The minaret has been used for centuries by *muezzins* (Arabic *mu'adhdhinun,* Muslim criers) for the call to daily prayers, but its original use is unclear. The earliest mosques in Arabia had no minaret, and the first towers in seventh-century Cairo (Egypt) and Damascus (Syria) may not have been built expressly for the call.

Minarets have been designed in many styles over time and space. Early ones were often square or octagonal, some with winding exterior staircases, while the sixteenth-century Ottomans built needle-thin, cylindrical minarets with conical peaks. Today, the muezzin does not always climb the minaret to call for prayers; minarets are often outfitted with loudspeakers.

ELIZABETH THOMPSON

MINORITIES

Subdominant or subordinate groups.

The term minorities is misleading and inappropriate when discussing subdominant or subordinate groups in Middle Eastern history and society. It is a term rooted in the naive assumption of Western social scientists that minor demographic groups can wield only minor political and economic power. In the states of the Middle East, demographic minorities have exercised considerable—even dominant—political and economic power. In the past, an ethnically distinctive minority, Muslims from the Caucasus, ruled the Arabic-speaking majority for centuries (the Mamluk dynasty of Syria [1250–1516] and Egypt [1250–1517]). During the twentieth century, in Iraq and Lebanon, the only two Arab states where Sunni Muslim Arabs are a minority, the traditional dominance of Sunni Islam has given its adherents disproportionate—in Iraq, dominant—power. The internal disorders that have torn these polities apart are due in no small part to the contradiction between the majoritarian democratic principles to which all pay lip service and the very different realpolitik.

Furthermore, the bases—religious, ethnic, or linguistic—by which one defines such groups are inconsistent over time and place. In addition, the very existence of such groups and the markers that define them have become a controversial political and intellectual issue. A given group might be considered part of the majority by one criterion in one century; in the next, by very different criteria, it

might be considered or—more significantly—might consider itself an oppressed minority. The process also may be reversed so that an oppressed minority may attempt to join the formerly oppressing majority.

Religion

Groups in the Islamic Middle East have been defined largely by religion. The traditional minorities—or, more accurately, subdominant groups—have been Christian and Jewish. Within these there have been further divisions by virtue of dogma, rite, and ethnic-linguistic identity. The Ottoman Empire, which dominated the Middle East and North Africa into the twentieth century, recognized most such groups as components of the so-called Millet System. The traditional states of Morocco and Iran followed practices that reflected their different social and religious needs. Because in Morocco, unlike the Ottoman Empire, the Jews were the only significant indigenous non-Muslim group, the institutional arrangements governing them were less elaborate, and their status tended to vary with the reigning Alawite dynasty (1654–). The most significant Christian and Jewish groups in Iran under Qajar rule (1795–1925) were the Armenians, with small groups of Jews and Nestorians, as well as Zoroastrians. Because of the hostile attitude of Iranian Twelver Shiʿism toward non-Muslims, the opportunities of such groups have been much more restricted than in the Sunni world. However, because of their larger number and economic importance, Armenians in Iran on the whole have fared better than other non-Muslims.

In addition to Christians and Jews, there was another religiously defined subdominant category, Muslim sectarians. For the Ottomans these were Shiʿites. In Iran, in addition to Sunni Muslims, there arose a messianic syncretistic offshoot of Shiʿism, the Baha'i faith. Such groups, unlike Christians and Jews, presented a unique threat to Muslim states because they articulated claims to power based on a similar religious discourse. Unlike Christians and Jews, who had been conditioned by more than a millennium of Muslim rule to accept the principle of status quo, religiously dissenting Muslims had to be retaught that principle from time to time.

Shiʿism represented a significant challenge to Ottoman authority in the sixteenth and seventeenth centuries when the rival Safavid dynasty in Iran attempted to use its Shiʿa coreligionists in eastern Anatolia as a fifth column in the Persian-Turkish wars. As this conflict diminished, both Ottoman Sunni rulers and Shiʿite subjects pretended that their differences did not really exist. This process was hastened by the Shiʿite application of the Islamic principle of *taqiyya* (caution), a doctrine of dispensation that justifies concealing one's true beliefs lest they antagonize the authorities. In the mid-nineteenth century an offshoot of Shiʿism, the Druze of Syria and Lebanon, emerged as a short-lived irritant to Ottoman rule in the region when they helped precipitate a conflict with a rival sectarian group, the Christian Maronites. However, it was only in the last quarter of the twentieth century, decades after the collapse of the Ottoman Empire, that Shiʿa became a force in the Arab world. In Lebanon, as a result of the urbanization of previously rural populations and emigration of the Christian elite brought on by years of civil war and foreign invasions, the poor and ignored Shiʿite community of southern Lebanon became a majority that could no longer be ignored. In Iraq, despite comparable upheaval, a Shiʿite community nearly as large, in relative terms, failed to gain comparable influence.

By the nineteenth century in Iran, as a result of the Safavids' successful campaign to convert the country to Twelver Shiʿism centuries earlier, Sunni Islam was reduced to the unaccustomed status of a statistically insignificant religion largely limited to the rural Kurdish community, and thus trebly marginalized. There was also a smaller Sevener Shiʿite community. A far more dangerous religious challenge arose from within Twelver Shiʿism. At first it manifested itself in the Bab movement, which arose in open rebellion to proclaim a new scripture superseding the Qurʾan. Once defeated, it reemerged nonviolently as the Bahaʾi religion, whose tolerant outlook proved attractive in the twentieth century. However, Shiʿite religious authorities regard it as heresy.

Ethnicity and Linguistics

In the twentieth century, recognized markers of group identity became newly significant in political

terms, with extremely disruptive consequences. Ethno-linguistic-regional identity, as it was called, tried to superimpose itself on strong religious affiliations. The quality of being Aleppine, Arab, Azeri, Berber, Cairene, Damascene, Egyptian, Hijazi, Khorasani, Kurdish, Jerusalemite, Najdi, Persian, Syrian, Turkish, and so forth had always existed. Traditionally such identities had been sources of group feeling, of ethnic pride and humor, of poetry, of distinctive cuisine and speech; but they had not been the basis for political organization, power, and sovereignty. Muslims (whether Arabic-speaking or Turkish-speaking or whatever) ruled non-Muslims (whether Arabic-speaking or Turkish-speaking or whatever). Although the latter might on occasion have wealth and exercise political influence, it was always behind the scenes and under the table. Modeling themselves on the newly dominant European notions of national political sovereignty, in the wake of the collapse of the traditional Islamic polities during and after World War I, Middle Eastern peoples attempted to fit the round peg of their traditional religious communal identities into the square hole of ethno-linguistic politics. This seemed to change the basis for determining dominant versus subdominant roles. And it required a number of uneasily and inconsistently reached decisions, none of which were—or are—self-evident. What were the new identities to be? Egyptian, Syrian, or Arab? Turkish or Turanian? Azeri, Turcoman, or Persian? These are merely samples of the host of complex questions that had to be answered for new nations and states to emerge.

In the new nation-states of the Arab world all speakers of Arabic—Christian, Jew, and Muslim (both Sunnis and Shiʿa)—were to be equal; there no longer were to be religious minorities. But that theory hardly described the far more complex and tortured reality. Different Christian groups chose different responses to these opportunities. By and large the Orthodox of Syria and Lebanon identified themselves with their traditional allies, Sunni Muslims, and attempted to support the cause of Arab nationalism. The Maronites, by contrast, preferred the independence of Lebanese identity. Although individual Copts had played a notable role in the rise of Egyptian nationalism, they grew marginalized as it increasingly transformed into Arab nationalism. Even less than Christians, some individual Jews participated in the early stage of Egyptian and Syrian nationalism; but the rise of Zionism and the conflict over Palestine, along with strong religious discrimination, excluded them from any lasting role. There has, however, been one political success story in the politics of religious minorities: the Alawites who dominate Syria's ruling elite, a small Shiʿite sect so extreme that some Muslims deny they are part of Islam. Two factors explain their unique achievement. During the colonial period the French recruited them for military service, so that by the 1960s they were overrepresented in the Syrian officer corps, the country's only electorate. They also denied their sectarian traditions and flocked to the Baʿth party, a bastion of secular Arab nationalism.

The smaller ethnic groups of the Muslim world that lost in the game of national musical chairs—notably the Kurds of western Asia and the Berbers of North Africa, who previously had some claim to power and dominant status by virtue of their Sunni identity—are now ignored and suppressed minorities within new political boundaries. During the 1920s Mustafa Kemal Atatürk and his Turkish Republic, through war and diplomacy, rid Anatolia of most of its Armenians and Greeks—though a large proportion of them in fact spoke Turkish as their first language—and then tried to redefine the only non-Turkish group remaining, the Kurds, as Mountain Turks. Iran has been more successful than most states in the Middle East in welding its varied subdominant groups—Turkic-speaking Azeris, Turcomans, Qashqaʾis, as well as the Arabs of Khuzistan and the Sunnis—into a relatively coherent polity. Although Persian speakers constitute a bare majority—if that—they have successfully used the appeal of Shiʿite Islam, to which 90 percent of the population adheres, to maintain the country's unity.

The redrawing of the map of the Middle East and North Africa after World War I created new sub-dominant groups without abolishing the old. In short, the region suffers from the worst of both worlds: it is riven both by the old confessional loyalties and by the new political demands of ethnic nationalism.

BENJAMIN BRAUDE

MINZ, BENJAMIN

[1903–1961]

A leader and founder of the Poʿalei Agudat Israel, a religious Zionist labor movement and political party in Israel.

Benjamin Minz was born in Lodz, Poland, and immigrated to Palestine in 1925. Under his leadership, the political party was established in Tel Aviv in 1933, and in 1946 Minz became its head. He served as chairman of the World Union of Poʿalei Agudat Israel. Unlike leaders of Agudat Israel, he advocated close cooperation with the Zionist Yishuv (Jewish community of Jerusalem) and its institutions. During World War II, he was active in rescuing Jews from the Holocaust. In 1948 Minz was a member of the Provisional State Council of Israel and served as deputy speaker of the second and third Knessets. In 1960 and 1961, he served as postmaster general. He wrote numerous books on topics relating to the beliefs and practices of the Hasidim.

ANN KAHN

MISRI, AZIZ ALI AL-

[1879–1965]

Egyptian officer and Arab nationalist politician.

Born in Cairo, of mixed Arab and Circassian parentage, Aziz Ali al-Misri (also Masri) was trained at the Istanbul Military Academy and was commissioned as an Ottoman army officer in 1901. He joined the Committee for Union and Progress (CUP) (Young Turks), but after the Young Turks seized power in 1908, he turned against the organization and became an Arab nationalist. It is often alleged that Misri's change of heart occurred because of a personal quarrel that erupted between him and CUP leader Enver while both were serving in the Ottoman army during the Libyan war. Misri formed secret Arab societies called al-Qahtaniyya in 1909 and al-AHD (Covenant) in 1913. He was arrested by the Ottoman government, tried for treason, and condemned to death, but the Turks let him go to Egypt instead. When the Arab Revolt broke out in 1916, he served briefly as Sharif Husayn's chief of staff. After World War I, he joined several Egyptian fringe groups committed to Arab nationalism. He directed the Cairo Police Academy from 1927 to 1936 and was inspector general of the Egyptian army in 1938. In 1939, Premier Ali Mahir named him chief of staff, but he was dismissed from that post in 1940 at Britain's insistence. He deserted the Egyptian army and tried to reach the Axis forces in the Libyan desert but was caught and court-martialed in 1941. After Aziz Ali had helped the Free Officers prepare for the revolution of 1952, they named him ambassador to Moscow in 1953 and considered making him president in place of Muhammad Naguib, but he retired in 1954. Fiercely nationalistic, Azi Ali was hampered in his career by his political idealism, which got the better of his discretion.

MISSIONARY SCHOOLS

Primary and secondary schools, colleges, and universities established by Christians to do charitable work and promote conversion.

In the Middle East, Christian missionary schools were founded in the wake of the extension of Western power and influence in the Ottoman Empire during the seventeenth, eighteenth, and nineteenth centuries. With the demise of the empire, the Eu-

ropean domination of the region, and then the European mandates over the post–World War I successor states, a variety of motives led both lay and religious organizations to aid in the educational enterprise of modernizing the peoples of the region.

Muhammad Ali in Egypt and his son Ibrahim Pasha in Syria facilitated the entry of such groups; the Ottoman millet system—which granted limited autonomy to the various Christian communities—allowed Christians to bring in missionaries to staff new schools and train teachers in the sciences, which were considered the secret of Western power and prestige. Practically all Western nations sent missionaries at some time, but the most sustained efforts were those of the American Board of Christian Missions (ABCM) and the Arabian Mission (both U.S. Protestant), the North African Mission (French Protestant), the Church Missionary Society (British Anglican), and a variety of Roman Catholic orders and congregations.

Until almost the end of the twentieth century, the desire of Westerners to bring education and enlightenment to the peoples of the Middle East coincided with the peoples' desire for learning and was considered a service rather than a cultural intrusion. Moreover, the schools registered a presence and an influence that were not considered religious per se. Christian missionary schools were, in fact, religiously motivated, but the sensitivity of the dominant Muslim population was respected, since Islam opposed any attempts at direct conversion or proselytization. Christian religious efforts remained within the faith—with Roman Catholics trying to attract Christians separated from Rome and with Protestants trying to convert Roman Catholics and Eastern Orthodox Christians. Many Roman Catholic educational efforts began as seminaries that trained local clergy for the Eastern churches.

Several missionary schools developed into notable institutions and have become landmarks in the

history of the region: the American University of Beirut, Saint Joseph University of Beirut, Aleppo College, Baghdad College (now Baghdad University), Robert College of Istanbul (now Boğaziçi University), and the American University in Cairo. Undoubtedly, the widespread elementary schools in Lebanon and Syria had the broadest impact. In 1894, for example, the Jesuits (Society of Jesus) had 192 primary schools in the region with students numbering some 8,000 boys and 3,000 girls, and the American Protestant Mission had 130 primary schools with more than 7,000 students. Today, the teaching orders of men, of women, and of dedicated Christian lay teachers—all citizens of Middle Eastern countries—still direct primary and secondary schools that were formerly mission operations.

After the demise of the Ottoman Empire, during the European-dominated years of the first half of the twentieth century, only a limited opposition to these schools existed, mostly in Islamic religious circles. The national governments produced by the post-World War II revolutions of the 1950s and 1960s, however, tightened controls over all education—limiting not only missionary schools but all private education—as in Syria in 1967 and Iraq in 1969. In North Africa the new governments also limited private schools, and then in the 1970s, an Islamic religious dimension was added to the growing regional preoccupation with national cultural identities—culminating in a growing Islamist political movement and the successful Iranian Revolution of 1979, which set out to eliminate all non-Islamic cultural influences. Since that time, a new set of forces, both social and political, has been in the making throughout the region.

John J. Donohue

MISSION CIVILISATRICE

French term for "civilizing mission," describing the essence of French colonial policy.

As the primary rationalization for colonialism, the "civilizing mission" signified France's attempt to convert its colonial subjects into French people. Whereas the British tended to reject the notion that an Indian, for example, might become British, the French believed that if properly taught French values and the French language, Algerians and Vietnamese alike would slowly evolve and become French. Hence the term *evolué,* which was used to refer to those who had adapted to French culture. There was also a moral component to the civilizing mission, in that some French held that it was their duty as a more enlightened race to elevate the ignorant masses of the non-Western world.

Zachary Karabell

MIXED ARMISTICE COMMISSIONS

Four tripartite committees established in accordance with the Israel-Egypt, Israel-Jordan, Israel-Lebanon, and Israel-Syria General Armistice Agreements (GAAs) of 1949.

Equal numbers of military delegates met periodically under the chairmanship of the chief of staff of the United Nations Truce Supervision Organization (UNTSO) or his authorized representative. Informal civilian advisers often assisted the official military personnel. Their purpose was to provide for the implementation and supervision of the various articles of the GAAs. As hopes for political negotiations in other forums faded after 1949, the Mixed Armistice Commissions (MACs) also became, by default, one of the last channels through which Arabs and Israelis could communicate directly with each other—although not always with the result of relieving tensions or contributing to a positive atmosphere.

In dealing with a growing number of complaints, the commissions took on quasi-judicial functions, quickly becoming (in the words of one critic) "courts and scoreboards." In the early 1950s, the MACs proved unable to meet their peacekeeping functions effectively when faced with an increase of infiltrations, expulsions, cross-border raids, and

reprisals. As time went on, both Arab and Israeli authorities made the tasks of MAC observers and investigators increasingly difficult. Offering lip service rather than true cooperation, the parties—Israel, Egypt, Jordan, Lebanon, and Syria—became skilled at manipulating the MACs for the purpose of scoring political and propaganda points. The effectiveness of the MACs as organs for conflict management also suffered from periodic walkouts and boycotts, by one party or the other, and from recurring challenges to the impartiality and integrity of various UN officials who served as chairmen.

After the 1956 Arab-Israel War, the truce supervisory machinery was further weakened, with some MACs virtually inoperative. The MACs ceased to exist following the June 1967 Arab-Israel war. In 1974, Israel officially declared the four General Armistice Agreements, which had provided the legal basis for the MACs, to be null and void. During the 1970s and 1980s, the UNTSO (with a staff of 220 military observers and offices in Jerusalem, Amman, Beirut, and Gaza) continued to monitor Arab-Israeli frontier incidents.

NEIL CAPLAN

MIXED COURTS

Egyptian courts that tried commercial and civil cases from 1875 to 1949.

Although they had analogues in the Ottoman Empire and elsewhere, mixed courts achieved their classic form in Egypt between 1875 and 1949. As premier of Egypt, Nubar Pasha negotiated European treaties that approved the courts for Egypt's Khedive Ismaʿil; he promptly fell victim to their decisions in favor of his foreign creditors and was forced to sell his Suez Canal shares to Britain in 1875.

Western and Egyptian mixed court judges heard the commercial and civil cases involving Westerners, but criminal cases remained under consular courts. The mixed courts used French law codes, and their working language was French. After 1882, British administrators often saw these courts as an impediment to their own plans for reform and political control. From the 1920s on, Egyptian nationalists campaigned for the abolition of any institution that infringed on Egyptian sovereignty. The Anglo-Egyptian Treaty of 1936 paved the way for the Montreux Convention of 1936, which provided for ending the mixed courts and the capitulations by 1949. The example of the mixed courts' bar association, law codes, structure, and procedures had a significant influence on Egypt's other court systems—the National *(Ahliyya)* and *shariʿa* (Islamic law) courts.

DONALD MALCOLM REID

MIZRAHI MOVEMENT

Orthodox Zionist organization, founded in Europe in early 1902.

Mizrahi was founded by Rabbi Isaac Jacob Reines as the religious Zionist organization within the World Zionist Organization (WZO), after the fifth Zionist Congress of 1901 resolved to enter the educational sphere. Since many members of the WZO believed secular nationalism to be antithetical to Judaism, they could not agree to a program of secular Zionist education.

They founded the Mizrahi organization, an acronym for *merkaz ruhani* (spiritual center), under the banner "The Land of Israel for the people of

Israel according to the Torah of Israel." In 1904, a world conference of Mizrahi was convened in Bratislava, Czechoslavakia (then Pressburg, Hungary), and the Mizrahi World Organization was founded with the objective of educating and promoting religious Zionism. The first convention of the American Mizrahi organization was convened in 1914, under the influence of Rabbi Meir Bar-Ilan, then general secretary, who had recently toured the United States.

After World War I, Ha-Poʿel Ha-Mizrahi (Mizrahi Labor) was founded, which established a group of religious kibbutz and moshav settlements in Palestine. Although Ha-Poʿel Ha-Mizrahi worked very closely with Mizrahi, the two were separate and autonomous and remained so as new political parties in the Israeli Knesset (parliament), until they merged in 1956, becoming the National Religious party (NRP). From 1951 to 1977, they occupied ten to twelve seats in the Knesset. Although the Mizrahi-Ha-Poʿel Ha-Mizrahi movement played a major role in establishing the public religious character of Israel in its initial decades of nationhood, the party's power and prestige declined by the 1980s. Always they struggled to establish the Sabbath rest and *kashrut* (dietary laws) in all national institutions, settlements, and organizations, so that a state constitution should be based on *Halakhah* (Jewish religious law).

Since 1981, the number of NRP Knesset seats declined by more than 50 percent. This has been attributed to the perceived accommodative stance of the majority party, Likud, to religious tradition; to ideological confusion, stagnation, and an absence of NRP leadership development; and to a move by NRP to the religious right, which led many former Mizrahi loyalists into the more sectarian religious parties, such as Agudat Israel and SHAS.

Chaim I. Waxman

MOADDA, MOHAMED

[1939–]

Leader of Tunisia's main legal opposition party, the Movement of Socialist Democrats.

A university professor and a founding member of the Mouvement des Démocrates Socialistes (MDS), the first party to split from the ruling Socialist Destour Party at the end of the 1970s, Mohamed Moadda moved to the forefront of the party after 1988, when President Zayn al-Abidine Ben Ali announced a restricted political liberalization for bodies that signed the National Pact. In the early 1990s Moadda led the MDS through a period of "critical support" for the regime until 1995, when opposition parties won only six of four thousand seats in the municipal elections. An open letter that he wrote to the president provoked his arrest in October, and convicted of contacts with Libyan intelligence agents, he was imprisoned in 1996. Soon released under conditions dictating that serious political activity would lead to reincarceration, he was kept under supervision and then placed under house arrest after making contact with exiles from the Islamist Nahda Party in 1997 and 1998. In 1999 he announced his candidacy for the presidency, a symbolic protest against the lack of provision for unapproved candidates, made in the knowledge that it could lead to imprisonment. He was reincarcerated in 2001 after making a televised broadcast and participating in a joint manifesto with Nahda. The object of an international human-rights campaign, Moadda went on hunger strike, was pardoned in March 2002, and was reinstated as MDS president. The price of his freedom was his agreement to moderate criticism of the regime, and to effect a difficult reunification between those MDS supporters who had remained loyal to him and those who had been recognized by the government under Ismail Boulahia.

GEORGE R. WILKES

MODA'I, YITZHAK

[1926–1998]

Israeli military leader, politician.

Born in Tel Aviv, Moda'i (originally Madrovich) joined the Haganah in 1941 and the police force in 1943. He served in the Israel Defense Force, eventually becoming a lieutenant colonel. After serving as military attaché to London and heading committees for cease-fire agreements with Syria and Lebanon, he received chemical engineering and law degrees at Haifa Technion (1957) and Hebrew University (1959). From 1961 to 1977 Moda'i was chief executive officer of Revlon (Israel).

As a member of the Liberal Party's directorate (1965–1968) he advocated uniting with Menachem Begin's Herut Party to create the Likud. He was appointed military commander of Gaza after the 1967 Arab-Israel War and was elected to the Knesset in 1974. Moda'i was minister of energy and infrastructure in the Likud government of 1977 and was minister of communication and later minister without portfolio (a member of the Cabinet with the right to attend Cabinet meetings and advise the prime minister but without responsibility for a division of government bureaucracy, such as the Ministry of Housing, Ministry of Labor, Ministry of Foreign Affairs, etc.). He was finance minister in the National Unity government of 1984, working closely with Prime Minister Shimon Peres on the economic stabilization program, which was the initiative for which Moda'i was probably best known. Tension between him and Peres forced Moda'i to switch to the Ministry of Justice and finally to leave the government in 1986. When Yitzhak Shamir took over the premiership in 1986 in an arrangement for power-sharing that had been made between Peres and Shamir at the time of the 1984 election, Moda'i returned as minister without portfolio and served as minister for economy and planning.

Moda'i served as chairman of the Jubilee Celebrations Committee in 1998, celebrating Israel's fiftieth anniversary, but resigned because of disagreements with tourism minister Moshe Katsav, the minister responsible for the celebrations. In May 1998 Moda'i died at age 72.

ZEV MAGHEN
UPDATED BY GREGORY S. MAHLER

MODERNIZATION

Process of sociocultural change in the Middle East that began about 1800 with European colonial expansion into the area.

Modernization is the term commonly used to denote the process of social change that the Middle East (and other parts of the world) has been experiencing for the last two hundred years. It may be traced to the Industrial Revolution and the impact of European industrial expansion and colonialism that was continually promoted by European agents—merchants, bankers, consuls, administrators, and missionaries. This process was embraced by early modernizing monarchs such as Selim III and Mahmud II of the Ottoman Empire and Muhammad Ali of Egypt. Five aspects may be distinguished: economic, political, social, intellectual, and psychological.

Economic Aspects

The Middle East has long been integrated in the world market. The region has mainly exported primary products, agricultural goods such as cotton, tobacco, fruits, and coffee; recently, it became the prime producer and exporter of petroleum. To facilitate both export and the importation of manufactured goods, certain raw materials, and foodstuffs, a network for mechanized transport was developed (railroads, seaports, river traffic, roads [with bridges and tunnels], airports), along with a banking and finance system. This entailed vast investments of foreign and, more recently, national capital. A large manufacturing sector has been established, and the region encompasses the world's most abundant petroleum deposits—exploited by a large production and exporting industry.

Political Aspects

Modernization here constitutes the emergence of centralized nation-states. In addition to the ruling bodies, large, and usually cumbrous, civil services administer the various countries and provide social services. Taxation has risen steadily as a proportion of Gross National Product. Suffrage often excludes women, but elections are held for presidents and parliaments (although in practice many countries are under a one-party dictatorship). The prevailing political ideology is nationalism—utilizing certain elements of socialism—mainly as the outcome of working toward independence from European imperialism during the twentieth century.

Social Aspects

Many changes have occurred because of the great increase in population; the sharp fall in death rates has not been matched by a decline in birthrates, so the population has increased at about 3 percent per annum (including both immigration and emigration). Cities have grown to the point where more than 50 percent of the population is urban. Family structure has consequently shown some changes; most young middle-class couples live on their own and make their own decisions, instead of following the practices and decisions of their patriarch. Social services have been greatly expanded; those that were provided by religious or private philanthropy are now usually provided by the state. Education is available to almost all boys of school age (and to the majority of girls), and the literacy rate has risen from an average 5 percent in the early nineteenth century to an average of more than 50 percent today (in Israel, more than 90 percent).

Intellectual/Psychological Aspects

Intellectual modernization meant, originally, the absorption by a small elite of the bulk of Western science, scholarship, literature, and to a smaller extent, the arts. This was achieved primarily through the French language, but British and American sources have been increasingly used. Diffusion of Western-style culture has resulted in the establishment of a vast network of Western-style schools, which are secular and therefore distinct from the traditional Muslim/Christian/Hebrew schools. They include many universities and technical and research institutes.

Although printing was available in the eighteenth century, it became significant only during the nineteenth century, when books and pamphlets were followed by newspapers and periodicals that reached the general reading public. Concurrently, the traditional written languages—mainly, Persian, Turkish, Arabic, and Hebrew—which were highly elaborate, formal, and remote from everyday speech, have been both simplified and enriched. New and hitherto unknown literary genres have developed, notably novels and plays, based on Western models. It is perhaps in them that one sees most clearly the psychological modernization that has occurred—the growing individualism, the weakening of traditional ways, and the participation in what may be called a world culture. The expanding fundamentalist tendencies in both Islam and Judaism may be explained by sociopolitical problems that continue to need attention, not by a growing traditionalism.

CHARLES ISSAWI

MOGANNAM, MATIEL

[c.1900–1992]

Leader of the Palestinian women's movement, 1920s–1930s.

Matiel Mogannam, a Christian, was born in Lebanon but was raised in the United States, where her family immigrated during her childhood. There, she met and married her husband, Mogannam Mogannam, a native of Jerusalem. During the early 1920s, the couple relocated to Jerusalem, where Matiel be-

came active in the Palestinian women's movement. Mogannam Mogannam was an advocate and officer of the National Defense Party. In 1929 Matiel Mogannam was one of the two secretaries of the Arab Women's Executive (AWE), which founded the Arab Women's Association (AWA) and the Arab women's movement in Palestine, in which she was extremely active. In 1933, when Sir Edmund Allenby, commander-in-chief of the Allied Forces of Palestine during World War I, came to dedicate the Young Men's Christian Association (YMCA) building in Jerusalem, Mogannam delivered a nationalist speech from the minbar of the Mosque of Umar at the Haram al-Sharif. In autumn of the same year, she spoke from a balcony in Jaffa during turbulent nationalist demonstrations held in the cities of Mandatory Palestine. Her book, *The Arab Woman and the Palestine Problem,* and her contributions to the Palestinian press, are firsthand accounts of the Palestinian women's movement before 1948. She and her husband relocated in 1938 to Ramallah, where she was active in the women's movement for many years. She died in the United States in 1992.

MOGHAIZEL, LAURE

[1929–1997]

Lebanese legal, women's, and human rights activist.

Laure Moghaizel (also Mughayzil) was a pioneer in the field of women's legal rights in Lebanon and the Arab world. Born into a middle-class Maronite family from South Lebanon, she distinguished herself early as an outspoken student and member of the Kata'ib (Phalangist) Youth Organization, which was originally established in 1936 as a Christian nationalist youth movement. Following Lebanese independence in 1943, it turned from a populist youth group into a formal political party. Moghaizel led efforts to equalize women's participation in this group as she studied for her law degree at Saint Joseph's University in Beirut. During the outbreak of confessional (civil and religious) unrest in Lebanon in 1958, Moghaizel's husband Joseph and then she herself broke with the Kata'ib, disappointed in its anti-Islamic rhetoric. From that time onward, she identified herself as a pro-democracy Lebanese woman with strong allegiances to human and family rights. In 1968 she was a founding member of the Democratic Party of Lebanon.

Moghaizel was instrumental in lobbying for basic laws that changed the lives of Lebanese women, such as a woman's right to vote (obtained in 1953) and the equalization of the law of inheritance of non-Muslims (obtained in 1959). She also fought to abolish discriminatory policies preventing a woman from leaving the country without her husband's permission. During the Lebanese civil war (1975–1990) she was a founding member of Bahithat, an association of women scholars opposed to confessionalism. She also played an active role in the broader Arab region and international arena, heading committees on Arab Women and Childhood Development and serving as vice president of the International Council for Women. Beside her political activism, she published widely on women and Lebanese legislation, women during the civil war, crimes of honor, women's labor, and Arab women and political laws.

Moghaizel's activism also extended to the related area of human rights. During the mid-1980s she was a founding member of the Lebanese Association for Human Rights and the Non-Violence Movement. She represented Lebanon and the Arab world in countless forums on the rights of women, children, families, and human beings generally, and published legal guides on human and women's rights. Her work as an attorney was matched by her passion for the recognition of human rights. She believed that Lebanon had an important role to play regarding improving freedom and human rights in the Arab world. Her service to Lebanon earned her the Order of the Cedar, rank of Commander.

In 1996, the Moghaizel Foundation was founded to "enhance and disseminate the thoughts and

discipline" of Joseph and Laure Moghaizel, especially issues relating to human rights, democracy, modernization, national unity, Arabism, and secularism. As of 2003, the foundation issued publications, encouraged research, organized workshops and seminars, and maintained a public library.

ELISE SALEM

MOHAJERANI, ATAOLLAH

[1954–]

Iranian politician.

Born in 1954 in Arak, Ataollah Mohajerani received his degrees (B.A., M.A., and Ph.D.) in history from Isfahan, Shiraz, and the Teachers' Training universities. He was a student during the Iranian Revolution and entered politics by running for and serving in the first parliament in the Islamic Republic of Iran (1980–1984). After serving one year as the cultural ambassador to Pakistan, he became the deputy for legal and parliamentary affairs, first for the prime minister and later for the president (1985–1989). Shortly after serving as a spokesperson for the newly elected president Mohammad Khatami in 1997, Mohajerani was appointed minister of culture and Islamic guidance—a position he held until April 2000.

Mohajerani is a culturally progressive, politically pragmatic, and religiously liberal politician affiliated with the Executives of Construction Party, which was established in 1996 with the support of the president, Ali Akbar Hashemi Rafsanjani, as a counterforce to religious conservatives. Relative to his predecessors, Mohajerani was an extremely liberal and visionary culture minister. He was one of the driving forces behind Khatami's liberal policies after 1997. During Mohajerani's tenure, Iran experienced more press freedom; increased publication of books, magazines, and newspapers; and a resurfacing of the Iranian cinema in the international arena. Previously banned artists and writers were allowed to produce their works again.

Mohajerani's policies generated conflicting reactions. When Salman Rushdie wrote *Satanic Verses* and Ayatollah Ruhollah Khomeini issued a *fatva [fatwa]* that absolved any Muslim who might kill him, Mohajerani wrote a book in which he defended Khomeini's verdict and declared the Rushdie affair to be part of a recurring Western plot against Islam. The conservatives adored Mohajerani, but when he advocated direct negotiations with the United States in 1989, he angered Ali Khamenehi, the leader of the Islamic Republic, who denounced him and suspended any discussion of the issue. Some conservatives viewed Mohajerani's policies as an assault on their religious values, and accused him of being a CIA agent hired to undermine the values of the Islamic Revolution. Several high-ranking clerics denounced him and demanded his impeachment by the parliament or dismissal by the leader. In 1998, radical vigilantes physically attacked Mohajerani and Hojatoleslam Abdolah Nuri, the minister of the interior, during Friday prayers in Tehran University. In 1999 conservatives tried to impeach Mohajerani in the parliament, but his eloquent defense prevented his critics from gaining enough votes for his removal.

Pressure on Mohajerani mounted from allegations of financial impropriety and legal challenges to his decisions, and rumors of his resignation continued. Finally, in April 2000 Khatami accepted his fifty-page letter of resignation. In 2001 Khatami asked him to serve as the director of the International Centre for Dialogue Among Civilizations (ICDC). As head of ICDC, Mohajerani continues to travel, give speeches and interviews, and write books and articles. He is married to Jamileh Kadivar, a parliament deputy, and they have four children.

ALI AKBAR MAHDI

MOHAMMAD ALI SHAH QAJAR

[1872–1925]

Sixth ruler of the Qajar dynasty in Iran.

Mohammad Ali was the eldest son of Mozaffar al-Din Shah Qajar. His mother was the daughter of Mirza Mohammad Taqi Khan Amir Kabir, the reformist prime minister executed by Mohammad Ali's grandfather, Naser al-Din Shah, in 1852.

Mohammad Ali became commander of the troops in the Iranian province of Azerbaijan in 1892. Four years later, when his father succeeded to the throne, Mohammad Ali was proclaimed crown prince. In 1905, as he was regent while his father was visiting Europe, the merchants of Tehran closed the bazaars and took refuge in the shrine of Shah Abd al-Azim in Rayy to protest against the policies of the Belgian administrator of Iran's customs. The secret political societies that organized this incident subsequently forced his father to grant a constitution and establish a parliament (the Constitutional Revolution of 1906). Mohammad Ali believed that these measures threatened authority and even rule of the shah.

In January 1907 Mohammad Ali succeeded to the throne following the sudden death of his father. From the outset he opposed the constitutionalists, who dominated the new parliament *(majles)* and on several occasions asked him to pledge his allegiance to the constitution. In July 1908, after months of political conflict, he authorized the Russian-officered Cossack Brigade to bombard the parliament, then dissolved it, abrogated the constitution, closed down political societies, banned newspapers that had been criticizing his rule, and imposed military government in Tehran. Pro-constitution forces immediately rallied in Tabriz, where they expelled supporters of the shah and established a temporary national parliament. Pro-constitution societies organized secretly in several cities, eventually taking control of Isfahan, Mashhad, and Rasht. Leaders of the Bakhtiari tribal confederation joined the constitutionalists in 1909 and recruited a large armed force to march north on Tehran from Isfahan. A volunteer paramilitary force that marched south from Rasht joined up with the Bakhtiari contingent outside Tehran in July 1909. Mohammad Ali Shah sought refuge in the Russian legation; he was forced to abdicate in favor of his minor son, Ahmad Shah, and depart Iran.

While in exile, Mohammad Ali gathered his supporters and resources and in 1911 returned to Iran via the Caspian Sea on a chartered Russian steamer. He captured Astarabad in Mazandaran province, but the constitutionalists assembled their forces and defeated him in September 1911. Subsequently, he sailed away into permanent exile, settling initially in Russia, where his hopes of obtaining political support from the government of the tsar went unfulfilled. Mohammad Ali Shah died in April 1925.

NEGUIN YAVARI
UPDATED BY ERIC HOOGLUND

MOHAMMADI, MAULAWI MOHAMMAD NABI

[1920–2002]

Afghan resistance leader and Muslim cleric.

Maulawi Mohammad Nabi Mohammadi was an Afghan resistance leader and Islamic scholar. He was a Gilzai Ahmadzai Pushtun from Logar province and had large landholdings in Helmand province. He was the head of a *madrasa* (Islamic school) in Logar province. In 1965, he was elected to the Afghan parliament representing the traditional *Ulama.* He strongly opposed the Marxist movement in Afghanistan and in 1978 fled to Peshawar, Pakistan, where he formed the Islamic resistance party Harakat-e Inqilab-e Islami-e Afghanistan (Movement for the Islamic Revolution of Afghanistan). His followers were among the traditional Islamic clergy and Gilzai Ahmadzai tribes in the Logar regions.

Mohammadi's religious and political beliefs resembled those of the Taliban, advocating a return to strict Islamic law and Pushtun tribal values. Mullah Omar, the leader of the Taliban, had once been a commander in Mohammadi's party. In 1994, Mohammadi aligned himself with the Taliban and largely withdrew from political life. He died at the age of eighty-one on 22 April 2002.

GRANT FARR

MOHILEVER, SAMUEL
[1824–1898]

Rabbi, early Zionist leader.

Born in Russia, Samuel Mohilever helped to organize Jewish emigration to Palestine in the 1880s and persuaded Baron Edmond de Rothschild to support Russian families settling there. In 1882, he founded the first Hovevei Zion (also Hibbat Zion) group, in Warsaw. In 1890, he was a founder of Rehovot in Palestine. As head of Hovevei Zion in Bialystok, he helped Theodor Herzl plan the First Zionist Congress (Basel, 1897).

MARTIN MALIN

MOJADDEDI, SEBGHATULLAH
[1925–]

Afghan resistance leader; Sufi pir; Afghan president, 1992–1993.

Born in Kabul in 1927 to a family of hereditary leaders of the Naqshbandi Sufi order, Sebghatullah Mojaddedi was educated at al-Azhar University in Cairo and at Kabul University. He fled Kabul in the 1970s and headed the Islamic center in Denmark from 1974 to 1978. After the Saur Revolution (1978), he went to Peshawar, Pakistan, where he formed the National Liberation Front of Afghanistan (Jebhe-ye Nejat-e Milli) and began an armed insurgency in Afghanistan against the Marxist government. He was elected president of the Afghan Interim Government, a government in exile, in Pakistan in 1989, and after the Najibullah government fell in 1992, he returned to Kabul. When the Taliban captured Kabul in 1996, Mojaddedi returned to exile in Pakistan, although he continued to visit Kabul, where he maintained a home. With the fall of the Taliban government in 2001, Mojaddedi returned to Kabul to participate in the new government of Hamid Karzai, although he holds no official positions.

MOJAHEDIN

Afghan Islamic resistance fighters.

The Afghan resistance groups who took up the war against the Marxist government in 1978 called themselves *mojahedin* (fighters of the holy war), a derivative from the Arabic *jihad* (holy war). By using the appellation *mojahedin,* they invoked a number of Islamic beliefs associated with the concept of jihad, particularly that a person who dies in a jihad becomes a martyr *(shahid)* whose soul goes immediately to the side of God. Fighting mostly out of Peshawar, Pakistan, Afghan mojahedin militias organized into groups that represent the sectarian and ethnic divisions of Afghanistan. Seven main parties represented Sunni Afghans; three were led by traditional and moderate clergy, and four were led by Islamist and fundamental leaders. The moderate-traditional parties were Harakat-e Inqilab-e Islami (the Islamic Revolutionary Movement), led by Maulawi Mohammad Nabi Mohammadi; Jebhe-ye Nejat-e Milli (National Liberation Front), led by Sebghatullah Mojaddedi, a Sufi pir; and Mahaz-e Islami (Islamic Front), led by Pir Sayyed Ahmad Gailani, head of the Qadiri Sufi order. The Islamist groups were Hezb-e Islami (Islamic Party), led by Golbuddin

A mojahedin patrols a village graveyard in Achin, Afganistan, 1988. AP/Wide World Photos. Reproduced by permission.

Hekmatyar; Hezb-e Islami, led by Mohammad Unis Khalis; Jamiᶜat-e Islami (Islamic Society), led by Burhanuddin Rabbani; and Ittihad-e Islami (Islamic Union), led by Abd al-Rasul Sayyaf.

In addition there were a number of Shiᶜite parties (Shiᶜa Muslims constitute between 15 and 20 percent of the Afghan population). They included Shura-ye Ittifagh-e Islami (Islamic Union), led by Sayyed Beheshti; Harakat-e Islami (Islamic Movement), led by Shaykh Mohseni; and Hezb-e Wahadat (Unity Party), an alliance of eight Shiᶜite groups.

Each mojahedin party depended on followers in Afghanistan and on other governments for support. During the resistance war, the mojahedin parties with the largest following were the Jamiᶜat-e Islami, which was the only Sunni party with non-Pakhtun leadership and thus popular in the non-Pakhtun areas of Afghanistan (especially the north and west), and the Hezb-e Islami, led by Hekmatyar, which had the support of the Pakistani military and therefore received a lion's share of the weapons and arms. When the Marxist government of Najibullah fell in 1992, the mojahedin parties returned to Kabul to form a government, which was generally referred to as the mojahedin government. Their attempt at unity failed and they began fighting among themselves. As a result, much of Kabul was destroyed in the fighting, and in 1996 the Taliban captured Kabul. Several of the mojahedin parties, especially Jamiᶜat-e Islami and Hezb-e Wahadat, retreated to the north of Afghanistan to fight against the Taliban. With the arrival of the Karzai interim government in 2001 many of the original mojahedin parties returned to Kabul to take part in the new government.

MOJAHEDIN-E KHALQ

The main armed force challenging the Islamic Republic of Iran.

The Mojahedin (or the Sazman-e Mojahedin-e Khalq-e Iran; Holy Warrior Organization of the Iranian People) was formed in the mid-1960s by Tehran University students who tried to synthesize Islam with Marxism, interpreting the former to be the divine message of revolution and the latter to be the main analytical tool for understanding society, history, and politics. While influenced by these features of Marxism, they rejected the philosophy of dialectical materialism. They also adopted the strategy of guerrilla warfare from Che Guevara, the Vietminh, and Algeria's Front de Libération Nationale (National Liberation Front, FLN). Some of their founding leaders received guerrilla training from the Palestine Liberation Organization (PLO).

From 1971 until 1979, the Mojahedin tried to destabilize the regime of Mohammad Reza Pahlavi with a series of assassinations, bank robberies, and daring armed assaults. In the process, more than eighty of their members lost their lives. Most of these were engineers, teachers, and university students. The group was further weakened by factional infighting. In 1975, one faction denounced Islam as a "conservative petty bourgeois ideology" and declared itself a pure Marxist-Leninist organization. This faction later became known as the Paykar (Combat) organization. By the time of the Iranian Revolution of 1979, little remained of the Mojahedin, and the surviving members had been imprisoned.

Despite this, the Mojahedin regrouped during the revolution and quickly grew to become a major threat to the Islamic Republic of Iran. Maʿsud Rajavi, one of the few survivors from the 1960s, took over the leadership. The Mojahedin grew rapidly in part because of its mystique of revolutionary martyrdom; in part because of its adherence to Shiʿism; in part because of its social radicalism; and in part because of its anticlericalism and opposition to the theocracy of the Ayatollah Ruhollah Khomeini. By 1981, its publication, *Mojahed,* was one of the country's most widely read newspapers; its parliamentary candidates were winning a substantial number of votes; and its rallies were drawing hundreds of thousands. The regime reacted by ordering a major crackdown. The Mojahedin, in turn, retaliated by launching an assassination campaign against the top figures of the Islamic republic.

In the aftermath of the 1981 crackdown, the Mojahedin moved its leadership abroad, created an umbrella organization named the National Council of Resistance, and, with an army of some 9,000, waged an armed struggle, based in Iraq, against the regime. By the end of the decade, however, the Mojahedin was a mere shadow of its former self. Its overt alliance with Iraq during the eight-year Iran-Iraq War (1980–1988) undermined its nationalistic credibility. Its stress on martyrdom had little appeal to the postrevolutionary generation of youth in Iran. Its own ranks within the country were decimated by executions and mass arrests. Moreover, its tactics and alliance with Saddam Hussein prompted both the United States and the European Union to categorize it as a "terrorist organization." What is more, the U.S. occupation of Iraq in 2003 eliminated the Mojahedin's main patron and placed the entire organization at the mercy of the United States. The Mojahedin hope to salvage something out of this disaster by persuading the United States that they can be a useful tool against the Islamic Republic.

ERVAND ABRAHAMIAN

MOJTAHED-SHABESTARI, MOHAMMAD

[1936–]

Influential intellectual among Iran's theologians.

Mohammad Mojtahed-Shabestari was born in Shabestar, which is a rural district near Tabriz in Azerbaijan, Iran. He received a traditional seminary education in Qom, where he lived from 1950 to 1968. From 1970 until the Iranian Revolution of 1979, he was the director of the Islamic Center in Hamburg, West Germany. He is fluent in German and well-versed in German theological and philosophical traditions of scholarship. During his eighteen years of residence in Qom, Mojtahed-Shabestari served on the editorial board of the *Maktab Islam,* a Shiʿite journal that addressed many of the social and political issue of the 1960s and 1970s in Iran. After the 1979 revolution, he published a journal called *Andish-e Islami* in Tehran. He was elected to the first Islamic Consultative Assembly, but since then he has devoted most of his time to teaching and writing as a professor of theology at Tehran University.

Mojtahed-Shabestari's thought, especially since the establishment of the Islamic Republic, has evolved to address the question of modernity and Islam in his native land. He has attempted to demonstrate the compatibility of human agency and human empowerment, and the notion of Divine Sovereignty. He also has recognized, albeit implicitly, the individual as the carrier of human agency. In turn, these two principles in his thought have allowed him to posit certain modern precepts such as the freedom of consciousness, which, according to him, constitutes the foundation of other types of freedoms and lays the grounding of civil rights. Thus, Mojtahed-Shabestari's discourse can be a source of inspiration for defying the notion of *velayat-e faqih* (guardianship of the jurisprudent), although he has avoided a frontal attack on this notion.

FARZIN VAHDAT

MOLLA

See GLOSSARY

MOLLET, GUY

[1905–1975]

French socialist and statesman.

Head of the French Socialist party (1946–1969) and premier of France (February 1956–May 1957), Guy Alcide Mollet sought an end to the civil war in Algeria (the Algerian War of Independence, 1954–1962). In October 1956, he allowed the French military to hijack a plane carrying several Front de Libération Nationale (FLN) leaders, including Ahmad Ben Bella. Convinced that Egypt's President Nasser was aiding the FLN, Mollet authorized French participation in the Suez invasion of October-November 1956.

ZACHARY KARABELL

MOLTKE, HELMUTH VON

[1800–1891]

Prussian military officer.

As a young lieutenant, in the 1830s Helmuth von Moltke was sent to Turkey to help train the army of the Ottoman Empire. At the battle of Nezib (1839), the Ottoman commander rejected his advice, and the Ottoman forces were then routed by the Egyptian army of Ibrahim Pasha. From 1858 to 1888, von Moltke was chief of the General Staff in Berlin.

ZACHARY KARABELL

MONASTIR

Seaport on the northeastern coast of Tunisia; center of the governorate of the same name.

Probably a Punic port before Islam, Monastir became the site of a well-known Arab Islamic *ribat* (fortified religious center), founded by the Muslim commander Harthama ibn Aʿyan in 796. The fortress, enlarged over the centuries, is today an important tourist site. To bolster the tourist trade, a large hotel and commercial complex was begun in the late 1980s.

Never a political center, it was a religious hub for several centuries in the medieval Islamic period. Two mosques of architectural importance were built at the turn of the eleventh century. Monastir was the hometown of Tunisia's President Habib Bourguiba. Under his government, an international airport was built in Monastir, used primarily for the tourist trade. In 2002, its population was estimated at 67,730.

MATTHEW S. GORDON

MOND, ALFRED MORITZ

[1868–1930]

British industrialist and politician.

Son of a prominent German-Jewish industrialist, the Baron Alfred Moritz Mond was a Liberal member of Parliament (1906–1928). In 1926, he was one of the founders of ICI (Imperial Chemical Industry). An ardent promoter of Zionism, he visited Palestine in 1921 and contributed an estimated 100,000 British pounds to the Jewish Colonization Corporation.

ZACHARY KARABELL

MONTAZERI, HOSAYN ALI

[1920–]

Iranian religious scholar and political activist.

Born to a peasant family in Najafabad, central Iran, Hosayn Ali Montazeri began his formal religious studies at Isfahan at the age of fifteen, moving in his early twenties to Qom to benefit from the scholars teaching there. In 1944 he joined the circle of Ayatollah Hosayn Borujerdi, the principal religious leader of the time, and before long began assisting him in his classes on Shiʿite jurisprudence. Also in Qom, Montazeri became a close associate of Ruhollah Khomeini, whose views he shared. Among the most active of Khomeini's associates in the uprising of June 1963, Montazeri was detained in its aftermath. He was rearrested several times in the following years, most notably in 1975 when he was sentenced to ten years' imprisonment (cut short in October 1978), and he was banished several times to various remote parts of Iran.

After the success of the 1979 Iranian Revolution and the establishment of the Islamic republic, Montazeri held several important posts. He was a member of the council for reviewing the draft constitution, a consultant on the appointment of revolutionary judges, an adviser on land reform, and a leader of the Friday prayers, first in Tehran and then in Qom. His eminence among the associates of Khomeini was confirmed by his selection (in December 1983) as successor-designate to Khomeini as the paramount political-religious authority in the system of government based on *velayat-e faqih.* However, a letter from Montazeri to Khomeini in which Montazeri criticized the shortcomings of the revolutionary order led to his forced resignation as successor-designate in March 1989. Montazeri then retired to Qom, where he taught Islamic jurisprudence until 1997. An open letter in which he questioned the religious qualifications of Ali Khamenehi as a *faqih* led to his house arrest in November 1997 and to a ban on his teaching. The house arrest was politically controversial and finally lifted in January 2003; the following September, he was allowed to resume teaching theology, even though he continued to criticize the government, especially the judiciary, as un-Islamic.

MONTEFIORE, MOSES

[1784–1885]

Philanthropist and Zionist.

Born in Italy, Sir Moses Haim Montefiore made a fortune in stockbroking in London and retired in 1824. He devoted the remainder of his life to Jewish philanthropy and the cause of Zionism. Between 1827 and 1875, he made numerous trips to Palestine to aid the Jewish community there, and in 1839 he developed a program to improve Palestine's agricultural and industrial output and sought to obtain autonomy for the Jewish community. Among his many philanthropic activities, he endowed a hospital and a school for girls in Jerusalem in 1855 and purchased land outside of the walled city. Montefiore was also involved with the plight of the Moroccan Jews, whose situation seriously deteriorated after expeditions by France to Morocco in the 1840s. At the urging of the Rothschilds, Montefiore went to Morocco in 1864 and met with Sultan Mulay Sidi Muhammad, who issued an edict easing restrictions and forbidding hostile acts against the Moroccan Jews. Montefiore traveled throughout the Mediterranean Muslim world and was treated as an important dignitary wherever he went.

ZACHARY KARABELL

MONTGOMERY, BERNARD LAW

[1887–1976]

British soldier.

A Sandhurst graduate, Bernard Law Montgomery (first viscount of Alamein) became commander of the Eighth Army in North Africa in August 1942, after General Sir Claude Auchinleck had checked German General Erwin Rommel at the first Battle of al-Alamayn (also El Alameih). On Prime Minister Winston Churchill's urging, Montgomery attacked in late October and won a decisive victory at the second Battle of al-Alamayn, leading to a full-scale retreat of Rommel's forces. Montgomery was later commander in chief of the ground forces during the Normandy invasion.

MONTREUX CONVENTION (1936)

Agreement of 1936 giving Turkey sovereignty over the Turkish Straits.

Under the Treaty of Lausanne (1923), the Turkish Straits (the Dardanelles, the Sea of Marmara, and the Bosporus) were demilitarized and placed under international control. This settlement infringed on Turkish sovereignty, and after repeated demands by Turkey to reform the relevant clauses of the Lausanne agreement, the Montreux Convention was signed on 20 July 1936. Under the terms of the convention, sovereignty of the Straits reverted to Turkey, and the Turks were permitted to remilitarize the Straits as they saw fit. Furthermore, passage of the Straits in times of war was to be restricted to nonbelligerents. All of the Lausanne powers endorsed the convention, with the exception of Italy and the addition of the USSR. Britain was represented by Foreign Secretary Anthony Eden. Alarmed by the growing power of Nazi Germany, Eden and the other European signatories felt it expedient to mollify Turkey.

MOROCCAN–ALGERIAN WAR

Conflict in October and early November 1963 along the northern frontier between the two countries.

The causes of the Moroccan-Algerian War were rooted in colonialism, decolonization, and nationalism. Morocco considered the border established by colonialists artificial. During the Algerian War of Independence (1954–1962), the Provisional Government of the Algerian republic (Gouvernement Provisional de la République Algérienne; GPRA) agreed in July 1961 to address the frontier question after the liberation struggle. Ahmed Ben Bella further put off this issue as he attempted to secure power in 1962–1963. A revolt in Kabylia in late September 1963 offered Morocco an opportunity to seize the contested land. This resulted in a brief conflict, with Algeria receiving the heavier blows (60 dead and 250 wounded according to the French newspaper *Le monde*). Mediation by the Organization of African Unity (OAU) produced a cease-fire in early November. In 1972 Morocco and Algeria signed conventions that delineated the frontier and agreed to the common exploitation of natural resources. Algeria ratified the agreements, but Morocco did not and subsequently engaged in its Western Sahara expansion (beginning with the Green March in 1975). The Western Sahara War included a brief engagement between Moroccan and Algerian troops in 1976. In the late 1980s, bilateral relations improved as demonstrated by Morocco's ratification of the 1972 conventions, the full restoration of diplomatic relations (1988), and the formation of the Arab Maghrib Union (1989).

MOROCCAN QUESTION

Name given to the final phase of European imperialist rivalries over Morocco, 1900–1912.

Morocco owed its continued independence into the twentieth century to its rugged topography and combative rural populations, as well as the ability of Moroccan diplomats to play off the European powers against one another. In 1900 the diplomatic stalemate was broken when France annexed territories claimed by Morocco.

Each of the chief European rivals for Morocco—France, Britain, Spain, Germany, and Italy—cited reasons why its claims on Morocco should be recognized. Each cited historic and material interests, as well as nationalist ones, in justification. None took any cognizance of Moroccan wishes in the matter.

Between 1900 and 1904, French Foreign Minister Théophile Delcassé persuaded Spain, Italy, and Britain to renounce claims to Morocco by a series of bilateral agreements. Germany was not consulted and sought to compel France to grant it comparable territories elsewhere, which it did in 1911. By the 1912 Treaty of FES, an independent Morocco ceased to exist. The Moroccan Question is generally portrayed as a chapter in the diplomatic history of Europe. But Moroccans also played a major role in both its unfolding and its ultimate resolution. Sultans Abd al-Aziz (1884–1908) and Abd al-Hafid (1908–1912) opposed French ambitions, but ended up acquiescing to the inevitable. Moroccan official pusillanimity and European troop landings between 1902 and 1912 were opposed by various popular rebellions, peasant revolts, and millenarian movements.

MOROCCO: OVERVIEW

Arab kingdom in the extreme northwest corner of Africa.

Morocco is bounded on the west by the Atlantic Ocean, on the north by the Mediterranean Sea, on the east and southeast by Algeria, and on the south by Western Sahara (claimed by Morocco). Spain administers two urban enclaves in northern Morocco—Ceuta and Melilla—and the offshore islands of Alhucemas, Penon de Velez de la Gomera, and Chafarinas. Most of Morocco was a protectorate of France from 1912 until 1956; northern Morocco was administered by Spain during that period. An 1860 war between Spain and Morocco established Spain's claim to Ifni, a small strip of land on the Atlantic coast of southern Morocco. The district of Tarfaya, near Western Sahara, became Spanish with the 1912 Treaty of Fes. Spain ceded Tarfaya to Morocco in 1958 and returned Ifni in 1969. Muhammad VI has ruled Morocco since 1999.

Geography and Climate

Morocco has an area of 178,620 square miles (446,550 sq km). It is dominated by the Atlas Mountains, which run through the center of the country from southwest to northeast, and the Sahara Desert, which dominates its frontier with Algeria, Western Sahara, and Mauritania. The Atlas chain comprises the High, Middle, and Saharan ranges, as well as the Rif Mountains along Morocco's Mediterranean coast. The northern Atlantic coastal plains of the Gharb constitute the chief agricultural area. Others include the Tadla plain of the Oum al-Rbi'a (Mother of spring) River south of Casablanca, the Haouz plain of the Tensift River near Marrakech, and the Sous River valley in southwestern Morocco. These rivers, navigable only by small boats, provide water for irrigation. The Mediterranean and Atlantic coasts have relatively moist, mild winter, and hot, dry summers. Eastern and southern Morocco have semiarid climates governed by the Sahara's heat and winds. Higher elevations of the Atlas Mountains, particularly the High Atlas between Marrakech and Ouarzazate, can be bitterly cold, and remain snow-covered year round. Morocco's highest peak, Mount Tubkal, is easily accessible from Marrakech and is a popular skiing area.

People, Language, and Religion

Morocco has 26 million people according to the last available census (1994), but later estimates place the population at about 30 million. About 55 percent of Moroccans live in urban areas, primarily in Casablanca (2,941,000), Rabat (1,386,000; the nation's capital), and Fez (775,000). Other major towns include Marrakech (746,000), Oujda (679,000), Agadir (550,000) Meknes (530,000), Tangiers (526,000), Kenitra (449,000), Beni-Mellal (387,000) and Safi (376,000). The population growth rate is 1.9 percent. Nearly 48 percent of the population is under twenty-one. Life expectancy for males is sixty-six; for females, seventy. Morocco's illiteracy rates are among the highest in North Africa: 34.4 percent for men and 62.8 percent for women. Most Moroccans are engaged in agriculture and fisheries, but an increasingly large number are in tourism, the liberal professions, commerce, industry, and government.

Morocco's ethnic groups are Arabs, mixed Arab-Berbers who identify as Arabs, and Berbers. "Berber," primarily a linguistic term, applies to about 35 percent of the population. The three primary Berber dialects are Tarrifit (spoken in the Rif), Tamazight (spoken in the Middle Atlas and the east), and Tachelhit (also called Chleuh, spoken in the High Atlas and the south). The Moroccan constitution does not recognize any of these dialects.

Morocco's national language is Arabic, but French is widespread in the media, commerce, education, diplomacy, and most government ministries. Moroccan Arabic differs from the Arabic of Algeria. It is characterized by an intense clipping of vowels and some vocabulary that is not understood outside of Morocco. Many Moroccans have a rudimentary understanding of the Egyptian dialect because films and television shows produced in Egypt are widely popular.

Islam is the state religion. Progovernment imams are appointed to all mosques under the direction of

Map by XNR Productions, Inc. The Gale Group.

the ministry of religion. Important mosques, such as the Qarawiyin in Fez and the Kutubiyya in Marrakech, receive substantial endowments from the state. Most Moroccans profess Sunni Islam. A small Jewish community (estimates vary from 5,000 to 20,000) exists in Morocco and enjoys religious freedom and civil liberties. Following historical precedents, the monarch continues to include Jews within his circle of personal advisors. King Muhammad VI, as the symbol of Moroccan Islam, maintains the title *Amir al-Mu'minin* (Commander of the Faithful). He endeavors to buttress his religious legitimacy through ostensible piety, simplicity, and generosity. Closer to the masses than his father was, Muhammad VI is often referred to as the "king of the poor." His donations as well as his publicized visits to hospitals and crowded medinas have had a strong impact on the Moroccan population.

Islamism generally appears to be a growing force in Morocco. The Party of Justice and Development (PJD), a political party of Islamist base that gained legal status in 1997, is currently the third most powerful in the Chamber of Representatives. The most popular Islamic movement of the country—though still considered illegal—is al-Adl wa al-Ihsan (Justice and Benevolence). Its leader, Abdessalam Yacine, spent eleven years under house arrest until King Muhammad VI freed him in 2000. Events in the first years of the twenty-first century revealed the existence of Islamist armed groups in Morocco and their possible link to transnational Islamism. The terrorist attacks that killed forty-four people in Casablanca in May 2003 were attributed to al-Sirat al-Mustaqim (the Straight Path), a small Islamist group suspected of being loosely connected to al-Qaʿida.

Economy

Since 1992 Morocco has been dealing with recurrent droughts that have deeply affected the agricultural industry and, ultimately, the country's overall economic performance. About 40 percent of the labor force is engaged in agriculture (especially citrus and cereals), fishing, and raising livestock. These sectors of the economy contribute over 15 percent of gross domestic product. The decreasing fish stock in the Atlantic Ocean has led to diplomatic tensions with Spain and the European Union regarding the renewal of licenses to fish in Moroccan waters. Manufacturing is geared to phosphate production, but higher fuel costs have sparked inflation, and phosphate price declines have reduced export earnings. Tourism has been steadily growing since the 1980s and has become an important source of jobs and hard currency. Emigration is Morocco's safety valve for its unemployed population. About half a million to one million Moroccans reside in Europe as expatriate workers; their remittances are an important source of foreign exchange for Morocco. Among the country's most pressing economic problems are urban unemployment (which reached 20.2 percent in 2001) and the increasing foreign debt, which amounts to nearly eighteen billion dollars. In 1995 the privatization program supported by the International Monetary Fund (IMF) and the World Bank was extended to key state firms such as the Office Chérifien des Phosphates and Royal Air Maroc. These privatizations were intended to attract foreign investment and to cover budget deficits. Yet the results are not fully satisfactory to the IMF because the Moroccan government maintains its expensive program of food subsidy.

History

Between 4000 and 2000 B.C.E., Berber peoples arrived from the Sahara and Southwest Asia. Most lowland Berber peoples eventually Arabized and Islamized. Beginning in the twelfth century B.C.E., Phoenicians began to explore the North African coastline. Their early coastal enclaves have been found in northern Morocco. By the late first century B.C.E., Rome's power had reached northern Morocco, and by the middle of the first century C.E., Morocco was the province of Mauretania Tingitana. The Vandals moved into North Africa in the 420s and ended Rome's presence. The Arabs' invasion of the late seventh and early eighth centuries transformed Morocco into an Islamic society with a powerful Arabic-speaking ruling class. Ruling dynasties were the Idrisids of Fez (early ninth century), the Almoravids and the Almohads of Marrakech (eleventh to thirteenth centuries), the Saʿadis (sixteenth century), and the Alawite dynasty (seventeenth century to the present).

Throughout the nineteenth century, Morocco integrated into the capitalist world economy on mostly unfavorable terms. The country also became the object of diplomatic rivalries among European powers. Britain pressured the sultans to open Morocco to commerce and free trade but preferred to keep a weak sultanate south of the Strait of Gibraltar. Military and administrative reforms failed to reinforce Morocco's position vis-à-vis European countries. Defeated by the Spanish armies in 1860 after a border conflict, Sultan Muhammad IV (r. 1859–1873) signed treaties that led his country to bankruptcy, financial subservience to Europe, and increasing foreign occupation.

France secured its preponderance in Morocco between 1900 and 1904 through various bilateral agreements with Italy, Spain, and Britain. Most of Morocco became a French unofficial protectorate until indigenous protests provided Paris with a

In the fourteenth century, the Marinid dynasty began construction of the Chella fortifications within the city of Rabat. The complex contains a mosque, zawiya (religious quarters), and numerous royal tombs. **© Robert Holmes/Corbis. Reproduced by permission.**

pretext for further intervention. The 1912 Treaty of Fes officially divided Morocco into a protectorate under France over most of the country and a protectorate under Spain over the north, including the Rif Mountains. The country, however, was not yet conquered. Once the protectorates were established, the military forces of Spain and France became preoccupied with suppressing rebellion primarily among the highland Berbers of the Rif and the Atlas mountains. The troops of France began a long and systematic campaign of subjugating Atlas Berber rebels. Spanish troops, with assistance from France, finally broke the Rif rebellion of Abd al-Karim in the late 1920s and consolidated Spain's rule from the capital of Spanish Morocco at Tetuan. France's painstaking campaign, named "pacification," ended in 1934.

Moroccan nationalism gained momentum when both religious reformists and Westernized elites united to oppose the Berber *dahir* (decree) of 1930. This divide-and-rule legislation intended to marginalize Berber Muslims by placing them under the jurisdiction of French rather than Islamic law. The nationalists founded the Istiqlal Party in 1944 and began asking for formal independence. Sultan Muhammad V tacitly supported their efforts, and as a result was exiled from 1953 to 1955. Morocco gained its independence in 1956, and the following year Muhammad V changed the Sultanate of Morocco to the Kingdom of Morocco. In the nationalist fervor that accompanied the first few years of independence, the king was able to push through a law making a one-party state illegal. This enabled the monarchy to break the power of Istiqlal by encouraging leftist elements to splinter off and create the National Union of Popular Forces (UNFP). The monarchy supported the fractionalization of political parties and the emergence of new ones in order to split the opposition. When Muhammad V died in 1961, Hassan II became king. Opposition to his personal rule and to the corruption within the

Morocco's port city of Tangiers is a popular tourist destination, due partly to its close proximity to Europe. The sunny city, with its large port, has always been an important commercial and strategic site. © PATRICK WARD/CORBIS. REPRODUCED BY PERMISSION.

system peaked in 1971 and 1972 with two failed coup attempts, one by army cadets and a second by air force personnel.

King Hassan's resolve to recover Western Sahara—a project that also aimed at bolstering his own position—led to a crisis with Spain when he ordered a Green March of 300,000 Moroccans in October 1975. His strategy bore almost immediate fruit, for in November Spain negotiated a withdrawal of its forces and the reversion of the area to Morocco and Mauritania. In February 1976 Morocco received the northern two-thirds and Mauritania gained the southern third.

In the meantime, indigenous inhabitants of Western Sahara (who call themselves Sahrawis, "Saharans") had undertaken a war of national liberation from Spain, establishing the Popular Front for the Liberation of Saqiya al-Hamra and Rio de Oro (POLISARIO), with a national government in exile (Saharan Arab Democratic Republic; SADR) in Algeria. As Morocco's forces replaced those of Spain in 1976, POLISARIO irregulars began a guerrilla war against Morocco that lasted until 1991. The long-delayed referendum on Saharan self-determination has still not taken place because of discrepancies concerning voter identification.

From 1992 onward, Hassan II embarked on a series of political reforms that gave opposition parties (including the Islamists) more participation in the government. After the legislative elections of 1997, the king invited the leader of the Socialist Union of Popular Forces (USFP), Abderrahmane Youssoufi, to become prime minister. The accession of Muhammad VI to the throne in July 1999 occurred peacefully. Although he continued to enforce the centrality and the inviolability of kingship, Muhammad VI furthered the political reforms. He removed several of his father's clients from office and freed more political prisoners.

LARRY A. BARRIE
UPDATED BY HENRI LAUZIÈRE

MOROCCO: CONSTITUTION

A series of constitutions, drafted in 1962, 1970, 1972, 1992, and 1996, that preserve the monarchical nature of the Moroccan regime.

The constitutional history of independent Morocco originated in a tug-of-war between the increasingly strong monarch and a heterogeneous group of nationalists. From 1956 onward, the once-united nationalists began to voice divergent views regarding the expected nature of the independent Moroccan polity. Amid their rivalries, King Muhammad V consolidated the monarchy and gradually reduced the hopes for parliamentary democracy. In return, he promised a written constitution and in 1960 appointed a constituent council to carry out this task. The first Moroccan constitution, however, did not originate from this body. King Hassan II, who succeeded his father in 1961, bypassed the council and asked French constitutional jurists to draft the constitution. Boycotted by the Union Nationale des Forces Populaires (UNFP), the first constitution was adopted by a majority of 97.86 percent in a national referendum in 1962. The secretive and unilateral origins of this document still constitute a thorny issue in Moroccan politics. The core of the 1962 constitution has remained unadulterated. The provisions concerning the monarchical nature of the regime and the basic prerogatives of the king have been carried over to the constitutions of 1970, 1972, 1992, and 1996. Therefore, legal analysts refer to these dates interchangeably as either the promulgation of new constitutions or mere constitutional revisions.

The constitution of 1962 was modeled after the French constitution of 1958 but granted even greater powers to the head of state. The document instituted hereditary monarchy (art. 20) and specified that the nature of the state could not be subject to constitutional revision (art. 108). The king was acknowledged as "commander of the faithful" *(amir al-muʾminin)* while his person was declared sacred and inviolable (art. 23). Among other prerogatives, the monarch gained the power to nominate and dismiss the prime minister and the ministers. The king also obtained the right to declare a state of emergency through the famous article 35, which he used in 1965 to dismiss representative institutions. Indeed, the constitution had created a bicameral parliament consisting of a chamber of representatives (two-thirds of which were directly elected) and a senatelike chamber of councillors nominated through electoral colleges. Theoretically, this parliament was relatively strong insofar as both chambers were to be consulted prior to the implementation of any royal legislative decree (art. 72). Yet the king had the capacity to dissolve the chamber of representatives (art. 27) and thus to paralyze the parliament. Hassan II held the upper hand at all levels.

The second constitution of 1970 was promulgated after a long hiatus of five years during which the king enforced a state of emergency. Repeatedly confronted by student strikes and protests, Hassan II attempted to solve the crisis by reviving the constitutional legitimacy of the kingdom. The new constitution was an authoritarian compromise. The bicameral system was abandoned and replaced by the creation of a single chamber of representatives whose composition was left unspecified (art. 43). In reality, only one-third of this new chamber would be directly elected by universal suffrage. Because the new constitution no longer specified a deadline for

the establishment of the chamber, the elections could be postponed indefinitely. The reduced parliament was less powerful. Hassan II no longer needed to obtain the approbation of the chamber before issuing royal legislative decrees. He also became the sole person (art. 97) capable of initiating constitutional revisions—a privilege he had previously shared with the prime minister and the parliament.

After the attempted coup of 1971, however, it seemed unwise for the regime to base its legitimacy on constitutional monarchism while significantly undermining the role of the government and the chamber. To correct this flaw, a third constitution was submitted in 1972. It was less authoritarian than the second one, though less generous than the first one. The 1972 constitution granted more legislative powers to the chamber and the prime minister in the economic, social, and cultural realms. Also, the council of ministers was to be consulted on key issues such as a declaration of war, a declaration of the state of emergency, or a project of constitutional revision (art. 65). In principle, the new constitution allowed for more participatory democracy. Two-thirds of the chamber would be elected by universal suffrage (art. 43), as it was in 1962. Yet the elections expected for 1972 were delayed until 1976.

Besides two amendments voted in 1980 with respect to the regency council and the postponement of the elections, there was no major constitutional change until the early 1990s. Subject to increasing criticism from both Moroccan politicians and European human-rights activists, the king undertook a process of political liberalization. The fourth constitution of 1992 acquiesced to some of the opposition's demands. The preamble, for instance, addressed the kingdom's commitment to human rights. A constitutional council was created (title VI) to supervise the constitutionality of Moroccan politics and elections. In addition, both the king and the chamber were allowed to create temporary courts of inquiry (art. 40). The new constitution balanced the relationship between the government and the assembly. The prime minister obtained the right to nominate ministers, and the chamber gained the power to debate and vote the government's platform.

Morocco's last constitution was adopted by referendum in 1996. Hassan II, whose health was declining, wished to hasten the process of political reform. New compromises were intended to convince the opposition parties (mainly the USFP and the Istiqlal) to participate in government. Thus the 1996 constitution reinstated the bicameral system of 1962 but changed the system of representation. All of the members of the chamber of representatives must now be elected by direct universal suffrage. The revived chamber of councillors is modeled after the German system of *länders*; its members, who are still indirectly elected, are supposed to represent the various regions of Morocco and the most important socioeconomic groups. Even though the king did not relinquish his key prerogatives (he can still dissolve both chambers separately), some new constitutional clauses are meant to reinvigorate parliamentary democracy. An important one states, for the first time, that sovereignty belongs to the nation (art. 2).

Morocco: Political Parties in

Political parties have been an integral part of Morocco since the early 1930s.

The severe constraints under which the parties have had to operate, the parliament's lack of real power vis-à-vis the monarch, and the fragmented nature of Morocco's society have combined to prevent political parties from establishing a basis of support beyond particularist, sectoral interests, and personal ties and have rendered them vulnerable to both manipulation and repression. Overall, Morocco's political parties have served a significant, albeit adjunct, function in what has been essentially a monarchy-dominated, traditional, patrimonial system of rule. This continued to be the case at the beginning of the twenty-first century, notwithstanding the increasing liberalization of public life during the

For the 1997 parlimentary elections in Morocco, vote turnout was higher than expected, with over 50 percent of the population casting ballots. © PARROT PASCAL/CORBIS SYGMA. REPRODUCED BY PERMISSION.

1990s, and particularly the establishment, with the king's blessing, of the *alternance* government in 1998, which was headed by longtime left-wing opposition leader Abderrahmane Youssoufi.

The Comité d'Action Marocaine (CAM) was established during the early 1930s to promote nationalist demands. A later incarnation, the Istiqlal Party, played a central role in the nationalist struggle during the decade before Morocco's independence in 1956. The Istiqlal and its offshoot, the Union Nationale des Forces Populaires (UNFP), led a vigorous challenge during the first decade of independence to the king's efforts to rule as well as reign. The result was an unmitigated triumph for the king. Opposition political parties were coopted and repressed. Methods of repression included bannings, arrests, imprisonments, and, in the case of the UNFP's Mehdi Ben Barka, assassination. In addition, the monarchy supported the establishment of the Mouvement Populaire (MP), the short-lived Front pour la Défense des Institutions Constitutionelles (FDIC), the Rassemblement National des Indépendants (RNI), and, in the 1980s, the Union Constitutionelle (UC), in order to counter the opposition.

From the mid-1960s until his death in 1999, King Hassan II governed with the assistance of the promonarchy groupings and parties. From the mid-1970s, he had considerable success in controlling the pace of political change, including the holding of general elections at intervals suitable to his political requirements (1977, 1984, and 1993 and 1997), pushing through cosmetic constitutional reforms, and mobilizing nearly the entire political spectrum on behalf of his Western Sahara policies. Prior to the electoral reform of 1997, two-thirds of the members of parliament were elected by popular vote, and one-third indirectly, by various corporate and professional bodies. The system was heavily subject to manipulation.

The Istiqlal, the Union Socialiste des Forces Populaires (which had split in the early 1970s from the UNFP), and the Parti du Progres et du Socialisme (PPS) played the political game, to a large degree, according to the king's rules: Between 1977 and 1984, Istiqlal even participated in the ruling coalition. At the end of the 1980s Morocco's diplomatic and military successes in regard to Western Sahara, sustained macroeconomic gains, and successful restructuring of the external debt strengthened the regime's confidence in its ability to loosen its grip a bit. On the other hand, widespread poverty, Western pressure regarding human-rights issues, and the specter of increasing radical Islamic activism compelled the regime to broaden political participation. The most important Islamic grouping, Jamiʿat al-Adl wa al-Ihsan (the "Justice and Charity Group") is officially banned from political life but is tolerated by the regime. Its supreme guide, Shaykh Abdsalem Yasine, was held in custody for most of the last quarter of the twentieth century, and finally released in 2000 by King Muhammad VI.

In May 1992 the Istiqlal, the USFP, the PPS, the rump UNFP, and the splinter Marxist-Leninist Organisation pour l'Action Democratique et Populaire (OADP) formed the Democratic Bloc *(al-kutla),* a parliamentary group pressing for constitutional and electoral reform, and especially for enhancing the powers of parliament. Three of the center-right parties—the UC, the MP, and the Parti National Démocratique (PND)—formed the Entente Nationale. Both the Istiqlal and the USFP achieved gains in the 1993 parliamentary elections. Istiqlal won 43 seats in the direct balloting and the USFP won 48. Both suffered drops in the indirect balloting. Each had achieved 52 seats, making them roughly equal in size to the UC and MP as the largest parliamentary fac-

tions. King Hassan offered the *kutla* opposition a total of 19 ministerial positions in his proposed new cabinet, but reserved the key posts of prime minister and the interior, foreign, finance, and justice portfolios for his close associates. Both the Istiqlal and the USFP refused the terms and remained in the opposition. At first, the king established a government of nonparty technocrats. In early 1995 Hassan offered the prime ministership to Istiqlal head Muhammad Boucetta, but the continued presence of interior minister and regime strongman Driss Basri was the primary sticking point, and the offer was rejected. Subsequently, a new government was formed that included 20 representatives from the Entente "loyalist" parties.

The 1997 elections marked a watershed in Moroccan political life. Constitutional reform had resulted in the establishment of a second house of parliament, and the existing chamber of deputies would now be elected entirely by popular vote. Morocco's system of "authoritarian pluralism" was clearly modified, and the *kutla* parties had chosen to accept the path of incremental reform. In the 1997 elections the USFP won the most seats (56 out of 325) and the most votes (just under 14 percent) of any single party. The Istiqlal dropped to 32 seats, occasioning charges of voter fraud. Other leading parties in the election were the UC with 50 seats, the RNI with 46 seats, and the MP with 40. A primarily Islamist party, the Mouvement Populaire Démocratique et Constitutionnel (MPDC) won 10 seats. The regime's sanctioning of Islamist political activities was part of its time-honored efforts to divide and control the fragmented political system. The results of the elections allowed King Hassan to realize his program of democratic *alternance,* namely the rotation of political power between two major blocs. The new government, headed by the USFP's Abderrahmane Youssoufi, was formed in 1998, and included representatives from the Istiqlal, the centrist RNI, the Mouvement National Populaire, and smaller parties. A number of cabinet posts remained in the hands of the "king's men," including Interior Minister Driss Basri.

The Youssoufi *alternance* government began with high hopes for the genuine democratization and liberalization of political life and the promotion of greater equality and economic prosperity. By the end of its more than four years in office, the glow had worn off; the pace of change remained slow, and public affairs were still dominated by the palace, with parliament having little influence. In the 2002 parliamentary elections the USFP dropped 7 seats, to 50, the Istiqlal gained 16 seats, to 48, the UC lost 34 seats, to 16, the RNI dropped 5 seats, to 41, and the MP lost 13 seats, to 27. Most noticeable was the leap forward by the moderate Islamist party, now called the Parti de la Justice et du Developpement (PJD), which became the third-largest party with 42 seats. King Muhammad VI designated his confidant and interior minister Driss Jettou (Basri had been removed in November 1999) as prime minister, and he formed a broad cabinet that included representatives from seven parties. The decision to appoint a prime minister who was not an elected party official confirmed anew the secondary status of Morocco's political parties, notwithstanding the regime's expressed commitment to liberalization.

MORRISON–GRADY PLAN (1946)

An Anglo-American report calling for the division of Palestine into semi-autonomous Arab and Jewish regions.

At the end of World War II, the British position in Palestine, its mandate, was becoming untenable.

With thousands of European Jewish refugees needing to immigrate to Palestine, Britain and the United States dispatched a commission of inquiry to that territory in April 1946. In July, headed by Herbert Morrison, representing Britain's Labour government, and Henry Grady, representing the United States, the commission drew up its report in London.

Called the Morrison-Grady Plan, the report suggested a division of Palestine into semi-autonomous Arab and Jewish regions, while the British high commissioner would remain in control of defense, foreign relations, customs, and immigration. The plan also called for a one-year quota of 100,000 Jewish refugees to enter Palestine, after which time the immigration quotas would be set by the British. Morrison-Grady would have meant an increase of British control over Palestine and was rejected by both the Arabs and the Jews.

MOSHAV

Collective village, based on agriculture, in Israel.

The moshav (plural, moshavim) is a collective village, of which there were 410 in 1991 with a combined population of 152,500. The collective provides agricultural inputs and marketing services to the families living there and the various moshav movements have national and regional organizations to provide these services. Land on the moshav is divided between the member families. In the early years, hired labor was banned and communal cultivation of some land prevailed. This changed in the 1960s and 1970s when Arab labor became an important part of the economy of many moshavim. The moshavim have their own bank, savings and pension schemes, insurance company, and regional purchasing organizations.

The foundations of the moshav go back to 1919, when Eliezer Yaffe published a pamphlet suggesting the creation of moshavim on nationally owned land, with mutual aid, cooperative purchasing and marketing, and the family as the basic unit. Like the kibbutz, the moshav was to be a pioneering institution, emphasizing national and social rejuvenation for the Jewish people and the Land of Israel. The first moshav was founded at Merhavia in the Galilee. Yaffe's ideas were influential in the founding of the second moshav, Nahalal, in 1921, the model for future settlements of this kind. Between 1949 and 1956, 250 moshavim were set up to house and provide employment for immigrants mainly from North Africa and Asia, who were not attracted to the communal life of the kibbutz, but for whom agriculture was the only possible basis for employment. By 1970 the moshavim had a population of 100,000. They had, in terms of numbers of settlements and total population, become more important than the kibbutzim.

During the 1980s, many of the moshav movement's economic organizations, responsible for marketing and purchasing inputs, went bankrupt as a result of overexpansion and high interest rates. Many moshavim were badly affected, and the mutual guarantee, by which each member or family supported other members, fell into disfavor. During the 1980s, an increasing number of urban families moved to moshavim; they commute to towns and are not involved in agriculture.

Members of each moshav elect a management committee that organizes the provision of economic services as well as education and health services to the community. The moshavim are also affiliated with different political parties, the largest moshav is affiliated with the Labor Party. Others are affiliated to religious parties.

The *moshav shitufi* is a moshav with many of the characteristics of the kibbutz. In 1991 there were 46 *moshav shitufi* with a total population of 12,600. Production is organized communally and members' work is determined by an elected committee. Consumption is private, with families eating at home

and providing their own domestic services, as on other moshavim and in contrast to the kibbutzim.

MOSQUE

Islamic place of worship.

Mosque is an anglicized French cognate for the Arabic word *masjid,* which literally means "place of prostration." In the most abstract sense, any private or public space properly prepared for the purposes of performing the five obligatory prayers of Islam *(salat)* constitutes a mosque. The term *mosque,* however, is most commonly used to refer to a space which has been permanently or semipermanently demarcated as a place of public Muslim worship.

While many mosques share such common features as a prayer niche *(mihrab),* pulpit *(minbar),* and area for performing ritual ablutions, the size, layout, and architecture of any given mosque is usually particular to its own specific historical, social, and cultural context. In many well-established Muslim communities, the largest and most centrally located mosque will often function as the *masjid al-jami,* or central mosque, where a large number of worshippers gather for the Friday noon congregational prayer *(salat al-jumʿa)* and sermon *(khutba).* Not unlike their counterparts in other religious traditions, mosques and larger mosque complexes often serve as a primary locus for a variety of communal gatherings and activities, ranging from social-service programs and political rallies to Qurʾan study groups and scholarly lectures.

MOSSAD

Israel's Institute for Intelligence and Special Tasks.

The Mossad is Israel's central intelligence agency, responsible for intelligence collection, covert action, and counterterrorism outside the borders of the state. It was founded in 1951, under orders from Prime Minister David Ben-Gurion, by Reuven Shiloah, a senior member of Israel's diplomatic corps. It replaced a number of organizations, including the SHAI (Sherut Yediʿot), the intelligence service of the Haganah, and the political department of the Jewish Agency, which had been created by the political leadership of the Yishuv (Jewish community in Palestine).

Responsibilities and Leadership

The division of functions and the boundaries between the various intelligence agencies had for many years been unclear. The founding of the Mossad left all official and overt diplomatic activities to the Ministry of Foreign Affairs; military intelligence, intelligence analysis, and information assessment to the Intelligence Division (Aman) of the Israeli Defense Force (IDF); counterinsurgency and counterespionage inside the country to the Security Service (Shin Bet); and counter-criminal intelligence to the police. All covert activities and espionage abroad were assigned to the Mossad.

The head of the Mossad, whose identity was for many years kept secret, was directly responsible to the prime minister and served as chairman of the coordinating committee of all heads of Israel's intelligence services. In 1952, Shiloah was replaced by Isser Harel, until then the head of the Shin Bet, who went on to serve as director of the Mossad for more than a decade.

Despite formal definitions of the respective realms of activities, it took some years and some internecine struggles among the various services for the exact boundaries to be established. Thus, for example, military intelligence continued to keep a special unit that operated agents across the borders and was responsible for the ill-advised activation, in

Israel prime minister Ariel Sharon (center) toasts with recently appointed head of the Mossad spy agency Meir Dagan (left) and former head Ephraim Halevy, 30 October 2002. © REUTERS NEWMEDIA INC./CORBIS. REPRODUCED BY PERMISSION.

the summer of 1954, of its espionage ring in Egypt, which ended in a fiasco that later became known as the Lavon Affair. A public scandal erupted when it was discovered that Harel had ordered the planting of recording devices in the office of the leaders of the left-wing MAPAM Party, which followed a pro-Soviet line, under the false suspicion that MAPAM was implicated in subversive activities. On the other hand, Mossad agents managed in 1956 to obtain the full record of Nikita Khrushchev's famous speech at the Twentieth Congress of the Soviet Communist Party, in which some of the horrors of Stalin's rule were disclosed. This was shared with a grateful CIA in Washington.

Over the years Harel gained great personal influence over some key political leaders. He was also called upon to execute some unconventional and dramatic operations abroad. One such was the discovery and rescue of a boy who had been kidnapped by his ultra-orthodox grandfather, who hid the boy in France in order to bring him up according to strict Orthodox traditions. Harel's most famous operation was the kidnapping of Adolf Eichmann, the high-ranking Nazi SS commander who was responsible for organizing the extermination of many hundreds of thousands of European Jews during World War II. Eichmann was captured in his home in Buenos Aires, smuggled to Israel, tried in Jerusalem, and sentenced to death in 1962.

In 1963, Harel came under severe criticism by David Ben-Gurion for his disproportionate response to the involvement of some ex-Nazi officers in unsuccessful Egyptian attempts to develop long-range missiles and unconventional weapons. He was obliged to resign in the spring of 1963.

Many subsequent heads of the Mossad were army generals who came from the ranks of the IDF. The man who replaced Harel was general Meir Amit, previously the director of military intelligence. Amit served as Mossad's chief from 1963 to 1968. Among his noteworthy activities was a trip to Washington to secure a cautious go-ahead from the Johnson administration before Israel launched its offensive in the June 1967 Arab–Israel War. Subsequent heads of the Mossad were Zvi Zamir (1968–1974), Yitzhak Hofi (1974–1982), Nahum Admoni (1982–1990), Shabtai Shavit (1990–1996), Dani Yatom (1996–1998), and Ephraim Halevy (1998–2003).

International Relationships and Operations

During the 1960s, the Mossad developed close relations with SAVAK, the intelligence service of Iran under the shah, and supported the Kurds in their rebellion against the officers' regime of Baghdad. Over the years, the Mossad managed to capitalize on its widespread image as one of the world's most efficient intelligence agencies and created close relationships with many other national agencies, not the least important of which was that with the CIA.

After the June 1967 war, the Mossad concentrated much of its resources on countering Palestinian terrorist activities. Thus, for example, it assassinated most of the al-Fatah operatives involved in the massacre of Israeli athletes at the 1972 Munich Olympics. Mossad agents also killed Khalil al-Wazir (Abu Jihad), Yasir Arafat's deputy in charge of military affairs, in his home in Tunis. Over the years, the Mossad also succeeded in placing its spies in a number of high positions in Arab capitals. Some of its successes may not be revealed for many years to come, but the spies who were eventually caught prove the point. The most important such was Eli Cohen, who established himself in Damascus, developed close relations with the Syrian elite, and reported invaluable information back to Israel before he was apprehended and hanged in 1965. Two more outstanding successes added to the towering prestige of the Mossad: the landing of a MiG-21 advanced Soviet combat plane from the Iraqi air force at an Israeli airport in 1966, and the January

1969 whisking away of three missile boats from the French port of Cherbourg, where they had been built for Israel but were being detained under an embargo declared by President Charles de Gaulle after the outbreak of the June 1967 Arab–Israel War.

The Mossad has also been involved in many nonintelligence operations, in particular with regard to clandestine political relations and endangered Jewish communities. Mossad agents undertook secret negotiations with Egyptian, Jordanian, Lebanese, and other Arab leaders long before the first peace treaty was concluded with Egypt in 1979. The Mossad also helped diaspora Jewish communities organize self-defense and was instrumental in the exodus of Ethiopian Jews via Sudan to Israel. It was also responsible for Israel's relations with Lebanese politicians and with Maronite militias, eventually paving the way for the IDF invasion of Lebanon in 1982.

On the eve of the October 1973 war, the Mossad gave the government an early warning of an imminent Egyptian offensive against the Bar-Lev Line, but military intelligence did not take the warning seriously. The failure of military intelligence to make the correct assessment during that war brought about changes in the mandate of Israel's various intelligence agencies. A unit for research and information assessment was added to the Mossad and to the Ministry of Foreign Affairs for the purpose of cross-assessment and verification.

The Mossad's main functions, and apparently also its main departments, are:

- information collection, utilizing a network of spies and other agents operating in stations around the world
- political action and intelligence liaison
- psychological warfare, propaganda, and disinformation
- research and assessment
- special operations, such as sabotage, assassination, and other activities, especially beyond Israel's borders.

A well-known example of special operations was the failed attempt to assassinate Khalid al-Mashʿal, head of the political bureau of HAMAS in Amman, Jordan. On 4 October 1997, Mossad agents injected Mashʿal with a toxic substance, but his life was saved when, in response to heavy Jordanian and U.S. pressure, Prime Minister Benjamin Netanyahu sent a physician to administer an antidote to the poison. The affair caused not only a sharp deterioration in Israeli–Jordanian relations but also an uproar in Israeli political circles.

In what may signal a decline in its mythical infallibility, the Mossad has been faulted for failing to anticipate the outbreak of the al-Aqsa intifada in September 2000. On the other hand, in recent years senior Mossad officials have been intensively involved in the evolving peace process with the Palestinians. Mossad chiefs Ephraim Halevy and General Dani Yatom (along with Shin Bet's Israel Hasson) began to appear in the media in the unusual roles of unofficial peace negotiators. Since these activities exposed the head of the Mossad to public view, the government decided to make the names of past and future directors public. In 2002, Prime Minister Ariel Sharon nominated his longtime friend General Meir Dagan, who had served in the IDF under him, to replace Ephraim Halevy as Mossad's director.

MOSSADEGH, MOHAMMAD

[1882–1967]

Iranian politician and leading speaker for the nationalist-democratic movement; prime minister, 1951–1953.

Mirza Mohammad Khan, later called Mossadegh (also Mosaddeq, Musaddiq) al-Saltaneh, was born in Tehran in 1882, into a wealthy family connected to the bureaucracy of the Qajar dynasty. His father, Mirza Hedayatollah Vazir Daftar, belonged to the Ashtiyani family, many of whom, such as Qavam and Vosuq, became important public figures in nineteenth- and twentieth-century Persia, now Iran. His mother Najm al-Saltaneh (known as Shahzadeh Khanom), was Prince Regent Abbas Mirza's granddaughter. Mossadegh married at age nineteen Khanom Zia al-Saltaneh, from an Islamic clerical family.

When Mossadegh's father died, he inherited his position as a chief *mostowfi* (representative of the state treasury) in the province of Khurasan. In support of the Constitutional Revolution (1905–1911), Mossadegh joined, briefly, the Adamiyat and Insaniyat societies. In 1909, he went to Europe but returned because of an illness. On recovery, he returned to Europe in 1911, studied law at Neuchâtel University in Switzerland, and completed his doctoral dissertation on the jurisprudence of Islam. He returned home in 1914 and became known as Dr. Mohammad Khan Mossadegh al-Saltaneh. During World War I, from 1914 to 1918, he wrote essays on legal and political matters, was active in the Democratic party (Hizb-i Iʿtidal), taught at the Tehran School of Law and Political Science, and became the deputy *(moʿavin)* of the ministry of finance.

Iranian premier Mohammed Mossadegh (1882–1967) speaks before a UN Security Council hearing in New York, 13 October 1951. © BETTMANN/CORBIS. REPRODUCED BY PERMISSION.

In 1920, Mossadegh was appointed governor of Fars, but he soon resigned when he refused to recognize the new government of Sayyed Zia Tabatabaʾi that was formed following his and Reza Khan's coup of February 1921. When Ahmad Qavam became prime minister, Mossadegh was appointed minister of finance. His attempts to reform the ministry were blocked by the *majles* (parliament) and the royal court, which led to the downfall of the cabinet. In 1922, Mossadegh was appointed governor of Azerbaijan and, in 1923, became foreign minister for about four months—his last office until he became prime minister in 1951.

Mossadegh's parliamentary activities began when he was elected Tehran representative to the fifth Majles. During his political career, Mossadegh increasingly personified Persia's nationalist and democratic aspirations. His first major move for nationalism was opposition to the Anglo–Persian Agreement of 1919. His commitment to democracy was reflected in his vehement opposition to Reza Khan's move to dethrone the Qajar dynasty to found his own, the Pahlavi.

After Reza Khan became Reza Shah Pahlavi, in 1925, Mossadegh remained a major critic of the regime, despite the shah's frequent efforts to co-opt him. With the rise of Pahlavi's despotism, many of Mossadegh's associates were exiled, jailed, or killed. Being very cautious, he withdrew from politics, shutting himself away at his rural estate in Ahmadabad, west of Tehran. (Meanwhile, in 1935, Persia was renamed Iran.) In 1940, he was arrested and imprisoned in Birjand. He was soon released, because Reza Shah was ousted by the Allies (Britain and the Soviet Union) in 1941 for being pro-Nazi; the shah was succeeded by his son, Mohammad Reza Pahlavi.

Mossadegh then returned to politics. In October 1949, he led a crowd of politicians, university students, and *bazaaris* into the shah's palace to protest voting fraud in Iran's fifteenth parliamentary elections. Once inside, the demonstrators elected a committee of twenty, headed by Mossadegh, which soon became the nucleus of the National Front. Under his leadership, the front was instrumental in pressuring the parliament to nationalize the British-run petroleum industry. On 30 April 1951, Mossadegh was elected prime minister by a large margin. The shah had no option but to ratify the oil-nationalization bill and, on 1 May the law went into effect. Although the United States initially supported the oil nationalization movement, it soon joined Britain in engineering the coup that overthrew Mossadegh in August 1953.

An aborted coup took place several days before the successful one. The shah fled the country after hearing that the coup had failed, but Mossadegh refused to have the shah arrested. Following the referendum that had given him the mandate in 1951, Mossadegh dissolved the parliament and had several military officers arrested for their roles in plotting against him. He continued to act constitutionally until he was removed by Fazlollah Zahedi, whom the shah named premier.

Mossadegh was subsequently tried and imprisoned by the shah's government. Mossadegh lived to age eighty-five and died while under house arrest on 5 March 1967.

MOSTAGHANEMI, AHLAM

[1953–]

Algerian writer.

Ahlam Mostaghanemi is acknowledged as the first woman writer of Arabic in Algeria, where she was born and raised and where she received a university education. Her first collection of poetry, *Ala marfa al-ayyam* (On the haven of days), was published in Algeria in 1973, and two more poetry collections followed. Before emigrating to France, Mostaghanemi also presented radio programs about poetry. In Paris, she completed her Ph.D. in sociology at the Sorbonne under the direction of Jacques Berque (1982). Her doctoral dissertation was published in 1985 as a book, *Algérie: Femmes et écritures* (Algeria: Women and writing). Mostaghanemi's novels brought her fame, especially *Dhakirat al-jasad* (1993). A first, quite literal, translation into English, *Memory in the Flesh* (2000), was revised and reissued in 2003 with the same title. Her second and third novels, *Fawda al-hawwass* (Chaos of the senses, 1998) and *Abir sarir* (Passing by a bed, 2003) have also attracted critical attention. *Memory in the Flesh* has won major literary prizes, including the Nur award for best literary work by a woman in Arabic (1996) and the Naguib Mahfouz medal for fiction (1998). The novel's insistence on the Arabic language—in its dedication to Malek Haddad and the author's father, who could neither read nor write Arabic—is central to its message and role as a postcolonial Algerian novel. *Memory in the Flesh* treats not only the ravages colonialism has exacted on its characters and country, but also Algeria's current problems. It is narrated by a man and poses questions about gender roles. Mostaghanemi's second novel uses characters from the first but replaces the male voice with a female narrator. Critics have commented extensively on the interplay between gender, language, and nation in these novels. Mostaghanemi lives in Beirut, where all of her novels have been published to consistent critical acclaim.

MOSTAʿZAFIN

See GLOSSARY

MOSUL

City in northern Iraq (Mesopotamia).

Mosul (also spelled Mawsil) is located on the west bank of the Tigris river opposite the ancient city of Nineveh. It was a significant center during the early Islamic period with a sizable Christian population. Destroyed by the Mongols, Mosul regained importance under the Ottoman Turks. Some of the older mosques and churches survived.

Located on the trade routes that led to eastern Anatolia and thence to the Black Sea, Syria, Lebanon, Iraq, and Iran to the south, goods from Mosul were shipped by raft down the Tigris to Baghdad or overland to Aleppo and Damascus or points north. The city was a center for regional and international trade: Grain export, the manufacture of cotton thread and fabric (whence the term *muslin*), and trafficking in sheep hides and wool were important activities.

The government at Istanbul regained administrative control of the city from local rulers in 1834; in 1879 it became a separate Ottoman province that included Kirkuk, Arbil, and Sulaymaniya, but real power remained in the hands of local families—Mustafa Çelebi Sabunci was virtual dictator from 1895 to 1911. The population of the mud-brick-walled city in the later nineteenth century was estimated at forty thousand, including seven thousand Christians and fifteen hundred Jews. By World War I the population of Mosul had risen to seventy thousand, and the city became the economic and administrative capital of the Ottoman province of Mosul, one of three (Baghdad, Basra, Mosul) that would make up modern Iraq.

With the breakup of the Ottoman Empire after World War I and the consequent protracted negotiations between Britain and Turkey for sovereignty over the city, Mosul became part of Iraq rather than Turkey. Though its stature as a center of trade waned as Baghdad became Iraq's capital, the city continued to expand. During the 1940s and 1950s many of the traditional families came to own much of the land and were instrumental, together with local Arab nationalists, in fomenting a rebellion against Abd al-Karim Qasim in 1959. With the discovery of oil nearby and the construction of a refinery, Mosul has retained its importance. It has rail links to Baghdad, Syria, and Turkey, a university, an airport, and a religiously diverse population. The population (estimated at 1,846,500 in 2004) is mainly Kurdish with a significant Christian minority and a Yazidi population that lives in the Sinjar mountains to the west of Mosul.

REEVA S. SIMON

MOSUL, ANGLO-TURKISH DISPUTE OVER

Dispute over oil deposits in Iraq, c. 1920–1928.

Mosul, a province in northern Iraq, is rich in oil deposits and serves as a transit center for trade with Turkey and Syria. Its population consists of Arab Sunni Muslims, a sizable Kurdish minority, and various Christian sects. In 1916, the Sykes-Picot Agreement between England and France designated Mosul as a French zone. In 1920, the San Remo Conference transferred Mosul to the British, with the stipulation that France would have a share in the Turkish Petroleum Company.

Mosul became a point of contention between Turkey and Britain in the early 1920s. Turkey claimed that Mosul was part of its territory because the majority of inhabitants were Ottoman non-Arabs and because Mosul had not been in the hands of Britain when the Mudros armistice pact was signed in 1918. Britain wanted Mosul to be part of Iraq for myriad reasons. It believed Mosul had substantial oil deposits and could be used as a bargaining chip with the newly established government of Iraq to extend Britain's mandated power over that country. Faisal I, the newly crowned king of Iraq, wanted Mosul to be part of his country in order to strengthen his authority and influence over nationalistic elements who opposed Britain's continued interference in Iraq's domestic affairs.

The dispute between Turkey and Britain continued for several years. The two countries failed to resolve their conflict when the Lausanne Peace Treaty of 1923 was signed by the Allies and Turkey, and again at the special conference convened at Istanbul in 1924. They finally agreed to settle the dispute through the League of Nations. The League appointed a fact-finding commission to visit Iraq, survey public opinion in Mosul, and meet with officials on both sides. On 16 July 1924, the commission's report to the League called for the inclusion of Mosul in Iraq, retaining the Brussels line as the border between the two countries. Additional conditions attached to the recommendation included (1) allowing Iraq to remain under the British mandate for twenty-five years; (2) recognizing the rights of the Kurds to use their language in educational institutions and administration of justice, and (3) encouraging the hiring of Kurds as administrators, judges, and teachers. Iraq welcomed the decision. Mosul was one of the few issues that united the full spectrum of public opinion.

Turkey rejected the recommendation of the League of Nations and vowed to use any means necessary, including military action, to stop the implementation of the resolution. On 5 June 1926, however, Turkey signed a tripartite agreement with Britain and Iraq confirming Mosul's inclusion in Iraq. Iraq agreed to give a 10 percent royalty on Mosul's oil deposits to Turkey for twenty-five years. On 19 January 1926, Iraq had signed a new treaty with Britain, despite opposition from nationalist elements, to extend the mandate period for twenty-five years, as stipulated by the League's resolution. This treaty was ratified in January 1928, on the condition that Britain would recommend Iraq for membership in the League of Nations at four-year intervals for the next twenty-five years. If admission was approved, the British mandate would end.

MOTAHHARI, MORTAZA

[1920–1979]

Iranian religious scholar and writer; a close associate of Ayatollah Khomeini, he fostered the intellectual developments that contributed to the Islamic revolution of 1978/79.

Born to a religious scholar who was also his first teacher, Motahhari (also Mutahhari) began his formal schooling in Mashhad at the age of twelve, swiftly discovering his fascination with philosophy and mysticism, which remained with him throughout his life. In 1937, he moved to Qom where he studied law and philosophy under teachers that came to include Ayatollah Ruhollah Khomeini. In 1952 he left for Tehran where, in addition to teaching philosophy at a traditional seminary, he accepted a position at the Faculty of Theology of Tehran University. He also collaborated with religiously inclined laymen in popularizing a view of Islam as a comprehensive and socially applicable ideology.

Briefly imprisoned after the uprising of June 1963, Motahhari remained in contact with Khomeini throughout the years of his exile in Iraq and participated in a series of clandestine religio-political organizations. Named to the Revolutionary Council established by Khomeini in the early weeks of 1979, after the success of the Iranian Revolution, he was assassinated on 1 May of the same year by members of Furqan, a group holding a radically modernist view of Shiʿism that saw Motahhari as its chief intellectual opponent.

Motahhari's literary legacy is important, including works that express his passionate devotion to mysticism and philosophy as the ultimate core of Islam, as well as other works designed to present Islam as a fully coherent ideology, superior to all its numerous competitors.

MOTHERLAND PARTY

Political party in Turkey formed in 1983 by Turgut Özal.

The Motherland Party (Anavatan Partisi, or ANAP) stood in the center-right of the political spectrum and governed Turkey from 1983 to 1991. The personality and worldview of Turgut Özal were instrumental to the party's success. Rejecting from the start the dichotomy between the state and society and Islam and modernity, the party tried to formulate a new synthesis. Its economic policies transformed Turkey during the 1980s, introducing free-market reforms and downsizing the public sector. The ANAP government also applied to join the European Union in 1987. Although Özal's policies produced an economic development boom, they also led to high inflation and charges of corruption.

Özal officially resigned as ANAP leader in 1989 to become president, but his influence—and that of his wife and brothers—continued in party affairs. For example, Özal handpicked his successor, Yildirim Akbulut. After Akbulut proved ineffective, both as party chair and as prime minister, Özal pressured him to resign in June 1991; in anticipation of the forthcoming parliamentary elections, Özal approved the younger and more dynamic Mesut Yilmaz as Akbulut's successor. Yilmaz faced the challenge of developing a new party identity that would appeal to a broader constituency; otherwise, ANAP would expend all its energies competing with the ideologically similar True Path Party. Although ANAP's policies and constituency were similar to those of the True Path Party, the intense personal rivalry between Süleyman Demirel and Özal precluded political cooperation between the two parties prior to Özal's death in 1993.

Since the 1991 elections, ANAP's position has declined steadily (in the 1987 elections it reached its peak by obtaining 65 percent of seats in the Turkish Grand National Assembly). It was forced to enter into a brief coalition government with the True Path Party in 1995, and then it supported the government of Bülent Ecevit from 1997 to 1998. ANAP was one of the big losers in the 1999 elections, declining to fourth place among Turkey's political parties when it won only 14 percent of total votes. Nevertheless, the proportional representation system that awarded parliamentary seats to parties that received at least 10 percent of the vote enabled ANAP to obtain 86 of the 450 seats in the parliament. In the 2002 general elections, however, ANAP won only 5.12 percent of the votes and thus could not qualify for any seats. While in opposition, ANAP has criticized the customs union with the European Union, arguing that its terms conflict with Turkey's interests.

MOUʿAWWAD, NAILA

[?–]

Lebanese female politician and advocate.

A member of parliament from the district of Zgharta in North Lebanon, Naʾila Mouʿawwad (also Naʾila Muʿawwad) has been an important oppositional voice and a leader on issues relating to women and the disenfranchised. After the 1989 assassination of President René Muʿawwad, her husband, she took over his parliamentary seat, and since then has been one of a handful of women in the 128-seat Lebanese legislature.

In postwar Lebanon, Mouʿawwad has been a constant voice for political reform and hence often in the opposition. She has defended Lebanese independence and cautioned against excessive Syrian control. She has actively argued for electoral reform, freedom of the press, and anticorruption policies.

Mouʿawwad chairs the Parliamentary Committee for Women and Children's Affairs and has been active in social development. In 1996, she led efforts to raise the age of working children from eight to fourteen, and spearheaded legislation on compulsory education in 1998. She has argued for improved conditions in women's prisons. Indeed, Mouʿawwad has lobbied consistently for women's rights in parliament, and has been trying to pass legislation allowing Lebanese women to bequeath their citizenship to their children.

In 1990, she established the René Muʿawwad Foundation with the objective to "create a dynam-

ics of sustainable development and make social justice and education accessible to all. These two factors are crucial for the emergence of true democracy in Lebanon." As a result of her leadership, countless projects on health, agriculture, literacy, and employment have been conducted, especially in North Lebanon.

ELISE SALEM

MOUDAWANA, AL-

The set of laws dealing with personal status, family, and inheritance in Morocco.

The Moudawana, or Mudawanat al-Ahwal al-Shakhsiyya, is made up of six books issued in five *dahir* (decrees) between 22 November 1957 and 3 March 1958. The Moudawana refers back to one of the most important texts of Maliki law, al-Mudawana al-Kubra by Sahnun ben Saʿid (776/7–854) of Qairawan, although it follows French patterns of codification. Addressing those charged with promulgating the Code of Personal Status following Morocco's independence from France in 1956, King Muhammad V stated that Morocco's rich history meant that it did not need to have recourse to the legal codes of foreign powers. All that was needed to reveal this glorious heritage was to rid it of the sterile commentaries and aberrant customs that over time had become mixed in with the *shariʿa* (religious law) and had retarded the state's evolution and progress. The Moudawana today is influenced by three juridical sources: in addition to the legislation inspired by Islamic law (Fiqh) and the legislation inspired by French law, the Moudawana is affected by trends in comparative law and international conventions. Beyond these written texts, women's status in Morocco is also regulated by unwritten sources such as traditions and inherited customs. When laws are in conflict with normative traditions concerning family customs, women may find their lived experience does not equate with their constitutional rights and civil status.

In Morocco, as in the other states of the Middle East and North Africa, the family lies at the core of society, and women at the core of the family. The processes of modernization, the creation of Western-style nation-states following independence, and globalization and internationalization have constructed women as citizens in contradictory ways: women are at one and the same time universal subjects as reflected in state constitutions and international conventions, special subjects as reflected in family law codes such as the Moudawana where they are legal minors, and privileged bearers of national and cultural authenticity in the symbolic imaginary of nations.

While other legal texts promulgated after independence reflected a shift in emphasis from the extended to the nuclear family, and thus from collective to individual identities and rights, the Moudawana reinscribed principles of Islamic law and posited a patriarchal family model. Civil status, as embodied in the various Moroccan constitutions dating from 1962, is founded on the principle of equality between men and women: the Moroccan Constitution states "All Moroccans are equal before the law" (Article 5); men and women enjoy equally their political and civil rights (Article 8); and, the sexes are equal in exercise of public employment and in the conditions required (Article 12). These statements of equality for women contradicted the Moudawana, which constructed female citizens as minors unable to enter into marriage contracts on their own and needing to be represented by a *wali* (guardian or tutor) until their husbands take over. Women had no say in the event the husband decided to marry additional wives. Lacking autonomy, women had little control over their own lives or those of their children. These contradictions led to periodic movements to bring the Moudawana into harmony with other laws. A 1972 royal commission drafted some proposed changes, but this effort was soon halted. In 1979, two drafts for changing the Moudawana were submitted, but the Ministry of Justice went outside the Constitution, giving them to a group of *ulama* (religious scholars), and only a few initiatives passed. That same year, a royal commission of three magistrates proposed many minor

changes and some major changes to the Moudawana, but they also met intense religious opposition.

Another campaign to liberalize the Moudawana began during the mid-1980s when Morocco suffered severe financial crises and underwent a process of structural adjustment. A series of economic reforms and human rights reforms followed as Parliament discussed a new constitution. Women at this time renewed their fight for equality, holding meetings and workshops, and sharing research on women's rights according to the Qurʾan. In October 1990, the Union de l'Action Féminine (Union for Feminine Action), a group founded by professional and middle-class women, launched a campaign to gather a million signatures on a petition to reform the Moudawana. They came into increasingly bitter conflict with conservative religious groups. On 20 August 1992, in a national broadcast, Hassan II intervened, stating that the Moudawana was his responsibility as Commander of the Faithful (Amir al-Muʾminin) and that only he had the authority to amend it.

After meeting with the women to discuss the proposed reforms, Hassan II brought their suggestions before the Council of the Ulama, and in 1991 some reforms were passed, opening the door to change: a man now needed his wife's permission to take other wives; a religious judge's permission was required for a divorce; and a mother who is more than eighteen years of age would receive custody of their children if the father died. In 1999, pressure from various sources forced the government to create a National Plan of Action to integrate women into the economy. High on the agenda was protecting women from violence and raising levels of female literacy. Supporters of women's equality argued that the participation of women was essential to any process of modernization and to democracy, that there could be no true development without women, and that it was the women's movement that had opened space for a civil, democratic society.

LAURA RICE

MOUROU, ABDELFATTAH

[1942–]

A cofounder of the Islamic Tendency Movement in Tunisia.

Born in 1942, Abdelfattah Mourou is a cofounder of the Tunisian Islamic Tendency Movement, which adopted the name Harakat al-Nahda (Renaissance Movement) in 1989, and he was one of its influential leaders up to the early 1990s. A son of a small merchant, Mourou received his primary education at the celebrated Sadiki College, a bilingual high school established by Khayr Eddin Pasha in the nineteenth century to synthesize religious and modern education. Mourou then studied law and graduated from the University of Tunis in 1971. At an early stage of his life, he joined one of the esoteric Sufi orders, al-Madaniyya, a small order established in the beginning of the century and characterized by its rejection of any foreign presence in the country. He started his Islamist activities in the 1960s by delivering religious lectures and forming educational circles for secondary school and university students at the country's mosques.

Mourou, along with Rashid al-Ghannoushi, Hemida al-Naifar, and Salah Eddin al-Jurshi, founded the Islamic Tendency Movement in 1981. The regime denied legal recognition to the movement and engaged in a series of confrontations with its members. Mourou was arrested for his his part and spent two years in prison. The movement

nonetheless grew during the 1980s and 1990s to be the main Islamic opposition force to the Tunisian secular regime. Following an attack in 1991 on the state party's office, which was attributed to members of al-Nahda, Mourou was briefly detained. Following his release, he began to adopt a conciliatory approach and issued a statement in which he denounced violence, announced the suspension of his membership in the movement, and expressed his desire to form a legal political party. The regime, however, turned against Mourou and engineered a defamation campaign aiming to discredit his personal conduct. Mourou has resigned political activism and practices law in Tunis.

MOUVEMENT DE L'UNITÉ POPULAIRE (MUP)

Tunisian political party in exile.

The Popular Unity Movement, formed by Ahmed Ben Salah in 1973, is ideologically socialist and personally hostile to former Tunisian president Habib Bourguiba. In the 1960s Ben Salah developed socialist planning as Tunisia's economic system. Disastrous attempts to collectivize agriculture led to his fall in 1969. Tried and imprisoned, he escaped from the country in 1973 and remains in exile. Little support exists for the party within Tunisia; most supporters are Tunisian expatriates living in Europe. The party still adheres to a staunchly socialist, state-managed economic program.

MUP attitudes toward the Bourguiba regime were highly personalized as a result of a contest of wills between Bourguiba and Ben Salah. The latter's refusal to participate in Tunisia's elections (which became somewhat more liberal after 1980) disillusioned many of the party's members, who consequently condoned a split in the party in 1981. A more flexible MUP emerged and renamed itself the Parti d'Unité Populaire (Popular Unity Party [PUP]). Under Mohamed Belhaj Amor, the PUP retained its earlier socialist and nationalist orientation but ended Ben Salah's personal vendetta against Bourguiba. The party adopted a more flexible approach to participation in the political process. Following the 1988 political liberalization under President Zayn al-Abdine Ben Ali, PUP became one of seven legal parties in Tunisia.

From 1983 on the MUP had been trying to obtain legal recognition, but without success, given the regime's refusal to reintegrate Ben Salah into the Tunisian political scene. In 1990 some members of the party participated in the legislative elections as independent candidates.

MOUVEMENT NATIONAL ALGÉRIEN

An Algerian nationalist organization that rivaled, and eventually lost to, the FLN.

The Mouvement National Algérien (MNA; Algerian National Movement) was founded in Paris in December 1954 by Messali al-Hadj in reaction to the launching of the Front de Libération Nationale (FLN; National Liberation Front) by his revolutionary rivals in Algeria. It was a continuation of his branch of the Mouvement pour le Triomphe des Libertés Démocratiques (MTLD; Movement for the Triumph of Democratic Liberties) established at Hornu, Belgium, during the summer.

One element after another of the Algerian political spectrum rallied to the FLN during 1955 and 1956. Claiming that this demonstrated that the FLN contained too many moderates and reformists, Messali's MNA was, by June 1956, the only major party remaining outside the nationalist coalition.

Polarization led to bloody fighting between MNA and FLN factions within Algeria. Also, the FLN waged a concerted effort to win over the loyalties of the Algerian community in France, long commanded by Messali, and to tap its financial resources. Intracommunal fighting in France took many lives. The MNA lost in both arenas and, from 1958 onward, was of little political consequence, going formally out of existence on 19 June 1962.

JOHN RUEDY

MOUVEMENT POPULAIRE (MP)

Pro-monarchy, overwhelmingly Berber political party in Morocco.

The Mouvement Populaire (MP) was organized in 1956–1957 in the Rif. Its supporters were Berber notables and tribesmen, some of whom belonged to the Army of Liberation, and small landholders. It was founded to oppose the political domination of newly independent Morocco by the Istiqlal Party and to serve as a mechanism for Berber political participation in cooperation with the monarchy. At the same time, the MP sought to avoid being cast as a purely Berber party, and so became the voice of the rural masses neglected by the Istiqlal. Its founders were Abdelkarim Khatib, a former head of the Arab Liberation Army (and ethnically an Arab), and Majoub Ahardane, the governor of Rabat province. The Istiqlal-dominated government arrested its leaders in April 1958 and blocked its legalization. The MP was finally registered as a legal political party in February 1959.

The relationship between the monarchy and the MP was strengthened during the early 1960s, following the ascension to power of Hassan II and the split in the Istiqlal. In 1962–1963, the MP was the only organized group within the monarchist coalition, which ran in the 1963 elections under the banner of the Front pour la Défense des Institutions Constitutionelles (FDIC). It thus was able to take advantage of the boycott of the 1963 elections by Istiqlal and the Union Nationale des Forces Populaires (UNFP) and to fill many of the positions in provincial assemblies, chambers of commerce, and communal councils. Its base of economic and political power was strengthened by the regime's policy of Moroccanizing large tracts of land that had been controlled by the French administration and settlers.

In 1965 the defection from the ruling coalition of a single MP member deprived the government of its majority, sparking a constitutional crisis that led to King Hassan's assumption of emergency powers. In 1967 the MP split over personality differences between Ahardane and Khatib; the latter's breakaway faction took the name Mouvement Populaire Démocratique et Constitutionelle (MPDC), which in the 1990s served as the legal basis for a primarily Islamist party sanctioned by the authorities. Ahardane was expelled from the MP in 1985 for "authoritarian practices," and the party was taken over by Mohand Laenser. In July 1991 Ahardane cofounded the rival Mouvement National Populaire (MNP). In the 1993 parliamentary elections the MP, competing as part of the loyalist Entente/Wifaq bloc, won a total of fifty-one seats, a gain of four from the 1984 elections, and in the government reshuffle of January 1995, it attained three cabinet seats. In the 1997 elections the MP dropped to forty seats and was left out of the new, left-of-center government. In the 2002 elections there was a further drop, with the party winning twenty-seven seats. Still, the party did attain three cabinet posts in the newly formed government, with party head Laenser receiving the agriculture and rural development portfolio. How the MP and other Berber-based parties would be affected by the emergence of a more assertive Berber culture movement remained an open question.

MOUVEMENT POUR LE TRIOMPHE DES LIBERTÉS DÉMOCRATIQUES

Algerian organization that sought to attain national rights through electoral participation.

The Mouvement pour le Triomphe des Libertés Démocratiques (MTLD; Movement for the Triumph of Democratic Liberties) was created in 1946 by Messali al-Hadj, leader of Algeria's clandestine Parti du Peuple Algérien (PPA; Party of the Algerian People), which colonial authorities had banned in 1939. Under French detention almost continuously since 1937, Messali urged his followers after World War II to boycott French elections. Released in 1946, he hastily organized the MTLD, however, to enter candidates in the elections to the first National Assembly of the Fourth Republic held in November. In spite of harassment by the authorities, the MTLD won five of the fifteen parliamentary seats reserved for Muslim Algerians. Major business of the National Assembly included drafting what became the 1947 Organic Law of Algeria. MTLD deputies regularly denied the competence of a French legislature to determine Algeria's status in any way. In the meantime, the MTLD became by far the most popular party in Algeria. But colonial authorities, fearful of a nationalist victory, openly rigged the Algerian legislative elections of 1948, and they tampered again with the elections of 1949, 1951, 1953, and 1954.

After years of urging Algerians to spurn the process, Messali's abrupt decision to present slates of candidates in 1946 confused many Algerians. They did not know whether the party was seeking national rights by direct action or through electoral participation. In fact, it was doing both. At a clandestine party congress in February 1947, delegates determined that the MTLD would pursue political strategies within the existing colonial framework, while a secret PPA would continue to press for independence by whatever means necessary. By the end of 1947, the PPA–MTLD leadership had, in fact, approved the creation of an Organisation Spéciale (OS), which conducted armed robberies and other acts of violence until broken up by the authorities in March 1950.

It appears that MTLD cohesiveness was constantly torn through these years by the partisans of direct action and those of political participation. The decision to pursue both strategies simultaneously reflected irreconcilable internal contradictions more than rationally chosen strategy. This fundamental conflict lay at the heart of a series of internal disputes that progressively sapped the party's effectiveness in the early 1950s. The weakening of the party was hastened by conflicts between the Central Committee and Messali Hadj, widely accused of authoritarianism and of attempting to establish a cult of personality. Banned from Algerian soil in 1952, Messali in 1954 called a party congress at Hornu, Belgium, that declared the Central Committee dissolved and elected him president for life. Since the Central Committee failed to recognize the authority of the Hornu Congress, the party was split down the middle.

In the spring of 1954, a group of militants—mainly veterans of or sympathizers with the OS—formed the Comité Révolutionnaire d'Unité et d'action (CRUA; Revolutionary Committee of Unity and Action). Disillusioned with the "politicals" and their failure to produce, they determined to launch an insurrection. By 1956, most of the MTLD centralists had rallied to the Front de Libération Nationale (FLN; National Liberation Front), which the CRUA had created. Messali, in Europe surrounded by the émigré loyalists who were his original base, refused to join. His wing of the MTLD became the Mouvement National Algérien (MNA; Algerian National Movement) entering into often violent conflict with the FLN both at home and in France.

MOVEMENT FOR UNITY AND REFORM (MUR)

Moroccan Islamic movement.

The Movement for Unity and Reform (MUR) is the second largest Islamic movement in Morocco, after Abdelsalam Yassin's al-Adl wa al-Ihsan (Justice and Benevolence). Formerly the Movement of Reform and Renewal (HATM), the MUR was established in Morocco in 1996 following a merger of HATM and the Association of the Islamic Future. Though the MUR is not legally recognized, the Moroccan regime has tolerated the movement's activities since the 1980s.

Led by a group of moderate Islamists, the MUR has branches throughout the country and has issued newspapers and other publications (notably the daily *al-Tajdid* [Renewal] and the quarterly *al-Furqan* [Proof]), held general conferences, and participated in popular marches. The main objectives of the movement are reforming the conditions of Muslims at the individual and societal levels and renewing their understanding and commitment to Islam. On several occasions the leaders of the movement have expressed their commitment to the fundamental basis of the Moroccan regime: Islam, the constitutional monarchy, and the territorial integrity of the country. They also reconfirmed their willingness to participate in political life through legal means and to cooperate with other political groups.

A major transformation took place within the movement when a large number of its leaders and cadres joined the historic yet moribund Constitutional and Democratic Popular Movement (MPCD) in 1996. This federation revived the MPCD and provided the MUR with the opportunity to participate in politics through formal channels. Under the umbrella of the MPCD (which in 1998 changed its name to the Party of Justice and Development), the MUR contested the legislative elections of 1997 and 2002 and won 14 and 44 seats, respectively, of the parliament's 325 seats. The movement is popular among Morocco's youth, university students, secondary-school teachers, and middle-class professionals.

EMAD ELDIN SHAHIN

MOVEMENT OF RENEWAL

Formerly the Tunisian Communist Party.

Founded as an offshoot of the French Communist party in 1920, the Parti Communiste Tunisien (Tunisian Communist Party, PCT) broke with the French party in 1934. It remained legal after Tunisia gained its independence in 1956 but was banned by President Habib Bourguiba in 1963. In 1981, however, Bourguiba legalized the PCT in order to offset the growing influence of the Islamist movement, and in 1988 the party signed Zayn al-Abidine Ben Ali's National Pact. PCT influence remained marginal, and the party has never succeeded in capturing the imagination of Tunisia's young people.

The disintegration of the Soviet Union in 1991 dealt the PCT a heavy blow. General Secretary Mohammed Harmel (head of the party since 1981) sought to capitalize on the Ben Ali "regime of change" by renaming the PCT the Mouvement Ettajdid (Movement of Renewal; in Arabic, Harakat al-Tajdid) and emphasizing the party's reformist credentials during its tenth national congress on 23 April 1993. The publication of the party's tabloid, *al-Tariq al-Jadid* (The new path), was suspended between 1989 and 1993, when it re-emerged as a monthly magazine.

Currently, Ettajdid is one of the five opposition parties represented in the Tunisian parliament. In the 1999 elections, the party obtained 2.74 percent of the vote and five seats. That same year, Ettajdid supported Ben Ali's candidacy in the presidential

elections. However, in 2002 it abstained from voting on a proposed referendum on constitutional reform, initially calling for nonparticipation and later asking for a "cleaning up of the political climate" and a general amnesty for political prisoners before the referendum. The February–March 2003 issue of *al-Tariq al-Jadid* was seized by authorities because it contained articles critical of the proposed constitutional reforms.

MOZAFFAR AL-DIN QAJAR

[1853–1907]

Fifth monarch of Persia's Qajar dynasty.

Mozaffar al-Din became shah in 1897, after his father Naser al-Din Shah was slain by an assassin's bullet. Mozaffar had lived in Tabriz in Azerbaijan, the traditional seat of the heir to the throne. He was of a timid but kindly nature and had been overshadowed and humiliated by forceful *pishkars* (ministers of Azerbaijan), appointed by his father, so he had little experience of statecraft upon his accession. His father had radiated an aura of royalty, although he had become despotic and unpopular toward the end of his reign.

The courtiers who came with the new shah to Tehran were greedy for the spoils of office they had long awaited; politics and court intrigues undermined the shah's authority and prestige. Mozaffar al-Din Shah's reign began badly, since Anglo-Russian rivalry was at its worst, compromising Persia's independence both financially and politically. A deep dissatisfaction among all the classes gave rise to widespread nationalism. The shah allowed some freedom of political discussion and activity, which soon resulted in the formation of political societies *(anjomans),* where reforms were discussed and contacts between various leaders were established. The printing and distribution of political tracts caused politics to be discussed and the government criticized.

Mozaffar al-Din Shah dismissed his father's unpopular minister, Amin al-Soltan, and appointed the liberal-minded Amin al-Dowleh, whose efforts to negotiate a much-needed loan from a neutral country failed. The shah recalled him and negotiated instead two loans from Russia at onerous terms. The monies were soon spent on trivialities during the shah's European trips in 1900, 1902, and 1905. These journeys were criticized and made him unpopular with the merchants, who resented the concessions granted to non-Persians; with the *ulama* (body of *mollas*), who were afraid of Western cultural influence; and with the liberals who feared a threat to Persia's independence. All the while, growing inflation and lawlessness weakened the central government. The dismissal of Amin al-Soltan and the appointment of the more autocratic Ayn al-Dowleh only exacerbated the situation.

Another cause of great resentment was the employment of Belgian customs officials at the borders, the proceeds of which were pledged as a guarantee against the loans from Russia and Britain. Naus, the director, was particularly hated; it was no coincidence that a photo of him, wearing the habit of a religious man to a costume party, was distributed with other propaganda by the opponents of the regime, to show the disrespect that foreigners had for the religious class. This was the spark that triggered the revolution in 1904. The first demands were for law and a House of Justice (Adalat-Khaneh), formulated by those merchants and *ulama* who took *bast* (sanctuary) in the Shrine of Shah Abd al-Azim in 1904. The shah agreed to their demands but took no real action; therefore a protest began that took the life of a religious student. As a result the *ulama* left Tehran in a body for Qom, and 14,000 merchants gathered at the British embassy. Their demands included the granting of a constitution and a national constituent assembly *(a majles-e shura-ye melli).* The shah reluctantly agreed, and the

preparation of the constitutional laws and the promulgation of electoral laws were accomplished quickly. The elections were rushed since the shah was ill, and it was feared that his successor, Mohammad Ali Mirza, might not continue his father's new policies. The electoral law was so devised that Tehran was purposely to receive half the 120 seats. In fact, Mozaffar al-Din Shah died a few months after he made the October 1906 inaugural speech in the *majles.*

Since the events of the succeeding reign confirmed the fears of the people, Persia was to face a long period of political turmoil. Mozaffar al-Din is therefore remembered with reverence, and those who built the entrance to the majles adorned it with the motto: *"Adl-e Mozaffar"* (The justice of Mozaffar), which was left untouched even after the change of dynasty in 1925.

M'RABET, FADELA

[?–]

Pseudonym of Fatma Abda, an Algerian journalist and essayist.

Fadela M'Rabet was born in Constantine, Algeria. She was a high-school teacher after Algeria gained its independence in 1962, then joined the staff of the newspaper *Alger-Républicain* and was in charge of a women's program on the radio. As of 2004 she lived in France.

M'Rabet's first book, *La femme algérienne* (Paris, 1964; The Algerian woman) was inspired by the correspondence she received while working as a journalist and radio commentator. Its tone is defiant, meant to shake the apathy of the reader and focus attention on women's suppressed rights. M'Rabet was critical of Islamic law, which granted a Muslim man the right to marry a non-Muslim woman while denying a Muslim woman the right to marry a non-Muslim man. Her second book, *Les Algériennes* (1967; Algerian women) is optimistic about the future as a result of women's greater access to education. M'Rabet echoes the concerns of a growing number of women to protect their rights, newly acquired as a result of their participation in the Algerian War of Independence.

A long period of silence followed the author's publication of *L'Algérie des illusions* (The Algeria of illusions), which she cowrote in 1972 with her husband Maurice T. Maschino, a French journalist. In 2003 she published an autobiographical novel, *Une enfance singulière* (An unusual childhood). The book is a nostalgic evocation of her childhood in Algeria during the colonial period and a reaction to the racism she experienced in France, where she lives and works.

MUʿALLA FAMILY, AL-

Ruling family of the emirate of Umm al-Qaywayn in the United Arab Emirates.

The first member of the Muʿalla dynasty was Majid Al Ali, who rose to power in 1775 as leader of the area's largest tribe, the Al Ali. During the early years of the twentieth century the emirate was ruled by Rashid ibn Ahmad (r. 1904–1922), a reputedly forceful leader who was successful in encouraging some tribes to seek his protection, thus expanding the territories of his emirate. His son, Ahmad bin Rashid al-Muʿalla, ruled from 1929 to 1981 and was known for his piety, support for modern education, and his membership in the Trucial States Rulers' Council in 1952. He also was honored as a Member of the British Empire. He was succeed by his son Rashid (b. 1930) in 1981.

ANTHONY B. TOTH

MUASHER, MARWAN

[1956–]

Jordanian diplomat.

Marwan Muasher (also Muʿashshir) has remained one of the most important Jordanian diplomats working on the Jordanian–Israeli peace process since the inception of public bilateral talks in 1991. Born in Amman, he studied at the American University of Beirut from 1972 until 1975. He completed his B.A. at Purdue University in Indiana, eventually also receiving a doctorate in computer engineering from Purdue. After returning to Jordan, he worked in the private sector and wrote political columns for Jordan's English-language newspaper. Muasher first began working with the Jordanian government in 1985 in the ministry of planning, where he eventually directed the Socio-Economic Information Centre. In 1989, he was appointed press advisor for the prime minister.

Muasher's career advanced with the onset of Jordanian–Israeli peace talks in 1991. From 1991 to 1994, he utilized his fluent American-accented English as the spokesperson for the Jordanian delegation to the talks. He also served as head of the Jordanian embassy's Jordan Information Bureau in Washington. From April to November 1995, Muasher held the important post of Jordan's first ambassador to Israel, becoming the public face of the Jordanian government in that country. He was minister of information from February 1996 through March 1997, after which he held the important post of ambassador to the U.S. from September 1997 to January 2002. During Muasher's tenure as ambassador, Jordan and the U.S. signed the U.S.–Jordan Free Trade Agreement. He returned to Jordan to serve as foreign minister, serving at a time of tremendous change in the region as a result of the U.S. invasion of Iraq and the resumption of Israeli–Palestinian peace talks.

MICHAEL R. FISCHBACH

MUBARAK, HUSNI

[1928–]

Egyptian officer and politician; president of Egypt since 1981.

Born in Minufiyya province to a middle-class family, Muhammad Husni Mubarak graduated from the Military Academy in 1949 and from the Air Force Academy the next year. After a brief stint as a fighter pilot, he served as an instructor at the Air Force Academy from 1954 to 1961. He spent the following academic year at the Soviet General Staff Academy. He was the commandant of the Air Force Academy from 1967 to 1969, air force chief of staff from 1969 to 1971, and then commander in chief from 1971 to 1974. He took charge of Egypt's aerial preparations for the Arab–Israel War in 1973. Because of his outstanding performance in the war, he was promoted to the rank of air marshal in 1974. President Anwar al-Sadat appointed him vice president in 1975, and Mubarak served him loyally for the next six years.

After Sadat was assassinated in October 1981, Mubarak quickly assumed the presidency, was officially nominated within a week by the National Democratic Party, and was confirmed without any opposition by a nationwide referendum. Upon taking over, he promised to address Egypt's economic and social problems, tried to curb the favoritism and corruption that had marred Sadat's final days, and released many of the political and religious leaders whom Sadat had sent to prison. Many of Sadat's henchmen were quietly removed from office.

Mubarak maintained Egypt's ties with the U.S. government, on whose economic aid it had become increasingly dependent. He did not break diplomatic relations with Israel (although he did recall Egypt's ambassador from Tel Aviv during Israel's invasion of Lebanon), and he slowly restored good relations with the other Arab governments and the Palestine Liberation Organization (PLO), which had withdrawn their ambassadors from Cairo upon Sadat's signing of the Egyptian-Israeli peace accord

Husni Mubarak became president of Egypt after the 1981 assassination of Anwar al-Sadat. Present during the attack, Mubarak himself was shot in the hand. A political moderate, Mubarak has worked hard to reestablish favorable relations with other Arab nations and curb extremist groups within his own country. © GETTY IMAGES. REPRODUCED BY PERMISSION.

in 1979. He hosts visits from Israeli leaders, but has seldom visited Israel since he became president. His government has played a prominent role in Israeli-Palestinian peace talks.

Although Mubarak's government encouraged Western and Arab investment in Egypt's economy, he curbed the operation of foreign multinational corporations within the country. He instituted a program of economic reform following a severe fiscal crisis in the late 1980s and also tried to form an economic union with Iraq, Yemen, and Jordan. His efforts to mediate the 1990 dispute between Iraq and Kuwait failed and instead became a precipitating factor in Saddam Hussein's decision to invade and occupy Kuwait. Although Mubarak initially hoped for an Arab solution to the problem, his government soon rallied behind Operation Desert Shield, sending 40,000 troops to join the allied coalition in Saudi Arabia. Egypt was later rewarded by the cancellation of some $14 billion worth of accumulated foreign debt. Egypt's economy made impressive gains during the 1990s. He has been elected president, without opposition, for four six-year terms, making him the longest-serving Egyptian head of state since Muhammad Ali. He has not yet designated a successor.

The Mubarak government has been challenged by Islamist political movements, which attacked prominent government officials, secularists, Copts, and foreigners between 1992 and 1997, but has curbed such violence through arrests, detention, trials, and occasional executions. Mubarak himself was nearly assassinated while attending a meeting of the Organization of African Unity in 1995, an incident that increased his popularity within Egypt. The gap between rich and poor remains wide—a potential threat to the stability and survival of his regime. More self-effacing than either Nasser or Sadat, he inspires neither strong loyalty nor aversion among most Egyptians.

MUFIDE KADRI

[1889–1911]

One of the first modern Turkish women painters.

Although she had no formal art education, Mufide Kadri took lessons from Osman Hamdi Bey and Salvatore Velery, teachers at the Istanbul Fine Arts Academy, which for many years did not admit women. She was a prolific painter, and despite her death at an early age, forty of her works remain in existence today. Her oil paintings can be seen in the Istanbul Art Museum.

DAVID WALDNER

MUHAMMAD

[570–632]

The Prophet of Islam.

Muhammad is referred to by Muslims as *rasul allah* (the messenger of God) or *al-nabi* (the Prophet), an appellation that they always follow with the invocation *salla allah alayhi wa sallam* (May God's peace and blessing be upon him).

Early Life

He was born in Mecca in 570, the year of the Elephant, a fortuitous year in tradition, since Mecca in that year survived an Abyssinian invasion directed through Yemen. Although one of various pagan centers in Arabia, Mecca was considered the most important one on account of the Kaʿba, a cubical religious sanctuary revered since ancient times. A spiritual focal point for devotees, who came to it as pilgrims with sacrifices, Mecca provided a convenient meeting point for merchants who exchanged goods there and poets who displayed their literary talents and competed for the attention of its wealthy guests and residents. Authority over the city rested in a loose confederation of tribal groups largely dominated by the tribe of Quraysh. Muhammad was born to the clan of Banu Hashim (Hashimites), a branch within Quraysh that was known less for its wealth than for its religious prestige. The patriarch of the clan was traditionally entrusted with caring for the Kaʿba and maintenance of the pilgrimage facilities, such as the renowned well of *zamzam,* where Islamic tradition states that in ancient times Ismaʿil, abandoned with his mother Hagar by Abraham (Ibrahim), struck water in the desert and thereby attracted settlement in that spot. Because Mecca is situated on the overland route between Yemen and Syria, its importance as a station, market, and religious center grew with the increasing caravan trade in the region.

Muhammad grew up as an orphan, having lost both of his parents by the age of six. He was then cared for briefly by his grandfather, Abd al-Muttalib, the patriarch of his clan, and afterward by his uncle Abu Talib. In his adolescent years, Muhammad joined his uncle on trade journeys, the most notable of which were to Syria, and he noticed the effects of this commercial boom on his city. The growth of excessive competition in Mecca was gradually undermining traditional Arab tribal values that emphasized principles of solidarity, mutual help, and magnanimity *(muru'a),* and leaving a pool of destitute and disenfranchised Meccans who were abandoned by a new, wealth-driven generation. In this troubled Arab milieu, Muhammad, who attracted attention in Mecca because of his fair dealing, honesty, and moral sensitivity, was commissioned by a wealthy widow, Khadija, to take charge of her caravan trade. Aged twenty-five, Muhammad married Khadija, fifteen years his senior; she bore him two sons (al-Qasim and Abdullah), who died in infancy, and four daughters (Zaynab, Ruqiyya, Umm Kulthum, and Fatima).

Beyond his distress about the social malaise in Mecca, Muhammad was dissatisfied with the pagan beliefs of the Meccans. The Kaʿba, surrounded by idols that catered to various pagan cults, had become a platform for profit making and opportunism.

Beginning of Islamic Religion

Seeking a full break with this society, Muhammad found solace in spiritual retreats that he undertook in a mountain cave, Hira, on the outskirts of Mecca. According to tradition, Muhammad spent long stretches of time alone in the cave, and it was on one of these occasions, in the year 610, that the angel Gabriel (Jabril) appeared to him and presented him with the words, "Recite in the name of thy Lord, the Creator" (Sura 96:1). Gabriel announced to Muhammad that he was to be the messenger of God and called on him to warn his people against polytheism and to lead them to the worship of the one God. The first words of the Qurʾan came to light

in the month of Ramadan—hence the religious importance of that month—and other verses followed in later years in various contexts over the course of Muhammad's life. Those closest to Muhammad—his wife, Khadija, his cousin Ali, his companion Abu Bakr, and his servant Zayd—were the first to hear the words of the Qurʾan and to embrace the new message, Islam (meaning literally surrendering oneself to the will of God). After overcoming some initial hesitation, Muhammad grew confident in his sense of mission and took the message to the public arena of Mecca.

The earliest Qurʾanic recitations of Muhammad emphasized the belief in absolute monotheism. Meccans were called on to cast aside all polytheism and to worship the one God, Allah, the creator of the universe. The Qurʾan described the omniscience and omnipotence of God and invited the people *(al-nas)* to ponder the signs of creation. The Qurʾan also admonished the Meccans for their exploitative business practices, involving usurious transactions and unfairness, and warned them of the existence of Judgment Day, when all would be rewarded or punished according to their deeds. This admonishment, together with Muhammad's public denigration of paganism, elicited the hostility of the leading Meccan merchants, who, in addition to feeling their pride offended, feared that the Islamic concept of one God would undermine the status of Mecca as a pagan center and an economic hub. Recognizing the significance of Hashimite solidarity, the Meccans at first attempted to make Muhammad abandon his attack on paganism by such methods as offering to make him king of Mecca, but when all failed, they declared a boycott against him and tried to extend it to all his clan.

In Mecca, Muhammad gained few Islamic converts (primarily young men, some from affluent families), and his attempt to preach in the neighboring town of Taʾif elicited even greater hostility than in Mecca. Finally, in 620, the prospects of the new religion began to change when Muhammad met six men from Medina who were visiting Mecca. This Medinese group, from the tribe of Khazraj, had long been familiar with messianic expectations that circulated in the discourse of Jews and Christians living in the region and proved receptive to the Islamic prophecy. The next year, this group held a larger meeting between Muhammad and seventy residents of Medina who pledged loyalty to the Prophet and invited him to their town. After years of rivalry in Medina between its two leading tribes, the Aws and the Khazraj, Muhammad's leadership offered the possibility of a neutral authority that could mediate disputes, administer the affairs of a diverse community, and contribute to its social recovery. As the hostility of the Meccans to the new religion and its adherents mounted, Muhammad finally decided to migrate, with Abu Bakr, to Medina in a secret journey that took place on 17 September 622. The trip, known in Arabic as *hijra* (migration), would later mark the beginning of the Islamic lunar calendar.

Rise of Islamic State

Once established in Medina, Muhammad set about organizing the nascent Islamic community and strengthening fraternalist ties between the Meccan emigrants *(al-muhajirun)* and the Medinese, known as the helpers *(al-ansar)*. In a document referred to by scholars today as the Constitution of Medina, Muhammad declared the unity of the community (*umma*) of Medina under his leadership and stipulated that all matters of legal and political concern were to be referred to him. Medina's hosting of the new religion soon made it the target of Meccan hostility. In 624, mounting tension between the two cities finally led to the first military confrontation at the battle of Badr, where a small Muslim force succeeded in beating back a larger Meccan army. The significance of Badr was not so much military as political. Muhammad's victory strengthened his support in Medina, attracted the admiration of tribal leaders from around the Arabian peninsula, and undermined the prestige of the Meccan order. Between the years 624 and 628, Mecca engaged the Medinese in numerous military skirmishes and battles, the most famous of which was the battle of al-Khandaq (the Trench) in 626. In that year, Mecca assembled a massive confederation of neighboring tribes to invade Medina, but the campaign was forestalled by the Medinese strategy of digging a trench around Medina. The Meccan army, unprepared for a siege and composed of tribal groups that had united for a quick battle only, soon dispersed and retreated.

This last confrontation definitively turned Muhammad into the central leadership figure, and

it was then only a matter of time before Mecca would itself become vulnerable to conquest. In 628, Muhammad set out to Mecca on pilgrimage with the new community, only to find his way blocked by the Meccans. At the peace of al-Hudaybiyya in that year, the Meccans called for a long-term truce, after which Muslims would be allowed access to Mecca for pilgrimage. Two years later, the treaty was violated by confederate tribesmen of Mecca, and this opened the way for the Islamic conquest of Mecca, which took place peacefully in 630. A year later, various Arab tribal chiefs from around the peninsula converged on Medina to pay homage or pledge allegiance to the Prophet. Whether nominal or effective, Muhammad's political authority had extended over the greater part of the peninsula, and texts of letters can be obtained from Islamic sources that Muhammad sent to neighboring kings of Persia and Byzantium, as well as various regional princes, inviting them to embrace Islam.

Medina continued its role as the capital of the Islamic state, although Mecca, after the destruction of the idols around the Kaʿba, became the spiritual center of Islam. In 632, soon after completing pilgrimage at Mecca and setting out again for Medina, Muhammad fell mortally ill from a fever. In his final days, he made no specific arrangements for succession. With illness preventing him from leading the prayers, the Prophet asked Abu Bakr to lead the community in prayers, and this gesture would later be interpreted in Sunni Islam as a recommendation for political succession. Shiʿite Islam, in contrast, turns toother traditions describing Muhammad's praise for Ali as a reflection of the Prophet's general designation of Ali as his successor. Ali was also, through his marriage to Fatima, the father of Muhammad's two grandchildren, al-Hasan and al-Husayn.

The life of Muhammad has long captivated the attention of Muslims and non-Muslims alike. Muslims look on him not only as a spiritual guide but also as an exemplar in social, ethical, and political terms. Islamic law grew not only from Qurʾanic edicts but also from the Islamic understanding of Muhammad's day-to-day manner of handling all sorts of temporal issues. Oral tradition *(hadith)* transmitted through Muhammad's companions recounts in detail his instructions and how he lived. Outside observers, on the other hand, continue to weigh Muhammad's achievements in comparison with those of other spiritual masters. In his confrontation with polytheism and his experience of migration, he is compared to Abraham, whereas as promulgator of the rudiments of Islamic law, he evokes a connection with Moses; in his political leadership of the community, he evokes a connection with David. In the vast desert on the fringes of the urban and sophisticated empires of the time—those of the Byzantines and the Sassanians, each with long traditions of structured governmental institutions—Muhammad united both the nomadic and sedentary Arabs into a coherent social unit that would later conquer these powers. Although this political expansion took place under his successors, Muhammad had laid the foundation for an Islamic universalist social vision that was rooted in a unifying monotheistic belief. The memory of the prophetic experience of *hijra* between cities henceforth inspired its emulation on a grander scale outside Arabia.

TAYEB EL-HIBRI

MUHAMMAD V

[1910–1961]

Sultan and king of Morocco from 1927 to 1961.

Sidi Muhammad Ben Yusuf was the third son of Mulay Yusuf, a colorless prince and brother of the

King Muhammad of Morocco (1910–1961; right) discusses state matters with his son, Mulay Hassan, 27 February 1961. **© HULTON/ARCHIVE BY GETTY IMAGES. REPRODUCED BY PERMISSION.**

sultan of Morocco, Mulay Hafid. Muhammad was born in Fez in 1910, at the beginning of the protectorate period; it seemed unlikely he would reign. Two years later, the French nominated his father to succeed the sultan, whom they had deposed because he refused to rule as they wanted. Muhammad V came to power after his father's death in 1927, because French authorities considered him to be more flexible and less ambitious than his brothers. Nevertheless, he used his popularity and his skills in international diplomacy to involve himself in a struggle, at first unequal, with the protectorate's authorities.

After the Berber *dahir* in 1930, which relieved Berber tribes from submitting to *shariʿa* (Islamic law), Muhammad became more sensitive to Moroccan nationalism, which was just beginning to awaken. Without breaking off from the protectorate, he supported demonstrations by young traditional and modern intellectuals, such as Allal al-Fasi, Hassan El Ouezzani, and Ahmed Balafrej, which, in 1944, gave birth to the Istiqlal (Independence) Party. World War II presented the opportunity to persuade the protectorate to move toward a cooperative regime more faithful to the spirit of the original agreement between France and Morocco.

Muhammad opposed the French attempt to protect Moroccan Jews from persecution while he helped rebuild military forces to fight again with the Allies. The 1942 Casablanca meeting with U.S. President Franklin D. Roosevelt and Britain's Prime Minister Winston S. Churchill strengthened his resistance. From then on, he used a strategy of promoting gradual change to regain the sovereignty his country had lost in 1912. He approached French authorities directly to avoid the obstacles set up by both settlers and French civil servants, who opposed any change. But he did not succeed despite his good relationship with General Charles de Gaulle. At the local level, opposition to the French became more and more violent and led to the sultan's deposition and exile in Madagascar on 20 August 1953.

But France could not depose Muhammad in 1953 in the same way it deposed his uncle Mulay Hafid in 1912. The international environment was unfavorable to France, French public opinion accepted unwillingly the pro-consuls' plots, and, above all, Muhammad was the symbol of a very deep opposition movement, which mobilized Moroccan cities as well as the countryside. The nation could no longer be governed, and the French administration collapsed within two years in the face of the uprisings. Muhammad was called back to preserve the French economic and military presence, which, otherwise, could have been swept out by nationalistic currents far more radical than those represented by the king and the Moroccan bourgeoisie.

Once he regained his throne, in November 1955, Muhammad took on the role of spokesman for nationalism. He let the Istiqlal Party exert power without, however, becoming a prisoner of the nationalist movement. He continued to defend the monarchy's privileges. Muhammad kept his country out of the confrontation between France and the Algerian Front de Libération Nationale (FLN), which he supported. But, profoundly hurt by the 1956 hijacking of a Moroccan plane with FLN leaders on board, he then attempted to play an intermediary role in the Algerian conflict, hoping, in vain, that de Gaulle's return to power in 1958 would facilitate his reconciliation with France. The king would die without witnessing success. But, he was careful not to jeopardize his country's position within a new Maghrib that, already, some perceived as dominated by a revolutionary Algeria, the main heir of the former colonial power.

Having succeeded in reestablishing his country's independence on the international stage, Muhammad also consolidated the position of the monarchy within an institutional system, which was shaken by the 1953–1955 crisis. Some among the nationalists welcomed a king who reigned without governing. But Muhammad did not share that philosophy for himself or his son, Prince Mulay Hassan, his heir, whom he had gradually introduced to power since the end of World War II.

The support he gained by fighting with the Istiqlal against the protectorate helped him keep his authority over an important part of the nationalist movement. In that struggle, the monarchy recovered its powers that the Treaty of Fes (1912) had alienated and, added to that, the administrative means set up by the protectorate. The military and police forces were placed under monarchical authority, but other administrative sectors depended upon a government dominated by the Istiqlal. Without the help of the monarchy, it was not possible to ensure either the control of the resistance movement or the settlement of rural uprisings. A pluralist text related to public freedom rights allowed, in April 1958, the legalization of new political parties and soon favored the split of the Istiqlal Party, with a right wing remaining close to the king and a left wing following a moderate line. In May 1960, Muhammad took the reins of power by naming Mulay Hassan prime minister. The prince had been, at the beginning of independence, chief of staff in the Royal Armed Forces.

As Algeria's independence approached, the more anxious Muhammad became to grant his country a constitution and to organize its democratization under the monarchy's control. He died suddenly in March 1961 after surgery and left the country to the authority of his son, Hassan II.

During this thirty-two-year reign, Muhammad V listened to his country and took part in its evolution, which allowed it to recover its independence and to project itself into modernity. Chosen because of his apparent docility, he proved, in the long run, to be a cautious opponent, capable of appreciating the modernizing actions of such French resident generals as Auguste Nogues or Eric Labonne. They reciprocated by respecting his dignity. In extreme circumstances, he displayed firmness and intuitively anticipated the reactions of common Moroccan people. As far as the rivalry with the nationalist movement, which gradually replaced the common fight against the protectorate, is concerned, he knew how to take advantage of time, how to safeguard his best cards; he went on being attentive to the rural world and sometimes contributed to undermining the credit modern leaders were already losing. Thus, four years after his return, he regained all the power without having to share it. While favoring Algeria's independence, he feared Nasserist or Marxist influences, which could have come from that neighboring country and be exerted upon Morocco.

A man of tradition, Muhammad V was the symbol both of independence and modernity. That symbol continues today to stamp the monarchy's image and to give Morocco a strong identity highly differentiated from that of its neighbor countries.

MUHAMMAD VI

[1963–]

King of Morocco since 1999.

Sidi Muhammad, the oldest son of King Hassan II, was born in Rabat on 21 August 1963. In 1985 he obtained a bachelor of arts degree in law from Muhammad V University, followed in 1987 by a master of arts degree in political science. In 1993 he earned a doctor in law degree from the Université de Nice Sophia Antipolis. Upon his father's death, on 23 July 1999, Sidi Muhammad ascended to the throne under the name Muhammad VI. He became the eighteenth king of the Alawite dynasty

Moroccan king Muhammad VI succeeded to the throne after the death of his father, Hassan II, in 1999. Muhammad VI's reign was initially quite popular with the public, but a slowdown in reforms lowered his support. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

bearing the title of Amir al-Muʾminin ("commander of the faithful"), befitting a monarch who claims descent from the Prophet.

From the outset, Muhammad VI distinguished himself by advocating religious tolerance, democracy, and human rights reforms. On religion and the state, he echoed his father's position when he asserted in 2000 that, although Islam is the state's official religion, there are also Jews who are an integral part of the Moroccan social fabric. The Amir al-Muʾminin is the leader of the Muslims but also of the Jewish minority still dwelling in the kingdom.

On democracy and human rights, Muhammad VI contended that his country must cultivate specific "homemade" democratic features and avoid blind emulation of Western political systems and advocacy organizations, which often seem irrelevant to the local milieu. He soon released several thousand prisoners and reduced the prison terms of another 38,000, many of the latter affiliated with the Islamist Jamaʿat al-Adl wa al-Ihsan (Justice and Charity).

On 20 August 1999 the king broke a taboo by giving a speech in which he mentioned the "disappeared" and the victims of "arbitrary arrest." Simultaneously, emblematic political exiles, or their families, were permitted to return home. Such was the case with the Marxist activist Abraham Serfaty and the family of Mehdi Ben Barka, who had been eliminated in 1965 by the Moroccan secret service upon his arrival in Paris. On 12 November 1999 Muhammad VI dismissed Driss Basri, minister of the interior since 1979. Basri had been regarded as Hassan II's powerful right-hand man who, since the late 1970s, had exiled numerous political opponents or incarcerated them at the infamous Tazmamart prison colony. During the early and mid-1990s King Hassan II had himself set the stage for the reforms undertaken by his son, fearing that the suffering of his people could lead to chaos.

The new king faced major challenges. The population has expanded, despite an infant mortality rate of 57 per 1,000, from ten million in 1956 to thirty-one million in 2003 (an annual growth rate of 2.1 percent). The nation suffers from water scarcity. Unemployment, based on official figures, has reached 20 to 25 percent, but may well be much higher. An estimated 5.9 million people live at or near the poverty level. A major problem is the low access to education, mainly in rural areas. Some 53 percent of the population are illiterate (70 percent among women), while 93 percent receive no medical care.

Of further concern is the Sahara crisis. During the 1970s Hassan II captured large areas of the Western Sahara evacuated by Spain. With Algerian support, the POLISARIO, a Saharawi national liberation movement, sprang up in the Sahara and engaged in guerrilla activity against Morocco. The movement formed a phantom Saharan State in Algiers. Hassan ignored demands for territorial concessions. Muhammad VI pursued this policy despite international pressure to revise it. The policy has caused tensions between Morocco and Algeria.

Despite the proliferation of political parties, nongovernmental human rights organizations, and women's organizations, the struggle for democracy and the uprooting of bureaucratic corruption and inefficiency continues. His most significant effort to date in a drive toward democracy was his decision to convene legislative elections on 27 September 2002. These elections were a step toward a modern civil society. Until these elections, women were excluded from the political decision-making process. In parliament women's representation was only 0.6 percent of the 325 seats in the Moroccan house of representatives (lower house). Only one woman held a government position, that of minister-delegate, which was not a full-fledged portfolio. Since the convening of the newly elected lower house, there are thirty-five women MPs, or 10.8 percent of the total. However, the elections also enabled the Islamists and other opposition parties to fortify their position within Morocco's parliament.

Despite increased women's representation in politics, serious problems continue for the majority of women not represented in the political elite. Muhammad VI's endorsement of revising the religious *madawana* (family code pertaining to women's personal status) toward greater equality between men and women is progressing well but remains thus far in the embryonic stage. The king's "Plan of Action" includes the lifting of legal discrimination in marriage and divorce, the abolition of polygamy, and economic equality between the sexes. The Islamists vehemently oppose the Plan, having forced the government in past years to postpone reforms.

Whereas the Jamaʿat al-Adl wa al-Ihsan retained outsider status, because it questions the legitimacy of Muhammad VI's status as commander of the faithful, the legal Islamist party, al-Adala wa al-Tanmiya (Justice and Development), made vital electoral strides. It reached third place in the legislative elections, with forty-two seats as compared to the fifty seats won by the Union Socialiste des Forces Populaires (USFP) and forty-eight of the Istiqlal Party.

The attempt to form a new government in October 2002 revealed the shortcomings of Moroccan democracy. Neither the USFP nor Istiqlal, the dominant governmental partners, nor Muhammad VI wanted the Islamists to hold ministerial posts. Committed to the concept of a global economy and determined to privatize the public sector, the king feared that involving Islamists in government could stymie reforms and draw sharp criticism from the Moroccan business community as well as the European Union (EU). Moreover, after the 11 September 2001 terrorist attacks, the king thought such a move might irritate Washington. According to the 1996 constitution, the king appoints key members of the government and may, at his discretion, terminate the tenure of any minister or prevent any political party from participating in the ruling cabinet.

Owing to the more liberal atmosphere in Morocco after the death of Hassan II, both conservative Islamists and secular leftists leveled serious criticisms at the new king. They claimed that while Muhammad VI had placed, early in his reign, priority on technological advances aimed at supplying Morocco's rural areas with potable water, electricity, Internet access, and cellular phone service, it had soon became evident that the son was not all that different from the father. Thus the Islamists stepped in to provide some education and welfare services to communities as yet not benefiting from promised reforms and to organize effective mass protests against the government.

Also having grown more vocal, the Berber population demanded greater cultural recognition of their heritage. Berber leaders claim that 60 percent of the Moroccan population is of Berber heritage. It is almost impossible to verify the population figures; leading experts on Berber culture note that Morocco's Berber speakers (there are three Berber dialects as well as literary Berber) constitute 40 percent of the population, mostly in rural areas. The Berber associations protest against their youth being exposed generation after generation to the idea that Morocco is part of the Arab nation, making them Arabs in spite of themselves. Although Berbers were converted to Islam, their ethnic and linguistic purity has remained intact. Morocco, the Berbers argue, is Berber, Arab, and African. In March 2000 Berber leaders drafted a manifesto calling on the kingdom to recognize Berber as a national language, teach it in schools, license a Berber television station, and end restrictions on registering Berber names for their children. In a concession to the Berbers, in 2001 Muhammad VI created by royal

decree an institute devoted to the conservation, dissemination, and teaching of the Berber language and culture of Morocco.

Until 2003 Muhammad VI had shown little interest in the Middle East. He declined a U.S.-Egyptian invitation to attend the June 2003 Sharm al-Shaykh meeting that preceded the U.S.-Israeli-Palestinian summit in Aqaba, and only grudgingly accepted his father's role as chairman of the al-Quds Committee, a body formulating Arab policies on Jerusalem. Unlike their political predecessors, Muhammad VI and the presidents of Tunisia and Algeria have chosen thus far to immerse themselves in domestic issues and ties with the EU.

MUHAMMAD ALI
[1770–1849]

Ruler (pasha) of Egypt, 1805–1849.

Muhammad (also Mehmet) Ali Pasha was born to a military family in the Macedonian port city of Kavalla (in what is today Greece). He was apprenticed to the tobacco trade by his father, Ibrahim Agha, and took over the family business upon Ibrahim's death in 1790. He also succeeded his father as commander of the local militia, in which post he came to the attention of the Ottoman authorities in Istanbul, who assigned him a warship to protect the surrounding waters against pirates. He married a well-to-do widow, Amina, who bore him three sons, Ibrahim, Ahmad Tusun, and Ismaʿil, and two daughters, Tevhide and Nazli.

In 1801, Muhammad Ali was appointed second in command of the 300 troops from Kavalla ordered to take part in the Ottoman Empire's expedition to drive Napoléon's army from Egypt. Muhammad Ali took over the regiment when its commander hastily returned to Macedonia; his skill on the battlefield prompted the Ottoman general to promote him to the rank of *binbashi* during the first weeks of the campaign. After the evacuation of the French, the Kavallan regiment stayed on to assist the Ottomans in subduing the Mamluk commanders. When the new governor let their pay slide into arrears, Muhammad Ali led these irregulars in a demonstration demanding it and then collaborated with the Mamluks to overthrow Egypt's Ottoman governor, taking control of Cairo in 1804 with the support of the religious notability and rich merchants. In June 1805, he was confirmed as governor-general *(wali)* of Egypt by the Ottoman Porte (government).

During the next six years, he suppressed the Mamluks and confiscated their lands, disarmed the urban population, and established a regular fiscal administration. These steps set the stage for military campaigns in the Sudan and the Hijaz (Arabia) in 1810 and 1811, which were followed by expeditions to Crete and the Peloponnese (Greece) from 1820 to 1824 and an invasion of Palestine and Syria in 1831.

After reaching the gates of Istanbul at the end of 1832, his armies were gradually forced out of Anatolia through the intervention of the British and Russians. Repeated attempts to conciliate Britain failed, and in 1840 the London Convention was effected, with the Ottomans supported by Britain, Austria, Prussia, and Russia. British warships then bombarded Beirut and appeared off Alexandria (Egypt), forcing Muhammad Ali to agree to give up his empire in Syria, Arabia, and the Aegean in exchange for the hereditary right to rule Egypt. He traveled to the Ottoman capital in 1846 to confirm his family's succession, but he succumbed to dysentery and dementia on 2 August 1849. His descendants continued to rule Egypt, taking the titles of wali and khedive until 1952, when Farouk was ousted by a revolutionary government.

MUHAMMAD ALI MOSQUE

Mosque commissioned by Muhammad Ali for Cairo's Citadel.

By its size and hilltop location, the Muhammad Ali Mosque at the Citadel dominates the Cairo skyline. As early as 1820, Muhammad Ali of Egypt asked French architect Pascal Coste to draw up plans for mosques in the Citadel and at Alexandria. Coste's plan was not used, however, when construction began in the early 1830s, just as Muhammad Ali was challenging his Ottoman overlord by invading Syria. Turning his back on local Mamluk-influenced architectural styles that had persisted through three centuries of rule by the Ottoman Empire, Muhammad Ali symbolized his ambitions by appropriating the style of great Ottoman mosques of Constantinople (now Istanbul). Sultan Ahmet's Blue Mosque, the Nuru Osmaniye, and the Yeni mosques have all been cited as influencing Yusuf Bushnaq, the Greek architect brought from Constantinople to construct the mosque. Its embellishments are in the baroque-rococo style in vogue in Constantinople in the eighteenth and early nineteenth centuries.

The mosque also symbolized Muhammad Ali's victory over the Mamluks, whom he had murdered in the Citadel in 1811. Dominating the citadel founded by Salah al-Din (known as Saladin [1137–1193]), it rose on the leveled ruins of the Qasr al-Ablaq (Striped Palace) of al-Nasir Muhammad, the Mamluk sultan whose mosque stands nearby.

The mosque is built of local Muqattam limestone, with columns and sheathing of alabaster—a stone softer than marble previously used mainly for vases and other small objects—from a quarry near Bani Suwayf. The mosque was completed in 1857 under Saʿid Pasha. Colonnades topped with small domes bound its open courtyard. The side opposite the great dome has a clock tower with an ornate timepiece presented by King Louis-Philippe of France; Muhammad Ali returned the favor with the obelisk now standing in the Place de la Concorde in Paris. Two slender Ottoman minarets rise 270 feet (82 m) on square bases only 10 feet (3 m) on a side. The great Byzantine Ottoman dome rests on four arches with four massive piers. Four half-domes lead out of the arches, four smaller domes fill in the corners, and a lower half-dome tops the *mihrab* (the niche at the east end of the mosque pointing to Mecca). Above the alabaster sheathing, the interior walls and domes are ornately painted. Muhammad Ali is buried beneath a marble monument to the right of the entrance, behind a bronze grill. Hundreds of lights hang from the ceiling on great chandeliers. Muhammad Ali's Jawhara (Bijou) Palace stands nearby.

The Muhammad Ali Mosque lacked local successors as well as local antecedents. In the second half of the nineteenth century, either Western or eclectic Mamluk-revival styles were preferred for major Egyptian buildings.

DONALD MALCOLM REID

MUHAMMAD AL-SADIQ

[1814–1882]

Ruler of Tunisia, 1859–1882.

Muhammad al-Sadiq Bey was the son of Husayn Bey (ruler of Tunisia, 1824–1835) and the third Husaynid *mushir* (marshal). His reign saw Tunisia's first experiment with constitutionalism, parliamentary rule, and restrictions on the bey's authority; the unbridled control of Prime Minister Mustafa Khaznader; disastrous foreign loans; increased taxes; a bitter revolt; Europe's economic control; the reformist ministry of Khayr al-Din (1873–1877); and the imposition of a protectorate by France (1881).

From all reports, Muhammad al-Sadiq was a weak ruler who was easily influenced by his political entourage of Mamluks, especially Khaznader. Like his predecessor, Ahmad Bey, al-Sadiq evinced an early fascination with the military and showed

some talent in that area. Soon after his accession, he sought to reconstitute the army and introduced a military code that provided for conscription of all able-bodied male adults for a period of eight years. An individual could send a proxy if he chose not to enter the army.

Upon assuming the throne in 1859, al-Sadiq declared that he would uphold the principles of the Fundamental Pact of 1857. He proclaimed a new constitution in April 1861. It included the principle of ministerial responsibility, financial control vested in the Grand Council, a strict budget controlled by the Grand Council, and a secular court system. Also provided was a "bill of rights" that included provisions for religious freedom and conversion from Islam.

Although the document appeared to guarantee constitutionalism and individual rights, it actually provided for a system that perpetuated the Turkish-Mamluk political elite and increased their power at the bey's expense. It was not, therefore, a parliamentary democracy that emerged, but a traditional elitist oligarchy. The limitations placed on the bey's authority by the constitution increased Khaznader's confidence and freedom of action. He used the constitution to eliminate his enemies on the Grand Council and install his close associates. He increased his financial exactions from the state treasury and more than doubled the national debt within one year. For this reason, he floated his first foreign loan in 1863. To pay for that loan, Khaznader increased the unpopular personal *majba* tax twofold. This led to the revolt of 1864.

From 1865 to 1869, Khaznader ran the state. In the latter year, after poor harvests, famines, and epidemics, al-Sadiq accepted the International Finance Commission, which aimed to ensure Tunisia's payment of its financial obligations. Khayr al-Din, Khaznader's son-in-law, represented Tunisia on the commission. In 1873 he persuaded the bey to remove Khaznader and install himself as prime minister.

Under Khayr al-Din's prime ministry, a number of reforms were instituted: regulation of the education at Zaytuna University, the founding of Sadiqi College, elimination of abuses in the administration of *hubus* (religious trust) properties, reformation of the tax system, abolition of the *mahallas,* improvements in administrative accountability, introduction of protective tariffs on imports, and numerous public works projects. Sharp curtailment of public spending by the bey and support for Ottoman claims to sovereignty over Tunisia forced Khayr al-Din to resign in July 1877. Constraints on the bey's powers were lifted, and the weak Mustafa ibn Isma'il became prime minister.

Using the excuse of Tunisia's violations of its border with Algeria, France invaded Tunisia in 1881. On 12 May 1881, Muhammad al-Sadiq Bey signed the treaty, known as the Treaty of Bardo, officially establishing France's protectorate, which lasted until 1956. It was later repudiated by the bey, an action that forced the signature of a second treaty in July. Although this second treaty was never ratified, the La Marsa Convention of June 1883 (signed by Ali Bey, ruler of Tunisia from 1882 to 1900) confirmed the provisions of the Bardo treaty and France's imposition of a protectorate.

MUHAMMAD, AZIZ

[1933–]

First secretary of the Communist Party of Iraq, 1963–1978.

A Kurd, born in Sulaymaniyya, Aziz Muhammad al-Hajj joined the Iraqi Communist Party in 1948. He was arrested the same year and jailed until the end of the monarchy in 1958. Soon after his release, he entered the Central Committee of the party and was appointed head of the Central Organizational Committee. From February 1963 to August 1965,

he resided in Moscow, and in 1963 was elected first secretary of the party (in exile). Starting in 1978, following the rapprochement between the Soviet Union and the Baʿth regime in Iraq, Muhammad led the party to cooperation with the Baʿth. On 17 July 1978, Muhammad signed the National Action Charter with the president of Iraq and the secretary of the Baʿth party, which became a basis for strategic alliance between the communists and the Baʿth. By the time of the U.S. invasion of Iraq in 2003, real power in the party lay in the hands of Hamid Majid Musa.

MUHAMMARA

See FOOD: MUHAMMARA

MUHARRAM

First month of the Islamic lunar calendar, containing thirty days.

The events that took place on the tenth of Muharram in the year 680 changed forever the character of this month by making it a month of mourning, at least for the Shiʿa. On that date, Husayn—the grandson of the Prophet Muhammad and the third Imam of Shiʿite Islam—was brutally killed on the battlefield of Karbala. In this battle Husayn's sons, male relatives, and followers also perished. The women of his encampment were taken as captives to Caliph Yazid in Damascus. This tragic event overshadows any other event in that month. Husayn's ordeal started on the first of Muharram, when he and his party were intercepted by Yazid's troops, and continued even after his death, with the captivity of the Karbala survivors. Although the tenth of Muharram (known as *Ashura*), is the actual date of Husayn's death, the mourning has been extended to cover the whole month.

For the Shiʿa, the Muharram tragedy of Husayn is the greatest act of suffering and redemption in history. It acquired a timeless quality, and, therefore, apart from the yearly Muharram observances, the Shiʿa continually try to measure themselves against the principle of the paradigm of Husayn whenever they regard themselves as deprived, humiliated, or abused. In fact, one of the main slogans during the Islamic revolution in Iran (1978/79) chanted by the crowds or scribbled as graffiti on town and village walls was "Every day is Ashura; every place is Karbala; every month is Muharram." This same slogan was intoned on radio and television and was graphically depicted on posters and even postage stamps during Iran's eight-year (1980–1988) war against Iraq.

The Muharram commemoration of Husayn's passion and martyrdom is charged with unusual emotions throughout the world's Shiʿa communities. Even the followers of Sunni Islam and the members of other religions who live among the Shiʿa are greatly affected by these commemorative rituals. That participation in the annual observance of Husayn's suffering and death is considered an aid to salvation on the day of judgment provides an additional incentive for Shiʿa to engage in the many mourning rituals. Elaborate Muharram observances were already carried out in the fourth Islamic century in Baghdad during the reign of Muʿizz al-Dawla of the Shiʿite Buyid dynasty. Many Muharram rituals have developed since, and although they may differ in form from one locality to another, passionate participation in them is universal.

These rituals may be divided into two categories, the ambulatory and the stationary. They are primarily performed during the first ten days of Muharram, with the greatest discharge of emotions and the greatest number of rituals occurring on the day of Ashura. The most common ambulatory rite is a procession, and the participants are divided into different groups of self-mortifiers—those who beat their chests with the palms of their hands; those who beat their backs with chains; and those who wound their foreheads with swords or knives. Some mortify themselves with stones, and others carry the *alam,* which signify the standard of Husayn at Karbala. In Iran, in some processions, floats with live tableaux representing the scenes from the Karbala tragedy can be seen, as well as Husayn's symbolic bier, called *nakhl* (date palm). Nakhl is carried because, according to tradition, Husayn's beheaded corpse was

carried on a stretcher made of date palm branches. Some nakhl are so large that they require more than 150 people to carry them. Processions are accompanied by bands of martial and mournful music. The most characteristic features of Muharram on the Indo-Pakistani subcontinent are the huge artistic interpretations of Husayn's mausoleum carried or wheeled in the procession. At the end of Ashura day, these structures, called *taʿziya,* are either cremated or buried at the local cemetery, called Karbala, or are immersed in water.

The Muharram observances were brought as far as the Caribbean basin in the years 1845 to 1917, when indentured laborers from India went there. Muharram is still, after carnival, the most important event in Trinidad. Although the Muharram rituals in Trinidad have more of a festive than a mourning character, the main features continue to be processions. In this case, the processions are parades of colorful cenotaphs for Husayn, called *tadja.* In India, the Sunni and even the Hindus actively participate in many Muharram rituals. In Trinidad as well, this is a true ecumenical event.

To the stationary rituals belong *majalis al-aza,* recitation and singing of the story of Husayn at the Battle of Karbala. In Iran, this ritual is called *rawda khwani.* The storyteller (called *rawda khwan*) of the Shiʿite martyrology sits above the assembled crowd on a *minbar* (pulpit) in a black tent, under an awning, or in a special edifice (*Husayniyya* or *takiya* in Iran; *ashurkhanah* or *imambarah* in India) and brings the audience to a state of frenzy with recitation, chanting, crying, sobbing, and body language. The most unusual stationary ritual is the taʿziya of Iran—the only serious drama and theater developed in the Islamic world depicting the martyrdom of Husayn and other Shiʿite martyrs. Originally, it was performed in the month of Muharram, but now it is staged year round.

The Muharram processions actually served as prototypes for the massive demonstrations in Tehran and other Iranian cities during the 1978/79 revolutionary upheavals. The mixing of Muharram mourning slogans with political ones has been an old Muharram tradition. The Iranian Revolution utilized the Husayn Muharram paradigm and was carried out in accordance with the Islamic calendar. Ayatollah Ruhollah Khomeini's revolution started in Muharram on Ashura, 3 June 1963, when he delivered a speech at the Fayziya Madrasa in Qom, criticizing the internal and external policies of the shah, Mohammad Reza Pahlavi, and his government. In the article "Islamic Government," written while he taught in exile in Najaf, Khomeini states: "Make Islam known to the people, then . . . create something akin to Ashura and create out of it a wave of protest against the state of the government" (*Islam and Revolution,* p. 131). A few days before Muharram on 23 November 1978, in order to accelerate the revolution, Khomeini issued from Neauphle-le-Château, France, a declaration called "Muharram: The triumph of blood over the sword," which was recorded in France and distributed in Iran through its network of mosques. The opening paragraph of the declaration reads as follows:

> With the approach of Muharram, we are about to begin the month of epic heroism and self sacrifice—the month in which blood triumphed over the sword, the month in which truth condemned falsehood for all eternity and branded the mark of disgrace upon the forehead of all oppressors and satanic governments; the month that has taught successive generations throughout history the path of victory over the bayonet. (*Islam and Revolution,* p. 242)

Less than two months later, the shah left Iran, enabling Khomeini to return from fourteen years of exile.

Muharram affects the entire Islamic community; however, it is primarily felt among Shiʿa. Muharram could be expressed both as a mourning depression and an exuberant agitation and will to act. These expressions of Muharram can be and have been converted into political actions.

MUHARRAQ

The second-largest city in the Kingdom of Bahrain and the second-largest island of the archipelago in the Persian/Arabian Gulf.

During the early nineteenth century, Muharraq (also Moharek, al-Muharraq) was ruled by leaders of the Abdullah branch of the al-Khalifa (who rule Bahrain). They used it as a base for their long-standing rivalry with the Sulman branch, centered in Manama (the capital, on the main island of Bahrain, now across a short channel-bridge). More homogeneous in population than Manama, Muharraq has mainly Sunni Arabs and only two predominantly Shiʿite residential districts. During the 1950s and 1960s, both radical and Arab nationalist movements appealed to the city's people in an effort to remove the British. Muharraq was the site of the British air force and army bases during the later years of the British protectorate (1880–1971). It is also the site of the country's international airport. In 2001, the city's population was estimated at 74,000.

FRED H. LAWSON

MUHSIN, ZUHAYR

[1936–1979]

Palestinian politician and guerrilla leader.

Born in Tulkarm in mandatory Palestine, Zuhayr Muhsin joined the Baʿth party at age seventeen and later became a teacher in Jordan. He was accused in 1957 of pro-Nasser subversion, and left to live briefly in Qatar and Kuwait, before finally settling in Damascus, Syria. In 1970, he became leader of Saʿiqa (Thunderbolt), the Syrian Baʿth party's Palestinian guerrilla organization. The following year, he was appointed to the Palestine Liberation Organization (PLO) executive committee as Saʿiqa's representative. Later, he became head of the PLO's military department.

Muhsin is believed to have led a battalion that attacked the Lebanese town of Damur in January 1976, where 582 people were killed. Saʿiqa also played a role in defending the Tal al-Zaʿtar Palestinian refugee camp in Lebanon under siege by the Phalange the following summer. At the 1977 Palestinian National Council meeting, Muhsin argued against partial, negotiated settlements on the Palestine question. He was assassinated by an unknown assailant on 15 July 1979 on a street in Cannes, France.

ELIZABETH THOMPSON

MUHTAR, GAZI AHMET

[1839–1918]

Ottoman soldier and grand vizier.

One of the great Ottoman war heroes of the late nineteenth century, Gazi Ahmet Muhtar's first notable victory was his halt of Russian advances on the eastern front in the Turkish-Russian War (1877/78). In appreciation, Sultan Abdülhamit II awarded him

the title of *gazi* and appointed him to head an imperial military inspection commission. From 1895 to 1906, Ahmet Muhtar served as the sultan's representative, or high commissioner, to Egypt.

During this time, Ahmet Muhtar became a prominent advocate of modernization and westernization and was loosely affiliated with the Committee for Union and Progress (CUP) and other groups. In July 1912, liberal officers opposed to the CUP's autocratic rule used military threats to bring down its grand vizier. They chose Ahmet Muhtar, then an elderly statesman considered above politics, to replace him. His government, known as "the great cabinet," consisted of several former grand viziers chosen to unite the empire in face of the Balkan crisis and Italian war. But Muhtar's government fell after only a few months, with the grave Ottoman losses at the outbreak of the Balkan War in October.

See also COMMITTEE FOR UNION AND PROGRESS.

ELIZABETH THOMPSON

MUHYI AL-DIN, KHALID

[1923–]

Egyptian politician.

A military officer from a well-to-do family, Khalid Muhyi al-Din received a degree in economics from the University of Cairo and the rank of major in the Egyptian army after graduating from the Royal Military Academy. He joined the clandestine Free Officers who toppled King Farouk in 1952. Although Muhyi al-Din was a member of the Revolutionary Command Council, he was eventually marginalized by Gamal Abdel Nasser, first for backing President Muhammad Naguib and later for being a communist in an Arab context that did not favor communism. He did, however, retain a position in the government overseeing the press. He opposed Anwar Sadat's pro-Western and pro-Israeli policies and in 1977 formed the National Progressive Unionist Party, over which he presided and which advocated a pan-Arab socialist ideology. He was elected to parliament in 1990.

MAYSAM J. AL-FARUQI

MUHYI AL-DIN, ZAKARIYYA

[1918–]

Egyptian military officer and politician.

Zakariyya Muhyi al-Din (or Mohieddin) came from a wealthy landowning family outside Mansura, Egypt. He was educated at the Military College and the Staff Officers College in Cairo, served in the Palestine War, and was an Army Staff College lecturer at the time of the revolution. An original member of the Free Officers and a key figure in the overthrow of King Farouk in 1952, he was appointed to the Revolutionary Command Council established to support Gamal Abdel Nasser in government. Muhyi al-Din subsequently served as interior minister (1953–1962), founded the General Intelligence Service, and then served as prime minister (1965–1966) and vice president (1967). After the 1967 war with Israel, Nasser resigned and named Muhyi al-Din his successor, a fact widely interpreted as acquiescence to U.S. influence, particularly since Muhyi al-Din supported economic liberalization throughout the 1960s. Public demonstrations encouraged Nasser to withdraw his decision, and Muhyi al-Din left public life in March 1968.

After Nasser's death in 1970, it was thought that conservatives were plotting to ensure that Muhyi al-Din succeeded as president, leading to a wave of "corrective" trials when Anwar al-Sadat secured the support of centrist and leftist camps. In 1972 Muhyi al-Din was again linked to a petition to Sadat by ministers and ex-officers opposed to Soviet influence, and in 1978 he publicly opposed Sadat's rapprochement with the United States and Israel. He has since refrained from making public interventions.

MUKHTAR

See Glossary

MUKHTAR, UMAR AL-

[c. 1862–1931]

Preindependence Libyan guerrilla leader.

Umar al-Mukhtar was born into the Minifa tribe, which lives along the eastern Cyrenaican coast, otherwise known as Marmarica. His family was part of the Farhan lineage, itself part of the Braidan fraction. The Minifa were a client tribe of the al-Abaydat *saʿadi* tribe, to whom they paid dues as *marabtin al-sadqan* (clients for protection). Most of the tribe were seminomads, but some lineages were camel-herding nomads. The tribe had long been under Sanusi influence, with the closest *zawiya* (Islamic religious center) being located at Janzur, on the coast.

Umar al-Mukhtar's early education was provided at the Janzur *zawiya.* He then moved to the Sanusi order's headquarters at Jaghbub, 100 miles (160 km) inland, near the modern border between Libya and Egypt. He proved an adept pupil and a committed member of the Sanusi *ikhwan* (brotherhood), with the result that he was nominated shaykh of the al-Qasur *zawiya,* in the Abid tribe, just to the south of al-Marj in the Jabal al-Akhdar.

At the turn of the century, after only two years at al-Qasur, Umar al-Mukhtar was sent southward to the new Sanusi headquarters at al-Kufra, which had been created in 1895. From there he was sent to Wadai, to participate in the Sanusi resistance to French penetration into what today is central Chad. He returned to al-Qasur in 1906 and took a prominent role in the first Italo–Sanusi War, which followed on the Italian invasion and occupation of Darna and Tripoli in September 1911.

The war was brought to an end by the Treaty of Akrama in January 1917. The treaty was, in effect, a truce, enforced on the Sanusi by British pressure, which left the Italians in charge of the coastal areas, while the Sanusi controlled the hinterland. Sanusi armed forces were gathered into a series of camps running eastward along the southern slopes of the Jabal al-Akhdar from Ajidabiya to Akrama. The *badu* (bedouin) forces in these camps were controlled by Sanusi *ikhwan* and shaykhs. Umar al-Mukhtar was responsible for the camps at al-Abyar, due east of Banghazi and south of al-Marj, and Taknis, just southeast of al-Marj.

In November 1921, in accordance with the terms of the Accord of Bu Mariyam, four of these camps were transformed into *campi misti* (mixed camps), in which Italian and Sanusi units, under their own independent commands, were garrisoned side by side. Both the camps controlled by Umar al-Mukhtar were included in this bizarre experiment, which was designed to promote joint policing and security arrangements. The fascist march on Rome at the end of 1922 also marked the beginning of the end of this experiment in joint policing and, on 6 March 1923, Italian forces attacked the campi misti, thus ushering in the second Italo–Sanusi War.

Although the Sanusi family did not take direct charge of the new war—most of its members fled to Egypt for British protection—Sanusi *ikhwan* played a prominent role, alongside some of the younger members of the Sanusi family. Umar al-Mukhtar was to take charge of operations against the Italians. He took charge of all the guerrilla bands *(adwar)* on the plateau formed along the southern slopes of the Jabal al-Akhdar in Cyrenaica, as the *al-Naʾib al-Amm* (general representative) of the Sanusi.

According to E. E. Evans-Pritchard, the *adwar* were usually between 100 and 300 men, and each was the nominal responsibility of a particular tribe.

Its membership, however, was often heterogeneous, including members of other tribes, *ikhwan,* and sympathizers from the Sudan and Tripolitania. The overall numbers involved in the fighting were very small—around 600 to 700 toward the end of the war—simply because the terrain did not permit major movements of personnel. Umar al-Mukhtar's responsibilities were to determine strategy, to arrange logistics and to ensure discipline, particularly in terms of pillage and vendettas.

The guerrilla war obeyed few of the rules to which the Italians were accustomed. In a telling passage, Teruzzi, when governor of Cyrenaica, pointed out to the authorities in Rome that superiority in men and arms was "a vain illusion, because the struggle was not against an organized enemy, but against an enemy who had no consistency of form." It was difficult, for example, for the Italians to distinguish between friend and foe, because those tribes that were apparently submitted to Italian rule still provided material support to the guerrillas.

The strategy of al-Mukhtar was to hold the southern slopes of the plateau formed by the Jabal al-Akhdar to the south of the littoral escarpment. Although the Italian forces were able to establish themselves on the coast and to control the immediate hinterland of their major bases at Ajidabiya and al-Marj, they found it very difficult to ensure control of the land between. They were able to use air power to attack *badu* camps in the flatlands of the plateau, but could do little about the plateau itself. Even a line of permanent forts and outposts along the plateau of the Jabal did little to increase the effectiveness of Italian units, while an attempt to divert guerrilla activity by the capture of Jaghbub in 1926 proved to be irrelevant to the struggle.

Nonetheless, the constant military pressure severely depleted al-Mukhtar's forces; in 1928, both provinces of Libya were placed under a single administration. An offer of negotiations persuaded al-Mukhtar, his companion guerrilla leader, Sidi Fadil Bu Umar, and a young scion of the Sanusi family, Sayyid al-Hasan al-Rida, to accept a five-month truce. The negotiations broke up in disorder, however, with al-Mukhtar and his supporters rejecting the arrangements agreed to by Sayyid al-Hasan al-Rida. By late January 1930, al-Mukhtar was forced to back into his last redoubt, after his forces were severely beaten at Wadi Mahajja; 800 men and 2,000 camels were lost during 1929, compared with Italian losses of only 114 men.

Command of the Italian campaign in Cyrenaica was then taken over by General Rodolfo Graziani, who applied a ruthless policy—providing Italian troops with great mobility, isolating the guerrilla bands from their logistics support base by herding the nomadic population of Cyrenaica into concentration camps, and cutting the guerrillas off from their Egyptian bases by a barbed-wire barricade.

On 11 September 1931, Sidi Umar al-Mukhtar was captured at Suluq and, five days later, was hanged before 20,000 Libyans in a demonstration of Italian power. The war was effectively over, even though 700 guerrillas had remained on the plateau. The last engagement was fought on 19 December 1931. The death of al-Mukhtar had destroyed the spirit of the Libyan resistance.

GEORGE JOFFE

MUKRANI FAMILY

Prominent family in preindependence Algeria.

During the late Ottoman period (c. 1800–1830), the Mukranis controlled a key section of the route between Algiers and Constantine. Under the French, Muhammad al-Mukrani was a regional commander until the military regime was weakened by Prussia's defeat of France in 1870. His revolt of 1871/72, supported by the Rahmaniyya brotherhood of Kabylia, was the largest and most harshly suppressed indigenous uprising prior to the War of Independence.

MUNIF, ABDEL RAHMAN

[1933–]

Saudi Arabian writer.

Abdel Rahman (also Abd al-Rahman) Munif, a prolific writer of novels and of autobiographical and political essays, was born in 1933 in Amman, Jordan, to a Saudi father and an Iraqi mother. He attended university in Baghdad and Cairo and earned a Ph.D. in oil economics from the University of Belgrade. Munif continued to visit Saudi Arabia until 1963, when the Saudi government stripped him of his citizenship because of his political activism. Munif held prominent positions in the oil industry and was editor in chief of the periodical *Oil and Development* in Baghdad. He published his first novel, *Al-ashjar wa ightiyal Marzuq* (The trees and Marzuq's assassination), in 1973. His 1978 novel, *Endings,* is distinguished from the many Arabic novels focused on urban life by its detailed portrayal of the culture and the harsh conditions of village life at the edge of the desert. His description of life, culture, and politics in the Arabian peninsula reaches its most elaborate expression in the five-book *Cities of Salt* series. The first volume, originally published as *Al-Tih* (The wilderness, 1984), presents a critical view of the development of a fictional Gulf emirate in the 1930s and explores the disruption of an oasis community as a result of the interaction between Americans and the local Bedouin community following the discovery of oil. Munif's devastating portrayal of government corruption and oppression in *Cities of Salt* and other novels has inspired censors in Saudi Arabia and Egypt to ban his books.

