SIDON

Syrian seaport city.

Sidon (in Arabic, Sayda, Saida, or Sayida) was an ancient Mediterranean seaport city founded by the Phoenicians during the third millennium B.C.E. and ruled in turn by Assyrians, Babylonians, Persians, Alexandrian Greeks, Syrian Seleucids, Egyptian Ptolemys, Romans, Arabs, Crusaders, and Ottomans. Located on the coast of present-day southwestern Lebanon, its name derives from *sayd* (*fishing* in Semitic languages), referring to murex marine snail *(Murex brandaris)* fishing, from which the famous purple dye was extracted. Sidon is mentioned in ancient writings, including the Egyptian Amarna letters, inscriptions in the city of Ugarit, and in Homer's *Iliad.* The city's golden age was during the seventeenth century C.E., under Amir Fakhr al-Din II, when Sidon became a dynastic capital and a center for the dyeing and silk industries. Fakhr al-Din built castles, gardens, and inns to house foreign tradesmen. During this period, religious coexistence among Christians and Muslims was marked, and it is still reflected in Sidon's Great Mosque of Umar and the Maronite church, whose foundations date to Roman times. Rebuilt after a disastrous 1837 earthquake, Sidon remains a commercial, fishing, and agricultural market center for citrus fruit and vegetables. A petroleum refinery plant, light industry, and fishing provide important sources of livelihood for Sidon's 140,000 inhabitants (as of 2000), the majority of whom are Sunni Muslims.

UPDATED BY CHARLES C. KOLB

SIDQI, BAKR

[1885–1937]

Iraqi soldier and government official.

Bakr Sidqi carried out the first military coup in the period between the two world wars in the Arab Middle East. Sidqi fought in the Ottoman army in World War I and joined the Iraqi army in 1921. In August 1933, he gained national prominence as the commander of an army unit that killed some six hundred Assyrian villagers in Sumayl.

Sidqi's ruthlessness and decisiveness in putting down the Rumaytha Rebellion in 1935 served to enhance his prestige further. At the same time, he formed a secret alliance between himself and Yasin al-Hashimi's main rivals, Jamaʿat al-Ahali, the Ahali Group, led principally by Hikmat Sulayman. This culminated in a coup d'état, organized by Sidqi and Sulayman, which forced Yasin's government out of office on 29 October 1936. Sulayman became prime minister and appointed a largely Ahali or pro-Ahali cabinet, while Sidqi remained the power behind the regime. However, Sidqi's dictatorial style gradually lost him the confidence of al-Ahali, most of whom had resigned by May 1937. By this time, Sidqi had also managed to alienate many of his colleagues in the army, who organized his assassination at Mosul in northern Iraq on 11 August 1937.

PETER SLUGLETT

SIDQI, ISMAʿIL

[1875–1949]

Egyptian politician and prime minister.

Ismaʿil Sidqi was born into a bourgeois family in Alexandria. His father was a high government official. Sidqi graduated from the School of Law in Cairo, and began a career in government. He was a colleague of Saʿd Zaghlul, the leader of the Wafd party favoring autonomy for Egypt, and was exiled with the other Wafdists in 1919, but soon broke with Zaghlul and joined the Liberal Constitutionalist party in 1924.

When King Fuʾad dismissed the Wafd government in 1930, Sidqi was asked to form a new government. Sidqi quickly renounced his membership in the Liberal Constitutionalist party, suspended parliament, instituted press censorship, and abrogated the 1923 constitution, replacing it with a more conservative constitution. He next formed his own

political party, al-Shaʿb (The People), which he used to run in the 1931 elections. The Wafd and other liberal parties boycotted these elections in protest of Sidqi's autocratic rule. Throughout Sidqi's term as prime minister, there were frequent protest by nationalist politicians demanding the restoration of the 1923 constitution. Sidqi's policies, combined with the effects of the 1929 depression, made his rule very unpopular in Egypt, but the lack of unity among his opponents kept him in office.

By 1933, King Fuʾad felt that he had sufficiently weakened the Wafd and strengthened his own power that he could rule without Sidqi. Sidqi stepped down in September of 1933 and immediately joined the National Front, which called for the reinstatement of the 1923 constitution.

In February of 1946, Sidqi was again invited to form a government, which lasted until December of 1946, when he resigned on the grounds of bad health. During this year, Sidqi conducted negotiations with Britain about troop withdrawals. These negotiations were widely condemned by nationalists, particularly with regard to the threat to Egypt's position in the Sudan.