CAROLINE SEYMOUR-JORN

MUNTADA AL-ADABI, AL-

A pro-Arab club founded in Istanbul in 1909; centered in Jerusalem after 1918.

Al-Muntada al-Adabi (Literary Society) was originally founded in Istanbul in 1909 by Abd al-Karim al-Khalil of Tyre, Lebanon, to act as a meeting place for Arab visitors and residents in the capital of the Ottoman Empire. The club played a role in the prewar reformist Arab movement in late Ottoman times. Membership of the club included politically conscious Lebanese, Palestinians, and Syrians. After the dissolution of the Ottoman state, the club reemerged in Jerusalem in November 1918 with new members and a new political program. It was largely dominated by prominent members of the Nashashibi family, most notably Isʿaf, a man of letters. Adopting a stance in favor of Arab nationalism, the club demanded complete Arab independence and Palestinian-Syrian unity. From its major center in Jerusalem, the club helped organize an anti-Zionist movement whose activities spread in Lebanon and Syria, where the club had branches. With the fall of the Syrian Arab government of Faisal I ibn Hussein (1920), the club lost a major source of support and was eclipsed by the emergence of the Arab Executive in 1920.

MUNTAFIQ TRIBE

See TRIBES AND TRIBALISM: MUNTAFIQ TRIBE

MUNTASIR FAMILY

Prominent Tripolitanian Arab family in Libya.

The Muntasir family resided in the coastal town of Misurata. It collaborated with the Turkish administrators of Libya during the second Ottoman occupation, after 1835, but fell out with the Young Turk revolution of 1908, since one of its leading members was murdered, allegedly, at Young Turk instigation.

The Muntasirs switched support to Italy during Italy's entry into Libya, before the military occupation of 1911, and cautious support continued during the first Italo-Sanusi War that ensued.

When the United Nations took charge of Libya's transition to independence in 1950, Mahmud Bey Muntasir was made premier of the provisional government, a position that was confirmed upon independence until his resignation in 1954. As an intimate of the royal family, he became premier and interior minister again in 1964, during pro-Arab nationalist agitation in Tripoli. Since the Great September Revolution (1969), members of the family have acted in a ministerial capacity and Umar Muntasir has been seen as the leading light of the technocrat faction within the Jamahiriya.

MURABITUN

Military arm of Harakat al-Nasiriyyin al-Mustaqillin (Independent Nasserite Movement); largest Sunni Muslim militia in west Beirut from the beginning of Lebanon's civil war of 1975 until the Arab–Israel War of 1982.

Founded by Ibrahim Qulaylat in early 1972, the Murabitun (Arabic for sentinels) of Lebanon maintained a close alliance with al-Fatah (of the Palestine Liberation Organization, PLO) and continuously replenished its arms stockpiles through the largesse of Libya. Qulaylat was a veteran of the Lebanese Civil War of 1958 and had cultivated a personal relationship with his hero, Egypt's President Gamal Abdel Nasser.

During the early stages of the Lebanese Civil War of 1975, the Murabitun expelled the Maronite Christian militias from the hotel district of downtown Beirut, and they maintained a sizable presence in the capital from then on. The dispersal of the PLO and the Murabitun's disarmament by Israel in 1982 greatly weakened the movement; in 1984, Syria's allies, the Shiʿite Amal and the Druze militias of the Progressive Socialist Party conducted a series of multiple strikes against Qulaylat, who increasingly advanced himself as the protector of the Sunni community. Qulaylat now lives in exile in France.

MUSA DAGH

Mountain site of Armenian resistance to 1915 deportation orders in the Ottoman Empire.

Of the hundreds of villages, towns, and cities across the Ottoman Empire whose Armenian population was ordered removed to the Syrian desert, Musa Dagh was one of only four sites where Armenians organized a defense of their community against the deportation edicts issued by the Young Turk regime beginning in April 1915. By the time the Armenians of the six villages at the base of Musa Dagh were instructed to evict their homes, the inhabitants had grown suspicious of the government's ultimate intentions and chose instead to retreat up the mountain and to defy the evacuation order. Musa Dagh, or the Mountain of Moses, stood on the Mediterranean Sea south of the port city of Alexandretta and west of ancient Antioch.

With a few hundred rifles and the entire store of provisions from their villages, the Armenians on

Musa Dagh put up a fierce resistance against a number of attempts by the regular Turkish army to flush them out. Outnumbered and outgunned, the Armenians had little expectations of surviving the siege of the mountain when food stocks were depleted after a month. Their only hope was a chance rescue by an Allied vessel that might be roaming the coast of the Mediterranean. When two large banners hoisted by the Armenians were sighted by a passing French warship, swimmers went out to meet it. Eventually five Allied ships moved in to transport the entire population, more than four thousand in all.

The Armenians of Musa Dagh had endured for fifty-three days: from 21 July to 12 September 1915. They were disembarked at Port Saʿid in Egypt and remained in Allied refugee camps until the end of World War I when they returned to their homes. As part of the district of Alexandretta, or Hatay, Musa Dagh remained under French mandate until 1939. The Musa Dagh Armenians abandoned their villages for a second, and final, time when the area was incorporated in the Republic of Turkey.

In the face of the complete decimation of the Armenian communities of the Ottoman Empire, Musa Dagh became a symbol of the Armenian will to survive in the postwar years. Of the three other sites where Armenians defied the deportation orders, Shabin Karahissar, Urfa, and Van, only the Armenians of Van were rescued when the siege of their city was lifted by an advancing Russian army. The Armenians of Urfa and Shabin Karahissar were either murdered or deported to face starvation in the Syrian desert much as the rest of the Armenians of the Turkish empire. In what became known as the Armenian genocide, Musa Dagh stood as the sole instance where the Allies averted the death of an Armenian community. That story inspired the Prague-born Austrian writer, Franz Werfel, to write a novelized version of the events as *The Forty Days of Musa Dagh.* Published in 1933, the book became an instant best-seller, but with the rise of Hitler, Werfel himself fled Vienna that same year. *Forty Days of Musa Dagh* was eventually translated into eighteen languages, and Metro-Goldwyn-Mayer bought the rights to the book and announced plans for the production of a film version of the novel. The Turkish ambassador's protestations to the Department of State resulted in the intervention of the U.S. government in the matter. With a veiled threat to ban U.S.-made films from Turkey, MGM studios permanently shelved plans to produce the movie.

ROUBEN P. ADALIAN

MUSA KAZIM

[1858–1919]

Ottoman Turkish religious leader.

Musa Kazim was the Shaykh al-Islam of the Ottoman Empire after the deposition of Sultan Abdülhamit II in 1909. He was also a member of Talat's cabinet in 1917. Musa Kazim Efendi called for a return to the foundations of Islam as the only way to restore the empire to its former glory. He believed in an orthodox Islam based on the Qurʾan and the *shariʿa* (Islamic law) and not open to what he perceived to be the liberal interpretations of the educated elite. Though he urged the adoption of Western technology, he claimed that Western culture was incompatible with the *shariʿa*, and cultural Westernization was therefore forbidden to Muslims. He was a staunch defender of the institution of the caliphate, and he championed reforms in the teaching of religion. Musa Kazim was a Sufi (a Muslim mystic) though there is some dispute as to whether he was of the Naqshabandi or the Bektashi order.

ZACHARY KARABELL

MUSA, NABAWIYYA
[1890–1951]

Early Egyptian feminist.

Nabawiyya Musa, often referred to as one of Egypt's first Muslim feminists, was a pioneer of girls' schooling, women's rights, women's journalism, and nationalist education. Musa graduated from, and then taught at, al-Saniyya teacher training institute for girls. She gained fame in 1907 as the first woman to sit for and pass the secondary-school certificate exam despite there being no secondary girls' school at the time. Consequently, she became the first female teacher to earn pay equal with that of her male counterparts, setting a precedent for postindependence Egypt. An outspoken critic of foreign education because of what she considered its dubious political and cultural influence, Musa stressed the importance of indigenous teachers and a nationalist curriculum. She advanced girls' schooling as teacher, administrator, inspector, author of a popular grammar text, and founder and director of two private girls' schools. Also an avid writer and public intellectual, she founded the journal *Majallat al-Fata* and in 1920 authored the groundbreaking feminist work *al-Maraʾa wa al-Amal* (The woman and work). An honorary founder of the Egyptian Feminist Union (established in 1923) and a staunch nationalist, Musa believed that spreading women's education was an essential nationalist act with the greatest potential impact.

LINDA HERRERA

MUSA, SALAMA
[1887–1958]

Egyptian socialist essayist.

Salama Musa was born into a Coptic, well-to-do, landed family in Zaqaziq, a town in Egypt's Nile delta. While still in high school, Musa left Egypt for Europe, where he studied in France and England. In England, he met and was influenced by several prominent members of the Fabian Society, including H. G. Wells and George Bernard Shaw. Fabianism was a doctrine that combined economic socialism with an emphasis on social and moral regeneration through the cultivation of traditional moral values such as culture, decency, and order.

Returning to Egypt, Musa sought to spread this doctrine, urging his readers to leave behind Asian civilization and to embrace European—specifically, British—civilization. Other themes he dealt with were the scientific spirit, the theory of evolution, and social democracy. He founded Egypt's Socialist Party in 1920 and established a journal, *al-Majalla al-Jadida* (The new magazine), a forum for radical critiques. In several of his works, Musa also developed the theme that the Coptic period was the apex of Egyptian civilization and that the Copts were the true present-day descendants of the ancient Egyptians.

DAVID WALDNER

MUSAVI-ARDEBILI, ABDOLKARIM
[1926–]

Politically active Iranian cleric.

Born in Ardebil in 1926, AbdolKarim Musavi-Ardebili began his religious career in 1942 in Qom, where he was a student of Ayatollahs Ruhollah Khomeini and Hosain Borujerdi. In 1948 he went to Najaf, Iraq, to pursue his education further, and he stayed there for nineteen months. In the 1960s in Qom he copublished the journal *Maktab-e Islam* (School of Islam), and also pursued political activ-

ities in his hometown of Ardebil. In 1971 he moved to Tehran to conduct sermons at a mosque. A founder, after the 1979 Iranian Revolution, of the now defunct Islamic Republican Party, Musavi-Ardebili also established the Bonyad-e Mostazʾafan (Foundation of the Oppressed). He was the prosecutor general from 1980 to 1981 and head of the supreme judicial council and the Supreme Court from 1981 to 1989. In 1988 he was appointed to the Expediency Council. Other positions held by Musavi-Ardebili include his appointment by Khomeini to the constitutional review panel in 1989 and his membership in the Supreme Council of the Cultural Revolution. Generally he has adopted moderate positions in the factional disputes among politicians since the early 1990s and has devoted his attention to a private high school that he founded.

MUSAVI, MIR-HOSAIN
[1941–]

Prime minister of Iran, 1981 to 1989.

Born in Khameneh in 1941, Mir-Hosain Musavi received a degree in architecture from the National University of Iran (now called Shahid Beheshti) in 1969. He was jailed in 1973 for anti-shah activities. Upon his release he left Iran for graduate studies in the United States, where he joined the Organization of Iranian Moslem Students. After the Iranian Revolution he joined the Islamic Republic Party and served as first deputy to the party's founder, Ayatollah Seyed Mohammad Hossein Beheshti (1929–1981).

A revolutionary favored by the left, he served as foreign minister in President Muhammad Ali Rajai's cabinet (1981). In October 1981, after a bomb attack had killed the president and the prime minister and a new election had resulted in the election of Hojatoleslam Seyed Ali Khamenehi as president, Musavi was appointed prime minister. He served in this position until 1989, when a constitutional amendment abolished the post of prime minister in favor of a stronger presidential system. His departure from the office marked a change in both the international and domestic policies of the Islamic Republic.

Musavi's tenure involved major national and international challenges: the Islamization of the society, the consolidation of clerical power and elimination of secular opposition, the debilitating Iran–Iraq War (1980–1988), and economic sanctions imposed by the United States. During the 1980s Musavi tilted Iran toward the socialist bloc aligned with the former Soviet Union. When reelected in 1985, President Khamenehi considered replacing him but was opposed by Ayatollah Khomeini, who saw Musavi as a counterbalance to the conservative faction. Musavi's premiership was overshadowed by a strong parliament presided over by Ali Akbar Hashemi Rafsanjani, and a president who did not favor his radical policies.

Musavi is a radical Islamic intellectual who supports a centralized and regulated economy, opposes the concentration of capital and land in private hands, and supports self-reliance over foreign investment and rapprochement with the United States. Despite his economic radicalism, he holds a relatively liberal attitude toward cultural policies.

After his premiership, he had a quiet life and assumed several nominal positions. Although both presidents Rafsanjani (1989–1997) and Mohammad Khatami (1997–present) appointed him as an adviser, he is rarely sought out. In 1987 Ayatollah Khomeini appointed him to the Expediency Council, but he has not been an active participant in recent years. Although he has a good relationship with the reformers, he is viewed as a radical member of the old guard. He remains a viable candidate for radical forces in the Islamic Republic. and during presidential elections his name often surfaces as a possible candidate.

He teaches at the Tarbiyat Modares University and is the chair of the Academy of Arts, the highest national institution overseeing national production of artistic works. He spends a good deal of his time on his own artistic works, which were shown in a 2003 exhibition in Tehran. He is married to Zahra Rahnavard, a sculptor and writer who is the

chancellor of the all-women university, Al-Zahra, in Tehran. They have three daughters.

MUSCAT

Capital of Oman; formerly a Portuguese and later a British stronghold on the Oman coast.

Muscat's fine natural harbor has for centuries attracted local and foreign maritime powers. Otherwise, the city's location offers more challenges than benefits. Its climate is hot and humid most of the year, and the narrow, rocky strip of land upon which it lies is wedged tightly between the Indian Ocean and the steep flanks of the Hajjar Mountains. It is not known when Muscat was established, but the name first appears in written sources during the thirteenth century.

The port came into regional prominence during the sixteenth century, after Portugal seized control and built two massive forts that overlook the harbor to this day. Portugal ruled until the Ya˒ariba imamate restored Omani rule in 1649. Although not Oman's capital, Muscat thrived under Ya˒ariba patronage as a leading Indian Ocean emporium and shipping center and the hub of an expanding maritime empire. After a period of decline and Iranian rule, Muscat became one of the main ports and trading centers on the western Indian Ocean from the late eighteenth and early nineteenth century, controlled by the Al Bu Saʿid dynasty.

Muscat's prosperity began to decline in the 1830s, as Zanzibar became the region's premier commercial center. During the nineteenth century, British influence grew in Muscat, and the port became an important coaling station for ships plying routes between the empire's Indian possessions and the Middle East. By the early twentieth century, despite some arms smuggling, Muscat had become a sleepy steamer port. Its faltering business was conducted mainly by British-protected Indian merchants. Economic depression reduced the population in the early years of the twentieth century to just above 4,000 from about 30,000 in the mid-eighteenth century, before a revival began after the 1970 coup that installed Sultan Qabus ibn Saʿid al Bu Saʿid's modernizing regime.

As in other places on the Arabian Peninsula, oil revenues have been used to develop once-poor towns in Oman. Although lack of space has limited Muscat's growth, post-1970 improvements have included a sumptuous royal palace, restoration of historic structures, and a modern infrastructure. More extensive development has been possible in nearby towns because of the greater availability of land along the coastal strip between the capital and the international airport at Sib. Thus while Muscat had an estimated population of 55,000 in 2003, the nearby city of Ruwi had 112,000 inhabitants as well as much of the capital region's commercial, government, and residential development. Other towns in this region include Matrah, famous for its traditional *souk,* or market, Darsayt, Qurum, Mandinat Qabus, Ghubra, and Khuwayr.

MUSIC

Musicians in the Middle East have, over the centuries, produced a great classical tradition in a variety of regional forms.

Historically, Middle Eastern music has been predominantly melodic, drawing from a complicated system of modes called *maqam* in Arabic, *makam* in Turkish, and *mugam* in Azerbaijani. The melodic system of Iran is based on *dastgaha,* similar in principle if not in practice. These systems and their repertoires frequently have written histories—music theories that date back to the time of al-Farabi and earlier.

Sung poetry is fundamental to the musical art of the region. The elegant or clever text and the performance that highlights the affective phrase or the play on words often are highly valued by listeners.

Instrument types include long- and short-neck lutes, plucked and hammered dulcimers, end-blown reed flutes, hourglass drums, frame drums, and several sizes of double-reed wind instruments often played in concert with large field drums. These instruments have different names, shapes, and playing styles.

Overarching genres of performance occur throughout the region, often consisting of suites of instrumental and vocal music, both improvised and formally composed. They occur in devotional rituals, dance, neoclassical performance, and performances by folk musicians. Despite the disparate sounds, contexts, and audiences, these performances are often linked by listeners with their Arabic musical-poetic heritage *(turath),* which encompasses a broad range of religious, classical, and folk musics. Typologies common in the West that separate the religious and the secular, or the classical, the folk, and the popular, do not always apply to Middle Eastern repertoires. For instance, in Iran the classical *radif* stands in stark contrast to Kurdish folk songs but is colored by Iranian Sufi performance. By contrast, the Azerbaijani *mugam,* a classical genre, includes and arguably depends on Azeri folk music in its structure.

Regional Distinctions

Over the years these historic materials and aesthetics have yielded distinct styles, genres, and practices in different times and places. For example, the governments of Morocco and Tunisia and private agencies in Algeria have participated in the revitalization of local forms of *nawba,* a suite-like genre. It is believed to have originated in Andalusia and to have been carried from there to North Africa. What results, in the twentieth century, is "classical" music so emblematic of a particular region that it is really not possible to speak of "Algerian" classical music, let alone "Arab" classical music but rather the repertories of Tlemcen, Constantine, Algiers, Fez, Tunis, and so on. However in general, revitalization of these genes serves to mark cultures as "Arab" rather than Berber.

On the other hand, styles drawn from the peoples of southern Morocco, Algeria, Tunisia, and Libya have created distinctly North African popular genres exemplified by the Moroccan group Nas al-Ghiwan. Similiarly, Algerian *raʾi* offers an excellent example of a style rooted in local musical practice, transformed with imported electronic instruments and modern texts. These styles draw the historic aesthetic of the clever, sometimes stinging colloquial text and favorite local instruments into contact with the electronics, and sometimes the staging, of rock music. The result may or may not be considered "westernized" by local listeners.

Regional distinctions have long been part of *mashriq* performances. Microtonal intervals tend to be tuned slightly higher in Turkey and Syria than in Egypt and North Africa. The *buzuq* is an important part of Lebanese folk culture. The resurgence of "classical" repertoires has been discouraged in Turkey since the establishment of the republic (1923). The governments of Egypt, Iraq, and Lebanon have sponsored neoclassical ensembles that often give concerts in opera houses, with musicians in evening dress performing without the extemporization that is historically part of Middle Eastern traditions. In other words, Arab pieces of music are presented in the context of a Western concert.

Transformed classical and folk traditions have emerged in nongovernmental venues as well. Perhaps the best known are the plays by Fayruz and the Rahbani brothers, articulating local pride and local concerns by using distinctly Lebanese styles and a combination of local and Western instruments. The Western models of the musical play and film,

popular in the Arab world, serve local purposes well. The best-known recent exponent of music from the *turath* is the Syrian Sabah Fakhri, who travels internationally, performing *muwashshahat, taqasim,* classical instrumental pieces, and newer songs in suite-like arrangements. Umm Kulthum and Muhammad ibn Abd al-Wahhab are well-known performers of "new" or "popular" music that has attracted a large audience throughout the Arab world. Abd al-Wahhab's style is the more innovative, creating a pastiche of Western and Arab musical styles in a single composition and establishing the free-form instrumental piece *(al-qitʿa al-musiqiyya)* as an important independent genre. Although both Umm Kulthum and Abd al-Wahhab sing complicated neoclassical works, Umm Kulthum has claimed this area as her own.

Instrumental improvisations *(taqasim)* and a historic suite-like genre, the Iraqi *maqam,* have persisted throughout the twentieth century, partly supported by the Arab diaspora. The performances of Munir Bashir, Nazim al-Ghazali, and Muhammad al-Qubbanji have been rereleased by firms in Paris and Baghdad. Iraq and the countries of the Arabian peninsula support rich traditions of singing and dancing that have been documented by local musicologists and by folklore institutes such as that established in Oman.

Teaching and performing classical Persian music have formed part of musical life in Tehran throughout the twentieth century, especially among elites. The musical culture of Iran encompasses a range of folk and religious musics as well. Cabaret music also has become popular. Following the Iranian Revolution, the new government moved to suppress musical performance, including music at weddings. In the long run, the primary target was cabaret music, often associated with consumption of alcohol and prostitution. In recent years, *radif* recordings have become readily available, and performance of traditional music persists.

Israel presents a unique musical culture, consisting of a patchwork of musics from Europe, the former Soviet Union, the Arab world, and Africa, brought together in a small space over a relatively short period of time. A few syncretic repertoires have emerged, but musics more often persist as individual emblems of the immigrant communities.

Musical Occasions

Weddings and special occasions, often religious in nature, have long offered venues for musical performance. Starting the pilgrimage to Mecca, celebrating the birthday of Muhammad, remembering the martyrdom of Husayn, and the ceremonies of Sufi *dhikrs* have all involved music. During the nineteenth and twentieth centuries, urban nightclubs and cabarets often featured musical entertainment and dancing, as did tourist hotels. Generally speaking, there is a long history of professionalism in Middle Eastern music. In some areas, notably Iran, professional musicians tend to belong to minority groups; musical performance in the majority culture tends to be amateur.

These tendencies have persisted in the twentieth century. Often they have been transformed through the mass media, which quickly took hold throughout the Middle East and became very popular. Many would argue that the mass media have become primary patrons of musicians.

Commercial recording took hold in the first decade of the twentieth century, mainly in Algiers, Cairo, Beirut, Constantinople (now Istanbul), and Tehran. Radio became more popular than the phonograph in the 1930s. Television, beginning in the 1960s, and videocassettes in the 1970s, proliferated, especially among the middle and upper classes. This development is significant particularly because cassettes, which are inexpensive and portable, gave control over production to local artists, or at least to agencies that were closer to the artists than a national radio company or a European-based recording company. Artists were able to produce their own recordings and market them locally, circumventing those who select music for radio and television stations and the requirements of international production firms. In the 1990s, despite the opportunities for Middle Eastern artists to produce internationally marketed videos and compact disks, some of the most interesting performances are locally released cassettes.

Musical Processes and Issues

As a constituent of social life, musical performances in the Middle East have engaged local histories with the flow of new materials from other societies. Unsurprisingly, this engagement has fed debates on

Munir Bashir (1930–1997). Iraq's best-known musician, Bashir was famous for his mastery of the oud, a musical instrument of the lute family. **© Shepard Sherbell/Corbis. Reproduced by permission.**

authenticity, music and sociocultural identity, modernity, and the proper nature of culture in the late twentieth century.

The development of mass media centered in urban areas has tended to promote the musics of those areas over others. Local musics from Morocco to Iraq have been dominated in the mass media by musics produced in Cairo and Beirut, for instance. Only in recent years, with the less expensive cassette and a recent interest in the musics of southern Morocco, Nubia, and the Gulf states, has this situation changed.

Contact with Europe and the United States has led some musicians to borrow, adapt, and integrate new sounds into local music. The accordion, cello, string bass, and electronic instruments have become widely popular and virtually consolidated with some local musics. Latin rhythms, disco, and nineteenth-century orchestral music (especially for film scores) have been borrowed outright. This vast array of sounds—ranging from religious chanting by a solo voice to improvisations on lutes, dueling songs, formally composed orchestral pieces, and special electronic effects—is being employed by musicians and their listeners to identify themselves and to suggest directions and affinities within their societies.

Boundaries are not always clear. The process of musical creation transforms past practices to contribute to the lively culture of Middle Eastern societies

intent on maintaining an identity while responding to the challenges of the present.

VIRGINIA DANIELSON

MUSLIM BROTHERHOOD

Religious political organization that started in Egypt in 1928 and subsequently spread throughout most Muslim countries.

The founder of the Muslim Brotherhood (*Jamʿiyyat al-ikhwan al-muslimin,* or the Society of Muslim Brothers) was Hasan al-Banna (1906–1949), the son of a modest but learned religious teacher, who received traditional as well as modern training at Dar al-Ulum in Cairo, where he was exposed to the prevailing Salafiyya ideology of Islamic revivalism preached in Egypt by Muhammad Abduh. It was in Ismaʿiliyya, a showcase of Egyptian poverty and European colonialist wealth and power where he was posted to teach Arabic in a primary school, that he founded the Muslim Brotherhood. In 1934 Banna moved back to Cairo, where his organization merged with the Society for Islamic Culture, which was headed by his brother, and the combined organization quickly became the largest grass-roots movement in Egypt. With more than half a million members drawn from the middle class as well as from labor groups, peasants, and the student population, and with an efficient structure, hundreds of mosques and clubs throughout the country, and a printing press, in the 1940s the Brotherhood became a powerful organization intent on affecting the government's social policies and ridding Egypt of British occupation. Partly because of its mass power, and partly in order to play it against the other political parties, the Egyptian government in turn compromised with and fought the organization, jailing Banna intermittently on various charges and releasing him for fear of mass insurrection.

From the start, the Muslim Brotherhood exhibited the dual characteristics of an internal reform movement operating within the context of foreign occupation. Banna's early and primary concern, which molded the movement and provided it with its lasting method and policy, had been to bring about a return to the pristine sources of the faith and away from the distortions of popular religion. In that, it was the continuation of the powerful reform movement that spread throughout the Muslim world in the eighteenth century and became known in Egypt as the Salafiyya movement, although unlike the latter (but similar to earlier reform movements), the Muslim Brotherhood showed Banna's strong attachment to Sufi spirituality. Consistent with the pattern of Islamic reform movements in history, its ideology was translated into a praxis that sought to establish *shariʿa* and to use Islam to combat corruption, moral laxity, economic exploitation, and oppression through the creation of a strong civil network centered around the mosque and providing for employment, education, welfare, clubs, health clinics, and other social services. In harmony with earlier reform movements and with orthodox Islamic doctrine, it advocated dialogue, preaching, and gradual reform rather than revolt.

But the Muslim Brotherhood was also operating in the context of Egypt's occupation by the British, who dictated government policy. Moving away from the Salafiyya, which had become concerned solely with a strict interpretation of the faith, the Brotherhood looked to fulfill popular aspirations such as Egyptian independence, and it used anti-imperialist rhetoric from the start. In order to keep its legal status and remain operational, the Brotherhood maintained a policy of nonconfrontation, but this was challenged by its followers. A ma-

jor turning point came in 1936 with the eruption of riots in Palestine against the Zionist implantation. The Brotherhood, which already had offices in Palestine, helped to raise funds for the insurrection. In 1938 a meeting with the Palestinian mufti Muhammad Amin al-Husayni produced the decision that a military wing was needed to push back the territorial ambitions of the Zionists, and a secret order was created within the Brotherhood to repel Western colonialism. Thus, as part of the organization remained focused on reform and dialogue with a Muslim government, the other part took on jihad against the foreigners, and preachers and organizers were sent to Palestine to help in the Palestinian insurrection.

In 1939 Brotherhood members defected from the organization, claiming that its lack of action against British occupation was inconsistent with its stated ideology, and they started *Shabab Sayyiduna Muhammad,* the first of a number of radical Muslim political movements that advocated the use of force against a government that cooperates with Western occupation or with policies against the interests of the Muslim community. Banna had always opposed engaging in jihad against fellow Muslims. But to the military wing, largely formed in response to the defection of the disgruntled members, fighting the British occupation of Palestine was the same as fighting the occupation of Egypt. The partition of Palestine in 1948 led to uncontrollable riots and acts of violence against British and Jewish interests. The Muslim Brotherhood organized on the issue of partition, a major conference that was attended by foreign dignitaries and heads of state. This show of force led the Egyptian government to outlaw the Brotherhood, and to a wave of repression against its members. Although Banna tried to rein in his followers, some of them carried out assassinations of public figures, and as a result, Banna was assassinated by government officials in February 1949.

The Brotherhood after Banna

Under a new *murshid amm* ("supreme guide") and with the promise not to get involved in political activity, the Brotherhood was allowed to operate again in 1951. It had a large number of followers in the army, and it had even supplied arms to the stranded Egyptian soldiers in Palestine during the 1948 Arab–Israeli War. A liaison was established between the Brotherhood and the movement of the Free Officers who, in 1952, seized power in a coup that benefited from the mass support provided by the Brotherhood. As a result, the Brotherhood was the only organization not dissolved by the new regime dominated by Gamal Abdel Nasser, which quickly became a secular nationalist-socialist autocracy that banned any opposition to the state. An assassination attempt on Nasser in 1956 led to the dissolution of the movement, the jailing of hundreds of its members, and the execution of many of its leaders, including its chief ideologue, Sayyid Qutb.

Ma'mun al-Hudaybi, head of the Muslim Brotherhood from 2002–2004, speaks during an interview at the Brotherhood's headquarters in Cairo, 7 May 2003. Al-Hudaybi called for a jihad to expel foreign forces from Iraq. © Reuters NewMedia Inc./Corbis. Reproduced by permission.

Anwar al-Sadat became Egypt's president in 1970. Hoping to defuse the power of the followers of Nasser who opposed his policies of reconciliation with Israel, Sadat released from jail Umar al-Tilimsani, the leader of the Brotherhood, and allowed the Brotherhood to operate again (though without a legal status). The loss of the charismatic leadership of Nasser and the failure of the government's socialist policies helped the Brotherhood to regain its membership. Sadat promised to restore legal status to the Brotherhood if it supported his policy toward Israel, but it refused, and the leadership and hundreds of members were again thrown in jail. After the assassination of Sadat in 1981 by a member of

one of the radical Muslim movements, the new president, Husni Mubarak, granted more freedom to the Brotherhood, which saw its membership soar. Because it had no legal status, it could not participate in political elections, so its members ran for parliamentary election by forming an alliance with the Wafd Party in 1984, and they won the majority of opposition seats. The same success was achieved in 1987, when the Brotherhood allied itself with the Socialist Labor Party and the Liberal Party, and included Coptic representatives. The Brotherhood's victories led to a massive crackdown by the government of Mubarak during the 1990s and an attempt to counter its ideology with strong government propaganda. But the Brotherhood retained its power, and in the parliamentary elections of November 2000, a majority of members of the Brotherhood were independently elected to parliament, thus making the Brotherhood, though officially banned, the largest holder of opposition seats in the parliament. The sixth leader of the Brotherhood, Maʾmun al-Hudaybi, who had assumed the leadership in 2002, died in January 2004, and Muhammad Mahdi Akif was elected the new guide-general for the Muslim Brotherhood.

The Muslim Brotherhood has offices throughout the Arab world, and a number of organizations emulating it have emerged in almost all Muslim countries. Its membership tends to be middle-class professionals and university graduates for whom the main goals are to oppose Western policies in the Muslim world in general and in Palestine in particular, and to bring about a social, economic, and political order in line with Islamic ideals. By avoiding theological discussion on the nature of law and state that could lead to divisiveness, taking a progressive stand on the rights of women (as demonstrated in the writings of Muhammad al-Ghazali), focusing on eliminating Western secular influences and ideologies (though accepting Western advances in technology, science, and education), and providing badly needed civic institutions, the Brotherhood has become the most important representative of the Egyptian masses.

MUSLIM SISTERS ORGANIZATION

Muslim women's group in Sudan.

The first woman recruited to the Muslim Brotherhood movement in Sudan was Fatima Talib, who joined the organization in 1949. Women from the al-Mahdi family joined her, and they formed the Society for Women's Development mainly to provide an alternative to the leftist Sudanese Women's Union. After the October 1964 popular revolution, the Muslim Brothers, which supported woman suffrage, launched a new women's organization called the Patriotic Women's Front. The small band of Muslim women's activists broke new ground in Sudanese politics by supporting the idea that women have a voice in religion as well as in politics.

The strength of the Muslim Brotherhood grew during the latter years of the military regime of Jaʿfar Numeiri, who moved the Sudan toward Islamization and Islamism. In 1983 *shariʿa* was made the sole law in force in the nation. Hasan al-Turabi guided this process as attorney general under Numeiri; after Numeiri's popular overthrow in 1985, Turabi reinvented the Muslim Brotherhood as the National Islamic Front (NIF).

In 1973 Turabi had presented his ideas about the emancipation of women in Islamic societies in a pamphlet, *The Woman in Islamic Teachings.* The formation of the Muslim Sisters Organization was inspired by this pamphlet. Turabi's view states that women are equally responsible for heeding the call of God. Oppression of women in Muslim lands is not a proper reflection of Islamic principles, which

should accept the full participation of women in public life. Islamists in all Muslim societies should seek to reform this situation, rejecting traditionalism, promoting the renaissance of women, and shielding them from exploitation by misguided Western groups. The acceptance of Turabi's arguments by the Muslim Brotherhood permitted the movement to adapt, making it part of the process of social modernization.

MUSLIM WORLD LEAGUE

International Muslim organization.

The Muslim World League (in Arabic, Rabitat al-Alam al-Islami), headquartered in Mecca and funded by the government of Saudi Arabia, was founded under the auspices of King Faisal ibn Abd al-Aziz Al Saʿud in 1966. The league promotes the cause of Islam throughout the world by holding conferences, distributing classical Islamic texts and modern religious publications, and paying the salaries of mosque preachers and missionaries.

KHALID Y. BLANKINSHIP

MUSTAFA FAZIL

[1829–1875]

Egyptian prince and supporter of Young Ottomans.

Prince Mustafa Fazil was the son of Ibrahim Pasha ibn Muhammad Ali and brother of the Egyptian Khedive Ismaʿil. In 1845, Mustafa Fazil traveled from Egypt to Constantinople (now Istanbul), where he took up politics. He served on the Council of Tanzimat from 1857 to 1862, and as minister of education in 1862 and 1863. In 1866, Ismaʿil secured a change in succession from Sultan Abdülaziz, thereby excluding Mustafa Fazil from the Egyptian throne. Mustafa Fazil, apparently in revenge, bankrolled the movement of Young Ottomans, first in Constantinople, and later from Paris. His 1867 open letter to the sultan was widely reproduced for forty years as a manifesto for political reform.

ELIZABETH THOMPSON

MUSTAFA REŞID

[1800–1858]

Ottoman foreign minister, grand vizier, and reformer.

Mustafa Reşid is considered one of the major forces promoting the Tanzimat reforms that modernized the Ottoman Empire in the mid-nineteenth century. He was born in Constantinople (now Istanbul), the son of Mustafa Efendi, an administrator of religious foundations. Intending a career as a religious scholar, he studied at the *ilmiyye,* but at the age of ten his father died and he was forced to withdraw from school and live with his uncle, Ispartali Ali Paşa, a court chamberlain of Sultan Mahmud II. In 1816, Reşid accompanied Ali Paşa to the province of Morea, where the latter had been appointed governor. It was during Ali Paşa's second term as governor (1820–1821), that Reşid witnessed the rout of Ottoman forces by the European-supported Greek rebels and by the modernized army of Muhammad Ali, governor of Egypt, in the Greek War of Independence. Reşid learned two lessons from this experience: first, that reform of the basic institutions of the Empire was needed, and second, that diplomacy aimed at acquiring European support for the empire was as crucial as modernization of the army.

In 1826, with the help of an influential family friend, Mustafa Reşid entered the civil service as a clerk in the scribes bureau of the foreign minister, where he quickly rose to become assistant to the minister in charge of foreign affairs. From this position, Mustafa Reşid participated in negotiations with Muhammad Ali in 1830; the latter was so impressed with his talents that he offered him a high position in the Egyptian administration. In 1832, Reşid was appointed amedçi in the foreign ministry.

Between 1834 and 1836, he was ambassador to France, where he became acquainted with European statesmen, including the famous Austrian foreign minister, Prince Klemens von Metternich. In 1836, he was transferred to Britain as ambassador to the Court of Saint James, where he discussed reforms with Lord Palmerston. In 1837, Sultan Mahmud II, seeking a counterweight to Mehmet Koja Husrev, the leader of the conservative opposition to reform, appointed Mustafa Reşid, now a leading advocate of reform, foreign minister, giving him the title Paşa. For the next eighteen months, Reşid Paşa remained in London and Paris, while attempting to bolster Mahmud II's reform program and to convince the sultan to place his trust in the British. He returned to Constantinople only upon receiving news of the death of the sultan and of the ascension to the throne of his son, Abdülmecit I.

In 1839, Mustafa Reşid Paşa skillfully blended his mastery of domestic and foreign affairs to deter military disaster while advancing reform. As foreign minister and representative of the Sublime Porte in London, he had been unable to prevent his conservative rival Mehmet Koja Husrev Paşa from becoming grand vizier. But when Muhammad Ali, governor of Egypt, sent an army commanded by his son Ibrahim into Syria, Husrev Paşa responded by attempting to appease Muhammad Ali, offering to appoint him life-time governor not only of Egypt, but of Syria and Adana. Recognizing that this would result in a virtual dismemberment of the empire that would guarantee Russian domination, Mustafa Reşid Paşa negotiated with British foreign minister Lord Palmerston for the European support needed to counter the Egyptian advance. European, particularly British, military and diplomatic support, which was crucial in defusing the crisis, was linked to a commitment to support internal reform. Sultan Abdülmecit recognized the key role played by Reşid Paşa and rewarded him with a promise to advance the program of the reformers. On 3 November 1839 Sultan Abdülmecit initiated this reform program with the proclamation of the Imperial Rescript of Gülhane, a document which was composed by Mustafa Reşid and which is considered the opening salvo of the Tanzimat. Though the Tanzimat was initiated at a time of increased European involvement in the empire, it was promoted by Ottomans like Mustafa Reşid Paşa who recognized the need for continued reforms to remedy defects in the administration of the empire. Mustafa Reşid sought British support, but he was not acting under British pressure.

Mustafa Reşid Paşa's importance did not cease with the proclamation of the Tanzimat. He was one of the architects of a new commercial code, promulgated in 1841, that was based on French commercial law. When asked whether the new law was in comformity with Islamic law, he reportedly replied, "the Holy Law has nothing to do with it." Vociferous reaction from Islamic scholars led to suspension of the law and Mustafa Reşid's Paşa's dismissal. He served as ambassador to France until 1845, when he began a second period as leader of the reform movement. Over the next fifteen years, he served six times as grand vizier (28 September 1846 to 28 April 1848; 12 August 1848 to 26 January 1852; 5 March to 5 August 1852; 23 November 1854 to 2 May 1855; 1 November 1856 to 6 August 1857; and 22 October 1857 to 7 January 1858) and three times as foreign minister.

In addition, Reşid played a crucial role in recruiting and training a cadre of reform-minded bureaucrats who, under his leadership, became known as the "men of the Tanzimat" *(tanzimatcilar)*. In order to learn more about Islamic law, he retained Ahmet Cevdet as a tutor, subsequently hiring him as his personal scribe, and then appointing him to educational positions in the administration. The most well-known of his protégés were Mehmet Emin Ali Paşa, who served as Mustafa Reşid's translator and scribe in the embassy in London and later served as foreign minister and as grand vizier, and Mehmet Fuad Paşa, who became Mustafa Reşid's protégé in 1837. Mehmet Ali and Mehmet Fuad led the reform program during the last two decades of the Tanzimat. Whereas Mustafa Reşid had always sought alliance with Britain, his two protégés sought to orient empire politics toward an alliance with France. Partially as a result of this difference, the two eclipsed Mustafa Reşid Paşa in the early 1850s, though at the time of his death in 1858, Mustafa Reşid was once again grand vizier. After his death, his sons carried on the tradition of service to the empire, serving as ministers and ambassadors.

DAVID WALDNER

MUSTAFA SUPHI

[1883–1921]

Turkish communist leader.

The son of a district governor, Mustafa Suphi was born in the Giresun district on the Black Sea. He studied law in Constantinople (now Istanbul) in the late 1890s and then continued his education in Paris and Rome. A leftist thinker, Mustafa Suphi fled Ottoman police shortly before World War I and took up residence in Russia where he organized a communist movement among Turkish prisoners. He began publishing communist propaganda in Turkish, which was distributed in Anatolia. After the war, Suphi supported the nationalist movement against the sultan, although the Kemalists coldly received his small group of about two hundred communists. Suphi was arrested in January 1921, shortly after returning to Turkey. While being transported by boat to Erzurum for trial, he and several friends were assassinated by pro-Enver Paşa supporters who believed Suphi would discredit the former Committee for Union and Progress (CUP) leader.

MUWAHHIDUN

Members of a reform movement that began in the eighteenth century to revive Orthodox Sunnism, stressing the Sunna, *or the ways of the Prophet Muhammad.*

The movement was started by a religious scholar from Najd (Saudi Arabia), Muhammad ibn Abd al-Wahhab (1703–1792), schooled by *ulama* (Islamic clergy) in what is now Iraq, Iran, and the Hijaz (western Arabia). He called for a return to the sources of Islam, stressing the absolute unity of Allah (*tawhid*) and strict obedience to the Qurʾan (the sacred book of Islam) and the *hadith* (sayings and traditions attributed to the Prophet Muhammad). His understanding of *tawhid* was somewhat unique, following the teachings of Ahmad ibn Hanbal's (780–855) school of law (*madhhab*) and its later interpretation by Ibn Taymiyya (1263–1328). By 1736, his followers— often called the Muwahhidun (Unitarians), today known as Wahhabis—rejected religious innovation (*bidʿa*) that promoted polytheism (*shirk*) and unbelief (*kufar*), and the tradition of *ziyaret,* or visits to saints believed to be intercessors between humans and Allah. Muwahhidun do not necessarily consider themselves members of a sect; rather, they reject esoterism on the basis of being people of tradition (Ahl al-Hadith).

The present-day structure of the Saudi government can be traced to the religious and political alliance sealed in 1744 between Ibn al-Wahhab with his marriage to the daughter of Muhammad ibn Saʿud, ruler of the Dariyya near the modern city of Riyadh. Together they created the model of a state wherein allegiance to the *shariʿa* (Islamic law), not tribal customs, reigned supreme. The movement spread rapidly, perhaps due to Abd al-Wahhab's introduction of firearms among Bedouin tribes accustomed to wielding the sword and lance. After his death, the Wahhabi forces had by 1806 sacked the Shiʿite shrines of Karbala (in southwestern Iraq), occupied the holy cities of Mecca and Medina where they destroyed the tombs of revered saints, and raided the Syrian interior.

Ottoman Turkish and Egyptian garrisons in the Hijaz were not able to prevent the emergence of the Wahhabi state in the twentieth century by the Al Saʿud family in their capital, Riyadh. It began when their relations with the Al Rashid family, a Wahhabi clan governing the Shammar region, became strained and, in 1884, the Saudi family was forced to seek sanctuary with the Mubarak rulers of Kuwait. In 1901, Abd al-Aziz ibn Abd al-Rahman ibn Saʿud, son of the last Saudi governor of Riyadh, led a daring raid that restored his family's power.

By 1912 a renewal in Wahhabi doctrine led to a consolidation of various tribes, or the Ikhwan (the brothers). In 1912 Abd al-Aziz (ibn Saʿud) appealed to other Bedouins to join the Ikhwan and steadily enlarged his domains by creating militarized agricultural colonies (*hujar*) to transcend tribal loyalties. The Bedouin tribes posed a threat to the unification of the Saudi kingdom, and the colonies were an attempt to make farmers of seminomadic warriors. The *hujar* were built on the sacred principle of *hijra* (emigration or flight, referring to the Prophet Muhammad's flight to Medina when he was forced to leave Mecca). In 1921 Abd al-Aziz entered Haʾil, the capital of Shammar, overthrowing the Rashid family in the process. In 1924 he occupied the site of Islam's holiest cities and shrines and overthrew caliph Sharif Husayn ibn Ali.

An important shift occurred in the late 1920s. Abd al-Aziz deemed the ferocity of the Ikhwan and particularly their *mutawwiʿun* (enforcers of obedience), Wahhabism's religious police, unfavorable to the modern Saudi state he wished to create. The Ikhwan wished to continue their advances into other areas under British protection only to be prohibited by Abd al-Aziz, who in 1926 had been proclaimed king of the Hijaz. The Ikhwan revolted in 1927 but were crushed with difficulty in 1929. However, their defeat did not mean the end of puritanical Wahhabism.

In 1932 Hijaz and Najd became a single country, which was officially named the Kingdom of Saudi Arabia, and fortunes of the Wahhabis became inextricably linked to it. King Abd al-Aziz strove to consolidate his power in those areas of the Arabian peninsula where he ruled. In alliance with the *ulama,* he strictly imposed the *shariʿa* and paid careful attention to the services accorded to the hajj (pilgrimage to Mecca). He placated Hijazi opinion by allowing *ijtihad* (learned opinion) in the cases brought against the government before the *mazalim* courts. In dire financial straits, he signed a petroleum concession with a U.S. company in 1932, and oil was discovered in 1936. His famous 1945 meeting with U.S. president Franklin D. Roosevelt on the U.S. destroyer on the Suez Canal stressed the growing international importance of Saudi Arabia, and by the end of World War II, oil production began.

The Wahhabi model appealed to other Islamic reform movements, such as the Salafiyya movement in Egypt in the late nineteenth century and the fundamentalist Muslim Brotherhood (al-Ikhwan al-Muslimun) founded by Shaykh Hasan al-Banna in 1928. Like other Arab potentates, King Abd al-Aziz was greatly preoccupied with Palestine, and he sent a military contingent to participate in the Arab–Israel War of 1948, when Israel became a state. Wary of Western influence, Saudi Arabia joined Egypt and Syria in the 1950s in resisting a regional Middle East defense organization. The threat of a Nasser-type military coup brought Saudi Arabia's defection from that alliance and placed it more in line with the Hashimites.

As oil wealth began to permeate Saudi society in the early 1960s, the Wahhabi movement retained a profound influence on the social and economic development of Saudi Arabia. The *mutawwiʿun,* a carryover from the Ikhwan, oversaw strict observance—challenging the melodious recitation of the Qurʾan, excessive veneration at saints' tombs, desegregation of the sexes, and the appearance of the full (unveiled) female form on television.

In 1953, King Abd al-Aziz died. By the 1960s, King Faisal's call for an Islamic pact politically split the Arab world. It put him in hostile ideological conflict with the Egyptian Gamel Abdel Nasser's revolutionary, socialist and secular brand of nationalism. Egypt's swift defeat by Israel in the Arab–Israel War of 1967 seemed to vindicate King Faisal's position. Conversely, he successfully coordinated with Egypt's new president, Anwar al-Sadat, to achieve more attention to Islamic symbolism in the Arab–Israel War of 1973.

The 1973 Arab oil embargo and rise in OPEC's (Organization of Petroleum Exporting Countries) oil prices brought riches to Saudi Arabia. This wealth aided a Pan Islamic "revival" and the Wahhabi kingdom built mosques and provided aid throughout Muslim countries, contributing to the strengthening of Islamist fundamentalist political groups and parties worldwide. Different local varieties of Wahhabi philosophy exist today in such varied places as Burkina Faso, Chad, Egypt, Mali, Oman, Pakistan, Qatar, Uzbekistan, as well as some mosques in the United States.

The Islamic revolution in Iran (1979) and Israel's pursuit of the PLO (Palestine Liberation Organization) into Lebanon (1982), however, ushered in a new radical wave of politically motivated Islamic neo-fundamentalism that does not share either the Wahhabi doctrinal approach to Islam or Saudi Arabia's pro-American policy. In 1988, Saudi Arabia broke relations with Iran when Iranian pilgrims to Mecca rioted and the Iranian navy fired on Saudi vessels in the Gulf. Saudi aid given to anticommunist Mojahedin (holy warriors) in Afghanistan may be seen as keeping in line with the martial spirit of the early Wahhabi movement. During the Cold War, the U.S. supported the Mojahedin in an attempt to help Afghanistan overthrow Russian control. This support inadvertantly strengthened Mojahedin and Taliban forces in the area. Saddam Hussein's invasion of Kuwait in 1990 and the ensuing Gulf Crisis caused Saudi Arabia and Kuwait to align themselves with the U.S.–led United Nations Coalition.

Wahhabism has softened a great deal since its emergence in the eighteenth century. If Islamic neo-fundamentalism and Islamist political parties are perceived as anti-Western, it will be left to see how much the Wahhabiyya will influence the direction taken by the Islamic reformist movements.

BASSAM NAMANI
UPDATED BY MARIA F. CURTIS

MZAB

Berber-speaking area in the arid pre-Saharan hamada 360 miles (600 km) south of Algiers.

The five original towns—al-Ateuf, Bou Noura, Ghardaïa, Melika, and Beni Isguen—were founded in the eleventh century along the bed of the Wadi Mzab. Berriane and Guerrara were added outside the wadi in the seventeenth century. The people are mainly Kharidjite Ibadites, a sect of Islam dating from the schism at the time of the fourth caliph, Ali, that adheres to a doctrine of puritanical and egalitarian religious and social obligations. The Mzab is noted for its highly developed, essentially theocratic organization and the economic maintenance of strong communities through the extraordinary commitment and success of its people as tradesmen throughout Algeria.

THOMAS G. PENCHOEN

MZALI, MOHAMMED

[1925–]

Prime minister of Tunisia from 1980 to 1986.

Born in Monastir, the home village of Tunisia's first president, Habib Bourguiba, Mohammed Mzali began his professional life as a university professor of Arabic and Islamic philosophy. In 1980 he was named by Bourguiba to succeed Hedi Nouira, who had suffered a stroke, as Tunisia's prime minister and the president for life's designated successor. Mzali's accession was heralded at the time as marking a relaxation of the political authoritarianism associated with Nouira's tenure; he was younger, in closer contact with the country's young people, and associated with support for political liberalization. Under his aegis, in fact, the first contested elections for the national assembly were held in 1981. Although the results were widely believed to have been falsified in favor of the ruling party, several independents took seats, establishing that party membership was not necessary for assembly membership. Soon thereafter, some opposition political parties, including the Tunisian Communist Party and several social democratic parties, were legalized, and the decades-long monopoly on Tunisian political life held by the ruling Neo-Destour Party was broken.

Despite his success at initiating political reform, Mzali proved unable to solve the country's

pressing economic problems, nor could he control the increasingly virulent political infighting among the Tunisian political elite. Even though Mzali had been designated by Bourguiba as his official successor, the Tunisian ruling elite openly jockeyed for position as the aging president's health began to deteriorate. In 1984 government-dictated consumer price increases touched off widespread rioting, prompting rescission of the increases. Mzali accused his rivals of deliberately encouraging the rioters to embarrass him.

In July 1986, worried that Mzali had lost the confidence of the government and the people, Bourguiba dismissed him in favor of the economist Rachid Sfar. A year and a half later, Bourguiba himself would be removed from the presidency by a Mzali appointment, General Zayn al-Abidine Ben Ali, the first military officer ever to sit in a Tunisian cabinet. Mzali himself was later accused of malfeasance and took exile in France, where he wrote a book, *Lettre ouverte à Habib Bourguiba* (1987), accusing many of his former political collaborators of corruption, mismanagement, and disloyalty. He remained an opposition leader in exile until he was allowed to return to Tunisia in 2002.

Additionally, since 1973 Mzali has held various positions at the International Olympic Committee; as of 2003 he is a member of the Commission for Culture and Olympic Education.

N

NAʿAMAT

A Zionist women's organization active in Israel and the diaspora.

Naʿamat (the Hebrew acronym for the Movement of Working Women and Volunteers) was founded in 1921 by Rahel Yanait Ben-Zvi and a group of women in the United States who raised $500 to plant trees. Naʿamat U.S.A. was formed at the same time. Ben-Zvi and others founded Naʿamat in protest against a society in which women were relegated to the kitchens while men worked the land and built the country. It was the first feminist movement in Palestine and was affiliated with the Histadrut (General Confederation of Labor). Its work began with agricultural training schools and expanded into providing child care for children of working women and vocational training for women who wanted to work.

During the 1960s, Naʿamat established a fund enabling Israeli women to pursue higher education. The organization set up legal aid bureaus during the 1970s, and Status of Women departments were established in Israel. Since 1990 Naʿamat's agenda has grown to include working with immigrants, a support program for single-parent families, centers for the treatment and prevention of violence in the family, and a shelter for battered women.

The Naʿamat Israel elects a president and management every four years, along with the leadership of the Histadrut. The president elected in 2002 was Talia Livni.

NABAVI, BEHZAD

[1942–]

Iranian politician.

Born in Tehran in 1942, Behzad Nabavi has had a roller-coaster career in politics. A son of a historian closely affiliated with the shah's regime, he joined the secular National Front (NF) and participated in antishah activities at Tehran Polytechnic University (now Amir Kabir University), where he received a masters degree in electronics in 1964. In the late 1960s he left the NF and joined the new underground Organization of People's Mujahedin of Iran (OPMI), which mixed Marxism and Islam and advocated armed struggle against the Pahlavi regime. In 1971 he was arrested and jailed for his antigovernment activities. In 1975 the OPMI splintered and Nabavi joined a group of Muslim activists working closely with Ayatollah Ruhollah Khomeini against the shah's regime. When released from prison in 1978, he joined revolutionaries surrounding Khomeini and was assigned to oversee the transformation of the Iranian broadcasting system. He also founded the Organization of the Mujahedin of Islamic Revolution (OMIR), a semiclandestine paramilitary counterforce against the OPMI. With the outbreak of the Iran–Iraq War, internal disputes led to the closure of the OMIR; it re-emerged in 1994.

When the Iran–Iraq War began in 1980, Nabavi established the National Economic Mobilization Headquarters for rationing foods. In the government of Mohammad Ali Rajai, he was a spokesperson and a minister without portfolio for executive affairs. He was appointed minister of heavy industry in 1982—a post he held until 1989. He was also the government representative in the Iran–United States Claims Tribunal in the Hague, the Netherlands, a forum for dispute resolution set up in accordance with the Algiers Agreement of 1981 that ended the hostage crisis between Iran and the United States. Nabavi was one of the Iranian negotiators of that agreement. He had a major role in the centralized policies of Prime Minister Mir Hossein Mousavi's administration (1981–1989).

After the death of Khomeini in 1989, the conservative camp gained ascendancy and individuals such as Nabavi were pushed out of power. Nabavi and his associates restarted the OPMI and began the publication of the biweekly *Asre Ma* (Our times). This paper, along with the journal *Kian,* which was published by the supporters of Abdolkarim Soroush, transformed the religious discourse and kindled a reformist movement that culminated in the election of Mohammad Khatami as Iran's president in 1997. This election brought the left back to power. In 2000 Nabavi was elected first deputy speaker of the sixth parliament.

This "old guerrilla," as his colleagues call Nabavi, is the most controversial revolutionary and political strategist in Iranian politics. The conservative faction views him with suspicion and has tried to bring him down politically, accusing him of embezzlement and financial corruption several times without any legal success. While a minister, he survived ten motions of no confidence initiated by the conservatives in the parliament. Nabavi's politics and economic views have changed tremendously. His current attitudes toward moderate privatization of markets and a rapprochement with the United States are the opposite of his views in the early 1980s.

ALI AKBAR MAHDI

NABI MUSA PILGRIMAGE

Annual Muslim pilgrimage to a shrine situated in the desert between Jerusalem and Jericho where, according to Muslim tradition, Moses is buried.

The Nabi Musa pilgrimage starts a week before the Greek Orthodox Good Friday. According to a widespread legend (not sustained by primary sources), it was established by Saladin after the conquest of Jerusalem in 1187 in order to outnumber Christian pilgrims during Easter. At the beginning of the twentieth century, especially during the British Mandate, the pilgrimage became a political event. In 1920, a crowd of pilgrims protesting for self-determination and against Zionism erupted into violence against Jews in Jerusalem. From 1921 to 1936 the pilgrimage was headed by Hajj Amin al-Husayni, the leader of the national movement. After the war of 1948 the pilgrimage was banned by the government of Jordan, which aimed to undermine the political influence of Hajj Amin in the West Bank. But worshipers, especially women, continued to go spontaneously to the shrine in order to perform rituals at the tomb. Between 1997 and 2000 the Palestinian Authority was closely involved in the organization of the pilgrimage, which once again became a great occasion for national celebration. Since the outbreak of the al-Aqsa intifada in 2000 the Israeli army has forbidden the celebrations.

NABI SALIH, AL-

Uninhabited island in the Bahrain archipelago of the Persian/Arabian Gulf.

Lying some two and one half miles (4 km) to the southeast of Bahrain's capital, Manama, al-Nabi Salih is situated midway between the island of al-Awal and the island of Sitra. Extensive date-palm gardens covered al-Nabi Salih in the eighteenth and nineteenth centuries. Sizable groves remain along the western and northern shores, watered by several natural springs. Bahraini Shiʿa revere the large pool at the center of the island, as well as the tomb of the local saint, Salih, from whom the island takes its name.

NABIZADE NAZIM

[1862–1893]

Ottoman Turkish writer.

Nabizade Nazim was born in Istanbul, where he graduated from military school. He served as an army officer, attaining the rank of captain. In the 1880s, his poetry appeared in a number of journals, but his reputation as a writer dates to the stories he published in *Servet-i Fünün* beginning in 1891; the first issue of the journal included his story "Seyyire-i Tesamüh." With his novel *Zehra* and his story "Kara Bibik," he established himself in the vanguard of Turkish literary realism; his later work was focused largely on the depiction of life in the villages of rural Turkey. His 1886 story "Yadigarlarım" told the story of his alcoholic father.

David Waldner

NABLUS

The largest West Bank city.

Nablus is 30 miles north of Jerusalem in a valley between Mount Ebal and Mount Gerizim. Known in the Bible as Shechem, it was the home of Jacob, Jacob's well, and the tomb of Joseph; it was the place of Jeroboam's rebellion and, as chief city of Samaria, became his capital of the kingdom of Israel. It was rebuilt and renamed Neapolis (from which the name Nablus derives) by the Roman emperor Vespasian, suffered damage in the Crusades, and became part of the Ottoman Empire. After the defeat and dismemberment of the Ottoman Empire in World War I, it became part of the British Mandate territory of Palestine. It became part of the Jordanian-occupied West Bank following the Arab–Israel War in 1948 and then part of the Israeli-occupied West Bank after June 1967. Israeli troops withdrew from the city in December 1995, after which it passed under the control of the Palestinian Authority. It was reoccupied by Israeli forces on several occasions since the start of the Al-Aqsa Intifada in late 2000.

Nablus has been a major economic, political, and cultural center for Palestinians. Several leading families in Palestinian history stem from Nablus, including the Tuqan Family and the Abd al-Hadi Family. It was long an important manufacturing city, particularly for textiles, food products, and olive oil soap. It has played an important role in Palestinian political history as well, especially as a center for Palestinian nationalism outside the family rivalries of Jerusalem. Home to al-Najah University (which obtained university status in 1977), the city has produced numerous writers, poets, and academicians. The population stood at 100,034 during the last official census in 1997.

BENJAMIN JOSEPH
UPDATED BY MICHAEL R. FISCHBACH

NABULSI, SULAYMAN AL-

[c. 1908–1976]

Prime minister of Jordan, 1956–1957.

Sulayman al-Nabulsi was the only prime minister in Jordan's history to be invited to form a government by virtue of his support in parliament and despite major policy differences with the king. He was prime minister of Jordan from October 1956 to April 1957 when he was suspected of participation in a conspiracy led by the chief of staff, General Ali Abu Nuwwar, to overthrow King Hussein ibn Talal.

Nabulsi was born in al-Salt in Jordan of a modest farming family, originally from the Nablus area in Palestine. He was an outspoken Arab nationalist, ideologically pro-Nasser, and a pan-Arabist. Active in politics since gaining a seat in parliament in 1948, he was constantly critical of the government. He published an article opposing Prime Minister Tawfiq Abu al-Huda's negotiations on the Anglo-Jordanian treaty, for which he was arrested and sent to prison for nine months.

Nabulsi then established the National Front party but was unable to obtain a license for it. Ironically, he ended up leading another political party, the National Socialist party, whose chairman had been Hazza al-Majali, a political rival and ideological adversary. Despite its name, analysts describe the party as principally Arab nationalist, social reformist, and pro-democracy. As with most political parties at the time in Jordan, this one would be more correctly described as a parliamentary bloc. The party won eleven seats out of a total of forty in the October 1956 elections and was able to form a coalition government with Nabulsi as prime minister. It was comprised of seven National Socialists, one Baʿthist, one Communist, and two independents. This was the first "popular front" government of the Arab world and as such was dedicated to the struggle against domestic conservatism and Western influence.

Nabulsi negotiated with Britain to abrogate the Anglo-Jordanian treaty of 1948 and carried out negotiations with Saudi Arabia, Egypt, and Syria for financial aid to substitute for British subsidies. An agreement signed on 19 January 1957 included a promise from the three Arab states to pay Jordan 12.5 million Egyptian pounds over the next few years. An accord with Britain abrogating the Anglo-Jordanian treaty was signed on 13 February 1957. Both these moves had popular support, particularly as they came in the wake of the Suez Canal crisis and the anti-Western feelings it had created. In the meantime, King Hussein had negotiated with the United States for aid under the Eisenhower Doctrine (proclaimed in January 1957) to make up for the budgetary loss expected when Britain withdrew its subsidy. To ensure U.S. support, King Hussein played up his anti-communism position, while Nabulsi's government was purging government officials loyal to the monarch. King Hussein broadcast a message directed at Nabulsi on 2 February 1957, in which he claimed that communist doctrine had infiltrated the government. Nabulsi reacted indignantly, repudiating "alien creeds" and reasserting his Arab nationalism.

On 7 April 1957 a coup attempt was mounted by a group of Baʿthist and pro-Nasser officers, but it was foiled by loyal army troops who rallied to the king. By 13 April it had become clear that the coup attempt had been led by Abu Nuwwar, and the simultaneous antiroyalist purges and discordant relations between Nabulsi and the king led many to believe that Nabulsi was implicated. The government was asked to resign, but Nabulsi was asked to be a minister in a new cabinet headed by a conservative premier.

Despite Nabulsi's participation in the new cabinet, a wave of strikes and protests demanded the resignation of the government, the return of the

"popular front" government, and the repudiation of the Eisenhower Doctrine. King Hussein responded by replacing the government with a cabinet made up entirely of ministers loyal to him, proclaiming martial law, abolishing political parties, suspending parliament, imposing a curfew, and placing security forces under army control. Nabulsi was placed under house arrest for the next four years. He never resumed political activity, although he was eventually pardoned by King Hussein and appointed to the Senate in 1971. Until his death, he remained virtually out of the public eye.

JENAB TUTUNJI

NADIR BARAKZAI, MOHAMMAD

[1883–1933]

King of Afghanistan, 1923–1933; known as Nadir Shah.

Mohammad Nadir Barazkai, known as Nadir Shah, was born to Sardar Mohammad Yusuf Khan from the Yahya Khel lineage of the Mohammadzai clan of the Barakzai branch of the Durrani Pushtun tribe. He was active in the court of Habibollah Khan but was arrested as a murder suspect when Habibollah was assassinated in 1919. He was freed by Amir Amanollah (reigned 1919–1929) and served briefly in his court. He left Afghanistan and spent some time in Paris before returning to India. In 1923, he led a revolt against Habibollah Kalakani and became king in 1929 but was assassinated in 1933 by a Hazara student who was the adopted son of Kalakani.

NADI, YUNUS

[1880–1945]

Turkish nationalist, journalist, and publisher.

Yunus Nadi was born in Istanbul to the Abalioğlu family, although he dropped the use of the family name in later life. He studied at the Medrese-i Süleymaniye and Galatasaray and attended law school before taking his first newspaper job at the age of twenty. He became editor in 1910 of the Committee for Union and Progress newspaper in Salonika, *Rumeli,* and in 1918 established the *Yeni Gün* paper in Istanbul. During Turkey's war of independence, he moved the paper to Ankara and there befriended Atatürk. Returning to Istanbul after the war, in 1924 Nadi founded *Cumhuriyet,* known today as the *New York Times* of Turkey.

Nadi was a fervent nationalist. During the war of independence, he printed the headline "Greece must be destroyed" in his paper daily. He joined the Green Army, the most famous of the private armies in that war, but it was disbanded in 1921 by Atatürk because of its radical politics. Nadi wrote four books about the independence war, which were published post-humously in 1955. Nadir Nadi became publisher of *Cumhuriyet* when his father died.

ELIZABETH THOMPSON

NAFUD DESERT

A desert in northern Saudi Arabia.

The Great Nafud desert of the Arabian peninsula extends over some 2,500 square miles (6,500 sq. km) of sand dunes, with elevations rising to 3,000 feet (915 m). Iron oxide in the sand gives the Nafud a unique reddish color. Winter rain produces grasses sufficient to support grazing in the winter and spring. The southeast portion of the Nafud is considered to be part of the tribal territory of the

Shammar bedouin, who make use of its wells and pastures.

ELEANOR ABDELLA DOUMATO

NAGUIB, MUHAMMAD

[1901–1984]

Egyptian military officer and politician.

Born in the Sudan to a professional family, Muhammad Naguib (also spelled Najib) was a graduate of Egypt's military academy. He served on the general staff during World War II and won respect from junior officers for his distinguished service in Palestine during the Arab-Israel War of 1948.

The Free Officers who overthrew King Farouk in 1952 decided to present Naguib as the head of the Revolutionary Command Council, to endow the revolution with his legitimacy. The monarchy was abolished in 1953 and Naguib took the posts of provisional president and premier, but he refused to be satisfied with a titular role. He favored a return to parliamentary government and, after a protracted struggle with Colonel Gamal Abdel Nasser, leader of the ruling military *junta*, Naguib was ousted in 1954. In 1955, Naguib published *Egypt's Destiny.* In 1956, Nasser was confirmed as president of Egypt by referendum.

DAVID WALDNER

NAHAL

Acronym for Noar Halutzi Lohem (Fighting Pioneer Youth), a division of the Israel Defense Force integrating military training with agricultural labor and settlement.

Nahal was founded in 1948 at the urging of a delegation of kibbutz and youth-group representatives to Prime Minister David Ben-Gurion. Zionism's ideological notions of national redemption through work on the land coupled with the nascent state of Israel's pressing need for massive cultivation led to the institution of these units of "warrior-farmers." Nahal recruits entered the army in groups, under the joint command of a youth-movement instructor and Israel Defense Force (IDF) officer, and either reinforced existing kibbutzim and moshavim or, more significantly, established new "holding settlements" *(heakhzuyot)* on the country's vulnerable borders. Nahal paratroopers have been heavily involved in Israeli military operations since the 1950s.

The perception of Nahal as a restructured continuation of the recently defunct Palmah (dissolved in 1948), where informality, egalitarianism, and individual daring were the rule, led to persistent tension as military discipline was imposed on the rank and file. Nahal was opposed by much of the military establishment for attracting some of the most highly qualified recruits away from active combat duty. As the necessity for prolonged professional and specialized military training became more apparent to the IDF, increasing numbers of troops were diverted from Nahal, and agriculture figures less than previously in the unit's activities.

See also PALMAH.

ZEV MAGHEN

NAHALAL

First moshav, founded in the Jezreel valley in 1920.

Nahalal was a unique form of agricultural settlement in Palestine; called a moshav, it was based on cooperatively owned land, individual family farms, and homesteads with family labor—but mutual aid and a cooperative framework for purchasing and marketing. The majority of Nahalal's founders had been members of a kibbutz (an agricultural collective), who disagreed with the arrangements made for family life, child care, and education. They wished to preserve the integrity of the nuclear family within a cooperative community. The parents of Israeli soldier and statesman Moshe Dayan—who were among the founders of the first kibbutz, Degania—also helped establish Nahalal.

NAHDA, AL-

Algerian political party.

Al-Nahda party was at one time the third most popular Islamic party in Algeria, after the Front Islamique du Salut (Islamic Salvation Front, FIS) and Hamas (Party for a Peaceful Society). It was founded in 1989 by Shaykh Abdallah Jaballah (b. 1956), following constitutional amendments that allowed for pluralism and the formation of political parties. Al-Nahda's origins go back to the mid-1970s, when Jaballah, then a law student at the university in Constantine, formed a student group, al-Jamaʿa al-Islamiyya. Due to the group's secret nature, it had limited influence until the mid-1980s and was concentrated in the eastern region of the country. Al-Nahda was influenced by the teachings and methods of the Egyptian Muslim Brotherhood and advocated education and gradualism as a means of social change. In 1987, as the political system in Algeria opened up, al-Jamaʿa became public, calling itself the Nahda Association for Social and Cultural Reform. In 1990 it became a political party that drew support from students, teachers, and professionals. Following the cancellation of the 1991 legislative elections, al-Nahda opposed the military takeover, called for the government to respect the people's choice, and boycotted the 1995 presidential elections. During the legislative elections of 1997, it won 34 seats out of 389 but refused to participate in a coalition government. The party experienced a major split in 1999, when its secretary general, Lahbib Admi, supported the presidential candidacy of Abdelaziz Bouteflika instead of Jaballah's. Jaballah formed a new party, the National Reform Movement (MRN), which most of al-Nahda's members joined. In the May 2002 legislative elections, MRN came third, with 43 seats, after the National Liberation Front (FLN) and the Democratic National Rally (RND); al-Nahda lost all but one seat, probably ushering in the demise of that party. Shaykh Jaballah and the MRN have advocated reform, pluralism, national reconciliation, and the preservation of the country's cultural identity.

EMAD ELDIN SHAHIN

NAHHAS, MUSTAFA AL-
[1879–1965]

Egyptian politician.

After graduating from the Khedivial law school in 1900, Mustafa al-Nahhas worked as a lawyer and judge. He entered politics in 1919, joining the nationalist Wafd movement. British authorities exiled him to the Seychelles (1921–1923) in the wake of the 1919 revolution and anti-British nationalist agitation.

Nahhas became one of the most important and popular Egyptian politicians from the 1920s until the Free Officers' coup d'état in 1952. He was elected to the chamber of deputies in 1923 and assumed leadership of the Wafd following the death of Saʿd Zaghlul in 1927. As head of the most popular party in Egypt, Nahhas served as prime minister, interior minister, and foreign minister on numerous occasions. His acceptance of the prime minister's portfolio in February 1942 after an armed ultimatum delivered by the British to King Farouk, however, discredited the Wafd's nationalist credentials in the eyes of many Egyptians.

Nahhas exerted tremendous influence over Anglo-Egyptian relations. As prime minister, he represented Egypt in failed negotiations with the British in May 1930 over a proposed bilateral treaty. He headed the Egyptian delegation in talks that produced the 1936 Anglo-Egyptian treaty, though he abrogated the treaty in October 1951 after negotia-

tions over the future of British military bases in Egypt failed. Nahhas was also instrumental in the West's decision to abandon the capitulations at the 1939 Montreux Convention.

On the inter-Arab level, Nahhas brought together Arab leaders in October 1944 to sign the Alexandria Protocol, which laid the basis for formation of the League of Arab States. He was prime minister when the Free Officers' coup deposed Egypt's civilian government in July 1952. He was attacked for corruption afterward, though not imprisoned.

See also League of Arab States; Montreux Convention (1936); Wafd.

Michael R. Fischbach

NAHNAH, MAHFOUD

[1942–2003]

Moderate Algerian Islamic leader and founder of Hamas (Movement for a Peaceful Society).

Born in 1942, Mahfoud Nahnah was the leader of the Movement for a Peaceful Society in Algeria. He was born in the city of Blida, southwest of Algiers, to a conservative family, and received his early education at one of the schools established by the nationalist movement. He graduated from the Algerian University in 1970 with a degree in Arabic language and literature and then worked at the university as a professor.

Nahnah was influenced by the ideas of the Muslim Brothers. In the mid-1960s he formed the organization al-Muwahhidun (Believers in One God) with the objective of establishing an Islamic state in Algeria. He opposed the socialist orientation of the regime and publicly criticized President Houari Boumédienne's proposed charter of 1976 as overemphasizing socialism at the expense of Islam. Nahnah was arrested for his political agitation in 1976 and sentenced to fifteen years imprisonment, but was released in 1980.

Nahnah remained politically active and focused on expanding his constituency. In 1989 he formed a social and cultural society, Jamʿiyyat al-Irshad wa al-Islah (Association of Guidance and Reform), which after the adoption of a new constitution in 1989 permitting the formation of political associations became a party in November 1990 called Harakat al-Mujtama al-Islami (Movement of the Islamic Society) with the Arabic acronym HAMAS. The results of the 1991 legislative elections demonstrated that Nahnah's party enjoyed some degree of popularity, as it secured 450,000 votes. Nahnah ran as a candidate against President Liamine Zeroual in the 1995 elections and came in second with over 3 million votes. Nahnah is viewed as a moderate Islamic leader who on several occasions has condemned the escalation of violence in Algeria and defended the state and the military institutions. His critics charge him of exploiting the crackdown against the more popular Islamic party, the Islamic Salvation Front (FIS), and its leaders, to increase his own popularity. Under President Abdelaziz Boutefleka, Nahnah's party has participated in the cabinet with several ministerial positions. In June 2003, Shaykh Nahnah died of leukemia.

NAHUM, HALFALLAH

[1880–1963]

President of the Jewish community in Tripoli, Libya; industrialist and philanthropist.

Halfallah Nahum was born in Tripoli to a prominent, affluent Jewish family. He received his primary and advanced technical-business education in Italian schools in Tripoli and Manchester, England, where his uncle lived.

In 1917, after renouncing the Dutch citizenship held for generations by his family and becoming a naturalized Italian, he was elected the first president of the newly reconstituted Jewish community of Tripoli under the Italian occupation. Soon, his leadership was challenged by the young Zionists headed by E. Nhaisi. A power struggle ensued, but Nahum was reelected president from 1919 to 1924.

In 1943, after the Allies took Tripoli, Nahum was asked to head the Jewish community until 1945, when a British subject, Zachino Habib, took over. With the English branch of the family, Nahum built a commercial and industrial empire. He was known for his modesty and for aiding the needy. He was ambushed and killed one night by ten Arabs and one Maltese.

Maurice M. Roumani

NAHUM, HAYYIM

[1873–1960]

Chief rabbi of Istanbul, 1901, and of Egypt, 1925–1960; Turkish representative to the post–World War I peace conferences and to Washington in the early 1920s; Egyptian senator, 1931.

Hayyim Nahum (called Nahum Effendi) was born in Manisa, Turkey, and studied law in Istanbul and at the Rabbinical College of Paris, where he also learned Oriental languages. He had ties with the Young Turks and their Committee for Union and Progress, and when he returned to Turkey following the Young Turks revolution, he was made chief rabbi *(haham bashi)* of Istanbul. In 1918/19, he joined the Turkish delegation for the armistice negotiations at The Hague and also served, unofficially, as Turkey's representative in Washington, D.C., during the early 1920s. In 1923, Nahum served as adviser to the Turkish delegation at the Lausanne Peace Conference.

When he moved to Egypt, King Fuʾad I made Nahum chief rabbi of Egypt in 1925, a position he held until his death in November 1960. Not only was he the most powerful figure of Egyptian Jewry vis-à-vis the Egyptian government, but in June 1931 the king appointed him a senator and in 1933 a member of the Egyptian Academy.

NAJAF, AL-

The capital of the Najaf Muhafaza (governorate) in central Iraq.

One of Iraq's two holy cities (the other is Karbala), al-Najaf (2003 pop. 500,000) lies on a ridge just west of the Euphrates River. The caliph Harun al-Rashid is reputed to have founded the city, whose growth occurred mostly in the tenth century, in 791 C.E. In the center of al-Najaf is one of Shiʿism's greatest shrines, the mosque containing the tomb of Ali ibn Abi Talib (c. 600–661), cousin and son-in-law of the prophet Muhammad, who was the fourth Muslim caliph (leader) and the spiritual founder of the Shiʿite sect. Al-Najaf also has schools and libraries that are valuable repositories of Islamic theology, especially Shiʿite jurisprudence.

Al-Najaf Muhafaza is a flat region extending over 10,615 square miles from the Euphrates River in the northeast to the Saudi Arabian border in the southeast. The governorate's population is concentrated near the river; the rest of the region is sparsely populated. Established in 1976, al-Najaf Muhafaza was formed from areas of the governorate of Qadisiyya in the east and the governorate of Karbala in the west.

Al-Najaf has long been a hotbed of Shiʿite resistance against the Sunni rulers in Baghdad, and in the twentieth century this resistance has been a source of tension between the Sunni-dominated government of Iraq and the Shiʿite government in Iran. The overthrow of Saddam Hussein by invading U.S. forces in April 2003 led to the return of open Shiʿite worship in the city, but the assassination of some of Iraqi Shiʿism's most important clerics, including the returned exile Ayatullah Muhammad Baqir al-Hakim (1939–2003), who was killed by a bomb in August 2003, marred the new era.

NAJD

The central plateau region of Saudi Arabia.

A geographically isolated region of the Arabian peninsula, Najd (the Arabic word for plateau or

highland) is bounded in the south by the great sand desert, the Rub al-Khali, and on the east by a long, narrow strip of sand desert known as al-Dahna. To the north lies another sand desert, the Nafud, and to the west, Najd is separated from the Red Sea coast by the mountains of Hijaz and Asir. The plateau is divided into three regions: southern Najd, the home of the eighteenth-century Wahhabi movement and the original home of the ruling Al Saʿud family (main city, Riyadh); Qasim, an agricultural district in the center of Najd (main city, Unayza); and Jabal Shammar in the north (main city, Ha'il). Because of its geographic isolation, Najd, unlike other areas of the Gulf and Arabian Sea, was not subject to European colonialism. Most of the great camel-herding bedouin ranged at least part of the year in Najd, but the bulk of its permanent population were town dwellers and semi-nomadic oasis gardeners. Najd is today the central administrative district and home to the capital city of Saudi Arabia, Riyadh.

Eleanor Abdella Doumato

NAJIBULLAH

[1947–1996]

President of Afghanistan from 1986 to 1992.

Najibullah was born in Kabul in 1947 into an Ahmadzai family of the Gilzai Pushtuns. He was educated at Habibia High School and studied medicine at Kabul University, graduating in 1975. He was active in politics at a young age and was a founding member of the People's Democratic Party of Afghanistan (PDPA) in 1965. When the PDPA split in 1967, he and Babrak Karmal became the leaders of the Parcham faction. After the Saur Revolution in 1978 Najibullah was named ambassador to Iran in an effort by the Khalq faction to send the Parchamis out of the country. He returned to Kabul in 1980, when Babrak Karmal was named president, and was made president of the Afghan secret police, Khad. In 1986 he became secretary-general of the PDPA and president of Afghanistan.

Najibullah was a powerful and ruthless leader, the strongest and most capable of the four PDPA presidents. He made a number of attempts to reunite the country and to subdue the Islamic resistance by modifying the Marxist ideology of the PDPA, by moving the country away from socialism, and by restoring the role of religion. However, he was unable to overcome the PDPA's initial mistakes or to make himself acceptable to the mojahedin. In 1992, three years after the departure of the Soviet military, his government collapsed, and he fled to the United Nations compound in Kabul, where he sought sanctuary.

In September 1996 the Taliban captured Kabul. One of their first acts was to storm the United Nations compound, where they shot and killed Najibullah and his brother. His body was hung on a lamppost on the streets of Kabul.

NAJJADA, AL-

Name of several Arab paramilitary youth organizations.

A group called al-Najjada (Helpers) was formed in 1936 in Beirut by journalist Muhieddine Nsouli as a Sunni Muslim counterpart to the Christian Phalange party. In the 1950s, it emerged as a pro-Nasser party with about 10,000 members under the new leadership of Adnan al-Hakim; it clashed with the Phalangists in the 1958 Lebanese Civil War. It has since adopted an Islamist ideology.

Another group of the same name was established at Jaffa, Palestine, in 1945 by a Muslim lawyer, Muhammad Nimr al-Hawari, as a counterpart to the Jewish Haganah. The Palestinian group quickly grew to an estimated 6,000 members in at least ten cities. It played a prominent role in the 1947 Palestinian protests and the 1948 Arab–Israel War.

See also Arab–Israel War (1948); Haganah; Hakim, Adnan al-; Lebanese Civil War (1958); Phalange.

ELIZABETH THOMPSON

NAKBA, AL-

Arabic term for the devastating consequences of the 1948 Arab–Israel War on the Palestinians.

Al-Nakba (in Arabic, disaster or catastrophe) refers to the flight and expulsion of the Palestinians during the 1947 to 1948 War, the confiscation of their property, massacres committed by Zionist (after 14 May 1948, Israeli) forces, the collapse of their society and, ultimately, the loss of their homeland. The term *al-Nakba* was widely used after a prominent Arab intellectual, Constantine Zurayk, wrote *Ma'na al-Nakba* (The meaning of the disaster) in 1948.

Of about 1,358,000 Palestinians living in Palestine in 1948, the United Nations (UN) estimated that some 726,000 became refugees during the two phases of the war: civil war after 29 November 1947, and the Arab–Israeli War after 14 May 1948. The exact number of Palestinians forced out is uncertain, but some scholars have estimated that about half of the refugees were expelled. Some of those who left did so after hearing of Zionist (later Israeli) attacks on Palestinians; according to one Israeli scholar, Benny Morris, there were about two dozen massacres in which 800 Palestinians were killed. More than 350 villages were abandoned or emptied, and most of these villages were destroyed—their homes were bulldozed or dynamited, their land was used to build Jewish settlements and house new Jewish immigrants, and the villages' names were removed from Israeli maps. A study by an American scholar, Michael R. Fischbach, of the archives of the United Nations Conciliation Commission for Palestine reveals that, in all, Palestinians lost some 6 to 8 million *dunums* (1.5 to 2 million acres), not including communal land farmed by villagers or state land. A Palestinian writer, Fayez Sayigh, estimated that 150,000 urban and rural homes were lost, as well as 23,000 shops, offices, and other buildings. To these losses must be added the human-capital losses of farmers, shopkeepers, laborers, and professionals and others who, within days, found themselves unemployed and destitute mostly in refugee camps in the West Bank, Gaza Strip, Jordan, Lebanon, and Syria.

Of the estimated 860,000 Palestinians who resided within the area that became Israel (which encompassed 78% of historic Palestine, about 23% more than the 1947 UN partition resolution allotted to the Jewish state), some 84 percent of the Palestinians were uprooted and displaced. In addition, about 20 percent of the 150,000 Palestinians who remained and became citizens of the Jewish state, were internally displaced persons, that is, refugees. There are many examples in modern times of mass transfer and human migration, but very few instances when most of the population has been substantially dispossessed and replaced by another, with its lands, homes and possession confiscated.

There are a number of long-term or fundamental causes of al-Nakba. Many Jews, seeking to escape antisemitic persecution and murderous pogroms in late-nineteenth-century Eastern Europe and Russia, became Zionists, dedicating themselves to establishing a state in their biblical homeland, Palestine, which they called Eretz-Yisrael. In 1917 the Balfour Declaration committed Great Britain to supporting the creation of a Jewish national home in Palestine, where, at the time, less than 10 percent of the population was Jewish. After conquering Palestine in late 1917, Britain—with the backing of the European powers and later the United States—gave the Jewish community time to grow, through Jewish immigration and land purchases, and to establish a quasi-government and military forces. The genocide of six million Jews during World War II generated considerable sympathy in the West for the Jews and their need for a state. In short, European antisemitism, Zionism, the Holocaust, and Western support for a Jewish state made the conflict, leading to al-Nakba, more likely.

An immediate cause of the disaster was Palestinian and Arab rejection of the 29 November 1947 United Nations General Assembly Resolution 181 (the partition resolution), which awarded the Zionists (who were one-third of the population and owned about 7% of the land) roughly 55 percent of Palestine. Inter-communal violence had preceded the UN resolution, and the Palestinians followed their rejection of it with more violent attacks, including massacres, on the Jewish community. Fol-

lowing the defeat of Palestinian and Arab irregular forces, and Israel's declaration of independence on 15 May 1948, five Arab armies entered Palestine. Three of these militaries invaded the nascent state of Israel, triggering the first Arab–Israeli War which produced more Palestinian refugees and cost the lives of 6,000 Jews, or 1 percent of the population, and approximately 13,000 to 16,000 Palestinians and 2,000 and 2,500 other Arabs.

Another immediate contributory cause of al-Nakba was a Zionist (later Israeli) policy of *cleansing,* a term used at the time, along with *transfer.* Many Zionist leaders believed, even before 1948, that in order to establish an ethnically Jewish state, and for the Palestinians to avoid becoming a fifth column within that state, it would be necessary to remove them. David Ben-Gurion, founding father of Israel and its first prime minister and defense minister, created a "consensus of transfer," according to Morris, and gave "transfer" instructions to his commanders who related them to their officers, sometimes in writing.

The legacy of al-Nakba—especially the nonresolution of the Palestinian refugee problem—has figured among the major causes of every Arab–Israeli war since 1948. Israel denies responsibility for the expulsion, claims that Arab leaders urged the Palestinians to leave, and looks to the Arab and the Western world to resolve the problem; Palestinians and other Arabs insist that Israel recognize its culpability and bear the burden of repatriating the refugees to their homes inside Israel or compensating them for their losses, consistent with international law.

The Israeli–Palestinian negotiators at Taba in January 2001 came close to resolving their conflict. The talks addressed Palestinian rights—including return and compensation—and the establishment of a Palestinian state in the West Bank and Gaza Strip. They also addressed Israel's security requirements and demographic fears. But time ran out on the negotiations and no serious effort has been made to resume them. Until Israel, the West (especially the United States), and the Arabs all take responsibility for failing to deal with the consequences of al-Nakba—particularly the continued dispossession and statelessness of the Palestinians—and until they are determined to solve the problem, the Arab-Israeli conflict is unlikely to end.

NAMIK KEMAL

[1840–1888]

Turkish intellectual and a founder of the Young Ottoman movement.

The son of an Ottoman aristocrat, Namik Kemal was born in Tekirdağ. He entered the civil service in Istanbul when he was seventeen and began working with Ibrahim Şinasi on the Young Ottoman journal *Tasvir-i Efkar,* which among other things championed constitutionalism and parliamentary democracy. Namik Kemal's essays were read widely, and he left

for Europe in 1867 to avoid persecution by the Ottoman authorities. He returned to Istanbul in 1871, and in 1873 he wrote *Vatan,* a play that dealt with the issue of fatherland and Ottomanism. After Sultan Abdülaziz was deposed in 1876, Kemal was one of the many framers of Midhat Paşa's 1876 constitution. After Sultan Abdülhamit II assumed power, Namik Kemal again went into exile and died on Chios in 1888. Kemal was one of the most important nineteenth-century Ottoman Turkish thinkers and reformers and a founder of the Young Ottoman movement. He wrote extensively about the meanings of *vatan* (fatherland), democracy, liberalism, and freedom in an Ottoman context. Although he was influenced by French philosophers, Kemal looked to Islam as the root of his ideas.

NAMIR, MORDEKHAI

[1897–1969]

Israeli Labor Party official and Knesset member.

Born in the Ukraine, Mordekhai Namir (originally Nemirovsky) settled in Palestine in 1924 after graduating from the University of Odessa. Beginning his political career as secretary of the Ahdut Ha-Avodah party, he served in the administrations of the Histadrut and the World Zionist Organization both before and after Israel's statehood. Namir joined the Haganah command from 1933 to 1948, and filled many foreign ministry positions in the Soviet Union and eastern Europe. He was elected to the Knesset (parliament) and appointed general secretary of the Histadrut in 1951, until becoming minister of labor and housing in 1956. From 1956 to 1969 he was mayor of Tel Aviv.

Zev Maghen

NAMIR, ORAH

[1930–]

Israeli politician.

Born in Hadera, Israel, Orah Namir served in the Israel Defense Force as an officer during the 1948 Arab-Israel War. During the late 1950s she lived in New York, working for the Israeli delegation to the United Nations and attending Hunter College, from which she earned a B.A. in English literature and European civilization. Upon returning to Israel, she married Mordekhai Namir (1897–1975), a veteran Labor Party leader and a long-time mayor of Tel Aviv. After his death, she entered politics and served as secretary general of Naʿamat. Elected to the Knesset on the Labor ticket in 1973, she specialized in social affairs and chaired the Education and Culture Committee (1974–1977) and the Labor and Social Affairs Committee (1977–1992). She also chaired the Committee on the Status of Women.

In 1992 Prime Minister Yitzhak Rabin appointed her minister for the environment and a year later minister of labor and social affairs. She held this latter position until 1996, when Prime Minister Shimon Peres appointed her Israel's ambassador to the People's Republic of China, a position she held until 2000. Her term of office in Beijing witnessed a strengthening of Israel-China relations, which was translated into a series of agreements on cultural, scientific, and economic matters.

NAQSHBANDI

One of the major Sufi orders in the Islamic world.

The most distinctive characteristics of the Naqshbandi order are the tracing of the *silsila,* or initiatic chain, from the Prophet Muhammad to Abu Bakr al-Siddiq, a companion of the Prophet Muhammad; use of the silent invocation of God (*dhikr*); and a strong adherence to the *shariʿa* or Islamic law. The first figure of importance in the history of the Naqshbandiya is Yusuf Hamadani (born 1048). In addition to providing four successors, he set down eight principles, or "sacred words," that provided the doctrinal framework of the order.

Although it is not possible to conclude that all branches or members of the Naqshbandiya were po-

Masʿud al-Barzani, general secretary of the Kurdistan Democratic Party (KDP). The KDP was formed in 1946 under the leadership of Barzani's father, Mustafa. © BETTMANN/CORBIS. REPRODUCED BY PERMISSION.

litically active throughout the history of the order, the fervent belief in the adherence to the *shariʿa* and the Sunna and a worldly attitude toward the role of Sufis in Islamic society contributed to the political participation of some Naqshbandi leaders. In the late medieval and premodern periods, it was not uncommon for Naqshbandi leaders to mediate in political disputes, pay taxes on behalf of a population, act in defense of popular sentiment, influence administrative policy, or control large tracts of land. In the regions of Khorasan and Transoxiana, in which Turko-Mongols ruled over predominantly Persian populations, Naqshbandi leaders at times played the role of defending Sunni Islam against Shiʿism and of thwarting the influence of Turko-Mongol nomadic customary law in favor of Islamic law. The Naqshbandi order gained adherents among both the Turkic and Persian populations of Central Asia and was prevalent in both urban and rural areas. However, at the height of its power in Khorasan, the Naqshbandiya was firmly entrenched in the intellectual and cultural milieu of the capital city of Herat, enjoying great renown under the leadership of Saʿd al-Din Kashgari (died 1462) and then Abd al-Rahman Jami (died 1492).

Several separate branches of the Naqshbandi order developed, the main ones being the Yasavi, begun by Ahmad Yasavi (died 1167); the Mujaddidi, established first in India by one of the four successors of Hamadani, Shaykh Ahmad Sirhindi (born 1563); and the Khalidi, established by Mawlana Khalid Baghdadi (born 1776), the last branch of the Naqshbandi to achieve strong adherence throughout the Islamic world. There was an extraordinary diffusion of the different branches into regions as widespread as Ottoman Turkey, Kurdistan, Eastern Turkistan, Syria, Palestine, India, central Asia, and the Indonesian-Malaysian world.

A major renewal of the Naqshbandiya came through the leadership of Mawlana Khalid Baghdadi (died 1827), who founded the Khalidi branch that became particularly strong in Turkey and spread as far as Malaysia. His concern with the preservation of the *shariʿa* was especially significant during a time when the Ottoman state was facing increasing challenges from the West. The Khalidi Sufi network spread throughout the Turkish, central Asian, and Arab world but was strongest in Anatolia and Kurdistan. The legacy of Naqshbandi activity is reflected today in the eminent position of established Naqshbandi families within Kurdish society, although over time most of those assumed political rather than spiritual leadership, one of the most well-known examples being that of the Barzani family.

In the modern period, particularly the nineteenth and twentieth centuries, Naqshbandis played a role in reformist and anticolonial resistance movements. Among the numerous examples are Shaykh Shamil's resistance to Russian imperialism in Daghestan in the nineteenth century, the active role of the Naqshbandiya in the mojahedin in the Soviet-Afghan war, the role of Shah Abd al-Aziz (died 1826) in the legal reform movement in India under British rule, and the role of Naqshbandi-led

rebellions in China. Although it is difficult to ascertain the true extent of Naqshbandi activity in the new central Asian states today, there is particularly strong adherence in the regions of Dagestan and the Fergana valley, and Naqshbandi shrines continue to be popular places of pilgrimage. In other regions of the Islamic world, the Naqshbandiya maintains a following, particularly in Turkey, but also in Afghanistan, the Kurdish regions of Syria and Turkey, India, Indonesia, and China.

NASER AL-DIN SHAH

[1831–1896]

Fourth ruler of the Qajar dynasty in Iran.

Naser al-Din Shah of Iran began his rule displaying an interest in reform, but became wary of the potential of reforms to undermine his political authority and turned to conservatism. **© BETTMANN/CORBIS. REPRODUCED BY PERMISSION.**

Naser al-Din Shah was the son of Mohammad Shah Qajar (r. 1834–1848) and Malik Jahan Khanom (d. 1873). His father designated him crown prince in 1835, when Naser al-Din Shah was four. His accession to the throne upon the death of his father in 1848 was resisted, especially by a cousin in Khorasan, but by 1850 the new monarch had subdued all challenges to his authority.

Naser al-Din Shah's reign marked the beginning of national reforms that became known as modernization. His interest in modernization seems to have originated in the stories he had heard about the reforms his grandfather, Abbas Mirza, had undertaken while governor of the Iranian province of Azerbaijan during the 1820s and early 1830s. After his father sent him to Azerbaijan as governor in 1847, Naser al-Din Shah allied himself with Mirza Taqi Khan Farahani Amir Kabir, whom Abbas Mirza had sent as an envoy to Turkey. Amir Kabir was impressed by the Ottoman's Tanzimat reforms. Back in Iran, after Naser al-Din Shah appointed him chief of the army in 1848, Amir Kabir initiated, with the shah's support, wide-ranging reforms, including the establishment in 1851 of Iran's first secular school, the Dar al-Fonun. Amir Kabir's reforms, especially those related to rationalizing the tax system, alienated diverse Iranian interest groups and even disturbed Britain and Russia, which were trying to consolidate their own influence over Iran. The opponents of reform allied with Naser al-Din Shah's mother, who eventually persuaded Naser al-Din Shah to dismiss Amir Kabir in 1851.

Although Naser al-Din Shah did not support any major reform programs after the experience with Amir Kabir, he did not oppose all reforms and took a leading role in special projects such as the reconstruction of public areas in Tehran and the introduction of modern urban infrastructure for the capital. His interest in at least minimal reforms was encouraged by a foreign pilgrimage to the holy sites of Shiʿism in Iraq and by three extended tours of Europe.

Meanwhile, Iran's increasing economic and political involvement with Europe exposed an ever-larger percentage of the urban political elite to European ideas, especially those about representative government. A new intellectual class, dominated by such figures as Mirza Malkom Khan and Jamal al-Din al-Afghani, emerged and began to advocate wide-ranging reforms to protect Iran from foreign encroachment. Naser al-Din Shah initially was interested in their ideas and patronized both men, but when he perceived that their views about political reforms potentially threatened his rule he dismissed Malkom Khan as Iran's ambassador to London and banished al-Afghani to exile in Turkey.

Iran's strategic weakness relative to Europe was the main impetus for interest in reform. In 1856 and 1857, Naser al-Din Shah's efforts to restore Herat to Iranian sovereignty were blocked by Britain. Thereafter, both British and Russian influence in Iran increased yearly. The shah sought to counter their influence by granting them competitive economic concessions and by trying to involve third countries, such as France, in Iran. These economic concessions, however, angered the traditional bazaar merchants, who believed that manufactured imports were destroying local production and foreign monopolies were denying them profits. The merchants tended to be closely allied with the *ulama,* and their joint opposition (as well as that of Russia) to the Reuter Concession induced Naser al-Din Shah to cancel it in 1873. More serious politically, however, was his granting of a foreign monopoly concession for tobacco in 1890. This move led to Iran's first national political protest movement in 1891 and 1892. With a mass consumer boycott, bazaar strikes in all the major cities, and even members of the court and royal family refusing to smoke tobacco, Naser al-Din Shah was forced to cancel the concession. The experience apparently was upsetting for the shah, because he became increasingly autocratic, tried to repress any expressions of dissent, and ceased to support any type of reforms. Naser al-Din Shah was assassinated by a bankrupt merchant in 1896.

NASHASHIBI FAMILY

Notable Muslim Palestinian family that established itself in Jerusalem during the fifteenth century.

The Nashashibi family is said to be of Circassian or Kurdish origin It gained prominence during the late nineteenth century when some of its senior members served in the administration of the Ottoman Empire. Uthman al-Nashashibi was elected to the Ottoman parliament as deputy of the Jerusalem *sanjak* (province) in 1912. Throughout the mandate years, the name Nashashibi denoted opposition to al-Hajj Muhammad Amin al-Husayni, a founder of Palestinian nationalism and the leader of the Palestine national movement until 1948. The leadership of the Nashashibi family was also well known for its advocacy of a policy of compromise with the Jewish Agency for Palestine and the British Mandate authorities. This position did not receive the same degree of support enjoyed by the Husayni program, which was based on the total rejection of the British government's Balfour policy. After 1948 the political influence of the Nashashibi family sharply declined, as did the influence of some other notable Palestinian families.

Raghib Nashashibi (1883–1951) was elected to the Ottoman parliament in 1914. During the British Mandate, Raghib became the most influential figure in the family and head of the anti-Husayni ("Opposition") camp. Ronald Storrs, governor of the Jerusalem district, appointed Raghib mayor of Jerusalem in 1920 as a reward for not participating in the anti-British demonstrations during the al-Nabi Musa celebrations in Jerusalem on 4 April 1920. Since the post had been occupied by Musa Kazim al-Husayni, who was dismissed for allegedly inciting the al-Nabi Musa celebrants, Raghib's acceptance of the mayoralty raised questions about his nationalism and exacerbated the Husayni-Nashashibi rivalry. Raghib helped form the Literary Society in 1918 and the Palestinian Arab National Party in 1928. In 1934, after he had lost his position as mayor to Dr. Husayn Fakhri al-Khalidi, Raghib formed the National Defense Party. Although the party's main source of support was the mayors and elites of the larger towns in Palestine, it was also able to reach the peasantry through the network of prominent families that supported the Nashashibi camp. He also served on the Arab Higher Committee from 1936 to 1937. After Israel became a state in 1948, Raghib served as minister in the Jordanian government, governor of the West Bank, and member of the Jordanian senate.

Raghib's nephew Fakhri Nashashibi (1899–1941) was a colorful and controversial political organizer and, from late 1920 until his assassination in Baghdad, the family's strong-arm man. After holding a number of posts in the mandate government, including aide-de-camp to High Commissioner Sir Herbert Samuel, he became Raghib's chief aide. Fakhri was a principal organizer of opposition to al-Hajj Amin and, at the peak of the Palestine Arab Revolt of 1936–1939, he organized the "Peace Bands," with help from the British military and the Zionist movement, to protect the Nashashibi camp from the campaign of intimidation launched against it at al-Hajj Amin's bidding. Fakhri favored a compromise settlement with the British and the Zionists.

Isʿaf Nashashibi (1882–1948), son of Uthman and a writer known throughout the Arab world, was described by contemporaries as an "Arabic dictionary that walks on two feet." Ali Nashashibi cofounded in 1912 a decentralization party for the Arab provinces of the Ottoman Empire; in 1916, Cemal Paşa executed him on charges of treasonable political activities. Nasir al-Din Nashashibi (1924–), a journalist and political writer living mostly in Egypt, served for some time as League of Arab States representative in Europe. Muhammad Zuhdi Nashashibi (1925–), a politician, started his political career as a Baʿth party figure in Syria after 1960. He has occupied senior positions in the Palestine Liberation Organization, including membership on its Executive Committee, head of the Economics Department, and chair of the Palestine National Fund. He has also served the Palestinian Authority through membership in its Higher Council for Refugee Camps and as finance minister.

MUHAMMAD MUSLIH
UPDATED BY MICHAEL R. FISCHBACH

NASIR, AHMED SAYF AL-

[c. 1880–1960]

Libyan tribal and political leader.

Ahmed Sayf al-Nasir was a member of the Sayf al-Nasir family, hereditary shaykhs of the Awlad Slaiman tribe of the Sirtica and Fezzan regions of Libya. Ahmed Bey fought the Italian conquest of Libya from 1915, seeking exile in French Equatorial Africa (now Chad) toward its end in 1930. During World War II, he returned to Fezzan with Free French Forces advancing from Chad (1943) and became the chief instrument through which the French administered the territory. In February 1950, the French authorities set up a Fezzanese Representative Assembly that elected Ahmed Bey as *chef du territoire,* unopposed, and he headed a local administration under French supervision. Although associated with often unpopular French decisions, he promoted Fezzan's incorporation into a federal Libyan kingdom under Muhammad Idris al-Sanusi and thereby strengthened the hands of those who sought that form of independent Libyan state. After independence in 1951, Ahmed Bey became *wali* of Fezzan, the head of its provincial administration.

NASIR, HANNA

[1936–]

Founding president of Bir Zeit University in the West Bank.

Born in Jaffa, Palestine, Nasir is a graduate of the American University of Beirut. In 1972 he became the founding president of Bir Zeit University, the leading Palestinian university in the West Bank. He was expelled by Israel to Lebanon in November 1974, charged with supporting the Palestine Liberation Organization (PLO). He remained in exile until May 1993. While in exile, Nasir remained president of Bir Zeit University. He was also an elected member of the Executive Committee of the PLO from 1981 to 1984.

UPDATED BY MICHAEL R. FISCHBACH

NASIR, NAJIB

[1865–1948]

Palestinian newspaper publisher and early anti-Zionist writer.

Born to a Greek Orthodox family in Tiberias, Najib al-Khuri Nasir converted to Protestantism while working for fifteen years in a hospital run by missionaries. He then worked briefly as a land sales agent for the Jewish Colonization Association before founding the daily newspaper *al-Karmil* in 1908 in Haifa. Nasir used his knowledge of land sales to Jews to write articles against Zionism and the first history of the Zionist movement in Arabic, *Zionism: Its History, Object and Importance.* Also, before World War I, he founded several activist organizations to limit Jewish immigration and land sales. *Al-Karmil* was closed permanently by court order in 1944. Nasir died in Nazareth.

ELIZABETH THOMPSON

NASRALLAH, EMILY

[1931–]

Lebanese fiction writer.

Emily (Abi Rashid) Nasrallah was born in South Lebanon in 1931 and writes popular Lebanese fiction, beginning with her award-winning 1962 *Tuyur Aylul* (Birds of September). The heroine, dismayed by village ignorance, moves to the city to study at the university. Her choices are difficult and not always liberating, and the novel ends on a sad and nostalgic note. For decades, Nasrallah has written novels and short fiction for adults and young readers and she is among the most regularly anthologized writers in the Lebanese educational curriculum. Her stories are usually set in a rural past and have served a role in recording and promoting folk culture.

Nasrallah has consistently centered her fiction on female characters and concerns, thereby serving

as a pioneer in Arab women's literature. From her first novel to *al-Jamr al-Ghafi* (Sleeping embers; 1995), Nasrallah has focused on women's struggles for independence and self-expression. Repeatedly, she shows that access to knowledge should be the right of every human being. She has been a vocal and visible women's-rights activist.

Nasrallah remained prolific during the Lebanese Civil War (1975–1990) and wrote about the incomprehensible violence and the sudden fragmentation that leads to death, division, and forced emigration. Her 1981 *al-Ikla Aks al-Zaman* (Flight against time) is a haunting tale set during the war years. Nasrallah is the recipient of numerous awards, and many of her novels and short story collections have been translated into German, Danish, and English.

ELISE SALEM

NASRALLAH, HASAN

[1960–]

Lebanese Hizbullah leader.

Hasan Nasrallah was born in 1960 in Qarantina, the eastern suburbs of Beirut, to a Shiʿite Muslim family. Hasan was religious at an early age. Because of the persecution of Shiʿa in East Beirut by right-wing militias, the family moved to the Tyre region. In his village of Bazuriyya, Nasrallah joined the ranks of the AMAL movement (founded by Imam Musa al-Sadr).

In the late 1970s Nasrallah moved to Najaf in Iraq to receive religious training at the renowned Shiʿite school. There he met and befriended Abbas al-Musawi, who would later lead Hizbullah. In 1978 the Iraqi government began harassing and persecuting Shiʿite religious students and leaders, and Nasrallah returned to Lebanon, where he continued his religious training at a school established by his friend al-Musawi in Baʿalbak. In 1982 Nasrallah was elected to the leadership of the AMAL movement in the Biqa region. After the Israeli invasion, AMAL leader Nabih Berri accepted the invitation of Lebanese president Ilyas Sarkis to join a "salvation committee" that included among its members the pro-Israeli right-wing militia leader Bashir Jumayyil. That decision by Berri alienated large segments of the movement and led to the creation of a splinter movement by Husayn al-Musawi, who founded the Islamic AMAL movement. Others gravitated toward a new group that would later become Hizbullah, or the Party of God. The group included people who formerly were leaders and members of the Iraqi Daʿwa Party.

Nasrallah rose quickly in the Hizbullah ranks and became the leader of the Beirut region. In 1989, amid rumors of differences of opinion in party leadership, Nasrallah left Lebanon for Qom to complete his religious studies and training. In 1992 Israel assassinated Abbas al-Musawi, and Nasrallah was elected secretary-general of the party, even though he had not served as a deputy secretary-general. He was the youngest member of the Shura Council (the highest executive body of the party). Nasrallah quickly rose to become one of the most charismatic, most popular leaders in Lebanon and in the Arab world. His pictures are seen in demonstrations in places like Morocco and Gaza. Nasrallah's eldest son was killed by the Israelis in 1997, and his handling of the personal tragedy (refusing a special deal with Israel to receive his body) only increased his popularity. Nasrallah's popularity was boosted further in 2000, when Israeli troops withdrew from south Lebanon after years of Hizbullah resistance, managed in its last years by Nasrallah. Nasrallah led Hizbullah's transformation into a parliamentary party with extensive media and social services in Lebanon. The party also retained its security-military force, calling for Israel to withdraw from the Shabʿa Farms, which are still occupied by Israel (which claims that they belong to Syria).

ASʿAD ABUKHALIL

NASRUDDIN HOCA

A well-loved character in the Turkish oral prose tradition; protagonist of humorous anecdotes told from the Balkans to central Asia.

Known as Nasr al-Din in Iran and as Juha in Arabia, Nasruddin Hoca appears in some stories as a wise folk philosopher or a witty if unconventional preacher. In others, he is naive and uninformed, the butt of youngsters' pranks, a figure of gentle ridicule who shows great resilience. However foolish he may seem, he survives all disasters and, having the last word, often turns the tables on those wielding power over or making fun of him. Although a village near Sivrihisar in central Anatolia is claimed as Nasruddin's birthplace and a mausoleum in Akşehir is said to be his 1284 burial place, a connection between the stories and any historical person is questionable.

The earliest Ottoman manuscript collections about Nasruddin Hoca are dated to the early sixteenth century and contain fewer than 100 stories. The first printed edition of 125 stories appeared in 1837; later publications present a body of several hundred items, and translations have appeared in many Western and Asian languages.

NASSAR, SADHIJ

[c.1900–c.1970]

Palestinian women's activist.

Sadhij Nassar, of Iranian origin, grew up in Haifa, where she lived until 1948. She married Najib Nassar, editor of the newspaper *al-Karmil.* It was one of the few interfaith marriages during this period, and not without controversy. Najib Nassar, who was an Orthodox Christian, was also considerably older than his wife, who was the granddaughter of the founder of the Baha'i faith. Beginning in the 1920s, Sadhij Nassar contributed articles to the newspaper, translated articles from the foreign press, and was editor from 1941 to 1944, when the Mandate authorities refused to grant her a permit under the Emergency Defense Regulations. In 1930 she was a founding member and secretary of the Arab Women's Union in Haifa, which was one of the more militant branches of the women's movement during the Mandate period. In 1939 the British detained her for political reasons and held her without charges under the Emergency Defense Regulations in the women's prison in Bethlehem. She was released after an eleven-month imprisonment. She continued her activities in the women's movement until 1948. After 1948, when she became a refugee, she wrote for various publications in London and in Damascus, where she tried to open a branch of the Arab Women's Union. She is believed to have died in Damascus sometime during the 1970s.

NASSER, GAMAL ABDEL

[1918–1970]

President of Egypt, 1956–1970.

Few Arab politicians rivaled the impact of Gamal Abdel Nasser (also known as Jamal Abd al-Nasir) on the Arab world in the twentieth century. His mid-century revolution and his rule of Egypt followed the corrupt monarchy of King Farouk and was fueled by nationalism. It held out the promise of socialism and Arab unity, stirring the imaginations of Arabic-speaking intellectuals and common people.

Born in Alexandria into the Muslim family of a modest postal clerk, Nasser received his primary education in the small Nile delta village of al-Khatatiba, to which his father had been assigned. After completing his secondary education in Cairo,

where he lived with an uncle, Nasser attended law school for several months before gaining entry to the Royal Military Academy in 1936.

The military provided the vehicle for Nasser's rise to power. His historical role began as the leader of a military conspiracy, the Free Officers, who launched a coup d'état and seized power in July 1952, overthrowing King Farouk. A republic was proclaimed, 18 June 1953, under General Muhammad Naguib as both provisional president and premier; he gave up the premiership in 1954 to Nasser, then the leader of the ruling military junta. Naguib was deposed and Nasser was confirmed as president by referendum on 23 June 1956.

In the eyes of a trusted minister, "the Nasir revolution cohered around the ideas and principles of pan-Arabism, positive neutrality, and the social revolution." Nasser, as his ex-minister put it, "took the side of the poor, just as he took the side of development, democracy, Arab unity, and non-alignment." Such admirers believe that even with the changed conditions after Nasser's death, "these principles will undoubtedly take new forms; yet, the ideas are still alive and they still move people" (Baker 1990, p. 80).

Nasser's critics have emphasized his authoritarianism and his bitter defeats. Anwar al-Sadat, his successor as president, charged that Nasser's vaunted social revolution degenerated into "a huge, dark, and terrible pit, inspiring fear and hatred" and that Nasser's relentless hostility toward Israel had given Egypt only "years of defeat and pain," undermining prospects of achieving peace and prosperity while accomplishing little to realize Arab goals (Sadat, p. 20; and *al-Ahram,* 27 June 1977).

Early Domestic Affairs

Debate about the ultimate meaning of Nasser's rule does not preclude identification of key turning points that both supporters and detractors accept as decisive. A domestic power struggle and the necessity of coming to terms with the former British colonial power, which retained its base at Suez, gave early definition to the new regime. General Naguib, the figurehead for the Free Officers' movement, challenged Nasser's leadership from February to April 1954 by drawing support from the small middle class, the movement of the Muslim Brotherhood, and the former political parties who all opposed the authoritarian and plebeian thrust of the military regime. Rallying urban mass support through a newly created party called the Liberation Rally, Nasser relied on the military and police to defeat the middle- and upper-class political forces arrayed against him. The formula worked, and the newly consolidated regime immediately launched an agrarian reform program that added peasant support and undermined the powerful landowning families that had backed the monarchy.

Former Egyptian president Gamal Abdel Nasser (1918–1970). Hailed by many Arabs as a champion of Arab interests, Nasser took power following a 1952 coup by the Free Officers revolutionary organization. **© United Nations. Reproduced by permission.**

Early Foreign Relations

Regime priorities of power consolidation and domestic reform were reflected in moderation on the three major foreign-policy issues confronting Egypt—the Sudan, the British, and Israel. While an activist foreign policy later became the hallmark of

Nasserism, as a new ruler Nasser established himself as a moderate in foreign affairs. In 1954, Egypt signed a conciliatory agreement for a transitional period of self-government for the Sudan, which became an independent republic in 1956. Negotiations also produced an Anglo–Egyptian agreement in 1954 that provided for the gradual withdrawal of the British from their remaining Suez Canal zone base. Opponents, including the Muslim Brotherhood, charged that Nasser had compromised the national interest. An assassination attempt against Nasser in October 1954 justified the crushing of the Muslim Brotherhood; in fact, throughout Nasser's rule, the brotherhood suffered severe repression.

Nasser emerged only reluctantly as the champion of the Arab struggle against Israel. A few dangerous paramilitary actions had drawn Egypt into the conflict in the early to mid-1950s. Small bands of Palestinians, including some operating from the Egyptian-controlled Gaza Strip, launched raids against Israel. Israel immediately developed a policy of massive reprisal against the Arab states sheltering the raiders.

When the West failed to respond to Nasser's need for arms, he announced an arms agreement with Czechoslovakia (an intermediary for the Soviet Union). A dispute with the United States and Britain over their financing of a high dam project at Aswan accelerated the radicalization of Egypt's foreign policy in 1955 and 1956. The Egyptians looked to the electricity that the dam would provide to fulfill their dreams of industrialization. The Western powers, alarmed by Nasser's flirtation with the East, denied funds previously promised. In defiance, Nasser nationalized the Suez Canal Company on 26 July 1956. The response came swiftly.

In 1956, Egypt was invaded by Israel in October and by France and Great Britain in November. Militarily, the invading armies triumphed, but the Egyptians resisted fiercely under Nasser's inspiring leadership. They fought just long and well enough to give international opinion time to force the invaders to withdraw. Most dramatic were the Soviet missile threats against Europe and Israel, but U.S. diplomatic pressure actually proved effective in securing a cease-fire and the withdrawal of the invaders. Defeated militarily, Nasser triumphed politically; he remained in power with the Suez Canal Company in Egyptian hands.

Union with Syria and Socialist Agenda

Buoyed by obtaining Suez, Nasser launched a bold bid for Egyptian leadership of the Arab world and laid the groundwork for an ambitious program of domestic change. On 1 February 1958, Syria voluntarily united with Egypt to form the United Arab Republic (UAR), which was later joined by Yemen. Although the union lasted only until 1961, it gave substance to the rhetoric of pan-Arabism. Nasser blamed the breakup of the UAR on reactionaries and responded by intensifying the revolution at home. A Charter of National Action then committed Egypt to socialism and announced the formation of a new mass political organization, the Arab Socialist Union.

Before he was forced to retreat, Nasser tried to realize a socialism for Egypt that had industrialization and improvement of mass welfare at its heart. The long-range goal was the creation of a heavy industrial base. Aziz Sidqi, Nasser's minister of industry, presided over a remarkable expansion of the nationalized public sector. Unfortunately, advances in agriculture did not match the industrial gains registered in the decade after Suez, which were diluted further by a rapidly expanding population. Still, Nasser did create the public sector and improvements in health and education reached even the rural countryside in limited ways. The issue of rural transformation was put on the national agenda.

The collapse of the union with Syria dealt a blow to Nasser's pan-Arab standing. He sought to regain momentum in the Arab arena by intervening in the Yemen Civil War in 1962, hoping that a victory by the republican side would give Egypt leverage on the strategic Arabian Peninsula. Instead, the intervention merely provoked conflict with the Saudi regime that supported the Yemeni royalists and with the Americans who stood behind the Saudis. Fearing Nasser's pan-Arabism as a destabilizing force, the Americans turned against the regime. Until this point, republican Egypt had earned impressive aid for its development effort from both the United States and the Soviet Union. After the intervention in Yemen, the United States cut off its aid to Egypt.

The period of growth and expansion at home and abroad was over by the mid-1960s.

1967 War with Israel

These reversals created a mood of desperation that culminated in Nasser's abandoning the heretofore cautious policy that he had pursued with Israel. In the Arab summit conferences of the 1960s, Nasser had consistently urged restraint. For ten years after Suez, Egypt lived in relative peace with Israel because the presence of a United Nations Emergency Force stationed on the Egyptian side of the border. Pressures mounted, however, as the Palestinians launched raids from Lebanon, Jordan, and especially Syria. Israel responded with deadly force. An outcry provoked by the response forced a weakened Nasser to act. Chided for hiding behind the United Nations (UN), Nasser requested the withdrawal of UN forces from the Sinai peninsula in 1967. The UN commander interpreted the order to mean the removal of his forces at the head of the Gulf of Aqaba. Egyptian troop replacements there meant closing the gulf to Israeli ships.

Israel viewed the closing of the Gulf of Aqaba as a cause for war. On 5 June 1967, Israel launched an attack, destroying the entire Egyptian air force in a matter of hours. In the course of the 1967 Arab–Israel War, Israel seized Jerusalem and the West Bank from Jordan and the Golan Heights from Syria, sweeping across Sinai and the Gaza Strip and routing the Egyptian army to leave an estimated ten thousand dead. On 9 June, Israel's forces reached the Suez Canal. On 10 June, a cease-fire was called by the UN; Egypt had lost the war, and Nasser then resigned.

In Cairo, Egyptians took to the streets to urge Nasser to remain as leader. For three more years Nasser ruled, refusing to accept an Israeli-dictated peace. In April 1969, he launched the so-called War of Attrition (1969–1970) in the canal zone that prolonged the Egyptian struggle against the Jewish state. At home, he announced a program that promised to revitalize the revolution. But Nasser's revolution never regained momentum. The exhausted Egyptian leader died on 28 September 1970 and was replaced by Anwar al-Sadat.

NASSER, LAKE

A reservoir of the Nile located in southern Egypt and northern Sudan, created by the Aswan High Dam after 1971.

Lake Nasser, created by the construction of the High Dam at Aswan, is 298 miles long and 10 miles wide at its widest point, with a water capacity of 130 million acre-feet, of which 24 million acre-feet serve as dead storage for sediment and 73 million acre-feet as live storage. About one-quarter of all the Nile waters entering Lake Nasser are lost to evaporation and seepage. The largest man-made lake in the world, Lake Nasser has a major role in Egypt's fishing in-

dustry, yielding 15,000 to 25,000 tons per annum. Original hopes that Lake Nasser would also support agriculture in its vicinity, however, have yet to be realized.

In 1978 the Ministry of Irrigation authorized construction of the Tushka canal to carry away surplus water from Lake Nasser to the New Valley Project in the western desert in case a high flood upstream caused Lake Nasser's waters to pass over the spillway, leading to damage to barrages and bridge abutments downstream. This emergency canal was used for the first time in the late 1990s, at a time of unusually high Nile flows. At the beginning of the twenty-first century, the Tushka diversion was a source of international controversy in that the Egyptian government announced plans for routine diversions of lake water into the western desert to reclaim land. This came at a time when the ten riparian states of the Nile Basin were attempting to reach an accord on future uses of the limited waters of the river.

The lake is named for Egypt's president who held office at the time of the building of the dam, Gamal Abdel Nasser. The rising lake displaced over 100,000 Nubian inhabitants, and flooded sites of ancient Egyptian buildings such as Abu Simbel. Creation of the lake in the early 1970s led to an international rescue effort to save dynastic-era antiquities of the valley behind the dam.

UPDATED BY GREGORY B. BAECHER

NASSIF, MALAK HIFNI

[1886–1918]

Egyptian writer.

An Egyptian Muslim, Malak Hifni Nassif (pseudonym, Bahithat al-Badiya) publicly advocated women's advancement in the early twentieth century during the *al-nahda al-nisaʾiyya* (women's awakening). This was a period in which women were increasingly able to publish essays, stories, and letters in the nascent women's press and also in the general press. The women's press and the writers who contributed to it played an important role in the development of feminism and the reform of social institutions in a number of Middle Eastern countries. Nassif, along with other prominent figures such as May Ziadeh, were active in literary and social groups through which they contributed to the intellectual and public debate about nationalism and how to define Egyptian and Arab political and cultural identity under the British colonial government.

Nassif articulated one of the founding discourses of feminism that emerged in Egypt during the first third of the twentieth century. Her strain of feminism remained secondary to that embodied in the work of Huda al-Shaʿrawi (1882–1947) until the final decades of the twentieth century. In contrast to Shaʿrawi's secular and Western-oriented feminism, Nassif's feminism, expressed in her collection of talks and essays, *Al-nisaʾiyyat* (Women's affairs, 1910), de-emphasized Western values as it attempted to affirm and improve women's lives and experience through increased educational and work opportunities within a reformed Islamic context.

CAROLINE SEYMOUR-JORN

NATEQ-NURI, ALI AKBAR

[1943–]

Iranian cleric; speaker of the majles.

Ali Akbar Nateq-Nuri was born in Nur Mazandaran. His political activities before the revolution are said to have begun in 1963, against the Pahlavi regime. He lived briefly in Lebanon and Syria, and after the revolution in 1979, became Ayatollah Khomeini's representative in the Construction Crusade (Jihad-e Sazandegi). Nuri served as minister of the interior between December 1981 and August 1985. As of 1996, he was the speaker of Iran's parliament (majles).

FARHAD ARSHAD

NATIONAL BLOC

Lebanese political party headed by Emile and Raymond Eddé.

Established in 1934, the National Bloc became the political vehicle for Emile Eddé and his son Raymond Eddé. Originally from Jubayl (Byblos), the Eddé family played an important role in the history of Lebanon. Elected president of Lebanon in 1936, Emile Eddé was the first Maronite Catholic president to appoint a Muslim prime minister—thus establishing the tradition. In 1949 Emile Eddé died and was replaced as chairman of the National Bloc by Raymond.

As a member of the Lebanese parliament from 1953, Raymond, a firm believer in the free-enterprise system, introduced several important pieces of legislation—notably the 1956 law on bank secrecy, the law introducing the death penalty in 1959, and the joint banking account law in 1961. With the beginning of the Lebanese Civil War in 1975, Raymond Eddé kept the National Bloc from becoming a party of warlords. He was the first Lebanese politician to warn of the dangers of Lebanon becoming a hostage to her two neighbors: Syria and Israel. In 1969 Raymond Eddé and the National Bloc were the only group to vote down the Cairo Agreement between Lebanon and the Palestine Liberation Organization (PLO). In 1976, as a result of seven assassination attempts, Raymond Eddé opted for the relative safety of exile in Paris.

Since Raymond's death in May 2000, the bloc has been led by his nephew, Carlos Eddé, a businessman who had spent most of his life abroad. The National Bloc is no longer a major player on the Lebanese political scene.

NATIONAL CONGRESS PARTY

The principal opposition political party in Libya immediately after independence.

Government tampering in national assembly elections in 1952 deprived the National Congress party of its victory. Party stalwarts reacted violently, leading, first, to the expulsion of its founder, Libyan nationalist Bashir Bey Sadawi, from the country and then, soon thereafter, to the demise of party politics in Libya.

NATIONAL DEMOCRATIC FRONT (NDF)

Leftist movement in the Yemen Arab Republic.

The National Democratic Front (NDF) was an umbrella organization created in 1976 by six leftist opposition groups in the Yemen Arab Republic (YAR), which sought to move the YAR in a more radical direction and away from the republican-royalist reconciliation that ended the civil war in 1970. The roots of the NDF can be traced to the expulsion of the left from the YAR polity following the Sanʿa Mutiny in 1968. In addition to an increasingly radical program of socioeconomic reform along socialist lines, the NDF sought to unify the YAR with the revolutionary South Yemen; to loosen ties of political dependency with Saudi Arabia; to curb the influence of tribal leaders; and to open up the closed political system of the YAR to popular participation. The NDF first sought through political means to pressure the government to accept it and

its goals. Frustrated in this effort, during the late 1970s and early 1980s the NDF waged an armed rebellion against the YAR regime with the support of Marxist South Yemen; it played an important role in the 1979 border war between the two Yemens. The NDF rebellion was largely put down by force in 1982, and many NDF members accepted the regime's terms for reconciliation; almost all of the others reconciled on the occasion of Yemeni unification in 1990, effectively ending the NDF as an organized force in Yemeni politics. Many former NDF leaders ended up playing important political roles in unified Yemen, some in the ruling party of the president and most in the opposition. The NDF was virtually nonexistent by the time of the brief War of Secession in 1994 and hence played no role in it.

NATIONAL DEMOCRATIC FRONT FOR THE LIBERATION OF OMAN AND THE ARAB GULF

Radical antigovernment organization (1970–1971), known as NDFLOAG.

NDFLOAG was formed in June 1970 by the merger of several small groups of foreign-educated Omanis. The front's members, fewer than a hundred, were united by shared antipathy for the reactionary sultan, Saʿid bin Taymur Al Bu Saʿid. Their aim was to carry out attacks on the government in northern Oman paralleling those that had been launched by the Popular Front for the Liberation of the Occupied Arabian Gulf (PFLOAG) in Dhufar in the south. Mortar assaults on garrisons at Nizwa and Izki failed, and most of the perpetrators were captured. The attacks, however, caused Omani supporters of the government, as well as its British protectors, to fear that rebellion could spread throughout the country. This fear led them to work with Saʿid's son, Qabus ibn Saʿid Al Bu Saʿid, to overthrow his father in July 1970. In December 1971 NDFLOAG, reduced to impotence, was absorbed by PFLOAG, which changed its name (but not its acronym) and became the Popular Front for the Liberation of Oman and the Arab Gulf.

NATIONAL DEMOCRATIC PARTY (IRAQ)

A political party in Iraq, known as the NDP (Arabic, al-Hizb al-Watani al-Dimuqrati); licensed in 1946 under the leadership of Kamil Chadirchi.

An outgrowth of the old Ahali group, (People's Group) the party had semi-socialist views and attracted supporters from the wealthy, well-established families as well as from Shiʿa and left-leaning middle-class people who believed in gradual change. In 1949 the party was banned along with the Iraqi Communist party. Even so, its members were involved in the strikes and riots that occurred in the early 1950s in opposition to the Anglo-Iraqi treaties. When free elections were held in 1954, the NDP won six seats but lost them when Prime Minister Nuri al-Saʿid suspended parliament and banned opposition parties. In 1956 the NDP applied for permission to form a party with Istiqlal (Independence party) the supported neutrality, an Arab federation, the liberation of Palestine, and political freedom. Denied, the Istiqlal, NDP, the Communist party, and the Baʿth party formed the United National Front, or United Popular Front.

Supporting the opposition to the monarchy, Chadirchi initially backed Abd al-Karim Qasim in his coup that overthrew the monarchy in June 1958. By 1961, Chadirchi opposed Qasim, even though Muhammad Hadid, second-in-command of the NDP, accepted the post of minister of finance in Qasim's government. As a protest to the antidemocratic nature of the regime, in October 1961

Chadirchi closed the NDP and ceased publishing *al-Ahali.*

REEVA S. SIMON

NATIONAL FRONT FOR THE LIBERATION OF SOUTH YEMEN

An association opposed to Britain's role in South Yemen in the 1960s.

The National Front for the Liberation of South Yemen (NLF), an association of seven organizations, first met in Sanʿa (capital of North Yemen) in 1963 to discuss strategies against the British position in South Yemen; three additional groupings joined later. Its intellectual and ideological origins lie primarily with the Arab national movement. It differed from other groups in two respects: its members agreed on the necessity of military action, and its primary popular base lay in the Protectorates rather than Aden. In 1967 the British turned over South Yemen to the NLF. In 1978 the NLF was recast as the Yemeni Socialist Party (YSP) and governed South Yemen (PDRY) until the merger with North Yemen in 1990. At that point, it became the second-most important party in the united state, and the major alternative and opposition party to the government of Ali Abdullah Salih. The frictions between the two constituent "regions" continue to be represented in the policies and personalities of their respective leaders and parties in the united state; the YSP continues to have its primary base of support in the old South.

NATIONAL FRONT FOR THE SALVATION OF LIBYA

The principal opposition to Qaddafi's regime in Libya.

The National Front for the Salvation of Libya (NFSL) was established in 1981. Illegal in Libya, it operates in exile under the leadership of its secretary-general, Muhammad Yusuf al-Magarief, a former Libyan ambassador to India. Encompasing opponents of Muammar al-Qaddafi of a variety of political persuasions, many of whom served in early Qaddafi governments, the NFSL has broadcast radio programming into Libya, published several newspapers and magazines abroad, and is credited with having organized a 1984 attack on the military barracks at Bab al-Aziziyya, where Qaddafi often stayed. During the mid-1980s, at the height of the American confrontation with Libya, the NFSL denied widespread allegations that it received assistance from the United States. By the 1990s, leadership positions in the NFSL were being assumed by younger Libyans who had grown up in exile and lived most of their lives outside the country.

LISA ANDERSON

NATIONAL FRONT, IRAN

Coalition of nationalist parties and groups that became prominent in the early 1950s and advocated a constitutional regime and Iran's control of its oil resources.

The National Front was responsible for the nationalization of the British-owned Iranian oil industry in 1951. Its influence declined after the Anglo-American coup of 1953, which overthrew Mohammad Mossadegh and reinstalled Mohammad Reza Pahlavi as shah. The rise of the National Front was

triggered by opposition to parliamentary election fraud. In October 1949 Mossadegh led a delegation to the shah's palace to protest the lack of free elections. A committee of twenty members was then formed to negotiate with the court minister, who promised to end electoral problems. The same committee later met at Mossadegh's house to form the National Front as a parliamentary faction. The front's diverse wings included social democrats, constitutional monarchists, and Islamists (led by clerics). Its social base consisted of bazaar merchants and craft guilds, members of the small industrial bourgeoisie, and urban professional middle classes. The front tried to enhance its political position by using the postwar rivalry between Britain and the United States for influence in Iran.

With opposition to foreign domination as its main goal, the National Front focused on ending British control of Iran's oil industry. The British rejected its demand for total Iranian control and equal profit-sharing with the Anglo-Iranian Oil Company. When the parliament nationalized Iranian oil, the shah delayed signing the bill, finally doing so in April 1950 when Mossadegh was elected prime minister.

Facing a British boycott of Iranian oil and increasing American hostility, Mossadegh's government encountered serious difficulties. The National Front's initial strength was its unification of disparate ideological and political currents under the banner of oil nationalization. But with the rapid polarization of Iranian politics in the early 1950s and under intense foreign pressure, the front began to unravel. Most significantly, its conservative and religious factions began opposing Mossadegh's defiant secular nationalism and defected to the monarchist and Anglo-American camp.

In August 1953, after a showdown with Mossadegh, the shah fled the country but was quickly returned to power through a CIA-engineered military coup. Mossadegh was overthrown and, along with many National Front leaders, ended up in prison. Some of his followers formed the National Resistance Movement but were unable to challenge the new regime effectively. In the early 1960s a Second National Front was organized by Mossadegh's former allies and played a leading role in another round of struggle for reform, but, like the Third National Front formed in 1965, was crushed by the regime.

Key personalities of the National Front emerged to lead the revival of popular opposition in 1977, but they soon were overtaken by Islamist forces. Still, the front's religious wing, led by Mehdi Bazargan, continued to be prominent. Following the fall of the monarchy in 1979, Bazargan became the prime minister of the provisional government. A few National Front old guards served in his cabinet; but they, along with Bazargan himself, were purged by the clerical Islamist forces close to Ayatollah Ruhollah Khomeini. Under the Islamic Republic, Bazargan continued to function as a loyal opposition figure, whereas most other National Front leaders were forced into exile.

Afshin Matin-asgari

NATIONAL FRONT, LEBANON

Coalition of left-wing Lebanese and Arab political parties and forces formed in 1984.

In 1984 in Lebanon, the leftist-nationalist coalition known as the Lebanese National Movement was dissolved as a result of internecine battles. In Israel, elections led to the victory of the Likud under Yitzhak Shamir. In the United States, Ronald Reagan was on the brink of being reelected for a second term.

The National Front was created as a result of these events. This coalition included representatives of the Progressive Socialist Party, the Lebanese Communist Party, the Baʿth party, the Syrian Social Nationalist Party, the Arab Democratic Party, and the Arab Socialist Union. The platform of the National Front contained six principles: (1) consolidate the resistance to the Israeli occupation in south Lebanon, (2) stress the unity and integrity of

Lebanon in the struggle against partition plans, (3) emphasize the Arab identity of Lebanon, (4) adopt an independent foreign policy, (5) call for political reforms and the abolition of the confessional system, and (6) call for economic and social reform. The mainstream Shiʿite AMAL movement was later invited to join the coalition.

GEORGE E. IRANI

NATIONALISM

A people's sense of its political identity or a movement to achieve such identity.

The word *nationalism* refers to the feeling of political unity or of identity and patriotic sympathy that a people usually focuses on its own language or culture or on a land that it regards as its own. It also refers to that component of various political ideologies according to which this feeling is held to be essential to the existence of a state or to a political movement's aspirations to statehood. Finally, it is used in the arguments advanced by historians, ideologues, and politicians to justify actual or proposed actions on behalf of the people they see as embodying the nation.

Evidence of nationalism, in any of these related senses, is difficult to discern in the Middle East prior to the nineteenth century. Individuals often felt affinity with their coreligionists, but it was assumed that whatever the religion of the ruler might be, the state was not exclusively defined by religion. Tolerance of religious plurality was the norm, even though the ruler's coreligionists usually enjoyed greater official favor than people of a different religion. Language similarly served as a bond between people and as a dividing line between groups, but no state was linguistically homogeneous or disposed to regard language as the defining quality of a ruler's subjects. As for territory, strong feelings of identity with places of origin, particularly cities and their environs, were much in evidence in such guises as folk sayings, humor, and local traditions, but they were seldom accorded a political valuation.

As in most other parts of the world, the appearance of elements of national feeling in the Middle East preceded formal nationalist statements or political manifestos. Historians have debated the degree of indebtedness (certainly heavy) that various Middle Eastern nationalist writers and political leaders owed to European models in seeking to express their nationalism, but it would be an oversimplification to consider these models the sole source of nationalism in the region.

Greek Nationalism

The earliest nationalist movement manifested itself in the Greeks' war to obtain independence from the Ottoman Empire (between 1821 and 1832). The earlier revolt of the south Slavs (between 1804 and 1830) that culminated in the creation of an autonomous principality of Serbia had been a manifestation of widespread discontent with Ottoman maladministration and military disorder. Its leaders did not articulate nationalist positions, however, and the Slavs would presumably have been content with a return to competent Ottoman rule.

In Greece, however, despite a patchwork leadership ranging from bandit chiefs to Greek intellectuals educated in western Europe, a distinctly nationalist ideology came in time to be accepted as the best expression of the people's will. This ideology, however, was associated with a revolutionary organization called the Philike Hetairia that was based in Greek communities outside Greece (the most important one was in Odessa). Nationalist ideology followed rather than preceded the Greek rebellion, and many Greeks fought to escape Ottoman rule without being aware of any ideology. Many of the ideologues were more familiar with conditions and ideas in western Europe than in the Peloponnesus. Rhigas Pheraios, for example (who wrote in his immensely popular "War Hymn": "How long, my heroes, shall we live in bondage,/alone like lions on ridges, on peaks?/ . . . Better an hour of life that is free/than forty years in slavery!"), had a personal history of involvement with numerous revolutionary groups in western Europe dedicated to the ideals of the French Revolution.

Independent Greece not only fostered a revival of classical language and a glorification of ancient greatness—both common practices in later examples

The Shah of Iran places a crown on his wife, Queen Farah, after crowning himself in a lavish ceremony, Tehran, Iran, 26 October 1967. The Shah delayed his coronation for more than 25 years because he did not want to be crowned until he had accomplished a social revolution in Iran. © Bettmann/Corbis. Reproduced by permission.

of Middle Eastern nationalism—but also developed the Megali Idea, an ideology that harked back to the Byzantine Empire and whose proponents visualized a broad Balkan realm extending to Istanbul (then Constantinople) in which people of various languages and ethnic groups would be led by Greeks. This approach to nationalism, manifesting a vision of the Greek people as a political entity rather than a geographical entity, reflects the thinking of Jean-Jacques Rousseau and other French ideologues rather than the German vision of complete identity of people and land. The concept of one people dominating others within a specified territory later becomes commonplace in Middle Eastern nationalism.

Turkish and Arab Nationalism

Although other nationalist stirrings in the nineteenth century were not consciously patterned on the Greek example, they had some common features. Many advocates of Turkish and Arab political and linguistic distinctiveness, for example, were educated in Europe or were familiar with European ideas. Namik Kemal, whose Turkish drama *Vatan* (Fatherland) helped establish that word (*watan* in Arabic) as an element of nationalism, spent three years in exile in Europe; and the Lebanese Christian Butrus al-Bustani, one of the most industrious advocates of a revived Arabic literary language, worked closely with American Protestant missionaries. Like the Greeks, the Turks and Arabs encountered difficulty in harmonizing their particularist views with a history of pluralistic empire. Just as adherents to the Megali Idea could visualize, on the Byzantine model, an ethnically plural state dominated by Greeks, the Arabs and Turks aspired mostly to a revival or assertion of ethno-linguistic identity within the pluralistic Ottoman Empire.

One difference between Greeks and other nineteenth-century nationalists was the association of religion with a people's identity. All Greeks were orthodox Christians, even though not all orthodox Christians were Greek, nor all Greek clergy nationalist in sympathy. By contrast, Christian Arabs were prominent in the protonationalist Arab literary revival, and the Turkish protonationalists supported the religiously plural Ottoman system. Therefore, even though the great majority of Turks and Arabs were Muslims, Islam did not from the outset become an integral element of nationalist thought.

Written expressions of nationalist views among Turks and Arabs circulated during the last decades of the nineteenth century. Religion, however, remained a problem. The foremost Turkish ideologue, Ziya Gökalp, concentrated his analysis of Turkish identity on language and folk customs and dismissed Islam as a transitory civilizational attribute that should not stand in the way of the adoption of European customs. The Arab Abd al-Rahman al-Kawakibi, on the other hand, called for a revival of the caliphate under an Arab of the prophet Muhammad's tribe, the Quraysh, instead of under the despotic Ottoman sultan Abdülhamit II.

Rise of Nationalism

The Committee for Union and Progress, a group of military officers that took control of the Ottoman Empire through a coup d'état in 1908, espoused Turkish nationalism and mandated the use of the Turkish language in certain administrative offices that had previously used local languages. Resentment against such Turkizing measures contributed to the formation of small Arab nationalist groups in Syria and Istanbul. Most of these Arab nationalists remained wedded to the concept of an Ottoman Empire, however, until the outbreak of World War I.

Ottoman defeat and the publicizing of Woodrow Wilson's advocacy of self-determination of peoples encouraged an outpouring of nationalist expressions throughout the Middle East. Kurds and Armenians, as well as Arabs whom Britain had encouraged in a nationalist revolt against the Ottomans during the war, tried to influence the peace negotiations in their favor. The most successful nationalist movement of the period, however, was that of an Ottoman army officer, Mustafa Kemal Atatürk, who established a Turkish republic that was ideologically rooted in the ideas of Gökalp. The new Turkish state expelled a Greek expeditionary force from western Anatolia; it also abolished the offices of sultan and caliph, and legislated the most strenuously secular form of nationalism known in the region.

Nationalism dominated Middle East politics from the end of World War II until the Iranian revolution of 1979. Arab nationalism flourished once the collapse of the Ottoman Empire resolved the question of whether or not to remain loyal to an ethnically plural state. Although some Muslims pushed for reestablishment of the caliphate, most nationalists were caught up in the tide of secularism, actually anticlericalism, that had engulfed Turkey. The Baʿth Party was founded in 1947 on a platform of Arab national unity and separation of religion from public affairs. Some other groups, such as the Syrian Socialist Nationalist Party, espoused an Arab nationalism based on a single country. The Arabic term *qawmiyya* (from *qawm,* group of people) distinguishes this type of nationalism from *wataniyya,* which calls for political unity of all the Arab peoples. Gamal Abdel Nasser, considered by many the most popular and effective Arab nationalist leader, strove for Arab unity but also inspired Egyptians with the feeling that Egypt was the center of the Arab world.

Zionism, a Jewish nationalist movement that originated in Europe and embodied many European ideas, came into bitter conflict with Arab nationalism, whose leaders viewed the Zionist community in Palestine as a manifestation of European colonialism. The basic elements important to Zionism—language, religion, land, and identity as a people—differed little from those that are important to Arab nationalism.

Being farther removed geographically from European cultural influence, Iran did not manifest a strong nationalist identity until the post–World War I period. Earlier anti-imperialist actions, such as the Tobacco Revolt of 1891 to 1893, engaged religious feelings as much as they did patriotic feelings. When the military commander Reza Khan assumed the throne as Reza Shah in 1925, he took the surname Pahlavi to indicate continuity with the pre-

Islamic imperial past, since the word is normally used to designate the form of the Persian language spoken at that time. The Pahlavi dynasty promoted a nationalist ideology focused on the person of the ruler and the historical sequence of imperial Iranian dynasties. It emphasized the dominant role of Persians and of the Persian language in a multiethnic kingdom.

In 1950, Prime Minister Mohammad Mossadegh became the focus of a strong nonroyal nationalist movement. Suppression of this movement on the shah's behalf by U.S. and British intelligence agencies detoured nationalist feelings in an antiroyal revolutionary direction. Thus the revolution that overthrew the monarchy in 1979 had a strong nationalist coloring along with its dominant religious ideology.

Some modern Muslim theorists maintain that nationalism can have no place in Islam because of the seamless unity of the *umma,* the community of Muslims. Observers of Middle Eastern politics often use the term *religious nationalism* to describe politically active Islamic movements. Proponents of current theories of nationalism often speak of the "peoples" for whom nationalist movements speak and act as "imagined communities." Rather than accepting nationalist myths proclaiming the unity of a particular tribal, ethnic, linguistic, or territorial group of people from time immemorial, these theorists emphasize that each factor adduced to explain or describe a group's national character is partly an invention of ideologues, a deliberate emphasis upon one or another characteristic that had not previously been considered so important. A new nationalism can thus develop whenever a community imagines itself as a unified entity deserving of special recognition. From this perspective, nationalism appears less as an immutable division of the human population into natural units than it does as an instrument for shaping and reshaping community identities and politics along varying lines. Consequently, the frequently posed question as to whether the new Middle Eastern states created after World War I would ever become genuine national communities (a question often answered in the affirmative in light of the loyal participation of Iraqi Shiʿa in Iraq's war with Shiʿite Iran) may be of little relevance in an unsettled region where communities of people may well reimagine their identities in future decades.

NATIONALIST ACTION PARTY

Ultranationalist political party in Turkey in the 1970s and again in the 1990s.

The Nationalist Action Party (Milliyetci Hareket Partisi, or MHP) was originally known as the Republican Peasants Nation Party, but it adopted its current name in 1969. It developed during the 1970s under the leadership of Alparslan Türkes, a former military colonel. The party had a strong social and ideological base, combining militant nationalism and anticommunism with a strong em-

phasis on interventionist economic policies and the use of militia-style youth organizations. The Nine Lights of Türkes (nationalism, idealism, morality, corporatism, science, populism, progressivism, technology, and the defense of peasantry) became the ideological basis of the party. Popular support for the MHP was not widespread, but it was stable: The party won 12 percent of the parliamentary seats in 1961, 2 percent in 1965, 1 percent in 1973, and 4 percent in 1977. Throughout the 1970s the party was involved in right-wing violence against leftist groups. Following the 1980 military coup the government closed the MHP, but it reemerged in the 1990s, demonstrating its strength in the 1999 parliamentary elections by securing the second largest number of votes, after the Democratic Left Party of Bülent Ecevit. MHP's legislative representation rose to 23 percent of seats in the Turkish Grand National Assembly and its new leader, Devlet Bahçeli, became deputy prime minister in a coalition government formed by Ecevit. Since 1999 MHP has shifted its understanding of nationalism from ethnic to cultural nationalism.

NATIONAL LIBERAL PARTY

Lebanese political party established by and in support of the Chamoun family.

The National Liberal Party (NLP) was established by Camille Chamoun when he left the presidency of Lebanon in 1958. The NLP is a political vehicle used by the Chamoun family to reward its followers and partisans. While not having a defined political ideology, the NLP favored free enterprise and strong ties between Lebanon and the West, while at the same time it championed Maronite authority over Lebanon's politics. In the 1970s, the NLP claimed some 60,000 to 70,000 members, most of them from the Maronite Christian community, with some Shiʿite, Druze, and Greek Orthodox followers.

During the Lebanese Civil War of 1975, the NLP's militia, the Tigers (al-Numur), fought alongside the Phalange militias against the Islamic-Leftist coalition. In 1980, the Tigers were defeated, following an attack by the Lebanese Forces headed by Bashir Jumayyil. Following their defeat, the Tigers joined the Lebanese Forces and recognized Jumayyil as their leader. The NLP remains the party of Camille Chamoun, who used it to maintain his political power after leaving the presidency of Lebanon. Under his mandate, Lebanon was engulfed in a short civil war that ended with the 1982–1984 intervention of a multinational force composed of U.S. Marines and British, French, and Italian troops.

During the Cold War, Chamoun chose the anticommunist camp but created many enemies in Lebanon and the Arab world. In 1987, Camille Chamoun died and was replaced by his son Dany as the chair of the NLP. In 1990, Dany was assassinated and was replaced by his brother Dori.

NATIONAL LIBERATION FRONT (BAHRAIN)

Organization advocating political reform in Bahrain.

Following a general strike in Bahrain in the summer of 1954, liberal reformers from both the Shiʿite and Sunni communities organized a Higher Executive Committee (HEC) to press demands for an elected popular assembly, an appellate court, and the right to form trade unions. Protracted negotiations between the ruler, Shaykh Sulman bin Hamad Al Khalifa, and the HEC led to the official recognition of a Committee of National Unity in return for the HEC's agreement to stop calling for a parliament. Radical activists based in the industrial labor force responded by forming a succession of clandestine organizations, which called for more fun-

damental changes in Bahrain's political and economic structure.

Out of these groupings in the late 1960s emerged the Popular Front for the Liberation of Oman and the Arab Gulf, from which the Popular Front in Bahrain split off in 1974. More militant workers then formed the National Liberation Front (Bahrain) to press for the creation of a nonexploitative, egalitarian social order. Police cracked down on the organization after the National Assembly was dissolved in 1975. The National Liberation Front (Bahrain) was subsequently overshadowed by Bahrain's heterogeneous Islamist movement, although it continued to enjoy support among young professionals and intellectuals unsympathetic to the Islamists.

NATIONAL OIL CORPORATION (LIBYA)

The state oil holdings of Libya.

In 1970, the government of Libya enacted Law 24, reorganizing its oil holdings as the Libyan National Petroleum Corporation, now the National Oil Corporation (NOC). This law directed future foreign investment in Libyan oil to be organized as a partnership with NOC. It also transferred to NOC concessions relinquished by foreign oil companies and oil properties acquired by nationalization. By September 1973, NOC owned a minimum of 51 percent of every oil operation in Libya.

Since then, NOC has expanded its operations, negotiating directly with foreign oil companies to set up new joint ventures. In response to the imposition of economic sanctions by the United States in 1986, NOC devised model exploration and production-sharing agreements (EPSAs) featuring terms highly favorable to foreign partners. These model EPSA contracts have allowed NOC to continue to attract new partners based outside the United States, despite the additional risks to foreign investors that U.S. and UN economic sanctions against Libya impose. Today NOC operates refineries, a petrochemical complex, and a tanker fleet.

NATIONAL PACT (LEBANON)

Agreement between Christian and Muslim communities in Lebanon.

The National Pact (al-Mithaq al-Watani), an unwritten agreement, came into being in the summer of 1943 as a result of numerous meetings between Bishara al-Khuri (a Maronite Christian), Lebanon's first president after independence, and the first prime minister, Riyad al-Sulh (a Sunni Muslim). At the heart of the negotiations was the Christians' fear of being dominated by the Muslim communities in Lebanon and the region, and the Muslims' fear of Western hegemony. In return for the Christians' promise not to seek foreign (i.e., French) protection and to accept the "Arab face of Lebanon," the Muslims agreed to recognize the country's independence and to accept the legitimacy of the 1920 boundaries. Muslims also were expected to renounce demands for unity with Syria. The National Pact was intended to reinforce the sectarian system of government by formalizing the confessional distribution of high-level posts in the government based on the results of the 1932 census, with Christians outnumbering Muslims by a ratio of six to five. Although some historians dispute the point, the terms of the National Pact are believed to have been incorporated in the statement of the first cabinet after independence (October 1943).

Specifically, the National Pact decreed that the presidency shall be reserved for a Maronite Christian, the prime ministership for a Sunni Muslim, and the speakership of parliament for a Shiʿite Muslim. Other top government posts—commander

in chief of the army, head of military intelligence, head of internal security, and some important ambassadorships—were reserved for Maronites. It was agreed that the deputy prime minister should be a Greek Orthodox and that "minorities" (not one of the six major religious sects) should be occasionally represented in the cabinet and always in the parliament.

The confessional system outlined in the National Pact was a matter of expediency, an interim measure to overcome philosophical differences between Christian and Muslim leaders. It was hoped that once the business of governance got under way, and as national spirit grew, the importance of confessionalism in the political structure would diminish. Over the years, the frequent political disputes—the most notable of which were manifested in the Lebanese Civil Wars of 1958 and 1975, and the Palestinian controversies in the 1960s and 1970s have borne clear testimony to the failure of the National Pact to produce societal integration. Moreover, along with the system of *zuʿama* ("bosses") clientelism, it has guaranteed the maintenance of the status quo and the continuation of privilege for the sectarian elites.

The National Pact was affected by the Taʾif accord of 1989. Its weakness stems from the sectarian representation that was allowed to prevail in the 1940s. The Maronites were accepted as representatives of all Christians. Furthermore, nobody within either religious community assigned Khuri and al-Sulh the task of dividing the national government along sectarian lines. The Taʾif accord juridically legitimized the basic provisions of the National Pact but changed the representational formula. Muslims and Christians are now represented equally in parliament, although the top government posts will continue to be divided along the lines of the pact. The Taʾif accord constituted the first revision of the pact.

AS'AD ABUKHALIL

NATIONAL PARTY (EGYPT)

Egyptian nationalist movement and political party.

The National Party (al-Hizb al-Watani) is the name of two successive movements of Egyptian resistance against foreign economic or political control. The first emerged in November 1879, after Khedive Ismaʿil ibn Ibrahim's deposition. Although purportedly an Egyptian protest movement against the privileges of Turks and Circassians and against the Anglo-French Dual Financial Control, its initial patron was probably Prince Halim, who claimed that Ismaʿil had deprived him of the khedivate. Former Premier Muhammad Sharif, a constitutionalist, also claimed to have formed the party. During the Urabi revolt (1881–1882), it became associated with the most radical elements in the National Assembly and the officer corps, but it lacked a formal organization, and it is not easy to determine its role in the revolt. When British troops occupied Egypt in September 1882 to restore order, the party vanished.

The National Party was revived in 1893 as a secret society, under the aegis of Khedive Abbas Hilmi II and with strong ties to the government of the Ottoman Empire. Its leaders were Mustafa Kamil, Muhammad Farid, and several other professional men educated in Egyptian and European schools. In the 1890s the party disseminated propaganda in Europe against the British occupation of Egypt and among Egyptians to back the khedive against the British agent and consul general, Lord Cromer (Evelyn Baring). In 1900 Mustafa Kamil founded a daily newspaper, *al-Liwa* (The banner), which became the National Party's organ. The Nationalists broke with Abbas in 1904, but they became reconciled after the 1906 Dinshaway Incident. Mustafa Kamil publicized the party's existence in his long speech of 22 October 1907 and convened the first Nationalist assembly in December. Its main goals were to persuade the British by peaceful means to

withdraw their occupying army from Egypt and to obtain a democratic constitution from Khedive Abbas.

Mustafa Kamil died two months later, and the Nationalists chose Muhammad Farid to succeed him. Farid tried to widen the party's appeal by circulating petitions demanding a constitution and by supporting the Young Turk revolution in Constantinople. It split, however, over whether to cooperate with the khedive in spite of his reconciliation with the British, whether to espouse pan-Islam even if doing so would alienate the Copts (Egyptian Orthodox Christians), and whether to seek Egypt's liberation by legal or by revolutionary means. Cromer's successors, Sir Eldon Gorst and Lord Herbert Horatio Kitchener, encouraged the khedive and his ministers to muzzle the press and, after a Nationalist killed Premier Butros Ghali in February 1910, passed special laws, banned or suspended newspapers, and jailed editors—even Farid—to intimidate and weaken the party. Farid's departure from Egypt in 1912 left the party leaderless and divided. During World War I, its emigré leaders sided against the British—that is, with the Ottoman Empire and Germany—but British security measures prevented them from inspiring an Egyptian uprising. The Nationalists aided the Wafd in the 1919 revolution and, when parliamentary rule was established in 1923, ran candidates for election. Led by Hafiz Ramadan, the National Party remained a small but vocal element in the fabric of Egyptian politics until the 1952 revolution, after which all political parties were abolished. Its name was incorporated by Anwar al-Sadat into his National Democratic Party, but the party itself was never revived.

NATIONAL PARTY (SYRIA)

Alliance of Syrian urban upper-class notables and politicians, formed in 1947 with Damascus as its center.

During the French mandate period in Syria (1920–1946), this alliance of notables and politicians had formed the Damascus branch of the National Bloc (al-Kutla al-Wataniyya), which had led Syria's nationalist political struggle against the French. The most prominent leaders of the National party (al-Hizb al-Watani) were Shukri al-Quwatli, Jamil Mardam, Faris al-Khuri, Lutfi al-Haffar, and Sabri al-Asali.

The National party did not have a modern political party structure—rather, it depended on its leaders, their loosely organized followings, and their extended family relations. Socially, the party represented industrial and merchant interests, which favored independence from France, in contrast to the largely more conservative landowning milieu, which was luke-warm toward such a prospect. The position of the National party together with the position of its Aleppo-based rival, the People's Party (Hizb al-Shaʿb), was undermined in the late 1940s and early 1950s. This took place through the rise of more radical political parties like the Baʿth party and by the increased role of the military in Syria's politics during that period.

NATIONAL PROGRESSIVE FRONT (SYRIA)

Coalition of left-wing and progressive parties in Syria.

The National Progressive Front is a coalition of Syrian political parties established on 7 March 1972 after the Correction Movement led by President Hafiz al-Asad. It consists of six parties under the leadership of al-Baʿth Arab Socialist Party. The other parties are the Syrian Communist Party, the Arab Socialist Union, the Socialist Unionist Party, the Arab Socialists Party, and the Socialist Unionist Democratic Party. The charter of the coalition states that its central leadership is formed from a chairman (who is at the same time the president of the Republic and the secretary-general of the Baʿth Party), nine members of al-Baʿth, and two members of each of the other parties. With the exception of al-Baʿth, the parties that comprise the Front are not allowed to canvass for supporters in the army or the student unions. In December 2000 the Baʿth Party command allowed the six coalition parties to open provincial offices and issue newspapers publicly.

NATIONAL RELIGIOUS PARTY

See ISRAEL: POLITICAL PARTIES IN

NATIONAL SALVATION FRONT (LEBANON)

Lebanese nationalist group.

After the signing of the agreement between Amin Jumayyil's government and Israel on 17 May 1983, opposition groups and politicians met to commit themselves to aborting the accord. The three founders of the National Salvation Front were Sulayman Franjiyya, Rashid Karame, and Walid Jumblatt. Minor members of the Front were the Lebanese Communist Party and the Syrian Social Nationalist Party. All of these groups were loyal to the Syrian regime and opposed Jumayyil's government, which was then, with U.S. support, launching a war against the opposition. The Front wanted to annul the agreement with Israel, which amounted to a peace treaty, and to oppose the Phalangist takeover of the Lebanese government and administration under Jumayyil. The Front cooperated with Nabih Berri of the AMAL movement, and as a result of direct Syrian military and political support was able to pressure Jumayyil to nullify the agreement.

NATIONAL SALVATION PARTY

Political party in Turkey during the 1970s.

The National Salvation Party (Milli Selamet Partisi, or NSP) was formed in October 1972 as a successor to the National Order Party (NOP), which had been dissolved by Turkey's Constitutional Court following the March 1971 military coup d'état. Like the NOP, the NSP represented itself as a modern party inspired by and reflecting traditional Sunni Islamic ethical values. A key figure behind the formation of both parties was the Naqshbandi (Sufi order) leader Mehmet Zahid Kotku. The most prominent NOP/NSP politician, however, was Necmeddin Erbakan, who fled temporarily to Switzerland in 1971 to avoid arrest. In the election of 1973, the NSP received 11.8 percent of the vote and obtained eighty seats in the Turkish Grand National Assembly, thus becoming its third largest party. Erbakan returned to

Necmeddin Erbakan served as the prime minister of Turkey from 1996 to 1998 before being forced out of office for pursuing antisecularist policies. After Erbakan was banned from politics, his supporters founded the Islamic Virtue Party, which the government outlawed in 2001 on the grounds it was a center of fundamentalist activity and a threat to constitutional order. © REUTERS NEWMEDIA INC./CORBIS. REPRODUCED BY PERMISSION.

Turkey and became the NSP's leader in October, one week after the 1973 election.

In February 1974 the NSP joined the first coalition government formed by Bülent Ecevit of the Republican People's Party. The NSP held six cabinet positions during the seven-month tenure of this government. The most significant development in the period was the crisis in Cyprus, to which the coalition government dispatched troops to protect the Turkish minority living in the northern part of the island. The military intervention resulted in both Erbakan and Ecevit acquiring reputations as heroes, although this did not translate into electoral support for either man's party. Ecevit resigned in October 1974, thus ending the coalition.

The NSP next agreed to participate in the first National Front government under Süleyman Demirel of the Justice Party (April 1975 to July 1977). In the 1977 elections, however, the NSP's share of the national vote declined to 8.6 percent, and it lost half of its seats in the assembly. It participated in Demirel's brief second National Front government (July to December 1977) and in the minority government from November 1979 until the September 1980 military coup. All political parties were disbanded after the coup. The successor to the NSP was the Refah Partisi, founded in July 1983. After the September 1987 referendum that reestablished the right of prominent former politicians to pursue political activities, Erbakan became chairman of Refah.

The strength of the NSP was in the small towns and rural areas of Anatolia. Religious groups such as the Naqshbandi, other Sufi orders, and the Nurcu generally supported the party. The NSP embraced industrialization and technological advancement but criticized what it termed blind imitation of European culture and lifestyles. Its main program was embodied in a document called the National Outlook *(Milli Görüş),* which called for the strengthening of culture, industrialization, social justice, and education. It was, in practice, a populist agenda based on respect for Turkey's Ottoman-Islamic heritage, conservative social values, and equal opportunities for the nonelite middle and lower classes.

NERMIN ABADAN-UNAT
UPDATED BY ERIC HOOGLUND

NATIONAL SECURITY COUNCIL (TURKEY)

Political/military body that oversees the Turkish government.

Turkey's National Security Council (Milli Güvenlik Kurulu, or NSC), formed after the 1960 military coup d'état, consists of the president (the chair of the NSC); the prime minister; ministers of defense, foreign affairs, and the interior; the chief of the general staff; and commanders of the army, navy, air force, and gendarmerie. Its composition and duties are stipulated in Turkey's 1961 constitution. The function of the NSC is to maintain the military's position as guardian of the principles of Kemalism

within the institutions of the state. Following the 1980 military coup, the new 1982 constitution not only retained the NSC but also enhanced its powers, stipulating, for example, that the cabinet must give priority to NSC recommendations. The military's influence on government has proved to be an impediment to Turkey's efforts to become a member of the European Union; in order to comply with criteria set forth by the European Union, constitutional amendments in 2001 curtailed the role of the military within the NSC. For example, the civilian members of the NSC have been increased, and the NSC no longer recommends policies to the cabinet, but rather conveys its views informally.

NATIONAL UNION (EGYPT)

Founded in 1956 to succeed the Liberation Rally.

The National Union was the second of Egypt's official mobilization bodies, to be followed in its turn by the Arab Socialist Union. The National Union was an indirect outgrowth of the Tripartite Aggression of 1956, when Egypt was invaded by the colluding forces of the British, the French, and the Israelis. The Free Officers regime sought to consolidate the internal political front by creating a more effective mobilization vehicle for the solidification of patriotic sentiment behind the military regime.

The National Union structured a network of quasi-governmental intermediary organizations, such as a youth movement and women's organizations, that aimed to absorb and canalize popular energies in the service of regime goals. Though officially labeled a political party, the National Union, like its predecessors and successor, proved merely a bureaucratic extension of the authoritarian regime, failing to provide effective means of mass political participation.

NATIONAL UNITY COMMITTEE (TURKEY)

A group of military officers, commonly referred to as the NUC, who seized control of Turkey's government on 27 May 1960.

The National Unity Committee (in Turkish, Milli Birlik Komitesi) was a group of military officers, led by General Cemal Gürsel, that staged the revolution of 27 May 1960 and subsequently ruled Turkey through 20 November 1961. Although the coup was prepared by officers of middle and junior rank, it was the senior officers who took control of the National Unity Committee and the government. Serious divisions separated the two groups: junior members favored radical reform requiring longer-term retention of power by the military. Senior members supported an early return of elected civilian government. One of the first acts of the NUC was to convene a constitutional commission to draft a new constitution. On 12 June 1960 a provisional constitution granted sovereignty to the NUC until new elections could be held. The NUC exercised legislative power directly and executive power indirectly through a civilian council of ministers appointed and controlled by the NUC.

On 13 November 1960, in a move to rid the group of its more radical elements, thirteen of the original thirty-eight members of the committee were purged, including the ultranationalist Colonel Alparslan Türkes, paving the way for convocation of a civilian constituent assembly to draft a new constitution. The constitution was approved in a popular referendum on 8 July 1961, though a large negative vote was cast. On 15 October 1961 parliamentary elections produced indecisive results, leading to the election of the NUC leader, Cemal Gürsel, as president of the republic, and to the necessity of organizing coalition governments for the first time.

The NUC implemented some social and economic reforms designed to stabilize politics in Turkey. In addition, it abolished the Demokrat Parti and brought almost six hundred of its members to trial, three of whom were subsequently executed.

NATIONAL UNITY GOVERNMENT (ISRAEL)

See ISRAEL: POLITICAL PARTIES IN

NATIONAL WATER SYSTEM (ISRAEL)

Agency that oversees the planning and development of Israel's water resources.

With the establishment of the State of Israel in 1948, much effort was expended on drawing up an inventory of national water resources, defining growth objectives for the country, and planning methods of development. The first comprehensive water-development plan was adopted in 1950, stressing the maximum conservation of water. In 1952, Tahal, the Israel Water Planning Corporation, was set up to plan the water, sewage, and drainage systems and to supervise development. In 1959, Israel's Knesset (parliament) passed the Water Law, vesting all water rights in the state and giving the water commissioner in the ministry of agriculture the sole authority to fix tariffs, allocate water, and issue licenses for exploiting water resources.

All water development schemes are closely integrated with plans for agriculture and the realities of the scarcity of both land and water. The development plans must also take into account shortages of capital. The price of water is therefore high and, until recently, farmers paid the least, since preference was given to irrigation installations that facilitated control of the amounts of water used, minimized conveyance losses, and were economical in the use of labor.

Israel's climate is typically Mediterranean, with rainfall occurring only in the winter and decreasing from north to south. Rainfall in the north averages 39 inches (1,000 mm) yearly; in the central

A sweet-water reservoir flanks the Ruler road to Afula, in northern Israel. © HANAN ISACHAR/CORBIS. REPRODUCED BY PERMISSION.

coastal plain 19 inches (500 mm); in the extreme south only 1 inch (30 mm)—but there are yearly fluctuations. Its only major river running from north to south is the Jordan River. Its smaller rivers include the Yarkon, the Kishon, and the Sorek. They all empty into the Mediterranean Sea, along with more than a dozen major streams. National development projects aim at using groundwater, springs, storm runoff, and reclaimed wastewater. The largest project predated the Johnston Plan and was completed in the 1960s—the National Water Carrier—which conveys water from the northeast to the center and, at the same time, integrates all local and regional waterworks into one national water "grid," operated according to a national plan.

Israel claims that the integrated water sources available for the nation amount to about 370 million gallons (1,400 million cu m) per year. The majority of this water comes from the upper Jordan River and includes water from the springs around the Sea of Galilee (Lake Tiberias or Lake Kinneret), from the lake itself, and from coastal and foothill groundwater sources. A smaller amount of this water comes from the groundwater of the Galilee mountains, the Kishon river system, the Yarkon river system and the springs, storm runoff, and reclaimed waste of Israel's cities of Haifa and Tel Aviv.

Regulation is aided by the use of two main storage facilities: (1) the Sea of Galilee in the north, which is used for excess Jordan River waters during the rainy season, and (2) the aquifer under the cen-

tral hills, which was integrated into the grid system after the 1967 Arab–Israel War.

A major priority in Israel's early decades was the expansion of irrigation, with domestic and industrial water supply taking second place. Priorities have now changed, and irrigation is being cut back as both population and industrialization have grown.

NATIONAL WOMEN'S COMMITTEE (YEMEN)

The official women's organization of Yemen.

The National Women's Committee (NWC) is the official women's organization of the Yemen Republic, established in 1996 by a prime minister's act. Initially, the committee was established in 1993 to coordinate the official preparations for the Fourth World Conference of Women. In 2000 the committee was restructured to function under the Supreme Council for Women's Affairs headed by the prime minister. The NWC has consultative status with the Council of Ministers. The chairperson of the committee is nominated by presidential decree. NWC leaders have included such prominent women as Amat al-Alim al-Suswa, Rashida al-Hamdani, and Huriya Mashhur. The members of the committee include directors of women's departments in ministries and state institutions and coordinators in selected organizations and women's sections of political parties. The NWC has branches in all governorates with heads nominated by the governor of each province. The committee monitors state policies in regard to women's issues, carries out surveys (for example, *The Status of Woman in Yemen,* published in Sanʿa in 1996), and launches campaigns for women's rights. Its branches organize seminars and training courses devoted to local leaders and grass roots activists. Women's participation in elections and nomination in state offices have increased during the 1990s due to the joint activities of women's organizations. The NWC publishes the monthly newspaper *al-Yamaniyya* (Yemeni woman) and has a web page at <www.yemeni-women.org.ye>.

NATURAL GAS

This entry consists of the following articles:

ECONOMIC EXPLOITATION OF NATURAL GAS
MIDDLE EAST RESERVES OF NATURAL GAS

ECONOMIC EXPLOITATION OF NATURAL GAS

A mixture of hydrocarbons that are vapors at normal temperatures and below-normal pressures.

Methane (CH_4) is the primary component of natural gas; other components are ethane (C_2H_6), propane (C_3H_8), butane (C_4H_{10}) and pentane (C_5H_{12}); nonhydrocarbons, such as nitrogen, hydrogen, and water vapor; and traces of rare gases, such as helium. The heavier-than-methane hydrocarbons are collectively termed *natural gas liquids.*

Associated gas is gas dissolved in petroleum; it sometimes also appears as a gas cap over an oil-bearing formation. Associated gas is the primary source of the pressure forcing oil to the surface during production and also is a byproduct of this process. An estimated one-quarter of the world's natural gas reserves occurs as associated gas.

Natural gas is highly flammable, and the complexity and cost of the technology needed to recover and exploit it prompted oil companies at first to flare (burn) most of the natural gas they produced. During the 1920s, research into the production of

petrochemicals led to the development of a number of commercial processes utilizing natural gas as a feedstock, but most of the natural gas produced as a byproduct of mining oil continued to be flared. At that time, the American Petroleum Institute commissioned a major study of the role of natural gas in oil production. Published in 1929—when industry leaders and government officials were worried about imminent fossil fuel depletion—the study produced the first empirical evidence of the relationship between gas pressure and recovery of oil reserves. In response to the study, the large, vertically integrated oil firms took the lead in changing traditional methods of oil production and processing so as to conserve natural gas.

Other modern uses of natural gas date back to the nineteenth century, when it was substituted for coal and wood in boilers located near oil fields. During the mid-nineteenth century, gas synthesized from coal was the chief source of illumination in urban areas, until it was displaced by the incandescent light bulb. During the first half of the twentieth century, gas gained a share of the home heating market and was used as a fuel in manufacturing. But the high cost of gas infrastructure, coupled with the larger profits from petroleum, made natural gas the stepchild of the oil industry.

The economic exploitation of natural gas depends on its commercial value, which in turn is a function of the size, quality, and location of the gas deposit; the projected rate of production; the price of natural gas; and the price of alternative fuels. The dependence of gas collection, transmission, and distribution on expensive infrastructure has historically been the biggest factor limiting the use of natural gas as a fuel. Oil-exporting countries in the Middle East have long protested the waste of their natural gas by flaring, but it was not until they could assume at least some of the cost of providing infrastructure that other than limited local uses for their natural gas became common.

Internationally, gas exporters have encountered resistance from importers with respect to the sharing of costs, particularly for pipeline construction and the expensive cryogenic facilities needed to liquefy and transport liquid natural gas. As long as the preponderance of natural gas is used for heating, demand is highly cyclical. As natural gas displaces other fuels, however, the load factor or average rate of capacity usage rises, making it more attractive.

The Organization of Petroleum Exporting Countries (OPEC)—which includes gas exporters such as Algeria, Qatar, Iran, and Libya—has had sharp pricing disputes with gas customers. Some led to interrupted deliveries, canceled contracts, and even the scrapping of entire projects. OPEC aspires to achieve a unified organizational position on natural gas pricing by developing formulas that link gas prices to crude oil prices. However, its efforts have been stymied by consumer resistance, by competition from non-OPEC gas sources (such as Russia) and nongas fuels (such as petroleum, which guarantees a built-in conflict of interest within OPEC itself), and by a long period of weakness in oil prices, which reduced producer incentives to link natural gas prices to crude oil prices.

Countering these drawbacks, improvements in transmission and storage technology and the growing global market for natural gas are positive economic signs. Although demand for natural gas in key industrial markets weakened in the 1980s as a result of recession, warmer winters, and conservation, the gas market has improved steadily for some years thanks to expansions in reserves (in 2000, proven reserves exceeded sixty times the rate of production); technical improvements in transmission, which is the most costly segment of the industry; marked improvements in load factors; and shifting priorities that make burning natural gas more attractive than oil and especially coal because gas produces lower levels of greenhouse gases and virtually no toxic pollutants.

Some OPEC countries see expanding internal consumption and manufacture of petrochemicals as superior alternatives to natural gas exports. However, neither the market for petrochemicals nor the domestic economies of most gas-rich members of OPEC can absorb the quantities of natural gas available. At the same time, antipollution regulations in fuel-importing countries make natural gas more attractive to developed-country consumers and lower its relative cost. Demand for natural gas is expected to top demand for coal by 2005, and it may approach demand for oil by 2025. Ongoing financial and regulatory changes in national and international markets support the continuation of these

trends by improving security guarantees for producers as well as consumers.

MARY ANN TÉTREAULT

MIDDLE EAST RESERVES OF NATURAL GAS

The Middle East holds 36 percent of the world reserves of natural gas but generates only 9.3 percent of world production.

Natural gas must be transported by pipeline or liquefied by refrigeration in the form of liquid natural gas and transported on specially built ships. The liquefaction process is substantially more expensive. But since the main demand for gas from the Gulf has come from users in the Far East, Europe, and the United States, liquefaction has been the only option and has made the production of the main Gulf gas fields less competitive. Gas from Algeria—because it can be piped under the Mediterranean—has been extensively used in Europe.

Natural gas has become the major feedstock for petrochemicals. The development of the petrochemical industry in the Gulf region has given impetus to the development of the fields. Saudi Arabia uses most of its produced natural gas for firing desalination plants, running power plants, and producing 35 million tons per year of petrochemicals and fertilizers, which are exported worldwide.

In the mid-1990s some major projects were undertaken to develop fields and liquefaction plants for exports, mainly in Qatar and Oman. Because of this expansion of Qatari and Omani liquefied natural gas exports, the Middle East was the fastest-growing gas production region in 2001.

JEAN-FRANÇOIS SEZNEC

NAVON, YIZHAK

[1921–]

Fifth president of Israel.

Yizhak Navon was born to a Jerusalem Sephardic family. Educated in religious schools and at the Hebrew University, from 1949 to 1950 he was a diplomat in Argentina and Uruguay, and served as political secretary first to Foreign Minister Moshe Sharett and then to Prime Minister David Ben-Gurion from 1951 to 1963. From 1963 to 1965, he was director of the Division of Culture and the Ministry of Education and Culture.

Navon was a member of the Knesset, first in the Rafi Party and later in the Labor Party. He chaired the important Knesset Foreign Affairs and Defense

Committee. From 1978 to 1983 Navon served as the fifth president of Israel, nominated by the opposition Labor Party and chosen over the Likud candidate. He was Israel's first "modern" president, departing from the "nonpolitical" role to take positions on controversial issues, most pointedly calling for an inquiry on the events in the Sabra and Shatila refugee camps in Lebanon, which were under Israeli control when Christian Phalangist forces massacred Palestinian refugees there. In 1984 he was reelected to the Knesset, serving as the minister of education and culture and as deputy prime minister in the government of Shimon Peres. Throughout his life, Navon has been a spokesman for the Sephardic community, serving as chairman of the National Authority for Ladino and as honorary chairman of the Abraham Fund promoting coexistence between Jews and Arabs.

MIRIAM SIMON
UPDATED BY GREGORY S. MAHLER

NAWFAL, HIND

[c. 1860–1920]

Writer and Lebanese immigrant to Egypt.

Nawfal Hind was the founder and editor of *al-Fatat* (1892–1894), the first Arabic-language periodical for and about women that published primarily female authors. She was the daughter of writers. Her mother, Maryam Nahhas Nawfal, was the author of what scholars assume to be the first Arabic-language biographical dictionary of women to be authored by an Arab woman. Her father, Nasim Nawfal, was a writer-publisher who helped launch *al-Fatat* in November 1892, as did Hind's sister Sara. Nawfal's family was Christian and from Tripoli (in present-day Lebanon) and was part of the nineteenth-century wave of writers emigrating to Egypt in search of opportunity and a freer publishing climate. She lived in Alexandria and published *al-Fatat* there until her marriage to Habib Dabanam in March 1894, when the magazine published its fourteenth and final issue.

MARILYN BOOTH

NAZARETH

Historic market city and pilgrimage site in the Galilee region of Israel; the only all-Arab city in the State of Israel.

Nazareth (2001 population, 68,700) is located on the southernmost ridge of the hilly Galilee region of northern Israel, approximately 18 miles (30 km) southeast of the coastal city of Haifa. Its name in Arabic is al-Nasira, meaning "the one who grants victory." The city was conquered by Crusaders in 1099, taken by Saladin in 1187, and then retaken by Frederick II in 1229. Muslim forces led by Baybars, the Mamluk sultan of Egypt (1233–1277), recaptured Nazareth in 1263, massacring its Christian population. The city was virtually uninhabited for nearly three hundred years before being incorporated into the Ottoman Empire in 1517. The town gradually grew under the sponsorship of local and foreign Christian missions, attracting Christian Arab families from southern and coastal Palestine, the Hawran region of Syria, and what is now southern Lebanon.

Nazareth was an important administrative center during the British Mandate period (1922–1948) and was captured by Israel's pre-state military forces on 18 July 1948. Unlike in other Palestinian towns and cities, Nazareth's population was not displaced after 1948. The conscious policy of the Israeli military commanders in 1948 was to avoid violence and large-scale population displacements from this particular city. Immediately after the war, Nazareth's

predominantly Christian population of 12,000 suddenly jumped to 18,000 with the arrival of more than 5,000 refugees, mostly Muslims, from neighboring Arab villages that had been destroyed during the hostilities. Overnight, Nazareth was transformed into the largest, densest, and most diverse concentration of Palestinians within the new state of Israel. Fifty-five years later, Nazareth's population had more than quintupled and Muslims greatly outnumbered Christians because of a higher Muslim birth rate and increasing Christian emigration.

The core of old Nazareth is situated in a long, bowl-like valley surrounded by several hills. Newer buildings and dense neighborhoods cover the hillsides above the old city, the elevation of which is approximately 1,200 feet (400 meters) above sea level. Well known throughout the Christian world as the home of Jesus, Mary, and Joseph, and as the scene of the Annunciation, Nazareth is a popular destination for tourists and pilgrims. The city boasts several churches, most notably the Roman Catholic Church of the Annunciation, completed in 1966, which is the largest church in the Middle East; the Greek Orthodox Church of the Annunciation (Gabriel's Church), constructed in the eighteenth century; and the Greek Catholic (Melkite) Synagogue Church. Nazareth is also a market town, a site of Arabic print media production, and home to several respected private primary and secondary schools administered by churches. It is known informally as the capital of the Arabs in Israel.

The municipality of Nazareth was founded in 1875. Until the mid-1990s, Nazareth housed the regional offices of state ministries and agencies, and the town's political life was dominated by a progressive political coalition, the Democratic Front for Peace and Equality (al-Jabba al-Dimuqratiyya lil-Salam wa al-Musawa), made up of the Nazareth branch of the Communist Party, the Committee of Merchants and Professionals, and the Association of Arab University Graduates. From the mid-1970s until the mid-1990s, Nazareth was a political base for left-wing, secularist, and Arab nationalist political currents among Palestinian citizens of Israel. Natzerat Illit, a Jewish development town founded on lands expropriated from Nazareth and other surrounding Arab localities in 1957 as part of a government campaign to Judaize the Galilee, has a population of 47,900, of whom approximately 11 percent are Arab. Since the mid-1990s, government offices formerly located in Nazareth have been relocated to the administratively separate although geographically adjacent Natzerat Illit. In the late 1990s, as Nazareth's municipality was undertaking Nazareth 2000, a multifaceted urban renewal program, with help from the Israeli government and Israeli businesses, to prepare the city for the millennial festivities and a tourism boom, hostilities erupted in the old city of Nazareth when a Muslim shrine was obstructed by construction crews. The ensuing conflict resulted in rioting and violence, polarized Muslims and Christians in Nazareth, halted the urban renewal project, paralyzed municipal governance, and involved the Vatican, the Israeli Ministry of Religious Affairs, and the Palestinian Authority. In October 2000, Nazareth was again the site of violence, this time occasioned by pogrom-like raids into Nazareth by Jewish mobs from Natzerat Illit one week after the outbreak of the second Intifada. Three Palestinian citizens of Israel were killed by police forces in the melée.

NAZIF, SÜLEYMAN

[1869–1927]

Ottoman Turkish poet and writer.

The son of a historian, Süleyman Nazif was born and educated in Diyarbekir. While employed in the civil service, he began to write for the provincial press and, in 1897, was forced into exile in Paris. While in Paris, he contributed articles to Ahmet Riza's Meşveret. During the Constitutional period, he joined Ebüzziya Tevfik in producing *Tasvir-i Efkar.*

Süleyman Nazif's poetry, which was published in *Servet-i Fünun* under the name Ibrahim Cehdi, was strongly influenced by Namik Kemal. He published four volumes of poetry and numerous other literary and academic works.

DAVID WALDNER

NAZMI, ZIYA

[1881–1937]

Turkish painter.

The son of a financial official in the Ottoman Empire, Ziya Nazmi was born in the Aksaray quarter of Istanbul. Under the conservative influence of his father, he studied at the School of Political Science; but when his father died, he entered the Imperial Academy to study art and later went to France. While in France, Nazmi was influenced by Impressionism, and his landscapes depict people, buildings, and trees with pinks, greens, and yellows bathed in soft, diffuse light.

Upon his return to Istanbul, he taught art and held several exhibitions of his Impressionistic work. Nazmi and his generation of painters replaced the formal realism of nineteenth-century painters with informal and natural depictions of everyday life in cities and villages, including nude portraits. Nazmi was an enthusiastic follower of Mustafa Kemal Atatürk's cultural reforms, and he painted one of the best portraits of Atatürk, who was president of Turkey from 1923 to 1938.

DAVID WALDNER

NE'EMAN, YUVAL

[1925–]

Israeli scientist and military and political leader.

Yuval Neʾeman was born in Palestine to an industrialist family in 1925. After early education in Egypt, he entered Herzeliya High School in Tel Aviv at the young age of eleven, matriculated at the age of fifteen, and entered the Technicion Institute in Haifa, from which he graduated as an engineer. From an early age he was a member of the Haganah, the Jewish clandestine paramilitary organization, and participated in several command courses. During the 1948 Arab–Israel War Neʾeman served as operation officer of the famous Givʿati brigade; by the end of the war he was second in command. He remained in professional service to the Israel Defense Force (IDF) until 1961. After a year studying in the École d'État Major in Paris (1952), he fulfilled prominent positions in the IDF's General Staff, reaching the rank of colonel. In 1954 and 1955 he stood at the head of the strategic planning department, in which capacity he authored the "Lavie File," a comprehensive analysis of Israel's security problems and strategic and operative doctrines. The Lavie File was adopted by the IDF under the leadership of General Moshe Dayan as Chief of Staff (CoS), and it totally changed Israel's security policy from defensive to offensive. This strategy included options of pre-emptive strikes, which were implemented in 1956 and 1967. In 1955 Neʾeman was nominated deputy chief of the intelligence service, a post that involved him in the coordination of Israel's secret relations with the French military and intelligence services during the Suez War (1956).

While serving as Israel's military attaché in London from 1958 to 1960 he resumed his studies in nuclear physics, a field of research that he later pursued in the United States, where he developed the theory that explained the system of elementary particles and established theoretically the existence of a new particle, Omega Minus, which was later verified in laboratory experiments. These achievements gained him international recognition as a leading nuclear scientist. In the early 1970s he served as a professor at Tel Aviv University; from 1971 to 1975 he served as the university's president. In 1975 he was nominated as chief scientist of Israel's security system, but he resigned from this position in protest of the withdrawal from the western part of the Sinai. A superhawk, Neʾeman entered politics and with several colleagues founded ha-Tehiya, an extreme right-wing party that advocated full annexation and settlement of all territories conquered by Israel in 1967. He served three terms as a member of the Knesset (1981–1990) and was twice a member of the government, holding the portfolio of Science and

Technology from 1982 to 1984 and a double portfolio of Science and Technology and Energy and Infrastructure from 1990 to 1992. His party was defeated in the elections of 1992, and Neʾeman finally retired from politics and returned to his academic activities.

MORDECHAI BAR-ON

NEGEV

Desert region in southern half of Israel; northeastern extension of the Sinai Desert.

The Negev is a triangular area with a maximum elevation of 3,300 feet and includes more than half of Israel's land area. The Negev Hills are a series of ranges with gentle northwesterly and steep southeasterly slopes. Some craters were formed by the erosion of upward-folded strata; they are 6 to 19 miles long, up to 3 miles wide, and surrounded on all sides by precipitous slopes. On their eastern side is an opening through which they drain into the Aravah Valley. August temperatures average 79°F, but they reach 90°F in the southern area and in Aravah. January temperatures average 52°F, reaching 59°F in the south and in Elat. The gateway from the north is the Negev's largest city, Beersheba, with a population estimated at 181,500 in 2002. To the south, the Negev opens onto the Gulf of Aqaba at Elat. The Negev has been irrigated in the northwest for agriculture; it contains some mineral resources, such as copper, phosphates, bromine, and potash, as well as natural gas and petroleum.

Under the British Mandate (1922–1948), the Negev was inhabited mainly by Bedouin. A few Jewish settlements were established by 1946. Control of the desert was contested by Arabs and Jews in the various partition plans. In 1947, the United Nations General Assembly's partition recommendation assigned parts of the Negev to the proposed Jewish state. In May 1948, Egyptian forces entered Gaza and the Negev in the opening days of the Arab-Israel War. With the conclusion of that war by armistice agreement in 1949, the Negev remained part of Israel. The late 1940s and early 1950s brought hundreds of thousands of immigrants to Israel. With an aggressive settlement program, by 2000 the Negev reached a population of more than 300,000.

NERVAL, GÉRARD DE

[1808–1855]

A French romantic poet and novelist known for his writing about the Orient.

Gérard Nerval was born in Paris with the name Gérard Labrunie. His delicate, musical poetry (e.g., *Les chimères,* 1854) and prose (of which the short story "Sylvie" is the best known) earned him a respected place in French literature. His treatment of dreamlike topics and visions influenced the development of surrealism and his translation of Johann Wolfgang von Goethe's *Faust* (1828) was widely acclaimed. Like many of his contemporaries, he was swept by romantic depictions of the Orient. In 1842, he left for a trip to the Orient in search of the sources of religion and spirituality as well as the exotic horizons of the Arab and Muslim world. His travel account *Voyage en Orient* is considered among his finest works. His depiction of the Orient is more an occasion for introspective meditation on religious issues and criticism of his own culture and society than an objective social study. His friendly account, extolling the tolerance and openness of the cultures and religions he encountered, caused critics to accuse him of skepticism. The use of the Orient as a cover for self-criticism had been well established in literature, as seen in Montesquieu's *Lettres persanes* and Voltaire's *Zadig.* Like others before and after him

(Chateaubriand, Alphonse de Lamartine, Lord Byron, Thomas Moore, etc.), Nerval contributed to the movement of orientalism, which depicted the Orient in a romantic light, at times projecting onto it the negative characteristics and fears of Western culture. The distortion of reality in subjective arts was a normal cultural phenomenon; however, it contributed to the pseudoscientific discipline of orientalism, which was closely associated with colonialism and has in contemporary times been denounced for its lack of objectivity and its political motivations. Beset by mental illness, Nerval committed suicide in 1855.

MAYSAM J. AL FARUQI

NESHAT, SHIRIN

[1957–]

Iranian multimedia artist.

Shirin Neshat is a New York–based artist who works in the fields of video, video installation, and photography. She received her M.F.A. from the University of California in 1982 and did not return to Iran for some years because of the Islamic Revolution. In the 1990s Neshat became one of the most sought-after woman artists from the Middle East. She has won many awards and participated in major exhibitions in the United States and Europe. The majority of her work explores the male-female dynamic in Islam, as exemplified in the split-screen video installation *Rapture.* Later works, such as the trilogy *Passage, Pulse,* and *Possessed,* focus more specifically on both the limits and possibilities of women's experiences in Muslim societies. Neshat makes heavy use of allegory, mythic scenes, the imagery of the veil, and hypnotic music. Her work reflects her sense of displacement from her native Iran, the experience of living in an in-between state of self-imposed exile, and her attempts to come to terms with the massive social and religious changes in modern Iran.

JESSICA WINEGAR

NESIN, NÜSRET AZIZ

[1915–]

Turkish playwright, novelist, short-story writer, and journalist.

Nesin was born in Istanbul, where he attended military high school and college until 1939. He worked as a journalist in Turkey in the 1940s, joining the leftist daily *Tan* in 1945, just before it was closed down by an anticommunist mob. He began writing novels and plays in the 1950s and quickly became known for his satirical style. He is considered by many the best Turkish humorist of recent years. He cofounded *Karikatür,* a humor magazine, in 1958. Since then, this prolific author has written dozens of short stories, several novels, and volumes of poetry, memoirs, and travel accounts. In the late 1980s, he served as chairman of the Turkish Writers Syndicate.

Nesin was an innovative playwright and was among the few to experiment with the theater of the absurd in the 1950s; he went on to write the leading plays of the 1970s. These included the antiwar play *The War between the Whistlers, Brushers,* and *Yasar, Neither Dead nor Alive.*

ELIZABETH THOMPSON

NETANYAHU, BENJAMIN

[1949–]

Israeli politician; prime minister, 1996–1999.

Benjamin ("Bibi") Netanyahu was born in Tel Aviv in 1949 and spent his early childhood in Jerusalem. He graduated from high school in Philadelphia, where his father, Professor Benzion Netanyahu, taught history. Benzion, a major ideological influ-

ence, was a disciple of Vladimir Ze'ev Jabotinsky, the founder of the right-wing Zionist Revisionist movement. Netanyahu served in the elite Sayeret Matkal commandos from 1967 to 1972, reaching the rank of captain. Alongside another future prime minister, Ehud Barak, he stormed a hijacked Sabena airliner at Tel Aviv international airport in May 1972. After the army, he studied business administration at Massachusetts Institute of Technology (MIT), where he received his master's degree in 1976. That same year, Netanyahu's older brother, Yonatan, was killed while participating in the rescue of 98 Israeli and diaspora Jewish passengers aboard a hijacked Air France airplane in Entebbe, Uganda. Netanyahu worked as a management consultant in Boston from 1976 to 1978, then returned to Israel as marketing manager of a furniture company. In 1980 he founded the Jonathan Institute on terrorism, named after his brother. It established him as a public figure.

From 1982 to 1984 Netanyahu served as deputy to the Israeli ambassador in Washington, D.C., and then as the Israeli ambassador to the United Nations. He made his name as an eloquent advocate of Israel's cause. In 1988 he was elected to the Knesset on the Likud list and served as deputy foreign minister. In 1990 he was appointed deputy minister in the prime minister's office under Yitzhak Shamir. He was Israel's principal spokesman at the 1991 Madrid peace conference.

Netanyahu championed direct election of the prime minister. He was to become its first beneficiary, although the two-tier system was abolished for the 2003 elections after it failed to produce the stable governance he had promised. In March 1993 he succeeded Shamir as Likud leader, and he was an outspoken critic of the Oslo accords with the Palestinians. He was elected prime minister in May 1996 by barely 30,000 votes after a wave of bombings in Israeli cities undermined Shimon Peres's Labor administration. Under the new system, the electorate seized the chance to vote for a prime minister from a major party, but for the Knesset lists of special-interest parties (ethnic, religious, ideological). Netanyahu presided over a coalition of eight rightist and religious parties, each with its own agenda. The Oslo process had gone too far to be turned back, though Netanyahu insisted on Palestinian "reciprocity." In January 1997 he withdrew Israeli troops from 80 percent of Hebron, and at the Wye River conference in October 1998 he agreed to evacuate a further 13 percent of the West Bank. Within a year, he had lost the confidence of his own ministers, who accused him of manipulation and deceit. In May 1999 Ehud Barak defeated him in a bitterly fought election, and Netanyahu resigned the Likud leadership and his Knesset seat. He returned to parliament in January 2003. Ariel Sharon appointed him finance minister, and Netanyahu set out to implement the neoconservative economics he had learned at MIT.

NETUREI KARTA

Group of ultra-Orthodox Jews living in Jerusalem and elsewhere who oppose Zionism prior to divine redemption.

Neturei Karta is Aramaic for "Guardians of the City." They are so named because their ideology rejects not only secular Zionism but all forms of Jewish sovereignty in Palestine prior to divine redemption. They deny all forms of cooperation with political Zionism, which they view as the hand-maiden of Satan. The Neturei Karta left the Orthodox political party, Agudat Israel, in 1938. They opposed the establishment of the State of Israel in 1948 and Israeli jurisdiction over Jerusalem.

Centered in the Meah She'arim district of Jerusalem, they do not recognize the validity of Israel's existence or participate in its political process. They maintain their own autonomous communal, religious, and educational structures and view themselves as the protectors of the religious nature of the city. The much larger Satmar Hassidic sect is highly supportive of Neturei Karta and often serves as its voice in Jewish communities outside Israel. Both groups have undertaken numerous public demonstrations against Zionism and the State of Israel.

NEUTRAL ZONE

An area shared by Iraq, Saudi Arabia, and Kuwait.

The neutral zone was originally devised because the boundary between Kuwait and Saudi Arabia, demarcated by the Anglo–Turkish Convention of 1913, was not ratified due to the outbreak of World War I. When the British government recognized the sovereignty of Ibn Saʿud in 1915, a compromise was reached on the disputed boundary that involved the establishment of a 2,000-square-mile (5,180 sq. km) neutral zone. This was incorporated in the Uqayr Conference in 1922, which set up a similar neutral zone between Saudi Arabia and Iraq that abuts the Kuwaiti-Saudi neutral zone. The convention allowed the parties to explore, on an equal basis, the natural resources (presumably petroleum—oil and gas) of the neutral zone but did not address the question of sovereignty ("sharing equal economic rights" in the neutral zone does not necessarily mean that the two parties are co-sovereign in the zone). In fact, each of the two countries administers its part of the zone as if it were a part of its state, but both states share in the oil exploration in the zone. For years political sovereignty was not an issue, because the zone remained isolated and uninhabited. With the expansion of oil and gas exploration, both onshore and offshore, divergent claims propelled the neutral zone to the forefront of regional politics.

Accepted practice has been that either Kuwait or Saudi Arabia could grant separate oil concessions to foreign companies for exploration in the neutral zone without prior approval from the other. Neither Kuwait nor Saudi Arabia can sign any binding agreement, however, regarding the entire zone without the other's approval. In July 1965, Kuwait and Saudi Arabia agreed to partition the neutral zone equally, with each state annexing its own part of the zone; however, the two states retained a shared sovereignty arrangement regarding the exploitation of natural resources. The status of the neutral zone did not change after the 1990 Gulf Crisis.

NEWSPAPERS AND PRINT MEDIA

This entry consists of the following articles:

ARAB COUNTRIES
IRAN
ISRAEL
TURKEY

ARAB COUNTRIES

Arab mass circulation print media, that is, newspapers and magazines that are intended for audiences in the Arab world.

Historical Development

The first printed periodical publication carrying news written by and for Arabs was *Jurnal al-Iraq,* which began appearing in Baghdad in Arabic and Turkish in the year 1816. Two Arab newspapers began publishing in Cairo in the 1820s, and these were followed by newspapers in Algeria in 1847, Beirut in 1858, Tunis, Damascus, and Tripoli Libya in the 1860s, Sanʾa in 1879, Casablanca in 1889, and Mecca in 1908.

Lebanon and Egypt have been leading centers of print media, publishing important newspapers earlier than most Arab countries; they continue to hold leading positions in journalism into the twenty-first century. The first Arab daily newspaper appeared in Beirut in 1873, and *al-Ahram,* which still appears as a leading daily, started in Egypt in 1875. By the twenty-first century only Egypt had dailies with circulations over half a million copies. Its two leading "national" dailies, *al-Ahram* and *al-Akhbar,* each distributed over seven hundred thousand, and *al-Jumhuriyya* sold about four hundred thousand copies. During the last decades of the twentieth century, the oil-rich Arab states of the Persian Gulf quickly expanded their print media, to some extent benefiting from Arab talent they hired from such countries as Lebanon, Egypt, Jordan, and Palestine, and quality daily newspapers proliferated. Circula-

Palestinian and Israeli newspapers display coverage of an Israeli air raid in Gaza in 2002. The loyalist Palestinian press is frequently subjected to various kinds of controls by Israel and the Palestinian Authority. © AFP/CORBIS. REPRODUCED BY PERMISSION.

tions there remained small, however; for example, Qatar, Bahrain, and Oman have had successful dailies only since the 1970s, and their circulations have never exceeded a few tens of thousands.

Among the smaller Arab states on the Persian Gulf, Saudi Arabia has the oldest newspaper traditions, and some of its leading newspapers have relatively long traditions. In the Western region of Saudi Arabia, such newspapers as *al-Bilad* and *al-Madina* were flourishing as early as the 1930s, and the dailies *Ukaz* and *al-Nadwa* had appeared there by the 1960s. In the early 1960s, *Al-Jazira* and *al-Riyadh* dailies started in Riyadh, and *al Yawm* started in Dammam; as of 2003, all seven of these newspapers still existed. In Yemen, governments in the south and the north have published daily papers since the 1960s, but they were of limited circulation and generally of poor quality.

The United Nations Educational, Scientific, and Cultural Organization (UNESCO) has established a minimum standard of one hundred copies of daily newspapers per one thousand inhabitants, but by the year 1966 only Lebanon and four Gulf states, namely Bahrain, Kuwait, Oman, and the United Arab Emirates, had passed it (worldbank.org, March 2003). By the twenty-first century, five Arab countries had dailies with more than one hundred thousand in circulation. Assuming multiple readers of each copy, an estimated thirty million Arabs, or more than 10 percent of the total Arab population, are regular readers of dailies.

Common Characteristics

There are significant differences among Arab countries in the use and structure of print media, reflecting underlying differences in wealth, population, literacy, political systems, and cultural conditions. The following characteristics generally prevail, although variations and exceptions occur throughout the region.

First, most Arab print media exist on a relatively weak economic base. They suffer from small literate populations and, in most places, limited incomes. Sales are therefore limited and, in addition, the practice of advertising in the media has not developed very extensively. Even as some Arab states and individuals became wealthy during the second half of the twentieth century, advertising remained modest and businesspeople did not see media as a lucrative investment. Although newspapers were no longer an expensive luxury for the middle classes, as they were during the middle of the twentieth century, price and literacy still limited circulations.

Second, Arab media tend to be closely tied to politics in a number of ways. The first newspapers were published by governments with the intent of informing bureaucrats and the public. The first indigenous Egyptian newspapers, *Jurnal al-Khadyu* and *al-Waqaʾi al-Misriyya,* appeared in the 1820s as government publications. The practice also emerged elsewhere. In Algeria the government started publishing *al-Mubashir* in 1847; in Tunisia the government started *al-Raʾid al-Tunis* in 1861, and in Damascus the government started *Suriya* in 1865. In Iraq the government began issuing *Jurnal al-Iraq* in 1816. Private individuals and families did begin to publish newspapers, but in the nineteenth century they appeared only in Syria, Lebanon, Egypt, and Morocco. More private papers emerged later, but after World War II, in the era of Arab nationalism and anticolonialism, Arab governments tended to want to control their own newspapers; government-owned papers still exist in most parts of the region, where they are still seen as important political instruments.

Some newspaper owners have tended to seek financial patronage from domestic and foreign governments or from local political parties. The Arab political parties that emerged after World War II sought to disseminate their views through the press, and party newspapers still exist in a number of Arab countries, although many of them are relatively small circulation weeklies.

Third, from the beginning, Arab newspapers have tended to include a significant amount of cultural content, traditionally publishing short stories, poetry, and serialized novels. Scholars and literary figures often write in the newspapers. At the same time, the profession of journalism, including the habit of aggressive reporting and the presentation of objective, unbiased news, has not been as fully developed in the Arab world as it has in some other parts of the world.

Finally, the structure of Arab print media tends to be fragmented, with most of the readership of individual newspapers confined to the paper's country of origin; many papers have small, specialized audiences. Most newspapers are published in one or two cities in each country because of the concentration of literate readers and because of barriers to distribution.

Organization

Arab print media can be divided for purposes of analysis into four separate organizational categories. One type can be called the "mobilization press." This type of media is under the tightest government control and supervision. Newspapers of this type never criticize or print negative information about senior officials. They avoid criticism of basic government policy, and only occasionally complain about the way lower-level individual government employees manage their responsibilities. There is no significant diversity among newspapers, all of which are owned by the government or by its political agents. The regime in fact controls all essential levers of power in the country, including the press. It sees itself as the vanguard of the people and regards the press as a tool of political mobilization of the public; it is not content with passive acquiescence but expects active editorial support for its policies. This type of print media is found in Syria, Sudan, and Libya. Before 2003 the press structure in Iraq was the clearest example of a mobilization press. The 2003 war in Iraq and the collapse of the regime of Saddam Hussein changed the Iraqi media scene, as genuinely private newspapers emerged for the first time in decades. As of 2003 the Iraqi system was still in transition.

A second press type can be called "loyalist," because although most newspapers are privately owned, their news and commentary loyally support the government in power. They eschew criticism of the top leadership, although they do complain about shortcomings of the government bureaucracy and express occasional mild criticism of govern-

ment ministers. There is little diversity among the daily papers except in style. This type of print media is found in the conservative monarchies of Saudi Arabia, Bahrain, Qatar, Oman, and the United Arab Emirates, as well as in Palestine. From the final years of the 1990s, however, a more liberal trend began to appear in these countries, initiated by some of the younger leaders who have gained more influence.

The Palestinian press, however, has some unique characteristics. Palestine was ruled by the Ottomans until 1917, then for thirty years by the British, then by Israel and Jordan until 1967, when Israel also occupied the West Bank and Gaza. Palestinian journalism found outlets in several Arab countries, but not in Palestine itself until the middle of the 1990s, when the Palestinian Authority assumed responsibility for some of the territory, and government-sponsored and private print media emerged there. Palestinian publications as of 2003 remained subject to controls of various kinds not only by the Palestinian Authority but also by Israel, since Palestine has not yet achieved independent statehood.

A third type of print media can be called "diverse," because its most distinguishing characteristic is that newspapers represent a considerable diversity in content, style, and political orientation. Essentially all are privately owned, and many but not all are quite critical of the government. The clearest example of this type of press is found in Lebanon, but during the twenty-first century it is found also in Morocco, Kuwait, and Yemen. Behind the press is a political system that includes active political parties and an environment of freer speech than in most other parts of the Arab world.

A fourth type of print media can be called "transitional," because its structure has been undergoing change in recent years; it is the subject of debate and discussion in the country and may change further. Some print media are owned by the government, some by private individuals, and some by political parties. Some freedom of expression exists, but a variety of governmental controls and economic pressures restrict that freedom. Laws on the books allow the government authorities to take action against journalists and editors, and court cases are relatively frequent. This type of press is found in Egypt, Jordan, Tunisia, and Algeria.

Offshore Publishing

Finally, there is an additional and separate category of important Arab newspapers that are primarily based in Europe but published for readers throughout the Arab world. This phenomenon began during the 1970s when the Lebanese civil war forced some Lebanese publishers and journalists to leave their country and set up "offshore" operations in London, Paris, and Rome. Some did not survive, but others did. When the civil war ended, some moved back to Beirut, such as the weekly *al-Hawadith*; others kept their bases in Europe. The improvements in satellite and computer technology during the 1990s made it possible for these offshore publications to overcome distribution obstacles because they could do the editorial work in Europe and print the paper in various cities in the Arab world for local distribution. Editors were concerned about local censorship and taboos, but they were nevertheless somewhat freer than locally published papers, and some of them varied their content depending on the target country.

By 2003, three major Arab publishing houses in London were producing newspapers and magazines for distribution throughout the Arab world. All were owned by wealthy Saudi nationals. The Saudi Research and Marketing Group, chaired by a Saudi prince, has produced the daily *al-Sharq al-Awsat* since 1977, and it also produces more than a dozen other publications, including the popular weekly magazine *al-Majalla.* Another publishing house, founded originally by a Lebanese family but now owned by another Saudi prince, produces the daily *al-Hayat* plus a weekly magazine, and it has a joint venture with a satellite television company. A third Arab daily that appears in London and is aimed at a pan-Arab audience is *al-Quds al-Arabi*; it is edited by Palestinians and tends to focus on Palestinian issues.

Non-Arabic and Specialized Publications

Most Arabs read newspapers in Arabic, but there are some important publications that appear in French or English. On the Persian Gulf, where thousands of English-speaking South Asians reside, there are many daily newspapers published in English, aimed primarily at those expatriates. Two of Kuwait's seven dailies are in English. In North Africa, where the French colonial legacy can still be seen, and French

is still spoken by many people, Morocco, Tunisia, and Algeria all have important newspapers in French. By 2003, of the eighteen dailies appearing in Algeria, eleven were in French, including five with circulations of more than one hundred thousand. Seven of the nineteen dailies in Morocco were in French. Of the sixteen leading dailies in Lebanon, one was in English and one in French. Even in Egypt, where most readers prefer Arabic, *The Egyptian Gazette* in English (which began publication in 1880) and *Le progrès Egyptien* in French (which started in 1893), are still appearing, although with limited circulations.

Every Arab country produces its own weekly and monthly magazines. Some have political agendas but most are special-interest publications that have no particular political agenda, but rather deal with specialized subjects such as sports or women's issues. The most common type is the weekly pictorial variety and current-events magazine, such as Egypt's *al-Musawwar* and Lebanon's *al-Hawadith.* Scholarly journals such as Egypt's *al-Siyasa al-Dawliyya,* religious magazines such as the Saudi *al-Daʿwa,* and literary and intellectual publications such as Kuwait's *al-Arabi* appeal to specialized readers.

Conclusion

In short, print media vary across the Arab world. Government, generally quite strong, influences the media in different ways. In one country there may be uniformity among publications, and the media play an advocacy role in support of the government. In another country, government influence will be more subtle and indirect. In some Arab countries, publications exist that express views in clear opposition to the government. The fundamental factor explaining these differences is the prevailing political system of the particular country in which the media are published.

Iran

Newspapers have been active in Iran since 1850.

The first Iranian government newspaper, *Ruznameh-e vaqa-ye ittifaqiyeh* (Newpaper of current affairs), was founded by the reform-promoting prime minister Amir Kabir (Mirza Mohammad Taqi Khan Farahani) in 1850, and it continued after his downfall (in 1851) as a chronicle of official information. No other newspapers were permitted during the reign of Naser al-Din Shah (1848–1896). Consequently, the most important early Iranian newspapers were published outside the country: *Akhtar,* founded in Istanbul in 1875; *Qanun,* founded in London in 1890; and *Habl al-Matin,* founded in Calcutta in 1893. Following the Constitutional Revolution of 1906, numerous newspapers were published inside Iran. Most papers supported the various ideological factions that emerged after 1906. By 1909 Tehran's largest circulation paper was *Iran-e now* (New Iran), a paper that openly espoused European socialist ideas. Ziya Tabatabaʾi founded a paper in Shiraz, *Islam,* that backed the constitutional movement. During World War I he moved to Tehran, where his paper *Raʿad* supported the British. In 1921 he joined with the future shah, Reza Khan (subsequently Reza Shah Pahlavi), in organizing the coup d'état that led less than five years later to the deposition of the Qajar Dynasty. As Reza Shah consolidated his power throughout the 1920s, the independent press was subject to increasing censorship. Press freedom was restored after Britain and the Soviet Union forced Reza Shah's abdication and exile following their joint invasion of Iran in August 1941. During the next twelve years newspapers represented every ideological tendency found in Iran, and papers in Armenian, Azeri, Turkish, Kurdish, and other ethnic minority languages also were founded.

The 1953 coup d'état that enabled Mohammad Reza Shah Pahlavi to assert his authority over the Majles and effectively establish a royal dictatorship ushered in another period of strict press censorship that lasted for twenty-five years. Just after the Iranian Revolution of 1979, there was a new and rapid

development of newspapers that reflected a diverse range of opinions and views, but after six months, press restrictions of increasing severity began to be introduced. By the early 1980s censorship prevented publication of material deemed contrary to the official ideology. After 1989 censorship regulations gradually relaxed, and the number of publications again increased. In 1997 the Ministry of Culture began to issue licenses to virtually anyone who applied for a publishing permit, and within a year more than one hundred new dailies—more than one-fifth of them in Tehran—were being printed throughout the country. Many of these newspapers proclaimed their commitment to democracy and criticized political leaders and policies they identified as antidemocratic. The objects of these political barbs used the court system to get several papers banned on grounds of slander and incitement, and in several cases journalists were fined or given prison sentences. Despite these setbacks, many editors and publishers subsequently brought out their former papers under new names. Since April 2000, what could be termed the reformist press has been more careful in its political reporting to minimize conflict with a generally hostile judiciary. Nevertheless, Iran's newspapers and print media in the early 2000s had a larger readership and offered a broader spectrum of views on political ideas than at any other time in the country's modern history.

Eric Hooglund

Israel

Historical, political and sociological overview of the Israeli printed press.

The Israeli press is a combined product of a nation-building ideology, an elitist-colonial concept of the media, and a more recent industrial market-oriented climate. The Zionist ideology has steered the Hebrew press since its emergence in Palestine in 1863. When the State of Israel was established in 1948, the press was vibrantly partisan. Most newspapers belonged to political parties, and only a few were privately owned. They included sixteen dailies—thirteen in Hebrew, one in English, and two in German—serving a population of 650,000. Newspapers owned by political parties include *Davar* (The Word; labor party MAPAI); *ha-Tzofeh* (The Seer; national religious party), *Kol ha-Am* (Communist party), and others. Private newspapers include *Haaretz* (The Land) and *Yediot Aharonot* (Last News) in Hebrew, *Jerusalem Post* (formerly *Palestine Post*) in English, *Yediot Hadashot* (Recent News) in German, and others. Seven years later, when Israel's population reached 1.7 million, the number of dailies had risen to twenty-five: sixteen in Hebrew, two in German, and one each in English, Arabic, French, Yiddish, Hungarian, Romanian, and Polish, all aimed at the Arabic and new immigrant populations.

The Israeli press inherited from the British Mandate an elitist role of social and cultural educator. Also, the colonial rule determined the legal status of the press, for the Press Ordinance of 1933 has remained the major press-licensing instrument in Israel, and the Emergency Measures of 1945 are still the legal basis of military censorship.

After 1948, due to a general decline in ideology and to political and economic processes, particularly since the 1970s, the large number of nationwide dailies published mostly in Tel Aviv and catering to a politically segmented population became a smaller number of wide-circulation newspapers. In 2003 there were twenty dailies in Israel, but only eight in Hebrew. The remaining twelve were English (one); Russian (seven), aimed mostly at new immigrants from the former Soviet Union; Arabic (one), also read in the areas controlled by the Palestinian Authority; and Romanian (two) and Polish (one), aimed at Israel's foreign workers. Since the 1960s a dynamic local press published mostly by the leading nationwide press groups has accompanied the decentralization of the population and the emergence of local leaderships. Also a large number of general-interest and specialized magazines are published.

The replacement of ideological zeal and party subsidies with privatization and industrial professionalism has been expressed in a bolder critical and investigative journalism, professional training

and hiring policies, and improved ethics. Concentration and cross-ownership, particularly since the 1980s, have allowed a few Israeli and powerful foreign groups and family enterprises to control the press. In 2003 they included four groups—Yediot Aharonot, Maʿariv, Haaretz, and Jerusalem Post—and one financial paper, *Globes,* and some low-circulation party newspapers, mostly religious.

Newspapers have always been an integral part of the political process in Israel, first as mouthpieces of the political parties to which they belonged, and later as independent critics and challengers on issues such as war and peace, occupation, socioeconomic justice, democracy, and globalization.

British Mandatory emergency measures that stipulated that all publications must be cleared by a military censor remain part of Israeli law. An agreement among the government, the army, and the press has eased this measure: A list of security-related topics issued by the censor defines the press items that must be cleared, and only a fraction of articles fall under it. Newspapers that refuse or are not allowed to join the agreement, including the Arabic press, are subject to full censorship. Foreign correspondents work under strict control, particularly in the occupied territories.

The Press Council, established in 1963 on a voluntary basis, brings together the National Association of Journalists, publishers, editors, and members of the public. The council aims to protect the freedom of the press, free access to information, and professional ethics.

DOV SHINAR

Turkey's first newspapers originated in the mid-eighteenth century. Though the Turkish press has long struggled under government restrictions, many of those restrictions have been lifted, and critical and investigative journalism have flourished. © DAVE BARTRUFF/CORBIS. REPRODUCED BY PERMISSION.

TURKEY

Newspapers in Turkey emerged during the Ottoman Empire.

The emergence of newspapers and print media in the later Ottoman Empire had a profound impact on sociocultural and political life. Turkish-language works were first printed in Istanbul in 1727 by Ibrahim Müteferrika, following earlier presses established by Jewish, Armenian, Greek Orthodox, and expatriate Western European communities. The first newspaper, *Takvim-i Vekayi* (1831; Calendar of events), was an official organ, primarily a means for the state to communicate with provinces. In 1840 *Ceride-i Havadis* (Journal of news) was established by Englishman William Churchill, and under Ottoman editors and writers it played a pioneering role in creating an appetite for news of current events. With *Tercüman-ı Ahvâl* (1861; Interpreter of events), edited by Ibrahim Sinasi, and *Tasvir-i Efkâr* (1862; Mirror of opinion), newspapers became instrumental in the appearance of new types of journalism and lit-

erary writing (e.g., novels and new poetry). Writers discussed a newspaper's role in the formation of public opinion and educating the citizenry, and contributed to the emergence of a style of written Turkish simpler and more direct than that typical of official discourse and letters.

Following the Young Turk Revolution of 1908, many restrictions on the press were lifted, and there followed a short-lived explosion of periodical publications in Istanbul and regional centers such as Salonika and Izmir, by and for communities and interests that had come to think of themselves in corporate terms (e.g., ethnic and religious minorities, women, professionals). With the establishment of the Turkish Republic in 1923 under Mustafa Kemal (Atatürk), the press became subject to the same dramatic centralization as other institutions, and essentially it became an organ of mass mobilization for the Republican People's Party's state. *Hakimiyet-i Milliye* (National sovereignty) in Ankara and *Cumhuriyet* (Republic) in Istanbul were left as the only national papers in 1925, and most regional papers were under government control by the time of a press law in 1931. By 1935 there were thirty-eight dailies in the country (twenty-two in Istanbul, six in Izmir, and two in Ankara). Journals and reviews such as *Ülkü* (Ideal) also tended to reflect the developmentalist-populist nature of the state, presenting articles in a direct language on regional and national culture, folklore, history, social conditions, and new technological developments, with little discussion of "political" topics.

With multiparty politics in 1946 came liberalizing measures, including easing of the press laws, and the emergence of real mass circulation newspapers such as *Vatan, Milliyet,* and *Hürriyet,* which saw themselves less as instruments of political mobilization and more as means of information for citizens in a democratic system. Under the Democrat Party a more liberal press law was passed, but by 1953 the ruling party tried to silence political opposition and the press, resorting to closures and jailing critics. The coup of 1960 was followed by a liberalization of the press, and journalists themselves drew up a Code of Ethics that was signed by all the major papers. These liberties were restricted after the coup of 1971, and again after that of 1980, but the public's expectation of an independent press was irreversible. Through the 1990s Turkey was criticized by several human-rights organizations for imprisoning journalists. With the winding down of the Kurdish separatist insurgency in 1999 and new legislation in line with European Union requirements press restrictions have been lifted gradually, and critical and investigative journalism has become characteristic of some newspapers.

NEW WAFD

Egyptian political party.

The Wafd, outlawed by Gamal Abdel Nasser in 1953, was relaunched in 1977 by its former secretary-general, Fuʾad Sarraj al-Din, as the New Wafd. The New Wafd, again the party of constitutional nationalism, liberalization, and landed and professional interests, was seen as a spent force by President Anwar al-Sadat, who therefore made it the first legal opposition party in 1978. It quickly developed a mass membership and outspoken opposition to his domestic and foreign policies, and alleged the unconstitutionality of presidential rule by referenda rather than regulated election. The government then banned the participation of politicians active before 1952, and the New Wafd disbanded in protest.

The party re-emerged in 1983 after Husni Mubarak's renewed liberalization. In 1984 it contested the elections in alliance with the Muslim Brotherhood and won 15 percent of the vote (58 seats), making it the largest opposition party. The alliance collapsed, and in 1987 the New Wafd fought alone and won 35 seats. In 1990 the New Wafd initiated an election boycott widely credited with de-

fending the political system in the face of emergency laws. Throughout its existence, however, the party has carefully moderated its opposition to the regime, leading to accusations of clientalism and to continuing internal tensions over the legitimate extent of opposition. In the 1995 elections the party turned broadside against the Muslim Brotherhood, and again received criticism for supporting the government line. By contrast, the strengthening of New Wafd opposition to Islamism has also been seen as a product of a deepening secularist-Islamist cleavage. New Wafd secularism also is underpinned by support from Coptic voters.

Serageddin died in 2000 and was replaced as party leader by his deputy, Nuʿman Jumaʿa.

NEZZAR, KHALED

[1937–]

Algerian general and defense minister.

Born near Biskra, Khaled Nezzar served in the French Army before deserting to join the Armée de Libération Nationale (ALN) in 1958, and from that point he pursued a military career. He was stationed along the Moroccan frontier during the border war of 1963 and commanded a battalion sent to Egypt to demonstrate Algerian solidarity after the Arab–Israel War of 1967. Nezzar's military education included studies in the Soviet Union and France. He was appointed to the central committee of the ruling Front de Libération Nationale (FLN) in 1979 and was promoted to general and assistant chief of staff in 1984. He quelled the destabilizing October 1988 riots, resulting in hundreds of casualties. In 1990 Nezzar received particular publicity when he was appointed Algeria's first minister of defense since 1965—a portfolio usually held by Algeria's authoritarian presidents. Faced with the prospect of a Front Islamique du Salut (FIS) government, Nezzar and others deposed President Chadli Bendjedid in January 1992 and established the Haut Comité d'Etat (HCE). Nezzar continued to serve as minister of defense as the civil war broke out, escaping assassination in February 1993. He retired in 1994 but continued to play a dominant role in the Pouvoir—the ruling establishment of military and civilian elites. While he was visiting France in 2001, Algerians filed charges against him for crimes of repression, including torture. The lawsuits were eventually dropped because of the duress placed upon the plaintiffs. Concurrently, Nezzar sued Habib Souaidia, a former Algerian officer and author of *La sale guerre* (2001; The dirty war), who had made televised comments accusing the military of massacres and tortures. Nezzar returned to Paris to defend the army, but his defamation suit against Souaidia was dismissed in September 2002.

Nezzar has authored *Mémoires du général Khaled Nezzar* (2000; Memoirs of General Khaled Nezzar) and *Algérie: Échec à une régression programmée* (2001; Algeria: defeat of a regressive program). He is also an entrepreneur, cofounding an Internet company called Soft Link Com. Nezzar remains a most powerful member of the Pouvoir.

NHAISI, ELIA

[1890–1918]

Zionist pioneer who mobilized the Libyan Jews in Tripoli.

Elia Nhaisi was born in Tripoli, Libya, to a poor Jewish family. He earned his living as a photographer, sold photographic postcards, and was the Tripolitanian correspondent for the Florentine Jewish weekly, *La Settimana Israelitica,* later known as *Israel.* In 1913, he established the Jewish Cultural Club and, in 1914, the Talmud Torah evening school for modern Hebrew. In 1916, he founded the Zionist Club, *Circolo Sion,* which by 1923 evolved into a

Libyan Zionist organization. His movement was supported by the community rabbis but opposed by the "Italianized" president and community council members, who championed Italianized assimilation for the Jews. The Italian Jewish press was his staunch supporter, and his Zionist group prevailed. Nhaisi died after a short illness at the age of twenty-eight.

MAURICE M. ROUMANI

NIATI, HOURIA

[1948–]

Algerian painter, installation and performance artist, singer, and poet.

Houria Niati was trained in Algeria as well as at the Camden and Croyden art schools in England, where she has lived since the late 1970s. She is best known for her paintings/installations *No to Torture* (1983–1996) and *Bringing Water from the Fountain Has Nothing Romantic about It* (1991). These works critique the romanticized and stereotypical portrayals of Arab women in colonial postcards and orientalist paintings, particularly those of Eugène Delacroix, whose subject was the women of Niati's native Algeria. Through a series of visual commentaries upon those earlier paintings, and through the creation of other pieces that manipulate the imagery and ideas in them, Niati interrogates the objectified orientalist images of the sensuous and secluded Arab/Muslim woman that were propagated through colonialism. For example, she imprisons, mutilates, and disfigures the women in her version of Delacroix's painting, thereby calling specific attention to how the female body was the site of violence under French colonialism and how the romanticism of the orientalists provided a cover for this "torture." In her work, she subverts the male perspective that was central to the colonial project and re-authors the subjectivity of Algerian women, thereby transforming her own experience of being arrested by the colonial authorities for protesting as a young girl. She also critiques the violence against women in contemporary Algeria. Her influences have included post-Impressionism, ancient Algerian rock paintings, and children's art. Niati is a trained singer in the Andalusian *shaʿbi* and *rai* traditions and often does performances to accompany her exhibitions, singing songs and reciting poetry inspired by those musical genres.

NILE RIVER

The longest river in Africa and, arguably, the world.

The Nile *(Bahr al-Nil)* dominates the landscape of eastern and northern Africa as well as the lives and livelihood of its people. The Nile traverses 35 degrees of latitude and 4,200 miles in its flow from Burundi in the East African rift valleys through ten riparian countries to Egypt on the Mediterranean. Within this 1.25-million-square-mile drainage area, the Nile Basin encompasses unique wildlife habitats and broad biodiversity. At the same time, Nile Basin countries are home to 300 million people, a number projected to double by 2025.

The Nile Basin is environmentally sensitive. Stretching from the equator to the Mediterranean, the Nile is a principal flyway for migrating birds that nest along its many marshes, lakes, and tributaries. Its wetlands, forests, and open lands are home to a broad array of flora and fauna. Its natural beauty has attracted tourists for centuries. But increasing population and limited water supply have put stress on the people of the basin as well as on the environment. Total water and water availability per capita in the Nile Basin remain low.

Compared to other major river basins, the Nile's disparity in water availability differs sharply among

sub-basins. Arid portions (perhaps one-third of the basin) yield negligible flows; in contrast, the highlands of Ethiopia, comprising 10 to 20 percent of the land area of the overall basin, and draining through the Blue Nile and Atbara, yield approximately 120 billion cubic yards, or 60 to 80 percent of the annual flow at Aswan. Flows from the White Nile originating in the region of Lake Victoria are buffered by the great Sudd swamps of southern Sudan, and thus are approximately constant through the year. Flows from the Blue Nile are concentrated in a three-month period of late summer, creating the famous annual inundation of Egypt.

Twelve miles south of Cairo, the Nile divides into the Rosetta and Damietta branches and enters the delta. For Egypt and Sudan, the river is almost the sole source of water, and their inhabitants have always been intensely concerned with the utilization of its waters. The valley of the lower Nile and delta has among the most fertile soils in the world, created by millennia of sediment deposition during the annual inundation. Since the building of the High Dam at Aswan in the 1960s, this felicitous natural process has been much curtailed. As population and industrialization grow along its banks, the quality of Nile waters has become degraded by pollution.

NIMR, FARIS

[1856–1951]

Lebanese Christian intellectual, publisher, and journalist who played an important role in popularizing modern science and Western ideas in the Arab East in the late nineteenth century.

A Greek Orthodox from Hasbeya, Lebanon, Faris Nimr was among the first Lebanese to study at the Syrian Protestant College (later renamed the American University of Beirut). He graduated at eighteen and became a tutor in astronomy and mathematics at the college. In 1876, he and fellow Syrian Protestant College graduate Yaʿqub Sarruf (1852–1927) began publishing in Beirut a scientific-literary journal called *al-Muqtataf* (The selection). In 1882, the two editors became embroiled in a fierce controversy over Darwinism that shook the college, where they were still teaching. Their support of Darwinism, articulated in *al-Muqtataf,* put them at odds with the college authorities, and they were dismissed in 1884. They then moved to Egypt, taking their periodical with them. In Cairo, *al-Muqtataf* rapidly developed into a leading opinion maker. Spurred by their success, the two Lebanese expatriates decided in 1889 to found *al-Muqattam,* a pro-British newspaper that promoted free enterprise. Sarruf retained primary responsibility for *al-Muqtataf,* and Nimr concentrated on *al-Muqattam,* which soon became one of the most influential dailies in Egypt.

Faris Nimr is remembered as one of the most prominent members of the early wave of Western-educated Lebanese intellectuals who played a leading role in introducing modern scientific knowledge and positivist ideas into the Arab East. What distinguished Nimr from most of his peers was his wide range of interests (which cut across the scientific-literary divide), his dual career as an intellectual and a publisher, and the remarkable sense of initiative and entrepreneurship that he demonstrated throughout his life, from his creation of *al-Muqtataf* when he was only twenty to his decision to relocate his business to Egypt and create a newspaper there. His writings and activities as a publisher in Cairo ensured that the impact of his ideas was felt much beyond his country of origin. Through *al-Muqattam* in particular, he inspired an entire generation of Arab intellectuals attracted to Western notions of individualism and laissez-faire economic ideas.

GUILAIN P. DENOEUX

NISSIM, ISAAC

[1895–1981]

Controversial Sephardic Chief Rabbi of Israel.

Born in Baghdad, Isaac Nissim moved to Jerusalem in 1926. Nissim was elected Sephardic Chief Rabbi of Israel in 1955, a position he held until 1972, although not without controversy. In 1964, he overcame a challenge by those Sephardim who sought to elect Rabbi Yaʿacov Moshe Toledano, the politically unaffiliated Chief Rabbi of Tel Aviv. At the time, Nissim was the candidate of the National Religious party.

CHAIM I. WAXMAN

NIXON, RICHARD MILHOUS

[1913–1994]

U.S. president, 1969–1974.

Born in Yorba Linda, California, Richard Milhous Nixon attended Whittier College and Duke University Law School. After serving in World War II, he was elected to Congress (1946–1950), where he was a member of the House Un-American Activities Committee during the McCarthy era of anti-Communism, then to the U.S. Senate (1950–1952), where he continued his strongly anti-Communist stance. He was selected to run as vice president on the Republican ticket with Dwight D. Eisenhower in 1952 and again in 1956. During the Eisenhower administration, Nixon was given substantive foreign policy missions to fifty-six countries, including the USSR. In 1960, he ran for president but lost to John F. Kennedy. Nixon won the presidency in the 1968 election.

Nixon's Middle East policy was marked by crisis abroad and conflict at home. Abroad, the War of Attrition and the Arab-Israel War of 1973 demanded the full attention of the State Department while the U.S. government was still trying to repel the Communists in Vietnam. Nixon's secretary of state, William Rogers, and his national security adviser, Henry Kissinger, pursued separate and often contradictory Middle East policies. With the collapse of the Rogers Plan for Arab-Israeli peace, Kissinger emerged as the dominant adviser, and this was consolidated when he was made secretary of state in 1973.

Under Nixon, the United States sold both Israel and Iran large amounts of miliary equipment, including Phantom jets to Israel. In May 1972, during a visit to Iran, Nixon promised that the United States would sell them an unlimited supply of non-nuclear weapons, and by the end of the Nixon administration, Israel and Iran emerged as the "two pillars" of U.S. policy in the Middle East.

The major crisis of Nixon's administration began with the 1973 Arab-Israel War and the resulting Arab oil embargo by OPEC (the Organization of Petroleum Exporting Countries). This began an escalating spiral of price gouging and inflation that continued into the 1980s in the United States. Nixon attempted to placate the Arab states, especially Saudi Arabia. Until August 1974—when Nixon resigned the presidency—he and Kissinger had to negotiate numerous cease-fires and armistice lines between Israel, Egypt, and Syria. They also visited both Communist China and the USSR, improving relations with both.

In his desire for another term in office, Nixon and his White House staff became involved in a cover-up of their actions involving a break-in at Democratic national headquarters at the Watergate complex. The escalating investigation over this impeachable set of offenses resulted in Nixon's resignation.

ZACHARY KARABELL

NIZAM AL-JADID, AL-

Regular Egyptian army of the early nineteenth century, established by Muhammad Ali Pasha, consisting of conscripted men trained in the European style.

In 1805, as soon as Muhammad Ali Pasha gained some independence from the Ottoman Empire and consolidated his position as *wali* (provincial governor) in Cairo, he began conscripting skilled laborers to work on government projects. His model was the conscript armed force instituted by Ottoman Sultan Selim III. The existing Egyptian military force, to which the Mamluks (powerful landlords) sent their own retainers for use by the state, was then replaced by 1822 with a new, drafted, regular army called *al-nizam al-jadid.*

The first four thousand men called up came from Upper Egypt. Those from the region between Manfalut and Qina were assembled at a training camp near Farshut, and those from the region between Qina and Aswan were gathered in Aswan. Their initial tour of duty was set at three years. Their replacements were selected from lists of prospective draftees drawn up by the officers in charge of the training camps as part of a comprehensive system of village census taking. Conscripts were drilled according to European procedures and organized into defined regiments, with a centralized command structure to supervise the distribution of arms, clothing, and other equipment. State officials even orchestrated a propaganda campaign in support of the new army, urging prominent religious scholars to write treatises sanctioning these innovative practices.

Regular infantry and artillery units were complemented by a flotilla of warships built along European lines in government yards. Both the new army and navy played major roles in the Egyptian campaigns in the Aegean Sea and Syria after 1824. Both were also strictly limited by Britain after Muhammad Ali's capitulation to the European powers in 1838. Thus ended this army.

NIZAMIYE COURTS

Secular Ottoman courts.

The Nizamiye (or Nizami, meaning regulation) courts were organized in 1869 by Minister of Justice Ahmet Cevdet to decide cases under new criminal and commercial law codes. The new court system extended from the lowest regional level, the *nahiye,* through the *kaza, sanjak,* and *vilayet,* or provincial levels. It was capped by the Council of Judicial Regulations (Divan-i Ahkam-i Adliye) in Constantinople (now Istanbul), which was the final court of appeal. After 1876, the courts were administered by the Court of Cassation (Temyiz Mahkemesi) in the ministry of justice. Under Abdülhamit II, Minister of Justice Küçük Sait Paşa introduced the institution of public defender in the Nizamiye courts and revised the commercial and criminal codes. A law school founded in 1878 produced one hundred graduates a year who staffed the expanding Nizamiye system.

Despite underfunding and overcrowding, the court system was generally considered efficient. Because of this, and the fact that the new law codes were prepared with the counsel of religious legal scholars, the *ulama*'s opposition to the Nizamiye was diminished, even though the new courts challenged the jurisdiction of *shariʿa*, or religious, courts.

ELIZABETH THOMPSON

NIZIP, BATTLE OF (1839)

Town, now in southern Turkey, where Egyptian forces defeated the Ottoman army on 24 June 1839, prompting the European powers to take steps to push Egypt out of Syria.

Throughout the spring of 1839, the Ottoman Empire encouraged unrest along the border between Anatolia and its former Syrian provinces, which had been captured in 1831 by the armies of Egypt's

Muhammad Ali Pasha—who named his son Ibrahim Pasha to govern them. Ibrahim at first refrained from responding to Ottoman activities, but was forced to mobilize when the Ottomans struck south across the Euphrates river in June. The two armies clashed at the town of Nizip, resulting in a crushing defeat of the Ottomans. Ibrahim immediately advanced north toward Konya, halting only when his father, who was worried about the impact that this move might have on regional diplomacy, ordered him not to go beyond the Taurus mountains. Meanwhile, an Ottoman fleet that had been sent to attack Alexandria in Egypt voluntarily surrendered to Muhammad Ali.

At the height of the crisis, the Ottoman sultan died. His successor had little choice but to enter negotiations with the victorious Egyptians. Egypt demanded control of the southern Turkish districts of Diyarbakir and Urfa—which commanded the primary trade routes between Syria and northern Iraq. The British government interpreted these demands as a direct threat to British interests in the region. France, on the other hand, signaled that it supported Egypt. Britain eventually persuaded Russia, Austria, and Prussia to agree to cooperate in expelling the Egyptian army from Syria, a commitment which was codified in the London Convention of July 1840. British warships then bombarded the Mediterranean ports of Beirut and Acre, forcing Ibrahim to withdraw his troops from all of Syria. Muhammad Ali returned the captured Ottoman fleet in exchange for recognition as the hereditary ruler of Egypt, which the Ottoman sultan granted on February 13, 1841. France returned to the European concert in July 1841, signing the Straits Convention with the other great powers.

NOOR AL-HUSSEIN (QUEEN NOOR)

[1951–]

Queen of Jordan and wife of King Hussein ibn Talal.

Noor al-Hussein became queen of Jordan in 1978, after her marriage to King Hussein Ibn Talal, who ruled the Hashimite kingdom from 1953 to 1999. Born Elizabeth Najeeb Halaby, she changed her name to Noor al-Hussein (light of Hussein) in the context of her engagement to the king and her conversion to Islam.

Queen Noor grew up in the United States in a prominent Arab-American family. She was part of the first coeducational class to enter Princeton University, graduating in 1974 with a bachelor of arts in architecture and urban planning. After graduation, she worked on a series of international development projects before concentrating on the design and development of aviation training centers and airports. It was in this capacity that she joined Royal Jordanian Airlines and met King Hussein, himself an avid pilot with a deep personal interest in the kingdom's national airline.

Following her marriage to Hussein in 1978 and her coronation, Noor began work on a series of philanthropic endeavors, with particular emphasis on child welfare and women's empowerment. In 1981, she worked with Yarmuk University to create the now annual Jarash international festival for culture and the arts. The festival has grown annually and become a major tourist attraction for the kingdom. Queen Noor is perhaps best known for the work of her Noor al-Hussein Foundation, which includes many programs supporting education, cultural preservation, health care, and the rights of and opportunities for women and children; however, her patronage extends to many programs across a wide range of activities, including archaeology, business development, environmental conservation, child welfare, and even tennis. During the late 1990s, Noor also added her support to the national campaign to prevent honor crimes (that is, the killing of women by male family members who suspect them of adultery or of otherwise offending "family honor"). Queen Noor pressed for the repeal of legislation that allowed for leniency in sentencing. She also became a high-profile spokesperson for the international campaign to ban land mines.

Her role in Jordan and on the international stage continued after the death of King Hussein in 1999. After a change in the royal succession and the accession of King Abdullah II ibn Hussein, the new king appointed Noor's eldest son, Hamza, crown prince and designated successor to the throne.

NORDAU, MAX

[1849–1923]

Author and Zionist leader.

One of Theodor Herzl's earliest supporters, it was Max Nordau who formulated the goal for the Zionist movement in Basle Program at the First Zionist Congress in 1897: "The creation for the Jewish people of a publicly recognized, legally secured Home in Palestine." Following Herzl's death, Nordau became a close adviser to David Wolffsohn, the second president of the World Zionist Organization. Nordau was a staunch advocate of Herzl's brand of political Zionism and was opposed to Ahad Ha-Am's cultural Zionism and Chaim Weizmann's practical Zionism.

NORTH ATLANTIC TREATY ORGANIZATION (NATO)

Post–World War II alliance for the defense of its members against the Soviet Union.

On 4 April 1949 twelve countries—including the United States, France, Great Britain, and Canada—signed the North Atlantic Treaty, establishing the basis for the North Atlantic Treaty Organization. NATO was designed to defend Western Europe in the face of a perceived threat from the Soviet Union and its Communist satellite states, which formed the Warsaw Treaty Organization in 1955.

Turkey applied for NATO membership in 1950, occupying a key strategic position between Europe and the Middle East. Admitted on 18 February 1952, Turkey agreed to provide NATO with secure access to the Straits at Istanbul and to the Black Sea.

With the end of the Cold War, NATO membership was expanded to include the Czech Republic, Hungary, and Poland (1999), and seven more states are due to accede in 2004. In September 2001 NATO invoked Article 5 of the treaty for the first time, declaring the terrorist attacks against the United States an attack against all members. NATO played no formal role in the American war in Iraq in 2003, though it agreed to assure Turkey's security under Article 4 of the treaty.

NORTHERN TIER

The region comprising the countries of Iran and Turkey in the Middle East and Afghanistan and Pakistan in central Asia; its location on the border of the Soviet Union made it an area of high interest for U.S. defense planners and their allies during the Cold War.

In the early 1950s the Northern Tier assumed strategic significance in Anglo-American plans for defense of the Middle East against an attack that the Western powers assumed the Soviets would launch in a drive toward the Suez Canal. The Western allies intended to arm Turkey and also to prepare Iraq and Syria, neither of which was contiguous with the Soviet Union, to resist invasion. The United States and Britain planned to defer Iran's participation but attempted to convince Egypt to join Western

planning for the Middle East Command (1951) and the Middle East Defense Organization (1952).

Egypt's refusal to participate in such regional defense plans brought the schemes to an end; nevertheless, the Western powers still believed that a "Middle East NATO" was possible. In April 1954 the United States signed an arms deal with Iraq and hoped that the bilateral treaty that Turkey and Pakistan signed that month could be expanded to include several Arab states. In 1955 Britain arranged and then joined with Iran, Iraq, Pakistan, and Turkey in the Baghdad Pact, which had the support of the United States.

See also Baghdad Pact (1955); Central Treaty Organization (CENTO); Middle East Defense Organization (MEDO).

NOUAKCHOTT

Capital of Mauritania.

Nouakchott is located 4 miles inland from the Atlantic Ocean, just south of central Mauritania. Three years before Mauritania's independence from France in 1960, Nouakchott, then just a village, was selected as the capital of the future independent Mauritania. City architects planned for a potential 15,000 inhabitants. By 1967, 20,000 people had moved to Nouakchott. As a result of Saharan droughts in recent decades, hordes of people have moved to the city, and as of the early twenty-first century more than 800,000 people inhabited Nouakchott, around 25 percent of the Mauritanian population.

Nouakchott, Mauritania's administrative and economic center, is home to all ethnicities. North of Nouakchott, Nouadhibou, a city of 100,000 people, also is a center of trade. Fishing, light industry, and handicraft manufacturing centers are located in Nouakchott and Nouadhibou. Foreign investment remains crucial for increased economic growth as population size and skilled labor are limited.

From any point in Nouakchott, Islamic prayer calls can be heard emanating from the mosques five times a day. Nouakchott has two large markets with men and women vendors lined up selling items such as fabric, electronics, Qurʾans, meats, vegetables, and rice. One of the markets is located in the Cinquième district, where more of the Pulaar population live and sell their products. The other large market, in the Capitale district, is mainly populated with black and white Maure vendors and shoppers. Nouakchott has restaurants of all types, a movie theater, internet cafés, beautiful mosques, a university, and an international airport.

NOUIRA, HEDI

[1911–1993]

Tunisian nationalist and politician.

Educated in Tunis and Paris, Hedi Nouira played an important role in shaping and publicizing the nationalism of Habib Bourguiba in the early days of the Neo-Destour political party, largely through his work on the party's French-language newspaper. Following several periods of imprisonment by the French colonial administration (France held a protectorate over Tunisia from 1881), and participation in the negotiations toward independence in the 1950s, Nouira became a leading member of Bourguiba's inner circle.

With independence in 1955–1956, he was appointed minister of finance (1955–1958), then head of the Central Bank of Tunisia (1958–1970). In November 1970, he was appointed to be the new prime minister by Bourguiba, a post he held for seven years; in 1974, during a party congress, he was named heir apparent by Bourguiba. As prime minister, Nouira initiated a period of economic liberalization—by placing new emphasis on the private sector, encouraging trade and foreign invest-

ment, and distributing large parts of state farms to small landholders. When these policies led to social and economic dislocation, Nouira (with Bourguiba's support) met the ensuing political turmoil with repression. In early 1980, shortly after the Gafsa Incident (a clash between Libya and Tunisia), Nouira was reported to have fallen seriously ill and was replaced.

NUʿAYMI FAMILY, AL-

The ruling family of the emirate of Ajman in the United Arab Emirates (UAE).

The rulers of Ajman are members of the Nuʿaym tribe, one of the largest in southeastern Arabia, with members spread from Oman to Bahrain. The first ruler of Ajman was Rashid ibn Humayd al-Nuʿaymi (r. 1816–1838), one of the Persian Gulf rulers who signed a peace treaty with the British in 1820. A small emirate with few economic resources, Ajman has been a recipient of financial aid from the ruler of Abu Dhabi, but it has not always followed the larger emirate's political lead. Due to his strong personality and his long tenure as amir (r. 1918–1981), Rashid bin Humayd al-Nuʿaymi, the ruler of Ajman at the time of the UAE's federation, hewed an independent line, often siding with the ruler of Dubai. The ninth and current ruler of Ajman is Humayd bin Rashid al-Nuʿaymi, born in 1931. He has ruled since 1981 and has served on the Supreme Council of the UAE since 1981. He is also the sponsor of the Shaykh Humayd bin Rashid prizes for Culture and Science.

NUBAR, BOGHOS

[1851–1930]

Armenian political leader and philanthropist.

Boghos Nubar was born in Alexandria, Egypt. He was the son of Nubar Pasha, the late-nineteenth-century prime minister of Egypt, and nephew and protégé of Boghos Bey Yusufian, his son's namesake and the great minister of Muhammad Ali, the founder of modern Egypt. Boghos Nubar received his training as a civil engineer in France and served as a director of the state railways in Egypt.

In 1906 Boghos Nubar, heir to his father's title and family fortune, took the lead, along with a group of wealthy Armenians in Egypt, to found the Armenian General Benevolent Union (AGBU) in Cairo, Egypt. Growing out of the concern for the tens of thousands of Armenians made destitute by the massive loss of life at Hamidian (1894–1896), the AGBU hoped to support the recovery of the Armenians from the brutalization suffered at the hands of the Ottoman government. Within three years of its founding, the 1909 mass killing of Armenians at Adana precipitated the AGBU to focus its resources in building orphanages, hospitals, and shelters for widows and elderly survivors in the region of Cilicia. The 1915 deportations and killings of Armenians required the AGBU to recommit significant funds to attempt a measure of relief for the entire Ottoman Armenian community now made refugees. The AGBU set up orphanages and clinics all across the Middle East wherever the Armenian refugees concentrated.

Boghos Nubar in Paris headed the Armenian National Delegation to Paris in 1918 to represent the disenfranchised Armenians of the Ottoman Empire with the hope of establishing a national home for them. In France Boghos Nubar was also instrumental in getting the French army to approve the formation under its command of the Legion d'Orient manned mostly by Armenians who saw some fighting in the Allied campaign in Palestine. Though a person of conservative political leanings, with his pedigree Boghos Nubar emerged as the leading spokesman for the Armenians at the Paris Peace Conference.

While the independent Armenian republic was too short-lived to see the AGBU extend its philan-

thropy to Russian Armenia, in the 1920s the AGBU responded to a disastrous earthquake that struck the city of Leninakan (formerly Alexandropol, currently Gyumri) and stayed to build educational and medical facilities in Soviet Armenia during that decade. Shut out of Armenia after Stalin's rise to power, the AGBU returned to Armenia in December 1988 after another devastating earthquake shattered the same city and the surrounding countryside.

Boghos Nubar died in Paris. Before his death, he had already set the AGBU in a new direction. After the immediate minimum physical needs of the Armenian refugees had been met, he donated funds to the AGBU, and in so doing set an example emulated since by other well-to-do Armenians, for the establishment of educational programs and institutions to begin the moral and intellectual recovery of a generation of Armenians which had known nothing but exile, hunger, and privation. Over the decades the organization founded by Boghos Nubar Pasha grew to become the largest in the Armenian diaspora with chapters around the world supporting schools, orphanages, clinics, libraries, youth centers, theaters, publications, and a host of other activities designed to sustain Armenian culture and identity in diaspora communities.

ROUBEN P. ADALIAN

NUBAR PASHA

[1825–1899]

Legal reformer, cabinet minister, and three-time prime minister of Egypt.

An Armenian born in İzmir, educated in France and Switzerland, Nubar was brought to Egypt by his uncle, who was a translator for Muhammad Ali. Nubar worked for his uncle and his successors. Having learned eleven languages and spent his youth in Europe, he knew how to charm Europeans and often mediated with them on Egypt's behalf, meanwhile making his own fortune. He successfully negotiated with the European powers to gain their consent to set up the mixed courts to try cases between Egyptian and foreign nationals. He presided over the short-lived "European cabinet" set up by Khedive Ismaʿil in 1878.

Not involved in the Urabi revolution, Nubar returned to power in 1884, at a time when Britain obliged Egypt to give up the Sudan, and led a third cabinet in 1894 and 1895. Clever and subtle as an intermediary between Egypt and Europe, he was both admired and resented by most Egyptians, who accused him (not unjustly) of enriching himself by exploiting his power.

NUBIANS

People of the Nile Valley south of Aswan, at the first cataract extending into the northern Sudan.

Nubia is the land of ancient kingdoms, such as Kush and Meroe, and Christian kingdoms before Islam that rivaled, were controlled by, or entered into peace treaties with Egypt. *Nab* is the ancient Egyptian word for gold, and Nubia was the source of gold for the region. Nubians have been active in trade and politics along the Nile since ancient times. They are renowned boatmen of the Nile River, and were enslavers of people farther south during the eighteenth and nineteenth centuries as well as victims of

slavery. Although culturally and linguistically distinct, Nubians' complex history reflects contact with many peoples, including Africans farther south along the Nile, Arabs who conquered North Africa, and Europeans, especially the Greeks who in their early encounter described them as "Aethiopian," or "the people of the burnt faces."

Nubians and their subgroups have a long history linked to the rise of Nile Valley agriculture, states, and urbanism. Nubians straddle the borders of contemporary Egypt and Sudan. Although they speak Arabic, the Nubian language of Rotana and various dialects, such as Kenuz, Sukot, Fadija, Halfawi, and Donglowai, have been retained. Estimates of the number of Nubian speakers range from two hundred thousand to one million; one-quarter live in Egypt and the rest in Sudan. Nubian is generally considered an Eastern Sudanic language, a branch of Nilo-Saharan.

The social status of Nubians varies markedly. In Egypt they are generally identified as Sa'eedi (from the south) and are unskilled laborers, or often doormen, and are considered honest but simple. In Sudan, Arabized Nubians of the north were favored by the British colonialists and are concentrated among the elites. They have held state power since independence in 1956. When the Aswan High Dam was constructed in the 1960s, much of Nubia was flooded, destroying archaeological sites and displacing most Egyptian Nubians, resulting either in their resettlement—in some cases at sites far removed from their historical villages along the Nile—or by moving their homes to higher elevations.

ALEYA ROUCHDY
UPDATED BY CAROLYN FLUEHR-LOBBAN

NUCLEAR CAPABILITY AND NUCLEAR ENERGY

Nuclear proliferation in the greater Middle East is a central issue in international affairs.

In the 1990s and into the twenty-first century, the issue of nuclear weapons in the Greater Middle East came to the fore as never before. Several developments played a role in this change: In 1998 nearby India and Pakistan almost simultaneously tested several nuclear weapons each. In 2002 these nations' ongoing conflict over Kashmir brought them close to the nuclear brink. Then came reports of the transfer of nuclear technology and materials from Pakistan to North Korea and perhaps also Iran. Other reports suggested that Pakistan considered its nuclear program to be an "Islamic bomb" enterprise that could provide extended deterrence to Israel's nuclear threat to the Arabs. Israel implied that it would use nuclear weapons if attacked by Iraq with chemical or biological weapons. Also of great concern was the proliferation of various delivery systems—ballistic and cruise missiles, long-range aircraft abetted by aerial refueling—by several states in the region that might be joined to nuclear weapons arsenals. Around the world fears grew that terrorist organizations such as al-Qaʿida might somehow acquire nuclear weapons or materials for a "dirty" nuclear weapon derived from radioactive wastes. There were also increasing fears about Iraq's acquisition of nuclear weapons—a major rationale for the U.S.-led coalition's invasion of Iraq in 2003—and Iran's seemingly imminent development of nuclear weapons.

Israel

Israel was the first of the nations in the region to cross the nuclear threshold. But despite a growing body of writings about the history of its nuclear program, vast gaps remain in what is known about the size of its arsenal, the dates of its initial deployments, and its current command-and-control structure. It appears that the initial decisions to move toward nuclear weapons status were made shortly after the Jewish state was created. Crucial to Israel's nuclear development was its nuclear cooperation with France, which grew out of the two nations' close relations at the time of the 1956 Suez War and continued until 1967–1968. Israel's nuclear development was centered on the French-supplied Dimona reactor, which went into operation around 1961, and continued to produce plutonium despite remonstrances from the Kennedy administration and some limited U.S. inspections.

Israel probably began plutonium separation and the deployment of operational nuclear weapons be-

Patriot antimissile missiles deployed near Israel's nuclear research reactor at Dimona. The Israelis refuse to allow international inspection of the facility, but satellite photographs taken by the Federation of American Scientists in 2000 confirmed that the reactor has the ability to produce 100–200 nuclear warheads. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

tween the 1967 and 1973 Arab-Israel wars, with the Soviet Union's active involvement in the Suez "war of attrition" (1969–1970) perhaps serving as a final trigger. In 1973 Israel's implicit threats to use nuclear weapons after the initial military setbacks in Sinai and on the Golan Heights appear to have impelled the U.S. arms resupply airlift after initial hesitation.

In 1979 U.S. satellites detected a flash over the southern Indian Ocean that was widely, though not definitively, attributed to an Israeli or joint Israeli-South African nuclear test. In 1986 Mordechai Vanunu, a disaffected Israeli who had worked at the Dimona reactor, leaked voluminous information and photographs that revealed the scope of the Israeli nuclear program. Those disclosures, now widely considered credible, indicated a program consisting of both fission and fusion weapons, involving up to or more than 200 weapons, mounted on delivery systems that could cover the entire Middle East. The latter delivery systems included now longer-range Jericho missiles (perhaps up to 1,500 miles), F-16 fighter aircraft with aerial refueling capability, and—perhaps—three diesel submarines purchased from Germany.

Various rationales have been offered for the Israeli nuclear program. The main rationale is that the program serves as a credible deterrent against the threat of an overwhelming Arab conventional force, which some deem inevitable. The size of Israel's program appears to imply the prospective use of tactical nuclear weapons in such a scenario, backed by a threat against cities. Other rationales for the nuclear program are that it offers increased assurance of American arms resupply during crises; it may convince Arab nations of Israel's permanence, thereby nudging them along in the "peace process"; and it may deter involvement in the Arab-

Israeli conflict by powerful peripheral nations such as Iran, Pakistan, and Turkey, the latter semi-allied to Israel.

Iraq

Iraq's initial efforts to become the second Middle Eastern nuclear power were thwarted by Israel's bombing of the Osirak reactor in Baghdad in 1981. During the subsequent decade, Iraq allegedly built a clandestine nuclear infrastructure with the aid of numerous Western suppliers of relevant technologies, most notably that of gas centrifuges. That operation apparently was vastly underestimated by Western intelligence services, and the full scope of the program was revealed only in the wake of Iraq's defeat in the Gulf War of 1991 and its subsequent submission to United Nations inspections, which appear to have resulted in the dismantling of part of Iraq's nuclear infrastructure. In the aftermath of the 2003 invasion, however, the status of the Iraqi nuclear program was unclear. Little evidence was found. Various analysts suggested that intelligence reports had overstated the program; that it was well hidden by the Saddam regime; or that prior to the invasion it had been dismantled or the evidence moved to Syria or elsewhere outside of Iraq.

Iran, Algeria, and Libya

Since the end of the Iran-Iraq War in 1988 and subsequent to the Gulf War, Iran is widely believed to have embarked on an energetic effort to acquire nuclear weapons. That effort is centered on its nuclear research complex at Isfahan. Reports suggest extensive outside assistance, particularly from Pakistan and perhaps from China and Russia. There are reports of work on centrifuge technology, and on plutonium production reactors. Israel in particular dreads the possible advent of an Iranian nuclear weapons program that would include long-range missiles capable of reaching Israel.

During the latter part of the shah's reign, Iran embarked on a program to build several nuclear reactors. One was nearly completed by a West German firm. In 2003 Iran was negotiating with Russia over the building of four new reactors, plans that were fiercely opposed by the United States. One reactor, at Bushehr, is apparently under construction.

Algeria has acquired a small nuclear reactor, causing anxiety in Western Europe over the threat that Islamic fundamentalism could lead to a European-Algerian conflict. Libya reportedly has made efforts to acquire nuclear weapons or technology, but to no avail. In December 2003, Libya announced the cessation of all of its nuclear, chemical, and biological weapons programs.

Conclusion

The vast oil and gas resources of the Middle East presumably render almost superfluous the acquisition of nuclear power reactors for peaceful purposes. Statements about generating electricity appear to provide rhetorical cover for intended nuclear weapons programs.

Nuclear disarmament is unlikely to be achieved in the region in the foreseeable future. Israel clearly sees nuclear deterrence as vital to its survival. It could not conceivably abandon its stockpile unless Pakistan did so as well, which would require India also to disarm, and thus also China, the United States, and Russia. That is a daunting row of dominoes.

ROBERT E. HARKAVY

NUER

People who live along the Nile in Sudan.

The Nuer, who call themselves the Nath, and their associated subgroup the Atuot are among the most numerous of the southern Sudanese Nilotic peoples. They live in the swamps and open savannas on both sides of the Nile south of Malakal in Sudan but have been seriously disrupted by protracted civil war in southern Sudan, waged most intensively since 1983. Culturally, they have a common origin with the Dinka, with common ties of pastoralism, intermarriage, and cultural borrowings. Periodic rivalries and conflicts have also characterized this relationship, including conflicts related to the resistance of the Sudan's People's Liberation Movement to the national government in Khartoum. The Nuer were the last of the Sudanese people to submit to British rule, and then only after a substantial military campaign in 1930, known as the Nuer Settlement. In more recent times the Nuer, some of whom have become well educated and politically active, have played an aggressive role in the southern Sudanese insurgency movement and remain the dominant military force in Nuerland.

ROBERT O. COLLINS
UPDATED BY CAROLYN FLUEHR-LOBBAN

NUMEIRI, MUHAMMAD JAʿFAR
[1930–]

Military leader; president of Sudan.

Muhammad Jaʿfar Numeiri (Nimeiri, Numairi, Numayri) was born at Wad Nubawʾi, a suburb of Omdurman, Sudan. After education at the local Qurʾanic school, El Hijra Elementary School, the Medani Government School, and the Hantoub Secondary School, he entered military college in 1949 and graduated as a second lieutenant in 1952. Thereafter, Numeiri served in the Western Command and the armored corps stationed at Shendi. He became a great admirer of Gamal Abdel Nasser's pan-Arab revolution, a view reinforced by training in Egypt and by his arrest and suspension from duty (1957–1959) after supporting the abortive coup by Abd al-Rahman Kabediya. He later served in Juba, in southern Sudan, and in Khartoum, where he proved troublesome and consequently was sent on military training courses to Cyprus, Libya, West Germany, and Egypt. Numeiri returned to play an active role in the overthrow of the government of his superior, General Ibrahim Abbud, in October 1964, which resulted in his arrest and transfer to the American Command School at Fort Leavenworth, Kansas. Upon his return to Sudan he was implicated in another abortive coup but once again survived to be given a more sedentary position as commanding officer of the military school in Khartoum.

Stationed in the capital, Numeiri was able to plot and successfully carry out a military coup on 25 May 1969 against the government of Ismaʿil al-Azhari, whom he replaced with his Revolutionary Command Council (RCC), an imitation of Nasser's revolutionary command council of 1952. The first challenge to his regime came from the Ansar (Mahdists) in March 1970. The Sudan army assaulted the historic sanctuary of the Mahdi and his Ansar at Aba Island, 150 miles south of Khartoum, decisively defeating the rebels and killing the spiritual leader of the Ansar, the Imam al-Hadi.

The second and more serious challenge came from the Communist Party (SCP) of Sudan. The Communists had originally been represented in the RCC and, emboldened by their success, sought to seize control of the government by a coup d'état on 19 July 1971. After a bloody struggle lasting three

Muhammad Jaʿfar Numeiri (second from right) with Libyan leader Muammar al-Qaddafi in 1970. During Numeiri's presidency, relations between Libya and the Sudan fluctuated, largely due to Sudan's improving relations with Egypt. Diplomatic relations between the two countries were severed for several years in the 1970s, and only began to make steady improvement after Numeiri was out of power. © Bettmann/Corbis. Reproduced by permission.

days, Numeiri prevailed. The Communist leaders were promptly executed, the party prorogued, and its organization in the Sudan dismantled. Having defeated his enemies on both the right and the left, he called for a plebiscite that elected him president of the Sudan, after which he dissolved the RCC and established the Sudanese Socialist Union (SSU) as the single ruling party.

Having consolidated his control in northern Sudan, Numeiri turned to the seventeen-year civil war with the southern Sudanese. He and the respected southerner, Abel Alier, brought the war to a conclusion after negotiations with the Anya-Nya southern insurgents at Addis Ababa on 27 February 1972. The Addis Ababa Accords granted a limited autonomy to southern Sudan, but the means of its implementation and preservation were never clear. At the time it was an extraordinary achievement whereby one of the most destructive civil wars in Africa seemed to have been peacefully resolved. Numeiri basked in an outpouring of international acclaim for his statesmanship. With Sudan at peace, he enjoyed ten years of complete authority marred, however, by his growing isolation from the Sudanese, whose frustration erupted in several abortive attempts to overthrow him. These halcyon years were accompanied by an economic boom that resulted from Numeiri's encouragement of foreign investment in Sudanese agriculture to transform Sudan into the "breadbasket" of the Middle East. Large tracts of land, much of it marginal, were seized by the state, which displaced Sudanese farmers and herdsmen for Sudanese and Middle Eastern entrepreneurs anxious to reap quick profits from large mechanized agricultural schemes. Numeiri also sought, with little success, to establish a rapprochement and national unity with Sadiq al-

Mahdi and his Ansar, whom he had savagely defeated in 1970.

These initiatives were accompanied by a change in his lifestyle and ideology. Abandoning the habits of a tough soldier, Numeiri in the late 1970s became engrossed in rigorous interpretation of Islam at a time when there were endless political disagreements with the southern Sudanese and a decline in the nation's economic prosperity. He came increasingly under the influence of the Sudanese Islamists led by Hasan al-Turabi who were determined to transform Sudan into an Islamist state from the secular one of Jaʿfar Numeiri. He misperceived that the increasingly influential National Islamic Front (NIF) were more dependable political allies than the southern Sudanese. In October 1981, after a series of strikes and demonstrations precipitated by the declining economy, he dismissed the National Assembly and the leadership of the SSU. Next, he unilaterally repudiated the Addis Ababa Agreement by dissolving the southern Regional Assembly and imposing his own Council for the Unity of the Southern Sudan.

The rapid deterioration of his popularity was hastened by the introduction in September 1983 of *shariʿa* (Islamic law), which would apply to all Sudanese, Muslim and non-Muslim, in its restrictions on individual behavior and its draconian penalties for petty offenses. This led to criticism from both Muslims and non-Muslims, dismay among the northern Sudanese, and the revival of the civil war in southern Sudan in May 1983, led by Colonel John Garang de Mabior and his Sudan People's Liberation Army (SPLA).

Numeiri declared a state of emergency. His adoption of the Islamist religious policies and stringent economic decrees produced serious riots throughout the cities of northern Sudan. He left Khartoum for the United States to seek additional financial assistance. While in Washington, D.C., on 6 April 1985, he was deposed in a bloodless coup d'état led by his chief of staff, Lieutenant General Suwar al-Dhahab, a Muslim Brother. Numeiri traveled from Washington to Cairo, where he was granted asylum and kept in house confinement for eleven years, until President Bashir allowed him to return to Sudan in May 1999. He received a spontaneous reception at the airport but has been told to live in quiet retirement.

NUMISMATICS

The study of coins and related objects.

Numismatics is an ancillary science to history that seeks to identify coins as to place, date, and government of issue so that the inscriptions, images, and other features of the coins can be used as evidence for political, economic, social, and cultural history. For archaeologists, coins are the most consistently datable evidence. Islamic coins produced in Muslim countries and similar coins sometimes issued by non-Muslims are especially useful for historical research—nearly all were inscribed with their city and date of issue and usually (according to the tradition of Islam) did not have images. This left space for long inscriptions, including the names and titles of the rulers under whom they were issued and something of their religious beliefs.

As a field of study, numismatics began during the European Renaissance as part of the general rediscovery of the classical world. Muslim historians did not use coins as historical evidence, although occasionally an extraordinary issue might be mentioned or described. More often they noted changes in the monetary system of their countries, and some writers, notably al-Baladhuri in the ninth century and al-Maqrizi in the first half of the fifteenth century, wrote brief treatises on monetary history. A few descriptions of mint operation were written as well as a few disquisitions on monetary theory, of which the most interesting is by the great historian Ibn Khaldun of fifteenth-century Egypt.

Some Islamic coins were noted in passing in works on other subjects, but the first study of Islamic numismatics was a twenty-page article in 1759.

The first catalog of an Italian Islamic collection was published by Adler in 1782, followed by Assemani's catalog of a collection in Padua in 1787 and Tychsen's catalog of the Göttingen collection in 1787/88. Catalogs of public and private collections continued to be published throughout the nineteenth century, culminating at the end of the century in the great catalogs of the national collections of England, France, Germany, and Russia. Stanley Lane-Poole's ten-volume set of the British Museum Islamic coins (1875–1890) continues to be a standard reference, partly because of his excellent scholarship and also because it was the only complete catalog of any collection (the British Museum has acquired many more coins since that time). His introductions to the volumes, describing the history and coinage of each Muslim dynasty, are still useful. Lavoix's three massive volumes on the collection of the Bibliothèque Nationale, in Paris, and Nützel's two volumes on the collection of the Königliche Museum, in Berlin, are also standard references. Markov's catalog of the Hermitage collection, in St. Petersburg, is less used because the inscriptions are brief, the work is difficult to find in the West, and it is reproduced directly from his Russian manuscript.

A major impetus to European numismatic research on Islamic coins in the countries from Scandinavia through the Baltic states and into Russia has been the immense quantities of seventh-to-tenth-century Islamic silver coins brought to those countries and buried by the Vikings. Stockholm is one major center for this study, beginning with Tornberg's several catalogs and studies from 1846 to 1870, and culminating with the great *Corpus Nummorum Saeculorum IX–XI,* a collective project to publish (first volume 1975) all the Islamic (and English and German) silver coins of the Viking age that were found in Sweden. The other major center for such study, founded by C. M. Fraehn, was St. Petersburg. His works, beginning in 1808, were important not only for Russian numismatists but for scholars throughout Europe. In particular, he devised a scheme for the arrangement of the Islamic coin-issuing dynasties that was followed, with subsequent modifications, by most Islamic numismatists until recently. Russia's numismatic research was also impelled by Russian interest in the coinage of its newly conquered territories in the Caucasus and central Asia.

Toward the end of the nineteenth century, the leading Russian scholars were Markov, mentioned previously, and Tiesenhausen, who published the only general corpus of Abbasid coins produced to date (a corpus attempts to assemble all known coins of a historical period or place, whereas a catalog is limited to the coins of a single collection or several related collections). Perhaps the most brilliant scholar of the Russian school, Vasmer, was executed in 1938. Numismatic scholarship remained active in the Soviet Union, however, with major centers in Leningrad, Moscow, and the cities of Muslim central Asia.

Islamic numismatics has an early history in Spain, since the coinage of the Arabs there (the Moors) was part of that country's heritage from 711 to 1492. Vives's catalog of all Muslim Spanish issues remains a standard reference. George Miles founded Islamic numismatics at the American Numismatic Society in New York City, which remains one of the principal centers for the field. In 1989, Tübingen University, in Germany, acquired an extremely important collection of Islamic coins and has begun to develop a center for research and training.

The Turks of the Ottoman Empire were the first people of the Middle East to join in numismatic research, publishing in European journals as early as 1862. At the turn of the century, the Müzei Humayun (Imperial Museum) published a series of major catalogs in Ottoman Turkish that rank in importance with the productions of the large European museums. This promising beginning was halted by World War I and the series was never finished. Europeans living in Arab countries produced various works of significance during the first part of the twentieth century, but few Arabs contributed until the demise of the Ottoman Empire and the establishment of some Arab states.

Abd al-Rahman Fahmi produced several important catalogs and studies based on the collection of the Museum of Islamic Art, in Cairo, and Nasir al-Naqshbandi founded a school of numismatists in Baghdad, where the Iraq Museum is a major center for research with a journal devoted to Islamic coins called *al-Maskukat.* The Damascus Museum, in Syria, also has an active collection, and its late curator, Muhammad Abu al-Faraj al-Ush, produced several important works. Recently the Bank al-Maghrib of

Rabat, Morocco, has created a numismatic center and published two major corpora of Moroccan coins by Daniel Eustache. Some public collections were built in Iran in the 1970s, but little has been published there. In Jordan, a center for numismatic research has been established at Yarmuk University with private support; a journal, *Yarmouk Numismatics,* was founded there.

The real explosion in Islamic numismatics began in the 1970s as a result of the new wealth brought by Organization of Petroleum Exporting Countries (OPEC) oil. Many private collectors in the Gulf countries began to bid up the price of Islamic coins, and the interest generated by rising prices led to great collector interest in Europe, the Americas, and Japan. This, as well as the expansion of Islamic studies in the West, has made the field extremely active.

NUQRASHI, MAHMUD FAHMI AL-

[1888–1948]

Egyptian educator and politician.

Mahmud Fahmi al-Nuqrashi was educated in Alexandria and at Nottingham University, England. When he returned to Egypt, he taught school, then was promoted in the administration until he became director of public instruction for Asyut. A Wafd supporter, he became vice-governor of Cairo, then deputy interior minister under Saʿd Zaghlul. Implicated in Sir Lee Stack's murder, he was briefly imprisoned and then cleared.

Nuqrashi held ministerial positions in the Wafdist cabinets of 1930 and 1936 but broke with Mustafa al-Nahhas in 1937. With Ahmad Mahir, he formed the Saʿdist Party, which took part in several non-Wafdist coalition governments. After Ahmad Mahir was assassinated in 1945, Nuqrashi became the leader of the Saʿdist Party and headed cabinets in 1945 and 1946 and from 1946 to 1948. He led the 1947 Egyptian delegation to the United Nations (UN) Security Council to demand that Britain withdraw from Sudan and allow it to unite with Egypt, but he did not gain UN support. When the State of Israel was declared in May 1948 and the Arabs attacked Israel, Nuqrashi reportedly tried to delay committing Egyptian troops, but he was overridden by Egypt's King Farouk. As setbacks to the Arab forces led to rising discontent within Egypt, he tried to outlaw the Society of Muslim Brothers (the Muslim Brotherhood). He was assassinated by a student member of that society on 28 December 1948.

NURI, ABD AL-MALIK

[1921–1992?]

Iraqi author.

Abd al-Malik Nuri, one of the most gifted writers of fiction in modern Iraq, was born in Baghdad. He studied law, graduating in 1944. Concurrently he showed an interest in contemporary fiction, especially that of James Joyce. His first collection of short stories, *Rusul al-Insaniyya* (Baghdad, 1946; Messengers of humanity) contains stories in a naturalist vein, expressing sympathy with the underdogs of

Baghdad society. His second volume, *Nashid al-Ard* (1954; The song of the earth) inaugurated a new phase in the language and techniques of modern fiction in Iraq. Stream-of-consciousness is judiciously employed, and the exterior movement that characterizes earlier stories is replaced by an internal flow of thoughts and emotions.

In 1972, Nuri published a short allegorical play, *Khashab wa Mukhmal* (Wood and velvet); his third and last collection of short stories to date, *Dhuyul al-Kharif* (Autumn's tails), appeared in 1980.

Like many other Iraqi intellectuals, Nuri was attracted to leftist ideas, especially in the 1940s. In subsequent years his political commitment seems to have declined markedly. Like several other Iraqi novelists of his generation (e.g., his close friend Fu'ad Takarli), Nuri wrote the dialogue of his stories in the vernacular of Baghdad rather than in *fusha,* the literary language of Arabic writing. This gave his stories a distinctive local color but made it difficult for readers outside Iraq to understand his works fully. In his drama, however, he used *fusha.*

SASSON SOMEKH

NURI, FAZLOLLAH

[c. 1842–1909]

Iranian religious scholar, important for his objections to Western-style constitutionalism during the revolution of 1906–1909.

After completing his preliminary religious studies in Iran, Nuri traveled to Iraq to study with the great authorities of Shiʿite Islam, such as Mirza Hasan Shirazi. Returning to Iran in 1883, he soon established himself as the most influential religious leader of Tehran, controlling several theological colleges. When the Constitutional Revolution began in 1907, Nuri initially collaborated with his colleagues who favored the cause. He soon began to turn his weight against the movement, however, claiming that its original aim—the implementation of *shariʿa* (Islamic law)—had been subverted by the emergence of unbelievers among the constitutionalists. In protest, in July 1907, Nuri withdrew from Tehran to a nearby shrine where he began publishing broadsheets that denounced constitutionalism as a European import, incompatible with Islam, and he called for a form of constitutional government more in accord with Islam. He objected in particular to concepts such as parliament possessing the right to legislate, the legal equality of Muslims and non-Muslims, and the unqualified freedom of the press. When in June 1908 the parliament was closed down by a royalist coup, Nuri effectively sided with the shah, although he continued to advocate his own concept of an Islamic-style constitution. In July 1909, the parliamentary regime was restored, and Nuri was executed at the end of the month. His violent end caused revulsion even among the constitutionalist religious scholars and contributed heavily to a disillusion with political involvement that was to last several decades.

HAMID ALGAR

NURSI, SAID

[1876–1960]

Influential religious writer in Turkey who advocated the compatibility of Islam and modern science.

Said Nursi was born in a Kurdish village, Nurs, in Bitlis province. He had a traditional religious education with different Sufi orders but was primarily self-educated. He worked to revitalize Islamic faith and Muslim society through raising religious consciousness. In 1907 he went to Istanbul to ask Sultan Abdülhamit II to establish a university in Van that would reconcile scientific reasoning with Islam. He was disappointed in the sultan's response and critical of his use of Islam for political purposes. Nursi developed close ties with the Young Turks movement before the 1908 revolution, but its later political agenda disillusioned him, and he joined the radical Islamic Muhammad Union. He was charged with joining the April 1908 counter-

revolution but was acquitted, and then returned to eastern Anatolia. Nursi shifted his strategy from political to religious activism and focused on individual consciousness through activist piety. During the World War I occupation of eastern Anatolia he fought against Russian troops and became a prisoner of war, serving two years in Russia. He supported the War of Independence under the leadership of Mustafa Kemal (later Atatürk), but eventually became disenchanted with Atatürk's radical secular agenda and withdrew from politics to contemplative writing. Nursi was charged with complicity in the 1925 Kurdish rebellion and sent to exile to Isparta. In the following years he was arrested many times and tried for his alleged political use of Islam. These trials led to further exiles, to Eskisehir (1935), Kastamonu (1936), Denizli (1943), and Emirdag, near Afyon (1944). Only after the Democrat Party came to power in 1950 did his exile come to an end.

Nursi's collection of essays constitute the *Risale-i Nur* (Epistle of light), which seeks to raise religious consciousness to arm Muslims with new moral and scientific ideas to preserve and expand their Islamic identity in society. His disciples are known in Turkish as *Nurcus,* the followers of Nursi. The *Risale-i Nur* initially was copied by hand for distribution because neither Nursi nor his disciples could afford the printing costs, and before the 1950s they also lacked the freedom to print religious texts. The main concern in his writings is the negative impact of positivist ideas in terms of the "moral and spiritual destruction" of Muslim believers, and of society as a whole. His goal was to rebuild the moral charter of Islamic ethics out of the Qurʾan. For Nursi, this moral charter was necessary to control the dangerous appetites of people and to provide for the higher pursuit of human perfection.

NUSAYBA FAMILY

Prominent Palestinian family from Jerusalem that traces its roots in the Old City to ancient times.

According to tradition, the Nusayba family took its name from a woman named Nusayba, who went to the Prophet Muhammad with a delegation of women and complained to him about the unfair treatment they received. Since the Muslim conquest of Jerusalem in the seventh century, the Sunni Muslim Nusayba (also Nuseibeh) family has held the keys of the Church of the Holy Sepulchre. This arrangement emerged during the days of the second Muslim caliph, Umar, who hoped to avoid clashes among rival Christian dominations for control over the church. Although symbolic, the arrangement has provided the Nusayba family a visible role in Christian activities in Jerusalem, which include pilgrimages and visits by Western Christians.

Notable members of the family have included Anwar Nusayba (1913–1986), who received a master's degree from Queen's College in Cambridge. His political career began as a member of the Arab Higher Committee in 1946 and secretary general of the All-Palestine Government in 1948. He was the chief Arab delegate on the Jordan and Israel Mixed Armistice Commission in 1951, and held ministerial posts in Jordan, including defense in 1953 and education in 1954 and 1955. He was made governor of the Jerusalem province from 1961 to 1963 and later served as Jordan's ambassador to the United Kingdom.

Hazem (also Hazim) Nusayba (1922–) studied at the American University of Beirut and later received a Ph.D. from Princeton University in 1945. He became a Jordanian diplomat, serving as foreign minister from 1962 to 1963 and again in 1965, as an ambassador, and as Jordan's longtime ambassador to the United Nations (1976–1985).

Sari Nusayba (1949–) obtained his bachelor's degree from Oxford University in 1971 and his doctorate from Harvard University in 1978. After teaching at Bir Zeit University from 1978 to 1988, he went on to serve as president of al-Quds University in Jerusalem. Sari has also been known for his outspoken and moderate political views. A supporter of al-Fatah, Nusayba helped organize secret talks in 1987 between the Israeli government and

Faysal Husayni, Fatah's leading figure in the West Bank. He has supported the peace process, serving on the steering committee to the Palestinian delegation at the Madrid Conference in 1991 and proposing joint Palestinian-Israeli plans for the future resolution of the conflict.

NUUN MAGAZINE

Arabic-language feminist quarterly magazine published in Egypt by the Arab Women's Solidarity Association.

Members of the Arab Women's Solidarity Organization (AWSA) suggested during its 1988 conference the creation of a magazine that would raise public awareness about women's issues. The first issue of *Nuun* (also *Nun*) appeared on 1 May 1989, and was originally distributed only to AWSA members due to limitations imposed by the Egyptian government on the distribution of materials published by nongovernmental organizations.

The magazine was concerned with the promotion of the general goals of AWSA: equality between the sexes, the advancement of women's rights and the promotion of cooperation between women, and the defense of democracy, development, and independence in the Arab world from a progressive feminist standpoint. *Nuun* aimed to serve as a forum in which Arab women could exchange views and experiences, and to promote a new consciousness about the liberation of Arab women. The name originated from the Arabic expression *nun al-nisa,* which refers to the formation of the feminine plural in the Arabic language. Because of its antitraditionalist, feminist, and progressive stance, the magazine confronted numerous attempts to curtail its dissemination. In 1991 the Egyptian government closed down the magazine for opposing Egypt's role as an ally of the United States during the Gulf War.

O

OASIS

See Glossary

OASIS GROUP

Consortium of three U.S. oil companies in Libya.

The Oasis Group (originally the Conorada Group) is a consortium composed of three U.S. "independent" oil companies: Amerada (now Amerada Hess), Continental (now ConocoPhillips), and Marathon. Bidding independently, the companies won concessions throughout Libya during the first auction of oil rights in 1955. Following the concession awards, the Oasis companies pooled their acquisitions. By 1965, when Libya opened a second round of concession bidding, Oasis was the number two producer of oil in Libya, bringing in more than 300,000 barrels per day.

Beginning in mid-1970, Libya's militant postrevolutionary government threatened to limit or halt oil production in selected concessions unless their owners agreed to higher prices. Two weeks after Occidental Petroleum capitulated to this pressure, the Oasis Group followed suit. The government continued its pressure on foreign oil companies. It nationalized part of Oasis, amounting to 51 percent by 1973.

Meanwhile, U.S. relations with Libya deteriorated steadily, reaching a nadir in 1986 when the United States imposed economic sanctions as part of President Ronald Reagan's declaration of war against terrorism. The Oasis partners were three of only five U.S. oil companies to retain properties in Libya after sanctions were imposed, by that time amounting to only 40.8 percent of Oasis. In 1992 the addition of United Nations sanctions further dimmed prospects for U.S. oil companies hoping to resume operations in Libya.

UN sanctions ended in 1999, following the Libyan government's surrender of suspects in the Lockerbie bombing of Pan Am flight 103. The ending of sanctions brought foreign oil companies back to Libya, but continuing U.S. sanctions prevented U.S. companies from returning. Despite energetic

lobbying, Congress passed a five-year extension of U.S. sanctions in August 2001, and Libya remains on the State Department list of countries accused of sponsoring international terror. Oasis companies continue their efforts to be allowed to resume operations in Libya. They face the prospect of losing their properties if the Libyan government decides that progress in negotiations with the United States to end the sanctions is unlikely to bear fruit. A large number of foreign companies are eager to acquire concessions in Libya and could bid on the Oasis properties if and when they are re-tendered by the Libyan government.

MARY ANN TÉTREAULT

OCCIDENTAL PETROLEUM

U.S. firm active in Libya.

Occidental Petroleum was a small, nearly bankrupt company when it was purchased in 1956 by Armand Hammer, a Russian-born American entrepreneur. Occidental won oil concessions in Libya during the 1965 bidding round and struck oil shortly afterward. Within two years, Occidental had become a major shipper of oil to Europe as a result of the abundance and quality of Libya's oil, and the closure of the Suez Canal during the Arab-Israel War of 1967.

Occidental's dependence on Libya made it a prime target for "the Libyan squeeze." The government of Muammar al-Qaddafi, who took over Libya in a bloodless coup in 1969, ordered Occidental to cut back production for refusing to agree to higher oil prices. Within three months, Hammer agreed to pay 30 cents more per barrel as well as a higher rate of taxes. Other companies followed his lead, touching off the oil price revolution of the early 1970s.

Although Occidental produced oil elsewhere, it kept its operations in Libya despite the nationalization in 1973 of 51 percent of its holdings. In 1985 Occidental sold 21 percent of its Libyan equity to the Austrian firm OMV.

In 1986 U.S. economic sanctions against Libya ordered all U.S. firms operating there to halt their activities. These sanctions were augmented in 1992 by U.N. sanctions imposed in retaliation for Libya's refusal to extradite two suspects in the December 1988 bombing of a Pan American flight over Lockerbie, Scotland. In 1999 U.N. sanctions were lifted, but two years later, the U.S. Congress voted to renew U.S. sanctions for five additional years. Despite Occidental's close ties with high-level members of the U.S. presidential administrations of Bill Clinton and George W. Bush, it was unable to have Libya removed from the State Department's list of countries supporting international terrorism. The Clinton administration did allow Occidental to survey its abandoned production facilities in 1999. Despite its success in getting the Bush administration to expand its support for the drug war in Colombia (which, incidentally, protects its operations there), Occidental has been unable to get permission to resume operating in Libya. As the prospects for the return of U.S. oil companies to Libya continue to dim, Occidental risks the loss of its Libyan holdings. Should the Libyan government ever implement its September 2001 ultimatum that Occidental and the other four U.S. companies with oil interests in Libya resume operations there, they would face the revocation of their concessions.

OIL EMBARGO (1973–1974)

Arab nations' reduced oil production in response to the Arab-Israel War of 1973.

Members of the Organization of Arab Petroleum Exporting Countries (OAPEC) decided in late October 1973 to cut oil production by 25 percent until Israel withdrew to the 1949 armistice lines. OAPEC also decided to cut off oil to the United States and the Netherlands to protest U.S. military and Dutch political support for Israel. Exempted from the boycott were France, Spain, Muslim countries, and Great Britain (conditionally). The remaining countries divided whatever oil was left between them. The result was a fourfold increase in the price of oil. The embargo was lifted in March 1974.

OMAN

Arabian Peninsula sultanate formerly known as Muscat and Oman.

Oman, officially the Sultanate of Oman since 1970, extends some 1,000 miles along the southeast coast

MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

of the Arabian Peninsula, on the Arabian Sea and the Gulf of Oman. Approximately 118,000 square miles, it has a population of 2,018,074 (1993 census). Oman's long-disputed southern border with Yemen and its western borders with Saudi Arabia and the United Arab Emirates, and the maritime northern border with Iran in the Strait of Hormuz, have all been largely negotiated and demarcated.

Physically, Oman in divided into three regions: Ru'us al-Jibal, Oman Proper, and Dhufar. The Ru'us al-Jibal exclave is separated from Oman by a 50-mile corridor of United Arab Emirates territory and is the mountainous tip of the Musandam Peninsula. Oman Proper, including Masira and the Daymaniyat Islands, is characterized by a narrow coastal plain (Batina), a parallel mountain chain (Jabal Hajar) anchored by Jabal al-Akhdar, and along its western limits, a dry gravel plain (al-Dhahira) that blends into the Rub al-Khali desert. Additional

Qabus bin Said became the sultan of Oman in 1970 after ousting his father, Saʿid ibn Taymur. Upon assuming leadership of the country, Qabus instituted a program of extensive modernization, opening up the long-isolated Oman to the rest of the world and adopting a moderate, independent foreign policy. © CORBIS SYGMA. REPRODUCED BY PERMISSION.

desert and gravel plains (Sharqiyya and Wusta) extend to the south. Dhufar, including the Halaniyat (Khuriya Muriyah) Islands, also has parallel regions of a coastal plain, the Qara Mountains, and interior desert. The overall climate is hot, with summer temperatures reaching 120° F; dry inland, the coast is extremely humid. The climate of Dhufar is moderated by summer monsoon rains.

Oman's population is 80 percent Omani Arab, plus a significant South Asian expatriate community. Arabic is the predominant language, but English is used widely. Oman is unique because Ibadi Islam, characterized by its adherence to the principle of an elected religious leader called an imam, is the majority faith. Other Muslims include large Sunni and small Shiʿite minorities, and a small Hindu community. The Muscat capital area, an amalgam of several formerly separate coastal towns adjacent to Muscat, is the major urban center, with 550,000 people. Other cities are Salala, Nizwa, and Suhar.

Oman's modern history began in 1749 when Ahmad ibn Saʿid (1749–1783), founder of its present Al Bu Saʿid dynasty, restored Omani independence from Persian invaders and gained election as imam. Ahmad successfully balanced tribal and religious support while encouraging maritime and commercial expansion, but his successors devoted greater attention to external affairs and abandoned claims to the imamate. Saʿid ibn Sultan Al Bu Saʿid (1804–1856) established the antecedent of today's sultanate by utilizing Muscat as the base for expansion in the Persian (Arabian) Gulf and East Africa to form the western Indian Ocean's leading maritime state. But this proto-sultanate was considered illegitimate by Omanis committed to the imamate ideal. Periodic interventions by the Saʿudis aggravated the internal instability, and Saʿid often ran afoul of his British allies' efforts to suppress both the slave trade and piracy, the latter a consequence of Saʿid's expansionism. With his options in Arabia thwarted, Saʿid made Zanzibar his principal residence in the 1830s. Following Saʿid's death in 1856, the British recognized separate Al Bu Saʿid sultanates in Muscat and Zanzibar. Long-simmering Omani opposition to political conditions peaked with the election of Azzan ibn Qays (1868–1871), leader of an Al Bu Saʿid cadet branch, as imam, and the unification of Oman under his rule. The British government utilized gunship diplomacy to overthrow the imamate and restore the sultanate. Muscat became a thinly veiled British protectorate. Support for the imamate remained strong and continued to grow as a consequence of the disruptive influences of economic globalization in the late nineteenth century. In the early twentieth century the imamate reappeared in Oman's interior but failed to overthrow the British-defended sultanate. In 1920 the rival Omani governments signed the so-called Treaty of Sib and regularized the conditions under which they coexisted for the next thirty-five years. Saʿid ibn Taymur Al Bu Saʿid (1932–1970) signaled Muscat's revival by diminishing British influence, suppressing the imamate, and reuniting Oman in 1957, then initiating exploitation of its oil resources. But his opposition to socioeconomic development led to widespread disaffection, a rebellion in Dhufar, and greater de-

Due to the country's 1,700 km of coastline, fishing is a fast-developing commercial industry in Oman. Since the early 1990s, the government has been investing substantially in this sector, building new harbors, granting fishermen subsidies to purchase boats, and constructing cold stores and processing facilities. © Jon Hicks/Corbis. Reproduced by permission.

pendence on the British. In July 1970 Qabus (also Qaboos) ibn Saʿid deposed his father. The new sultan ended Oman's long diplomatic isolation, suppressed the insurgency in Dhufar, and launched political and economic reforms.

Oman's political system has evolved from autocracy to nascent democratic system during the past thirty years. The Basic Law of 1996 defines the political system, which has two consultative bodies—an elected Majlis al-Shura and an appointed Council of State. There are no political parties. The sultan continues to be the source of all law. An independent judiciary system was implemented in 2001. In principle, women have full political rights, and they do serve in both consultative bodies and senior government positions.

Until the early 1970s Omanis subsisted upon an agricultural and fishing economy. Oil exports began in 1967 and funded modest economic development under Saʿid ibn Taymur. Those efforts accelerated greatly under Qabus after 1970. Modernized agriculture, livestock, and fishery practices still support about 50 percent of the population, but service jobs (35%) in both the public and private sector have increased dramatically. Industry and commerce (15%) provide other livelihoods. Production of petroleum products, both crude oil and natural gas, dominates the economy, accounting for 70 percent of state revenues and 90 percent of exports, mostly to East Asia. Oman also exports copper and chromite, some industrial goods (mostly clothing), and food products, and it imports machinery, transport, and consumer goods, mainly from Japan, Britain, the United Arab Emirates, and South Asia. Since 1970 the government has developed a comprehensive communication and transportation infrastructure and provided modern education through university level and healthcare facilities for the Omani people.

OMAR, MUHAMMAD (MULLAH)

[1959–]

Afghani leader of the Taliban Movement that ruled most of Afghanistan between 1996 and 2002.

Muhammad Omar was born of Pashtun ethnic heritage in the village of Singesar, near Kandahar, and attended a religious school. He started teaching before finishing his degree but when the Soviet Union invaded Afghanistan in 1979, he joined the resistance and commanded a small group of *mujahidin* (also *mojahedin*) (fighters), losing an eye in one of the confrontations with the Soviet military. After the

withdrawal of the Soviet Union, he went back to teaching in Kandahar but was driven to start in 1994 a small movement called the Taliban in order to end the crimes and abuses of local strongmen during the Afghani civil war.

Benefiting from Pakistani endorsement and help and initial Pashtun grassroots support, he managed to recruit a number of former *mujahidin* trained for the most part in the schools set up in the refugee camps in Pakistan and by 1998 had taken control of most of Afghanistan. Affected by a history of war and foreign oppression and motivated by a strong devotion to Islam, the Taliban's ideology was influenced by the Egyptian Muslim Brotherhood and the Pakistani Jamaati Islami, focusing on fighting Western occupation and intervention, and seeking to establish an Islamic State. Reclusive and autocratic, Omar directed the movement with a small number of associates and adopted an increasingly strict interpretation of his cultural and religious heritage, resorting to a repressive control of Afghan society, restricting the work and education of women, and ordering the destruction of ancient Buddhist statues deemed idolatrous.

Though at first mostly concerned with Afghani issues, the Taliban became more involved with pan-Islamism with the increased presence of non-Afghani Muslims, including Osama bin Ladin, who provided them with funds and support. After the 11 September 2001 attacks on U.S. targets, the Taliban refused U.S. demands for the extradition of bin Ladin. As a result, the United States invaded Afghanistan in 2002 and dispersed the Taliban, whose leaders went into hiding.

OMAR MUKHTAR CLUB

Cyrenaican (Libyan) political organization.

The club was founded in 1943 by younger men advocating an independent and unitary Libya. It became increasingly critical of the British military administration and older leaders cooperating with it. By 1949, it had accepted that a federation of the provinces of Cyrenaica, Tripolitania, and Fezzan was an essential feature of Libyan independence.

JOHN L. WRIGHT

OMDURMAN

Historical capital of the Sudan.

Although Khartoum is the official capital of the Sudan, Omdurman is the country's historic, cultural, and spiritual capital. It is also part of a tri-city metropolitan area (with Khartoum and Khartoum North) that forms the country's political, industrial, and commercial heart. Originally an insignificant fishing village on the west bank at the confluence of the Blue Nile and the White Nile, Omdurman became a major city at the end of the nineteenth century when Muhammad Ahmad al-Mahdi made it his military headquarters in 1884. After the Mahdist forces destroyed Khartoum (1885), the Mahdi's successor, Khalifa Abdullah, made Omdurman his capital, and the city grew as the site of the Mahdi's tomb. The Battle of Karari (1898), which took place near Omdurman, marked the defeat of the Mahdist state in Sudan by the Anglo-Egyptian army of Lord Kitchener. Although most of the city was destroyed after the battle, the Mahdi's tomb has been restored and embellished. The Khalifa's former residence is now a museum. Recently, Omdurman has grown rapidly, and has an estimated population of well over two million. The major Sudanese political groups have their headquarters in the city, as do the television and radio networks and the famous soccer and cultural clubs. Although the official headquarters of the army is in Khartoum, the principal military installations are in Omdurman, including those of Sudan's air force.

OPIUM

Papaver somniferum, the air-dried, milky juice obtained from incisions to the unripe seed pods of the poppy plant.

Opium is a powerful analgesic of mixed blessings. It is one of the richest sources of many useful medicinal alkaloids, such as codeine, morphine, and papaverine. But repeated and extensive use of it and its derivatives—most notoriously heroin—are known to cause severe addiction.

The poppy plant grows wild just about everywhere in the plains of Asia and the Mediterranean, and by the late medieval period there are references to opium use in various parts of the Middle East, as both a medicine and a narcotic. The escalation of opium production and trade seems to have been closely linked to burgeoning European colonial and commercial interests in Asia, and official international controls of opium trafficking, cultivation, and consumption are a twentieth-century phenomenon. The United States spearheaded this effort with an international conference convened by President Theodore Roosevelt in Singapore in 1909. This was followed by a series of conventions held in The Hague, culminating in the convention of 1912.

Despite international initiatives undertaken during the twentieth century, Middle Eastern countries such as Afghanistan, Iran, Pakistan, and Turkey still produce a substantial portion of the world's opium supply. In Afghanistan in particular, precarious living conditions and geopolitical developments caused its production of opium to skyrocket during the 1990s, making it the world's largest opium producer. As of 2003, most of the drug of Afghan origin is reportedly distributed northward through the neighboring countries of Central Asia, with Europe as its final destination.

ORAN

Largest urban center in western Algeria (estimated pop. 693,000, 1998).

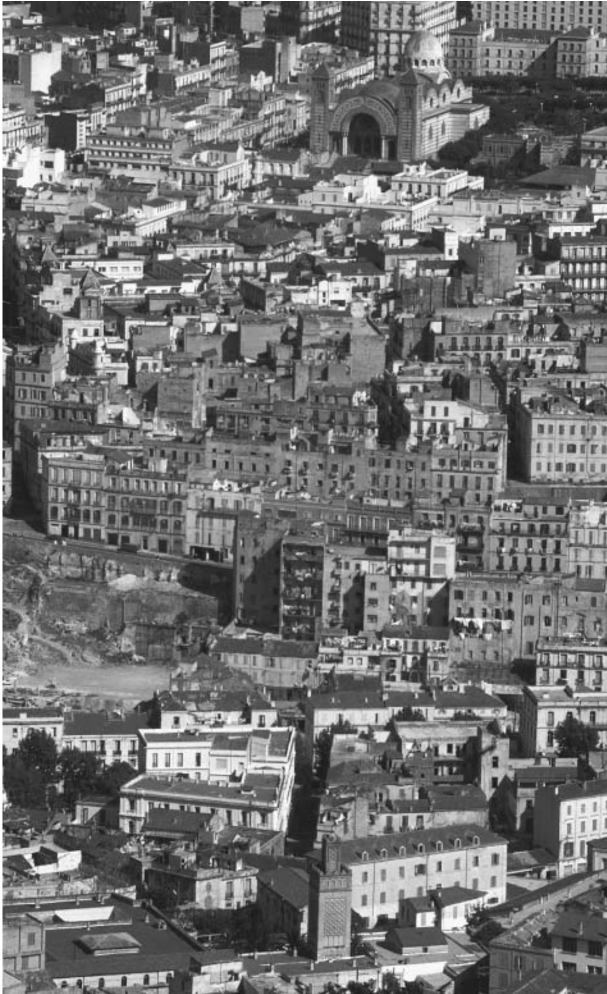
On a bay of the Mediterranean Sea, Oran is the administrative, commercial, and educational hub of the petrochemical complex of Arzew-Bethioua (50 km [30 mi.] to the east).

Oran was founded in 903 C.E. by Muslim merchants from Andalusia searching for an alternative port to Ceuta on the West African gold route. The waters of the Ra's al-Ayn river supported the foundation of a sizable walled city with a citadel (qasaba, or Casbah). Muslim CORSAIRS succeeded the merchants at the end of the fourteenth century, then were ousted in 1509 by Christian Spaniards. The Ottomans fiercely opposed Spain's expansion and incorporated Algeria into their empire, but it was only in 1791 that Turkish troops wrested Oran from the Spanish.

The French entered western Algeria in 1831 and occupied Oran, which had some 3,000 Muslim and Jewish inhabitants. European settlers far outnumbered Muslim rural migrants prior to World War I; it was only after World War II that the indigenous population rose to about 40 percent of a total of 413,000 inhabitants.

In the 1840s a canal system and a safe port with breakwaters were constructed. Administrative, commercial, and cultural functions shifted from the Muslim city to the east, along an east-west axis. The Muslim population was forcibly removed in 1845 to its own quarter in the south, resulting in de facto segregation of European settlers and Muslims well into the twentieth century. An urban streetcar system and a main train depot were in place around the turn of the century, an airport was constructed in the 1920s, and paved streets appeared by the 1930s.

During the colonial period Oran was the leading exporter of agricultural goods (red wine, olive oil, soft wheat, citrus, artichokes, tobacco, esparto,



Oran, Algeria's second largest city, was founded in 937 C.E. and is the birthplace of Nobel prize–winning author Albert Camus. **© MARC GARANGER/CORBIS. REPRODUCED BY PERMISSION.**

wool, and leather). There was little interest in industrialization; apart from mostly small construction and food-processing enterprises, two steelworks were financed by foreign capital. Trade disruptions during World War II encouraged the establishment of import-substitution industries (bottles, containers, cement, and hardware), but these struggled to survive after the war. The Plan of Constantinople (1958), with which France sought to jump-start industrialization in response to the Algerian War of Independence (1954–1962), created jobs in public works projects but did not enlarge the industrial sector.

After independence Algeria's government embarked on a gigantic program of state industrialization. In 1967 the Oran region was selected to become the main center for the exportation of hydrocarbons and the production of industrial chemicals. These basic industries were supplemented with factories for agricultural machinery and consumer goods. Private investment went primarily into the textile, plastic, food-processing, metalworking and footwear sectors. By the early 1980s the industrial base had grown to 112 state and 284 private businesses with 10 or more employees and total workforces of 32,000 (state) and 10,000 (private).

When the European settlers left Algeria in 1962, they abandoned close to two-thirds of the housing stock of Oran. By 1970 housing was scarce, however, and during the 1970s and 1980s some 12,000 new apartments (about a quarter of what was needed) were constructed. In spite of the periodic razing of shantytowns and the forced return of the inhabitants to their villages of origin, by the mid-1980s about one-third of the rural population had permanently settled in Oran and the other cities of the industrial region. The rural migrants who flooded the city found jobs primarily in construction, low levels of administration, retail, private industry, and the informal sector. Jobs in state industries typically were open only to qualified older workers.

Given the lack of convenient housing, the commute between residence and workplace often is as far as 30 miles (50 km), mostly by public bus or company van. Nearly half of Oran's industrial workforce works outside the city. The new suburbs require additional trips for shopping and entertainment, given the continued concentration of retail shops, services, and entertainment in the city center. On the other hand, many local and regional administrative offices, a new technical university, and vocational colleges have been moved to the suburbs, evening out the distribution of traffic.

In the center of Oran there has been a proliferation of bars, most of which sell coffee and tea. During the interwar period, they were the birthplace of rai, a music of bedouin immigrants that has become Algeria's rock 'n' roll. Also, the mixture of apartment buildings and small commercial and crafts establishments, typical of European inner cities prior to World War II, is still largely intact. Traditional food, clothing, and kitchenware shops

are clustered in downtown Oran, and Medina Jadida (a kilometer to the south).

In downtown Oran, upscale residences, professional practices, airline offices, banks, restaurants, and furniture, jewelry, perfume, leather, and record shops coexist with less expensive apartment buildings, retail businesses, and bars as well as mechanical and electrical repair shops (the latter mostly on the periphery). The inner city is no longer the place where established families and rural migrants are neighbors, as was the case in the 1960s, but they still share the same neighborhoods.

The cancellation of the first national elections in 1992 and the return to de facto military rule slowed the process of devolution. In the struggle between the military and Islamists during the 1990s, Oran experienced less violence and terrorism than did Algiers; yet the paralysis was severe. Security under President Abdelaziz Bouteflika, inaugurated in 1999, has improved.

ORDINANCES ON VEILING

Prohibitions on women in Afghanistan.

The pamphlet *Shariʿa Ordinances on Veiling (Fatawa-i-Sharaʿi dar Mawrid-i-Hijab)* was issued in 1994 by the Afghan Supreme Court *(Stera Mahkama)* during the Islamic Government of Burhanuddin Rabbani (1992–1996). The pamphlet was signed by sixteen members of the Bureau of Jurisdiction and Deliberation *(Riyasat-i-Ifta wa al-Mutaliʿat)* of the Supreme Court. The last paragraph reads in part: "The Afghan nation fought for fourteen years and suffered enormous losses in order to free the country from the hands of the atheist [Communists] and reinstate Divine Ordinances. Now that this objective has been fulfilled by the Grace of the Almighty, . . . we urge that God's ordinances be carried out immediately, particularly those pertaining to the veiling of women. Women should be banned from working in offices and radio and television stations. Girls schools, which are in effect the hub of debauchery and adulterous practices, must be closed down. . . ." The ordinances required women to cover their face outside the home and not to leave their home without having a compelling reason and first obtaining their husband's permission. The wearing of noisy shoes, anklets, perfume, or any other embellishment that might attract a man's attention was prohibited. These ordinances were precursors to similar decrees issued later by the Taliban.

ORGANISATION ARMÉE SECRÈTE (OAS)

A movement of French colons and renegade army officers that sought to block Algeria's independence.

The Secret Army Organization (Organisation Armée Secrète; OAS) was created in February 1961 under the leadership of Colon activists Pierre Lagaillarde and Jean-Jacques Susini. Its military leadership was provided by Generals Raoul Salan, Marie-André Zeller, Edmond Jouhaud, and—for a short time—Maurice Challe.

In April 1961, under Challe's leadership, the OAS attempted a coup in Algiers that appeared for a short time to threaten the metropolitan government as well. When the coup failed, the movement adopted a policy of undermining government authority by bombings and by assassinations of officials, of liberal intellectuals, and prominent Muslim leaders. As the Evian negotiations proceeded, the organization switched to a campaign of terror against Muslims in general, and finally, after France agreed to independence, to a "scorched earth" policy of massive destruction of infrastructure. On 17 June 1962, the OAS signed a cease-fire with the Front de Libération Nationale (FLN: National Liberation Front).

ORGANISATION MAROCAINE DES DROITS DE L'HOMME

Moroccan human rights organization.

The Moroccan Human Rights Organization (OMDH) was founded in 1988 by a group of Moroccan professionals to address the problem of human rights violations in the kingdom. Prior to the establishment of the OMDH, the Istiqlal Party had founded the Ligue Marocaine de Défense des Droits de l'Homme (Moroccan League for the Defense of Human Rights) in 1972, and the Union Socialiste des Forces Populaires (Socialist Union of Popular Forces, USFP) had established the Association Marocaine des Droits de l'Homme (Moroccan Association of Human Rights) in 1979. The OMDH planned its first congress for May 1988. Initially banned by the government because of its "extremist" membership, the OMDH was finally allowed to hold its inaugural assembly at Agdal (Rabat), in December 1988. The presidency has been held by Omar Azziman (1988–1989); Khalid Naciri (1990–1991); Ali Oumlil (1991–1992); Abdelaziz Bennani (1992–2000), and Abdellah Oualladi (2000–).

Among the goals of the organization are the diffusion of knowledge about individual and collective human rights at the civil, political, cultural, and socioeconomic levels; the protection of human rights; the reinforcement of the rights of the individual during the judiciary process; the consolidation of an independent judiciary and its impartiality; the consolidation of democracy and the rule of the law; and the promotion of international solidarity in the defense of human rights. The OMDH is a member of the International Federation of Human Rights, based in Paris; the International Commission of Jurists, based in Geneva; the World Organization against Torture, based in Geneva; and the Arab Organization of Human Rights, based in Cairo. The organization periodically cooperates with international and regional organizations, such as the Association Marocaine des Droits Humains, the Ligue Marocaine pour la Défense des Droits de l'Homme, and the Comité de Défense des Droits Humaines.

The OMDH's initial focus on abuses of prisoners' rights led the government to release over one thousand prisoners by the end of 1989. In response to published OMDH reports, King Hassan II founded the Conseil Consultatif des Droits de l'Homme (Consultative Council of Human Rights). The creation of a Ministry of Human Rights in November 1993 was interpreted as a new attempt on the part of the government to neutralize the work of the existing human rights organizations. Disturbances in late 1990 sparked renewed activism on the part of OMDH in 1991, which continued into 1992 and 1993. To its earlier agenda of concern with issues of torture, the disappeared, and prison conditions, the OMDH added passport denials, violations of travel freedom, an independent judiciary, and press controls as points of contention with the government.

The OMDH publishes a magazine, *al-Karama,* and OMDH materials often appear in the publications of other organizations, such as the Rassemblement Nationale des Indépendants (National Rally of Independents), the former Communist paper *al-Bayan* (The clarion), and USFP newspapers.

In February 1993, Mohamed Mikou, secretary-general of the Conseil Consultatif des Droits de l'Homme (CCDH), recommended that the government cooperate with human rights organizations and that King Hassan ratify the U.N. Convention on Torture, to which the king agreed on 14 June 1993; the United Nations acknowledged the Moroccan ratification on 21 July 1993. Amnesty International's April 1993 report on Morocco stated that five hundred people had "disappeared" in Morocco since 1963. It named secret detention centers and provided a list of forty-eight Sahrawi prisoners who had died in detention between 1976 and 1990.

The death of King Hassan II and the enthronement of King Muhammad VI in July 1999 was received with a certain level of hope by the progressive sectors of the country. In 1999, the OMDH called on international human rights organizations to form a fact-finding mission to investigate human rights abuses in the Lahmada refugee camps of Tinduf, stronghold of POLISARIO. In 2001, the OMDH denounced governmental repression against the Moroccan Association National des Diplomés Chômeurs (Association of Unemployed College-Degree Holders). Following a month of street mobilizations, the OMDH joined other Moroccan human rights organizations in denouncing the "disappearance" of individuals suspected of having links

with al-Qaʿida in December, 2002. The OMDH has opposed the sentencing to three years of imprisonment of Moroccan journalist Ali Mrabet, director of the French language publication *Demain* and its Arabic counterpart *Duman,* for the publication in a Catalonian newspaper of several cartoons critical of the Moroccan monarch; the organization continues to demand a full investigation of the "disappearances" and during the 1990s and beyond has focused on the abuses in Moroccan prisons. It has also criticized human rights abuses in the Republic of Tunisia under the Zayn al-Abidine Ben Ali government. In January 2003, the OMDH issued a statement condemning the U.S. military attack against Iraq as an action that contravened international law.

ORGANIZATION FOR THE LIBERATION OF THE OCCUPIED SOUTH

Yemeni independence group, founded 1965.

Created through a merger of organizations and leading personalities in North and South Yemen (including Muhammad Ahmad Nuʿman, Abdullah Ali Asnaj, and Muhammad Ali Jifri), the Organization for the Liberation of the Occupied South (OLOS) was originally a rival of the National Liberation Front (NLF) but later joined elements of the NLF to create the Front for the Liberation of South Yemen (FLOSY). Not long thereafter, the NLF insisted on its independence, and the two organizations were again rivals. Members of the al-Jifri family later became prominent in the operations and governance of the Yemeni Socialist Party, until exiled after the Yemeni civil war of 1994.

ORGANIZATION OF AFRICAN UNITY (OAU)

An alliance of African states (known as OAU) formed for mutual support in economics, self-government, and security.

In May 1963, the OAU was founded at Addis Ababa, Ethiopia, by thirty-two African states, including Algeria, Tunisia, Morocco, Egypt, Libya, Djibouti, Mauritania, Somalia, and Sudan. Devoted to issues such as colonialism, economic development, and mutual security, the OAU, like most multistate coalitions, has had limited success in transforming its ideals into reality. Although the OAU was an active supporter of liberation movements in Mozambique, Angola, and Zimbabwe, it had difficulty providing more than moral and diplomatic encouragement; in intra-African conflicts, such as that over the Western Sahara, the OAU has found itself in a quandary. The Arab states of the Maghrib (North Africa) have been and continue to be its ardent members.

Egypt's President Gamal Abdel Nasser pressured the OAU to his side in his stand against Israel, so through the 1960s, the OAU moved gradually toward the Arab camp. In 1971, the OAU issued a strong resolution criticizing Israel's handling of the Palestinian issue. By the end of 1973, all but four (Lesotho, Malawi, Swaziland, and Mauritius) of the OAU member states had broken relations with Israel. The Camp David Accords between Egypt and Israel (1979) caused a slow process of renewal of diplomatic relations with Israel—Zaire was first in 1982.

ORGANIZATION OF ARAB PETROLEUM EXPORTING COUNTRIES (OAPEC)

Organization formed to promote cooperation among Arab oil-producing states.

The Organization of Arab Petroleum Exporting Countries (OAPEC) is a regional organization, established in 1968 by Saudi Arabia, Libya, and Kuwait, and modeled after the older Organization of Petroleum Exporting Countries (OPEC). The other members are Algeria, Bahrain, Egypt, Iraq, Qatar, Syria, and the United Arab Emirates. Egypt was suspended between 1979 and 1987. Tunisia withdrew in 1986. The goals of OAPEC are to promote the oil interests of member countries, to enhance cooperation among them in production, marketing, and associated industries. It aims also to carry out joint ventures to diversify their economies, to participate in stabilizing the oil market, and to provide suitable circumstances for capital and experience to be invested in the member countries. Although OAPEC was not intended as a political instrument, one of the critical decisions taken by member states in 1973, at its Kuwait headquarters, was the oil embargo following the Arab-Israel War. Since that time, OAPEC oil and gas world share has been steady at about 25 percent, with significant increases mainly by Saudi Arabia and Kuwait to compensate for the two-thirds reduction of Iraq's share since 1990. OAPEC proven oil reserves have not increased. By 2010 OAPEC oil production may increase by 50 percent to 30 million barrels per day, to meet about one-third of world needs. OAPEC capacity utilization, already high at 85 percent, may increase to above 90 percent. As of 2003, OAPEC share of worldwide natural gas production stood at 35 percent; it may double by 2010.

EMILE A. NAKHLEH
UPDATED BY KARIM HAMDY

ORGANIZATION OF PETROLEUM EXPORTING COUNTRIES (OPEC)

Group formed in 1960 to protect economic interests of oil-exporting countries.

In the early 1950s, international oil companies (IOCs) developed the posted price system to help host governments estimate oil revenues in advance. Posted prices were accounting devices that host governments used to calculate the amount of taxes the companies would pay under industrywide fifty-fifty profit-sharing agreements. Despite normal fluctuations in the real prices at which crude oil was traded, posted prices were not adjusted, and fixed posted prices became an industry norm. When competitive pressures forced the IOCs to reduce posted prices unilaterally in February 1959, an immediate outcry arose from the affected host governments.

OPEC's Founding

The first Arab Oil Congress met later that year. Delegates from oil-exporting countries came to plan concerted action against the oil companies. Structural differences among national oil industries made coordination among these countries difficult technically. Conflicts of interest over investment and production shares made coordination difficult politically. Competition between Venezuela and Middle Eastern exporters was heightened by the 1959 posted price cuts. British Petroleum set lower prices

in parts of the Middle East than in Venezuela in hope of breaking the As-Is Agreement, a mediated connection between world oil prices and the U.S. market. Venezuelan oil thereby became even less competitive, requiring further downward price adjustments and convincing oil exporters that their responses to the companies had to be closely coordinated.

Political conflicts ended the Oil Consultation Commission, the first producer attempt to institutionalize coordination. But when the IOCs imposed yet another round of price cuts in August 1960, five oil-exporting countries set aside their political differences to salvage their economic interests. Venezuela, Saudi Arabia, Iran, Iraq, and Kuwait formed the Organization of Petroleum Exporting Countries (OPEC) in September 1960. OPEC's first resolutions included calls to restore posted prices to their pre-February 1959 levels and to stabilize oil prices by regulating production.

The U.S. government refused to recognize OPEC, forbade U.S. oil companies to negotiate with it, and imposed trade sanctions on OPEC members to discourage other countries from joining. This suited the IOCs, which saw an advantage in continuing their accustomed practice of dealing with host governments one at a time. OPEC responded creatively, developing joint negotiating positions with the understanding that any member able to gain an additional advantage on its own should do so. Any gains would constitute a new floor for bargaining in the next round. During its first ten years, this "leapfrogging" earned OPEC members incremental gains in oil revenues, which both increased OPEC's international stature and attracted new members to the organization.

Perhaps OPEC's most significant contribution to the oil revolution was its support and implementation of "participation," the gradual nationalization of foreign-owned oil properties. Most members did not follow the participation strategy to the letter, but years of discussion provided an opportunity to prepare for the responsibilities that would come when they became full owners of their oil industries. This accomplishment was overshadowed, however, by OPEC's successful utilization of leapfrogging to achieve rapid oil price increases, by Libya in 1970 and afterward by alternating pressure exerted first by oil-exporting countries in the Mediterranean and then in the Persian Gulf. This set the stage for OPEC's takeover of crude oil pricing when the 1973 Arab–Israel War, with its well-designed Arab oil embargo, provided the opportunity.

Pricing Strategies

OPEC's success in taking over oil pricing created new problems for the group. Oil-importing countries, led by the United States, demonized OPEC as the primary cause of worldwide economic decline. Inside OPEC, structural differences among member industries led to disagreements over pricing strategies. Low-price-preference members such as Saudi Arabia, with small populations and huge oil reserves, favored moderate oil prices to discourage consumers from seeking alternative fuels. High-price-preference members like Algeria, with large populations, wanted high prices so they could pay for ambitious development programs, while their small reserves offered no incentive to support pricing policies that would sustain the long-term attractiveness of oil as a fuel. Some members with large reserves, like Iran and Libya, also favored high prices. Iran had a large population and an ambitious development program, but Libya's preference was politically motivated by Libya's desire to assert its autonomy among its OPEC peers as well as its independence from western domination.

Price positions could be flexible, however. In 1978, the threat of revolution pushed Mohammad Reza Shah Pahlavi of Iran to seek allies among his neighbors. Iran joined most of the Arab gulf countries in pushing for the adoption of a long-range moderate pricing strategy to replace what had, until then, been an ad hoc method of setting oil prices. The new system became obsolete almost before it was agreed upon, however; it was superseded by pressures that doubled oil prices in one year thanks to panic buying during the Iranian Revolution. Predictably, oil demand fell, but the availability of new, non-OPEC supplies from the North Sea and elsewhere allowed major importers to shift their purchases, making OPEC the marginal supplier of crude oil to the world market.

Market weakness in the early 1980s caused OPEC to focus on oil production sharing as a strategy for controlling oil prices by regulating crude

supply. A voluntary production-sharing plan was launched in 1982 but, as had happened to the voluntary oil import quota in the United States during the 1950s, producers ignored it. A mandatory quota system was introduced in March 1983, and crude prices were reduced for the first time since OPEC had assumed its price-setting role in the hope of stimulating consumer demand. An Austrian accounting firm was hired to monitor member production in order to discourage cheating on the quotas.

The quota system had many flaws. Even small producers were required to accept a quota, prompting Ecuador to leave OPEC in 1993 to escape its quota obligations. Saudi Arabia, OPEC's largest producer, refused to accept a formal quota that it said was an unacceptable infringement on its sovereignty. This marginalized Saudi production within OPEC as crude from many sources flooded the market and total demand for OPEC oil declined. Without a quota and its implied entitlement to produce a defined share of OPEC crude, the Saudis had to accept the informal role of swing producer, one which would vary its production to satisfy market demand remaining after other producers had supplied their quota amounts. As OPEC's swing producer, however, Saudi Arabia would have to absorb more than a proportional share of demand reduction. This already unpleasant situation would be complicated in the Saudi case by its heavy dependence on associated natural gas, which led to shortages of fuel for power generation when oil production there fell to below 3 million barrels per day in mid-1985. Shortly afterward, Saudi Arabia decided to produce oil with only its own needs in mind. Global supplies burgeoned and oil prices plummeted, dipping below $10 U.S. per barrel in June 1986. Although oil prices recovered, they have yet to return to pre-1985 highs.

Political Divisions

Political conflicts continued to divide OPEC members during this time. The first Gulf War, between Iran and Iraq (1980–1988), so split the organization that OPEC could not agree on a new secretary-general when it was Iran's turn to nominate one of its nationals. An assistant secretary-general, Fadhil al-Chalabi of Iraq, served as acting secretary-general from 1983 to 1988. Hostility among members during this period made meetings acrimonious and reduced the usefulness of OPEC as a forum for coordinating policy.

The end of the Iran–Iraq War provided an opportunity to mend intra-OPEC relations, but the second Gulf War, which began when Iraq invaded Kuwait in 1990, brought new turmoil to oil markets and to OPEC itself. Before Iraq invaded Kuwait, world oil prices were depressed and virtually every OPEC member with excess production capacity was producing over its quota. Unfortunately for Kuwait, it was the only country small enough and close enough to suffer Iraq's wrath directly. After Kuwait was liberated in February 1991, U.N. sanctions against Iraq, imposed in retaliation for the invasion, ended legal oil exports from Iraq. Starting in December 1996, Iraqi income from smuggled oil was augmented by earnings from the U.N. Oil-for-Food Program, which supervised the marketing of some 3.4 billion barrels of Iraqi crude between the start of the program and March 2003, when the United States and Britain invaded Iraq. The United Nations also ensured that the Iraqi share of oil-for-food income was spent only to meet humanitarian needs. The rest went for war reparations (25 percent after December 2000, 30 percent before), the cost of U.N. weapons inspections (0.8 percent), and administrative and operational costs for the program (2.2 percent).

Overproduction by OPEC members remains a problem during periods of ample crude supplies, but political turmoil and consequent supply disruptions in member countries, from Venezuela and Nigeria to Iraq and Indonesia, have masked the problem of excess capacity by creating or even merely threatening war-related shortages. Yet members able to do so are expanding production capacity, which will add to conflict over production ceilings and quota allocations as growing supplies from Iraq come to the market.

Overall, OPEC's difficulties in managing and stabilizing the international oil market continue to be beyond member control. Following the collapse of the Soviet Union, the new Central Asian countries offered attractive terms to potential investors in oil and gas exploration and development. Now rising production from this region adds to pressures on the price structure. The need for capital invest-

ment is another axis of competition pitting OPEC against Central Asian and non-OPEC African producers, leading many OPEC members to reconsider their positions on nationalization. IOC operations are expanding in virtually every OPEC nation, while the occupation of Iraq could leave a privatized Iraqi oil industry as one of its legacies.

OPEC's gravest failure has been its concentration on oil market conditions rather than on the economy as such. Consequently, it has failed to develop strategies to prepare members for a post-oil world. As long as prices are low and supplies seem secure, oil will remain a competitive fuel in global markets and the deep restructuring necessary to wean member economies from their addiction to oil revenues can be avoided. Yet whether post-Saddam Iraq will be reintegrated into OPEC or not, relying on hydrocarbon revenues as the mainstay of their economies leaves members vulnerable not only to the day-to-day vagaries of the market but also to the impact of long-term structural change. The almost exclusive concentration of governments, press, and public on oil pricing actually prevents OPEC from devoting significant intellectual and financial resources to other aspects of industry development, including research on alternative sources of energy for export and domestic use. Kuwait's early research into solar power, for example, was quickly abandoned as its oil reserves expanded and reliance on oil revenues seemed less risky than devoting substantial resources to bringing a competing energy source to markets where it already had an advantage. Yet with concerns about pollution and global climate change encouraging consumers to shift out of hydrocarbons, OPEC members' acute dependence on oil and gas revenues leaves their economic security as vulnerable to changes in market structure as they are to political conflict.

ORGANIZATION OF THE ISLAMIC CONFERENCE

Organization founded in 1972 by Islamic states to promote their cooperation by coordinating economic, social, scientific, and cultural activities.

As a response to the August 1969 burning of the Aqsa Mosque in Jerusalem, the first Islamic Conference of Kings an d Heads of State was convened in Rabat in September of the same year. This summit resolved that Islamic nation states should foster "close cooperation and mutual assistance in the economic, scientific, cultural, and spiritual fields." As a first step toward facilitating such cooperation, the summit established the Islamic Conference of Foreign Ministers, which eventually ratified the charter of the Organization of the Islamic Conference (OIC) at its third meeting in March 1972. Membership in the OIC is based on a commitment to the United Nations and its declarations on human rights, as well as an affirmation of the fundamental principles of mutual equality, respect for sovereignty, and the peaceful settlement of disputes among member states. The charter also enumerates the following principal objectives: the promotion of global Islamic solidarity; the eradication of racial discrimination and colonialism; the liberation of Palestine; support for the struggles of oppressed Muslim peoples everywhere; and a dedication to international peace, security, and justice.

Four specialized institutions have been established within the framework of the OIC: the Islamic Development Bank; the Islamic Educational, Scientific, and Cultural Organization; the Islamic States Broadcasting Organization; and the International Islamic News Agency. The general secretariat of the OIC has permanent observer status at the United Nations and maintains its headquarters in Jidda, Saudi Arabia. The Doha Declaration (November 2000) called for an end to the occupation

in Palestine and invited those member states that had established relations with the State of Israel to "put an end to all forms of normalization with Israel until it genuinely and accurately implements U.N. resolutions relevant to the issue of Palestine." The Kuala Lumpur Declaration on International Terrorism, issued during the extraordinary session of the Islamic Conference of Foreign Ministers in April 2002, rejected "any attempt to link Islam and Muslims to terrorism" and condemned acts of international terrorism, emphasizing "the importance of addressing the root causes of international terrorism." The following states were members of the OIC as of August 2003: Afghanistan, Albania, Algeria, Azerbaijan, Bahrain, Bangladesh, Benin, Brunei Dar es Salaam, Burkina Faso, Cameroon, Chad, Comoros, Cote d'Ivoire, Djibouti, Egypt, Gabon, Gambia, Guinea, Guinea-Bissau, Guyana (Republic of), Indonesia, Iran, Iraq, Jordan, Kazakhstan, Kuwait, Kyrgyzstan, Lebanon, Libya, Malaysia, Maldives, Mali, Mauritania, Morocco, Mozambique, Niger, Nigeria, Oman, Pakistan, Palestine, Qatar, Saudi Arabia, Senegal, Sierra Leone, Somalia, Sudan, Surinam, Syria, Tajikistan, Togo, Tunisia, Turkey, Turkmenistan, Uganda, United Arab Emirates, Uzbekistan, Yemen, and Zanzibar. Three countries held observer status: Bosnia and Herzegovina, Central African Republic, and Thailand.

ORIENTALISM

The study and exploration of the Orient by Occidentals.

The word *orientalism* derives from the Latin *oriens,* which means "east." The idea of a cultural division between East and West, between the Orient and the Occident (from the Latin *occidens,* which means "west"), goes back to Greco-Roman times, where in texts as diverse as Herodotus's *Histories* or Varro's *On the Latin Language* distinctions were made between Asia and Europe, which corresponded to Orient and Occident. Throughout the Middle Ages, there was a growing perception of a distinction between a civilization that was the heir of the Judeo-Christian, Greco-Roman traditions (the West) and one that was the heir of the Indian and Chinese religious traditions (the East). The Islamic civilization of the Middle East fits uncomfortably into this polarity.

Even though the East and West, whatever cultural labels one may assign to them, were in contact through trade, exploration, and cultural and intellectual exchange and military activity from early Roman times, and even though they shared economic, cultural, intellectual, artistic, and religious influence, the idea of orientalism took root during the late Middle Ages, with the Portuguese voyages of discovery during the late fifteenth century, and developed through the nineteenth century. From that point on, Western explorers, scholars, writers, artists, and, ultimately, colonial administrators undertook to study, represent artistically, govern, and economically exploit the East. Traditional orientalism focused on the literary and scholarly results of that enterprise and included grammars, dictionaries, encyclopedias, texts, translations, travel accounts, novels, and paintings. The most important study of this process is that of Raymond Schwab. The artistic extension of orientalism is the school of orientalist painters, a group of nineteenth-century, mostly academic, painters, predominantly French, English, and German, who focused on real and imagined scenes of Middle Eastern exoticism in their work.

The field of orientalism changed radically with the 1978 publication of *Orientalism,* by Edward W. Said. Said, although focusing solely on the Islamic Middle East, exposed orientalism as a colonialist enterprise, "a Western style for dominating, restructuring, and having authority over the Orient" (p. 15). His work has exercised a vast influence over the field of cultural studies and has been applied by scholars in the other fields of traditional orientalist studies, including India, China, Japan and Southeast Asia.

JOHN M. LUNDQUIST

ORIENTALISTS, INTERNATIONAL CONGRESS OF

A group whose meetings were devoted to the spread of learning in Oriental subjects.

Initiated in Paris in 1873, these periodic meetings of scholars—dedicated, as one scholar put it, to "the propagation of the knowledge of the History, Languages and Civilizations of Oriental people among Western Nations"—represented the academic profession of Orientalism as it was recognized in nineteenth-century Europe. Few non-Europeans attended the early meetings, and no meetings were held outside Europe until the fourteenth congress was held in Algiers in 1905. Papers on Asian and African topics of all sorts, but primarily focusing on philology and archaeology, were presented in sessions organized by geographical region or language family. The small size of the academic community concerned with Asia and Africa is indicated by the fact that the number of members, on all topics combined, remained in the hundreds throughout the nineteenth century. Some members, however, attended as representatives of national Oriental societies. Congress proceedings were normally published. The work of the International Congress of Orientalists is carried on by the International Congress of Asian and North African Studies.

ORMANIAN, MAGHAKIA

[1841–1918]

Armenian clergyman and scholar; Armenian patriarch of Constantinople, 1896–1908.

Born in Istanbul, Ormanian was sent to seminary in Rome (1851) and was subsequently ordained a Roman Catholic priest. In 1877 he left the Roman Catholic Church to join the Armenian Apostolic Church. He was ordained a celibate priest in 1879 by Nerses Vazhapetian, Armenian patriarch of Constantinople, who employed his linguistic skills to prepare appeals to embassies and foreign governments concerning the situation of Armenians in the Ottoman Empire. In 1880 Ormanian was elected primate of Erzurum, and in 1887 he became a teacher of theology at Echmiadzin in Russian Armenia. Banished by the czarist government for his political views, in 1889 Ormanian became the dean of the seminary of Armash, near İzmir.

Ormanian was appointed Armenian patriarch of Constantinople in 1896, just after a series of mass killings attributed to the policies of Sultan Abdülhamit II had been unleashed against the Armenians of the Ottoman Empire. As religious leader of the Armenians, Ormanian steered a cautious course during an era of repression. This brought him much animosity from radical elements in the Armenian community who opposed policies of the sultan. In 1908, during the Young Turk revolution, he was removed from office.

Thereafter, Ormanian devoted his time to writing one of the great works of Armenian historical scholarship. His three-volume *Azgapatum* (National history; 1912 to 1927) is an exhaustive Armenian ecclesiastical history. In 1914 Ormanian entered the Armenian monastery of St. James in Jerusalem. He was exiled to Damascus in 1917 by the Young Turk regime and died a year later in Istanbul.

ROUBEN P. ADALIAN

ORMSBY-GORE, WILLIAM GEORGE ARTHUR

[1885–1964]

British colonial official, also known as Lord Harlech.

In 1918 William George Arthur Ormsby-Gore went to Palestine as assistant political officer for the

Zionist Commission. In April of that year he defended the Balfour Declaration, but urged restrictions on Jewish immigration and land purchases because of growing indigenous impoverishment. In a speech in London in August 1918, however, Ormsby-Gore asserted that the indigenous population west of the Jordan River was not Arab and that the real Arab national movement lay outside of Palestine with Prince Faisal of the Hijaz (now part of Saudi Arabia), who was soon to be named king of Syria.

Ormsby-Gore became the British member of the Permanent Mandates Commission (1921–1922). As Britain's colonial secretary from 1936 to 1938, he rebuffed advocates of the partition of Palestine, and retired from office amid the controversy.

ORTAOYUNU

The Ottoman popular theater-in-the-round.

Sometimes described as "karagöz come to life," Ortaoyunu has frequently been compared to the commedia dell'arte because of its improvisational character. An urban entertainment, it was traditionally an open-air presentation performed by an all-male cast in a space encircled by the audience (women separated from men). Performances also were presented in taverns, palaces, and eventually theaters. Scenery was minimal: a chair or table to indicate a shop or booth, and one or two folding screens painted to represent a building, a forest, and so on.

A small group of folk musicians supplied music for dancers who appeared before the main presentation. This was followed by a burlesque dialogue between the two main characters, Pişekâr and Kavuklu, who correspond closely to the shadow play figures Hacivat and Karagöz, respectively. The play might be chosen from the special ortaoyunu repertory or, like karagöz, retell the plot of a well-known romance (Leyla and Mecnun, Ferhat and Şirin, etc.). The presentation was always open in form, however, and rather than a plot, might offer various scenes that entertained while imparting a human or political message.

At the beginning of the twentieth century, the improvisational aspect of ortaoyunu inspired the tuluât theater, but attempts (including the staging of Western plays) failed to preserve the Turkish theater-in-the-round as a viable form of entertainment.

OSIRAK

A French-produced nuclear reactor sold to Iraq.

Osirak was originally developed in 1964 as a material-testing reactor. The purchase contract was signed on 17 November 1975; on 13 January 1976, Iraq signed a contract with Italy to purchase "hot cells" used to separate plutonium, which would make the reactor capable of producing fissionable material for an atomic bomb. Construction began in the late 1970s on the outskirts of Baghdad and was supposed to be completed by late 1981. Osirak was destroyed by Israel's air force on 7 June 1981; part of a smaller reactor survived.

OSLO ACCORD (1993)

Agreement between Israel and the PLO negotiated secretly in Oslo, Norway, and signed at the White House on 13 September 1993.

In 1993 Israel and the Palestine Liberation Organization (PLO) agreed to recognize each other, and signed a Declaration of Principles (DOP) providing for Palestinian self-government in the West Bank and Gaza Strip for five years.

Backdrop to the Accord

The agreement resulted from a convergence of events and trends that created an optimal opportunity for peace between the two parties. The first Intifada (uprising) by the Palestinian population of the West Bank and Gaza against Israel's occupation, which began in December 1987, empowered the PLO, as the Palestinians' representative, to seek a diplomatic settlement with Israel. In 1988 PLO chairman Yasir Arafat recognized Israel, accepted United Nations Security Council Resolution 242, and renounced terrorism. The PLO could not immediately capitalize on these concessions, however, because Israel did not reciprocate. The PLO's position deteriorated due to the collapse of the Soviet Union, which left the PLO without superpower support. Furthermore, the Israeli government of Yitzhak Shamir adamantly refused to deal with the PLO or to make territorial concessions for peace. Believing that Iraq could help the Palestinian cause, Arafat sided with Saddam Hussein during the Gulf Crisis (1990–1991), and thereby lost the financial support of the Gulf states.

The collapse of the Soviet Union, mass Jewish immigration to Israel, and the destruction of Iraq's army in 1991 enhanced Israel's security, but the Intifada convinced the Israeli Labor and left-of-center parties that continued occupation and repression were deemed costly in terms of international isolation and domestic discord, whereas granting self-government to the Palestinians was gradually viewed as less objectionable.

Moreover, more and more Palestinians and Israelis and their leaders concluded that there was no military solution to their conflict. The PLO had galvanized Palestinians and gained international recognition, but its armed struggle against Israel failed to liberate an inch of Palestine. Even though Israel was considered to be the fourth strongest military power in the world, it could not destroy the PLO or subdue a civilian population of two million in the occupied territories. Both sides concluded that mutual recognition and sharing historic Palestine was the only viable option.

U.S. president George H. W. Bush and Secretary of State James Baker III thus had an unprecedented opportunity to broker peace in the Middle East by arranging the Madrid Peace Conference (1991) between Israel and the Arabs, including the Palestinians. When Prime Minister Shamir appeared to be stalling, Bush and Baker withheld a guarantee for a $10 billion loan for Israel. In the next elections in Israel, the public brought to power a moderate coalition, headed by Yitzhak Rabin, with a "territory for peace" policy. But eleven sessions and twenty-two months after Madrid, the negotiations proved unproductive. The PLO regarded the framework for talks as unfair, and did not consider the United States or its middle-range officials to be "honest brokers." Israel realized that Palestinian negotiators from the occupied territories were unwilling or unable to negotiate independently from the PLO.

Norway's foreign ministry arranged for a private, secret channel in Oslo for two Israeli scholars, Yair Hirshfeld and Ron Pundak, who were in touch with Yossi Beilin, Israel's dovish deputy foreign minister, and a PLO economist and aide to Chairman Arafat, Ahmad Sulayman Qurai (Abu Ala). Negotiations began in the winter and spring of 1993. When they progressed, Israel's foreign minister, Shimon Peres, took charge, and convinced security-conscious Prime Minister Rabin to support the agreement. Israel and the PLO initialed two sets of documents in Oslo in late August: an exchange of letters of mutual recognition and the Declaration of Principles on Interim Self-Government Arrangements (DOP).

The Accord and Its Reception

On 9 September 1993 Arafat signed the PLO letter recognizing Israel's right to exist, accepted Security Council Resolution 242, renounced the use of terror and violence, and pledged to remove clauses in the Palestinian Covenant calling for the elimination of Israel. By recognizing Israel, the PLO renounced the Palestinian people's claim to 78 percent of historic Palestine, in which they had lived for centuries. The next day Rabin signed

Pictured left to right are Israeli prime minister Yitzhak Rabin, U.S. president Bill Clinton, and Palestinian leader Yasir Arafat. In 1993, the three leaders met in Washington to sign the Israeli-PLO peace accord. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

Israel's letter, recognizing the PLO as the representative of the Palestinian people and declaring Israel's intention to negotiate with the PLO. Implicit was Israel's recognition of Palestinian demands for self-determination and independence in the West Bank and Gaza Strip.

The second document, the DOP, which was signed at the White House on 13 September 1993, outlined a five-year plan for Palestinian self-government, starting with Israel's withdrawal of troops from the Gaza Strip and the West Bank town of Jericho, and the transfer of authority over economic development, education and culture, taxes, social welfare, and tourism. This was followed by elections of an interim self-government council. After the second year, negotiations would begin on Jerusalem, refugees of 1948, Jewish settlements, and borders.

Most Israelis and Palestinians were initially approving. Palestinians were disappointed that the most fundamental issues were deferred, but supported the agreement because there was no credible alternative. There were, however, vocal rejectionists in both camps. In Israel, leading figures in the Likud Party such as Ariel Sharon and Benjamin Netanyahu stated that should they come to power, they would not honor the agreement, and Jewish settlers warned of violent resistance to the removal of settlements. Palestinian radicals initiated deadly violence against settlers and soldiers. Negotiations over implementation of the interim agreement dragged on until another was signed in Cairo in May 1994. Then Israel's troops withdrew and Palestinian police took over in Jericho and the Gaza Strip. Violence by both sides and postponements diminished support for the Oslo Agreement, yet the parties managed to reach a number of partial agreements,

including Oslo II, signed at the White House on 28 September 1995. Oslo II set the stage for Israel's further withdrawal from the West Bank and for Palestinian elections.

With each new agreement, the opponents of a peaceful settlement intensified their violence. HAMAS and Islamic Jihad conducted a number of deadly terrorist acts against Israelis. In Israel, the Likud Party increased its inciteful rhetoric against Prime Minister Rabin, providing Jewish extremists with the climate that resulted in his assassination in November 1995. The new prime minister, Shimon Peres, moved forward with the peace process, but was defeated in May 1996 by the Likud's Benjamin Netanyahu, who capitalized on popular security anxiety caused by a series of deadly terrorist bombings in Jerusalem and Tel Aviv. Netanyahu initially declined to meet Arafat, and refused to implement the Rabin government's agreement on troop withdrawal. He pursued a hardline policy—much to the disappointment of the administration of U.S. president Bill Clinton—that included the construction of a controversial Jewish settlement at Har Homa (Jamal Abu Ghunaym) on the outskirts of Jerusalem. Although Netanyahu signed in October 1998 the Wye River Memorandum, which mandated further Israeli withdrawal, Oslo continued to unravel. The election of Ehud Barak of the Labor Party gave some hope for a peaceful resolution of the conflict, but negotiations between Barak and Arafat, mediated directly by Clinton at Camp David in July 2000, and indirectly elsewhere, broke down.

The failure of diplomacy and the worsening conditions in the territories resulted in the Aqsa Intifada, which began on 29 September 2000, the day after Ariel Sharon and an Israeli security force of 1,000 visited al-Haram al-Sharif, or Temple Mount. Arafat probably acquiesced to, if not encouraged, the violence in the hope of achieving diplomatic gains he could not get at the negotiating table, but by doing so he broke his promise made at Oslo to end the attacks on Israel. Barak was voted out of office in early 2001 and replaced by Sharon, a hardline member of Likud and an opponent of Oslo. The spiral of violence that followed resulted in the collapse of the Oslo peace process.

Both sides blamed the other for the breakdown. Palestinian officials blamed Clinton and Barak, even though Clinton offered far-reaching parameters on 23 December 2000 that moved the process forward, and Barak made groundbreaking concessions to the Palestinians at Taba, Egypt, in January 2001. Israeli and some U.S. officials, especially Barak and Clinton, blamed Arafat, who had championed a two-state solution for three decades but could not accept the offer at Camp David, which would not have led to a viable, contiguous, and independent Palestine state. The media and the public in the Arab world, Israel, and the United States adopted their respective official one-sided versions of the breakdown. Balanced accounts—such as those offered by Deborah Sontag of the *New York Times,* Clinton's advisor Robert Malley, and Charles Enderlin, a French-Israeli television journalist—reveal complex causes and indicate that responsibility for the failure can be shared three ways.

Despite its detractors, the accomplishments of the Oslo Accord are considerable. For the first time in a century, most Arabs and Jews agreed on a solution—a two-state solution. And, after a decade of negotiations from Madrid to Taba, both sides had narrowed their differences on most of the key issues.

PHILIP MATTAR

OSMAN, HOUSE OF

The longest ruling dynasty in Islamic history, 1300–1922.

The Osmanli dynasty was named for Osman I, the Turkish leader in whose time (ruled c. 1299–1324) the foundations were laid for a state that later became the Ottoman Empire. The name was corrupted to Othoman, which became Ottoman in European usage. Succession went to the most successful son, often as a result of civil war or at least the threat of it. To prevent further strife, the new sultan was obliged to kill all his brothers and their sons. From the early 1600s, lateral succession became possible; and by the end of the 1600s, seniority had become the rule.

During the reign of the thirty-sixth sultan, Mehmet VI Vahidettin, the Ankara government abolished the sultanate (1 November 1922) and, on 3 March 1924, also the caliphate—the office of the head of Islam—which had been assumed by Ottoman sultans. Abdülmecit II, the last caliph and thirty-seventh ruler, and all members of the dynasty were immediately sent into exile, from which they were to be allowed back into the Republic of Turkey fifty years later—thirty years for female members of the family.

OTTOMAN EMPIRE

This entry consists of the following articles:

OVERVIEW
CIVIL SERVICE
DEBT

OVERVIEW

Multiethnic, multireligious, monarchical Muslim empire founded by the Ottoman (or Osmanli) Turks in the late thirteenth century; it survived until after World War I, when, as one of the losing Central powers, it was formally dissolved by the peace treaties of 1918–1922. Mustafa Kemal (Atatürk) overthrew the last sultan in 1922.

In the thirteenth century, as the power of the Seljuk Turks declined, the Ottoman Turks began to absorb their small states. In the fourteenth century, the Ottomans took over some of the Byzantine Empire's territories and, late in that century, several Balkan states. Under Selim I and Süleyman I (the Magnificent), the Ottomans brought Hungary and much of the Balkan peninsula, parts of Persia (now Iran), and the Arab lands under their rule. In 1453, they conquered Constantinople (now Istanbul) and made it their capital. During the sixteenth and seventeenth centuries, the Ottoman Empire was at its peak and controlled much of southeastern Europe, the Middle East, and North Africa, comprising some 1.2 million square miles (1.9 million sq. km) with some sixteen million people. That area would today include parts or all of the following: southeast Hungary, Albania, the six republics that were pre-1991 Yugoslavia (Serbia, Montenegro, Croatia, Macedonia, Slovenia, and Bosnia and Herzegovina), Greece, Bulgaria, Romania, southern and Caucasian Russia, Turkey, Syria, Iraq, Lebanon, Israel, Jordan, Egypt, Saudi Arabia, Kuwait, the United Arab Emirates, Libya, Tunisia, and Algeria.

By 1914, only about 11,000 square miles (17,700 sq. km) remained of the Ottoman Empire in Europe of the 232,000 square miles (373,000 sq. km) controlled during the sixteenth century, with 613,000 square miles (986,000 sq. km) remaining overall—about half the territory of the sixteenth century. That greatly reduced territory included only what is now Turkey, the Arab states, and Israel until the empire's official dissolution (1918–1922).

The empire's early capitals included Bursa and Edirne (formerly Adrianople), but Constantinople (Turkish, Konstantiniye) served as its capital from its capture in 1453 until 1923, when the Republic of Turkey declared its new capital at Ankara. Constantinople was by far the largest Ottoman city, with about 400,000 population in 1520 and some 1 million in 1914. Other major Ottoman cities included Belgrade, Aleppo, Cairo, and Damascus. After 1800, cities such as İzmir (Smyrna), Beirut, and Alexandria rose to prominence—products of increasing nineteenth-century economic ties with Europe.

The empire's administrative divisions changed with time. By the nineteenth century, most provinces *(vilayets)* were divided into districts *(sanjaks)* and subdistricts *(kazas),* each of which had a number of village areas *(nahiyes).*

The Sprawling Empire

Geography and climate varied greatly, since the empire ranged over three continents, including much of what is today's Middle East. Mountains of modest height cut by corridor valleys and heavy forests characterized part of the European provinces, while in Anatolia, narrow coastal plains and high interior plateaus with little vegetation rose to rugged snowcapped mountains in the eastern part of the peninsula. In the Syrian province, similarly narrow coastal plains bordering the Mediterranean rose to the mountains of Lebanon. To the east, highlands yielded to desert and, beyond, to the alluvial lowlands of Mesopotamia (now Iraq). A spine of mountains branches south from the Syrian province, just inland—with one range heading into the Sinai peninsula and the other emerging along the western edge of the Arabian peninsula, reaching the greatest height in Yemen. The great rivers of the empire included the Danube, Tigris, Euphrates, and Nile—but navigable rivers were comparatively rare in both the European and Middle Eastern areas of the empire.

Climatic conditions ranged from the cold heights of eastern Anatolia to the heat of the Egyptian, Arabian, and North African deserts, including the sweltering heat and humidity of the coast of the Persian (Arabian) Gulf. Almost everywhere rainfall was sparse—a fact of Ottoman life.

The empire had a wide base of natural resources; and much of its expansion can be understood as an effort to seize and control areas rich in various resources. For example, the Ottoman conquest of Serbia derived, in part, from an interest in its silver mines. As the empire lost territory in the nineteenth and twentieth centuries, it also lost the rich diversity of its resource base. The Ottoman state bent the economy to meet its imperial needs before any others. Edicts directed mineral, agricultural, and industrial products to satisfy both the imperial military and the bureaucracy.

The Empire's Agricultural History

Agriculture was the basic economic activity, providing a livelihood for the majority of Ottoman subjects through the centuries—although the produce varied according to time and place. Some areas were not cultivated during periods of political disorder but were tilled again with the guarantee of political security. During the sixteenth century, the areas under cultivation were so extensive that they remained at peak production until the post-1830 period of increasing governmental recentralization. The fertility of the soil was legendary in some areas, such as the Nile delta or the Aydin river valley in western Anatolia. More commonly, however, the soil was not rich or, when fertile, lacked sufficient rainfall. In many areas, agriculture was a precarious enterprise; crop failures and famines were normal in the cycle of life. Consequently, to survive, many families mixed animal raising and handicraft production with farming. Landholdings were usually small, a pattern preferred by the state, which sought direct relations with the farming families (and fiscal and political control over them). Large estates became more common after 1750, as agriculture became increasingly commercial—particularly on new land being brought into cultivation. Hence, great estates were most common in the eastern Syrian and Iraqi regions that were settled or resettled in the later nineteenth century. Such large holdings grew cereal grains; generally, overall grain output increased because of rising market opportunities. Vineyards and olive orchards flourished in the Mediterranean provinces of the empire, and cotton grew in the Macedonian, Anatolian, Syrian, and Egyptian regions—but their yields fluctuated greatly over time. Forest products were common to the Balkan regions and

The church of Hagia Sophia in Istanbul, late 1800s. Commissioned by the emperor Justinian in the sixth century, the church was built in only five years (532–537 C.E.) and stands as one of the greatest examples of Byzantine architecture. © MICHAEL MASLAN HISTORIC PHOTOGRAPHY/CORBIS. along sections of the Anatolian Black Sea coast, while dates were harvested in the Iraqi areas.

Industrial production first served both international and domestic markets but, after about 1800, internal demand predominated. Textiles, leather making, and food processing were of great importance; urban-based enterprises were highly visible, but rural manufactories were extensive and important. Until the nineteenth century, guildlike bodies *(esnaf)* in the cities and towns played important roles in organizing and controlling production. They worked in an uneasy cooperation with the state, helping it to obtain goods in exchange for government support of esnaf privileges.

Significant economic changes in the Ottoman Empire resulted from the rising economic, political, and military power of Europe in the late eighteenth and nineteenth centuries. Until about 1750, the Ottoman economy was autarkic—that is, relatively self-sufficient—by government design. It imported comparatively little and exported a variety of textiles and other manufactured goods, both to the East and the West. Thereafter, the export of many finished products decreased, but the export of agricultural products and raw materials, such as cereal grains and raw cotton, increased—almost exclusively to Western markets. Ottoman industry received a rude shock from the competition of European manufactured goods. Ottoman textile manufacturers then restructured their enterprises along nonguild lines with unregulated production and lower wages, so most of the craft guilds lost power and ceased functioning. Using machine-made thread and other low-technology imports, many nineteenth-century local textile makers survived and even increased production for the expanding domestic market. In addition, several new international export industries emerged that employed tens of thousands of poorly paid workers, notably in raw-silk reeling and carpet making.

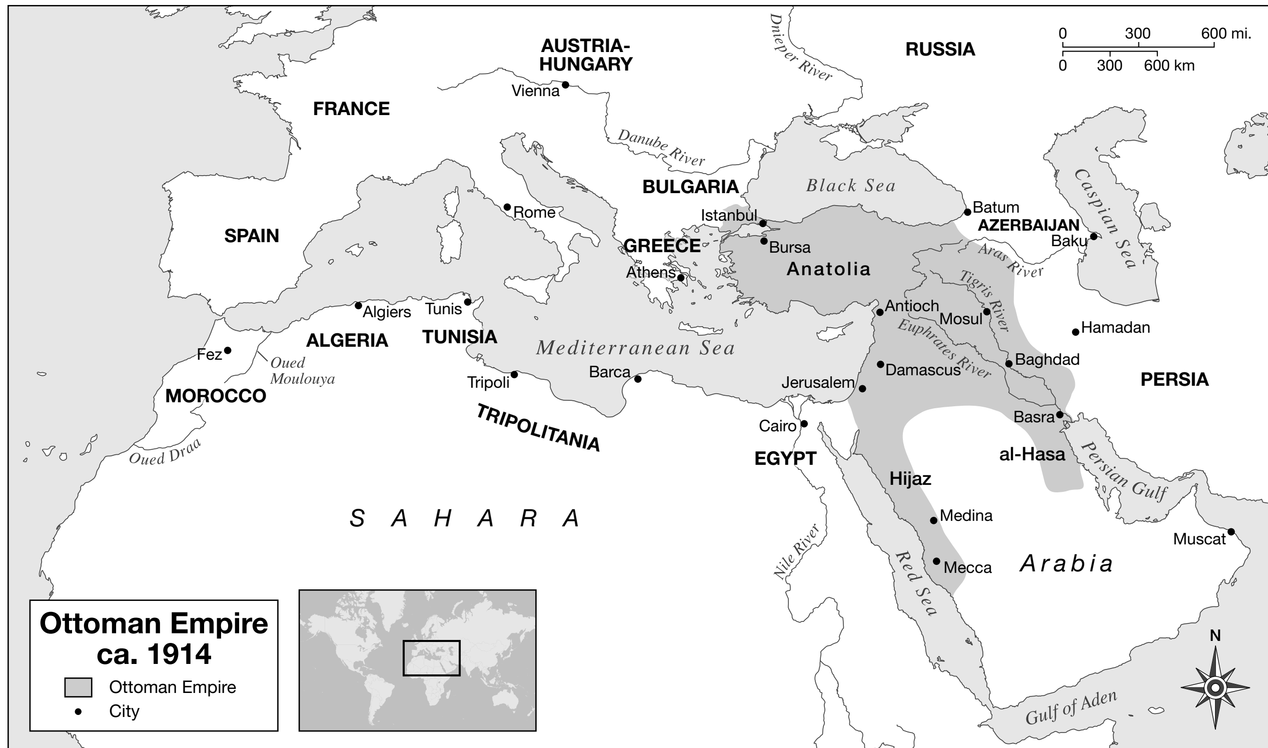
The Challenges of Ethnic Diversity

The ethnic and religious makeup of the Ottoman Empire was diverse and intermingled. As if to lead by example, the Ottoman ruling family was truly international, counting dozens of ethnic groups among its ancestors. The relative size of the empire's ethnic groups is very difficult to determine, since the pertinent statistics were manipulated for use as weapons by nineteenth-century nationalism. Various ethnic groups sought their own states or attempted to deny the claims of competitors. In the era before territorial shrinkage, speakers of Turkish and of the Slavic languages formed the two largest groups in the empire. The largest ethnic groups were the Turks, Arabs, Greeks, Slovenians, Serbs, Albanians, Ruthenians, Wallachians, Moldavians, Croatians, Armenians, Laz, and Kurds. The official language of the empire was Ottoman Turkish, an administrative language consisting largely of Turkish grammar, with Turkish, Arabic, and some Persian vocabulary. The elite classes spoke and wrote in Ottoman Turkish, exchanging official correspondence and sharing a high culture, which gave the empire a unity that was superimposed over its diversity. The religious makeup was equally diverse. Until the nineteenth century, when districts with large Christian populations broke away, most Ottoman subjects were Christians of various denominations, usually of the Orthodox church, the descendant of the Byzantine state church. There also were Armenian and Greek Orthodox Catholics, Maronites, and those belonging to smaller Christian denominations; there was as well a diverse but small population of Jews. Within the Ottoman Islamic community, adherents of Sunni Islam slightly out-numbered adherents of Shiʿism. During the nineteenth century, Islam became the predominant religion in the empire, just as Turks became the dominant ethnic group. By 1914, about 83 percent of the population practiced Islam.

During the four centuries before 1850, the Ottoman state had sought to organize the various ethnic and religious communities into a smaller number of religious nations, called millets. Under the leadership of its own religious authority, each millet organized, funded, and administered its own religious and educational institutions. The Greek



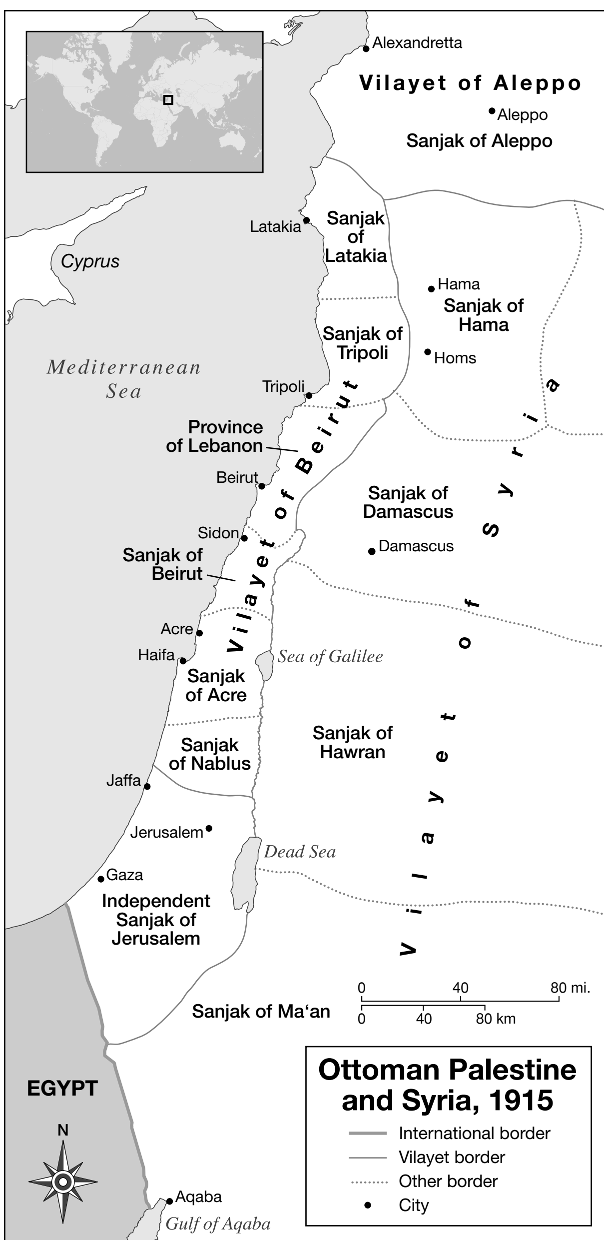
Map by XNR Productions, Inc. The Gale Group.

Orthodox millet, for example, ran schools and churches for the lay population, as well as seminaries to train its clergy. The sultan, who had descended from Osman, the fourteenth-century founder of the dynasty, ruled the empire throughout its history. Until 1453, the sultans shared power with other important families, as the first among equals. Thereafter, they theoretically were without peer, although power passed from the sultan to members of his government after about 1640. Until the end of the seventeenth century, power rested with the central state in the capital; during the eighteenth century, power became dispersed among provincial notables. A centralized state emerged during the early 1800s—based on internal evolutionary developments, as well as borrowings from Western models. Struggles for control of the state between the reforming sultans and the reforming bureaucrats swung in favor of the bureaucracy between 1839 and 1878 and then back to the sultan until 1908. After the revolution of the Young Turks in July of 1908, the last sultans reigned rather than ruled.

During the nineteenth century, the Ottoman Empire lost its Balkan territories to rising European nationalism and imperialism—especially pan-Slavism as instigated by Russia. Various Balkan ethnic groups—the Serbs, Greeks, and Bulgarians—abandoned, with great-power sponsorship, the Ottoman multicultural formula and opted for nation-statehood, which aspired to ethnic homogeneity but did not achieve it. Government efforts to create a competing Ottoman nationality foundered in the face of exclusivist nation-state identity. Efforts to eradicate differences among its remaining subjects were similarly unsuccessful. Take for example the state program to abolish the millets; fearing a loss of influence, various religious authorities—both Christian and Muslim—as well as many European statesmen opposed the move.

Increased Westernization Shapes the Empire

At the same time, ongoing domestic-reform efforts produced a revitalized, powerful Ottoman state that reasserted its presence in an unprecedented fashion. A series of reform decrees—the Hatt-i Şerif of Gülhane (1839) and the Hatt-i Hümayun (1856)—presented the path that Ottoman leaders intended



MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

to follow. Ottoman military forces successfully adopted Western weapons, strategy, and tactics and crushed local notables, nomadic tribes, and other domestic challenges to the central regime. The state apparatus became marked by increasing centralization, specialization of function, and ever greater size. Knowledge of Western languages, administrative practices, and culture became critical to advancement in the political and, finally, social spheres. The government, for example, founded a vast network of secular, nonsectarian, Westernizing schools to inculcate the new values. In the realm of popular culture, entertainment forms of Western origin—the theater and novels—became increasingly popular, as did European-style clothing and manners. Nineteenth-century Ottoman experiences foreshadowed those of third-world states of the twentieth century in yet other ways. After increasing taxation to finance the expensive civil and military changes, the Ottoman Empire ultimately resorted to borrowing vast sums from abroad, which eventually resulted in virtual bankruptcy and a partial foreign takeover of the Ottoman economy. Toward the end, despite centuries of success, the empire could not compete with the explosion of twentieth-century European economic, military, and political power; after participating as a member of the losing Central powers in World War I, it was partitioned.

OTTOMAN EMPIRE: CIVIL SERVICE

Government administrative service exclusive of the military.

In the sense of an administrative system that recruits and promotes officials on merit and operates by impartially applied rules, civil service is an anachronistic concept almost anywhere (except China) before the mid-nineteenth century. Even after that time, to apply the concept to the Ottoman Empire is questionable, in that the regulatory apparatus, although created, was used to thwart its impartiality.

For centuries, however, the Ottoman Turks had had a branch of the ruling elite whose functions were civil—in the sense of being neither military nor religious. Until the end of the eighteenth century, this group is best understood as scribes. Ottomans referred to them with terms like *kalem efendileri* ("men of the pen" or "of the offices"), or the corresponding abstract noun *kalemiye.* The scribes conducted the government's correspondence and kept its financial accounts and records on land tenure. Nineteenth-century reforms expanded and changed this branch of service into something like the civil services then emerging in Europe. From the late 1830s on, it also was referred to with a different term, *mülkiye,* having implications associated with land tenure and sovereignty. Particularly relevant to local administration, this term came to refer generally to civil officials, memurin-i mülkiye.

The state of the late eighteenth-century scribal service shows where this change began. It had a core of fifteen hundred men, serving in Istanbul in the Land Registry *(Defterhane-i Amire),* the grand-vizierial headquarters that Europeans called the Sublime Porte *(Bab-i Ali),* and the Treasury *(Bab-i Defteri).* Considering that scribes also served in military organizations or on provincial governors' staffs, an outside total can be estimated at two thousand. While it may seem odd that so few could suffice for a large empire, the Ottomans did not historically use scribes as administrators. In the years of conquest and through the sixteenth century, for example, local administration had been largely in cavalry officers' hands. By the eighteenth century, an able man might rise through scribal ranks to provincial governor, a kind of proto-foreign minister *(reis ül-küttab),* or grand vizier. Such careers were exceptional, and an ordinary scribe's role remained that of secretary *(katib).*

Many traits of the scribal service indicated its obscurity within the ruling elites. It had as yet no recruitment system beyond familial and patronage networks. It lacked its own form of training, other than apprenticeship. Except for those raised to heights that exposed them to elite factional politics, career patterns bore imprints of the guild tradition and the Sufi ethos that permeated it. To serve as a scribe was the chief practical application of the adab-tradition—the worldly, literary aspect of the learned Islamic culture. Building on an ancient Middle Eastern cultural elitism, Ottoman scribes had elaborated their craft to a high point in which mastery of stylistic conventions became more important than clear communication.

The shift from scribal to civil service began under sultans Selim III (1789–1807) and Mahmud II (1808–1839). In response to defeat by Russia during the last quarter of the eighteenth century, Selim's "New Order" *(Nizam-i Cedit),* the first attempt at comprehensive governmental overhaul, included both reform of existing agencies and the first Ottoman attempt to create European-style systems of permanent consular and diplomatic representation. In 1821, Mahmud II created the Translation Office *(Tercüme Odasi)* at the Sublime Porte, which trained young Muslims as translators. Following his abolition of the janissary infantry (1826), administrative reform accelerated. In the 1830s, Mahmud II revived the diplomatic corps and reorganized government departments as ministries. To support his efforts at centralization, he also laid the bases of civil personnel policy by reforming conditions of service. He created a new table of civil ranks, abandoned the practice of annual reappointment *(tevcihat)* to high office, replaced old forms of compensation (such as fee collecting) with salaries, founded the first secular civil schools, and enacted laws eliminating some insecurities inherent in officials' historical status as the sultan's slaves. These reforms climaxed with the Gülhane Decree, which

proclaimed "security for life, honor, and property" and equality for all—civil officials included.

Several weak sultans followed Mahmud II. This enabled top civil officials—their position in relation to the ruler now much secured, and their importance increased by their role in negotiating with the European powers on whom the empire was becoming dependent—to run the government until another strong sultan emerged. The period so opened became known as the Tanzimat (the Reforms, 1839–c. 1871). The center of power shifted from the palace to the Sublime Porte. As civil officialdom's Westernizing diplomatic vanguard grew in power, a new line of promotion appeared, running from the Translation Office through the embassies to the post of Foreign Minister and the grand vizierate. Westernizing policy changes followed en masse, as the Ottoman government grew in size and in its impact on people's lives. Civil officials now did take responsibility for local administration. Westernizing legal reform and the creation of secular courts gave them judicial roles. Modern census and population registration systems required Ottomans to face civil officials to get identity papers and passports. The teachers in the new secular schools were civil officials. Out of the Westernist official elite a literary vanguard emerged, too; from it the region's first Western-style political protest movement, the Young Ottomans (Yeni Osmanlilar), in turn arose to exploit the tensions created by rapid change.

Between the death of Grand Vizier Ali Paşa (1871) and Sultan Abdülhamit II's accession (1876), the Tanzimat political configuration broke up. Abdülhamit shifted power back to the palace, making it the hub of a police state. Administrative reform continued along the lines charted during the Tanzimat, however. For example, Abdülhamit's reign became a growth period for education, publishing, and public works, especially railroads. In addition, his reign became the most important since Mahmud II's for the development of personnel policy for civil officials. The process began with creation of the personnel records system (*sicill-i ahval,* 1877). A decree on promotion and retirement followed, in 1880, introducing the idea of a retirement fund *(tekaüd sandiği)* financed by salary deductions. Commissions were set up to supervise the appointing of civil officials. With these, the civil personnel system assumed the general outlines of a modern, merit-based civil service, except that Abdülhamit manipulated the system, using it rather as a tool by which to control his officials. Under him, the growth of civil officialdom continued, as he pressured the politically conscious to accept office, in which they would become dependent on him. Ultimately, he had about 35,000 career officials and an equal number of hangers-on in civil service.

With the revolution of the Young Turks (Jön Türkler) in 1908 came a bold start in purging civil officialdom and streamlining administrative agencies. Despite gains like the 1913 provincial administration law, World War I and the dismemberment of the empire overcame these efforts. Still, in terms of elites, legislation, and organization, the Republic of Turkey inherited enough so that the early development of its administrative system has been described as evolutionary, rather than revolutionary.

Ottoman Empire: Debt

Borrowing in the Ottoman Empire by the government and within the private sector.

Throughout most of its history, from 1300 to 1922, the government of the Ottoman Empire relied on short-term loans from individual lenders as well as currency debasement and short-term notes to resolve fiscal shortfalls. On occasion, the Ottoman government just confiscated the monies needed, either from the lenders or from state officials. In the private sector, individuals, who only sometimes were professional moneylenders, lent their surplus to others. Both public and private borrowers commonly paid interest for the privilege. Both public and private borrowing persisted until the end of the empire—although confiscation became rare after

about 1825. Very important changes occurred in the forms of borrowing, within and outside the government, beginning about 1850, when foreign capital became available and assumed an unprecedented role.

In many ways, the international borrowing experiences of the Ottoman Empire during the nineteenth century anticipated those of today's third-world nations. The Ottoman economy was competing in a world dominated by the industrialized nations of the West, which possessed superior military technologies and political and economic power. Ottoman survival strategy required large, modern military forces and state structures. As both were exceedingly expensive, government expenditures mounted accordingly. Unlike the economies of many of the countries with which it was competing—notably Britain and France—the Ottoman economy remained essentially agrarian and incapable of generating the funds needed for increasingly complex and costly military and civilian structures. Thus, the government borrowed to modernize and survive.

Acutely aware of the dangers, Ottoman statesmen resisted international borrowing until the crisis provoked by Ottoman participation in the Crimean War, 1854–1856. International loans then quickly succeeded one another, on decreasingly favorable terms. These loans were private, the creditors being European bankers and financiers who were usually given diplomatic assistance by their own governments. By the early 1870s, Ottoman state borrowing too easily substituted for financial planning; between 1869 and 1875, the government borrowed more than its tax collectors took in. The Ottoman state suspended payments on its accumulated debt in 1875, after crop failures cut revenues between 1873 and 1875 and the global depression of 1873 dried up capital imports.

Perhaps fearing occupation by the European governments of its creditors, the Ottoman government eventually honored its obligations. Prolonged negotiations resulted in a reduction and consolidation of the total Ottoman debt and the formation, in 1881, of the Ottoman Public Debt Administration; this body took control of portions of the economy. The Ottoman Public Debt Administration supervised the collections of various tax revenues, turning the proceeds over to the European creditors—an international consortium representing bondholders of Ottoman obligations. Residents of France, Great Britain, and Germany held most of the bonds. The ceded revenues came from the richest and most lucrative in the empire—taxes imposed on tobacco, salt, silk, timber, alcohol, and postage stamps.

Although nominally a branch of the Ottoman government, the Debt Administration actually was independent and answerable only to the bondholders. Many scholars consider its founding as the beginning of Ottoman semicolonial status—when the state lost control over parts of its economy. Still worse, perhaps, the state's legitimacy and relevancy also declined in the eyes of subjects who had to pay their taxes to a foreign group rather than their own state. The Debt Administration represented a true loss of Ottoman sovereignty, but, as the government may have hoped, the consortium reassured foreign investors, who provided still more loans to the state, which needed still more cash to finance modernization.

Foreign capital invested in the Ottoman private sector became significant only after 1890. A part of the more general diffusion of European capital into the global economy, these investments also derived from the comforting presence of the Debt Administration, which was involved in many of them. Industrial or agricultural investment was nearly completely absent. Railroads, port facilities, and municipal services absorbed most of these monies, more firmly linking the Ottoman and international economies by facilitating the outward flow of raw materials and the import of finished goods. French financiers were the most important single source of funds, while the British and Germans also were significant providers. Almost all these new loans were administered by the Debt Administration.

By 1914, Ottoman public and private debts to foreign financiers consumed, in roughly equal shares, more than 30 percent of total tax revenues. In one way or another, the Debt Administration administered virtually the entire amount. This pattern of indebtedness makes clear the ongoing subordination of the late Ottoman economy to the European until the demise of the empire after World War I.

DONALD QUATAERT

OTTOMANISM

A supranational and protonationalist political principle that stressed patriotism and the group feeling of all Ottoman citizens.

Political elites used Ottomanism to achieve consensus among different ethnic and religious communities and foster political and social unanimity in allegiance to the sultan. It originated as a response to foreign encroachments and separatist movements during the Tanzimat period and was sustained by enhanced social and political mobilization. While Ottomanism was sufficiently vague and malleable to serve different political platforms, the territorial indivisibility of Ottoman domains was its constant concern. The administrative principle of centralization was integral to Ottomanist policies.

Ottomanism germinated from the Tanzimat recognition of the notion of citizenship. The Young Ottomans infused Ottomanism with constitutionalist ideas, which Sultan Abdülhamit II supplanted with Islamic symbols and solidarity. The Young Turks subscribed to secular and constitutionalist Ottomanism but were divided about the nature of the underlying administrative framework. The centralist position prevailed after the revolution of 1908. The piecemeal dismemberment and secession of non-Muslim parts of the empire compromised the secularist thrust of Ottomanism. Ottomanism was not a coherent ideology but blunted the growth of particular nationalisms, particularly among the Muslim groups.

HASAN KAYALI

OTTOMAN LIBERAL UNION PARTY

Political party opposed to the Committee for Union and Progress, also known as Osmanh Ahrar Firkasi.

The Liberal Union party was established in 1908 by Riza Nur, as the major opposition party after the 1908 revolution. Rooted in Prince Sabahettin's wing of the Young Turk movement, it espoused a platform that sympathized with the ethnic aspirations of Albanians and Armenians, and thus opposed the Committee for Union and Progress's (CUP) strongly centralist and Turkish leanings. The Liberal Union won only one seat, as against the CUP's 288 seats, in the November 1908 parliamentary elections. In 1909 the party was repressed under the martial law that followed the April counterrevolution.

The Liberal Union was revived in November 1911 as an umbrella opposition group called the Freedom and Accord party (Hürriyet ve Itilaf Firkasi). It won a Constantinople (now Istanbul) by-election in late 1911, but it lost the national elections in April 1912. It then allied with the Group of Liberating Officers who dislodged the CUP from power that summer. The coalition ruled only until January 1913, when the CUP forced Grand Vizier Mustafa Kamil Paşa to resign at gunpoint after losses in the Balkan War. The CUP government dissolved the Liberal Union in June 1913, executing and exiling its leadership after Grand Vizier Mahmut Şevket was assassinated. Damat Mehmet Ferit briefly revived the party in 1919 to replace the CUP, but the party split and its liberal wing joined the Kemalists.

OTTOMAN MILITARY

This entry consists of the following articles:

OTTOMAN ARMY
OTTOMAN NAVY

OTTOMAN ARMY

Military organization that defended the Ottoman Empire and helped establish the Turkish republic.

The origins of the modern Ottoman army date to the destruction of the janissaries by Sultan Mahmud II (June 1826). Mahmud then laid the foundation for a new military organization based on Western models. Its centerpiece was a European-style infantry corps, the Trained Victorious Troops of Muhammad (Muallem Asakir-i Mansure-yi Muhammadiye, Mansure for short). Other military services—cavalry, artillery, and transport—were established mainly by reforming existing military units. Mahmud also created a modern corps of imperial guards out of the Bostanci corps, which had guarded imperial palaces.

There also were attempts to centralize the command structure. The authority of the commander in chief *(ser asker)* of the Mansure was gradually extended over the other services and branches. Thus his headquarters (Bab-i Ser Asker) gradually came to combine the roles of a ministry of war and general staff, and eventually was in charge of all land forces.

Under Mahmud II the military engineering schools were rejuvenated and reformed. He also established a military medical school (1827) and an officer school (1834). Russia and Britain sent military instructors. Most useful services were rendered by a Prussian military mission that grew from one officer (Helmuth von Moltke) in 1835 to twelve in 1837.

In the 1830s Mahmud sought to strengthen the army. Large permanent units with regular commanding officers and staffs were formed. In 1834 a provincial militia *(redif)* was established to provide reserve forces. However, the commissary system could not support the rapid increase of the military. Epidemics were rife, and over a quarter of all recruits succumbed to disease. Desertion was very common. Although the army had been successfully employed as an instrument of coercion and centralization, as a military force it remained relatively small and poorly organized, trained, and equipped. By the end of Mahmud's reign there were only some 90,000 men in all the services. The wars with Russia (1828–1829) and with Muhammad Ali's Egypt (1831–1833, 1839) resulted in heavy losses and the disruption of the army's development.

During the Tanzimat period (1839–1876) the army consolidated and built on the shaky foundations laid in the previous era. The Bab-i Ser Asker continued to acquire new departments. The army steadily grew, and recruitment and training improved. In 1843 the army, renamed the Regular Imperial Troops (Asakir-i Nizamiye-yi Şahane, Nizamiye for short), was organized in permanent territorial commands, each consisting of an army corps *(ordu)* under a field marshal *(müşir).* The field marshals, directly responsible to the *ser asker,* had wide jurisdiction in all military matters. This limited the provincial governors' ability to intervene in military affairs, and was intended to centralize further the military organization and strengthen the authority of the ser asker. Five territorial army corps were established, with headquarters in Istanbul, Üsküdar, Monastir, Sivas, and Damascus. In 1848 a sixth corps was established with headquarters in Baghdad. In 1849 the Nizamiye had some 120,000 men and the *redif,* 50,000. With local and semiregular organizations, the empire's land forces numbered some 250,000 men.

The horsemen of the Ottoman Empire's Imperial Calvary were considered excellent horsemen and skilled warriors, c. 1880s.
© Michael Maslan Historic Photographs/Corbis. Reproduced by permission.

The reign of Abdülaziz (1861–1876) witnessed considerable increases in military appropriations and improvements in the army's equipment and

training. Modern weapons were purchased abroad, mainly from Germany, and with them came German military instructors. Since the majority of the officers were poorly educated, in 1855 the army initiated its own network of schools to prepare youths to become soldiers and officers. In 1867 over 8,000 students were enrolled in these schools.

In 1869 the army was reorganized into seven territorial corps, with headquarters in Istanbul, Shumla, Monastir, Erzurum, Damascus, Baghdad, and Sanʿa in Yemen. Each corps was required to have some 26,500 men. During the Russian war of 1877–1878 the Ottoman army had some 500,000 men, of whom some 220,000 took the field. During this period the Ottoman Empire reemerged as an important military power in southeastern Europe and the Middle East. Its army performed well during the Crimean War (1853–1856) and in the early stages of the Russian war of 1877–1878. In the latter conflict, however, the Ottomans were outclassed by the superior Russian army.

Under Abdülhamit II (1876–1909) the army benefited from ever increasing allocations, improved recruitment and training, and modern weaponry (mostly from Germany). It received assistance from a German military mission led by Kolmar von der Goltz (1883–1896). At the same time, however, Abdülhamit weakened the authority of the *ser asker* and placed military affairs under the supervision of permanent commissions staffed by his confidants. He personally approved the appointment and promotion of officers, and established networks of informers throughout the army.

By the 1890s the officer corps had become rife with discontent and sedition. The great expansion of the military had brought growing numbers of young officers from classes whose loyalty to the regime was not unconditional. Furthermore, the officers were better educated, and many espoused liberal ideals. In addition, officers and men were poorly paid, with salaries usually months in arrears. Finally, throughout most of Abdülhamit's reign the army was employed, with little success, in suppressing national and ethnic uprisings as well as lawlessness, especially in Macedonia and eastern Anatolia. Many officers, frustrated by the growing numbers of casualties, believed that the government was either unwilling or unable to provide the necessary means to restore order and protect the empire's territorial integrity. This led many officers, especially in the junior and intermediate ranks, to join the Young Turk movement, which called for the overthrow of Abdülhamit. The Young Turk Revolution (July 1908), which restored constitutional government and led, a year later, to Abdülhamid's deposition, began as a mutiny in the Third Army Corps, based in Macedonia.

In the following years, the Young Turk regime provided the army with increased allocations, modern weapons, and another German military mission, led by Gen. Otto Liman von Sanders (November 1913). At the beginning of World War I, the Ottoman army had some 640,000 men. During the war the Ottomans mobilized an estimated total of some 4 million men. Although the army was plagued by problems of logistics and command, it generally fought well and was successful, especially in Gallipoli (1915–1916) and in Iraq (1915–1916), and in defending Anatolia from foreign invasion following the war. In the end, however, the army could not save the empire from final collapse. Nevertheless, as the institution that had benefited more than any other from reform and modernization, it played a crucial role in the rise of the Turkish republic.

Ottoman Navy

Military vessels and fleets of the Ottoman Turks.

View of Constantinople Harbor, 1893. Constantinople is often considered, geographically, to link Europe with Asia and is home to the Hagia Sophia mosque. **© Corbis. Reproduced by permission.**

In the fifteenth and sixteenth centuries, sea power played a central role in the expansion of the Ottoman Empire, and Ottoman fleets operated on the high seas in the Atlantic, the Mediterranean, and east into the Indian Ocean. In the seventeenth and eighteenth centuries, the Ottoman navy was generally neglected and its effectiveness declined, but it was revived at times during the nineteenth and early twentieth centuries. The decline of the navy in the seventeenth and eighteenth centuries was largely due to the new geostrategic realities, whereby the main challenges to the empire no longer came from the naval powers of Spain, Portugal, and Venice, but from the land powers of Austria, Poland, Russia, and Persia (now Iran).

The origins of the modern Ottoman navy can be traced to the Russian-Ottoman Wars of 1768–1774. A Russian fleet based in the Baltic circled the European continent and destroyed the Ottoman fleet at Cheshme (July 1770). This led to a massive effort to rejuvenate the navy. During the reigns of Abdülhamit I (1774–1789) and Selim III (1789–1807), scores of modern warships were constructed under the supervision of European shipwrights. The Naval Engineering School (Tersane Mühendishanesi) was founded (1776), and the navy's command structure was modernized and placed under the supervision of the newly established Ministry of the Navy (1805). At the beginning of the nineteenth century, the navy was once again a formidable, though largely untested, force. In 1806, it listed 27 ships of the line and 27 frigates, as well as smaller vessels, armed with 2,156 guns and manned by some 40,000 sailors and marines.

After the fall of Selim III (1807), the navy was again neglected, and its strength declined. During the Greek War of Independence (1821–1830), it suffered many losses at the hands of the Greeks. The heaviest single blow, however, came on 20 October 1827, when a combined British-French-Russian fleet destroyed the Ottoman-Egyptian fleet inside the harbor of Navarino (now in Greece). The Ottomans alone lost thirty-seven vessels and thousands of sailors. It took the navy more than a decade to recover from the disaster at Navarino. By 1838, it had fifteen ships of the line and an equal number of frigates, as well as smaller vessels.

As of 1838, there was growing cooperation between the Ottoman and British navies: Ottoman and British squadrons conducted joint maneuvers; the navy was reorganized on British lines; Ottoman officers were sent to Britain for training; and British naval officers and engineers arrived in Constantinople (now Istanbul), the Ottoman capital, to serve as advisers from time to time.

In July 1839, the Ottoman grand admiral, Ahmet Fevzi Pasha, suddenly sailed the entire fleet to Alexandria and surrendered it to Egypt's ruler, Muhammad Ali, who was trying to become independent from the empire. This extraordinary act was the result of a power struggle within the Ottoman government following the death of Mahmud II. The fleet was returned in the following year as part of a general settlement of Ottoman-Egyptian relations, giving Egypt its autonomy.

During the Tanzimat (reform) era (1839–1876) in the empire, considerable resources were directed toward the further development and modernization of the navy, and sailing vessels were replaced with steamships. On the eve of the Crimean War (1853–1856), the Ottoman navy had 10 ships of the line and 14 frigates, as well as smaller vessels, with a total of 2,080 guns and a staff of more than 20,000 men. On 30 November 1853, Russia's Black Sea squadron, using new shell-firing guns, destroyed an Ottoman wooden fleet at Sinop. This had important political consequences, since it enraged British public opinion against Russia, leading to the Crimean War. It also marked an important milestone in naval history, resulting everywhere in the construction of iron-clad warships. The Ottoman navy also replaced most of its main wooden warships with iron-clads. By 1877, it had thirteen iron-clad frigates in addition to three wooden frigates, four corvettes, and various smaller craft.