DAVID WALDNER

SIDRA, GULF OF

A body of water on the coast of Libya.

The Gulf of Sidra is located on the Mediterranean cost of Libya. Its coastline, 310 miles (500 km) of barren desert, forms an important geographical boundary between Libya's two major populated areas: Tripolitania, the western coastal region that shares many historical features with the Maghrib, and Cyrenaica, the eastern coastal region that has been more closely associated with the Arab states of the Middle East. This gulf then provides an important dividing line for the culture of the Maghrib and that of the Mashriq.

See also MAGHRIB.

STUART J. BORSCH

SILK

Fiber taken from the wrapping of silkworm cocoons.

Silk became an important textile product and luxury commodity in the Middle East from antiquity. Silk textiles came into the Middle East by trade from India and China. While Indian and Arab merchants sailed the Indian Ocean, Chinese merchants sent the fine cloth along the famous 4,000 mile (6,400 km) Silk Road—through central Asia and northern Iran to Europe. (Except for a few traders, rarely did any travel more than a short distance of the entire route.)

In the sixth century C.E., the Byzantines smuggled Chinese silk cocoons to Istanbul to begin their own mulberry groves and silkworm industry. Lebanon, Iran, and Iraq cultivated mulberry trees and silkworms as well. Parts of the Ottoman Empire, Bursa and Mount Lebanon, were important centers of silk-cocoon farming, and their fine silk textiles were loomed throughout the empire for both trade and imperial use. In the late nineteenth and early twentieth centuries, many Middle Eastern silk weavers lost their trade because of French intervention during the mandate period and the appearance of increasingly inexpensive silk goods that were being produced in the industrialized nations and in Asia for world markets.

ELIZABETH THOMPSON

SILVER, ABBA HILLEL

[1893–1963]

American Jewish leader.

Abba Hillel Silver was born in Lithuania. He was brought to the United States as a small child and raised in New York City's Yiddish-speaking immigrant milieu. He later studied at the University of Cincinnati and the Hebrew Union College, the

seminary of U.S. Reform Judaism. In 1917, Silver assumed the pulpit of The Temple—Tifereth Israel in Cleveland, Ohio, a position he maintained until his death.

During the 1930s, Silver was among the first U.S. Jewish leaders to denounce the Nazi Party in Germany, and he joined with Rabbi Stephen S. Wise in organizing a countrywide anti-Nazi boycott. With the escalation of violence against the Jews of Central Europe, Silver emerged as a spokesman for U.S. Zionism's militant camp. He publicly challenged the Franklin Roosevelt administration to do more to intervene on behalf of European Jews. After the outbreak of World War II, he emerged as U.S. Zionism's undisputed leader.

Silver brought energy and vigor to Zionist lobbying efforts in Washington, D.C., during the 1940s. He campaigned tirelessly for bipartisan support of a Jewish state in postwar Palestine and skillfully deployed U.S. Jewry's political leverage to advance Zionist interests. His efforts to increase public pressure on the Roosevelt and Harry S. Truman administrations marked a dramatic shift in U.S. Jewish policymaking.

MIA BLOOM
UPDATED BY MARK A. RAIDER

SIMAVI, SEDAT

[1896–1953]

Turkish newspaper and magazine publisher.

Sedat Simavi, born in Istanbul, was the son of a governor of Samsun and was descended on both sides of his family from grand viziers of the Ottoman Empire. After graduating from Galatasaray Lycée, he worked as a teacher for a few years, then in 1917 made two of Turkey's earliest films, *The Claw* and *The Spy.* He began his publishing career in 1916, with magazines like the political-humor weekly *Hande* and, in 1919, the slick, progressive monthly women's magazine *Inci.* Simavi published a variety of popular magazines between 1918 and 1939 on women, fashion, health, humor, and cinema.

Simavi is best known for founding the daily newspaper *Hürriyet,* in 1948. The first of the boulevard-type newspapers, emphasizing slick style, sensation, and personal stories, it reached a circulation of 30,000 in its first year and by the 1950s was Turkey's largest paper (it had supported the winner—the new Democrat party—in the 1950 elections). While *Hürriyet*'s circulation approached 700,000 in the 1970s, it declined in the 1980s to about 450,000, with stiff competition from newer newspapers like Sabah and the Simavi-owned *Günaydin.* After Simavi's death, his son Erol became editor of the paper. With other family members, including grandson Sedat Simavi, he heads a publishing empire that includes several top daily newspapers and magazines.

SINAI PENINSULA

Triangular peninsula between the Mediterranean and Red seas.