During the reign of Abdülhamit II (1876–1909), priority was given to the development of the army, while the navy, because of financial constraints, was neglected, leading to its decline. In 1912, the navy listed four battleships, two cruisers, eight destroyers, three corvettes, and smaller craft. During the Balkan Wars (1912/13), it was outclassed by the Greek navy, which dominated the Aegean Sea.

Following the Balkan Wars, the Ottoman government, led by the Young Turks, placed great emphasis on modernizing and strengthening the navy. A British naval mission led by the Admiral Arthur H. Limpus helped reorganize the navy and its various departments. The navy was to be greatly strengthened by two modern battleships ordered from Britain whose delivery was expected in August 1914. On 3 August, however, the British government announced that with the impending European crisis (that very soon became World War I), the ships would not be delivered. On 11 August, the Ottoman government permitted two powerful German cruisers, *Goeben* and *Breslau,* to enter the Dardanelles; they subsequently announced their purchase by the Ottoman navy as replacement for the British-built warships. The cruisers were given Turkish names, but they remained under the command of their German crews. On 29 October, Ottoman warships, including the two former German cruisers, suddenly attacked Russian ports in the Black Sea, marking the entry of the Ottoman Empire into the war.

OTTOMAN PARLIAMENT

Attempt at representative government in the empire between 1877 and 1920.

The Ottoman parliament met from 1877 to 1878 and between 1908 and 1920. The constitution of 1876 stipulated a bicameral parliament: a lower Chamber of Deputies elected popularly and a Chamber of Notables nominated by the sultan. The parliament of the First Constitutional period (1876–1878) had two terms that convened March to June, 1877, and December 1877 to 14 February 1878, when Sultan Abdülhamit II abolished parliament. The Young Turk Revolution of 1908 forced Abdülhamit to re-institute it. The three parliaments of the Young Turk period met December 1908 to January 1912, May to August 1912, and May 1914 to December 1918. The last Ottoman parliament that convened in January 1920 dissolved itself after the Allied occupation of Istanbul in March 1920.

For the 1877 to 1878 parliament, previously elected provincial administrative councils selected the deputies according to quotas based on population and proportionate allocations of Muslims and non-Muslims (seventy-one Muslims and forty-eight non-Muslims in the first session; sixty-four Muslims and forty-nine non-Muslims in the second). Due to inaccurate population figures in remoter Asian and African provinces and the political exigency of catering to separatist Christian elements and their European protectors, non-Muslim communities and European provinces received higher quotas.

Abdülhamit intended to legitimate his rule by giving his consent to parliament but stripped it of the authority to legislate independently and to limit the executive. Nevertheless, the deputies, who on the whole represented the provincial elites, were vocal in their criticism of the government. Abdülhamit closed parliament indefinitely on the pretext of the national emergency engendered by the ongoing war with Russia.

Thirty years later, the Young Turk Revolution of 1908 reintroduced the constitution and parliament. Constitutional amendments enhanced parliament's legislative prerogatives vis-à-vis the sultan, provided for ministerial accountability to parliament, and eliminated religious quotas. In the two-tier elections, males above the age of twenty-five voted for secondary electors, who then elected the deputies. Candidates had to be literate males who knew Turkish and were above the age of thirty. The election of one deputy for every 50,000 males produced chambers of around 250 deputies. The Committee for Union and Progress (CUP) managed to dominate the elections due to its revolutionary élan and moral authority in 1908, through electoral manipulation in 1912, and by suppressing opposition and effectively instituting a single-party regime in 1914. Electoral victory did not guarantee CUP's domination of parliament, which was the breeding ground of opposition.

From the dissolution of the body in August 1912, which followed a government crisis and anti-CUP rebellions, to May 1914, parliament remained in suspension. New elections were delayed until the winter of 1913/14 due to the extraordinary circumstances of the Balkan Wars, the forcible CUP takeover in January 1913, and the assassination of Grand Vizier Mahmut Şevket Paşa in June 1913. As World War I began, emergency powers were ceded to the cabinet, and parliament's significance diminished even though it continued to meet with interruptions.

The two-tier election system favored the election of representatives of privileged social groups: *Ulama*, officials, landowners, and professionals. However, party politics produced a more diverse Chamber of Deputies in the Second Constitutional period compared with 1877/78. Parliament always served as a forum where both local and national issues were voiced. Newspapers reported its proceedings on a daily basis. Despite the executive's attempts to control parliament, the Chamber of Deputies served as a check on the sultan, the cabinet, and occasionally on the CUP's extralegal interventions.

OUARY, MALEK

[1916–2001]

Algerian novelist, poet, and journalist.

A Christian born in Ighil Ali, Malek Ouary was educated in his village and became a radio journalist in Algeria. He then worked at the Office de la Radiodiffusion-Télévision Française (ORTF) in Paris. A francophone writer, his works include *Par les chemins d'emigration* (investigative report); *Cahier d'epreuves* (1955); *Poèmes et chants de Kabyle* (1972); and also the novels *Le grain dans la meule* (1956), *La montagne aux chacals* (1981), and *La robe kabyle de Baya* (2000).

PHILLIP C. NAYLOR
UPDATED BY ANA TORRES-GARCIA

OUAZZANI, MOHAMED HASSAN

[1910–1978]

Moroccan nationalist.

In the early 1930s, Mohamed Hassan Ouazzani, a native of Fez, was a leader of the Comité d'Action Marocaine (CAM). He was elected secretary-general of the Bloc d'Action Nationale in October 1936, but the following year founded the Parti Démocratique Constitutionnel (PDC). Ouazzani was imprisoned for nine years (1937–1946) on political charges. Periodically, he cooperated with the Istiqlal, and from 1953 to 1954, he and his followers joined the National Front. Ouazzani was named minister of state without portfolio in King Hassan's 1961 coalition government. He was among those wounded in 1971 in the attempted coup against the king.

BRUCE MADDY-WEITZMAN

OUFKIR, MUHAMMAD

[1918–1972]

Moroccan general and politician.

Muhammad Oufkir was from Middle Atlas Berber stock, from central Morocco. He served with distinction in the French army in Italy and Indochina during World War II and thereafter. When Morocco became independent of French colonialism in 1956, he was promoted to general and, in 1964, was appointed by King Hassan II as minister of the interior. In 1965, he was at the center of the Ben Barka affair and sentenced by a French court to life imprisonment (in absentia). In 1971, Oufkir led the suppression of an army coup attempt against King Hassan and was made minister of defense. In the next year, however, he helped organize a second coup attempt; following its collapse, he committed suicide.

OUJDA GROUP

Algerian nationalists instrumental in winning independence and in governing the new nation.

The term *Oujda group* refers to Houari Boumédienne and a circle of colleagues that emerged in Oujda, Morocco, during the later years of the Algerian War of Independence. The best-known members of that circle included Ahmed Kaid, Ahmed Medeghri, Cherif Belkacem, Abdelaziz Bouteflika, Mohamed Tayebi, and Ali Mendjli.

As French repression of Algerian guerrillas intensified during 1957 and 1958, more and more of them were forced across the borders into Tunisia and Morocco. Boumédienne, who had begun his revolutionary career fighting in Wilaya Five, the western Algeria military district, ended up in Oujda, about 7 miles (12 km) from the Algerian border. There he helped to organize the Moroccan branch of the external Armée de Libération Nationale (ALN; National Liberation Army), which he eventually rose to command. When the separate commands of the ALN were unified in December 1959, Boumédienne became chief of its general staff, bringing members of the Oujda group with him.

In 1960 and 1961, factional divisions within the political leadership of the Front de Libération Nationale (FLN; National Liberation Front) began to

lessen the effectiveness of the Provisional Government of the Algerian Republic (Gouvernement Provisoir de la République Algérienne; GPRA). The ALN general staff, dominated by the Oujda group, emerged as the most cohesive of the revolutionary institutions. It was frequently in conflict with the civilian leadership. Within days of independence in 1962, Ben Youssef Ben Khedda, president of the GPRA, fired Colonel Boumédienne, and Majors Kaid and Mendjli. The officers refused to recognize the GPRA's authority to take such action and instead entered Algeria to begin building internal support.

At Tlemcen, near the Moroccan border, there coalesced a group hostile to Ben Khedda and the GPRA that was headed by Ahmed Ben Bella. Support for Ben Bella, who had spent most of the war years in French prisons, came from disillusioned liberal politicians, some radical socialists, and especially from Boumédienne and the Oujda group. The latter provided the military support that enabled Ben Bella to take over Algiers and manage his election as Algeria's first president in September 1962.

Ben Bella was to remain in power until June 1965, devoting much of his time to attempts to eliminate political competitors inside the government and the party. By October 1963 he had managed to eliminate many opponents. By then, power was about equally divided between his own followers and those of Boumédienne. Thereafter, he moved gradually to eliminate the latter, until, by early 1965, only Boumédienne in the War Ministry and Bouteflika in the Foreign Ministry survived. During May and June, Ben Bella moved to undercut the authority of Bouteflika, threatening to dismiss both him and Boumédienne, but the latter intervened.

On 19 July 1965, the military overthrew Ben Bella in a bloodless coup engineered in the name of a body called Council of the Revolution. The heart of this council was the Oujda group, which also took over key posts in the cabinet (defense, interior, foreign affairs, finance). Boumédienne headed both the Council of the Revolution and the government. These allies helped him, through the remainder of the decade, to consolidate his own power. But, between 1972 and 1976, as cleavages developed in the inner circle over difficult political choices, Boumédienne eliminated one after another the members of the Oujda group from his government.

OULD SID'AHMED TAYA, MAʿOUIYA

[1941–]

President of Mauritania since 1984.

Born in 1941 in Atar, the capital of the Adrar region, Maʿouiya Sid Ahmed Taya is the fourth military leader to hold the office of the presidency in Mauritania since its independence from France in 1960.

Taya joined the military in 1961 after Mauritania gained its independence from France. During the latter half of the 1970s Taya served as a military commander in the conflict with Western Sahara. In 1984 Taya led a coup d'état, overthrowing the previous military leader, Mohamed Khouna Ould Haidallah, and appointed himself head of state. Still leader in 1991, Taya drafted a new constitution that legalized political parties and called for a turn toward democracy. Taya, representing the Parti Républicain Démocratique et Social (PRDS), won the January 1992 presidential election, gaining most of his support from the military, members of his Smacid tribe and other white Maure groups, and residents of his native region of the Adrar. Financial scandals and political instability overshadowed much of Taya's democratization efforts in the early 1990s.

In 1991 Mauritania broke ties with the United States and signed agreements with Iraq during the

Gulf War. As the war came to a close, Taya opted for a more moderate position in world affairs, making amends with Senegal, breaking ties with Iraq, and recommencing Mauritania's good relations with France and the United States. Despite pressure from Arab states to break ties with Israel, Taya recently accepted a visit from Israeli foreign minister Shimon Peres, and he increasingly thrives from his good relationship with the United States. He also believes that Mauritania's relationships with West African states and with the Arab Maghreb Union are valuable, and he has been working to improve relations with Senegal since the conflict in 1989. Taya faces international pressure to further democratize Mauritania and end human-rights abuses. Since 1999 Taya also evolved his economic policy of central control to one that encourages more privatization of businesses.

Taya won the 1997 presidential election with 90 percent of the vote. In reaction to charges of fraudulent municipal elections in January 1999, Taya issued voting and identity cards to prevent future electoral scandals. Elections are held every five years.

As of 2003 Mauritanian exiles charged Taya with crimes against humanity, arguing that he called for a policy of "denegrification" following the border clashes and ethnic violence along the Senegal River in 1989. He is also blamed for prolonging undemocratic policies such as slavery, extrajudicial incarcerations, and press censorship.

NAOMI ZEFF

OULED SIDI CHEIKH

A nineteenth-century tribal confederation/brotherhood of western Algeria.

Because of their location in western Algeria, this powerful group of tribes was often influenced by the sultan of neighboring Morroco. The Ouled (also Awlad Sidi Shaykh) had capricious relations with the authorities of French colonialism. They cooperated with Governor-General Thomas-Robert Bugeaud de la Piconnerie against the renowned Amir Abd al-Qadir. One of the chief collaborators, however, Mohammed ben Abdallah, later turned against the French. This led to conflicts at Laghaout (1852) and Touggourt (1854). Then, during this campaign, Si Hamza, of the Ouled (Cheraga), joined the French.

A basic lack of French sensibilities toward the confederation's traditions produced a major insurrection in 1864/65. During the Great Kabylia Revolt of 1871, the Ouled were generally restive rather than rebellious—then passive thereafter in relations with the French.

OUZIEL, BEN ZION MEIR HAI

[1880–1953]

Sephardic chief rabbi.

Ben Zion Meir Hai Ouziel was born in Jerusalem and studied in various yeshivot there. He became chief rabbi of Jaffa in 1914. After serving as rabbi of Salonika from 1921 to 1923, he was selected as Sephardic chief rabbi of Tel Aviv, and in 1939 he became the Sephardic chief rabbi of Palestine, a position he occupied until his death. Ouziel was active in the Mizrahi Movement, served as a delegate to several Zionist congresses, and held several committee positions in the Jewish Agency. He testified before the Anglo-American Committee of Inquiry and the United Nations Special Committee on Palestine. In addition to being active in the political sphere, Ouziel published extensively on practical Jewish religious law (Halakhah) and on Jewish thought.

CHAIM I. WAXMAN

OYAK (ORDU YARDIMLASMA KURUMU)

Turkish military pension program that became a public conglomerate with political power.

Ordu Yardimlasma Kurumu Army Mutual Assistance Association was founded in Turkey in 1961 as a pension program to protect career military officers from inflation, but it soon became Turkey's largest and most diversified public conglomerate. By 1984, OYAK's assets totaled more than US$300 million, with heavy investments in the automotive,

electronics, construction, and food-processing industries, among others.

Since the late 1960s, OYAK's economic clout has enhanced its political influence. It is an example of the Turkish state's use of professional associations and social-insurance programs to implement economic policy. OYAK is nominally attached to the ministry of defense but is run autonomously by civilians and technocrats.

ELIZABETH THOMPSON

ÖZAL, TURGUT

[1927–1993]

Turkish prime minister, later president.

Turgut Özal was born in Malatya, a provincial city in southeast Turkey. His father, trained as a religious teacher, taught in the secular schools of the Turkish republic and later worked as a civil servant; his mother was also a teacher. Özal attended Istanbul's Technical University, graduating in 1950 with a degree in electrical engineering. After studying economics and engineering in the United States, he worked under Süleyman Demirel at the Electric Power Survey Administration, which was responsible for several hydraulic and electrical projects. In 1961, Özal participated in the establishment of the State Planning Organization, which issued five-year development plans, and throughout the 1960s, he was an important economic adviser to Prime Minister Demirel. He was one of the architects of the 1970 stabilization program, but following the 1971 military intervention, he left the State Planning Office to work for the World Bank in Washington, D.C.

Returning to Turkey two years later, he served as managing director of two large private sector companies and, in 1977, entered politics as a candidate for the religiously oriented National Salvation Party from İzmir. Özal failed in this campaign, but in 1979, Demirel made him responsible for developing a solution to Turkey's growing economic

Former Turkish prime minister Turgut Özal, 1988. Özal is perhaps best remembered for bringing a free economy to Turkey and for envisioning the country as a modern, democratic society. **© AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.**

crisis. As undersecretary of the State Planning Organization, Özal proposed a series of measures to stabilize and reform the Turkish economy known as the 24 January Measures. Following the September 1980 coup, which removed Demirel from power, the military officers that ruled Turkey asked Özal to remain as deputy prime minster in charge of the economy, a position he held until July 1982, when a banking scandal led to his removal from government. In response, Özal and several close associates established, in May 1983, the Motherland Party (Anavatan Partisi; ANAP), which contested the elections of 1983. Despite opposition from the military leadership that supported the Nationalist Democracy party, Özal's Motherland party won an overwhelming victory.

During his years as prime minister, Özal focused on two major goals: reforming the Turkish

economy and enhancing Turkey's position in world affairs. In the economy, he sought to tame triple-digit inflation, modernize industry, increase Turkey's exports in order to put an end to persistent shortages of foreign exchange, and privatize Turkey's large public industrial sector. Under his supervision, the economy grew at a rapid rate, and exports expanded dramatically. In addition, many of his reforms have created an environment more conducive to foreign and domestic private investment. He was less successful, however, in selling off the inefficient state sector and in reducing inflation; these failures and subsequent macroeconomic instability have dampened investment.

In foreign affairs, Özal worked to integrate Turkey into the world economy, a strategy leading to his formal request for admission into the European Community in 1987. In the late 1980s, he initiated a new era in Greek-Turkish relations that would be more conducive to a settlement of their conflict. At the same time, he worked to further links with many Middle Eastern countries that were becoming important markets for Turkish exports. His desire for Turkey to play a leading role in regional affairs led him to strongly support the allied coalition against Saddam Hussein, a policy that sparked domestic opposition.

In the late 1980s, Özal faced a number of political challenges. First, Turkey's persistent economic problems, coupled with rampant rumors about his personal corruption and that of his family, led to a precipitous decline in his personal popularity as well as that of the ANAP. Second, the conservative Islamic wing of the Motherland party, which dominated the party's organization, began to challenge the policies of Özal and the more liberal wing of the party. Finally, the party faced challenges from its competitors, the True Path party on the right and the Social Democratic party on the left. In 1989, seeing the declining political fortunes of the ANAP, he engineered his election to the presidency. In doing this, Özal faced a great deal of opposition, both from his own party and from the opposition parties, and was elected only on the third ballot. As president, Özal sought to transform his office from its traditionally above-politics status to the preeminent political position in the country. As a result, he was accused, even by members of the Motherland party, of interfering in politics and forcing his will on the government. In addition, many of his policies were extremely controversial, particularly his enthusiastic support for the American-led coalition against Saddam Hussein and his calls for a conciliatory position toward the Kurdish issue. When Süleyman Demirel became prime minister in 1991, he vowed to remove his former protégé from the presidency.

One of Özal's final projects was to project Turkish influence into the newly independent Turkic countries of central Asia. Following an exhaustive tour of the republics in the spring of 1993, he died of a heart attack in Istanbul.

OZ, AMOS

[1939–]

Israeli author.

Oz was born Amos Klausner, in Jerusalem. He studied in a religious elementary school and in a secular high school. At the age of thirteen, after the death of his mother, he went to live in kibbutz Hulda, of which he later became a member. He studied literature and philosophy at the Hebrew University of Jerusalem and taught at the kibbutz high school. Oz left the kibbutz in the 1980s. In 1996 he moved to Arad and began teaching at Ben-Gurion University of the Negev in Beersheba, where he is a full professor and holds the Agnon Chair of Hebrew Literature. He has also been a visiting fellow at Oxford University, an author in residence at the Hebrew University, and, in 1997, a visiting writer at the New York State Writers Institute.

Oz's first short story was published in 1961 and his first collection of short stories, *Where the Jackals Howl,* in 1965. He has published eighteen books in Hebrew, including novels, novellas, books of short stories, books of essays, one volume of literary criticism, and close to 500 articles and essays in Israeli and international magazines and newspapers, which have been translated into thirty languages.

The kibbutz is the locus of several stories and novels in which Oz examines the relationship between the individual and the collective in modern Israel. The closed society of the commune may be viewed as a human laboratory where national ideals are measured against personal needs and desires. The enemy, often depicted as lurking outside the geographical enclave, proves to be internal, harbored and suppressed within the protagonist.

Closely associated with that time is Oz's study of the family unit, love and loyalty within the family, obsessions, separations, and dissatisfaction. The tension between fathers and sons as representatives of two generations of Israelis, the founders and the followers, is not resolved by oedipal revolt and independence but, rather, by compromise and surrender. This is in line with Oz's political view, which calls for dialogue and the harnessing of violence.

In *Black Box* (1987), an epistolary novel, a divorced couple is entangled in a passionate concern with their straying teenage son, who is perceived as a possible symbol of Israel's future: The broken family serves as a metaphor for political allegory. In *To Know a Woman* (1989), the hero is a former intelligence officer who withdraws from public service in order to come to terms with private emotions, a crumbling family, and a need for confronting his femininity, translated as the need for nurturing the self and the need for human compassion. Other works include *Israel, Palestine and Peace* (1994), *Don't Call It Night* (1994), *Panther in the Basement* (1995), and *But These Are Two Different Wars* (2000). The first chapter of his unfinished memoirs was published in *The New Yorker* in December 1995.

In 1991 Oz was elected a full member of the Academy of the Hebrew Language. He has received the French Prix Femina, the 1992 Frankfurt Peace Prize, the Brenner Prize, and the Israel Prize. In 1997 he was awarded the French Cross of the Knight of the Légion d'Honneur by President Jacques Chirac. A member of the Peace Now movement since its inception in 1977, Oz frequently appears in the media, voicing his opinions on Palestinian-Israeli relations, the peace process, refusal to serve in the military, and other contemporary political issues.

OZ VE SHALOM (NETIVOT SHALOM)

Israeli religious peace movement.

Some members of the National Religious Party, who opposed the tendencies of their party to support Greater Israel policies, formed in the early 1970s an ideological forum that advocated moderation, tolerance, and pluralism in matters involving religion and the state and a compromise solution to the Arab-Israeli conflict. In 1975, in reaction to the founding of Gush Emunim, the extreme settlers' movement, they established themselves as an independent "Fabian Society," seeking influence primarily through ideological, educational, and intellectual work, adopting the name "Oz ve Shalom," a famous line from the Jewish prayer book meaning "strength and peace."

In response to the 1982 Lebanon War and the intensification of the activities of Peace Now, a group of younger Zionist-Orthodox activists established a separate peace movement that aspired to appeal to a religious audience. They named themselves "Netivot Shalom" (Paths of Peace). Peace Now, the main peace movement at the time, was a secular movement, using secular terminology and organizing many of its activities on the Sabbath. To avoid duplication, in 1984 both religious peace groups merged under the name Oz ve Shalom/Netivot Shalom. The movement's main public figure was Avi Ravitzky, a professor of Jewish studies at the Hebrew University. They also gained the support of Rabbis Yehuda Amital and Aharon Lichtenstien, the heads of Yeshivat Har Etzion in Gush Etzion. Yet the movement remained limited in scope and at its peak claimed some 3,000 supporters.

P

PACHACHI, MUZAHIM AL-

[?–1987]

Iraqi statesman.

Born in the small town of Bujayla (now al-Nuʿmaniyya), Muzahim al-Pachachi was graduated from the college of Sawr in 1913. He began his active public life in 1924 as a member of the Constituent Assembly. From 1924 to 1925, he was minister of labor and communication and, from 1925 to 1927, the deputy of Hilla province. In 1931, he was appointed permanent representative of Iraq in London, minister of labor and communication, and also minister of the interior. He served as permanent representative of Iraq to the League of Nations from 1934 to 1935, minister plenipotentiary in Rome from 1935 to 1939, and minister plenipotentiary in Paris and Vichy from 1939 to 1942. He was prime minister from 26 June 1948 to 19 January 1949, and deputy prime minister and minister of the interior from 1949 to 1950. He died in Geneva on 23 September 1987. His son, Adnan [1923–], served as an Iraqi diplomat until going into exile in 1969. He returned to Iraq in 2003 and served on the American-created Iraqi Governing Council following the U.S. invasion of the country.

PAGIS, DAN

[1930–1986]

Israeli poet, professor.

Born in Bukovina, Pagis spent three years in a Ukrainian concentration camp, from which he escaped in 1944. Arriving in Palestine after the war, he learned Hebrew and taught on a kibbutz. He obtained his doctorate in medieval Hebrew literature and taught at Hebrew University, the Jewish Theological Seminary of America, and Harvard University. The Holocaust, a formative experience in Pagis's life, had a profound effect on his writings. Like many other Holocaust survivors, however, he was able to let his memory surface only after the capture of Adolf Eichmann in 1960 and the trial in

Jerusalem. It was only in Pagis's third poetry collection, *Gilgul,* published in 1970, that poems which actually turn to the Shoah were first published. Among Pagis's books of poems are *The Shadow Dial* (1959), *Late Leisure* (1964), and *Twelve Faces* (1981). Scholarly works include *Change and Tradition: Hebrew Poetry in Spain and Italy* (1976) and *The Riddle* (1986). *Last Poems* was published posthumously. As the title suggests, the poems center on dying and death.

PAHLAVI, MOHAMMAD REZA

[1919–1980]

Shah of Iran, 1941–1979.

Mohammad Reza Pahlavi was born in Tehran on 26 October 1919 to Brigadier Reza Khan (later Reza Shah Pahlavi). He was designated crown prince in April 1926 and graduated from a special primary military school in Tehran in 1931, from Le Rosey secondary school in Switzerland in 1936, and from Tehran Military College in 1938. In 1939, he married Princess Fawzia, the sister of King Farouk of Egypt; they had a daughter, Shahnaz, in 1940 and were divorced in 1948. In 1950, he married Soraya Esfandiari Bakhtiari; this marriage, too, ended in divorce in 1958 because she was not able to produce a male heir. In 1959, he married Farah Diba, who gave birth to Crown Prince Reza in 1961, and three other children thereafter.

Mohammad Reza Shah's thirty-seven-year reign can be divided into five distinct phases: from the 1941 occupation of Iran by the Allied forces to the 1953 coup d'état; the postcoup period (1953–1959); the period of political strife (1960–1963); the period of the shah's increasingly autocratic rule (1963–1976); and the period of revolutionary crisis that ultimately led to the collapse of the Pahlavi dynasty (1977–1979).

From 1941 Occupation to 1953 Coup d'Etat

Mohammad Reza acceded to the throne on 17 September 1941, after Russian and British troops invaded Iran on 25 August, forcing Reza Shah to abdicate. A major crisis in the early years of his reign came in 1945 when the Soviet Union refused to withdraw its forces from northern Iran. Through a combination of international pressures and internal maneuverings by Prime Minister Ahmad Qavam, the Russian force finally left Iran in late 1946, and the pro-Soviet republics of Azerbaijan and Kurdistan collapsed. For much of this period, the shah was forced to conform to the will of the *majles* (parliament), which as a political institution dominated both the young monarch and the cabinet. Following an assassination attempt on 4 February 1949, a Constitutional Assembly was convened on 21 April; it granted him the right to dissolve the *majles.* In March 1951, the British-dominated Anglo-Iranian Oil Company was nationalized by an act of the *majles* under the initiative of Mohammad Mossadegh, the leader of the National Front, who subsequently became prime minister. Although 1951 to 1953 were "the worst years" of the shah's reign, he did not take any initiative to dismiss Mossadegh until he was urged to do so by Prime Minister Winston Churchill and President Dwight Eisenhower, who also urged him to appoint Gen. Fazlollah Zahedi as prime minister. When Mossadegh refused to accept the shah's dismissal order on 16 August, the shah fled the country and went to Rome. On 19 August 1953, he was reinstated to power in a coup conceived by MI-6 (British Military Intelligence) and carried out by the Central Intelligence Agency. The leading *ulama,* the old-guard politicians, the propertied classes, and a core of army generals supported the shah and the coup.

Post-Coup Period

The period 1953 to 1959 began with the repression of members of the intelligentsia who had supported either the National Front or the pro-Soviet Tudeh party, and saw a gradual increase of the shah's power vis-à-vis the old-guard politicians, the propertied classes, and the *ulama.* In this period, the govern-

ment signed an agreement with a consortium of major Western oil companies in August 1954, joined the Baghdad Pact (later the Central Treaty Organization, CENTO) in October 1955, established an effective intelligence agency (SAVAK) in 1957, and launched the 1954–1962 development plan.

Political Strife (1960–1963)

The period from 1960 to 1963 began with a reactivation of opposition groups and increasing pressures from the administration of John F. Kennedy for reforms. In May 1961, the shah appointed Dr. Ali Amini as prime minister and Hasan Arsanjani as minister of agriculture; the latter became the architect of land reform. The shah, who could not tolerate an independent-minded prime minister, dismissed Amini in July 1962 and asked Amir Asadollah Alam, his closest confidant, to form a new cabinet and continue the reform. The land reform program, which was the centerpiece of the shah's White Revolution, and women's suffrage met with strong resistance from the *ulama,* who joined the opposition forces and instigated urban riots on 5 June 1963 to protest Ayatollah Ruhollah Khomeini's imprisonment. The shah was indecisive in responding to the situation, but Alam took command and gave the shoot-to-kill order to the security forces; more than 100 were killed, and resistance of religious groups was crushed. This event marked the suppression of all opposition forces and the beginning of increasingly autocratic rule by the shah.

Increased Autocratic Rule (1963–1976)

In the period 1963 to 1976, the shah emerged as the sole policymaker; he allocated oil revenues among various agencies and projects and directly supervised the armed forces and security organizations, foreign policy and oil negotiations, nuclear power plants, and huge development projects. In this period, Iran's gross domestic product grew in real terms by an average annual rate of around 10 percent. Meantime, public services substantially expanded and modernized, and the enrollment at all educational levels increased rapidly. The shah also dramatically expanded the military and security forces and equipped them with advanced weapon systems. In the early 1970s he played a key leadership role in the Organization of Petroleum Exporting Countries (OPEC) and helped the organization to raise the price of oil sharply. Meanwhile, he emerged as the leading figure in the Persian Gulf after the withdrawal of British forces in 1971. Furthermore, he signed an agreement with the Iraqi leader Saddam Hussein in 1975, ending the two countries' border disputes. By the mid-1970s, the shah managed to establish close ties not only with the United States, Western Europe, and Muslim countries but also with the Communist bloc countries, South Africa, and Israel.

President John F. Kennedy meets with the shah of Iran in the White House, 13 April 1962. Supported by the United States, the shah assumed absolute power after a 1953 coup that ousted Prime Minister Mohammed Mossaddeq. © Bettmann/Corbis. Reproduced by permission.

The many diplomatic and economic achievements of the shah led to ostentatious displays of royal hubris. For example, in October 1971 he celebrated the 2,500th anniversary of the foundation of the Persian Empire by Cyrus the Great and formed, in March 1975, a one-party system. Both acts were resented by the intelligentsia and middle classes. He also replaced powerful, independent-minded politicians with more accommodating and submissive aides, a strategy that cost him dearly at times of international and domestic crisis. Concurrently, the shah's White Revolution had undermined the traditional foundation of his authority—the *ulama,* the bazaar merchants, and the landowning classes. They were replaced by the entrepreneurs, the young

Mohammad Reza Shah Pahlavi (1919–1980) ruled as king of Iran from 1941 to 1979. He implemented the "White Revolution" in 1963, the most important aspect of which was the redistribution of half of the privately owned agricultural land to the peasants who share-cropped it. He ruled as a royal dictator until 1979, when the monarchy was overthrown in a popular revolution led by Ayatollah Ruhollah Khomeini. © BETTMANN/CORBIS. REPRODUCED BY PERMISSION.

Western-educated bureaucratic elites, and new middle classes who had developed uneasy relations with the shah. The intelligentsia resented the lack of political freedom and violations of human rights, the rigged elections, corruption, and close ties with the United States. The old religious groups and the bazaar merchants and artisans resented the un-Islamic Western lifestyle promoted by the shah's modernization policies. The entrepreneurial and political elites were discontented with the shah's autocratic rule, and with the lack of their own political power and autonomous organizational base. Under these circumstances the nucleus of an anti-shah revolutionary coalition was formed by a large group of liberal and radical intelligentsia, and a small group of militant *ulama* and their important followers in the bazaar.

Pahlavi Dynasty Collapse (1977–1979)

The opportunity for the opposition to challenge the shah came after the victory of Jimmy Carter in the U.S. presidential race of November 1976 and the ensuing active support given by his administration to the cause of human rights. When the political upheavals began (1977), the shah's weak and indecisive character contributed to the collapse of the Pahlavi regime and the rise of the Islamic Republic under the leadership of Ayatollah Ruhollah Khomeini, a charismatic figure with a strong will to power. Despite the mass-based nature of the Iranian Revolution, however, not all sectors of the population opposed the shah. The peasantry, for example, constituting over half of the population at the time, continued to support him, though passively. Even labor and the majority of public-sector employees and the middle and lower-middle classes did not join the uprising until the last phases of the revolution, when the shah's regime was on the verge of collapse. After a series of mass demonstrations, mass strikes, and clashes between the shah's security forces and opposition groups in the latter half of 1978, the shah left the country in January 1979; he died of cancer in Cairo on 27 July 1980.

For the shah the ideal model of the imperial persona was the Persian image of the "benevolent autocrat," as exemplified by great Persian monarchs, including his father, Reza Shah. Although this model implied that he should be determined, self-confident, and brave, in reality he was gentle, timid, and indecisive. The shah's inherently fragile character became evident particularly during periods of instability and crisis, whereas his "benevolent autocrat" tendencies came up during periods of stability and success. Furthermore, he was not immune to conspiracy theories. He therefore often saw the secret hands of foreign powers, specifically those of the British, behind virtually every international and domestic incident. He believed, for example, that the Anglophobic Mohammad Mossadegh and the xenophobic Ayatollah Khomeini were British agents. Referring to an Anglo-Russian conspiracy, the shah attributed the Islamic revolution

to the "unholy alliance of Red and Black." Belief in conspiracy theories further intensified his inherent vulnerability during periods of crisis. As a result, in the critical periods of 1941 to 1953 and 1960 to 1963, Mohammad Reza showed considerable indecisiveness. On the other hand, in the post-coup period (1953–1959) he began to show more determination, and in the stable period of 1963–1976, he emerged as a "benevolent autocrat," who devoted himself, in his own way, to the welfare of his people. Finally, during the period of revolutionary crisis (1977–1979), the shah, for the third time during his reign, turned indecisive, once again embraced conspiracy theories, and displayed a mood of withdrawal—traits and reactions that may have contributed significantly to his downfall.

Ahmad Ashraf

PAHLAVI, REZA

[1878–1944]

Founder of the Pahlavi dynasty in Iran.

Reza Shah Pahlavi was born into the family of a foot soldier in a small village near the Caspian Sea and given the name Reza. A few months after his birth, he lost his father, and he spent most of his childhood with his maternal uncle, an officer in the Cossack Brigade in Tehran. At the age of fifteen, at the behest of his uncle, he enlisted in the Cossack Brigade; on the strength of his personal traits and leadership qualities, he rose to officer rank. Surnames were not common in Iran in the early twentieth century, and his peers called him Reza Khan, the title *khan* being one of respect.

Reza Khan rose to prominence in the early 1920s when Iran was on the verge of economic collapse and political and territorial disintegration. The southward push of the newly established Soviet Union already threatened traditional British strategic and commercial interests in Iran and its colonial rule in India. The creation of a functioning central government capable of holding Iran intact as a buffer state became the main concern of Great Britain. Reza Khan, who aspired to save the country from disintegration, had risen to the rank of brigadier general and replaced the Russian commander of the Cossack Brigade. The commander of British forces in Iran did not oppose the coup d'etat engineered by Ziya Tabatabaʾi, with the support of Reza Khan, who marched his troops, some 2,500 men, into Tehran on 21 February 1921. The prime minister and cabinet were dismissed and Ahmad Shah, the reigning Qajar monarch, was forced to appoint Tabatabaʾi prime minister and Reza Khan army commander. Within a few months, however, Reza Khan ousted Tabatabaʾi and, having become the dominant player on the country's disarrayed political stage, virtually forced the powerless Ahmad Shah first to appoint him minister of war and then to appoint him prime minister. In 1925, Reza Khan masterminded a parliamentary act by which the Qajar dynasty was deposed. He was

entrusted with the throne as the founder of the Pahlavi dynasty.

To modernize a debilitated and backward country, Reza Shah began to reorganize and rebuild the army and the bureaucracy practically from scratch. A universal conscription law was passed in 1925 and young army officers were sent to France for military training. He ordered the purchase of a limited supply of weapons, including armored vehicles, fighter planes, and small warships. Administrative and judicial reforms began as early as 1922, when the Iranian *majles* (parliament) enacted a law calling for competitive entrance exams and specific qualifications for prospective civil servants. A new ministry of justice was established in 1925 and charged with drafting and applying a new legal code based on European judicial systems. These legal reforms helped create a secular system of justice that took away much of the clergy's traditional control over the administration of justice.

With the creation of a modern national system of education, the number of pupils in modern schools increased more than tenfold, from approximately 30,000 in 1921 to 370,000 in 1941. In 1935, the University of Tehran was founded; between 1925 and 1940, some 1,500 Iranian students were sent abroad for study in various fields. Concerted efforts were made to revive and propagate Iran's ancient cultural heritage and values in order to strengthen Iranian national identity as the indispensable foundation for a modern nation-state. Reza Shah paid considerable attention to improving the country's communications, transportation, and industrial capacities. An 850-mile-long railway, running from Bandar Shah on the Caspian to Ahvaz near the Persian Gulf, was completed in 1938. The quality of roads was improved and new highways, bridges, and tunnels were constructed. With foreign assistance, the country's postal and telegraph systems were drastically upgraded and a radio transmission system was installed in Tehran. The founding of a national bank in 1927, which replaced the British-controlled Imperial Bank of Persia and was given the right to issue legal tender in 1931, gave the government effective control over the country's financial markets. Bent on asserting Iran's economic independence, Reza Shah expanded Iran's nascent light industries. Although he relied on foreign technical assistance, especially from Germany, for his modernization program, he eliminated virtually all vestiges of foreign, and particularly British, economic and administrative tutelage in Iran.

Reza Shah's modernization policy led to the formation of new urban middle classes and, more specifically, a new professional bureaucratic intelligentsia which became the main support of his regime. He also had the support of the leaders and supporters of the 1905 through 1911 Constitutional Revolution and of the Social Democrats in his efforts to create a modern, independent nation-state. However, his political and social reforms were met with strong resistance from two major traditional forces: tribal chiefs and the clergy. The formation of a centralized bureaucracy and the unification and strengthening of the armed forces undermined the traditional privileges of tribal chiefs and eventually led to the expansion of the central government's authority over tribal areas. The secularization of Iran's judicial and educational systems greatly alarmed the clergy, who had also become concerned about some of Reza Shah's other innovations, such as public dress codes for both men and women, which they saw as undermining traditional Islamic lifestyles and values. Especially controversial was his order that women not appear in public covered in the traditional Iranian chador.

Reza Shah lived the life of a simple soldier. He was known for his parsimony and distaste for luxury. He had a great capacity for work, was often personally involved in minor administrative matters, and had a remarkable memory for the mundane details of governance. However, he also developed an obsession with acquiring large landed estates, mostly through forced gifts from private owners or through outright confiscation. A much more serious character flaw with respect to the sociopolitical development of the country was his highly autocratic and arbitrary leadership style, particularly in the latter half of his reign, in the 1930s. His method of ruling left little room for the development of personal initiative or a genuine parliamentary system of government. Furthermore, his autocratic regime also blocked the formation of a viable political elite that could guarantee the continuation of reforms undertaken during his reign. His mounting fear of disloyalty, rivalry, and sedition led to the banishing

or elimination of a number of prominent political figures, most of whom had supported him in his meteoric rise to power and helped him set the country on the path of modernization. Prominent among his victims were the court minister Abdul Hussein Teymurtash; Ali Akbar Davar, the architect of Iran's modern judicial system, state industries, and enterprises, who was driven to suicide; and the chiefs of the Qashqaʾi and Bakhtiari tribes. Taqi Arani, the leader of a group of leftist intellectuals, died in prison under suspicious circumstances. Sayyid Hasan Modarres, a leading political cleric, and Farrokhi Yazdi, an acerbic poet and journalist, were also among Reza Shah's victims. By the end of his reign, his authoritarian rule had alienated not only an important group of the professional bureaucratic intelligentsia but also a growing number of the independent intelligentsia, such as Sadeq Hedayat and Malek al-Shoara Bahar; the intelligentsia of the left; and the nationalist figures who rallied around Mohammad Mossadegh in the 1940s.

With the outbreak of World War II in 1939, Iran declared its neutrality. In 1941, after Germany invaded the Soviet Union and Moscow and London became wartime allies, Iran suddenly acquired strategic importance as a potential Allied supply route that circumvented Nazi-controlled Europe. A joint Anglo-Soviet force invaded Iran on 25 August 1941. On 16 September 1941, Reza Shah was forced to abdicate in favor of the crown prince, Mohammad Reza Shah Pahlavi. Reza Shah left Iran on 28 September aboard a British vessel. He remained under de facto house arrest in Mauritius and later in Johannesburg, South Africa, where he died on 26 July 1944.

PAKISTAN AND THE MIDDLE EAST

Pakistan's ties to the Middle East are based on history, religion, security, and economics.

Pakistan's historical links with the Middle East go back to the Arab invasion of Sindh in 712 C.E. The Arab–Islamic and Iranian cultures have deeply influenced the civilization of the areas that now comprise Pakistan. Contemporary geopolitical considerations have reinforced Pakistan's interest in the Arab region. For security as well as religious reasons, Pakistan has attached great significance to its relations with the Arab Islamic states.

The perception of a security threat from India and their dispute over Kashmir have impelled Pakistan to look toward the Islamic countries as "natural allies." Nevertheless, Pakistan's use of common Islamic symbols and shared religious identity did not satisfy the countries of the Middle East. Instead, Pakistan's decision to join the U.S.-sponsored security pacts in the 1950s provoked Arab hostility, particularly from Egypt, Syria, and Iraq. Archrival India found the political climate in the radical Arab states more congenial for its diplomacy. Pakistan's relationship with the West brought it closer to Iran, Turkey, and pro-West moderate Arab states.

In response to declining U.S. interest in military alliances, Pakistan's Middle East policy underwent a fundamental transformation in the early

1970s. As an alternative to dwindling Western support, Pakistan began to look toward the Arab oil-producing countries for economic assistance. Under Mohammad Reza Pahlavi, Iran became an important regional ally and also a source of much-needed foreign aid. Saudi Arabia and the Gulf states showed tremendous interest in Pakistan's security and economic development.

With the manifold increase in oil revenues, the Gulf region became more attractive for Pakistan as a market for its surplus manpower. Millions of Pakistanis have worked on developmental projects in the Gulf countries. The Pakistani workers abroad not only have lessened the pressure on unemployment at home but also have earned the country tens of billions of dollars. In the peak years (1980–1988), Pakistani workers remitted about three billion U.S. dollars a year that offset the huge gap in the balance of trade.

While Pakistan has unilaterally and unconditionally supported the Arab states in their disputes with Israel, including a Palestinian homeland, it has not received unanimous political backing of all the Middle Eastern countries in its disputes with India. In pursuit of bilateralism, Pakistan has carefully avoided taking sides in conflicts between the Muslim states. In the Iran–Iraq War in the 1980s, Pakistan remained strictly neutral. Pakistan's participation in Operation Desert Storm against Iraq in 1991 was a different matter. It was launched under the United Nations banner, and the coalition of Western and Arab states enjoyed broader legitimacy in forcing Iraqi invaders from Kuwait.

Over the years, Pakistan has emerged as an important regional actor in the Middle East, although it maintains a low profile. It has security protocols with a large number of Middle Eastern states. Pakistan provides training facilities to the armed forces of Saudi Arabia, Oman, Jordan, United Arab Emirates, Kuwait, and Bahrain. Also, Libya had access to these facilities in the 1970s. Pakistani military personnel serve in various capacities as trainers and advisers for Arab armies. In the 1980s, Pakistan stationed about 10,000 of its troops in Saudi Arabia. As a quid pro quo, Saudi Arabia financed the modernization of Pakistan's air force. In the latter part of the twentieth century, among developing countries, Pakistan had the second largest military presence overseas (after Cuba)—all of it was in the Middle East.

PALESTINE

Area located on the eastern shore of the Mediterranean south of Lebanon and northeast of Egypt.

The area known as Palestine has taken on different geographic and political connotations over time. The following discussion distinguishes between (a) pre-twentieth-century history of the area; (b) Palestine as a territory under British administration from late 1917 to early 1948; and (c) Palestine as the territory administered by the Palestine National Authority since 1994, also known as the West Bank and Gaza Strip.

Pre-Twentieth-Century History

Palestine has since ancient times been a crossroads between Asia, Europe, and Africa. Its climate is arid. The southern half, the Negev, is desert, but in the north there are several fertile areas. The principal water source is the Jordan River, which flows south through Lake Tiberias into the Dead Sea.

Palestine is of central importance to three monotheistic faiths: Islam, Christianity, and Judaism. For 1,300 of the past 1,400 years, the land was under Muslim rule. Most European and North American Christians and Jews consider Palestine on both sides of the Jordan to be the Holy Land of the Old Testament of the Bible. Although the British initially designated the area of the Palestine Mandate to extend eastward to Mesopotamia (Iraq), by the early twentieth century most people took the Jordan River to be the eastern border of Palestine.

The earliest inhabitants of Palestine were the Canaanites. The land was conquered by numerous invaders, including (in the fourteenth century B.C.E.) the Hebrews and the Philistines, who gave

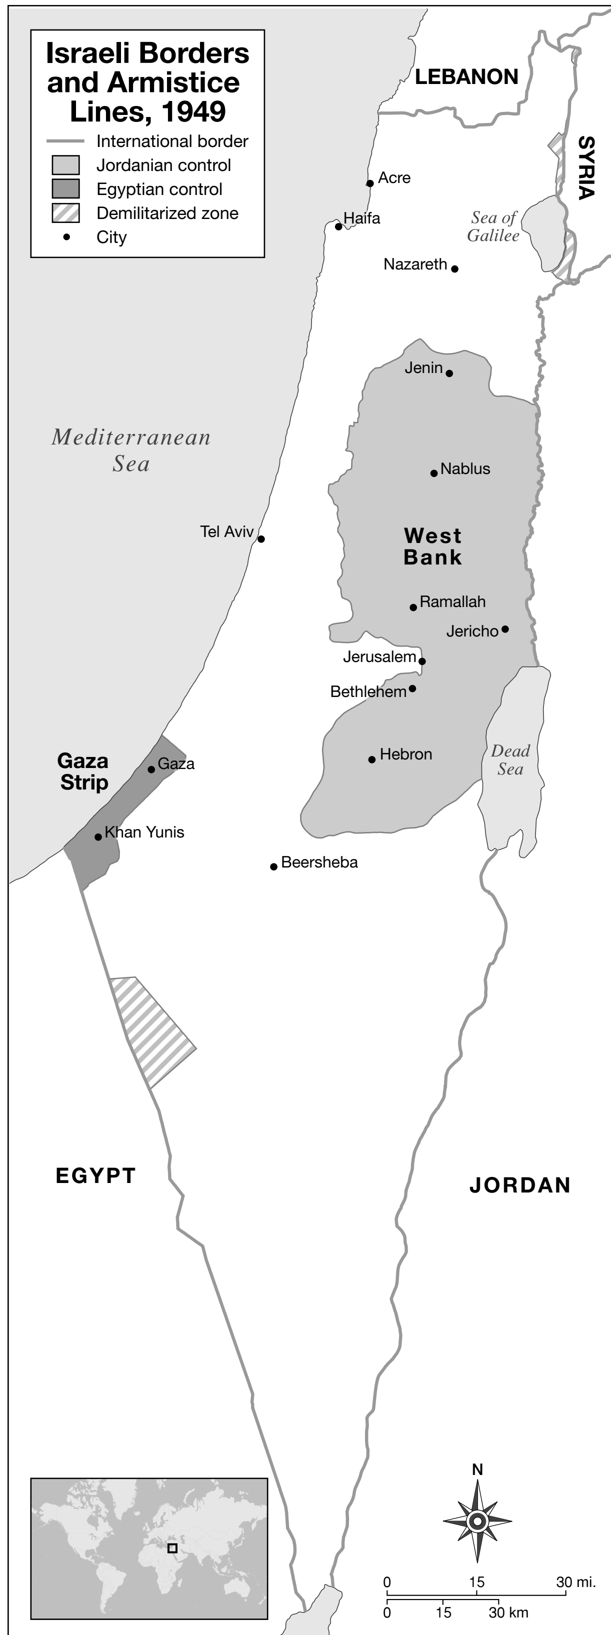
the country its name. The Israelites, a confederation of Hebrew tribes, established a unified kingdom in the area under David and Solomon (c. 1000–922 B.C.E.), which subsequently split into the kingdoms of Israel in the north and Judaea in the south. From 587 B.C.E., Palestine became a province of the Persian Empire, and was later ruled by Jewish kings as part of the Roman empire. The Romans crushed the Jewish revolts of 66–73 and 132–135 C.E., killing and exiling many Jews, and renaming the area *Syria Palaestina.*

In 638 C.E. Arabian Muslim armies captured Jerusalem and replaced the Byzantine rulers of the area, which thereafter became known as *Filastin.* Arab geographers in the tenth century referred to Filastin as one of the provinces of Syria, but by the twelfth and thirteenth centuries the term was no longer used.

From the fifteenth century until the end of World War I, the region was part of the Ottoman Empire. Changing provincial and administrative boundaries within the empire blurred Palestine's separate existence. In an attempt to centralize government administration, the Ottoman Empire was divided into new administrative regions under the Vilayet Law of 1864. Under this arrangement the central and largest part of Palestine, as well as Transjordan, became part of the *vilayet* (province) of Damascus. The northern part of the country, including Acre, Haifa, Tiberias, Safed, Nablus, Jenin, and Tulkarm, was part of the *vilayet* of Beirut. Jerusalem, Gaza, Hebron, and Beersheba became the *sanjak* (district) of Jerusalem, which, because of the city's special religious status and because of European interest, was established as an independent unit governed directly from Constantinople (now Istanbul).

By the mid-nineteenth century the population of Palestine was about 500,000, the vast majority of whom were Muslims. The southern half of the country, later called the Negev, was mostly desert, sparsely inhabited by bedoun tribes. Overall, only about a third of Palestine was suitable for cultivation.



Map by XNR Productions, Inc. The Gale Group.

By the end of the nineteenth century, a commercial bourgeoisie comprised of Muslims, Christians, Jews, and German Templars played an important role in the incorporation of Palestine's economy into the world economic system. There was a major increase in cultivation of export commodities that included wheat, barley, sesame, olive oil, and oranges. Small-scale industries produced textiles, soap, oil, and religious items.

Palestine as a modern political entity came into existence as a result of the collapse of the Ottoman Empire in World War I. Although the Arabs of the region considered themselves to be a distinctive group, there was no serious conflict between them and the Ottoman Turkish establishment until the early twentieth century. Nineteenth-century Palestinian elites approved of and benefited from the Ottoman reform effort (Tanzimat, from 1839 to 1876), and many of them held influential posts in the ruling establishment in Constantinople. Several served in the parliament; Nablus was reputed to be especially favored by Sultan Abdülhamit II. It was against this backdrop that an Arab "decentralist" movement would emerge before World War I, and within this wider pan-Arab political sentiment the first seeds of a distinct Palestinian nationalism were sown.

Although Jews had been living in Palestine (which they call Eretz Yisrael, the Land of Israel) for millennia, the first politically motivated Jewish immigration came in 1882. At the time, the Jewish population was about 24,000, mostly comprised of Orthodox Jews unaffiliated with the Zionist movement. They were settled mainly in Jerusalem, Hebron, Safed, and Tiberias. There was little friction between these Jews, the "Old Yishuv," and the indigenous Arab population. However, as the number of Zionist settlements increased, quarrels arose between them and neighboring villages over grazing, crops, and land issues. Between 1886 and World War I, there were several armed clashes that resulted from Jewish settlers purchasing land from absentee Arab owners and subsequently dispossessing the peasant cultivators.

Growing opposition to Zionism and emergence of a new pan-Turkish ideology following the Young Turk Revolution in 1908 led to a heightened sense of distinctive Palestinian patriotism. Although most of the Palestinian elite remained loyal to the Ot-

toman sultan during World War I, a few prominent intellectuals identified with the nascent pan-Arab nationalist movement. During the war, opposition to Ottoman authority increased because of economic disasters (caused by a locust plague, drought, and famine) with which the Ottoman authorities failed to cope, and because of the repressive measures imposed by the Turkish governor, Cemal Paça.

Palestine under British Rule

Before World War I the area that became Palestine was sometimes known as "southern Syria." With the retreat of the Ottoman Army, Palestine was occupied by British forces under General Sir Edmund Allenby in 1917 and 1918, and was placed under a military government administration known as Occupied Enemy Territory Administration South (OETA-S) until 1 July 1920, when the military regime was replaced by a British civil administration. During three decades of British rule, Palestinians further developed their national consciousness and were able to exercise some degree of national-communal political activity.

In London, the British foreign secretary, Arthur J. Balfour, wrote a letter on 2 November 1917 defining His Majesty's Government's new policy favoring the creation of a Jewish national home in Palestine. In April 1918 a Zionist Commission arrived in Jaffa with a mission (despite a local publication ban on the Balfour Declaration) to prepare the Yishuv to enjoy special status and privileges under an expected pro-Zionist British regime that would encourage Jewish immigration, settlement, land purchase, and—eventually—statehood. Rumors about the impending implementation of the Balfour policy alarmed many sectors of the Palestinian population, whose local leadership created, during the first year of the British occupation, a country-wide organization to express its opposition to Zionism. The Muslim-Christian Association (MCA) first appeared in Jaffa early in November 1918, and in Jerusalem later the same month; subsequently it set up branches in various Palestinian towns. The purpose behind creating the MCA was to organize a Palestinian national struggle against the threat of Zionism.

The top leadership of the MCA was drawn largely from the older generation of urban notables who had social standing in Ottoman times. Initially, the MCA, under former Jerusalem mayor Musa Kazim al-Husayni, did not have much political power, and its significance derived from the fact that it embodied the concept of political cooperation between Muslims and Christians in Palestine. Gradually, however, it became a group of leaders and activists who were able to mobilize important segments of Palestinian society around a program of independence and opposition to Zionism. Their main instruments of political action were petitions submitted to the Palestine government and the organizing of demonstrations and other campaigns on instructions from the Jerusalem secretariat, which was headed by Jamal al-Husayni. Yet the notables who led the MCAs were interested in maintaining friendly relations with the new British masters of the country.

Ashkenazi Jews descend from Poland, Austria, Germany, or Eastern Europe. Traditionally the Ashkenazi Jews speak Yiddish. **© Hulton-Deutsch Collection/Corbis. Reproduced by permission.**

As part of its efforts to promote Palestinian national demands, the MCA was instrumental in convening a country-wide congress in Jerusalem from 27 January to 9 February 1919. Called the first

Palestine Arab Congress, it was followed by six more, the last of which was held in 1928. The MCA also initiated the formation of the Arab Executive (AE) Committee that tried to coordinate the national struggle in the 1920s and early 1930s.

Government of Palestine under the Mandate

Following the British takeover, Palestine acquired fixed boundaries, its own government, and a political identity separate from the surrounding countries carved from the Ottoman Empire by Great Britain and France. Its separate identity was given international recognition when Great Britain assumed the Mandate for Palestine under the League of Nations in July 1922. In 1923 the British unilaterally divided the area of the original mandate into Transjordan (east of the Jordan River) and western Palestine, with the Jewish national home provisions of the mandate applying only to the latter territory. The area east of the river became the autonomous emirate (principality) of Transjordan (later the Hashimite Kingdom of Jordan) under the Amir Abdullah, son of the sharif of Mecca.

Map by XNR Productions, Inc. The Gale Group.

According to the terms of the Mandate for Palestine, Great Britain was ultimately responsible to the League of Nations for governing the country, which was ruled, in effect, like a colony, under a high commissioner (HC) appointed by the British government. The HC was responsible to the Colonial Office in London rather than to the local population and had authority to make all government appointments, laws, rules, and regulations. He was backed by British military forces and police. Most high commissioners were former British colonial officials or army generals. The government of Palestine created its own courts, postal service, police force, customs, railroad and transportation network, and currency backed by the British pound sterling. Until 1948 the inhabitants of the country, both Arabs and Jews, were legally called Palestinians and considered British subjects.

The British attempted to introduce a limited measure of self-government through establishment of advisory and legislative councils during the 1920s and 1930s. The first, set up in October 1920, was a nominated advisory council (AC) pending the establishment of a legislative body. The AC was composed of ten Palestinian officials: four Muslims, three Christians, and three Jewish members of the Yishuv.

In August 1922 the HC, Sir Herbert Louis Samuel, proposed as a first step toward self-government a constitution that called for the replacement of the AC with a legislative council (LC). The proposed LC was to be composed of twenty-three members: eleven appointed British members, including the high commissioner, and twelve elected Palestinian members, incuding eight Muslims, two Christians, and two Jews. However, in order to safeguard the Balfour policy of support for the Jewish national home, the HC would retain a veto power and the council's legislative authority would not extend to such central issues as Jewish immigration and land purchase.

The Jews reluctantly accepted, but the Palestinians rejected the proposed constitution and boycotted the elections for the LC in February 1923. Palestinian leaders argued that participation in the council would be tantamount to acceptance of the British Mandate and Balfour policy, which they feared would lead to their subjugation under a Jewish majority in an eventual state. The poor election turnout caused the HC to shelve the LC proposal and revert to the idea of an advisory council. But Samuel failed to convince Palestinian leaders to sit on a revised AC; nor was his subsequent proposal to establish an "Arab Agency" (to be parallel to the "Jewish Agency" recognized under the mandate) any more successful at winning the cooperation of local politicians. Samuel thereupon abandoned the idea of encouraging popular participation in the governing of Palestine. Although the idea of establishing a LC would be revived in 1928 and again in the early 1930s, the British were unable to win both Arab and Jewish support for their proposals. As a result, Palestine was governed, from 1923 until the end of the Mandate in 1948, by a HC in consultation with an AC composed only of British officials.

Britain's Dual Obligation and Intercommunal Rivalry. The League of Nations Mandate for Palestine incorporated provisions of the Balfour Declaration calling for "establishment in Palestine of a national home for the Jewish people." It also recognized the "historical connexion of the Jewish people with Palestine," promised support of Zionist objectives, and gave preference to Jewish land acquisition and settlement. Although the mandate (like the Balfour Declaration) made no specific reference to the Arab population as possessing national rights (referring to them as the "existing non-Jewish communities"), it prohibited "discrimination of any kind . . . between the inhabitants of Palestine."

As a result of this dual obligation to both foster the establishment of the Jewish national home and ensure "that the rights and position of other sectors of the population are not prejudiced," British policy was ambivalent, and at first seemed destined to arouse unrealizable expectations on the part of both communities. Initial support for Zionist objectives was indicated in the appointment of Herbert Samuel, an Anglo-Jewish leader sympathetic to Zionism, as the first HC to Palestine (1920–1925). However, opposition by the country's Arab majority to the establishment of a Jewish homeland and to larger imperial interests became a major obstacle to full British cooperation with Zionist leaders who were eager, for their part, to proceed full speed toward their objectives of a Jewish majority and an eventual Jewish state in Palestine.

The dissatisfaction of Palestine's Arab population with Britain's pro-Zionist policy was expressed peacefully in the forms of public demonstrations, protest letters and petitions, and the dispatch of several delegations to London and Geneva. Palestinian leaders, seeking self-determination and the establishment of an Arab state in Palestine, feared Jewish domination (through increasing immigration and land purchases) and the establishment of a Jewish state. Nationalist frustrations led to periodic rioting (April 1920, May 1921, November 1922, August 1929, November 1933) and to a full-scale rebellion known as the Arab Revolt (1936–1939). Local British security forces restored law and order, and the Colonial Office in London issued several policy statements (White Papers) in attempts to redefine or clarify its Palestine policy. But all attempts to bridge the gap between the Arab and Jewish communities were unsuccessful; each community proceeded to develop itself with little, if any, contact with the other. By 1939 Great Britain had retreated from its position on implementing the Balfour provisions of the mandate.

Each community developed its own educational, health, welfare, cultural, political, and labor organizations. Arab schools supported by the Mandatory government's Education Department were conducted in Arabic with their own curriculum. The Yishuv had its own schools, where the language was Hebrew, and its own Hebrew University, founded in 1925. The two communities lived largely separately; contact was only at the peripheries, in government offices, or in a few business enterprises. The Yishuv was mainly urban, concentrated in the coastal region and in the city of Jerusalem, whereas the Arab sector was largely rural, in central Palestine.

By the end of the mandate in 1948, the Palestinian population had doubled, mostly through natural increase, from just over 650,000 (1922 census) to 1.3 million. During the same period the population of the Yishuv increased even more

dramatically, largely through immigration, from about 84,000 to approximately 650,000. The increase in the Jewish population from about a tenth to a third of the total population of Palestine was accompanied by extensive expansion of the Yishuv's socioeconomic and politicomilitary infrastructure. The number of rural collectives *(kibbutzim)*, cooperatives *(moshavim)*, and private farms increased several times; the all-Jewish city of Tel Aviv grew from an adjunct of Jaffa to the second largest municipality in the country. Jewish-owned industry dominated the economy. Despite the growth of its rural sector, the Yishuv was 85 percent urban by the end of the mandate, and Jewish-owned land comprised less than 7 percent of the total, although more than a quarter of the cultivated area was Jewish.

The Yishuv developed its own political parties and self-governing institutions that took responsibility for functions not under jurisdiction of the mandatory government, such as courts, education, and social welfare. The British recognized the World Zionist Organization as the official agency to implement establishment of the Jewish national home. Within Palestine the Yishuv elected its elected assembly *(Assefat ha-Nivharim)*, whose national council *(Vaʿad Leʾumi)* ran the day-to-day affairs of the Jewish community. More than a dozen political parties were divided into four principal categories: labor, general Zionist, Orthodox religious, and Sephardic or Oriental. The strongest political bloc was labor by virtue of its control of the Histadrut, the large labor federation that controlled much of the Yishuv's economy, and of the largest paramilitary group, the Haganah.

Palestinian Political Organization during the Mandate. The Palestinian community was much less centralized and more loosely organized than the Yishuv. The older politicians, representing the traditional elite and notable families who had been closely associated with the Ottoman establishment, had formed the MCA in 1918 and continued to lead the Palestine Arab Congresses by holding positions on the Arab Executive.

With the defeat of Faisal's Arab kingdom by the French in July 1920, Palestinian leaders who had previously been engaged in the struggle for independent "Greater Syria" focused on local problems, primarily the struggle against the British mandate and the Jewish national home. Later that year, the third Palestinian Arab Congress convened in Haifa, elected an AE committee, and sent a delegation to plead the Palestinian cause both at the Colonial Office in London and at the League of Nations headquarters in Geneva. Neither the congresses nor the AE were successful in attaining their objective, and both gradually lost credibility. When its chairman, Musa Kazim al-Husayni, died in 1934, the Arab Executive ceased to exist.

Throughout the mandate period serious rivalry for political office and government favor existed between members of the Nashashibi and Husayni families. The most influential Palestinian leader was al-Hajj Muhammad Amin al-Husayni, appointed by the British as mufti of Jerusalem in 1921 and elected president of the Supreme Muslim Council in 1922. By virtue of these positions he commanded extensive financial resources and influence throughout the Palestinian community. Prior to 1936 the mufti pursued a policy of cooperation that aided the High Commissioner in keeping the peace. However, following the outbreak of the Arab Revolt in 1936, al-Hajj Amin al-Husayni became more militantly anti-British. His activities ultimately led the British to seek his arrest, but in mid-1937 he escaped, first to Lebanon, then to Iraq.

Supporters of the mufti, called Councilites *(al-majlisiyyun)*, were opposed by "the Opposition" *(al-muʿaridun)* led by the Nashashibi family. Both groups were supported by extensive clan *(hamula)* networks and client relationships. The Husaynis, the larger network, were considered more militant than the Nashashibis, who were willing to compromise with the British. Even though both factions rejected the Jewish national home, these internal rivalries constituted a weakness vis-à-vis the more cohesive Jewish community.

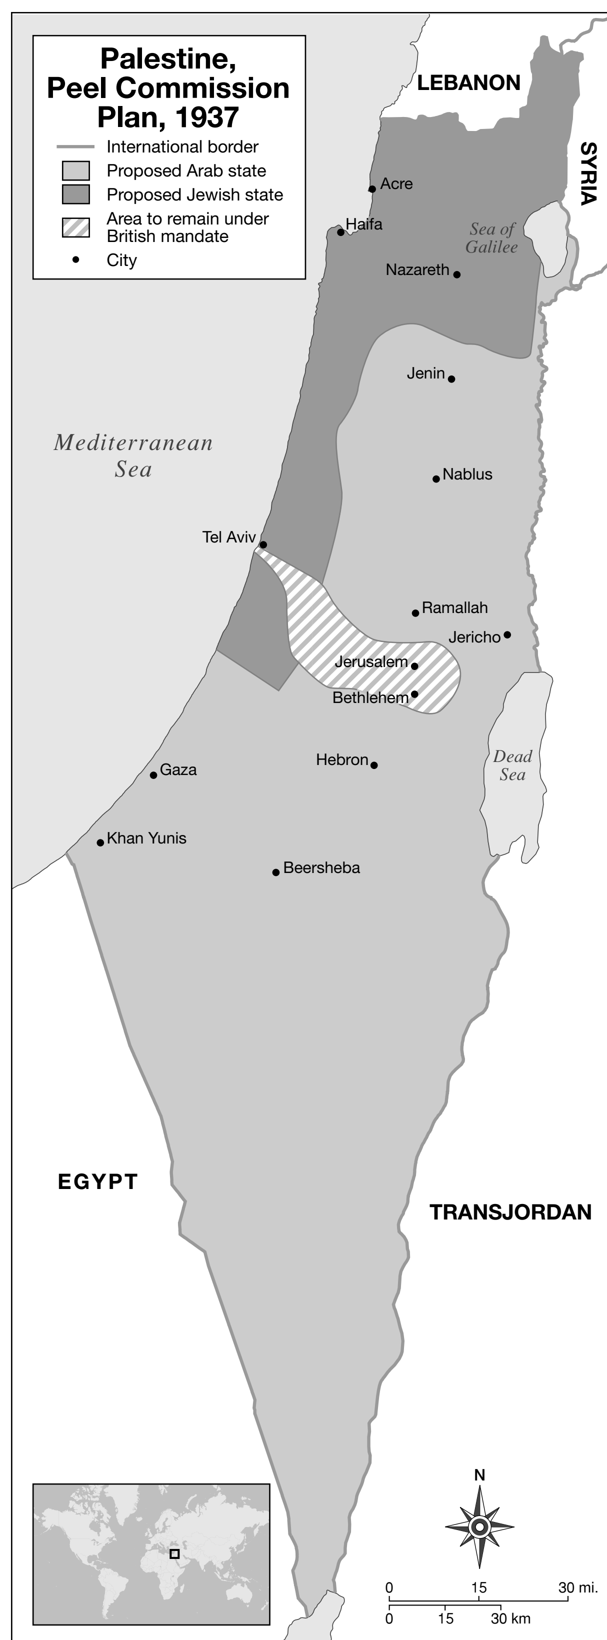
Following demise of the Arab Executive in 1934, younger and more militant elements became active in local Palestinian politics, leading to the creation of the Palestinian branch of the pan-Arab Independence (Istiqlal) Party headed by Awni Abd al-Hadi, who was joined by Akram Zuʿaytir and Muhammad Izzat Darwaza. The old MCA and AE forces also regrouped into rival Arab political parties, chiefly the Palestine Arab Party, organized by the Husaynis, and the National Defense Party, headed by the

Nashashibis. The Palestine Arab Party was founded in March 1935 by Jamal al-Husayni, a relative of al-Hajj Amin al-Husayni. Many political activists who had previously supported the AE (1920–1934) joined its ranks. Its leaders maintained close contact with the Roman Catholic community through its officers, Alfred Rock and Emile al-Ghuri, and with the activist scouts' movement and workers' societies in Jerusalem and Haifa. The party endorsed the following set of "national demands," which were later endorsed by an umbrella organization representing all major parties: (a) repudiation of the Balfour Declaration; (b) full stoppage of Jewish immigration and land purchases; and (c) the immediate establishment of Palestine as an independent state under Arab control.

The National Defense Party was formed on 2 December 1934 by the supporters of Raghib al-Nashashibi, the former mayor of Jerusalem. The leaders encompassed most Arab mayors; important politicians from large landowning families; influential middle-class Christians; and the Jaffa branch of the Palestine Arab Workers Society. The party denounced the sale of land to Zionist landholding companies and sought limitations on Jewish immigration. Nonetheless, it was tacitly more cooperative with the British authorities and Zionist leaders, and (unlike the Husaynis) maintained good relations with Amir Abdullah of Transjordan.

General Strike and Revolt, 1936–1939. By April 1936, growing Palestinian concern at the rapid influx of Jewish immigration and the accompanying frustration at British unwillingness to fulfill their national demands led to a general strike against the British authorities and the Yishuv. The strike soon became an uprising, drawing support from the whole Palestinian community and from Arab nationalist circles in the neighboring lands. The Arab Higher Committee (AHC), chaired by the mufti and representing a broad coalition of Arab political organizations, was formed to lead the uprising. Elements of the Palestine Arab Party formed an underground paramilitary force that remained active until suppressed by the British in early 1939.

During a lull in the fighting (1936–1937), the British sent a Royal Commission of Inquiry under William Robert Wellesley, the first Earl Peel, to ascertain the causes of the rebellion and to propose



Map by XNR Productions, Inc. The Gale Group.

solutions. In July 1937 the Peel Commission recommended a form of radical surgery: the partition of Palestine into a small Jewish coastal state, and a larger Arab state to be joined with Transjordan. The Palestine Arab Party denounced the plan, and the revolt resumed, this time with greater support from nationalist groups in Iraq, Syria, and Lebanon. The National Defense Party, for its part, accepted the Peel Commission concept of territorial partition and was not averse to the idea of linking the Arab portion of Mandatory Palestine to Abdullah's Transjordan. The party was criticized by other Palestinian politicians for deviating from the antipartition consensus.

The short-lived unity behind the AHC was broken when the uprising entered its second phase in 1937. The Nashashibi member of the AHC resigned, leaving leadership in the hands of the mufti and his allies. In 1937 the British outlawed the AHC and arrested and deported several of its members. The mufti and several of his associates fled to Syria, Iraq, and Lebanon, from which they attempted to keep the rebellion alive. During 1937 and 1938 a number of assassinations took place as the struggle between followers of the Nashashibis and Husaynis turned violent, contributing to a leadership vacuum in the Palestinian community. By 1939 the rebellion petered out as a result of the conflict within the Palestinian community and the massive use of force by the British. In the end, the Palestinians had suffered staggering losses: more than 3,000 dead, 15,000 to 20,000 wounded, and more than 5,000 leaders and fighters in detention.

In their search for a political formula that would reestablish tranquility in Palestine in light of a looming European war, the British convened a roundtable conference of Arab and Zionist representatives at London's St. James's Palace in early 1939. Bickering over who should represent the Palestinians contributed to the ineffectiveness of the small Palestinian delegation (headed by Jamal al-Husayni and George Antonius) that sat through many meetings alongside those of Iraq, Egypt, Transjordan, Saudi Arabia, and Yemen. When the conference broke down without reaching consensus, Colonial Secretary Malcolm MacDonald issued a White Paper in May that retracted the Peel Commission's partition recommendation and proposed instead that, over a period of ten years, self-governing institutions would be developed for an eventual independent Palestinian state that would not be dominated by either Arabs or Jews. At the same time, the White Paper restricted Jewish immigration to 75,000 over five years, with any subsequent immigration dependent on Arab approval. Furthermore, the purchase of land by Jews would be limited in some parts of Palestine and forbidden in others. The White Paper thus limited the expansion of the Jewish community and its territorial holdings, but fell short of the Palestinians' demands for total stoppage of immigration and the immediate granting of independence.

During and after World War II. Overshadowed by the necessities of prosecuting the British war effort after 1939, local political activity in Palestine was quiescent, despite the absence of consensus in support of the new White Paper policy. Within the Yishuv, official Zionist policy was to fight the restrictions of the MacDonald White Paper as if there were no war against Germany, while helping in the fight against the Axis powers as if there were no White Paper. Britain was left to pursue its war effort without official Zionist, Arab, or Palestinian endorsement of the provisions in the White Paper.

Faced with these new directions in British policy, attempts were made to revive the AHC, but these were marred by the continuing rift between the Husaynis and Nashashibis and by the absence of many exiled leaders whom the British had prevented from returning to the country. By 1941 the National Defense Party had become inactive, although Raghib al-Nashashibi continued to issue statements in its name. Some leaders of the Palestine Arab Party were able to return to Palestine and reopen the party's offices in April 1944 and to use its connections with the Arab Bank and the local press to regain substantial influence. A Husayni-dominated AHC was organized in 1945, but it was countered by an opposition Arab Higher Front. When Jamal al-Husayni returned in February 1946 he gained control over the AHC as well as the Palestine Arab Party. Later that year the Arab League intervened, and another AHC was set up.

In the struggle following World War II the AHC rejected various British and Anglo-American compromise proposals and, ultimately, the 1947 United Nations (UN) partition proposal. Paramilitary organizations formed to oppose partition were split be-

tween the Husayni al-Futuwwa and the opposition al-Najjada. The 29 November 1947 announcement of the UN General Assembly vote recommending partition led to Palestinian attacks on Jewish quarters in Jerusalem, triggering an intermittent "civil war" that lasted from December 1947 to May 1948. The 14 May proclamation of Israel's independence, immediately upon the official termination of the mandate and the withdrawal of British forces and administration, was followed by the invasion of Palestinian territory by the armies of Transjordan, Egypt, Syria, and Iraq. The first Arab–Israel war, which also involved Lebanese forces and volunteers from Saudi Arabia and Yemen, ended in early 1949 with the defeat of the Arab forces and the signing of armistice agreements between Israel and Egypt, Transjordan, Lebanon, and Syria.

The fighting of 1948 to 1949 displaced more than 700,000 Palestinians (approximately half the Arab population of Palestine) who had fled or been expelled by Jewish (later Israeli) forces. This fragmentation of Palestinian society and the creation of a huge refugee population became known as *al-Nakba*—the catastrophe. For many years, controversy has swirled around the question of responsibility for this massive defeat and for the creation and persistence of the Palestinian refugee problem. Blame has been attributed variously to a deliberate Israeli policy of expulsion; disunity, distrust, and disorganization among Palestinian leaders and their supporters in the neighboring Arab countries; and tactical or strategic errors made by the Palestinian leadership—notably their rejection of the UN partition proposal. Recent archival research has unearthed new evidence for the first explanation, and has drawn attention to a fourth contributing factor: the asymmetry or imbalance of forces—throughout the Mandate period, but especially after 1937—between the Yishuv and the Palestinian community. The former was growing, determined, better armed, and highly disciplined, and had enjoyed British protection during its formative years. The Palestinians, on the other hand, were demoralized, disunited, and without effective leaders, many of whom had been killed or exiled during and after the revolt.

Disappearance and Reemergence of Palestine

With the establishment of the Jewish state of Israel in May 1948 and the occupation of the Gaza Strip by Egypt and of the West Bank by Jordan, Palestine ceased to exist as a separate political entity. Yet, during the 1950s, Arab, British, and UN documents continued to refer to the situation "in Palestine" when dealing with Israel, the neighboring Arab states, and areas inhabited by displaced Palestinians. Even without a political territory or government, Palestinians maintained their distinctive national and historic consciousness, and were reluctant to cease identifying with their lost homeland.

Putting their hopes in UN resolutions, the declarations of their own exiled leaders, and the promised support of neighboring Arab regimes, most Palestinians continued to dream of their eventual return to their homes and the establishment of an Arab Palestinian state. As refugees, the Palestinians became the focus of international relief efforts; successive generations of Palestinians were born in exile and in refugee camps of the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA). Yet, political solutions based on the Palestinians' right to return or compensation (UN General Assembly Resolution 194 of December 1948) eluded generation after generation of Middle Eastern leaders.

Some Palestinians in exile became active in seeking political and military solutions that would result in their return and the eventual creation of an independent Palestinian state. Despairing of the efforts on their behalf of members of the League of Arab States, Palestinians developed their own leadership, known as the Palestine Liberation Organization (PLO). Initially created by Egypt's Gamal Abdel Nasser in 1964, the PLO's first chairman was Ahmad Shuqayri. After 1968 the PLO became an autonomous umbrella organization under the leadership of Yasir Arafat, bringing together many Palestinian groupings. For the next decade, the PLO adopted "armed struggle" as its primary mode of operation, thereafter developing a diplomatic campaign to restore Palestinians to their homeland by replacing the Jewish Israeli state. The boundaries of the future Palestinian state were declared to be those of the former British mandate.

The PLO's quest for international recognition of Palestinian rights was crowned with its first major success in 1974, when the United Nations Gen-

MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

eral Assembly passed Resolution 3236 in support of the "inalienable rights of the Palestinian people in Palestine" to "self-determination without external interference," to "national independence and sovereignty," and "to return to their homes and property from which they have been displaced and uprooted." The following year, the UN created the Committee on the Exercise of the Inalienable Rights of the Palestinian People. Although they provided only moral support, such declarations and activities added much-needed international legitimacy to the Palestinians' quest for recognition of their right to a homeland during a period when both Israel and the United States were defining the PLO as a terrorist organization unworthy of inclusion in diplomatic discussions.

A decade later, in a further effort to open a dialogue with the United States, and hoping to capitalize diplomatically on the intifada against Israeli occupation that had been sparked in December 1987 in the West Bank and Gaza Strip, representatives at the twentieth meeting of the Palestine National Council in Algiers in November 1988 issued a symbolic declaration of Palestinian independence. At the same time, they formally endorsed the land-for-peace and mutual recognition approaches contained in UN Security Council Resolution 242 of November 1967—a resolution whose text makes no mention of the Palestinians or their rights. Afterward, PLO Chairman Yasir Arafat issued several prepared statements denouncing the use of terrorism by all parties, and implying that the future Palestinian state would exist alongside, rather than in place of, the Jewish state of Israel. Arafat's last step resulted in the opening of a PLO dialogue with the United States.

During the 1991 Madrid Conference and subsequent talks at the U.S. State Department, Palestinian leaders were invited to participate (as part of a joint delegation with Jordanians) for the first time in direct negotiations with Israel. Following the historic mutual recognition between the Israeli government and PLO and the signing of the Oslo Accord in September 1993, a process was begun to provide for phased Israeli withdrawals, beginning in Jericho, from occupied Palestinian territories on the West Bank and the Gaza Strip.

In early 1994 a Palestinian National Authority (or Palestine Authority) was created to administer

these areas as further interim negotiations continued for additional Israeli pull-backs and other measures toward a final settlement. The Palestine Authority (PA) thus became an embryo government of a still-to-be-created sovereign Palestinian state. Many disappointments and frustrations prevented the scheduled later stages of negotiation from taking place or bearing fruit. This resulted in an untenable situation marked by violence and repression, most dramatically exploding into the second (al-Aqsa) intifada in September 2000. In the course of suppressing this Palestinian intifada, the Israel Defense Forces reoccupied, for varying lengths of time, many parts of the territories that had come under the rule of the weakened PA.

PALESTINE ARAB REVOLT (1936–1939)

Arab revolt in Palestine to resist British support for a Jewish national home.

PALESTINE ARAB REVOLT (1936–1939)

The revolt in Palestine (1936–1939) was in many ways the decisive episode in the efforts of the Palestinian Arabs to resist the British mandate's support for a Jewish national home in Palestine. Although it helped force a British policy reassessment, which led to the 1939 white paper curtailing Jewish immigration to Palestine, ultimately the revolt must be judged a failure. At its conclusion in 1939, the Palestinian Arabs were exhausted by more than three years of British repression. Perhaps 5,000 had been killed and 15,000 to 20,000 wounded; 5,600 of their leaders and fighters were in British detention; and most of the rest were scattered outside the country or dead. Such losses, in a population of about 1 million Palestinian Arabs in 1939, meant that more than 10 percent of the adult males were killed, wounded, or detained by the end of the revolt.

Equally important, the Palestinians failed to benefit politically. Their already divided leadership was fragmented further by the events of 1936 to 1939; and with many of its leaders in exile from 1937 on, it was paralyzed by a division between those outside of Palestine and those inside it that persisted for decades thereafter. These divisions contributed to the failure of the Palestinians to capitalize on the potential advantages offered them in the 1939 white paper, which with its limits on immigration and promise of self-government within ten years, held out for the first time the prospect of Arab majority rule in Palestine. In any case, the government of Winston Churchill, which came into office soon after, was resolutely opposed to its implementation. After the war, the impact of the revelation of the Holocaust, the growing strength of the Yishuv in Palestine, and the rising power of the United States in the Middle East combined to render it moot. The Palestinians came out of this ordeal politically weaker than they had gone into it, and unprepared for the struggle for Palestine (1945–1948) that, attendant on the establishment of Israel, resulted in the dispossession of about half the Arab population of the country.

Economically, the revolt was a disaster for the Arabs. It had begun in April 1936 as a spontaneous strike and boycott of the British and of the Jewish economy of Palestine. Effective though it was at the outset, the result was measurably to weaken the Arab sector of the economy, which did not have the resources or the resilience to support the hardships of the revolt, and to strengthen the economy of the Yishuv, which did. The Arab labor boycott, moreover, had the paradoxical effect of furthering the Zionist policy of giving jobs only to Jews—cheaper Arab labor had heretofore been favored by many Jewish businesses—and spurred the economy of the Yishuv to greater self-reliance.

On the military level, the Palestinians lost several thousand of their best fighters and military commanders in combat or to British firing squads, which executed 112 Arabs. Many thousands of others were wounded, detained, or forced into exile. In addition, the British seized over 13,000 weapons and 350,000 rounds of ammunition from Arabs (about 500 guns were seized from Jewish groups in this period), at a time when the British were arming units like the Jewish Settlement Police and cooperating with the Haganah to repulse Arab attacks. All of these losses, particularly in combatants, military leaders, and weapons, were sorely felt when the Palestinians confronted the well-armed and organized forces of the Yishuv during the fighting that started immediately after the partition resolution was passed by the United Nations General Assembly in November 1947. This fighting grew in intensity until May 1948, by which time the Palestinians had been routed in many crucial areas, losing the cities of Jaffa, Haifa, and Tiberias, and scores of villages, towns, and strategic roads and junctions to the advancing forces of the Haganah and its allies. In some sense, the outcome of these decisive battles (1947–1948) was determined by the disastrous political, economic, and military results of the 1936–1939 revolt for the Palestinians.

The revolt was notable for its spontaneous inception, with local committees springing up in April 1936 to organize a general strike and boycott that lasted until October of that year. Among the motives for the revolt was the rapid growth in Jewish immigration to Palestine: From 1932 to 1936 there were 174,000 immigrants, more than the total Jewish population of the country in 1931. The Arab Higher Committee was formed by Palestinian notable leaders soon after the strike began, largely in response to this pressure from below, but never really gained control of events. In the sporadic fight-

ing of 1936 and in the intense battles of the second phase of the revolt, which began in September 1937, local organization was paramount, with minimal coordination between the mainly peasant military bands, which bore the brunt of the fighting. In spite of this lack of coordination, the Palestinians initially had the British on the defensive for much of 1937 and 1938 and took control of most Arab cities, towns, and villages, and much of the countryside. Only the arrival of massive British reinforcements—which brought troop strength to over 20,000 by 1938—and the intensive use of air power were able to break the back of the revolt.

In much Palestinian historiography, the revolt has been glorified as the forerunner of the modern Palestinian "armed struggle" that was launched in 1965. It is commonly linked to the attempts of Shaykh Izz al-Din al-Qassam to organize an armed rebellion against the British, which were aborted when he and some of his comrades were hunted down and killed by British forces in 1935. Qassam's example was very influential, however: Many thousands marched in his funeral cortege, and hundreds of his followers, whom he had organized in clandestine cells in the northern part of the country, played crucial roles during the revolt; they included some of the most senior commanders. Qassam's legacy is a disputed one, however, claimed by al-Fatah and other Palestinian nationalist groups, and more recently by the radical Islamic HAMAS movement, which has named its armed wing for him.

PALESTINE ECONOMIC CORPORATION

American-funded economic aid program to Jews in Palestine.

Founded in 1926 by a group of prominent American Jews, including Supreme Court Justice Louis D. Brandeis, the Palestine Economic Corporation provided material aid and technical assistance to Jewish business enterprises in Palestine. Funding was usually in the form of loans or equity investments. Subsidiaries to the corporation included the Palestine Mortgage and Savings Bank and the Central Bank of Cooperative Institutions, which provided funds for low-cost housing and credits to kibbutzim, among other social programs.

Through 1946, the corporation had funded more than ninety enterprises and played a key role in establishing such basic industries as chemicals, citrus products, paper, plastics, and tires. The corporation later changed its name to PEC Israel Economic Corporation. By 1967 it had eleven thousand stockholders, mostly in the United States, with assets of more than $28 million in Israel's industrial, construction, and citrus sectors.

PALESTINE EXPLORATION FUND

British research group founded under the patronage of Queen Victoria for scientific study of the Holy Land.

Established in 1865 to study biblical sites, the Palestine Exploration Fund began work in Jerusalem in 1867, especially the work of Charles Warren on the Walls of Jerusalem. The fund expanded its scope in the 1870s to conduct a complete survey of the Holy Land. The fund's team of geographers, archaeologists, anthropologists, and orientalists published numerous articles that influenced British public

opinion. Its maps, drawn between 1871 and 1877, were used by Sir Edmund Allenby in his victorious cavalry campaign in Palestine in World War I and are invaluable today to historians. The maps designated the historical boundaries of Palestine as extending a few miles east of the Jordan River. Some members of the fund, particularly its director, Claude Reignier Conder, advocated British colonization of Palestine and the restoration of its Jewish population. The group funded the work of archaeologists W. M. F. Petrie and Kathleen Kenyon.

PALESTINE LAND DEVELOPMENT COMPANY

Land-purchasing company of the World Zionist Organization.

Established in 1908 by Arthur Ruppin, a German Jew, as part of the World Zionist Organization, the Palestine Land Development Company (PLDC) used Jewish National Fund and private monies to purchase and populate tracts of land with Jewish immigrants. It acquired extensive holdings in northern Palestine (Galilee), particularly in the 1920s and 1930s.

The PLDC bought nearly 90 percent of its land from large landowners, rather than individual peasants. Many of the transactions created controversy, such as the PLDC's purchase of 240,000 *dunums* (144,000 acres, 60,000 ha) of fertile land in the Jezreel valley between 1921 and 1925, its purchase of 30,000 *dunums* (18,000 acres, 7,500 ha) at Wadi Hawarith in 1929, and its assumption of the Lake Huleh concession in 1934.

PALESTINE LIBERATION ORGANIZATION (PLO)

The institutional structure of the Palestinian national movement and the political representative of about nine million Palestinians.

The Palestine Liberation Organization (PLO; Arabic, *Munazzamat al-Tahrir al-Filastiniyya*) was created at the Arab summit in January 1964 to contain and channel Palestinian nationalism and prevent Palestinian guerrilla groups from taking independent actions to liberate Palestine, from which Palestinians had fled or had been expelled by the Israel Defense Force (IDF) in 1948. The Palestine National Council (PNC), the PLO's parliament, convened with 422 members in Jerusalem in May 1964 and elected a fifteen-member Executive Committee, which chose as its chairman a lawyer, Ahmad Shuqayri. The PNC adopted a national covenant or charter *(al-mithaq al-watani),* which was revised in 1968, calling for the elimination of Israel and the restoration of Palestine to the Palestinians.

When Israel defeated Egypt, Syria, and Jordan in 1967 and occupied the West Bank and the Gaza Strip, both Arab and Palestinian leaders were discredited. Shuqayri was replaced by another lawyer, Yahya Hammuda. The guerrilla groups, the most significant of which was Al-Fatah, expeditiously moved to fill the political vacuum by increasing their attacks on Israel. On 21 March 1968, Israel massively retaliated at Karama, Jordan. The guerrillas'

stiff resistance resulted in the deaths of at least 21 Israelis, about 100 Palestinians, and 40 Jordanian soldiers who aided the Palestinians. The guerrillas embellished their own accomplishment, inflated Israel's casualties, and gave little credit to the Jordanians. Karama became a symbol of struggle against Israel, which many had considered invincible. Al-Fatah gained thousands of recruits, Arab admiration, and financial support, primarily from the Gulf Arab states. More important, the guerrilla groups won control over the PLO. They amended the national charter in July 1968 to underscore the rejection of Arab interference in Palestinian affairs, the total liberation of Palestine by Palestinians through armed struggle, and establishment of a democratic secular state of Arabs and Jews.

Yasir Arafat, Palestine Liberation Organization (PLO) chairman, smiles at a child in a Palestinian refugee camp in west Beirut, Lebanon, 15 July 1982. During the height of Israeli occupation, Arafat made several such tours to help boost morale among Palestinians. © AP/Wide World Photos. Reproduced by permission.

Groups within the PLO

The battle at Karama propelled Yasir Arafat, head of al-Fatah, into the leadership position. An engineer educated at Cairo University, he was elected at the fourth PNC (February 1969) to replace Hammuda as chair of the Executive Committee. The PLO was transformed from an Arab-controlled organization to an umbrella of disparate military and political groups. Although these groups had a common goal, the liberation of Palestine, they differed considerably on ideology and tactics. The dominant group was al-Fatah, established in Kuwait by Salah Khalaf (Abu Iyad), Khalil al-Wazir (Abu Jihad), and Arafat (Abu Ammar), who became its spokesperson. It owed its broad appeal to Arafat's charismatic personality and to its pragmatic politics, which eschewed ideology for action toward a simple national goal: the liberation of Palestine. Al-Fatah's chief rival in the PLO was the Popular Front for the Liberation of Palestine (PFLP), headed by George Habash, a Christian physician educated at the American University of Beirut. The PFLP is a Marxist group dedicated to the overthrow of conservative Arab governments. Its contempt for the government of Jordan led it to challenge Jordan's sovereignty, triggering the 1970–1971 civil war that resulted in the PLO's defeat and its relocation to Lebanon. An offshoot to the left of the PFLP that espouses Marxism-Leninism is the Democratic Front for the Liberation of Palestine (DFLP), led by a Jordanian Christian, Nayif Hawatma. Another offshoot is the Popular Front for the Liberation of Palestine–General Command (PFLP-GC), led by Ahmad Jibril. Others include al-Saʿiqa, controlled by Syria, and the Arab Liberation Front (ALF), controlled by Iraq.

The influence of these groups has been disproportional to their numbers, but some see them as a necessary alternative to the centrist al-Fatah. They have stimulated political debates. They have charged that the lack of a coherent ideology within al-Fatah has led to an absence of vision regarding politics and society in the diaspora and the future state of Palestine; that many of its functionaries are inept and corrupt bureaucrats tolerated by Arafat; that the PLO drifts from crisis to crisis; that Arafat manipulates Palestinian institutions such as the PNC and the Executive Council and has autocratic powers that undermine Palestinian democracy; and that Arafat flirts with almost any nation—Jordan, Egypt, the United States—without a clear policy.

PLO diversity resulted in the groups working at cross-purposes or in costly blunders. For example, the Arab-controlled Saʿiqa and ALF emphasized Arab unity while others insisted on Palestinian self-reliance. Al-Fatah denounced airplane hijackings in 1969 and 1970 by PFLP and PFLP-GC as counterproductive to the Palestinian cause. While al-Fatah sought Arab support and generally avoided Arab problems, the leftist groups involved the PLO in the

civil war in Jordan and contributed to PLO involvement in Lebanon's civil war and in the Gulf crisis. Disagreements have led groups to secede from the PLO or to leave it temporarily. These could have brought violent conflict and disunity had it not been for the dominance of al-Fatah and Arafat's mass appeal and political skills. He often appeased or reflected diverse currents and articulated vague and, at times, contradictory positions—which, while damaging his credibility abroad and creating diplomatic immobility, enabled him to maintain the coalition. His leadership allowed the PLO to develop political, military, and socioeconomic institutions in Lebanon until 1982.

Institutions

Foremost among these institutions was the PNC, the PLO parliament, whose membership varied. It represented virtually all ideological tendencies and groups, including the commando organizations and their political branches, ten unions—those, for example, of workers, women, teachers, students, writers, and engineers—and Palestinian communities. It developed a large and complex infrastructure for the estimated 360,000 Palestinians in Lebanon. Its well-trained armed forces numbered about 16,000. Its social and economic institutions served almost half a million Palestinians and poor Lebanese. The Palestine Martyrs Works Society (SAMED) operated businesses and light industry grossing $40 million annually. The Red Crescent Society supervised sixty clinics and eleven hospitals, and the Department of Social Welfare provided financial assistance for the blind, day-care centers, the wounded, and families of "martyrs." By the early 1980s the PLO had gone from an umbrella of guerrilla groups to the institutional embodiment of Palestinian nationalism and a state within a state.

The political and economic institutions enhanced the PLO's prestige and legitimacy. The Arab League recognized the PLO as the sole legitimate representative of the Palestinian people at the Rabat conference (October 1974). A month later, the United Nations invited Arafat to address the General Assembly and awarded the PLO observer status. In 1976 West Bank and Gaza Palestinians voted out pro-Jordan mayors, replacing them with supporters of the PLO. By 1982, over 100 countries had recognized the PLO.

Setbacks

Despite such success, however, the PLO suffered major setbacks. After its expulsion from Jordan, it established a state within a state in Lebanon, thereby undermining Lebanon's sovereignty, incurring Israel's retaliation, and embroiling it in Lebanon's civil war after 1975. In March 1979, at Camp David, Egyptian President Anwar al-Sadat signed a separate peace agreement with Israel that excluded PLO participation and provided for a limited Palestinian autonomy instead of full self-determination. With Egypt neutralized, Israel invaded Lebanon in June 1982 to destroy the PLO but succeeded only in forcing the PLO to move to Tunis; stripped of PLO protection, between 800 and 1,500 Palestinians in the Sabra and Shatila refugee camps were massacred in September by the Israel-allied Phalange. The 1982 Reagan peace plan, based on the Camp David autonomy proposal, once again excluded PLO participation. The following year, dissension within al-Fatah caused a revolt by Saʿid Musa Muragha (Abu Musa), with the help of Syria, which had long sought to control the PLO. When Arafat attempted to reestablish PLO power in Lebanon in 1983, Syria unleashed the forces of Abu Musa, who drove him out of Lebanon again. Israel attempted to undermine the PLO leadership by bombing its headquarters in Tunis in October 1985 but failed to kill Arafat.

Moderation and Diplomacy

Unable to strike at Israel, the PLO relied primarily on diplomacy to achieve a compromise settlement. At the twelfth PNC in 1974 and the thirteenth in 1977, the PLO had moderated its goal of liberating all of Palestine to one of establishing a state in the West Bank and Gaza; it supported the 1982 Fahad Plan that implicitly accepted a two-state solution. Empowered by the intifada, the Palestinian uprising that began against Israel's occupation in December 1987, Arafat in November 1988 led an enlarged PNC that included the DFLP to endorse the establishment of an independent Palestine state. It also endorsed the 1947 United Nations General Assembly Resolution 181. In December 1988, Arafat declared the PLO's acceptance of Israel's right to exist, recognition of Security Council Resolution 242, and the renunciation of terrorism. The United States promptly opened a dialogue with the PLO.

Israel and its supporters, however, refused to acknowledge the change.

Israel's failure to reciprocate largely convinced Arafat to support Saddam Hussein in the 1990–1991 Gulf Crisis. This was a blunder that resulted in loss of financial support from the Gulf states. Without the support of the Soviet Union, short on funds, and fearing irrelevance, the PLO accepted the U.S. peace initiative that led to the 1991 Madrid peace conference between Israel and the Arab states and the Palestinians. However, twenty-two months and ten rounds of negotiations proved fruitless. The PLO regarded the framework for the talks as unfair and did not consider middle-level U.S. officials, especially those associated with pro-Israel lobbies, as "honest brokers." Norway established a secret channel in Oslo through which the PLO and Israel agreed to recognize each other. On 13 September 1993, at the White House, they signed a Declaration of Principles for a five-year Palestinian limited autonomy in the West Bank and Gaza, starting with the Gaza Strip and the town of Jericho, followed by elections for an interim council, Israel's withdrawal from other parts of the West Bank, and transfer of power. Unresolved final status issues—Jerusalem, Jewish settlements, refugees of 1948, and borders—were deferred.

Toward Establishing a State

In May 1994, the IDF withdrew from Jericho and most of the Gaza Strip, and Palestinian police and a civil administration took over. Arafat moved to Jericho in June. Despite a decline in support for the peace process due to the violence and the slow pace of the negotiations, the PLO and Israel reached a number of agreements regarding the interim period, especially Oslo II, signed on 28 September 1995, which set the stage for Israel's further withdrawal from of the West Bank and the establishment of Palestinian Authority (PA) control over this area. The PLO held two PNC meetings in April 1996 and December 1998 to rescind articles in the National Charter that called for the destruction of Israel; the latter vote took place in the presence of U.S. president Bill Clinton. Clinton invited PLO chair Arafat and Israeli prime minister Ehud Barak to Camp David to negotiate final status issues of the West Bank and Gaza Strip. The negotiations took place in July 2000, but failed and were followed by the second Palestinian uprising (Aqsa Intifada) against Israeli occupation. Even though the PLO resumed the negotiations with Israel, especially at Taba in January 2001, the negotiators ran out of time when Clinton left office in January and Prime Minister Ehud Barak was replaced by Ariel Sharon in February 2001. Sharon refused to resume negotiations with the PLO until the Palestinians stopped their violence. He reoccupied Palestinian cities, including Ramallah, where the IDF attacked Arafat's headquarters and placed Arafat under virtual house arrest.

Arafat and many of the leading members of the PLO are also leaders in the PA. Arafat is both the chair of the PLO and the president of the PA. Mahmud Abbas, who was Arafat's deputy in the PLO, became the first prime minister of the PA in 2003. Ahmad Qurai, deputy director of the PLO's department of economic affairs, became the second prime minister of the PA in 2003 and 2004. The PLO still has a primary role: to negotiate with Israel over the future of the West Bank and the Gaza Strip. Yet, with the establishment of the PA, the PLO was increasingly eclipsed by an elected Legislative Council and the many "state" institutions. If a state is established, the organization is likely to decline further, because its goal of establishing a state would have been fulfilled, and its institutions would be replaced by state institutions.

PALESTINE NATIONAL CHARTER (1968)

Amended version of the Palestine National Covenant with greater emphasis on armed struggle against Israel.

The fourth Palestine National Council meeting (Cairo, July 1968) amended the 1964 Palestine National Covenant to produce the Palestine National Charter (PNC). Following the Arab defeat of June 1967, the leadership of the Palestine Liberation Organization (PLO) passed to the more action-oriented leaders of al-Fatah, the Popular Front for the Liberation of Palestine (PFLP), the Palestine Liberation Front (PLF), and other commando groups. While these groups continued to strive in principle for the ideals of Arab nationalism, in practice their character and development became increasingly Palestinian. Their focus was on Palestinian nationalism and on armed struggle against Israel.

The 1968 charter incorporated new principles that were supposed to guide Palestinian political action after the 1967 defeat. The charter has thirty-three articles. Article 1 explicitly defines Palestine as the "homeland of the Palestinian Arab people," while Articles 3 and 9 in particular stress the principles of self-determination and Palestinian national sovereignty over Palestine. Reference to these principles is made eight times. Moreover, the concepts of self-determination and sovereignty are defined in explicit Palestinian terms. Although the ethno-cultural links of the Palestinians to the larger Arab homeland are emphasized, they do not predominate over the territorial connection between the Palestinians and their homeland Palestine.

The 1968 charter radicalized the instruments of political action to be employed for the liberation of Palestine. Armed struggle is posited as the "sole road" to liberation (Article 9), and the concept recurs thirteen times in an emphatic, declaratory tone. Armed struggle, however, does not exclude conventional warfare as Article 10 suggests, since the Arab countries are considered partners in the battle for liberation. In this formula, the role of commando action was given primacy and regarded as the "nucleus of the Palestinian popular liberation war" (Article 10).

The principles of the charter were superseded by subsequent Palestine National Council decisions. Above all, they were superseded by the Declaration of Principles concluded between Israel and the PLO in September 1993. The PNC voted in April 1996 to cancel the portions of the charter calling for the destruction of the State of Israel and to draft a new charter within six months.

PALESTINE NATIONAL COUNCIL

Constituent assembly or parliament for the Palestinian people.

The Palestine National Council (PNC) is the highest decision-making body within the Palestine Liberation Organization (PLO) and the supreme representative institution of the Palestinian people. The PNC is the forum where official policies of the PLO are debated and formulated. Its resolutions and declarations represent the evolving consensus within the Palestinian national movement on major internal, regional, and international questions. Thus, PNC resolutions are best understood by comparison to previous resolutions and in relation to their wider political context. Similarly, their interpretation by the PLO leadership is best judged by its subsequent actions.

The Palestine National Council met in 1998 to rescind the Palestinian National Charter that had previously called for the destruction of Israel. U.S. president Bill Clinton was present for the historic vote. © AP/Wide World Photos. Reproduced by permission.

The PNC, like the PLO itself, grew out of the first Arab Summit, held in Cairo in January 1964. The summit resolved to enable the Palestinian people "to play a role in the liberation of their country" and empowered the Palestine delegate to the League of Arab States, Ahmad Shuqayri, to hold consultations on the implementation of this decision. A Palestinian General Congress, convening as the National Conference of the Palestine Liberation Organization, met in East Jerusalem in May 1964 to ratify its constitution and other documents that formally established the PLO and its institutions. The 397 invited delegates represented a broad spectrum of Palestinian life. Among the proposed institutions approved was a national assembly, which in 1970s came to be known as the Palestine National Council. Its structure, powers, and procedural rules are set forth in the Fundamental Law appended to the Palestine National Covenant, which survives in amended form.

According to the Fundamental Law, the PNC is the supreme authority for formulating the policies and programs of the PLO and its institutions, and all who operate under the PLO umbrella are accountable to its decisions. It does not sit in permanent session, has no permanent committees, and by force of circumstance has no permanent location. It must convene in regular session once a year (changed from every two years in 1971) and whenever requested by the PLO Executive Committee (the executive branch of the PLO) or PNC membership. In some years the PNC has not convened due to conflict (e.g., during the 1975–1976 Lebanese civil war), but under other circumstances its failure to meet has been the subject of fierce criticism, most recently when the PNC was not called into session to debate the 1993 Israeli–Palestinian Declaration of Principles.

Candidates for the PNC must be nominated by a committee (which since 1971 consists of the PLO Executive Committee, the PNC chairman, and the commander in chief of the Palestine Liberation Army), and then elected by a majority of the entire membership at its next session. It elects its own

PLO leaders Bassam Abou Sharif, Mahmud Darwish, and Harwan Kanafi at a 1991 Palestine National Council meeting. **© Francoise de Mulder/Corbis. Reproduced by permission.**

presidential office, which consists of a chairman, two vice chairmen, and a secretary. The attendance of two-thirds of its delegates is required for a quorum, and its initial practice of "collective decision-making" was in 1981 defined as majority voting. The PNC met in closed session until 1981, when foreign dignitaries and Palestinian observers were first invited. With few exceptions it publishes its resolutions and other documents, and the media may observe and record most of its proceedings.

Although election procedures remain in place, they have not been practiced since the Palestinian guerrilla organizations took control of the PLO in 1968 to 1969. The PLO's constituent organizations and PLO mass unions and labor syndicates are each assigned a quota of seats, decided through negotiation in accordance with each group's respective size and importance. Representative quotas for Palestinian exile communities, other nonformally organized Palestinians, and delegates resident in Israel and the occupied Palestinian territories are directly selected by the PNC nominating committee. Although the PNC is an integral PLO institution, PNC delegates do not necessarily serve as officials in the PLO or as members of its constituent factions.

The size of the PNC has varied over time. In 1968 its membership was reduced from 466 to 100 and limited to representatives of guerrilla factions (68) and political independents (32) to ensure effective deliberations and guerrilla control over the PLO. Representatives of PLO unions were admitted in 1971, and membership was expanded to 150. In 1977 the PNC again represented Palestinian exile communities and additional diasporic groups (e.g., deportees), increasing its membership to 293. Active membership has since risen to pre-1968 levels. The PNC's progressive shift from guerrilla tactics to genuine diplomacy and conditional acceptance of the state of Israel's existence is mirrored in its current delegates.

At the beginning of each session of the PNC, the PLO Executive Committee must submit a report on its activities and the status of the PLO. A new Executive Committee, whose size and membership is determined by the PNC, is elected at the end of each session. The new Executive Committee's policy guidelines and other instructions, and PLO proclamations, are set forth in resolutions adopted by the PNC typically drafted in committee.

In 1970 the PNC also established the PLO Central Committee (since 1973 known as the Central Council) as an intermediate body between itself and the Executive Committee. It possesses legislative and executive powers and meets at least once every three months to review the work of the Executive Committee, approve its decisions, clarify PNC guidelines where necessary, and issue supplementary resolutions where relevant. Because it was designed to improve coordination between various represented and nonrepresented guerrilla factions, the Central Council is neither elected by the PNC nor entirely composed of PNC members. In its current form it comprises the Executive Committee, the PNC chairman, the Palestine Liberation Army (PLA) commander in chief, representatives of PLO constituent organizations and institutions, and PNC members selected by the Executive Committee. It elects a general secretariat from among its own members.

The PNC also hears the report of the Palestine National Fund (the PLO treasury), approves its budget, (re-)elects its Board of Directors (which elects its own officers), and considers reports and structures of other PLO institutions. It does not, however, have the right to interfere in the internal affairs of the movements that operate under the PLO umbrella.

Given that regular general elections would be difficult if not impossible to conduct under the fragmented conditions of Palestinian existence, the PNC is a genuine attempt at creating a representative body, and generally it has been very successful. The PLO leadership has encouraged pluralism within the PNC, but the PNC exhibits some clearly undemocratic tendencies. Aside from the lack of elections, criticism of the quota system (practiced in all PLO institutions) claims that it places powers of decision-making and accountability in PLO factions rather than constituencies and encourages hegemony by a dominant group. The increasing appropriation of power by the PLO leadership has also led to a lack of regard for PNC resolutions and procedures as well as its marginalization as the locus of Palestinian decision-making. The PNC is now often eclipsed by the actions of the Palestinian Authority (PA), which was created as an interim governing body in 1994 representing pre-1967 Israeli-occupied territories. The PA was created as steps were being taken to establish a Palestinian state. The PNC would have eventually resumed its function with some restructuring, but al-Aqsa Intifada has made it nearly defunct.

The following is a list of cities where sessions have occurred and highlights important PNC resolutions:

1964: Jerusalem. Establishment of the PLO and drafting of the Palestinian National Charter.

1965: Cairo. Meetings held from 20–24 May. Arab–Israel War breaks out 5 June.

1966: Gaza.

1968: Cairo. Entry of the guerrilla movement, and amendment of the Palestine Charter insisting on total liberation of Palestine through armed struggle. Half of the PNC's seats given to the PLO.

1969: Cairo. Yasir Arafat elected chairman of the Executive Committee.

1970: Cairo. Crisis between guerrilla groups and the Jordanian army.

1971: Cairo. Endorsement of a secular democratic state.

1972: Cairo. PNC rejects Jordanian King Hussein's Palestinian/Jordanian United Kingdom Plan. Most Arab countries reject this plan, and Egypt cuts diplomatic ties with Jordan.

1974: Cairo. First steps toward endorsing a two-state solution, with an independent Palestinian state.

1977: Cairo. Reiteration of previous meeting's proposals. Emergence of a more moderate, mainstream PLO as well as West Bank leadership.

1979: Damascus. Rejection of Camp David Accords.

1981: Damascus. Meetings 11–19 April. In August, Saudi Crown Prince Fahd calls for peace plan and creation of Palestinian state recognizing Israel in its pre-1947 borders.

1983: Algiers: Rejection of the Reagan Plan, which outlined a Palestinian state with central authority in Jordanian, not PLO, control. PNC agreed to a confederation between the Kingdom of Jordan and an independent Palestine led by the PLO, based on the 1982 Fez Plan (based on the Fahd Plan) that called for the establishment of an independent Palestinian state.

1984: Amman. Resolutions give Arafat the authority to cooperate with Jordan and Egypt, and call for improving relations with Syria. First Executive Committee decides to remove PLO institutions from Damascus and transfer PNC headquarters to Amman. Call for free Palestinian state in confederation with Jordan, which leads to the 1985 Amman Agreement in 1985.

1987: Algiers. Meetings held 20–25 April after the issue of the Tunis Document (16 March), which called for a free Palestinian state, accord on the Fez Plan, and rejection of the Amman Agreement. Intifada begins 9 December.

1988: Algiers. Referred to as the "Intifada meeting." Unilateral declaration of the independence of the Arab state of

Palestine. Reconciliation between al-Fatah and other factions that had challenged Arafat's leadership. 103 countries recognize the newly created Palestinian state.

1991: Algiers. Authorized Palestinian participation in negotiations with Israel.

1993: Washington, D.C. Israeli–PLO Declaration of Principles on interim self-government signed.

1994: Establishment of the Palestinian National Authority (PNA), an autonomous entity comprising the territory of Gaza and towns and areas of the West Bank occupied by the Israeli Defense Forces in 1967, for a five-year transitional period to include Palestinian interim self-government and a gradual transfer of powers and territories.

1996: Gaza. After signing the Oslo Accords, PNC votes 504 to 54 to void parts of the Palestinian National Covenant that denied Israel's right to exist. Edward Said, scholar and activist, leaves the PNC because he believes the Oslo Accords undermine Palestinian refugees' right to return to their homes in pre-1967 Israel. Arafat elected president of the PA.

1998: Gaza. PNC meets at the insistence of Israeli prime minister Benjamin Netanyahu. With U.S. president Bill Clinton presiding, it reaffirms its 1996 actions. Discussion of Wye River I and II memoranda for implementation of Oslo II accords.

1999: Discussion of Middle East Peace Summit at Sharm el-Shaykh and memorandum on implementation timeline.

2000: Discussion of implications of the Camp David 2000 Summit. PA negotiations on permanent status of a Palestinian State underway until outbreak of al-Aqsa Intifada in October.

2001: Discussion of the Mitchell Report on Israeli–Palestinian violence and al-Aqsa Intifada.

2002: Discussion of Permanent Status Negotiations.

Since the beginning of the al-Aqsa Intifada, Arafat has been confined to highly restricted movement by the Israeli government, making it extremely difficult to carry out the Palestinian legislative processes of the PNC and the PA. To remain the supreme political institution of the Palestinian people as a whole, the PNC must replace the quota system with democratic selection and become a permanent body if it is ever to become the genuine Palestinian parliament. In 2003 the PNC was chaired by Salim Zaʿnun. It had 669 members; 88 were from the Palestinian Legislative Council (PLC), 98 represented the Palestinians in the occupied territories, and 483 represented people of the Palestinian diaspora.

PALESTINE NATIONAL COVENANT (1964)

A 1964 document adopted by the Palestine Liberation Organization.

The Palestine National Covenant was adopted by the Palestine National Council at its first meeting (May–June 1964) after being drafted by a special charter committee. The covenant reflected the Arab political mood of the time and the political mentality of its framers, who were, on the whole, notables selected from among Palestinian public officials, professionals, and businessmen. Five interrelated ideas constitute the thrust of the covenant. First, it emphasized the total liberation of Palestine, which in effect meant the dismantling of Israel. The concept of liberation recurs sixteen times in the twenty-nine articles of the covenant; all other concepts are subordinate to it. This concept encompasses Arab nationalism, Islam, and culture.

Second, and connected with liberation, came the concept of self-determination. However, it is not clearly articulated whether, after liberation, the Palestinians would exercise self-determination within the context of an independent Palestinian state or a Palestine that is united with one or more Arab states (Articles 4 and 10). The word "state" is absent from the covenant, but the tone of the articles and the political persuasion of the majority of the members of the charter committee suggest that preference was given to a liberated Palestine that would be united to a projected unitary Arab nation.

Third, the covenant offered a definition of who was a Palestinian and whether this definition applied to Jews. In an attempt to emphasize the indissoluble link between Palestinians and their homeland, Palestinians are defined as the Arab nationals who "resided normally in Palestine until 1947," that is until the start of the Palestinian exodus following the United Nations partition resolution of November 1947. In a supplementary article the covenant stipulated that the "Jews who are of Palestinian origin will be considered Palestinians if they are willing to live loyally and peacefully in Palestine" (Article 7).

Fourth, the covenant sanctioned the status quo that existed in the West Bank (under Jordanian control) and Gaza Strip (under Egyptian control) by stipulating that the Palestine Liberation Organization (PLO) would not exercise any sovereignty over those areas (Article 24). At the time, the PLO leadership adopted this position because it lacked the desire and the ability to challenge the system of those Arab states whose political prescriptions rested more on perpetuating the status quo than on disrupting it. Moreover, the principle of territorial sovereignty was overshadowed by the dream of Arab unity, which gripped the imagination of the Palestinian and Arab masses. This explains why Article 16 vaguely linked "national sovereignty" to the abstract idea of "national freedom."

Fifth, the charter did not clearly articulate the means by which the goal of liberation should be achieved. Armed struggle and revolution, both being principles that occupied a central position in the ideology of most national liberation movements, had no place in the covenant. Given the mood of the time, it is not surprising that the framers of the covenant prescribed Arab unity as the principle instrument for liberation.

This 1964 covenant was amended in July 1968 as the Palestine National Charter, and the amended version itself was superseded by subsequent Palestine National Council decisions.

PALESTINE RESEARCH CENTER

Research and publication center of the Palestine Liberation Organization.

The Palestine Research Center was founded in Beirut in 1965 by the Palestine Liberation Organization (PLO) to study all aspects of Palestinian life in Israel and the Arab countries, Zionism, and contemporary politics and society in Israel. Its library

includes approximately 25,000 volumes, in addition to documents, photographs, and microfilms. Among its many publications is the Arabic-language journal *Shuʾun Filastiniyya (Palestinian Affairs).* It was directed for many years, beginning in 1978, by Sabri Jiryis.

Israeli authorities confiscated the center during the Israeli invasion of Lebanon in June 1982. The collection was later returned in December 1983, whereupon the center moved to Cyprus.

PALESTINIAN ARAB CONGRESSES

Seven congresses convened by Palestinian Arab politicians between 1919 and 1928 to oppose pro-Zionist British policies and gain independence.

The first Palestinian Arab congress (al-Muʾtamar al-Arabi al-Filastini) met in Jerusalem from 27 January to 9 February 1919. Organized by local Muslim and Christian associations, its thirty participants framed a national charter that demanded independence for Palestine, denounced the Balfour Declaration (and its promise of a Jewish national home), and rejected British rule over Palestine. A majority sought the incorporation of Palestine into an independent Syrian state, and the delegates strongly denounced French claims to a mandate over Syria. The congress expressed its request for independence in the language of U.S. president Woodrow Wilson's principles supporting the right of self-determination of subject peoples.

Scholars disagree about the second congress. Muhammad Muslih argues that the British prevented it from being held, but other scholars view the Arab congress held in Damascus in March 1920 as the second congress. It proclaimed Syrian independence under Amir Faisal, son of Sharif Husayn ibn Ali of Mecca.

The third congress was held in Haifa in December 1920. The forty-eight delegates elected an executive committee (the Arab Executive), with a permanent secretariat based in Jerusalem; Musa Kazim al-Husayni headed it. The scion of a leading Jerusalem family, he had been removed by the British as mayor after riots in the spring of 1920. The congress and executive committee were dominated by middle-aged men from ranking Muslim and Christian landowning and merchant families, but younger, more radical politicians also participated—those who had returned home from Damascus in July 1920, after the French had overthrown Amir Faisal and established their mandate over Syria. In Palestine, a civil administration was established under Herbert Samuel, a British Zionist. The congress's resolutions omitted references to unity with Syria, but maintained firm opposition to Zionism, insisting that Palestine gain its independence as an Arab state. The resolutions appealed to the British sense of justice and fair play, in the hope that the pro-Zionist policies could be modified.

The fourth congress met in May 1921 in the wake of widespread riots in Jaffa. It resolved to send a delegation to London, headed by Musa Kazim al-Husayni, to alter British policy. The delegation remained in London through July 1922 and had some impact on British thinking: The Churchill White Paper of June 1922 indicated that the government might place some limits on Jewish immigration and promote a degree of Palestinian self-rule.

At the same time, a special assembly was convened in June 1922. It was more militant than the previous congress, and the participants voted to hold a peaceful two-day demonstration in mid-July against the establishment of the British mandate. That militancy increased in the fifth congress, held in Nablus in August 1922, with more than seventy-five delegates attending. They rejected the Churchill White Paper and launched a boycott of elections for the legislative council. Soon afterward, a second delegation went to Istanbul, Lausanne, and London in a futile effort to persuade the Turkish government not to sign a peace agreement without taking into account the interests of its former Arab provinces, which were being ruled by British and French forces.

The sixth congress met in June 1923 at the insistence of local Muslim and Christian societies who feared that Sharif Husayn ibn Ali of Mecca would sign a treaty with London that would recognize the British mandate over Palestine, rather than demand independence for Palestine. The 115 delegates resolved to send a third delegation to London to monitor the negotiations. Moreover, the resolutions stiffened the Arabs' rejection of representative institutions that did not grant policymaking authority to the Palestinian community, and the delegates even proposed such steps toward noncooperation as withholding taxes. However, the large landowners objected to that step, fearing that the British would seize their property in retaliation, and so action on those proposals was shelved.

The British mandate became effective in 1923, and the seventh congress convened from 20 to 22 June 1928, ending five years of tension and division among the Arab politicians. In the intervening years, the Nashashibi family of Jerusalem had withheld its participation in the institutions associated with the Arab congress, founded the National Party (1923), and contested with the Husaynis and their adherents in elections for the Supreme Muslim Council (1926) and local municipal councils (1927). New groups also had emerged among young educated Muslims and pan-Arab activists. The seventh congress sought to unite such factions behind the demand for a representative council and parliamentary government, which would help them attain their national goals. Since Jewish immigration had dipped in 1926 and 1927, the delegates had become less fearful of the Zionist movement than they had been in the past, and they hoped that a gradualist approach to self-government would attain their ends. Their resolutions also emphasized socioeconomic needs such as reopening the Ottoman-period agricultural banks so that farmers could obtain loans, increasing the allotment to education in the government's budget, and reducing the authority of the Greek priests in the Orthodox Christian community. The congress elected an enlarged Arab Executive whose forty-eight members included twelve Christians. The various factions were balanced: Musa Kazim al-Husayni retained the presidency, but both vice presidents (including a Greek Orthodox) favored the Nashashibi camp. The three secretaries were the young radical Jamal al-Husayni, the pro-Nashashibi Protestant lawyer Mughannam Ilyas al-Mughannam, and the pan-Arab, independent-minded lawyer Awni Abd al-Hadi.

The new Arab Executive immediately pressed the British to grant representative institutions, but its efforts coincided with renewed Arab–Jewish tension centered on conflicting claims to the Western Wall in Jerusalem. The riots of August 1929 undermined the cautious negotiating efforts of the Arab Executive; its members were swept up in the growing militancy of the Arab community. The fourth delegation to London in the spring of 1930 presented maximalist demands, including the immediate formation of a national government in which the Arabs would have the majority. The Arab Executive also supported the demonstrations and protests launched by youthful activists in the fall of 1933, as Jewish immigration and land purchases again escalated.

Following the death of Musa Kazim al-Husayni in March 1934, the Arab Executive held its final meeting in August. That meeting permitted the formation of political parties, but resolved to convene an eighth general congress in 1935. The eighth congress never met: By then, politicians were preoccupied with forming their own parties and contesting municipal council elections. When the Arab general strike began in Palestine in April 1936, a new coordinating body—the Arab Higher Committee—was constituted from the heads of the political parties. The Arab Executive then faded away. Although the Arab Executive had limited effectiveness, it had served as an informal voice for the Palestinian community for more than a decade. The congresses had provided an essential forum for Palestinian Arab politicians to debate fundamental policies and articulate their demands.

PALESTINIAN AUTHORITY

Autonomous Palestinian government operating in parts of the West Bank and Gaza starting from 1994.

The September 1993 Oslo Accord between Israel and the Palestine Liberation Organization (PLO) called for the establishment of a Palestinian Interim Self-Governing Authority (PISGA) in those parts of the West Bank and Gaza from which Israeli forces would eventually withdraw. Israel would then cede certain autonomous powers to the PISGA pending a final peace settlement. This concept was actualized by the subsequent May 1994 Gaza-Jericho Agreement that led to an initial Israeli withdrawal from those two areas and that created the Palestinian Authority (PA), which would exercise autonomous powers until an elected Palestinian council could replace it. PLO Chair Yasir Arafat and a body of PLO cadres were allowed to return from exile and form the 24-member council of ministers that made up the PA, which commenced functioning in July 1994.

Palestinian prime minister Ahmed Qurai (left) and leader Yasir Arafat (right) pray before a meeting of the Palestinian parliament. © AP/WORLD WIDE PHOTOS. REPRODUCED BY PERMISSION.

The September 1995 Interim Agreement between Israel and the PLO laid the basis for further Israeli withdrawals from the West Bank and for an elected Palestinian Council that would wield both legislative and, through its executive authority, executive powers. Following elections, the Palestinian Council and the president of its executive authority would thereafter assume the powers of Palestinian self-government from the PA, although in fact the new governmental structure that emerged continued to use the same name. Elections for the 88-seat council and its president were held in January 1996. Arafat won the presidency decisively. Chief PLO negotiator Ahmad Sulayman Qurai (also Qurei, Quray, Abu Ala) was elected as the first speaker of the council.

After further redeployments of Israeli forces starting in late 1995, the PA exercised different levels of authority in the West Bank and Gaza. By early 1997 it exercised full control over Gaza excluding the areas in and around Israeli settlements. The situation in the West Bank was more complicated. Israeli forces had only withdrawn from about 27 percent of the territory. The PA exercised full civil and security control over Area A, which included all of the major towns except Jerusalem (which remained under total Israeli control). It controlled civil matters in Area B—most other Palestinian villages and inhabited sites—but shared security functions with Israel. Finally, Area C remained under complete Israeli authority. Not only was the total area under full or partial PA control less than a third of the West Bank, it was divided among hundreds of separate Area A and B enclaves that were cut off from one another (and from Gaza) by Israeli-controlled Area C.

A burgeoning bureaucracy grew to enable the PA to govern. By early 1997 PA ministries and departments controlled many aspects of daily life for Palestinians. The PA even issued passports and postage stamps, and dispatched a two-man team to the 1996 Olympic Games. A multitude of competing security and intelligence agencies developed. Security forces comprised former soldiers of the PLO's exile Palestine Liberation Army, other exiles, and locally recruited men. These agencies included the National

Security Forces; Civil Police; Border Police; Coastal Police; Civil Defense; University Police; and Arafat's own guard, Force 17/Presidential Guard. Intelligence agencies included the General Security Service; Military Intelligence; Special Security Force; and the powerful Preventative Security Forces, headed in Gaza by Muhammad Dahlan and in the West Bank by Jibril Rajub.

Even after the Palestinian Council began meeting, Arafat continued to rule in an authoritarian fashion through the security and intelligence services and his new twenty-two-member executive council (cabinet). The judiciary was not independent; Arafat's government sometimes simply ignored its rulings, and certain cases were decided by secret military courts. Arafat possessed the authority to veto council legislation. As calls for reform mounted, important legislators such as Haydar Abd al-Shafi resigned, and Marwan Barghuthi introduced a no-confidence motion in the council in April 1997.

Palestinian demands for change combined with outside pressures for reform. Israeli and U.S. anger over terrorist attacks by groups such as HAMAS and Islamic Jihad that were based in the PA led to mounting international pressure on Arafat to crack down on militants and to change PA governance. The second intifada saw Israel reoccupy large areas of the PA and decimate its infrastructure. Yielding to pressure, Arafat in April 2003 created the post of prime minister, which was filled by veteran PLO leader Mahmud Abbas. The PA's ability to function, however, remained hostage to rivalries and wider developments in the peace process.

PALESTINIAN CITIZENS OF ISRAEL

A remnant of the larger Arab community living in the parts of British Mandate Palestine that became the state of Israel in 1948.

Until 1948, both Jewish and Arab residents of Palestine were called Palestinians. After 1948, both Jewish and Arab citizens of Israel were called Israelis. In recent years, many Arab citizens of Israel preferred to be called Palestinians. Of the approximately 900,000 Palestinian Arabs who lived in the area that became Israel in 1948, fewer than 170,000 (about 12.5 percent of Israel's population) remained after the Arab–Israel War of 1948: 119,000 Muslims, 35,000 Christians, and 15,000 Druze. About 32,000 were town dwellers; 120,000, villagers; and 18,000, nomads. Some 30,000 were internal refugees, having fled from one part of Israel to another during the 1948 war. Most of the community leaders and professionals had left the country (only ten Palestinian physicians remained); most institutions were in disarray; and nearly every family had some members in the surrounding enemy countries.

The Palestinian population was separated from the Jewish majority in western, central, and upper Galilee, from Nazareth north. A few thousand remained in the former Arab towns of Ramla, Acre, Jaffa, and the city of Haifa, the Negev, and several score of smaller villages—a distribution that remained basically unchanged. Initially, most areas where the Arab minority of the new Jewish state lived were under the military authorities and subject to restrictive military government emergency regulations, which limited freedom of movement, access to civil courts, and individual ownership of land. The military authorities controlled nearly all aspects of life in the Palestinian community. The military government had to approve the appointments for most positions, from teachers in village schools to mayors of Palestinian towns.

Many in Israel's government considered Palestinian Arab citizens a security risk because of the continuing state of war with the surrounding countries, although the severity of military government restrictions was gradually eased until the Knesset terminated most emergency regulations during 1966. Even so, Palestinians living in Israel continued to be mistrusted by many Israelis even though

experience demonstrated that the number who might be a security risk was minute.

From 1948 until the early 1990s, government policy regarding Palestinian citizens of Israel was coordinated by the adviser on Arab affairs, a special office in the bureau of the prime minister. Several ministries—including education, religion, minorities, agriculture, and social welfare—also had special offices for Arab affairs, usually headed by Jewish officials. In the absence of most professionals, such as doctors, after the 1948 war, the government took initial responsibility for rehabilitating the Palestinian community. A social welfare network was introduced in Arab areas and welfare offices were opened. Special courses were organized to train Palestinian personnel, and clinics were established by the ministry of health. Village rehabilitation was organized to restore agricultural production through the replanting of olive groves, the introduction of farm mechanization, and agricultural loans.

Policies emphasizing the security and development of Israel as a Jewish state often vitiated efforts to integrate Israel's Palestinian citizens. This was evident in policies regarding land and other immovable property belonging to Palestinians. Property, including homes and farms, belonging to the 30,000 internal Palestinian refugees and to several thousand other Palestinian citizens was taken over by the custodian of absentee property, who was charged with the administration of possessions belonging to those who left their homes during the 1948 war. Most of those affected by the Absentee Property Law had fled to surrounding countries. However, much of the agricultural land belonging to Israel's Palestinian citizens also was seized by the custodian. Other laws pertaining to the acquisition of land for reasons of security and for development resulted in government sequestration of about 40 percent of the land belonging to the country's Palestinian citizens.

Land requisition policies resulted in a shift in the occupational pattern of the Palestinian community, which before 1948 had been mostly rural and agricultural, to widespread employment in the Jewish urban economy. However, the rural social network, based on traditional *hamulas* (families), remained largely intact. The majority of those in the urban economy traveled from their villages or towns to work in centers of Jewish commerce and industry, where they were employed in unskilled or low-paid jobs at the bottom of the economic ladder. Government land requisition led to the depeasantization of the Palestinian community and to shortages of urban property, which resulted in greatly overcrowded villages and towns. Yet some who retained agricultural land prospered, despite the overall decline in Palestinian farmland. From 1949, with the assistance of the agriculture ministry, modern farming methods, extensive mechanization, and irrigation were introduced; Palestinian agricultural productivity increased several times over. Although the overall economy of the Palestinian community lags behind the Jewish sector, a few of those who pay the highest income tax in Israel are from the minority community.

Initially the MAPAI (Labor Party), which controlled the government from 1948 until 1977, organized Palestinian political parties headed by local notables who were co-opted by the military government. These local parties elected several members to the Knesset, where they usually voted with the MAPAI. Some were led by *hamula* or tribal or clan leaders; some identified with ethnic factions such as the Druze. Other Arab Knesset members were affiliated with the Communist Party and the MAPAM (Left Labor Party).

Government officials charged with policy for the minority communities encouraged each to develop its own institutions and organizations. Thus the system of religious courts established during the Ottoman era, and continued during the British Mandate, was maintained; these included *shariʿa* (Islamic religious) courts and separate courts for each of the several recognized Christian denominations. In 1962, the first Druze religious court, separate from the Islamic courts, was organized. The Druze were initially permitted to join Israel's military forces; later they were subject to the draft. A few Bedouin and Christian Palestinians also were permitted to join the armed or security forces, and some attained high rank. Government policy generally exempts Muslims other than Bedouins from serving, which results in the exclusion of most of Israel's Palestinians from certain family and other government allowances and increases the difficulty of finding employment, since prior military service

is required for many jobs, especially in government jobs related to national defense.

Between 1948 and the early 1990s, the Palestinian community experienced rapid economic, social, and political development. A new generation of leaders replaced those who had fled before and during the 1948 war or who had been co-opted by Israel's government. By the late 1950s, and in the 1960s and 1970s, the new generation of Israel's Palestinians included many politically active professionals, university-educated in Israel or abroad. They became increasingly dissatisfied with the position of Israel's Palestinian citizens. Many with advanced degrees were unable to find employment in jobs commensurate with their training and skills. Issues that concerned them included the government's land policies; the citizenship law, which gave preference to Jewish immigrants; the lack of Arabs in responsible government posts; the disparities between government resources allocated to the Jewish and Palestinian sectors in education, housing, and other services; and the perception that they were not accepted as full citizens of Israel. Opposition to government policies was evidenced in a shift of Palestinian voting patterns away from Labor and other Jewish parties, initially to the Communist Party of Israel. Attempts to organize Palestinian nationalist parties were blocked by government authorities or by internal dissension among potential Palestinian leaders.

By the 1960s, Palestinian nationalist sentiment had increased, and many Arabs in Israel supported Egypt's President Gamal Abdel Nasser. The rise of this national consciousness was demonstrated in 1965 when Israel's Communist Party split into a Jewish faction and a largely Palestinian nationalist faction, the New Communist List (RAKAH). Although several of RAKAH's leaders were Jewish, most of its votes came from Palestinian Israelis who perceived it as the principal legal vehicle for expressing opposition to government policies. Other groups attempted to organize opposition parties but were either banned by the authorities or failed to galvanize sufficient support. By the 1970s, RAKAH was winning more votes within the Palestinian community than any of the Jewish parties, and it became the principal voice opposing government policies toward what was officially called the Arab sector. Later, RAKAH was joined by organizations, such as the Committee for Defense of Arab Lands and the Committee of Heads of Arab Local Councils, to form HADASH (the Democratic Front for Peace and Equality). Like parties in the Jewish political spectrum, Palestinian parties often split, reformed, and acquired new names and leaders. Thus in the 2003 election, the main Arab parties included BALAD (National Democratic Assembly), HADASH, TAʿAL (Arab Movement for Renewal), and the United Arab List. More radical Arab parties included the Organization for Democratic Action and the Progressive National Alliance. All advocated equal rights for Palestinian citizens inside Israel and the establishment of a Palestinian state coexisting with it.

The Arab–Israel War of 1967 and Israel's occupation of the West Bank, East Jerusalem (formerly part of Jordan), and Gaza (formerly occupied by Egypt) constituted a watershed for Israel's Palestinian citizens. For the first time since 1948, they could establish direct contacts with Palestinians in surrounding countries. From 1948 until 1967, only a small number of Christians had been permitted to cross from Israel to Jordan once or twice a year, at Christmas and Easter. After 1967, Israel's Palestinian citizens could visit the West Bank and Gaza, and Palestinians in the occupied areas could visit Israel. Many family relationships were reestablished, Israel's Palestinians were increasingly exposed to new developments in Palestinian national consciousness, and they were no longer regarded by the Arab world at large with suspicion or mistrust. Larger numbers of Israel's Palestinians identified themselves not only as loyal citizens of Israel but also as supporters of the Palestinian national cause. Increasing numbers identified themselves as Palestinians first and as Israelis second.

Significant demographic changes characterized Israel's Palestinian community. It grew from 12.5 percent of Israel's population in 1948 to over 18 percent by 2000, mostly as a result of natural increase. By the 1990s, Sunni Muslims constituted 78 percent of the Arab population; the Druze, approximately 9 percent; and various Christian denominations, about 13 percent. Most Christians were Greek Catholic (32 percent), Greek Orthodox (42 percent), or Roman Catholic (16 percent). At the turn of the century, 1,200,000 Palestinians lived under Israel's jurisdiction, including over 200,000 residents of East Jerusalem (annexed by

Israel in 1967; most nations, including the United States, do not recognize Arab East Jerusalem as part of Israel). Few East Jerusalem residents chose to become Israeli citizens; most retain passports issued by Jordan.

Despite great improvements in infant mortality, average life span, literacy, and similar social indicators by 2002, 92 percent of Palestinian workers were in the bottom half of the country's wage scale, and a third of Palestinian children lived below the poverty line. By 2002, only 5.7 percent of civil servants were Palestinian citizens. Of these, more than half worked in health and social services; few were directly involved in policy-making or decision-making roles. Of Israel's 5,000 college and university lecturers, only about 50 were Arab citizens. These were among the factors contributing to the growing radicalization of Israel's Palestinian community. Palestinian discontent led to increasing demands for full equality, expressed in support for groups such as the Democratic Arab Party, the Progressive List for Peace, and the Islamic Movement. Tensions also grew between the country's Jewish and Arab citizens, caused by wide differences over the peace process and Israel's treatment of Palestinians in the occupied territories. Israel's Palestinian citizens were not consulted or involved in the Oslo talks or the negotiations that followed. Most supported or sympathized with the Palestinian intifadas of 1987 through 1991 and 2000. The brutal response of the Israeli police to nationalist protest demonstrations in October 2000 left thirteen Palestinian Israelis dead and scores more wounded, creating a deep wound among Israel's Palestinian citizens. These tensions were underscored in the election campaign of 2003 when the Central Election Committee attempted to strike BALAD leader Azmi Bishara and TAʿAL leader Ahmad Tibi from the ballot. Although Israel's Supreme Court overrode the decision, the key issue in dispute remained: Was Israel to be a Jewish state or a state of all its citizens?

PALESTINIANS

A people who consider themselves descendants of the Canaanites, and other peoples who have settled in Palestine since ancient times.

The name *Palestinian* applies in contemporary times to Muslim and Christian Arabs who inhabited Palestine as a consolidated community until the creation of Israel in May 1948, an event that shattered the community and dispersed about 726,000 Palestinians throughout the Middle East, primarily to Gaza, the West Bank, Jordan, Syria, and Lebanon.

In 2004 the total number of Palestinians was estimated at 8.9 million. Approximately 88 percent

are Muslims, and the other 12 percent are Christians. Until the initiation of the Palestinian Authority (PA) in the summer of 1994, the largest concentration of Palestinians lived under Israeli occupation. In 2004 approximately 2.1 million lived in the West Bank, 200,000 in East Jerusalem, and 1.33 million in the Gaza Strip. Approximately 1.3 million lived in pre-1967 Israel as Palestinian citizens of the Jewish state. Other Palestinians lived in other Arab countries, especially Jordan, which had approximately 3 million.

Late Ottoman Period

The politics and culture of the Palestinians from the latter part of the nineteenth century until after the signing of the Declaration of Principles between Israel and the Palestine Liberation Organization (PLO) on 13 September 1993 can be divided into five stages. In the first stage, from 1876 to 1917, the Palestinians shared a common cultural heritage shaped primarily by the values of the Arab and Muslim empires that had ruled the country with few interruptions from 638 C.E. to 1917. Palestinian society in this stage consisted of three major classes: peasants *(fallahin),* commercial bourgeoisie, and urban notables or patricians. The patricians were the ruling class, and their influence ran deep in the countryside and in Palestinian cities and towns.

In 1897 the Basel program of the first Zionist Congress strongly affected the Palestinians. The program fixed the Zionist goal: "To create for the Jewish people a home in Palestine, secured by public law." This ushered in the first phase of a protracted struggle between indigenous Palestinians and Jewish immigrants. Opposition to Zionism was the focus of Palestinian political activities, as well as of Palestinian historiography and other forms of writing.

British Rule

The second stage, from 1917 to 1948, was inaugurated with the collapse of the Ottoman Empire at the end of World War I. By the autumn of 1918 Palestine, Transjordan, and Iraq were under British control. This development made Palestine increasingly vulnerable to Zionist colonization—first, by isolating the country from its wider Arab environment and second, by giving the British a free hand in implementing the Balfour Declaration of 2 November 1917, in which the British promised to support a Jewish National Home in Palestine. With the Balfour Declaration, the stage was set for a long struggle between the Palestinians and the Zionist immigrants. The Palestinians, who constituted approximately 90 percent of Palestine's population by the end of World War I, saw in the Zionists a potential threat to their national existence.

In strategic terms, the Palestinian-Zionist struggle was over the status quo. The Palestinians wanted to preserve the status quo, through political and diplomatic efforts between 1917 and 1936 and through armed rebellion during the Palestine Arab Revolt of 1936 to 1939. In contrast, the Zionists sought to change the status quo through mass immigration and land acquisition. The Jewish population in Palestine rose from 9.7 percent in 1919 to 35.1 percent in 1946, and Jewish-owned land increased from 2.04 percent of the total area of Palestine in 1919 to 7 percent in 1946. Meanwhile, British policy in the military sphere was aimed at disarming the Palestinians and arming the Jews. Thus, by 1947 the overall power equation was decisively in favor of the Zionists.

Palestinian society was also affected by three other factors: Zionist settlement activity, British colonial policies, and the expansion of Palestine's economy. While dominant members of urban notable families continued to control the politics of the country, other social forces were at play. The expansion of trade and the growth of coastal cities and towns enhanced the position of the middle class. Artisans and craftsmen, as well as people engaged in the finance, construction, and service sectors, also benefited from the expansion of trade. However, the peasants, who constituted almost two-thirds of Palestinian society, did not benefit from these economic developments. Their condition worsened in great part because of Zionist settlement and the lack of capital. Although Jewish agricultural settlers had adequate land, the indigenous Palestinian peasantry lacked the space necessary for its growing population. The October 1930 report of Sir John Hope-Simpson acknowledged this problem, noting that there was not room for a substantial number of Jewish settlers on the land.

The depressed state of the peasantry, together with other developments, had produced rebellion

within Palestinian society by the mid-1930s. The most notable development was the escalating rate of Jewish immigration. The influx of Jewish immigrants had two major consequences: It produced panic and desperation among the Palestinians, reinforcing their fears of Jewish domination in the future; and it radicalized the Palestinians and convinced them that the British were unwilling or incapable of following an evenhanded policy. Against this background, a revolt erupted in May 1936 and continued unabated until the summer of 1939, with only a short lull between November 1936 and January 1937 while the Peel Commission toured Palestine to ascertain the causes of the revolt.

With the publication of the Peel Commission Report in July 1937, the rebellion exploded again in opposition to the commission's recommendation calling for a tripartite partition: a Jewish state; a Palestinian state to be incorporated by Transjordan; and a British mandate over other areas. There was a Palestinian consensus against partition because the proposed Jewish state would cover about 33 percent of the total area of the country at a time when Jewish ownership of land was roughly 5.6 percent, and because a large portion of Palestinian villages, and a high percentage of Palestinians, would fall inside the Jewish state. The British responded to the Palestinian revolt with the full force of their military power. In terms of the cost in human lives, the revolt was a national calamity for the Palestinians: More than 3,075 were killed, 110 hanged, and 6,000 jailed in 1939 alone. At the same time, the British organized, trained, and armed special Jewish forces, creating in the process a Jewish military infrastructure that gave a decisive edge to the Jewish forces ten years later during the Arab–Israel War of 1948.

When the British realized that partition was not practicable, as indicated by the Woodhead Commission report of November 1938, they convened the unsuccessful London Conference in February and March 1939 to resolve the issue of the future status of Palestine. To break the deadlock, Malcolm MacDonald, colonial secretary of state, issued a white paper on 17 May 1939. Although the white paper fell short of meeting long-standing Palestinian demands, it introduced a number of important modifications concerning immigration and the application of the Balfour Declaration.

British implementation of the white paper proved difficult, partly because of Palestinian and Zionist opposition and partly because of the burdens of World War II. In these circumstances, by the 1940s the British were unable to handle the effects of the Balfour Declaration. The military and political structures of a Jewish national home were already in place in Palestine, in great part because of Britain's generosity. In almost every respect these structures were superior to those of the Palestinians.

Against this background, the United Nations (UN) divided Palestine into Jewish and Arab states in November 1947. The Palestinians rejected partition primarily because the UN proposed to give the Jews 55 percent of Palestine when Jewish ownership in November 1947 did not exceed 7 percent of the country's land. By contrast, the Jews found it in their interest to accept partition. Thus, the door for armed conflict in Palestine was wide open. A civil war between Jews and Palestinians followed the partition resolution. After the British left Palestine in May 1948, war, interspersed with cease-fires, continued until July 1949.

Units of armies and volunteers from neighboring Arab countries came to the aid of the Palestinians, who were losing the civil war and fleeing in large numbers. However, the Arab intervention was to no avail. The Jewish immigrant population was militarily superior to all the Arab soldiers combined. The Jews were also superior in terms of leadership, organization, and institutional links to the Western powers. In the end, the Zionists prevailed. Israel seized 77 percent of Palestine; about 726,000 Palestinians became refugees, many of them forcefully expelled by the Jewish forces while others fled out of fear. The Palestinians call this event *al-Nakba,* or the catastrophe.

The politics of the national struggle left a deep imprint on the intellectual life of the Palestinians, as is clearly illustrated in Palestinian historiography, art, and literature. There were literary and artistic works written in the romantic tradition, such as those by Khalil Baydas, Khalil al-Sakakini, and Muhammad Isʿaf al-Nashashibi, that focus on the social responsibility of men of letters and the relationship between culture and civilization. Other works, written in the realist tradition, reflect the philosophies of Ibn Khaldoun, Hegel, Marx, and Darwin.

From *al-Nakba* to the 1967 War

The third stage, which lasted from 1948 to 1967, was characterized by formal armistice agreements between a number of Arab states—Egypt, Syria, Lebanon, and Jordan—and Israel; the disarray among Arab states unsuccessfully attempting to achieve Arab unity; the impact of Cold War politics on the Middle East; the eclipsing of Palestinian nationalism by Arab nationalism; and Israel's refusal to accept any responsibility for what had befallen the Palestinians in 1948. Uprooted, dispersed, and with no state of their own, diaspora Palestinians (60% of the Palestinian population in 1948) came under the guardianship of the host Arab countries in which they lived. Another 30 percent lived in the West Bank and Gaza, and the remaining 10 percent lived in Israel. As a whole, the lives of Palestinians during this stage were marked by national dispersion, occupation, job insecurity, uncertain residency, discrimination, and political repression.

The post-1948 situation had serious consequences. First, it made the Palestinians totally dependent on the Arab states. Second, geographical dispersal made it difficult for the Palestinians to work together within one organizational framework. Thus, some Palestinians identified with the Arab National Movement, others with the Arab Baʿth Party or the Muslim Brotherhood; others acquired senior positions in the bureaucracies of Arab governments, particularly the Jordanian government, or formed independent Palestinian movements that advocated armed struggle against Israel. Life in the diaspora radicalized certain Palestinian groups that embarked on armed struggle against Israel in the mid-1960s in the hope of triggering an Arab–Israel war.

Against a background of inter-Arab rivalries and escalating Arab–Israel tensions, the Arab League created the PLO in 1964. The PLO's leadership was entrusted to Ahmad Shuqayri, a diaspora Palestinian of upper-class origin. In theory, the PLO was to work for the liberation of Palestine, but in practice it provided cover for Arab inaction toward Israel. The PLO charter of 1964 called for the total liberation of Palestine. Arab unity, rather than armed struggle or revolution, was posited as the instrument of liberation. Palestinian authors such as Abd al-Latif Tibawi, Fadwa Tuqan, and Fawaz Turki gave expression to this goal. Many of them romanticized this goal by infusing it with the sentiment of the Palestinian concept of return. History books, novels, and collections of poems and pictures of Palestine poured forth during this period to express the pain of exile and the overpowering desire to return.

Literary and political themes were expressed by poets such as Mahmud Darwish, Samih al-Qasim, and Tawfiq Zayyad and literary critics such as Salim Jubran, Ihsan Abbas, and Afif Salim. Palestinian and Islamic historiography was produced by Arif al-Arif, Muhammad Izzat Darwaza, and Akram Zuʿaytir. Stories of great Arab travelers were written by Iskandar al-Khuri al-Baytjali and Nicola Ziyada.

Reemergence of the Palestinian National Movement

The fourth stage of contemporary Palestinian history, from 1967 to the present, began with the Israeli conquest of the West Bank and Gaza in June 1967, a development that resulted in the displacement of more than 300,000 Palestinian refugees who fled the West Bank and the Golan area. Approximately 120,000 of these people were second-time refugees who had lived in refugee camps under Jordanian or Syrian jurisdiction. The Arab–Israel War of 1967 also resulted in the placement of the West Bank and Gaza under the jurisdiction of the Israeli military government. During its occupation of these territories, Israel undertook settlement and other activities that had a devastating impact on the Palestinians, including the formal annexation of East Jerusalem and the doubling of its surface area; the settlement of more than 120,000 Israelis in the Palestinian sector of the city; the confiscation of more than 55 percent of the West Bank and more than 40 percent of the Gaza Strip; and the deportation of some Palestinians from both areas.

Soon after the 1967 war, the Palestinians arose as an independent political force. They asserted the primacy of Palestinian nationalism and expressed themselves in the idiom of revolution and armed struggle. The PLO charter, revised in 1968 to give expression to this new trend, called for the liberation of all of Palestine, emphasizing that armed struggle was the only way. Aware at the time that the problem of Israeli Jews must be addressed, the PLO articulated the idea of a secular democratic state anchored on nonsectarian principles of coexistence

among the Jewish, Christian, and Muslim citizens of a liberated Palestine. In terms of political organizing, the Palestinians used Jordan as their early base of operations against Israel. In an attempt to attract international attention, radical Palestinian groups resorted to acts of violence, including the hijacking of civilian airliners and the murder of members of the Israeli Olympic team in Munich in September 1972.

The unprecedented coincidence between the radicalization of the Palestinians and the emergence of pragmatism and a preference for a diplomatic settlement with Israel on the part of key Arab states led to tensions between revolutionary Palestinians and the new Arab political order. The Jordanian Civil War (1970–1971) epitomized the incongruence between the romanticism of revolutionary Palestinians and the pragmatism of the leaders of Arab states. The Palestinian guerrillas were defeated in Jordan, but they moved to Lebanon, where they reemerged as a strong political force in a country deeply divided by sectarian as well as socioeconomic differences. Their presence in Lebanon served as a catalyst for the civil war that was triggered in April 1975. After the Arab–Israel War of October 1973, a new Palestinian consensus emerged with respect to a diplomatic settlement with Israel. This consensus was reflected in the PLO's political programs of June 1974 and March 1977. Both programs implicitly called for peace with Israel and the establishment of a Palestinian state in the West Bank and Gaza.

Momentous events affected the Palestinians between 1982 and 1990. In June 1982 Israel invaded Lebanon. Thousands of Palestinians were killed, maimed, or taken prisoner by the Israeli invading force. After nearly three months of fighting, the PLO evacuated Lebanon under the protection of a multinational force and set up its new headquarters in Tunisia. While the PLO, led by Yasir Arafat, was trying to recover from the devastating impact of the Israeli invasion of Lebanon, the situation of the Palestinians in the West Bank and Gaza continued to deteriorate under the impact of massive Jewish settlements and the policies of the Likud government, which took power in Israel in 1977. The Palestinian response to this situation was the Intifada (uprising), which erupted in December 1987. The Intifada put the West Bank and Gaza Palestinians in the limelight after several years of neglect by Arab governments whose energies were focused on the Iran-Iraq War.

The Struggle for a State

The intifada also catapulted the priorities of West Bank and Gaza Palestinians to the top of the PLO agenda. Before that, the PLO catered primarily to the preferences of diaspora Palestinians. This led to the further crystallization of the pragmatic trend that had begun to emerge in the previous phase. The intifada forced the PLO to move definitively toward the peaceful pursuit of a state in the West Bank and Gaza, where the overriding priority of the Palestinians living in those territories was to end Israeli occupation. This was the crux of the PLO's political program of November 1988, when the Palestine National Council accepted the UN land for peace Resolution 242 and recognized the State of Israel. Politically and intellectually, this phase witnessed the greater salience of religious activism with the emergence of the Islamic Jihad in 1986 and the Islamic Resistance Movement (HAMAS) in January 1988.

Despite their political difficulties, the Palestinians participated in the Arab national debate over cultural and sociopolitical issues. Hisham Sharabi wrote on Arab intellectuals and their interaction with Western culture. Using anthropological and sociological concepts, he also analyzed patterns of authority in contemporary Arab society. Edward Said, a scholar-critic, wrote on Western literature and authored books and articles on the Palestine question and other Middle Eastern topics. Walid Khalidi wrote on the Palestinians in Palestine before their diaspora. Mahmoud Darwish, the Palestinians' national poet, wrote poems about the Palestine struggle and criticized PLO and Arab leaders. Palestinian women such as Fadwa Tuqan, Sahar Khalifa, and Salma al-Khadra al-Jayyusi used poetry and other genres to express the cause of women's rights in the Arab world. Other women, including Hanan Ashrawi, participated in politics and wrote on social and cultural topics.

Iraq's invasion and occupation of Kuwait in August 1990 set in motion a chain of political developments that led to the mutual recognition of Israel and the PLO and the signing of the historic Decla-

ration of Principles in September 1993 by PLO chairman Arafat and Israeli prime minister Yitzhak Rabin. The PLO's support for Saddam Hussein was to a significant degree responsible for the shattering of the Palestinian community in Kuwait, which totaled approximately 350,000 people working as teachers, civil servants, and industrialists. However, the tragic results of the Gulf Crisis provided a propitious occasion for resolving the cause of the Palestinians. The launching of the Madrid peace process in 1991 opened the way for the Israel-PLO accord of September 1993. This accord was followed by other agreements to implement Palestinian self-rule, including the Taba Accords of September 1995. The Oslo Accord (1993) resulted in the withdrawal of Israeli troops from Gaza and major West Bank towns and the establishment of the Palestinian Legislative Council. With the Palestinians exercising control over some areas of the West Bank and Gaza, the realization of Palestinian self-determination seemed possible.

Yet, Palestinian hope for self-determination was dashed by a number of setbacks. One of the architects of Oslo, Yitzhak Rabin, was assassinated in 1995. The foundation for peace that he and Arafat built was undermined by the policies of a new prime minister, Benjamin Netanyahu, an opponent of the Oslo process, who refused to implement troop withdrawal and continued settlement activity, especially at Har Homa/Jamal Abu Ghunaym in East Jerusalem. By the time the more pragmatic Ehud Barak took over the premiership in Israel, most Palestinians had lost hope in the Oslo peace process. During the decade of the negotiations of the 1990s, confiscation of Palestinian land continued and the number of Jewish settlers doubled in the area in which the Palestinians hoped to establish a state. In addition, their economic conditions worsened. They were humiliated at checkpoints and their lives were disrupted by curfews and blockades. Finally, when the Camp David summit meeting in July 2000 failed, and Ariel Sharon provocatively visited al-Haram al-Sharif with 1,000 Israeli armed police on 28 September 2000, on the following day they initiated a second intifada, or uprising, that many considered to be their war of liberation.

Instead, it proved to be a costly rebellion. Palestinian militants attacked military and civilian Israeli targets. The violence helped to bring to power a hard-line Israeli prime minister, Ariel Sharon. Sharon, an enemy of Oslo, destroyed a large part of the PA's security system, administrative offices, and economic infrastructure. He placed Arafat under house arrest, assassinated Palestinian militants, and continued his confiscation of Palestinian lands for Jewish settlements. As a result of the suicide bombings by Palestinian radicals against Israeli civilians (which Arafat tolerated despite his promises in 1988 and 1993 to fight terrorism) international support for the Palestinian struggle for a state diminished, especially after 11 September 2001, when the United States and its allies declared war on "international terrorism." By early 2004 some 3,000 Palestinians, including about 500 children, and about 900 Israelis had lost their lives. More than half of those killed on both sides were civilians.

There were unexpected benefits arising from the al-Aqsa Intifada. Some reforms, such as financial accountability, were welcomed by the Palestinian public when they were instituted in the PA areas. The office of prime minister was established in 2003 in an effort to share power outside of President Arafat's narrow circle. The United States announced in a diplomatic initiative, Road Map, tosupport the creation of a democratic, sovereign state of Palestine within three years. Despite the violence and destruction, both the Palestinian and Israeli publics continued to support a two-state solution, and they seemed closer to resolving the final status issues than ever before. In early 2004 Palestinian realization of a state of Palestine was awaiting the right circumstances and leadership to make it happen.

PALIN COMMISSION REPORT (1920)

British Foreign Office report on the causes of the Arab violence in Palestine, April 1920.

The Palin Commission (formally the Palin Court of Inquiry) was set up in Palestine in May 1920, in the wake of violent protests by Arab residents of Jerusalem against the growing presence and political demands of the Jewish community. In early 1920, Arab protests had been mounted against the Balfour Declaration, against privileges accorded the Zionist Commission, and against the denial of Arab independence. They culminated in violent attacks on Jews in Jerusalem during the celebration of the Muslim holiday of Nabi Musa in early April, which coincided with Passover. Five Jews and four Muslim Arabs died. At that time, Palestine was ruled by a British military administration, headed by General Louis J. Bols, who sought to reassure the Palestinian Arabs that Britain would observe the status quo in that territory.

The British Foreign Office appointed a commission composed of three military officers and headed by Major General P. C. Palin, which filed its report on 1 July 1920. The report, which was never made public, argued that the disturbances were caused by the Arabs' disappointment over unfulfilled promises of independence, which the British had made during World War I to Sharif Husayn ibn Ali of Mecca; their belief that the Balfour Declaration implied the denial of their own right of self-determination; and their fear that the establishment of a Jewish National Home would lead to such substantial Jewish immigration that the Arabs would be subject to the Jewish community. The report argued that those feelings were aggravated by the proclamation of Sharif Husayn's son

Amir Faisal ibn Hussein as king of Syria, in March 1920, with a potential claim to Palestine, too. Feelings were also aggravated by the actions of the Zionist Commission, which sought a privileged status vis-à-vis the British military administration and asserted the right of the Jewish community to statehood. The report called the Zionist Commission "arrogant, insolent and provocative" and said that its members could "easily precipitate a catastrophe" (McTague, 1983, p. 102). Nonetheless, the report concluded that the British must rule with a firm hand, proving that the policy of the Balfour Declaration would not be reversed but also that the Arabs would be treated fairly.

The report's substantive findings paralleled the views of General Bols, who wanted to reduce the authority of the Zionist Commission and reassure the Arabs. Instead, the British government decided that the Arabs would acquiesce once British pro-Zionist policy was implemented firmly. Therefore, London replaced the military administration with a civilian administration on the day before the Palin Report was submitted; that administration would be guided in its policy by the Balfour Declaration and presided over by a Jewish High Commissioner. The Palin Report's predictions proved accurate concerning mounting Arab-Jewish tension and the difficulty of reconciling their contradictory aims if Zionist aspirations were not moderated. But the report was never published or publicized and, therefore, failed to influence the public debate in London and Jerusalem at a time when British policy and the Arab-Jewish relationship might still have been modified.

PALMAH

Labor Zionist elite military organization (1941–1948).

The Palmah (Plugot Mahatz, or "shock companies") was the Haganah's elite strike force, founded in May 1941 to help defend the Yishuv against potential German invasion. Its founders were Yitzhak Sadeh and Yigal Allon, Haganah leaders affiliated with the left-wing Kibbutz ha-Meuhad (United Kibbutz) movement. The elite force of pioneer-soldiers was largely recruited from and was based and housed at the movement's kibbutzim. Trained in commando tactics, the Palmah had a strong esprit de corps that stressed military professionalism and socialist values. It became the military vanguard of the Zionist Left, which caused tensions with the MAPAI-affiliated Haganah, to which it was ostensibly subordinate.

In its early years, the Palmah actively cooperated with the British. Palmah units served alongside the British Army in the campaign against the Vichy regime in Syria and later saw service against Iraq's pro-Nazi regime. But after 1945, the Palmah participated along with the other Jewish undergrounds in the armed struggle against the British Mandatory authorities in 1945 and 1946. Specially trained Palmah volunteers played a lead role in "the Saison" of 1944 and 1945 against the renegade Irgun and LEHI underground groups. This internecine operation took on an ideological dimension as left-wing Palmah members captured and sometimes tortured right-wing Irgunists. Political rivalries again came to the fore in June 1948, when a Palmah unit under the command of Yitzhak Rabin was used to destroy the Irgun weapons ship *Altalena,* commanded by Menachem Begin.

The Palmah produced a number of senior officers in the 1948 War, and five Palmah officers later served as chief of staff of the Israel Defense Forces (IDF): Moshe Dayan (1953–1957), Yitzhak Rabin (1963–1967), Haim Bar-Lev (1968–1972), David Elazar (1972–1975), and Mordechai Gur (1975–1978). During the 1948 war, Palmah battalions fought on all fronts (Galilee, central, and south) and played a critical role in defeating the Egyptians in the Negev. Of the more than 4,000 Israeli combatants killed in the war, approximately 1,000 were from the Palmah, about one-fifth of its ranks. Because of its strong ties to the leftist MAPAM party and the United Kibbutz movement, David Ben-Gurion viewed the Palmah with suspicion, and on 7 October 1948, it was formally dissolved as a separate military structure and was blended into the newly

established IDF, which incorporated the Palmah's military tactics and professionalism.

AMOS PERLMUTTER
UPDATED BY PIERRE M. ATLAS

PALMERSTON, LORD HENRY JOHN TEMPLE

[1784–1865]

British statesman, diplomat, and prime minister whose policies in the Middle East curtailed Ottoman power in the mid-nineteenth century.

Henry John Temple was born at Westminster and died at Brocket Hall, England. At the death of his father in 1802, he became third Viscount Palmerston at age seventeen. Palmerston entered politics in 1806 as a member of the House of Commons and served in parliament for an unbroken fifty-nine years.

During his first twenty years in Commons, he did a competent job as secretary of war but held no cabinet rank. His first cabinet appointment was in 1828, during the prime ministership of the Duke of Wellington. In his subsequent distinguished career, Lord Palmerston was foreign secretary from 1830 to 1841 and 1846 to 1852, then prime minister from 1855 to 1858 and 1859 to 1865.

In the Middle East, Palmerston pursued an aggressive policy. When Muhammad Ali, viceroy of Egypt, attempted to seize control of the entire eastern Mediterranean coast, renouncing his fealty to the Ottoman sultan, Palmerston risked war with France (1839–1841), which had supported the viceroy and his son, Ibrahim Pasha, as they concentrated Egyptian troops in Syria. In the end, the French failed to assist their client. Britain bombarded Beirut and Acre, landed troops there, and gave a series of graded ultimatums to Muhammad Ali, offering him greater rewards for immediate retreat. The Egyptians, harboring false expectations of French aid, hesitated too long. The London Conference of 1840 and its follow-up in 1841, inspired by Palmerston, ended by depriving Muhammad Ali of Syria, Lebanon, Palestine, and the Sinai desert, leaving him only the consolatory title Hereditary Viceroy of Egypt. At those conferences, all the great world powers supported Palmerston by declaring that warships, except for small vessels in diplomatic service, were barred from passing the Straits of the Bosporus and Dardanelles while the Ottoman Empire was at peace. Even France, Muhammad Ali's former ally, supported the London Conference of 1841.

In 1850 Palmerston risked losing office when he sent the navy to bombard Piraeus after the Greek government had been desultory in paying damages to a British subject whose property had been destroyed in a riot. He emerged from the crisis enjoying the confidence of the British parliament, stronger and more popular than ever.

Even before Muhammad Ali's retreat from Syria, Palmerston had succeeded in persuading the Ottomans to allow foreign consuls to be stationed in Jerusalem and to allow foreign nationals to reside permanently in the holy city—something not previously tolerated. William Tanner Young, who opened the British consulate in 1838, had full capitulatory rights, including powers of life and death to judge British subjects in Ottoman Jerusalem who were under British law.

When Anthony Ashley Cooper, seventh earl of Shaftesbury, married Lady Palmerston's daughter by her first marriage, Palmerston found himself under personal pressure to back his stepson-in-law's evangelical Christianity. This chiefly meant giving strong support to English and German Protestant missions in Palestine. Jews were the largest single group at whom missionary efforts were directed, as it was illegal in Turkey to convert Muslims to Christianity. Thus, by 1847, Britain was prepared to extend consular protection to Russian and other stateless Jews whose visas had expired. For a brief period, Palmerston contemplated creating a Jewish commonwealth in Palestine, under British protec-

tion, but under Ottoman suzerainty. Even after abandoning that idea as premature, Palmerston continued to encourage Consul James Finn in Jerusalem to grant blanket protection not only to Jews without valid passports, but also to such native Ottoman subjects as Druze, Samaritans, and Armenians. He saw no contradiction between the acquisition of willing clients and the primary British goal of saving the Ottoman Empire from partition at the hands of the French or Russians. Because France had become the protector of Roman Catholics in the Middle East and Russia had become the protector of Orthodox Christians, Palmerston regarded it as merely an evening of the contest for Britain to become the protector of Palestinians who were not Catholic, Orthodox, or Muslim.

Palmerston was out of office in 1853 when Britain, France, and Russia blundered into the Crimean War. He became prime minister in 1855, in time to participate in the negotiation of the Treaty of Paris (1857), a settlement that ensured the total removal of all fortifications and warships from the Black Sea.

Throughout his career, Palmerston did everything possible to prevent France from sponsoring the construction of a canal at Suez because he feared that it would become still another source of conflict. He did not live to see the completion of the Suez Canal in 1869, and he certainly could not have predicted that by 1874 Britain would control the waterway. By July 1860 Palmerston was sufficiently comfortable with Napoléon III that Britain became a party to a treaty, negotiated at Paris, permitting France to send 6,000 troops to Lebanon to end the endemic strife there between the religious sects in that Ottoman province.

PALMYRA

Ancient city in an oasis of the northern Syrian desert at the site of present-day Tadmur.

The first mention of Tadmur (or Tamar, city of dates), Palmyra's ancient and modern name, goes back to the nineteenth century B.C.E. It was probably a Caananite town that later came under Aramaic influence. In the third century B.C.E., the city achieved international prominence when the Seleucids made it a transfer point of east-west trade. Through trade contacts, the city absorbed Hellenic culture and the Greek language, which was spoken alongside Aramaic, Arabic, Syriac, and other languages. From the time of the reign of Emperor Tiberius (14–37 C.E.), the city came under Roman control and was renamed Palmyra (city of palms). During the Pax Romana and with the benefit of paved Roman roads, the city's commercial fortunes expanded.

Palmyra's golden age was the third century C.E. Emperor Caracalla (211–217 C.E.) granted Palmyra the status of a Roman colony, exempting it from taxes. The city became the chief way station between Damascus and the Euphrates river. Goods came on caravans of camels from Rome, Egypt, India, the Persian Gulf, and from China along the silk route. Some Palmyran merchants owned ships that sailed the Indian Ocean. Palmyra's busy bazaars and ruling institutions were housed in fine Roman and Mesopotamian stone buildings with Corinthian colonnades, whose ruins remain in good condition today. Palmyra became the seat of the personal empire of Septimius Odaenathus, a member of a local Arab tribe, who gained the title Emperor of the East after saving the Roman Emperor Valerian in 260 from capture by the Sassanian king, Shahpur I.

From 267 to 272 C.E., the city was ruled by Queen Zenobia. Under her vigorous rule, Palmyra in 270 conquered Syria, Egypt, and Anatolia. Zenobia

An amphitheater that stands in the ancient Roman city of Palmyra. © Christine Osborne/Corbis. Reproduced by permission.

then declared the empire of Palmyra independent of Rome, but two years later, Roman Emperor Aurelian reconquered all the territory and plundered the city of Palmyra. Zenobia tried to flee by camel toward the Euphrates, but was captured and taken to Rome, where she lived the rest of her days. Palmyra was reduced from a capital to a small frontier city after the destruction caused by Aurelian's reconquest in 273.

Ancient Palmyrenes worshiped the deity Bol (also Baal or Bel) who presided over the movements of the stars. Bol's chief sanctuary, shared with the sun and moon gods Yarhibol and Algibol, still stands. Greek and Roman deities were incorporated into the local belief system. In the second century, the worship of a single unnamed god became important, and by 325, a Palmyra bishop attended the Nicaean Council.

In 634, Khalid ibn al-Walid conquered Palmyra and assimilated it into the expanding Muslim caliphate. The city was destroyed by an earthquake in 1089 and reportedly had a mere two thousand inhabitants in the twelfth century. After the city was sacked by Tamerlane at the end of the fourteenth century, it fell into ruins. In the seventeenth century, Fakhr al-Din of Lebanon used Palmyra as a military training ground and erected a castle on a hill nearby.

The city was first excavated in 1929, and restorations have continued since then. Today, Tadmur is a city of thirty thousand inhabitants, the site of tourist facilities and a prison.

PAMIR MOUNTAINS

Afghan mountain range.

The Pamir mountains run north to south from Tajikistan to northern Pakistan, separating the Oxus drainage from the plains of Kashgar in China. In Afghanistan, the Pamirs extend through the Wakhan corridor, an area inhabited by Kirghiz nomads until the nomads were relocated to Turkey during the war of resistance (1978–1992). This area was annexed to Afghanistan in 1885 by the British, connecting Afghanistan to China so as to keep the British Empire of South Asia separate from the Russian Empire in Central Asia. Given their remote location and difficult terrain, the Pamir Mountains have been a choice place for hiding people or caches of weapons or other contraband. The area was annexed by the Soviet Union in 1980, then returned to Afghanistan when the Soviet Army withdrew a decade later. This corridor also provides a passage to China, albeit over a high and difficult terrain.

GRANT FARR

PAN-ARABISM

Movement and doctrine for Arab political unity.

Pan-Arabism, the desire or drive for Arab political unity, was largely, albeit not entirely, a product of World War I, when much of the former Ottoman Empire was awarded to British or French mandates by the League of Nations. Arab attention in the ensuing two decades focused on obtaining political independence from European control as opposed to broader discussions of social reform or the adoption of a particular political system. In the process, budding Arab nationalism and vague formulations of Arab unity became increasingly interwoven with support for Palestinians in their opposition to Jewish land purchase and immigration under the British Mandate.

As the Arab leadership organized to resist foreign occupation, it fostered a debate over which elements of the Arab heritage could best be employed as symbols around which to shape the image of Arab states. Some Arab writers continued to assert the primacy of Islamic bonds while others, like the Syrian educator Sati al-Husari, rejected Islamic sentiments in favor of a unified Arab nation bound by ties of Arab culture. Emphasizing the secular components of the Arab heritage, al-Husari envisioned an Arab nation, unified politically, and similar to the nations of Europe.

As late as World War II, pan-Arabism in the sense of a political movement aimed at unifying the Arab nation remained centered on Iraq, Syria, and the Arabian peninsula. The Baʿth Party in the 1940s called for comprehensive Arab unity in the form of a single Arab state stretching from the Atlantic Ocean to the Persian Gulf. Neither Egypt nor the Maghrib, the western Islamic world traditionally comprising Algeria, Morocco, Tunisia, and later Libya, played a significant role in pan-Arab movements until after the end of the war.

In the 1950s Gamal Abdel Nasser and the United Arab Republic (UAR) coopted the pan-Arabism of the Baʿth Party. Nasser argued that the Arab nations enjoyed a unity of language, religion, history, and culture, which they should exploit to create their own system of cooperation and defense. The peak of both Nasser's popularity and pan-Arabism as a political movement occurred between the 1956 Suez crisis and the June 1967 Arab–Israeli war. The collapse of the UAR in 1961 followed by the Arab defeat in 1967 dealt a severe psychological blow to the prestige of Arab leaders and the confidence of the Arab people; it is considered by many to constitute the Waterloo of pan-Arabism.

Over the next two decades, only a few Arab governments, notably Muammar al-Qaddafi's Libya, continued to promote pan-Arabism in terms of practical political union. As other Arab states established themselves and began to define and pursue national interests, their commitment to pan-Arabism was increasingly perfunctory. By the end of the twentieth century, its time as a widely accepted doctrine and political movement had passed; and if pan-Arabism was not dead, it was surely a spent force. By the 1990s, Islamist political movements, inspired in part by the successful Iranian Revolution of 1979, were growing in popularity and strength

throughout the Arab and Islamic worlds, often supplanting the earlier enthusiasm for pan-Arabism.

PAN-SYRIANISM

See SYRIAN SOCIAL NATIONALIST PARTY

PAN-TURKISM

A movement advocating the union of Turkish peoples.

In the second half of the nineteenth century, Turkish-speaking Ottoman intellectuals became familiar with European cultural nationalism. The result was increased awareness of the origins of Turkish peoples, an enhanced consciousness of a distinct Turkish identity, and interest in Turks living outside the Ottoman Empire. Aided by the political interest the Ottoman sultans took in the Muslim Turks of central Asia under the onslaught of Russian imperialism, Turkish consciousness gradually became politicized and led to formulations for political unity of Turkish peoples.

Meanwhile, Eastern European scholars and nationalists fighting Russian expansionism stressed the Asian roots of their peoples and forged the notion of pan-Turanism. "Turan" refers to the Turkish-populated regions east of Iran and extending into the Ural and Altai mountains, also ancient homeland of Finns, Hungarians, and Mongolians. In strict terms "pan-Turanism" refers to a vague union of Ural-Altaic peoples. "Pan-Turkism," often used interchangeably with "Pan-Turanism," refers to a political union of Turkish peoples who in the nineteenth century lived within and beyond Turan.

Pan-Turkish ideas influenced Young Ottoman leaders (particularly Ali Suavi) and found systematic expression in a linguistic movement to simplify literary Turkish. From the 1880s on, Turks in Russia clung to pan-Turkish ideas to resist Russian cultural subjugation. The best-known propagandist was Ismail Gasprinski, a Tatar who published a journal called Interpreter. Emigrés from Russia propagated pan-Turkish ideas in the Ottoman realm. In 1904, Yusuf Akçura, a Kazan Turk educated in Constantinople (now Istanbul), wrote his influential *Three Kinds of Policy,* making a case for pan-Turkism against Ottomanism and Islamism. He also contributed to the foundation of cultural and literary Turkish societies, best known among them the Turkish Society and Turkish Hearth Association. Writers such as Halide Edip, Ömer Seyfettin, and Mehmet Emin Yurdakul joined Russian Turks (including Akçura, Ahmed Ağaoğlu, and Ali Hüseyinzade) in Turkish cultural activity.

In the Ottoman period, contrary to later nationalist contentions in the empire's successor states, pan-Turkism did not become the predominant ideology. Even in the thought of Turkists, such as Ziya Gökalp, Turkism could not be separated from Islamism or Ottomanism. As a political program pan-Turkism remained vague and marginal. Tekin Alp (Moise Cohen), a Jewish journalist, was an ardent propagandist. Pan-Turkish thought did promote nationalist consciousness among certain educated segments of Turks and, with the collapse of the Ottoman Empire, contributed to the crystallization of a Turkish nationalism limited in scope and restricted to Anatolia.

Pan-Turkism flourished at the end of World War I and until the consolidation of the Bolshevik state and the Turkish republic. The simultaneous collapse of the Russian and Ottoman empires stimulated fantastic, ill-conceived, and unrealistic schemes of unifying the Turks of Asia. Enver Paşa and Cemal Paça, who fled Istanbul at war's end, spent their

lives in uncoordinated attempts to establish the great Turkish state. The Soviet governments discouraged and systematically undermined pan-Turkism in Central Asia.

Pan-Turkish sentiments briefly surged in Turkey during World War II with the aid of German propaganda and with the expectation that the Soviet Union would crumble. In the Republic of Turkey, pan-Turkish racialist ideas have inspired the ultranationalist right. A pan-Turkish political framework has not emerged as a realistic or popular scheme among the Turkish republics of central Asia since the breakup of the Soviet Union, while cultural and economic interchange among them and with Turkey has intensified.

PARCHAM

Afghan Marxist political faction; also its newspaper.

Parcham (Banner), a faction of the People's Democratic Party of Afghanistan (PDPA), was founded in 1965 as a worker's revolutionary party dedicated to a Marxist revolution in Afghanistan. In 1967, the PDPA split into the Khalq (People's) faction and the Parcham faction. The split was in part the result of rivalries between the two leading personalities of the PDPA. Babrak Karmal was the leader of the Parcham faction, which attracted followers from the Persian-speaking Kabul intelligentsia; the Khalq faction had a predominantly rural and Pakhtun base.

In 1968, the Parcham faction published a newspaper also called *Parcham.* Published by Sulaiman Layeq and edited by him and Mir Akbar Khaiber, it was closed by the parliament after only six editions for being "anti-Islamic."

In April 1978 the two factions of the PDPA united to stage a successful revolution and took over the government. The Parcham faction was soon purged, however, and its leaders were jailed or sent abroad as diplomats by late 1978. On 25 December 1979 a large Soviet airlift began; two days later a Parcham faction staged a coup with the help of the Soviet Union. Babrak Karmal returned to Kabul, and the Parchamis took over the government. The government of Karmal attempted to move the party toward an ideological center and denounced many of the reforms and actions of the Khalq faction. Karmal and President Najibullah, who succeeded him in 1986, attempted to undo most of the radical reforms of the Khalqis and announced a plan of national reconciliation. They even changed the name of the PDPA to the Hezb-e Watan (Homeland party) in 1989. These changes, however, were unsuccessful in convincing the Afghan mojahedin leaders to put a halt to the war of resistance. The Parcham government collapsed in 1992.

PARIS PEACE SETTLEMENTS (1918–1923)

Post–World War I treaties and agreements that reconfigured the Middle East.

The defeat of the Ottoman Empire in 1918 led to its dissolution. In the long term the victorious Allies' partition of the Ottoman territories was less important than their introduction of a new system of political organization based on the European model of the nation-state. The modern Middle East was shaped physically and politically by the peace agreements. At the initial Paris Peace Conference

in 1919 Britain and France, the victorious allies, were more concerned with adjusting their differences and harmonizing their territorial appetites than with a just and durable final settlement. Hence they agreed at the San Remo Conference in April 1920 to divide the former Arab provinces of the Ottoman Empire along the lines of the Sykes-Picot Agreement, with some minor modifications. France received the mandates for Syria and Lebanon, which the League of Nations confirmed in 1922. France waived its claims to Mosul in Iraq in exchange for shares in the Turkish Petroleum Company (later the Iraq Petroleum Company). Britain obtained mandates for Iraq, Transjordan (which it created in 1920), and Palestine. The Zionists succeeded at the Paris conference in convincing Britain to incorporate the Balfour Declaration into the preamble of the Palestine mandate.

To the Arab nationalists, the Paris conference was a political disaster; it sowed the seeds of future conflicts in the region. The victorious Allies initially tried to enforce a similar settlement on the defeated Ottoman government in the 1920 Treaty of Sèvres, which was designed to partition Turkey into very small, unviable segments. But unlike their Arab counterparts, the Turkish nationalists, led by Mustafa Kemal (Atatürk), successfully challenged the clauses of the Sèvres settlement related to Anatolia and Thrace, forcing the Allies, after a long, debilitating military campaign, to renegotiate a new settlement at Lausanne in July 1923. The Treaty of Lausanne confirmed Turkish sovereignty over the whole of Anatolia; the Sèvres clauses calling for an independent Armenia and an autonomous Kurdistan were forgotten.

See also Atatürk, Mustafa Kemal; Sèvres, Treaty of (1920); Sykes–Picot Agreement (1916).

PARIS, TREATY OF (1857)

Anglo-Iranian treaty that forced Iran out of Afghanistan and Muscat, 1857.

After Iran had tried to annex the Afghan city of Herat, British troops occupied Iran's Kharg Island and part of her mainland. Iran then signed this treaty, agreeing to withdraw from Afghanistan and relinquish Iranian claims to Herat, Afghanistan, and parts of Musqat in return for British withdrawal from Iran.

PARLIAMENTARY DEMOCRATIC FRONT

The members of Kamal Jumblatt's parliamentary bloc in Lebanon.

The Parliamentary Democratic Front was a powerful political group in the 1972 Lebanese election, although it did not have a clear political agenda beyond loyalty to the political leadership of Kamal Jumblatt. It included members from various sects but was predominantly Druze-oriented, given the Druze basis of Jumblatt's leadership.

PARSIPUR, SHAHRNUSH

[1946–]

Iranian author.

Born and raised in Tehran, Shahrnush Parsipur graduated from Tehran University. Her first short stories (she writes in Persian) were published in the early 1970s. Her first book was the novel *Dog and the Long Winter* (1976). Riots, demonstrations, and the Iranian Revolution in 1978–1979 caused the shah and his family to leave. In 1979, the Islamic Republic of Iran was proclaimed, under the leadership of the Ayatollah Ruhollah Khomeini.

After two volumes of short stories, a second novel came out, *Tuba and the Meaning of Night* (1988), which Parsipur wrote after spending four years in prison for political reasons. In 1990, a slim volume of interconnected stories was published, *Women without Men,* which was banned by the Islamic republic, and her novel *Blue Reason* remained unavailable there as of the mid-1990s.

Parsipur, whose writings exhibit a woman-centered Iranian universe, stands as the leading figure in a fourth generation of Iranian women literary artists. The chief figure in the first generation was the traditionalist poet Parvin E'tesami (1907–1941); in the second, the prominent short-story writer and novelist Simin Daneshvar (born 1921); the third generation saw Iran's most famous woman writer, the poet Forugh Farrokhzad (c. 1934–1967).

Translations of Parsipur's stories appear in *Stories by Iranian Women since the Revolution* (1991) and *Stories from Iran: A Chicago Anthology* (1991). Her career receives treatment in Michael Hillman's *From Durham to Tehran* (1991). English translations of Parsipur's major writings were in print by 1992, when the author toured the United States and participated in the International Writer's Program at the University of Iowa.

PARTI DE L'AVANT-GARDE SOCIALISTE (PAGS)

Successor to the Algerian Communist Party.

Created in 1966, the Socialist Vanguard Party (PAGS) succeeded the Algerian Communist Party (PCA), which had been founded in 1936 and banned in November 1962. The PAGS renewed its political activities under Houari Boumédienne's regime (1965–1978). University graduates, students, unionists, and workers made up the majority of the party. PAGS provided support to Boumédienne's progressive agrarian and industrial policies and his anti-imperialist foreign policy. In the 1980s the Front de Libération Nationale (FLN) banned PAGS members from participation in state institutions or in the FLN's mass organizations. PAGS officially restarted its movement following Algeria's liberalization. In 1990 PAGS elected Hachemi Chérif as national coordinator. He succeeded Sadek Hadjerès, who had led the party since the 1950s. PAGS was renamed Ettahadi and later the Social and Democratic Movement (MDS) under the charismatic Chérif, who staunchly opposed Islamist ideology. Chérif contested Abdelaziz Bouteflika's disorderly economic liberalization, which resulted in massive unemployment because many state-owned enterprises were dismantled and sold to private owners without regard to the future of the employees. Chérif also disliked Bouteflika's cozy relationship with Islamists. MDS advocates a total break with the regime and calls for a secular democratic alliance that excludes Islamists whatever their degree of moderation.

PARTI DÉMOCRATIQUE CONSTITUTIONNEL (PDC)

Moroccan political party founded in 1937.

The Parti Démocratique Constitutionnel (PDC) was founded by Muhammad Hassan al-Wazzani (Ouezzani) as the result of a split with the Bloc d'Action National owing to personal differences between Allal al-Fasi and Wazzani, as well as disagreements over negotiating strategies with the French authorities. The PDC remained a small group, more of a political club than a party, centered on Wazzani's followers and friends. After World War II, it cooperated periodically with the Istiqlal Party and in 1953 and 1954 joined the National Front, which opposed the continuation of the French protectorate. In 1958, it merged with the Parti Démocratique de l'Indépendance (PDI); in 1963 it operated within the Front pour la Défense des Institutions Constitutionnelles (FDIC).

PARTI DÉMOCRATIQUE DE L'INDÉPENDANCE (PDI)

Political party in Morocco.

Formed after World War II by a splinter group originating in the Istiqlal Party and led by Muhammad Hassan al-Wazzani, the Parti Démocratique de l'Indépendance (PDI) briefly joined with the Istiqlal and the two nationalist parties in the Spanish zone in 1951 to form the short-lived Moroccan National Front. On its own again, and deriving its support mainly in the predominantly Berber tribal areas, it received six portfolios in the first representative Moroccan government, established in December 1955 after the sultan had returned from exile. Its only clear idea was uniting around the person of the king, as well as opposing the hegemony of the Istiqlal. In 1959, following the defection of a number of party leaders to the Union Nationale des Forces Populaires (UNFP), it renamed itself the Parti Démocratique Constitutionnel (PDC) and competed in the 1963 elections within the framework of the pro-palace Front pour la Défense des Institutions Constitutionelles (FDIC). In recent decades, the party competed in local and national elections with little success, winning no seats in the 1977 and 1984 parliamentary elections. In the 1993 parliamentary elections, again operating under the PDI banner, and headed by one of the original PDI founding members and ex-Moroccan diplomat Thami al-Wazzani, it experienced a revival of sorts, winning nine seats. In the 1997 elections, it dropped to just one seat; in the 2002 elections, it won two seats.

PARTI D'UNITÉ POPULAIRE (PUP)

Opposition political party in Tunisia.

The Parti d'Unité Populaire (Party of Popular Unity), one of the six legal opposition parties in Tunisia, was an offshoot of the Mouvement pour l'Unité Populaire (MUP) founded in Paris in 1973 by Ahmed Ben Salah. In 1981 a rift between the Paris-based group and its Tunisian branch was formalized with the creation of a second Movement of Popular Unity (often called MUP-II). In 1985 it was renamed the Parti d'Unité Populaire (PUP). In 1999 Mohamed Bel Haj Amor, PUP secretary general, entered the first presidential elections in Tunisia to allow more than one candidate but lost. In 2000 Amor was succeeded as the head of the PUP by Mohamed Bouchiha.

PARTI DU PEUPLE ALGÉRIEN (PPA)

Algerian nationalist organization that used direct, often violent, action that led to the war of independence.

The Parti du Peuple Algérien (PPA; Party of the Algerian People) was founded early in 1937 by Messali al-Hadj, widely viewed as the father of the Algerian nationalist movement. An extension onto Algerian soil of the Etoile Nord-Africaine (ENA; Star of North Africa), whose constituency was principally among the émigré community in Paris, it was remarkably successful in mobilizing urban working classes, lower middle-class Algerians, as well as the sons of some of the more affluent Algerians behind the nationalist cause. Messali al-Hadj and five of the PPA's directors were imprisoned in August 1937, and the party itself was banned in September 1939. During World War II, it functioned underground at reduced levels both in Algeria and France.

In 1943, leaders of the party approved the drafting of the Manifesto of the Algerian Muslim People and the more radical *additif* that followed it. When, in March 1944, the moderate Ferhat Abbas

decided to organize a coalition of forces called the Amis du Manifeste et de la Liberté (Friends of the Manifesto and of Liberty), members of the underground PPA flocked to it in such numbers that they eventually came to dominate it in all but name. It was PPA elements that helped turn the V-E Day celebrations of 8 May 1945 into a series of bloody confrontations between nationalists and the colonial authorities that are considered a direct precursor of the Algerian revolution.

When he was released from prison in 1946, Messali al-Hadj made an abrupt decision to reenter the political process by creating the Mouvement pour le Triomphe des Libertés Démocratiques (MTLD; Movement for the Triumph of Democratic Liberties) as a front for the outlawed PPA. From then on, until the war of independence, the MTLD ran candidates in most elections. But the PPA continued at a secret level in order to retain within the fold the growing group of militants who favored direct action. The party's detractors considered this dual approach one of its major weaknesses.

PARTI NATIONAL

Moroccan political party.

Established in April 1937 by the bulk of Morocco's nationalist leadership (except Muhammad al-Wazzani and his followers) after the French authorities dissolved the Comité d'Action Marocaine (CAM), the Parti National, to show continuity with the CAM, located its headquarters in the same premises, in Fez. Organizationally, it was similar as well, consisting of an executive committee, a national council, local branches, and party cells. Its program was the implementation of a new French protectorate as a step toward full independence. It also campaigned against the power of rural chieftains, especially Glawi Pasha.

The French authorities cracked down on the party in the fall of 1937, arresting many of its leaders, most of whom were exiled. Nevertheless, clandestine party cells continued to function. Following his release in 1938, Ahmad Muhammad Lyazidi assumed leadership of the movement. In 1941, a reorganized supreme council was formed by Ahmad Maqwar and Lyazidi; the establishment of party branches followed the landing of Allied forces in 1942. Ahmad Balfarej was allowed to return from Paris in January 1943, and at the end of the year, together with the exiled Allal al-Fasi, reconstituted the party as the Istiqlal.

PARTI NATIONAL DÉMOCRATIQUE (PND)

Political party in Morocco.

Originally known as the Parti des Indépendants Démocrates, the PND was founded in 1981 by a breakaway faction of the Rassemblement National des Indépendants (RNI). Led by Muhammad Arsalane al-Jadidi and Abdel Hamid Kacemi, it included fifty-seven members of parliament and three cabinet ministers. The group represented large landowning interests who opposed International Monetary Fund recommendations to reduce credit to the agricultural sector, particularly the large commercial farms. Its numbers in parliament declined by more than half in the 1984 parliamentary elections, to twenty-four; it maintained this figure in the 1993 elections, when it ran as part of the pro-palace Entente (Wifaq) bloc. In a government reshuffle in January 1995 the PND received three cabinet posts. In the 1997 elections, it dropped to only ten seats and was left out of the new government. In the 2002 elections it attained twelve seats and remained outside of the government.

PARTITION PLANS (PALESTINE)

Plans for the territorial division of Palestine that attempted to reconcile the rival claims of the Jewish and Arab communities; first suggested in 1937 by Britain's Peel Commission.

Following the outbreak of the Arab rebellion in 1936, the British government, which had been granted the Palestinian mandate by the League of Nations, appointed Earl Peel to chair a royal commission. The commission learned that Jewish nationalism was as intense and self-centered as Arab nationalism, that both were growing forces, and that the gulf between them was widening. Partition was seen as the only method for dealing with the problem. In its final report (July 1937), the Peel Commission recommended that Palestine be partitioned into a small Jewish state; an Arab state to be united with Transjordan; and an area, including Jerusalem, to remain under a permanent British mandate. The Zionist leadership accepted the principle of partition and prepared to bargain over the details. But the Arab leadership refused to consider partition and reasserted its claims to the whole of Palestine. Although the Peel plan was not acted upon, the principle of partition guided all subsequent exercises in peacemaking (1937–1947).

On 29 November 1947, the United Nations (UN) General Assembly voted in favor of a resolution (no. 181) for replacing the British mandate with two independent states, thereby suggesting that the logic of partition had become inescapable. The UN partition resolution laid down a timetable for the termination of the British mandate and for the establishment of a Jewish state and an Arab state linked by economic union, along with an international regime for Jerusalem. An exceptionally long and winding border separated the Jewish state from the Arab one, with vulnerable crossing points to link three Jewish enclaves—one in eastern Galilee, one on the coastal plain, and one in the Negev. The Jewish state would also contain a substantial Arab minority within its borders.

Despite doubts about the viability of the state as proposed, the Zionist leadership accepted the UN partition plan. Local Arab leaders and the Arab states rejected it vehemently as illegal, immoral, and unworkable. To frustrate this partition, the Palestinian Arabs resorted to arms. The UN partition plan thus provided both an international charter of legitimacy for a Jewish state as well as the signal for the outbreak of war between Arabs and Jews in Palestine.

PASHA

See Glossary

PATRIARCH

A leader in an Eastern Christian church.

By the fourth century C.E., the Christian church was divided into five administrative districts: Jerusalem, Antioch, Alexandria, Constantinople (now Istanbul), and Rome. Each of these was headed by a bishop called a patriarch. Today, "patriarch" is the title for the head of an Eastern Christian church, such as the Armenian patriarch or the Greek Orthodox patriarch (who still resides in Istanbul).

PATRIARCHS, TOMB OF THE

Ancient biblical shrine.

Located in Hebron in the West Bank, the Tomb of the Patriarchs (Cave of the Machpelah) is one of the most ancient biblical shrines. Among the most authentic sites, it is purported to be the burial place of Abraham and Sarah, Isaac and Rebecca, Jacob and Leah, and according to Jewish folklore, Adam and Eve as well. Viewed as one of the holiest shrines by both Jews and Muslims, it has been the focal point of persistent struggles between Palestinian and Jewish nationalists.

CHAIM I. WAXMAN

PATRIOTIC UNION OF KURDISTAN (PUK)

Kurdish political party.

Established in 1977, the Patriotic Union of Kurdistan (PUK) advocated the self-determination of Iraqi Kurds through armed struggle. Led by Jalal Talabani, the PUK claims to be more leftist than the rival Democratic Party of Kurdistan (DPK). In 1987 the PUK put an end to ten years of internecine fighting and joined the Kurdistan Front of Iraq with the KDP and six other smaller organizations. After the Gulf War (1991) the PUK shared power with Masʿud Barzani's DPK inside the Kurdish Autonomous Zone, in the parliament elected in May 1992, and in the Kurdish Regional Government formed in Irbil in July 1992. In May 1994 internecine fighting resumed and continued until the Washington Agreement of September 1998. The PUK formed its own government in Sulaymaniyya, and the Kurdish Autonomous Zone was de facto split into two regions. It took four more years to implement the Washington Agreement (1998) and to convene the Kurdish Parliament, which met again for the first time in full session on 4 October 2002. Both the DPK and the PUK approved a draft of Federal Constitution for the future Iraq.

PEACE AND AMITY, TREATY OF (1805)

Treaty concluded in 1805 between the United States and Tripoli.

This treaty ended the conflict that began in 1801 when Yusuf Karamanli, pasha of Tripoli (in present-day Libya), closed the U.S. consulate, expelled the consul, and declared war on the United States. This conflict ended an uneasy peace in which the U.S. government paid an annual tribute of $18,000 in return for Tripoli's nonbelligerence vis-à-vis U.S. shipping in the Mediterranean. U.S.-Tripoli relations deteriorated in 1801 because Karamanli demanded $250,000 and the Americans refused to pay.

The treaty was concluded on 4 June 1805 and was ratified by the U.S. Senate on 12 April 1806. It was negotiated by Karamanli and Colonel Tobias Lear. The United States agreed to a one-time payment of $60,000 to secure the treaty and to ransom American prisoners of war. It also consented to abandon Derna (a provincial capital in eastern Libya occupied during the war) and not to supply its mercenary allies, who supported the pasha's brother, Ahmad Karamanli, in his claim to be the legitimate ruler of Tripoli. In return, Yusuf Karamanli agreed to release Ahmad's wife and children, whom he was holding hostage. A secret article (dated 5 June 1805), not revealed until 1807, granted Yusuf four years to release Ahmad's family, in return for the Americans' assurance that Ahmad not challenge Yusuf's legitimacy to rule Tripoli. In 1809, Yusuf permitted Ahmad to return to Tripoli as governor of Derna. But in 1811, he again felt threatened by Ahmad, who fled to Egypt.

Under terms of the treaty, prisoners were exchanged. On the American side, they consisted primarily of the 297-man crew of the U.S.S. *Philadelphia.*

Five Americans had died in captivity, and five chose to remain in Tripoli. One week after the Americans were freed, eighty-nine Tripolitan captives were returned, along with the $60,000.

The political and economic effects of the war undermined Yusuf's government. Disorder broke out in the early 1830s, encouraging the Ottoman Empire to reestablish its presence in Tripoli in 1835, thus bringing the Karamanli dynasty to an end.

PEACE CORPS

U.S. volunteer agency whose goal is to help developing nations share American expertise and to enhance mutual understanding.

The Peace Corps was established by U.S. President John F. Kennedy on 1 March 1961 "to promote world peace and friendship" by providing developing nations with volunteer American personnel. It was hoped that, through daily contact with Americans doing development work, developing nations would better understand the people of the United States and that in turn Americans would better understand other peoples and their situations.

Since its inception, the Peace Corps has sent more than 170,000 American volunteers to over 136 developing countries, including the following countries in the Middle East: Bahrain, Iran, Jordan, Libya, Morocco, Oman, Tunisia, Turkey, and the Yemen Arab Republic. In all of these countries, Peace Corps volunteers were teachers, engineers, designers, and administrators of special programs.

In Iran from 1962 until 1976, Peace Corps volunteers founded kindergartens, taught English, built libraries, designed a new mosque in a Khorasan village after the old one was destroyed in a 1968 earthquake, and planned a college of dentistry in Mashhad. In Morocco, volunteers faced the challenge of learning both Arabic and French; they were employed in activities ranging from irrigation projects to teaching physical education in secondary schools. In addition to teaching, the Peace Corps in Tunisia supplied the Habib Thameur Hospital in Tunis with nurses. In Turkey, some of the over two hundred volunteers founded a home for street boys in Istanbul and others worked at the Middle East Technical University in Ankara. And in the former Yemen Arab Republic, Peace Corps volunteers helped construct a water-pumping station in Hodeida.

Though Peace Corps volunteers are sent only at the invitation of the host country, the program has not been without its critics. A problem that has plagued the Peace Corps in the Middle East and elsewhere has been the failure to train host-country counterparts to replace Peace Corps volunteers once their twenty-seven months of service have ended. Still, although the Peace Corps has not always succeeded as a development organization, its record has been more benign and its effects more beneficial than some other U.S. aid programs developed during the height of the Cold War.

The Peace Corps no longer had any volunteers in the Middle East in late 2003 but was planning to reinstate its programs in Jordan and Morocco in the spring of 2004. According to the Peace Corps Media Office, 68 volunteers served in Bahrain from 1974 to 1979; 1,748 served in Iran from 1962 to 1976; 227 served in Jordan from 1997 to 2003; 295 served in Libya from 1966 to 1969; 3,444 served in Morocco from 1963 to 2003; 160 served in Oman from 1973 to 1983; 2,130 served in Tunisia from 1962 to 1996; 1,460 served in Turkey from 1962 to 1972; and 564 served in North Yemen and, after unification in 1990, all of Yemen from 1973 to 1994.

ZACHARY KARABELL
UPDATED BY CHRISTOPHER REED STONE

PEACE NOW

Israeli peace protest movement.

Peace Now, the oldest, largest, and at times most effective peace movement in Israel, was founded in the spring of 1978 by a group of reserve officers of the Israel Defense Forces who, in response to Egyptian President Anwar Sadat's dramatic November 1977 visit to Israel, wrote a collective letter to Prime Minister Menachem Begin, imploring him not to miss this opportunity to conclude peace with Egypt. The letter was followed by a number of large demonstrations in the streets of Tel Aviv and Jerusalem. Begin claimed that these demonstrations impressed him sufficiently to persist in his efforts to conclude the Israel-Egypt Peace Treaty the following year.

The Egyptian-Israeli agreements signed at Camp David in September 1978 provided also for further negotiations on the Palestinian question. When these negotiations, which became known as the "autonomy talks," failed—and in reaction to the massive increase of Jewish settlements in the occupied territories—Peace Now decided to focus on the struggle against the occupation in general. This decision put the movement in a direct clash with the Begin government, in opposition to the Israeli invasion of Lebanon in June 1982 and in protest against the involvement of Israeli forces in the massacre perpetrated by Lebanese Phalange militia in the Palestinian refugee camps of Sabra and Shatila in Beirut. The movement organized a number of massive demonstrations, the largest of which assembled over 250,000 demonstrators (some estimates reached 300,000 and 400,000) in the Tel Aviv Municipal Square.

The success of Peace Now in mobilizing sizable parts of the public against the war drew the attention of right-wing extremists, and Peace Now activists became targets of personal attack and abuse. On 10 February 1983, during a demonstration near the prime minister's office calling for the dismissal of Ariel Sharon as minister of defense, a hand grenade was thrown at the demonstrators, killing Peace Now activist Emil Grunzweig and wounding seven others.

Peace Now is not a membership organization. However, counting the number of signatures on recurrent petitions, financial contributions, and participation in demonstrations, the movement reached at its peak more than 200,000 supporters. In order to maintain is broad cross-party support, Peace Now has declined offers to become an established political party and run in Knesset elections. Nevertheless, a number of its leaders have become members of the Knesset and even cabinet ministers (such as Minster of Immigration Absorption Yaʿel Tamir, Minister of Industry and Commerce Ran Cohen) while belonging to other parties.

Over the years Peace Now has also been heavily involved in dialogue with Palestinians on every level, from the top leadership to meetings of youth and students, as well as in local initiatives. Peace Now was also involved in defending Palestinians whose rights were encroached on by settlers, especially in Jerusalem, where a special litigation institution called Ir Shalem was established. The well-known human-rights watch group B'Tselem was also started by activists of Peace Now.

After 1993, when the Rabin government followed, through the Oslo process, policies long advocated by Peace Now, the movement seemed to lose much of its raison d'être. But the decay of the peace process after Rabin's assassination, during the tenures of Benjamin Netanyahu and Ehud Barak, revived the movement, whose activities were concentrated during this phase primarily on public monitoring of settlement activity. The outburst of the second Palestinian Intifada after the collapse of the Camp David negotiations in July 2000 left Peace Now discouraged, and reflected a general malaise of the Israeli left. Yet with the continuous financial support of its support organizations abroad it manages to continue its activities and even attract many younger people to the ranks of its leadership. Its most recent initiative was the creation of a broadly based Coalition for Peace in which a number of Palestinian activists, led by Sari Nusayba, the chancellor of al-Quds University in Jerusalem, became active as well.

PEAKE, FREDERICK GERARD

[1886–1970]

British military officer in Transjordan.

A graduate of Sandhurst, the British Royal Military Academy, Peake served in India from 1908 to 1913. In September 1920, Captain Peake was sent to Transjordan to investigate the condition of the police and gendarmerie. He subsequently received permission to raise two small forces to maintain law and order. The first, the 100-man Mobile Force, guarded the Amman–Palestine road. The other, of fifty men, helped the British official posted in Karak. In April 1921, Peake was appointed one of Amir Abdullah I ibn Hussein's advisers. During the summers of 1921 and 1923, he organized the 150-man Reserve Mobile Force, which became the nucleus of the Arab Legion.

As a result of regional skirmishes, the Reserve Mobile Force was reorganized with 750 officers and men and given additional financing. The reorganized force thwarted Wahhabi raids in 1922 and the Adwan tribal rebellion in 1923.

In September 1923, all forces in Transjordan were merged with the Reserve Mobile Force, put under Peake's command, and renamed the Arab Legion. During the first three years of his command, Peake developed the Arab Legion into a highly effective force that accepted able-bodied volunteers from any Arab country, preferably men from villages and towns. John Bagot Glubb, who arrived in 1930 as Peake's second in command, created the Desert Mobile Force, composed mainly of bedouins, to shore up the Arab Legion, which had been weakened by the creation of the Transjordan Frontier Force in 1926. Peake retired in 1939 and was succeeded by Glubb.

Jenab Tutunji

PEARL DIVING (BAHRAIN)

Before the 1930s, pearling was the major industry in the island nation of Bahrain.

Boats from Manama, Muharraq, al-Hidd, and other towns on the Bahrain coast set out for the main oyster banks in the Persian/Arabian Gulf, to the east of the islands, during a season that lasted from June through September. Representatives of the merchants who financed the operation often accompanied the pearl fishing fleet, purchasing the day's catch on the spot. Profits were distributed among the owners, pilots, divers, and crew at the end of the season according to shares drawn up in advance. Delays in payment and the vagaries of diving usually left divers and crew in perpetual debt to the merchants and captains. Since Bahrain was a British protectorate from 1880 to 1971, British officials attempted to remedy this state of affairs by promulgating a formal code for the industry in 1923, but the risks and hardships of pearling led most divers and crew to take up jobs in the new petroleum and construction sectors that opened in the early 1930s. Respectable fleets continued to set out from Bahrain as late as the mid-1940s, but by the end of World War II, the numbers dwindled so that only a handful of boats took part in the annual pearl harvest.

PEEL COMMISSION REPORT (1937)

Royal Commission Report that listed the causes of unrest between Arabs and Jews in mandated Palestine and recommended territorial partition.

During the Arab general strike, which began in April 1936, the British decided to send a high-level fact-finding commission to mandated Palestine. In May the colonial secretary stated that the Royal Commission would investigate the causes of unrest after order was restored, but it would not question the terms of the Mandate. After the strike ended in October, the commission sailed to Palestine, headed by William Robert Wellesley, the first earl Peel, for-

mer secretary of state for India. In Jerusalem the commission heard the testimony of sixty witnesses in public sessions and of fifty-three more witnesses in forty private sessions. In January 1937 the commissioners returned to London and heard two witnesses in a public session and eight witnesses (including Zionist leader Chaim Weizmann) during the course of seven *in camera* sessions.

The British government issued Command Paper 5479 on 7 July 1937. It concluded that the terms of the Mandate were unworkable and could only be enforced by repressing the Arab population. Both Arabs and Jews demanded political independence. Establishing an Arab state would violate the rights of the Jewish minority, but forming a Jewish state in the entire territory would violate the rights of the Arab majority and arouse international Arab and Muslim opposition. The only feasible solution was partition: two sovereign states? Arab and Jewish? with a British zone encompassing Jerusalem, Bethlehem, and a narrow corridor to the Mediterranean near Jaffa. Britain would temporarily control the strategic ports of Haifa and Aqaba. The Jewish state would cover about 25 percent of the country, north from Tel Aviv along the Mediterranean coast and all of Galilee. The Arab state would lie in the central mountains and the Negev, include Jaffa port, and merge with the Hashimite state in Transjordan.

The Jewish Agency accepted the principle of partition but criticized the proposed boundaries and insisted that all Palestinians be deported from the Jewish state at British expense—at that time, 300,000 Palestinians, a number equal to the Jewish residents in the area. The Palestinians' Arab Higher Committee denounced the plan and insisted that Palestine remain a unitary state because 70 percent of the population was Palestinian and 90 percent of the land was under Palestinian control. Palestinians in Galilee, whom the Jewish Agency wanted expelled, then played leading roles in the rebellion that erupted again in October 1937.

The Woodhead Commission, appointed to recommend partition borders, concluded in Command Paper 5854 (8 November 1938) that partition was not feasible and proposed limited zones of sovereignty within an economic federation. The government's Command Paper 5893 concluded "that the political, administrative and financial difficulties involved in the proposal to create independent Arab and Jewish states inside Palestine are so great that this solution of the problem is impracticable" (*A Survey of Palestine,* vol. 1, p. 47). Maintaining a unitary Palestinian state was reaffirmed in the MacDonald White Paper of May 1939. But the partition idea, first broached by the Peel Commission Report, reemerged as the basis of the majority proposal approved by the United Nations General Assembly in November 1947.

PELED, MATTITYAHU

[1923–1995]

Israeli general, scholar, politician, and peace activist.

Born in Haifa, Mattityahu (Matti) Peled served in the Jewish underground military organization as a platoon commander in the Palmah (Haganah's "Crack Troops"). In 1946 he studied law in London. Peled returned to serve in the Arab-Israel War of 1948 as a company commander and was wounded while breaking through the Egyptian lines near al-Majdal. He served for more than twenty years as a career officer in the Israel Defense Force, holding different positions; among them was as the first military governor of the Gaza Strip and of Sharm al-Shaykh from 1956 to 1957. In 1957 he was appointed commander of the Jerusalem area. From 1961 to 1963 Peled studied Arabic literature and Middle East studies at Tel Aviv University. During the Arab-Israel War of June 1967 he served as quartermaster general, holding the rank of major general. In 1969 he retired from active service to complete his Ph.D. in the United States and was appointed lecturer in the Arabic Literature department of Tel Aviv University.

During the mid-1970s Peled became active in politics and joined the Israeli Council for Israeli-Palestinian Peace, which advocated recognition of the Palestine Liberation Organization (PLO) as the sole legitimate representative of the Palestinian people and the creation of a Palestinian state. During the late 1970s and early 1980s Peled was heavily involved in dialogue with Palestinian leaders, prominent among them Isam Sartawi, the PLO representative in Paris, as well as with senior European leaders (such as Bruno Kreisky, Pierre Mendès-France, and Willy Brandt). During 1983 and early 1984, together with a few colleagues from the Israel-Palestine Council, Peled met with Yasir Arafat three times in Tunis and Geneva, in defiance of Israeli law. In 1986 he was elected to the Knesset on behalf of the Progressive List for Peace, an Arab-Jewish party, and served one term (until 1986). Peled died of cancer in March 1995.

PELT, ADRIAN

[1892–1981]

United Nations commissioner for Libya.

In November 1949 the United Nations General Assembly called for the creation by January 1952 of an independent Libyan state, which would include the three historic regions of Cyrenaica, Tripolitania, and Fezzan. In December 1949 the General Assembly appointed Assistant Secretary-General Adrian Pelt UN commissioner for Libya, with a charter to assist the inhabitants of Libya in drawing up a constitution and establishing a state independent of British and French control. Pelt submitted a report to the General Assembly on 17 November 1950, calling for creation of a national assembly no later than 1 January 1951 and of a provisional government by 1 April 1951. Following the creation of the assembly and the proclamation of a Libyan constitution on 7 October 1951, the United Kingdom of Libya declared its independence on 24 December 1951. The most comprehensive and authoritative historical account of the independence of Libya under the auspices of the United Nations is found in Pelt's own book, *Libyan Independence and the United Nations.* Libya was the first African state to achieve independence from European rule and the first and only state created by the UN General Assembly.

PEOPLE'S ASSEMBLY

Egyptian political body.

The dominance of the executive branch of Egypt's government is tempered slightly by a strong tradition of judicial independence. In contrast, the People's Assembly is constitutionally weak. Moreover, rigged elections regularly give the National Democratic Party, an extension of the government, overwhelming parliamentary majorities.

Raymond William Baker

PEOPLE'S DEMOCRATIC PARTY OF AFGHANISTAN

Afghan Marxist political party; also called Democratic Party of the People of Afghanistan.

The People's Democratic Party of Afghanistan (PDPA) was formed in the period of constitutional reform in Afghanistan (1963–1973) during which parliamentary elections were held and political parties were allowed to organize. It officially came into being on New Year's Day, 1965, at the home of Nur Mohammad Taraki. Taraki was the first secretary-general of the party's central committee, and Babrak Karmal was its first deputy secretary-general. Although its ideology, judging by the early literature,

could be characterized as national democratic and progressive, later, after 1978, the PDPA became openly Marxist, with strong Leninist tendencies.

By 1965, the PDPA had split into two factions, each associated with the name of its newspaper: the Khalq (People) faction, led by Nur Mohammad Taraki and Hafizullah Amin, and the Parcham (Flag) faction, led by Babrak Karmal. The Khalq faction was dominated by Pashto-speaking Afghans from outside of Kabul and had strong ties to the military, whereas the Parcham faction was dominated by Persian-speaking Afghans from Kabul.

On 27 April 1978 the two factions of the PDPA united to stage a coup and take control of Afghanistan. In 1978 and 1979, the PDPA began to institute a series of radical social reforms dealing with land tenure, education, and women's rights. These reforms, coupled with the PDPA's strong antireligious and anticlerical position, proved too progressive for Afghans accustomed to the traditional social system, and by 1979 the Islamic opposition had begun to mount an aggressive guerrilla war against the government. On 23–24 December 1979, a large contingent of Soviet military forces entered Afghanistan and did not leave until 1989.

Calling itself a party of national socialism and having changed its name to Fatherland Party, the PDPA had by 1990 largely abandoned Marxism. It ruled Afghanistan until 1992, when its last president, Najibullah, resigned and Kabul was taken over by Islamic rebels.

PEOPLE'S DEMOCRATIC REPUBLIC OF YEMEN

The name of South Yemen from late 1970 to May 1990, the first two decades of independence from Britain.

The People's Democratic Republic of Yemen (PDRY) spanned the twenty years between the constitution that ended the People's Democratic Republic of South Yemen and the unification of the two Yemens in May 1990. South Yemen had been created politically on 30 November 1967, when the victorious National Liberation Front (NLF) assumed power upon Britain's departure from Aden colony and the Aden protectorates. Britain had first occupied Aden in 1839. For the next century, Britain was preoccupied with the port of Aden, while neglecting the dozens or so states in the interior with which it signed treaties of protection only in the last quarter of the nineteenth century. As a consequence, no single political entity in modern times except the stillborn South Arabian Federation of the mid-1960s embraced even most of what was to become an independent South Yemen in late 1967. Instead, what existed was the 75-square-mile (194 sq km) Aden colony—a city-state, a partly modern urban enclave, and, by some measures, the world's second or third busiest port in the late 1950s—and the vast, mostly distant, politically fragmented interior states, which were, for the most part, based on subsistence agriculture and traditional sociocultural institutions. Neither the British administration nor the nationalists who first stirred in Aden in the 1940s had much knowledge of, interest in, or impact on these states, despite Britain's adoption of a new "forward policy" during the last decades of imperial rule. As a result, the people of Aden were closer, in more ways than just geographically, to the city of Taʿiz in North Yemen than to the Hadramawt, which lay far to the east of Aden and had its

Old Sultan's Palace located in Yemen's capital city, Seyun, is now a museum. **© Earl & Nazima Kowall/Corbis. Reproduced by permission.**

View of Shibam, Yemen, in the desert valley of Hadhramawt. Hundreds of ancient, tower-like houses of up to nine stories high and built from clay can be seen from far away. UNESCO has declared it a protected world monument. © Earl & Nazima Kowall/Corbis. Reproduced by permission.

strongest business and familial ties with people in the Persian (Arabian) Gulf, India, Indonesia, and East Africa.

The infrastructure barely holding together the major settlement areas of South Yemen at independence in 1967 consisted of dirt tracks, unpaved roads, a number of airstrips, and the telegraph. The country consisted of many microeconomies, most of them agriculturally based and largely self-sufficient; isolated Wadi Hadramawt was an odd case, dependent as it was upon emigration to and remittances from the Gulf and Southeast Asia. What little market economy existed during the British period mostly centered on the port of Aden and its environs, and this in turn was plugged less into the surrounding states than into the international economic system via its sea-lanes. This fragile modern sector was dealt devastating blows near the time of independence when the blockage of the Suez Canal during the Arab–Israel War of 1967 nearly brought port activities to a halt, and Britain's rapid withdrawal ended both subsidies from London and the significant economic activity tied to the large British presence.

The history of South Yemen since independence is distinguished by five major periods: (1) During the period of political takeover and consolidation (1967–1969), the NLF established control in Aden and over the interior at the same time that the party's balance of power passed from the nationalists led by Qahtan al-Shaʿbi to the party's left wing. (2) The long period of uneasy leftist coleadership of Salim Rabiyya Ali and Abd al-Fattah Ismaʿil (1969–1978) was distinguished by the efforts of these two rivals both to organize the country in terms of their versions of Marxist-Leninist "scientific socialism" and to align the country with the socialist camp and national liberation movements around the world. (3) The Ismaʿil interlude (1978–1980) began with the violent elimination of Salim Rabiyya Ali by Ismaʿil and was notable for the firm establishment of the Yemeni Socialist Party (YSP) and bitter conflict between a militant PDRY and the Yemen Arab Republic (YAR), the other Yemen. (4) During the era of Ali Nasir Muhammad (1980–1986), the consolidation of power in this single leader was paralleled by increasing moderation in both domestic affairs and external relations, especially with the YAR. (5) The final period of collective leadership and political weakness (1985–1990) began with the intraparty bloodbath that ousted Ali Nasir and otherwise decapitated the YSP. It ended with the merger with the YAR to form the Republic of Yemen. During the transition period that followed formal unification in May 1990, the YSP shared power with the ruling party of the YAR, the General People's Congress, under their respective leaders, Ali Salim al-Baydh and Ali Abdallah Salih.

Despite this pattern of bitter and sometimes lethal intraparty conflict, between 1967 and 1990 the PDRY regime did maintain rule and order throughout the country, made progress in bridging the gap between Aden and the rest of the country, pursued social goals with some success, and made good use of limited resources in efforts to develop a very poor country. Despite pressures toward fragmentation, especially urgings from Saudi Arabia that the Hadramawt go its separate way, South Yemen held together during difficult political and economic times. This was largely the result of political will, agitation, and organization. The gap between city and countryside remained a constant concern of the leadership, and progress was made in extending education, medical care, and other social services beyond Aden and the other urban cen-

ters. In addition, a campaign was waged to extend women's rights and other progressive ideas and institutions to the countryside. Great differences in wealth and property were eliminated, and the economy was organized along socialist lines, most notably in terms of a variety of agricultural and fishing collectives and cooperatives. In the end, however, the socialist experiment, short of time as well as money, failed; the discovery of oil, in 1986, simply came several years too late. Moreover, there was neither time nor resources to push the modern ideas and institutions into the countryside where entrenched tradition prevailed. Nevertheless, the regime remained relatively committed, egalitarian, and free of corruption.

In many ways, the PDRY of the 1970s and 1980s, like Cuba, became both heavily dependent and a great burden upon the Soviet Union. The sudden collapse of the latter and its socialist bloc in the late 1980s left the PDRY weak and in isolation, shorn of fraternal and material support. This as much as the bloodbath that decapitated the YSP in early 1986 left South Yemen unable to resist North Yemen's call for unification in late 1989.

PEOPLE'S HOUSES

Institution founded on Atatürk's ideas, designed to strengthen Turkish culture among Turkey's people.

In Turkey, the Republican People's Party (RPP) established the People's Houses *(Halk Evleri)* in 1932, during the single-party era. Party leaders' conceptualized the People's Houses as a multipurpose institution designed to strengthen Turkish national identity, promote Western scientific thought, and educate the masses in Kemalism—the six principles of republicanism, nationalism, populism, statism, secularism, and reformism—put forth by the first president of the Republic of Turkey, Mustafa Kemal Atatürk.

The People's Houses succeeded the Turkish Hearth Association *(Türk Ocaği),* having acquired the use of its property and its role as an institution of political indoctrination. But unlike the Turkish Hearth, which often promoted pan-Turkism and Islam, the People's Houses advanced secularism and confined their nationalist ideology to Turkey.

The RPP not only controlled the houses, but provided funds for their operation from the state budget. The RPP also held title in its own name to house property. The party central committee had authority to open houses in localities throughout the country. RPP by-laws required deputies to support the houses, and provincial RPP committees managed local house finances. The ministry of education strongly encouraged school administrators and teachers to join the houses and play an active role in their activities. The party provincial chairman appointed the house head; local party officials and teachers usually comprised each house's administrative board. Through direct supervision and frequent reporting requirements, national and local RPP leaders made certain that each house advanced party doctrine.

A house could have as many as nine activity sections: (1) language and literature, (2) fine arts, (3) library and publications, (4) history and museum, (5) drama, (6) sports, (7) social assistance, (8) educational classes, and (9) village development. House leaders encouraged teachers to research local Turkish history and culture and to write up their studies for the house's publication series. They also encouraged students to attend house functions and to use the house library. Hoping to make each house a focus of community activity, leaders invited local residents to utilize house facilities for their weddings, circumcision celebrations, and other special occasions. Despite these efforts, however, few houses became the friendly gathering places of the general public.

The RPP quickly established People's Houses in all of Turkey's provincial capitals and in many of its towns. In 1939, the party decided to extend the house's influence—by establishing People's Rooms *(Halk Odalari)* in small towns and villages. Each room was administratively attached to a local house. By 1950, there were 478 houses and 4,322 rooms spread over much of Turkey. Although house and room membership was open to all citizens, regardless of gender or class, most members were middle- and upper-class males. Of about 100,000 members in 1940, only 18,000 were women and some 27,000 were (male) farmers and workers. The remainder of the men and more than 17,000 of the women were government and party officials, teachers, and professionals. A majority of the workers were employed by state enterprises that encouraged their membership. Many, if not most, of the common people probably viewed the houses as alien institutions associated with the often oppressive RPP, dominated by the urban elite, and allied with antireligious forces. Some critics claimed, without solid foundation, that the People's House–concept had been inspired by the Soviet Union's *Narordi Dom* (People's House).

In the late 1940s, when the RPP allowed multiparty politics in Turkey, the opposition (Democrat Party, DP) openly resented the RPP's attempts at promoting their agendas through the People's Houses at public expense. Shortly after the Democrat Party came to power in the 1950 election, the RPP proposed to preserve the People's Houses as Atatürk's heritage, but to reorganize them in the light of Turkey's new multiparty political structure. The Democrats, who criticized the houses for closely identifying with the RPP—and for failing to serve all the people as originally intended—rejected the RPP proposal. The DP put an end to the houses in 1951 by confiscating the property they occupied, claiming it belonged to the state treasury.

Despite this ignoble end, many members of the RPP continued to regard the People's Houses as an admirable attempt by the political and intellectual elite to advance the Turkish nation along the path set by Atatürk.

PEOPLE'S SOCIALIST PARTY

Yemeni political party.

Founded in 1962 by the Aden Trades Union Congress, the People's Socialist party (PSP) was led by Abdullah al-Asnaj (later an important participant in the politics of North Yemen as well). Modeling itself on the Labour Party, it supported political means to accomplish its goals of British withdrawal, independence, and union with North Yemen. Its unwillingness to use political violence to accomplish these objectives resulted in a loss of influence to the rival National Front.

PERA

The most Europeanized district of Istanbul during the last century of Ottoman rule.

Pera (Beyoğlu) comprised the long ridge stretching north above Galata, and its slopes to east and west. Galata, the Genoese and Venetian port concession on the northern shore of the Golden Horn in Byzantine Constantinople, remained such in the Ottoman city but was subject to greater government control. Especially after the arrival of large numbers of western and northern European traders in the seventeenth century, Pera became the site of embassies and merchants' mansions. Its great age of prosperity, power, and prestige came in the second half of the nineteenth century, after trade liberalization and social Europeanization. With tremen-

dous expansion of European trade, the Grande Rue de Pera flourished with shops, restaurants, hotels, banks, and office buildings in the latest European styles; it was populated by foreigners, local non-Muslims, and Muslims in the vanguard of Europeanization. In republican times, though Turkified and much less cosmopolitan, the area managed to maintain, somewhat diminished, its social, cultural, and commercial importance.

I. METIN KUNT

PERES, SHIMON

[1923–]

Israeli politician, military leader, and cabinet member; prime minister, 1984–1986, 1995–1996.

Born Shimon Perski in Belorussia in 1923, Peres migrated to Palestine in 1934. In 1947, he joined the Haganah, which was then led by David Ben-Gurion, who became Peres's political mentor. He spent several years in Kibbutz Geva and Kibbutz Alumot. In 1948 Ben-Gurion appointed Peres, then twenty-five, to head Israel's navy. Peres subsequently studied politics and economics in the United States. In 1952 he was appointed deputy director-general of the Israeli Defense Ministry and served as director-general until 1959. As a leading Defense Ministry official, he participated in secret armament negotiations with the French prior to the Sinai campaign of 1956.

Peres advocated military aid (in addition to other aid and exchange programs) for the new states of Africa to help Israel develop influence there. In 1959 he was elected for the first time to the Knesset, and he and his ally Moshe Dayan argued for a change in government policy that shifted government emphasis from pioneering to enhancing state efficiency. From 1959 to 1965 Peres served as deputy defense minister. During this period he helped to develop a "special relationship" with France; he was also responsible for Israel's nuclear program.

Although being a protégé of David Ben-Gurion was advantageous in Peres's early career, it was dis-

Israeli foreign minister Shimon Peres, center, received the 1994 Nobel Peace Prize for his efforts to bring peace between Israel and the Palestinians. Peres shared the honor of the award with Israeli prime minister Yitzhak Rabin and Palestinian leader Yasir Arafat. **© PHOTOGRAPH BY YA'ACOV SA'AR. GOVERNMENT PRESS OFFICE (GPO) OF ISRAEL. REPRODUCED BY PERMISSION.**

advantageous later when Ben-Gurion's political capital within MAPAI decreased. In 1965 Peres left the Defense Ministry to help Ben-Gurion establish Rafi, a new party, and in 1967 he helped to negotiate a reconciliation between Rafi, MAPAI, and Ahdut ha-Avodah that resulted in the creation of the new Israeli Labor Party.

In 1969 Peres was appointed minister of immigrant absorption; from 1970 to 1974 he served as transport minister in the government of Golda Meir. During 1974 he was minister of information. Although he was one of the contenders to succeed Meir when she resigned in 1974, he lost the Labor leadership race to Yitzhak Rabin. The competition between Peres and Rabin for leadership of the Labor Party would continue until Rabin's assassination in 1995. In 1974 Peres was named defense minister, an office he held until the 1977 election, and he served briefly as acting prime minister in 1977 after Rabin's resignation. After gaining command of the Labor Party in 1977, he led it twice to defeats by Menachem Begin and the Likud Party (1977, 1981). According to many, his losses were due to the public's skepticism about his rapid change from defense hawk to dove in relation to dealing with the Palestinians.

In 1984 both major parties failed to win a majority of seats in the Knesset and a national unity government involving both the Labor and the Likud

parties was formed. Shimon Peres served as prime minister and Yitzhak Shamir as foreign minister until 1986, whereupon they switched roles for the remainder of the term of the Knesset.

In the Knesset elections of 1992 the Labor Party recaptured power and Peres became foreign minister in the cabinet of Prime Minister Rabin. As foreign minister he negotiated the later stages of the Oslo Agreement and convinced Rabin to support it. In recognition of his efforts to achieve peace in the region Peres shared a Nobel Peace Prize with Rabin and Yasir Arafat of the Palestine Liberation Organization in October 1994.

Following Rabin's assassination in November 1995 Peres became prime minister for seven months until the elections of May 1996, when he again lost to the Likud, headed by Benyamin Netanyahu. A year later Peres resigned as chair of the Labor Party, and in June 1997 Ehud Barak, former chief of staff and member of the Knesset, was elected to chair the Labor Party.

Barak was elected prime minister in 1999, and Peres served as his minister of regional cooperation from July 1999 to March 2001. After the March 2001 election in which Barak lost to the Likud's Ariel Sharon, Peres was appointed minister of foreign affairs and deputy prime minister in the national unity government led by Sharon. In October 2002 Peres and other members of the Labor Party resigned from the Sharon government.

PÉREZ DE CUÉLLAR, JAVIER

[1920–]

Peruvian diplomat; United Nations secretary-general, 1982–1991.

Javier Pérez de Cuéllar received a law degree from the Catholic University in Lima in 1943. He joined Peru's ministry of foreign affairs in 1940 and the Peruvian diplomatic service in 1944; in 1946, he was a member of the Peruvian delegation to the inaugural session of the United Nations (UN) General Assembly. He later served as ambassador to Switzerland, the Soviet Union, Poland, and Venezuela. A scholar as well as a diplomat, he authored the *Manual de derecho diplomático* (Manual of diplomatic law) in 1964.

In 1971 Pérez de Cuéllar was appointed the permanent representative of Peru to the UN, where he served as president of the Group of 77 (1972) and president of the UN Security Council (1973–1974). He was appointed a special representative to UN Secretary-General Kurt Waldheim in 1975, successfully resolving the crisis in Cyprus. After a two-year stint as Peruvian ambassador to Venezuela, he returned to the UN in 1979 as an undersecretary for political affairs; in that position, he dealt with the aftermath of the Soviet invasion of Afghanistan.

In January 1982 Pérez de Cuéllar began the first of two successive terms as UN secretary-general. During his tenure, he negotiated the August 1988 cease fire that ended active hostilities in the Iran–Iraq War. He later led the UN in its confrontation with Iraq after the latter invaded Kuwait in August 1990. Under his leadership, UN peacekeeping forces were awarded the Nobel Peace Prize in 1989. After retiring from the post of UN secretary-general in 1991, he continued to serve in a variety of international organizations, notably the United Nations Educational, Scientific, and Cultural Organization (UNESCO) and the Inter-American Dialogue.

In 1995 Pérez de Cuéllar made an unsuccessful bid for the presidency of Peru. He later served as both prime minister and foreign minister in the interim Peruvian government of Valentín Paniagua (2000–2001). He was then appointed Peruvian

ambassador to France. In the course of his career, Pérez de Cuéllar has been decorated by thirty-four countries and honored by more than fifty colleges and universities around the world.

PERIM

Yemeni island in the Red Sea.

This small, barren volcanic island with a well-protected harbor is located in the Bab al-Mandab Straits at the lower end of the Red Sea, between Yemen and the coast of Africa at Djibouti, and theoretically should have some strategic value. Seized by the British occupiers of Aden in 1857, Perim (also Barim) Island was used as a coaling station by the British until the 1930s. The island became a part of South Yemen upon independence in 1967; with the unification of the two Yemens in 1990, it became a part of the Republic of Yemen. Despite the presence of a tiny garrison of South Yemeni troops through the 1980s and even rumors of the presence of Israeli observers, Perim was accorded no real strategic or economic significance during the late twentieth century, in contrast to Socotra Island in the Arabian Sea. A poor fishing village exists side by side with the rusting, collapsing remains of its more glorious days as a coaling station.

PERMANENT MANDATES COMMISSION

Oversight body of the League of Nations.

The Geneva-based commission was established in 1919 under Article 22 of the Covenant of the League of Nations to supervise the administration under the mandate system of fifteen mandated territories including four in the Middle East—France's Lebanon and Syria and Britain's Palestine and Iraq. It required annual reports from mandatory governments and advised the Council of the League of Nations on policy regarding the mandates. The Commission, however, exercised little supervisory authority, and three of the mandates in the Middle East—Lebanon, Syria, and Palestine—were generally run autonomously, much like colonies.

Most members of the commission were representatives of colonial powers: Great Britain, France, Italy, Portugal, Spain, Belgium, the Netherlands, Germany, and Japan. Only two members were noncolonial states: Switzerland and Norway. Citizens of the mandates could appeal to the commission but only through their mandatory high commissioner. The commission repeatedly rejected Palestinian Arabs' appeals for the right to self-determination and tolerated France's delays in granting autonomy to Syria and Lebanon. However, the commission granted independence to Iraq in 1932. The commission existed until 1946, when the United Nations replaced it with its Trusteeship Council as the Mandate System became the trusteeship system.

PERSIAN

An Indo-European language related to English, Sanskrit, Kurdish, and Pashto.

Modern Persian arose about the ninth century C.E. It is the national language of Iran, Afghanistan, and

Tajikistan. It is known generally and in Iran as Farsi; in Afghanistan, as Dari; and in Tajikistan, as Tajiki. It has exerted great influence on the Indian subcontinent and in Ottoman Turkey.

Persian has twenty-three consonants and six vowels. It has two consonants lacking in English: *gh* (similar to the French *r*) and *kh* (similar to the *ch* in the German *Buch*). It lacks the *th* sounds (as in *thin* and *this*); the consonant *w;* the vowels in *bit, but,* and *put;* and syllable-initial consonant clusters (as in *strip*). It has neither gender, articles, nor number agreement.

Persian uses a slightly modified Arabic script, written from right to left (except for the numerals). There are seven diacriticals (three seldom used). Seven letters cannot join each other or any following letter. Under Soviet rule, Tajiki briefly used the Latin script, then switched to the Cyrillic. Since the dissolution of the Soviet Union, there has been a movement for the return to the Arabic script. The Persian script's main features are inconsistent representation of certain vowels and alternative spellings of some consonants and vowels. These and other features, causing problems in reading and writing, have since the nineteenth century led some Iranians to advocate the adoption of Latin or some other script.

Persian has changed little in the last thousand years or so: a person who knows Persian can understand tenth-century Persian (except for a few words and phrases). Persian includes an extensive Arabic element, the language of Islam, and was for a time the language of science and scholarship for all Muslims. There are also a number of Turkish and Mongolian loanwords, reflecting Turkish and Mongol rule in Iran. Growing contacts with Europe since the nineteenth century have led to extensive borrowings from French and, since World War II, from English. Greek, Aramaic, and Indian languages also account for a few words. In its turn, Persian is the source of some words in Arabic, large numbers in Turkish and Urdu, and smaller numbers in Western and other languages. Most of these words have found their way into Western languages through classical Greek, Latin, Arabic, and Spanish (for example, the English *tulip, narcissus, khaki, orange, sugar, julep, jasmine, pajamas, magic, arsenic,* and *cushy,* and the names Cyrus and Roxanne).

PERSIAN (ARABIAN) GULF

Arm of the Gulf of Oman and Indian Ocean.

The Persian Gulf is a shallow body of water between the Arabian Peninsula and Iran; it is more than 500 miles long and as wide as 200 miles. Fed on the northwestern end by the confluence of the Tigris and Euphrates rivers (called the Shatt al-Arab), the gulf drains to the southeast through the Strait of Hormuz into the Gulf of Oman and the Indian Ocean. Its maximum depth is only 328 feet. There are numerous islands in the gulf, Bahrain and Qeshm being the largest ones.

Since antiquity the gulf has been a major trade and marine route between East Africa and South Asia. In the nineteenth century British commercial interests supported British military intervention in the gulf. Consequently, all the Arabian Peninsula coastal principalities were forced to conclude protectorate treaties with Britain, while British commercial and naval influence progressively increased in the ports along the Iranian coast of the gulf. In addition to the gulf's economic significance derived from trade and pearling, the British perceived the waterway as having strategic importance as a gateway to their imperial possessions in India. The early-twentieth-century discovery of petroleum deposits throughout the coastal region and even in the seabed of the gulf further enhanced its increasingly intertwined economic and strategic values. By the 1970s and into the twenty-first century, more than 80 percent of Middle East oil exports passed through the gulf. Inevitably, its waters became polluted by oil spills that harmed the local fishing industry and threatened rare sea mammals and other aquatic life.

PERSIAN CATS

Long-haired cats that were exported from Iran in the nineteenth and early twentieth centuries.

The Persian cat is a stocky domesticated feline with long, silky hair, a large, round face, small ears, and a bushy tail. It is called "Persian" because it was exported from Iran, or ancient Persia. The cat, known as *buraq* in Persian, was first described by European travelers, who observed that some Safavi dynasty princes and high government officials kept the cat as a house pet in seventeenth-century Isfahan, then the capital of Iran. Even though the cat has long been associated with Iran, its exact origins remain unclear. The Kurdistan region of southeastern Turkey, the central plateau area of Iran, and the Bukhara district in modern Uzbekistan all have been cited as probable places of origin. During the nineteenth century, however, the Isfahan region of Iran was the major source for the export of Persian cats to Europe and India. Wealthy Iranians kept them—as well as more common short-haired cats—as pets. Nasir al-Din Shah Qajar (r. 1848–1896) had a reputation for adoring and keeping cats, and his favorite Persian cat, Badri Khan, was assigned human attendants to care for him in royal fashion.

In Europe, the keeping of cats as house pets became common only during the eighteenth century, but by the nineteenth century Europeans who could afford to do so were purchasing cats imported from Iran and the Ottoman Empire. The Persian cat became especially popular beginning in 1871 when Britain's Queen Victoria bought a pair of imported Persian cats at London's first Oriental cat fair. Thereafter, the keeping of Persian cats as desirable—and valuable—house pets spread from England to Europe and North America. The domestic breeding of Persian cats in all the aforementioned places gradually eliminated the need to import them. Although the export of Persian cats from Iran continued during the first decade of the twentieth century, the practice ceased after 1912.

Persian cats were first exported from Iran in the nineteenth and early twentieth centuries. Though long associated with Iran, the Persian cat's origins may actually be from elsewhere in the surrounding region. COURTESY OF PHILIP MATTAR.

PERSIAN SCRIPT

Modified Arabic alphabet used for writing Persian.

As a result of Arab expansion, the Middle Persian, or Pahlavi, script (developed from Aramaic) was replaced by the Arabic script during the ninth century. Despite changes in vocabulary and in the script, the Persian language has remained largely intact for

centuries. The Persian script, while mainly the same as modern Arabic, contains changes, such as extra markings on the Arabic *ba* (Roman B) to create the Persian *pe* (Roman P), on the Arabic *ghayn* (Roman Gh) to create a Persian *che* (Roman Ch) and on the Arabic *ra* (Roman R) to create the Persian *zhe* (Roman Zh), none of which exist in Arabic. Arabic calligraphy, primarily used to write the Quʾran, also changed as a result of Persian influence. The Arab styles of *taliq* and *naskh* combined to form the Persian *nastaliq* style. From *nastaliq* comes *shekasteh,* broken script allowing greater speed; with *shifih* the letters are farther apart but conjoined in a "lover's embrace." Persian calligraphy was not confined to the Quʾran, and became most popular during medieval times through Persian court and mystical poetry.

PETAH TIKVAH

First new Jewish settlement in Eretz Yisrael in the modern era.

Located several miles east of Tel Aviv, Petah Tikvah (also, Petah Tiqva) was founded in 1878 by a group of religious Jews from Jerusalem led by Rabbi Yoel Salomon, David Gutman, and Yehoshua Stampfer, who were active in the goal of redeeming land and liberating the Jewish community in Palestine from the yoke of the Halukka. Petah Tikvah was the first colony founded.

In its first decade, the community was beset with problems: malaria, insecurity, complicated disputes with Arabs living on adjacent lands, and financial shortages. Some of the settlers received financial aid from the Hibbat Zion movement and, eventually, substantial support from Baron Edmond de Rothschild.

When the State of Israel was founded in 1948, the population of Petah Tikvah was about 20,000. By 2000 its population had grown to more than 200,000. Especially because of the land shortage, the city has an increasing number of high-rise buildings.

PETER VII

109th Coptic patriarch of Egypt (1809–1852).

Originally chosen by Mark VIII (1796–1809) as *abuna* (archbishop) of the Ethiopian Orthodox Church, Peter instead became an important bishop close to the patriarch and eventually succeeded him. Peter was a thrifty and judicious administrator whose wise handling of accounts created a fortune that made possible the reforms of his successor, Cyril IV (1854–1861). Peter assembled part of the patriarchal library in Cairo and had new copies of important treatises made from old versions, sometimes participating in the task. He wrote theological treatises clarifying the Coptic Church's position on Communion and Christ's nature. Peter's good relations with the viceroy of Egypt became legendary. In particular, Peter won great favor with Muhammad Ali when he refused an offer from the Russian czar to put the Coptic Orthodox Church under his protection.

PETRA

Ancient city carved from the cliffs in today's Jordan.

In about 500 B.C.E., the Nabatean Arabs established a presence in the region east of the great Jordan-Dead Sea rift. They built their capital and trading center at Petra, in southern Jordan, close

to the Wadi Araba and adjacent to the contemporary village of Wadi Musa. In its location and appearance, Petra is a unique city. The only easy access is through a half-mile-long (1 km) narrow passage called the *siq.* At its terminus is the treasury, a large edifice carved into the rock of the rose-colored cliffs. This vista is repeated with additional buildings as well as with simple houses hewed within the stone precipices of the ancient city. They include a huge monastery, a palace, tombs, and an amphitheater, most of which were crafted in a modified Greco–Roman style. For tourism, Petra is one of Jordan's most important archaeological sites and attractions.

PETROCHEMICALS

Chemicals isolated or derived from petroleum or natural gas.

Petrochemicals include industrial and agricultural chemicals synthesized from refinery products, gases, and natural gas. Research into manufacturing processes was stimulated by the availability of raw materials (most of which would otherwise be waste products) and by foreign demand. The global petrochemicals industry remained relatively small until World War II, when the United States concentrated government investment in petrochemicals into a few large, privately owned plants and in newly constructed state-owned facilities operated by experienced firms. This huge investment in petrochemicals during the war left the U.S. industry in a dominant position for many years, making it very difficult for the national oil companies (NOCs) of Middle Eastern countries to compete. Before the nationalization of their oil industries, the NOCs were hindered by the operating companies' reluctance to supply enough raw materials and process technology to make the NOCs' local ventures competitive internationally. Exports were necessary because Middle Eastern domestic markets for petrochemicals were small. Another disadvantage grew out of the inability of the NOCs to conduct state-of-the-art research on process technology or to fabricate locally the equipment needed to establish and retain a position on the cutting edge of the industry.

These drawbacks decreased in importance after oil prices rose in the early 1970s. Increased costs of drilling for raw material in oil fields gave the NOCs a comparative advantage. Also helpful was the rise in importance of a third class of firms involved in petrochemicals: international contracting firms such as Fluor, Foster Wheeler, and Chiyoda, which were able to design and construct state-of-the-art turnkey facilities and associated infrastructure. During the 1970s and after, Middle Eastern oil-exporting countries found it relatively easy to acquire petrochemicals facilities tailored to their needs.

Persian (Arabian) Gulf petrochemical producers have increased their market share of world petrochemicals from almost 0 percent in 1980 to about 10 percent in 2002. The cost of the feedstock (the raw material, i.e. natural gas or refined oil products) can account for between 40 percent and 70 percent of the final chemical product. Hence the Gulf producers of oil and gas with raw material costs of between $0.50 and $2.00 per barrel of oil have a natural advantage. As a consequence, the large petrochemical manufacturers in the Gulf have taken most of the increase in demand due to the growth of the Far Eastern economies. As of mid-2002, the Gulf countries—mainly Saudi Arabia, Iran, Kuwait, and Qatar—produced a total of 58 million tons of petrochemicals and had plans to start a further 57 million tons within the next five years.

UPDATED BY JEAN-FRANÇOIS SEZNEC

PETROLEUM, OIL, AND NATURAL GAS

Naturally occurring hydrocarbon compounds.

The petroleum industry in the Middle East dates to 3000 B.C.E., when Mesopotamians exploited asphaltic bitumen obtained from seepages and rock asphalt mining to produce construction mortar, mosaic cement, road surfacing, and waterproofing materials. This form of petroleum, called pitch, is the residue left after natural gas and volatile liquid fractions have evaporated from crude oil. Ancient Bahrainis coated pottery and baskets with pitch, and in the biblical story of Noah it is used to caulk the ark. An industry distilling lamp fuel from crude oil began in Alexandria about the second century C.E. About five hundred years later, Byzantine armies began to use "Greek fire," a napalmlike substance distilled from crude oil that was poured or sprayed on enemy troops and ships, and then set afire.

The Modern Oil Industry

The modern oil industry is far more complex and integrated, a continuous process that pivots on the extraction, or production, of petroleum and natural gas from the earth. Upstream from production are exploration (the search for oil-bearing lands), and development (the construction of production infrastructure such as oil wells and natural gas separators in oil fields). Downstream from production are transportation (including pipelines, tankers, trucks, and railroads), refining (turning crude oil into usable products), and marketing (gasoline stations and other outlets). Petroleum and natural gas are both fuel sources as well as the raw material from which petrochemicals, such as fertilizers and the building blocks of plastics, are manufactured.

Looking at the oil industry as a global system lets us identify its choke points, the stages where a powerful firm or government can exert political and economic leverage on the entire process. One potential choke point concerns petroleum reserves and production. In the nations of the Middle East, as in most other nations, mineral rights belong to the state. Firms must negotiate with governments for concessions, or rights, to extract hydrocarbons on their territories. In exchange, they offer lump-sum payments, rents, taxes, and/or royalties (payments per unit of oil or gas produced).

The One Company/One Country Pattern

Before World War II, Middle Eastern countries competed for investment from international oil companies (IOCs). The largest IOCs were more fearful of an oil glut, which would depress prices, than of shortages, which would inconvenience consumers. Under the 1928 Red Line Agreement, the partners in the Iraq Petroleum Company agreed that none of them would explore for or develop new oil in the former Ottoman Empire unless every partner consented to each new project. Countries inside the Red Line had difficulty getting the IOCs to find or develop the oil that could have increased their national incomes because the largest—and richest—Red Line companies were reluctant to add to already excessive oil production capacity.

Oil partnerships and concession patterns also limited the leverage of Middle Eastern governments. Instead of one government hosting several firms that operated on various parts of its territory, the initial pattern of oil industry development in the region was to have a single operating company, often a joint venture or partnership, as the only oil producer in each country. Joint ventures are common in the oil industry because of its capital intensity and high risk. Individual parent companies like Gulf (now part of Chevron) and the Anglo-Persian Oil Company (later Anglo-Iranian Oil Company, then British Petroleum, and now BP Amoco), set up jointly owned operating companies such as the Kuwait Oil Company (KOC) to pool financial resources and risk. Although two separate parents invested in and profited from Kuwait's oil, their business in Kuwait was conducted by a single company, KOC. Such partnerships also offered the IOCs some control over total world oil supplies. They made sharing production information easier (especially for U.S. companies, which were constrained by antitrust laws), dampened competition among partners, and provided a protected environment in which the large IOCs could coordinate their global operations.

Kuwait's ability to choose a concession partner was limited by treaties between its ruler and the British government, which gave Britain the final authority to approve concession agreements. Britain would not allow Kuwait to contract with a non-British company, although Kuwait eventually persuaded Britain to accept a non-British firm as a partner in KOC. The concession further limited

Kuwait's autonomy by giving KOC exclusive rights for ninety years to find and produce oil over the entire land area of Kuwait. Had Kuwait sought better terms from another company during that time, that company would have faced legal challenges from KOC's parents, preventing it from selling Kuwaiti oil in the international market.

Kuwaiti autonomy also was limited by the threat of direct intervention by one or both home governments of KOC's parents, Britain and the United States. In the early 1950s, Iran found itself in exactly this situation. In 1951, the Iranian government under Prime Minister Mohammad Mossadegh nationalized the operations of Iran's oil company following a conflict with its managers. The owner of the oldest oil production facilities in the Middle East, Iran's operating company had only one parent, the Anglo-Iranian Oil Company (AIOC). AIOC obtained court orders enjoining other companies from buying Iranian oil.

Afraid of the example that a successful nationalization might provide to other Middle Eastern governments, the British and American governments worked to destabilize and eventually to overthrow the Mossadegh regime. The restoration of the shah, Mohammad Reza Pahlavi, in 1953, following a brief period of ouster, also reinstated foreign oil companies as managers of the nationalized Iranian oil company. Rather than restoring AIOC to its former position as sole owner, however, the Iranian government sought a "Kuwait solution" and invited non-British participation in the National Iranian Oil Company (NIOC). When NIOC was reorganized, American companies and the French national oil company received 60 percent of the shares, leaving AIOC with only 40 percent.

The one company/one country concession pattern allowed oil companies to treat one or more Middle Eastern host countries as marginal suppliers of oil to the international market despite the cost advantages of their oil over what could be obtained from most other sources. This balancing act was possible because all the major companies whose production holdings stretched across the Middle East were partners in two or more concessions. The way the Iranian crisis was resolved in the 1950s made the management of crude oil supply by the IOCs even easier. The reorganized NIOC was the first operating consortium in the Middle East to include all of the Seven Sisters—the IOCs dominating the industry from the end of World War II until the oil revolution. Once these companies had estimated the amount of oil needed to balance market demand, they could regulate production by increasing or decreasing offtake in countries whose governments could not retaliate easily.

An Iranian oil worker at an oil refinery in Iran's capital city, Tehran. Iran's rich petroleum reserve is a major source of revenue for the country; however, as a result, the country struggles with severe air pollution problems. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

The End of the One Company/One Country Pattern

The one company/one country pattern in the Middle East unraveled in the 1950s. Following the reorganization of the Iranian concession, which incorporated several independent companies, independents began to compete more vigorously against

the majors to win new concessions. When the government of Libya opened bidding for concessions in 1955, it divided its territory into independent parcels, eventually awarding rights covering 55 percent of its land area to fifteen operating companies whose owners included independents from France, Germany, and the United States. At about the same time, older producers with unallocated offshore properties began to auction them off. The independents were innovative bidders for all these properties, offering terms that included higher-than-average lump-sum payments and royalties along with equity shares for host governments. Better terms for new concessions encouraged host governments to demand that prior concession holders relinquish unexploited territories. The new concessions that were signed for relinquished properties included sunset provisions allowing the contracts to lapse if the companies failed to develop promising properties after a predetermined period of time. As more and more independents won concessions and then found oil, markets became glutted and prices weakened.

In what was perhaps the last straw for the IOCs, the U.S. government imposed a quota on U.S. oil imports in 1959. The U.S. market, the largest in the world, was doubly lucrative because the high cost of domestically produced oil gave sellers of lower-cost foreign oil the potential to reap high profits by selling at or slightly under high U.S. product prices. U.S.-based IOCs had long been encouraged by their government to find oil overseas, and access to the protected U.S. domestic market reinforced other incentives to invest abroad. When profits from their international operations were squeezed by higher concession costs and competition from independents, IOCs with marketing outlets in the United States looked toward U.S. oil sales as a source of deliverance. However, cheap imports threatened the domestic price structure, and firms that owned only U.S. production facilities fought oil imports, especially from the low-cost Middle East.

The U.S. government asked oil companies to limit imports voluntarily, but hard-pressed firms were unwilling to forgo profits from crude sales in the United States. Domestic producers, citing national security and the risk of becoming dependent on foreign imports, soon demanded real protection. In 1959, the voluntary quotas became mandatory. Meanwhile, the major companies had begun to consider reducing per-barrel prices paid to host governments as a way to improve their deteriorating finances. In February 1959, after consulting one another (but not their hosts), the IOCs unilaterally reduced the posted prices of crude oil used to calculate operating-company tax obligations to host countries. Despite the outcry that followed, the IOCs lowered posted prices again in August 1960. In September, Iran, Iraq, Kuwait, Saudi Arabia, and Venezuela formed the Organization of Petroleum Exporting Countries (OPEC).

The OPEC Era

Through OPEC, major oil exporting countries had the same opportunities to coordinate their oil policies that the IOCs had long enjoyed. They used the companies' refusal to engage in joint negotiations with an OPEC representative to ratchet oil prices up in successive negotiations, each taking the best deal made by any other member as its floor for the next round, a tactic called leapfrogging. Following a failed Arab oil embargo imposed after the 1967 Arab–Israel War, OPEC militancy in relation to the IOCs grew. In 1970, the Libyan government used its superior structural position to induce leapfrogging among its own concessionaires, enforcing production cuts on the most vulnerable to make them agree to price increases and then imposing those increases on the rest.

In 1971, OPEC moved toward participation, a concept referring to gradual nationalization, which had originated with Saudi Arabia's oil minister, Ahmad Zaki Yamani. Members that reached participation agreements with their operating companies in the early 1970s later accelerated the timetable to achieve full nationalization more rapidly. Even so, the process allowed each OPEC member to develop a strategic plan for assuming control of its oil industry. After nationalization, most national oil companies (NOCs) managed their new responsibilities far better than predicted, some with the assistance of former concession owners. A few acquired overseas holdings and most added to their hydrocarbon reserves and expanded operations, such as refining, that added value to their exports. Excessive political interference and infrastructure deterioration did not become major problems for most OPEC NOCs until after world oil prices collapsed in the mid-1980s.

As more than one energy analyst has observed, the stone age did not end because the world ran out of stones and the oil age will not end because the world runs out of oil. Middle Eastern oil and gas operations are undergoing a transition. Natural gas has become a highly desirable fuel. New resources have been discovered, including the giant Northern field in Qatar. New technologies allow natural gas to be shipped long distances and off-loaded safely, right at the time when governments in developed countries are tightening antipollution requirements and encouraging consumers to shift to cleaner fuels such as gas. Where air and water quality are high priorities, gas is the hydrocarbon fuel of choice for electrical power generation as well as for direct consumption. Countries with large gas reserves may be better placed economically than those that rely primarily on crude oil sales.

For oil exporters, the future is more ambiguous. Even if oil remains a dominant fuel for some years, supplies are increasing outside the Middle East and competition will keep prices and revenues down. As domestic industries age, new exploration and development will have to be financed out of earnings against which domestic claims are increasing or, as seems increasingly to be the case, foreign investment will make up the difference between what oil exporters can afford to pay and what they need to invest. Strategic investment in overseas oil and gas operations, recreating to varying degrees the multinational vertical integration that had underpinned the old oil regime, has been helpful. Ownership of downstream operations enables OPEC members to guarantee a minimum level of production and sales through their own refining and marketing networks, and also helps them stabilize oil profits because of the inverse relationship between price movements in crude and products—when one falls, the other generally rises.

Overall, however, strategic investment of oil revenues outside of the oil and gas industry is a more pressing need, whether this includes research on alternative energy sources or concentrates on identifying and supporting domestic industries vibrant enough to employ rising generations and satisfy key local needs. A quarter of a century ago, the economist Walter J. Levy deplored "the years that the locust hath eaten," the resources consumed rather than invested to achieve long-term, post–oil age economic security. Since then, the locusts have consumed many more resources, while Middle Eastern governments and populations remain acutely dependent on oil revenues for basic needs. Wisdom suggests anticipating the end of the oil age by adopting new investment policies, but the combination of expediency and their strong positions in hydrocarbons offer more tempting and far easier alternatives to Middle Eastern countries making choices about how to use their petroleum and natural gas resources.

PETROLEUM RESERVES AND PRODUCTION

An industry based on the distillation of crude oil for the creation of fuel in local and world markets.

In March 2003, the Middle East and North Africa produced 29 percent of all the oil produced worldwide (22.5 million barrels/day out of a total of 76.5 mb/d), and held 69.3 percent of the total world proven crude oil reserves of 1,050 billion barrels. At this rate of production, the Middle East will exhaust its oil reserves by 2030 unless significant new

reserves are found. The inflow of cash to the region in 2003 from oil and related products can be estimated at US$215 billion.

Within the Middle East, five countries (Iran, Iraq, Saudi Arabia, Kuwait, and the United Arab Emirates [U.A.E.] control 90.5 percent of all reserves and 67 percent of production. Should Iraq be in a position to resume its pre-war(s) production, this group of five countries would produce 74 percent of the regional production and 29 percent of the world's demand. In 2001 the United States imported an average of 2,775 barrels per day from the Middle East, about 23.8 percent of its imports (BP Statistical Review of World Energy, 2002).

Production and Pricing

The cost of oil production in the Gulf is the lowest in the world. Marginal increases in production cost between $0.50 and $2.00 per barrel. The lower end of this range is most common in Saudi Arabia, the higher in the United Arab Emirates, due to the higher costs of offshore drilling. (For comparison, incremental costs are $12–$15/b in the North Sea fields, $3–$5/b in Mexico, and $18–$20/b in U.S. offshore wells.)

TABLE BY GGS INFORMATION SERVICES, THE GALE GROUP.

Most of the oil produced in the Middle East is sold via long-term contracts between national oil companies and direct users, such as ExxonMobil, TotalElfFina, ChevronTexaco, BP-Amoco, or AGIP. The oil producers also sell to large trading companies, such as Mark Rich in Switzerland or Phibro in the United States, which in turn resell to ultimate users. The contracts between the users and producers generally specify that prices be set (often quarterly) by the producer based on a standard benchmark, such as prices of Brent or Dubai light, and adapted to conditions such as distance, sweetness (level of sulfur), and gravity. Some producers also sell contracts to deliver oil through the main oil exchanges, primarily London and New York, but the exchanges are mostly used by the traders. Although the volume of oil traded on the exchanges represents only 20 to 30 percent of the total oil sold worldwide, the market price set on these exchanges is the main source of information used by major producers in setting their prices.

The most common price benchmarks used in long-term contracts between the Gulf state oil companies and their buyers are Dubai Light for shipments to the Far East, Dated Brent (North Sea) for shipments to Europe, and West Texas Intermediate (WTI) grade for shipments to the United States. Prices of the crude oil actually shipped are modified by adding or subtracting a certain amount per barrel to reflect the grade, the quality, the distance to the market served, and the timing of the purchase relative to the benchmark quote.

When a producer is ready to effect a shipment under a given contract, it contacts the user, who in turn arranges to have a tanker ready at the point of sale for loading within forty-eight hours. Shippers and users, who have quite precise expectations on when to expect loading orders, often have tankers waiting nearby the loading facilities. In the case of Gulf shipments, tankers wait near Khor Fakkan on the Gulf of Oman.

API Gravity and Pricing

Crude oil is graded according to gravity, measured by the American Petroleum Institute degree of grav-

ity (API): the higher the number, the lighter the grade. Heavier grades require more energy to refine than the lighter grades and are used to produce heavier and cheaper products. The region produces a large range of crudes from the newly developed Saudi ultra-light crude at API 50.4 to the Syrian Souediah Heavy at API 24. Standard light crudes in the Gulf have an average API of 34; Algerian crude is very light at API 44.

Many refineries are unable to use a wide range of API crudes. When refineries are overstocked with light crude, the discount on heavy crudes may decline and sometimes turn into a premium. In general, crudes of different API degrees from the same point of sale will be priced differently. For crude shipped out of Ra's Tanhura in 1991, the average discount on heavier grades amounted to 10.7 percent for an API difference of 7 degrees.

Prices, relative to the benchmark oils, are modified according to the sweetness of the relative crudes, the less sulfur the sweeter. In the Middle East, the light Gulf crudes tend to be relatively sweet, while the Syrian crudes are very sour. Sweet crudes are preferred by refiners because they are cheaper to process and less corrosive on equipment.

Comparison of FOB (free on board) crude oil prices for major grades in 1991*

API Type of Oil	Average $ from Origin Grade	Average $ from Northwest Europe	Average U.S. Gulf	Average from Singapore
Arab Light Saudi Arabia	34	19.8	19.42	19.33

Pricing, Distance, and Timing of Sale

The distance and cost of transport between the point of sale and the place of delivery is reflected in prices. At similar API grade, Arabian Light 34 sold on an average of seven years (1988 to 1994) at a discount of about $1.73 from North Sea Brent for shipments to Europe. Arabian Light 34 for the same period sold at a discount of $3.01 from WTI for shipments to the United States. (This last difference also reflects a difference in lightness in favor of WTI.) Even within the Gulf, prices also are adjusted for distance. In 1991 similar-grade oil shipped to Europe—Oman Light 34 (shipped from Oman)—sold at a premium of 2.7 percent over the Saudi Light 34 shipped from Ra's Tanhura approximately 560 miles (900 km) north, and at a premium of 5.1 percent over Iranian Light 34 shipped from Kharg island, 683 miles (1,100 km) north.

Changes in market conditions between shipment announcement and loading is included in the computation of price. For example, Saudi Light 34 was adjusted by $1.90 per barrel on shipment to Europe ordered in December 1993 but effected only in January 1994.

Numerous other factors also affect the prices and the above-mentioned adjustments. The availability of tankers at any one time influences the cost of shipping; supply and demand for ships is arranged by numerous ship brokers worldwide. Price terms are quoted in reference to an index of total daily costs called the "Worldscale." Insurance rates also influence prices. At times of turmoil in the Gulf, insurance rates rise significantly and force the producers to absorb most of the increase to entice buyers to continue lifting crude from within the Gulf.

TABLE BY GGS INFORMATION SERVICES, THE GALE GROUP.

Purchases of Saudi and most other crudes in the region by the oil companies and major traders are usually done using thirty-day sight letters of credit, confirmed by a local bank. However, the original ARAMCO partners are not required to issue such letters of credit and instead buy on open-book basis from ARAMCO. Upon loading of oil, the shipmaster signs the bill of lading. The seller then presents the bill of lading, the insurance documents, and a signed draft to the local bank for payment. Payment is then effected by the local bank within thirty days of the date of the bill of lading.

Pipelines

Pipelines allow producers to bring oil closer to the main users and thereby cut the cost of transport. The main pipelines in the region have been laid to facilitate access to the European markets. Pipelines from the Gulf fields to the Mediterranean, which provide the most efficient transport, are subject to political problems. The tapline opened in 1975 from Saudi Arabia to Lebanon was closed by Syria; the Iraq-Syria pipeline was closed by Syria in 1982, but has been partially reopened by Syria in 2001 and is being tested for use at a rate of about 200,000 barrels per day. The pipeline from Iraq to Turkey is being used for most shipments of Kirkuk oil from Iraq to the Mediteranean. Its present capacity is about 1.5 million barrels per day but could be increased with investments in pumping facilities. The Trans-Arabian pipeline from Iraq to Yanbu on the Red Sea, through Saudi Arabia, was closed in 1990 when Iraq invaded Kuwait and has remained closed since.

The major pipeline presently used in the Gulf is the East West Arabian pipeline (Petroline), which is 745 miles (1,200 km) long and has a capacity of 4.8 million barrels per day. The other major pipeline is the Sumed pipeline in Egypt, which allows oil shipments to bypass the Suez Canal and has a capacity of 2.4 million barrels per day. Algeria exports gas to Europe by two pipelines; one through Tunisia to Italy and one through Morocco to Spain.

PETROMIN

Catalyst for the Saudi acquisition of ARAMCO.

The General Petroleum and Mineral Organization (PETROMIN) was established by Saudi Arabia in 1962. In 1963, PETROMIN began marketing petroleum products in the kingdom. By 1980 PETROMIN was marketing all the oil produced in the kingdom that was not lifted by the ARAMCO (Arabian American Oil Company) partners, about 20 percent of total production. Under its president, Dr. Abdal Hadi Taher, a U.S.-trained petroleum engineer, PETROMIN developed as a fully integrated oil company. It established a vast number of subsidiaries in refining, transport, and distribution. By the mid-1970s, PETROMIN was able to show the American owners of ARAMCO that the Saudi government, in the long run, could potentially control their oil operations independently from ARAMCO. It is not known if PETROMIN was actually an important factor in the negotiations for the friendly acquisition of the U.S. oil companies' interest in ARAMCO. After ARAMCO was turned over to the Saudis, however, the role of PETROMIN started to decline. In 1994, PETROMIN and its successor company SAMAREC were merged into ARAMCO.

See also ARABIAN AMERICAN OIL COMPANY (ARAMCO).

JEAN-FRANÇOIS SEZNEC

PHALANGE

Political party in Lebanon.

The Phalange (Kata'ib) party was founded in 1936 as a Maronite Catholic paramilitary youth organi-

zation by Pierre Jumayyil, who modeled it on the fascist organizations he had observed while in Berlin as an Olympic athlete. It was authoritarian and centralized in organization, and its leader was all-powerful. The Phalange became a major political force in Mount Lebanon. After allying itself with the French Mandate authorities, the Phalange later—just before Lebanese independence—sided with those calling for independence; as a result, the party was dissolved in 1942 by the French high commissioner (it was restored after the French left Lebanon). Despite this dispute, over the years the Phalange has been closely associated with France in particular and the West in general. For many years, the party newspaper, *al-Amal*, was printed in Arabic and French.

Consistent with its authoritarian beginnings, Phalangist ideology has been on the right of the political spectrum. Although it has embraced the need to modernize, it has always favored the preservation of the status quo. The Phalange party motto is "God, the Fatherland, and the Family," and its doctrine emphasizes a free economy and private initiative. It focuses on the primacy of preserving the Lebanese nation, but with a "Phoenician" identity distinct from its Islamic Arab neighbors. Party policies have been uniformly anticommunist and anti-Palestinian, with no place for pan-Arab ideals. The Lebanese Civil War of 1958 and the intensification of sectarian conflict benefited the party; its membership increased from 300 in 1936 to 40,000 in 1958. The power of the party was reflected in parliament; from 1959 through 1968, 61 percent of its candidates were elected. In the 1972 parliament, the Phalange had seven deputies, including Pierre Jumayyil and his son Amin Jumayyil. By the start of the Lebanese Civil War that began in 1975, the party's membership had increased to 65,000, including a militia of nearly 10,000.

Throughout the civil war, the Phalange party was the most formidable Christian force, and its militia bore the brunt of the fighting on the Christian side. Because the party was part of the mostly Christian, right-wing coalition known as the Lebanese Front, the power of the Jumayyil family increased considerably. Ironically, as Pierre Jumayyil's son Bashir Jumayyil was consolidating his power through the integration of all right-wing militias into his Lebanese Forces, the role of the Phalange party diminished. Bashir, a member of the party, marginalized its traditional leadership, which he felt was too moderate.

During the 1980s, the Phalange lost much of its credibility and political stature. In 1982, under military pressure from Israel, which occupied a good deal of Lebanon, Bashir Jumayyil was elected president. He was assassinated before assuming office, and his brother Amin took his place. The corrupt and partisan rule of Amin further harmed the image of the party, and the death of Pierre Jumayyil in 1984 inaugurated a struggle for power within the party. The party was even attacked by the Lebanese Forces, the erstwhile political child of the Phalange, in 1985. George Saade, elected president of the party in 1987, tried to rejuvenate the organization, but the changing political sentiment in the country in favor of Syria did not help his cause. The Phalange was briefly led by Munir al-Hajj after Saade's death in 1998. The race to replace al-Hajj was a rivalry between Amin Jumayyil, who returned to Lebanon in July 2000, and Karim Pakradouni (who was not Maronite, but Armenian). In early 2002, Pakradouni became leader, and Jumayyil was expelled from the party in July 2002.

PHARAONICISM

An intellectual outlook found particularly in early twentieth-century Egypt.

Intellectuals of a Pharaonicist orientation assumed the existence of a unique Egyptian national character shared by ancient and modern Egypt; their writings attempted to demonstrate the ancient Pharaonic

origins of many of the characteristics and traits of contemporary Egyptians. Expounded particularly by those Egyptians who were educated in Europe or who were Westernized intellectuals, Pharaonicism faded as Arab-Muslim nationalist sentiment grew in Egypt.

JAMES JANKOWSKI

PHARAON, RASHAD

[1912–]

Diplomat and physician in Saudi Arabia.

Rashad Pharaon, born and trained in Syria, became the private physician to a succession of Saudi monarchs from 1936 onwards. Enjoying the confidence of the Al Saʿud family, he was appointed their first ambassador to France and Europe (1947–1966); during the same period, he was also the kingdom's first minister of health (1954) and senior delegate to the United Nations (1963–1964), and he was involved in most areas of Saudi foreign relations as the closest adviser to Faisal ibn Abd al-Aziz when he was foreign minister and then king.

UPDATED BY GEORGE R. WILKES

PHILAE

An island, now submerged, that was the site of an ancient Egyptian temple complex.

The island of Philae was located in the Nile River at the First Cataract, south of the present Aswan dam; it is now totally submerged. Between 1972 and 1980, before the island was submerged into Lake Nasser, the main temples were disassembled and reassembled on the island of Agilkia, under the aegis of the United Nations Educational, Social, and Cultural Organization (UNESCO).

From the Late Period of Egyptian history (304 B.C.E.–30 B.C.E.), Philae served as the frontier between Egypt and Nubia. Philae was approximately 460 feet by 1510 feet (140 m by 460 m) in size. It was paired with another nearby island, Biggeh, as a focal point of the worship of the Egyptian god Osiris. Biggeh housed an *abaton,* one of the purported tombs of Osiris, while Philae was home to a temple to the sister/wife of Osiris, Isis. This temple, thought to be the single most beautiful preserved ancient Egyptian temple, housed a *mammisi,* or birth house, built to celebrate the birth of Harpocrates to Isis and Osiris.

The Isis temple is of Ptolemaic date (304 B.C.E.–30 B.C.E.). The temple was laid out on the east side of the island, built along two axes, with a roughly south-northeast orientation. A long courtyard flanked by colonnades gave access to the first, 66-foot-tall (20 m) pylon, or entrance gateway. Inside this pylon was a second courtyard with a colonnade on the east and the *mammisi* on the west. A second, 43-foot-tall (13 m) pylon gave access into the Isis temple proper.

There were a number of other notable buildings and structures on the island, particularly a kiosk on the east side dating to the time of Augustus (30 B.C.E.–14 C.E.). This kiosk, perpendicular to the Isis temple, formed a second processional axis. The latest datable inscription in Egyptian hieroglyphic script (24 August 394 C.E.) was found on the island.

DAVID WALDNER
UPDATED BY JOHN M. LUNDQUIST

PHILBY, HARRY ST. JOHN

[1885–1960]

The leading European explorer of Saudi Arabia.

Harry St. John Philby was born in Ceylon (now Sri Lanka) to a family of the Raj (British administration in India) and educated at Cambridge University in England. He joined the Indian civil service after his graduation in 1908, but when his temperament stalled his career, he transferred in 1915 to the Indian expeditionary force in Mesopotamia (now Iraq). Again he ran afoul of his superiors, who sent him to central Arabia in 1917 to negotiate with an unreliable ally. In the course of this mission,

which had only limited success, Philby discovered his life's passion—exploration of Arabia—and a patron, the aforementioned unreliable ally, Abd al-Aziz ibn Abd al-Rahman, known in the West as Ibn Saʿud, then ruler of Najd and subsequently, founder of Saudi Arabia.

Although Philby eventually tied his fortunes to Ibn Saʿud, immediately after World War I he was posted to Iraq and Transjordan (now Jordan) where he irritated superiors with his hostility to the Hashimites, the Hijazi family to whom the British entrusted the rule of these states newly carved from the Ottoman Empire. Because the Hashimites were rivals of the Saudis, they became Philby's enemies too.

In 1925 Philby quit the colonial service to become a merchant in Jidda. However, it was not until after his conversion to Islam in 1930 that his fortunes began to improve. In 1932 his plan for a voyage through Rub al-Khali (the Empty Quarter), a feat that had long eluded Europeans, finally gained Ibn Saʿud's approval. To Philby's immense chagrin, a rival Briton, Bertram Thomas, had just preceded him, but Philby did complete a more ambitious course and his explorations of the peninsula continued throughout his life. These constitute the most enduring of his achievements, for he was a meticulous observer of the land, its flora and fauna, and archaeological remains. His precise observations drew the map of Arabia.

In 1933 Philby helped to negotiate the agreement that opened Saudi Arabia to American oil exploration, the first stage in the creation of the Arabian American Oil Company (ARAMCO). He had other business successes, including a concession to sell Ford motor cars in Arabia. His political instincts were less fortunate. Throughout much of his life he waged a constant campaign against what he considered to be the stupidity and immorality of the policies of the British government. On several occasions Philby meddled in Palestinian affairs, consulting with Jewish dissenter Judah Magnes to produce an ill-fated Arab-Zionist peace plan in 1929. In 1939 he proposed to senior Zionist officials in London a scheme under which King Ibn Saʿud might be persuaded to support the creation of a Jewish state in Palestine in exchange for Jewish political influence in London and in Washington, D.C., on behalf of the complete "unity and independence" of the remaining Arab lands, and "extensive financial help" to the Arabs, including a hefty subsidy to the Saudi ruler.

Philby's wartime harangues included praise for Adolf Hitler and disparagement of the British war effort, leading the Foreign Office to consider him a dangerous crackpot. In 1940, during a stopover in India on his way from Arabia to the United States, he was arrested, shipped to England, and imprisoned for nearly a year. After the war he was able to return to Arabia, but the death of Ibn Saʿud in 1953 and Philby's criticism of his successors brought him banishment to Beirut in 1955. He resettled in Riyadh only after abandoning politics.

The charge that Philby was a secret agent is unfounded. However, he enjoyed the company of Western diplomats, to whom he provided much gossip. And his son, Kim Philby (1912–1988), was a high-ranking official in British counterintelligence before being exposed as a Soviet mole.

BENJAMIN BRAUDE
UPDATED BY NEIL CAPLAN

PHOENICIANISM

A Lebanese nationalist ideology.

Phoenicianism is based on the idea that Lebanon is unique in the Middle East for its location, people, and mission, and therefore should not be bound in any arrangement to neighboring countries, which are seen as inferior. The ideology of Phoenicianism flourished early in the twentieth century, when decentralization parties proliferated in the Arab region of the Ottoman Empire. Many Christians were dedicated Arab nationalists, although some Lebanese Christians believed that their nation should not be associated with the Arab region.

Phoenicianism is based on the belief that the Lebanese political entity is, contrary to historical

realities, not the product of the twentieth century. "Lebanese nationalists"—a term that has come to describe the views of the right-wing Maronite Christian establishment and its allies in other sects—believe that Lebanon, both as a political entity and as a people, has been in continuous existence since Phoenician times. The Phoenicians are seen as ancient Lebanese, and Phoenician achievements are exaggerated to the point that the Greek and Roman civilizations are perceived as inferior to the "Lebanese Phoenician civilization." Lebanese nationalists argue that the Phoenician identity defines the Lebanese political identity. Other identities, such as those based on Islam or Arabism, are regarded as alien to the Lebanese historical experience.

The dispute over Phoenicianism is at the root of the Lebanese political problem. There is no consensus on the identity of Lebanon. Although the Maronite establishment has insisted that the Lebanese identity should be defined in purely historical terms (i.e., Phoenician), Lebanese Muslims and others who support their views argue that the Lebanese identity has been shaped by the Islamic Arab legacy. Arab nationalists dismiss the Phoenician claims and compare then to Zionist claims over Palestine. The political arrangement of Lebanon since 1943 has failed to settle this thorny political issue. The National Pact of 1943, for example, tried to please both sides by declaring that Lebanon has "an Arab face," leaving the determination of the identity of the "body" unspecified. For advocates of Phoenicianism, the only linkage between Lebanon and the Arab world rests in Lebanon's membership in the League of Arab States.

Phoenicianism has developed from an ideology into a full-fledged myth. Nobody has contributed to the nourishment of the myth more than Lebanese poet and ultranationalist Saʿid Aql, who traces most of the great discoveries of civilization to the Phoenician people. Even the discovery of America is attributed by Aql—among others in Lebanon—to Phoenician travelers who preceded Columbus. The great Greek thinkers are called Phoenicians. The school curricula in Lebanon reinforce the myths about the Phoenician people among all who accept a version of history promulgated by ideologues who have dominated the Ministry of Education since independence.

PHOSPHATES

Export of these compounds is vital to the economies of Israel, Jordan, and Morocco.

Natural calcium phosphate deposits occur worldwide in the crust of Earth. Although the global phosphorous content is only 0.1 percent, in economically viable deposits it ranges between 26 percent and 38 percent, measured in phosphorous pentoxide, or P_2O_5. Many Arab countries produce phosphate rock for transformation into phosphoric acid and other complex fertilizers. These include Morocco, Algeria, Tunisia, Egypt, and Jordan, as well as Syria, and Iraq. Some other countries in the region are minor players in phosphate production and export. In 2000, the economic reserves of the main five producers were estimated at 7 billion tons, 1.6 billion tons, 267 million tons, 600 million tons, and 1.27 billion tons, respectively. These five countries provide close to half the world's production, which is mostly processed for use as agricultural fertilizers. Morocco produces the richest phosphate (32% P_2O_5 at Khouribga). Important Moroccan sites are Khouribga, Benguerir, Youssoufia, and Bougraa-Layoune in the Western Sahara. Algeria's phosphate reserves are located in the Constantine region, in the east of the country. At 15 percent P_2O_5, they are not as rich as Moroccan deposits. They were mined early by the colonial French, during the nineteenth century. A number of Algerian sites were abandoned or exhausted, including Djebel Dekna, Djebel Dyr. Four sites are still in production: M'zaita, Tocqueville, Bordj R'dir, and Kouif. Tunisia's phosphates contain 30 percent P_2O_5. Major production in Tunisia is in various sites in the Gafsa province, in the southwest, including Mdilla, Metlaoui, and Moulares. The quality of Egypt's phosphate is similar to Tunisia's. Abu Tartur, located 31 miles (50 kilometers) west of the

Kharga Oasis in the Western Desert, is its major phosphate site. Jordan's phosphate is mined at Eshidyia, al-Hassa, al-Abyad, and al-Rusayfa. In these five countries, phosphate production, processing, and export represent an important component of economic output, and at the same time a serious source of industrial pollution. In 1998, fertilizer production accounted for $8.5 billion of the $13 billion chemical industry output in the Arab region.

PINSKER, LEO

[1821–1891]

Early Zionist leader.

Born in Russia, Leo Pinsker was active in the Odessa branch of the Society for the Promotion of Enlightenment, which advocated assimilation as the solution to the problem of European Jewry. Following the pogroms of 1881, Pinsker changed his view and began calling for the resettlement of Jews in a country where they would constitute a majority and attain political independence. He proposed the establishment of a national fund based on contributions for the settlement of immigrants with financial needs. He expressed hope that those who oppressed the Jews might aid in their resettlement. He did not advocate any particular location for the Jewish center but suggested the convening of a congress to make such a decision. Pinsker published his ideas in German, in a pamphlet entitled *Autoemancipation: A Warning of a Russian Jew to His Brethren* (1882). The pamphlet made a profound impression on the Hibbat Zion movement, which adopted it as its manifesto. In 1884, he was made chair of the Central Committee of Hibbat Zion, serving as its head until 1889.

PLAGUE

Epidemic disease spread by fleas that infest rats.

Plague is caused by the bacillus *Pasteurella pestis.* Bubonic plague, which affects the lymph nodes, is most commonly identified with major epidemics since the fourteenth century; it can decrease infected populations by as much as one-third. Numerous outbreaks were recorded in the Middle East in the nineteenth century. The most severe bubonic plague epidemic in the twentieth century was in Egypt, some 520 miles south of Cairo, in 1912. Some 237 deaths out of a total of 357 cases were recorded.

Pneumonic plague, which affects the lungs, occurs more commonly during the winter; it is highly infectious, with a mortality rate of almost 100 percent. It is spread through the air from person to person. Septicemic plague, which affects the bloodstream, is the rarest form. It is 100 percent fatal, because death occurs within a few hours of infection.

JENAB TUTUNJI

PLUMER, HERBERT CHARLES ONSLOW

[1857–1932]

British career officer who was High Commissioner for Palestine from 1925 to 1928.

Lord Plumer was born in Yorkshire, England, on 13 March 1857, and entered the British army in 1876. He served in the Sudan in 1884 and in South Africa during the Boer War (1899–1902), which led to his promotion to major general. He was a senior general on the European front during World War I and became a field marshal in 1919. Lord Plumer

served as governor and commander in chief of Malta from 1919 to 1924, but he is best known for his three years as British high commissioner for Palestine from 1925 through 1928.

As a career officer in the British armed forces, Lord Plumer stressed the importance of maintaining security and stability in the volatile mandated territory. During his three years' rule, Jewish immigration stagnated, and therefore the Arabs became less fearful of eventual Jewish political domination. Lord Plumer, however, resisted requests by Palestinian Arab politicians to hold elections for a legislative council; he preferred to hold elections for municipal councils that would test the feasibility of self-government and provide combined representation for Arabs and Jews. The relative quiet of his years in office persuaded him that he could reduce the number of British troops in Palestine. In reality, tension was simmering below the surface, which led to major riots at the Western (Wailing) Wall in Jerusalem, August 1929.

POGROM

An armed riot by one ethnic, tribal, or religious group against another, incited by the government; usually accompanied by looting, mass property destruction, rape, and murder.

The term *pogrom* derives from the Russian *pogromit* (to destroy); Russia was the scene of the first modern pogroms, against its minority Jewish population, beginning in 1881. During the Russian Civil War (1918–1923), armed forces of all sides perpetrated atrocities against the Jews, though Vladimir Lenin's government went on record as opposing antisemitic violence.

POINT FOUR

U.S. aid program to the Middle East under the Truman Doctrine.

The name refers to the fourth point made in U.S. president Harry Truman's 1949 inaugural speech, wherein he cited the need to support democracy and economic stability where small nations are threatened by outside (that is, Soviet) influence.

Point Four led to unprecedented U.S. military and economic aid to the Middle East, allocated under various programs, expanding aid given to Turkey and Greece under the Marshall Plan since 1947. Of the $2.94 billion in military equipment sent to the region during the 1950s, Turkey received $1.87 billion, with Iran, Iraq, Jordan, Lebanon, Libya, Pakistan, and Saudi Arabia receiving lesser amounts. Aid also went to agricultural projects and to Palestinian refugees.

POLISARIO

Acronym of the Frente Popular para la Liberación de Saguia el-Hamra y Rio de Oro (Popular Front for the Liberation of Saguia el-Hamra and Rio de Oro), the movement struggling to establish the independent state of Western Sahara in Spain's former Spanish Sahara colony.

POLISARIO was founded on 10 May 1973 by a combined group of Moroccan students of Sahrawi background studying at Muhammad V University in Rabat, Morocco; a small number of veterans of anticolo-

nial struggles during the late 1950s residing in Mauritania; and youth from within Spanish Sahara. The group evolved out of the earlier, more informal Movement for the Liberation of the Sahara. Its first head was the charismatic Mustapha Sayed al-Ouali. POLISARIO's founding manifesto spoke of a strategy of "revolutionary violence" and "armed struggle" against Spanish colonial rule, but it was not until the second congress, more than a year later, that independence was explicitly declared as POLISARIO's goal.

The notion of a Sahrawi nation was a new one, the combined product of the sedentarization among the formerly nomadic Saharan tribes, socioeconomic changes in Spanish Sahara, and new ideological currents linked to decolonization in Africa and developing nations. POLISARIO was a reflection of these changes as it sought to transcend traditional tribal cleavages and fashion a supratribal Sahrawi national identity, although the majority of the POLISARIO leadership was Reguibat in origin, from the largest of the Sahrawi tribal confederations.

Libya's Muammar al-Qaddafi was the first head of state to provide support and until the early 1980s was an important supplier of arms. Algeria was initially hesitant but by mid-1975 had become POLISARIO's main benefactor and POLISARIO was rendered almost completely dependent on Algiers. The Spanish departure in early 1976 and the entrance of Moroccan and Mauritanian troops inaugurated the Western Sahara War. (By agreement with Spain, Morocco was to occupy the northern two-thirds of the territory and Mauritania the remaining one-third.) One immediate outcome was a large-scale exodus (estimates range from one-third to two-thirds) of the Sahrawi population (about 74,000, according to the 1974 Spanish census) from Western Sahara to the Algerian side of the border, around Tindouf. POLISARIO was granted a great degree of autonomy to run the refugee camps, which served as POLISARIO's military, political, and social base. POLISARIO's military wing, the Sahrawi Popular Liberation Army, numbered between ten thousand and fifteen thousand during the early 1980s, and eight thousand to nine thousand in 1991. The POLISARIO leadership established a formal government-in-exile, SADR (Saharan Arab Democratic Republic). Al-Ouali was killed in fighting in June 1976. His replacement, Muhammad Abd al-Aziz, was chosen at the third POLISARIO congress and was still head of POLISARIO and president of SADR in 2003.

Morocco gradually gained the upper hand militarily and consolidated its control over the bulk of Western Sahara during the 1980s. Concurrently, Algerian aid decreased. Hence, POLISARIO's diplomatic gains—recognition of SADR by more than seventy countries at its peak, and full membership in the Organization of African Unity—proved to be of limited value. Morocco and POLISARIO formally agreed to a United Nations–sponsored cease-fire in 1991, which was to be followed by a UN-supervised referendum in 1992, giving Sahrawis the option of independence or incorporation into Morocco. The plan was POLISARIO's best hope, but it was also risky. Its winner-take-all formula stipulated that defeat would necessitate POLISARIO's disbanding. As it happened, the vote never took place, owing to the two parties' persistent failure to reach agreement on the list of eligible voters. In 2001, Morocco's unhappiness with the revised voter rolls, and the UN Security Council's unwillingness to impose the referendum by force, led UN mediator James A. Baker to propose delaying the referendum in favor of a five-year period of autonomy for the region, to be followed by a referendum with an expanded voter list. POLISARIO initially resisted the plan. However, in 2003, under the prodding of Algeria, it assented, and the UN Security Council endorsed the plan. Fearing that its claim to sovereignty over the territory, Morocco rejected the plan, and the matter remained unresolved.

POLITI, ELIE

[1895–?]

Jewish Egyptian journalist, publisher, and banker.

Elie Politi was born in Cairo to a family of modest income. Though he obtained a rudimentary French education, he was largely self-educated. Politi turned to journalism during the 1920s. He founded and directed the daily *L'informateur financier commercial* in the late 1920s and published a number of economic directories while helping to establish *al-Misri* in Cairo, which became one of the most influential daily newspapers in the Middle East during the 1940s and early 1950s.

From 1914, Politi was also one of the leading businessmen and land developers in Egypt. He directed and managed the Commercial Bank of Egypt, transforming it into a major and respected financial institution, and helped to develop the new city of Muqattam on the eastern hills overlooking Cairo, as well as the beach and urban area of Maʾamura, east of Alexandria. *Al-Misri* was closed when Gamal Abdel Nasser took power in 1954, in spite of its nationalist stance during clashes with Britain the previous year, and the banks were nationalized at the end of the decade. Like most of the Egyptian Jewish economic elite, Politi was a committed Egyptian patriot. In 1965 he published his memoirs, *L'Egypte de 1914 à Suez,* in Paris.

POLLARD AFFAIR

Israeli espionage against the United States.

Jonathan Pollard, a civilian intelligence analyst with the U.S. Navy, was arrested by the Federal Bureau of Investigation in November 1985 while seeking sanctuary in the Israeli embassy in Washington. A Jew and passionate Zionist, Pollard was recruited to spy for Israel's Bureau for Scientific Liaison (Lekem), which operated independently of the Mossad (Israel's foreign intelligence agency). U.S. officials claimed that Pollard had compromised more than 1,000 classified documents, many of them top secret, during seventeen months of espionage. Material included reports on Soviet arms shipments to Arab states, on missiles, and on chemical weapons.

Pollard, who was sentenced to life imprisonment, claimed to have been motivated not by financial gain but by a desire to help Israel combat terrorism. The affair briefly rocked the most sensitive and secret elements of Israel's relationship with the United States. Pollard himself dismissed Israeli suggestions that his recruitment was a rogue operation by the Lekem chief, Rafi Eitan, and an overzealous air force officer. Two Israeli commissions of inquiry failed to establish precisely where responsibility lay.

No lasting damage was done to military and intelligence links between the two countries. Pollard's supporters, especially those in the Jewish community, continued to seek a presidential pardon, arguing that he had been treated more harshly than others who had spied for the United States's enemies, let alone for one of its most intimate allies.

POLYGAMY

Marriage in which a spouse of either sex may have more than one mate at a time.

Polygamy for men (polygyny) is sanctioned in Islam by direct reference in the Qurʾan and is practiced to some extent in all countries with Muslim populations except where prohibited by law. Muslim men may have as many as four wives at a time but are admonished to treat all equally. The *shariʿa* warns of the unlikelihood that the wives in a polygamous marriage can, in fact, be treated equally. Therefore, monogamy is the preferred condition.

Polygamy is statistically minimal in Middle Eastern countries that uphold the *shariʿa* in family law. This is partly due to legislation that makes polygamy difficult to enter into or to maintain. Economic considerations also make polygamy virtually impossible, since there must be a separate household for each wife. Consequently, those who practice polygamy are often relatively wealthy or influential. Community and political leaders are more likely to practice polygamy as a sign of respect and as a matter of prestige.

In bedouin and tribal cultures, tribal leaders practice polygamy both to enhance their own prestige and to form or strengthen alliances with other tribes.

POPULAR FRONT

The 1930s French government that was supportive of Arab nationalism.

The Popular Front government came to power in France in June 1936, under the premiership of the socialist Léon Blum, author of the Blum–Viollette Plan. Tension between the French government and Arab nationalism was alleviated by the new government's vision of its commitment in the Middle East, particularly of the French mandate over the Levant. Stalled independence negotiations with nationalists of Syria were rejuvenated, and a Franco–Syrian treaty was signed in September 1936, in which France maintained some major supervisory powers. The treaty was never ratified by France, which by June 1937 had a new government with a more conservative colonial outlook.

POPULAR FRONT FOR THE LIBERATION OF PALESTINE

Radical, left-wing Palestinian guerrilla organization.

The Popular Front for the Liberation of Palestine (also known as the PFLP, al-Jabha al-Shaʿbiyya li-Tahrir Filastin, al-Jabha al-Shaʿbiyya, and the Red Eagles) is a Marxist-oriented group established by George Habash, a Christian Palestinian, after the June 1967 Arab–Israel War. Habash created the PFLP after successfully uniting three groups: Heroes of the Return, the National Front for the Liberation of Palestine, and the Independent Palestine Liberation Front. In 1968 the group joined the Palestine Liberation Organization (PLO) and was second in importance and influence among the Arab Palestinians only to Arafat's al-Fatah movement.

The group's ideology is based on three principles: Palestinian national sovereignty *(wataniyya),* Arab unity *(qawmiyya),* and Marxist-Leninist ideology. The PFLP has sought to unite Palestinian efforts within a secular governing framework, and it has modeled some of its operative activities and strategies on Cuban leader Fidel Castro's revolutionary guerrilla methods. Central to the group's understanding of *wataniyya* is a strict opposition to the State of Israel, an interest in restoring Arab unity in the region, and criticism of pro-Western Arab states.

In 1970 internal conflict split the PFLP into three separate groups: the PFLP, the Democratic Front for the Liberation of Palestine (DFLP), and the Popular Front for the Liberation of Palestine–General Command (PFLP-GC). Habash remained at the head of the PFLP and forged ties with other leftist groups outside Palestine such as the German Baader-Meinhoff group, the Irish Republican Army (IRA), and the Japanese Red Army. The PFLP began operating in Europe and elsewhere, claiming responsibility for such events as an attack at Lod Airport in 1972 and the hijacking of an Air France airbus to Entebbe in 1976. In the Arab world, they

are associated with hijacking and the destruction of four international airplanes in Jordan in 1970. These acts of terrorism led to their being banned in Jordan, where they had originally been based. When Jordan's King Hussein expelled the organization, they relocated in Lebanon.

Although it is a member of the larger umbrella group of the PLO, the PFLP has often opposed al-Fatah's policies, forming splinter groups in opposition to Arafat's concessions in the Middle East peace process. During the first Intifada in 1987, key PFLP members formed a group called the Red Eagles that carried out attacks on Israel in the West Bank, and later formed a coalition with other opposition groups such as the DFLP and the Damascus Ten. In 1993 the group finally separated from the PLO after it signed the Declaration of Principles. At that time, the PFLP elected a new executive body: George Habash, Abu Ali Mustafa (Mustafa Zibri), Abd al-Rahim Lalluh, Abu Ahmad Fuʾad, Sabir Muhi al-Din, Taysir Kubʿa, and Umar Kutaysh.

With the decline of Soviet support after the disintegration of the former U.S.S.R., the PFLP became marginal in comparison to emerging Islamist groups such as HAMAS and Islamic Jihad. Although the group disagreed with the provisions set out in the 1993 Oslo Peace Accord, it renewed its ties with Arafat's al-Fatah group in 1999. This renewal of ties with the PLO signaled a shift in the PFLP's Marxist doctrine, which has become increasingly focused on socialist democracy. Whereas formerly the PFLP did not recognize Israel as a state, it now accepts the possibility of a Palestinian state with Jerusalem as its capital alongside a temporary Israeli state that eventually reverts to an "historic Palestine" after the right of return sees Palestinian refugees repatriated.

Habash retired in 2000 and was succeeded by Abu Ali Mustafa. Mustafa had been a founding member of the PLO and a member of its Executive Committee. After taking over in 2000, he moved PFLP headquarters from Syria to Ramallah in the West Bank and began organizing attacks on Israeli targets there. After learning that Mustafa and the PFLP intended to carry out attacks on Israeli schools and other civilian areas, Israeli authorities bombed his office, killing him and several others. Ahmad Saʿadat then became head of the PFLP; he was associated with the assassination of Rehavam Zeʾevi, Israel's tourism minister, and in April 2002 was sentenced to one year in prison for taking part in the assassination. Although the courts later ruled in favor of his release, continued PFLP attacks have prevented this.

The PFLP's funding comes from a variety of sources. Financial and military support are said to come from Syria and Libya, and in 1999, Iranian president Mohammad Khatami promised to continue Iran's support of not only the PFLP, but also the PFLP-GC, Islamic Jihad, and HAMAS. In addition to outside support, the PFLP has financed its activities from front companies as well as legitimate business activities.

During the al-Aqsa Intifada, the PFLP claimed responsibility for a number of violent incidents within Israel's pre-1967 border areas. Habash maintained his opposition to Arafat's signed accords with Israel. Saʿadat also stood in strong opposition to the Oslo Accords, although the general language of the PFLP has shifted from Marxist-Leninist revolutionary appeals to a focus on democracy and social justice.

POPULAR FRONT FOR THE LIBERATION OF PALESTINE–GENERAL COMMAND

Radical Palestinian group.

With between 500 and 1,000 members, the Popular Front for the Liberation of Palestine–General Command (PFLP-GC) is one of the smaller Palestinian guerrilla organizations. The PFLP-GC recruits mainly from the Palestinian refugee camps of Lebanon and Syria. Its leadership, under Ahmad Jibril, served in the Syrian military before forming the Palestine Liberation Front (PLF) in 1965. After briefly merging with al-Fatah, in 1967 they were founding members of the Popular Front for the Liberation of Palestine (PFLP), then broke away in October 1968. The PFLP-GC was admitted to the Palestine Liberation Organization (PLO) in late 1969 and acquired a seat on the PLO Executive Committee in June 1974. Based first in Amman and then in Beirut, its headquarters have been in Damascus since 1982. During the late 1960s another, unrelated PFLP splinter group, led by Ahmad Zaʿrur and eventually known as the Organization of Arab Palestine, also used the name PFLP-GC, but it was usually distinguished as PFLP-GC (B). During this period the original PFLP-GC was therefore often known as PFLP-GC (A) and occasionally operated as the al-Aqsa Fidaʾiyyun Front.

Nominally Marxist-Leninist, the PFLP-GC has been one of the most uncompromising of the Palestinian "rejectionist" groups. In October 1974 it was a founding member of the Front of Palestinian Forces Rejecting Surrenderist Solutions (the Rejection Front). In 1983 it was one of two PLO factions to rebel after Yasir Arafat hinted at making peace with Israel, and it has since boycotted all PLO institutions, supporting a series of rejectionist coalitions from Damascus.

The PFLP-GC is known for its indiscriminate military actions specializing in the use of small, highly trained units for high-profile operations. It was responsible for a suicide raid on an apartment building in the northern Israeli town of Kiryat Shmona in April 1974 that killed eighteen Israeli civilians, and for the November 1987 hang-glider attack on an army camp in northeast Israel that killed six soldiers. It is presumed to be responsible for the February 1970 midair explosion of a Swiss airliner en route to Israel that killed more than forty-five people; the 1978 bombing of a Beirut building that killed more than two hundred PLO personnel; and a series of Syrian-backed attacks in Jordan and Europe, notably the bombing of a civilian airliner over Lockerbie, Scotland in December 1988. Its military positions across Lebanon face regular Israeli attacks, and Jibril's son Jihad, responsible for operations in Lebanon, was killed in 2002 by a car bomb that was widely believed to have been planted by Israel.

Ahmed Jibril, the leader of the Popular Front for the Liberation of Palestine–General Command, a group which opposes the rule of Yasir Arafat. **© Reza/Webistan/Corbis. Reproduced by permission.**

The PFLP-GC's close links with Syria (as well as Libya and, more recently, Iran) have reduced its autonomy, undermining its credibility among Palestinians when its other loyalties placed the PFLP-GC in military conflict with the PLO. In 1977 a faction led by Muhammad Zaydan and Talʿat Yaʿqub split off to revive the PLF after Jibril justified Syrian military incursions into Palestinian camps in Lebanon. In 1984 Jibril was expelled from the PLO following Syria's 1983 confrontation with

the PLO. A decade later, the PFLP-GC was implicated in attempts on Arafat's life. The PFLP-GC's presence in the West Bank and Gaza Strip is consequently small. Nevertheless, its 1985 prisoner exchange with Israel, enabling hundreds to return to the Palestinian territories, infused valuable (if primarily non–PFLP-GC) cadres into these territories. Its 1987 hang glider operation also perceptibly emboldened the Palestinian population on the eve of the Intifada, and from the 1990s, the PFLP-GC trained and smuggled arms to Islamist groups in the territories. Its Syrian-based radio station, Idhaʾat al-Quds (Radio Jerusalem), established in 1988 to encourage rebellion in the West Bank, was popular, and often jammed by Israel. It publishes *Ila al-Amam* (Forward), first issued in 1963, and *al-Jabha* (The front), which first appeared in 1969.

POPULAR FRONT FOR THE LIBERATION OF THE OCCUPIED ARABIAN GULF

Marxist, antigovernment organization of southern Oman (1968 to 1971).

The Popular Front for the Liberation of the Occupied Arabian Gulf (PFLOAG) was organized in 1968 as the successor to the Dhufar Liberation Front, a largely tribal group attempting to overthrow the rule of Saʿid ibn Taymur Al Bu Saʿid's dynasty in Oman's southernmost province. PFLOAG not only aimed to enlarge the scope of the rebellion, but gave it a radical, Marxist orientation and tried to impose a collectivist regime where its forces were in control. With financial support and weaponry from Iraq, the People's Republic of China, and the Soviet Union as well as a secure base in neighboring Marxist South Yemen (People's Democratic Republic of Yemen), the front took most of Dhufar from the shaky regime of Sultan Saʿid. The accession of his son, Qabus ibn Saʿid Al Bu Saʿid, by coup in July 1970, turned the situation around, with the considerable foreign military assistance from Great Britain and Iran playing a key role. Well-funded civil action programs helped secure the loyalty of a population little drawn to PFLOAG's anti-Islamic ideology. In December 1971 it absorbed the National Democratic Front for the Liberation of Oman and the Arab Gulf (NDFLOAG) and assumed its second identity as Popular Front for the Liberation of Oman and the Arab Gulf with acronym unchanged. In May 1974, after serious reverses, those favoring continued military action formed the Popular Front for the Liberation of Oman (PFLO). By 1976 Dhufar was completely and securely in government hands.

POPULATION

Demography is crucial to an understanding of economic, social, and political life in the Middle East.

Until the nineteenth century, the Middle East experienced a typical Malthusian demographic system: high fertility outpaced high mortality, but there was occasional extraordinary mortality from warfare, famine, or epidemic disease, particularly bubonic plague. The population grew slowly until one of these demographic crises occurred, dipped sharply, then

Children attend school in Baghdad, the heterogeneous capital city of Iraq. The population of Baghdad is nearly five million, accounting for approximately 25 percent of the country's total population. © REUTERS NEWMEDIA INC./CORBIS. REPRODUCED BY PERMISSION.

began to grow slowly once again. This pattern ended in much of the Middle East during the nineteenth century. Despite minor outbreaks, truly catastrophic epidemics ended with the cholera epidemic of 1865. The increase in central government control facilitated security, trade, and delivery of food to famine regions. Egypt's population began to grow early in the century, as did that of Anatolia and the coastal provinces of Ottoman Syria during the 1870s. Iraq, Arabia, and Iran took little part in either the improvement in civil conditions or population growth.

The period of World War I (and the wars in Anatolia that followed it) was a demographic watershed in the Middle East, a period of great mortality and forced migration unequalled in the previous millennium. After the war, the Middle East began a new period of population growth, erasing the wartime population losses within a decade. Turkey's population began to expand fairly rapidly, from 14.6 million in 1927 to 18 million in 1940. Egypt's population grew from 13 million inhabitants in 1917 to 16 million in 1937. Other countries grew less quickly, but population increased markedly across the region. Nevertheless, the Middle East can be described as underpopulated before World War II. Large areas of potentially fertile lands were uncultivated. Population density was low, due to high mortality and lack of developed resources. By modern standards, mortality had declined only slowly. In late Ottoman times, mortality had averaged more than 3.5 percent per year. This condition only gradually improved between the two world wars. However, Egypt, Palestine, and Turkey managed to lower mortality through irrigation, public sanitation, and by ending conditions of civil unrest that had diminished the distribution of crops and goods. Medical improvement was a minor factor.

Population of the Middle East, 1800 to 2025, in millions*

Year	Population	Year	Population
1800	32.8	1925	54.7
1825	33.4	1950	79.2
1850	33.8	1975	154.3
1875	36.0	2000	308.6
1900	44.1	2025	449.3

* Including the areas of today's Bahrain, Egypt, Gaza, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, Syria, Turkey, United Arab Emirates, West Bank, and Yemen.

SOURCE: Projections to 2000 and 2025 from United Nations, *World Population Prospects*, 2000. (medium-fertility variant)

TABLE BY GGS INFORMATION SERVICES, THE GALE GROUP.

After World War II, as in much of the world, the Middle Eastern population began to increase rapidly. Fertility, always high, remained so, while introduction of modern medicine greatly lowered mortality. Modern agricultural techniques and the new crops of the green revolution increased the ability of Middle Eastern economies to feed larger populations. The result was a population boom. From 1950 to 1990 the population of the Middle East increased threefold. By the 1960s the rate of population increase meant that, if the high rates continued, future populations would double every twenty-five years. These rates of increase put great strain on the economies of the region. The results have included rapid and unplanned urbanization and unemployment, as well as overuse of fertilizers and poor agricultural techniques that temporarily yield large crop increases but eventually exhaust the soil.

Life expectancy at birth*

Fertility

The average fertility of Middle Eastern women changed little for centuries. Women who lived through their childbearing years (many did not) could expect to have six to seven children (the total fertility rate). Since the late 1970s fertility decreased in most countries. By 1999 the average woman in Turkey had 2.4 children, in Egypt 3.3, in Iran 2.7. However, in Syria and Saudi Arabia, the average remained very high, at 4.6 per woman. Women in Yemen and Oman had 6.2 children on average. Contraceptive usage varies greatly: in 1999, more than 60 percent of Turkish women used some form of contraception at some time in their lives; in Jordan, 27 percent. In some other countries the figures were much lower. Despite recent reductions, the Middle East remains one of the highest fertility regions in the world.

The history of high fertility has strained the capacity of the Middle Eastern economies. Nearly one-half of the population in Syria, Iraq, and Yemen is children under age fifteen. Even Middle Eastern countries with lower fertility, such as Turkey, have populations in which one-third are under fifteen. (This compares with 21 percent in the United States and 20 percent in Western Europe.)

If present fertility trends continue, future Middle Eastern populations will divide into two very different patterns. Israel is already nearing a European pattern of low fertility. Kuwait, Lebanon, Qatar, the Emirates, and Turkey are approaching that standard. Yemen, Syria, Iraq, Saudi Arabia, and others still retain high fertility. The demographics of the latter countries will in fifty years look very different from those of the former, with very large numbers of children and a fast-growing population. For example, at the beginning of the twenty-first century, Syria, Iraq, Jordan, and Saudi Arabia taken together had a slightly smaller population than Turkey. If trends continue, in fifty years they will together have twice as many people as Turkey.

Fertility and mortality, 1980–1999

	Total fertility rates (births per woman)		Mortality rates (crude death rate/1000 people)	
	1980	1999	1980	1999
Egypt	5.1	3.3	13	7
Iran	6.7	2.7	11	6
Israel	3.2	2.9	7	6
Syria	7.4	3.7	9	5
Saudi Arabia	7.3	5.5	9	4
United Arab Emirates	5.4	3.3	5	3
Yemen	7.9	6.2	19	12

TABLE BY GGS INFORMATION SERVICES, THE GALE GROUP.

Mortality

In the absence of extraordinary causes, fertility would have always outstripped mortality in the traditional Middle East. The population would have risen at approximately 1 percent per year. In fact, epidemics, wars, and famines meant that mortality equaled fertility. The most common causes of death were gastrointestinal diseases. Infant mortality was particularly high, with more than 40 percent of children dying before their first birthday, more than half before age five. Epidemics of plague and cholera caused temporary high mortality. In Egypt, for example, cholera took more than 100,000 lives in each of the epidemics of 1855 and 1865 and almost 200,000 in 1831. Bubonic plague took 500,000 lives in 1835 alone.

Warfare also caused great mortality in the nineteenth century. The Ottoman wars with Russia were particularly deadly for both military and civilian populations. From the beginning of the Balkan Wars in 1912 to the end of fighting in the Turkish War of Independence in 1922, the region suffered some of the worst wartime mortality in history. The highest death rates were found in eastern Anatolia—the result of war between the Ottomans and Russians and conflict between Muslims and Armenians in western Anatolia after the Greek invasion and in Palestine. In Anatolia, 3.8 million died (22 percent), and in Palestine 50,000 (6 percent). In all those conflicts, starvation and disease took a higher toll than did actual battle. Lebanon also suffered mass starvation during the war.

After World War II, the rapid introduction of modern medicine, public sanitation techniques, and agricultural improvements reduced mortality rates sharply. In 1950 the Middle East had a high crude death rate (deaths divided by total population) of more than 2.3 percent a year, but by 1999 it had fallen to less than 0.6 percent a year. Some countries, such as Egypt (0.7 percent in 1999) and Yemen (1.2 percent in 1999) lagged behind. A major part of the postwar improvement came in infant mortality. In 1950 one in five Middle Eastern children died before age five; in 1999 only one in nineteen died before age five, compared to a world average of one in thirteen.

The Iran–Iraq War of 1980–1988 resulted in the deaths of hundreds of thousands of Iranian and

Tenement housing in Cairo, Egypt. Estimates of Cairo's population vary from 8 to 12 million as of 2003. A population explosion that began in 1952 has resulted in overcrowding, scarce housing, unemployment, and health concerns. © TOM NEBBIA/CORBIS. REPRODUCED BY PERMISSION.

Istanbul is Turkey's largest city, boasting a population of over ten million as of 2000 and an annual increase of 3.45 percent due to migration from the countryside. One of every six Turks lives in Istanbul, contributing to a population density of 1,700 persons per square kilometer. **© Yann Arthus-Bertrand/Corbis. Reproduced by permission.**

Iraqi soldiers, with consequent effects on the size and gender structure of both populations. In addition, it is estimated that the Baʿthist regime in Iraq killed some three hundred thousand of its own citizens during campaigns against the Kurds in the north of the country and against the Shiʿa in the south.

The United Nations has lowered its projections of the region's population growth to 2025 as a result of the faster than expected decline in fertility. This has translated into slower population growth rates starting in Egypt and spreading east. The absolute increases in population are still growing in many countries because of past fast growth rates, and it will take ten to twenty years for slower growth rates to translate into smaller absolute increases.

Migration

Refugee migrations have been a major demographic factor during the past two centuries. Only the most prominent population transfers can be mentioned here: During the nineteenth and early twentieth centuries, great population movements took place as direct results of Russian imperial expansion in the Crimea and Caucasus and of nationalistic movements among the Christian peoples of the Ottoman Empire. Russia expelled or caused the migration of approximately 1.2 million Circassian, Abhazian, and Laz Muslims from the lands of the Eastern Black Sea. Of these, 800,000 survived and most eventually settled in what today is Turkey, as did the 300,000 Crimean Tatars forced to emigrate during the 1850s and 1860s. A sizable group of the Circassians were settled in the Arab world. Russian expansion also fostered a century-long population exchange, with much attendant mortality, between the Turks and Kurds of Russian Transcaucasia and the Armenians of Ottoman Anatolia and Iran. Between the 1820s and 1920s, 500,000 Armenians and 400,000 Muslims (not including the Circas-

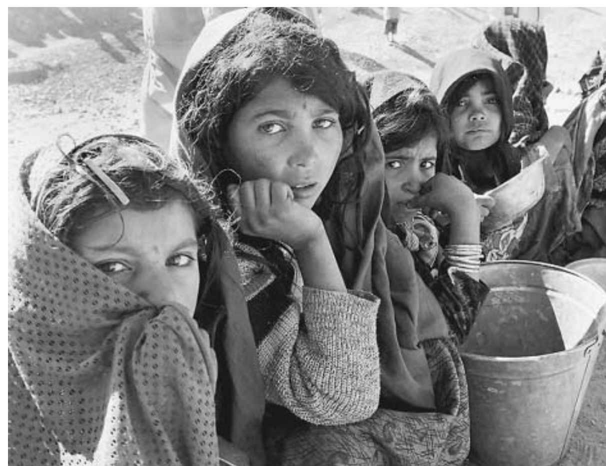
sians and Abhazians) crossed the borders. During World War I, an estimated one million Muslims were internal refugees in Eastern Anatolia; an estimated 275,000 Armenians were deported to or were refugees in the Arab world, and 135,000 were refugees in Europe and the Americas.

Nearly 600,000 Turks (40 percent of its Turkish population) were surviving refugees from the new state of Bulgaria after the Russian–Ottoman Wars of 1877–1878. Greece, Bulgaria, Serbia, and Montenegro expelled to Anatolia and Eastern Thrace 414,000 Turks during and immediately after the Balkan Wars of 1912–1913. During World War I, the Turkish War of Independence, and the Greek-Turkish population exchange that followed, more than one million Greeks from Anatolia and eastern Thrace went to Greece and 360,000 Turks from Greece to Turkey. Up to 1.5 million Turks were internal refugees within Anatolia and eastern Thrace during the Greek-Turkish war.

Before World War II a major immigration of primarily European Jews swelled the Jewish population of Palestine from 60,000 in 1918 to 600,000 in 1946. More than 700,000 Palestinian Arabs were refugees in the Arab-Israel War of 1948. Between 1948 and 1975, 1.6 million Jews came to Israel. Half of these were from the Middle East and North Africa, another third from Eastern Europe, especially the Balkans. Immigration to Israel has continued recently with nearly one million Jews from Russia and successor states.

The only Middle Eastern country to be heavily affected by refugees from the Afghan War was Iran, which accepted more than two million Afghan refugees. Turkey took in 300,000 ethnic Turkish refugees from Bulgaria, as well as Iranian refugees after the Iranian revolution and Kurdish refugees after the Gulf War. Many of the refugees to Iran and Turkey have been repatriated or have moved to other countries. A significant number of the refugees from Afghanistan, Iraq, and Bulgaria have returned home at least once, only to leave once again when economic and political conditions changed.

The quest for employment has been a major cause of migration into and from the Middle East. In Ottoman times, 175,000 Turkish emigrants went to the United States from 1869 to 1914. More recently,



Drought, hunger, and over two decades of war forced over one million Afghan refugees—mostly women and children—to seek shelter in neighboring countries. In 2002, a massive program undertaken by the United Nations High Commissioner for Refugees, the Afghan Ministry of Refugees and Repatriation, and the governments of the affected countries helped relocate some 1.8 million Afghans back to their home country. © Reuters NewMedia Inc./Corbis. Reproduced by permission.

the International Labor Organization estimated that 1.8 million Turks were working in Germany, the Netherlands, and Belgium in 1988. During the same year, 20,000 Koreans, 50,000 Indonesians, and 90,000 from the Philippines worked in the Gulf states. Before the Gulf War, up to two million foreign workers, mainly Egyptians, worked in Iraq.

Urbanization has been the most significant factor in internal migration in the modern Middle East. Driven by population pressure in rural areas, the urban population increased from twenty-one million (27 percent urban) in 1950 to 185 million (60 percent urban) in 1999. There is considerable variance between countries: In 1990, Syria's population was only half urban, Egypt's less than half urban, while the populations of Iraq and Turkey were more than 60 percent urban. Istanbul was one of the twenty largest cities in the world. Smaller countries such as Israel and Lebanon were as urbanized as Europe or North America.

Censuses and Population Data

A census by definition registers the entire population at one time. Prior to 1882 no real census was taken in the Middle East. In the place of censuses,

the Ottoman and Egyptian governments made compilations of registration data. The registers were lists of inhabitants by household in each village, taken by government officials. These often produced surprisingly accurate counts of the population, especially in areas that were under close governmental control. On occasion, the central governments of Egypt and the Ottoman Empire ordered general updates and compilations of the registers. During the 1860s the Ottoman government began to publish population numbers in the *salnames* (yearbooks) of its provinces. The Ottoman compilations usually listed data by sex and religion only, even though age-specific figures were kept and are available in archives. The 1313 Istatistik-i Umumi ("1895 General Statistics") was the only Ottoman publication to include data by age group. Population data was collected sporadically in Iran, but was not published officially.

The first real census in the Middle East was taken by the khedival government in Egypt just prior to the British occupation in 1882. Under British statistical influence, Egypt published censuses in 1897, 1907, 1917, 1927, and 1937. The British also undertook a limited form of census in Aden (later People's Democratic Republic of Yemen) in 1881, then published other counts of Aden, as part of the censuses of India, in 1891, 1901, 1911, 1921, and 1931. The Turkish republic began a modern census program with censuses in 1927 and 1935, followed by censuses every five years. The British Mandate government in Palestine took fairly accurate and very detailed censuses in 1922 and 1931, and with limited success updated the census data through birth and death records and published the data in the Palestine Blue Books. The French collected data in Syria and Lebanon, but only published brief summaries that indicate poor recording. An incomplete census was taken in Lebanon in 1942–1943.

Modern Middle Eastern censuses have routinely been supplemented by publications of detailed information on marriage, divorce, birth, and death, although these often have been accurate only for urban areas. Sample surveys of the population, often supported by the United Nations or other international bodies, have also been published.

Middle Eastern censuses after World War II

Country	Census years
Bahrain	1941, 1950, 1959, 1965, 1971, 1981, 1991, 2001

PORT SAʿID

Mediterranean port in Egypt.

Port Saʿid (Bur Saʿid), Egypt, situated on a narrow peninsula on the Mediterranean Sea coast, is located on the west side and at the northern end of the Suez

Canal, which links the Mediterranean and Red Sea. Established in conjunction with canal construction in 1859, it was named for Saʿid Pasha, viceroy of Egypt (1854–1863). Built in nineteenth-century European architectural style to accommodate Europeans working on Ferdinand de Lesseps's Suez Canal Project (1859–1869), it is complemented by a twin city, Port Fouad, located on the eastern side of the canal. The harbor became a maritime fueling station with export industries (especially chemical, tobacco, cotton, and food processing) supplementing sardine fishing and the production of salt from evaporated seawater. In 1904 a railroad link was completed between Port Saʿid and Cairo. As a major trade and business center, Port Saʿid thrived through both world wars. In July 1956 Egypt nationalized the canal after it had been an international waterway for nearly eighty-seven years. The port was strategic during the Arab–Israel wars and was attacked by Israeli forces in 1967 and 1973. The harbor was closed from 1967 to 1975, and most inhabitants evacuated the city. Egypt regained Port Saʿid in 1973, instituted major residential and commercial reconstruction, and established a tax-free industrial zone. Tourism was encouraged, and the city became an important summer resort. In 2003 Port Saʿid was the nation's fourth largest city, with 565,000 inhabitants, and second only to Alexandria as a commercial port.

POSTAGE STAMPS

Government-issued stamps encapsulate the history and culture of the region.

The Islamic states of the Middle East had operated elaborate postal messenger systems since the seventh century, but it was Great Britain in 1840 that issued the world's first postage stamp. It depicted Queen Victoria. Postage stamps quickly spread, with the Ottoman Empire issuing its first stamp in 1863, followed by Egypt in 1866, Persia in 1868, Afghanistan in 1871, the Hijaz (now part of Saudi Arabia) in 1916, and Yemen in 1926. Elsewhere, British, French, and Italian colonial officials in the Middle East designed the first stamps for their jurisdictions.

The Ottoman Empire issued its first postage stamp in 1863. Other Middle Eastern nations followed suit. The first stamps to be issued refrained from depicting human figures, but in the late nineteenth century, some nations did begin to issue stamps with portraits of current or past leaders on them. COURTESY OF DONALD M. REID, GEORGIA STATE UNIVERSITY.

Early Middle Eastern stamps, like Islamic coins before them, observed conservative Islamic tradition by rarely portraying human figures. Arabesque designs, calligraphy, or a crescent and star served as symbols instead. In 1876, Persia broke with tradition by showing its ruler on a stamp; the Ottomans did the same in 1913. Egypt, Iraq, and Transjordan followed during the 1920s; then Afghanistan, Syria,

and Lebanon during the 1940s. Saudi Arabia, more isolated and conservative, waited until the 1960s.

Rulers appeared variously in traditional dress, in Western coat and tie, or in military uniform. Turkey's Mustafa Kemal Atatürk, who secularized Turkey after the dissolution of the Ottoman Empire by, among other things, outlawing Muslim headwear, wore civilian dress on his stamps from 1926 on, but many soldiers-turned-president preferred military uniforms. After coming to power in 1979, Iraq's President Saddam Hussein appeared variously on stamps in coat and tie, army uniform, and Arab *kafiyya.* Some rulers promoted a cult of the leader on their stamps, with the hero towering above the masses he claimed to embody. Syria's Hafiz al-Asad, Egypt's Anwar al-Sadat, and Iraq's Saddam saturated stamps with their own portraits. Egypt's president Gamal Abdel Nasser was more reticent, and Husni Mubarak followed Nasser's rather than Sadat's example in this regard.

The first stamps of the Ottoman Empire, Egypt, Persia, Afghanistan, Saudi Arabia, and Yemen bore inscriptions in only Arabic script. Although they were not French colonies, they soon added French, long the main language of world diplomacy. All later switched to English as their second language on stamps—except Afghanistan, which kept French, and Turkey, whose adoption of the Latin alphabet in 1928 made its Turkish-only stamps partly accessible to Westerners. French colonial possessions used French, and British possessions English. French Algeria and Italian Libya used no Arabic on their stamps until independence (1962 and 1951, respectively). Hebrew has been the main language on Israel's stamps since independence in 1948, with English and Arabic as secondary languages.

European colonial stamps presented romanticized and orientalist colonial picturesque themes—pre-Islamic ruins, old mosques, colorful landscapes, and folk scenes. European officials first selected the pyramids and sphinx as symbols for Egyptian stamps, but many Egyptians came to identify, at least partially, with these pre-Islamic symbols. Egypt often commemorates ancient pharaonic treasures on stamps; folk costumes are also shown as part of a proud national heritage. Even so, stamps with such themes are often issued with Western tourists and collectors in mind.

Revolutions drastically changed stamp designs. "The people"—symbolic soldiers, peasants, workers, professionals, and women in both traditional and Western dress—celebrate liberation, modernization, and the drive for economic development. Stamps advertise such things as petroleum pipelines, factories, and broadcasting stations. Socialist countries commemorated land reform, the spread of healthcare, and five-year plans. In addition to such symbols of material and social progress, Israel also depicts themes from biblical history, Jewish history, and Zionism.

The stamps of Israel and the Arab states also reflect their respective versions of the Arab–Israel conflict. Stamps commemorate the war dead, advertise the latest aircraft, and boast of specific victories. Most Arab countries have issued stamps deploring the Dayr Yasin massacre (as they describe the event) of 1948, mourn the plight of Palestinian refugees, and celebrate Palestinian resistance to Israel. Since Israel's occupation of East Jerusalem in 1967, the Dome of the Rock (in the Haram al-Sharif) has often appeared on stamps as a symbol of Arab and Islamic claims to Jerusalem. The stamps of Arab countries that depict maps omit the name *Israel,* showing only the borders and sometimes the name of pre-1948 Palestine. With its borders still unsettled and controversial, Israel's stamp designers make it a practice to avoid showing national maps.

During the 1950s and 1960s, pan-Arab themes tended to overshadow symbols of local territorial patriotism. Beginning in the 1970s, Islamic themes became popular—mosques, Qurʾans, hegira dates, and crescents—on stamps honoring the prophet Muhammad's birthday, the Islamic New Year, and the hajj. Islamic themes stand out above all on the stamps of the Islamic Republic of Iran since the 1979 revolution, depicting deceased Shiʿite holy men, martyrs killed in the jihad (holy struggle) against Iraq, and anti-American symbols.

POTASH INDUSTRY

Potash, a potassium or potassium compound, is used in industry and as a component of agricultural fertilizer.

In 1861 Adolph Frank, a German Jew, discovered the benefits of potash, and his work helped create the potash industry. In 1902 Theodor Herzl's utopian work, *Altneuland,* envisioned a modern industry based on the chemical compounds in the Dead Sea. Moshe Novomeysky (1873–1961), a mining engineer and Zionist who immigrated to Palestine from Siberia in 1920, devised a plan to extract the Dead Sea's chemical compounds for industrial use, and approached the British government for concessionary rights. Following ten years of negotiation, he established the Palestine Potash Company, which became a major enterprise in the Middle East. The first plant was established on the northwestern shore of the sea in 1931. In 1937 a second plant was established on the southwestern shore, near Sodom. The Anglo-American Committee of Inquiry (1946) noted the Palestine Potash Works as a positive point of contact between the Arab and Jewish economies.

Much of the company was destroyed during the Arab–Israel War of 1948. Only the southwestern plant remained and, after the establishment of the State of Israel, became a government-controlled company. But production did not resume until 1954, when the road from Beersheba to Sodom was completed. Since then the company, privatized under the name Dead Sea Works Ltd., and its output have grown significantly. By 2000 Dead Sea Works was one of the world's largest producers of potash, producing almost 10 percent of the global output.

During the 1980s Jordan developed its own potash industry with technical and financial assistance from a variety of countries. But by the turn of the century sales were declining, with the Jordan Phosphate Mines Company reporting a loss of $40 million for the year 2000.

POTSDAM CONVENTION

Russo–German agreement concerning their involvement in the Middle East.

From its inception, the German-dominated Berlin–Baghdad Railway project aroused the suspicion of the other European powers. On 6 through 9 August, 1911, Germany and Russia concluded an agreement at Potsdam, Germany, whereby Russia acquiesced to continued German involvement in the railway in return for a German affirmation of Russia's position in Persia (now Iran).

ZACHARY KARABELL

POWELL, COLIN L.

[1937–]

U.S. army officer, diplomat.

Born in New York City to Jamaican immigrant parents, Colin Luther Powell received his B.S. in geology from the City College of New York in 1958, and later received an M.B.A. from George Washington University in Washington, D.C. Powell was commissioned as an officer in the United States army in 1958. He was sent as an adviser to the army of the Republic of Vietnam (South Vietnam) in 1962,

returning for a second tour of combat in 1968 to 1969 after the U.S. military entered the conflict in force. His Vietnam service left him with eleven military decorations.

Powell rose thereafter through the army to the rank of general. From October 1989 to September 1993 he was the first African American to serve as chairman of the Joint Chiefs of Staff—the highest military officer in the nation. During that period Powell oversaw the massive deployment of U.S. forces in the Middle East and the Horn of Africa, during the 1991 Gulf War and the intervention in Somalia in 1992. He was the author of the Powell Doctrine, which advocates committing U.S. forces to war only if massive force is used in conjunction with carefully articulated political goals and a defined exit strategy.

After several years of retirement from the military, Powell was appointed secretary of state beginning in January 2001. During his tenure he again was involved with momentous U.S. policy decisions regarding the Middle East and Southwest Asia. While he was secretary of state U.S. forces invaded Afghanistan in October 2001 and Iraq in March 2003. Powell was also active in pushing Israelis and Palestinians to resume negotiations in accordance with the Road Map for peace created by the United States, Russia, the European Union, and the United Nations.

PRINCESS BASMA WOMEN'S RESOURCE CENTER

Women's resource center for policy makers and women's groups in Jordan.

Prior to the 8 March 1996 celebrations of International Women's Day, the Princess Basma Women's Resource Center was opened in Amman. At the inauguration of the center Princess Basma, sister of the late Jordanian King Hussein ibn Talal, stressed that "the women's movement is undergoing a new stage in Jordan, which is that of implementing and executing strategies," adding that "both the governmental and nongovernmental organizations that deal with women's issues should co-operate, re-examine, and develop ways of implementing strategies." The center is directed by Princess Basma's daughter, Farah Daghestani, and it aims to gather and analyze information and enhance effective policies on women's issues. It also aims to increase the participation of women in development and decision-making processes in addition to organizing seminars and training workshops for women's groups. The center intends to implement mechanisms for the Platform of Action, which was agreed to at the 1995 United Nations Fourth Conference on Women in Beijing. The establishment of the center is perceived by many as an attempt by Princess Basma to take full control of women's issues in Jordan, especially because it came after the 1992 establishment of the Jordanian National Committee for Women and the 1995 establishment of the Jordanian National Women's Forum.

ISIS NUSAIR

PROGRESSIVE SOCIALIST PARTY

Lebanese political party, founded in Beirut in 1949 that played an important role in Lebanon after independence.

The Progressive Socialist Party (PSP) was a major vehicle for the political ambitions of its founder, Kamal Jumblatt. Born in Mukhtara in 1917, Jum-

blatt belonged to one of the major Druze families, the head of a major Druze family confederation (the Jumblatis) in Lebanon.

The party was originally formed as a multisectarian party with Christians and Muslim intellectuals comprising its leadership, but increasingly it became organized around its president and his electoral calculations and interests. Major policy decisions were undertaken by the president, who is the center of authority. Despite claims to the contrary, the PSP is widely perceived to operate according to the sectarian political interests of the Druze community, as determined by its leader.

The tenets of the party are a mixture of social democratic practices and Arab nationalist thought. Jumblatt believed that industrialization was inevitable but that it had to be reined in because of ecological concerns. The PSP has advocated the abolition of the political confessional system, the creation of civil courts for civil marriages, a unified educational system, the nationalization of important services, and a progressive inheritance taxation system. In foreign policy, the PSP has emphasized Lebanon's Arab identity and role, solidarity with the Palestinian cause, and support for major issues and concerns regarding developing countries.

During the civil war (1975–1976), the PSP under Jumblatt became the linchpin for the Lebanese National Movement and fielded 2,000 fighters. Following the assassination of Jumblatt, his son, Walid Jumblatt, became the president of the PSP in 1977. Walid Jumblatt succeeded in fending off any challenges to his leadership within the Druze community, and in the War of the Mountain (beginning in 1983) he emerged as the undisputed leader of the Druze community. The party has been continuously represented in the parliament since 1972, including in the post-Ta'if parliaments.

PROTECTORATE STATES

Traditional southern Arabian political entities protected by British treaty from 1839 to 1967 when they united to form South Yemen.

The dozen or so protectorate states to the north and east of the Aden colony occupied a huge area relative to that of the colony. They were viewed primarily as a political-military buffer for that highly valued port and military base. Over the 125 years of British occupation of Aden since 1839, the protectorates were defined and redefined geographically as well as administratively in a largely ad hoc way. Political-military pressure first from the Ottoman Turks and then from the imamate of North Yemen caused the British to become increasingly involved in the governance of the states in Aden's immediate environs during the first six decades of the twentieth century; local political turmoil in the decades after World War I drew the British more directly into the governance of the vast Hadramawt region far to the east of Aden. Out of these "independent," amorphous protectorates, eventually in combination with Aden itself, the British in the 1960s sought to build the South Arabia Federation, the ship of state they hoped would succeed them when they withdrew in 1967. They failed, but Aden and the protectorate states went on to comprise South Yemen, the People's Democratic Republic of Yemen (PDRY).

PROTESTANTISM AND PROTESTANT MISSIONS

Protestant missions were active in the Middle East from the nineteenth century.

Protestant denominations based chiefly in the United States and Britain have sponsored missionary activities in the Middle East since the opening of the nineteenth century, leaving a legacy of educational and benevolent institutions whose influence is felt

to the present day. Protestantism, one of the three major branches of Christianity, encompasses a large number of denominations with widely differing liturgical and theological structures. What they have in common is that they do not recognize the moral and doctrinal authority of the Roman pontiff, they stress the centrality of the Bible and each individual's interpretation of it, and they share the belief that in the matter of salvation, the relationship between the individual and God is unmediated.

Missions in the Nineteenth Century

The most prominent missionary organization in the United States was the American Board of Commissioners for Foreign Missions (ABCFM), supported by the Congregational Church, which established mission stations in Lebanon in 1823, in Constantinople in 1831, and in Urmia (Iran) in 1834. In 1870 the ABCFM turned over part of its territory of operations, including Lebanon, to the Board of Foreign Missions of the Presbyterian Church. The Arabian Mission, founded as a nondenominational mission under the auspices of the Dutch Reformed Church in America in 1889, established a school in Basra and hospitals in Muscat, Bahrain, and Kuwait. In Britain the leading missionary organization in the Middle East was the Church Missionary Society (CMS), which began work in Smyrna (İzmir) in 1815, in Egypt in 1825, in Julfa (Isfahan) in 1875, and in Damascus in 1860. Among many smaller or short-lived mission societies that attempted work in the Middle East were the Boston Female Society for Promoting Christianity amongst the Jews, founded in 1816, and the London Society for Promoting Christianity amongst the Jews.

The original goal of Protestant missions in the Middle East was to preach the Gospel to Muslims. Both goal and method met immediate obstacles: Despite Muslim respect for the prophethood of Jesus, Christ as deity was and is incompatible with Islamic monotheism; for the person to be converted, leaving one's religious community, whether Christian, Muslim, or Jewish, meant separation from family and social networks; politically, under Ottoman authority missionaries were forbidden to preach among Muslims; and finally, the price of apostasy in Islamic law is death. Lack of familiarity with indigenous languages on the part of missionaries was also a serious obstacle to successful preaching.

Consequently, in a pattern that most missionary societies were to follow, the ABCFM turned its attention to indigenous Christian communities: Nestorian, Armenian, Coptic, Greek, and Syriac. Considered by the ABCFM to be "nominal Christians," unschooled in the Bible and bankrupt of Christian virtues, these Christians were to be reformed from within so as to serve as models of emulation to their Muslim neighbors, and ultimately become the instrument of their evangelization. The method of attracting potential proselytes to the Gospel message was benevolent service, such as establishing schools for children and clinics to offer medical care. Often such evangelizing aroused the resentment and noncooperation of indigenous church leaders whose parishioners began to gravitate to the missions, and with good reason: Protestant missionaries were perceived to be well-connected politically and able to offer protection to minorities; they offered schools and medical care available nowhere else; and, after the creation of a Protestant Millet, becoming Protestant entitled converts to commercial privileges originally afforded only to Europeans.

The outcome was breaking off of separate Protestant congregations from each of the Eastern Orthodox churches, which had already been fractured by the creation of separate Catholic denominations. In Turkey, where Armenians were the primary target, there were 111 Armenian Protestant churches by 1895, and in Egypt, by 1926 there were 150 congregations of Coptic Protestant Christians with 155 Egyptian clergy. As a percentage of the total population, the number of Christians of all denominations declined precipitously in the last decades of the twentieth century, especially in Palestine, but in the mid-1970s there were altogether about 250,000 indigenous Protestants in the Middle East.

Protestant missions have been criticized for bringing about increased sectarianism in a region already fragmented by religious sectarianism. Missionary activity has also been blamed for prompting violence against religious minorities, such as the massacre of Nestorian Assyrian Christians by Kurds in 1843 and the assaults against the Alawi in eastern Turkey later in the century. On the other hand, the benevolent work of Protestant missions brought about positive and lasting change. In order to pros-

elytize, for example, missionaries imported the first printing presses into the region, prepared translations, and helped to expand literacy. Missionary health care institutions, such as the Arabian Mission hospitals in Bahrain and Kuwait, the Edinburgh Medical Mission in Damascus, the CMS medical missions in Baghdad and Mosul, and twelve missionary hospitals in Iran, offered the best medical care available for their time.

The most enduring achievement of the missions lay in founding institutions of higher education, such as the American University of Beirut, established in 1864 as the Syrian Protestant College; Robert College in Constantinople (1863); and the American University in Cairo (1920). The Presbyterian Mission's American Junior College for Women in Beirut, the American College for Girls in Cairo, and Constantinople College for Girls were the first institutions of higher education for women in the Middle East. Around the Persian Gulf and in many rural areas across the region, missionary schools were the only secondary schools offering secular subjects for girls until well after World War I. The British Syrian Mission alone opened fifty-six schools for girls, starting in 1860.

By the end of World War I, missionary work in the Middle East began to decline along with Western enthusiasm for the missionary enterprise worldwide. In the 1930s and 1940s governments of the newly independent states in the Middle East placed increasing limitations on missionary activities, by nationalizing schools, for example, so that many missionary societies consolidated their efforts or ceased operations.

Contemporary Missions

Since about 1980 globalization has brought Protestant missions back onto the world stage in a new burst of activity. Using the Internet and satellite television for fundraising and recruitment, and establishing cooperative links with international agencies, churches, and other mission organizations abroad, mission societies both old and new have a presence in almost every country in the Middle East.

In method, purpose, and constituency, these societies fall into two broadly divergent categories. On the one hand are spiritual and institutional descendants of mainline Protestant denominations who have consolidated mission projects institutionally and partnered their efforts with each other and with indigenous Christian churches. Concerned with Christian benevolent action for the benefit of all, as opposed to proselytizing on behalf of a particular religious doctrine, these mission organizations focus on building community with indigenous religious groups, promoting social justice, and alleviating human suffering. Global Ministries, for example, represents a consolidation of the Division of Overseas Ministries of the Disciples of Christ and Wider Church Ministries of the United Church of Christ, and partners with a wide network of regional and international religious organizations that share their goals and values. These links include Churches for Middle East Peace, which is itself an ecumenical advocacy group of mainline U.S. and Middle Eastern Protestant churches, the Coptic Evangelical Organization for Social Services (CEOSS), Sabeel Ecumenical Liberation Theology Center, the Young Men's Christian Association International, and the Middle East Council of Churches, which is a fellowship of local Christian communions tied to the World Council of Churches (WCC). The WCC maintains its own relief agency in the Middle East, Action of the Churches Together (ACT), which responds to emergencies by joining forces with like-minded international agencies. In anticipation of humanitarian needs resulting from the 2003 U.S.-led war in Iraq, for example, ACT joined with U.K.-based Christian Aid, Norwegian Church Aid, Lutheran World Federation, and the Dutch-based Inter Church Organization for Development Cooperation.

By contrast, U.S. conservative evangelical missionary organizations targeting the Middle East are concerned primarily with evangelizing Muslims through forthright teaching that salvation comes through Jesus Christ alone. For these groups, extending humanitarian aid is a worthy task in its own right, but it is to be given in tandem with a Christian message. The International Mission Board of the Southern Baptist Convention, for example, in anticipation of Iraqi refugees crossing into Jordan in 2003, sent food boxes carrying a quote from John 1:17 translated into Arabic: "For the Law was given through Moses; grace and truth were realized through Jesus Christ." Similarly, the evangelical

mission Samaritan's Purse (SP) supports a health clinic in Afghanistan and a hospital, schools, and agricultural and food aid in war-torn Sudan, where mission staff are bound to fulfill SP's statement of faith, which includes the belief that evangelism is a responsibility of the church and of every individual Christian. There are also evangelicals in the Middle East who encourage activities that have the effect of overt evangelism. For example, in 1995, religious associations in Lebanon and in Egypt joined a consortium of European and U.S. evangelical groups to establish a Christian satellite television station, SAT-7.

One outcome of proselytizing among Muslims has been a spate of assaults on evangelical missionaries, including the 2002 killing in southern Lebanon of a U.S. nurse working at a missionary clinic and the shooting death in Yemen two months later of three missionary medical staff and the wounding of a fourth. These assaults, in the viewpoint of mainstream clergy in the Middle East, both Catholic and Protestant, are evidence that direct evangelizing of Muslims is not only counterproductive but puts all missionaries as well as local Christians in jeopardy. Evangelicals counter that their objective is merely to expose people to the truth that Jesus is their savior, and let them decide for themselves. Franklin Graham, head of Samaritan's Purse and politically the most influential evangelical leader in the United States, equates their deaths with martyrdom, and sees them as an inspiration to others who would follow in their footsteps.

Another major source of contention between U.S. evangelical and mainline Protestant missions stems from the evangelicals' stated belief in the Bible as literal word of God, interpreted to sanctify the expansion of Jewish settlement over all of Palestine and beyond. By contrast, mainline Protestant groups seek a peaceful resolution of the conflict that accommodates all the region's peoples.

PROTOCOLS OF THE ELDERS OF ZION

One of the world's most notorious antisemitic documents, crafted at the end of the nineteenth century by the Tsarist Russian secret police, the Okhrana.

Drawing upon what was originally a German plagiarism of a French novel attacking the French emperor, Napoléon III—and which had nothing whatever to do with Jews, the *Protocols of the Elders of Zion* was brimming with paranoid ruminations of a Jewish lust for world domination, and purported to be the transcript of a conspiratorial meeting of elderly Jewish plotters in the Jewish cemetery in Prague. This delirious fantasy has had the most extraordinarily long life. Intended originally to bolster the sagging fortunes of tsarist rule in Russia, the *Protocols* reached a broad public audience during the Russian Revolution and Civil War, when they were mobilized against the Bolshevik insurgents. They soon became a basic part of the antisemitic canon, helping to form part of the world view of such diverse proponents as Henry Ford and Adolf Hitler. Among many elements that attracted readers were the lurid portrayal of the plotters' mentality, the disparaging picture of modernity, and allusions to modern economic inequities. Although convincingly exposed as a forgery in England in 1921, the *Protocols* have been called the most widely circulated book on the globe, next to the Bible, and have appeared in countless editions and translations.

The *Protocols* have become an important text in anti-Israel and antisemitic propaganda, have been disseminated widely throughout the Middle East, and have benefited from periodic approbation from politicians, academics, and the mass media in the Arab and Muslim world. As recently as November 2002, during Ramadan, the *Protocols* served as a main theme of an Egyptian television series, "A Rider without a Horse," that reached millions of viewers throughout the region.

MICHAEL R. MARRUS

PUSHTUN

Largest ethnic group in Afghanistan.

The Pushtun, sometimes also referred to as Pathans or Pakhtuns, make up between 38 and 45 percent of the population of Afghanistan, and since the beginning of the nineteenth century have comprised the ruling elite of the country. Although Pushtuns live in most parts of Afghanistan, they are concentrated in the southeast, especially along the border with Pakistan's Northwest Frontier province, where several million more Pushtun also live.

The language spoken by Pushtun, usually called Pushto, is distantly related to Persian and belongs to the Iranian family of languages. Pushto, along with Dari, the Afghan version of Persian, is an official language of Afghanistan. There are no words in Pushto that refer exclusively to a "lineage," in which descent is demonstrated, or a "clan," in which descent is merely assumed; the suffixes *-zai* and *-khel,* added to names of males to imply descent from them, can mean either "lineage" or "clan." The ambiguity is very useful in practice. Instead of allowing genealogy to dictate their behavior, the Pushtun can manipulate their tables of organization so as to change the significance of levels of segmentation, to the extent of incorporating totally alien groups within their genealogical fold. The critical variable in determining whether a group belongs is the exchange of women in marriage.

Durrani, Ghilzai, and Karlanri have been for the last two hundred years the names of the major groups of Pushtun clans. Symbolically, the unity of the Pushtun is expressed through their adherence to Pushtunwali, the ideal code of behavior, stressing honor, hospitality, and revenge; it is also a customary system of mediation that includes provisions for settling disputes ranging from theft to homicide.

PYRAMIDS

Burial monuments for ancient Egyptian kings.

For over a thousand years, from the Step Pyramid of King Djoser (r. 2654–2635 B.C.E.) to the beginning of the New Kingdom with the Eighteenth Dynasty (1549 B.C.E.), Egyptian kings were buried in pyramid tombs. There may be as many as one hundred; remains of some that are mentioned in texts have not yet been discovered. The ruler's pyramid was the center of a pyramid complex, which generally included a mortuary temple on the east side, a causeway leading down to a valley temple on the edge of the flood plain, and subsidiary pyramids for queens. All were plundered long ago. The three major pyramids of Giza (Fourth dynasty, c. 2547–2475 B.C.E.), the largest of which is that of Khufu (Cheops), are the most famous. Easily visible from Cairo, they are central objectives of archaeological research and tourism. Khufu's Great Pyramid is unusual in containing three burial chambers, probably reflecting changes in plan, with the king buried in the uppermost. The interior walls of the pyramid of Unas, the last ruler of the 5th Dynasty (2375–2345 B.C.E), and those of the 6th Dynasty (2345–2181 B.C.E) at Saqqara are elaborately inscribed with religious passages known as Pyramid Texts. After Egyptian rulers stopped building pyramids, nonroyal funerary chapels sometimes included small pyramid-shaped structures. Centuries later in what is now northern Sudan, the Nubian

kings of Meroe and Napata built steep-sided pyramids on a smaller scale than those of their Egyptian predecessors. First depicted on postage stamps in 1867 and giving their name to *al-Ahram* (Egypt's leading newspaper), they have become national symbols of Egypt.

Q

QABBANI, NIZAR

[1923–1998]

Syrian poet.

Nizar Qabbani was born in Damascus on 21 March 1923. He completed his study of law at the Syrian University in 1945, and later joined the foreign ministry and served in Cairo, Ankara, London, Madrid, and Beijing, resigning in 1966 to establish in Beirut a publishing house carrying his name and devoted to printing poetry. He began writing at age sixteen and published more than thirty of his own volumes. His major themes involve physical beauty. One poem, "Bread, Hashish, and a Moon" (1954), brought upon him the wrath of the conservatives in the Syrian parliament, who called for his resignation. After the Arab defeat in the Arab–Israel War of 1967, Qabbani wrote a scathing attack on Arab mores and leadership in his poem "Marginal Notes on the Book of the Relapse" (1967), which won him wide popular acclaim. Henceforth, his writings addressed the political and social malaise of Arab society in a poetic diction that was intentionally simplified by the occasional use of Arabic vernacular. Large crowds attended his readings, attesting to his popularity in the Arab world. His works went into several editions and sold in exceptionally large numbers. He resided in London, and died there in May 1998.

Qabbani's published works include *The Brunette Said to Me* (1944), *Childhood of a Breast* (1948), *Samba* (1949), *You Are Mine* (1950), *Poems* (1956), *My Beloved* (1961), *Poetry Is a Green Lamp* (1963), *Drawing in Words* (1966), *The Diary of a Blasé Woman* (1968), *The Book of Love* (1970), *A Hundred Love Letters* (1972), *Outlawed Poems* (1972), *Love Will Remain My Master* (1989), *I Have Married You Freedom* (1989), *The Match Is in My Hand, and Your States Are of Paper* (1989), *No Winner but Love* (1990), *The Secret Papers of a Qarmati Lover* (1990), and *On Entering the Sea: Erotic and Other Poetry of Nizar Qabbani* (1998).

QADDAFI, MUAMMAR AL-

[c. 1942–]

Ruler of Libya since 1969.

Muammar al-Qaddafi (also spelled Muʿammar al-Qadhdhafi) was born during World War II, probably in the spring of 1942, to a Bedouin family near Sirte in northern Libya. The only surviving son of a poor family, he did not attend school until he was nearly ten, when he was sent to a local mosque school. He was evidently very intelligent, for he went on to secondary school in Sabha (or Sebha), in the southern province of Fezzan, between 1956 and 1961. Like many young people in the Arab world at the time, he was an admirer of Gamal Abdel Nasser, the ruler of Egypt, whose anti-imperialist and Arab nationalist foreign policies and egalitarian domestic reforms were then widely popular.

By 1961, when he was expelled from school in Sabha, Qaddafi's political inclinations were well known. His dismissal is variously attributed to an altercation with the son of the powerful governor of the Fezzan and to demonstrations he organized against the breakup of the union of Syria and Egypt (the United Arab Republic) that year. Qaddafi finished secondary school in coastal Misurata, where he renewed contact with some of his childhood friends, several of whom joined him in entering the Libyan Military Academy. These friends subsequently became members of the group that plotted the successful overthrow of the pro-Western Libyan monarchy in 1969. This lends credence to Qaddafi's claim that he determined very early on that only through a military coup could someone with his humble family background and ambitious political goals exercise power in Libya.

A six-month signals course in Britain followed graduation from the military academy in 1965, and Qaddafi was then posted near Benghazi. From there, he readied his secret network of conspirators for 1 September 1969, when they took advantage of a vacation trip by aging King Muhammad Idris al-Mahdi al-Sanusi to Turkey to topple the monarchy in a bloodless coup. The Free Unionist Officers, as they called themselves, initially constituted themselves as a collective Revolutionary Command Council (RCC) and appointed a number of more senior military and civilian figures to government positions. By December, however, when a countercoup was said to have been foiled, the RCC was given full authority and Qaddafi was revealed as the regime's leading figure. Although he serves as head of state, to this day Qaddafi holds no formal position of authority.

The 1970s

The new regime's initial posture reflected Qaddafi's admiration of Nasser's Arab nationalism as well as his own admiration of Islam. (Indeed, although Qaddafi's politics were often controversial, his reputation for personal integrity has remained virtually untarnished through his tenure in office.) Soon alcohol was outlawed, churches and night clubs closed, the British and American military bases evacuated, foreign-owned banks seized, the remaining Italian residents expelled (Libya had been an Italian colony before World War II), and only the Arabic language permitted in all official and public communications.

By the mid-1970s, Qaddafi was not only disenchanted with Nasser's successor in Egypt, Anwar al-Sadat, but had come into his own as a political visionary. Between 1976 and 1979, he published the three slim volumes of the *Green Book,* in which he expounded his third international theory (also known as third universal theory), an attempt to develop an alternative to capitalism and communism, both of which Qaddafi found unsuitable to the Libyan environment. Disenchanted with both competitive and single-party politics, Qaddafi instituted instead a system of popular congresses and committees—composed of elected members—to run the country on all levels, including local administration, state-owned enterprises, universities, and national policy review and implementation.

Muammar al-Qaddafi (b. 1942) became the leader of Libya in 1969 when he staged a coup that successfully overthrew the country's monarchy. Qaddafi employs socialist philosophies in his dictatorship, and has been linked to various terrorist activities. Pictured are (from left to right) Qaddafi, Yasir Arafat, Gamal Abdel Nasser, and Hussein I. © BETTMANN/CORBIS. REPRODUCED BY PERMISSION.

Contributing to the upheaval precipitated by these political innovations were Qaddafi's parallel economic reforms, which were based on his radically egalitarian precapitalist vision of economic relations. In his view, the exploitation entailed in wage labor, rent, and commerce must be replaced by equal partnerships and by nonprofit state-run distribution of goods and services. Workers were encouraged to take over the enterprises in which they were employed, landlords lost their property to their tenants, and retail trade disappeared. This immediately produced shortages and hoarding of basic commodities, halted housing construction, and increased already widespread economic inefficiency. That the country survived these disruptions was a function of its very large petroleum revenues during the 1970s and the substantial expatriate workforce they subsidized.

By the late 1970s, Qaddafi had grown dissatisfied with the performance of the committees and congresses; their lackluster record resulted partly from inexperience, partly from bad faith, and partly from unrealistic expectations on the part of their founder. To rectify the problems, he introduced watchdog "revolutionary committees." Domestically, these oversight groups did little more than further obscure the lines of authority, but they earned considerable notoriety abroad. Because Qaddafi attributed the failures of his revolution to foreign and domestic subversion, he assigned the revolutionary committees responsibility for "liquidating the enemies of the revolution"—that is, assassinating government opponents at home and abroad.

From the 1980s On

Qaddafi was soon branded one of the world's principal sponsors of terrorism by many Western nations, notably the United States, which initially viewed his coup with tolerance. By the late 1970s, his vitriolic condemnation of the Camp David Accords capped a decade of increasingly hostile relations with the West. Qaddafi's large arms purchases,

his support of national liberation movements—from various Palestinian factions to the Irish Republican Army—and his campaign to assassinate Libyan opponents of the regime outside the country provided justification for the U.S. campaign that culminated in the bombing of Tripoli and Benghazi in April 1986. Qaddafi appeared to have been targeted personally—several of his family were wounded and an adopted daughter was killed in the raid—and his high-profile involvement diminished for some time thereafter.

Severe economic problems in the second half of the 1980s and the implosion of the Soviet Union at the end of the decade also contributed to Qaddafi's quieter demeanor. In response to a fall in oil prices and the imposition of economic sanctions by the United States, Qaddafi reversed some of his domestic reforms. Small-scale retail trade was allowed to resume, and some political prisoners were released. Time and experience thus tempered Qaddafi's methods; however, there was no indication his commitment to a vision of unity, justice, and freedom for the Libyan people and their Arab compatriots had diminished.

As the twentieth century closed, Qaddafi initiated significant changes in the tone, content, and direction of Libyan foreign policy, and he accelerated this process in the wake of the 11 September 2001 terrorist attacks on the United States. Following the suspension of U.N. sanctions in 1998, he championed a number of new initiatives in Africa, signaling a major shift in emphasis from the Arab world to the African continent. For example, Libya took the lead in establishing the Community of Sahel-Saharan States (COMESSA) in 1998, called for the creation of a United States of Africa in 1999, and became the African candidate for chairman of the U.N. Human Rights Commission in 2002. In tandem with these initiatives, the Qaddafi regime strengthened long-standing commercial and diplomatic ties with key European states, including Britain, Italy, and Russia. Eager to reestablish diplomatic relations with the United States, Qaddafi was an enthusiastic, early supporter of the war on terrorism.

Internally, the Qaddafi regime, by the end of the 1990s, had successfully corralled domestic opposition on a number of fronts, including the army, tribal groups, and militant Islamists. A shopworn economy, adversely affected by low oil prices in the 1990s, was posed in the early twenty-first century to benefit from foreign investment and private enterprise. Finally, even as Libya sought political reform, including the promotion of democracy and human rights, Qaddafi's quixotic personality masked a relatively stable political system in which external policies were often linked to issues of domestic legitimacy.

Qaddafi later took several significant steps on the road to international reintegration. Libyan officials in September 2003 agreed to pay $2.7 billion in compensation to the families of the victims of the 1988 bombing of Pan Am flight 103. In December 2003, Libya renounced its unconventional weapons programs, agreeing to international inspections to verify compliance. And in January 2004, Libya cleared one of the last hurdles in its campaign to rejoin the international community, reaching a settlement in the 1989 bombing of a French airliner over Africa.

QADDUMI, FARUQ

[1931–]

Palestinian political activist.

Born in Jinsafut in the northern West Bank, Qaddumi studied economics and political science at Cairo University. In the late 1950s, he helped found al-Fatah, the most significant organization in what became the Palestinian national liberation movement. Known as Abu al-Lutf, Qaddumi has long been a member of al-Fatah's Central Committee. He helped to secure funding from Arab Gulf states and represented the group's aims to Syria, Iraq, and Egypt in the 1960s. Qaddumi has held important positions within the Palestine Liberation Organization (PLO). He was elected to its Executive Committee in February 1969 and has headed the Political Department since July 1974. He was long considered a potential successor to PLO Chairman Yasir Arafat.

Qaddumi's 1967 proposal for establishing a Palestinian state in the West Bank and Gaza was an early step in what became official PLO policy in 1977. Qaddumi has often clashed with Arafat, questioning the wisdom of Arafat's embrace of various diplomatic solutions to the Arab-Israeli conflict. He opposed the Israeli-PLO Oslo Accord of 1993 and increased his attacks on Arafat and his policies thereafter. He refused even to enter the territory of the Palestinian Authority (PA), and was long an opponent of Mahmud Abbas, the Fatah leader, who helped negotiate the Oslo Accord and who served as the PA's first prime minister in 2003. Qaddumi still serves as the "foreign minister" of the PLO, most recently representing the PLO at an Arab League meeting in 2003.

QADI

Islamic judge.

According to Muslim legal doctrine, the *qadi* or judge is a public official whose primary responsibilities entail the administration of justice on the basis of the divinely revealed law of Islam, known in Arabic as the *shariʿa*. Eligibility for this office has been traditionally restricted to male jurists of majority age who have a reasonably comprehensive knowledge of the doctrine of their particular school of law. Because Islamic law construes the qadi as an agent of the legitimate governing authority, the government usually reserves the right to appoint qadis for the towns, cities, or regions under its control. In many historical and cultural contexts, judicial hierarchies have been established with the creation of one or more "chief judges" whose responsibility is to appoint and oversee the conduct of subordinate judges. While in theory, the qadi is empowered to adjudicate cases involving every legal issue—both civil and criminal—addressed by the *shariʿa*, in practice the qadi's authority extends only as far as the *shariʿa* is actually applied as the law of a given Muslim society. In many medieval and modern contexts, government institution and application of far-reaching secular legal codes have limited the jurisdiction of the qadi to areas of personal status (i.e., marriage, divorce, child custody, and inheritance) and the supervision of religious endowments *(waqf).*

See also *SHARIʿA*.

SCOTT ALEXANDER

QADIRIYYA ORDER

Sufi brotherhood.

The Qadiriyya Order was named for Abd al-Qadir al-Jilani (c. 1077–1166), Sufi teacher and founder

of a Hanbali *madrasa* and religious hostel. Biographies of Abd al-Qadir date from more than a century after his death, so not much is known for certain about his life. Many apocryphal stories exist, attributing miracles, sayings, and poems to him.

Adb al-Qadir was born in the Jilan district of modern-day Iran, south of the Caspian Sea. He went to Baghdad at a young age to study philosophy and law and began preaching at about age fifty. The institutions that he founded in Baghdad were perpetuated, in large part by his forty-nine sons and other associates, until Baghdad fell to the Mongols in 1258. Abd al-Qadir is buried in Baghdad, and his tomb is a pilgrimage site.

Surviving works of Abd al-Qadir include *The Resource for Seekers of the Path of Wisdom* (a guidebook to Hanbali belief and practice, with a concluding section on Sufism), *The Divine Beginning* (a collection of sixty-two sermons), and *The Revelation of the Hidden* (a collection of seventy-eight sermons). The main theme of his work is the integration of Hanbali and Sufi thought in Islam.

Some claim that the Qadiriyya was widespread during Abd al-Qadir's lifetime. Although he was unquestionably a charismatic figure with many followers, the founding and spread of a brotherhood with fully developed institutions probably date from well after his death. In any case, the Qadiriyya was one of the earliest and became the most widespread of Sufi brotherhoods, playing a significant role in the spread of Islam.

From Iraq, the Qadiriyya spread first to Syria in the late fourteenth and early fifteenth centuries, with centers in Damascus and Hama. Refugees introduced the Qadiriyya into Morocco after they were expelled from Spain in 1492. The Qadiriyya spread to other parts of the Fertile Crescent and the Maghrib (North Africa), then to central Asia, the Arabian peninsula, India, and Eastern Europe. In the nineteenth century, the Qadiriyya reached sub-Saharan Africa and the Malay Peninsula.

Through his sermons, Abd al-Qadir taught asceticism, peacefulness, generosity, humanitarianism, and submission to the will of Allah. The emphases of the Qadiriyya have varied by time and place. Some brotherhoods venerate the personage of Abd al-Qadir and suggest that he performed miracles; others stress his teachings. Many brotherhoods are also derivative of the Qadiriyya but are named for followers of Abd al-Qadir.

QAFIH, YIHYE BEN SOLOMON

[1850–1932]

Yemenite Jewish scholar.

Yihye ben Solomon Qafih was born in Sanʿa, capital of Yemen, orphaned as a child, and raised by his grandfather. His areas of scholarly expertise included the halakhah (the body of Jewish law supplementing scriptural law and forming the legal part of the Talmud) and the works of both medieval and Enlightenment Jewish thinkers. Unlike other Yemenite scholars, he established communication with foreign contemporaries, among them the rabbis Abraham Isaac Kook and Hillel Zeitlin, with whom he communicated regarding the essence of Kabbalah (a system of Jewish theosophy and mysticism).

Qafih's most important enterprise was the Dardaʾim movement (named for Darda, one of the four ancient Jewish sages), founded on the eve of World War I, and emulating Haskalah (the Enlightenment) as it appeared among European Jewry during the eighteenth century. Although leading to partial Jewish intellectual revival in Sanʿa, it provoked considerable controversy among local rabbis. Nevertheless, Qafih is considered the most important Jewish reformer of modern-day Yemen.

QA'ID

See GLOSSARY

QAʿIDA, AL-

Militant organization formed, not necessarily formally as a political party, sometime after 1986 by Osama bin Ladin, who settled in Afghanistan to help in the organization of Muslim Arab volunteers driven by hostility against Soviet communism.

Al-Qaʿida (also Al-Qaeda and Al Qaeda; literally, "the base") was founded by bin Ladin and his lieutenants to take advantage of the religious fundamentalist revival that was spurred by the Iranian Revolution and the Soviet invasion of Afghanistan, and has clearly left its mark on world affairs due to its practice of spectacular and largely indiscriminate violence worldwide. This small organization cannot be separated from the career and fortune, literally, of its founder, Saudi millionaire Osama bin Ladin.

Bin Ladin was born in Saudi Arabia in 1957 to a very wealthy father. He attended King Abd al-Aziz University in Riyadh, and obtained a degree in public administration and management. He fell under the spell of Palestinian fundamentalist advocate Abdullah Azzam, who popularized the cause of the "struggle against the Soviet infidels" after the Soviet invasion of Afghanistan in 1979. Bin Ladin relocated to Pakistan to organize the efforts of Arab volunteers; he quickly distinguished himself with his organizational skills, but was not known as the overall leader. He still served more as an assistant to Azzam, and did not distinguish himself in battle. He used some of his fortune to help in the organization and recruitment efforts. After the death of Azzam, bin Ladin rose in stature, and founded in the mid-1980s (probably in 1986) the highly secretive organization that was later known as al-Qaʿida. It became a vehicle for the declaration of international military struggle against governments and Western representatives and institutions in the Muslim world. It would later carry the blood struggle worldwide. Its ideology is influenced by the fundamentalist worldview and militant piety and dogmatism of seventh-century Kharijites, Wahhabism, and contemporary extremist offshoots of the Egyptian Muslim Brotherhood. The organization benefited from the largesse of oil-rich Arab governments and the CIA during the 1980s. But when Iraq invaded Kuwait, bin Ladin broke with the Saudi royal family after years of a close alliance. He relocated in 1991 to Sudan, where he stayed until 1996. Bin Ladin continued to secretively recruit and form bases and cells in many parts of the Muslim world, and even among Muslim immigrants in Western countries.

After his expulsion from the Sudan in 1996, he sought refuge in Afghanistan, where the militant Taliban government was in power. He influenced the thinking of the Taliban, and joined ranks with the disaffected rejects of the Arab state prison systems. Fundamentalist militants who were wanted in their home countries flocked to Afghanistan to join the new movement. Ayman al-Zawahiri (1951–), a physician and militant fundamentalist from Egypt who served time after the assassination of Egyptian president Sadat, became bin Ladin's deputy; they both announced the formation in 1998 of the Islamic Front for the Combat of Jews and Crusaders. This announcement clearly showed the influence of al-Zawahiri, who was an early advocate of indiscriminate violence in the name of Jihad. Bin Ladin was an enthusiastic partner, and the two complemented one another. Al-Zawahiri was the ideologue, but since he lacked charisma, he left it to bin Ladin to inspire the thousands of young recruits who passed through the training camps of Afghanistan. The agenda of al-Qaʿida was initially centered around the expulsion of all Christians and Jews from Arabia, relying for that on a reported *Sahih* hadith of the Prophet. The organization would later develop an agenda that contained a litany of complaints about Western intervention in the Middle East.

This secretive organization remains mysterious despite the new revelations about it that came out in the Western press after 11 September 2001. It is not structured like a regular political party, and the organization seems to be more horizontal than vertical. Groups are trained in camps, where they receive military training and ideological indoctrination, and are then dispatched to faraway places to either improvise an attack or implement a plan that had been set by bin Ladin and his aides. In 1998, the organization came to international attention with twin suicide bombings against U.S. embassies in Tanzania and Kenya. This was followed by U.S. strikes on al-Qaʿida bases in Afghanistan, intended to kill bin Ladin. Bin Ladin survived, and had most likely been busy with the planning for his most spectacular and violent act yet: 11 September 2001.

Al-Qaʿida has an unusual mix of traditional ideology with an adept utilization of modern technology for its violent ways. Members communicate through e-mails, and computers were found in caves after the eviction of al-Qaʿida from Afghanistan. This technical side perhaps reflects the construction business from which the bin Ladin family came. Bin Ladin has also a very keen sense of the value of propaganda, and the audio and video tapes that are produced by al-Qaʾida (through its affiliated propaganda outfit, Muʾassasat al-Sahhab) are quite sophisticated, although the language is crudely and vulgarly hateful against Jews and Christians (all Jews and all Christians). The organization has not tried to win mass appeal, and bin Ladin's repeated calls for jihad have fallen on deaf Arab and Muslim ears.

The United States went to war against al-Qaʿida after 11 September 2001, but has not succeeded in either capturing or killing bin Ladin and al-Zawahiri, or in eliminating the organization altogether. Al-Qaʿida's chief operational figure, the Egyptian Muhammad Atif (also Alef; 1944–2001), however, was reported killed in November 2001. Bin Ladin continues to issue messages through recorded audiotapes, but the movement suffered severe blows with the overthrow of the Taliban government and the consequent loss of a base of operation and training camps. Many top and middle-rank leader have been killed or captured by U.S. forces. While bin Ladin remains at large, his ability to rejuvenate the movement, or perhaps to strike at the United States at the scale of 11 September remains impaired. Al-Qaʿida's main success, however, has probably been in its war against the House of Al-Saʿud. The Saudi royal family was embarrassed with the revelation that fifteen of the nineteen hijackers of 11 September were Saudi nationals. The image of the royal family in Western countries, which has cost millions of dollars in propaganda expenditure, was probably irreparably damaged. Inside the kingdom, al-Qaʿida clearly has some presence, especially since its fanatical fundamentalist ideology is not that inconsistent with the Wahhabi doctrine, the ruling ideology of the kingdom. The corruption and hypocrisy of the royal family, and the decline of the economic fortunes of the kingdom, have all increased the dissatisfaction of youths, who have been targeted by bin Ladin. Series of bombings in the kingdom took place in 2003, and al-Qaʿida claimed responsibility through a variety of flyers and pamphlets, often disseminated on the Internet. It is unlikely that al-Qaʿida would last without bin Ladin, which explains the efforts of U.S. government to catch him.

QAIRAWAN

City in north central Tunisia.

Qairawan (also Kairouan, al-Qayrawan) is located some 100 miles (156 km) south of Tunis. Its population in 2002 was estimated at 162,130. Its economy is based on agriculture, arboriculture, carpets, and leatherwork. Like many North African cities, it has a walled older section and a modern quarter established during colonialism. It was initially a military camp set up by the Arab Muslim invaders spreading Islam during the late seventh century. Gradually a town emerged with the building of mosques, shops, and fortresses; its founding is often associated with Okba (Uqba ibn Nafi), a Muslim general (to whom a mosque is dedicated); others also played a role, however. The city boasts the oldest extant mosque in Africa.

Following upheaval brought on by Kharijite revolts, the town came under Aghlabid rule in the ninth century, and under their patronage it was transformed into an important regional intellectual and religious center, known for its schools and pilgrimage stops. Decline followed, however, as did the pillaging of the city by nomadic groups in the mid-eleventh century. In the early thirteenth century, the capital was moved to Tunis, which became the hub of political and intellectual life in Tunisia. Today, Qairawan is considered a Holy City of Islam, and it is the center of the governorate of the same name.

Matthew S. Gordon

QAJAR, ABDULLAH MIRZA

[1849–1908]

Pioneering Persian photographer.

Abdullah Mirza Qajar was the son of Jahangir Mirza, a member of the Qajar family—the rulers of Persia. Photography had been introduced to Persia in the 1860s, and the shah, Naser al-Din, was a keen photographer. Abdullah studied photography in Paris and Vienna and was the official photographer at the Dar al-Fonun, the modern school founded by Mirza Taqi Khan Amir Kabir, the reform-minded minister of the shah.

Abdullah Qajar was appointed chief of the imperial printing press during the reign of the succeeding shah, Mozaffar al-Din, and in 1900, accompanied him to Europe. He photographed public personalities, common people, urban and rural scenes, and buildings, and he signed them *Special photographer to His Imperial Majesty, and His humble servant, Abdullah Qajar.* In 1896, he wrote a short account of the methods he had studied in Europe and about his career.

MANSOUREH ETTEHADIEH

QAJAR, AGHA MOHAMMAD

[1742–1797]

Founder and first monarch of Persia's Qajar dynasty; shah in 1796.

Agha Mohammad Qajar (also Aqa Mohammad Ghadjar) was born the son of Mohammad Hoseyn Khan of the Qovanlu branch of the Qajar family, a Turkic tribe that had settled in and near Astarabad, now in northeastern Iran. The chief of the tribe, Fath Ali Khan, was killed by Nader Shah Afshar, so his son Mohammad Hoseyn Khan took refuge with other Turkomans. After Nader was killed in 1747, his successor Adel Shah took Mohammad Hoseyn Khan's six-year-old son Agha Mohammad Khan and emasculated him. When Adel Shah died, Agha Mohammad joined Karim Khan Zand, who ruled in southern and central Persia, with a capital at Shiraz. Mohammad Hoseyn was killed in battle by Karim Khan Zand in 1758; Zand then took Agha Mohammad and his family as hostages to his capital.

Agha Mohammad was treated well and was trusted by Karim Khan, but when Karim died in 1779, Agha Mohammad escaped and raised the standard of revolt against the descendants of the Zands (Persian dynasty 1750–1794). Gradually, he succeeded in conquering, pacifying, and uniting Persia. Still, he had to contend with Lotf Ali Khan Zand, Karim Khan's successor. After being defeated by Agha Mohammad in Shiraz, Lotf Ali escaped to Kerman in southeast Persia. There he was finally captured by Agha Mohammad in 1794, who proceeded to sack the city and treat the citizens with great cruelty for sheltering Lotf Ali.

In 1796, Agha Mohammad had himself crowned king (becoming Agha Mohammad Shah Qajar), in Tehran, which he chose for his capital. At the time, Tehran was a small and insignificant township selected for its proximity to the seat of Qajar power in the north. Agha Mohammad set about reconquering Georgia, once a tribute state to Persia, but transferred by its ruler, Heracleus, to Russia. During his second expedition to Georgia in 1797, the shah was assassinated outside Shusha, Georgia's capital.

Though Agha Mohammad Shah was harsh and cruel, by his courage, astuteness, and endeavor he reunited his country and founded the dynasty that ruled Persia until 1925.

MANSOUREH ETTEHADIEH

QAJAR DYNASTY

Ruling family of Iran, 1796–1925.

The Qajars were a Turkoman tribe that rose to prominence in Iran during the Safavi dynasty (1501–1722). In the turbulent civil wars that broke out after the Safavis were deposed by invading Afghans, the Qajars gradually consolidated power until Agha Mohammad Shah Qajar crowned himself shah at Tehran in 1796. He was killed a year later, and his nephew succeeded him as Fath Ali Shah (r. 1797–1834). During his reign, Russia defeated Iran in two wars (1805–1813, 1827–1828), acquiring territory in the north, while England blocked Iranian aspirations in Afghanistan. Both countries secured favorable treaty rights in Iran and acquired influence in the succession, which went in 1834 to Fath Ali's grandson Mohammad Shah, who ruled the country uneventfully until his death in 1848.

During the long reign of Naser al-Din Shah (r. 1848–1896), Iran had to confront an increasingly powerful European presence. Trade and budget deficits forced Naser al-Din Shah to grant lucrative concessions in the north to Russia for the operation of the Caspian fisheries, and in the south to Britain for telegraphs, tobacco exports, and river navigation. Believing that various economic and social reforms would help his government withstand British and Russian influence, Naser al-Din set up European-style educational institutions, brought in Russian advisers to drill his Cossack Brigade, created government printing offices, and tried to establish factories to supply the army. However, he neglected the financial and administrative requirements of the reforms, thus undermining their effectiveness. A serious challenge to his rule arose between 1890 to 1892, when the shah was forced to repeal a monopoly concession for tobacco that he had granted to an English company. In the first mass social movement of the modern period, the entire nation, including Naser al-Din's wives, boycotted tobacco in protest against European economic encroachment and the shah's acquiescence in it.

Ahmad Shah (center), the last Qajar monarch of Iran, during a visit to London in 1919. Ahmad Shah and the Qajar dynasty were formally deposed by a vote of the Majles (parliament) in 1925. **© Hulton-Deutch Collection/Corbis. Reproduced by permission.**

The aftermath of the Tobacco Revolt was marked by further popular unrest, which culminated in the assassination of Naser al-Din Shah on 1 May 1896. His son, Mozaffar al-Din Shah (r. 1896–1907), faced worsening economic conditions, which the bazaar merchants and *ulama* (Islamic religious leaders) increasingly attributed to the shah's helplessness in confronting foreign pressures. The less numerous Western-trained intelligentsia began to criticize European economic control and Qajar absolutism. In 1905 the beating of four sugar merchants (because of high prices) in the bazaar touched off a series of protests that soon engulfed Tehran and culminated in the summer of 1906 with the bazaar merchants closing their shops en masse and the *ulama* withdrawing from their religious services. Mozaffar al-Din Shah, unable to rely on support from Russia owing to the revolution there, was forced to agree to the formation of a national assembly (the Majles). This body set about in the fall of 1906 to write a constitution, which the shah signed on 30 December 1906, only nine days before his death.

The Constitutional Revolution brought political turmoil upon Iran between 1905 and 1911. The new king, Mohammad Ali Shah (r. 1907–1909), proved to be autocratic, and with Russian support he closed the Majles in June 1908. Constitutional resistance to the shah organized in Tabriz and other cities, and in July 1909, two proconstitution armies converged on Tehran and deposed Mohammad Ali Shah. His eleven-year-old son, Ahmad Shah Qajar, was crowned and ruled under a regent and the watchful eye of the reconstituted Second Majles.

The former shah attempted a comeback, with tribal support, in the summer of 1911, but was defeated by the constitutional forces.

The central government under the figurehead Ahmad Shah looked on helplessly during World War I as Russian and British troops fought against Turkish forces in Iran. Local movements arose in several provinces to challenge Tehran, especially in Gilan. A coup d'état in February 1921 brought to power Reza Khan, commander of the Cossack Brigade. As war minister, Reza Khan repressed the provincial opposition movements; by October 1923 he had become prime minister. Soon thereafter, Ahmad Shah left Iran for Europe on a trip of indefinite duration (in fact, he never would return). Reza Khan used his power base in the army and among the majority parties in the Fifth Majles to bring about the deposition of Ahmad Shah on 31 October 1925. Two months later the Majles vested the monarchy in Reza Khan, who adopted Pahlavi as his family surname. This "legal" transfer of royal authority formally ended the rule of the Qajar dynasty.

QALQILIYA

West Bank City.

Qalqiliya, whose origins extend back to Canaanite times, is situated in the northwest corner of the West Bank, close to the Green Line the (boundary with Israel) and 14 miles (23 km) from the Mediterranean Sea. The city's strategic position on the border between Palestine's coastal plain and the mountains made it an important locale in the eyes of caravan merchants and invading armies. By modern times, Qalqiliya was noted for its abundant agricultural produce. Its fertile land produced citrus fruits, vegetables, other fruits, and grain.

The town's history was affected dramatically by the Arab–Israeli conflict. As a result of the Arab–Israel War of 1948 and the subsequent 1949 Rhodes armistice between Jordan and Israel, Qalqiliya ended up as part of the Jordanian-controlled West Bank, although most of its agricultural land came to lie on the Israeli side of the cease-fire line. In October 1956, two weeks before the Arab–Israel War of 1956, the town was the scene of a bloody Israeli retaliatory raid that prompted Jordan's King Hussein ibn Talal to request assistance from the United Kingdom under the terms of his country's defense pact with the British. During the Arab–Israel War of 1967, Israeli forces occupied Qalqiliya, holding the town until they handed it over to the Palestinian Authority in December 1995. The city had a population of 31,753 in of 1997, the year of the last census.

As a result of Palestinian suicide bombings during the al-Aqsa Intifada, which began in September 2000, Israel reoccupied Qalqiliya for a time. It also began constructing a barrier between Jewish population centers and Palestinian territory in the West Bank. The wall had a particularly devastating impact on Qalqiliya, which was not only cut off from much of its remaining agricultural land but also surrounded on three sides by the wall.

Michael R. Fischbach

QANAT

See Glossary

QANUN

Secular law promulgated by ruler's decree.

Rooted in the legal tradition of *yasa* (a royal edict) in the Turkish and Mongol empires of central Asia,

qanun was most fully developed by the sultans of the Ottoman Empire. Qanun (also Kanun) was theoretically restricted to those areas of public life not covered by *shariʿa* (Islamic law).

In the fifteenth century, Sultan Mehmed II was the first leader of the Ottoman Empire to codify his decrees into a *kanunname* (book of laws) on the rights of subjects, the organization of the state, taxes, landholding, and economic organization. Later sultans progressively extended the scope of secular law, thereby infringing on what had once been the monopoly of religious law. Qanun underwent extensive reform in the nineteenth century, when French law codes were incorporated into the Ottoman Empire's legal system.

ELIZABETH THOMPSON

QARADAWI, YUSUF AL-

[1926–]

Egyptian Sunni Muslim scholar.

Yusuf al-Qaradawi was born in Egypt into a poor family of peasants who were devout Muslims. When his father died, his uncle took over the responsibilities for his upbringing and education. Qaradawi memorized the Qurʾan when he was barely ten years old. After completing his secondary school education, he joined the famous al-Azhar University in Cairo and had a distinguished educational career in Islamic studies during the 1950s and 1960s. In 1973, at long last, he was able to defend his Ph.D. thesis after the delay caused by President Gamal Abdel Nasser's crackdown on the Muslim Brotherhood.

It was while attending the secondary school of Tanta that he joined Imam Hassan al-Banna's revivalist Muslim Brotherhood organization. Imam al-Banna believed strongly in the virtues of prayer and discipline nurtured within an organization that was dedicated to service for socioreligious welfare and political activism. Qaradawi's al-Azhar education was interrupted several times by detentions in Egyptian jails due to his affiliation with the Muslim Brotherhood. He began to preach in Cairo mosques in the mid-1950s and developed a reputation as a preacher, a teacher, and a writer. In 1962 al-Azhar sent him to Qatar to head the Qatari secondary institute of religious studies. In 1977 he laid the foundation for what was to be the College of *shariʿa* and Islamic Studies and also the Center of Sunna and Sirah Studies at the University of Qatar, both of which he heads.

Qaradawi is probably the foremost scholar of the Sunni Muslim world today. Unlike the strict Salafi/Saudi-trained scholars, he is known for taking moderate positions on many religious issues pertaining to what is lawful and unlawful in Islam. He combines well the traditional knowledge of *shariʿa* that he obtained from al-Azhari with a contemporary understanding of the issues that Muslims face today. His writings (exceeding forty) are widely read and have been translated into many languages. He has also become a very popular television preacher on the al-Jazeera satellite television station, with an audience said to be in the tens of millions. In recent religious rulings, Qaradawi has been praised for his condemnation of the 11 September 2001 attacks, defense of the right of American Muslim soldiers to fight against other Muslims in Afghanistan, and critique of the October 2002 bombing of two nightclubs on the Indonesian island of Bali as a heinous crime. His account of Palestinian suicide bombers as martyrs engaged in a just struggle against an occupying force and militarized society that targets them has not been as well received.

ABDIN CHANDE

QARAMANLI DYNASTY

Dynasty of Turkish origin that attained autonomous rule of Tripolitania under Ottoman suzerainty, 1711–1835.

The Qaramanli (also Karamanli) dynasty—Ahmed (1711–1745), Mehmed (1745–1754), Ali (1754–1793,

1795/96), and Yusuf (1796–1835)—directed autonomous Tripolitanian domestic and foreign policies, including the signing of international treaties. Their economy was based on international trade and sea piracy; their pirates were the scourge of the Barbary Coast, known as the Barbary pirates. During Ali's reign the region suffered from epidemics, plague, and famine, as well as from power struggles among Ali's sons. Algerian strongman Ali Burghul (Bulghur) took advantage of the situation and with Ottoman approval ruled Tripoli between 1793 and 1795, causing the population severe hardship.

Under Yusuf, the European powers and the newly independent United States went to war against the Barbary pirates, ending the taking of ships, cargoes, and men (who were often sold into slavery). This forced Yusuf to impose high taxes, which caused a popular revolt. On 27 May 1835 an Ottoman naval force landed in Tripoli following a local request for Ottoman intervention. Its commander was proclaimed governor, and members of the Qaramanli family were arrested or exiled.

QARAWIYYIN, AL-

First university in the Islamic world.

Al-Qarawiyyin was built as a mosque in Fez in 859. The building was enlarged in the tenth century and later under the respective rules of the Almoravid, Almohad, Marinid, Saʿdi, and Alawiite dynasties. Its architecture expresses the Arab-Hispanic art that makes the Qarawiyyin one of the most prestigious monuments in Fez and in North Africa.

Since the twelfth century, most of the Moroccan *ulama* (Islamic clergy) received their religious teaching at the Qarawiyyin. Students came from all regions of Morocco and from the Arab world.

Under the Alawite dynasty, the Qarawiyyin was subject to a series of reforms regulating its organization and programs of teaching. The sultan Abd al-Rahman (1822–1859) reorganized the teaching there by *dahir.* This reorganization was oriented toward communicating to students religious disciplines guided by conformism to Islam. Among topics taught were Qurʾanic exegesis, astronomy, dialectics, mysticism, lexicography, philology, geography, medicine, and divination.

The teaching was free of charge, and the student could join the university at any time of the year. However, each student had to spend five years in the university to receive an *ijaza* given by his teacher if the student showed regularity and attended courses successfully.

In the nineteenth century, the teachers constituted a body of *ulama* that gave allegiance to the sultan and were consulted by him on different matters. They enjoyed high status in Fez, and *qadis* (judges) were recruited from among them. After the French takeover, the Sultan Mulay Youssef signed a *dahir* (on 19 May 1914) creating a council charged with the task of improving the university's methods of teaching, its administration, and the status of its teachers. In 1918, the university became affiliated with the Ministry of Justice and was led by le Conseil de Direction.

The most important change occurred after two *dahirs* were promulgated by Muhammed V on 1 April 1931 and 10 May 1933. The teaching became organized in cycles: elementary, secondary, and higher. Higher education in Qarawiyyin had two sections: one specialized in religious law, hadith (legends and traditions surrounding the Prophet), and interpretation of the Qurʾan; the second specialized in literature, Arabic language, history, and geography. Exams, hours of teaching, holidays, and the status of teachers were also regulated. In 1947, the Qarawiyyin became a state university.

After independence, the Qarawiyyin became affiliated with the Ministry of National Education, having as objectives to teach religious knowledge and to promote scientific research in this field. Three other institutions became linked to the Qarawiyyin: the Faculty of Arabic Language in Marrakech, Faculty of Theology in Tetuan, and Dar al-Hadith al-Hasaniyya in Rabat.

QASIM, ABD AL-KARIM

[1914–1963]

Leader of the leftist nationalist 1958 revolt in Iraq; president and prime minister of Iraq, 1958–1963.

Abd al-Karim Qasim (also Kassem) was born into a poor Baghdad family. His father, a carpenter, was a Sunni Arab and his mother was a Kurdish Shiʿite.

General Abd al-Karim Qasim (1914–1963) salutes a line of armed forces as they pass the reviewing stand. Qasim, an army officer, overthrew the Iraqi monarchy in 1958, and then became the leader of the Republic of Iran. **© BETTMANN/CORBIS. REPRODUCED BY PERMISSION.**

After finishing high school, he taught for one year in a primary school before changing careers and joining the military college of Iraq from which he graduated in 1934. As part of an Iraqi military unit, he participated in the first Arab–Israel War, 1948–1949. Like other officers of his generation, he retained a bitterness about the defeat, which he attributed to the weakness and corruption of the Arab monarchies.

In 1952, the Egyptian monarchy was overthrown by nationalist officers and a republic was established. Reverberations from that coup soon reached Baghdad. The Iraqi military was not only disgusted with corruption in the Baghdad regime but was still bitter over the failed anti-British military coup of 1941 and the repression of nationalists that followed.

In Iraq, after the Egyptian revolution, junior officers began to organize underground cells. Qasim joined this clandestine organization in 1955 and, because of his seniority and his respected professional reputation, soon became chairman of the Central Committee of the Free Officers, as they called themselves.

On 14 July 1958 these officers staged a successful coup, which resulted in the killing of the royal family and the Prime Minister Nuri al-Saʿid—and the proclamation of a republic. General Qasim became president and prime minister, and his fellow officer and colleague Abd al-Salam Arif became deputy prime minister. In a very short time, relations between the two men soured over differences relating to Iraq's policy toward Egypt's President Gamal Abdel Nasser. Arif advocated an immediate rapprochement with Nasser and an eventual joining of the United Arab Republic (Egypt and Syria); Qasim wanted to keep his distance from Nasser.

As prime minister, Qasim took several anti-Western steps in foreign policy. He let Iraq's membership in the Baghdad Pact lapse, he restored diplomatic relations with the Soviet Union, and he signed an arms agreement with that country. In domestic policy, he began an agrarian reform program and passed progressive legislation giving women additional rights in matters of divorce and inheritance. In 1961, Qasim issued Law Number 80, which stripped the foreign-owned Iraq Petroleum Com-

pany of 99.5 percent of its concessionary territory. For a time, he allowed open activity by political parties; his lenience toward the Communist party, however, led to serious dissatisfaction among the population and the army.

Criticism of his policies toward Nasser and the Communists exacerbated the rift between him and Arif, who was arrested (on charges of attempting to kill Qasim) and imprisoned. In March 1959, Iraqi nationalist officers attempted a coup in Mosul. In response, the Communists and their allies took to the streets in Baghdad and elsewhere, which resulted in mass killings in Mosul and Kirkuk in July 1959 (that Qasim did little to prevent).

Besides facing opposition from Arab nationalists and the Baʿth party, Qasim had to confront a renewal of Kurdish revolts for separatism. After returning to Iraq in 1958, Mustafa Barzani, the renowned Kurdish leader, staged a revolt in 1960 that lasted (off and on) until 1963, further weakening Qasim and his legitimacy. Qasim also had political problems within the Middle East: In May 1961, Britain ended Kuwait's protective status, making that country independent. Relying on vague historical claims, Qasim announced that Kuwait was an integral part of Iraq but sent no troops to back up his claim. British troops were, however, dispatched to Kuwait to defend it, although these were eventually replaced by forces from the League of Arab States. Thus Qasim became isolated from his Arab League neighbors.

During these events, the Arab nationalists and Baʿthists had been organizing and undertook a successful military coup in Baghdad. On 8 February 1963 Qasim was arrested and executed the following day. Arif became president of the republic, with a Baʿthist as prime minister and a civilian government, after annulling the military law that had been in force since 1958.

QASIMI FAMILY OF RAʾS AL-KHAYMA, AL-

Ruling family of Raʾs al-Khayma in the United Arab Emirates.

Humayd ibn Abdullah al-Qasimi ruled Raʾs al-Khayma between 1869 and 1900, when the emirate rejoined with Sharjah and was ruled by another branch of the family. In 1921 Sultan ibn Salim al-Qasimi seized control of the emirate from his nephew, Muhammad bin Salim al-Qasimi, and Raʾs al-Khayma once again separated from Sharjah, causing lingering resentment between the two branches of the family. In the 1940s Muhammad and his relatives charged that the sultan was not distributing revenues from oil companies in an equitable manner. When the sultan was out of the country, Muhammad's second-oldest son, Saqr, captured the amir's fort in the capital and was thereafter recognized by local elites and by the British as ruler. Because of his strength of will and independent-mindedness Saqr ran afoul of British officials and other rulers. In the 1960s he was a strong advocate of Arab nationalist causes and of the involvement of Egypt and other countries in the affairs of the emirates. He also was reluctant at first to bring Raʾs al-Khayma into the UAE's federation. The heir apparent is his son Khalid, who was educated in the United States.

QASIMI FAMILY OF SHARJAH, AL-

Ruling family of Sharjah in the United Arab Emirates.

During the seventeenth century the Qawasim tribe possessed the most powerful maritime forces in the

waters of the lower Persian Gulf, asserting control even in the face of encroachments by the British. Sharjah and Raʾs al-Khayma were the most prominent regional ports. The most notable ruler of the region from 1727 to 1777 was Rashid ibn Mattar bin Rahman al-Qasimi, who claimed descent from the prophet Muhammad. The patriarch of the current rulers of Sharjah is Sultan bin Saqr bin Rashid al-Qasimi, who ruled for fifty years starting in 1804. Sharjah is notable for the political turbulence in modern times among the members of the ruling family. Saqr bin Sultan al-Qasimi ruled from 1951 to 1965. However, he was arrested after attempting to overthrow his successor and nephew, Khalid ibn Muhammad al-Qasimi (r. 1965–1972), who was killed in the process. The current ruler is Sultan bin Muhammad al-Qasimi, who has been in power since 1972. He was born in 1939 and was educated at Cairo University, the University of Exeter, and the University of Durham. He received a doctorate in history and has published several books on the history of the lower Persian Gulf, including *The Myth of Arab Piracy in the Gulf.*

QASSAM, IZZ AL-DIN AL-

[c. 1880–1935]

Islamic militant who fought the French in Syria and the British in Palestine.

Izz al-Din al-Qassam was born in Jabla, near Latakia, Syria. He studied in Cairo at al-Azhar University and reportedly came in contact with Rashid Rida, the precursor of Arab nationalism. Following the French occupation of Syria, he participated in guerrilla activities (1919–1920) in the Alawiya region of Jabal Sahyun, for which he was sentenced to death by a French court-martial. After the French suppressed Syrian resistance, Qassam escaped to Palestine. He was hired to teach at an Islamic school in 1921, and a year later was appointed by the Supreme Muslim Council as a preacher at the new Istiqlal mosque in Haifa. He preached a puritanical way of life that alarmed some people enough to seek his dismissal. He was appointed marriage registrar in the *shariʿa* court at Haifa in 1929, which enabled him to travel throughout Palestine.

Qassam became convinced that Britain's support for Jewish immigration and land purchases, which ultimately lead to a Jewish state. He therefore began to advocate a popular uprising against the British once the Palestinians were united and organized. In 1928 he was a founder of the Young Men's Muslim association, which with the Boy Scouts, organized military drills and the stockpiling of arms, and initiated violent attacks on Jewish settlements (1931–1933). According to Subhi Yasin, his contemporary (and the source of much of our information about Qassam), Qassam sent a follower to the mufti of Jerusalem, Muhammad Amin al-Husayni, suggesting that he start a revolt in the south while he (Qassam) started one in the north. The mufti reportedly declined, stating that he was seeking a political solution. While Qassam believed that a revolt should take place, with only 200 recruits and insufficient arms and training, he felt the Palestinians were not yet ready. Two factors made him change his mind: the discovery, on 18 October 1935, of an arms shipment destined for Jewish forces, and the immigration that year of the largest number of Jews (almost 62,000) to Palestine. On 21 November he left Haifa with ten of his followers to attack a police arsenal to acquire its arms, but an unplanned clash, in which a police sergeant was killed, alerted the police. Hundreds of police chased and caught up with the group; rather than escape or surrender, Qassam and his men fought it out. He and two of his men were killed.

Qassam became a symbol of martyrdom for Palestinian youth groups such as Ikhwan al-Qassam (Qassamite Brotherhood), which formed resistance cells to take up the mantle of Qassam. The Qassamite attack in which two Jews were killed on 15 April 1936 was a catalyst for the most violent uprising against the British, the Palestine Arab Revolt (1936–1939).

Half a century later, the legacy of Qassam inspired another generation of Palestinians. Shortly

after the Intifada began in 1987, an Islamic fundamentalist group, HAMAS (Islamic Resistance Movement), was established to resist Israeli occupation through its military wing, Kataʾib Izz al-Din al-Qassam, which conducted terrorist attacks against Israelis.

QAT

See GLOSSARY

QATAR

Nation on the western shore of the Persian Gulf.

Qatar occupies a mitten-shaped peninsula that extends about 105 miles into the Persian Gulf roughly midway along its western coast. About 50 miles across at its widest point, it has an area of 4,400 square miles. Qatar shares a land border with Saudi Arabia and is separated from Bahrain to the west by about 30 miles of water. It consists largely of desert sand and gravel with occasional limestone outcrops and *sabkhas* (salt flats). A lack of water made the establishment of permanent settlements in Qatar's interior impossible until the post-oil era. Summer weather is severe, with temperatures as high as 122°F (50°C) and high humidity along the coasts; winters are pleasant, with temperatures generally around 60°F (17°C), with a continuous north wind. Scant rainfall sustains meager vegetation. Qatar's proven oil reserves were estimated to be 15.2 billion barrels in 2001. More importantly, the country's natural gas reserves amounted to an estimated 21 trillion cubic meters in 2002, most of it in the North Dome field, the world's largest deposit of nonassociated gas.

A degassing station in Dukhan, Qatar's center for oil production and the country's only onshore oil field. Dukhan, which was first drilled in 1939, contains three reservoirs which supply the majority of Qatar's oil. © CHRISTINE OSBORNE/CORBIS. REPRODUCED BY PERMISSION.

Qatar's population was estimated at nearly 800,000 in 2002, having grown rapidly since oil income started to flow after World War II. Even earlier, the population included significant numbers of immigrant Iranians and East Africans originally brought as slaves and freed in the first half of the twentieth century. Oil wealth and the rapid economic development it has generated have brought large numbers of expatriates to Qatar, reducing the indigenous population to about one-fifth of the total. Iranians account for about a sixth, other Arabs for a quarter, and South Asians for a third. The great majority of the population is Sunni Muslim, with Qataris subscribing to the same strict Wahhabi interpretation of Islam as the Saudis; an estimated one-sixth is Shiʿite. About three-fifths of Qatar's population lives in Doha, the capital and principal port, located on the east coast. Other major urban areas include Khawr, located north of Doha, and the industrial complex of Umm Saʿid to its south.

History

In the 1760s the Al Khalifa, one of the Utayba clans from central Arabia that had earlier settled in Kuwait, migrated to Qatar and established its base at Zubara, on the west coast. After they seized the islands of Bahrain from the Iranians in 1783, their hold on Qatar weakened and the Al Thani, a family from central Arabia, established a leading position on the east coast. An 1867 attack by the Al

MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

Khalifa and the ruling Banu Yas tribe of Abu Dhabi against Doha and other settlements led to British intervention that established Muhammad ibn Thani as de facto ruler of Qatar. In 1893 his son, Qasim ibn Muhammad Al Thani, defeated superior forces of the occupying Ottoman Turks, who had extended their suzerainty over Qatar in 1871. In 1916 Abdullah ibn Qasim signed a treaty with Great Britain that conferred British protection over the emirate, forbade Qatar to have relations with or cede territory to other states without British agreement, and gave special rights to Great Britain and its subjects in Qatar.

Like the other Persian Gulf Arab states, Qatar's pearling industry, virtually its sole source of income before oil, was devastated in the 1930s due to the influx into the world market of cultured pearls produced in Japan. In 1935 a concession was granted to a subsidiary of the Anglo-Iranian Oil Company (later British Petroleum). The modest concession payments enabled Abdullah ibn Qasim to solidify his position and that of the Al Thani clan, a process completed when the ruling family began to earn oil export income after 1949. Political independence was thrust upon Qatar in 1968, when the United Kingdom decided to end its protective relationships with the lower Gulf states by the end of 1971. It declared its independence on 3 September 1971 after the failure of efforts to join Bahrain and the seven Trucial Emirates in a federation.

Economy

Earnings from oil and natural gas production have given Qataris one of the world's highest per capita incomes and have made dramatic economic development possible. In 1991 Qatar began production of gas from its vast North Field. As part of the second phase of development of the North Field, the country built a liquefied natural gas (LNG) production and export facility at Ra's Laffan, which began exports in 1996. The country's modern physical infrastructure includes excellent roads linking Qatar with the other Gulf states, an international airport, and a large, modern port at Doha. Attempts have been made to diversify the economy by building cement plants and flour mills, and expanding the shrimping industry. Modern techniques in agriculture have made possible vegetable and chicken production sufficient to meet an increasing local demand.

Government and Politics

In 1970, a year before independence, Qatar became the first of the lower Gulf states to adopt a written constitution. It provided for a council of ministers or a cabinet to be appointed by the ruler, and an elected advisory council. Members of the ruling family dominate the cabinet and the advisory council has thus far consisted only of members appointed by the ruler. With perhaps as many as 20,000 members, the Al Thani family is the largest ruling family in the region and has dominated most important areas of government. In June 1995 Shaykh Hamad ibn Khalifa overthrew his father, Shaykh Khalifa ibn Hamad Al Thani. Hamad has attempted to open the country's social and political environment. In

More than half the population of Qatar resides in Doha, which was founded in the nineteenth century as a fishing and pearling village. Doha grew rapidly after the country began exporting petroleum in 1949 and became Qatar's capital city in 1971. © CHRISTINE OSBORNE/CORBIS. REPRODUCED BY PERMISSION.

1996 he allowed the creation of al-Jazeera, a semi-independent satellite television network that has become world famous for its groundbreaking coverage of Arab issues, including the United States's conflict with Osama bin Ladin and al- Qaʿida. In addition, the ruler oversaw Qatar's first elections, which were held in March 1999 for members of the largely consultative Municipal Council.

Foreign Relations

Apart from its wider oil interests, Qatar has focused its foreign policy largely on Persian Gulf affairs, seeking to maintain close and friendly relations with the other traditional, dynastic Arab states. Two long-standing and contentious border disputes, with Bahrain and Saudi Arabia, were resolved peacefully in 2001. Hamad has pursued a more active and independent foreign policy than did his deposed father. Qatar agreed to the deployment on its soil of U.S. and other non-Arab military forces during the Gulf Crisis in 1990 and 1991, and its troops participated in the fighting to liberate Kuwait. In the wake of increased U.S. military activities in the region after 11 September 2001 and the reluctance of Saudi Arabia to accede to U.S. military requests, Qatar permitted the construction of a large airbase called al-Udayd where U.S. command and control facilities and other assets were transferred from Saudi Arabia in 2002 and 2003 during the U.S. buildup for its war on Iraq.

UPDATED BY ANTHONY B. TOTH

QATAR GENERAL PETROLEUM COMPANY

See QATAR PETROLEUM

QATAR PETROLEUM

Qatar's national oil company, established in 1974, formerly known as Qatar General Petroleum Company.

As they did in other countries in the region, Western companies controlled Qatar's oil production until local leaders insisted on nationalizing this valuable resource. The Qatar General Petroleum Company (QGPC) was established in 1974, with 40 percent of the ownership held by foreign companies. The company was fully nationalized in 1977, after which it began to expand its operations from onshore and offshore oil and natural gas production to refining, petrochemical production, exploration, and development.

A major turning point came in 1991, with the opening of phase one of the North Field natural gas development project. The North Field is the largest natural gas field in the world, and its development has made Qatar a major producer. Abdullah bin Hamad al-Attiya, minister of energy and industry and the company's chairman and managing director, announced in 2001 that his company's name change to Qatar Petroleum (QP), which happened in that year, reflected in part its increased status in world energy markets. Many of QP's projects revolve around developing the field and utilizing its products in domestic and international markets while promoting the hiring of Qatari nationals in the company and maintaining a policy sensitive to the region's natural environment.

MARY ANN TÉTREAULT
UPDATED BY ANTHONY B. TOTH

QAʿWAR, WIDAD

[1932–]

Scholar, collector, and conservator of traditional Palestinian and Jordanian embroidery, costumes, and textiles.

Born to a Christian Palestinian Arab family in Tulkarem, in British Mandate Palestine, Widad Qaʿwar (*née* Irani) and her brothers were sent to Lebanon for primary school. Because of heightened tensions and uncertainty in Palestine, she was brought home in the mid-1940s to complete her secondary education at the Friends Girls School in Ramallah. The shock, upheaval, and sudden transformations of Palestinian society in 1948 and 1949 initially sparked her desire to collect and preserve examples of traditional Palestinian folk culture.

Qaʿwar returned to Lebanon and continued her studies at the Beirut College for Women (now the Lebanese American University), receiving a B.A. in history in 1950. She pursued postgraduate studies at the American University of Beirut and there met Kamil Amin Qaʿwar, her future husband, with whom she settled in Jordan.

Qaʿwar's unique collection of embroidery (in Arabic, *tatriz*) preserves a fading way of life and the cultural heritage of Palestinian women and village life. Each village is characterized by its own embroidery styles, patterns, and color schemes. From two traditional embroidered dresses that she received as a gift, Qaʿwar's collection has grown to become the largest and richest collection of Palestinian, Jordanian, and Syrian costumes now extant the Hashimite kingdom of Jordan. Qaʿwar's interests extend beyond collecting. She has also conducted interviews with village women about the transmission, practice, and innovation of the ancient craft of embroidery, with a special focus on

the communal and political dimensions of embroidery from the late 1960s onward.

The June 1967 war prevented Qaʿwar from visiting the villages of her childhood. The hardships of occupation, and the creation of a new group of Palestinian refugees, strengthened her desire to collect as many examples of embroidery as possible.

After 1968, Qaʿwar focused on documenting and researching the history of Palestinian textiles, particularly on the wedding trousseaus of the women in the village of Bayt Dajan, near Jaffa, who were now living in refugee camps in and around Amman. A hand-woven wedding garment was usually part of the trousseau. Each trousseau features six to twelve embroidered garments, including accessories such as scarves and pillowcases.

Embroidery patterns and themes were drawn from daily life and natural surroundings. Trees, houses, flowers, and insects are all found in Palestinian needlework, which uses four types of stitches. *Al-madda* (stretch/extending), was found in the Galilee but also in Nablus and Tulkarm. It is characterized by its simplicity. *Falahi* (meaning "of the peasants") is a cross-stitch found in most Palestinian embroidery. *Tahrira* (to make silky) is a more complicated stitch originating in Jerusalem and Bethlehem. It is made from silk, first imported from Syria. The *wasla* (connecting) stitch is new, appearing after 1967. It depicts images of the Palestinian flag, Jerusalem, and the Dome of the Rock, and has acquired different names in different locales, knows as *swaisiya* or *sabaly* in the Jaffa area, *manaajel* in the areas between Ramallah and Hebron, *aqeedeh* in Gaza, and *tanbeeteh* in Beersheeba.

Qaʿwar's collection of embroidery and textiles has grown to include examples from other Arab countries. She has taken the collection on tour in Europe and is committed to using it as an educational resource on Palestinian culture and history. In 1990, she was a founding member of the Arab Resource Center for the Popular Arts in Beirut.

QAWUQJI, FAWZI AL-
[1890–1974]

Military officer who led Arab nationalist forces against the imperial powers in Palestine.

Born in the late 1880s in Tripoli, Syria (later within Lebanon), Fawzi al-Din al-Qawuqji graduated from the Ottoman military academy in Istanbul and served in the early part of World War I as a captain in the Ottoman cavalry. He switched sides to join the Arab revolt in 1916 and fought the French invasion of Amir Faisal I ibn Hussein's independent Syria in July 1920. Qawuqji commanded a cavalry company of the Syrian legion after the war and used that position to lead a revolt in October 1925, in Hama (Syria), against the French mandate forces. He coordinated with other nationalist forces in the landowning and merchant classes as well as with rural rebels. Qawuqji continued to lead a rebel band in the countryside during 1926/27 but fled to Iraq in April 1927 (where Faisal was king). Qawuqji then served in the Iraqi army, from where he hoped to launch an attack on Syria to free it from French rule. His 200-man guerrilla force was, however, diverted to Palestine from August to November 1936 to assist the Palestinian general strike against British rule and Zionism. Qawuqji's forces were better prepared militarily than the Palestinian guerrilla bands but did not cooperate effectively with the Palestinians. Qawuqji called himself Commander in Chief of the Arab Revolution in Southern Syria and failed to coordinate with Abd al-Qadir al-Husayni, leader of the Palestinian guerrillas in the Hebron area.

Qawuqji spent World War II in Iraq and Axis-controlled Europe. Despite his tensions with Palestinian politicians, the League of Arab States requested Qawuqji to return to Palestine in January 1948 to head the Arab Liberation Army, which sought to prevent the partition of Palestine. Once again, Qawuqji failed to cooperate with Abd al-Qadir al-Husayni and other Palestinian guerrilla leaders. He was severely defeated in his few encounters with the Haganah (the prestate armed forces of the Zionist

movement). After Israel was established in May 1948 and the Arabs attacked, the Arab Liberation Army was forced out of central Galilee in July 1948 by Israeli forces—and from the rest of northern Galilee in October 1948. Qawuqji had taken a strong stand against the flight of Palestinian Arabs from their homes; he threatened to punish villagers who fled, and his forces even blocked roads to prevent them leaving. Nonetheless, his six-thousand-man force was too small to keep northern Palestine from being seized by Israel and many of its Arab residents being expelled by Israel's forces.

QIYOMIJIAN, OHANNES

Early-twentieth-century Ottoman official in Lebanon.

Ohannes Qiyomijian was born in Istanbul to an Armenian Catholic family. After completing his formal education, he was appointed to the Foreign Ministry. He served as a counselor for the embassy of the Ottoman Empire in Rome. He was twice asked to become a *mutasarrif* in Lebanon before he accepted the assignment in January 1912. Among his responsibilities was adding a member from Dayr al-Qamar to the Administrative Council and revising the election laws. Qiyomijian established commercial courts and opened ports in Juniya and Nabi Yunis. He enlarged the army to 1,200 and raised the salaries of the soldiers after their sit-in strike in Baʿabda. In 1913, he imported salt and tobacco directly into Lebanon in return for fees paid to the treasury of Mount Lebanon. Turkish mass killings of Armenians led Cemal Paşa to insist on his dismissal and he tendered his resignation in June 1915.

As'ad AbuKhalil

QOM

Shrine town in Iran.

The city of Qom (also Qum), 92 miles (148 km) south of Tehran, is, after Mashhad (the burial place of the eighth Shiʿite imam, Ali Reza), the second most important shrine town in Iran. The sister of Imam Reza, Hazrat-e Fatima, is buried in Qom. The city was a winter capital as well as a royal mausoleum town during medieval times and was strongly patronized when the Shiʿite Safavids came to power during the sixteenth century. In 1920 a religious center of learning *(hauzeh-ye ilmiyeh)* was established in the city by Shaykh Abd al-Karim Ha'eri Yazdi. Through its *madrasas* (religious schools) Qom is one of the main centers of Islamic studies in Iran today. With the accession to power of Reza Shah Pahlavi in 1925 and the modernization reforms undertaken, the town soon became the scene of a struggle between the monarchy and the religious establishment. The first major episode of violence that precipitated the Iranian Revolution of 1979 occurred there. When Ayatollah Ruhollah Khomeini returned to Iran in 1979 as the leader of the revolution, he established his headquarters in the Madrasa-y Faiziyeh in Qom.

See also Iranian Revolution (1979).

Parvaneh Pourshariati

QOTBZADEH, SADEQ

[1937–1982]

Iranian politician.

Charged with treason and plotting to kill Ayatollah Ruhollah Khomeini, Sadeq Qotbzadeh was executed in 1982 by partisans of the Islamic Republic of Iran, after having spent his entire life bringing about the downfall of the Pahlavi regime. He was born in

Tehran in 1937 (1938 according to some accounts) to a conservative, religious merchant family. In 1958, fearful of being arrested by the government of Mohammad Reza Shah Pahlavi because of his association with the more religious branch of the National Front, he left Iran to attend Georgetown University in Washington, D.C. While in America, he worked in the Islamic Student Association with Ibrahim Yazdi and Mostafa Chamran. His anti-shah activities in the United States led to the cancellation of his visa. He moved to Europe in 1963, where he joined an opposition movement led by Abolhasan Bani Sadr. In 1979, he returned to Iran (on the same plane that was carrying Ayatollah Khomeini back to Iran) and became a member of the Revolutionary Council. In 1980, President Bani Sadr chose him to be foreign minister, but by February 1981, Bani Sadr had fled the country and Qotbzadeh was arrested on charges of conspiracy against the state and plotting to kill Ayatollah Khomeini. Qotbzadeh was not a radical and not a cleric, and as post-1979 Iran moved in both those directions, prodigal sons of the revolutionary movement were no longer favored. Qotbzadeh was, however, by some accounts, one of the key people involved in the disappearance of Imam Musa Sadr, Lebanese Shiʿite leader, in Tripoli in 1978.

QUEEN SURRAYA

[1899–1968]

Afghan queen who fought for women's rights.

Surraya, wife of Amanollah Khan, king of Afghanistan (1919–1929), was the pioneer force behind women's emancipation and education in Afghanistan. She was born in 1899 in Damascus, the daughter of the famous Afghan writer and journalist Mahmud Tarzi, who returned to Afghanistan in 1905 after years of exile in Syria. She married Prince Amanollah in 1916 and used her royal position to promote change in the status of Afghan women. She was responsible for the establishment of the first schools for girls and the first association for the protection of women's rights in Afghanistan. In 1927, she accompanied her husband on an official tour of Europe and the Middle East and was the first Muslim queen to appear unveiled in public in Europe. She was also the only Afghan queen to be introduced in person to the Afghan Grand Assembly *(Loya Jirga).*

Queen Surraya's campaign for the emancipation and unveiling of women was one of the reasons for the outbreak of uprisings instigated by the clergy in 1928. After King Amanollah's abdication in 1929, the royal couple lived in exile in Europe. Surraya died in 1968 in Rome but was permitted by King Zahir Shah to be buried in Afghanistan in recognition of her service to the cause of Afghan women.

QURAI, AHMAD SULAYMAN

[1937–]

Palestinian economist and statesman, architect of the 1993 Oslo Accord.

Qurai (also Qurei, Quray; nom de guerre: Abu Ala) was born into a wealthy family in Abu Dis, near Jerusalem. In 1968, shortly after Israeli occupation, he left for Jordan and subsequently Saudi Arabia, gaining employment in the banking sector. He now joined the Palestine National Liberation Movement (al-Fatah) and was appointed director of Samid, the institution responsible for Palestine Liberation Organization (PLO) finances in Lebanon. Relocating to Tunis after the PLO's 1982 evacuation from Beirut, he became deputy director of the PLO's Department of Economic Affairs and in 1989 was elected to the Fatah Central Committee. The architect of PLO development plans for the Palestinian territories, he was chief Palestinian delegate at the secret Israeli-Palestinian negotiations in Oslo that produced the

September 1993 Declaration of Principles on Interim Self-Government Arrangements.

In 1994, Qurai became director of the Department of Economic Affairs of the Palestinian Authority, creating the Palestinian Economic Council for Development and Reconstruction as a channel for international investment. He became the first speaker when the Palestinian Legislative Council was established in 1996, took part in the unsuccessful "final status" talks of 2000/01, and, in September 2003, was appointed prime minister, raising the prospect, in spite of the weakness of his popular support, of a renewed accommodation with Israel.

MOUIN RABBANI
UPDATED BY GEORGE R. WILKES

QUR'AN

The sacred scripture in Islam.

The Qurʾan (literally, recitation) consists of the ensemble of revelations recited by the prophet Muhammad and considered by the Muslims to be the word of God verbatim. The Qurʾan was revealed piecemeal during the prophetic career of Muhammad, starting in 611 C.E. with a vision he experienced during a night known as the Night of Destiny *(laylat al qadr)* and ending with his death in 632. The word *Qurʾan* is coined by the revelation itself, which is also designated by other terms such as *kitab* (book), *tanzil* (literally, what is sent down), and *dhikr* (remembrance). The Qurʾan, which is shorter than the Christian New Testament, is divided into 114 chapters *(sura,* plural *suwar)* and 6,616 verses *(aya,* plural *ayat).* The word *aya* means literally "sign," and is used also in reference to any natural phenomenon as the expression or sign of God's will.

The Qurʾan is not arranged either chronologically or thematically, but rather on the basis of pre-Islamic aesthetic criteria, to which the Qurʾan implicitly refers when it challenges doubters to compete with it on literary grounds (2:23, 11:13), and which constitute the basis for the claim of the miraculous nature of the Qurʾan expressed as *iʿjaz,* or inimitability. The chapters are arranged roughly in order of length, and they all start with the *basmala* (the invocation of God's name). The prophet is reported to have rearranged the text regularly with the onset of new revelations, and Muslim tradition maintains that he made also the final ordering of the text. The first chapter is called *al-fatiha* (the opening), and consists of a prayer addressed to God. In the other chapters, some verses deal with rituals and social and economic regulations, and many others consist of didactic parables and stories about former biblical and Arabian prophets, historical figures, and communities. The largest number of verses, however, is of a hortatory nature, dealing with God's majesty and power and with the various aspects of His creation. The Qurʾan uses indifferently the terms *I, We,* and *He* when God addresses His creatures, whether directly or indirectly, through the Prophet.

Themes and Interpretation

The themes of the Qurʾan build around the central claim of *tawhid,* or the absolute unity and transcendence of God. God is an omnipotent, all-powerful deity, on whom creation is completely dependent. All of creation was offered to humanity as a trust to allow the latter to carry out its task as God's vicegerent *(khalifa)* on earth. The Qurʾan, which is written in powerful rhymed prose with striking imagery, vividly reminds human beings that they will report to God on the Day of Judgment and that the afterlife (paradise and hell) is predicated on one's actions in this life. Parables and moral didactic stories abound, as well as warnings and general advice on how to succeed as God's vicegerent and avoid the failure to which pride and greed lead. Because the Qurʾan refers to the human endowment *(fitrah)* that allows people to distinguish good from evil, it calls itself *dhikr* (reminder or remembrance); and it is repeatedly pointed out that similar messages, based on a single divine source of revelation called *umm al-kitab* (13:39), had been sent to all communities over time, and eventually gave rise to different interpretations in the form of different religions. The Qurʾan itself is the conclusion of this string of revelations that start with Adam as the first prophet and end with Muhammad.

The Qurʾan has given rise to a number of sciences, the most important of which is *asbab al-nuzul* (the study of the historical context of the verses), and to countless commentaries that range from the literalist to the mystical. Modern commentaries such as those of Muhammad Abduh, Abu al-Aʾla al-Mawdudi, and Sayyid Qutb have shifted from the early traditional atomist approach to a comprehensive approach that integrates the various meanings of the text.

Collection of the Qur'an

Muslim tradition holds that the Prophet relied primarily on the memorization by his disciples of the revelations he taught them, but he did have a number of secretaries transcribe the text of the Qurʾan. There is agreement that after his death, these transcriptions were collected by Zayd ibn Thabit, one of his main secretaries, but no official canon or reference was established. By the time of Uthman's reign (644–656), the spread of variant readings of the text (based on the use of synonyms, and on pronunciations found in dialects other than that of the Qurʾan), and the proliferation of manuscripts *(mushaf,* plural *masahif)* made without reference to the original recitation, caused alarm amongst the Companions of the Prophet. Consequently, Uthman ordered Zayd to establish an official canon in the Quraysh dialect based on the original collection, and to get confirmation and approval of his work from the Companions. All other existing manuscripts and personal copies (which often contained personal annotations, or omitted some passages, or followed a different order of the chapters) were ordered destroyed, and all new copies of the Qurʾan were made from the new canon. However, differences persisted. Muslim tradition identifies and accepts as part of the original text of the Qurʾan seven dialects *(ahruf)* in which the text is said to be revealed, though the standardization of the Uthman canon, which emphasized the Quraysh dialect, made these obsolete. In addition, different readings or styles of recitation *(qiraʾa)* arose based on different possible orthographic forms and pronunciations. The Qurʾan had been recited aloud from its inception; eventually, ten different readings were accepted as legitimate, based on the authenticity of the oral traditions that transmitted them and on evidence that the original reader's recitation had been tolerated by the Prophet. Further standardization came with the development of diacritical dots and marks in the written text.

Contemporary Orientalist views of the collection of the Qurʾan diverge widely, ranging from the claim that it is a late forgery to near-total endorsement of traditional Muslim claims. However, with very few exceptions, there is general agreement that the current text of the Qurʾan is in accordance with Uthman's canon (as there are no traditions referring to other canons), and that the variations that prompted codification of the Qurʾan were mostly minor divergences of pronunciation and orthography and omissions in some personal copies of some chapters or insertions of prayer formulas external to the text. More importantly, it seems that the early Muslim community accepted the Uthman canon: There were no attempts made by the early dissenting political groups (Shiʿite and Khawarij) to claim a divergent text; instead, they insisted on a divergent interpretation of it.

Place in Islam

The Qurʾan is the ultimate reference for the Muslim who reveres it as the only expression of the sacred on earth. Besides providing the central worldview from which Muslim culture and civilization springs, it directly affects a number of disciplines and arts. Thus grammar, syntax, lexicography, law, and literary criticism are all based on the Qurʾanic text. Calligraphy, the most sophisticated of Islamic art forms, was developed to celebrate the holy text, and the chanting of the Qurʾan, based on abstract modular improvisation that organizes musical motifs in complex patterns, provides the core structure of the various genres of Islamic music.

QUSAYR, AL-

Historic Egyptian port on the Red Sea.

The town al-Qusayr in Egypt on the Red Sea is located slightly north of the twenty-sixth parallel, and linked to the Nile by a trade route to Qina. The site has been in use since pharaonic times and served as a port of embarkation for Muslim pilgrims to Mecca. It was a major commercial center in Mamluk and early Ottoman Empire times and experienced a revival under Muhammad Ali, but the pilgrimage traffic was diverted to Suez after the canal was built (1859-1869), eclipsing its importance.

QUTB, SAYYID

[1906–1966]

Radical ideologue of the Muslim Brotherhood.

Born in Asyut, south of Cairo, to a family of impoverished rural notables, Sayyid Qutb was trained as a teacher at Dar al-Ulum. Until 1942, he was an inspector in the Ministry of Public Instruction; he also wrote Wafdist political opinions in the popular press and published poetry, short stories, and literary criticism. From 1945 to 1948, he wrote a series of articles critical of Egyptian politics and several books on literary figures and issues. He was highly critical of the government in his writings, and this earned him de facto exile to the United States, where he was sent by the ministry to study the education system. During his three-year stay in the United States, disturbed by what he considered to be U.S. sexual permissiveness, materialism, and racism, he rediscovered his deep Muslim roots. Upon his return to Egypt in 1951, he was recruited by the Society of the Muslim Brethren, or Muslim Brotherhood. He became a member of the Guidance Council and head of the propaganda section. In 1953, he was appointed editor-in-chief of the society's newspaper *al-Ikhwan al-Muslimin* (the Muslim brethren).

In the months before and after the July 1952 Egyptian revolution, Qutb and Gamal Abdel Nasser met regularly. Nonetheless, in the wake of a 1954 assassination attempt on Nasser by a Muslim Brother, Qutb was imprisoned. He was released in 1964 but was arrested again in 1965. After being tortured and tried by a military court for conspiracy against Nasser, Qutb was hanged on 29 August 1966.

In prison, Qutb converted from moderate to radical Islamism. It was there that Qutb indoctrinated some of the future radical leaders, including Shukri Mustafa. During his incarceration, from 1954 to 1964, Qutb wrote, and circulated outside prison, numerous books, including one of his most influential, *Maʿalim fi al-Tariq* (Signposts on the road). An account and interpretation of events in Nasser's concentration camps, it is a seminal work and served as the basis for the reconstituted Islamist movement in the early 1960s. *Maʿalim* describes both the words and the actions that are needed for the destruction of the secular regime and the creation of a Muslim state.

Qutb's theoretical writings, addressing the political, economic, and social organization of the Islamic state, vividly expressed the unity of *din* (religion) and *dawla* (state), in distinct contrast to the post-Enlightenment separation of church and state prevalent in the West. Focusing on the intersection of *shariʿa* (Islamic law) and modern society, he maintained that the former was imbued with an inherent sense of *tajdid* (renewal). As such, it offered the principles necessary for progress through action. Moreover, Qutb held that laws and statutes were only one of Islam's two pillars; the other was education, which alone could provide Muslims with an Islamic theory of life.

Through his writings, Qutb established the theoretical foundations for radical Islamist organizations. His books, which upheld the doctrines of divine governance *(hakimiyya)* and insisted on attacking worldly unbelief or paganism *(jahiliyya)* through violent revolutionary means, have become the gospels

of Islamic radicals, including the Arabs who during the 1980s fought the Soviet invasion of Afghanistan.

The inauguration ceremony of Syrian president Shukri al-Quwatli (1892-1967), shown seated in the House of Parliament, in Damascus. Quwatli succeeded Hashem al-Atassi (1875-1960), in 1940. © BETTMANN/CORBIS. REPRODUCED BY PERMISSION.

QUWATLI, SHUKRI AL-
[1891–1967]

Three-time Syrian president; Arab nationalist.

Shukri al-Quwatli was born in Damascus to a Sunni Muslim family of prosperous landowners and bureaucrats who made their fortune through agriculture and trade with Abd al-Aziz ibn Abd al-Rahman Al Saʿud in the Arabian Peninsula. He was one of the most important figures in the political life of modern Syria. He received his education in the elite schools of Damascus and his public administration training in Constantinople (now Istanbul). Having no stake in the Ottoman Empire, he joined the secret Arab nationalist society al-Fatat and then the Hashimite-led Arab Revolt in 1916. His underground activities on behalf of the cause of Arab independence during World War I enabled him to emerge as a nationalist hero.

Although al-Quwatli served in the local administration of the Hashimite Prince Faisal I ibn Hussein's Arab government, which was set up in Damascus after the defeat of the Ottoman state, he belonged to a group of avowed anti-Hashimite pan-Arabists who devoted most of their time to the Istiqlal Party (Arab Independence party). Forced to flee Syria after the French invasion of July 1920, al-Quwatli spent the next ten years in exile first in Cairo, which he used as a base for his activities on behalf of the Hashimite-leaning Syrian–Palestine Congress, and then in Europe, primarily Berlin, where he collaborated with other exiled Syrians in anti-French propaganda campaigns. He was active in supporting the Great Syrian Revolt of 1925–1927.

With the French amnesty of 1930, al-Quwatli returned to Damascus. Initially he maintained a low political profile devoting much of his time and energy to business ventures, primarily the processing and exporting of fruits and vegetables. The Syrian Conserves Company, which he founded in 1932, vaulted him into the limelight as an industrialist who promoted Syria's economic interests during a critical phase of its fight for independence.

Following the election of a Syrian parliament in 1932, al-Quwatli joined the National Bloc, Syria's principal nationalist organization from 1927 until the end of the French mandate era. An uncompromising pan-Arabist devoted to the cause of Arab independence, al-Quwatli was soon disenchanted with the bloc's ineffectiveness and its policy of "honorable cooperation" with the French, and he became a leading instigator of the general strike that erupted in Syria on 27 January 1936, and brought commercial and educational life to a standstill for thirty-six days. When the all-bloc government was formed in Damascus in 1936, al-Quwatli served as minister of defense and of finance only to resign two years later. Although he was the leading nationalist politician in Syria during World War II, his anti-French

activities forced him to go into exile in Iraq. His connections with Ibn Saʿud, however, made the British apply pressure on the French to accept his return. In the Syrian elections of 1943, he was elected to the presidency of a "formally" independent Syria. His nationalist sentiment, which was beyond reproach, enabled him to remain in office despite the factionalism and scandals that plagued his administration.

In March 1949, al-Quwatli was deposed as president by Colonel Husni al-Zaʿim's successful coup and once again he went into exile, but this time in Egypt, a country on which he came to depend during the rest of his political life. Thanks to Egyptian and Saudi support, he returned to Syria in 1954 after the overthrow of the military regime of Colonel Adib Shishakli. In August 1955, he was elected president of Syria for a third time. By that time, the political landscape in Syria had changed. The class of urban notables from which he hailed and that controlled Syrian politics from the latter part of the nineteenth century through the early years of independence was under attack by new political forces, including al-Baʿth and the communists. Syria's domestic politics was also weak and unstable, and the country itself was at the heart of a struggle for dominance between Hashimite Iraq and republican Egypt on the one hand, and the big powers on the other hand.

Al-Quwatli strongly supported the ideas of an Egyptian–Syrian union in 1957 and 1958. With the consummation of the union and emergence of the United Arab Republic (UAR) in 1958, al-Quwatli's active participation in Syrian politics came to an end. He resigned his post as president to allow Gamal Abdel Nasser, Egypt's charismatic president, to take over the presidency of the UAR. Before his death in 1967, al-Quwatli witnessed the collapse of the UAR in 1961 and the coming to power of a factionalized group of Baʿthist military officers who came in the main from rural Alawi, Druze, and Ismaʿili backgrounds significantly different from the landowning, scholarly, and mercantile Sunni families from which his generation of leaders hailed. The advent of these new groups to power brought with it the reorientation of Syrian politics, both domestically as well as in the area of foreign relations.

Muhammad Muslih

R

RAAB, ESTHER

[1894–1981]

The first Palestinian-born woman poet in the modern era to write and publish in Hebrew.

Esther Raab's childhood in the early years of the first Jewish settlement of Petah Tikvah shaped an intimate connection between her and the wild and primary landscape of Eretz Yisrael (Palestine). This emotional relationship is expressed throughout her poems. In 1923 Raab's first poem, "Ani Tahat ha-Atad" (I am underneath the bramble bush), was published in the new Hebrew literary periodical *Hedim,* but it was only in 1930 that her first book, *Kimshonim* (Thistles)—containing thirty-two poems written between 1920 and 1930—was published.

Raab was a pioneer in her poetics. As early as the 1920s, Raab's poems differed markedly from those of her mainstream male contemporaries and from those of other women poets of the time. Her early poetry is striking in its sensuous descriptions of the landscape of Eretz Yisrael and in its rebellious female voice. Moreover, this early work is notable for its rejection of the stanza and meter in favor of free verse and idiosyncratic syntax and word order. These elements of form and content, which set Raab's poetry apart from the poetic and thematic conventions of her time, may have contributed to her fate as a poet. After the cool and sometimes openly hostile reception of her book, Raab fell into a two-decade-long silence. She started to publish again in the late 1950s.

Raab died in Tiveon and was buried in the city of her birth, Petah Tikvah. She requested that a few lines from her poem be engraved on her tombstone: "Your earth-clods were sweet to me/Homeland—just as the clouds of your sky/Were sweet to me."

Among Raab's books of poetry are *The Poetry of Esther Raab* (1963), *As Last Prayer,* (1976), *Root's Sound* (an anthology; 1976), and *Esther Raab, Collected Poems* (1988). A second, enlarged edition of her collected poems was published in 1994, the one-hundredth anniversary of her birth.

Shibolet Zait

RAAD, INʿAM

[1929–1998]

Lebanese politician.

Inʿam Raad (also Raʿd) was born to a Greek Orthodox family in Ayn Zhalta. His father, Tawfiq, a graduate of the American University of Beirut (AUB), was a pharmacist who emigrated for a few years to Australia. In 1949 the younger Raad obtained his degree in political science at AUB. Until 1957 he taught Arabic, English, geography, and history at Broummana High School and other schools in Lebanon. In 1944 he had joined the Parti Populaire Syrien (later called the Syrian Social Nationalist Party) and was elected several times to its politburo. Between 1958 and 1961 he was chief editor of the party's publications, *al-Bina* and *Sabah al-Khayr.* In 1961, following an attempted coup mounted by the party against the Lebanese government, Raad and his followers were condemned to death; Raad's sentence later was commuted to a life sentence. In 1969 President Charles Hilu announced an amnesty for the civilian party members implicated in the coup. In 1992 Raad was elected president of the party. He died in 1998.

RABAT

One of the four imperial cities of Morocco; national capital since 1912.

Since being named capital by the French in 1912, Rabat (also Ribat al-Fath) has grown in size and prestige as the new administrative, educational, and cultural center of Morocco. It is bordered by the Atlantic Ocean and the Bou Regreg River, which separates it from its rival sister city to the north, Salé.

Rabat takes its name from a small tenth-century *ribat* (monastery-citadel) manned by Muslim holy warriors *(murabits).* The Almohad Sultan Yaʿqub al-Mansur constructed a city on the site and named it Ribat al-Fath (Monastery of Conquest), in honor of a victory over Spain in 1195. Rabat's historical significance, along with its neighboring rival, Salé, stemmed from commercial trade and piracy in the seventeenth and eighteenth centuries. Spanish Muslims expelled from Spain in 1610 formed the core of Rabat's population.

At the beginning of the French protectorate in 1912, the French decision to relocate Morocco's capital to Rabat opened it to extensive development outside the original Arab city *(madina)* to the south and west. French colonial administrator General Louis-Hubert Gonzalve Lyautey, in laying out the plan for Rabat, saw it as an opportunity to design an exemplary modern city. The major national university, Muhammad V, is located in Rabat, as are various national research institutes. Rabat and Salé together form an administrative prefecture that has grown at a rate of more than 5 percent annually since the late 1960s. The population of Rabat-Salé and environs numbers 1,386,000 (1994 figures).

RABBANI, BURHANUDDIN

[1940–]

President of Afghanistan, 1993–1996.

Burhanuddin Rabbani was the president of Afghanistan from 1992 to 1996. He was born in Faizabad, Badakhshan province, to a Tajik family and educated in Islamic studies at Kabul University and al-Azhar University in Cairo, where he received a master of arts degree (1968). He returned to Kabul to teach in the faculty of Islamic law at Kabul University (1970) and was a leader of the Islamist movement in Afghanistan. In 1971 he joined the Jamiʿat-e Islami and became its leader. In 1974 he fled Afghanistan, first traveling to Saudi Arabia and then to Pakistan, where he reorganized the Jamiʿat-e Islami as a guerrilla militia to fight against the Kabul government.

As he was Tajik, Rabbani's political party drew most of its followers from the non-Pushtun Afghans, especially in the northern and western regions of Afghanistan.

With the collapse of the People's Democratic Party of Afghanistan (PDPA) government in 1992, Rabbani returned to Kabul and became president of Afghanistan. Driven from Kabul by the Taliban in 1996, Rabbani sought refuge in northern Afghanistan, where he formed the United National and Islamic Front for the Salvation of Afghanistan (UNIFSA), also known as the Northern Alliance, to fight against the Taliban government. When the Taliban fell in late November 2001, UNIFSA forces captured Kabul. Although Rabbani was still seen as the president of Afghanistan by some of his followers, he was forced to relinquish control to the new government of Hamid Karzai.

See also Jamiʿat-e Islami; People's Democratic Party of Afghanistan.

RABBI

Title derived from rav, *which in Hebrew denotes a master.*

In its Talmudic origins, the mastery to which *rabbi* referred was a knowledge of both Scripture and Jewish oral tradition, including competence in interpreting law and recalling legends. Although at first the title was honorific, it evolved into something more formal. Always connected with a level of superior scholarship and familiarity with sacred Jewish texts, it has in contemporary times also come to signify general religious leadership.

Although the requirements for acquiring the title are not stipulated in Jewish law, *semikha* or ordination—in which another rabbi attests to the scholarship and learning of the initiate—has become an assumed prerequisite of being called rabbi. Throughout much of Jewish history, this process occurred in the context of yeshivas; currently, it also takes place in theological seminaries.

A rabbi holds a photograph of Jerusalem's Temple Mount, or Old City Mosque, at a gathering of Israel's chief rabbinate, August 2000. They discussed building a synagogue on the area that is thought to be the Jewish Second Temple, ruined by the Romans in 70 c.e. © AFP/Corbis. Reproduced by permission.

Generally, civil authorities have recognized the right of the Jews to decide for themselves who may be called rabbi. This became more complicated after Jews ceased to speak with a single communal voice in the modern period, with the consequence that different groups of Jews set various criteria for deciding who would be entitled to be called rabbi. Thus in the modern period in the United States, for example, there are four types of rabbis being ordained, to represent the four different denominations: Reformed, Reconstructionist, Conservative, and Orthodox. The Orthodox denomination, although it represents a minority of world Jewry, produces the most rabbis. Throughout Jewish history, the title has been granted only to men, but in the late twentieth century, non-Orthodox Jews began to ordain women as well. In Israel, only Orthodox rabbis are officially recognized, even though Reformed and Conservative rabbis are also there.

Two general categories of rabbis evolved in modern times: those who were primarily teachers, scholars, or issuers of legal decisions and remained in the academy of Jewish learning or sometimes served on a religious court, and those who ministered in the community and the synagogue. Rabbis

have also become ratifiers of changes in personal status by officiating at weddings, funerals, and other rites of passage.

The rabbinate in modern Israel is unique in several important respects. Because there is no strict separation of religion and state in Israel, Halakhah is the governing law in all matters of personal status. Accordingly, the Orthodox rabbinical interpretation of Jewish law is dominant. In Israel, many rabbis exert their authority as officials of the state Ministry of Religion and the office of the Chief Rabbinate. Headed by two national chief rabbis elected by a board of fellow rabbis for a term of ten years, the Chief Rabbinate is divided into Ashkenazic and Sephardic wings. Ostensibly empowered to make all ultimate religious decisions, it also provides parish rabbis and chief rabbis for major municipal regions.

There are other rabbis in Israel, particularly within Hasidic and yeshiva circles. Unlike the state rabbis whose authority is official, these rabbis dominate by virtue of their charisma or perceived scholarship. The relatively few non-Orthodox rabbis in Israel have a limited following. During the last few decades, the chief rabbis and their subordinates have steadily lost moral authority. Today the majority of secular Israelis consider them irrelevant, and the minority of ultra-Orthodox Jews guide themselves by their own sages whom they endow with greater rabbinic authority. This leaves only a narrow band of Orthodox Jews—primarily religious Zionists—who recognize the moral preeminence of the Chief Rabbinate. Nevertheless, the Chief Rabbinate is assured of influence as long as it continues to control matters of personal status and religious certification in the state.

SAMUEL C. HEILMAN

RABI, MUBARAK

[1935–]

Moroccan novelist and short-story writer.

Mubarak Rabi was born in Benmaʿashu, near Casablanca, Morocco. He received a degree in philosophy from the Faculty of Arts in Rabat and has a master's degree in psychology. He is at present dean of the College of Arts and Sciences at Ben Msik in Casablanca and teaches psychology at Mohammad V University in Rabat. Rabi is a member of the Union of Arab Writers and writes in Arabic. After unsuccessful efforts at poetry, he has concentrated on fiction. He received the Maghribi Prize for the novel and the short story in 1971.

Rabi is primarily concerned with Moroccan life and the role of magic and traditional beliefs in people's lives. This is best illustrated in his collection of short stories, *Sayyidna Qadr* (1969; Saint destiny). His books reveal a clear interest in human nature and a desire to discover the factors that shape it, producing good and bad. He is preoccupied with the loss of values in modern times and the ensuing conflicts among people. His fiction remains detached from the political turmoil in Morocco.

Rabi is also deeply interested in the education of children, as is obvious from his novel *Badr Zamanihi* (1983; The full moon of his time) and his collection of essays, *Awatif al-Tifl* (1984; The child's emotions). His later works include a novel, *Burj al-Suʿud* (1990;The lucky zodiac), a collection of short stories, *al-Balluri al-maksur* (1996; The broken crystalline), and a trilogy, *Darb al-Sultan* (1999–2000; The sultan's way). His concern remains humans evil and good inclinations seen with the eyes of a psychologist.

AIDA A. BAMIA

RABIN, YITZHAK

[1922–1995]

Israeli military leader and politician; member of the Knesset; prime minister, 1974–1977 and 1989–1995.

Born in Jerusalem, Yitzhak Rabin received part of his early education at an agricultural school; later,

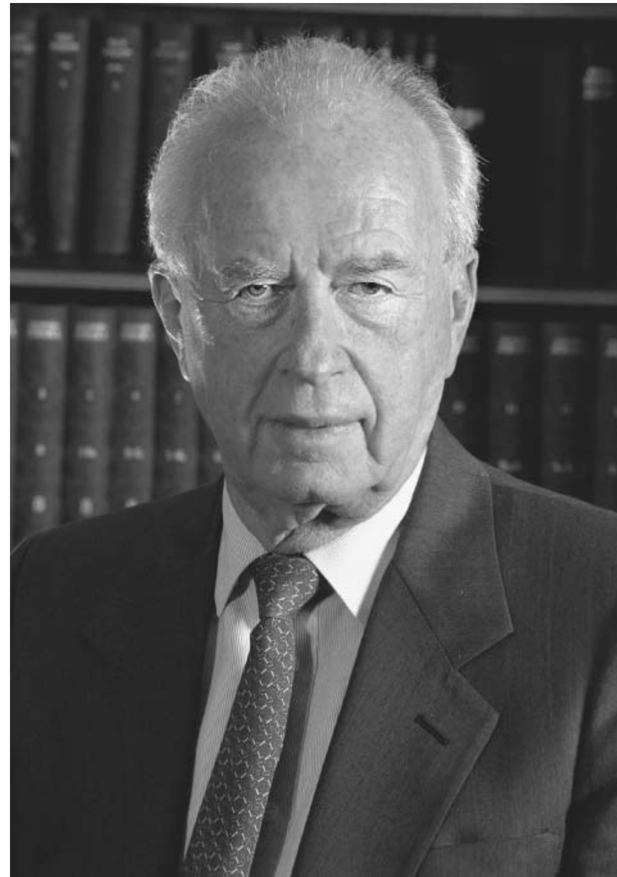
he became active in the Ahdut ha-Avodah (socialist labor) movement in the Galilee. In 1941 he joined the Palmah, the Haganah's elite commando unit. Rabin's early military experience included fighting against Vichy French forces in Syria and Lebanon. In the Israeli War of Independence (1948) he fought against the Egyptians in the Negev campaign and also in Jerusalem. After the war he studied in Britain at the army staff college, from which he graduated in 1953.

Rabin, whose first career was in the military, was appointed chief of staff of Israel's armed forces in 1964; at the time of the June 1967 war he was Israel's commander in chief. In 1968 he retired from the army and became Israel's ambassador to the United States. He was very successful in that capacity, and the diplomatic experience combined with his military career gave him the leverage to start a second career, in politics, at the age of fifty-one.

Rabin returned to Israel from Washington, D.C., in March 1973; in the same year, he was elected to the Knesset for the first time and also served as minister of labor in the government of Prime Minister Golda Meir. In April 1974, when Meir resigned because of intense criticism of her government's handling of the 1973 war, the Labor Party's Central Committee sought her successor from among a field of candidates that included Shimon Peres, Moshe Dayan, Yigal Allon, Pinhas Sapir, and Abba Eban, as well as Rabin. Rabin was selected in June 1974 primarily because of his reputation as a war hero and because he was not associated with the government's unpreparedness for the Yom Kippur War.

In creating his coalition, Rabin, who was Israel's first *sabra* (native-born) prime minister, refused to give in to the extremist demands of members of the National Religious Party for greater Orthodox (Jewish) religious influence on public policy. He consequently achieved only a bare majority, with the help of the new and small Citizens' Rights movement, and this left his government vulnerable to periodic attacks in the Knesset. From 1974 to 1975 Rabin worked closely with U.S. Secretary of State Henry Kissinger, who was involved in the shuttle diplomacy that led to disengagement agreements with Egypt and Syria.

Rabin's first term as prime minister was marked by continuous intraparty bickering, primarily because Defense Minister Shimon Peres attempted to take over leadership of the party and become the prime minister. Domestic economic problems, chiefly inflation, continuing criticism of the Labor Party's performance in the Yom Kippur War, and increased ethnic tensions between Ashkenazic and Sephardic Jews all contributed to a gradual decline in the Labor Party's popularity and the rise of the Likud Party under Menachem Begin. Rabin resigned from the party leadership and from his post as prime minister in May 1977 because of a financial scandal involving his own and his wife's bank accounts in the United States. Shimon Peres replaced him as party leader.



Former military leader Yitzhak Rabin served as prime minister of Israel for two terms, the first beginning in 1974 and the second in 1989. Rabin made notable strides towards peace with other Middle Eastern countries and with Palestinians, which led to his assassination in 1995 by Yigal Amir, a disillusioned young Israeli who claimed he killed Rabin to halt this process.
© Photograph by Ya'acov Sa'ar. Government Press Office (GPO) of Israel. Reproduced by permission.

After twelve years, during which the Labor Party, led by Shimon Peres, was the opposition party in a shared-power arrangement with the Likud, Rabin again became party leader and prime minister in 1989. Over intense opposition from conservative forces in Israel, he pressed hard for a peace treaty with the Palestinians and Israel's Arab neighbors. In September 1993 he signed an Agreement on Principles on Interim Self-Government with Yasir Arafat of the Palestine Liberation Organization, and an Accord to Implement Self-Rule for the Palestinians was signed in May 1994. In October 1994 Rabin signed a full peace treaty with King Hussein of Jordan. In the same year, he shared a Nobel Peace Prize with Foreign Minister Peres and Chairman Arafat.

On 4 November 1995, while he was speaking at a peace rally in Tel Aviv, Rabin was assassinated by a Jewish right-wing extremist who opposed his overtures to Palestinians and other Arab leaders working toward peace in the Middle East. "The Rabin legacy" is often cited, but there is disagreement about its substance. For some it is associated specifically with the Oslo peace accords. For others it refers generally to the quest for peace. Critics have observed that those who allude to "the Rabin ideology" or "the Rabin legacy" mistake their own views for those of Rabin; these critics argue that Rabin did not have an ideology or a legacy—what he had was a sense of responsibility for the state and a willingness to pragmatically consider new ideas in order to pursue peace.

RABIYYA ALI, SALIM

[c.1935–1978]

Politician and government leader of South Yemen.

Salim Rabiyya Ali (or Rubiyya Salim Ali, or Salmine) came from the up-country of South Yemen, northeast of Aden, and first made his name fighting in the national liberation struggle against the British and their feudalist allies in the Radfan region during the mid-1960s. He was president of the People's Democratic Republic of Yemen (PDRY) throughout most of the 1970s. He and his colleague and rival Abd al-Fattah Ismaʿil were founders of the National Liberation Front (NLF), early leaders of its left wing, and allies in the successful effort to rout its right wing in 1969; they were essentially co-rulers of the PDRY for the next decade, with Rabiyya Ali serving as president and Ismaʿil as secretary-general of the NLF. At the same time, they were bitter rivals and represented different perspectives on South Yemen's Marxist revolution: Rabiyya Ali, the Maoist, was identified with populist, grass-roots organizing as well as state institutions, whereas Ismaʿil, inspired by the Soviet model, was identified with the ruling party and its cadres. Their intraparty struggle for control of the revolution intensified and in mid-1978 erupted into armed conflict triggered by Rabiyya Ali's continuing efforts to improve previously hostile relations with North Yemen, Saudi Arabia, and the other Arab Gulf states, and more immediately by mutual accusations about responsibility for the assassination of North Yemen's president, Ahmad Husayn Ghashmi. Forces loyal to Rabiyya Ali lost the fight and he and two of his senior colleagues were summarily tried and executed.

ARAB COUNTRIES

Origins and development of radio and television broadcasting in the Arab world.

Most Arab radio and television systems are government-owned, for several reasons. First, Arab governments regard radio and television as potent domestic political instruments because they reach most of the population regardless of literacy and income levels. Moreover, Arab broadcasting underwent its first major expansion during the period after World War II when Arab nationalism and anticolonialism were strong, and governments were very eager to use them for purposes of political nation building and national defense. Governments justified controls on the basis of the alleged need to protect the country against its enemies, old and new. By the same token, radio and television facilities have been prime targets of revolutions seeking to take power, and therefore the governments took special measures to protect them. Third, broadcasting is not a lucrative source of income for commercial investors because commercial advertising in the Arab world, and especially in the electronic media, is relatively limited, and generally advertising revenues do not cover costs. Fourth, governments are concerned about their image as conveyed in other countries through broadcasting so they want to control the programs. There are a few exceptions, especially in Lebanon and among the new satellite television companies, but the norm is government control of electronic broadcasting.

Arab Radio Broadcasting Development

Arab radio broadcasting began in the 1920s, but only a few Arab countries had their own broadcasting stations before World War II. After 1945, most Arab states began to create their own radio broadcasting systems, although it was not until 1970, when Oman opened its radio transmissions, that every one of them had its own radio station.

Egypt's Radio and Television Building in Cairo, which produces the bulk of the country's media programming, contains recording studios, hundreds of offices, an information center, a press center, and a broadcasting museum. On 31 May 2003, Egypt's annual Media Day, President Husni Mubarak inaugurated a new ten-story extension to the building which houses eight digital studios and a 1,200-seat auditorium. © DAVE BARTRUFF/CORBIS. REPRODUCED BY PERMISSION.

Among Arab countries, Egypt has been a leader in radio broadcasting from the beginning. Broadcasting began in Egypt in the 1920s with private commercial radio, and in 1934 the government gave the Marconi Company the exclusive right to broadcast. In 1947, however, the Egyptian government declared radio a government monopoly and began investing in its expansion.

By the 1970s, Egyptian radio had fourteen different broadcast services, including six for foreign audiences, staffed by more than 4,500 employees. With a total air time of 1,200 hours per week, Egypt

Qatar-based television network al-Jazeera has increasingly been referred to as the "Arab CNN." The network has one of the world's largest audience bases, with some 45 million subscribers. © AFP/CORBIS. REPRODUCED BY PERMISSION.

ranked third in the world among radio broadcasters, The programs were all government controlled, and much of the motivation for the government's investment in radio was due to the aspirations of President Gamal Abdel Nasser to be the recognized leader of the Arab world. Egypt's "Voice of the Arabs" station, which targeted other Arab countries with a constant stream of news and political features and commentaries, became the most widely heard station in the region. Only after the June 1967 war, when it was revealed that this station had misinformed the public about what was happening, did it lose some credibility; nevertheless it retained a sizable listenership.

On the Arabian Peninsula, radio was slower to develop. In Saudi Arabia, radio broadcasts started in the Jidda-Mecca area in 1948, but they did not start in the central or eastern provinces until the 1960s. Neighboring Bahrain had radio by 1955, but Qatar, Abu Dhabi, and Oman did not start indigenous radio broadcasting until nearly a quarter century later.

Arab Television Development

As for television, indigenous television broadcasting in the Arab world first began during the late 1950s, in Iraq and Lebanon. Thirteen other Arab countries followed during the 1960s, but it was not until 1975, when North Yemen inaugurated its television station, that all Arab states had television stations.

Before that, some Arab audiences had begun to be exposed to television from foreign sources. In the North African countries of Morocco, Tunisia, and Algeria, where knowledge of the French language was widespread, some of the population was able to watch television broadcast across the Mediterranean from France. In Libya, Arabs living near the U.S. military base at Wheelus were able to watch U.S. television transmitted by the U.S. armed forces, until the

base was shut down after the revolution of 1969. In eastern Saudi Arabia some Arabs were able to watch U.S. TV programs broadcast by the U.S.-run Arabian American Oil Company (ARAMCO) located there.

Audiences

Audiences for Arab radio and television have expanded considerably over the years. All Arab countries have passed the United Nations Educational, Scientific, and Cultural Organization (UNESCO) minimum standard of fifty radio receivers per thousand population, and nearly all of them have passed the UNESCO minimum standard for television receivers of 100 per thousand population, as shown in the table below (worldbank.org and unesco.org, March 2003; data is for 2000, except 1997 for Oman, UAE, Bahrain, and Qatar).

When compared with other less developed areas of the world, these audience rates are roughly equivalent for radio, and they are substantially higher for television. Because multiple listeners and viewers use each radio and television receiver, it is assumed that radio listening is nearly universal among the almost three hundred million Arabs, and that television reaches more than one hundred million of them.

Ownership and Control

When Arab television developed, it was a government monopoly almost everywhere except in Lebanon. During the 1950s, the Lebanese government gave television licenses to two groups of private businesspeople. During the civil war in the 1970s, several private groups and parties started their own unauthorized television stations, but by the 1990s the government had limited the television companies to four, each more or less representing one of the major Lebanese political-religious groups.

During the 1990s, Arab satellite television broadcasting emerged, and it has become the most powerful of all media instruments in the Arab world. In 1990 and 1991, during the Gulf crisis and Gulf War that resulted from Iraq's occupation of Kuwait, the U.S. satellite broadcaster CNN was very widely watched in the Arab world because it provided news and images of developments in the crisis quickly when everyone was eager to know what was happening. Yet CNN's broadcast was in English, and its reporting and editorial judgments presented from a U.S. point of view, and many Arabs wished they had such a service that presented news and events from an Arab point of view and in Arabic. Also, the cost of satellite dishes was becoming lower and therefore within reach of more people. A few wealthy Arabs therefore decided to invest in the creation of Arab satellite television systems; they were willing to invest large sums and to lose money for the prestige and political influence of the new media.

Electronic media density

	Population in millions	Radios per 1000	TVs per 1000
Algeria	30	244	110
Bahrain	0.7	580	472
Egypt	64	399	189
Iraq	23	222	83

TABLE BY GGS INFORMATION SERVICES, THE GALE GROUP.

In 1991 Saudi Arabian investors established Middle East Broadcasting (MBC). It was the first private Arab satellite TV station that aimed primarily at a pan-Arab audience. It offered news and entertainment, and soon other investors started to imitate its success. In 1994 two other groups of Saudi investors established two other Arab satellite companies, the Arab Radio and Television Network (ART) and Orbit. MBC, like most of the others, was a free-to-air broadcaster that carried advertising to cover at least part of its costs, but ART and Orbit are fee-based broadcasters that used a coded system accessible only to subscribers. During the next three years, two groups of Lebanese private investors started the satellite stations named Future and Lebanese Broadcasting Company, respectively, and Syrian private investors started Arab News Network. During the same period, the Government of Qatar subsidized the start of a satellite station in

An Iranian reporter broadcasts live during the February 2000 elections. State-run Iranian television was broadcast from twenty-eight stations as of the late 1990s, reaching 4.61 million television sets across the country. In 1997 Iran also launched a satellite channel that covered Europe, parts of Asia, and other regions in the Middle East. © TOUHIG SION/CORBIS SYGMA. REPRODUCED BY PERMISSION.

that country that was nominally private, called al-Jazeera, which became controversial and popular because its programming broke many Arab taboos. Al-Jazeera's discussions and call-in programs frequently include, for example, direct criticism of the policies and specific personalities of several Arab governments, to an extent not heard before in Arab media. In addition, the programs discuss religion and gender in ways rarely dealt with in public.

In the twenty-first century, eight more private satellite television stations have been created, including two owned by Lebanese, three by Egyptians, and one each by Tunisians, Algerians, and Saudis. Meanwhile, most Arab governments got into the act, creating their own satellite television systems alongside their existing terrestrial ones. Even the new satellite companies, although nominally private, tended to operate under some government influence because of legal reasons, financial necessity, and personal connections between owners and government officials.

Palestinian-controlled broadcasting is a special case. For years, Palestinian broadcasters only had access to transmitters outside Palestine and located in other Arab countries, using the government-owned and -controlled transmitters of those countries. During the 1990s, after the Palestinian-Israeli Oslo Accords, radio and television began under the auspices of the Palestinian Authority (PA) and by private individuals. Nevertheless, the PA often restricted the latter, and Israel restricted both.

WILLIAM A. RUGH

ISRAEL

History of radio and television in Israel.

Broadcasting in Israel has accompanied the gradual weakening of state hegemony, the transition from a "melting pot" philosophy to a multicultural orientation, and the growth of privatization and market control. After its introduction by the British, broadcasting was a full government monopoly for some thirty years. The first radio station, the *Voice of Jerusalem,* went on the air in 1936 under the Palestine Broadcasting Service. Following a traditional British colonial policy of curbing nationalist content while allowing for some carefully monitored cultural expression, the government controlled the news tightly. Other programming was produced by the Jewish and Arab communities.

Renamed *Kol Yisrael* (the voice of Israel) when Israel was established in 1948, radio came under the direct control of the Ministry of the Interior, and later of the Prime Minister's office. Most programming was in Hebrew, some in Arabic and in the languages spoken by new immigrants. For many years, Israel's broadcasting system was monolithic and government-controlled, including *Kol Yisrael* and *Galei Tzahal,* the army station opened in 1950. Direct official control was justified by security challenges and by the need to stabilize the nation and to achieve immigrant acculturation. The government monopoly was abolished in 1965 in response to popular and political criticism and in an effort at satisfying increasing media needs. The Israel Broadcasting Authority (IBA) Law was enacted in the same year, introducing the IBA as a public, nongovernmental body broadcasting in Hebrew and Arabic.

Israel Television became part of the IBA shortly after its establishment in 1968. An educational television service set up in 1966 by the Rothschild Foundation was transferred to the Ministry of Education. Although formally modeled on the BBC, the IBA has never been entirely free from governmental influence. In the 1980s an "open skies" philosophy emerged, producing demands to increase the number of news channels and to upgrade cultural creativity. The broadcasting system underwent remarkable growth: Private cable TV appeared in 1989 and satellite services in 2002, two commercial television channels went on the air in 1992 and 2002, and regional private commercial radio stations started transmissions in 1996.

Media concentration, privatization, and incorporation reduced competition for entrance into and access to the market. Economic interests and government pressures have enhanced media conformism that favors government policies and powerful economic groups. Nevertheless, technological progress helped to empower some "voiceless" groups through a large number of pirate radio stations, such as the now defunct left-wing *Voice of Peace* and right-wing *Channel Seven*; low-powered ultraorthodox religious stations called "holy channels"; pirate radio and cable TV in Russian and Arabic; and an illegal industry of homemade audio- and videocassettes operated by Israeli-Palestinian partnerships. Also activist groups of the elderly, feminists, gays, greens, and others have gained access to community radio and television outlets, and to radio stations in schools and colleges.

Radio and television have always been important components of the political scene. In addition to their use for electoral purposes, they have served both to support the government and to criticize its policies and actions on issues such as war, occupation, peacemaking efforts, economic crises, and social integration.

The procedures that govern press censorship also apply to broadcasting. According to Israeli law, all broadcast materials must be submitted to the military censor, in a fashion similar to press censorship. Adopted from British Mandatory emergency measures, these laws have been adapted to the changing circumstances. Thus, an agreement between the government, the army, and the media provides a list of security-related topics that must be cleared, allowing for only a fraction to be submitted. Foreign correspondents work under strict control, particularly in the occupied territories.

DOV SHINAR

TURKEY

Outline of Turkish state- and independent-media broadcasting developments.

Radio broadcasting in Turkey began in Istanbul in 1927, when there were roughly 5,000 radios in the country, and a few months later in the same year Ankara Radio began broadcasting. The value of radio as a vehicle for mass mobilization and education was immediately realized by the new Republican authorities, and programming consisted mainly of news bulletins, concerts, weather, and programs such as *Radio Gazete* (Radio Journal), presenting news summaries; *Evin Saati* (Home Hour), a homemaking show; and *Ziraat Takvimi Saati* (Calendar Hour on Agriculture), appreciated in rural areas. In 1942 around 60 percent of programming was musical, another 35 percent consisted of speeches and dis-

cussions, and the number of radios in the country had risen to more than 100,000, or around 4.1 per thousand people, with half concentrated in Ankara and Istanbul.

With multiparty politics in 1946 the Democrat Party came to power in 1950. Frustrated by newspapers' general support for the opposition, it began to pressure the radio to reflect its party views. In the wake of the coup of 1960 regional stations were established in İzmir, Adana, Antalya, Erzurum, Gaziantep, and Kars. With the expansion of radio and demand for television, the state Turkish Radio and Television (TRT) Corporation was established in 1964. In 1969 a radio station was established in Diyarbakir.

Television broadcasting began in 1968, transmitting from Ankara, then from İzmir in 1970 and Istanbul in 1971. Following the coup of 1971 the autonomy of the TRT was curbed, neutralizing its treatment of social and political issues; the 1980 coup temporarily narrowed again the range of discussion on TRT. By 1977 television transmissions reached about 60 percent of the population, and in 1981 selected programs began to be broadcast in color. TRT 2 (culture and art) was established in 1986, and 1989 saw the creation of GAP-TV, directed toward the southeast, and TRT 3. In 1990 the stations began broadcasting via satellite, greatly extending coverage, including TRT-INT for the Turkish population in Europe.

Satellite dishes became popular in the late 1980s for watching "pirate" channels broadcasting from Europe, including Turkish-language ones, and in the early 1990s for watching private stations in Turkey. The wider range and frankness of discussion, as well as the perceived drabness of TRT, combined with agreements to carry soccer matches on the new channels, led to their instant success. In 1993 the government closed all pirate radio and TV stations, to the public's strong objection, and then officially ended its monopoly of TV and radio broadcasting in 1994 and set up a High Council for Radio and Television (RTÜK) to handle licensing and infrastructure, but also to monitor broadcasts and mete out fines and suspensions.

In the late 1990s Turkey launched its own satellites, greatly expanding broadcast areas in Europe, the Middle East, and Central Asia. According to a 1996 survey, more Turkish households had television sets than had telephones, an indication of how profoundly TV has become a part of social life in the country. TV, and to a lesser extent radio, are now major economic sectors subject to market pressures, and play major roles in the formation of public opinion and popular culture.

RAFI PARTY

See ISRAEL: POLITICAL PARTIES IN

RAFSANJANI, ALI AKBAR HASHEMI

[1935–]

President of Iran, 1989–1997.

Born in the southeast Iranian city of Rafsanjan, Ali Akbar Hashemi Rafsanjani began his religious education at the early age of fourteen in Qom (Qum), where from 1958 onward he was a leading figure among the younger disciples of Ayatollah Ruhollah Khomeini. His first arrest for political activities against the regime of Mohammad Reza Shah Pahlavi came in 1964; he succeeded in escaping after undergoing two months of torture. He thereupon joined the ranks of the Allied Islamic Associations, and in January 1965, after the assassination of Prime Minister Hasan Ali Mansur by four members of this organization, he was jailed for four and a half months.

Resuming his clandestine organizational work in Qom, Rafsanjani next was jailed in 1967 for publicly opposing the shah's extravagant coronation ceremonies. In 1973 he was sentenced to eight years in prison on charges of collaboration with the Mojahedin-e Khalq guerrilla organization; he served four years of this sentence.

After the triumph of the Iranian Revolution in February 1979, Rafsanjani was appointed to the Council of Islamic Revolution, and when the government of Mehdi Bazargan resigned in November of that year, he was also appointed acting minister of the interior. A founding member of the Islamic Republican Party (IRP), he was elected chairman of Iran's legislature, the Majles al-Shura—which was dominated by that party and its allies—on 20 July 1980. Through the skillful use of this office, he swiftly became one of the most visible and influential politicians in the country, a process that was accelerated when his senior colleagues in the IRP became victims of assassination. Also important in the growth of his popular appeal were the nationally televised sermons he frequently delivered for the Friday prayers at Tehran University. After the death of Ayatollah Khomeini on 3 June 1989, President Ali Khamenehi was elevated to the position of leader *(rahbar)* of the Islamic Republic, and Rafsanjani was elected the next president in August 1989. On 11 June 1993 he was elected to a second term with 63.2 percent of a turnout that represented 57.6 percent of the electorate. Once reputed to favor radical socioeconomic reform, Rafsanjani as president enjoyed the reputation of a pragmatist concerned above all with the reconstruction of the Iranian economy. After the end of his second term as president in 1997, Rafsanjani was appointed as chair of the influential Expediency Council, which has authority to revoke vetoes by the Council of Guardians.

RAHNAVARD, ZAHRA
[c. 1947–]

Iranian artist and writer.

Zahra Rahnavard was born into a religious family in Tehran. After graduating from high school, she attended the Tehran Teachers' College, where she obtained a teaching certificate. In the late 1960s, she met Mir-Hosain Musavi, who opposed the regime of Mohammad Reza Shah Pahlavi, as she did, and who shared her Islamic values; they married in 1969. Subsequently, she studied at and obtained a master's degree from Tehran University's department of arts. In the early 1970s, she joined the study circle around the Islamist philosopher Ali Shariʿati. In 1976, After Shariʿati was arrested, Rahnavard fled with her two children to the United States, where she became affiliated with the Confederation of Iranian Students, especially with its Islamist faction. She returned to Iran just before the success of the Iranian Revolution and became one of the influential women promoting the cultural, economic, and political programs of the new Islamic Republic, especially during her husband's tenure as prime minister, from 1981 to 1988.

Rahnavard is the author of a number of publications on art, literature, poetry, religion, and politics. Her writings have been translated into Turkish, Arabic, Urdu, and English. Her essays include "The Uprising of Moses," "The Colonial Motives for the Unveiling of Women," "The Beauty of the Veil, and the Veil of Beauty," and "Women, Islam, and Feminism in Imam Khomeini's Thought." Rahnavard has also held several exhibits of her art. Her large sculpture "Mother" is situated prominently in the middle of a busy Tehran square. In the first decade of the revolution, she used her considerable oratorical skills and her talent as a writer to propagate Islamist values in Iran and abroad. She was a founder of the Women's Society of the Islamic Republic and the Islamist Women's Society and editor of *Rah-i Zaynab,* a popular women's journal. In 1997, Rahnavard joined the reformist camp of President Mohammad Khatami and in 1999 she became president of the influential al-Zahra Women's College in Tehran.

RAJAVI, MASUD

[1947–]

Leader of the Iranian Mojahedin-e Khalq since 1979.

Masud Rajavi was born in Tabas, in central Khorasan. He completed secondary school in Mashhad and studied political science at Tehran University. Because of his activities with the Mojahedin-e Khalq, he was arrested in 1971 and condemned to death, but the sentence was commuted to life imprisonment. He remained in jail until the Iranian Revolution of 1979. Following the revolution, Rajavi rebuilt the Mojahedin, attracting hundreds of thousands of supporters. Since a 1981 government crackdown, Rajavi has led the Mojahedin from exile. In 1985 he married Maryam Azodanlou, who took on Rajavi's family name. Maryam Rajavi was declared not only the co-leader of the Mojahedin but also the future president of Iran.

RAJUB, JIBRIL

[1953–]

Palestinian activist and senior security official in the Palestinian Authority.

Born in the West Bank village of Dura, Jibril Rajub joined al-Fatah as a youth. Imprisoned by Israel soon thereafter in 1968, he was released in a 1985 Israeli-Palestinian prisoner exchange. He had become one of al-Fatah's most senior figures in the West Bank when Israel deported him during the first intifada. In Tunis he served as an advisor to Palestine Liberation Organization chair Yasir Arafat, and helped to coordinate the first intifada as deputy to al-Fatah security chief Khalil al-Wazir (Abu Jihad).

With the establishment of the Palestinian Authority (PA) in 1994, Rajub returned from exile to head the Preventative Security Forces (PSF) in the West Bank. Along with Gaza PSF chief Muhammad Dahlan, Rajub was one of the two most important security officials in the PA. He eventually ran afoul of Arafat, who dismissed him in April 2002. As part of the feud between Arafat and PA prime minister Mahmud Abbas in the summer of 2003, Arafat mended fences with Rajub and appointed him as his national security adviser, pitting him against his rival Dahlan, Abbas's minister of state for security affairs.

RAMADAN, TAHA YASIN

[1938–]

Iraqi politician.

Taha Yasin Ramadan, also known as Taha al-Jazrawi, was born in Mosul to a working-class Arabized Kurdish family. In 1959 he was dismissed from the army by the regime of Abd al-Karim Qasim, because of his leanings toward the Baʿth party. In 1966, he became a member of the Baʿth party's regional (Iraqi) leadership, and after the Baʿthist takeover in 1968, he supervised the purging of the army. Starting in 1969, Ramadan became a member of the Revolutionary Command Council and, starting in 1972, he commanded the Baʿthist militia. He was one of the ideological hard-liners among Saddam Hussein's entourage, always toeing Hussein's line. Between 1979 and 1991 he was first deputy prime minister, following which he was appointed vice president. Ramadan emerged from the Gulf Crisis of 1990 and 1991 as one of the most powerful individuals in Iraq outside of Hussein's own family, with his power base resting in the city of Mosul and in the party apparatus.

Following the U.S. occupation of Iraq starting in March 2003, Ramadan became a wanted figure. He was eventually captured in Mosul by Kurdish forces in August 2003, whereupon he was handed over to the U.S. forces.

RAMALLAH

Palestinian city in the West Bank.

Located about 6.5 miles north of Jerusalem on the western side of the Nablus–Jerusalem road, Ramallah was an important urban center under the British Mandate. After Jordan annexed the West Bank in 1950, Ramallah became part of the Jerusalem governorate. In the Arab-Israeli War of 1967, Ramallah was occupied by Israel. It was the site of many clashes between Israel's military authorities and Palestinians between June 1967 and December 1995, when Israel withdrew and the Palestinian Authority (PA) assumed control. The city underwent an economic boom during the mid-1990s when the PA established the town, unofficially, as its main West Bank administrative center. Many PA offices were built, as well as villas for returning emigres.

Ramallah was occupied by the Israelis several times after the start of the al-Aqsa Intifada in late 2000. It is noteworthy among Palestinian towns for its strong educational and professional heritage. U.S. Quakers established a girls' school in Ramallah in 1889, and nearby Bir Zeit University is one of the best Palestinian universities in the West Bank. In the last official census of 1997, the city's population stood at 17,851.

RAMGAVAR AZADAGAN PARTY

Armenian political party of Lebanon.

The ultimate goal of the Ramgavar Azadagan party, founded in 1921, was the liberation of Armenia. It has oriented its activities toward preserving Armenian culture among Armenian communities throughout the world. After a period of dormancy, the party was revived in the 1950s, in the wake of the increasing conflicts between the Dashnak party and the Hunchak Party. The Ramgavar party presented itself as an alternative that avoided issues divisive to the Armenian community. During the Lebanese civil war of 1975, the Ramgavar party opposed what it considered to be the right-wing policies of the Dashnak party.

See also DASHNAK PARTY; HUNCHAK PARTY.

ASʿAD ABUKHALIL

RAMLA

Also called Er Ramleh; a town in Israel 12 miles southeast of Tel Aviv.

Ramla was founded in 717 C.E. to replace nearby Lydda as the region's capital under the Arab caliphate. It soon outstripped its neighbor in size and prosperity, thriving on trade and industry, particularly soap and olive oil. More than three-quarters of Ramla's 1946 population of 16,380 were Palestinian. In the 1948 Arab–Israel War, Israeli troops occupied the area and forced the evacuation of thousands of the town's Palestinian residents. The town grew again after the war with the arrival of Jewish immigrants. As of 1994, its population of 62,000 included fewer than 12,000 Arabs (similar to the nationwide balance between the two populations), half of whom lived in mixed neighborhoods and the other half in two rundown all-Arab sections. In 1993 Yoel Lavi, the newly elected mayor from the right-wing Likud Party and a son of Holocaust survivors, undertook a program to improve the

educational opportunities available to the town's Arab children, in cooperation with several Israeli-Arab town councilors.

RAMSES COLLEGE FOR GIRLS

An Egyptian school for girls from kindergarten through twelfth grade.

Ramses College for Girls (founded as the American College for Girls), located at Ramses Square in Cairo, Egypt, originated as a trilingual (English, Arabic, and French) missionary school of the United Presbyterian Church of North America. Founded by Ella Kyle, its first building was inaugurated in 1910 by former U.S. president Theodore Roosevelt. The student body included girls of various ethnicities—Armenian, Greek, Jewish, Abyssinian (Ethiopian), Egyptian, Syrian, and Lebanese, as well as girls from the Gulf states—many of whom attended as boarders. Dr. Helen T. Martin served as principal from 1923 to 1956. In 1960, with the nationalization of private schooling, its ownership was transferred to the Evangelical Synod of the Nile, an Egyptian Protestant organization. The school's cosmopolitan community gradually dwindled until it became entirely Egyptian. In 1967, following the Arab–Israel War and subsequent strained relations with the United States, the school's name was changed to Ramses College for Girls. From 1967 to 1992 the school's principal was Reda Salama of the legendary Salama sisters (her sister Mary was principal of Port Said School), who established an Institute of Secretarial Studies and a Department for Girls with Special Needs. The school's graduates include leading figures in social development, aviation, diplomacy, government, and education, such as Aziza Hussein, Lutfia Nady, Aida Guindi, and Nawal al-Tatawi. By 2003, more than two thousand girls were enrolled in the school.

RANIA AL-ABDULLAH (QUEEN RANIA)

[1970–]

Queen of Jordan and wife of King Abdullah II ibn Hussein.

Rania al-Abdullah became queen of Jordan in 1999, following the succession in the Jordanian Hashimite monarchy from her father-in-law, King Hussein ibn Talal, to her husband, Abdullah II ibn Hussein. Abdullah was the eldest son of Hussein, who had served as Jordan's monarch since 1953.

Born Rania al-Yasin, Queen Rania grew up in Kuwait in a well-known and well-to-do Palestinian family. She was educated in Kuwait and then went to Egypt to attend university, graduating in 1991 with a bachelor's degree in business administration from the American University in Cairo. She married then-Prince Abdullah in 1993. For some Jordanians, their Jordanian-Palestinian marriage symbolized hope for greater unity and opportunity for both groups within Jordanian society.

Since joining the Hashimite royal family, Rania has used her position to patronize causes of particular interest to her, including support for emerging small businesses. She shares with her husband an interest in economic development, in particular with developing information technology in the kingdom. She has also patronized programs supporting tourism and historic preservation. Her greatest interest, however, is supporting programs protecting women and children from domestic violence. She joined the campaign to prevent "honor crimes," or killings of women by male family members who suspect them of committing adultery or otherwise compromising "family honor." Queen Rania has called for the repeal of laws allowing leniency in sentencing the offenders. Her public role in Jordanian domestic politics and foreign relations steadily increased after she became queen in 1999. She serves on numerous boards and committees dedicated to supporting women, children, and family life, and her role in public life extends beyond Jordan. In 2002 she became a member of the board of the powerful World Economic Forum, the only board member from an Arab country. In 2003 and 2004, she served as president of the Arab Women's Summit, a forum of Arab first ladies, activists, and other professionals.

RASAFI, MAʿRUF AL-

[1875–1945]

Most prominent poet in Iraq between the world wars.

Maʿruf al-Rasafi was born in Baghdad into a family of Kurdish origin, and studied at the Rashidiyya school there. His knowledge of classical Arabic sources enabled him to teach Arabic language and literature in higher institutes of learning in Baghdad, Jerusalem, and Constantinople (now Istanbul). He represented Baghdad in the Chamber of Deputies in Constantinople, and after the establishment of the kingdom of Iraq, he was elected to parliament.

Although his poetry was composed in a classical language, Rasafi was regarded as a voice of the people who fearlessly attacked Iraq's social and political maladies.

A first edition of Rasafi's *Diwan* was published in Beirut in 1910. Subsequent editions in his lifetime appeared in 1925 in Cairo and in 1931 in Beirut. A five-volume annotated edition was published in Baghdad in 1986.

Rasafi published works on Arabic language and literature, including an important study on the modern dialect of Baghdad (serialized in al-Karmali's *Lughat al-Arab* in 1926–1928).

SASSON SOMEKH

RA'S AL-KHAYMA

Northernmost of the United Arab Emirates.

Raʾs al-Khayma's two separate territories cover some 650 square miles and have coastlines on both the Persian (Arabian) Gulf and the Gulf of Oman. The emirate has greater topographical diversity than the other emirates, and its slightly greater rainfall makes significant agriculture possible. Raʾs al-Khayma has the largest oil and natural gas reserves of the small emirates north of Sharjah (the Northern Emirates). In addition, it utilizes the mineral resources of the Hajjar Mountains, exporting aggregate stones and producing cement, asphalt, and lime. Fishing is also important for the emirate's economy.

According to a 1997 estimate the emirate had 153,000 inhabitants, most of whom lived in the capital city of the same name. Nearly 90 percent of the population is indigenous.

In the eighteenth and early nineteenth centuries Raʾs al-Khayma's Qasimi rulers held sway along the shores of the lower Persian (Arabian) Gulf and the northern Indian Ocean until attacks on British shipping to India elicited a massive British campaign that resulted in the almost total destruction of the tribe's capital and fleet. The Qasimi rulers never regained formal power; this has given rise to resentment in modern times over the preeminence of the ruler of Abu Dhabi.

Upon its independence in 1971, Raʾs al-Khayma's ruler, Shaykh Saqr ibn Muhammad, angered by his state's limited political role in the new federation and expecting imminent discovery of oil in his territory, remained outside the U.A.E. federation for six weeks after its formation on 2 December 1971. (Modest oil deposits were not discovered until 1983.) At the same time, Iran seized the Tunb Islands from Raʾs al-Khayma, and it continues to occupy them, a circumstance that contributes to current strains between Iran and Persian (Arabian) Gulf Arab states.

UPDATED BY ANTHONY B. TOTH

RASSEMBLEMENT NATIONAL DÉMOCRATIQUE (RND)

Political party of Algerian president Liamine Zeroual.

The Rassemblement National Démocratique (RND) was created on February 1997, a few months before the June legislative elections. It received its official approval on April 1997. Called the "political party of President Zeroual," it is also the party of the Algerian administration. Since its creation, it has been directed by three men: Abdelkader Bensalah, former member of the National Council of Transition; Tahar Benbaibèche, former leader of the Organization of Martyrs' children; and Ahmed Ouyahia, the current prime minister and former minister of justice. According to analysts and diplomats in Algeria, the RND was founded by some defectors from the FLN (the National Liberation Front, once Algeria's sole party) who were opposed to its willingness to enter into a dialogue with Islamists. It was created as a vehicle to support President Zeroual's policies, to win the 1997 elections, and to punish the FLN for its involvement, two years before, in the Sant Egidio agreement.

In the legislative elections of June 1997, which were tarnished by massive irregularities, the RND arrived at the head of the list with 155 elected deputies (46.5% of the vote), gaining 80 seats of the 96 in the upper house. During the provincial and municipal elections of October 1997, it won 896 seats (of 1,779 seats) in the Provincial Popular Assembly (APW) and more than the half of 13,126 seats in the communal assemblies.

In the 2002 legislative elections the FLN won 199 seats at the National Popular Assembly (APN) and the RND lost its majority at all levels.

RASSEMBLEMENT NATIONAL DES INDÉPENDANTS (RNI)

Parliamentary grouping of independent supporters of Morocco's monarchy.

The Rassemblement National des Indépendants (RNI), founded in October 1978, projected a centrist liberal image representing landowners, senior civil servants, technocrats, industrialists, and businessmen, many from old established families. Initially, it held 141 seats in parliament, making it the largest single group there. It was led by King Hassan II's brother-in-law, Ahmed Osman (prime minister 1972–1979), and the king's cousin, Ahmed Alawi. In 1981 a breakaway group led by former trade union leader and labor minister Muhammad Arslane Jadidi and Abdel Hamid Kacemi, representing a group of rural landholding notables, formed the Parti des Indépendants Démocrates, later renamed the Parti National Démocratique (PND). Following the 1981 government reshuffle, the RNI was left out of the government in order to create a "loyal opposition." In the 1984 parliamentary elections the RNI lost 80 seats and was replaced by the newly formed Union Constitutionelle (UC) as the single largest party in parliament, although it subsequently was part of the governing coalition, and Osman was named speaker of parliament. In 1993 the party refrained from affiliating with the pro-palace Entente bloc, preferring to run alone in parliamentary elections. It suffered a further loss of 20 seats in the 1993 parliamentary elections and was left out of the newly formed government of technocrats. In 1997 it won 46 seats and joined the government led by the Union Socialiste des Forces Populaires (USFP) as a junior partner with six cabinet posts. In the 2002 elections it won 41 seats and again received six cabinet posts in the new government headed by the nonparty king's loyalist Driss Jettou.

RASSEMBLEMENT POUR LA CULTURE ET LA DÉMOCRATIE (RCD)

The unique secular party in Algeria.

The Rassemblement pour la Culture et la Démocratie (RCD) was born from a split within the FFS (Socialist Forces Front), the traditional Kabyle political party headed by Hocine Aït Ahmed. This secular party was created in February 1989 during a meeting of the Amazigh Cultural Movement. Its aims include political pluralism, the abolition of the Family Code of 1984 that limits women's freedom, an official redefinition of the Algerian identity in its triple dimension (Amazigh, Arabic, and Muslim), social justice, modernization of the Algerian economy to include free enterprise, and the separation of politics from religion. Opposed to the country's forced Arabization, it also considers the use of the French language in Algeria a matter of cultural enrichment.

During the municipal elections of June 1990, the RCD won only 87 communes, mainly in Kabylia (as compared to the 900 won by the FIS). During the first round of legislative elections held in December 1991, it did not win a single Islamist seat in the Popular National Assembly (APN, the Algerian parliament). With the overwhelming FIS victory, Saïd Sadi, head of the RCD, supported the interruption of the electoral process that drove the country into civil war. A strong supporter of "eradication" policy, the RCD preferred to see the Algerian army rule Algeria rather than the Islamists. It organized resistance to Islamists in Kabylia and called for the formation of defensive groups against terrorism.

The RCD participated in the 1995 and subsequent elections and took part in different coalition governments. In the summer of 2000, however, it pulled out of the government in protest against the regime's policies toward the Kabyles. It boycotted the 2002 legislative elections.

RATEB, AISHA

[1928–]

Egyptian diplomat, lawyer, and law professor.

Aisha Rateb (also A'isha Ratib) was educated in Cairo and Paris. At twenty-one, she applied for a position as judge on Egypt's highest administrative court, the State Council. After being rejected, she sued the government. One of its members later filed an opinion confirming that Egyptian law—and Islamic jurisprudence—did not prevent women from serving in the judiciary. The judge concluded the problem was societal. Rateb's struggle was supported by the media, the people, and by feminist leader Huda al-Shaʿrawi.

Rateb was the first professor of international law at Cairo University, and in 1971 she was the second woman to hold the post of minister of social affairs, where she remained until 1977. She was the first person responsible for two ministries—in her case, social insurance and social affairs. In 1978 she became the Egyptian minister of foreign affairs. She was the first Egyptian woman to be appointed ambassador for Egypt, serving in Denmark from 1979 to 1981 and in Germany from 1981 to 1984. Despite Egypt's history of women's participation in civil society since the turn of the twentieth century, it has been slow to open the doors of its judiciary to women. Rateb's efforts have helped to open this door to other women. Egypt appointed its first female judge to the Supreme Constitutional Court, Tahani al-Gebali (al-Jabali), in January 2003.

MARIA F. CURTIS

RATEBZAD, ANAHITA

[1930–]

First Afghan female physician; Marxist politician.

Anahita Ratebzad was deputy head of state in the People's Democratic Party of Afghanistan (PDPA) government from 1980 to 1986. She was the first Afghan woman to play an active role in government and one of the few Afghan women to become a medical doctor. Born in Guldara in Kabul province, Anahita Ratebzad attended the Malalai Lycée in Kabul. She received a degree in nursing from the Chicago School of Nursing and an M.D. degree from Kabul University. She became involved in leftist politics and was elected to parliament in 1965. A founder of the PDPA, she was active in the Parcham wing of that party. She served as ambassador to Belgrade (1978–1980), minister of social affairs (1978–1979), and minister of education (1979–1980). In 1986 President Najibullah replaced the Parcham government and Ratebzad fled to Moscow with her companion Babrak Karmal. They returned to Kabul in 1989, but were forced to flee to Moscow again in 1992 when the Najibullah government fell. After the fall of the Taliban government in 2001, they did not return to Kabul.

[1908–1981]

Hebrew-language poet and journalist.

Born in Russia as Uriel Halperin, Yonatan Ratosh was raised in a completely Hebrew-speaking environment. In 1921, he moved to Palestine, where he worked as a journalist for *Haaretz* and *ha-Yarden* and where he also wrote many books of poetry.

Ratosh is known for his belief in the existence of a Hebrew people who are distinguishable from the people living in Israel and from the people of many different cultures who follow the Jewish religion. According to his belief, the distinctive Hebrew people, who are the descendants of the Canaanite nation, developed a new national identity based on Hebrew culture.

BRYAN DAVES

RAUF EZZAT, HEBA

[1965–]

Egyptian political scientist and Islamic thinker and activist.

Heba Rauf Ezzat (also Hiba Raʾuf Izzat) was educated in German Catholic schools and is at the point of receiving a Ph.D. in political science from Cairo University. Rauf has become a prominent spokesperson on gender issues in Egypt and on the Internet. From 1992 to 1997 she wrote a weekly column, "Women's Voice," for *al-Shaʿb,* the Islamist-leaning newspaper of the Egyptian Labor Party. She supports change from within to counter what she sees as secularization of the (Muslim) family. Conceptualizing the Muslim family as outside of history, she criticizes Western feminists for analyzing it within the framework of the rise of bourgeois and patriarchal social structures. Yet she gives more centrality to gender than do many Islamic activists, such as her mentors,

Zaynab al-Ghazali and Safinaz Kazim. Arguing from central texts of Islamic jurisprudence, she finds strong precedent for women's participation as leaders in public life as long as they are Islamically qualified. Although knowledgeable about Western political philosophy, in her polemics Rauf nevertheless expresses common misperceptions about European and American society. She tends to support monolithic notions of "Islamic" and "Western" societies as inevitably dichotomized. She rejects the label of "feminist" and sees feminism as a diversionary and unnecessary practice, irrelevant to those who work within an Islamic framework.

MARILYN BOOTH

RAVIKOVITCH, DAHLIA
[1936–]

Israeli poet.

Dahlia Ravikovitch was born near Tel Aviv. Her father was killed by a drunken driver when she was six, a trauma that she describes in her collection of autobiographical stories, *Death in the Family* (1976), and that reappears in various guises throughout her work. Raised on a kibbutz and in Haifa, she studied at the Hebrew University of Jerusalem and in England, and then worked as a teacher and as a journalist. The author of eight volumes of poetry and the recipient of several awards, among them the prestigious Israel Prize for Literature (1998), Ravikovitch also has published short stories, children's books, and Hebrew translations of English poetry.

Ravikovitch's poems are predominantly personal and written in high diction, finicky form, and idiosyncratic vocabulary, at times mythological or archaic. These properties merge, in her highly charged poems, with simple, almost childlike syntax, tone, and point of view, creating a unique simultaneity of dreamlike beauty and lurking danger, a perfect aesthetic expression of struggle. This tension is dominant in *A Love of an Orange,* Ravikovitch's first collection (1959), and is recognizable in works such as *The Third Book* (1969). Later volumes manifest a tendency toward simpler expression.

During the 1980s, the war in Lebanon sparked a poetic-political protest in which Ravikovitch took part. The voice of her poetry identifies with the vulnerable and speaks frequently of the feminine condition. Her retrospective collection, *The Complete Poems So Far* (1995), confirms her status as one of Israel's leading poets and its foremost woman poet.

UPDATED BY ZAFRIRA LIDOVSKY COHEN

REAGAN PLAN (1982)

Plan for Arab–Israeli peace.

On 1 September 1982, U.S. president Ronald Reagan issued a policy statement in the wake of Israel's June 1982 invasion of Lebanon and the successful expulsion of the Palestine Liberation Organization (PLO) and its estimated 15,000 fighters from that country, following extensive mediation by U.S. special envoy Philip Habib. In his speech Reagan expressed satisfaction that Lebanon's troubles were over and turned his attention to the Palestinian-Israeli conflict. Citing the Camp David Accords as its basis, the Reagan plan called for Arab recogni-

tion of Israel and negotiations over control of an undivided Jerusalem. The plan ruled out Israeli sovereignty or permanent control of the West Bank and Gaza, as well as an independent Palestinian state, favoring instead a confederation between Jordan and the West Bank and Gaza. Israeli prime minister Menachem Begin rejected the plan and reiterated Israel's claim to the West Bank; Arab leaders were less categorical but hardly enthusiastic. The assassination of Lebanese president-elect Bashir Jumayyil two weeks later, the massacre of Palestinian civilians at Sabra and Shatila, the hasty return of U.S. Marines to Beirut, and an ongoing deterioration of the Lebanese situation refocused U.S. attention on Lebanon, however, and the Reagan Plan for Palestinian-Israeli peace fell by the wayside.

LAURA ZITTRAIN EISENBERG

REAGAN, RONALD

[1911–]

President of the United States, 1981–1989.

Born in Illinois, Reagan graduated from Eureka College. Beginning in 1937, he was a film and television actor in Hollywood. Reagan entered politics in 1966 when he was elected governor of California; he was reelected in 1970. He later served two terms as president of the United States, surviving a gunshot wound he received during an assassination attempt in March 1981.

Reagan's two terms in office saw him grappling with some important issues in the Middle East and Southwest Asia, and engaging in policies that would affect future American involvement in the region tremendously. The most openly pro-Israeli U.S. president to that time, he announced a plan for Arab-Israeli peace on 1 September 1982, following Israel's invasion of Lebanon and the evacuation of Palestine Liberation Organization (PLO) forces from Beirut. The Reagan Plan called for establishment of Palestinian self-government in the West Bank and Gaza Strip, in association with Jordan, on the basis of the Camp David Accords of 1978. Israel rejected the Reagan Plan, and the Arab states announced their own proposal, the Fez Plan, several days later. Reagan also ordered U.S. forces to Lebanon from 1982 to 1983, both to supervise the PLO withdrawal and to bolster the Lebanese government. In 1983, bombings destroyed both the U.S. embassy and the U.S. marine barracks in Beirut, leading to the ignominious withdrawal of American forces. Reagan was also plagued by the long captivity of several American hostages in Lebanon. As with the bombings, Hizbullah is generally considered to have been behind the kidnappings. The circuitous exchange of arms to Iran, via Israel, in return for the release of the hostages, led Reagan into the worst scandal of his presidency.

Reagan was also president during the bulk of the Soviet occupation of Afghanistan (1979–1988). His administration provided massive support to Islamic guerrillas fighting the Soviets, laying the basis for the country to become a haven for Islamic militants worldwide. Finally, his government's support for Iraq and Saddam Hussein during the long Iran–Iraq war (1980–1988) helped stem a possible Iranian victory and bolster Saddam to face the U.S. in later years.

RECAIZADE MAHMUD EKREM
[c. 1846–c. 1913]

Ottoman Turkish poet and literary reformer.

Mahmud Ekrem Recaizade was born in Istanbul during the Ottoman Empire and enrolled in the military academy. He later transferred to the Civil Service School where he met and became a disciple of Namik Kemal. He worked for many years as Kemal's assistant on the newspaper *Tasvir-i Efkar;* in 1867, after Kemal's flight to Paris, Recaizade became chief editor of the newspaper.

Recaizade was a member of the second generation of Tanzimat writers who created the New Literature school, which sought literary inspiration in everyday life. Recaizade also contributed to the *Servet-i Fünun* (Wealth of sciences) movement, which focused on the problems of the individual under the oppressive regime of Sultan Abdülhamit II. He is considered a transitional figure between the romanticism of Namik Kemal and the realism of Ömer Sayfettin. In addition to his poetry, his novels, and his plays, he published theoretical studies of literature that criticized traditional forms of artistic expression and created an environment for greater artistic experimentation.

RED CRESCENT SOCIETY

Name of the International Red Cross in Muslim countries.

A humanitarian organization that maintains neutrality, the International Red Cross was established in 1864 at the behest of Jean-Henri Dunant, a Swiss citizen who had organized emergency medical aid for French and Austrian victims at the Battle of Solferino in 1859. In 1876, Ottoman officials requested that a red crescent, instead of a red cross, be used to mark their ambulances. The symbol, later accepted by other Muslim nations, was formally accepted by the society in 1929.

The Red Crescent Society is part of the International Federation of Red Cross and Red Crescent Societies. National societies have traditionally concentrated on natural disasters, while the International Committee of the Red Cross has concentrated on situations of conflict and warfare. Red Crescent societies have made an important contribution to the international organization, developing policies that are inclusive of non-Western traditions.

RED LINE AGREEMENT

Part of the post–World War I reorganization of the Turkish Petroleum Company (TPC) as the Iraq Petroleum Company (IPC).

TPC was formed in 1914, shortly before the outbreak of World War I. Fifty percent of TPC was owned by the Anglo-Persian Oil Company (later British Petroleum). A 5 percent beneficial interest was owned by the Armenian entrepreneur Calouste Gülbenkian, who had put together the TPC consortium. The remainder was split between the Deutsche Bank and a subsidiary of Royal Dutch Shell. The original TPC agreement included a clause pledging the principals to refrain from seeking additional concessions in the Ottoman Empire except through TPC.

At the San Remo Conference in 1919, the German share of TPC was transferred to France. The Americans, also victors in the war, demanded a share as part of their spoils and accepted 20 percent in 1922 (later enlarged to 23.7 percent). However, this

did not end the disputes impeding the company's reorganization. Gülbenkian insisted that the "self-denying clause" be retained in any new agreement. The French, with their 23.7 percent share, supported Gülbenkian; the other participants did not.

The final agreement establishing IPC was signed in July 1928 at Ostend, Belgium. It included the self-denying clause. However, the principals declared themselves unsure of the actual boundaries of the Ottoman Empire. Legend has it that Gülbenkian, then and there, took a red pencil and drew a line around what he meant by "Ottoman Empire"—the Red Line. With the exception of Kuwait and Iran, the Red Line encompassed most of what would become the great oil-producing areas of the region.

The Red Line, along with the As-Is Agreement, shaped the structure of foreign ownership and the tempo of development of Middle Eastern oil. For example, Gulf Oil (now owned by Chevron), an original party to the IPC agreement (it later dropped out), became an active contender for a share of the Kuwait concession, in part because its participation in IPC prevented it from seeking promising concessions elsewhere in the Gulf. Gulf's success in winning a share thwarted expectations that Anglo-Persian (APOC) would be able to monopolize Kuwait, then a British protectorate. The Red Line prevented APOC and the U.S. partners in IPC, chiefly Standard Oil of New Jersey (now Exxon) and Standard Oil of New York (now Mobil), from seeking concessions in Saudi Arabia. The rich fields in the eastern part of Saudi Arabia were discovered by Casoc, a subsidiary of Standard Oil of California (now Chevron). Texaco purchased half of Casoc in 1936. Neither was a Red Line company.

The need for additional capital to develop the oil fields of Saudi Arabia led to the end of the Red Line. Once again, a world war provided the opportunity to reorganize oil concessions in the Middle East. After the Germans occupied France in 1940, the IPC holdings of Gülbenkian and the French were sequestered under British law. The IPC board in London was notified that the IPC agreement might have been invalidated by having become a contract with an enemy power. The IPC principals chose not to pursue this possibility during the war, but afterward, Standard of New Jersey's legal counsel brought the issue before U.S. officials, who joined the corporation in pressing for a revision of the IPC agreement to eliminate the self-denying clause. The successful conclusion of these maneuvers in 1947 ended the Red Line and allowed Standard of New Jersey and of New York to take shares in ARAMCO while retaining their shares in IPC.

MARY ANN TÉTREAULT

REFAH PARTISI

Main Islamic-oriented political party in Turkey, 1984–1998.

The emergence of pro-Islamic parties in Turkey can be traced back to 1969, when a group of dissident parliamentarians in the Justice Party attempted to establish a new party focusing on their program called Milli Gorus (National Vision).

The National Order Party (NOP) was set up in January 1970 under the leadership of Necmeddin Erbakan, a mechanical engineer, former university professor, and former president of the Turkish Industry Chambers Union. The major aim of the party was to strengthen national industry and to restore Islamic teaching and morality. Following a military memorandum in 1971, the Constitutional Court investigated the party's antisecular program and closed it in 1972, and Erbakan left for Switzerland. At the end of the same year, a new party, the National Salvation Party (NSP) was founded by lawyer Süleyman Arif Emre.

The NSP, which Erbakan assumed leadership of, participated in several coalition goverments between 1974 and 1980, when a military coup led to the banning of all political parties. After the reopening of political life in 1983, the third pro-Islamic party, Refah Partisi (RP), was established in March 1984 under the leadership of Ahmet Tekdal. Following a referendum the same year, the restitution of polit-

ical rights to party leaders was accepted. This encouraged Erbakan, who once more assumed the leadership of RP. RP took positions against multinational corporations and European Union membership. The empowering factors were the new urban groups, Muslim intellectuals, and grass roots organizations in the large cities. The party targeted distinct social groups such as youth, women, workers, civil servants, professional cadres, retired persons, and disabled people. The Ladies Commission brought dynamism to the party. The intense activism that took place within the elaborate RP structure was carried out predominantly by religiously mobilized, very dedicated, industrious women. The female party members constantly stressed that they worked "for God's sake," meaning that they did not expect any rewards such as elective or appointive offices in return. In the rural areas of central and southeast Turkey the party included peripheral forces of local merchants and manufacturers, a majority of whom were practicing Muslims and Turkish nationalists. The party succeeded in obtaining the support of Kurds, who seemed to be searching for a political organization that was not part of the political establishment. RP opted to highlight Islamic solidarity more than ethnic or class distinction. RP's transnational character was crucial in securing financial contributions to the party. The large network of migrant associations in Germany supportive of the "National Vision" contributed large membership donations.

The municipal elections of March 1994, the national elections of 1995, and the local elections of June 1996 in which the RP took 33.5 percent of the vote, secured the mayorship of metropolitan cities such as Ankara and Istanbul, as well as the leadership of twenty-two provinces. Erbakan became prime minister in 1996. However, his controversial visits to Libya, Indonesia, Malaysia, and Iran led the military to exert pressure for the resignation of the RP coalition government in June 1997. The Constitutional Court banned the party in February 1998 on grounds of antisecular policies.

The RP leadership immediately established a new party, the Virtue Party (VP), under the leadership of Erbakan's closest collaborator, Recai Kutan. All the deputies of the dissolved RP joined the VP. The new party participated in the 1999 general elections but lost its previous leading position. With 21.3 percent of the general vote and 111 seats out of 550 in the parliament, it became the main opposition party. The Constitutional Court ruled that the VP was solely a continuation of the RP and dissolved it in June 2001.

Subsequently, the conservative wing of the dissolved VP founded the Felicity Party (FP) under the leadership of Recai Kutan. Claiming to be the only representative of the National Vision, the FP received only 2.49 percent of the vote in the general elections of 2002.

Following the dissolution of the Virtue Party, the reformist wing founded under the leadership of the former mayor of Istanbul, Tayyip Erdoğan, the Justice and Development Party (JDP). Although a novice among the competing eighteen parties, the JDP received 34.6 percent of the general vote and 363 seats in parliament. The JDP denied being an Islamist party and used moderate, rather than secular, discourse during the electoral campaign. The JDP does not emphasize the primacy of culture, as did the RP and VP; instead, it claims to represent the true essence and will of society and defines itself as a democratic conservative party.

Afghan

Afghans who fled civil war in their country during the 1980s and 1990s.

The flight of refugees from Afghanistan began in 1978, driven by internal conflict caused by the takeover of Afghanistan by the Marxist-Leninist People's Democratic Party of Afghanistan and later by the Soviet invasion in December 1979. By the early 1980s, a large-scale resistance war was being waged and more than six million refugees had fled Afghanistan, most settling in the neighboring countries of Pakistan and Iran, but many thousands also fleeing to India, Turkey, the United States, and Western Europe.

The Afghan refugees referred to themselves as *muhajarin,* from the Arabic root *hijra,* referring to the flight of the prophet Mohammed from Mecca to Medina, thus giving the refugees a religious status. Afghan refugee camps were established in Pakistan and Iran, assisted by the United Nations High Commission for Refugees and other world relief agencies. Areas of Pakistan near the Afghan border, especially the Northwest Frontier Province and Baluchistan, became crowded with Afghan refugees, creating local hostility among the Pakistanis. In Pakistan, most of the refugees were ethnic Pushtun from the southeastern provinces of Afghanistan, although some Persian-speaking refugees, especially Hazara, fled from central Afghanistan to the area around Quetta in Baluchistan. Most of the two million Afghan refugees who fled to Iran were Persian speakers from the western provinces of Afghanistan. These large refugee camps became centers of political activity and recruiting grounds for young men to fight in the Islamic insurgencies in Afghanistan.

Attempts at large-scale refugee repatriations occurred several times, beginning in 1992, only to be halted by renewed instability and the outflow of even more refugees. The first repatriation attempt occurred in 1992, after the mojahedin succeeded in ousting the Soviet-supported government in Kabul. (The Soviet Union had withdrawn its troops in 1990). More than 1.4 million refugees were repatriated in 1992 and 1993. However, the mojahedin, which was split into several antagonistic groups, was unable to develop a viable government, leading to internecine warfare and increased instability in Afghanistan. As a result, hundreds of thousands of refugees again fled Afghanistan in the mid-1990s.

In the midst of this chaos, the Taliban, a religious movement from the Kandahar region, gained control of most of Afghanistan. The Taliban government's strict Islamic codes, human-rights abuses, and bias against non-Pushtuns led to a steady refugee flight throughout the 1990s.

In addition to the political and economic instability in Afghanistan during the 1990s, Afghanistan also experienced a severe drought beginning in 2000, which created harsh conditions for millions of Afghans. In the year 2000 alone, over 172,000 Afghans fled to Pakistan because of the drought conditions or the political instability. Hundreds of thousands were displaced internally.

After the events of 11 September 2001, coalition forces began bombing the Taliban government in Kabul, and by November 2001 an interim government headed by Hamid Karzai had replaced it. Although this presented opportunities for refugees to repatriate, the immediate consequence of the allied bombing and the change in government was an increase in refugees. Even though Pakistan had closed its borders, over 160,000 Afghans crossed into Pakistan between 11 September 2001 and the end of the year. At the same time—the fall of 2001—the Iranian government, fearing a large exodus of Afghans into Iran, established two refugee camps just inside Afghanistan, which housed over 11,000 refugees.

By the spring of 2002, the refugees' situation began to change as the Karzai government brought some stability to Afghanistan. In addition, the United Nations and other relief agencies began large-scale repatriation efforts, which gave refugees who were willing to return grain and help with transportation. In total, 1.8 million refugees were repatriated during 2002. By 2003, the repatriation rate had slowed, in large part because most of those who wanted to return had already done so. Even with the massive number of refugees who returned, four million Afghans still lived outside of their home country as of the early twenty-first century. Many, maybe most, of these remaining refugees may never return.

Balkan Muslim

People who have migrated and relocated from Bosnia, Bulgaria, Montenegro, Serbia, and other Balkan countries.

The Balkans—the area including parts of Albania, Bosnia, Bulgaria, Croatia, Kosovo, Macedonia, Montenegro, Romania, Serbia, and Slovenia—have been home to nations whose boundaries have been drawn and redrawn since Hellenistic times. The Balkans have been the site of significant and continued upheaval at least since the Ottoman conquest during the fourteenth century, which caused mass migrations of Muslims. As a result of the Russian–Ottoman War of 1877–1878, Muslims were forced from conquered areas in Bulgaria, Montenegro, and Serbia. Later, the Balkan allies either exiled or caused the deaths of a majority of the Muslims from territories they conquered during the Balkan War of 1912–1913. Other Balkan Muslims became refugees in regions taken by Greece after World War I. Some 400,000 refugees came to Turkey during the Greco-Turkish population exchange of the 1920s. The collapse of the Soviet Union prompted several "breakaway" republics in southeastern Europe and sparked or reignited varied political, cultural, and religious clashes. The 1990s proved to be a difficult time, especially with the disintegration of Yugoslavia. Roughly 800,000 Muslims left Bosnia after it declared independence from Yugoslavia and conflict with Serbia escalated in 1991. Significant numbers of Bosnian Muslims (around 50,000 at least) fled to Croatia, a predominantly Christian country. Continued fighting between Serbian government forces (Christian, led by Slobodan Milosevic) and the Kosovo Liberation Army (Muslim, generally ethnic Albanian) in the predominantly Muslim republic of Kosovo prompted a continued refugee situation as well, especially when fighting escalated in 1998. Despite ongoing international mediation, the Balkan Muslim refugee crisis is far from resolved.

Updated by Noah Butler

Jewish

Jews who fled from Arab and Muslim countries to Israel after 1948.

Following the 29 November 1947 United Nations resolution to partition Palestine, the establishment of Israel on 14 May 1948, and its subsequent victory over the armies of five neighboring Arab countries in the 1948 war, an estimated 800,000 Jews living in Arab and Muslim countries were subjected to anti-Jewish violence, abuse, and persecution, which led most of them to seek refuge in Israel. The government of Israel, working through the Mossad le-Aliyah Bet (a clandestine state institution for immigration) and the Jewish Agency, mounted airlift operations funded by the United Jewish Appeal through its subsidiary body, the American Jewish Joint Distribution Committee.

In 1949 and 1950, 48,315 Jews were airlifted from Yemen and Aden in the Magic Carpet Operation, flying directly from Aden to Tel Aviv on chartered U.S. planes. In 1950, the Iraqi government permitted its 160,000 Jews to emigrate provided they renounced their Iraqi nationality and whatever properties and assets they could not sell. Iraq demanded total secrecy and insisted that the planes flying the Jews make a landing in Cyprus en route to Israel. Between 1950 and 1951, 123,370 Iraqi Jews were airlifted to Israel in Operation Ezra and Nehemiah (also known as Operation Ali Baba). Each was allowed 50 dinars on departure.

In 1948, some 100,000 Jews lived in Egypt; 16,000 fled to Israel between 1948 and 1951;

The Jewish community in Ethiopia, frequently referred to as Beta Israel, or the falashas (the alien ones), have been emigrating to Israel by the thousands since the late 1970s. By early 2003, eighty thousand Ethiopian Jews were living in Israel, frequently in the poorest sections of the country. © GIDEON MENDEL/CORBIS. REPRODUCED BY PERMISSION.

17,500 settled in Israel between 1952 and 1956; and the majority came after the 1956 Arab–Israel War. Following the 1967 Arab–Israel War, 2,500 Egyptian Jews fled, the majority settling in Israel. Some 33,000 Jews from Libya settled in Israel between 1948 and 1960, the rest going to Italy; 2,678 Jews fled from Syria and 235 from Lebanon to Israel between 1948 and 1951, many of them walking across the border. An additional 2,700 came from those countries between 1952 and 1960. In 1991, on the intercession of U.S. president George H. W. Bush, Syria allowed 1,400 Jews to leave for Israel.

In 1948, some 600,000 Jews lived in French-controlled Morocco, Algeria, and Tunisia. As the struggle for independence from France intensified, the situation of the Jews deteriorated and Israel began to evacuate them, mainly by sea via France. Between 1948 and 1971, some 235,000 out of 400,000 Moroccan Jews emigrated to Israel. The rest went to France and other countries. Most of Algeria's Jews fled after that country gained its independence from France in 1962. The majority went to France, as they were considered French nationals; 20,000 immigrated into Israel between 1948 and 1971. During the same period, some 54,000 Tunisian Jews fled to Israel.

In recent years, the World Organization of Jews from Arab Countries has been registering Jewish-owned properties left behind in Arab countries in order, possibly, to make future demands for restitution or to offset Palestinian Arab demands for property left behind in Israel in 1948.

UPDATED BY MERON MEDZINI

KURDISH

People of Kurdistan, a territory inhabited mainly by the Kurds of five countries, who fled to escape repression and possible death.

In September 1925, more than 20,000 Assyrian Christians (Nestorians) and Kurds arrived in northern Iraq, fleeing the repression that came after the end of the Kurdish revolt in Turkey (1922–1925). This was the first time the international media mentioned the problem of Kurdish refugees.

More recently, thousands of Kurds sought asylum in Iran after the collapse of General (Mullah Mustafa) Barzani's independence movement in 1975. Kurds also fled to Iran and Turkey after the Iraqi Kurdish resistance in the aftermath of the Iran–Iraq War (1988). These were small flights compared to the huge refugee crisis caused in April 1991 by Saddam Hussein's attacks toward the end of the Gulf War (January–April 1991). Fearing for their safety after the failure of their uprising in March 1991, about 2 million Iraqi Kurds fled toward the Turkish and Iranian borders. The arrival of such a huge number of refugees, thousands of whom died of hunger and cold, internationalized the Kurdish problem and forced unwilling Western governments to extend their protection to the Kurds. While those who went to the Turkish border came back to Iraq after the creation of a safe haven, dozens of thousands of Kurdish refugees stayed for years in Iran, living in the cities or in camps. Most of them came back in the late 1990s after the stabilization of the Kurdish region. A small number of Kurdish refugees from Iran and Turkey live in camps in Iraq.

PALESTINIAN

People of Palestine who fled or were driven out in 1948 and 1967; their repatriation remains a controversial issue.

A major consequence of the Arab–Israel War (1948) was the flight of approximately 700,000 members of the indigenous Arab population from their homes in those parts of Mandatory Palestine that became the new state of Israel, 30 percent of whose territory lay beyond the borders of the UN partition plan. Since 1948, the Palestine refugee problem has been one of the most important and controversial issues in the continuing conflict. It has appeared on the agenda of every UN session since 1948 and has been the subject of numerous UN resolutions calling for repatriation or compensation to the refugees, or sometimes both.

Refugees from Palestine travel to Gaza after being evacuated by the UN, 31 March 1949. The question of Palestinian refugees has been a core issue in the Arab–Israeli conflict since 1948. **© HULTON-DEUTSCH COLLECTION/CORBIS. REPRODUCED BY PERMISSION.**

Whereas the Palestinians, the Arab states, their supporters, and many Israelis assert that the refugees were forced by Israeli military or paramilitary units to leave their homes and property, the government of Israel has disclaimed responsibility, placing blame for the flight on Palestinian leaders and the surrounding Arab countries, which, Israel states, urged the refugees to leave. In recent years, several Israeli revisionist accounts have produced evidence that in many instances the Israeli military did force Palestinians to depart. Another cause of the flight was the breakdown of Palestinian Arab society during the war in Palestine, followed by chaos and the total disruption of civil society. The number of original Palestinian refugees is based on estimates rather than an accurate census. The UN estimated

in 1949 that more than 700,000 of Palestine's 1948 Arab population could be classified as refugees.

A second major exodus occurred following the June 1967 war, when over 300,000 Palestinians left the West Bank and the Golan area in Syria, many of them second-time refugees who had lived in camps since 1948. By 2003, those classified as refugees by the UN Relief and Works Agency for Palestine Refugees in the Near East (UNRWA) had increased to more than 2.4 million. UNRWA considers as refugees individuals and their direct descendants who lived in Palestine a minimum of two years preceding the 1948 conflict, who lost homes and means of livelihood, and who reside in areas where UNRWA services are available. According to this definition, nearly half the total number of Palestinians in the world were refugees in the 1990s.

The largest concentration is in Jordan, with over 1.5 million in the occupied West Bank and Gaza. More than 700,000 live in Jordan, more than 390,000 in Lebanon, and 400,000 in Syria. Initially most refugees lived in camps established by the UN. However, by 2003, 2.7 million lived in other places but received education, health care, and other social services from UNRWA. More than half of UNRWA expenditures were for education. Although the educational and social services provided by UNRWA are of relatively high quality, the area occupied by the refugee camps has not been greatly extended despite the rapid population increase. Thus the camps have become extremely overcrowded, and housing and other public facilities have become greatly overburdened.

In most areas, the internal affairs of the camps are run by the Palestinians themselves. Refugee frustration with low wages, poor living conditions, and their inability to return to their original homes has caused social and political unrest, with the result that some camps in Lebanon have become bases for Palestinian guerrilla activity. Political life in the camps is intense, and refugees are active in nearly every Palestinian political faction and paramilitary organization. On some occasions, the camps have become targets of non-Palestinian military forces—of the Israeli army and various local militias in Lebanon and of the royal army in Jordan—resulting in thousands of Palestinian casualties.

The refugee question has long been a focus of attempts to resolve the Arab–Israel conflict, beginning in December 1948 with UN General Assembly Resolution 194(III), stating "that the refugees wishing to return to their homes and live at peace with their neighbors should be permitted to do so at the earliest practicable date, and that compensation should be paid for the property of those choosing not to return."

The refugees and the Arab states have emphasized the right to return as fundamental in any peace settlement. However, Israel has opposed any large-scale repatriation, instead emphasizing resettlement in the surrounding Arab countries. Attempts at refugee resettlement have not been successful, largely because of refugee insistence on the right of return. By the 1990s, the right to return was interpreted by many refugees and some Arab states as return to a Palestinian state in the West Bank and Gaza rather than within the borders of Israel. Following the 1991 Madrid Middle East peace conference, one of the five multilateral groups established to deal with functional problems dealt with the refugee issue.

REJECTION FRONT

Grouping of Palestinian organizations (1974–1980) that opposed a diplomatic solution to the Arab–Israeli conflict.

The Rejection Front was formed in 1974 by Palestinian organizations opposed to the strategy under discussion within the Palestine Liberation Organization (PLO) that envisioned a negotiated, two-state solution to the Arab–Israeli conflict. The Rejection Front proposed instead to continue the armed struggle for the liberation of all Palestine. Led by the Popular Front for the Liberation of Palestine, the front eventually included as well the Popular Front for the Liberation of Palestine–General Command, the Arab Liberation Front, the Palestine Liberation Front, and the Palestinian Popular Struggle Front. The front ceased functioning within the rubric of the PLO and was backed by the Baʿthist government of Iraq.

As the PLO's strategy changed after the 1978 Camp David Accords, and as Iraq reconciled with the PLO, the front's activities waned and had stopped altogether by 1980.

RENAISSANCE PARTY

See Nahda, al-

REPUBLICAN BROTHERHOOD

The Republican Brotherhood is one of the earliest examples of a reformist movement in Islamic societies that addressed issues of the status of women and non-Muslims in Islamic states.

The Jamhuriyin, as the Republican Brothers are known in Sudan, were founded by Mahmud Muhammad Taha in 1945 as the Republican Party, one of many parties struggling for independence from Great Britain. Although the party favored independence, it scored no electoral victories when independence was achieved in 1956. In 1958, Taha began campaigning for Islamic reform, after the 1964 broadly democratic popular October Revolution that overthrew the first military regime of Abboud. From its origins it has acted less like a party and more like a movement, and grew over the next two decades. Its youthful followers, female as well as male, engaged in public teaching and proselytizing on the streets of Khartoum and Omdurman, and at the universities. A parallel Republican Sisters branch was formed specifically for education and outreach to women, although Taha's seminars in his home were famous for being coeducational, with lively participation on the part of women.

The movement was unique in Islamic Africa and the Middle East at the time. Taha wrote a number of books and several hundred pamphlets dealing with the theological and philosophical bases of his reform program, which came to be known as the Second Message of Islam. The Republican Brotherhood was the popular name for what Taha called the New Islamic Mission, which was intended to develop a new Muslim consciousness with a modern vision of the faith of Islam and Islamic law, *shariʿa.* Taha's analysis was based upon historical and contextual analysis of the Qurʾanic texts revealed to the prophet Muhammad between 610 and 632 C.E. at Mecca and Medina. The earlier Meccan texts deal with religious belief and practice and are meant as a universal message for all humankind, whereas the later Medinan texts he saw as intended to reform Arab society through the newly enlightened community of Muslims. Taha argued that *shariʿa* and Muslim practice should be based upon the primary Meccan texts. His writings and teachings were circulated through more than 200 pamphlets, which ranged from the basic theological points of the Second Message to the reform of specific aspects of the *shariʿa* and the status of women. The Republican Brothers specifically called for reform of Islamic law in regard to women and Muslim marriage, seeking to reduce or eliminate expensive dower *(mahr)* and equalize the status of women and men in marriage. For example,

they argued for marriage contracts that pledged monogamy on the part of the husband and gave both partners equal rights to divorce. Republican egalitarianism extended to non-Muslims as well; their religious rights and freedoms would be protected equally with those of Muslims.

While the movement generally abjured direct involvement in politics, it nonetheless opposed the Sudan government's Islamization of law. In September 1983, General Muhammad Jaʿfar Numeiri declared that *shariʿa* would be comprehensively applied as state law, despite the fact that one-third of the population, especially in the south, is animist or Christian. This precipitated a resumption of civil war over the issues of autonomy and religious freedom, which had been negotiated in the Addis Ababa Peace Accords of 1972. The Republican Brotherhood launched a major campaign against this imposition of *shariʿa.* With the divisive effect of Islamic law apparent, the movement intensified its criticism of the regime in a leaflet of protest issued symbolically on 25 December 1984. In response, the government arrested five Republican leaders, including Taha, charging them with sedition, undermining the constitution, and inciting unlawful opposition to the government. By January 1985, all had been found guilty of apostasy and sentenced to death. All repented and received reprieves except Mahmud Taha, who, then in his mid-seventies, was executed by hanging. Within two months, a popular uprising overthrew the Numeiri regime; many of its opponents had been galvanized into action by Taha's death.

REPUBLICAN PEOPLE'S PARTY (RPP)

The Republic of Turkey's first political party, founded in 1923.

The Republican People's Party (Cumhuriyet Halk Partisi), was founded by its first president, Mustafa Kemal (Atatürk), and its first vice president, Ismet Inönü Its major goal was the establishment of a national-territorial Turkish state. Until the late 1920s the RPP was ideologically eclectic, attempting to reconcile the views of conservatives and the supporters of progress. During its first years, the leadership focused on modernization. Denying social cleavages, the party refused to identify with any particular class. Kemalism was first proclaimed as a political doctrine at the second party congress in October 1927, when Mustafa Kemal delivered a six-day speech outlining the RPP goals: republicanism, meaning rejection of monarchy and dictatorship; nationalism, or the rejection of any dynastic, religious, or racial bases for statehood; secularism, or the separation of religion from the state; and popularism. After the economic crisis of 1929 the party added etatism (state economic enterprises) to its principles. At the third party congress in May 1931 the six principles of Kemalism were symbolized in the form of six arrows. The 1931 convention was a turning point for the RPP and for Turkey itself. With the strong emphasis on nationalism and secularism, the state was made arbiter of religious affairs, and the new definition of nationalism attempted to raise the Turkish nation to the highest level of civilization.

In 1935 the RPP merged with the bureaucracy. The minister of interior became, ex officio, the general secretary of the party. In 1937 the six principles of Kemalism were incorporated into the constitution. In 1938, after Mustafa Kemal's death, his successor, Ismet Inönü, became the national leader. The one-party regime lasted through six elections. Two efforts to form competing parties (in 1925 and 1930) ended in failure. In 1941 some democratic processes were permitted, including fielding independent candidates and nominating more candidates than available parliamentary seats. The end of one-party rule came in 1946, when the newly founded Democrat Party (DP) won all seats where its candidates were placed on the ballot. The opposition forced the government to change the existing electoral law. The new law in 1949 introduced secret

balloting, open counting, and judicial supervision. On 14 May 1950 the Democrats won 53.3 percent of the popular vote and 83.8 percent of the parliamentary seats. After a peaceful transfer of power, the two-party format lasted until 1960. However, relations between the government and the opposition deteriorated after 1953. The DP supported the more liberally inclined demands of business and catered to the peasant voters. Toward the end of the 1950s the DP became more authoritarian. In April 1960 the DP set up a parliamentary investigating committee that charged the opposition with subversive activities. The ensuing unrest lead to the military coup of 27 May 1960 and the dissolution of the Democrat Party.

In the framework of the Constituent Assembly, the RPP played a determining role in shaping the new constitution. However, the RPP did not obtain a majority in the 1961 elections, and their participation in coalition governments lasted only until 1963. The turning point in the history of the RPP occurred on the eve of the 1965 elections, when Inönü set forth the maxim "left of center" to describe the party's position. Bülent Ecevit was elected the party's general secretary in 1967. The new image of the party tried to provide a moderate-left alternative for the masses of underprivileged voters, with a strong emphasis on a liberal-pluralist social order, a mixed economy, land reform, and a strong cooperative movement. This required a realignment of Turkey's party system, by which the old center-periphery cleavage was replaced by a new functional cleavage. However, the election of 1973 brought the RPP only 33.3 percent of the vote, and the coalition governments headed by Ecevit did not last. The election of 1977 made the party, with 41.4 percent of the vote, the largest in the assembly, but the deadlock between the RPP and the main opposition party paralyzed the government. Civil strife, violence, and poor performance of coalition governments led to the third military coup, in September 1980.

The RPP was disbanded on 16 October 1981 by Turkey's National Security Council. The new constitution of 1982 brought a ten-year ban on all former politicians, but political parties were allowed to reopen under their traditional names. In 1993 the successor of the dissolved RPP, the Social Democratic Populist Party (SHP), merged with the revived RPP. In the 1995 election the RPP, under a new leader, Deniz Baykal, won 10.8 percent of the vote. The fragmentation of the leftist vote had led to a new polarization between the nationalist and Islamic parties. In the 1999 election the RPP received only 8.6 percent of the vote and remained out of parliament. Although Baykal resigned from the party leadership in 1999, he was reelected in 2000 and was able to obtain 19.3 percent of the vote in the 2002 election.

The post-1993 ideological debate within the party has concerned the nature of secularization, the nature of state-society relationships, the role of the nation-state, the approach of the party to globalization, and minority rights and liberties. A new interpretation of secularism has been triggered by the debate around the Anatolian Left. This concept, initiated by Baykal in 2000, draws parallels between the two Muslim groups (Alevi and Sunni) as well as non-Muslims. Baykal argues that the RPP has to have a deeper and more correct analysis of Turkish culture and history. By returning to the Anatolian roots and claiming a nationally authentic flavor, the dichotomy between the elite and masses can be overcome. This implies a move away from a class analysis to a human-centered analysis. The RPP maintains good relations with some organized interest groups, such as trade unions, small business organizations, and secular women's associations. The RPP indicated its sympathy for the identity search among people of Kurdish origin, but maintains a clear distinction between ethnic separatism and identity politics. With regard to human rights, the RPP has made this issue its primary focus. During the 2002 electoral campaign, accountability of parliamentarians and transparency of the administration dominated its political rhetoric. On basic issues of a welfare state, the RPP proposes universal education, healthcare, and social security reforms. In the realm of economics, the RPP defends the role of the market economy but wants to control it with organized labor and consumer groups. The RPP actively supports Turkey's admission to the European Union and is a member of the Socialist International. The major weaknesses of the party are the domination of factionalism and the increasingly fierce intraparty competition due to the shrinking of the party.

REVISIONIST MOVEMENT

See ZIONIST REVISIONIST MOVEMENT

REVOLUTIONARY ASSOCIATION OF THE WOMEN OF AFGHANISTAN (RAWA)

Activist organization formed to advocate women's rights in Afghanistan.

The Revolutionary Afghan Women's Association (Anjoman-i-Enqilabi-i-Zanan-i-Afghanistan), known as RAWA, was founded in 1977 in Kabul by Meena Keshwar Kamal and a small group of close associates in opposition to the pro-Soviet Democratic Organization of Afghan Women (DOAW). RAWA opposed the fundamentalism of the radical Islamic groups as well as the pro-Soviet People's Democratic Party of Afghanistan (PDPA), which had been the dominant political forces in Afghanistan since the mid-1960s. Despite deep ideological differences, the radical Islamists and the members of the PDPA both rejected RAWA as a Maoist organization. Due to violent threats from radical Islamists, RAWA was forced to operate underground. Working clandestinely, RAWA members were active in rallying female student protests in Kabul against the December 1979 occupation of the city by Soviet troops.

RAWA eventually moved its headquarters to Quetta, the border city inside Pakistan, where it became openly involved in the anti-Soviet movement and provided health care and education to refugee Afghan women and children. Its membership grew rapidly as many newly arrived educated, professional Afghan women joined its ranks. In 1981, Keshwar Kamal started the monthly *Payam-i-Zan* (Women's message) to encourage exiled women to fight for freedom, democracy, and social justice for all. After Kamal's assassination on 4 February 1987 in Quetta, RAWA once again became a clandestine organization. Rather than choose a single leader, the members elected a rotating governing council of twelve and continued to fight for freedom and social justice and to provide relief for women refugees.

After the fall of the pro-Soviet regime in 1992, RAWA protested the seizure of power by radical Islamic forces. It declared the day the fundamentalists entered into Kabul (28 April 1992) "the Black Day" in Afghan history, and condemned Pakistan and the United States for backing the fundamentalists. On 28 April 2002, the eighth anniversary of the rule by Islamic fundamentalist regimes in Afghanistan, RAWA organized protest rallies in Pakistan and in Washington D. C., demanding a free and democratic Afghanistan. The gathering in Washington was sponsored by the Feminist Majority Foundation and the National Committee of Women for a Democratic Iran.

Since 1997, RAWA has used the Internet to share its message with a global audience and has succeeded in bringing to world attention the plight of Afghan women, but its exceedingly harsh language and personal attacks drove away some of its early sympathizers.

SENZIL NAWID

REVOLUTIONARY COMMAND COUNCIL (EGYPT)

Egyptian political body formed in the summer of 1952.

The Free Officers movement formed the RCC following its overthrow of King Farouk (July 1952) and establishment of a military junta. Led by Colonel Gamal Abdel Nasser, the members of the RCC included Colonel Anwar al-Sadat, Major Abd al-Hakim Amir, Major Salah Salam, Major Khalid Muhyi al-Din, and other high-ranking officers. General Muhammad Naguib, an older and widely respected officer, was brought in as prime minister and, in June 1953, president of the newly declared Republic of Egypt. The RCC faced a series of challenges in consolidating power, that from the Muslim Brotherhood probably the most significant. A power struggle between Nasser and Naguib led to Naguib's ouster in November 1955 and was an important step in Nasser's rise to power. The RCC was officially dissolved in 1956.

REVOLUTIONARY COMMAND COUNCIL (LIBYA)

Leaders of Libya's 1969 revolution and subsequent government until 1977.

Following the overthrow of the Libyan monarchy on 1 September 1969, the central committee of the Free Unionist Officers movement designated itself the Revolutionary Command Council (RCC) in a December 1969 constitutional proclamation. Initially exercising both executive and legislative functions, the RCC took whatever measures it deemed necessary to protect the revolution. Even when the RCC later appointed outsiders to a council of ministers, it reserved supreme authority in all fields to itself.

The twelve members of the RCC shared similar backgrounds, motivations, and worldviews. Largely drawn from the lower middle class and minor tribes, most of its members graduated from the military academy in Benghazi at a time when a military career offered opportunities for upward socioeconomic mobility. The language of the RCC was the language of Arab nationalism, guided by precepts from the Qurʾan and strengthened by the conviction that the revolutionary government spoke for the masses.

Members of the RCC constituted the cabinet of the Libyan government until 2 March 1977, when the Declaration of the Establishment of the People's Authority stated that direct popular authority would be the basis for a new Libyan political system. At that point, Muammar al-Qaddafi was designated general secretary of the newly formed General People's Congress and the remaining four members of the now defunct RCC composed its general secretariat.

RONALD BRUCE ST JOHN

REVOLUTIONARY GUARDS

Iranian military organization created in 1979 to protect the Islamic revolution.

The Islamic Revolutionary Guards Corps, or *Sepah-e Pasdaran-e Enqelab-e Islami,* was formed in May 1979 as an ideologically committed force entrusted with protecting the political success of the Iranian Revolution from external and internal enemies. Initially, it comprised the several unofficial militias that had been organized spontaneously during the final weeks of the revolution in Tehran and other cities to protect demonstrators from the shah's security forces. These militias continued to grow after the revolution, taking on security functions and tracking down suspected counterrevolutionaries. Even though Iran's armed forces had declared political neutrality in February 1979, deep suspicions about military officers' loyalty to the revolution existed among the new revolutionary leaders. Consequently, the provisional government of Mehdi Bazargan accepted the argument that the various militias should be organized into a centralized

force, the Revolutionary Guards, that could counter a potential military coup.

The Revolutionary Guards assumed a primary role in suppressing the armed autonomy movements among ethnic Baluchis, Kurds, and Turkmen in 1979 to 1980, the antigovernment demonstrations in Tabriz in December 1979, and the armed uprising by the Mojahedin-e Khalq that began in June 1981. They also had a central role in prosecuting the Iran-Iraq War, which Iraq initiated in September 1980 by launching an invasion of western Iran. Throughout the eight-year war, the Revolutionary Guards remained a separate and rival military force to the army, but after Ali Akbar Hashemi Rafsanjani became Iran's president in 1989, he implemented a policy of integrating the militaries as co-equal units of a National Defense Force with a unified command. In 2004 the Revolutionary Guards was a force of 120,000 men, the overwhelming majority of whom had elected to serve their compulsory 18-month military service in this branch of the armed forces.

The Revolutionary Guards has overall authority for the 40,000 volunteers of the paramilitary force known as the *Sepah-e Basij,* which was formed in November 1979. The impetus for organizing the Basij was a perceived need for a mobilized and armed population to confront a possible attack by the United States. At the time, there was widespread fear that the United States might attempt to overthrow the revolution and restore Mohammad Reza Shah Pahlavi, as it had done in 1953. Any Iranian sixteen years and older could join the Basij and receive training in the use of small arms. Some women joined, and the Basij organized several women's units. The majority of volunteers, however, were young men from the lower urban classes or from rural backgrounds, and they constituted an important source of recruits—hundreds of thousands—during the war with Iraq. Since 1989, the Revolutionary Guards generally, and its Basij militia specifically, have seen their mission to be maintaining the ideological purity of the revolution. Given the lack of consensus among the political elite with respect to what policies are consistent or inconsistent with revolutionary ideals, these guardian organizations of the revolution risk becoming entangled partisans in the intense factional politics that have characterized Iran since the early 1990s.

Eric Hooglund

RICHMOND, ERNEST T.

[1874–1974]

Archaeologist and architect in Egypt during World War I.

Ernest T. Richmond served the Mission to Palestine as consulting architect for the Dome of the Rock Mosque in Jerusalem (1918–1919). As assistant to chief secretary Wyndham Deedes and then to Gilbert Clayton (1920–1924), he was given control of the Political Department of the Secretariat as a result of high commissioner Herbert Samuel's desire to protect Arab interests and to restrain Zionist excesses. Members of the Arab Executive saw Richmond as virtually their only friend in the British administration of Palestine. He was strongly disliked by the Zionists for his sympathies with the Arabs of Palestine and his opposition to Zionism.

Richmond helped secure the appointment of al-Hajj Amin al-Husayni as mufti of Jerusalem and president of the Supreme Muslim Council (SMC). He sought to expand the powers of the mufti and the jurisdiction of the SMC and to promote the latter as a partial counterweight to the Jewish Agency. Richmond became chief adviser to the high commissioner on Muslim affairs. When he resigned, he was appointed to the nonpolitical position of director of antiquities, in which capacity he served until 1937.

Jenab Tutunji

RIDA, RASHID

[1865–1935]

Disciple and biographer of Egyptian religious reformer Muhammad Abduh; editor of the Islamic modernist magazine al-Manar.

Rashid Rida was born in the village of Qalamun, near Tripoli, in what was then the Ottoman Empire and is now Lebanon. Rida came from a family of local prominence and piety. He attended the local Qurʾan school and continued his education in Tripoli at an Ottoman state school and an Islamic school run by Shaykh Husayn al-Jisr. Although exposed to the Turkish and French languages, as well as to mathematics and Western science, Rida considered languages other than Arabic unnecessary for a scholar of Islam like himself. Inspired by the classic *Revival of the Religious Sciences* by Ahmad Abdullah al-Ghazali, Rida joined the Naqshbandi Sufi order. An encounter with the dance of Mevlevi dervishes, however, shocked him into publicly denouncing what he took to be the excesses of Sufism.

Al-Urwa al-Wuthqa (The indissoluble bond), the magazine that Jamal al-Din al-Afghani and his disciple Muhammad Abduh issued from Parisian exile in the 1880s, awakened Rida to his life mission of reviving Islam. He hoped to join al-Afghani, who was then residing in Istanbul under Sultan Abdülhamit II's surveillance and never received Rida's letter. Afghani died in 1897; Rida went instead to Cairo to join Afghani's erstwhile disciple Muhammad Abduh—whom he had met twice before. Rida became Abduh's inseparable disciple, founding the magazine *al-Manar* in 1898 to spread Abduh's reformist Islamic, or Salafiyya, message.

For thirty-seven years, until his death, Rida wrote much of *al-Manar* himself and published other religious works on the *al-Manar* press. His books in Arabic, usually serialized in *al-Manar* first, include the *Biography of the Master Imam Shaykh Muhammad Abduh* (3 vols.), *The Caliphate or Supreme Imamate, The Muhammadan Revelation,* biographies of the Prophet Muhammad and the caliphs Umar and Ali; with Abduh, an unfinished twelve-volume *Commentary on the Qurʾan.*

Like Afghani and Abduh, Rida made the Islamic *umma* (community) his central concern, asking why it had declined relative to the modern West and blaming the decline on medieval additions to Islam—such as the reverence for Sufi saints—which had obscured the pure religion of the ancestors (*salaf,* from which comes the name for the Salafiyya movement). He urged reformist *ulama* (Islamic leaders) to follow Abduh and himself in returning to the Qurʾan and the *sunna* (body of customs) and interpreting them afresh for the modern age. At first *al-Manar* concentrated its fire on the conservative *ulama* entrenched in the mosque-university of al-Azhar in Cairo. Rida blamed them for succumbing to the blandishments of the state, tolerating folk superstitions, and failing to mount a vigorous defense of Islam; by the 1920s, however, Rida had grown more conservative and came to see Western-inspired secularism and liberal nationalism as greater dangers. He drew nearer to the strict literalism of the Hanbali Law School, its fourteenth-century juridical theologian Ibn Taymiya, and their Muwahhidun proponents in Arabia. King Ibn Saʿud of Arabia responded with financial support for Rida's activities.

After his early years with Afghani, Abduh had retreated from overt politics, but Rida made frequent forays into Ottoman, Syrian, Arab, and caliphal politics. He saw Sultan Abdülhamit II's rule in Syria as repressive, and *al-Manar* published the attack of Abd al-Rahman al-Kawakibi on Abdülhamit II and his call for restoring the caliphate (held by the Ottoman Turks) to the Arabs. Hoping that changed circumstances after the Young Turk Revolution of 1908 would allow him to open a school for Islamic propaganda and guidance, Rida spent a year in Istanbul. The authorities changed their minds, however, and Rida opened his school in Cairo in 1912, only to have it fall victim to World War I. Meanwhile, as a member of the Ottoman Decentralization Society, he protested the Young Turks' tightening grip on the Arab provinces. After the war, when Mustafa Kemal (Atatürk) abolished first the Ottoman sultanate and then the caliphate, *al-Manar* published a series of studies on the caliphate and the possibility of its revival by an Arab ruler. Rida had a hand in the rival caliphal congresses in Mecca and Cairo in 1926, which unsuccessfully advanced the claims of King Ibn Saʿud of Arabia and King Fuʾad of Egypt for the office. In the mid-1920s, when Ali Abd al-Raziq denied the caliphate's Islamic legitimacy and Taha Husayn declared pre-Islamic Arabic poetry a later forgery, Rida found himself agreeing with the Azhari *ulama* in defending revered traditions. Rida had a final try at congress politics as a participant in the 1931 Islamic Congress in Jerusalem.

As a Syrian, Rida felt the tug of emerging Arab nationalism more than Iranian-born Afghani or Abduh, an Egyptian. *Al-Manar*'s publication of Kawak-

ibi and Rida's Decentralization Society activities had Arabist implications, and he was even chosen president of the Syrian Congress, which in 1920 declared the independence of the short-lived Syrian Arab kingdom under Faisal I ibn Hussein. After the French mandate over Syria was effected in 1921, Rida went to Geneva as vice president of a delegation to the League of Nations protesting the mandates granted to Britain and France in the Middle East as part of the peace settlements of World War I.

Rida's influence waned in the later years, and his death in 1935 attracted little notice. His most direct heir was Hasan al-Banna, who founded the Muslim Brotherhood in Egypt in 1928/29 and admired Rida's Islamic activism and his strict interpretation of the *shariʿa* (Islamic law). Banna put out a few issues of *al-Manar* after Rida's death, but it disappeared in 1940.

Rida displayed an unusual blend of timidity and combativeness. He lacked the charisma of Afghani and Abduh before him and Hasan al-Banna after him. Rida's works are not widely read today; nevertheless, he was an essential link in the chain of Islamic activism running from Afghani and Abduh to Banna and Sayyid Qutb—and the present-day Muslim Brethren and their more radical Islamist offshoots.

RIF

Moroccan mountain chain.

Contiguous with the Jibala massif at the western end, the Rif mountains run along the Mediterranean coast of Morocco for a distance of nearly 200 miles (300 km) but are nowhere more than 50 miles (80 km) wide. Some peaks rise to a height of 6,600 feet (2,000 m). Heavily wooded until clearance began in the seventeenth century, the region now suffers from environmental degradation and drought, and its largely Berber-speaking inhabitants have a history of labor migration.

RIFAAT, ALIFA

[1930–]

Egyptian fiction writer.

Alifa Rifaat (also Rifʿat) was born in Cairo. She began her literary career under a pseudonym in 1955 with the publication of short stories in the magazine *al-Risala.* Her husband's opposition to her writing brought her literary career to a halt for over a decade. In 1972, she began publishing again, under her own name. A number of the stories Rifaat published in the 1970s and 1980s focus on women's fantasies and thoughts, exploring women's emotional lives and the psychological damage done to them by men, and also a system of social mores that does not take into account women's need for personal, sexual, and emotional fulfillment. Rifaat and other women writers who began publishing in the 1960s and 1970s were among the first to express feminist concerns in fictional form.

Deeply influenced by the Qurʾan and other religious texts, Rifaat couches her social critique within an Islamic framework. Echoes of her concern for women's emotional and sexual well-being are found in the works of prominent writers of the 1970s generation, including Salwa Bakr and Niʿmat

al-Bihayri. In 1981, Rifaat published her short story collection *Man yakun al-Rajul?* (Who will be the man?) and since then she has published four other collections in Arabic. A fifth collection, *Distant View of a Minaret,* was translated into English and published in 1983. Her first novel, *Jawharat Firʿawn* (Pharoah's jewel) was published in 1991.

CAROLINE SEYMOUR-JORN

RIFAʿI, SAMIR AL-
[1899–1965]

Prime minister of Jordan during the period 1944 to 1963.

Born in Safed in Mandatory Palestine, Samir al-Rifaʿi was noted for his resourcefulness, subtlety, and intelligence. As prime minister in 1944 and 1945, he participated in negotiations to establish the League of Arab States and signed the charter on behalf of Jordan. As prime minister when King Abdullah I ibn Hussein was assassinated, he handed power over to the veteran Tawfiq Abu al-Huda in July 1951.

Al-Rifaʿi was asked to form a government on 9 January 1956, in the aftermath of anti-Baghdad Pact protests. He proclaimed martial law and decisively rejected the Baghdad Pact, refusing to sign "any new pacts." This allowed him to reject the Covenant of Arab Union at the same time. To prevent a rupture in ties with the United Kingdom and subsequent loss of British subsidies, al-Rifaʿi favored renegotiating rather than abrogating the 1948 Anglo–Jordanian treaty. But this stand was very controversial. He remained in office this time until October 1956, when Sulayman al-Nabulsi, who opposed the relationship with Britain, was asked to form a government.

Following the "royal coup" of 25 April 1957, which ousted al-Nabulsi's cabinet, Rifaʿi served as deputy premier and effective leader of the government in the cabinet of Ibrahim Hashim. He guided negotiations for Jordan's federation with Iraq, headed the regional cabinet in Amman during the federation, then continued as prime minister of Jordan after its breakup in 1958. Al-Rifaʿi steered King Hussein ibn Talal through that difficult period and helped him survive plots by Colonel Abd al-Hammid Sarraj, the interior minister of Syria, when it was the "northern region" of the United Arab Republic (UAR). Al-Rifaʿi also helped engineer Jordan's friendly ties with the United States and secured American subsidies, although Jordan never officially accepted the Eisenhower Doctrine. Unfortunately, al-Rifaʿi became too closely identified with Jordan's quarrels with President Gamal Abdel Nasser of the UAR. A break in ties with the UAR followed, and al-Rifaʿi resigned on 5 May 1959.

Al-Rifaʿi formed his sixth and last cabinet on 27 March 1963, with a mandate to improve relations with Syria, Egypt, and Iraq. When the three countries agreed to form an expanded United Arab Republic, however, public demonstrations favoring Jordan's participation in the union led to clashes with the army, notably in the West Bank. Al-Rifaʿi was on the verge of being denied a vote of confidence when he tendered his resignation. He went on to serve as president of the upper house of parliament, or Senate.

JENAB TUTUNJI

RIFAʿI, ZAID AL-

[1936–]

Jordanian politician.

Son of the prominent Jordanian politician Samir al-Rifaʿi, who was of Palestinian origin, Zaid (also Zayd) al-Rifaʿi was known as a boyhood friend and loyal confidant of Jordan's King Hussein ibn Talal. He held numerous positions in the Foreign Ministry before beginning service to the king in 1964, where he eventually rose to chief of the royal court (1969), political adviser to the king (1972–1973), prime minister/defense minister/foreign minister (1973–1976), and prime minister/foreign minister (1985–1989).

Jordan suffered a series of setbacks in the early 1980s as the effects of petroleum pricing in the Gulf states battered its once-booming economy. Jordan became more dependent on loans and struggled with high inflation. The al-Rifaʿi government introduced a series of austerity measures in November 1986 and March 1989, the latter in consultation with the International Monetary Fund. New taxes and sharp increases in consumer prices led to rioting in traditionally pro-regime districts, such as Maʿan and al-Karak, along with denunciations of corruption in the al-Rifaʿi government and calls for his resignation. After al-Rifaʿi quickly resigned, King Hussein announced that general parliamentary elections would be held in November 1989, for the first time since 1967. Al-Rifaʿi was later appointed to the Jordanian senate, and served as president.

RIF WAR

One of the most successful Moroccan attempts to resist an initial European invasion, 1921–1926.

The Treaty of Fes (1912), imposing a French protectorate over Morocco, assigned northern and southern zones to Spain. Until the end of World War I, the Spanish army and economy were not strong enough to take advantage of this. But, in 1919, the Spanish army began to push westward from Melilla into the Rif mountains, and a loosely organized coalition was formed to oppose it. In 1920 Muhammad ibn Abd al-Karim al-Khattabi took over leadership of the coalition and set about creating unity based on the strict imposition of the *shariʿa,* allied with European military techniques.

Led by Muhammad ibn Abd al Karim al-Khattabi, Moroccan tribesmen rebelled against Spanish rule in 1912. They inflicted many defeats on the Spanish before finally being overwhelmed by combined French and Spanish forces in 1926. Here, Moroccans man artillery in 1923. **© HULTON-DEUTSCH COLLECTION/CORBIS. REPRODUCED BY PERMISSION.**

By June 1921 Spanish military intelligence was warning that Abd al-Karim's supporters could resist further Spanish advances, despite the 25,000 troops in the eastern zone. The warnings were ignored, new advance garrisons set up, and on 2 June the Rifis attacked a post at Dahar Abarran. The garrison was withdrawn, but other posts came under attack. On 22 July, the main Spanish forward base at Anwal withdrew with heavy casualties. The retreat became a rout, and by 9 August all Spanish positions outside Melilla were lost and over 13,000 soldiers killed. Melilla was not occupied because Abd al-Karim, concerned that he might lose control, wanted to avoid the slaughter of civilians.

In little more than a year, Spanish forces had almost regained their old lines, but Abd al-Karim used the supplies they had abandoned to equip a regular army. He capitalized on the prestige of his

victory to institutionalize a bureaucratic government in the central Rif, staffed largely by members of his own family. He emphasized the *shariʿa,* both for ideological reasons and to ensure order. An infrastructure—roads and a telegraph system—was built to maintain control and better fight the Spanish. In February 1923 he received formal *bayʿas* (declarations of allegiance) from the central Rif tribes and established a Rifi state.

Abd al-Karim overcame such local opponents as Ahmad ibn Muhammad al-Raysuni, a sharif of the Jibala mountains, and Abd al-Rahman al-Darqawi, head of the Darqawiyya *tariqa* whose headquarters at Amjutt were just over the figurative border of the French zone. Both of the local chiefs resented Abd al-Karim's growing authority, but in doing so came into conflict with the French and Spanish. The attack on isolated Spanish outposts in the Jibala began in August 1925, and in November Spanish forces withdrew from the town of Shawin. The Spanish army lost around 10,000 men.

Abd al-Karim was reluctant to attack the French zone. He did not want to have to fight two European armies. He agreed because he needed to secure food supplies and deal with the Darqawiyya and because of pressure from some of his commanders. The attack on Amjutt in April 1925 succeeded, and Rifi forces moved on Fez, overrunning many French positions. The French army held the Rifi attack, and in June 1925 a conference in Madrid agreed on a joint Franco-Spanish campaign to crush the Rifis.

In September 1925 Spanish landings at Alhucemas and French advances from the south were coordinated. By the winter, the Rif was surrounded and running out of food. The following April, brief peace negotiations at Oujda, in eastern Morocco, failed and Rifi resistance collapsed. On 15 May 1926, Abd al-Karim surrendered to the French.

RISHON LE-ZION

Town in central Israel, seven miles southeast of Tel Aviv, stretching to the Mediterranean coastline.

Formerly known as Ayun Qara, Rishon le-Zion was founded in 1882 by ten Zionist settlers from Russia under the leadership of Zalman Levontin. They were soon joined by 100 additional pioneers. They experienced severe difficulties in the early years, including lack of funds and water resources, but financial support provided by Baron Edmond de Rothschild, who bought back the land from them and provided monthly stipends and funds to plant vineyards, culminated in 1889 in the opening of Carmel wine cellars. The first Hebrew kindergarten and elementary school opened in Rishon le-Zion during the 1880s; the first agricultural workers' association was founded there in 1887.

At the beginning of the twentieth century, Rishon le-Zion became a cultural and social center, with its own orchestra and choir. The lyrics of the national anthem were written there by Naphtali Imber. The Jewish National Fund was founded there and the first telephone system and electrical generator were installed in Rishon. The town's urbanization began in the 1950s and by the 1970s Rishon had become a densely populated urban center. By the end of 2002, the population had surpassed 211,500 and the town was considered part of the Tel Aviv metropolitan area.

RIYADH

Saudi Arabia's capital and largest city.

Riyadh is located in the southern Najd region. More correctly transliterated as *al-Riyad* ("the gardens"), the city is also the capital of a large province of the same name. Nearby are the ruins of al-Dirʿiyya, the original seat of the Al Saʿud family until an invading Egyptian army destroyed the village in 1818 and put an end to the first Saudi state. The Al Saʿud thereupon relocated at Riyadh, which became the capital of the second Saudi state of the mid-nineteenth century. With a second decline in

Saudi fortunes, Riyadh was lost to the rival Al Rashid dynasty of Haʾil in 1891. But in 1902, Abd al-Aziz ibn Abd al-Rahman (also known as Ibn Saʿud) infiltrated the town with a small band of followers. Launching a surprise attack on al-Musmak fortress, Abd al-Aziz succeeded in capturing the Al Rashid governor and restoring Saudi control over Riyadh.

Over the next two decades, the Al Saʿud used Riyadh as their base to extend their authority once again over all of Najd. From the late 1920s, Saudi Arabia had two capitals, with the king resident in Riyadh, the capital of Najd, but most of the ministries and embassies located in al-Hijaz. By 1955 most government ministries and head offices had moved to Riyadh. The Foreign Ministry and foreign embassies remained in Jiddah until 1985, when they too were required to move to the capital. Riyadh's population was estimated at only 169,000 in 1962, but the oil boom (beginning in 1974) dramatically transformed the city and caused its population to increase to over 1.5 million. By 2003 the capital's population was estimated at nearly 4.5 million. The skyline has been enhanced in recent years by two skyscrapers, the thirty-story al-Faysaliyya Center and the Kingdom Tower.

Very little of the old city remains intact; the old mud-brick fort of al-Musmak has been preserved and Ibn Saʿud's al-Murabbi Palace was restored during the country's centennial celebrations in 1999. Many buildings in the new diplomatic quarter, which is known as al-Dirʿiyya because of its proximity to the old village, imitate the traditional mud-brick architecture. Near this quarter are located the new King's Office Complex (al-Yamama Palace) and the headquarters of the Gulf Cooperation Council. Also nearby is the campus of King Saʿud University; founded in 1957, it is the country's oldest university. Imam Muhmmad ibn Saʿud University, one of the kingdom's three Islamic universities, is located in Riyadh as well. The city is the inland terminus of a railroad from al-Dammam on the Persian Gulf coast, and the previous international airport has become a major air force base. The government is the largest employer in Riyadh, although light industry and retail firms are also important.

RIYADH ARAB SUMMIT

See Arab League Summits

RIYAD, MAHMUD

[1917–1992]

Egyptian diplomat and former secretary-general of the League of Arab States.

In 1939, Mahmud Riyad enrolled in the Egyptian Military Academy and obtained a master's degree in military sciences. In 1948, he headed the Egyptian delegation to the armistice talks with the Israelis in Rhodes. In 1955, he was appointed ambassador to Syria, and two years later he participated in the Syria–Egyptian unity talks. On 1 June 1972, he was elected secretary-general of the League of Arab States. As secretary-general he played an important role in mediating the conflict between the two Yemens (1972), the border conflict between Iraq and Kuwait (1973), and the Palestine Liberation Organization–Lebanese government clashes in 1973.

George E. Irani

RIYAD, MUSTAFA AL-

[1834–1911]

Egyptian official, cabinet minister, and three-time premier.

The origins of Mustafa al-Riyad, usually known as Riyaz Pasha during his lifetime, are obscure; he may have been Jewish. In Egypt, he began his career as a clerk in the foreign ministry and then in the army. Aide-de-camp for Abbas Hilmi I, he then held a succession of provincial governorships. Khedive Ismaʿil entrusted various ministerial portfolios to him. He contributed to Egypt's intellectual life by inviting Jamal al-Din al-Afghani and the editors of *al-Muqtataf* to settle there and also provided an endowment for the newly founded National Library. He backed Egypt's foreign creditors against Khedive Ismaʿil and helped write the 1880 liquidation law,

which reduced Egyptian government indebtedness by strictly limiting expenditures.

Riyad underestimated the strength of the Egyptian officers in his first term as head of Egypt's government. Having acceded to their demand to dismiss his war minister in February 1881, he had to resign after their Abdin demonstration in September of that year. He stayed in Europe as long as the followers of Ahmad Urabi held sway. He served again as head of Egypt's government from 1888 to 1891 and from 1894 to 1895. He was widely thought to oppose the British occupation and to support the establishment of Cairo's first Muslim-owned daily, *al-Muʾayyad.* He favored bringing in Western technology but resisted the growing power of Europeans over Egyptian finances, justice, and government.

See GLOSSARY

ROCKEFELLER MUSEUM

Name popularly given to the Palestine Archaeological Museum in Jerusalem.

The museum, which opened in 1938, was funded by $2 million pledged by John D. Rockefeller, Jr., to match an endowment fund. The building, designed by Austen St. Barbe. Harrison, stands on ten acres facing the Old City walls. In addition to exhibition space, there are study galleries, record offices, a library, an auditorium, and offices. An ancient cemetery, dating from the sixth and fifth centuries B.C.E., was discovered on the site and excavated.

Before the termination of Britain's Palestine Mandate in 1948, the building was turned over to an international board. In November 1966, Jordan nationalized the museum and took possession of the building and its contents. After capturing Jerusalem during the Arab-Israel War of 1967, Israel took over the museum, claiming it as captured Jordanian state property. It entrusted the museum to the Israeli Department of Antiquities, which invited the Israel Museum to operate the exhibition galleries. This move created controversy. For example, when the Israel Museum tried to include some items from the Rockefeller Museum in an exhibition in the United States entitled "Treasures from the Holy Land: Ancient Art from the Israel Museum" in 1985, the Metropolitan Museum of Art in New York City challenged Israel's acquisition of some of the items. The U.S. Smithsonian Institution then agreed to host the exhibit the following year, but objected to the inclusion of eleven artifacts from the Rockefeller Museum. Israel refused to change the exhibition, which consequently was not shown.

MIA BLOOM
UPDATED BY MICHAEL R. FISCHBACH

ROGERS, WILLIAM PIERCE

[1913–2001]

American secretary of state, 1969 to 1973.

William Pierce Rogers was born in June 1913 in Norfolk, New York. He graduated from Colgate University in 1934 and received a law degree from Cornell University in 1937. He served three Republican presidents in a public career that lasted nearly fifty years: He was Dwight Eisenhower's attorney general (1957–1961) and Richard M. Nixon's secretary of state (1969–1973) and in 1986, under Ronald Reagan, he headed the investigation into the *Challenger* space shuttle disaster.

As secretary of state, Rogers promoted a cease-fire in the Middle East that lasted from 1970 until

the 1973 war. His 1970 Rogers Peace Initiative was an effort to implement the 1967 UN Security Council Resolution 242, which put forth principles for peace negotiations between Arabs and Israelis, including the principle of land for peace. Rogers's objective was "to encourage the parties to move to a just and lasting peace." The initiative was one of the key efforts that contributed to peace between Egypt and Israel in 1979.

Rogers was a 1973 recipient of the U.S. Presidential Medal of Freedom, the nation's highest civilian honor, and he received several honorary doctorates, including one his alma mater, Colgate. He died of congestive heart disease in January 2001.

ROLO FAMILY

Sephardic Jewish family of businessmen who had settled in Alexandria by the mid-nineteenth century.

The Rolo family produced a number of well-known and influential businessmen, among them Ruben (b. 1820), and his sons Simon, Giacomo (1847–1917), Robert S. (b. 1869), and Robert J. (b. 1876).

Robert S. Rolo gained the strongest influence in Egypt's economy among the family's members, since he served as a legal advisor to Crown Prince Fu'ad and was later regarded as a close confidant of the king, serving as an indispensable intermediary between the royal court and the British residency. He also served as director of the Egypt National Bank for many years. Ruben, Simon, and Giacomo Rolo joined forces with other Sephardic families, notably the Suarès and Cattaoui, in promoting such economic enterprises as the Helwan Railway and in creating Kum Ombo, Egypt's well-known agricultural company. Robert J. Rolo served as the president of Alexandria's Jewish community between 1934 and 1948.

ROMAN CATHOLICISM AND ROMAN CATHOLIC MISSIONS

Native Middle Eastern groups or individuals or those who established religious institutions there to convert people to Roman Catholicism.

The term *Catholic* is ambiguous in the Middle East. In Arabic, it refers to the Melkites; in English, it refers to Christians of the Latin rite, usually called Roman Catholics in the United States.

Since the Christian Church evolved in the Middle East, differences in theology and ritual that had existed for centuries between the eastern and western parts of the Roman Empire led to a schism in 1054. In the West (Europe) the Latin rite became basic to the Roman Catholic church. In the East (Byzantium) the Byzantine state church prevailed until the rise of Islam in the seventh century C.E. The expansion of Islam was rapid, with Muslims conquering North Africa and the Iberian peninsula by the eighth century and ruling until the fifteenth century. In 1009 Muslims destroyed the Holy Sepulchre in Jerusalem; in 1095 Pope Urban II called for a holy war to "rescue the Holy Land from the Muslim infidels." To do this, the First Crusade was organized in 1096. The Crusaders, under Godfrey of Bouillon, succeeded in conquering Jerusalem in 1099. Seven more Crusades followed, with successes and failures, until the Mamluks of Egypt conquered Acre in 1291, evicting the Crusaders.

The Roman Catholic Church was reestablished in the Middle East in 1099, when a hierarchy under a Latin partriarchate at Jerusalem was established. By the end of the thirteenth century, however, after the Crusaders were evicted from the region, only the Franciscan Brothers stayed on as custodians of the shrines. As the Crusader venture

collapsed, the pope's contacts with the Mongols in central Asia inspired the Franciscan and Dominican orders to work among them, in the Ilkhanate of Persia, during the thirteenth and fourteenth centuries. Then after the fall of Constantinople (now Istanbul) to the Ottoman Turks in 1453—which ended the Byzantine Empire—Franciscan, Capuchin, Dominican, Carmelite, and later, Jesuit missionaries went to the provinces of the Ottoman Empire under the protection of European powers to try to convert Eastern Christians to Roman Catholicism.

In the nineteenth century the Latin-rite presence in North Africa increased because of the French occupation of Algeria. The ancient see of Carthage was restored in 1876. Cardinal Lavigerie was named primate of Africa, with more than one million Catholics in Morocco, Algeria, and Tunisia—where he founded the White Fathers and White Sisters to work in the region.

In 1847 the Latin patriarchate of Jerusalem had been reestablished and numerous missionaries, engaged in education and nursing, had been sent to Ottoman Palestine. During the twentieth century, however, with the dismantling of the Ottoman Empire by the Allies after World War I and the post–World War II independence of Israel, Tunisia, Algeria, and Morocco, the Roman Catholic presence dwindled both in North Africa and in Palestine.

In 1990 the number of Latin-rite Roman Catholics throughout the Middle East was estimated to be 1.3 million (about 35 percent are migrant workers from Sri Lanka, India, and the Philippines). Some 566,000 Roman Catholics are indigenous to Sudan and more than 60,000 live in the West Bank and Jordan. These discrete communities are unusual for the region; most of the other Catholics form small communities or are family groups who left other local Christian churches, especially one of the Eastern Orthodox (which include the Nestorian and the Monophysite churches—the Coptic, Ethiopian, Armenian, and the Mar Thoma of India) or Uniate churches.

Arabia and the Gulf

The jurisdiction of the apostolic vicar for Arabia extends to the countries of the Arabian peninsula and the Gulf, excluding Kuwait, which has its own vicar. There are few local Catholics, but there are large

Students study theology at the Camboni School in Khartoum, the capital city of Sudan. © Gilbert Liz/Corbis Sygma. Reproduced by permission.

numbers of Palestinian, Indian, Sri Lankan, and Filipino workers in the region. The *Annuario Pontificio* counts 470,000 for 1990. There are parishes in the United Arab Emirates (U.A.E.) and Bahrain and Catholic schools in the U.A.E. and in Kuwait. In Saudi Arabia chaplains for foreign workers are allowed to operate "clandestinely," although this provokes occasional troubles. In North Yemen the government has called in nursing sisters to staff hospitals, and there are a few priests to care for expatriate Catholics.

Egypt

The three vicariates in Egypt had been reduced to one at Alexandria. While the official count of Latin Catholics is only 8,000, there are some 200 men and 1,000 women members of Latin orders and congregations, mostly engaged in education.

Syria

Syria, with a vicariate at Aleppo, lists 12,000 Latin Catholics, with about 250 men and women engaged in social and apostolic work since Catholic schools were closed in 1967.

Iraq

Baghdad is an episcopal see with an archbishop, but Latins number only a few thousand, and since

Catholic schools were closed in Iraq, only a few Latin-rite religious orders remain, staffing a seminary, a parish, and a hospital.

Lebanon

Lebanon has a large number of Latin-rite religious orders and congregations, with about 250 men and over 1,000 women working in 150 Catholic schools, a university, several hospitals, and numerous social ministries. The community numbers about 20,000.

West Bank and Jordan

In the West Bank and Jordan a substantial Palestinian community of 60,000 Roman Catholics has its own patriarch and diocesan clergy (about 60) who celebrate the Latin rite in Arabic. There is a Catholic University at Bethlehem and over 270 educational establishments. As this region is the Holy Land, it is a center for several Catholic religious orders.

Sudan

The largest Middle Eastern indigenous Roman Catholic community is found in Sudan. Some 217,000 Roman Catholics are in Juba and some 348,000 are in Khartoum. Each city has its local ordinary with a growing diocesan clergy aided by a few hundred men and women in non-Sudanese orders. The famine in the south has caused the displacement of many Sudanese Catholics.

North Africa

Morocco has two residential sees, one in Tangiers and one in Rabat, caring for some 40,000 Catholics, including over 200 men and women in religious orders engaged in a variety of social and educational works.

Algeria has a metropolitan see at Algiers with suffragan bishops in Oran and Constantine ministering to over 40,000 Catholics. Men and women in religious orders number about 350, many engaged in secular roles. In both Morocco and Algeria the diocesan clergy is substantial (about 50 in each) but of European origin.

There has been a prelature in Tunis since 1964, when a Vatican accord with the government suppressed the see of Carthage and closed all but 7 of its 100 churches. Catholics number over 15,000, cared for by 15 priests. Over 200 men and women in religious orders work in a variety of apostolates, including the research institute and library of the White Fathers.

Libya has a vicar apostolic and about 30 women in religious orders working in hospitals. Four religious men and one diocesan priest care for the spiritual needs of the 30,000 or so expatriate Catholics.

Iran and Turkey

Iran has a bishopric at Isfahan and a few priests and nuns caring for the Latin-rite community of 2,000. Turkey has an episcopal see in İzmir and a vicariate in Istanbul for some 7,000 Catholics. The number of Roman Catholic expatriates fluctuates with economic conditions; still, their presence in the Middle East, which had been relatively stable, is now in decline. Missionary vocations are sparse, and the need for educational and social help from expatriates is narrowing. At the same time, the Vatican is concerned about the increased emigration from indigenous Latin communities that has been provoked by political constraint and the resurgence of pan-Islamic sentiment.

ROMANIZATION

Writing the Turkish language in the Latin alphabet.

Turkic peoples have used a variety of scripts in the course of their history, the earliest being the Orkhon script known through eighth-century inscriptions found in Mongolia. With conversion to Islam, the Turks adopted the Arabic script and used it over the centuries. On 9 August 1928, Mustafa Kemal (Atatürk), president of the new Republic of Turkey, announced its replacement by a Latin alphabet—essentially phonetic, omitting q, w, and x; adding ç

(=*ch*), ğ ("soft" g), and ş (=*sh*); and including eight vowels: a, e, i, ı, o, ö, u, and ü.

Dissatisfaction with the Arabic script was not new. Discussion of and experimentation in modifying it date from the Tanzimat. The script, ill-suited to the Turkish phonetic system and hard to read and write (or print), was thus a prime cause of illiteracy. It symbolized adherence to Islam and Arab–Persian culture, and at a time when he was leading Turkey toward a new, Western-oriented way of life, Atatürk considered it a major obstacle to progress.

As for the Latin script, Namik Kemal was among the first to mention it as a suitable alternative (1879). Articles favoring it appeared in the early twentieth century, and Atatürk himself demonstrated its possibilities in Turkish sections of letters (otherwise in French) sent to a friend after becoming military attaché in Sofia (1913). During World War I, however, Enver Paşa devised a modified Arabic script for the military, but this had little effect.

Discussion continued under the republic, but a proposal for Latin letters was rejected at the 1923 İzmir Economic Congress. Interest increased, however, with the announcement of a romanization policy for the USSR's Turkic languages (a policy later reversed in favor of Cyrillic). On 24 May 1928 the Grand National Assembly legislated the introduction of international numerals, and Atatürk determined to proceed with the alphabet. A commission studying the plan submitted its proposed alphabet on 1 August 1928. Eight days later Atatürk announced its adoption, admonishing everyone to learn it as a patriotic duty.

Atatürk also demanded a speedy transition, and on 3 November 1928 the Grand National Assembly approved the new script. Turks were required to prove ability to use it in place of the Arabic script by the beginning of 1929, passing an examination or attending "national schools" set up across the country. The assembly also decreed that printing in the old script was illegal, and by the middle of 1929 all publications were being printed in the new script.

Romanization coupled with language reform affected many aspects of Turkish life. By breaking with traditions of the Ottoman-Islamic past, it stimulated Turkish nationalism and secularization. It facilitated dissemination of information, improved education and the literacy level, speeded modernization and technology through increased interaction with the West, and helped lead Turks to ever greater social and political awareness.

ROME, TREATY OF

French–Italian pact in which some Middle Eastern territory changed hands.

In an effort to obtain Italy's support against Nazi Germany, France's foreign minister Pierre Laval signed the Treaty of Rome with Italy's dictator Benito Mussolini on 7 January 1935. France conceded small amounts of land in North and East Africa to Italy and, according to some accounts, the negotiations involved an unwritten pledge by Laval to support Italian claims in Ethiopia. When World War II began in 1939, Italy was allied with Germany, and Germany occupied France, so prewar agreements were negated or renegotiated.

ROMMEL, ERWIN

[1891–1944]

German general (field marshal) in World War II.

Erwin Rommel (1891–1944), shown with a German officer in a car during inspection of German troops sent to aid the Italian army in Libya, North Africa, in 1941. Rommel, a German general, was called the "Desert Fox" for his brilliant military acts in World War II battles in North Africa. **© AP/Wide World Photos. Reproduced by permission.**

Erwin Rommel, the Desert Fox, is best known as the commander of the Afrika Korps, which took North Africa during the early years of World War II. Assuming command in February 1941, Rommel reversed Italian setbacks and crossed North Africa from west to east, driving the British into Egypt by May 1942. Hitler ordered a drive on Cairo and the Suez Canal, which led to the defeat of the Afrika Korps at al-Alamayn in November 1942, while Rommel was on sick leave in Germany. With his troops in retreat from the British Eighth Army, Rommel retired to Germany in March 1943, disenchanted with war and Hitler's politics. Implicated in a plot on Hitler's life, he committed suicide by poison in October 1944.

ROOSEVELT, FRANKLIN DELANO

[1882–1945]

Thirty-second president of the United States.

Franklin Delano Roosevelt was born at Hyde Park, New York; he died of a cerebral hemorrhage at Warm Springs, Georgia. Born into a wealthy family (a distant cousin of President Theodore Roosevelt), he attended Groton, Harvard, and Columbia Law. In 1905, he married Anna Eleanor Roosevelt (another distant cousin), and in 1907 began a law practice in New York City.

Early Career

His political career began in 1910, with his election to the New York State Senate. An opponent of the Democratic party's machine in New York City called Tammany Hall, he soon gained a reputation for independence and progressivism within the Democratic party. He worked for Woodrow Wilson's presidential campaign and was made assistant secretary of the Navy in Wilson's administration from 1913 to 1920, becoming the Democratic nominee for vice president in 1920. When the Cox/Roosevelt ticket lost to the Republican Harding/Coolidge ticket, he returned to his law practice. In August 1921, infantile paralysis left his legs and lower abdomen paralyzed.

Through exercise and treatment, Roosevelt recovered some movement of his lower limbs and was able to continue his law practice and civic affairs. He supported the popular New York City Democrat Alfred E. Smith in the presidential races of 1924 and 1928, then reentered elective politics himself to win the governorship of New York State in 1928 and 1930. In 1932, during the worst of the Great Depression, he won the first of his four presidential elections. His New Deal helped him remain in office throughout the Depression and World War II—one of the most pivotal periods of the nation's history.

Presidential Career—Foreign Policy and World War II

During the 1930s, Roosevelt's foreign policy reflected the isolationist mood of the nation. Relations with Germany, Italy, and Japan cooled; neutrality prevailed after Italy's attacks in North Africa and Germany's on Poland (1939); and the Lend-Lease Program of March 1941 provided matériel to Britain and other nations at war before the United States formally entered World War II in December 1941, after Japan's attack on Pearl Harbor.

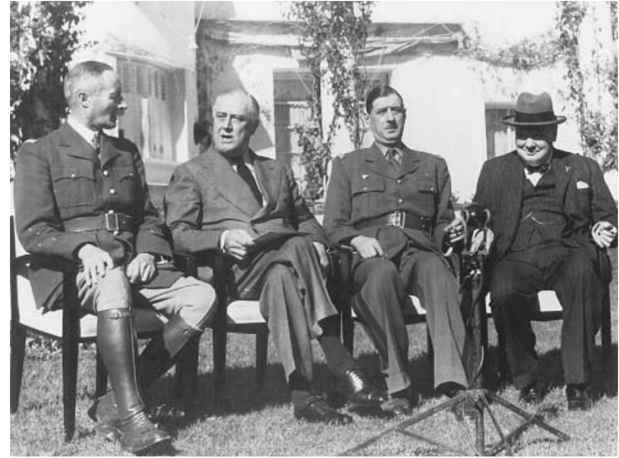
During World War II, Roosevelt cooperated closely with the Allies, including the Soviet Union.

He traveled to hold a series of conferences with the heads of state of the major Allied powers, in which he agreed that Europe would be the first priority, with a second front opened against Germany and Italy (the Axis) at the earliest time. This began with the invasion of North Africa by U.S. and British forces in November 1942 (against German and Italian troops), followed by landings on Sicily (a German-occupied Italian island in the Mediterranean) in July 1943, and culminating with the invasion of German-held Normandy (northern France) in June 1944. Crucial to the European theater was the support of Middle Eastern countries. During the December 1943 Tehran Conference, Roosevelt sponsored a communiqué recognizing Iran's contributions to the war effort and expressing support for Iran's independence and territorial integrity. Shortly thereafter, Roosevelt and Britain's Prime Minister Winston Churchill met in Cairo and requested that Turkey enter the war, a goal that had been pursued by the British since late 1942. Turkey agreed in principle, in exchange for arms support, but a British mission in early 1944 was unable to achieve much; Turkey finally declared war on Germany in February 1945.

Japan's forces were being steadily conquered in the Pacific islands and nations under their occupation and control, and Roosevelt insisted on a policy of unconditional surrender, with the formation of a United Nations to guide world peace in the postwar years. Although he did not live to see either, his vice president, Harry S. Truman, became president on his death, 12 April 1945; Truman had two atomic bombs (developed during the Roosevelt Administration) dropped on Japan in August 1945 and received Japan's unconditional surrender 14 August 1945; Germany had already surrendered in May 1945. Truman also appointed Roosevelt's widow, Eleanor, to join the U.S. delegation at the United Nations; there she headed the UN Commission on Human Rights and was influential in helping to settle the Palestine partition in 1947/48 that resulted in the formation of the State of Israel (1948), which Truman was the first to recognize and back with diplomatic relations.

Wartime Policies toward Refugee Jews and the Middle East

During the war years, victory had been Roosevelt's primary objective. By 1942, although it was clear



U.S. president Franklin Delano Roosevelt met with Winston Churchill in Casablanca, Morocco, in 1943. Here they announced that they would accept only an unconditional surrender by the Axis nations. This conference set the basis and direction for the rest of the war. COURTESY OF THE FRANKLIN DELANO ROOSEVELT LIBRARY. REPRODUCED BY PERMISSION.

that Hitler's program aimed at territorial conquest, it was also clear that total destruction of Europe's Jews was part of the Nazi plan. Advised by members of his administration that any increase in U.S. immigration would meet strong opposition and might affect a successful war effort, Roosevelt did not pursue that route of relief. He also declined to overcome the objections of the U.S. Department of State to ransoming Jews from Nazi-occupied Romania, Bulgaria, and France. He was told that using war matériel to move Jews to Palestine and/or North Africa might incite the Arabs or even cause vindictive action by the Nazis. As the war progressed, the role of petroleum-rich Saudi Arabia increased in importance to the United States.

Before 1940, the United States had no diplomatic representation in Saudi Arabia. The primary U.S. presence was the Arabian American Oil Company (ARAMCO), which had been operating a sixty-year oil concession since 1933. With the beginning of war, ARAMCO activities were curtailed and Muslim pilgrims ceased their pilgrimages to Mecca and Medina—both of which caused an economic crisis for Saudi Arabia. Although Germany and Japan would have welcomed the chance to provide assistance and gain an influential oil-rich ally, Saudi King Ibn Saʿud preferred to continue his alliance with the United States; in early 1941, he re-

quested a loan of thirty million U.S. dollars from ARAMCO to cover lost royalties and, when ARAMCO could not do this, applied to the U.S. government for assistance. Roosevelt was reluctant at first—he had no legislative authority to do this—but he soon managed to have loan monies that had gone to Britain partially diverted to Saudi Arabia, thereby averting that country's bankruptcy. By 1945, Britain had in this way provided some 2.5 million pounds sterling to Saudi Arabia (although after 1943 Lend-Lease was extended and included Saudi Arabia).

Roosevelt's policy on victims of Nazi oppression reflected the general mood of the United States. Fearing that immigration would bring foreign agents (who would cause trouble from within the U.S.) as well as an increase of unemployment (during what was still the Depression, before war work increased necessary jobs nationwide), his administration strictly enforced the very limited quotas of the National Origins Act of 1924. In 1939, he allowed some 27,000 German and Austrian refugees into the United States; this was after the *Anschluss* (German annexation of Austria), when 190,000 Jews were being expelled from Austria, most into countries that were soon to be occupied by Nazi troops. In 1939, Roosevelt also sponsored a conference of thirty-two nations to discuss the refugee problem—the conference was not able to achieve anything of substance, and Britain refused to discuss the possibility of immigration to Palestine. U.S. immigration actually decreased in 1939 to below the level allowed by the quotas, but this decline was attributed to the transfer of the U.S. Immigration and Naturalization Service from the Department of Labor to the Department of Justice.

With regard to Jewish immigration to Palestine, Roosevelt was balancing an inclination to support Zionism with the realities of World War II and the consequent pressures from both his Arab and British allies. In 1943, he assured Abdullah I Ibn Hussein, amir of Transjordan, that the United States would not make decisions about Jewish immigration to Palestine that would be hostile to the Arabs. Meeting with King Ibn Saʿud after the Yalta Conference in February 1945, Roosevelt gave him similar assurances, recapping them in a letter on April 5th. At the same time, Roosevelt had also been expressing support for Zionism; in February 1944 a joint resolution was put before Congress (1) to support unrestricted Jewish immigration to Palestine and (2) for the development of Palestine as a Jewish commonwealth. The vote on this was postponed after General George C. Marshall expressed concern over the impact it might have in the Arab world. Instead, Roosevelt made a public statement in favor of Zionism.

A month earlier, in January of 1944, Roosevelt had agreed to a proactive policy toward refugees from Nazi Europe, including the Jews. This had been the result of a report by Secretary of the Treasury Henry Morgenthau, Jr., "On Acquiescence of This Government to the Murder of the Jews." Roosevelt established the War Refugee Board, with its charter to rescue those singled out for destruction. The board avoided the problem of U.S. immigration quotas by establishing emergency rescue shelters to house the refugees temporarily. The change in policy was too late for most of Europe's Jews, and it was not accompanied by a change in bombing policies—which might have been aimed at disrupting the rail lines and ancillary activities that led to the concentration camps.

Roosevelt's strength began to fail during the last year of the war, although his charisma and charm continued to be felt by his people, who championed his efforts with his allies and against his enemies. His personal leadership during the war was recorded on news film and broadcast on radio. Only many years after his death was his administration criticized with respect to its handling of the Middle East situation.

ROOSEVELT, KERMIT

[1916–2000]

Theodore Roosevelt's grandson, who, as a CIA agent, became involved in Middle Eastern affairs.

Born in Argentina, Kermit Roosevelt graduated from Harvard University and, after a short teaching career, joined the Office of Strategic Services and, following World War II, its successor, the Central Intelligence Agency (CIA). Roosevelt confirmed rumors that the 1953 coup in Iran that led to the downfall of the nationalist government of Mohammad Mossadegh and the restoration of the Pahlavi dynasty was staged by the CIA and, in his account of the events, supported by the U.S. government. Roosevelt was also deeply involved in the Suez Crisis of 1956, and some sources hold him responsible for the failure of the U.S. secretary of state, John Foster Dulles, to convince Egyptian president Gamal Abdel Nasser to cancel an arms deal with the Soviet Union. They moreover accuse Roosevelt, and the CIA, of undermining the State Department by counseling Nasser to ignore Dulles. Roosevelt resigned from the CIA during the Eisenhower administration and, after working in the oil business, founded his own corporation in 1964. In 1975 the Senate Foreign Relations subcommittee reported that Roosevelt had used his CIA contacts in Iran and Saudi Arabia to win government contracts for the Northrop Corporation, a major U.S. aircraft manufacturer.

In 2000 the *New York Times* obtained a copy of the CIA's secret history of the coup, which by most accounts was written by Donald Wilber, an Iranist and part-time CIA operative. The account expanded significantly on what Roosevelt had volunteered about the U.S. government's role in overthrowing the government of Mossadegh.

ROTHSCHILD, EDMOND DE

[1845–1935]

Jewish philanthropist active in Palestine.

Known as the Benefactor *(ha-Nadiv),* Edmond James de Rothschild, scion of the Rothschild banking family, was born in Paris. His concern in 1882 to give sanctuary to Eastern European pogrom victims was translated into a commitment for the development of a self-supporting Jewish homeland and finally a state. His assistance to the Jewish settlements of Rishon le-Zion and Zikhron Yaʿakov in Palestine (1883–1884) rescued them from financial collapse. Rothschild purchased land and equipped the colonies he established. He also supported the development of cash crops and industry. For example, after establishing a winepress at Rishon le-Zion in the early 1890s, he formed a company that began to market its wines in 1896.

Insisting that his support not be purely charitable, Rothschild was determined that the colonies be self-supporting. When the Jewish immigrants could not make them succeed, he appointed his own managers and staff, hired workers, and underwrote agricultural experimentation, to the chagrin of the Zionist socialists who, after the start of the twentieth century, began to dominate the Zionist enterprise.

Acceding to the wishes of the leadership of Hovevei Zion, Rothschild transferred the administration of his settlements to the Jewish Colonization Association, which had been established to administer philanthropic monies to Jews in need of economic support. In 1924, under the auspices of his son, James Armand de Rothschild, who had arrived in Palestine as a British soldier with General Edmund Allenby, the Palestine Jewish Colonization Association (PICA) was established. It supported kibbutzim, moshavim, and Jewish settlements; swamp drainage; stabilization of sand dunes; agricultural

research; and educational and cultural institutions. PICA encouraged the development of industrial enterprises, and after 1948 bought and modernized flour mills, saltworks, and chemical enterprises, many of which were turned over to the State of Israel after the death of James de Rothschild and the termination of PICA (both in 1957).

Rothschild visited Palestine often, touring his settlements and assessing their progress. In 1929, he was made honorary president of the Jewish Agency. Rothschild is buried in Israel overlooking the colonies Zikhron Yaʿakov (named after his father) and Binyamina (named after himself; his Hebrew name was Avraham Binyamin), and the area near Caesarea where he had funded clearing of malarial swamps.

ROYAL DUTCH SHELL

An Anglo-Dutch petroleum conglomerate.

The Royal Dutch Shell group of companies was created in 1907 from the merger of the Royal Dutch and Shell oil companies. More commonly known as Shell, the group is one of the largest oil companies in the world and is one of the Seven Sisters. Though headquartered in London, the company's main interests were in Iraq, Iran, Kuwait, and Turkey until nationalization of oil resources by the Gulf countries. It had no sizable role in the oil industry of Saudi Arabia. In 2001, the company had 91,000 employees worldwide, sales of $135 billion, and net assets of $56 billion.

JEAN-FRANÇOIS SEZNEC

RUB AL-KHALI

Sand desert with an area of 200,000 square miles (518,000 sq. km) shared by Saudi Arabia, the United Arab Emirates, Oman, and Yemen; one of the largest sand deserts in the world.

Rub al-Khali (the Empty Quarter) has no permanent settlements and is separated from populated areas by wide gravel plains devoid of vegetation. The northern part is watered by occasional winter rains, while the southern part is sometimes watered by spillover of monsoon rains from the Indian Ocean. Al-Murra and al-Dawasir bedouin frequent the northern parts of the Empty Quarter, where their camels feed on bushes and grasses that grow in the sand. Al-Manasir (of Abu Dhabi) and al-Duru (of Oman) tribes roam the eastern regions while the al-Kathir and al-Rawashid of Oman and the al-Manahil and Saʿar of Yemen use the southern and western reaches. The Rub al-Khali's boundaries have been mostly demarcated. In 1974 the borders between Saudi Arabia and the U.A.E. (Abu Dhabi) were agreed; in 1990 Saudi Arabia and Oman signed a border treaty; in 1992 Oman and the new Republic of Yemen reached an agreement; and in 2000 Saudi Arabia and Yemen finalized their land boundaries.

RUBINSTEIN, AMNON

[1931–]

Israeli law professor and political leader.

Born in Tel Aviv, Amnon Rubinstein studied at the Hebrew University and became a member of the bar in 1963. He earned a Ph.D. in law from the London School of Economics in 1966 and served as a professor (1961–1975) and dean (1968–1973) of the law faculty at Tel Aviv University. In 1974 he founded the centrist Shinui Party, which advocated free enterprise, electoral reform, and the formulation of a written constitution. In 1977 Shinui was part of the Democratic Movement for Change Party, but it broke away in 1978 and Rubinstein became its chair. In 1992 Shinui joined Ratz (Citizens' Rights Movement) and MAPAM (United Workers Party) to form Meretz (Vigor), and won twelve seats in the Knesset.

Rubinstein has served on many key Knesset committees, serving as chair of the Knesset Economic Committee and the Knesset Constitution, Law, and Justice Committee. From 1984 to 1988 Rubinstein was communications minister in a national unity government; from 1992 to 1996 he was minister of education and culture. Rubenstein is one of the best-known scholars in the Knesset, having written several books and many articles in the popular press and in academic periodicals on political and legal topics.

RUMELIA

The European part of the Ottoman Empire, in particular the Balkan peninsula.

Formerly written as *Rum-ili*, the word *Rumelia* has its origins in the medieval Muslim practice of referring to the Byzantine as Rum and their territory as Bilad al-Rum. With the arrival of the Turks in Anatolia and, in particular, with the advancement of the Ottoman Empire, the use of Rum to designate Western Anatolia survived and evolved eventually into Rumelia or Rumeli.

During the reign of the Ottoman sultan Murat I (1362–1389), Rumelia emerged as a name to designate Ottoman territories in Europe, governed as a separate military-administrative region under the rule of a beylerbeyi, the first such governorate of its kind in the Ottoman Empire. It was around this time, too, that the empire was officially divided into two large administrative regions straddling the Sea of Marmara: Rumelia and Anadolu (Anatolia). At first, each successive territorial conquest in Europe, up to the Danube, was added to the beylerbeyi of Rumelia. After 1541, with the establishment of the governorate of Budin and Bosnia, the number of beylerbeyis began to proliferate. In the nineteenth century, during the Tanzimat, the administrative divisions of Rumelia underwent further changes. Finally, in 1894, Rumelia was officially subdivided into the *vilayets* (provinces) of Edirne, Selanik, Qoskova, Yanya, Ishqodra, and Manastir.

Currently the word is generally understood to refer to the triangular region between Istanbul and Edirne and the peninsula of Gallipoli—all that remains of Turkish Europe. The word is, however, no longer used in official documents or atlases; rather Trakya, a Turkish variant of Thrace, is used instead. The last official recorded use of Rumelia was during the Turkish War of Independence in 1919.

Today it is used most commonly by the residents of Istanbul to distinguish the European side of the city from the Anatolian. It forms an integral part of many a place name on the European side, such as Rumelihisari and Rumelifenerai.

KAREN PINTO

RUPPIN, ARTHUR

[1876–1943]

Sociologist and Zionist official.

Born in the Prussian province of Posen (now Poznan in western Poland), Arthur Ruppin became head of the Palestine office of the World Zionist Organization in 1908. Ruppin's leadership opened a new epoch of Zionist settlement in Ottoman Pales-

tine. The restoration of constitutionalism in the Ottoman Empire after the Young Turk Revolution of 1908 created some opportunities for Jewish settlers. Ruppin, a technician and social theorist, negotiated the purchase of large tracts of land in the Jezreel valley and mobilized funds to add to Jewish neighborhoods in Haifa, Tel Aviv, and Jerusalem. Through his official position and personal influence, he provided financial support for young Jewish pioneers, who developed the kibbutz and moshav as new types of collective agricultural communities.

Ruppin grew up in Europe during a period of rapid economic change that brought ruin to his family, forcing him to leave school at fifteen. Apprenticed to a grain merchant, Ruppin was quickly promoted to office manager. After completing secondary school, he studied law and economics at the universities of Berlin and Halle. A scholar and a man of action, Ruppin's *The Jews in the Modern World* (1904) laid the foundation for the study of the sociology of Jewry. He lectured in Palestine, in sociology at the Hebrew University, and directed Palestine's Institute for Economic Research. On behalf of the Jewish Agency (the liaison between Palestinian Jews and the British mandate authorities), he promoted policies to develop Jewish industry and agriculture. During World War I, he saved Palestine's Jews from starvation by supervising the distribution of American funds, even after he was exiled in 1916 to Istanbul. In the last decade of his life, he aided the absorption of German Jews fleeing the Nazis. A founder of Brit Shalom in 1925, Ruppin advocated, for a short time, the establishment of Palestine as a binational state. While he modified this view, he stressed the importance of Palestinian Jews reaching an agreement with Palestinian Arabs that would not compromise Zionist goals. He died in Jerusalem in 1943.

DONNA ROBINSON DIVINE

RUŞDIYE SCHOOLS

Ottoman secular primary schools.

The first *ruşdiye* primary schools were established in 1838 at the Süleymaniye and Sultan Ahmet mosques in Istanbul by Sultan Mahmud II, to prepare young men to attend his new technical schools. These schools slowly became an alternative to the religious education system, numbering sixty by 1853. Their graduates staffed the Ottoman Empire's expanding administration and military during the Tanzimat era and beyond. In the early years, students aged ten to fifteen years (and later even younger) studied languages, mathematics, science, history, and religion for four years. By the late nineteenth century, nearly every provincial town had a ruşdiye school. In 1895, more than thirty-five thousand students, about four thousand of them non-Muslim, attended the state-run ruşdiye schools. The first ruşdiye for girls was founded in 1858.

The military built its own system of schools beginning in 1855, and its ruşdiye schools enrolled eight thousand boys in 1895. İdadi (middle) Schools were added in the late nineteenth century. In addition, in 1895 a separate system of millet ruşdiye schools, run by various religious groups, enrolled seventy-six thousand non-Muslim students.

ELIZABETH THOMPSON

RUSK, DEAN

[1909–1994]

American secretary of state.

David Dean Rusk was born in Georgia. A Rhodes Scholar, he studied at Saint John's College, Oxford, and later at the University of California Law School in Berkeley. During World War II, Rusk served in the army in the China-Burma-India theater, rising

to the rank of colonel. He held key positions in the Department of State (1946–1952) and helped implement the Marshall Plan and U.S. Far East policy. From 1952 to 1961, he was president of the Rockefeller Foundation. He served as secretary of state (1961–1969) in the Kennedy and Johnson administrations.

He was a hawkish steward of American foreign policy during the Cold War, believing in the use of military action to combat communism. Rusk emphasized diplomatic efforts during the Cuban missile crisis and North Korea's seizure of the USS *Pueblo,* but advocated military escalation in the Vietnam War (1955–1975). On the Palestinian refugee issue, Rusk followed former Secretary of State John Foster Dulles in hoping (in vain) that the U.S. administration would apply pressure on Israel to make a generous gesture regarding compensation and return. He cautioned against acceding to Israel's requests for a security guarantee on the grounds that it would harm American interests in the region without appreciably enhancing Israeli security. In the build-up to the Middle East crisis of 1967, he strongly endorsed plans for sending a U.S.-led multinational flotilla through the Strait of Tiran to challenge Egypt's blockade of Israel's southern port of Eilat, but he advised against President Johnson's giving the Israelis a yellow (or amber) light to proceed cautiously with a preemptive attack on Egypt. His post-1967 behind-the-scenes diplomatic efforts paved the way for the 1969 Rogers Plan. Ending his years of government service, Rusk taught international law at the University of Georgia from 1970 to 1984.

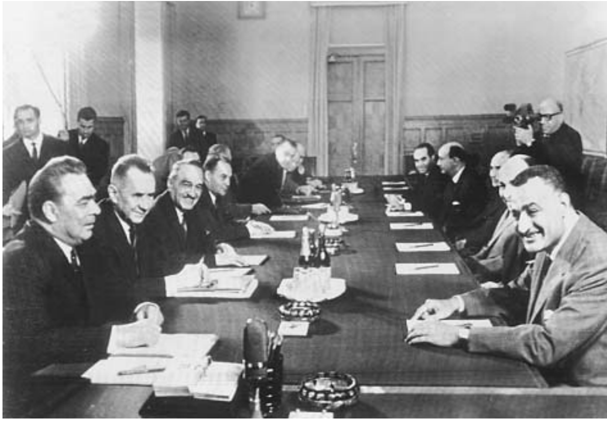
RUSSIA AND THE MIDDLE EAST

From Catherine the Great's 1774 victory against the Ottoman Empire until the late twentieth century, Russian/Soviet policy was to rule the Black Sea and the lands around it.

In the late eighteenth and early nineteenth centuries, Russia increased pressure on the Ottoman and Persian empires in an attempt to capture parts of the Black and Caspian seacoasts, as well as of the Caucasian interior. Persia's refusal to recognize Russia's 1801 annexation of Georgia led to a war (1804–1813) and a Russian victory. According to the Treaty of Golestan (1813), Persia lost a large part of the Caucasus, including Georgia, as well as parts of the western Caspian coast. Persia also recognized Russian naval preeminence in the Caspian Sea.

The next round for the control of the central Caucasus was fought between 1826 and 1828. It, too, ended in a Russian victory. Under the terms of the Treaty of Turkmanchai (1828), Persia relinquished to Russia part of Armenia and recognized the Aras River as the Transcaucasian boundary between the two states. In addition, Persia granted Russia important commercial concessions and extraterritorial privileges, enabling Saint Petersburg to establish a strong political and economic position in the Persian Empire. In the late 1850s Russia turned its attention to Transcaspian Muslim central Asia, conquering the Khanate of Khiva in 1873 and Kokand and Bokhara in 1876. The process was completed in the mid-1880s with the annexation of Merv and Panjdeh, situated near the Afghan border. In 1881 Persia agreed to the Atrek River as the Transcaspian boundary with Russia.

Russia's southward expansion alarmed Great Britain, for Russian control of the Turkish Straits would threaten part of the maritime lifeline of the British Empire. London was also alarmed at the steady Russian encroachment into Persia and, later, Afghanistan. If unchecked, these advances would ultimately bring the Russians to the border of India, the crown jewel of the British Empire. Hence, throughout the nineteenth century, London attempted to prevent Russia from overrunning the Ottoman and Persian empires and from making major inroads into Afghanistan. In the early twentieth century, however, fear of imperial Germany prompted Britain and Russia to reconcile their dif-



A meeting at the Kremlin in Moscow at which Egyptian president Gamal Abdel Nasser, pictured at right, sits across from Soviet leaders Leonid Brezhnev, Alexei Kosygin, and Anastas Mikoyan, pictured from left to right. Both the Russian and Middle Eastern leaders were critical of U.S. attacks on North Vietnam. © BETTMANN/CORBIS. REPRODUCED BY PERMISSION.

ferences in Asia. According to their 1907 treaty, Afghanistan became a British sphere of influence and Persia was split into three zones: Russia dominated the northern and Great Britain the southern parts of the country; separating them was a third, or neutral, zone. After the outbreak of World War I, the two allies concluded the Constantinople Agreement (1915), stipulating that after the war Russia would occupy the Turkish Straits. This dramatic reversal of long-standing British policy was dictated by the necessity of keeping Russia in the allied coalition.

Tsarist Russia did not survive to enjoy the fruits of victory over the Central powers. The communist regime, in power after November 1917, renounced the concessions secured by its predecessor, proclaimed itself an ally of the exploited masses, and, in 1921, concluded treaties of friendship and neutrality with Turkey, Persia, and Afghanistan. Nonaggression treaties with Turkey and Afghanistan were signed in 1925 and 1926, respectively.

The Soviet Union and the Middle East, 1945 to 1991

During World War II, after Germany invaded the U.S.S.R. in 1941, Soviet and British troops occupied Iran to secure a safe supply route for the flow of Allied war matériel to the Soviet Union. The treaty of alliance concluded between Iran, Great Britain, and the U.S.S.R. in 1942 provided for the withdrawal of foreign forces not later than six months after the end of the war. By early 1946 the British had pulled out, but the Soviets remained. They left later in the year, after Tehran had signed an agreement permitting Soviet oil exploration in northern Iran (it was never implemented). More significantly, Washington exerted pressure on Moscow to abide by the 1942 agreement.

Stalin's refusal to leave Iran was but one of the perceived indications of his aggressiveness. As seen in the West, his ambitions in the Middle East complemented Soviet expansion in Eastern Europe and the Far East. In 1945 Stalin renounced the Soviet-Turkish nonaggression treaty and renewed tsarist claims to Turkish territory, including the Straits. He was also held responsible for efforts by Greek communists to topple that country's pro-Western government. Washington responded by promulgating the Truman Doctrine (1947), which assumed responsibility for the defense of Greece and Turkey. The U.S. Sixth Fleet was deployed in the Mediterranean in 1946 and its presence was later augmented by Strategic Air Command bombers based in Morocco, Libya, Turkey, and Saudi Arabia. Jupiter missiles followed in the 1950s and Polaris submarines in the 1960s. By means of the Eisenhower Doctrine (1955), Washington pledged to defend the Middle East against Soviet aggression, and the Baghdad Pact, consisting of Turkey, Iran, Iraq, Pakistan, and Great Britain, was formed during the same year.

The vast accumulation of U.S. power in and near the Mediterranean was seen in Moscow as a threat to its security. Hence, for much of the post-Stalin period the U.S.S.R. worked hard to neutralize the U.S. military presence in the vicinity of its southern border. As part of the general superpower competition, the Soviets made a major effort to establish a viable naval and air presence in the Middle East. A naval squadron was permanently deployed in the Mediterranean in 1964, but naval and air bases became available in Egypt only in 1970. Cairo withdrew these privileges later in the decade, but by then the Middle East had ceased to represent a major strategic threat to the U.S.S.R. Ironically, this was due not to Soviet countermeasures but to technological advances: Washington came to rely on land-based and submarine-launched intercontinental ballistic missiles. Until 1991 the U.S.S.R.,

mainly for political reasons, maintained its Mediterranean squadron and had access to facilities in Syria, Algeria, Libya, and Yemen. The most dramatic projection of Soviet power in the post-1945 Middle East occurred in Afghanistan. To preserve a faltering communist regime, Soviet troops entered the country in 1979. They were withdrawn in 1989, leaving Afghanistan stalemated militarily and politically.

An early Soviet political objective was to undermine Western positions in the Middle East. The trend was set by Stalin's support of the partition of Palestine and of the State of Israel (1947–1948), and it lasted into the Gorbachev period. Western influence has declined from the peak reached in 1945, but this process was initiated by local actors, pursuing their own (not Soviet) interests. The U.S.S.R. played a part by lending moral and material support to regional leaders who were refused Western assistance or arms, but its role was facilitative and, therefore, secondary.

In addition, especially during the Khrushchev and Brezhnev periods, the U.S.S.R. attempted to strengthen its own position and to gain U.S. recognition as a political equal in the Middle East. Efforts to improve Moscow's standing were crowned with some short-term successes. In the 1950s the Soviet Union established working relations with Iraq, Syria, Egypt, and Algeria. Later, treaties of friendship and cooperation were signed with Egypt (1971), Iraq (1974), and Syria (1980). However, these apparent gains did not net the U.S.S.R. any permanent, long-term benefits.

Egypt abrogated its treaty in 1976. In 1980 Iraq attacked Iran without consulting the Kremlin. Moscow's ensuing attempts to maintain evenhanded relations with the combatants during their eight-year war led ultimately to a deterioration of both sets of relationships. Gorbachev's realization of the cost-ineffectiveness of the Kremlin's political involvement in the Middle East was partly responsible for his decision to disengage from the Soviet commitment to the Arabs in their conflict with Israel, an obligation that Moscow had maintained through the Khrushchev and Brezhnev periods. Lastly, efforts to gain U.S. recognition of Moscow's political parity in the Middle East had also been unsuccessful.

One of the regional problems that the U.S.S.R. had used to advance its political interests in the Middle East was the Arab–Israel conflict. In 1953, in a major about-face, the Soviets abandoned Stalin's policy of support for the Zionist cause and sided with the Arabs. In the ensuing years Moscow extended Egypt and Syria large-scale military and economic assistance and adopted a strong pro-Arab and anti-Israeli position. With some modifications, this attitude was maintained well into the 1980s. Among other things, the U.S.S.R. recognized the Palestine Liberation Organization as the official representative of the Palestinian Arabs and backed the Arab states in the Arab–Israel wars of 1956, 1967, and 1973. In 1967 Moscow broke diplomatic relations with Israel. As noted, a major change in the Soviet position occurred in the late 1980s when "new thinking" in Gorbachev's foreign policy led the Kremlin to improve relations with Israel. Large-scale Jewish emigration from the U.S.S.R. to Israel was accompanied by the restoration of diplomatic relations between the two states in 1991. As Moscow's policy became "evenhanded," to the chagrin of the Arabs, the U.S.S.R. ceased to play an important role in the Arab-Israel conflict.

Before 1970 the U.S.S.R. had no important economic interests in the Middle East. In the 1970s and 1980s the Soviets became heavily involved in selling arms to Iraq, Syria, Libya, Egypt, and Iran. These transactions, worth tens of billions of dollars, ranked second to petroleum sales as the U.S.S.R.'s main earner of foreign currency. (The stunning superiority of Western arms over the Soviet weapons in the hands of the Iraqi military during Operation Desert Storm in 1991 has seriously eroded the market value of such Russian-made armaments for the foreseeable future.) In addition, the U.S.S.R. bartered various types of goods and services for Iraqi, Libyan, and Algerian oil and Iranian gas. Until its dissolution, the U.S.S.R. looked at the oil-rich Persian Gulf states as sources of capital in restructuring the Soviet economy.

On balance, between 1945 and 1991 the U.S.S.R. can be said to have improved its military position vis-à-vis the Middle East in the sense that no strategic threat to Soviet security emanated from the region. But the U.S.S.R. also suffered disappointments and setbacks, and its military and political gains usually proved temporary. In the 1990s the U.S.S.R.'s position was further weakened by the collapse of the Soviet economy and

Gorbachev's frantic efforts to revive it by normalizing relations with the Western powers, especially the United States. Given these priorities, the continuation of superpower competition in the Middle East made little sense from the new Soviet perspective. As contiguous states with a large Muslim population, however, Russia and the various independent republics that were formed from the Soviet Union in 1992 will inevitably remain interested parties in the regional affairs of the Middle East.

Relations with the Russian Federation States, 1991 to the Present

Following the collapse of the Soviet Union in December 1991, a weakened Russian Federation, no longer following the "anti-imperialist" foreign policy of the U.S.S.R. and increasingly concerned with economic development and protecting Russia's southern borders, focused its Middle East policy primarily on four countries: Iran, Israel, Turkey, and Iraq. Iran was the closest Middle East ally of post-Soviet Russia. Moscow was Iran's primary supplier of military equipment; the two countries cooperated diplomatically in a number of areas including Tajikistan, where they jointly arranged a cease-fire; TransCaucasia, where until 2001 they worked together against Azerbaijan; and Afghanistan, where they both opposed the Taliban. The centerpiece of the relationship was the nuclear reactor that Russia, despite strong U.S. opposition, was constructing for Iran at Bushehr. The one major area of disagreement was the demarcation of the Caspian Sea.

Economics also was a major factor in the Israeli-Russian relationship, with trade rising to over a billion dollars per year by 2002. The relationship was also marked by extensive cultural cooperation and the joint development and sale of military equipment. The major problem in the relationship was Russia's supply of the nuclear reactor to Iran, which Israel saw as a major enemy. Similarly, economics played an increasingly important role in the Turkish-Russian relationship. With trade rising to over $10 billion annually before the Russian economic collapse in 1998, Turkey became Russia's leading trading partner in the Middle East. There had been a rivalry between Turkey and Russia in Central Asia in the 1990s, as well as serious disagreements over ethnic issues, with Russia alleging Turkish aid to the Chechen rebellions, and Turkey alleging Russian assistance to the terrorist Kurdish Workers Party. But by 2000, with the Blue Stream natural gas pipeline being built to carry Russian natural gas to Turkey, Russian Prime Minister Mikhail Kasyanov could state that the Turkish-Russian relationship had moved from rivalry to partnership. Finally, in its relations with Iraq, Russia hoped to recover as much as possible of the $8 billion in debt owed to Moscow by the regime of Saddam Hussein, as well as obtain business opportunities for Russian companies such as LUKOIL. Despite opposing the Anglo-American attack on Iraq in 2003 that ousted the Hussein regime, and the subsequent military occupation of the country, Russia pursued business opportunities with the Iraqi Governing Council that was appointed by the United States, and Moscow held out the possibility of reducing the Iraqi debt in return for contracts for Russian companies.

RUSSIAN–OTTOMAN WARS

Wars between the Russian and Ottoman empires over opposing expansionist policies.

During the nineteenth century, Russia's approach to the Ottoman Empire was governed by several distinct but interrelated considerations. In terms of military strategy, the Black Sea provided access to the rich Ukrainian plain, which became regarded as Russia's "soft underbelly," and entry into the Black Sea was possible only through the Turkish Straits, the gateway to and from the Mediterranean. Hence, control of the straits became an important Russian objective. As the European powers awakened to Russian ambitions, Russia modified its quest for annexation of Ottoman territory and attempted to establish protectorates in such regions as the principalities (Wallachia and Moldavia) and Bulgaria. Other Slavic nationalities struggling against Ottoman control also represented a political interest. Economically, trade in and beyond the Black Sea became an important concern, especially after the fertile lands along the northern shore were opened to cultivation. Reinforcing these interests, Russia's role as protector of Greek Orthodoxy in the Ottoman Empire added yet another dimension to the quest for dominance in the Black Sea region.

Europe's preoccupation with Napoléon Bonaparte early in the century enabled Russia to consolidate its position in the Black Sea area. The Treaty of Bucharest (1812) ended a six-year war by ceding to Russia Bessarabia and territory in the western Caucasus and extending privileges in the principalities. In 1829 Tsar Nicholas I (r. 1825–1855) used the Greek War of Independence as reason to declare a war against the Ottoman Empire. The Ottomans lost and in the Treaty of Adrianople (1829) ceded to Russia the mouth of the Danube and additional territory in the Caucasus. The treaty also conferred autonomy upon the principalities, placed them under Russian protection, and, for the first time, guaranteed Russian merchant ships free passage through the straits.

In 1833 Russia and the Ottoman Empire signed the Treaty of Hunkar-Iskelesi, one of only two treaties of mutual assistance entered into by the two states. (The first, directed against Napoléon, had been signed in 1805.) This unusual treaty resulted not from a war but from Russian assistance to Sultan

The Treaty of San Stefano was signed in 1878 between Russia and the Ottoman Empire. The Ottomans ceded to Russia parts of Armenia and the Dorbuja; agreed to pay a substantial indemnity; recognized the independence of Romania, Serbia, and Montenegro; and increased the territories of Serbia and Montenegro. **© CORBIS. REPRODUCED BY PERMISSION.**

Mahmud II, whose reign (1808–1839) was being threatened by Muhammad Ali, the rebellious pasha of Egypt. Once the Russian troops arrived, at the Sultan's invitation, they were, for the first and only time, in control of the straits area and Istanbul. They left later in the year after Mahmud II signed the Treaty of Hunkar-Iskelesi, which closed the straits to warships of all foreign nations. The establishment of a Russian protectorate over the Ottoman Empire proved unacceptable to Great Britain and Austria. The ensuing Treaty of London (1840), which sent Muhammad Ali back to Egypt, and the Straits Convention (1841) made the independence and territorial integrity of the Ottoman Empire a common concern of Europe's great powers acting in concert.

As an outgrowth of Tsar Nicholas I's inability to resolve the Eastern (i.e., Ottoman) question to his satisfaction, the Crimean War (1854–1855) pitted Russia against the Ottoman Empire, which was allied with Great Britain, France, and the Kingdom of Sardinia. Russia capitulated after the allied troops landed in the Crimea and Tsar Nicholas died. Under the terms of the Treaty of Paris (1856) the Ottoman Empire regained the mouth of the Danube and southern Bessarabia and agreed to the demilitarization of the Black Sea; the principalities became a protectorate of the victorious European allies; and an international commission was established to as-

sure free navigation on the Danube. Russia also abandoned its claim to the protectorate of the Greek Orthodox Church in the Ottoman Empire. In 1871, using the diplomatic upheaval caused by the Franco-Prussian War, Russia unilaterally renounced the Treaty of Paris.

The war of 1877 to 1878 grew out of the local disturbances in the Balkans. The Turks' brutal suppression of the Balkans, followed by the declaration of war on the Ottoman Empire by Serbia and Montenegro (1876), provided Russia with a pretext to intervene on their behalf. The defeat of the forces of Sultan Abdülhamit II (r. 1876–1909) prompted harsh terms in the 1878 Treaty of San Stefano. The last armed confrontation between the two empires occurred during World War I. The Russians had made some headway in the Transcaucasus, but the Communists, who had seized power in 1917, took Russia out of the war and renounced all imperial claims to Ottoman territory.

RUTENBERG, PINHAS

[1879–1942]

Engineer and Yishuv leader; pioneer of hydroelectricity in Palestine.

Born in Romny, Ukraine, Pinhas Rutenberg became active in the Russian revolutionary movement and participated in the "Bloody Sunday" march—the start of the 1905 Revolution. From 1907 to 1915 he worked as an engineer in Italy. During this period he became interested in Jewish affairs and wrote a pamphlet titled "The National Revival of the Jewish People."

During World War I Rutenberg went to London to try to influence the Zionist leadership to establish Jewish military units to liberate Palestine from the Ottoman Empire. When he discovered that Vladimir Zeʾev Jabotinsky had similar interests, he contacted him to coordinate their efforts and traveled to the United States to spread the idea.

After Aleksandr Kerensky's March Revolution of 1917 overthrew the tsarist government of Russia, Rutenberg returned there to be appointed deputy governor of Saint Petersburg, in charge of civilian affairs. In November 1917, with the Bolshevik takeover, Rutenberg was arrested, spent six months in prison, and escaped to rejoin anti-Bolshevik groups. By 1919, perceiving antisemitism in the revolutionary movement, Rutenberg saw no future for himself in the new Soviet state and left for Palestine, where he joined a British team surveying Palestine's water resources, particularly the Jordan River.

Rutenberg drew up a far-reaching plan for creating a hydroelectric scheme to supply both sides of the Jordan with power and water for irrigation. From 1920 to 1923, Rutenberg worked to influence the British authorities to grant him a preliminary concession for his Palestine Electric Corporation Limited. In 1926 he was awarded the full concession over the use of the Jordan and Yarmuk rivers for supplying hydroelectricity to Palestine. He raised the money for the company mainly from Jews in the United States and Great Britain. In 1932 the first Jordan power station was opened in Naharayim, at the confluence of the Jordan and Yarmuk rivers. The station functioned until it was destroyed during the 1948 Arab–Israel War.

Rutenberg was an active Zionist and headed the Vaʿad Leʾumi (National Council) in the crisis year of 1929. During the 1936 disturbances, he joined with four other Yishuv leaders to propose a plan for Arab-Jewish coexistence. His water-development plans had already brought him into friendly contact with Abdullah ibn Hussein, the amir of Transjor-

dan, but nothing came of these efforts. Strongly concerned about infighting among Jews, Rutenberg also attempted unsuccessfully to mediate between David Ben-Gurion's MAPAI Party and Jabotinsky's Revisionists, who were constantly at odds. In 1939 Rutenberg again became the head of the Vaʿad Leʾumi, and served until he died in 1942. In secret wartime conversations with British officials in London, he discussed plans for assassinating the exiled mufti of Jerusalem, Hajj Amin al-Husayni.

S

SAʿADA, ANTUN

[1904–1949]

Founder and leader of the Syrian Social Nationalist Party.

Antun Saʿada was a charismatic leader and a revolutionary Arab thinker who in 1932 founded, and then headed the Syrian Social Nationalist Party (SSNP) until his death in 1949. He was born in Shuwayr, Mount Lebanon, on 1 March 1904 to Eastern Orthodox Lebanese parents. His father, Khalil Saʿada, a product of the late-nineteenth-century Arab Renaissance, was a well-known physician, novelist, linguist, publicist, and political activist. Saʿada joined his father in Brazil in 1921. He was strongly affected by his father's modern views while they worked together publishing a newspaper and a journal throughout most of the 1920s. During this period, Saʿada's intellectual formation was solidified by his mastery of several languages and his involvement in political activism. In 1930 Saʿada returned to Lebanon determined to bring about change, and he secretly founded the SSNP in 1932. The party was initially called the Syrian National Party; Saʿada added the word *social* to the party's name in the 1940s to emphasize the social dimension of nationalism. Saʿada was accused of fascist leanings, but this continues to be debatable.

The secret organization, whose membership in its early days drew mainly on students from the American University of Beirut, where Saʿada was tutoring in German, mushroomed to more than 1,000 members in two years. French colonial authorities uncovered the party on 16 November 1935; Saʿada was arrested along with other party leaders and put in jail for six months. During his imprisonment, Saʿada finished his seminal work, *The Genesis of Nations.* The party continued to grow in size and influence, although Saʿada was detained again in 1936 and 1937 for a total of seven months. The oppression of Saʿada and the party by the French, rekindled by an arrest warrant in 1938, played a role in shifting his activities overseas, where his main goals were to organize Syrian emigrants and to promote his cause in international circles. But World War II and the French measures taken against him blocked

his return home, and he was exiled, mainly to Argentina, for several years.

Saʿada was received as a hero upon his return to Beirut on 2 March 1947. The newly independent Lebanese state quickly moved to curb his increasing influence, to no avail. Meanwhile, he succeeded in consolidating his power in the party and in solidifying the party's growth in Lebanon, Syria, Palestine, and Jordan. An attack on the SSNP by the proestablishment Phalange Party in June 1949 in Beirut was followed by an aggressive government campaign. As a result, Saʿada mounted a rebellion against the Lebanese state on 4 July 1949. The Syrian president, Husni al-Zaʿim, to whom Saʿada turned for help, betrayed Saʿada's trust and turned him over to his foes. Saʿada was summarily tried without due process in Beirut and executed on 8 July 1949.

Saʿada saw the SSNP as an agent of change and progress. The party's goals included the revival, independence, sovereignty, and development of the "Syrian Nation" as part of the Arab World. This nation was partitioned by British and French colonial powers into new political entities after the collapse of the Ottoman Empire in 1918. According to Saʿada, the Syrian Nation included Lebanon, Syria, Palestine, Jordan, Iraq, Kuwait, and Cyprus. The reform principles emphasized the abolition of feudalism and sectarianism and promoted secularism. The SSNP is historically characterized as well-disciplined and staunchly secular, with multiethnic and multiconfessional membership.

SAADAWI, NAWAL AL-

[1931–]

Egyptian feminist, writer, and doctor.

Nawal al-Saadawi (also spelled Nawal al-Saʿdawi or Nawal el-Saadawi) was born in the village of Kafar Tahla in Egypt. She graduated from the faculty of medicine at Cairo University in 1955 and practiced medicine for ten years, becoming a vigorous opponent of the exploitation of women in Egypt and the Arab world. She was dismissed from her position as Egypt's general director of health education for having written *Woman and Sex* (1972), which discussed the sexual exploitation of women, including prostitution, clitoridectomy, incest, and sexually transmitted diseases. For instance, she discussed in detail the female sexual anatomy, especially the variation in hymen types. She also discussed the epistemology of psychological, physical, and social epidemics affecting sexual roles and relationships. She openly discussed taboos such as rape, women's submissive roles in the family and society, sexual repression, and inconsistent social and religious values. Between 1979 and 1980, she became the United Nations advisor for the Women's Program in Africa and the Middle East. Her literary and scientific writings resulted in her imprisonment in 1981. Upon her release in 1982, she founded the Arab Women's Solidarity Association International, which was closed down in 1991 by the Egyptian government. She and Dr. Sherif Hetata, her second husband, were members of the Commission of Inquiry for the International War Crimes Tribunal (1992), which investigated war crimes against Iraq. She also served on a mission to bring medical aid to Iraq in defiance of U.S. sanctions. In 2001, an Egyptian court dismissed a lawsuit filed against her by a religious extremist for having "scorned Islam."

The candor with which she has approached health, economic, political, and social problems has made her a radical and progressive activist, working against social injustice exercised in the name of religion, morals, and love. She has written more than thirty books, which have been translated into thirty languages and have reached both a popular and an academic audience worldwide. Her books in English include *Searching* (1991), *My Travels around the World* (1992), *Memoirs from the Women's Prison* (1994), *Woman at Point Zero* (1997), *The Nawal El Saadawi Reader* (1997), *Hidden Face of Eve: Women in the Arab World* (1997), *The Innocence of the Devil* (1998), *Daughter of Isis: The Autobiography of Nawal El Saadawi* (1999), and *Walking through Fire: A Life of Nawal al Saadawi* (2002).

SAADE, GEORGE

[1930–1998]

Lebanese politician.

Born to a Maronite Catholic family, George Saade completed his schooling in Lebanon. In 1955 he left for Spain, where he enrolled as a student at Madrid's Central University and completed degrees in literature and philosophy and Semitic languages. Elected to the Lebanese parliament in 1968, Saade was also appointed as minister in several governments. In 1945, while a student, he joined the Phalange Party (Hizb al-Kataʾib), in which he played important roles, including adviser for educational matters to the party founder, Pierre Jumayyil. In 1969, following clashes between the Lebanese army and the Palestine Liberation Organization (PLO), Saade was appointed to a joint dialogue group with the Palestinians. In the 1970s he played a key role in the Phalange Party's relationships with the Arab countries. In 1986 he was elected president of al-Kataʾib. In 1991 and 1992 Saade was a member of the Lebanese government until his resignation in September 1992. He died in November 1998.

SABA FAMILY

Prominent Palestinian/Lebanese business family.

The Sabas, Christians originally from Shafa Amr in Palestine, achieved prominence in the twentieth century through the extraordinary business and political career of Fuʾad Saba. In the 1920s, Fuʾad [1902–] founded the now-huge accounting firm of Saba & Co. In the 1930s, he helped establish the Palestinian National Fund and acted as secretary to the Arab Higher Committee. He was briefly exiled by the British in the late 1930s for his political activities.

Fuʾad relocated Saba & Co. to Beirut before the 1948 Arab-Israel War and started other enterprises there, including the al-Mashriq Financial Investment Company (1963), the Arabia Insurance Company, and the Middle East Society of Associated Accountants. His business boomed after signing contracts with the American oil firm of J. Paul Getty and a top American accounting firm, Arthur Andersen and Company. He lived in Beirut until his death in the late 1980s.

Fuʾad's son Fawzi, born in 1931 in Jerusalem, attended the American University of Beirut, as his father did. He became a partner in Saba & Co. and has been living in Saudi Arabia and Dubai. (The family is of no known relation to Elias Saba, the 1970s Lebanese finance minister from northern Lebanon.)

SABAH, RASHA AL-

[1950–]

Advocate for women's rights in Kuwait.

Rasha al-Sabah, a member of Kuwait's ruling family, was born 18 November 1950. She received a bachelor's degree from the University of Birmingham (U.K.) in 1972, and a master's degree and doctorate from Yale University in 1974 and 1977 respectively.

At Kuwait University she became the head of the University Language Center in 1977, a dean in 1982, and a vice rector for community service and information in 1985. Rasha is well-known as a champion of women's rights at home and as a spokeswoman for her country abroad. A cousin of Amir Jabir al-Ahmad, she is among his most trusted advisors. Currently she holds the position of undersecretary of higher education. She also served as Kuwait's deputy ambassador to the United Nations from 1990 to 1994. She was a prominent supporter of the amir's controversial May 1999 initiative to confer full political rights on Kuwaiti women and was openly disappointed when the National Assembly voted it down twice in November 1999. An innovative advocate of women's interests, she opened the first mixed-sex *diwaniyya* in Kuwait, where both women and men participate weekly in conversations at her home about the issues of the day. Rasha is the recipient of a number of honors, including a Doctor of Laws conferred in 1997 by Richmond University in London.

MARY ANN TÉTREAULT

SABAH, SUAD AL-

[1942–]

Poet, economist, publisher, activist in social change affecting women and children.

Suad Muhammad al-Sabah (also spelled Souad al-Sabah or Suʿad al-Sabah) was born in 1942 in Kuwait as a member of the ruling family. She graduated from the Faculty of Economics and Political Sciences at Cairo University in 1973. She obtained a doctorate in economics from Sari Guilford University in the United Kingdom in 1981. She later returned to Kuwait and established the Suad al-Sabah Publishing and Distribution House. She has published several books of poetry and established a literary prize that carries her name. She also has written hundreds of economic and political essays as well as popular articles in several Arabic local and international newspapers and magazines. Her poetry has been translated into many languages, including English.

Upon the 1990 Iraqi invasion of Kuwait, al-Sabah campaigned against the war, writing newspaper articles and hosting radio programs, attempting to persuade Arab organizations to adopt firm stands against Iraq's aggression. In 1991 she published an anthology of ironic and bitter poetry on the Gulf War entitled *Will You Let Me Love My Country?* The poems delve into the spiritual crisis experienced by most Arab intellectuals in the new world order.

Al-Sabah is the director of Kuwait Stock Exchange and a member of the Higher Council for Education, the executive committee of the World Muslim Women Organization for South East Asia, and the board of trustees and the executive committee of the Arab Intellect Forum. She is also a founding member of the Arab Cultural Establishment, the executive committee of the Arab Human Rights Organization, and the Arab Council for Childhood and Development. Her poetry has captured the attention of popular artists as well as university researchers in many countries. Her literary publications include *Wamdatt Bakira* (Early blinks) and *Lahathat min Umri* (Moments of my life, 1961). Her scientific works in English include *Development Planning in an Oil Economy and the Role of the Woman* (1983) and *Kuwait: Anatomy of a Crisis Economy* (1984).

RITA STEPHAN

SABBAGH, HASIB

[1920–]

Palestinian entrepreneur and philanthropist.

Hasib Sabbagh came from a Christian family in Safed in British Mandate Palestine, although he was born in Tiberias. He graduated from the Arab College of Jerusalem in 1938, and in 1941 gained a civil engineering degree from the American University of Beirut.

In 1943, with four other contractors, he established the Consolidated Contractors Company (CCC) in Haifa. Sabbagh left Palestine in April 1948 and moved to Lebanon. CCC was reestablished there in 1950, becoming the region's largest multinational and one of the largest contractors worldwide.

A longtime member of both the Palestine National Council and of its central council, Sabbagh provided crucial international contacts for Yasir Arafat during the 1970s and 1980s. Most controversially, his 1978 meeting with the Phalange, first agreed to and then denounced by Arafat, provoked condemnation from the Lebanese and Syrian governments as well as from Palestinian opposition groups. In 1988, his active support encouraged Arafat to steer the Palestine Liberation Organization firmly toward a renewed peace initiative.

Through the Diana Sabbagh Foundation, one of the largest Arab charitable foundations, Sabbagh has supported institutions of higher education across the Arab world and the West, and has influenced a range of dialogue initiatives, notably in the United States at the Council on Foreign Relations, the Carter Center, and the Center for Muslim–Christian Encounter, and in Palestine within the Palestinian Initiative for the Promotion of Global Dialogue and Democracy (MIFTAH), under Hanan Ashrawi. He also cofounded the Welfare Association for Palestinians, chaired the Palestinian Students Fund, and has been on the boards of the Arab Bank and of many academic institutions and pro-Palestinian think tanks, such as the Institute of Palestine Studies.

MOUIN RABBANI
UPDATED BY GEORGE R. WILKES

SABBAGH, SALAH AL-DIN AL-
[1889–1945]

Arab nationalist; Iraqi army officer who headed the Golden Square group that opposed the government and influenced politics from 1939 to 1941.

Born in Mosul of a Lebanese father and an Iraqi mother, Salah al-Din al-Sabbagh was educated in Mosul and the Ottoman Military College in Istanbul, graduating as an officer in 1915. During World War I, he served in Palestine and Macedonia and was taken prisoner, ultimately joining Amir Faisal I ibn Hussein, who became king of Iraq, to return to Iraq in 1921 to a position in the Iraqi army. His military education also included courses in Belgium and in Britain. Sabbagh became an instructor at the Baghdad Military College in 1924 and later taught at the Staff College. By 1940 he was assistant chief of staff of the Iraqi army.

Al-Sabbagh was an Arab nationalist and the head of the Golden Square, the group of army officers that from 1939 to 1941 influenced Iraqi politics from behind the scenes. An admirer of the Jerusalem mufti (chief Muslim jurist) Hajj Muhammad Amin al-Husayni, al-Sabbagh worked with him and with Rashid Ali al-Kaylani in their negotiations with the Axis powers for support of their pan-Arab goals. Al-Sabbagh backed Rashid Ali as prime minister in 1941 and was a major advocate of war with Britain in April and May. After the Iraqi defeat in the Anglo–Iraqi War of 1941, Sabbagh fled to Iran and then to Turkey, where he was extradited to Iraq and executed in 1945. His book *Fursan al-Uruba fi al-Iraq* (The knights of Arabism in Iraq), an autobiographical account of his pan-Arabism, was published posthumously in Baghdad in 1956.

SABBATH

The seventh day of the week; the day of religiously mandated rest.

In Judaism, the Sabbath (in Hebrew, *Shabbat,* or rest) was and is the holiest day of the week. Historically, no work of any kind could be done; hence, fire could not be made and, by extension, nothing that runs electrically or mechanically can be started up by observant Jews. Food is prepared in advance and special customs ensure rest and reflection on the past week, and thereby restoration of the soul for the coming week.

The Jewish Sabbath begins at sundown Friday and lasts twenty-five hours, until nightfall Saturday; the Christian Sabbath is usually celebrated on Sunday. In Israel on the Sabbath, public facilities are closed. Outside of Haifa, buses of the state cooperatives do not run, no El Al (Israeli) airliners take off or land, and no Hebrew newspapers are published.

Public observance of the Sabbath has been the source of some tension within Israeli society. Since the formation of the state, Orthodox and, in particular, *haredi* (ultra-Orthodox) Jews have been insistent that restaurants, movie theatres, and other "profane" public establishments remain closed in observance of the Sabbath. Although such closings have been common, increasing numbers of businesses are remaining open on the Sabbath.

There is no ban in Israel on the driving of private cars on the Sabbath, but *haredi* Jews, in an effort to enforce the religious prohibitions of the Sabbath, have periodically clashed with local authorities and drivers by demanding the closure to automobile traffic of public thoroughfares that pass near or through their enclaves on the holy day of rest. This has occasionally led to violent demonstrations, stone-throwing, and mass protests by Orthodox Jews against "desecration of the Sabbath." Although most of these demonstrations ultimately have led to the limitation or eventual halt of the flow of traffic on these thoroughfares during the Sabbath, the protests have also led to increased tensions between Orthodox and secular Israelis and often hostile debates about religious coercion in Israeli society.

SAMUEL C. HEILMAN

SABRA

Word ultimately derived from the Arabic for a variety of prickly pear found in Israel; also the name for a native-born Israeli.

Native-born Israelis are described as Sabras because their personality is often thought to be similar to the fruit of the plant: tough and prickly on the outside, sweet on the inside.

BRYAN DAVES

SABRA AND SHATILA MASSACRES

Mass killing of hundreds of Palestinians in refugee camps, 16–18 September 1982.

Shortly after Israel invaded Lebanon on 6 June 1982, the Israel Defense Force (IDF) laid siege to Beirut. A cease-fire accord reached in August allowed the entry into West Beirut of a multilateral force, including a contingent of U.S. Marines. Following a U.S. pledge to protect Palestinian civilians, Palestine Liberation Organization (PLO) fighters and officials departed the city, as did the multinational force. The day after the president of Lebanon, Bashir Jumayyil, was assassinated (14 September), Israel sent troops into West Beirut, where they surrounded two Palestinian refugee camps in violation of the cease-fire agreement. Defense Minister Ariel Sharon and Chief of Staff Rafael Eitan arranged for the Israel-supported Phalange militia to enter the camps to clear out what Sharon described as "2,000–3,000 terrorists who remained behind. We even have their names." The Phalange murdered hundreds of Palestinians, mostly women, children, and older men. Israel put the figure at 800; other sources estimated it at 1,500.

The international community condemned Israel's role in the mass killing, and up to 400,000 Israelis (8 percent of the population) demonstrated against the government of Menachem Begin and demanded a judicial inquiry. A three-man Israeli commission, headed by the president of the Supreme Court, Yitzhak Kahan, found that Israeli officials were "indirectly responsible" because they arranged for the Phalange, mortal enemies of the Palestinians, to enter the camps and, even though Israeli officers and government officials received reports about the atrocities, they ignored them and allowed the Phalange to extend their stay in the camps. The International Commission, chaired by Sean MacBride, former assistant secretary general of the United Nations, charged that under international law, Israel was directly responsible because the camps were under its jurisdiction as an occupying power and be-

cause the IDF planned and facilitated its ally's entry into and activities in the camps, prevented survivors from leaving the camps, and did not stop the mass killing after hearing about it. Despite the findings of both commissions, no one was prosecuted. In 2001, Human Rights Watch and Amnesty International called for an investigation of Ariel Sharon for his role in the Sabra and Shatila massacres.

SABRI, ALI

[1920–1991]

Egyptian military officer and politician.

Ali Sabri was educated at the Military Academy, taught at the Air Force Academy in 1949, and served as an air force officer. Though not a member of the Free Officers, he supported their movement and acted as liason to the U.S. embassy prior to the 1952 revolution in which the Free Officers overthrew King Farouk. Between 1957 and 1962, Sabri was minister of presidential affairs, giving him access to President Gamal Abdel Nasser, who appointed him to the Supreme Executive of the Arab Socialist Union (ASU) in 1962, a position he held through 1965, at which time he was appointed secretary-general of the union. Sabri is well known in Egyptian politics as perhaps the most influential leftist. His tenure in the ASU is closely associated with Nasser's shift to the left in the early 1960s. As head of the ASU, Sabri sought to make it the leading political body in Egypt by subordinating the public sector, the bureaucracy, labor unions, and professional syndicates to its control. On the death of Nasser, Sabri was one of the most powerful men in Egypt. He was responsible for naming Anwar al-Sadat president, under the mistaken assumption that he could control Sadat. In May of 1971, Sabri and his supporters publicly broke with Sadat. Sadat responded by arresting Sabri for plotting a coup. Sabri was sentenced to death, but this was commuted to twenty-five years in prison. Sabri was released from prison in 1981.

SADAT, ANWAR AL-

[1918–1981]

President of Egypt from 1970 until his assassination in 1981.

Anwar al-Sadat was born 25 December 1918 in the village of Mit Abu al-Kum in the Lower Egyptian province of Minufiyya. His father, a mid-level government official, arranged for him to enroll in primary and secondary school in Cairo, from which he was graduated in 1936. That same year, admission in the national military academy was opened to young men from nonaristocratic families, and Sadat seized the opportunity to pursue a career as a military officer. He was graduated in 1938 and was posted to Manqabad in Upper Egypt, where he became friends with another ambitious young officer, Gamal Abdel Nasser. Transferred to the outskirts of Cairo in 1939, he immediately made contact with a range of underground political organizations working against the monarchy of King Farouk. They included the Muslim Brotherhood (al-Ikhwan al-Muslimin) and a cell based in the signal corps

Anwar al-Sadat (1918–1981) was an Egyptian political leader and president (1970–1981). Muslim extremists, who were against his peace initiatives with Israel, assassinated him. THE LIBRARY OF CONGRESS. REPRODUCED BY PERMISSION.

sympathetic to Nazi Germany. Since World War II was raging in North Africa, his association with this cell led to his arrest in 1942 for conspiring against the British war effort (Britain maintained a protectorate over the Suez Canal and Egypt). Upon his escape from prison in 1945, he revived his contacts with the Muslim Brotherhood, taking part in a January 1946 plot to assassinate a prominent pro-British politician. He was arrested again in connection with this incident and spent two more years in prison awaiting trial. His longstanding connections with high-ranking but anti-British members of the armed forces won him reinstatement in the officers' corps in 1950.

Toward the end of 1951, Sadat was asked by Nasser to join the inner circle of the clandestine Free Officers movement. He played little direct part in the coup d'état headed by General Muhammad Naguib that overthrew the monarchy and brought the movement to power in July 1952, but he was chosen to broadcast the first announcement of the coup on the morning it occurred. He was thereafter editor of the newspaper *al-Jumhuriyya,* a member of the ruling revolutionary command council, and a minister of state.

As secretary-general of the ruling political party, the Arab Socialist Union (ASU), Sadat assumed the role of faithful subordinate to Nasser, assisting him in moving first against the Muslim Brotherhood and then against his rivals within the Free Officers. When Nasser overcame Naguib to lead the ruling junta, he repaid Sadat's loyalty by appointing him first speaker of the reconfigured national assembly in 1962, one of four vice presidents in 1964, and then, in December 1969, vice president of the republic.

Nasser's unexpected death by heart attack in September 1970 precipitated eight months of intense jockeying for power at the highest echelons of the Egyptian regime. Proponents of continuing the government's socialist economic policies—led by the secretary-general of the ASU, Ali Sabri—faced firm opposition from advocates of a more liberal order, such as the editor of the semiofficial *al-Ahram* newspaper, Muhammad Hasanayn Haykal. Sadat, who had been appointed provisional president by the cabinet shortly after Nasser's death, took advantage of his relatively insulated position in the national assembly to play these factions against one another, emerging as the regime's key figure when the cabinet of ministers tendered its resignation to the assembly in May 1971. He immediately charged the powerful minister of the interior with plotting to set up a police state and replaced him with a trusted ally, Mamduh Salim. He then moved to cultivate public approval by commissioning the national assembly to formulate a permanent constitution, pardoning most of the country's political prisoners and returning properties sequestered during the socialist era of the early 1960s to their original owners. At the same time, he attempted to undermine leftist influence by catering to those sympathetic to the Muslim Brotherhood through carefully choreographed displays of his own religiosity in the mass media and by tolerating the spread of Islamist political groups on university campuses.

These moves precipitated a wave of unrest among university students in January 1972 that persuaded

Sadat to initiate major shifts in Egypt's foreign policy as a way of consolidating his position at home. That July he ordered all Soviet military advisers out of the country and began planning for a campaign to recapture the Sinai peninsula, which Israel had occupied during the Arab–Israel War of 1967. While preparing to attack Israel's forces in the Sinai, Sadat effected a rapprochement with Saudi Arabia and created a working alliance with Syria as well, which enabled the Egyptian armed forces to strike across the Suez Canal on 6 October 1973. Although the attack was, in the end, repelled and Israeli units drove deep into the Egyptian delta before a cease-fire was arranged on 23 October, the comparatively good showing made by Egyptian troops led Sadat to claim the honorific "the hero of the crossing" and invite U.S. Secretary of State Henry Kissinger to mediate an interim settlement with Israel. Two disengagement agreements negotiated under U.S. auspices in January 1974 and September 1975 laid the foundation for Sadat's 9 November 1977 surprise announcement that he intended to travel to Jerusalem to initiate peace talks with Israel's government. Ten days later he addressed the Israeli parliament, smashing what he called "the psychological barrier" to peace between the two states. He then took part in a series of face-to-face negotiations with Israeli Prime Minister Menachem Begin that culminated in the September 1978 Camp David Accords, which in turn led to the signing of an Egyptian–Israeli peace treaty in March 1979. This document resulted in the withdrawal of Israeli forces from the Sinai in April 1982.

Sadat's unprecedented trip to Jerusalem was prompted by internal as well as external developments. In June 1974, the regime implemented an economic program designed to attract greater amounts of foreign investment into the country and provide new opportunities for local entrepreneurs, which came to be known as the policy of *infitah* (opening up). At the same time, competing factions within the ASU were encouraged to organize into separate political groupings *(manabir),* which by 1976 had become established as autonomous parties; the largest of these, the centrist National Democratic Party, continued to dominate the national assembly, while smaller rightist and leftist parties, the Social Democratic Party and the National Progressive Unionist Party, played the role of loyal opposition to the government. It was in these circumstances at the beginning of 1977 that the regime agreed to implement austerity measures demanded by the International Monetary Fund and cut state subsidies on a wide range of basic foodstuffs and other necessities. This decision sparked large-scale riots in Cairo, Alexandria, and other Egyptian cities, forcing the government to restore the subsidies. President Sadat immediately castigated the rioters as "thieves" and ordered wholesale revisions to the Parties Law of 1977 that substantially limited the activities in which political associations were permitted to engage. The subsequent electoral successes of the main prerevolutionary party, the Wafd, added to Sadat's displeasure with the new political order he had helped to create. In June 1978, he ordered the arrest of the Wafd's leadership; he supervised the de facto rigging of parliamentary elections a year later; and in September 1981, he issued new regulations that led to the imprisonment of virtually all opposition activists.

These measures added fuel to the smoldering popular discontent generated by Egypt's persistent economic difficulties and Sadat's unilateral peace treaty with Israel. The Camp David Accords failed to bring appreciably greater levels of U.S. assistance into the country, even as the policies associated with *infitah* steadily increased the gap between rich and poor. They did little better in persuading Israel to proceed with the direct talks concerning the future of the occupied territories that were envisaged as the second stage of the agreement. Furthermore, the very image affected by Sadat to win popular support in the United States—that of a benevolent patriarch, complete with sweater and pipe—grated on dissidents at home. Militant Islamist cells proliferated in poor neighborhoods, in the provinces of Upper Egypt and, most notably, within the armed forces. Members of one of these cells, al-Jihad, assassinated Sadat on 6 October 1981 as he reviewed a military parade commemorating the eighth anniversary of the attack across the Suez Canal. He was succeeded by his vice president, Husni Mubarak.

FRED H. LAWSON

SADAT, JIHAN AL-

[1933–]

Egyptian feminist and political activist.

Jihan al-Sadat was born on Rawda Island in Cairo. Her father, Safwat Ra'uf, was Muslim and a civil servant in the Ministry of Health, and her mother was British. Although raised as a Muslim, Jihan attended a Christian missionary school. In 1949 she married Anwar al-Sadat, the future president of Egypt. Known as the First Lady of Egypt during her husband's presidency, she was an outspoken supporter of women's rights and peace with Israel. She founded the Talla Society, a cooperative that taught women various handicrafts so that they could support themselves, and *al-Wafa wa al-Amal* (Faith and Hope), which built the Middle East's largest hospital complex for disabled war veterans and their families. She represented Egypt at the International Women's Year Conference held in Mexico City in 1975. Two years later she founded SOS Children's Villages International for orphans. She later led the fundraising drive for the rehabilitation of Qasr al-Ayni Hospital. She earned B.A., M.A., and Ph.D. degrees in Arabic Literature at Cairo University. Along with other prominent feminists, she helped to draft what became known as Jihan's Laws, which gave women the right to divorce, custody of children, and the right to the family home if their husbands took second wives (portions of this legislation were abrogated in 1985). Soon after President Sadat was assassinated in 1981, Jihan moved to the United States, where she lectures on women in developing countries and on Islamic culture. She has taught at the University of South Carolina, Radford University, American University, and the University of Maryland, where she has been an associate of its Center for International Development and Conflict Management since 1988 and has promoted the Anwar Sadat Chair for Population, Development, and International Peace. She has received at least eighteen honorary doctorates and numerous awards.

ARTHUR GOLDSCHMIDT

SADAWI, BASHIR

[c. 1882–1957]

Libyan (Tripolitanian) politician.

Associated with the Tripolitanian republic after World War I, Bashir Sadawi was in exile for many years, during which he acted as adviser to the Saudi

Arabian monarchy of Ibn Saʿud. In 1947, with Arab League support, he founded the National Council for the Liberation of Libya in Cairo to promote the unity of the regions of Tripolitania and Cyrenaica. In 1949, popular protests against Anglo-Italian trusteeship proposals for Libya prompted several political groups to form the Tripolitanian National Congress party under Sadawi's leadership. During the many years of international debate on Libya's future (1945–1949) and the subsequent preparations for independence under UN supervision (1949–1951), Sadawi emerged as Tripolitania's leading politician, consistently supporting a unitary Libyan state and Amir Idris al-Sayyid Muhammad al-Sanusi as the sole leader capable of uniting the country.

Sadawi's political hopes were dashed, first by the decision that independent Libya was to be a federal kingdom under Idris, then with the failure of his National Congress party to win as many seats as expected in the first postindependence elections in February 1952. The government used postelection riots as an excuse to deport Sadawi, who returned to Saudi royal service.

SADIQI COLLEGE

Secondary school in Tunis.

Sadiqi College was founded in 1875 and 1876 by Khayr al-Din. Its curriculum, which included modern sciences and languages, was taught in Arabic and French. In an effort to modernize the college, subjects such as translation, administrative law, and Islamic jurisprudence were added to the curriculum. During the French protectorate, French replaced Arabic as the language of teaching for most subjects. In 1892 the school acquired a French director.

Sadiqi attracted few students at first, but its enrollment increased steadily. As its popularity grew, it became very selective in the choice of its students, in contrast to Zaytuna University. Sadiqi graduated seventy-eight students in 1954.

The graduates of Sadiqi usually went to France for their higher education. As a result, they were criticized by those who considered the college an institution for bourgeois children and were accused of maintaining strong links with France and its culture.

Although Sadiqi was a model for many of the Franco–Arabic schools that arose in Tunisia during the French protectorate, it was only in 1911 that its diploma was officially recognized.

SADI, SAID

[1947–]

Leader of the Algerian political party Rally for Culture and Democracy.

Said Sadi was born into a poor family in Aghrib in Kabylia. A charismatic psychiatrist, he began his militant activities for cultural and workers' rights while a student and joined the clandestine opposition party Front des Forces Socialistes (FFS; Socialist Forces Front). He strongly opposed single-party rule and called for Berber cultural rights. One of the leaders of the 1980 Berber Spring uprising, he demanded recognition of the Berber language and culture within a democratic state. He was jailed five times in the 1980s. He subsequently broke with the FFS and joined a group of militants devoted to human rights and to cultural and women's issues. In 1985 they founded the Human Rights League. In 1989 Sadi founded and headed the Rassemblement pour la Culture et la Démocratie (RCD; Rally for Culture and Democracy), an outgrowth of the Berber movement. Sadi has been a staunch critic of both

the regime and Algeria's Islamists. The RCD boycotted the 1991 legislative elections but participated actively in the November 1995 presidential election and the June 1997 legislative vote. Sadi obtained 10 percent of the votes in 1995. The RCD obtained 19 seats at the assembly in 1997. Sadi has equated Islamism with terrorism, which explains his support for the military against radical Islamism. Although he boycotted the 1999 presidential election, Sadi supported President Abdelaziz Bouteflika's program to reform the economy, justice and educational systems, and administration. Two members of the RCD served as ministers in the government. Sadi withdrew the RCD from the government because of the Kabylia crisis, triggered in April 2001 following the killing in Tizi-Ouzou of a youngster by the National Gendarmerie. The demonstrations and violence that developed following that incident revealed the regime's inability to provide adequate democratic institutions to represent the nation's diverse interests. Because of the acute crisis, the RCD boycotted the legislative and municipal elections in May and October 2002, respectively. Sadi has sided with the *aruch* (tribal councils) and called repeatedly for the end of repression.

YAHIA ZOUBIR

SADR, MUHAMMAD BAQIR AL-

[1931–1980]

Iraqi Shiʿite religious leader whose writings inspired and influenced the Islamic movement in Iraq.

Born in the Shiʿite district of Kazimiyya, Baghdad, to an Arab family from Lebanon, Muhammad Baqir al-Sadr studied in Baghdad and al-Najaf. Among his teachers was Muhsin al-Hakim, the highest Shiʿite *Marja al-Taqlid* of the time. Sadr rose in the Shiʿite clerical hierarchy to the rank of ayatullah, becoming the only Arab of eight living *marja al-Taqlids.* He was placed under house arrest in June 1979, following the Shiʿite riots in al-Najaf and Karbala. On 8 April 1980 he was hanged, following assassination attempts on several officials earlier that month. He was accused of being the leader of the outlawed al-Daʿwa party, being the mastermind behind the assassinations, and plotting with Iran against Iraq's government. A prolific writer, Sadr published more than twenty books dealing with various subjects, including Islamic government and economy.

AYAD AL-QAZZAZ

SADR, MUHSIN

[1871–1963]

Iranian politician.

Born to a clerical family from Mahallat, Muhsin Sadr entered the bureaucracy in 1907 as a clerk at the Ministry of Justice during the reign of Naser al-Din Shah Qajar. During the Constitutional Revolution, he sided with Mohammad Ali Shah and became chief interrogator after the bombardment of the *majles.* An opportunist, Sadr exploited his links to the Iranian aristocracy after the restoration of the Constitutionalists and resumed his service at the Ministry of Justice. He was appointed minister of justice five times, speaker of the senate twice, governor of Khorasan once, and prime minister once. Reza Shah Pahlavi removed him from the Ministry of Justice in 1936.

NEGUIN YAVARI

SADR, SITT RABAB AL- (CHARAFEDDINE)

[1946–]

A social and human-rights activist and Shiʿite philanthropist.

Born in Iran, Sitt Rabab al-Sadr moved to Lebanon at the age of fifteen. She adopted and promoted the social vision of her brother, Imam Musa al-Sadr, who

encouraged her to join the Imam al-Sadr Foundation in Lebanon around 1960 and devote herself to social work and humanitarian aid. Meanwhile, she completed a B.A. in arts and an M.A. in philosophy in Lebanon. After the disappearance of Imam Musa in 1978 during a visit to Libya, Rabab became the president of the Imam al-Sadr Foundation, which consists today of six vocational schools and an orphanage. Al-Sadr oversees the girls' section of the foundation, providing much-needed economic assistance and social guidance to orphaned and dependent girls, regardless of their religious background. The foundation faced particular financial and organizational challenges after the dramatic increase in orphans due to the Lebanese war (1975–1991), the Israeli occupation of South Lebanon, and brutal attacks on civilians. She helped obtain a license for the foundation as a nonprofit organization in the U.S. in order to help gather contributions for widows, orphans, and poor children, mostly from South Lebanon. The schools sponsored by the foundation use modern technology and advanced educational methods and equipment.

Al-Sadr remains critical of the Lebanese government for abandoning South Lebanon and marginalizing it in state development policies. Following the Israeli withdrawal from South Lebanon in May 2001, the foundation launched two mobile medical clinics, which traveled to remote villages with no health facilities in order to offer preventive and curative medical services. Nearly 10,000 people benefited from these services. The foundation works to increase the attendance of orphans at primary schools, trains women for jobs, and runs day-long health centers. Al-Sadr strongly believes in the central role of education for women as a means for social change and personal growth. During numerous regional and international conferences on women's issues, she called on policymakers to acknowledge the need for gender equality and cooperation between men and women in the pursuit of a harmonious society. Her admirers and supporters urged her to run in parliamentary elections in Lebanon but she expressed her aversion to politics due to the restrictions it placed on social and family life.

RULA JURDI ABISAAB

SAʿDUN, ABD AL-MUHSIN AL-

[1879–1907]

Leader of the Muntafiq tribe and Iraqi politician.

Son of Fahd Pasha al-Saʿdun, Abd al-Muhsin al Saʿdun was head of one of the two major branches of the ruling house of the Muntafiq tribe. He was graduated from the Ottoman Military College in 1905, became aide-de-camp to the sultan, but resigned his commission in 1909 and returned to Iraq. In 1910 and 1912 he was elected to represent the Muntafiq district in the Ottoman parliament. During the British mandate in Iraq, he headed al-Taqaddum (Progressive) party, which advocated termination of the mandate and independence through conciliation. President of the Constituent Assembly and twice president of parliament, Abd al-Muhsin held numerous cabinet portfolios and was four times prime minister. As principal Iraqi negotiator of the 1926 Anglo–Iraqi Treaty, he obtained important amendments regarding oil, military, and finance and shepherded its ratification. He was knighted in 1926.

ALBERTINE JWAIDEH

SAʿDUN FAMILY, AL-

Ruling family of the Muntafiq in southern Iraq.

These are descendants of Mani, a sharif of Mecca who fled to the Euphrates around 1600 to escape a feud; won influence over the Muntafiq tribes by adjudicating their disputes; and was finally acknowledged as their ruler. The family name derives from Saʿdun, a great leader who led numerous raids against the Turks before being captured and beheaded in 1741. As rulers of the powerful Muntafiq, the Saʿdun were almost independent of Turkish rule until 1870 when the Ottomans made an attempt at regular land settlement. At the behest of their shaykh, Nasir Pasha, who founded the town of Nasiriyya and accepted high government office, the Saʿdun converted from tribute-receiving chiefs into regular landlords under Ottoman auspices. As a result of this "betrayal" to the Turks, the Saʿdun chiefs rapidly lost power over their tribes, whom they had reduced from landowners to tenants.

ALBERTINE JWAIDEH

SAʿEDI, GHOLAMHOSSEIN

[1935–1985]

Iranian novelist, playwright, short-story writer, and scriptwriter.

Gholamhossein Saʿedi, who used the pen name Gowhar Morad, was born in Tabriz and was graduated from the medical school at Tehran University with a specialty in psychiatry. He was the first Iranian who seriously engaged in writing "village literature," representing a village and its population not as a romantic entity but showing its deprived and actual face. One of the most popular Iranian writers of the 1960s and 1970s in Iran, he produced several plays and collections of short stories. Saʿedi left Iran in the late 1970s for Paris, where he died. Much of his work is available in English.

PARDIS MINUCHEHR

SAFED

City located in the upper Galilee region of Israel.

Situated atop a mountain at an elevation of 2,780 feet (848 m), Safed (Hebrew, *Tzfat;* Arabic, *Safad*) is 25 miles (40 km) north of Tiberias and 30 miles (48 km) east of Acre. Safed is not mentioned in the Bible but was cited by the Roman historian Flavius Josephus as one of the cities he fortified. The Crusaders built a fortress in Safed, and the Mamluks made it an administrative center. Safed was one of the hills from which fires were built to signal the beginning of the lunar cycle and festivals. In the sixteenth century Joseph Karo, the author of the legal rabbinical work *Shulhan Arukh* (The set table), and Isaac Luria, founder of practical kabbala, turned Safed into a center for Jewish mysticism. In the late eighteenth century two large groups of Jews emigrated to Safed: Hasidim and their detractors, the followers of Rabbi Elijah, the Gaon of Vilnius. In 1837 an earthquake struck the area, killing 5,000.

In 1929, at a time when riots were breaking out throughout Palestine, Arabs attacked and destroyed the Jewish quarter of Safed; it was rebuilt in the 1930s. At the outbreak of the Arab–Israel War of 1948, the Jewish population in the city numbered only 2,000 out of a total of 12,000 inhabitants. When the British evacuated their position in Safed in April 1948, Arab forces attacked. Divisions of the Palmah counterattacked on 10 May 1948, putting to rout the Arab military units and the Arab population. Today the city is a center for artists and mystics.

BRYAN DAVES

SAFVETI ZIYA

[1875–1929]

Ottoman Turkish writer.

Born in Istanbul, Safveti Ziya attended the Galatasaray Lycée. He held various government posts, and in the early years of the republic, he became chief

of protocol in the Foreign Ministry. In 1896 he joined the French-influenced Servet-i Fünün literary movement. Safveti Ziya is best known for his novel *Salon Köşelerinde* (1910), a portrait of the cosmopolitan social life of Istanbul.

ELIZABETH THOMPSON

SAGUES, ALBERT

[1883–c. 1950]

Educator employed by Alliance Israélite Universelle.

Albert Sagues, born in İzmir, Turkey, was one of the most effective architects of the Alliance Israélite Universelle (AIU) schools, bolstering French cultural influence in Morocco and Tunisia. His efforts proved crucial for the spread of French language and culture among urban Jews. Sagues was a school principal for the AIU in Casablanca (1909–1912), Tunis (1912–1924), and Tangier (ca. 1925–post 1945). A firm advocate of the preservation of French colonial influence in the Maghrib, Sagues opposed political Zionism while favoring a modern Hebrew cultural renaissance.

MICHAEL M. LASKIER

SAHARA

World's largest desert.

The Sahara (in Arabic, desert) encompasses an area of 3.32 million square miles (8.6 million sq km), stretching across eleven countries and Western Sahara, and covering nearly the entire northern region of Africa from the Atlantic Ocean to the Red Sea hills. Parts of the Sahara reach all the way north to the Mediterranean; to the south, it extends nearly 1,500 miles (2,400 km). The two countries with the highest percentage of desert are Libya (99 percent) and Egypt (98 percent). Fifteen percent of the Sahara consists of sand "seas"; the rest is a mixture of *hammada* (barren rocky plateaus), coarse gravel, two mountain chains in the central regions (with the highest point being 11,204 feet [3,417 m] at the peak of Emi Koussi in Chad), low lands, depressions (the lowest point being 436 feet [133 m] below sea level at the Qattara depression in western Egypt), oases, and transition zones.

Hills and valleys of the El Oued Dunes, located in the Algerian Sahara Desert, Algeria. **© ADAM WOOLFITT/CORBIS. REPRODUCED BY PERMISSION.**

The Nile and Niger are its only two permanent rivers. Transition zones receive between 5 and 10 inches (12.7 and 25.4 cm) of rain per year; most of the rest receives fewer than 5 inches (12.7 cm). Large portions of the area receive no rainfall for years at a time. Its climate is among the most inhospitable—the highest evaporation rates, highest temperatures, and lowest humidity (a life-threatening 2.5 percent) have all been registered there. Extreme wind velocities and massive drops in nighttime temperatures, sometimes to subfreezing level, are also a regular feature of the Sahara.

Desertification has slowly encroached upon previous transition zones, such as the *sahel* belt of vegetation covering fossil sand dunes that separate the Sahara from Equatorial Africa; some also occurs in Arab North African countries. The reasons for the Sahara's continuing expansion range from climatic changes to some direct human influence, such as overgrazing by sheep herds and wood gathering for fuel. The most important minerals found in the Sahara include petroleum and natural gas fields, uranium, phosphates, iron ore, and a long list of other metals.

The four main ethnic groups of the Sahara are all predominantly Berber in origin: the Arabo-Berbers

in the north; the Moors (Maures), a mixture of Arab, Berber, and black African groups in the southwestern regions (encompassing parts of present-day Mauritania, Mali, and Western Sahara); the distinctive Twaregs, the most numerous of the four, of the south-central area; and the Tibu of the Tibesti area of Chad, who are also of Berber and black African mixture. Apart from livestock grazing, the old traditional economy included a profitable trade in gold and slaves from West Africa, salt from the desert, and cloth and other products from the Mediterranean coast. The camel, probably introduced in the second century B.C.E., was the backbone of trans-Saharan trade.

Before the prolonged droughts of the 1970s and 1980s, best estimates of the Sahara's population were approximately 2 million persons; about two-thirds were concentrated in oases; the rest engaged in seasonal movements and some were purely nomadic. In Arab North Africa, sedentarization had become almost complete, owing to the erosion of the pastoral economic base. Both "push" and "pull" factors were at work: desertification, which reduced livestock herds; displacement stemming from anticolonial struggles; the exploitation of oil and gas fields, which provided employment; and the extension of governmental authority, resulting in increased enclosure of land for farming, as well as expanded health and education services.

Historically, the Sahara was a large barrier to aspiring conquerors—Egyptians, Romans, Carthaginians, and Arabs. Islam spread steadily, however, in part from the activities of Muslim traders and scholars. Explorers from Britain and France began to penetrate the Sahara in the early part of the nineteenth century. French conquests began in 1830. Political boundaries in the Sahara were defined only in the late nineteenth and the twentieth centuries. Much was left imprecise by the French, who ruled over most of the region, resulting in a number of border disputes after decolonization, including those between Morocco and Algeria over the Tindouf area, and Libya and Chad with regard to the Aozou strip.

See also Aozou Strip; Berber; Deserts; Tindouf; Twareg; Western Sahara.

Bruce Maddy-Weitzman

SAHARAN ARAB DEMOCRATIC REPUBLIC (SADR)

The official government-in-exile of POLISARIO.

The founding of the Saharan Arab Democratic Republic (SADR) was proclaimed at Bir Lehlou, a town in northwestern Western Sahara, on 27 February 1976, one day after the departure of Spain's authorities from the territory, by a previously established Provisional Sahrawi National Council. Its constitution, adopted at the third POLISARIO (Popular Front for the Liberation of Saguia El-Hamra and Rio de Oro, a politico-military organization formed in 1973 to secure the independence of Western Sahara) congress in August 1976, proclaimed SADR to be a "democratic Arab republic," with a "republican political system." SADR was declared part of the Arab nation and Islam the state religion. Fundamental objectives included socialism, social justice, and the attainment of Maghrib unity as a step toward Arab and African unity. POLISARIO's executive committee was charged with presiding over SADR's executive organ until independence and sovereignty were attained. POLISARIO's August 1991 Congress adopted a new draft constitution for the future Saharan state, including provisions for a multiparty system, a free enterprise economy (with strategic resources controlled by the state), universal suffrage, a free press, and cooperative relations with Morocco. POLISARIO head Muhammad Abd al-Aziz was the first, and thus far the only, president of SADR. He was re-elected secretary-general, receiving 92 percent of the vote, at POLISARIO's 11th congress, held in October 2003 in Tifariti, the POLISARIO-controlled territory of Western Sahara.

SADR's main value for POLISARIO has been in the diplomatic sphere: At its peak, it attained recognition from more than seventy countries (the number had dropped to around sixty by 2003), and, after years of struggle, assumed its seat in 1984 as a full member of the Organization of African Unity (OAU), triggering a Moroccan walkout. In contrast to the OAU, the League of Arab States (Arab League) kept SADR and POLISARIO at arm's length.

BRUCE MADDY-WEITZMAN

SAHNOUN, AHMED

[1907–2003]

Islamic religious scholar and leader in Algeria.

Shaykh Ahmed Sahnoun, born in 1907 in Biskra, northeast of Algiers, was a highly respected religious figure and scholar viewed as the spiritual leader of the Islamists in Algeria. He was closely associated with the Islamic reformer Abdelhamid Ibn Badis (1889–1940) and the Association of Algerian Scholars, which was established in 1931 to resist the assimilationist policies of the French and reassert the Algerian Arabo-Islamic identity. During the struggle for Algerian independence, Sahnoun was imprisoned several times by the French for his anticolonial stance.

After independence, he refused to be associated with the state-controlled religious institutions, and continued preaching, promoting religious education, and establishing independent associations. In the 1960s he cofounded al-Qiyam (Values) Association to reassert Arab and Islamic identity in independent Algeria. Following violent clashes between Islamist and leftist students at the main campus at the University of Algiers in 1982, Sahnoun, along with Abbasi Madani and Shaykh Abdellatif Soltani, cosigned a fourteen-point statement that criticized the secular policies of the state and demanded the promotion of Islam in government and society. Due to his advanced age he was placed under house arrest rather than imprisoned, then released in 1984.

President Chadli Bendjedid met with Sahnoun, Ali Belhadj, and Mahfoud Nahnah following the massive riots of October 1988 and urged them to assist in restoring order. Sahnoun established the Association of the Islamic Call in 1989 to unite all the Islamic movements in the country, coordinate their activities, and prevent escalations of violence with the regime. Throughout the Algerian civil war, which began in 1992. Sahnoun refused to engage in dialogue with the military regime and demanded the release of the imprisoned leaders of the Front Islamique du Salut, Abbasi Madani and Ali Belhadj. Sahnoun suffered from health problems, and died in early 2003 at the age of 96.

EMAD ELDIN SHAHIN

SAʿID, AMINA AL-

[1914–1995]

Leading Egyptian feminist.

Amina al-Saʿid was born in Asyut and raised in Cairo. She is known as a leading feminist, journalist, writer, and activist in the period before and following the 1952 Egyptian revolution. In 1931 she was among the first women to enroll in Fuʾad I University, founded in 1908 and renamed Cairo University in 1952. As a protégé of Huda Shaʿrawi, she removed the veil early on and also advanced the cause of women's sports by daring to play tennis on the university campus. She enjoyed success as the author of novels, social tracts, biography, and travel writing. An avid pan-Arabist, she helped create the Pan-Arab Feminist Union and was also active in the Egyptian Feminist Union. Throughout her career she pressed for the reform of Islamic personal status laws. In the 1940s she became the first paid woman journalist to work for a mainstream publishing house, Dar al-Hilal, and became vice president of the Board of Press Syndicate in 1956. She wrote for *al-Musawwar* and founded and edited the pan-Arab journal *Hawa.* The burgeoning feminist movement underwent severe state repression following 1952, but al-Saʿid endured as the only major feminist from the previous generation to be supported by the government.

SAID, EDWARD

[1935–2003]

Author, educator, and scholar.

Edward Said was one of the greatest public intellectuals, scholars, and writers of the twentieth century. He almost single-handedly created the fields of cultural studies and post-colonial studies with the publication of his book *Orientalism* (1978), which ranks as one of the most influential books of the twentieth century. He was a brilliant, multitalented thinker, speaker, writer, and musician, publishing widely in the fields of literature, Middle Eastern politics, orientalism, and music. In the latter field, for example, Said was an accomplished pianist, served as music critic for the *Nation* magazine, and with conductor and pianist Daniel Barenboim published *Parallels and Paradoxes: Explorations in Music and Society* (2002). He and Barenboim also co-founded East West Divan, an orchestra comprised of Arab and Israeli musicians.

Said was born in British Mandate Jerusalem to affluent Palestinian Christian parents. The family moved to Cairo early in his life and he attended Victoria College in Cairo, where his classmates included the future King Hussein ibn Talal of Jordan and the actor Omar Sharif. In 1951, Said was sent by his parents to the United States, where he attended Mount Hermon School in Massachusetts, and then Princeton University and Harvard University, where he received his Ph.D. in English in 1964 with a dissertation, *Joseph Conrad and the Fiction of Autobiography* (published by Harvard University Press in 1966). Said became an instructor at Columbia University the year before he received his Ph.D. degree and became a full professor there in 1970. In 1977, he was appointed to an endowed chair at Columbia as the Parr Professor of English and Comparative Literature. There followed appointments as the Old Dominion Foundation Professor of Humanities and finally University Professor, Columbia's highest honor for a faculty member. Said died in New York City at the age of sixty-seven.

Said was deeply involved in the politics of the Middle East, particularly the Israel-Palestinian crisis, as well in as the politics of colonialism—the way that centuries of Western scholars, artists, administrators, explorers, and writers have used Western military, economic, and cultural dominance to stereotype, dominate, and subjugate Eastern (particularly Islamic Middle Eastern) peoples, all in the name of what was presented as an objective, nonintrusive, nonjudgmental process: orientalism. Said was for years a member of the Palestine National Council and helped write the Palestinian constitution in 1988. He broke with Yasir Arafat following the Oslo Accords of 1993 both because he felt that the Palestinians got a very bad deal out of the accords and because he came to favor a single Jewish-Palestinian state rather than the two separate states that the leaders on both sides continued to pursue.

Said was the author or editor of at least twenty-eight books, as well as countless scholarly articles, newspaper articles, and editorials. In addition to the books mentioned above, he will be remembered particularly for *Culture and Imperialism* (1993), which extends the themes whose exploration he began in *Orientalism; The Politics of Dispossession: The Struggle for Palestinian Self-Determination, 1969–1994* (1994); *Covering Islam: How the Media and the Experts Determine How We See the Rest of the World* (1997); and *Out of Place: A Memoir* (1999).

Said served as president of the prestigious Modern Language Association during 1999. At that time, Richard Poirier, president of the Library of America, stated that Said "is certainly the most influential critic in anything touching upon the cultural criticism of literature."

Throughout his career, Said served as a lightning rod for criticism from all sides, owing on the one hand to his fierce and unwavering support for the freedom and independence of the Palestinian people—which led him to withering denunciations

of Israel and of what he viewed as imperialist American support for Israel and projection of U.S. power in the Middle East—but also, in his later years, to his equally harsh denunciations of the violence, duplicity, and tyranny of Middle Eastern rulers and of their journalistic and intellectual supporters.

SAʿID, NURI AL-

[1888–1958]

Frequent minister or prime minister of Iraq and one of Iraq's leading statesmen from 1921 to 1958.

Nuri al-Saʿid was born in Baghdad during the Ottoman Empire into a middle-class Sunni Islamic family of Arab Turkish stock. At an early age he was enrolled in primary religious school before going to the Ottoman military secondary school. Later he attended the military college in Istanbul, and was graduated an officer in 1906. He returned to Baghdad, where he worked in an army unit responsible for collecting taxes from tribesmen, a position that enabled him to travel, to gain intimate knowledge of the country, and to establish contacts with *shaykhs* (tribal leaders), which he later used to his political advantage. In 1910, Nuri returned to Istanbul to attend the Ottoman staff college. In 1912, the year he graduated, he saw action against Bulgaria in the Balkan Wars.

In his youth, Nuri believed in Arab nationalism and the modernization of the Ottoman Empire (along the lines of the principles of the Young Turks, who seized power in Istanbul in 1909). He was, however, disillusioned by their anti-Arab policy and in 1913 joined al-Ahd (the Covenant), a secret society supporting self-determination for Arabs. When the Turks became suspicious of his activities, Nuri, fearing arrest, fled to Cairo, Egypt, in the spring of 1914. From there he went to Basra (Iraq), where he aligned himself with Sayyid Talib Pasha al-Naqib, a well-known leader of the Arab cause and the head of a local important family.

Nuri was in a Basra hospital, recovering from an illness, when the British seized the city at the beginning of World War I. They arrested him as an Ottoman officer and sent him to India, where he was put under loose house arrest. Nuri was released in 1915 and left India for Cairo where, encouraged by the British, he joined the movement of Sharif Husayn ibn Ali of Mecca, who had called for Arab independence from the Turks. Nuri played a major military role in the revolt (which Sharif Husayn finally proclaimed) against the Turks on 5 June 1916.

With the collapse of the Ottoman Empire at the end of World War I, Nuri became chief of staff for Prince Faisal I ibn Hussein, one of the sons of Sharif Husayn. He went with Faisal to Paris and London as an adviser during the peace talks.

In 1920, the British were awarded a mandate over Iraq by the League of Nations and established an indigenous Iraqi government. Jaʿfar al-Askari, Nuri's brother-in-law, became minister of defense and called Nuri to Iraq, where he was nominated chief of staff of the army. The following year, Faisal became king of Iraq, an objective toward which Nuri had worked hard. In the years that followed, Nuri was active in building the Iraqi army and police.

In 1929, Nuri assumed the first of his many prime ministries. It was he who negotiated the Anglo–Iraqi treaty of 1930, which officially ended the British mandate over Iraq, but which allowed Britain military bases and an assured influence in Iraq until 1955. His ability to secure its passage through parliament led the British to appreciate Nuri's skills and personality. This act inaugurated his long career as Iraq's dominant politician and demonstrated his strong belief in collaboration with the British.

These British leanings met with strong opposition from nationalists, however, who wanted complete independence. In dealing with the opposition, Nuri used tactics for which he later became famous—censorship of the press, proroguing parliament, and manipulating elections.

In 1936, Jaʿfar al-Askari was killed in a military coup, and a number of the pro-British politicians were removed. Nuri left Baghdad for Cairo in self-imposed exile and did not return until October 1937.

King Ghazi ibn Faisal of Iraq, who inherited the throne in 1933, died in a 1939 automobile accident. His infant son Faisal II ibn Ghazi was declared king, and his uncle Abd al-Ilah ibn Ali became regent, with Nuri's blessing.

After his return to Iraq, Nuri began to associate with a group of rising Arab nationalist military officers, who became prominent after the 1936 coup. They frequently intervened in politics, with Nuri's connivance. The harmony between Nuri and these officers slowly dissipated, however, after the beginning of World War II. While Nuri advocated a pro-British stand during the war, the officers slowly shifted to a pro-Axis one. The tension between the two camps rose when the British, fearing direct intervention by Nazi Germany, landed troops in southern Iraq. The nationalist officers staged a coup in May 1941, and the regent and Nuri fled the country. After encountering some resistance, the British were able to quell the nationalist movement and gain control of Baghdad.

The regent then returned to Baghdad, and a pro-British government headed by Jamil al-Midfaʿi was formed. Nuri chose to stay in Cairo as ambassador but was called back in October 1941 to head a new cabinet as prime minister, a post he held until 1944. During that period Nuri worked closely with the British in prosecuting both nationalist officers and civilians; they were arrested, tried, and in some cases executed. These measures left a deep wound among Iraqis, who had considerable sympathy toward the nationalists. Soon, most of the Iraqis lost faith in Nuri and became critical of both his policies and his leadership.

Nuri kept Iraq quiet for the remainder of the war, but the war left its imprint on Iraq. A high inflation rate and the widening gap between poor and rich allowed the leftists, a small but aggressive group, to gain strength. They became a target of suppression by Nuri and his successors.

Nuri was the first to advocate a council or league of Arab States, even before the end of the war. He was successful in launching his idea when a protocol for the foundation of the Arab League (as it is also called) was signed in Alexandria, in 1944.

In the postwar period, Nuri's influence over Iraq was unchallenged; even when he did not hold office he was able to steer the body politic in the direction he desired. A pro-Nuri majority was assured in parliament—especially among rich landlords and shaykhs. Nuri used this position to gain support among the Shiʿa and the Kurds. When the Kurdish leader Mulla Mustafa al-Barzani revolted in 1945, Nuri—with the backing of the British—crushed the revolt and compelled him to take refuge outside Iraq.

With the rise of petroleum prices and Iraq's increased oil income, Nuri turned part of his attention to the establishment of an economic development program. In 1950, he engineered the passage of a law establishing a development board, composed of Iraqi and foreign experts, to lay down a five-year development plan. Between 1950 and 1958, four such plans were passed, and some 70 percent of oil revenue was devoted to Iraq's long-term development.

In 1952, Nuri negotiated a 50–50 split of oil revenues with the Iraq Petroleum Company (IPC). Between 1951 and 1958, Iraq's oil revenues rose dramatically from 32 million to US$237 million. Iraq's dependence on oil revenues rose, too. By 1958, oil revenues accounted for 28 percent of gross national product and 60 percent of the budget. Increased oil revenues were not accompanied by a change in social structure; rich landlords and tribal shaykhs gained title to much of the arable land, while urban merchants grew increasingly wealthy on government contracts.

The development of Iraq's human resources also lagged behind its needs. Between 1950 and 1958, although higher-education institutions expanded, by 1958 they still graduated only a few thousand students a year, and secondary education remained

concentrated in urban areas. Opposition to the regime increasingly erupted in street violence. In 1952, when a riot broke out at the College of Pharmacy in Baghdad, it quickly spread throughout Iraq, so a military government was appointed to maintain order.

Between 1952 and 1958, regional Arab issues played a dominant role in internal politics. In 1952 a coup d'état in Egypt brought to power a group of Arab nationalist military officers, led by Gamal Abdel Nasser. The fall of King Farouk's monarchy in Egypt and the anti-Western tone taken by the new Egyptian regime had broad effects in the Arab world—particularly in Iraq, where the regime was pro-West. These events helped to destabilize Iraq's regime and eventually led to its fall.

The 1930 Anglo-Iraqi treaty was due to expire in 1955, and Nuri was searching for a vehicle to replace it. Britain proposed what became known as the Baghdad Pact, which would include the northern tier of the Middle East—Iran, Turkey, and Pakistan—as a new shield against Communism. Nuri wanted to include Kuwait and even Egypt, but Nasser would have nothing to do with any instrument tied to the West. Nuri's most significant impact on Iraq was in foreign policy, since he tied Iraq to the Western alliance and the Baghdad Pact. This provided for a shield against encroachment from the Soviet Union but seriously isolated Iraq from its Arab neighbors. The group of agreements that constituted the Baghdad Pact was signed in 1955—among Iraq, Turkey, Britain, Iran, and Pakistan.

The Iraqi people virtually rejected the pact. Eventually, Nuri dissolved parliament and fostered the election of a majority that favored his policies. Thus was the pact effected. In 1956, Egypt's President Nasser nationalized the Suez Canal, and England, France, and Israel attacked Egypt, taking the canal. Iraqi popular opposition to Nuri's regime then intensified and, faced with uprisings, he imposed martial law to bring about control.

In February 1958, Egypt and Syria announced the formation of the United Arab Republic. Popular support for this union was strong in Iraq and Jordan, but the governments of these two countries saw it as a serious threat to their regimes; a federation between Iraq and Jordan was then announced. Nuri's last post was that of the federation's prime minister—and one of his last political acts was an attempt to bring Kuwait into the federation.

In 1957, while Nuri was involved in foreign policy, four opposition parties—the Istiqlal (Independence), National Democratic, Baʿth, and Communist parties—joined together as a national front against the Iraqi government. Far more serious opposition to the regime came from the army, where junior officers were busy organizing military cells to topple the monarchy. Nuri downplayed as insignificant warnings of trouble in the army.

In May 1958, civil war broke out in Lebanon. The Jordanian government, fearing the war might spill over, asked its federation partner, Iraq, to send troops to Jordan. On 14 July 1958, they complied. Nevertheless, under the command of the Free Officers, Iraqi troops also occupied strategic points in Baghdad—the ministry of defense, the radio station, and the king's palace. The monarchy was abolished, and the Republic of Iraq was declared. The king and the regent were killed, and Nuri escaped from his residence—but the following day, fleeing in the streets disguised as a woman, he was shot dead. His only son, Sabah, was also killed during the coup.

The new Iraqi government under Prime Minister Abd al-Karim Qasim dismantled much of Nuri's work, dissolved the federation with Jordan, and allowed Iraq's membership in the Baghdad Pact to lapse. Political ties with the Soviet Union, severed in 1954, were reestablished, and Iraq turned to the Soviet bloc for arms. Rapprochement with Egypt's Nasser was brief, and the revolution failed to eliminate the most lasting contributions of Nuri and the British—the Iraqi state and its two foundations, the army and the bureaucracy.

DONALD MALCOLM REID

SAʿID PASHA

[1822–1863]

Son of Muhammad Ali; viceroy of the semiautonomous province of Ottoman Egypt, 1854–1863.

Prince Saʿid commanded the Egyptian navy during the last years of the reign of his father, Muhammad Ali, and through the short reign of his nephew Abbas Hilmi I. Saʿid's childhood friendship with the French consul, Ferdinand de Lesseps, paved the way for the French concession to build the Suez Canal despite the opposition of the British and the viceroy's Ottoman overlord. European fortune-seekers flooded into the country under the Francophile Saʿid, who started Egypt down the road to ruinous foreign debt. Egypt's contribution of 20,000 troops to the Ottoman Crimean War effort also strained its resources. Saʿid rehabilitated Rifaʿa al-Tahtawi and other officials who had fallen into disfavor under Abbas. Saʿid's Land Law of 1858 attempted to extend central authority in economic affairs, and in 1858 he appointed Auguste Mariette head of what became the Egyptian Antiquities Service, but his capricious decisions and increasing European interference made institution building difficult. The viceroy gave more power to indigenous Egyptians in provincial administration and promoted them into the junior ranks of the officer corps at the expense of the Turkish-speaking elite. Port Saʿid, at the Mediterranean entrance to the Suez Canal, bears Saʿid Pasha's name. Historians have devoted relatively little attention to the reigns of Abbas Hilmi I and Saʿid compared to those of their flamboyant predecessor Muhammad Ali and their successor Khedive Ismaʿil.

SAʿIDZADEH, SEYYED MOHSEN

[1958–]

Iranian legal scholar, writer, and outspoken clerical proponent of gender equality.

Seyyed Mohsen Saʿidzadeh was born in Qaʿen, Khorasan, Iran. He began his religious studies at age ten at the seminary in Qaʿen. In 1973 he moved to Mashhad to continue his studies, and in 1976 he moved to Qom. He was among the first graduates of the Qom Law School, set up in 1979 to train judges for the revolutionary courts. After graduation in 1983, he served as a judge in Kermanshah until 1986, when he resigned and returned to Qom to pursue advanced studies. He has certificates from fifteen ayatollahs attesting to his proficiency in Qurʾanic exegesis and *hadith* literature. In 1988, he began researching women's issues in Islamic jurisprudence and developing premises for the construction of equal rights for women within a *shariʿa* framework. He has written extensively on women's rights in Islamic law and tradition, but little of his work has been published so far; what has appeared in print is mainly in the feminist journal *Zanan,* sometimes appearing under pseudonyms. His unconventional views and his critique of patriarchal interpretations of the *shariʿa* dismayed traditionalists within the clerical establishment. In June 1998, following publication in the independent reformist newspaper *Jameʿeh* of an article in which he criticized misogynist traditions, Saʿidzadeh was arrested and tried in camera by the Special Clergy Court. He was released after three months but defrocked and banned from publishing.

ZIBA MIR-HOSSEINI

SAINT CATHERINE'S MONASTERY

Monastic complex in the Sinai Peninsula begun in the fourth century.

Saint Catherine's monastery sits near the foot of "God-trodden" Mount Sinai (Jabal Musa) in the middle of Egypt's southern Sinai Peninsula. In the mid-200s Christian hermits began to gather around the place where they believed God had spoken to Moses in the burning bush (Exodus 3:2–6). In 337 Helena, mother of Byzantine Emperor Constantine I, ordered the building of a small church and tower on that spot.

In 551 Emperor Justinian commissioned his favorite architect Stephanus of Ailae to erect high enclosure walls and to build a large church with monks' dwellings and gardens. In the 800s the "monastery of the bush" was renamed after Saint Catherine. The legend was that after her martyrdom in 305 in Alexandria, angels had borne her body to Mt. Sinai; five centuries later the monks discovered the holy relics.

This strong tradition was based on extant inscriptions (the debate about the dating being unresolved) that Muhammad himself protected the complex by an immunity decree. Guided by this tradition, later Muslim rulers in Egypt arranged for a tribe of bedouin mountaineers to protect—not always successfully—the monks from marauding nomads. The Frankish crusading Knights of the Sinai (from 1099 to 1270) and Napoleon (in 1798) also provided protection to the monks.

The monastery's library of more than 4,500 manuscripts (mostly Greek, but also Arabic, Syriac, Egyptian, and Slavonic) and its collections of more than 2,000 icons are uniquely precious. The isolation of the monastery preserved the earliest icons from being smashed by the imperial iconoclastic decrees of Leo III (726) and his successor Constantine V.

Foreign grants and the expertise of foreign scholars have ensured that the icon collections are catalogued, displayed, and safeguarded. Because Jewish, Muslim, and Christian pilgrims and tourists climb Mt. Sinai in ever increasing numbers, daily access to Saint Catherine's is limited to a few morning hours, except for those who stay in a well-managed, modest guest house.

THOMAS STRANSKY

SAINT JOSEPH UNIVERSITY

Jesuit university in Lebanon.

Saint Joseph University, established in 1875, was administered by the Society of Jesus (Jesuits) and had strong ties to the University of Lyons in France. It had branches in Tripoli, Sidon, and Zahla. French is the primary language of instruction, although some courses are offered in English and in Arabic. The Department of Arabic and Oriental Studies is considered very strong. Faculties in 1994 included theology, medicine, pharmacy, dentistry, engineering, law and political science, economics and business administration, and letters and humanities.

ASʿAD ABUKHALIL

SAINT MARK'S CATHEDRAL

Seat of the Coptic patriarchate.

Built in the 1970s, Saint Mark's Cathedral provided a new seat of the Coptic patriarchate and a cultural and religious focal point for Egypt's Copts, one of the largest and most important Christian minorities in the Middle East. On 2 June 1968, the relics

of Saint Mark were returned to the Coptic church by Pope Paul VI with great fanfare. They are now interred beneath the main altar of Saint Mark's and lend the cathedral an enhanced importance and venerability. Located in the once-fashionable Abbassiya district of greater Cairo, the cathedral offers Coptic rite services in Arabic, English, and French.

See also COPTS.

RAYMOND WILLIAM BAKER

SAʿIQA, AL-

Pan-Arabist Palestinian guerrilla organization.

The Organization of the Vanguards of the Popular Liberation War—Forces of the Thunderbolt or al-Saʿiqa (Thunderbolt) was founded by pro-Syrian Palestinian Baʿthists in 1968, following a 1966 Baʿth Party resolution to create a Palestinian chapter. (The rival, pro-Iraqi Baʿthists later established the Arab Liberation Front.) Saʿiqa joined the Palestine Liberation Organization (PLO) in February 1969, but relations with the PLO mainstream deteriorated after Syria's 1976 intervention in Lebanon, with Saʿiqa openly involved in Syrian attacks on the PLO. Saʿiqa was one of two factions that rebelled against Yasir Arafat in 1983, and it has since boycotted all PLO institutions in favor of a series of Syrian-sponsored anti-Arafat alliances (the National Alliance in 1984, the Palestinian National Salvation Front in 1985, and subsequently the Group of Ten).

A number of Saʿiqa's founders, including its first secretary-general, Dafi Jumani, were ousted in 1970 by the new Syrian regime of Hafiz al-Asad after Saʿiqa backed the losing side in a struggle for power within Syria. At Syrian insistence, Jumani was replaced by Mahmud Muʿayita and, in 1971, by Zuhayr Muhsin. Muhsin was assassinated in 1979 under circumstances that remain unclear, and was succeeded by Isam al-Qadi. The organization's publications include the weekly *al-Tali* (The Vanguards), first published in 1969, and an internal bulletin, *al-Saʿiqa.*

Throughout its existence, Saʿiqa has received political, military, and financial support from Syria, whose Palestinian refugee camps and whose own military provide most of the group's recruits. Saʿiqa's policies have been either dictated by Damascus or calculated to serve Syrian interests within the Palestinian movement. Syrian patronage once made Saʿiqa the second largest constituent member of the PLO, giving it a generous quota of seats in the Palestine National Council and the PLO Executive Committee. However, its presence in the Palestinian territories and other areas beyond Syrian control has been weak, and its role as a Syrian instrument is widely resented there. Saʿiqa contributions to the 1973 Arab-Israel War were confined to a supporting role in the Syrian Golan. Its support of Syria's intervention in Lebanon in 1976 led to mass defections and its total elimination from areas under PLO control. Saʿiqa's absence during the 1982 siege of Beirut and its open collusion with Syria in the latter's efforts to impose its hegemony over the PLO and Lebanon during the 1980s have strained its credibility further. In January 2003 an attempt at bringing Saʿiqa into the Cairo reconciliation process between the PLO and Palestinian opposition groups failed, despite insistence on their inclusion by HAMAS and Islamic Jihad.

Syria has also operated a distinct "Saʿiqa" force, which was particularly active in the 1970s and early 1980s in targeting U.S., Israeli, Jordanian, and Egyptian embassies, Jewish institutions, and other civilian groups around the region and across Europe.

MOUIN RABBANI
UPDATED BY GEORGE R. WILKES

SAISON

Crackdown against Zionist dissident organizations by mainstream Zionist underground in British Mandatory Palestine.

The Saison, or "hunting season," was an operation authorized by David Ben-Gurion from November

1944 to March 1945 against dissident Jewish underground groups. In February 1944 the Irgun Zvaʾi Leʾumi, led by Menachem Begin, initiated an armed revolt against the British authorities in Palestine in an attempt to secure Jewish independence. Their violent activities ran counter to the official policy of the Yishuv (the Jewish community in Palestine) at the time and would not be tolerated. On 31 October, Begin was issued an ultimatum by Haganah leaders to cease and desist, which he rejected. On 6 November, Walter Edward Guinness, Lord Moyne, the senior British official in the Middle East, was assassinated in Cairo by LEHI, an Irgun splinter group. This provided an opportunity to conduct a sweeping crackdown on both extremist groups. Special units of Palmah and Haganah volunteers arrested and handed over approximately 1,000 suspected Irgun and LEHI members to the British, some of whom were tortured beforehand. Many religious Zionists and General Zionists opposed the operation, and the bitter rivalry between Labor Zionism and Revisionist Zionism gave the Saison political and ideological overtones. Begin ordered his forces not to retaliate, fearing a Jewish civil war. Irgun activities against the British ceased until after the end of World War II.

SAKAKINI, KHALIL AL-

[1878–1953]

Palestinian writer and educator.

Khalil al-Sakakini was born in Jerusalem to a Greek Orthodox family. His early life was devoted to Arab letters. In 1909, he founded the Dusturiyya school in Jerusalem, which developed an influential model for a secular, Arab curriculum. Also before World War I, he played a leading role in the Nahda Urthuduksiyya (Orthodox Revival) movement. During the mandate period in Palestine, Sakakini continued his advocacy of public education and became principal of the Dar al-Muʿallimin (Teacher's College) in Jerusalem. He is perhaps best remembered for his books on teaching Arabic to beginners, some of which are still used in the Arab world.

Sakakini also participated in the early Palestinian national movement, and his diaries are an important source for scholars of the period. He argued that Jewish immigration threatened to disrupt the unity of Arabic culture. An ardent pan-Arabist, he admired Faisal I ibn Hussayn, who led the Arab revolt of 1916 and, from 1921 to 1933, was King of Iraq. In 1923, Sakakini became secretary for the Arab Executive Committee in Jerusalem. He and his family fled to Cairo in early 1948, during the Arab-Israel War. His best-known book is *Kadha Ana Ya Dunya: Yawmiyyat Khalil Sakakini* (Such am I, O world).

SALAFIYYA MOVEMENT

Modernist Islamic intellectual movement of the nineteenth and twentieth centuries, which had some following among Sunni elites living in the Ottoman Empire.

The Salafiyya movement sought to engineer a religious revival and reform that would incorporate Western conceptions of modernity and assert the religious and cultural identity of Islam at the same time. The most prominent spokesmen of the movement were Jamal al-Din al-Afghani (1838–1897), Muhammad Abduh (1849–1905) and Rashid Rida (1865–1935). The members of the movement (*salafis*) took the line that the values of early Islam were compatible with those of modern Europe. In so doing, they attributed to Islam mainly secular virtues such as rationalism, the encouragement of sciences, political power, and democracy. In this way they were

able to place blame for the relative decline of Islamic societies and power vis-à-vis the West on Muslims who over time had diverged from Islam's original teachings. For this trend, the *salaf* or "forefathers," had in fact two complementary meanings. One was the early companions of the Prophet Muhammad, who were perceived to have abided by the Qurʾan and the sunna (deed and/or utterance of the Prophet) as closely as possible. Using this conception of the salaf, the Salafiyya emphasized the return to the scriptures. The second meaning of the salaf denoted reverence for the founders of the Islamic schools of law and for particular medieval jurists, such as al-Ghazali, who influenced the Salafiyya in one way or another.

The central part of the Salafiyya program consisted of legal reform through reinterpreting Islamic law (the *shariʿa*) to make it compatible with Western and modern values. In fact, the Salafiyya became caught between two opposing trends: (1) a Westernizing trend, which wanted to adopt Western secular codes and legislate completely outside Islamic law, and (2) a traditional trend, which was perceived as adhering to rigid and premodern interpretations of the four jurisprudence schools of Sunni Islam. Striving to pursue a third alternative, the Salafiyya renounced the widespread nineteenth- and twentieth-century belief in Sunni circles that the gate of reinterpretation of Islamic law *(ijtihad)* had been closed at some point between the tenth and twelfth centuries. For the Salafiyya, *ijtihad* should be permissible in all aspects of transactions *(mu'amalat),* except where there is an explicit text *(nass)* in the Qurʾan or in an authentic sunna. The Salafiyya also called for unifying the interpretation of the *shariʿa* by employing two general principles. The first was the principle of public interest *(maslaha),* which was treated as one of the sources of Islamic law. The second principle was a combination *(talfiq),* whereby, for the interpretation of a religious precept in the field of transactions, the judge would not be confined to the opinion of one Islamic school of law but could make use of the interpretations of any school. The Salafiyya movement may also be regarded as a forerunner of Arab nationalism, since it emphasized Arab-based Islam and the Arabic language, albeit concurrent with modern sciences.

Politically, the Salafiyya produced two trends. One was the trend of Jamal al-Din al-Afghani, which emphasized fighting the advance of Western imperialism into the East, in general, and in Muslim lands, in particular. This made al-Afghani validate several lines of political approach to mobilize various Muslim and non-Muslim groups against the West. He thus spoke in terms of both religious and secular nationalism. He called for healing the divisions between the Sunnis and Shiʿites by concentrating on the common religious basics among these two largest of Muslim sects.

The second trend was that of Muhammad Abduh. After working closely with al-Afghani for a short period, Abduh dissociated himself from his friend's politics, shunned political activism, and concentrated on the issues of Islamic religious reform through education and jurisprudence.

As for Rashid Rida, generally speaking, he followed Abduh's political line during the period preceding World War I; however, he shifted his position and adopted an anti-Western activist political line, akin to that of al-Afghani, after the war—as a reaction to the establishment of direct European rule in most of the core Arab-Islamic areas, namely Syria and Iraq.

In Morocco, as in the Arab East, the Salafiyya movement condemned the doctrines and practices of popular Sufi orders, which it regarded as having no textual basis in Islamic thought. Politically, the Moroccan Salafiyya championed the nationalist liberal anticolonial cause and gained popularity thereby, especially because the rival Sufi orders cooperated with the French, in one way or another, after France proclaimed Morocco a protectorate in 1912. As an intellectual reformist movement, however, the Salafiyya of Morocco, and especially one of its leaders, Allal al-Fasi, emphasized the need for internal reform in Muslim society and to that end pursued a social line of self-help.

MAHMOUD HADDAD

SALAM FAMILY

Prominent Lebanese family involved in education, philanthropy, and politics.

Salim Ali (1869–1938). One of the major Sunni Muslim figures in Beirut during the late Ottoman period. In addition to his activities as a merchant, he served as mayor of Beirut and was a member of the Ottoman parliament.

Anbara (1897–1986). Daughter of Salim Ali. She was born in Beirut and became a leading author, translator, and feminist. She married Palestinian educator Ahmad al-Samih al-Khalidi and in 1929 moved first to Jaffa and then to Jerusalem. She participated in a women's political meeting that same year that marched to the British high commissioner to present their grievances.

Salim (1922–). Businessman. After completing his studies at the American University of Beirut in 1947, he worked for Middle East Airlines. He was chairman and chief executive officer from 1982 to 1992.

Tammam (1945–). Son of Saʾib Salam. He went into business in 1968. In 1974, he formed the Ruwwad al-Islah movement. As the heir to the Salam family's political leadership, he was first elected to the parliament in 1996.

Hala Salaam Maksoud (1943–2002). Granddaughter of Salim Ali. She studied at the American University of Beirut and earned a Ph.D. in political theory from Georgetown University. She taught at both Georgetown University and George Mason University. A leading personality in the Arab-American community, she served as president of the Association of Arab-American University Graduates, the Arab Women's Council, and the American-Arab Anti-Discrimination Committee. She married Clovis Maksoud, former ambassador for the League of Arab States to the United Nations.

Ghida (1963–). Married Prince Talal bin Muhammad of Jordan, nephew of King Hussein ibn Talal, in 1991.

MICHAEL R. FISCHBACH

SALAM, SAʾIB

[1905–2000]

Major Sunni politician in Lebanon.

Saʾib (also Saeb) Salam was born in Beirut to Saʿid Ali Salam, of the wealthy Salam Family. He attended the American University of Beirut and the University of London but received a degree from neither. Salam was first elected to parliament in 1943, shortly before Lebanon's independence from France. He later came to political prominence during the Lebanese Civil War of 1958, when he championed the cause of those who opposed the government of Camille Chamoun. Salam articulated the sentiments of "the Beiruti street" by emphasizing Sunni political support for Gamal Abdel Nasser. He was identified with the Wasat (center) political bloc during the 1960s and criticized the government of Fuʾad Chehab. In 1970, after the election of Wasat member Sulayman Franjiyya as president, he was appointed prime minister. He resigned in 1973 to protest the refusal of Franjiyya to dismiss the Maronite commander in chief of the Lebanese army, whom Salam held responsible for Israel's raid on Beirut that resulted in the assassination of three top Palestine Liberation Organization (PLO) leaders. Salam's views became consistently pro-Saudi, and his educational enterprises (such as al-Maqasid) received funding from the Saudi government. Salam opposed the right-wing militias during the war but was more opposed to the leftist coalition. In the summer of 1982, he arranged indirect talks between PLO Chairman Yasir Arafat and U.S. envoy Philip Habib, talks that led to the PLO's withdrawal from Beirut. Salam also helped formulate the 1989 Taʾif Accord that ended Lebanon's lengthy civil strife.

Salam is also noted for establishing Middle East Airlines, Lebanon's national carrier, in 1945. Following two assassination attempts, he left Lebanon and lived in Geneva, Switzerland, from 1985 to

1994. He died on 21 January 2000, four days after celebrating his ninety-fifth birthday.

SALANT, SAMUEL

[1816–1909]

Renowned scholar of traditional Jewish law and chief rabbi of Jerusalem.

Samuel Salant was born in Bialystok and studied in a number of yeshivas (Jewish religious schools) in Eastern Europe. He arrived in Jerusalem in 1841 and was soon appointed rabbi of the Ashkenazic community; he became Jerusalem's chief rabbi in 1878. In Palestine, Salant led the development of a vast network of Ashkenazic educational, medical, and social institutions. With Sir Moses Montefiore, he advocated the growth of the Jewish community in Jerusalem's Old City and in new areas beyond its walls.

Chaim I. Waxman

SALIH, ALI ABDULLAH

[1942–]

President of the Yemen Arab Republic, then of Yemen, since 1978.

Salih became a public figure in the mid-1970s as a military commander and a supporter of the reform policies of Ibrahim al-Hamdi (assassinated in 1977). Hamdi's successor, Ahmad Husayn Ghashmi, was also assassinated shortly thereafter (1978). A four-man presidential council was then formed, one of whose members was Salih. After intense political maneuvering, he was elected president by the People's Constituent Assembly (created by Ghashmi).

Salih's origins did not augur well for his success: he is a member of the Sanhan tribe, a minor element of the Hashid tribal confederation. Though this made him a part of one of the major political forces in the country, he was not able to draw immediately upon the support of any of its major constituent elements, and it was widely assumed that his tenure would be brief. He undertook no radical policy shifts and moved to develop his own basis of support within the military and in civilian society. By shrewdly exploiting North Yemen's very limited room to maneuver in the international arena (in view of Saudi Arabia's strong position and more developed international associations), and promoting economic development programs and the exploitation of Yemen's limited oil resources, Salih grew in stature and popularity.

Developing a broader basis of support and legitimacy for his rule required dealing with several foreign and domestic policy issues. In foreign policy, the two most important areas were relations with South Yemen (PDRY) and Saudi Arabia. Frictions with the government and personnel of the PDRY led to two wars in less than a decade (1972 and 1979). However, the demise of the Soviet Union, and some mutual issues that required resolution (e.g., borders, oil resources) led to the unification of North and South Yemen in 1990; Salih became president of the unified state. Tensions between Yemen and Saudi Arabia have remained high throughout Salih's regime, but increased at the time of the first Gulf War due to Saudi Arabia's fear of the power of the unified state of Yemen.

In the domestic arena, Salih tried to move away from his reliance on the military: after a series of organizations designed to provide a greater civilian role in government, Salih promoted the creation of a National Legislature, in which his own political party, the General People's Congress (GPC), played the major role.

Perhaps the greatest threat to his government was the outbreak of a civil war between the North and South, in 1994, in which the North decisively defeated the South. In its aftermath, some significant changes were made to the institutions of government. Tentative steps toward more democratic rule had begun with multiparty elections in 1993. However, the 1997 elections were boycotted by the

representatives of the South, allowing Salih's party and its allies to dominate the new legislature. In 1994 parliament abolished the old presidential council and replaced it with a one-man presidency. Under the new rules, it elected Salih to a five-year term. Then, in 1999, Yemen held its first direct elections to the presidency; Salih won with 96.3 percent of the vote. In 2000 several other changes to the constitution were approved; among them, the president's term was extended to seven years and he was granted several new powers. The next round of parliamentary elections was held on schedule in 2003. Once again, Salih's party, the GPC, completely dominated the outcome (winning 238 of 301 seats).

Most observers regard Salih's role in all these developments as crucial. Although it is clear that he enjoys genuine popular support, there are many critics (both secular and Islamist) of his policies, and there is little doubt that his regime is characterized by personalism, corruption, and nepotism (an example being the important role of his eldest son, Ahmad). But, there is also no doubt that his innate political shrewdness and ability to deal with the multitude of political, economic, and social interests found in (and around) the country are important reasons for the fact that he is among the longest-serving Arab rulers.

MANFRED W. WENNER

SALIH, TEYIB

[1929–]

The most famous Sudanese novelist.

Teyib (also Tayyib) Salih was born in 1929 in the Northern Province of Sudan to an ethnic group known for the propagation of Islamic scholarship in the region. His primary education was religious, and he was a precocious scholar. By the time he entered secondary school in Khartoum, he had already studied prominent Arab authors such as Taha Husayn. He studied at Khartoum and London universities and has spent most of his life outside of his homeland. He studied in England before working at the British Broadcasting Corporation as head of drama in the Arabic Service. On his return to Sudan, he became the director of Sudanese National Radio. He later worked as a director-general of information in Qatar in the Persian Gulf; with the United Nations Educational, Scientific, and Cultural Organization (UNESCO) in Paris; and as UNESCO representative in Qatar.

Salih's major publications are the anthology *The Wedding of Zein and Other Sudanese Stories* (1969) and the novel *Season of Migration to the North* (1969). He has also written many short stories, which are among the best to be found in modern Arabic literature. Salih's novels have gained worldwide attention, especially *Season of Migration to the North.* His writing is drawn from his experience of communal village life and centers on people and their complex relationships. At various levels and with varying degrees of psychoanalytic emphasis, he deals with the themes of reality and illusion, the cultural dissonance between the West and the Orient, the harmony and conflict of brotherhood, and the individual's responsibility to find a fusion among his or her contradictions. These motifs and their contexts derive from both his Islamic background and the experience of modern Africa. He constructs an impervious unity of the social, religious, and political essence of the African or African Arab, holding that a harmony of existence is possible for individuals in a society of values and ethics. His books have been translated into several languages and *The Wedding of Zein* was made into an Arabic film that won an award at the Cannes Film Festival in 1976.

KHALID M. EL-HASSAN

SALIM, ALI

[1936–]

Egyptian dramatist.

After a successful career as a comic actor, Ali Salim turned to writing and became one of the major

comic dramatists in Egypt; he is well known for his satiric wit. His early plays are full of farcical situations and telling criticism of the idiocies of bureaucracy and the phobias of the common man; notable among these are *al-Nas Illi fi al-Sama al-Thamina* (1966; People in eighth heaven) and *Biʾr al-Qamh* (1967; The wheat well). *Madrasat al-Mushaghibin* (1971; School of troublemakers), in which a kind teacher reforms a class of rowdy teens, was one of his great popular successes. Salim has written several more serious works, of which *al-Buffeh* (1968; The buffet) and *Kumidiya Udib: Int Illi Qatalt al-Wahsh* (1970; The comedy of Oedipus: You're the one who killed the beast) have had considerable success on stage. The latter, which transports the Oedipus legend to Egyptian Thebes, provides Egyptian audiences contemplating the consequences of the Arab–Israel War of 1967 with a telling view of a nation ruled by an idealistic leader whose bold plans divert his attention from the fact that his security forces are terrorizing the nation.

Retired from the Ministry of Culture, he is also known for traveling to Israel after the Oslo peace talks. His best-selling account of the trip (*Rihla ila Israʾil,* 1994) takes to task those fearful of cultural invasion, rues the mental state of war besieging many of his compatriots, insists that the real battle is one of civil rights, and answers the curiosity of many Egyptians toward their Israeli neighbors. Salim was expelled from the Egyptian Writers Union for publishing the book. He continues to work for peace, and he has also returned to his first love, puppet theater.

UPDATED BY NANCY BERG

SALIM HASAN

[1888–1961]

Egyptian Egyptologist.

The second Egyptian Egyptologist of note after Ahmad Kamal, Salim Hasan was educated in Cairo and Paris. He taught at Cairo University and reached the second highest post in the Egyptian Antiquities department, under its French director. Salim Hasan excavated extensively at Giza, site of the Sphinx and the great pyramids, worked at Saqqara, and published voluminously in Arabic, English, and French.

DONALD MALCOLM REID

SALIM, JAWAD

[1919–1962]

Iraqi sculptor and painter.

Jawad Salim, one of the two best-known sculptors in modern Iraq (the other is Khalid al-Rahhal), was born in Baghdad into a middle-class family. His father, his two brothers (Saʿud and Nizar), and his sister (Naziha) were avid painters. Jawad Salim's talents became apparent early in his life, and in 1938 he was sent by the government to study art in Paris. He moved to Rome in 1939, and toward the end of that year he returned to Baghdad, where he was appointed instructor of sculpture at the newly established School of Fine Arts. He was also employed by the Iraqi Museum in the restoration of Mesopotamian artifacts.

During World War II, Salim met a group of Polish artists who had fled to Iraq. Paris-trained post-Expressionists, they encouraged him to pursue an "Iraqi path" in his painting and sculpture but also awakened his enthusiasm for such artists as Cézanne, Renoir, and Goya. Around 1944, Salim befriended a British artist, Kenneth Wood, who was a diplomat in Baghdad. According to Salim's diary, Wood exerted significant influence on his development. During that period, Salim produced such sculptures as *al-Usta* (The master builder), which portrayed modern Iraqi masons but drew inspiration from Ibsen's play of the same title.

In 1946, Salim went to London to study at the Slade School of Art; he returned to Iraq some five years later. He was much impressed by such modern British artists as Henry Moore. In Baghdad, he both painted and sculpted, and established the Baghdad Group for Modern Art. After the fall of the monarchy in 1958, he was commissioned by the regime of Abd al-Karim Qasim to design and exe-

cute a massive monument titled *al-Hurriyya* (Freedom), consisting of fourteen bronze units. This work, placed in one of the main squares of Baghdad, consumed the last two years of his life.

SALLAL, ABDULLAH AL-

[1919–1994]

First president of the Yemen Arab Republic.

Abdullah al-Sallal was born in 1919 on the northern highlands of Yemen; he was from the lower class of barbers and butchers. He became a soldier and was one of the very important group of young soldiers sent by Imam Yahya to Iraq for training during the mid-1930s. He returned after about one year abroad and became a politically active officer. He was involved in planning the 1962 coup against the monarchy and became president of the Yemen Arab Republic from 1962 until 1967. Al-Sallal was coarse in manner and appearance, neither thoughtful nor visionary, and came to be seen as a puppet of President Gamal Abdel Nasser of Egypt; he was ousted and exiled in 1967 by a combination of factions opposing both the long civil war between the republicans and the royalists and the dependence of republican Yemen on Egypt. In 1982, the regime invited al-Sallal to return from exile. He died in Yemen in 1994, at the age of seventy-four, having enjoyed the role of elder statesman for more than a decade.

SALNAME

See Glossary

SALONIKA

A principal city in the Ottoman Empire that has belonged to Greece since 1912.

Located at the head of the Gulf of Salonika, Salonika (also known as Salonica or Thessalonika) was captured by the Ottoman sultan Murad I in the late fourteenth century. The city flourished as a trade and cultural center through the seventeenth century and revived in the nineteenth century, becoming an industrial center and the seat of the political and cultural wings of the Young Turk movement. The founder of the Republic of Turkey, Mustafa Kemal Atatürk, was born in the city in 1881 and attended its military *rüşdiye* school from 1893 to 1895. In 1901 the modern port was opened, and in 1908 the Committee of Union and Progress launched its revolution there.

Greece captured Salonika from the Ottomans in November 1912, during the First Balkan War. Five years later, a fire destroyed much of the city. Its Jewish community was wiped out under German occupation (1941–1944). It is the second largest city in contemporary Greece.

SALT, AL-

A small, picturesque town in Jordan.

Al-Salt is located about 20 miles (29 km) northwest of Jordan's capital, Amman, in the hills overlooking the Jordan valley to the west. It contains some beautiful examples of Islamic residential architecture. The archaeological evidence shows that Salt has been inhabited since about 3000 B.C.E. It was the principal town in Transjordan in the 1920s and one of the gateways from Palestine to Transjordan and countries further east and south. Salt suffered a

steady decline, as other population centers flourished in Jordan and routes to Palestine moved south or north. It has never fully recovered from this decline, although it is a regional capital (Balqa district) and boasts several "firsts": the first hospital and the first secondary school in Jordan. The latter lays claim to having educated many of Jordan's prime ministers, most of its ministers, and a large number of prominent members of Jordanian society. Salt also has a substantial Christian minority that enjoys cordial relations with the Muslim community. The population of al-Salt in 1994 was about 56,000.

JENAB TUTUNJI

SAMARITANS

People claiming descent from the ancient Kingdom of Israel.

In the fourth and fifth centuries C.E., the Samaritans numbered about 1,200,000 persons dwelling in many cities and villages in the biblical Land of Israel (from southern Syria to northern Egypt). By 1917, centuries of harsh religious decrees, forced conversions to Islam and Christianity, slaughter, and persecution had thinned the Samaritan community to a bare 146 persons. During the 1930s, however, the community began to increase, and it has been gradually developing in all areas of life. By January 2003 its numbers increased to 654: 349 in Holon, near Tel Aviv, and 305 in the Kiryat Luza neighborhood, on the peak of Mount Gerizim overlooking Nablus.

Throughout their history, the Samaritans never lost their uniqueness as a people. They have their own writing, the ancient Hebrew script; they speak their own language, the ancient Hebrew dialect spoken by Jews until the beginning of the first millennium C.E.; and they are brought up in accordance with a unique, millennia-old tradition, dating back to the return of the people of Israel under Joshua, son of Nun, to its homeland.

The Samaritans are guided by four principles of faith: (1) one God, who is the God of Israel; (2) one prophet, Moses, son of Amram; (3) one holy book, the Pentateuch (the Torah handed down by Moses); and (4) one holy place, Mount Gerizim.

The Samaritans celebrate only those holidays mentioned in the Torah: Passover, the Feast of Unleavened Bread; the Feast of Weeks (Shavuot); the First Day of the Seventh Month; the Day of Atonement (Yom Kippur); the Feast of Tabernacles (Sukkot); and the Eighth Day of Assembly and Rejoicing of the Torah (Shemini Atzeret, Simhat Torah). Unlike that of mainstream Judaism, the Samaritan New Year is celebrated fourteen days before Passover, and the eve of their Passover is marked by a sacrifice of lambs and male goats on Mount Gerizim.

Samaritans adhere to four symbols of identification: (1) living in the Land of Israel, (2) compulsory participation in the animal sacrifice on Mount Gerizim at Passover, (3) keeping the Sabbath as written in the Pentateuch, and (4) adhering to the laws of purity and impurity as written in the Pentateuch.

The Samaritans perform circumcision on the eighth day following a male birth. A boy or a girl who completes the reading of the Pentateuch is considered "Concluder of the Law." The attachment between a couple proceeds in three stages: consent, engagement, and marriage. Marriage with Jews outside the community is acceptable. Divorces are rare. Funerals take place on Mount Gerizim, or in the Samaritan section of the Kiryat Shaʾul cemetery in Tel Aviv.

The peace process between the government of Israel and the Palestinians, bringing Nablus under Palestinian administration, has led to a separation between the Samaritan communities in Holon and on Mount Gerizim.

BENYAMIM TSEDAKA

SAMARRA

One of the oldest cities in Iraq, situated 65 miles (104 km) north of Baghdad.

There is evidence of a prehistoric Chalcolithic culture around Samarra, but the site was only sparsely populated in ancient times. The present city was founded on the east side of the Tigris River by the Abbasid caliph al-Muʿtasim in 835 C.E.; it was divided into quarters, based on business and profession. It served as the capital of eight Abbasid caliphs from 836 to 892, when Caliph al-Muʿtamid moved the capital back to Baghdad. During the Abbasid period, the caliphs were eager to make Samarra a beautiful city, with new palaces, lakes, and wide squares, and they brought in many types of plants from all over the Islamic world.

With its rich Islamic history, Samarra has many sites of historic and architectural interest. The most important is the al-Malwiyya Mosque with its spiral minaret, which is 171 feet (52 m) in height with a round room at the summit that is 19.6 feet (6 m) high. It was begun in 1443 by the Caliph al-Mutawakkil. Also of interest are the House of the Caliph, which contains three monumental staterooms, large residential complexes, and outdoor recreation facilities; the mosque of Abu Dulaf, with its spiral minaret; al-Mankur Palace; and many walls, especially al-Qadissiyya, Isa, Ashnas, and Shaykh Wali. A museum was established in Samarra for the artifacts found during excavations in the area.

Two apostolic imams, Ali al-Hadi and his son Hasan al-Askari, were buried in Samarra; therefore it is a holy city of Shiʿism, one of four in Iraq. The imams' shrine is visited by Shiʿa from all over the Islamic world. Part of the mosque marks the spot where, according to the Shiʿa, the twelfth and last apostolic imam, al-Mahdi, disappeared.

The majority of contemporary Samarra's population is composed of members of tribes from the surrounding countryside, who follow Sunni Islam. In 1992, the population was estimated at 150,000. Clan and political links tend to unite Samarra with the cities to its north and south, Tikrit and Baghdad. A road links it with both major centers. Under the republican regime, the city was governed by the *qaʾimmaqam* (chief of the administrative unit), who reported to the *muhafidh* (the representative of the central government in Baghdad). With the creation of the Coalition Provisional Authority, following the 2003 invasion of Iraq, Samarra came under the authority of a military commander directly appointed by occupation forces in late April 2003. It soon became a center of opposition to American forces in the region.

Samarra has a desert climate, with great temperature differences between day and night and between summer and winter. The high reaches 110°F (43°C), and the low is just above freezing. Annual relative humidity is 18 to 30 percent; annual rainfall ranges from 4 to 16 inches (10–40 cm). The area grows cereal crops, citrus fruits, apples, and many types of vegetables. The major industries are a pharmaceutical plant and an electrical power plant. Strong tribal connections to the governing authorities during the Baʿathist period contributed to the city's prosperity.

One vital project nearby is the al-Tharthar Dam, opened in 1956, which prevents the flooding of Baghdad by shifting the flow of the Tigris during its rise to the al-Tharthar Valley, a depression between Samarra on the Tigris and Hit on the nearby Euphrates.

NAZAR AL-KHALAF
UPDATED BY PAUL S. ROWE

SAMAR, SIMA

[1957–]

Physician, advocate for democracy and women's rights in Afghanistan, and Afganistan's Minister for Women's Affairs.

Sima Samar was born in Ghazni, Afghanistan. She received a medical degree from Kabul University in 1982. After the arrest and disappearance of her husband, she went to Quetta, Pakistan, and became a humanitarian relief worker and supporter of the Revolutionary Association of the Women of Afghanistan (RAWA). In 1987, she received funding from the Church World Service and several

other organizations to establish a women's hospital in Quetta. In 1988, she organized the Shuhada Foundation to provide medical care and education for Afghan women refugees and their children in Pakistan. She received the Ramon Magsaysay Award for Community Leadership in 1989 and the John Humphrey Freedom Award in 2001 for her efforts to protect the rights of women in Afghanistan.

In late December 2001, she became minister for women's affairs in Hamid Karzai's interim government. She resigned in June 2002, when conservatives threatened her with a death penalty for allegedly questioning the relevance of Islamic law in an interview during a visit to Canada. She was acquitted of the charge of blasphemy by the high court of Afghanistan and given a new position as chair of Afghanistan's Independent Human Rights Commission.

SENZIL NAWID

SAMMAN, GHADA

[1942–]

Syrian-Lebanese writer.

Ghada Samman was born and raised in Syria, moved to Lebanon in the 1960s, and has been living in France since 1984. She is one of the Arab world's most prolific female authors, having published more than thirty books in a variety of genres. Her work has been translated into many languages. She studied English literature at Damascus University and the American University of Beirut and began her career as a journalist. She writes a weekly column for the London-based *al-Hawadith* magazine. Among her books is *al-Raghif Yanbud ka al-Qalb* (1975), which exposes political corruption in the Arab world and attacks social inequality, especially the mistreatment of women. Her *al-Amal Ghayr al-Kamila* (1979) is a multivolume collection of fiction and nonfiction on her travels to various Arab and European capitals, with insightful comparisons on culture, society, and politics.

Samman is also known for her fiction. Her novel *Beirut '75* (1974) is a gripping urban narrative that touches upon class divisions, gender inequality, and the selfish rich. It prophetically anticipated the outbreak of violence in Lebanon the following year. *Beirut Nightmares* (1976) draws from the author's own experiences during the first year of the Civil War, when she was trapped for a week near the Beirut hotel district. A sequence of nightmares, from the mundane to the surreal, are told in a wrenching first-person voice. One of her collections of short stories, *The Square Moon* (1999), is set mostly in Paris and focuses on cultural conflict and the perspectives of exile.

For decades, she has given voice to Arab women: "The liberated woman is not that modern doll who wears make-up and tasteless clothes. . . . The liberated woman is a person who believes that she is as human as a man. The liberated woman does not insist on her freedom so as to abuse it," she wrote in 1961. In her many works of fiction and nonfiction, Samman has been a staunch supporter of Arab nationalism and has criticized Zionist and imperialist policies, but she has not shied away from critiquing repressive aspects of her own culture.

ELISE SALEM

SAMUEL, HERBERT LOUIS

[1870–1963]

First high commissioner in Palestine under the British Mandate, 1920–1925.

Herbert Louis Samuel was born to a Jewish banking family in Liverpool, England, in 1870. Educated at Balliol College, Oxford, he entered parliament as a Liberal in 1902 and in 1909 became the first practicing Jew to serve in a British cabinet. He rose to be home secretary in 1916 (and again in 1931–1932). During the First World War Samuel was the first person to raise with the cabinet the idea of British sponsorship of Zionism. In 1920 he was knighted and sent to Palestine as first head (high commissioner) of the British civil administration under a League of Nations mandate. His appointment was greeted with enthusiasm by Zionists but he disappointed them by his suspension of Jewish immigration in response to Arab anti-Jewish riots in May 1921 and by his appointment of an Arab nationalist leader, Muhammad Amin al-Husayni, as mufti of Jerusalem. Samuel was responsible for extending the border of the Mandate eastward to include Transjordan. He was the principal author of the Churchill White Paper of 1922, which established the criterion of "economic absorptive capacity" as the basis for limiting Jewish immigration.

Although Samuel's efforts to establish an elected legislative council proved abortive, he restored a measure of political calm from 1922 to 1925. His recognition of the Palestine Zionist Executive as the Jewish Agency,defined in article 4 of the Mandate, and his creation of the Supreme Moslem Council, headed by the mufti, laid the basis for the institutional partition of Palestine between Jews and Arabs. In the late 1930s, however, Samuel strongly opposed proposals for territorial partition. But his alternative proposals for an Arab-Jewish settlement, formulated with a Conservative MP, Earl Winterton, found little support. He was created Viscount Samuel of Mount Carmel and Toxteth in 1937.

SANʿA

Capital of the Republic of Yemen.

One of the world's oldest continuously inhabited sites, Sanʿa was the capital of the Yemen Arab Republic from 1962 to 1990, at which time it became the capital of the new Republic of Yemen. Over earlier centuries it had been the capital and chief city of a succession of political entities: the Hamid al-Din Zaydi imamate from the end of World War I to 1962; the two Ottoman occupation regimes during the sixteenth and nineteenth centuries; earlier Zaydi imams before and after the Ottoman occupation; and numerous other regimes, major and minor. Regardless of ruler, Sanʿa was for centuries the great Zaydi urban center in the highlands of North Yemen, surrounded by tribes that accepted and defended Zaydism. The city has been Islamic since the earliest days of Islam, and its major mosque is said to be built on the ruins of one that was built before the death of the prophet Mohammad. In recent decades, the city has been the stage for much of Yemen's highest political drama: the sacking of Sanʿa by the tribes as punishment for its role in the aborted 1948 revolution and the heroics of its citizens and republican defenders during the seventy-day siege of Sanʿa in early 1968.

Sanʿa is located at an altitude of about 7,500 feet in the geographical center of modern North Yemen, northeast of the port of Hodeida (al-Hudayda) and north of Taʿiz. Its barren setting conveys an austere, almost monastic aura, but it has a dry, temperate climate, marred seasonally by lip-cracking dryness and dust-filled winds. Wells and erratic rains in the spring and late summer allow for both irrigated and dry farming as well as extensive animal husbandry in the city's environs. Sanʿa is not a green place; people and factories have won out decisively over trees, grass, and flowers in the competition for water.

Guarded by the small, bald mountain of Jabal Nuqum, Sanʿa stretches across a wide, flat plain from the mountain's western flank. Before the 1962 revolution, Sanʿa had an hourglass configuration: the Jewish quarter (Qa al-Yahud) to the east separated by a half mile of gardens and the usually dry watercourse from the much larger, walled Islamic city at the foot of the mountain. This configuration was largely erased by the unplanned growth of the

A skyline view of Yemen's capital city, Sanʿa. © ABBIE ENOCK; TRAVEL INK/CORBIS. REPRODUCED BY PERMISSION.

1960s and 1970s and, even more so, by the urban sprawl of the 1980s. Still, the old Islamic city remains one of the urban architectural treasures of the world. It was declared a World Heritage Site by the United Nations Educational, Scientific, and Cultural Organization (UNESCO) in the early 1980s and has been the object of considerable restoration and preservation campaigns since then. In addition to its main gate, restored portions of thick wall, and dozens of slender minarets, the city is distinguished by the dense concentration of houses, many of them several stories tall, made of cut stone and of baked and sun-dried bricks. The domestic architecture of Sanʿa dates back at least two millennia and is a triumph of art and engineering. The city's ancient marketplaces still thrive; the most famous of these is at the core of the old city. These marketplaces house shops selling goods from all over the world and are also home to artisans and traditional manufacturers. In recent years, the new city and the outskirts have become the locale for modern stores, distribution centers, showrooms, and light industry. Sanʿa has also become a city of schools, most notably the Sanʿa University.

During the 1960s and 1970s, Sanʿa boasted handsome stone government offices and other public buildings, old and new, as well as many mosques, schools, and fine homes, but Taʿiz claimed to be the commercial and business center of North Yemen—the more modern city, more open to the ideas and practices of the outside world. By the 1980s, however, with a population of more than 500,000 and growing rapidly, Sanʿa had emerged as the undisputed center of political, cultural, and economic life in North Yemen. With Yemeni unification in 1990, government officials and supplicants flooded from Aden to Sanʿa, the political capital, and the preeminence of Sanʿa became even more apparent; it remains to be seen what ranking and division of labor will ultimately prevail between Sanʿa and Aden, the designated economic capital of unified Yemen. The cities, while similar in size, are wildly different in appearance and lifestyle, making them a complementary pairing. As they grow, both must cope with traffic congestion, water and electricity shortages, limited sewage facilities, great housing needs, and the inadequacy of other urban services. The great challenges of becoming a livable modern city in a poor, developing country were compounded in Sanʿa after 1990 by the deluge of unemployed workers expelled suddenly from Saudi Arabia at the beginning of the 1991 Gulf War. By the mid-1990s, Sanʿa's population had reached almost one million. For the first time rimmed by slums and replete with beggars, Sanʿa is nonetheless beginning to meet some of these challenges, and the old city survives as an urban treasure.

ROBERT D. BURROWES

SANʿA UNIVERSITY

One of two universities in the Republic of Yemen.

For a long time Sanʿa University was the only university in the former Yemen Arab Republic. Since its founding in 1970, Sanʿa University has grown dramatically in the number of students and faculty, become diversified in the degrees and programs it offers, and improved the quality of its educational offerings. The university began on a modest, ad hoc basis with a teachers' college and a law school; the first external aid for the university was secured from

Kuwait during its first year, and Kuwait remained its biggest benefactor throughout the 1970s and 1980s. Its arts and science faculties underwent rapid growth during its first decade, and among the departments created during the 1980s were engineering, agriculture, and medicine. By 1990 it occupied two large, modern campuses in the city. Since Sanʿa University was funded over the years largely by Kuwait, modeled on and guided by Kuwait University, and staffed through the 1980s mostly by Egyptians, it tended for a long time to be something of a pale carbon copy of Kuwait University's carbon copy of Cairo University. Consequently, a theme at least since the beginning of the 1980s has been the struggle to make the university relevant to the nature and needs of Yemen through the Yemenization of its program, faculty, and administration. In addition, classes have been coeducational from the outset, making it a battleground between secular modernists and resurgent Islamic conservatives.

By the 1990s, Sanʿa University, while continuing to grow, was merely the flagship of a national university system that had smaller units in all major cities; indeed, with Yemeni unification in 1990, it had to share top billing with the large, long-established Aden University. More significantly, the failure of Yemen to join the international coalition during the crisis and war in the Persian Gulf during 1990 and 1991 led to the total loss of Kuwaiti funding, a loss that has not been made up since from other sources. The continuing growth in the demand for higher education and a regime that has not made meeting the need for higher education a top priority have led to an erosion of the quality of education at Sanʿa University and throughout the university system generally since the early 1990s. Class size increases, the need for new offerings goes largely unmet, and many current and potential faculty members are seeking employment in other countries and professions. Higher education in Yemen is in crisis, and not only at Sanʿa University.

SANCTIONS, IRAQI

Trade and financial restrictions imposed by the United Nations on Iraq between 1990 and 2003.

The nature and effects of the United Nations sanctions on Iraq are more complex than has often been supposed. In brief, the UN, largely at the instigation of Britain and the United States, declared comprehensive trade and financial sanctions against Iraq under UN Resolution 661, passed on 6 August 1990, four days after Iraq invaded Kuwait. That Iraq was in a position to attack Kuwait at all was largely due to the almost unanimous support, both material and moral, that it had received from the international community in the course of its war with the Islamic Republic of Iran between 1980 and 1988, a war Iraq had started with the tacit encouragement of the United States.

Early Sanctions

The Gulf War, whose stated and rapidly achieved objective was to remove Iraq from Kuwait, was launched under UN auspices on 17 January 1991 and ended with Iraq's surrender on 24 February of the same year. In the course of this period, Iraqi cities were repeatedly bombed and damage was done not only to military installations but also to the civil infrastructure. The damage included the destruction of water purification and pumping plants, much of the electrical system, and many oil installations.

In April 1991, UN Resolution 687 allowed Iraq to import foodstuffs and materials for "essential civilian needs," although oil exports were not allowed. All restrictions would be lifted if Iraq complied with four principal conditions: the identification and elimination of its weapons of mass destruction; the demarcation of its frontier with Kuwait, to be accompanied by acceptance of Kuwaiti sovereignty; the release of Kuwaiti and other nationals held in Iraq; and the establishment of a compensation commission, which would assess war damage and pay for it by a levy on Iraqi oil revenues. Until the U.S. invasion of Iraq in the spring of 2003, Iraq only complied fully with one of these conditions: the recognition, in November 1994, of the frontier with and the sovereignty of Kuwait.

It had never been envisaged that the sanctions would still be in place some twelve years after their imposition. In fact, their severity was considerably reduced by the provisions of UN Resolutions 986 (14 April 1995; accepted by Iraq in January 1996) and 1153 (20 February 1998), which permitted Iraq,

An Iraqi woman sits at the bedside of her sick daughter. After the Gulf War, sanctions were eased regarding the amount of oil that Iraq could export, as well as what products could be imported under the enacted dual use restrictions, the flow of goods and money began to ease. Sanctions were lifted from Iraq in 2003. © AP/WIDEWORLD PHOTOS. REPRODUCED BY PERMISSION.

under UN supervision, to sell first $2 billion (Resolution 986) and then $3.55 billion (Resolution 1153) net worth of oil in exchange for food every six months; in October 1999, the UN Security Council raised the revenue cap to $8.3 billion.

Oil for Food

Attempts to introduce oil-for-food arrangements had begun on the UN side as early as 1991 but had been continually rejected by Iraq as an intrusion on its sovereignty. These earlier efforts had insisted on a considerable degree of on-site monitoring and also required Iraqi acceptance of the presence of the UN Special Commission (UNSCOM, the UN weapons inspectorate), set up in May 1991. What Iraq held out for before January 1996 (when it reluctantly accepted Resolution 986), but could not obtain, was the comprehensive lifting of sanctions. This was not made more likely by continuing revelations of the extent of Iraq's nuclear, chemical, and conventional weapons arsenals. The regime apparently felt this capacity was important enough to sacrifice the well-being of its people in order to maintain it.

The overriding argument against these and other sanctions—that their indiscriminate nature punishes the innocent and has little effect on the guilty (that is, the regime itself)—is persuasive. Various international organizations wrote heartrending reports on the effects of shortages of basic foodstuffs and medicines: The monthly food ration was reduced by 40 percent in October 1994, and severe malnutrition among young children was widely reported from 1991 by both internal and external observers. The provision of both education and health care deteriorated noticeably. In education, large numbers of teachers left the profession, with the result that fewer children went to school, while diseases associated with poverty, such as kwashiorkor, tuberculosis, and respiratory and digestive illnesses, reappeared after 1991 after having been virtually eliminated over the

previous decades. However shocking these developments may have been, allocating all blame for them on the sanctions is not entirely justified; at least equal blame must be placed at the door of the regime for not taking the necessary steps to ensure that they would be lifted. Historian Pierre-Jean Luizard, in his book *La question irakienne,* put it thus: "The regime . . . used the embargo to move Western politicians and intellectuals, as if it were not itself responsible for the tragic situation of the Iraqi population, and as if the embargo was not linked to its remaining in power" (p. 270).

The sanctions acted as a major obstacle to Iraq's economic recovery after 1991, but again it is certain from the evidence of both defectors and UNSCOM itself that the regime had been developing biological and chemical weapons in the late 1980s and was working toward the capacity to operate nuclear missiles. There is little doubt that it was no longer able to do so after the early 1990s, and it is not unreasonable to assume that the sanctions played a major role in this. Modification of the sanctions regime in such a way as to make it less onerous to the civilian population was certainly an option, but the oil-for-food arrangements, proposed five years before they were accepted, were intended to ease that particular burden. All in all, however, sanctions both in Iraq and elsewhere have often proved a blunt instrument, whose effect has sometimes been to rally the population around an offensive regime rather than to stimulate the population to overthrow it. In the case of Iraq after the brutal repression of Kurdish and Shiʿite resistance in 1991, a popular rising against the regime was never a realistic option in any case.

In the wake of the U.S. invasion of Iraq, the UN Security Council voted to lift the sanctions via Security Council Resolution 1483 of 22 May 2003.

PETER SLUGLETT

SANE'I, YUSEF

[1927–]

Iranian reformist cleric.

Ayatollah Yusef Sane'i was born in 1927 to a clerical family in Neekabad, Isfahan Province. He entered an Isfahan religious seminary in 1946 and upon completion of preliminary studies entered a Qom seminary in 1951. In 1955 he became a student of Ayatollah Ruhollah Khomeini and obtained the degree of *ijtihad* (interpretation) in 1959, at the age of thirty-two. He started his teaching career in 1975 at the Haghani school, where he taught until 1994. His opposition activities under the shah were mainly sermons, lectures, statements, and participation in demonstrations. In 1980 Khomeini appointed Sane'i a member of the Council of Guardians. He resigned in 1982 to become a (successful) candidate for the Assembly of Experts from Tehran. Khomeini then appointed him public prosecutor, but he resigned this post in 1985. He was also Khomeini's representative at the High Council of Reconstruction of War Zones. Contrary to common belief, it is not Yusef Sane'i but his brother Hassan Sane'i who is the head of the Fifteenth of Khordad Foundation that offers a bounty for the killing of British author Salman Rushdie.

Ayatollah Sane'i is a reformist cleric who maintains that Islam and democracy are compatible, has warned against limitations of women's rights in the name of religion, and has criticized the misinterpretation of the Qurʾan. In his declarations and interviews with the women's press he has argued that Islam does not prohibit women from becoming judges *(mujtahids),* or political leaders, and that blood money should be the same for men and women. (Blood money is money paid by one who who has caused loss of life to the family of the victim. By law, this is a permissible alternative to imposing capital punishment. The blood money paid for women is half of that paid for men.) He argues that the women's struggle, continuation of the process of institutionalization of the rule of law, and the legitimacy of the public will lead to the strengthening of women's rights.

SAN REMO CONFERENCE (1920)

Post–World War I talks at which Great Britain and France were awarded mandates over Middle East countries.

In April 1920, the victorious World War I allies, with the exception of the United States, met in San Remo, Italy. At the conference, Britain was awarded mandates over Palestine and Iraq, and France was awarded mandates over Syria and Lebanon. Technically, a mandate held the territories in trusteeship for the League of Nations until the political systems of these territories were developed enough to warrant independence and admission to the League of Nations.

The San Remo Conference also discussed petroleum in Mesopotamia (now Iraq). France agreed to renounce its claims to the province of Mosul in return for a 25 percent share in the Turkish Petroleum Company. Italy was also promised access to this oil; but the issue of Mosul—whether it was to be an autonomous region of Kurds or a province of Iraq—was not decided until 1926, when it was officially incorporated into Faisal I ibn Hussein's new kingdom of Iraq.

ZACHARY KARABELL

SAN STEFANO, TREATY OF (1878)

Signed on 3 March 1878, this treaty concluded one of the major wars fought between Russia and the Ottoman Empire (1877–1878).

Among the provisions of the Treaty of San Stefano were the following:

1. Serbia and Montenegro received their independence from the Ottoman Empire and were granted additional territory.
2. Independence was also gained by Romania, which lost southern Bessarabia to Russia but was compensated by the acquisition of the Black Sea province of Dobrudja.
3. Bosnia and Herzegovina were granted autonomy and were promised reforms, to be supervised jointly by Russia and Austria.
4. In addition to southern Bessarabia, Russia also acquired a substantial part of northeastern Anatolia, including the provinces of Batum, Kars, and Ardahan.
5. Unexpectedly, the treaty also called for the creation of Greater Bulgaria. Its territory extended from the Danube and the Black Sea

> to the Aegean Sea in the south and included much of Macedonia. Nominally a part of the Ottoman Empire, Greater Bulgaria was to be ruled by a Christian government and to possess a national militia. For the next two years, it was also to remain under Russian occupation—a clear indication of the direction in which Russia was moving: Bulgaria guards the northern access to the Turkish Straits.

It soon became obvious that the Treaty of San Stefano—a major gain in Russia's contest with the Ottoman Empire for supremacy in the Balkan-Black Sea region—would not be allowed to stand. Among the great powers, early concern was expressed by Great Britain and Austria-Hungary. Britain had long opposed Russia's aggrandizement at the expense of the Ottoman Empire and particularly the Russian drive toward the Turkish Straits. Austria-Hungary shared British apprehensions and was also perturbed by the creation of the Russian puppet state of Greater Bulgaria. Bowing to the British, Austro-Hungarian, and later German pressure, Russia agreed to submit the terms of the treaty of San Stefano to a great power congress—the Congress of Berlin.

The resulting Treaty of Berlin (1878) endorsed many of the provisions negotiated at San Stefano. Russia and Romania kept their territorial gains. Romania, Serbia, and Montenegro retained their independence, and the latter two retained much of the territory allocated to them. Bosnia and Herzegovina were, however, placed under Austrian control, and England was permitted to occupy Cyprus. Finally, despite Russian objections, the Congress of Berlin dismantled Greater Bulgaria. The latter was split into three parts: Bulgaria proper, located north of the Balkan mountains; East Rumelia, situated south of them; and Macedonia. All remained under Ottoman suzerainty but were granted autonomy and were promised reforms.

Great Britain was the main beneficiary of the Congress of Berlin. Supported by Austria-Hungary, Britain denied Russia the opportunity to become the sole arbiter of the affairs of the Ottoman Empire. The congress also prevented Russia from becoming the patron of Greater Bulgaria. Great Britain also acquired Cyprus; strategically located in the eastern Mediterranean, the island was used four years later to effect the British occupation of Egypt.

OLES M. SMOLANSKY

SANT EGIDIO PLATFORM

An attempt to defuse the bloody conflict between Islamists and the Algerian government through political dialogue; also known as the Rome Platform.

In 1994, members of the Algerian opposition approached the Roman Catholic lay movement Sant Egidio in Rome, suggesting that it attempt to broker a peace settlement on the model of the successful accord it had helped establish in Mozambique. A first meeting in November demonstrated the gulf between the government, represented by General Betchine, and the opposition parties, which for the first time since the breakdown of the Algerian democratic process in 1992 included the Islamic Salvation Front (FIS) in a multiparty forum. A wide range of opposition parties, representing some 80 percent of the votes cast in the 1991 elections, attended a second meeting in January 1995 and signed a national pact on 13 January, committing them to respect for both democracy and the Islamic traditions of the country and demonstrating the strength of a middle ground marginalized in the armed combat between the army and the Armed Islamic Group (GIA). Although the government immediately attacked the document as an attempt at "outside interference" with the government's efforts at drawing Islamists into the democratic process, the opposition parties claimed the agreement was proof that the government and not the Islamic parties had been responsible for obstructing the democratic dialogue. Hope briefly grew after 26 January, when the government announced presidential elections, but the spiral of violence thereafter demonstrated the powerlessness of the political opposition in the face of the intransigence of key forces in the security establishment and the extremist wing of the Islamist movement.

SANUSI, MUHAMMAD IBN ALI AL-
[1787–1859]

Muslim scholar and founder of the Sanusi order, 1837.

Muhammad ibn Ali al-Sanusi studied Arabic and Islam in Algeria, Morocco, Egypt, and the Hijaz of western Arabia. He quarreled with leading *ulama,* (Muslim scholars), became active in Sufi circles, and was successful among Muslim nomads. A follower of Sidi Ahmad al-Fasi, he moved to Cyrenaica, Libya, in 1838, which became the base for the spread of the Sanusi order.

RACHEL SIMON

SANUSI ORDER

Islamic order founded in 1837 by Muhammad ibn Ali al-Sanusi (died 1859); followed by Muhammad al-Mahdi (1859–1902), Ahmad al-Sharif (1902–1917), and Idris al-Sanusi.

Combining orthodoxy and Sufism, the Sanusi order aimed to unite all religious orders by returning to the sources. It called for closeness to the prophet Muhammad through study, training, and intention, but rejected ecstasy. It advocated a modest lifestyle and refraining from daily pleasures. Its main support was tribal (in Cyrenaica and central Africa). The Sanusi organization was based on a network of *zawiyas* (religious compounds), which were strategically located and served as centers of study and trade, to which neighboring affiliates contributed their *ushr* (tithe) and manpower. The Sanusi political power was recognized by the Ottoman Empire and by central African kingdoms. The order was a key factor in the resistance to Italian rule (1911–1933), which caused the death and exile of many Sanusi leaders and followers, the confiscation of *zawiyas,* and the de facto collapse of the order.

RACHEL SIMON

SANU, YAʿQUB
[1839–1912]

Egyptian nationalist playwright and satirical journalist.

Born into a Jewish family in Alexandria, Yaʿqub Sanu, also known as James Sanu, is considered the father of modern Arabic satire. He organized the first popular theater in Egypt, which presented plays in colloquial Arabic. Influenced by the Muslim reformer Jamal al-Din al-Afghani, Sanu established a political newspaper, *Abu Nazzara Zarqa* (The man with the blue glasses). In 1877 or 1878, the royal court deemed his writings offensive and expelled him from Egypt. Settling in Paris, Sanu continued his campaign of attacking the members of Egypt's political establishment for collaborating with the colonial powers and betraying Egypt.

DAVID WALDNER

SAPIR, PINHAS

[1907–1975]

Israeli Labor party leader, minister of finance.

Pinhas Sapir, born in Poland as Koslovsky, received a religious education as a child and later became a leader in the ha-Halutz movement.

In 1929 he immigrated to Palestine. From 1937 to 1947 Pinhas Sapir was Levi Eshkol's deputy at Mekorot Water Company. Later Pinhas Sapir served in a number of high government and cabinet positions including director general of the Ministry of Defense (1948–1953) and director general of the Ministry of Finance (1953–1955). He was minister of commerce and industry from 1955 to 1964 and again from 1970 to 1972. He also served as minister of finance from 1963 to 1968 and again from 1969 to 1974.

He was known to be a power broker within the Labor party and played an active role in uncovering the details of the Lavon affair (1960–1961). As finance minister after the Arab–Israel War of 1967, he expressed reservations about Moshe Dayan's proposals for integrating the occupied territories with Israel. He was suggested as a successor to Golda Meir, after her resignation as prime minister in 1974, but he refused the offer. He left the government in 1974 to become chairman of the Jewish Agency executive.

MARTIN MALIN

SARID, YOSSI

[1940–]

Israeli political leader and government minister.

Yossi Sarid, the son of a prominent educator, was born in Palestine. After a brief career as a columnist for *Haaretz,* Sarid became active in the Labor Party. He was close to Pinhas Sapir, the powerful, dovish minister of finance, and was responsible for the party's information drives in four election campaigns. In 1974, after the Arab–Israel War the previous year (also known as the October War), Sarid was elected to the Knesset, and has remained a member ever since. In 1982 Sarid was the only Labor member of the Knesset who opposed Israel's invasion of Lebanon. In 1984, in protest of the formation of the Peres-Shamir Unity Government, Sarid resigned from the party and joined Shulamit Aloni's Movement for Civil Rights and Peace (RATZ). In 1988 Sarid was one of the founders of Meretz, the left-wing party espousing social welfare policies and peace with the Palestinians, based on the principle of "two states for two nations." In 1992 Meretz joined the coalition government, formed by Yitzhak Rabin. Sarid was appointed minister of the environment. He strongly supported the Oslo Accord and was a member of the team of three senior ministers who negotiated its details.

In 1996 Sarid replaced Aloni as chairman of the party. When Ehud Barak formed his coalition government in 1999, Meretz joined once more and Sarid was appointed minister of education. He initiated many reforms in Israel's educational system, but could not complete them; Meretz had to quit the coalition to avoid its breakup during the dramatic negotiations with the Palestinian Authority on the "Final Status" arrangements, which eventually collapsed at the July 2000 Camp David Conference. In the 2002 elections, Meretz suffered the severe drawback of losing four of their ten Knesset members. Sarid took responsibility for the defeat and resigned from his position as head of the party, but remained in the Knesset as a veteran member of its Foreign and Security Committee. Sarid published hundreds of articles and two poetry volumes.

BRYAN DAVES
UPDATED BY MORDECHAI BAR-ON

SARKIS, ILYAS

[1924–1985]

President of Lebanon, 1976 to 1982.

Ilyas Sarkis studied law at the Université Saint Joseph, then joined the audit office as a magistrate in Lebanon. His integrity and discipline brought him to the attention of Lebanon's President Fu'ad Chehab, who appointed him legal adviser in 1959 and director general of his cabinet in 1962. Chehab's successor, Charles Hilu, appointed him

chairman of the Banking Control Commission and, in June 1968, governor of the Central Bank.

As the major Chehabist contender in the presidential election of 1970, Sarkis lost by one vote to Sulayman Franjiyya, whose tenure developed into one of the contentious issues in the Lebanese Civil War (1975). The legislature then specifically amended the constitution to allow early presidential elections to permit the accession of Sarkis in May 1976. Considering him Syria's candidate, Kamal Jumblatt, the leader of the leftist forces and ally of the Palestine Liberation Organization (PLO), tried unsuccessfully to disrupt the parliamentary session in favor of the candidacy of Raymond Eddé.

As prescribed by the Arab summit conferences at Riyadh and Cairo, Sarkis attempted, using a neo-Chehabist team, to disarm all the Lebanese militias with the help of the Syrian-dominated Arab Deterrent Forces (ADF). He was blocked in doing so by the Phalange and the National Liberal Party (NLP), who insisted that the PLO disarm first. Since Israel would not allow Syrian troops to descend south of the Litani River, PLO guerrillas remained in southern Lebanon, where raids and counterraids across the border finally led to Israel's invasion of the area in March 1978. Although United Nations peacekeeping troops were deployed in the wake of Israel's withdrawal, Israel would not allow Sarkis to send Lebanese army units to the southern border area, propping up instead the local Christian militias under Major Saʿd Haddad. In September 1978, tensions between the Maronite Christian militias and the Syrian troops of the ADF culminated in the bombardment of the Ashrafiyya quarter in east Beirut, bringing the president close to resignation.

Henceforth, all that Sarkis could do was maintain the status quo among the disparate armed groups and try to manage the crisis. In 1980, the rise of Bashir Jumayyil as the charismatic militia leader of the Maronite community forced Sarkis to mend fences. He ultimately persuaded the young Jumayyil to steer his course more toward the United States instead of relying exclusively on Israel. Toward the end of his term, Sarkis increasingly believed in the desirability of electing the strong Bashir to office. Sarkis refused suggestions that he remain for two more years as an extraordinary measure—even in the wake of Israel's 1982 invasion and after Bashir Jumayyil's assassination while president-elect.

Although accused by critics in the Maronite and leftist camps of being weak and vacillating, Sarkis was an honest and moderate president. He insisted that he had transferred power to his successor, Amin Jumayyil (Bashir's brother), with the government's apparatus still united and the economy strong despite the intermittent civil war. In retrospect, these were by no means negligible accomplishments.

Bassam Namani

SARTAWI, ISSAM

[1935–1983]

Palestinian doctor and political activist.

Issam Sartawi was born in 1935 in Acre during the British mandate over Palestine, received his university and medical education in Iraq, and then went to Ohio University in the early 1960s to specialize in heart surgery. In 1968, he returned to the Middle East and joined his family in Amman, Jordan. That year he formed the Organization of Action for the Liberation of Palestine, which carried out clandestine attacks against Israel from Jordan. In 1970, after King Hussein's forces fought to keep the armed Palestinian guerrilla groups in Jordan from overthrowing the government that had given them sanctuary, Sartawi disbanded his small force and joined al-Fatah, the armed Palestinian group led by Yasir Arafat.

Later, he became an advocate of recognizing Israel and seeking Israeli-Palestinian peace on the basis of a directly negotiated two-state solution. He frequently advised Arafat, who was by then Palestine Liberation Organization (PLO) chairman, and was roving representative for the PLO, although not a member of the PLO Executive Committee. In addition, Sartawi served as informal liaison between

Arafat and the Israeli doves and Western leaders. Sartawi had to contend with mounting criticism within the PLO. This led to his resignation from the Palestine National Council in 1981, though Arafat refused to accept it.

In April 1983, against a background of failed negotiations between Arafat and King Hussein on whether the latter would take part in U.S.-sponsored negotiations representing the Palestinians, Sartawi attended a meeting of the Socialist International in Portugal. On 10 April, he was assassinated there by a gunman. Sabri al-Banna's (Abu Nidal) al-Fatah (Revolutionary Council), which had broken away from the PLO nine years earlier, took responsibility for the shooting.

SASSON, ELIYAHU

[1902–1978]

Israeli senior official, diplomat, and cabinet minister.

Eliyahu (Elias) Sasson was born in Damascus to a middle-class Jewish family that emigrated to Palestine in 1919. He followed in 1927, after immersing himself in the life and politics of Damascus, including its Arab nationalist activities. This provided the basis for a wide network of contacts, which he put to full use once he became head of the Arab section of the Jewish Agency's Political Department in 1934. When the Israeli state was established, in May 1948, he was appointed director of its Foreign Ministry's Middle East Department.

Both before and after 1948, Sasson played major roles in Zionist–Arab and Israel–Arab diplomacy, seeking to promote understanding and agreement. His history placed him in a unique position as a Zionist who had a genuine rapport with Arab nationalists. During the 1940s, he held secret meetings with Amir (later King) Abdullah and members of his entourage. In December 1947, he wrote to the secretary-general of the Arab League hoping to find a way to prevent the outbreak of hostilities. After the first Arab–Israel War, he was part of the Israeli negotiating team in the armistice talks with the Egyptians at Rhodes.

In the bureaucratic politics of the young Israeli state, he was identified with the accommodationist line of Moshe Sharett. But Sharett was no match for David Ben-Gurion, and the softer policies of Sharett's school were defeated by the harsh realities of Arab-Israeli relations. Sasson found himself removed from the center of policy making when he was appointed Israel's first head of mission (as minister) in Turkey in 1949. After 1952, he took up the post of Israel's ambassador to Italy yet continued to advise his colleagues in the Foreign Ministry about Arab affairs from his station in Rome. From 1961 to 1969, he served in various Labor-led cabinets as minister of posts and minister of police, representing the Mizrahi/Sephardic component of Israel's population.

SASSOON FAMILY

Family of international renown, which originated in the Jewish community of Baghdad.

Sassoon ben Salih (1750–1830) was a banker to the *vali* (provincial governor) of Baghdad. His son David (1792–1864) fled from a new and unfriendly *vali,* going first to the Gulf port of Bushehr in 1828 and then to Bombay, India, in 1832, with his large family. In Bombay, he built the international business called David S. Sassoon, with the policy of staffing

it with people brought from Baghdad. They filled the functions of the various branches of his business in India, Burma, Malay, and east Asia. In each branch, he maintained a rabbi. His wealth and munificence were proverbial, and his business extended to China and then to England.

His eight sons also branched out into many directions. Elias David (1820–1880), his son by his first wife, left the firm to establish E. D. Sassoon. Three of his other sons became prominent in England and were great friends of the Prince of Wales, later Edward VII. Of those who settled in England, Sir Edward Albert Sassoon (1856–1912) was a Conservative member of Parliament from 1899 until his death, and the seat was inherited by his son Sir Philip Sassoon (1888–1939) from 1912 until his death. Sir Philip served in World War I as military secretary to Field Marshal Sir Douglas Haig and, during the 1920s and 1930s, as Britain's undersecretary of state for air. The English poet Siegfried Sassoon (1886–1967) is David's great-grandson. Intermarriage in England has caused the general loss of Judaism within this branch.

The branch that carried on the ancestral tradition has been represented by Rabbi Solomon David Sassoon (1915–1985), who moved from Letchworth to London and then to Jerusalem in 1970. He was the son of the David Sassoon who collected Jewish books and manuscripts and who catalogued them in *Ohel David,* in two volumes. This David was the son of Flora Abraham, who had moved from India to England in 1901 and established a famous salon in her London home.

SYLVIA G. HAIM

SATELLITE CITIES DEVELOPMENT

Egyptian satellite cities built on the outskirts of Cairo to reduce overpopulation.

Cairo is overwhelmed by a population estimated at 16 million, with some 90 percent of Egypt's 60 million inhabitants residing on only 4 percent of the country's territory. In 1976, as part of Anwar Sadat's "Open Door Policy," his government started building fourteen new cities to draw people away from Cairo to redirect urban growth toward the desert and away from the limited arable land. The plan encouraged foreign investment in Egypt largely banned since the country's 1952 socialist revolution under Gamel Abdel Nasser.

Bearing names that honor events in recent Egyptian history, the new cities have drawn industry away from the capital through tax exemptions for private investors, but have done little to alleviate Cairo's overpopulation. By the late 1990s, only 500,000 people had relocated to the new cities due to the poor quality of housing, lack of water and electricity, and their remoteness, characterized in the 1997 novel *Irtihalat al-Luʾlu* (The movement of pearls), by Niʿimat al-Bihayri.

The original plan focused on human habitability and an improvement in the quality of life. As the government was unable to fund the needs of these cities, their futures and the provision of human services fell on the shoulders of investors. Therefore, some towns have flourished, while others are virtual ghost towns. Greater Cairo's market in luxury housing absorbs a large portion of available investment capital and makes little contribution to needed housing for the general populace. Investors who choose to do so make infrastructural improvements to their developments; other developments are built under subpar conditions. The wealthy rim of Cairo's infrastructure is being rebuilt, while the city's center, and the poor populations who remain there, are neglected. In an attempt to reduce illegal squatting, the government has relocated some poor families to sites that function as public housing; some of these sites lack basic services such as water, electricity, and sewerage.

The satellite cities can be broken down into two general groups: residential, and a combination of industrial and residential. The residential areas invest in infrastructure that leads back into Cairo, while the idea behind the industry-based sites is to develop self-sufficient cities. While the following is not an exhaustive list, it provides an overview of development and success.

Residential

Madinat Nasr, or "Victory City," one of the largest and earliest of the desert development areas of the 1970s, is now a vast residential quarter. Approximately 50 percent of its residents are high-ranking

diplomats. Other luxurious residential areas (some gated communities), evoking Sadat's fascination with American cities like Los Angeles and Houston, are named Beverly Hills, Gardenia Park, Dreamland, and Hayy al-Ashgar (Treeville). Another area that is under private development in the northeast is called New Cairo.

Residential/Industrial

Sadat City relies on approximately 180 heavy industrial enterprises. It now has a new fee-paying primary school, built by its businessmen, who claim it is the most modern and well-equipped school in the country. Investors in Sadat City are funding a rail link that they estimate could be running by 2005. Sixth of October City is experiencing the fastest expansion rate. There are over 1,300 factories, as well as sports stadiums and cinemas. It has greatly benefited by the Twenty-sixth of July Overpass connecting it to Cairo. It is the home of the private October 6 University. Tenth of Ramadan City has thousands of small and micro enterprises, making products aimed at a range of markets, from tourists to heavy industry. It suffers from environmental waste problems despite laws passed in 1994 to protect the environment. Its problems provide a negative example of the free reign investors have had in the development.

Fifteenth of May City began as commuter city serving nearby factories. It is now showing some signs of development, although it is not developing as rapidly as other cities. Madinat al-Salam has had virtually no major investors show interest and remains underdeveloped.

A 1989 government report estimated the population in all the satellite cities at one-fifth of the original plan. New tax incentives, in some cases "twenty-year tax holidays," have caught the attention of investors. By 1996 many of Egypt's 400 state-owned companies had been sold to private investors, and the government has paved the legal and regulatory way for entrepreneurs. Taking Sadat's idea one step further, Husni Mubarak has pledged nearly $9 billion to build 18 new cities in remote desert regions of the Sinai, the Red Sea, and the New Delta, estimating the settlements will house 3.3 million Egyptians, create 70,000 new jobs, and support 75,000 acres of farmland.

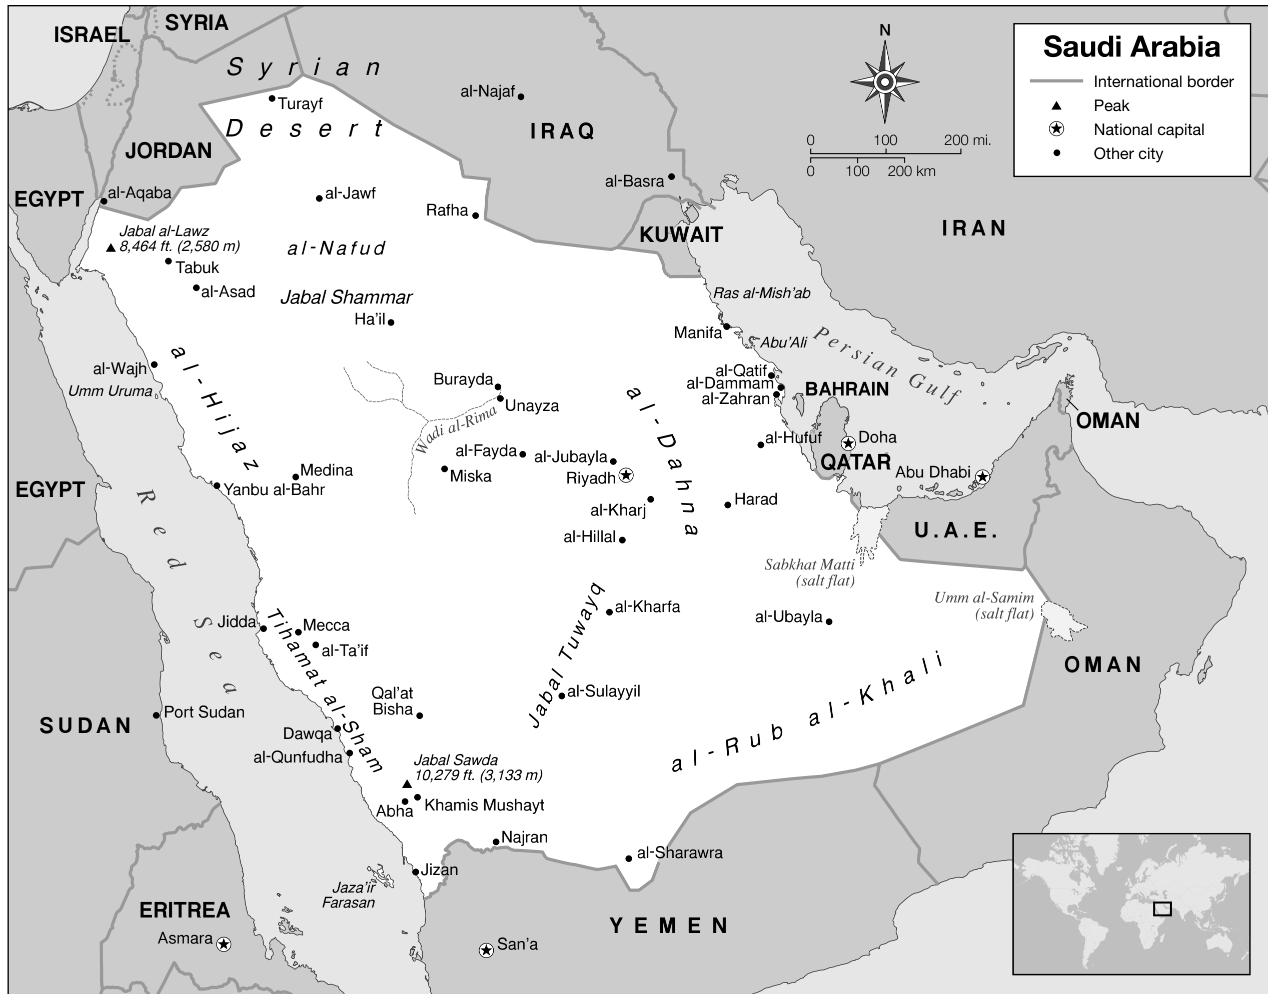
HANI FAKHOURI
UPDATED BY MARIA F. CURTIS

SAUDI ARABIA

Country in the Arabian Peninsula.

The Kingdom of Saudi Arabia occupies the greater part of the Arabian Peninsula, with a size of approximately 830,000 square miles (2,150,000 sq. km) and a population in 2002 of approximately 22 million. The country is bounded on the west by the Red Sea; on the north by Jordan and Iraq; on the east by the Gulf (also known as the Persian or Arabian Gulf) and the small states of Kuwait, the island state of Bahrain just off the Saudi shore, Qatar, and the United Arab Emirates; and on the south by Oman and Yemen. The country forms a rough triangle, tilting from west to east. Al-Hijaz, the westernmost of the three principal regions, rises from a low, barren coastal plain to a craggy, mountainous spine before leveling out into a gravel plateau. As the birthplace of Islam, al-Hijaz contains Islam's holiest cities, Makka (Mecca) and al-Madina (Medina). It also contains Saudi Arabia's second-largest city, Jidda (Jedda), with the country's biggest port. The center of the country is occupied by the Najd, the historic center of modern Saudi Arabia and the location of its capital, Riyadh. The Eastern Province, lying between Riyadh and the Gulf, contains nearly all of the kingdom's massive oil deposits. Besides the conurbation of al-Zahran (Dhahran), al-Dammam, and al-Khubar (Khobar), the province also embraces the extensive and ancient oases of al-Ahsa (Hasa) and al-Qatif. Along the southeastern border, Saudi Arabia shares with Oman and Yemen the world's largest sand desert, al-Rub al-Khali (The empty quarter). In the southwest, the mountains of



MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

al-Hijaz grow higher as they proceed south across Asir into Yemen. The country is divided into thirteen provinces.

Nearly all of the country is desert, and the climate is generally very hot in the summer and humid along the seashores. Although the coastal plains are mild in winter, the interior desert can be cold. Small juniper forests exist only in several spots in the western mountains. There are no rivers or permanent bodies of water. Rainfall is sparse.

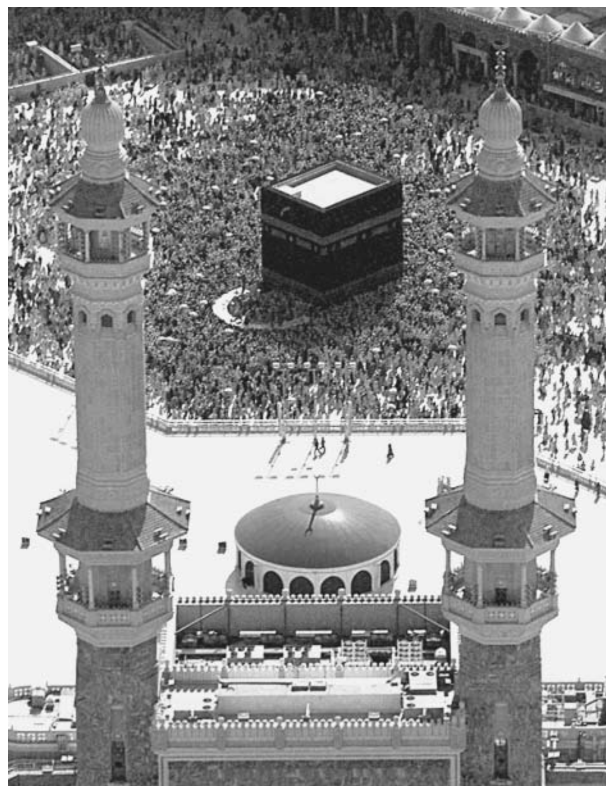
Economy

Traditionally, the majority of the people were engaged in pastoral nomadism, herding camels, goats, and sheep. Subsistence agriculture was practiced in the extensive oases of al-Ahsa (Hasa) and al-Qatif in the Eastern Province, as well as in other smaller oases across the country. Cultivation was also intense in the southwest highlands, and fishing was a feature along both the Red Sea and Gulf coasts, The west, particularly Mecca, Jidda, and Medina, relied on the hajj (the annual Muslim pilgrimage) for income. Trade was important throughout the country, but especially for the small ports along the coastlines and for transshipment centers such as Burayda and Unayza in the Najd.

Oil exploration began in the Eastern Province in the 1930s, and commercially exploitable reserves were discovered in 1938. The advent of the Second World War delayed large-scale production until the late 1940s. Production levels reached 0.5 million barrels per day in 1949, doubling by 1955, and rising to 3.5 million barrels per day by 1968. By the beginning of the 1980s, Saudi Arabia was produc-

ing about 10 million barrels per day. This declined to less than 4 million barrels per day as a result of the decline in world demand for oil, but at the beginning of the twenty-first century the kingdom was again producing over 8 million barrels per day and had become the world's largest crude oil exporter. Total reserves were estimated at 262 billion barrels in 2002, giving Saudi Arabia about 25 percent of the world's total. Other natural resources are negligible, although several small gold mines were put into operation in the early 1990s.

Oil completely transformed the Saudi economy. Prior to oil, the nascent Saudi kingdom was a poor state, highly dependent on hajj revenues for the government's income. Since then, Saudi Arabia has become a highly developed social welfare state. In the 1980s, it also embarked on a large-scale program of industrialization, emphasizing petrochemical industries and other energy-intensive industrial programs that could make effective use of locally refined oil or gas for fuel. The small ports of al-Jubayl on the Gulf and Yanbu on the Red Sea were selected as complementary sites for new industrial cities. Other industrial efforts have gone into import substitution and highly subsidized agricultural programs.



The Kaʿaba Stone is located in the Haram mosque in Mecca, Saudi Arabia. Millions of Muslim pilgrims walk around the Kaʿaba Stone each year at the end of the Hajj, which is a pilgrimage to Mecca. © CORBIS. REPRODUCED BY PERMISSION.

Language, Religion, and Education

Nearly all Saudi citizens are Arab, although there has been considerable ethnic mixing in al-Hijaz as a result of centuries of immigration connected with the hajj. Arabic is the sole indigenous language, but English is widely spoken. All Saudis are Muslims and most are Sunni. The Hanbali school of Islamic jurisprudence predominates because of Wahhabism, a movement within Sunni Islam, founded in eighteenth-century Najd by Muhammad Abd al-Wahhab, emphasizing the ascetic values of early Islam and widely followed within the kingdom (its adherents prefer to be known as Muwahhidun, or Unitarians). Saudi Arabia also perceives itself as having a special responsibility for the protection of the Islamic holy places. As many as 500,000 inhabitants of al-Qatif and al-Ahsa oases are Jaʿfari (or Twelver) Shiʿa, and small Shiʿite communities are to be found in Medina and Najran.

Great strides were made in education over the last half of the twentieth century, and about 62 percent of Saudi citizens are literate. The country has eight universities, the oldest of which dates from 1957. Three universities specialize in Islamic disciplines and the other five offer broader curricula. Several hundred thousand Saudis have received a university education abroad, notably in the United States and the United Kingdom.

Political Structure

Saudi Arabia is a monarchy, headed by a king drawn from the Al Saʿud royal family. The country's four monarchs since 1953 all have been sons of King Abd al-Aziz ibn Abd al-Rahman (r. 1902–1953): Saʿud (r. 1953–1964), Faisal (r. 1964–1975), Khalid (r. 1975–1982), and Fahd (r. 1982–). King Fahd also holds the title of prime minister. His half-brother Abdullah is heir apparent and first deputy prime minister. Because of King Fahd's poor health, Abdullah serves as the de facto head of government. Although the king holds enormous power, he is not

King Faisal ibn Abd al-Aziz Al Saʿud (1904–1975) is welcomed to the White House by President Richard Nixon and his wife Pat, during a 27 May 1971 state visit. During the 1960s and 1970s King Faisal positioned Saudi Arabia as the powerful supporter of the United States among the Middle East's Islamic nations. NATIONAL ARCHIVES, NLNP-WHPO-MPF-C6399(32A). REPRODUCED BY PERMISSION.

an absolute monarch, being required to rule according to Islamic precepts and tribal tradition. Important decisions are made only after gaining the consensus of an inner circle of male members of the royal family. Generally, the process of consensus-building also includes the rest of the family, other key families (such as collateral branches of the Al Saʿud and the Al al-Shaykh, descendants of Muhammad Abd al-Wahhab), the religious establishment, tribal shaykhs, senior government officials, and prominent merchant families.

The Council of Ministers was established in 1953 and its ranks have expanded so that the majority is made up of commoners, in addition to members of the Al Saʿud. The family continues to hold the key portfolios of defense, interior, and foreign affairs. The armed forces are divided into four services: army, air force, air defense, and navy. There is also a large national guard, which serves as a counterbalance to the regular armed forces and is said to be particularly loyal to the Al Saʿud. Saudi Arabia's orientation in foreign policy traditionally has been first to the Arab states and then to the Islamic world. Since the 1940s, the United States has been a key partner in oil exploitation, socioeconomic development, trade, and military and security matters. Staunchly anti-Communist, the kingdom established diplomatic relations with the Soviet Union only in 1990 (earlier relations in the 1920s and 1930s were allowed to lapse).

History

The present kingdom is the third Saudi state established since an alliance was struck in 1744 between Islamic reformer Muhammad Abd al-Wahhab and Muhammad ibn Saʿud Al Saʿud, then the head of the small town of al-Dirʿiyya in Najd. Imbued with the religious fervor of Wahhabism, Muhammad ibn

Saʿud and his successors were able to extend their authority over much of Arabia, thus creating the first Saudi state. However, their success, and especially the occupation of Mecca, aroused the anxiety of the Ottoman Empire, which instructed its viceroy in Egypt, Muhammad Ali, to send an army to Arabia to sack al-Dirʿiyya in 1818, and the Al Saʿud family's seat was subsequently moved to Riyadh, where it has remained ever since. Saudi fortunes revived in the mid-nineteenth century under Turki ibn Abdullah, who founded the second Saudi state, and his son Faysal ibn Turki, who regained many of the territories won by his predecessors and added new ones. However, another disastrous period in the late nineteenth century saw the Al Saʿud forced to surrender Najd to a rival family, the Al Rashid of Haʾil, and flee to Kuwait.

The origins of the third Saudi state lie in a surprise attack by young Abd al-Aziz ibn Abd al-Rahman on Riyadh in 1902. With Riyadh restored to Al Saʿud control, Abd al-Aziz (commonly known in the West as Ibn Saʿud) was able to conquer the rest of southern Najd and most of the Eastern Province before the First World War. After the war, the Saudi leader first absorbed the Al Rashid state and then conquered the Hashimi kingdom in al-Hijaz. At the beginning of 1926, Abd al-Aziz was able to proclaim himself King of al-Hijaz and Sultan of Najd. Over the next decade, he gradually extended his boundaries to their present limits, being prevented from further expansion on all sides by British-protected states (apart from Yemen, with whom a border war was fought in 1934). In 1932, the name of the country was changed to the Kingdom of Saudi Arabia.

The later years of King Abd al-Aziz's reign witnessed the infusion of oil income into a traditional society and the waste of much of it on consumer goods and the palaces of the Al Saʿud. Breaking with tradition, which held that succession should go to the strongest, King Abd al-Aziz appointed his weak son Saʿud as his heir instead of the more capable son Faisal. The early years of Saʿud's reign brought the kingdom to the brink of financial disaster, and his flirtation with Egypt's socialist leader, Gamal Abdel Nasser, did not prevent Egyptian intervention in Yemen in 1962. In 1964, an Al Saʿud family council, with the backing of the powerful religious establishment, deposed King Saʿud and named Faisal king. Faisal was able to continue the reforms

he already had instituted as prime minister and to lay the foundations of a modern government and social welfare system. Although he resisted Arab demands for a Saudi oil boycott of the West during the 1956 Arab-Israel War, he was unable to do so during the October 1973 war. The resultant shortage sent the price of oil soaring and put the kingdom in the center of the world stage.

In 1975, King Faisal was assassinated by a cousin, and his half-brother Khalid succeeded him, but Khalid left much of the day-to-day governing to his half-brother Fahd. When Khalid died in 1982, King Fahd inherited a country faced with much-reduced oil revenues and increasingly severe external challenges. The government suffered sixteen consecutive years of budget deficits before recording a surplus in 2000. The Iranian Revolution

(1979) and Iran-Iraq War (1980–1988) had refocused both Saudi and Western assessments of the principal threat to the kingdom away from the Soviet Union to a resurgent Iran. Saudi-Iranian relations remained troubled through the 1980s but improved through the 1990s. An even more serious threat emerged in August 1990, when Iraq invaded Kuwait and raised fears that it had designs on Saudi oil fields as well. Riyadh invited Arab and Western governments to participate in a coalition to drive the invading forces out of Kuwait. Operation Desert Storm was launched from Saudi territory in early 1991 and accomplished the liberation of Kuwait and the destruction of much of Iraq's military and industrial capability. The kingdom participated fully in the subsequent economic sanctions against Iraq, although popular opinion increasingly turned against them.

The kingdom has relied heavily on its "special relationship" with the United States for more than fifty years. But ties were severely strained after the terrorist attacks on the United States of 11 September 2001. Al-Qaʿida, a radical Islamist network established by a Saudi national, Osama bin Ladin, apparently orchestrated the attacks and recruited fifteen Saudis to be among the nineteen hijackers. In the following years, many in the United States claimed that the kingdom was not doing enough to stop the flow of funding to terrorist groups and that the country encouraged anti-American beliefs. The Saudi government strenuously denied these allegations and the Saudi and U.S. governments continued to have close official relations. A May 2003 terrorist attack on residential areas in Riyadh sparked a Saudi campaign to eradicate extremists in the kingdom, and a number of arrests and shootouts occurred over the succeeding months.

Riyadh's refusal to allow the United States to use military facilities in the kingdom during the 2003 war against Iraq prompted Washington to establish alternative bases in Qatar. By the end of that summer, all U.S. military detachments (apart from elements involved in training Saudi forces) were removed from the kingdom; this had been a key al-Qaʿida demand.

SAUDI, MONA

[1945–]

Jordanian sculptor and poet.

Mona Saudi (also Muna Saʿudi), born in Jordan, is one of the few Arab women artists to work primarily in stone, and especially to execute large-scale stone sculptures. Her sculptures have been produced in marble, granite, limestone, and other materials, and she has also done etchings to accompany them. She was educated at the Ecole Supérieure des Beaux Arts in Paris and was influenced by Brancusi, but her work also reflects an engagement with Islamic and ancient Middle Eastern artistic traditions. For example, many of her works are refined, abstract forms taken from Arabic calligraphy and Arabic words, or are done in the spirit of ancient Egyptian and Sumerian art. Saudi describes her pieces as already formed within the piece of stone and says her work is to draw them out through sculpting. Her work is also inspired by her reading and writing of poetry, and her poems have been translated in her collection *An Ocean of Dreams* (1999). Saudi is also an arts activist. She has published the drawings of Palestinian refugee children and organized arts exhibitions to support the Palestinian cause. She lives and works in Beirut, and her large-scale public sculptures can be found there, as well as in Jordan and at the Institut du Monde Arabe in Paris.

SAUNDERS, HAROLD

[1927–]

Senior U.S. official who helped to negotiate peace between Egypt and Israel, then launched a nongovernmental peace-through-dialogue program.

Harold H. (Hal) Saunders earned a Ph.D. in political history at Yale University before joining the U.S. Air Force and then the CIA as an analyst. He joined the National Security Council staff of the Kennedy administration in 1961, was involved in U.S. Mideast policy during the 1967 and 1973 Arab-Israel wars, witnessed the 1970 crisis in Jordan, and in 1974 joined the U.S. State Department as deputy assistant for the Near East and North Africa. From 1973 to 1975 he worked with Secretary of State Henry Kissinger on scores of Mideast missions: in response to the oil embargo and the outbreak of civil war in Lebanon; helping to mediate three interim Egyptian-Israeli peace agreements; and restating U.S. policy to the Palestinians (in what was later known as the Saunders document of 1975). As assistant secretary of state for the Near East and South Asia, Saunders advised President Jimmy Carter at the Camp David talks of 1978, attracting criticism from both Israeli president Menachem Begin and some Palestinian leaders over U.S. policy regarding Israeli settlements in Gaza and the West Bank. He also helped to draft the Egyptian–Israeli peace treaty of 1979, and, following the revolution in Iran, coordinated efforts to secure the release of U.S. embassy staff there.

Drawing on the early concept of a "peace process" that he helped to develop while working under Kissinger, Saunders became a leading advocate of "sustained" nongovernmental dialogues as an instrument of conflict resolution.

SAYGUN, AHMED ADNAN

[1907–1991]

Turkish composer.

İzmir-born Ahmed Adnan Saygun studied music in Turkey and at the age of twenty won a competition for a state scholarship to study in France. He was a member of the first generation of Turkish composers—known as "The Five"—who sought to add harmonic substructures to Turkish folk songs, which are pure melodies. Saygun and his colleagues also composed symphonies incorporating folk music. In 1934 Saygun composed the first important Turkish national opera, *Feridun,* based on a Perso-Turkish legend. Saygun also composed the operas *Kerem,* whose libretto narrated the love affair of a Christian girl and a Muslim boy, and *Köroğlu* (The son of the blind man), whose libretto tells the story of a chivalrous outlaw. Other compositions by Saygun include an oratorio, *Yunus Emre,* two string quartets, and piano concertos. His works have been performed in Paris, Moscow, New York, and Washington, D.C. Saygun also contributed to the training of the next generation of Turkish composers.

SAYYAB, BADR SHAKIR AL-

[1926–1964]

One of the first Iraqi poets to write Arabic free verse.

Born in Jaykur, Iraq, and educated in Basra and Baghdad, Badr Shakir al-Sayyab wrote one of the earliest poems of *al-shiʿr al-hurr* (roughly, free verse). His was the first modernist attempt to develop complex, anti-traditional modes to explore the human condition, metaphysics, and social and political issues, as well as his own experience and feelings, in sharp contrast to the poetry that had dominated previous decades. Constructing a text as a closely interwoven whole, he embodies the organic nature of the quest for modernization in the Arab world.

Al-Sayyab remained closer to the spirit and tone of classical Arabic poetry than other *al-ruwwad* (pioneers) of al-shiʿr al-hurr, even when using modern techniques or myth and symbolism. Those poems that appear ambiguous use myth or symbolic treatment of contemporary political situations.

Highly ideological (for many years a Marxist), al-Sayyab wrote more confessional and intimate poetry during his final illness. His life reads like a tale of political involvement and struggle, imprisonment, and suffering. The poet Adonis, a well-known scholar of Arabic literature, described al-Sayyab's poetry as "a point of meeting between two worlds, one retreating, the other advancing—emerging out of the future."

SAYYIDA ZAYNAB MOSQUE

Modern structure honoring the Islamic saint.

The mosque of Sayyida Zaynab, a modern structure built on a venerable and revered site, honors one of the great Islamic saints of Cairo. Sayyida Zaynab was a historical person, most frequently identified as either the sister of Sayyidna Husayn or the companion of Sayyida Nafisa. The *mawlid* (feast day) of Sayyida Zaynab is one of the most colorful in Cairo, drawing thousands to celebrate her putative birthday.

Raymond William Baker

SAYYIDNA HUSAYN MOSQUE

A neo-Gothic structure just north of al-Azhar in the old bazaar quarter of Cairo.

Sayyidna Husayn mosque, which honors the prophet Muhammad's grandson, was built in 1792. Standing so close to al-Azhar and amid the beloved old quarters of the city, the mosque exerts a special hold on the imagination of Egyptians.

SCHOOL FOR HAKĪMĀT

Western-style medical school and hospital established in 1827 in Abu Zaʿbal, Egypt.

In 1832, Muhammad Ali, ruler of Egypt, opened a school for *hakımāt* (women physicians). In the 1820s Egypt was underpopulated, and endemic and epidemic diseases, including smallpox, syphilis, plague, cholera, as well as stillbirths, were decimating the population. To strengthen Egypt's military and industrial workforce and to improve public health, Muhammad Ali recruited a French physician, Antoine-Barthelemy Clot (Bey), to establish a Western-style medical school and hospital in Abu Zaʿbal. A number of physicians came from Europe to train Egyptian medical students and also health barbers, who customarily carried out minor surgical procedures such as bloodletting in addition to haircutting, to vaccinate the population against smallpox. However, the health barbers had limited access to women and children, who thus remained unvaccinated. In addition, the physicians believed that the high rate of stillbirths was caused by uneducated local midwives. To address these issues, as well as to control the spread of syphilis among his troops, Muhammad Ali also asked Clot (Bey) to establish a European-style medical school specifically to train women physicians (*hakımāt*), which opened at Abu Zaʿbal in 1832, and was subsequently moved to Qasr al-Ayni. Students for the first classes were Abyssinian and Sudanese girls purchased at the Cairo slave market and abandoned Egyptian girls living in a hospice for the poor. In later years, Egyptian military families also sent their daughters to the school.

In a six-year program, the students were taught to read and write Arabic, vaccinate against smallpox, bleed, perform obstetric maneuvers, treat and report cases of syphilis, register births and deaths, and conduct postmortems on female corpses. Upon graduation they received a military rank and were married to officers of similar rank. The *hakımāt* were familiar figures in the countryside where they were called in medical emergencies, in coroners' offices where they carried out postmortem examinations, in police stations where they conducted forensic procedures, and in court houses where they testified in criminal cases. Their working conditions, salary, and social status, however, remained low.

Nevertheless, control of the school gradually shifted to the *hakımāt.* The first director of the school was Madame Fery, who retired in 1836. Palmyre Gault, a graduate of the midwifery program and the maternity hospital in Paris, immediately succeeded her but died of plague in 1840. In 1844 a Coptic male physician became director, followed by two graduates of the school. Following the British occupation in 1882, the colonial authorities sharply limited enrollment in the medical schools and insisted that they use British textbooks and teach in English only. The school at Qasr al-Ayni became little more than a school for midwives.

NANCY GALLAGHER

SCIENCE AND TECHNOLOGY

With the notable exception of Israel, science and technology in the Middle East is at an embryonic stage, especially when compared to the West. Whether and how it develops will depend largely on politics and economics in each country and in the area.

The science and technology systems in most Middle Eastern countries are, with two exceptions, similar to those in other developing countries. Israel, whose system is akin to that of industrial countries, is the major exception. The other is Afghanistan, which has not yet established a scientific infrastructure.

Most Middle Eastern countries are primarily interested in applying science and technology for development. Some have sought to acquire capabilities in defense technologies but have been only partially successful. Israel alone has succeeded in applying technology for developmental and military purposes.

With the exception of Israel, information on professional manpower and science-related institutions in all countries is limited.

Manpower Development

Governments of the region have long recognized the importance of professional manpower to national development and have consequently devoted considerable efforts and resources to the provision of higher education. During the early 1950s, most countries except for Egypt and Israel suffered from shortages of professional manpower. These shortages have today been overcome everywhere in the region except Afghanistan.

Substantial numbers of engineers and scientists are now available. The Arab countries are in the lead, with a total of some 600,000 engineers. The figures on research and development (R&D) scientific manpower, though incomplete and fragmentary, are as follows: Egypt (1986), 21,000; Iran (1985), 3,200; Israel (1984), 20,000; Turkey (1985), 11,300. These countries also had a substantial number of university professors: Egypt (1988), 33,000; Algeria (1988), 14,000; Morocco (1989), 7,000; Iraq (1986), 4,600; Saudi Arabia (1988), 10,000; Syria (1986), 5,000; Iran (1988), 14,000; Turkey (1989), 31,000.

Graduate level education and postdoctoral specialization in the basic and applied sciences are still dependent on foreign study.

Despite large numbers of scientists and engineers, the science and technology systems in most countries suffer from a lack of articulation: higher education is not integrated with demand. Moreover, continuing and distance education is still underdeveloped. Consequently, there is an inability to adapt and upgrade manpower skills in an efficient and cost-effective manner.

Israel, by contrast, depends heavily on educated immigrants. Its universities are of high quality, and effective systems of continuing and distance education have been introduced.

Research & Development

R&D in Israel is at the same level as those of leading industrial countries. It publishes about 10,000 papers a year in refereed journals surveyed by the Institute of Scientific Information (ISI) in Philadelphia. Its per capita publication output compares favorably with that of the United States, and the profile of its publications is similar to that of other industrial countries.

Israeli researchers circulate in and receive funding and support from European and American research establishments. A considerable proportion of Israeli R&D is directed toward weapons systems; but Israel also has strong research programs in most scientific and technological fields of relevance to its economy. It devotes about 3 percent of its gross national product (GNP) to R&D, and currently has about 50,000 research scientists. Its heavy emphasis on military technology is, however, causing serious economic problems as a result of the current collapse of the world demand for weaponry.

The scientific output of the Arab countries can be compared favorably with that of Brazil and India, the leading developing countries. During the 1980s, the number of scientific publications per million inhabitants was 18 (Brazil), 16 (India), and 15 (the Arab world). The per capita output of the Arab countries is some 2 percent that of industrial countries. In 1990, there were more than 5,000 publications from 700 Arab institutions. Half of these were from 12 institutions, 11 of which were universities. Other institutions involved in publishing were hospitals and agricultural research stations.

R&D in the Arab countries is overwhelmingly of an applied nature. Thirty-eight percent of publications are in medicine; 20 percent in agriculture;

17 percent in engineering; 17 percent in the basic sciences; and 8 percent in economics and management. Even work that is classified as basic science is often of an applied nature. The three leading countries in order of research output are Egypt (37 percent), Saudi Arabia (20 percent), and Kuwait (12 percent). In 1990, Kuwaiti output had started to approach that of European countries.

Publications from Iran and Turkey are on a more limited scale; their output in 1990 was 161 and 1,300, respectively. The number of publishing institutions was 80 (Iran) and 155 (Turkey).

The profile of publications from Iran and Turkey, like that in the Arab countries, emphasizes traditional and applied fields such as medicine and agriculture; the proportion of publications in the basic sciences, molecular biology, information sciences, and other advanced areas is far below international levels.

The exact funding of R&D in the Arab world, Iran, and Turkey is not accurately known; it is estimated, however, to be below 1.0 percent (probably closer to 0.5 percent) of GNP throughout the region.

Institutional Framework

The capacity to apply science and technology is dependent on the prevailing institutional framework rather than on the actual number of professionals. Most of the countries have some form of institution to manage science and technology: ministries of science and technology or directorates, attached to the ministry of higher education, of planning, or to the prime minister, which are responsible for different aspects of science and technology.

But the pervasive nature of science and technology is still not recognized, and these institutions are generally bureaucratic and inflexible; they tend to regard science and technology as being restricted to R&D and manpower.

Once again, Israel is the exception; it has established an effective and comprehensive system of science policy planning and management.

The Application of Science and Technology

Some of the instruments through which science and technology are developed and applied are: consulting and contracting organizations, agricultural research stations, extension programs, hospitals, industrial firms, testing laboratories, information services, and others.

Most countries have organizations to provide these services that vary in competence and efficiency. A brief description follows of two strategic types of organizations.

Consulting organizations are critical instruments for planning and designing new projects and for adapting and transferring technology. A substantial number of state-run and private consulting firms have been established throughout the region. In fact, one of the largest international consulting firms in developing countries is Lebanese (Dar al-Hanadasa [Shair & Partners]). Large public-sector consulting firms are found in most countries of the region.

Consulting firms are heavily oriented toward civil engineering technologies, with the result that the region is still dependent on the importation of consulting services in industrial technology.

Contracting organizations bring together ideas, plans, materials, equipment, labor, and financing to produce the desired products within an agreed schedule and cost. The largest contracting firms in the region are in Turkey, whose government has provided them with the necessary financial, risk cover, and diplomatic support.

There are around 100,000 Arab contracting firms, but the Arab countries still depend on foreign firms for 50 percent of their requirements. This is largely due to the absence of appropriate public policies. The leading Arab contracting companies are privately owned and based in Lebanon and Saudi Arabia.

National Science Policies

Israel is the only country in the region with the capacity to design and implement science and technology policies. In the rest of the region, national, regional, and international organizations have sought to promote the development of capabilities in science policy formation, but the results have been limited. This is due to the prevalence of preindustrial political cultures, which have made science policy formation difficult, if not impossible.

As of the mid-1990s there were increasing indications that Turkey would soon acquire an industrial political economy. When it does so, it will be capable of formulating and implementing science policies.

The colonial legacy of the region has led to the virtual elimination of intersectoral linkages and has resulted in the vertical integration of the components of a fragmented economy into foreign sources of technology. This situation has prevented the acquisition and accumulation of technological experiences, which in turn has reduced the chances of a transition to an industrial political economy.

The combination of underused capabilities and unexpected developments could lead the way to technology change. For example, the heavy bombing of Iraq, coupled with the stringent economic blockade, has forced the mobilization of Iraq's considerable capabilities in science and technology, which had previously been marginalized. A massive reconstruction of the country has consequently taken place. The same example applied to Iran during the 1980s.

Different countries in the region may discover how to mobilize their considerable professional scientific and technological manpower after other alternatives are no longer available. These challenges could induce changes in the political culture, which in turn could result in new attitudes toward science and technology.

SCOUTS

Worldwide youth movement that began in England in the early 1900s; it now has affiliates in virtually every country.

Except for Afghanistan, all Middle Eastern countries have scouting associations, affiliated with the World Organization of the Scout Movement. The oldest are in Lebanon (founded 1912), Syria (1913), Egypt (1918), Iraq (1921), Tunisia (1933), and Algeria (1934). The region's office of the World Scout Bureau is in Cairo, Egypt, for all Arab countries; in Geneva, Switzerland, for Turkey; and in Manila, Philippines, for Iran. In Israel, the girls' section belongs to the Asia-Pacific scout region (Manila), the boys' to the European (Geneva). Most countries have separate Boy Scouts and Girl Scout/Guide organizations.

As a youth movement in the Middle East, scouting revolves around camping and community service, including desert reclamation, medical aid, traffic control, tree planting, construction, helping pilgrims to Mecca, literacy activities, and disaster relief. Self-sufficiency and good citizenship are the goals, with volunteerism and outdoor activities stressed for health and positive attitudes toward society.

In 1990, the largest scout associations were in Iran (105,515), Egypt (73,275), Algeria (66,585), Tunisia (26,120), Israel (29,600), and Turkey (21,750). Total regional membership is some 450,000.

SEBASTIANI, HORACE

[1772–1851]

French general.

Horace Sebastiani was one of Napoléon Bonaparte's most trusted lieutenants. He traveled to Egypt and Syria in 1802/03 and reported favorably on the feasibility of a French reconquest. In 1806, Sebastiani became French ambassador in Constantinople (now Istanbul) and negotiated an informal alliance against Russia with the Ottoman sultan, Selim III. The re-

sulting conflict between Russia and the Ottoman Empire saw a radical increase in French power in Constantinople that undermined the authority of Selim III and thus paved the way for his deposition in 1807. As French foreign minister in 1832, Sebastiani was unable to halt the conflict between Sultan Mahmud II and Muhammad Ali. Seven years later, serving as ambassador in London, Sebastiani made a futile attempt to alert his government to Lord Palmerston's determination to humble Muhammad Ali. Having rejected Sebastiani's warnings, the French cabinet watched as an English coalition defeated Egypt without the aid of France. This diplomatic humiliation brought down the government of Adolphe Thiers and severely weakened French influence in the Middle East for years to come.

SEBBAR, LEILA

[1941–]

Algerian novelist and essayist.

Leila Sebbar was born on 9 November 1941 in Aflou, Algeria, to a French mother and an Algerian father. She lives in Paris and writes in French.

Sebbar deals with a variety of topics, and either adopts a purely fictional approach or uses psychology to make her point. Many of Sebbar's novels express the frustrations of the *Beur*, the second generation of Maghribi youth who were born and raised in France and who have not yet integrated into French society. Her book *Parle mon fils, parle à ta mère* (1984; Talk son, talk to your mother), illustrates the absence of dialogue between two generations who do not speak the same language.

The events of several novels center around a young woman called Shérazade, a name very close to Scheherazade, the heroine of the classic collection of Arabian tales, the *Thousand and One Nights*. Shérazade is the protagonist of three novels: *Shérazade, 17 ans, brune, frisée, les yeux verts* (1980; Shérazade, 17, brunette, curly hair, and green eyes); *Les carnets de Shérazade* (1985; Shérazade's notes); and *Le fou de Shérazade* (1991; Crazy about Shérazade). Sebbar uses the implicit connection between Shérazade and Scheherazade to establish the contrast between the old and the new generations of Algerian women, drawing a nonconventional image of the female Beur.

Other themes in Sebbar's writings are the problems of emigration and the torments of life in exile. The latter is central to *Lettres Parisiennes, autopsie de l'exil* (1986; Parisian letters, the autopsy of exile), a correspondence with Canadian novelist and essay writer Nancy Huston. Sebbar's double affiliation to Algeria and France is evoked in two short essays: "They Kill Teachers," published in a collection of autobiographical narratives, *Une enfance algérienne* (1997; An Algerian childhood), and "D'abord, ce n'est pas la guerre" (Primarily, it is not war), in *Une enfance outremer* (2001; A childhood overseas).

SECRET ARMY ORGANIZATION

See Organisation Armée Secrète (OAS)

SEDIQ, SOHAILA

Afghan female physician who promoted health care for women under the Marxist and Taliban governments.

Sohaila Sediq, Afghanistan's first female general and the minister of health during the interim government of Hamid Karzai, was born in 1941 in Kandahar, Afghanistan. She is a Durrani Pushtun and belongs to the Mohammadzai clan. She received

a medical degree in the Soviet Union and was promoted to the rank of military general by the Marxist regime of Babrak Karmal (1980–1986) in recognition of her service as a surgeon during the fighting between the Karmal regime and the mojahedin (Afghan freedom fighters). Although she received her medical training in the Soviet Union and worked closely with Soviet doctors in the military hospital in Kabul, there is no evidence to suggest that she joined the Afghan communist party (the People's Democratic Party of Afghanistan). She was director of the Women and Children's Hospital in Kabul under the Taliban and an advocate for the protection of women, but she opposed the campaign in support of Afghan women led by Western feminists and Afghan women activists in exile; in her opinion, they were inadequately informed about conditions inside Afghanistan and attempted to use the plight of Afghan women to promote a Western feminist agenda. She is highly regarded by educated women inside Afghanistan.

SENZIL NAWID

SEFARETNAME

See GLOSSARY

SEFRIOUI, AHMED

[1915–]

Moroccan novelist and short-story writer.

Ahmed Sefrioui was born in Fez, Morocco. He studied at the Mulay Idris College in Fez, where he received a predominantly French education. He subsequently held posts at the Moroccan Office of Arts and Crafts, the Batha Museum in Fez, and the Office of Historic Monuments in Rabat.

Sefrioui's writings show his great interest in his country's folklore. *Le jardin des sortilèges ou le parfum des légendes* (1989; The garden of sorcery or the perfume of legends) is essentially a book of folktales. Other works, such as *Le chapelet d'ambre* (1949; The amber rosary) and *La boîte à merveille* (1954; The magic box), portray traditional Moroccan life and customs, which Sefrioui cherishes. Although they were written while Morocco was a French colony, Sefrioui's books ignore the foreign presence. His portrayals of his country's traditions are an affirmation of a threatened identity.

Sefrioui's approach is that of an ethnologist describing his society's customs and traditions and his religion's (Islam's) dictates. His novel *La maison de servitude* (1973; The house of slavery) provides a glimpse of traditional life in the city of Fez and of the teaching at the *qarawiyyin* (mosque university), paying special attention to details and using many Arabic terms to add an element of local color. Sefrioui's concern for the preservation of his culture is not unconditional and blind, however: He believes in the evolution of societies and the inevitability—and benefit—of change.

AIDA A. BAMIA

ŞEKER AHMET

[1841–1907]

Ottoman Turkish painter.

Ahmet Ali Paşa, known as Şeker Ahmet Paşa, was born and educated in the Uskudar district of Istanbul. While a student at the medical school, his talent for painting drew the attention of Sultan Abdülaziz, who sent him to Paris where he studied the academic painting of the period with French artists Boulanger and Gérôme. In 1870, he displayed his work in a Parisian exhibition, and in 1871, he returned to Istanbul. Şeker Ahmet Paşa organized and participated in a number of exhibitions in Istanbul and won many Ottoman and foreign awards for his work. The highly finished quality of his paints and the static linearity of his renderings call to mind French academic painters such as Daubigny and Courbet. His series of landscapes of the gardens and parks of Istanbul, as well as a variety of still lifes, reflects the conscious efforts of Turkish artists to develop Western techniques of painting.

David Waldner

SELÇUK, MUNIR NURETTIN

[1899–1981]

Turkish singer and composer.

One of the most skillful and famous Turkish singers of the twentieth century, Munir Nurettin Selçuk was born in Istanbul during the Ottoman Empire, the son of an official in the Imperial Council. His aptitude for music and his beautiful voice became apparent when he was still a child, and he then began to take music lessons from the foremost teachers of the time.

He gave his first public concert at the age of eighteen. Throughout the 1920s, he continued to study music, including a period of piano study in Paris, and his first recordings date from this decade. Beginning in 1942, he served on the board of directors of the Istanbul Conservatory and became its chief in 1953. He composed more than one hundred pieces and was a founder of the Eastern Music Group, which was led by Ali Rifat Çagetay.

SELIM III

[1761–1808]

Twenty-eighth Ottoman sultan, 1789–1807.

The son of Mustafa III, Selim was allowed by his uncle Abdülhamit I an unusually free and liberal upbringing, on the assumption that he would succeed to the throne. Wars against Russia during the reigns of his father and uncle convinced Selim of the need to modernize the Ottoman army, and while still a prince he sought advice and assistance from King Louis XVI of France for this purpose.

When Selim succeeded his uncle in April 1789, the Ottoman Empire was again at war with Russia and Austria. Selim's first act, in May, was to convene a special assembly of leading statesmen to discuss the empire's military and financial problems,

A 1798 engraving of Selim III (1761–1808), sultan of the Ottoman Empire from 1789 to 1807. Selim's attempts to reform the empire angered conservatives and the Janissaries, who overthrew him in 1807 and then had him strangled. © Michael Nicholson/Corbis. Reproduced by permission.

and to request detailed reports on how to proceed with reforms. The resulting New Order program accelerated and formalized the piecemeal military and educational Europeanization started earlier. A new army corps was formed, with a separate financial bureau to administer earmarked revenues to support the effort. Schools to train officers for the army and navy in the European manner were given new impetus. Another extension of a process begun earlier was in diplomatic relations with European powers. Ambassadors had been sent to leading

capitals to gather information on European politics and international relations, and to study recent military and technological advances; in 1792 the Ottoman government established permanent embassies in London, Paris, Berlin, Vienna, and St. Petersburg so that the empire could be better informed about European relations and present its concerns directly.

With Europe increasingly preoccupied with French Revolutionary wars, Selim turned his attention to internal political problems, using his new troops to suppress provincial notables who controlled large areas of the empire's territories. They had some initial success, but from 1797 the empire was embroiled in the European war when France took an active interest in the eastern Mediterranean, culminating in Napoleon's invasion of Egypt in 1798. The Ottoman Empire was thus forced to accept support from Britain and Russia against its traditional ally France. After Britain's navy and Selim's army turned Napoleon back from Palestine, France left Egypt in 1801, and Britain followed soon thereafter. Nevertheless, full Ottoman control could not be restored; the vice commander of the New Order army in Egypt, Muhammad Ali, eventually gained power.

In Arabia, Wahhabi doctrine had taken hold, and its Saʿudi champion rejected Selim's position as caliph of the Sunni Muslim community. In the Balkans, Russia's influence was growing, both in the Danubian principalities and in Serbia, where a revolt began in 1804. Since France's threat to the Ottoman territories had been lifted, Britain had assumed an active role in the eastern Mediterranean. After Napoleon's victories in central Europe, Selim, wishing to balance the influences of Britain and Russia, attempted to revive the alliance with France, but Russia's advance into Moldavia and Wallachia in October 1806 and Britain's naval activity near Istanbul in January 1807 prevented it.

Beset by foreign engagements not of his choosing; unable to establish authority in the provinces, where political, religious, and ethnic uprisings challenged his rule; and alienating large segments of Istanbul's population by what seemed to be an overhasty attempt to Europeanize while European powers dominated the empire's policies, Selim was deposed in May 1807 after a popular insurrection supported by palace attendants and out-of-favor officials. A year later, when provincial forces loyal to Selim marched on the capital, he was killed to prevent a countercoup.

Though a Europeanizing reformer, Selim was educated in the classical Islamic-Ottoman culture. He was a distinguished poet and a talented composer. He tried to regenerate the power of his empire through a European-style army, but in his political behavior he was a typical sultan. He helped develop policy and direction, but left government in the hands of viziers. To keep factionalism in check, he changed viziers and other statesmen frequently. His greatest misfortune was that his empire no longer could set its own course and go at its own pace. In the last decade of his rule, Selim found himself responding to foreign threats from rapidly shifting directions, desperately trying to keep in check external and internal forces that proved to be beyond his control.

SEMITES

See GLOSSARY

SEMITIC LANGUAGES

A group of languages, previously categorized as the Semito-Hamitic family, that are now described as a branch of the Afro-Asiatic linguistic family.

Hebrew, Aramaic, Syriac, and Ugaritic are derived from the Northwest Semitic group; Arabic and the Ethiopic languages belong to the South Semitic branch. The character-defining feature of Semitic languages is the system of consonant roots. Most words are triliteral (three consonants separated by vowels), though bi- and quadriliterals are also common. Each root represents a distinct meaning; variations from that root are derived by set patterns of

vocalization, less important consonants, and prefixes or suffixes. The root sense of the verb is modified to express intensification, causation, reciprocity, etc., by vowel changes or prefixes. All members of the family have two genders, masculine and feminine, and, with the exception of Ethiopic languages, the adjective follows the noun and agrees with it in gender. Nominal sentences are ordered subject-verb-object, while verbal sentences are verb-subject-object.

SEPEHRI, SOHRAB

[1928–1980]

Iranian poet and painter.

Sohrab Sepehri was born in Kashan and graduated from Tehran University's Faculty of Fine Arts. He founded a school of poetry resembling that of the French symbolists. Although commentators place him within the tradition of Iranian poetry, he created totally new metaphors in his verse. Sepehri's most famous piece, *Seda-ye Pa-ye Ab* (The sound of the water's footsteps, 1965), is an autobiographical narrative verse that many critics consider a masterpiece of contemporary Persian poetry.

SEPTEMBER 11TH, 2001

Day of al-Qaʿida terrorist attacks on the United States.

On 11 September 2001, two hijacked planes were flown into the Twin Towers of the World Trade Center; a third hijacked plane was crashed into the Pentagon in Washington, D.C.; and a fourth crashed in Pennsylvania on its way to another target in Washington, D.C. (most likely the Capitol). The attacks, the work of Osama bin Ladin's al-Qaʿida, resulted in the deaths of about three thousand people, including the passengers and hijackers of the four planes and civilians from more than eighty countries. The Twin Towers, the tallest structures in New York City, collapsed to the ground after the explosion of the jet fuel, and the Pentagon sustained major damage to one wing. For the first time in U.S. history, the Federal Aviation Administration suspended all flight operations at the nation's airports.

It is still not clear whether bin Ladin intended to trigger a war between the United States and all Muslims, or whether these acts of violence were intended to terrorize the "enemy." While it has been established that bin Ladin's group was responsible for the attacks, conspiracy theories regarding the "real culprits" continue to fascinate and galvanize world public opinion. Many people in the Middle East are still skeptical about the U.S. version of the events, and a book by a French journalist that alleged that the U.S. government was behind the attacks was a best-seller in France.

In the United States, the attacks changed the political culture; a climate of fear spread throughout the country, and the Bush administration pushed for the passage of USA PATRIOT Act I, a series of legal changes that would augment the powers of the central government, in the name of security. Critics were concerned that the administration took advantage of the climate of fear to curtail the civil liberties of American citizens and of alien residents in the United States. Following the attacks, hundreds of citizens and residents were arrested by the Federal government, though many would not be charged with crimes; not one of the more than 1,200 arrested after 11 September has been linked

United Airlines flight 175 was the second hijacked plane flown into the World Trade Center in New York City on 11 September 2001. These attacks, which have been linked to the al-Qaʿida terrorist network, prompted the United States to military action against Afghanistan's Taliban leadership as part of its "War on Terrorism." © AP/Wide World Photos. Reproduced by permission.

to the 11 September attacks. More than half of them were convicted on traffic or visa violations and were deported out of the United States. Around the world, 11 September signaled a new era of international relations with the inauguration of the Bush Doctrine, according to which the United States would claim the right to attack other countries, and to overthrow their governments, if those governments were perceived to pose a threat to the United States. The aggressive response of the United States, through the wars in Afghanistan and Iraq, and the presence of U.S. troops in more than 120 countries, alarmed world public opinion, although Americans remained by and large supportive of U.S. efforts. In the Middle East, antipathy to the U.S. government seems to have increased after 11 September following the statements and actions of the White House, which remains convinced that its problem with the Muslim world is one of public relations, not politics. Toward that effort, the U.S. government has been spending millions to influence the opinions and politics of the Muslim world. It is certain that the events of 11 September (the subject of hundreds of books in many languages) will influence world affairs for years, if not decades, to come.

SERASKER

See Glossary

SERI, DAN-BENAYA

[1935–]

Israeli author.

Seri was born in Jerusalem. His first novel, *Grandma Sultana's Salty Biscuits* (1980), was acclaimed for its originality in weaving folk motifs, psychological depth, and surrealism into a poetic prose rich in language and detail. His second book, *Birds of Shade* (1987), includes four novellas, one of which, "Siman-Tov's Thousand Wives," was made into a film.

Seri's works are set in Jerusalem and focus on its Sephardic (Mizrahi) Jewish communities. He creates bizarre plots of sexual perversion stemming from cultural mores, customs, and taboos, as well as individual eccentricity. The fictitious community featured in these works is oblivious to the surrounding world, lives by its folk traditions and lusts, and is controlled by the intensity of a pseudological progression of events. The gallery of characters created by Seri appears in all of his books, forming a fantastic-realistic world of consistent anomalies. His prose style is saturated with biblical and Talmudic references, often used out of their original context and meaning, thus producing a cunning modernistic irony.

Mishael, the protagonist of Seri's novel *Mishael* (1992), is a lonely widower who discovers that he is pregnant. As his body grotesquely transforms to that of a woman, Mishael sets out to find himself a new wife, all the while confronting his own sexual identity and the harassment of his community. The novel suggests childhood traumas and guilt as the grounds for this predicament, yet the hero's acceptance of the unnatural as reality is its main strength.

SETIF

City southwest of Constantine in northeastern Algeria.

Setif is located at the site of the ancient Roman city of Sitifis. Near Setif in 1152 the Almohads defeated the Banu Hilal tribe. The city declined during the Ottoman Empire. During France's colonial administration, the city was the site of bloody riots and retributions (the Setif Revolt) in May 1945, which galvanized Algerian nationalism. The estimated population in 1998 was 212,000.

PHILLIP C. NAYLOR

SETIF REVOLT (1945)

One of the most violent incidents in the history of French colonialism in Algeria.

The May 1945 revolt in the city of Setif, Algeria, was caused by the deportation proceedings of Messali Hadj, the rising expectations for reform, and the agitations of nationalists. After the start of a parade celebrating Europe's victory over fascism, Muslims demonstrated carrying nationalist placards. This provoked the police, leading to rioting and the deaths of 103 Europeans. French retribution probably caused between 5,000 and 10,000 Muslim deaths (although some contend that the fatalities were in the tens of thousands).

This event convinced many younger nationalists that violence was the only recourse to French colonialism as disclosed by the 1947 formation of the Organisation Spéciale (OS) and in 1954 the Front de Libération Nationale (FLN).

ŞEVKET, MAHMUT

[1856–1913]

Ottoman general and grand vizier.

Born in Baghdad the son of a provincial government official, Mahmut Şevket, known as Şevket Paşa, completed his studies in Constantinople (now Istanbul), where he entered military service. As part of a special commission for military purchases and training, he was sent to Germany for nine years. He was promoted to the rank of general in 1901. Between 1905 and 1909, he held several posts in Rumelia, achieving minor successes in easing tension in the region.

A year after the Young Turk revolution, Şevket Paşa achieved new prominence as commander of the Hareket Ordusu (operations army) that marched on Constantinople in April 1909, putting down the counterrevolution. In the new post of inspector general of Constantinople, he led the brutal represssion and punishment of the rebels under martial law for the next two years. In 1910, he became minister of war and advocated withdrawal of the military from politics. When the Committee for Union and Progress (CUP) seized power in January 1913, it appointed him grand vizier. Six months later, he was assassinated by CUP opponents. His murder introduced a new period of violent repression by the CUP.

ELIZABETH THOMPSON

SÈVRES PROTOCOL (1956)

Secret Israeli-British-French agreement.

The Sèvres Protocol was the product of secret negotiations among British, French, and Israeli leaders

at a villa in Sèvres, a Paris suburb, from 22 to 24 October 1956 to initiate war against Nasser's Egypt. The protocol reflects diverse grievances: Britain was concerned about loss of control over the Suez Canal; France was disturbed about Egyptian support for Algerian rebels; Israel was anxious about Egypt's active support for terrorist incursions, the blockade of its southern port, Elat, and massive arms purchases from Czechoslovakia. Interests coalesced during the summer of 1956, with the French serving as the essential intermediary between the British and Israelis, who were deeply suspicious of each other.

The protocol began with a plan for inaugurating an attack across Sinai by Israel on 29 October with the aim of reaching the Suez Canal a day later. The British and French were to issue an ultimatum to both sides on 30 October calling for a cease-fire and for separating the contending parties beyond a zone of ten miles on either side of the canal. Anticipating Egyptian rejection, Britain and France were to occupy that zone while Israel was to clear the Egyptian blockade of Elat by occupying the islands of Tiran and Sinafir at the southern end of the Red Sea. There was also a French annex to the protocol providing for an aerial umbrella and a naval presence to secure Israel proper from Egyptian attack. The protocol was signed by Israeli prime minister David Ben-Gurion, French foreign minister Christian Pineau, and British deputy secretary of state and chairman of the joint intelligence committee Patrick Dean. After the signing, the three governments fulfilled their obligations although they denied the existence of the negotiations and the protocol. Eager to hide evidence of this "collusion," British prime minister Anthony Eden shredded the document and the French misplaced it. Surviving copies are to be found in Israeli archives, where evidence of the first instance of cooperation with Western powers was treasured.

S. ILAN TROEN

SÈVRES, TREATY OF (1920)

Peace treaty signed by Britain, France, and the Ottoman Empire after World War I.

World War I ended in the Middle East with the signing of the Mudros armistice by the Ottoman Empire on 30 October 1918; but the Middle East was only a small concern of the overall peace negotiations held in France in 1919—German issues took precedence.

Each nation and group came with its own agenda. British prime minister David Lloyd George, while mouthing all the proper slogans about goodwill to Middle Eastern peoples, was there to advance the interests of the British Empire. These included British-controlled sea and land routes to India and assurance that no other power be given important strategic areas. French president Georges Clemenceau, compensating for heavy French troop losses, adamantly adhered to each wartime agreement signed by the Allies that would give France a hold on Syria and southern Anatolia. He also hoped for dominance over the Turkish Straits and perhaps over what would become Turkey. U.S. president Woodrow Wilson came with his Fourteen Points.

In addition to the big three, representatives of other concerned nations and groups came to the peace negotiations, including the Hijazis, Armenians, Greeks, Italians, and Zionists. No permanent decision were made in 1919 in this atmosphere of claims and counterclaims.

At the end of 1919, British troops in Syria were replaced by French troops, giving the Arabs the impression that the Sykes–Picot Agreement would be upheld. In Palestine, anti-Jewish riots broke out. The Arab Syrian Congress elected Faisal ibn Hussein as king of Syria and his brother Abdullah I ibn Hussein as king of Iraq and tensions rose in Iraq and Egypt. Britain realized that a treaty for the Middle East could no longer be postponed and in April 1920 met with France in San Remo, Italy, to forge an agreement on their points of difference. This prepared the way for a peace settlement with the Ottoman Empire—and the Treaty of Sèvres was signed on 10 August 1920.

By this treaty, the Ottoman sultan recognized that his Arab provinces were cut off from his empire.

In August of 1920, at the end of World War I, Turkey and the Allies signed the Treaty of Sèvres, which dissolved the Ottoman Empire as well as the sovereignty of Turkey. © Bettmann/Corbis. Reproduced by permission.

Control over the Straits went to an international commission. Arabia was recognized as independent and a British protectorate over Egypt was acknowledged. Syria and Iraq became provisionally independent under the newly created mandate system—with Syria to be under the French and to include Alexandretta, Aleppo, Damascus, and Beirut; France could deal with King Faisal as it wished. The state of Iraq was formed under British tutelage, with the province of Mosul attached to those of Baghdad and Basra. Palestine, including both sides of the Jordan river, became a British mandate as well, and the (pro-Zionist) Balfour Declaration of 1917 was written into it. Germany's shares of the Turkish petroleum Company went to France, and Britain got oil-pipeline transit rights across Syria. Britain and France immediately moved into their respective spheres, although the League of Nations mandates did not become effective until 1923.

The Treaty of Sèvres, imposed on the Ottoman government, was never ratified—because of internal Turkish affairs—namely the rise to power of Mustafa Kemal Atatürk and the overthrow of the Ottoman sultan. Thus the treaty became obsolete and final arrangements were put off until the Treaty of Lausanne, signed in 1923.

SEZER, AHMET

[1941–]

Tenth president of the Republic of Turkey.

Ahmet Sezer graduated from the Faculty of Law at Ankara University in 1962, and in the same year started his career as judge in Ankara. Following the completion of his military service in the Land Forces Academy, he served as a judge in the town of Dicle and later took up assignment as a supervisory judge at the High Court of Appeals in Ankara. He was elected as a full judge to the High Court of Appeals in 1983 and appointed by the president to serve on the Constitutional Court in September 1988. Sezer was elected chief justice of the Constitutional Court in January 1998. The Turkish Grand National Assembly named him the tenth president of the Republic of Turkey on 5 May 2000.

Sezer is known for his rigid views on secularism and legalism. He has stated that secularism is a necessary condition of democracy, and he gives priority to secularism over democracy. Turkey's liberal advocates of broader civil rights have expressed deep disappointment with Sezer.

SFAR, BASHIR

[c. 1865–1919]

Tunisian journalist.

From an aristocratic family of Tunis, Bashir Sfar was one of four editors of Tunisia's news periodical *Al-Hadira* (The capital). Sfar was a leader of the reformist Young Tunisian movement, which brought together classically trained Tunisians from the Zaytuna mosque and modernly trained Tunisians from Sadiqi College in the middle years of the French protectorate. This was a precursor to the movement for independence from France.

LAURENCE MICHALAK

SFAR, TAHAR

[1903–]

Tunisian nationalist.

One of the early and most vocal leaders of the nationalist Destour movement, Sfar was educated at the Tunisian Sadiqi College and in France. Sfar became adjunct secretary-general of the Neo-Destour Party in 1934, during the Ksar Hellal Congress that consecrated the rupture between the Neo and Archeo sectors of the independence movement and delineated new guidelines in the struggle toward independence under the leadership of Mahmoud Materi, with Habib Bourguiba as secretary-general. In the late 1930s, faced with increasingly repressive measures by the French colonial administration and disillusioned with the militant stance adopted by Bourguiba and others, Sfar effectively withdrew from politics.

UPDATED BY VANESA CASANOVA-FERNANDEZ

SFAX

Tunisian seaport on the northeast coast of the Gulf of Gabès.

Sfax (also Sfaqes or Safaqis) was a Phoenician trading center before it was settled in the eighth century by Arab invaders spreading Islam; they built a mosque in the mid-ninth century. It continued as an important seaport for the Mediterranean olive oil trade and was one of the few Tunisian towns to resist the French occupation after the protectorate of 1881, thus suffering bombardment. After Tunisia became independent in 1956, Sfax became the center of a governorate and the second-largest Tunisian city, with a population of some 232,000 (as of 1984).

Today it has a medical school, one of three appellate courts, a large prison, the regional radio station, an international airport and an air-force base, and a busy port that handles mainly phosphates and olive oil.

SFEIR, NASRALLAH

[1920–]

Lebanese Maronite patriarch.

Nasrallah Sfeir (Sufayr) was born in Rayfun, Lebanon, in 1920, and was ordained a priest in 1950. After a service as auxiliary Bishop of Antioch, he was ordained bishop in 1961. He was appointed and confirmed as a Maronite patriarch in 1986, and was elevated to cardinal in 1994. The intra-Maronite civil war in East Beirut and Kisrawan in the late 1980s affected Sfeir's leadership. In 1990 followers of General Michel Aoun chased the Maronite and publicly humiliated him before television cameras. Aoun was later ousted, and he sought refuge in France. The arrest and trial of Samir Geagea, the former commander of the Lebanese Forces), left the Maronite community eager for leadership and guidance, which was promptly provided by Sfeir. Sfeir's political role and influence expanded in the 1990s and in the early twenty-first century. He was largely quiet about the Israeli occupation of Lebanon, but became very vocal against the Syrian military presence in Lebanon after 2000. He also criticized what he saw as the misapplication of the Taʾif Accord, and he has never visited the Syrian capital in recent years despite several invitations. He chaired the Maronite bishop council and released overtly political statements on a monthly basis. His political influence within the Maronite community is supreme, and he receives a wide range of visitors every day.

As'ad AbuKhalil

SHABʿA FARMS

A group of farms near the convergence of Syrian, Lebanese, and (due to Israel's occupation of Syrian territory since 1967) Israeli territories.

Shabʿa Farms became a focus of international conflict in the summer of 2000, after Israel withdrew its forces from South Lebanon, ending a costly occupation that began in 1976. The fourteen farms that make up Shabʿa Farms are named after the village of Shabʿa, on the western slopes of Mount Hermon (in Arabic, Jabal al-Shaykh). The area of Shabʿa Farms encompasses approximately 6.5 square miles. Israel maintains that the farms are Syrian territory and thus argues that it should have rights over them. The Syrian government insists that the farms are part of Lebanese territory. Since the border in this area is not clearly demarcated, the United Nations has asked the Syrian government for documentation to back up its claim that the farms are not part of its territory. Hizbullah, which led the successful resistance movement against Israel's occupation of South Lebanon, argues that Israel's withdrawal from Lebanon will not be complete unless and until Israel withdraws from the farms. The Lebanese government supports this position. Israel has established a military post on one of the hills overlooking the area and has exchanged fire with Hizbullah forces. It is unlikely that the status of the farms will be settled before the issue of Israel's occupation of Syrian territories—that is to say, the Golan Heights—is resolved. UN Secretary-General Kofi Annan has recommended that all sides recognize the demarcation line drawn after the 1973 Arab–Israel war as a temporary measure. But Israel does not seem ready to leave the farms, and some reports have mentioned the settlement of Ethiopian Jews there.

Syria and Hizbullah may also be interested in keeping the issue of Shibʿa Farms alive as it grant them a reason, or excuse, to escalate or de-escalate, the level of tensions with Israel. However, there is certainly a nationalist basis for both Syria and Lebanon, which explains why every piece of land becomes important.

See also Annan, Kofi A.; Golan Heights; Hizbullah.

As'ad AbuKhalil

SHABBI, ABU AL-QASIM AL-

[1909–1934]

Noted Tunisian poet.

Born in the southern Tunisian oasis town of Tozeur, Abu al-Qasim al-Shabbi had a mobile childhood because of his father's judicial career. The constant traveling familiarized him with the Tunisian countryside and people and induced in him a profound and lifelong infatuation with both that permeated his later poetry. Studies at Tunis's eminent Zaytuna Mosque university and law school also influenced al-Shabbi, but they clashed with his penchant for European and Arabic literature and with his budding rebellion against the French colonial system and the restrictions of the Arab poetic tradition. His entire poetic career was compressed in a seven-year period that occurred between age eighteen, when he began publishing his poetry, and age twenty-five, when he succumbed to heart disease. The pressures of family obligations caused by his father's untimely death in 1929 and the additional responsibilities occasioned by his marriage are thought to have contributed to his early demise in October 1934.

New currents in Arab poetry from the Middle East and North America stirred al-Shabbi's imagination, as did the European Romantics. Al-Shabbi sought to break the bonds of convention and tradition and to revolutionize both poetry and society. Although he opposed the French colonial regime, he also castigated traditional Tunisian mores and called for social transformation, freedom, and progress. For this imaginative poet, the city contrasted unfavorably with nature, where he felt he could escape into a solitary utopia and indulge in his pursuit of idealized womanhood.

Al-Shabbi's revolutionary stance appealed to a later generation of Tunisian and Arab nationalists. Along with other Tunisians of his generation, al-Shabbi contributed to the literary renaissance of his country, at the same time that other Tunisians heralded a social renaissance (for example, Tahir al-Haddad in his epochal work on Tunisian women) and a political renaissance (for example, Habib

Bourguiba through his founding of the Neo-Destour party in the year of al-Shabbi's death). Al-Shabbi helped Tunisian poets break with traditional forms and find a more impassioned poetic expression that could help move the Tunisian people toward social awakening and a modern outlook. Many of his poems were set to music and became patriotic or popular songs. During October 1994, which marked the sixtieth-anniversary commemoration of the poet's death, celebrations were held in the towns al-Shabbi had visited or resided in, such as Tozeur (his birthplace and the site of his mausoleum), Majaz al-Bab, Gafsa, and Kebilli. Al-Shabbi is known as the "poet of life," after his most famous collection of poems, *Songs of Life.*

LARRY A. BARRIE

SHAʿBI FAMILY

Prominent Yemeni clan.

Originally from al-Shaʿb, Qahtan and Faysal Abd al-Latif al-Shaʿbi were prominent in the origins of the Yemeni branch of the Arab Nationalist Movement as well as the National Liberation Front of South Yemen. Until deposed by more radical elements, Qahtan was president of the People's Republic of South Yemen (1967–1969), while Faysal served briefly as prime minister and foreign minister. Shortly thereafter, Faysal was assassinated.

Qahtan al-Shaʿbi died in 1976, but other members of the family have been prominent in Yemeni politics since then. Among them is Najib Qahtan al-Shaʿbi, who was elected to parliament in 1997 and ran as an independent in the presidential election of 1999.

MANFRED W. WENNER

SHADER, JOSEPH

[1907–1977]

Former Lebanese minister, deputy, and vice president of the Phalange party.

Born and educated in Beirut, Joseph Shader was a prominent Armenian Catholic lawyer who was elected to the Chamber of Deputies in 1951, when he became the first parliamentary representative of the Phalange party. In parliament, he joined Camille Chamoun, Kamal Jumblatt, Raymond Eddé, and others who sought to force President Bishara al-Khuri to resign. He successfully competed in every single parliamentary election held until his death in 1977 and was therefore a deputy for Beirut in the parliaments elected in 1953, 1957 (when he also became deputy speaker of the chamber), 1960, 1964, 1968, and 1972. Under President Chamoun (1952–1958), he supported the government's pro-Western and anti-Nasser foreign policy, and in March 1958 he became minister of planning in a cabinet headed by Sami al-Sulh. A specialist of public finance, he once was president of the Parliamentary Commission for Finances. He held the vice presidency of the Phalange party for several years and is remembered as one of that party's most influential members.

SHAFIʿI SCHOOL OF LAW

One of the four systems, or schools, of thought in Sunni Muslim law.

The Shafiʿi school of law was founded by Muhammad ibn Idris al-Shafiʿi (died 820), a disciple of Malik ibn Anas (died 795) and Muhammad ibn Hasan al-Shaybani (died 805). Bringing about a synthesis between the rationalists and the traditionalists, Shafiʿi elaborated a system of positive law and a rudimentary legal theory that attracted a number of scholars who propagated his teachings, thus creating the first personal school of law *(madhhab)* in Islam. His two chief treatises that survived are *al-Umm,* a collection of treatises mainly concerned with positive law and disagreements among the early jurists, and *al-Risala* (also known as *al-Kitab,*) a work on legal theory with particular emphasis on Prophetic *hadith* (traditions) as a binding source of law.

The immediate students of Shafiʿi who were responsible for propagating his teachings, and thus for laying the first roots of the school, were al-Buwayti (died 846), Harmala (died 857), Muzani (died 878), al-Zaʿfarani (died 874), al-Karabisi (died c. 859), and al-Rabi ibn Sulayman al-Jizi (died 870). Al-Rabi ibn Sulayman al-Muradi (died c. 884) is known as the transmitter of most of Shafiʿi's extant works. Other scholars, such as Ibn Hanbal (died 854) and Abu Thawr (died 855), initially the disciples of Shafiʿi, became themselves the founders of independent law schools.

The widespread influence of the Shafiʿi school must be credited to the work of Ibn Surayj (died 918), significantly nicknamed the "Little Shafiʿi." He was responsible for harmonizing the teachings of the school and for training a generation of influential Shafiʿi scholars who guaranteed not only the survival of the school but indeed its success. Among the most important of these scholars are Abu Bakr al-Sayrafi (died 942) and al-Qaffal al-Shashi (died 948), who are considered two of the first major authors of complete works on Shafiʿite legal theory *(usul al-fiqh)*.

Among the many names that dominated the later history of Shafiʿism are: Abu Bakr al-Baqillani (died 1013), Abu Ishaq al-Isfara'ini (died 1015), Abu Muhammad al-Juwayni (died 1046) and his son Imam al-Haramayn (died 1085), Bayhaqi (died 1066), al-Mawardi (died 1058), Abu Ishaq al-Shirazi (died 1083), Ghazali (died 1111), Abu Bakr al-Shashi (died 1113), Fakhr al-Din al-Razi (died 1209), Rafiʿi (died 1226), Izz al-Din (b. Abd al-Salam; died 1262), Muhyi al-Din al-Nawawi (died 1277), and Suyuti (died 1505). The positive law *(furu)* treatises of Juwayni, Shirazi, Ghazali, Rafiʿi, and Nawawi became standard for the later period, whereas in legal theory, the works of Juwayni, Ghazali, and Razi gained popularity.

Today the Shafiʿi school has followers in Egypt—mainly in rural areas—as well as in Syria, Lebanon, Palestine, Jordan, Iraq, Hijaz, Bahrain, Yemen, Pakistan, Iran, India, and Indonesia.

SHAFIQ, DURRIYYA

[1908–1975]

Egyptian writer and feminist.

Durriyya (also Doria) Shafiq was born in the town of Tanta in Egypt's Nile delta, where she was educated by Roman Catholic nuns. With the support of Huda al-Shaʿarawi, she received her doctorate from the Sorbonne in Paris, where she wrote a dissertation entitled "La femme Egyptienne et l'Islam." In 1945 Shafiq returned to Egypt, founded *Majallat Bint al-Nil* (The magazine of the daughter of the Nile), and in 1948 established the Union of the Daughter of the Nile, an association which called for political rights for women and female literacy. A later political party, which she founded in 1953, was banned in 1954. In the 1960s Shafiq's public opposition to President Gamal Abdel Nasser led to her being placed under house arrest. Among her writings are *al-Mar'a al-Misriyya min al-Faraʿina ila al-Yawm* (The Egyptian woman from the pharaohs until today) and *al-Kitab al-Abyad li Huquq al-Mar'a al-Misriyya* (The white paper for the rights of the Egyptian woman).

SHAHADA, GEORGE

[1910–1989]

Lebanese playwright and poet.

Born in Alexandria, Egypt, of an old Lebanese family imbued with French culture, George Shahada completed his primary studies at the Jesuit school

in Beirut before moving to Paris, where he received most of his secondary education and all of his university training. After obtaining a French *licence* (bachelor of arts degree) in law, he returned to Beirut, where he first worked first as cultural attaché at the French embassy. He later became a professor and then the secretary-general at the Ecole Supérieure des Lettres, which had emerged as a center for the promotion of French avant-garde poetry in the region.

His first collection of poems, *Poésies I,* published in Paris in 1938, showed very clearly the influence of surrealism on his work and gained him the attention of French and international critics. Repeated stays in Paris enabled him to maintain a close friendship with André Breton, a leader in the surrealist movement, whom he had met during his student days. He also developed friendships with Jean Cocteau, Paul Eluard, St.-John Perse (pseudonym for Marie-René-Auguste-Aléxis St. Léger), Jules Supervielle, and other leading French intellectuals. By the early 1950s, Shahada already had established himself as one of the leading neosurrealist poets and the foremost representative of Lebanese poets writing in the French language. It was then that he started writing plays, which soon brought him more recognition than his poetry and indeed established him as the best-known French-language dramatist outside France.

During the 1950s and 1960s, Shahada wrote more than a half-dozen important plays; the best-known of these are *Monsieur Bob'le* (1951), *La soirée des proverbes* (1954; The evening of proverbs), *Le voyage* (1961; The voyage), and *L'emigré de Brisbane* (1965; The emigré from Brisbane). Although Shahada always wrote in French and spent a great part of his life in France, his work reflects his emotional attachment to his native land and an unmistakable Eastern influence. Its emphasis on magic and fantasy has even led some critics to compare it to Middle Eastern fairy tales and to describe Shahada as a storyteller in the tradition of Sheherazade. His heroes (for instance, M. Bob'le and Vasco) are usually good-natured, naive figures who were able to preserve a childlike innocence and the ability to wonder at the marvels of nature and life. They identify mysteries behind the appearance of the ordinary and are usually led from banal, everyday situations into increasingly unexpected, odd, and captivating adventures. Far less preoccupied with understanding the world than with experiencing its beauty, they are sometimes shown communicating not only with other human beings, but also with the animals and objects that surround them.

By placing such strange but charming characters at the center of his humorous plays, Shahada seeks to evoke the harmony that men and women can find with nature and each other. He invites the members of his audience to look for the mysteries of life, and to listen to their intuitions and dreams instead of being driven by their intellects. Shahada's plays thus constitute a plea for feeling before understanding, and they exhibit an unmistakable Middle Eastern sensitivity to the wonders of nature.

Although Shahada's suspenseful, funny plays highlight the comical, incongruous, and tragic aspects of the human condition and draw on technical devices that were used in the avant-garde theater of the 1950s, they nevertheless differ from the so-called Theater of the Absurd. Unlike plays by Eugène Ionesco or Samuel Beckett, for instance, they betray an optimistic outlook on life. Beckett's characters tend to feel helpless, frustrated, and bitter, and live only in their minds, whereas Shahada's heroes are spontaneous individuals who still display the simple happiness and purity of childhood. In sharp contrast to the way Beckett emphasizes the chaotic and meaningless aspects of life, Shahada invites his audience to appreciate what he sees as the intrinsic harmony and beauty of the world and to look at one's surroundings with the innocent, uncorrupted eyes of a child.

In 1973, Shahada returned to poetry. In December 1986—a year after his last collection of poems, *Le nageur d'un seul amour* (The swimmer of an only love) was published in Paris—the Académie Française awarded him the Grand Prix de la Francophonie during a summit of French-speaking countries held in Paris. By becoming the first recipient of this prestigious honor three years before his death, Shahada obtained well-deserved recognition of his unique place in the world of Francophone literature. He is remembered as the twentieth-century author who best blended Western surrealist literature and avant-garde dramatic techniques with the Eastern tradition of storytelling.

SHAHBANDAR, ABD AL-RAHMAN

[1880–1940]

Syrian politician.

Born in Damascus, Abd al-Rahman Shahbandar attended the Syrian Protestant College (later the American University of Beirut). He received his medical degree in 1906 and became a professor of medicine. He was one of the most prominent nationalists in Damascus after World War I, serving Amir Faisal I ibn Hussein as chief liaison with Britain, and as an interpreter for the King-Crane Commission in 1919. Shahbandar was appointed minister of foreign affairs in 1920 by the newly crowned King Faisal. The French promptly disbanded this government, and Shahbandar fled to Egypt. He returned to Damascus under French amnesty in 1921 and founded the first nationalist organization in Syria, the Iron Hand. Shahbandar was arrested and sentenced to twenty years in prison for nationalist activities in 1922. The sentence was changed to exile, and after seeking support for Syria's independence in the West, with the help of his friend Charles R. Crane, he returned to Damascus in 1924.

In 1925, Shahbandar organized and led the People's Party, which played a central role in the revolt (1925–1927). He spent ten years in Cairo, then returned to Damascus in April 1937. His pro-Hashimite stance put him in direct confrontation with the ruling National Bloc, and he was placed under house arrest in 1938. Shahbandar's quest for Britain's support for a confederation of Syria, Transjordan, Palestine, and Lebanon under Amir Abdullah I ibn Hussein, and his denunications of his more hard-line nationalist rivals, led to his assassination in Damascus (June 1940). Ultimate responsibility for the assassination was never fixed, though National Bloc members may have been involved.

SHAHIN, TANYOS

[1815–1895]

Leader of the Lebanese peasant revolt.

Tanyos Shahin was born into the Saʿada family in Rayfun, Kisrawan. When peasant protests against the feudal landlords swept parts of Mount Lebanon in 1858, Shahin was approached by armed peasants and asked to become a local leader in Rayfun; his influence quickly spread through the Kisrawan region. He succeeded Salil Sfayr, who feared the consequence of his role and resigned. Shahin articulated the grievances of the peasants to the Mashayikh (heads of Maronite landowning families) and was not reluctant to use violence to achieve his aims. The Maronite patriarch Bulus Masʿad accused Shahin of intensifying the conflict between the peasants and the landlords. When the landlords tried to ignore the demands of the peasants, Shahin made clear his willingness to use force. At one point he tried to arrest leading landlords who were meeting in a monastery, but the presence of clerics stopped him. Shahin called for the confiscation of property and crops owned by the landlords and in 1859 seized silk and wheat belonging to landlords and put it in his own house. His power allowed him to punish and reward individuals. By the spring of 1859, he had expelled all members of the Khazin family from Kisrawan. At the end of the year, the Maronite peasant rebellion had become interwined with the Maronite-Druze conflict, which led to the civil war of 1860. The appointment of a Mutasarrif in 1861 led to the defeat of Shahin, although he was allowed to remain in Kisrawan as local leader.

ASʿAD ABUKHALIL

SHAHIN, YUSUF

[1926–]

Egyptian film director.

Born in Alexandria, Egypt, to a middle-class Christian family, Yusuf Shahin studied at Alexandria

University before studying acting at the Pasadena Playhouse in California. He directed his first film, *Baba Amine,* in 1953, at the age of twenty-four. Considered to be one of the most important international film directors, Shahin is also one of the most eclectic, having directed everything from musicals to melodramas, autobiography to comedy, and neorealist to political films. His movies pushed the traditional boundaries of Arab cinema. *Alexandria Why?,* his most autobiographical film, innovated the use of first-person narrative, while other films, such as *Cairo Station,* explored issues of sexuality and madness for the first time. His more political films, such as *The Return of the Prodigal Son* (an adaptation of André Gide's novel), explored the social politics of the Arab-Israel War, while films such as *Once upon a Time on the Nile* concentrated a strong critical eye on the construction of the Aswan High Dam. His work has been included in international projects featuring famous directors, such as the Lumière Brother's anniversary compilation of shorts, as well as shorts about 11 September 2001. In 1997, he won the prestigious Cannes Film Festival's highest honor, the Palme d'Or, for his film *Destiny.* Shahin has directed more than twenty films and is the subject of numerous books and articles.

SHALTUT, MUHAMMAD

[1893–1963]

Egyptian Muslim leader who emphasized combining modern science with religious studies

Shaykh Muhammad Shaltut studied and taught at al-Azhar University in Cairo, then became Grand Shaykh of al-Azhar in 1958. Shaltut advocated combining the modern sciences with traditional religious studies. As a result, his work is often cited in Egypt and the Arab world by Islamic modernists and moderates.

Early on, Shaltut actively served in cultural, legal, journalistic, and educational capacities within Egypt. In his religious role, his primary focus was to make the Islamic sciences accessible to Muslim laypersons and applicable to modern Muslim life. Indeed, Shaltut emphasized societal unity and faith, social justice, and independence as key manifestations of Islamic principles. He did not, however, offer detailed theories of "Islamic socialism," or advocate the creation of an Islamic state in Egypt. As a reformer, Shaltut held to the traditional tenets of Islam, but castigated religious thinkers and students for blindly following legal schools *(taqlid),* and failing to consider Islam within a modern context, vis-à-vis *maslaha* (public interest). On a practical level, many of Shaltut's years at al-Azhar were spent modernizing teaching methods, textbooks, and courses to reflect this approach.

Shaltut's arguably most influential contributions dealt with jihad and the agreement among legal schools *(al-taqrib bayna al-madhahib).* In 1940 Shaltut endeavored to reconcile the Qurʾanic verses of fighting with those of forgiveness in order to clarify the notion of jihad in Islam. He concluded that there is no basis in Islam for conversion through violence, and that in both the classical and contemporary periods, jihad was and is only permissible in self-defense. During his tenure at al-Azhar, Shaltut issued a groundbreaking legal ruling *(fatwa)* declaring the gate of *ijtihad* (independent reasoning) open. Therefore, jurists could legitimately draw from any of the Sunni or Shiʿite *madhahib* in order to gather the most sound arguments and evidence for their judgments. His efforts were formalized in the Islamic Research Academy in 1961, and with the implementation of courses in Shiʿism at al-Azhar.

UPDATED BY CRYSTAL PROCYSHEN

SHALVI, ALICE

[1926–]

Leading Israeli religious feminist; founder of the Israeli Women's Network; academic and pedagogue.

Born in Düsseldorf, Germany, and educated in England at Cambridge University, Alice Shalvi was raised as an Orthodox Jew but her feminist conviction has led her into the more liberal Masorti (Conservative) movement. Shalvi headed English literature departments at Hebrew and Ben-Gurion universities and was the founder of Pelech, an experimental school for religious girls (1975–1990) and of the Ohalim movement of neighborhood associations (1973–1979); she was also founding director (later chairwoman) of the Israeli Women's Network (1984–2000). In the latter position, she was one of the most prominent feminist advocates in Israel, developing a program that covers most forms of discrimination and disadvantage faced by women in Israeli society. An important aim of her work was gaining acceptance of Israeli women's contributions in all sections and at all levels of the armed forces, since army service plays a significant role in Israeli economic, political, and social life. Shalvi has also argued that women in Israel are a distinctive force for peace, and she has engaged in a vigorous dialogue with Palestinian women. In 1997, she became the first female rector of the Schechter Institute of Jewish Studies in Jerusalem.

SHAMI, AHMAD MUHAMMAD AL-

[unknown]

Yemeni political leader.

A prominent member of a large family of Sayyid aristocrats in Yemen, Ahmad Muhammad al-Shami joined the early opposition to the Hamid al-Din imamate in the 1940s. As a founding member of the Free Yemenis in 1944, he was among those imprisoned in Hajja after the aborted 1948 revolution. After his release from prison in the 1950s he nonetheless did serve the Hamid al-Din imamate, and continued to do so until the death of Imam Ahmad a week before the 1962 revolution that replaced the imamate with the Yemen Arab Republic (YAR). At the time, Shami did not cast his lot with the republicans; instead, he chose to serve young Imam al-Badr and the royalists as foreign minister during the long civil war that came quickly in the wake of the revolution and continued until 1970. Apparently less committed to the imamate than opposed to some of the republican leaders, their policies, and the great influence of Egypt on the republic, Shami strove for reconciliation even as he served as royalist foreign minister. In 1970, three years after the coup that brought the al-Iryani regime to power in the YAR, he led the moderate royalists into the republican-royalist reconciliation; he then joined the Republican Council, the newly created plural executive of the YAR. However, he withdrew from politics and left Yemen permanently in the mid-1970s, moving to London for medical treatment; shortly thereafter, he was seriously incapacitated by illness.

SHAMIKH, MUBARAK ABDULLAH AL-

[1950–]

Libyan official and former secretary of the General People's Congress of Libya.

Mubarak Abdullah al-Shamikh is a member of the Maghariba tribe, from Cyrenaica in eastern Libya, in the Ajdabya region. He received his primary and secondary education in Libya and a university degree in engineering in the United States. He was a member of the Revolutionary Committees before being appointed to the General People's Committee (cabinet, GPC) as secretary of communications and marine transport in 1985. He was out of office from 1989 to 1992, and his activities during this

period are unclear. In November 1992, Shamikh returned to the GPC as secretary of utilities, tourism, and communications, surviving a cabinet reshuffle in April 1993 in which he was designated secretary of utilities, public works, transport, and communications. The GPC was again reshuffled in December 1995, and Shamikh became the secretary of utilities and housing, a post he held until early 2000.

On 2 March 2000 Shamikh was named GPC secretary (prime minister) in a new Libyan minigovernment after the General People's Congress (parliament) labeled the previous government of Muhammad Ahmad al-Manghusha a failure, dismantling most of its ministries and transferring their functions to municipal councils. He was replaced as GPC secretary by Shukri Ghanim, secretary of economy and foreign trade, on 14 June 2003 in an effort to promote a policy of greater economic openness. Since June 2003 Shamikh has served the Qaddafi regime as head of the general planning council.

RONALD BRUCE ST JOHN

SHAMI, MUHAMMAD ABDULLAH AL-
[c.1890 –c.1964]

Senior administrator for Imams Yahya and Ahmad from the 1940s through the early 1960s.

Muhammad Abdullah al-Shami came from a prominent traditional family of judges, administrators, and teachers (a *qadi* family) from the town of Kawkaban, near Sanʿa. After a career as senior administrator in many large towns, he served Imam Ahmad as governor and frontier officer in the eastern border town of al-Baydha during the 1950s, a time when the British were pushing north from Aden into the hinterland and Yemen was resisting this push. He conducted repeated border negotiations with his British counterpart, Basil Seager, and he repeatedly encouraged tribal forays into territory disputed with the British and subverted South Yemeni tribes in those territories with money and arms. Later, when he was already more than seventy years of age, al-Shami successfully negotiated for the ailing Imam Ahmad a tentative end to the tribal revolt of 1960; he was senior administrator of Sanʿa at the time of the overthrow of the imamate in 1962. In the wake of the 1962 revolution, al-Shami was imprisoned, tried, and convicted. He was released after several months and retired to Kawkaban, where he died in about 1964.

ROBERT D. BURROWES

SHAMIR, MOSHE
[1921–]

Israeli writer and political activist.

Moshe Shamir was born in Mandatory Palestine, in Safed, and raised in Tel Aviv. From 1941 to 1947 he was a member of Kibbutz Mishmar ha-Emek. In 1944 he joined the Palmah, and he fought in the Arab-Israel War (1948). Shamir is a leader of the first generation of native Israeli writers and best known for his novels of the 1940s and 1950s, which depict in rich detail and glowing terms the development of the new state and the sabra character. *Hu Halakh Ba-Sadot* (1947; *He Walked through the Fields* [1959]), *Ad Elat* (1950; Until Elat), and *Kilometer 56* (1949) were all written in this vein. This adulatory attitude toward Israeli society metamorphosed into a critical one in the novels *ha-Gevul* (1966; The border) and *Yonah Be-Hazer Zarah* (1975; Pigeon in a strange yard). Shamir's early embrace of Marxism influenced the underlying themes of class conflict in many of his historical novels, such as *Melekh Basar Va-Dam* (1954; *The King of Flesh and Blood* [1958]) and *Kivsat ha-Rash* (1956; *David's Stranger* [1964]).

Following the 1967 Arab–Israel War, Shamir helped found the Greater Land of Israel movement, advocating the retention of all captured land west of the Jordan River. In 1973 he joined the Likud Party under Menachem Begin but then switched to the right-wing Tehiyah Party to protest the conclusion of a peace treaty with Egypt. He served as a member of the ninth Knesset (Israel's parliament) from 1977 to 1981.

While continuing to publish novels (*Playboys* [1986], *To the End* [1991], and *Ya'ir Avraham Shtern* [2000]), Shamir in recent years has also written critiques of Israeli literature (*Personal View* [1987], *The Seed Carriers* [1989], *For and Against* [1989], and *Filling the Gap* [1999]), of Israeli politics (*The Red Thread* [1987]), studies of Jewish identity (*Searchlight to the Depth* [1996]) and one book calling for a Zionist renaissance (*The Green Place* [1991]).

UPDATED BY DONNA ROBINSON DIVINE

SHAMIR, YITZHAK

[1915–]

Israeli prime minister, 1983–1984, 1986–1992.

Shamir, whose name means "hard stone," was born Yitzhak Yzernitsky in 1915 in Rozhnoï, eastern Poland, to leftist parents. He emigrated in 1935 to Mandatory Palestine, where he studied briefly at the Hebrew University. In 1937 he joined the Irgun Zva'i Le'umi (IZL) in Tel Aviv, where, under the code name "Nissan," he participated in terrorist attacks and reprisals against the Arab population and British interests. In 1940, after the IZL decided to stop all operations against the British and join them in their fight against Nazi Germany, Shamir joined the "IZL in Israel" (Hebrew: Etzel be-Yisrael; acronym: IZL Beth), a splinter group headed by Abraham Stern that rejected any cease-fire with the British occupation forces in Palestine. During that time, the group also tried unsuccessfully to establish relations with the Third Reich.

Shamir was captured by the British police in December 1941 and incarcerated in the Mazra prison camp, from which he escaped in August 1942. With the remnants of the IZL Beth, he created the Fighters for the Freedom of Israel (Hebrew: Lohamei Herut Yisrael; acronym: LEHI) which he led with Natan Yellin-Mor and Israel Eldad. As chief of operations, Shamir organized several major terrorist attacks against British targets, notably, in September 1944 in Cairo, the assassination of Walter Edward Guinness, Lord Moyne, the British minister of state. Arrested again in June 1946, he was deported to a prison camp in Asmara, Eritrea, and a year later escaped to the colony of French Somaliland (now Djibouti), where he became a political refugee.

A former member of the Lohamei Herut Yisrael and the Mossad, Yitzhak Shamir became Israel's prime minister after the retirement of Menachem Begin in 1983. Shamir served a second term from 1986 until 1992, when his Likud Party was defeated in the general elections. © BETTMANN/CORBIS. REPRODUCED BY PERMISSION.

In May 1948 Shamir returned to the newly proclaimed State of Israel where, with the disbanded

LEHI leaders and activists, he formed the political party "Fighters List"—but not before directing several LEHI operations in Jerusalem, including the assassination, in September 1948, of the UN mediator Count Folke Bernadotte, which prompted David Ben-Gurion's government to outlaw the LEHI as a terrorist organization. This did not prevent the Fighters List from gaining one seat in the 1949 Knesset elections. During the party's convention in 1949, Shamir supported its nationalist platform, which contained also elements of a socialist-Marxist ideology. He later adopted liberal views.

Engaged in private business until 1955, Shamir was thereafter recruited by the Mossad as head of the Israeli intelligence agency's special operations in Europe. When Mossad director Isser Harel retired and was replaced by Meir Amit, Shamir left the service and returned to private business. In 1970, at age fifty-five, he joined the Herut party (later to become the Likud), becoming its director of organization. He was elected to the Knesset in 1974 and became chairman of the Likud in 1975. When the Likud under Menachem Begin came to power in 1977, Shamir became speaker of the Knesset. When Moshe Dayan resigned as foreign minister in March 1980, Shamir replaced him. The Kahan Commission, appointed in 1982 to investigate the massacres in the Sabra and Shatila Palestinian refugee camps in Beirut, reprimanded Shamir for not having attempted to verify the information about these events given him by the deputy defense minister.

With the retirement of Prime Minister Begin, Shamir was regarded as his natural successor, and he became prime minister on 15 September 1983. After the 1984 general elections, he formed a National Unity Government with the Labor party, which won by a narrow majority. As stipulated by the coalition agreement, he switched roles as foreign minister, deputy prime minister, and prime minister with Shimon Peres and, accordingly, served as prime minister from 1986 to 1988. In 1988 he won the elections on his own and became prime minister for four more years, again as part of a National Unity Government. The Labor party withdrew from the coalition in 1990 after a dispute with the Likud over the peace process. In 1992 the Likud party, led by Shamir, was defeated and his political career came to an end.

Shamir's tough ideological and political policies were reflected in his steadfast refusal to grant any territorial concessions to the Palestinians and in his support for increased Israeli settlements in the occupied territories. He was in favor of reaching peace agreements with Syria and Jordan but believed these treaties should be based on Israel's territorial gains after the 1967 War. Shamir led the Israeli delegation to the 1991 Madrid Conference, where direct peace talks were held between Israel and its Arab neighbors, including the Palestinians, but he firmly opposed the principle of exchanging land for peace. In a candid interview upon losing office in 1992, Shamir declared that he had displayed "the tactics of moderation" at Madrid, "but without conceding anything on the goal—the integrity of the [greater] Land of Israel." This remark led to accusations that he had been negotiating in bad faith.

Shamir's diplomatic accomplishments while in office included the renewal of diplomatic relations with many countries and the opening of relations with the Soviet Union and China. Shamir advocated using a strong hand against the 1987–1991 Intifada and refused to set limits on new construction of Israeli settlements, even at the risk of losing the U.S. loan guarantees that he needed to absorb the large numbers of Jewish immigrants coming from the Soviet Union. His policies as prime minister demonstrated both his determination to preserve the political status quo and his minimal concern with social and economic issues.

SHAMLU, AHMAD

[1925–2000]

Leading Iranian exponent of the "new poetry"; editor and translator.

Ahmad Shamlu was born in Tehran in 1925, the son of a military officer. Although he never finished high school, he became one of Iran's foremost poets during the second half of the twentieth century. He also was the editor of several literary journals and translated some thirty-five works of poetry and prose into Persian. The late 1950s through the 1960s marked Shamlu's most productive years as a politically concerned, modernist poet. In his poetry, he comes close to rejecting the bases of Persian verse: rhythms and metrical patterns.

In 1977, exasperated with life under the regime of Mohammad Reza Pahlavi, Shamlu left Iran for foreign exile. He returned to Tehran in early 1979, full of optimism about the new social order emerging in the aftermath of the Iranian Revolution. He founded a weekly called *Ketab-e Jom'eh,* which the Islamic republic banned a year later. His collected poems were published in Germany during the mid-1980s.

In April 1990, at the University of California at Berkeley during an extended stay in the United States for health reasons, Shamlu delivered a controversial lecture in the field of Persian literature. He attacked Ferdowsi (940–1020), author of Iran's national epic, the *Shahnameh* (Book of kings, c. 1010), as a feudal writer perpetuating royalist myths. Hundreds of responses to Shamlu's speech subsequently appeared in Persian publications throughout the world.

SHAMMAS, ANTON

[1950–]

Israeli Palestinian novelist, poet, journalist, translator, and nonfiction writer.

Anton Shammas was born to a Christian family in Fassuta, Galilee; he defines himself as an atheist, as a Palestinian citizen of Israel, and as one who identifies with Islamic culture. He studied art history and English and Arabic literature at Hebrew University of Jerusalem from 1968 to 1972, edited the literary journal *al-Sharq* from 1970 to 1975, and produced Arabic television shows in Israel from 1976 to 1986 at the same time that he worked as a freelance journalist.

Shammas writes in Hebrew and English, and his works are characterized by an attempt to challenge the definition and test the tolerance of the Israeli discourse from within the Hebrew language. His highly praised first novel *Arabeshot* (1986; *Arabesques,* 1988) was written in Hebrew and deals with the residents of his native village and, more specifically, with the Shammas family. Interwoven with their lives are historical events and associations that highlight the conditions of the Arabs residing in Israel.

He moved to the United States in 1987 and has been teaching at the University of Michigan since 1988.

SHAPIRA, HAYYIM MOSHE

[1902–1970]

Israeli political leader; active in the Ze'irei ha-Mizrahi Zionist movement.

Born in Russia, Hayyim Moshe Shapira studied at the Grodno Yeshiva in Russia and at the Hildesheimer Rabbinical Seminary in Berlin. He attended the fourteenth Zionist Congress and later was elected to the Zionist General Council as a representative of ha Poʿel ha-Mizrahi. In 1925, he emigrated to Palestine, where he became a leader in the Zionist Executive.

After the Anschluss of Austria and Germany in 1938, Shapira went to evacuate Austrian Jews to Palestine. Throughout his life, he sought to facilitate the emigration of religious Jews to Israel. From the time the state of Israel was proclaimed in 1948 until his death, Shapira was a minister in the Israeli cabinet as part of the National Religious party.

BRYAN DAVES

SHARABATI, AHMAD AL-

[1905–]

Syrian politician.

Ahmad al-Sharabati, the son of nationalist Damascene merchant Uthman al-Sharabati, studied engineering at the American University of Beirut and at the Massachusetts Institute of Technology. He started his career by running a tobacco factory for his father and later became involved in the import trade, especially of motor vehicles. His political career started in the early 1930s when he joined the National Action League, a pan-Arabist movement that was anticommunist. Harassed by the French Mandatory authorities in Syria, Sharabati fled to Transjordan (now Jordan), where he stayed for several years. In 1943, he became a member of the Syrian parliament, running as a nationalist. In 1945, he became minister of education and then minister of national economy in the ministry of Faris al-Khuri. After his resignation from the cabinet that year, in 1946 he was appointed minister of national defense in the cabinet of Jamil Mardam. In 1948 he resigned as a result of the poor performance of the Syrian army in the Arab-Israel War. In 1951, he was implicated in a conspiracy against Adib Shishakli, the military ruler in Syria, and was sentenced to two years and four months in prison.

ABDUL-KARIM RAFEQ

SHAʿRAWI, HUDA AL-

[1879–1947]

Egyptian feminist.

A native of Minya, Huda al-Shaʿrawi was born to a prominent and prosperous politician-landowner and a Circassian mother. She was raised in an elite household, where domestic life was still centered on the cloistered *harim* (harem), although transitionally so during the late nineteenth century. She describes this experience in her memoirs, dictated to her secretary during the 1940s but published only in 1981; this section of the memoir has appeared in English as *Harem Years.* Shaʿrawi grew up studying with tutors at home, as was typical for elite girls of the time, and was taught in Arabic, Persian, Turkish, and French. Her marriage to her much older cousin and guardian, Ali Shaʿrawi, also a prominent politician, was arranged by the family and took place when she was thirteen. Some seven years later she managed to obtain a separation. Her interest in women's issues developed gradually out of her experiences and her awareness of women's activism in Europe. She was one of the founders of the 1914 Intellectual Association of Egyptian Women. As a wealthy patron as well as an organizer, she was active in charity organizing, a province open to upper-class women. But Shaʿrawi was unusual in moving from behind-the-scenes work into a highly visible, public political role. She spearheaded the Wafdist Women's Central Committee (1919) and was a leader of the famous first women's nationalist demonstration in March 1919. However, disagreement over women's appropriate political roles and particularly over whether women's demands should be admitted to discussions leading to the Egyptian constitution caused a rift with the Wafd, Egypt's nationalist party. Shaʿrawi went on to found, with a group of women, al-Ittihad al-nisa'i al-Misri (Egyptian Feminist Union; EFU) in 1923. She presided over it until her death. The EFU founded two journals, the French-language *L'Egyptienne* (1925), for which Shaʿrawi wrote editorials, and *al-Misriyya* in Arabic over a decade later (1937), when a broader audience fueled the need for a journal in the in-

digenous language. Shaʿrawi's writing appeared here, too, though she probably played less of a role in the journal. Shaʿrawi and two colleagues attended the 1923 International Women Suffrage Alliance in Rome and was responsible for a famous symbolic moment when, on her return, she publicly lifted her veil at Cairo's main railway station. She gradually became more involved in regional and international feminist organizing, becoming vice president of the International Alliance of Women for Suffrage and Equal Citizenship in 1935 and leading a move to found the Arab Feminist Union in 1945.

SHAʿRAWI, MUHAMMAD MUTWALLI AL-

[1911–1998]

Egyptian cleric.

Muhammad Mutwalli al-Shaʿrawi was born in Daqadus, Egypt, in 1911. He originally wanted to devote his career to farming, but his father encouraged him to study in Cairo. In 1937 he joined the faculty of Arabic language of al-Azhar. He was active in student politics and served time in jail. Shaʿrawi came to prominence as a cleric during the presidency of Anwar al-Sadat. He was famous for his utilization of modern media (television, audio- and videocassettes, pamphlets, and books) to disseminate his religious message. He was a firm believer in Islamic fundamentalism, but did not address political questions directly for fear of embarrassing his friend and protector, Sadat. He served as minister of Waqf from 1976 to 1978, but he was more famous for his televised religious sermons. As minister, he was behind the establishment of the Faysal Bank, the first Islamic bank in Egypt. Shaʿrawi never wavered from his loyalty to Sadat, which led his critics to accuse him of serving as the "sultan's cleric." Shaʿrawi has been credited (or blamed) for convincing a few well-known Egyptian actresses and singers—most famously, Shadya and Shams al-Barudi—to veil themselves and withdraw from show business.

SHAREF, ZE'EV

[1906–1984]

Israeli political leader.

Having emigrated from Romania in 1924, Ze'ev Sharef became secretary of the central committee of the Haganah. After Israeli statehood he served in various capacities in the government, including as secretary of the political department of the Jewish Agency, secretary of the Emergency Committee and the National Administration (which established the Israeli civil service), and secretary of the Cabinet from 1948 to 1957.

Sharef played a unique role in Israeli history by transporting the Proclamation of Statehood from the Jewish National Fund Building (where it was typed) to David Ben-Gurion at the Tel Aviv Museum on the afternoon the State of Israel was declared, 14 May 1948. After Ben-Gurion read the Proclamation Sharef read out the names of the members of the National Council to sign the document.

From 1948 to 1957 Sharef was the first secretary of the Israeli government. From 1957 to 1959 he was director general of the Prime Minister's Office. He served as director of state revenues, and administrator of the Weizmann Institute. From 1965 to 1974 he was a member of the Knesset, serving as minister of commerce and industry in 1966, as minister of finance in 1968, and as minister of housing from 1969 to 1974.

SHARETT, MOSHE

[1894–1965]

Israel's first foreign minister and second prime minister.

Moshe Sharett was born Moshe Shertok. His family migrated from Russia to Palestine in 1906. He attended school in Herzliyya and Tel Aviv, and after graduating in 1913, he entered the University of Istanbul to study law. When World War I broke out, he was drafted into the Turkish army.

At the end of the war, Sharett attended the London School of Economics, graduating in 1924. He returned to Palestine and became a journalist; from 1929 to 1931 he was editor of *Davar,* a daily newspaper in Tel Aviv.

In 1931 Sharett became political secretary of the Jewish Agency Executive. In 1935 he was named director of its political department, and began laying the foundations for what was later to become Israel's Ministry of Foreign Affairs. Sharett had a long-time working partnership with David Ben-Gurion in the Jewish Agency Executive, and after 1948, in Israel's first cabinets.

In 1946 he participated unofficially in talks in London to negotiate Zionist goals. Sharett was a representative of the Jewish Agency in the 1947 negotiations with the United Nations (UN) Special Committee on Palestine. He sought UN support for the creation of an independent state for the Jews in Palestine. In December 1947 he was among Jewish leaders lobbying for American support in the UN.

Moshe Sharett (1894–1965) in the 1950s. Sharett was an influential member of the Zionist movement and played an important role in the creation of the state of Israel in 1948. He was Israel's first foreign minister, and in January 1954 became the second man to serve as premier. **© Bettmann/Corbis. Reproduced by permission.**

In May 1948, Sharett (who had hebraized the name Shertok at the time of the creation of the state of Israel) was named foreign minister in the Jewish provisional administration. In that capacity he negotiated support for Israel's statehood with U.S. Secretary of State George Marshall.

Once the state of Israel was in existence, Sharett became its first foreign minister, a position he held until 1956. In that post he emphasized that proceeds from the sale of lands belonging to absentee Arabs would be applied to a fund to resettle the refugees elsewhere, not to repatriate them in Israel. He argued that the problems of the Palestinian refugees were just like the problems of refugees around the world. In that sense, there was no legal precedent requiring their repatriation to the lands they had occupied before the war.

In March 1949, Sharett introduced the "principle of nonidentification" to indicate that Israel

would not be aligned with either the East or the West. Israel's intention was to work with all nations to develop peaceful links and support for its existence. By 1951, however, it had become clear that the Soviet Union would support the Arab bloc against Israel, and Israel's foreign policy became clearly aligned with the West.

Prime Minister Ben-Gurion resigned in December 1953, and Sharett became prime minister. In June 1955 his cabinet was overturned by the withdrawal of the General Zionist Party from the coalition. He remained as acting prime minister until the scheduled elections for the third Knesset took place. After the elections, Ben-Gurion returned to the prime ministership with a new cabinet in November 1955.

In 1956 tensions increased between Ben-Gurion and Sharett over the appropriate response to Egypt's actions in and around the Suez Canal. Sharett argued that Israel should act with great restraint, while Ben-Gurion was in favor of a more provocative strategy. When Ben-Gurion felt that the tensions were growing too great, he asked for Sharett's resignation as foreign minister in June 1956, replacing him with Golda Meir.

SHARIʿA

Arabic for "the trodden path leading to a water hole." In Islam, the regulations of God's law as transmitted through a prophet; the dominant law in Islamic societies.

Muslims, Christians, and Jews each have "a law *(shirʿa)* and a normative way to follow," the Qurʾan attests (verse 48). In the Middle Ages, Islamic discourse referred not only to this strict definition of *Shariʿa* as law but also to all that which Allah has revealed—whether it pertained to actual religious practice or to belief. In Islam, those aspects relating to practice belong to the province of law (*fiqh*); those that concern belief belong to theology *(ilm al-kalam or ilm al-tawhid).* Law, however, depends on theology, since the contents and validity of law rest on textual sources, whose divine origins and truth are known. Furthermore, all sciences that are used to attain a knowledge of law and theology are considered *Shariʿa* sciences, even if their subject matter is not legal or theological. Therefore, the Arabic language, *hadith* (verbal statements of Prophetic traditions), exegesis (interpretations), and even logic are deemed *Shariʿa*—even if designating logic this way has always been controversial.

The use of the term *Shariʿa* has actually, in practice, been restricted to the realm of law, and particularly to those aspects that bear upon the conduct of the individual in both worldly and religious matters. *Shariʿa* may be equated, therefore, with *fiqh* in both its components: (1) positive law *(furu)* and (2) legal theory *(usul).* Positive law delineates legal obligations, ranging from rituals to personal and penal law; contracts; sales; hunting; and more. Legal theory demonstrates how positive law is derived through legal reasoning and interpretation, which results in the law stipulating the legal and moral responsibility thrust upon Muslims.

The legal and moral elements in the *Shariʿa* are evident in the individual rulings classified in accordance with five norms *(ahkam)*: (1) the obligatory *(wajib),* (2) the recommended *(mandub),* (3) the permissible or indifferent *(mubah),* (4) the prohibited *(haram),* and (5) the repugnant *(makruh).* The obligatory represents an act whose performance entails reward and whose omission entails punishment. It is commonly divided into those acts that are binding on all and those that are binding on the Muslim community as a whole but which are discharged once a sufficient number of individuals perform them. The recommended act requires a reward for performance but does not involve a punishment for omission. In the permissible, both omission and commission are equally legitimate. The prohibited is an act that entails punishment upon commission. The repugnant act is rewarded when omitted but not punished when committed.

The nature of reward and punishment supports the permeating moral element in Islamic law. Reward is always bestowed in the hereafter; punishment—in rituals and in several other spheres of the law—is nothing but divine punishment to be meted out at the resurrection. As a comprehensive system of law, imbued with religious mores, the rules of the *Shariʿa* are not always enforceable.

As a system of legal rights and obligations that governs public and private life, *Shariʿa* has always been the dominant law in Islamic societies. No doubt secular organs of justice, such as the early and medieval *mazalim* courts and the *qanun* of the Ottoman Empire, have always supplemented *Shariʿa*; however, their jurisdiction was confined mainly to administrative and penal law, and they were, more often than not, run by *Shariʿa* judges and jurists.

Judges and jurisconsults (muftis) have played the central role of developing *Shariʿa* since the first century of Islam. Immediately after the death of the Prophet Muhammad in 632 C.E., the Qurʾan provided the main source of the law that may be considered Islamic. To be sure, customary Arabian law and the later Umayyad dynasty's administrative practices supplemented Qurʾanic legislation, but these were not yet imbued with a religious character. The Prophet's *sunna* (his utterances and idealized practice as expressed in *hadith*) was to gain importance as a source of law only gradually. It was not until the end of Islam's first century (c. 700 C.E.) that his *sunna* became a source of law, supplementing the Qurʾan and the still prevailing popular and administrative practices of the Umayyads. Islam's second century (ending c. 800 C.E.) witnessed a gradual yet definite process whereby these practices were idealized as the consensus of the geographical schools—a consensus seen to reflect the ideal practice of the Prophet Muhammad and the early caliphs who succeeded him. Thus imbued with a religious element, these practices, expressed through verbal statements of *hadith,* were gradually and constantly projected back to the earlier generations until they have come to be connected with the Prophet himself. By the beginning of Islam's third century (the ninth century C.E.), the process of back-projection was virtually completed, and the law, now elaborated to its fullness, was recognized to have been exclusively derived from the Qurʾan and the *sunna* and sanctioned by the authoritative instrument of consensus *(ijma).*

By the eighth and ninth centuries, the body of *Shariʿa* law was elaborated by a variety of legal schools, ranging from those that resorted to free reasoning and expediency in elaborating their positive law—such as the Hanafi school of law—to those standing on the other end of the spectrum, such as the Zahiris, who interpreted the texts literally. Such radical tendencies and their schools, including the Zahiri, soon disappeared; but liberal tendencies were not sufficient to bring the Hanafi school to extinction. Nevertheless, they had to be rationalized and modified to be admitted by mainstream jurisprudence. A classical example of this process of adjustment may be seen in the concept of *istihsan,* which represented to the eighth-century Hanafis a means of formulating law on the basis of practical considerations, without being restricted by the imperatives of the religious texts. Whereas problems of law solved by *istihsan* were largely accepted, even in later centuries, the procedure of *istihsan* had to be, and indeed was, restructured by the likes of Dabusi and Sarakhsi—this was based on the proposition that the *sunna* and the Qurʾan were the ultimate sources of the law and that no human intervention can be allowed in the unraveling of divine law.

The Sunni schools of law thus came finally to acknowledge a common legal theory, though differences among them continued to exist—partly as a reflection of the legacy they inherited from their early development within differing geographical schools. Be that as it may, in addition to the Shiʿa schools, only four Sunni schools survive and they provide, in effect, a comprehensive system of *Shariʿa.*

Shariʿa continued to dominate the life of Muslims until the nineteenth century, when, because of influences and pressures from the West, changes in the law were deemed necessary. Formally, the most notable legal change was the introduction of the code system, which was foreign to *Shariʿa,* a law based on interpretation of religious doctrine. Substantively, several attempts were made to wholly substitute European codes for a number of *Shariʿa* laws. Thus, during the Ottoman Empire, commercial and penal codes based on their French counterparts were promulgated in 1850 and 1858, respectively. A more important codification of this period was the Mejelle (1876), which represented the first attempt ever to codify Islamic law. Selectively codified, Hanafi law was restricted to contracts, some

torts, and a law of procedure. The last part, however, was soon replaced by the Code of Civil Procedure (1880), again based on French law.

A more drastic set of reforms was adopted in Egypt in 1875. In addition to new penal, commercial, and procedural codes based on French law, a new court structure was introduced. It incorporated into the Egyptian court system the Mixed Courts, with a majority of non-Egyptian judges, one of whom presided over the bench.

In 1917, the first attempt at reforming family law was made by the Ottomans, without resorting to European codes. It promulgated the *Ottoman Law of Family Rights,* which regulated matters of personal status and was based on a comprehensive amalgamation of legal doctrines belonging to the Maliki, Shafiʿi, and Hanbali schools of law, and sometimes weak authorities from the Hanafi school. One of the main concerns in this promulgation was the improvement of the legal status of married women.

Legal reforms, introduced by national legislation, have become an ongoing process in the Muslim states since the beginning of the twentieth century (based on Sunni and Shiʿite principles). In these reforms, *Shariʿa* law was to some extent preserved in the area of family matters, but even here it was applied in a new system of courts and administered through a modern law of procedure. With these sweeping changes, the officials of the traditional court virtually disappeared, and the traditional role of the qadi (judge) has been drastically diminished.

SHARIʿATI, ALI

[1933–1977]

Iranian Islamic ideologue, whose lectures and writings on secularly educated youth helped prepare the way for the Islamic Revolution of 1978/79.

Ali Shariʿati was born in the village of Mazinan in northeastern Iran but soon moved with his father, Mohammad Taqi Shariʿati, a reformist cleric of Islam, to the city of Mashhad. There he attended high school and teachers' training college as well as pursuing a religious education under the aegis of his father. He then began working as a teacher, studying at the same time at the Mashhad Faculty of Letters and beginning his long career of oppositional activity; his first arrest came in 1957. After a year's delay, he was permitted to travel to Paris in 1960 for his doctoral studies. While in France, he came under the influence of scholars and thinkers, such as Louis Massignon and Jacques Berque, became politically involved in the struggle for Algerian independence and the organization of Iranian students in Europe, and, most importantly, acquired the ideological orientation that was essential to his thought.

Immediately on his return to Iran in 1964, Shariʿati was arrested and detained for several months before being allowed to take up a post at the University of Mashhad. His tenure there was short-lived, and it was outside the academic environment that he exercised the greatest influence. Moving to Tehran, he began lecturing on Islam in a variety of settings, most importantly the Hosayniyeh-ye Ershad, a modernist religious institution established in 1969 that attracted large crowds to its functions. Shariʿati's name became virtually synonymous with the institution, and when it was closed by the government in 1973, he was arrested for a third time. Released in 1975, he spent two years under house arrest in his native village before being allowed to

leave for England. He died there on 19 June 1977, soon after his arrival, under circumstances that led to widespread suspicion of involvement by the Iranian secret police. His body was taken to Damascus for burial.

Central to Shariʿati's understanding and presentation of Islam were an emphasis on the social and civilizational functions of religion; an impatience with the niceties and abstractions of traditional Iranian Islamic culture; and a bold if often unconvincing use of themes and terms eclectically derived from non-Islamic sources. His legacy has been varyingly assessed in postrevolutionary Iran, being sometimes denounced for its syncretic nature and its implicitly anticlerical message.

SHARIATMADARI, KAZEM

[1904–1986]

One of Iran's most important clerics.

Ayatollah Sayyid Kazem Shariatmadari, born in Azerbaijan, was a *marja al-taqlid* (source of emulation) from 1962 until his death in 1986.

Ayatollah Shariatmadari was not inclined to political activism. But throughout the Pahlavi period, the scholars affiliated with his Center for Islamic Study and Publication rivaled Ayatollah Ruhollah Khomeini's more activist followers. Shariatmadari was briefly imprisoned in 1963, following the June uprisings. In general, he viewed the Pahlavi regime as dictatorial and favored restoration of constitutional rule in Iran. With the triumph of the Islamic Revolution in 1979, Shariatmadari again called for restraint and the rule of law, denouncing the revolutionary tribunals and summary executions of the early days of the revolution. He also confronted the regime on the issue of a referendum to decide the form of the post-Pahlavi state. Rather than a simple vote of yes or no on an Islamic republic, Shariatmadari, as well as most secular parties, supported at the least a choice between an Islamic, democratic, or just simple and plain republic. Shariatmadari was also associated with the Islamic People's Republican party (IPRP), the main contender to Khomeini's Islamic Republican party. The IPRP favored collective rule of the *ulama* (Islamic clergy), a more democratic constitution, and an elected rather than an appointed assembly of experts empowered to draft the constitution of the nascent Islamic republic. The IPRP was dissolved in 1980, over the first presidential elections, a victory for Khomeini and the Islamic Republican party.

Shariatmadari continued to oppose the excesses of the Khomeini regime and, in 1982, was implicated in a coup against the Islamic republic, organized by Sadeq Qotbzadeh, was stripped of his title of *marja al-taqlid,* and was placed under house arrest, where he remained a marginal player in the political life of his country until his death in 1986.

SHARIF

An Arabic word that literally means "noble" or "illustrious," especially by virtue of one's lineage.

In the first few centuries of the Muslim era, *sharif* (pl., *ashraf* or *shurafa*) was used to refer to members of the prominent Arab families that made up the typically landed aristocracy of the expanding Muslim domains. Much like its rough equivalent *sayyid,* however, use of *sharif* as an honorific was gradually limited to scions of the clan of the prophet Muhammad (that is, the Banu Hashim), and eventually was further restricted to Muhammad's direct descendants through his grandsons Hasan and Husayn. In Mecca, Medina, and their environs, the custom developed of applying the title *sharif* almost exclusively to descendants of Hasan, with *sayyid* referring to descendents of Husayn. Under Ottoman rule the se-

nior member of the Arabian sharifs was recognized as the semiautonomous governor of Mecca and the keeper of its sacred sanctuary.

SCOTT ALEXANDER

SHARIF, AZIZ

[1904–]

Iraqi politician.

Born in Ana and educated at Baghdad Law College, Aziz Sharif founded the People's Party in 1943 and subsequently joined the Communist Party. He was a candidate member of its central committee (1958–1963), and secretary-general of the Partisans of Peace, a pro-Soviet umbrella organization. Sharif was minister of justice under the Baʿth government (1970–1971) and a key intermediary in the Baʿth-Kurdish negotiations. Sharif served as minister without portfolio until 1976.

MARION FAROUK-SLUGLETT
UPDATED BY MICHAEL R. FISCHBACH

SHARIF-EMAMI, JAʿFAR

[1910–1998]

Iranian prime minister and statesman.

Jaʿfar Sharif-Emami was the son of Hajj Mohammad Hasan (known as Sharif), a member of the religious establishment who worked as an aide to Sayyid Mohammad Emami, the leader of Friday prayers in Tehran. Sharif-Emami attended college in Germany and worked at the Railroad Office of the Ministry of Roads. In 1943 the British forces accused him of belonging to a German fifth column in Iran and incarcerated him for one year. He was elected to the senate as a deputy from Tehran in 1953 and became minister of industries and mines in 1957 and prime minister in 1960. In 1961 he was made head of the Pahlavi Foundation, the largest corporation in the country; he amassed a great fortune in that capacity. In 1962 he also was appointed speaker of the senate. It was widely believed that Sharif-Emami led the German Freemasonry Lodge in Iran. In an effort to quell the Islamic Revolution by choosing a leader with some degree of credibility with the clerical establishment, Mohammad Reza Shah Pahlavi reappointed him premier in August 1978. Sharif-Emami failed in his mandate, however, and the military government of General Gholam Reza Azhari was declared in November 1978. Sharif-Emami left Iran in 1979 and died in New York on 16 June 1998.

NEGUIN YAVARI

SHARIFIAN DYNASTIES

Rulers of Morocco since the sixteenth century, when the modern principle was first established that they be sharifs—descendants of the prophet Muhammad, founder of Islam.

The cult of the Sharif was introduced in Morocco under Idris II in the early ninth century but went into abeyance. Sharifism became established in Morocco as a response to the crises of the sixteenth century—occasioned by Christian efforts to extend the *reconquista* (reconquest) of the Iberian Peninsula into Morocco; large-scale tribal migrations in North Africa; the fragmentation of the Moroccan polity following the decline of the Merinid dynasty; the rise of regional Sufi powers; and the conquest of Algeria in 1517 by the Ottoman Empire.

Both the Saʿdians (1548–1641) and the Alawi (1668–present) were Alids, and traced their descent to Muhammad through his son-in-law Ali, but they were Sunni rather than followers of Shiʿism. Both assembled powerful political coalitions that combined tribal solidarities, rural Sufism, and Sharifism. Both rose to power after first securing control over southern Morocco and then conquered the cities and Atlantic plains. Both were responses to the long-term crisis of legitimization caused by the fragmentation of Islam's power in the Maghrib (North Africa) and al-Andalus (Iberian province) and especially to the threat posed by the Spanish and Portuguese, who had driven the Moors from the Iberian Peninsula and unified their countries under Catholic monarchs.

The Saʿdians emerged in the period 1514–1548 as opponents of the Portuguese in southern Morocco

and revivers of Islam. Under Muhammad al-Shaykh, they defeated the reigning Wattasids, conquered Fez and Marrakech, and stabilized Morocco's frontiers at roughly their present borders. Under Ahmad al-Mansur (1578–1603), the state was reorganized along Ottoman principles, including notably a force of musketeers, financed by the production of sugar for export on royal estates. The conquest of Timbuktu in 1591 briefly gave Morocco direct access to the salt and gold of the sub-Saharan zone. With the help of an alliance with Elizabethan merchant adventurers, the Saʿdians were able to defeat the Iberians and confine them to a few coastal enclaves. Following the death of Ahmad in 1603, the Saʿdians went into a long decline, as the result of dynastic conflict, a resurgence of Iberian threat, and the reemergence of regional power centers of which the *zawiya* (community) of Dila in the Middle Atlas mountains and the Andalusian corsair republic of Sala were the most important.

The rise of the Alawis, cousins of the Saʿdians, took place under Muhammad al-Sharif and Rashid, who were able to defeat the Dila Marabouts and assert their control over Morocco by 1668. The consolidator of the dynasty was Ismaʿil (1672–1727), a remarkable ruler who by incessant warfare and systematic organization was able to bring the disparate regions of the state under control. Ismaʿil restructured the army around a contingent of musket-wielding black slaves, defeated the Sufi brotherhoods, and imposed a system of heavy taxation. He expelled foreign occupiers, notably the Spanish from Larache and the British from Tangier. Henceforth, Moroccan sultans styled themselves as "Commander of the Faithful," an implicit claim to the caliphate otherwise also claimed by the Ottomans. Following Ismaʿil's death, however, the army revolted, and power once again fragmented.

After the turbulent reign of Abdullah, who was deposed five times between 1727 and 1757, the state was reorganized under Muhammad III (1757–1790), the architect of "modern," that is, precolonial, Morocco. By de-emphasizing the tax on agricultural produce and increasing trade (and thus customs revenues), Muhammad III provided an alternate basis for the state finances without disturbing the potentially volatile rural populations. The port of Essaouira was founded in 1767 to place the foreign trade of the Atlantic coast of Morocco under government control.

By emphasizing the religious aspects of his leadership as sultan, caliph, and sharif, Muhammad III sought to counter the reassertion of the maraboutic forces in the countryside. By constant diplomatic negotiation with foreign powers and constant bargaining with local authorities, he devised a precarious balance for the Moroccan state. Its dependence upon foreign commerce made it vulnerable to foreign intervention, however, while the absence of a strong army deprived it of any means to reassert its control over the population.

Under Sulayman (1792–1822) and Abd al-Rahman ibn Hisham (1822–1859), Morocco entered into a precolonial phase, increasingly dependent upon foreign trade and increasingly vulnerable to European pressure, notably signing after 1856 a series of treaties granting most-favored nation status to leading European powers. In retaliation for Moroccan support of the Algerian resistance leader Abd al-Qadir, Moroccan ports were shelled by the French navy, and a Moroccan army was defeated at Isly in 1844. A war with Spain in 1859–1860 over the city of Tetuan was settled only after Morocco agreed to pay a sizable indemnity and make other concessions.

Hassan I (1873–1894) sought to reverse the decline, with mixed results. His military and administrative reforms failed to survive his death, although his adroit diplomacy managed to buy time for Morocco in the face of rising European imperialist ambitions. His successors Abd al-Aziz and Abd al-Hafid also sought to introduce needed reforms and to play off the European powers, but with less success. The Moroccan Question (1900–1912) marks a period of increase in European rivalries over Morocco. In 1912 the Treaty of Fes with France and the Spanish–Moroccan accords marked the formal end of Moroccan independence.

The protectorates of France and Spain lasted from 1912 to 1956. During this period, Moroccan sultans Mulay Youssef (1912–1927) and Muhammad V (1927–1961) were formally incorporated into the French colonial administration, their titles confirmed, but their powers largely alienated to the European occupiers and their local Moroccan agents

through a factional delegation. With the rise of nationalism in the 1930s and 1940s, Muhammad V began increasingly to show his sympathy for the nationalists. In 1946 he publicly broke with the French and assumed leadership of the nationalist movement.

Since 1956, independent Morocco has continued to be governed by the Alawite dynasty. The present sultan, Hassan II, assumed power in 1961 upon the death of his father.

SHARIF OF MECCA

The local, hereditary rulers of Mecca from about 965 to 1916.

Although the sharifs never enjoyed complete independence from distant powers, their remoteness from the imperial capitals of Cairo and Constantinople (now Istanbul) helped them maintain effective rule in Mecca, as did their claimed descent from the prophet Muhammad. The last sharif, Husayn ibn Ali (1852–1931), tried to establish an independent Arabian kingdom, leading the Arab Revolt in 1916 against the Turks in the Hijaz, but he was overthrown by the Saudis in 1925. Founder of the modern Arab Hashimite dynasty, Husayn died in Amman, the capital of his son Abdullah, then ruler of Transjordan (now Jordan). His third son, Faisal I, founded the royal line of Iraq.

SHARIF, OMAR

[1932–]

Egyptian movie star.

The son of a wealthy merchant of Lebanese descent, Omar (also Umar) Sharif was born Michel Chalhoub on 10 April 1932. Educated at Victoria College in Alexandria, he converted from Christianity to Islam and changed his name to Omar Sharif before making his Egyptian film debut in *The Blazing Sun* in 1953. Between 1953 and 1958, he appeared in twenty-four Arabic-language films. On the set of his first film, Sharif became bored during the long pauses between his scenes and took up the game of bridge to while away the time. Sharif became internationally known after playing a lead role in the film *Lawrence of Arabia,* a part for which he received an Academy Award nomination for best supporting actor. Sharif has appeared in many English-language films, including *Doctor Zhivago* and *Funny Girl.* He won the Golden Lion lifetime achievement award for fifty years in films in 2003 after a comeback in the film *Mr. Ibrahim,* in which he plays the role of an old Arab man in Paris who adopts a young Jewish boy. He also pursued his interest in bridge, becoming one of the world's leading authorities on the game and authoring several books on the subject.

SHARJAH

One of seven shaykhdoms making up the United Arab Emirates.

Sharjah is the third largest emirate in the United Arab Emirates (U.A.E.), with an area of 1,000 square miles. Seventy-five percent of its 400,000 inhabitants (2001 estimate) live in the capital city of the same name on the Persian Gulf coast, just north of Dubai. Three exclaves on the Gulf of Oman coast—Dibba, Kalba, and Khor Fakkan—belong to Sharjah and make it the only one of the seven emirates to share borders with all the others. It has the extreme summer heat and aridity of its neighbors, but agriculture is possible in the Dhayd Oasis and in the exclave territories.

In the late-eighteenth and early nineteenth centuries Sharjah and its northern neighbor, Ra's al-Khayma, formed the most powerful state of the lower Gulf under the al-Qasimi family, which is still the ruling clan in each emirate. The al-Qasimi state was defeated by Britain in an 1819 naval battle. Subsequently, the al-Qasimi ruler signed the General Treaty of Peace (1820), which began the process by which the area became a protectorate of Britain. During the 1840s and 1850s the al-Qasimi gradually were eclipsed by the Banu Yas tribal confederation of Abu Dhabi—then, as now, led by the Al Nahayyan family. Following the death of Shaykh Sultan bin Saqr al-Qasimi, one of his sons set up an "independent" state at Ra'x al-Khayma; this state formally split from Sharjah in 1869, but it did not gain formal British recognition as a separate emirate until 1921.

Sharjah enjoyed moderate prosperity in the early twentieth century, boosted by the presence of a Royal Air Force base from the 1930s until 1955. In the early 1950s Sharjah's creek became silted, and with the decline of maritime commerce, it lost its position of importance in the lower Gulf. In 1971, on the eve of independence, Britain pressured Sharjah to agree to shared sovereignty with Iran of the island of Abu Musa. This agreement precipitated a coup attempt in Sharjah (1972) during which the ruler, Shaykh Khalid ibn Muhammad, was killed.

Oil and gas discoveries in 1973 and 1980 brought prosperity, as did the development of several factories in a specially created industrial zone in the western part of Sharjah city. Sharjah also has developed a successful tourist industry. Reflecting the academic bent of the ruler, who holds a doctorate from Exeter University, Sharjah leads the U.A.E. in the development of arts, literature, and museums.

SHARM AL-SHAYKH

Strategic town opposite Tiran island, near the southern tip of the Sinai Peninsula.

The cove and town of Sharm al-Shaykh control maritime access to the Strait of Tiran from the Gulf of Aqaba. In 1954 Egypt fortified the cove to block Israeli shipping from the port of Elat, but in the Arab–Israel War (1956) Israel captured it along with the rest of the peninsula. The United States later persuaded Israel to withdraw its forces in return for assurances of free passage through the Tiran Strait. When the Sinai was restored to Egyptian control in 1957, the United Nations Emergency Force was based at Sharm al-Shaykh until 1967, when Egypt asked it to leave. Its removal was one of the events precipitating the 1967 Arab–Israel War. Occupied by Israel during that conflict, the site became the Israeli naval and air base of Ophira. Restored to Egypt in 1982, the town has become a major tourist resort and frequently serves as the site of high-profile meetings of Middle Eastern and world leaders, notably the Antiterrorism Summit of 1996 and one phase of the Israeli-Palestinian negotiations in 2000.

SHARON, ARIEL

[1928–]

Israeli prime minister and army commander.

Ariel Sharon was born on 27 February 1928 into a family of stubbornly independent pioneer farmers in Kfar Malal. He joined the Haganah in 1945 and took part in the 1948 Arab–Israel War as a platoon commander and intelligence officer. He served in Jerusalem and the northern Negev, making his mark as an inspirational leader. In 1952 he formed Unit 101, a special commando force geared for unconventional retaliatory operations in enemy territory. In 1953 it raided the Palestinian village of Qibya, destroying forty-five houses and killing sixty-nine villagers, half of them women and children. Unit 101 set the standard for the elite commando units of the Israel Defense Force (IDF). In 1954 it was integrated into the paratroop regiment, with Sharon as commander. In 1956 he was appointed to command a paratroop corps, which executed Israel's defense strategy of inflicting retaliatory blows more severe than the original provocations.

Israeli prime minister Ariel Sharon (b. 1928) is a veteran of the Israeli military and achieved his first seat in government in 1973. He was elected prime minister in a special election on 6 February 2001. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

Sharon's performance as military strategist during the 1956 Arab-Israel War earned him a reputation as one of IDF's most brilliant field commanders. At the same time, his activism made him a controversial figure and drew criticism from his superiors. He disobeyed orders and sent paratroopers into the Mitla Pass, deep in the Sinai desert. This ended disastrously, with thirty-eight Israelis dead. As a major general commanding an armored division during the 1967 Arab-Israel War, Sharon revealed a new talent for orchestrating huge, set-piece battles. In 1969 he was appointed chief of the Southern Command. He ruthlessly demolished thousands of homes in Gaza refugee camps to open roads for antiterror patrols, and deported hundreds of young men to Jordan and Lebanon. The number of sabotage attacks dropped dramatically.

Sharon retired from the army in June 1972 after he recognized that he was not going to be promoted chief of the general staff. He entered politics as a member of the Liberal party and was influential in merging it with the right-wing Herut and two smaller parties to form the Likud. He was called back to military service for the 1973 Arab–Israel War, during which he led Israeli forces in penetrating Egyptian defenses to cross the Suez Canal. During this period, in a bitter dispute with the military high command over tactics, he was accused of insubordination but was not relieved of his command. Elected in December 1973 to the Knesset, he resigned after a year to accept an emergency appointment with the IDF. From June 1975 to March 1976, he served as Prime Minister Yitzhak Rabin's special adviser on terrorism. He founded a new political party, Shlomzion, which gained two Knesset seats in the 1977 elections. Shortly thereafter, he rejoined the Likud, which had won the elections, and was appointed minister of agriculture.

Sharon spearheaded Jewish settlement expansion in the occupied territories. Yet he supported returning Sinai to Egypt under the 1979 peace treaty and initiated and administered the destruction of the Jewish settlements there. In 1981 he was

appointed defense minister in Menachem Begin's government. He planned and led Israel's invasion of Lebanon, which began in June 1982, and was accused of extending the war's objectives far beyond those originally approved by the government. The war destroyed the Palestine Liberation Organization's infrastructure and drove its leaders into exile in Tunis, but it left Israeli troops mired in guerrilla warfare in Lebanon for the next eighteen years. The Kahan Commission concluded that Sharon was culpable for not preventing the slaughter of hundreds of Palestinians by Israel's Lebanese Christian allies at the Sabra and Shatila refugee camps. As a consequence, he was forced to resign the defense ministry but allowed to remain in the cabinet. In 1984, and again in 1988, he was appointed industry and trade minister in a National Unity government. From 1990 to 1992 he served as housing and construction minister under Yitzhak Shamir and as chairman of the ministerial committee on immigration and absorption. After the collapse of the Soviet Union, he built homes for hundreds of thousands of immigrants.

When the Likud returned to office, Benjamin Netanyahu appointed Sharon national infrastructure minister in 1996, and foreign minister two years later. Following the election of Labor's Ehud Barak as prime minister in May 1999, Sharon succeeded Netanyahu as Likud leader. His visit to the Temple Mount in Jerusalem in September 2000 sparked Muslims riots, which grew into a second, more bloody, Palestinian intifada.

Sharon was elected prime minister in February 2001 following the collapse of Barak's peace policy and his failure to control the violence. After a suicide bomber killed thirty Jews celebrating Passover in a Netanya resort hotel in March 2002, Sharon invaded and reoccupied West Bank cities, destroying buildings and killing and capturing hundreds of Palestinian fighters. Although the bloodshed continued, albeit on a reduced scale, the voters endorsed his aggressive strategy and confirmed him in the premiership by a landslide in January 2003. Sharon declared the Palestinian leader Yasir Arafat "irrelevant" and isolated him in the ruins of his Ramallah headquarters.

Under United States pressure, Arafat appointed Mahmud Abbas as the first Palestinian prime minister. Sharon opened negotiations with him and accepted a "performance-based road map to a permanent two-state solution," drafted by the United States, the European Union, Russia, and the United Nations. Abandoning his earlier contention that "Jordan is Palestine" and that the Jews had a right to all of the land west of the River Jordan, Sharon surprised many observers when he labeled the West Bank and Gaza territories as "occupied" and declared that Israel could not go on ruling 3.5 million Palestinians. After Abbas was replaced by Ahmad Qurai, Sharon gave the new prime minister a chance to prove that he could curb the Palestinian militias and bring the two sides back to the negotiating table. Sharon showed himself more pragmatic than his party, but his premiership was shadowed by police investigations of alleged financial irregularities.

SHARQI FAMILY, AL-

Ruling family of Fujayra, one of the members of the United Arab Emirates.

Fujayra's ruling family's Sharqiyyin tribe inhabits the Hajjar Mountains and the coastal region of the Shimailiyya district on the Gulf of Oman. The current ruler's family, the Sharqi, came to power in 1876 with the accession of Hamad ibn Abdullah al-Sharqi, who was part of the Qasimi tribal federation that ruled Sharjah. In 1902 the ruler declared independence from Sharjah and was recognized by

the other emirates, but not by Britain. Hamad's son Muhammad continued the family's rule and its insistence on independence, which the British finally recognized in 1952. The current ruler, Hamad ibn Muhammad al-Sharqi, came to power in 1974 after his father's death. Born in 1948, he was educated at Mons Military Academy and Hendon Police College.

SHATT AL-ARAB

The narrow waterway that forms the southern border between Iran and Iraq.

The Shatt al-Arab, or Arvandrud in Persian, provides Iraq with its only means of access to the Persian Gulf. Issues of joint sovereignty over the waterway have long been a source of contention between Iran and Iraq. In 1975 Mohammad Reza Shah Pahlavi of Iran and Vice President Saddam Hussein of Iraq signed the Algiers Agreement, which demarcated the *thalweg* (middle) line along the Shatt al-Arab as the border between the two states. In September 1980 Iraq launched an offensive against the Islamic Republic of Iran, declaring one of its intentions to be the restoration of the Shatt al-Arab to sole Iraqi sovereignty. Hostilities were brought to an end in 1988, but a peace agreement remains to be signed between the two countries. UN Resolution 598 has not been implemented other than to establish a cease-fire; sovereignty of and navigation rights in the Shatt al-Arab remain unresolved. Since Iraq's massive defeat at the hands of the United States in the Gulf War of 1991, borders have reverted to the 1975 demarcations, albeit unofficially.

NEGUIN YAVARI

SHA'UL, ANWAR

[1904–1984]

Iraqi Jewish writer and journalist.

Anwar Shaʾul was born into a Jewish family in the city of al-Hilla in southern Iraq; they moved to Baghdad when he was in his early teens. He studied at the Alliance Israélite Universelle and later obtained a law degree. Between 1924 and 1938 he was a journalist, first editing the Jewish weekly *al-Misbah* (The lantern) and in 1929 launching his own weekly magazine, *al-Hasid* (The reaper).

Shaʾul's knowledge of foreign languages enabled him to translate literary works from English and French. A volume of original and translated fiction appeared in 1922 under the title *al-Hisad al-Awwal* (The first harvest). It was followed in 1955 by *Fi Ziham al-Madina* (In the crowded city) and in 1956 by a volume of poetry, *Hamasat al-Zaman* (Whispers of time).

Shaʾul stayed in Iraq after the mass exodus of its Jewish community in 1951 and 1952. In 1971 he left Baghdad and settled in Kiron, near Tel Aviv. In 1981 he published his collected poetry in *Wa Bazagha Fajr Jadid* (And a new dawn has risen). He also published an autobiography, *Qissat Hayati fi Wadi al-Rafidayn* (My life in Mesopotamia), in 1980.

SASSON SOMEKH

SHAWA, LAILA

[1940–]

Palestinian artist and illustrator.

A native of Gaza, Laila Shawa (Layla Shawwa) is an oil painter, a silk-screen artist, and an illustrator of children's books who has also done sculpture. She studied in Cairo, at two arts academies in Rome, and in Austria with Oskar Kokoschka. She has also worked on United Nations children's art programs in Gaza. Shawa's famous silk-screen installation *Walls of Gaza* (1992–1995) exemplifies her ongoing interest in political struggle and oppression, and in children who live with war and deprivation. Her photographs of children and graffiti-laden walls in Gaza are juxtaposed on large panels to make the viewer confront the effects of conflict and violence on generations of children. Other works examine breast cancer as a metaphor for other eruptions and invasions, such as the 1991 Gulf War, and atomic bombs, linking the body with the land—a strategy adopted by other Palestinian artists. Shawa's paintings on a variety of subjects, including the restrictions on Middle Eastern women, are reminiscent of Henri Rousseau in style and color. Her works have been exhibited throughout the Middle East, in England, and in the United States.

SHAW COMMISSION

A British commission of inquiry into a 1929 disturbance in Palestine.

A commission of inquiry, led by Sir Walter Shaw, was sent to Palestine by the British government to investigate the August 1929 Western Wall Disturbances, which caused the deaths of 249 Jews and Arabs. The commission's report, issued in March 1930, stated that the fundamental cause of the political violence was "the Arab feeling of animosity and hostility towards the Jews consequent upon the disappointment of their political and national aspirations and fear for their economic future." The Palestinians feared that by "Jewish immigration and land purchases they may be deprived of their livelihood and placed under the economic domination of the Jews." The commission's report called for an explicit policy regulating land and immigration that would have, in effect, curtailed the Zionist program in Palestine. The British government, however, postponed consideration of any change in policy until after another commission, which it appointed in May 1930 under Sir John Hope-Simpson, had studied land settlement, immigration, and development.

PHILIP MATTAR

SHAWQI, AHMAD

[1868–1932]

Foremost Arab neoclassical poet.

In the course of his poetic career of forty years, Ahmad Shawqi both renovated the language of Arabic poetry and endowed it with the genre that had been missing in it, namely, the verse drama. After re-

ceiving a thorough Arabic and Islamic education in Cairo, he was sent by Khedive Tawfiq to France, where he spent three years, 1891 to 1893, during which he immersed himself in French literature, especially the Romantic Trio: Alfred de Musset, Lamartine, and Victor Hugo. This was the decisive influence on Shawqi—his window into Western literary art, through which he was able to rejuvenate modern Arabic poetry.

On his return to Egypt, he became in 1893 the court poet of Khedive Abbas Hilmi II. This marked the first phase of his poetic career, which lasted until 1914, when the First World War broke out. During this period, he composed odes on the khedive and the Alawi Dynasty and on Egyptian history, and he emerged as the poet of Islam and the Islamic Caliphate (then the Ottoman Empire). He also wrote a number of historical novels, perhaps inspired by his model, Victor Hugo. In 1898 he published his collected poems as a *diwan* titled *al-Shawqiyyat,* and this immediately established his reputation as the leading poet of his generation in the entire Arab world.

In 1914 his patron, the khedive, was deposed by Britain, and Shawqi was sent into exile. He chose Spain, where he spent the second phase of his poetic career, four years (1915–1919) in Barcelona, devoting his time to reading and contemplation. These four years witnessed the composition of splendid odes in which he remembered the glories of Spanish Islam.

The third phase of Shawqi's poetic career began in 1919 on his return to Egypt and lasted until his death in 1932. Shawqi was free from involvement with the court and court life, and with the abolishment of the caliphate in 1924, he became more interested in Arab nationalist aspirations, especially in Egypt and Syria, which inspired his memorable odes with pan-Arab overtones. It was also in this period that he composed his verse dramas, the most striking of which are *Majnun Layla* and *Masra Cleopatra.*

Shawqi did not limit his themes to the Arab and Islamic world. He is the poet of the Mediterranean par excellence and of pharaonic Egypt. His odes on both, hardly known in Europe and the United States, stand well in comparison with the best in world literature. Four years before his death, his preeminence as a poet was recognized when delegates from the Arab world travelled to Cairo, fêted him, and saluted him as *Amir al-Shuʿara* ("Prince of Poets").

IRFAN SHAHÎD

SHAYKH

A general title of respect.

The term *shaykh* (also sheikh), can be applied to an elderly man, a tribal chief, a ruler of a shaykhdom along the Persian Gulf, a village chief, a religious scholar, a senator, or a Sufi master. The early caliphs were known as shaykhs. Shaykh al-Islam was the title given to the chief *mufti* (jurist) of the Ottoman Empire, who had direct access to the sultan and served as the highest-ranking legal administrator.

See also SHAYKH AL-ISLAM.

MARILYN HIGBEE

SHAYKH AL-ISLAM

Honorary title for Muslim jurists.

Shaykh al-Islam (literally, Elder of Islam) is an honorific title that has been historically applied to prominent Muslim jurists, theologians, and spiritual masters in recognition of outstanding knowledge and/or piety. In the early medieval period (c. 800–1200), the title was quasi-official and conferred on an elite few through acclamation by disciples or peers. Over time, however, the title was adopted by certain highly trained jurists (that is, muftis, or "jurisconsults"), who could legitimately claim the authority to issue a formal legal opinion *(fatwa).* In fact, although the more elitist, quasi-official usage of this title has continued into the modern period (particularly in the form of posthumous conferral), the later medieval and early modern periods witnessed an increasingly widespread attachment of the title to official positions in state-controlled judicial administrations.

The office of Shaykh al-Islam seems to have reached its apex as part of the Ottoman imperial establishment. By the time of Süleyman I (ruled 1520–1566), the chief jurisconsult of Constantinople (now Istanbul) was designated as the unique Shaykh al-Islam and recognized as the highest-ranking and most powerful member of the extensive imperial judiciary with exclusive direct access to the sultan himself. In 1916, however, the Committee for Union and Progress transferred much of the power of the former Ottoman Shaykh al-Islam to a secular Ministry of Justice, and by 1924 the new Turkish republic completely abolished the office. It is important to note that the office of Shaykh al-Islam has been much more widely and systematically instituted in Twelver Shiʿa contexts than in Sunni contexts. It was first introduced into the Iranian Shiʿite judicial system by the Safavid Shah Abbas I (ruled 1588–1629) and remains today the official title of the presidents of municipal religious courts in the Shiʿa communities of Iran and the former Soviet Union.

See also Committee for Union and Progress; Shaykh.

SHAYKH, HANAN AL-

[1945–]

Arab writer.

Hanan al-Shaykh is undisputedly one of the most important Arab women writers at the beginning of the twenty-first century. Born and raised in Lebanon, al-Shaykh first distinguished herself by writing prose fiction that exposed some of the repressive patriarchal traditions of her society. She did so by introducing characters, often women, who unabashedly explored themselves, their families, and their communities. She faced brief periods of censorship and occasional negative reviews. Although some of her fiction is set in the broader Arab world, two of her most prominent novels are situated in Lebanon during the Civil War of 1975 through 1990. Al-Shaykh has become an important voice in critical studies of the war itself. The renowned *Hikayat Zahra* (The Story of Zahra, 1980) is a relentless psychosexual drama that manages, primarily through its complex protagonist, to narrate an insane society in violent civil disarray. Al-Shaykh's stark imagery and gripping plot mesmerized readers. Her follow-up novel, *Barid Bayrut* (Beirut blues, 1992), structured as a series of letters by another memorable female protagonist, extends the depiction of the Lebanese wars and fortifies the ideology of nonpartisanship, as every militia, army, confessional (religious/ethnic), and national group is subject to critique and to ridicule. Al-Shaykh's focus is on nuanced reactions, complex relationships, and multiple points of view. Her war novels offered new ways of imagining Lebanon in this destructive era.

Al-Shaykh spent her early school years in Lebanon and Egypt and later lived in Saudi Arabia. Since the early 1980s, she has lived in London and has participated in local productions of her experimental plays. One of her publications, *Only in London* (2001), explores some of the issues of Arab émigrés in Europe. With a keen sense of humor and a fresh Arabic writing style, al-Shaykh's works have extended the possibilities for Arab women writers. Because of good translations into English and other languages, Al-Shaykh's readership is growing outside the Arab world.

SHAYKHI

Follower of Shaykh Ahmad al-Ahsaʾi (1753–1826), a Twelver Shiʿite Islamic thinker who emphasized the esoteric and intuitional aspects of the religion.

Shaykh Ahmad cultivated followers in al-Hasa in eastern Arabia, Bahrain, and Iraq, as well as in Yazd and Kermanshah in Iran. A separate school of Shiʿism did not coalesce around his name until after his death, when he was succeeded by Sayyid Kazim Rashti (d. 1844) in Karbala; for a time, esoteric Shaykhism offered a challenge to the scholastic orthodoxy of the Usuli school.

After Rashti's death, though many Shaykhis became Babis, important Shaykhi communities continued to exist in the Persian Gulf, and in Kerman and Tabriz. The Tabriz Shaykhis diminished their doctrinal and ritual differences with the majority Usuli school, and played a progressive role during Iran's Constitutional Revolution (1905–1911). The Kerman Shaykhis, led by the Qajar noble Karim Khan Kermani (1810–1871) and his descendants, remained esoteric. Some among the Qajar nobility, as well as Mozaffar al-Din Shah (r. 1896–1906), converted to this school. Kerman Shaykhism proved conservative and often was supported by local governors. This privileged position helped to provoke Shaykhi-Usuli riots in 1905.

In the twentieth century Shaykhism became marginalized as a Shiʿite sect and Shaykhis suffered persecution under the Islamic Republic of Iran after 1979. Shaykhi communities persist in Kerman and elsewhere. The Ihqaqi family (based in Kuwait but originally from Tabriz) now produces most Shaykhi publications and claims many followers in southern Iraq. The movement also has been prominent in recent decades in Pakistan, where debates have raged over its orthodoxy and a Shaykhi Institute was founded in Faisalabad.

SHAZAR, SHNEOUR ZALMAN

[1898–1974]

Third Israeli president.

Shneour Zalman Shazar's last name is actually an acronym for Shneour Zalman Rubashov, his original name. Shazar was born in Minsk, Russia, and raised in Stabsty where he was educated in a Habad Heder, a Lubovitch Hasidic school. He joined the Poʿalei Zion (Labor Zionist) movement in 1905. In 1911, Shazar went to Palestine for the first time and worked on Kibbutz Merhavia, but he did not emigrate there until 1924. He became a member of the Secretariat of the Histadrut (General Federation of Labor) and was on the editorial board of its newspaper, *Davar.*

In 1947, he served as a member of the Jewish Agency delegation to the United Nations. After statehood Shazar ran and was elected on the MAPAI (Labor) list for the Knesset in 1949 and served there until 1957. He was appointed to be the minister of education and culture in 1949, and two years later he became a member of the executive of the Jewish Agency. In 1963 he was elected Israel's third president, to succeed Yizhak Ben-Zvi, and served two terms.

BRYAN DAVES

SHAZLI, SAʿD AL-DIN AL-

[1922–]

Egyptian military officer and opposition politician.

Saʿd al-Din al-Shazli (also Shadhili, Shazly) was educated at Cairo University and the Military and Staff colleges in Cairo, and received training at the infantry school at Fort Benning in the United States. Shazli was chief of staff of Egyptian armed forces during the 1973 Arab–Israel War. Al-Shazli broke with President Anwar al-Sadat over Sadat's 1977 peace initiative with Israel, and was sent as ambassador to the United Kingdom and to Portugal. In 1978, he called for the overthrow of Sadat. In 1980, he went into exile in Algeria, where he formed an opposition party. Al-Shazli has published books on military strategy and the Arab–Israeli conflict.

SHEKEL

Name of Israeli currency.

The word *shekel* derives from biblical times, when coins were called shekels. *Shekel* was the term used by leaders of the Zionist movement to denote the price of membership. For the purpose of designating this cost of membership, attendees at the First Zionist Congress pegged the shekel to a fixed rate of certain major Western currencies.

Until 1970, the Israeli currency was called the lira or pound. In 1984, following a steep devaluation, the name of the currency was changed to the new Israeli shekel (NIS).

BRYAN DAVES

SHENHAR, YITZHAK

[1902–1957]

Hebrew writer.

Yitzhak Shenhar was born in Ukraine and became active in the ha-Halutz movement before moving to Palestine in 1921. He published his first poetry in 1924 and held a number of manual labor jobs until he began his literary career. In the 1930s, he worked as a writer, editor, and translator for the Schocken publishing house. He wrote short stories and poems about the life of Jews in Eastern Europe and in Palestine.

BRYAN DAVES

SHENOUDA III

[1923–]

Patriarch of the Coptic Orthodox Church.

Few Coptic patriarchs have had as much experience in both secular and ecclesiastical affairs prior to their election as Shenouda III. Born near Asyut and originally named Nazir Jayyid, he graduated from Cairo University in 1947 and fought in the 1948 Arab-Israel War. He earned a bachelor of divinity degree in 1950 from the Coptic Orthodox Theological Seminary. He became a leader in the lay-dominated Sunday School movement, editing its monthly magazine, and took holy orders in 1954. Within the church, he was successively a monk, a secretary to Cyril VI, and a bishop. He became a professor of Old Testament studies at the Coptic Seminary and the editor of its journal. Elected patriarch in 1971, Shenouda is the highest-ranking cleric of the Coptic Orthodox Church, the Middle East's largest Christian denomination. He has traveled frequently to North America, Europe, and Australia in order to maintain contact with expatriate Copts worldwide.

Shenouda was among the more than 1,500 Egyptians who were accused by President Anwar al-Sadat in September 1981 of extremist religious activity. Exiled and replaced by a council of five bishops, Shenouda fled to the desert monastery of Anba Bishoi in Wadi Natrun, northwest of Cairo. The reasons for his arrest and exile were unclear. Although religious turmoil had increased in the late 1970s and early 1980s (mainly instigated by Muslims opposed to Sadat's peace treaty with Israel), the president's charges, including those against Shenouda, could not be proven. Some Copts and Muslims punished by Sadat were active in religious

professions and thus superficially gave credence to his allegations, but others had secular occupations—lawyers, writers, journalists, broadcasters, politicians—and appear to have been guilty only of disagreeing with the president.

Sadat's actions may have been a delayed response to Shenouda's September 1977 protest against the proposed imposition of Islamic law *(shariʿa)* in Egypt. The proposal would have made apostasy—in this case, conversion from Islam—a capital offense. Shenouda had feared that the law would discriminate against Egyptian Christians and other non-Muslims. He succeeded temporarily, for Sadat's recommendation was withdrawn, only to be reintroduced in 1980. Because Muslim fundamentalists then unleashed a murderous round of terror against the Copts, Shenouda ordered a series of demonstrations that enraged many Muslims and caused them to accuse the patriarch of engaging in politics. Sadat turned down Shenouda's repeated requests for a meeting, and so in 1981 the patriarch refused to accept the government's Easter greeting, humiliating Sadat, who may have taken revenge by the September arrest. Some Copts believed that Shenouda's dismissal was a political move to balance Sadat's incarceration of many Muslims. Another possible explanation is that, during a 1980 meeting between Sadat and U.S. president Ronald Reagan in Washington, D.C., a group of Coptic expatriates staged a protest, which Sadat wrongly blamed on Shenouda.

The censure of Shenouda for "sectarian sedition" was both ironic and unfortunate. Although he had vigorously defended the Coptic Church and struck back against Muslim fundamentalists, he has never been antagonistic toward Islam per se. Throughout his career, he has been sympathetic to Muslim causes and to Egyptian national interests. Some of his theological writings, particularly his major 1967 work *al-Khalas fi al-Mafhum al-Urthuduksi* (Salvation in Orthodox understanding), are as critical of aspects of Protestantism as of Islamic fundamentalism. Shenouda has specifically denounced the intrusion of religion as a divisive force in political affairs. One result of his historic meeting with the Roman Catholic Pope Paul VI in May 1973 (the first visit by an Egyptian pope to his Roman counterpart since 325 C.E.) was a joint statement of concern about the Palestinian problem. In May 1986 Shenouda sent a representative to the funeral of a leader of the Muslim Brotherhood.

Shenouda's plight improved slowly after Sadat's assassination in October 1981. However, in 1983 an administrative court upheld Sadat's actions against Shenouda and ordered the Coptic Orthodox Church to hold a new papal election; only in January 1985 did a decree from President Husni Mubarak allow Shenouda to regain his office.

Shenouda reaffirmed his policy against politicizing religion by opposing an initiative by the Ibn Khaldun Center to host a conference in 1994 on minorities in the Arab world and efforts by the U.S. Congress in 1997 to pass legislation that would have barred aid to Egypt as long as it allowed discrimination against Copts. He attacked Israel's administration of Christian holy places and vowed not to visit Jerusalem until it was freed from Jewish control. He also condemned U.S. policy toward Iraq. Generally, his strategy has been to align Egypt's Copts closely with their Muslim counterparts in the interest of preserving national unity. He received UNESCO's prize for tolerance in October 1995. He is a past president of the World Council of Churches and headed for many years the Middle Eastern Council of Churches.

DONALD SPANEL
UPDATED BY ARTHUR GOLDSCHMIDT

SHEPHEARD'S HOTEL

British gathering place in Cairo from 1841 to 1952.

In 1841 a British farmer's son named Samuel Shepheard built Shepheard's Hotel in Cairo. As Britain became more involved with the finances of khedival Egypt and especially after the establishment of an informal British protectorate in 1882, Shepheard's became the center of British social life in Cairo. Renovated in 1891, 1899, 1904, 1909, and 1927, the hotel was famous for its opulence.

British officers and administrators often retired to the bar at Shepheard's at the end of the day, and the Moorish Hall attracted tourists from Europe and America. After World War II, the relationship between Britain and Egypt deteriorated and, on Saturday, 26 January 1952, riots erupted in Cairo, which led to the destruction of numerous British and foreign establishments. Singled out by the crowd for particular attention was Shepheard's Hotel. The hotel was destroyed in an explosion, and although rebuilt on another site in 1957, it never regained its former stature.

ZACHARY KARABELL

SHESHBESH

One of several names for a board game, known in the West as backgammon, played with two dice and thirty pieces (fifteen per side).

Sheshbesh pieces are usually black for one player and white for the other. The origins of the game are obscure; while some experts argue for its invention in Persia, others suggest that it originated in southwest Asia. In 1927, Sir Leonard Wooley discovered a board game in the ruined city of Ur that was marked off into elaborately inlaid squares (twenty in all) accompanied by two sets of dice and two sets of discs, seven white and seven black. This places sheshbesh variants in Sumeria as early as 2600 B.C.E. Although it is not known how this game was played, experts assume that movement of the pieces over the board was governed by rolling the dice. The Ur game appears somewhat related to modern ludo, which in turn is related to backgammon.

The traditional game consists of balancing the elements of skill and chance while playing on a board marked with twenty-four chevrons in alternating colors of black and white. The pieces, fifteen to a player, are arranged on the trays according to a specific pattern, or are held off the board. Entry or movement begins according to the roll of the dice. The pieces move the full distance around the board in a race to the home tray, and are then borne off. Most commonly, players try to prevent and delay one's opponent from bearing off. If a hit has been made the player will attempt to block the entry of the piece by making homes—covering a chevron with a minimum of two pieces. Shesbesh is known by a large variety of names. These include *takht-e nard* in Iran, *plakato* and *tawali* in Greece, *tric-trac* in France and Germany, tables *reales* in Italy and Spain, *mahbusa, yahudiyya farahjiyya,* or *tawlat al-zahr* in Syria and Arabia, and *bula* in Egypt.

CYRUS MOSHAVER

SHIBERGHAN

City in northern Afghanistan.

The capital of the Afghan province of Jowzjan, Shiberghan is located approximately 80 miles west of Mazar-e Sharif. The city has about 30,000 inhabitants, but the number is only a rough approximation. The official 1979 census showed a population of 19,000, but by 2003 estimates held that it might be as high as 40,000. Most of Shiberghan's population is Uzbek, although the city also has a sizable Turkmen and Tajik population. After natural gas was discovered in 1931, Shiberghan was developed with Soviet aid into a modern city. The city became a focal point in the battle between the Taliban and Afghanistan's Northern Alliance. Shiberghan is the location of a prison used by the Northern Alliance, and it has been alleged that several hundred Taliban and al-Qaʿida prisoners were killed at the prison.

GRANT FARR

SHID, NAHID

[1953–]

Iranian lawyer.

Nahid Shid was born in 1953. She graduated from Tehran University law school and pursued religious education with Ayatollah Marʾashi-Najafi. She has been an attorney since 1980, specializing in women's affairs, employment, and social insurance. She also is an expert at the Social Welfare organization and a consultant at the High Council of the Cultural Revolution. She initiated several amendments to the insurance law and divorce law, especially the principles of *ojrat-ol misl* and the reevaluation of dowry. The amendment to *ojrat-ol misl,* which was promulgated in 1993, stipulates that when a man files for divorce his wife can ask to be compensated for the housework she did during the marriage. The change to dowry, promulgated in 1996, stipulates that the amount of dowry should be calculated according to its current value, taking into account inflation. Shid argues that most religious laws should be changed because they are based on secondary principles and do not take account of social change. She maintains that blood money cannot be functional in a society in which women are medical doctors, university professors, and the like, and concludes that blood money should be the same for men and women. She presented her candidacy for the Fifth Parliament elections (1996) but was disqualified by the Council of Guardians.

AZADEH KIAN-THIÉBAUT

SHIDYAQ, AHMAD FARIS AL-

[1804–1887]

Lebanese writer, linguist, and literary critic who played a leading role in the Arabic literary revival of the mid-to-late nineteenth century.

A Maronite who converted to Protestantism in 1826 after witnessing the Maronite clergy's persecution of his brother Asʿad, Faris al-Shidyaq was sent to Egypt by the American Protestant missionaries in Lebanon so that he could pursue his studies in Cairo. From 1834 to 1848, he taught at the American Protestant mission school in Malta, undertook a new Arabic translation of the Bible, and edited the publications of the American press there. For several years afterward, he traveled widely through Europe and the Near East, and worked as editor of the official Tunisian journal *al-Ra'id al-Tunisi* between 1854 and 1860. He converted to Islam during his stay in Tunis and adopted the name Ahmad Faris. In 1860, he relocated to Istanbul at the invitation of the Ottoman authorities. While there, he undertook his most important project: the publication of the Arabic-language newspaper *al-Jawa'ib,* a mouthpiece for Ottomanism which soon became a leading forum for the discussion of the political and cultural issues of the time and can be considered a pioneer of modern Arabic journalism. In addition to the many pieces of literary criticism that he wrote for this journal and others, Ahmad Faris al-Shidyaq is also remembered for his own writings in prose and verse and for his travel writing. A writer whose influence was felt throughout the region, he was one of the architects of modern literary Arabic.

SHIHABI, ZLIKHA AL-

[1903–1992]

Palestinian women's activist.

Zlikha (also Zulaykha) Ishaq al-Shihabi was born in Jerusalem and educated at the Sisters of Zion School there. Her education was supplemented by private lessons. In 1929 she was a member of the Arab Women's Executive Committee, which convened the Palestine Arab Women's Conference in Jerusalem, and directed the Palestinian women's movement during the Mandate period. Shihabi was elected president of the Arab Women's Union (AWU) in Jerusalem in 1937, a position she held until her death. In the 1940s the AWU founded a sports club with its own playground and tennis courts, and in 1946 it opened a clinic near Bab

al-Zahira, a gate of the Old City of Jerusalem. She represented Palestinian women and spoke at the Eastern Women's Conference on Palestine (Cairo, 1938), and the Arab Women's Conference (Cairo, 1944), as well as other international conferences. In 1964 she was president of the preparatory committee that founded the General Union of Palestinian Women in Jerusalem, which was subsequently banned by both the Jordanian authorities and then the Israeli government after Jerusalem was captured in 1967. Because of her political activities the Israelis deported Shihabi to Jordan in 1969, but she managed to return to Jerusalem after a few months and continued her work with the AWU there until her death.

SHIʿISM

Branch of Islam that traces its leadership to Ali ibn Abi Talib, cousin of Muhammad.

The Shiʿa constitute the largest Islamic community after the Sunnis, numbering close to 90 million worldwide. Iran is the only predominantly Shiʿite country; significant Shiʿite minorities exist in Iraq, India, Pakistan, Afghanistan, Yemen, Kuwait, Bahrain, eastern Saudi Arabia, Lebanon, and various Western countries. Shiʿism rests on a belief that the right of succession to political and religious leadership of the community belongs solely to the prophet Muhammad's cousin, Ali ibn Abi Talib, and his progeny. The Prophet was first succeeded by three of his companions—Abu Bakr, Umar, and Uthman—who ruled successively (632–656). Ali's rule (656–661) was almost immediately contested by Muʿawiyya, who succeeded him and founded the Umayyad dynasty. Upon Muʾawiyya's death, Ali's son Husayn revolted against Yazid, the successor and son of Muʾawiyya. For the followers of Ali, Husayn's death in battle at Karbala became symbolic of the hostility between them and those linked with Sunni Islam. The battle, especially the martyrdom of Husayn, continues to be commemorated by Shiʿa.

Origins

The assassination of Uthman in 656 opened a split in the Islamic community. Soon after the accession of Ali to the caliphate, Muʿawiya, governor of Syria, kinsman of Uthman, and among the last generation of companions of the Prophet, declared his opposition to Ali's leadership. His opposition soon gained support among tribal groups in Syria and Mesopotamia. In response, Ali moved the Islamic capital to Kufa (in southern Iraq) and engaged Muʿawiya in a protracted rivalry that ended in an armistice known as *al-Tahkim,* which left Muʿawiya sovereign in Syria, Egypt, and northern Mesopotamia, while Ali ruled the Arabian peninsula and the east. Those who supported Ali were known as *Shiʿat Ali* (the partisans of Ali); hence the name Shiʿism. Ali was assassinated in 661; subsequently, Muʿawiya consolidated his rule over the territories formerly under Ali and moved to make the line of political succession that of his family, the Umayyads. Since Ali's martyrdom the city of al-Najaf, where he is buried, has become a place of pilgrimage for Shiʿa.

Ali had two sons, Hasan and Husayn (or Hussein), from his marriage to the Prophet's daughter, Fatima. They quickly inherited Ali's leadership and attracted the loyalty of the Shiʿa. Exasperated by the political deadlock, Hasan abandoned his claim to succession, leaving Muʿawiya free to extend his control. Muʿawiya was succeeded in 680 by his son Yazid, who lacked the political acumen of his father. Yazid's hereditary route to power upset an Islamic community accustomed to having a strong consultative element in political election and viewing senior companions of the Prophet as worthier candidates to rule.

In 680 the residents of Kufa invited Husayn, who lived in Medina, to assert his right to succeed his father, and they pledged to support him. Husayn

left Medina with his family and close associates, but before he could reach Kufa, an Umayyad force attacked and killed him and most of his family. This unprovoked attack on the youngest of the Prophet's grandchildren increased opposition to the Umayyads.

The cause of Shiʿism then expanded to include other branches of the larger family of the Prophet, the Banu Hashim, or Hashimites. There were a number of Hashimite revolts, primarily in Iraq and the east. Pivotal revolts were those of Zayd ibn Ali ibn al-Husayn in Kufa (743), and of his son Yahya in Transoxiania. Zayd's movement formed an early current of Shiʿism that espoused political activity to further the Alid cause, and did not restrict the imamate to one particular branch of the Alid family. (The Zaydi sect still survives in Yemen.)

In 750 a broadly based movement originating in Khorasan toppled the Umayyad caliphate. Succession to the caliphate passed to the Abbasids, a Hashimite branch named after Abbas, an uncle of the Prophet. Feeling betrayed, the Alids staged several revolts, the most notable of which was the one in Medina by Muhammad al-Nafs al-Zakiyya (762), a descendant of Hasan. By then, however, the Abbasids had consolidated their control.

Theology

Shiʿism originated as a political movement supporting the rights of Ali to the caliphate. Since leadership in the early Islamic community was associated to a great extent with religious merit, Ali was considered the rightful ruler not only because of his early conversion to Islam and close family ties to the Prophet, but also because of his religious knowledge. Shiʿite tradition states that the Prophet always referred to Ali as the preeminent expert on spiritual matters among his companions, and that at Ghadir Khumm, Muhammad reportedly declared to his companions that Ali was his *waliyy* (rightful and trusted successor) and blessed him with special prayers. The earliest concrete evidence of Shiʿism as a spiritual sect, however, did not appear until the 750s or 760s. In the era immediately following the revolution, a divergence emerged among those supporting the cause of Ali's family. Shiʿism came to be associated increasingly with descendants of Husayn, and in particular, the sixth descendant, Jaʿfar al-Sadiq.

Although little historical fact is known about Jaʿfar al-Sadiq, it is generally believed that it was during his time that the rudiments of Shiʿite theology were first formed. These consisted of the beliefs that the imam (presumably from the Husaynid line) holds the secrets of religious knowledge *(maʿrifa),* that he has the authority to pass on this knowledge to a designated successor through a process of investment known as *wasiyya,* and that the followers of the imam must not challenge the authority of the established state in support of the Alid imamate until the imam declares the historically assigned time for such a political revolution. From the time of Jaʿfar al-Sadiq, the Shiʿa became closely clustered around the line of his descendants. However, a significant division took place within his lifetime. Jaʿfar's son Ismaʿil was supposed to be the spiritual successor to his father, and thus began to attract followers. Either because Ismaʿil died during his father's lifetime or because during his last years Jaʿfar decided to transfer the succession to another of his

The Hussein Mosque, located in Kerbala, Iraq. **© Charles & Josette Lenars/Corbis. Reproduced by permission.**

sons, Musa, another group began to recognize Musa as his only successor.

This latter group continued to recognize the transmission of the authority of the imamate in a line of twelve successors, the last of whom, a child, is believed to have disappeared in the city of Samarra in 873. Shiʿa believe that the last of the twelve imams will one day reveal himself as the leading religious and political guide (the Mahdi), reestablish his leadership over the whole Islamic community, and usher in an age of justice and righteousness. Recognition of twelve descendants of Ali as imams led to this larger Shiʿite community being known as Twelver (also Ithaʿashar) Shiʿa, or Imamis. The other group, which refused to accept Musa as successor and maintained its religous loyalty to Ismaʿil, the seventh imam, is hence known as Ismaʿilis, or Seveners. Like the Twelvers, some Ismaʿilis believe in occulation *(ghayba),* but they consider Ismaʿil to be the vanished imam destined to usher in a righteous age.

The Growth of Shiʿism

In the late ninth century competing Shiʿite missions emerged. For some time, Ismaʿili *daʿwa* (mission, propaganda) had its strongest support in North Africa, where it was the religious affiliation of the Fatimid dynasty (909–1171), which came to rule North Africa, Egypt, Hijaz, and Syria. Establishing the city of Cairo (969) as their capital, the Fatimids hoped to turn Egypt into the center of Ismaʿili propaganda, and for this purpose they founded al-Azhar seminary. The Fatimids' religious enterprise had little success because the majority of their subjects adhered to Sunni schools of thought; Ismaʿilism became the ideology of the state and of a minority in society. Elsewhere in the Islamic world, the Buyid dynasty, which ruled Iran and Iraq between 932 and 1062, declared its loyalty to Shiʿism but chose to follow the Twelver branch. Although Shiʿism did not become the religious affiliation of the majority under Buyid rule, the dynasty did much to promote it. For example, Husayn's murder was commemorated with public ceremonies on the tenth of Muharram, the events at Ghadir Khumm were celebrated, and steps were taken to protect Shiʿism.

The next stage of substantial elaboration of Twelver Shiʿite thought occurred in the sixteenth century under the Safavid dynasty in Iran. Until their arrival, Iran had been primarily a Sunni region. Locked in a mortal conflict with two Sunni dynasties—the Ottomans to the west and the Uzbeks in Transoxiania to the east—Ismaʿil al-Safawi (1494–1524), founder of the dynasty, found it politically helpful to underline the ideological particularity of his government by adopting Shiʿism as the state religion. At the time, Safavid Shiʿism consisted largely of an affiliation to Sufi movements in Azerbaijan. Under Safawi's successor, Tahmasp (1524–1576), however, the state moved toward a more institutional and hierarchical structure guided by a clergy and an established law, rather than by the esoteric propensity of Sufi masters. This change fostered the alliance between the state and the clergy, the latter bolstering the legitimacy of the state and the former supporting Shiʿite propaganda. The Safavids sought to make Shiʿism the law of the land and the only religious affiliation in society. Under Abbas I (1588–1629) they built theological seminaries and attracted renowned scholars from Iraq, southern Lebanon, and Bahrain to help systematize Shiʿite learning. Sunni Islam was all but eliminated in the Safavid territories.

Shiʿite Scholars and Differences with Sunnism

The idea of the occultation of the imam deprived Shiʿism of binding authority in spiritual matters. This inevitably called for the presence of religious scholars who could guide the community. Kufa was the earliest center of Shiʿite thought, and in later times Qom in Iran emerged as a preeminent cen-

ter of Shiʿite learning. Among the most prominent of scholars in Qom were Abu Jaʿfar al-Kulayni (d. 941) and Ibn Babawayh al-Saduq (d. 991). Noted scholars in the later theological schools of Baghdad were Shaykh al-Mufid (d. 1022) and Sharif Murtada Alam al-Huda (d. 1067). The greatest Shiʿite scholar, however, was perhaps al-Majlisi (d. 1699), who contributed the most toward changing a Sufi form of Shiʿism to a dogmatic and formal legislative form. Beginning in the nineteenth century there was a debate between two main currents in Shiʿism: the Akhbari, which seeks to establish Shiʿite jurisprudence on the authority of tradition *(akhbar)*, and the Usuli, which emphasizes the primacy of rationalist principles *(usul)* and the need to exercise *ijtihad* (reasoned speculation). Since the debate has been resolved in favor of the Usuli current in the twentieth century, the authority of the *mujtahid* (expert scholar capable of exercising reasoned speculation) has taken on greater importance. Although Shiʿa and Sunnis agree on core matters of ritual, dogma, and law, they differ on details. Whereas Sunnis, for instance, permit the occasional practice of wiping the foot covering with water *(al-mash ala al-khuffayn)* during ablution, Shiʿa reject the practice. The institution of temporary marriage *(mutʿa)*, accepted under Shiʿite law, is rejected in Sunnism. The most prominent area of difference, however, remains historical. The Shiʿa's rejection of the caliphate of the first successors to the Prophet—viewed as equals according to Sunni historical reading—and their insistence on the sole right of Ali ibn Abi Talib to the succession has long formed the most visible difference between the two communities.

SHILLUK

Non-Muslim Sudanese people.

The Shilluk are a linguistic group belonging to the Western Nilotic subgroup of the Eastern Sudanic branch of the Nilo-Saharan family. They are concentrated along the west bank of the White Nile in southern Sudan. Because Shilluk political organization is centered around the king *(reth)*, the Shilluk have experienced greater unity than other tribes in the region. Enjoying access to good agricultural land along the Nile, the Shilluk are more settled than other tribes and rely more on cultivation and fishing than on cattle raising. The Shilluk numbered about 150,000 persons according to the 1983 census.

SHILOAH, REUVEN

[1909–1959]

Israeli intelligence official, strategist, and diplomat.

Born Reuven Zaslani in Jerusalem, Shiloah served in the SHAI (the Haganah intelligence service) in

the 1930s and worked with the Jewish community in Iraq. He headed the Arab section of the political department of the Jewish Agency under Moshe Shertok (Sharett). He was liaison officer with British and U.S. intelligence services during World War II. Shiloah held many secret meetings with King Abdullah of Transjordan before and after the 1948 war.

He was the first director of the political department of the Israeli Foreign Ministry and headed the Israeli delegation to the Lausanne peace talks in 1949. He was also the first head of the Mossad (1949–1952), but was worn down by the disastrous collapse of the Israeli spy network in Iraq, by a serious road accident, and by constant feuding with Isser Harel, the first head of the Shin Bet and Shiloah's successor as Mossad chief.

Shiloah resigned his chairmanship of the intelligence services coordinating committee to serve under ambassador Abba Eban as a minister at the Israeli embassy in Washington, D.C. (1953–1957). While there he forged close ties with the U.S. intelligence community.

As a senior adviser to Golda Meir, the foreign minister, Shiloah was instrumental in forging Israel's "periphery doctrine" of responding to the Cold War and Nasserism by seeking closer links with non-Arab regimes such as Turkey, Iran, and Ethiopia. He attempted but failed to establish an Israeli relationship with NATO. Shiloah was widely described as a workaholic; this trait contributed to his poor health and his premature death.

IAN BLACK

SHIMʿUN, MAR

[1908–1975]

Patriarch of the Assyrian (Nestorian) community.

Ishai Mar Shimʿun XXIII was born in the Ottoman Empire (now Turkey) and educated in England in the 1920s. In 1918 and 1919, some 20,000 Assyrians (Nestorians) who had fled southeastern Turkey were settled in Iraq by the British authorities. Fearing the consequences of British withdrawal in 1932, the Mar Shimʿun attempted to set up a separate enclave for his people with himself as politico-spiritual leader. The Assyrians were told that they should either become assimilated as Iraqis or leave, and in a confrontation between the community and the Iraqi army in August 1933, at least 600 Assyrians were killed. The Mar Shimʿun left Iraq, eventually reaching the United States; though he returned briefly to Iraq in 1970, he died in the United States in 1975.

See also ASSYRIANS.

PETER SLUGLETT

SHIN BET

Israel's General Security Service (G.S.S. or Shabak), responsible for preventing hostile activity.

The Shin Bet was created in 1948 to counter espionage, subversion, and sabotage. Its early preoccupations were Soviet-bloc espionage and monitoring Israel's Arab minority. Its first head was Isser Harel, who was succeeded by Amos Manor in 1954.

The Shin Bet expanded greatly after the 1967 war, becoming the leading civilian agency for controlling the Palestinians in the newly occupied territories, recruiting informers and collaborators and working with the Mossad to penetrate resistance groups such as al-Fatah and the Popular Front for the Liberation of Palestine.

The Shabak affair (1984–1986) brought unwelcome exposure of Shin Bet practices. Two Palestinians who hijacked an Israeli bus were said by the authorities to have died during the rescue. Photographs showed them leaving the bus alive, and it became clear that they had been deliberately killed by Shin Bet personnel while in custody. Israel's attorney general recommended that Avraham Shalom, head of the Shin Bet, be dismissed, but amid accusations of a cover-up, President Chaim Herzog pardoned Shalom and eleven other Shin Bet officers. A new committee investigated Shin Bet procedures, including interrogation methods that some human-rights experts said constituted torture.

The Shin Bet struggled to cope with the Palestinian uprising after 1987 and saw its effectiveness weakened when Israel withdrew from the Gaza Strip and large parts of the West Bank after the Oslo Accords. Its reputation was damaged by its failure to prevent the assassination of Yitzhak Rabin by a right-wing Jew in 1995 and by the Palestinian suicide bombings that accompanied the second intifada that began in 2000.

JULIE ZUCKERMAN
UPDATED BY IAN BLACK

SHIRAZ

Ancient city and provincial capital in southwestern Iran.

Shiraz, the capital of Fars, probably dates back to Achemenid times (c. 550–330 B.C.E.). During the Sassanian dynasty (c. 226–642 C.E.), it developed into an important commercial center and military base, a position it has retained for more than 1,300 years. During the medieval period, two of Iran's greatest poets, Saʿdi and Hafez, lived in the city. Shiraz flourished in the late eighteenth century as the capital of the Zand dynasty (1750–1794).

During the nineteenth century Shiraz was an important center for the distribution of foreign trade, much of which passed through the Persian Gulf port of Bushehr (Bushire), about 125 miles west of the city. The development of ports in Khuzestan in the early twentieth century, and especially the building of the Trans-Iranian Railway, which bypassed both Shiraz and Bushehr, led to the decline of this trade. Beginning in the 1930s, however, modern industries were developed in Shiraz, initially textile factories, but increasingly more diversified manufacturing after 1965. Industrialization brought a major influx of rural migrants, and the city's population increased nearly sixfold in 40 years, from 179,000 in 1956 to 1,053,000 by 1996.

NEGUIN YAVARI
UPDATED BY ERIC HOOGLUND

SHIRAZI, MIRZA HASAN

[1815–1897]

Nineteenth-century Iranian cleric.

Born in Shiraz to a well-established clerical family, Mirza Hasan Shirazi embarked on vigorous religious training that took him first to Isfahan and then Iraq. He has become most notable for a religious decree *(fatwa)* in 1892 against the use of tobacco. The decree read as follows: "In the name of God the merciful, the usage of tobacco in any way is equal to denouncing God and fighting against the divinely guided messianic leader [that is, the Mahdi, the Imam of the Age]." Shirazi's decision to issue such a proclamation is said to have stemmed from the allocation of exclusive rights of tobacco production and sales to the British by Naser al-Din Shah and his prime minister. The effect of the decree was that the government was forced to annul its agreement with the British. It is said that even the wives of the shah refused to use and serve tobacco during the period of the decree.

FARHAD ARSHAD

SHIRAZ UNIVERSITY

A private university established in 1956 in Shiraz, Iran.

The Pahlavi University of Shiraz, Iran, was established by a special law passed by the parliament in 1956 as a nongovernment university under the trust of the king, the queen, and the crown prince. Its name was changed to Shiraz University after the 1979 Iranian Revolution. It began with nine colleges or faculties and by 1977 had 648 faculty members

and 5,129 students. It was one of the first Middle Eastern universities created on the U.S. model, offering courses in English and including among its faculty a number of foreigners. Its curriculum includes courses in literature, natural sciences, medicine, agriculture, and engineering. It had 12,600 students and 360 teachers in 2002.

SHISH KEBAB

See FOOD: SHISH KEBAB

SHITREET, BEKHOR

[1897–1967]

Israeli Mizrahi leader.

Bekhor Shitreet (also Shitrit) was born in Tiberias into a family that had emigrated from Morocco to Palestine in the eighteenth century. He was educated as a rabbi and taught Hebrew, Arabic, and French in the Alliance (French) school system in Tiberias. An organizer of the police force set up in Palestine by the British in 1919, he later was a police commander in lower Galilee and head of the Tel Aviv police force in 1927. After the founding of the State of Israel in 1948, he was elected to the Knesset as a member of the MAPAI party and served as minister of police. During his lifetime Shitreet sought to improve relations between religious minorities in Israel.

BRYAN DAVES

SHLONSKY, AVRAHAM

[1900–1973]

Hebrew poet, literary critic, editor, and translator.

Avraham Shlonsky was the main leader and proponent of modern Hebrew poetry in the evolving Jewish community of British mandatory Palestine and the State of Israel. Born in 1900 in the tsarist Ukraine, he was sent at age thirteen by his Zionist parents to study at the prestigious Herzliya Gymnasia (high school) in Tel Aviv, but had to return to Russia during World War I. In 1921 he emigrated to Palestine and joined a new kibbutz and for a while worked as a *halutz* (pioneer) in road paving, construction, and agriculture. His early poems appeared in 1922, and he was soon drawn to the burgeoning cultural life in Tel Aviv. During a visit to Paris, Shlonsky was influenced by modern French poetry, especially by the symbolists and the expressionists, but also by the Russian avant-garde poetry that flourished during the Russian Revolution and in the early days of the Soviet Union.

During the 1920s Shlonsky became a leading figure in the literary revolt against the rhetorical-didactic style of Hayyim Nahman Bialik, the towering and authoritative king of early Hebrew and Zionist poetry. Shlonsky edited the literary pages of *Davar,* the daily paper of the labor movement, and from 1926 edited *Ketuvim* (Writings) and from 1933 *Turim* (Columns), the literary journals of the rebellious young opposition to the literary establishment. In the late 1930s he became active in the Marxist left wing of the labor movement (ha-Shomer ha-Tzaʿir and later MAPAM), founded its *Sifriyat ha-Poʿalim* (Workers Library) publishing house, and edited the party's literary supplements and journals. In the late 1940s and early 1950s Shlonsky edited *Orlogin,* the home for what was then called Progressive Culture, which sympathized with the Soviet Union in the Cold War. During the 1950s he was active in the Moscow-influenced World Peace Movement, but after the revelations of Stalin's antisemitic tendencies Shlonsky became critical of the attitude of the Soviet regime toward the Jews and Zionism.

Shlonsky was acclaimed for his agility with the Hebrew language. Beside his influential "serious" poetry, he was widely admired for his light poetry, satires, and children's verse. A prolific translator, he introduced the young Hebrew-speaking generation to the world classics (Shakespeare, Molière, Romain Rolland, De Coster) and in particular to Russian poetry and prose (Pushkin, Gogol, Chekhov, Mayakovsky, and Tolstoy). In addition to the nine major collections of poetry that he published, Shlonsky also translated more than seventy major European works into Hebrew. In 1967 Shlonsky was awarded the prestigious Israel Prize. He died in 1973.

MORDECHAI BAR-ON

SHOCHAT, MANYA

[1879–1961]

Leading Zionist pioneer, advocate for Russian Jewry, feminist, mother of the kibbutz movement, and founder of the League of Arab-Jewish Rapprochement.

Born near Grodno, Russia, Manya Wilbushevitz Shochat (also Shohat) reacted to the Kishinev pogrom of 1903 by distancing herself from the Russian revolutionary movement in favor of Jewish self-defense and nonrevolutionary socialist movements. For supporting an attempt to assassinate the Russian interior minister, Shochat was imprisoned. She persuaded the secret police to release her, then fled when her police contact fell from office. Arriving in Ottoman Palestine in 1904, Shochat established the first collective, Kibbutz Sejera, and was a founding member of the Jewish self-defense movement, Ha-Shomer. She undertook a number of overseas fundraising missions on behalf of Palestinian Jewish workers and Russian Jewry and attempted to foster dialogue with local Arabs while also smuggling arms to Jewish communities, which led to her arrest by the Turkish authorities. Under the British Mandate in Palestine, Shochat was prominent in the kibbutz movement and the newly established Haganah (Jewish defense force). After rioting resulted in the death of Jews across the country in 1929, she helped to found the small League of Arab-Jewish Rapprochement while continuing to support Jewish immigration and defense efforts—a combination she pursued through the subsequent war, believing that respect could win peace while survival demanded self-reliance.

GEORGE R. WILKES

SHORFA

North African title for all descendants of the prophet Muhammad.

In Morocco, since the rule of the Idrisid dynasty, descent from the prophet Muhammad became a source of legitimacy for establishing political power. All the founders of the religious brotherhoods claimed such origin to gain authority and credit among disciples. A genealogical tree linking the shorfa to the Prophet would assess the claim. The Saʿdi (sixteenth century) and Alawi (seventeenth century to the present) dynasties that ruled or have ruled Morocco are considered shorfa dynasties.

RAHMA BOURQIA

SHUF

Region of Lebanon.

The Shuf is the district (*qada*) located in southern Lebanon between the Jizzin and al-Matn districts, and between the Mediterranean Sea and the Biqa valley. It has more than 220 towns. The main city is the predominantly Druze town of Baʿaklin, which was, for a while, the seat of government for the Maʿnids. The Shuf was made part of the governorate of Mount Lebanon because a sectarian balance between Maronite Christians and Druze was desired. Historically, the electoral battles in the region were between the candidates of Kamal Jumblatt and those of Camille Chamoun, but the presence of a number of sects in the region forced both leaders to seek support among nonaligned sects to win the election. For example, the Shuf had a Sunni Muslim seat, and even the Maronite Chamoun had to field a Sunni candidate to win the election. Druze leader Walid Jumblatt has been demanding the division of the Mount Lebanon governorate into two sections to achieve a degree of sectarian parity. He does not

feel he should have to seek support among the Maronites, who constitute a majority in the northern part of the governorate. By the early 2000s, however, Jumblatt—whose traditional pro-Syrian stance had shifted—began making political alliances with Christian candidates.

UPDATED BY MICHAEL R. FISCHBACH

SHUFMAN, GERSHON

[1880–1972]

Hebrew writer.

Born in Belorussia, Gershon Shufman received a traditional Yeshiva education and taught himself Hebrew and Russian. In 1902, he enlisted in the Russian army, which coincided with the publication of his first collection of short stories. From 1913 to 1938 he lived in Austria and from there emigrated to Palestine. His brief articles and short stories are his best literary creations. They describe life in Galicia, Austria, and in Israel, and focus on day-to-day experiences that, in turn, reflect reality.

Shufman's writings are considered forerunners of modern Hebrew literature. A four-volume revised version of his collected works appeared between 1946 and 1952, and a fifth volume was added in 1960. He received the Israel Prize for literature in 1957.

ANN KAHN

SHUKRI, MOHAMMAD

[1935–]

Moroccan novelist.

Mohammad Shukri was born in Beni Shiker in the Nadhor region of Morocco. He learned to read and write only at the age of twenty. He lives in Tangier.

Shukri's first autobiographical novel, *al-Khubz al-Hafi Sira Riwaʿiyya, 1935–1956* (For bread alone), details his difficult childhood and stirs the admiration of the reader for his efforts to overcome his circumstances. The extreme realism of Shukri's writings, reproducing the life of hunger, theft, drugs, and prostitution he experienced or observed around him, delayed the publication of his novel in Arabic for many years—the English translation by Paul Bowles, *For Bread Alone* (1973), appeared first. Shukri's collection of short stories *Majnun al-Ward* (1979; Enamored of roses) depicts city life in Morocco with the same harsh realism and a camera-eye technique; the words are even more poignant than the situations they describe, and have a stronger impact on the reader.

The second volume of Shukri's autobiography, *Zaman al-Akhta* (The time of mistakes) was published in 1992; its fourth edition has a different title, *Al-Shuttar* (2000; Streetwise). Abandoning the fictionalized narrative of *For Bread Alone,* Shukri stays closer to reality made vibrant through the use of the present tense, and the forthrightness in speech that characterized his earlier book reappears. Autobiographical information also figures in Shukri's fiction works such as *al-Suq al-Dakhili* (1985; The inner market), where he evokes with his usual blunt and uninhibited style the intimate details of day and night life in Tangier.

Shukri's oeuvre extends beyond the novel. His account of Jean Genet and Tennessee Williams's visit to Tangier was later translated into French by Mohammed el-Ghoulabzouri under the title *Jean Genet et Tennessee Williams à Tangier* (1992). His literary assessment of his contemporary Arab and Western authors (as well as his own work) is found in *Ghiwayat al-Shahrur al-Abyad* (1998; The seduction of the white sparrow). Shukri has also published two plays, *al-Talqa al-Akhira* (1980; The last bullet) and *al-Saʿada* (1994; Happiness).

AIDA A. BAMIA

SHULTZ, GEORGE

[1920–]

U.S. secretary of state, 1982 to 1989.

George Shultz was born in New York City on 13 December 1920. He earned an economics B.A. from Princeton in 1942, and a Ph.D. from the Massachusetts Institute of Technology (MIT) in 1949. During World War II he joined the Marine Corps Reserve. Shultz pursued an academic career at MIT, as a member of the U.S. Senate staff, and at the University of Chicago. In the late 1960s he started his political career as secretary of labor and then director of the Office of Management and Budget.

While secretary of the treasury in the administration of U.S. president Richard Nixon, George Shultz was confronted with the Oil Crisis. During a business career he established a solid economic knowledge of the Middle East. Following Alexander Haig as the second secretary of state of the administration of Ronald Reagan, Shultz had to tackle the aftermath of the Iranian Revolution and the Israeli invasion within the Lebanese civil war. His time in office as secretary of state was marked by the final stages of the Cold War, from a deterioration of relations up to the beginning of the U.S.–Soviet honeymoon in the short period before the collapse of the Soviet Union.

Despite Israeli–U.S. tensions that flared over the Reagan Plan, which linked Palestinian self-rule with Jordan, and escalated during the Lebanon invasion and the Pollard spy case, bilateral relations between Israel and the United States were largely improved as—due to the political wills of Shultz and Reagan—Israel was declared a strategic ally.

The Iran-Contra Affair and the clandestine U.S. involvement in the anti-Soviet resistance in Afghanistan were not shaped by Shultz. New approaches in engaging an Arab-Israeli peace process were only possible shortly after his term in office, when the end of the Cold War and the Kuwait crisis profoundly reshaped the political landscape of the Middle East.

OLIVER BENJAMIN HEMMERLE

SHUMAYYIL, SHIBLI

[1850–1917]

Syrian medical scholar and intellectual.

Born in Syria to a Christian family, Shibli Shumayyil was one of the first graduates of the Syrian Protestant College's medical school in Beirut. He completed his medical studies in Paris and settled in Egypt to practice medicine and write numerous articles on medicine and on social and scientific theories. He was particularly influenced by Charles Darwin, using the evolutionist's ideas to formulate his ideas on the unity of being and natural laws in human society. He denounced despotism as unnatural and false. Also influenced by the thought of philosophers Herbert Spencer and Ludwig Büchner, Shumayyil criticized nationalism and all forms of exclusive solidarity because they divided human society. He preached universalism and liberalism and so gave measured support to the Young Turk movement. Like his contemporary, the Lebanese Farah Antun, Shumayyil sought the theoretical basis for a secular state that would promote a society where Christians and Muslims would be equal.

ELIZABETH THOMPSON

SHUQAYRI, AHMAD

[1908–1980]

Diplomat, activist, and first head of the Palestine Liberation Organization.

Ahmad Shuqayri was a Palestinian born in Tibnin, Lebanon, while his father, the Islamic judge Shaykh Asʿad Shuqayri, was living there in exile. Ahmad returned to the family's home town of Acre in 1916. After studies there and in Jerusalem, he entered the American University of Beirut in 1926 but was expelled by French Mandate authorities the following year for Arab nationalist activities. Following his return to Palestine, he studied law and wrote for a newspaper; after graduating from college, he went to work in the law offices of the nationalist figure Awni Abd al-Hadi and became involved in the pan-Arab nationalist Istiqlal Party. During the 1930s,

Shuqayri put his legal skills to work on behalf of Palestinians charged by the British with security offenses. He fled Palestine for Cairo following the end of the Palestine Arab Revolt, returning only at the end of World War II. During the late 1940s, he was appointed head of the Arab Higher Committee's Arab Information Office in Washington and later headed the central Arab Information Office in Jerusalem. He fled to Lebanon during the 1948 fighting.

In exile, Shuqayri rose to become a leading Arab diplomatic figure during the 1950s and early 1960s. He served in the Syrian delegation to the United Nations from 1949 to 1950 before being appointed assistant general secretary of the League of Arab States (Arab League) from 1950 to 1957. He then served the government of Saudi Arabia as minister of state for UN affairs and as its UN representative until he was dismissed in 1963 for disagreeing with the Saudis over Egyptian intervention in the first Yemeni Civil War. Shuqayri began to play a major role in Palestinian nationalist affairs in September 1963, when he was asked to serve as the representative of Palestine at the Arab League. At the Arab summit of January 1964, he was asked to begin investigating the possibility of creating a uniquely Palestinian organization. That February, Shuqayri called for the convening of a Palestine National Council in East Jerusalem. At that meeting the Palestine Liberation Organization (PLO) was created, with Shuqayri as its head. The PLO sought to mobilize Palestinians politically and militarily. It established offices in several Arab countries and worked to raise men to serve in the PLO's fighting force, the Palestine Liberation Army, brigades of which were attached to the armies of Syria, Iraq, and Egypt.

Shuqayri and the PLO remained close to Egyptian president Gamal Abdel Nasser and the Arab regimes. Far from a revolutionary organization, the PLO consisted of conservatives and nationalists willing to work with the regimes in liberating Palestine in coordination with overall Arab strategies toward Israel. Younger Palestinian militants, such as those in the al-Fatah organization, believed instead in a policy of independent, guerrilla-style struggle. Israel's massive defeat of Arab forces during the Arab–Israel War of June 1967 rendered the policies of the Arab states and the PLO bankrupt in the eyes of many Palestinians. For them, Shuqayri's elegant and sometimes heated rhetoric about liberation contrasted starkly with his failure and that of the established Arab elites. Associated with Nasser and the catastrophe of defeat, and facing criticism for his administration of the PLO, Shuqayri resigned on 24 December 1967.

He lived thereafter in Cairo until his opposition to the 1978 Camp David Accords prompted him to leave Egypt and move to Tunisia. He died in Amman, Jordan, while receiving medical treatment there on 25 February 1980, and was buried in the Jordan Valley just across the cease-fire line from his native country.

SHUQAYRI, ASʿAD AL-

See Shuqayri Family

SHUQAYRI FAMILY

Prominent Palestinian family from Acre.

In the late nineteenth century, the Shuqayris emerged among the elites of Acre, one of the fastest-growing Palestinian cities of the time. They were landowners, Ottoman administrators, and religious officials. The family's prominence continued into the twentieth century. Asʿad Shuqayri (1860–1940), mufti of Acre, served on the Shariʿa Inquiries Court at Istanbul and as mufti for the Fourth Army during World War I. Opposed to the anti-Zionist

movement, Asʿad sold several hundred *dunums* of the family's land near Haifa to Zionists in the 1930s.

The family was associated with the Nashashibi-led National Defense party. Another member of the family, Dr. Anwar al-Shuqayri (?–1939), was assassinated by members of the opposing Husayni party in 1939. Asʿad's son Ahmad Shuqayri (1908–1980), a lawyer, edited the newspaper *Mir'at al-Sharq* for two years and was a founder of the Istiqlal Party in 1931. In the 1940s Ahmad became known as a feisty nationalist, taking on several leading political roles. In the 1950s he represented Syria and Saudi Arabia at the United Nations and in the 1960s was chosen Palestinian delegate to the Arab League. He founded the Palestine Liberation Organization (PLO) in 1964.

SHURA

A consultative council.

The first recorded *shura* in Islamic history was called by Caliph Umar in 644 to choose his successor. The choice of later caliphs, although usually designated by their predecessor, was customarily ratified by a *shura* of family members and political leaders. The *shura* soon became generalized as an Islamic tradition of leaders consulting members of a community or family and asking them to reach consensus on troublesome issues.

The term *shura* has been used throughout the Middle East in the nineteenth and twentieth centuries to confer traditional legitimacy on a variety of modern representative councils. The Ottomans applied the term to many of the administrative councils created by the nineteenth-century Tanzimat reforms. Political groups in twentieth-century Arab states, particularly around the Gulf, have based their demands for representative bodies on injunctions in the Qurʾan that men should conduct their affairs through *shura*, or consultation, with others.

SHUSTER, W. MORGAN

[1877–1960]

Financial adviser to Persia in the early twentieth century.

W. Morgan Shuster, an American publisher, financier, and lawyer, was born in Washington, D.C. After attending Columbia College and Law School, Shuster worked for the War Department and the Cuban Customs Service from 1898 to 1901. He then served in a variety of posts in the Philippines from 1901 to 1909, after which he became a banker. From May 1911 to January 1912, he was treasurer general and financial adviser in Persia (now Iran). In 1915 Shuster became president of the Century Corporation in New York City, a post he held until 1933 when he became the president and chief executive officer of Appleton-Century-Croft. In an effort to rationalize Persia's finances, the Majles (legislature) hired Shuster upon the recommendation of the U.S. State Department and with the consent of Russia. Described by some as lacking in tact and courtesy, Shuster immediately organized a Treasury Gendarmerie to collect taxes, some from prominent Russian officials. Shuster chose Major C. B. Stokes, a devoted friend of Persia and former British military attaché, to head this new treasury police force. The Russian legation opposed this appointment, leading the British to post Stokes to India. Shuster's successful opposition to the Russian-supported restoration of Muhammad Ali as shah earned him additional enmity from that quarter.

The British also viewed Shuster's activities as hostile to Anglo-Russian understandings regarding

Persia, dating from the agreement of 1907. This opposition came to a head in November 1911 when Shuster ordered the confiscation of property owned by the former shah's brother, Shoa al-Saltana, then living in exile in Russia. The Russian consul general, claiming that Saltana's assets were owed to the Russian bank, sent an armed force often Russian-trained Persian cossacks to prevent Shuster from taking control of the property. Shuster responded with a larger force. This led to the Russian demand of 5 November for an apology; Persia apologized, but then Russia demanded Shuster's removal. For a time the Majles rejected this demand, and Persian nationalists attacked Russian troops in Tabriz and Rasht. There was also a boycott of Russian goods and the assassination of a pro-Russian minister. Russia responded with force, hanging a number of nationalists and sending troops to Tehran. In early December, the Majles again rejected the demand of Shuster's removal, but it finally yielded to Russian pressure and that of the powerful Bakhtiari tribe on 20 December. Shuster left Persia in January 1912 to pursue his other interests.

SIB, TREATY OF (1920)

Treaty between the sultanate and imamate in Oman.

A British-mediated undertaking signed 25 September 1920, by the rival sultanate and imamate governments in Oman. Ending seven years of warfare, it recognized both regimes' mutual autonomy and initiated a peace lasting until 1955. Subsequently, it was used unsuccessfully to justify the creation of a fully independent imamate in Oman's interior.

SIDARA

See GLOSSARY

SIDERA, ZINEB

[1963–]

London-based multimedia artist of Algerian origin.

Sidera's video installations and photographic work center on displacement and exile; they draw on her own experience being born in France to immigrant Algerian parents and moving to Britain. She trained at the Slade School of Art, Central Saint Martin's School of Art, and Royal College of Art in England, where she lives and works. Women, the veil, the gaze, and memory are some of the themes that emerge in her artistic exploration of the shifting subject positions that are part of the immigrant and exile experience, especially among Muslim and Arab women living in the West. Like many other artists from Arab countries living in exile, Sidera is particularly concerned with capturing the personal and political paradoxes and contradictions of living within and between cultures and finds the veil a useful way to do so. In many of her works, she examines the ways in which veiling has carried multiple meanings—from the history and legacy of the Algerian encounter with French colonialism to its place within individual and family life. Sidera also explores what she has called "the veiling of the mind"—the process of censorship and self-censorship within individuals and societies. Through photographs of herself veiled and veiling, or photographs of her own gaze (marked off by obscuring the edges of the work as if it were being seen by a veiled viewer), she challenges stereotypes of the submissive veiled woman while at the same time showing how the veil becomes a sign of backwardness and a vehicle of submission. The ambiguous meanings of visible and invisible veiling are a metaphor for her own restless experience of migration and exile, and for the complicated questions she has encountered therein.