The Sinai is the desert area of northeast Egypt that forms the land bridge between Africa and Asia. In the north it is a flat and sandy dune sheet. Rugged mountains, including the al-Tih Plateau and Egma Escarpment as well as Sinai Massif surrounding Gabal Musa, dominate the central and southern regions. The peninsula is bordered on the east by the State of Israel and the Gulf of Aqaba and on the west by the Suez Canal and the Gulf of Suez. To the north it is bordered by the Mediterranean and in the south it comes to a point extending into the Red Sea. The Sinai is hot year round: it has average highs of about 90°F (32°C) and average lows of about 60°F (15°C), but temperatures tend to be lower in the mountains of the south.

The term *Sinai* is an ancient one, derived possibly from the name of the Semitic moon god Sin. The peninsula has generally come under Egyptian domination since ancient times. According to the Bible, it was the area in which the Israelites wandered for forty years after their deliverance from slavery in Egypt, and the site of Mount Sinai, where Moses received the Ten Commandments. During the reign of the Byzantine Emperor Justinian (527–565),

the Eastern Orthodox Monastery of Saint Catherine was built at the foot of the legendary Mount Sinai, known as Gabal Musa (Mount Moses), in central Sinai. It remains an important attraction for pilgrims and tourists.

During the Middle Ages, the area was settled primarily by nomadic Bedouin tribes and loosely controlled by successive empires. It fell under the Ottoman Turks from 1517 until 1840. After Muhammad Ali broke with the Ottoman Empire, the Treaty of London gave Muhammad Ali control over Egypt, but the Sinai remained under Ottoman administration. The British Colonial Office exerted its own rule over Egypt from 1882 and clashed with the Ottomans over specific areas of the Sinai. They managed to establish the eastern boundary as a line from al-Arish or Rafah to Aqaba. A line from Rafah to Aqaba became the southern boundary of the British Mandate territory of Palestine from 1922 to 1948. It remained the international border between Egypt and the new state of Israel from 1949 through June 1967, when Israel occupied the Sinai. During Israel's occupation, Jewish settlements were established in the Sinai, two major air force bases were constructed, and the Alma Oil Field was discovered and developed.

Under the 1978 Camp David Accords, phased Israeli withdrawals were undertaken in 1980 and 1982. The territory of Sinai was divided between four demilitarized zones, three in Egypt and one on the Israeli side of the border. Under the Egypt-Israel Peace Treaty of 1979, the Multinational Force and Observers (MFO), headquartered in the area of al-Gorah in northeast Sinai, has been established to observe and verify force reductions in the eastern zone, and to ensure free navigation through the Strait of Tiran.

The Sinai is now primarily divided between the two Egyptian governorates of North and South Sinai, with portions of the region abutting the Suez Canal attached to the governorates of Bur Saʿid, Ismailiyya, and Suez. The population of the peninsula was estimated at about 38,000 in 1948, mainly Bedouin; it had grown to about 140,000 by 1970, with the development of petroleum and manganese deposits plus the influx of Palestinian refugees. By 1994 the population of the peninsula had grown to approximately 270,000. Aggressive plans for resettlement and development of the region, most importantly the Salam Canal project in the north, have contributed to a rapidly increasing population base.

Along the northeastern coast of North Sinai is the city of al-Arish, the largest settlement in the Sinai with a population of well over 75,000. Along the southern coasts, several small resorts have emerged as important local centers, including Taba, Nuwayba, and Dahab on the coast of the Gulf of Aqaba, and the port of Sharm al-Shaykh on the Red Sea coast at the extreme southern end of the peninsula. The latter has played host to several high-level negotiations and Middle East summits since the early 1990s. It is also renowned as a diving resort for its spectacular coral reef and variety of tropical fish. The environmental significance of the area was recognized with the creation of nearby Ras Muhammed National Park in 1983.

UPDATED BY PAUL S. ROWE

ŞINASI, İBRAHIM

[1826–1871]

Ottoman intellectual.

İbrahim Şinasi's father was an army officer for the Ottoman Empire, and Şinasi himself became an army scribe after completing elementary school. He learned French, and in 1849 he was sent to Europe by the leading Tanzimat reformer, Mustafa Reşid Paşa. There he was influenced by such luminaries as Ernest Renan and Albert Lamartine, but when he returned to Turkey, he was unable to advance in the government and devoted himself to literary endeavors. The author of several plays and books of poetry, he was also a prominent journalist and the editor of *Tasvir-i Efkar* (Description of ideas), which began in 1862 and acted as a clearinghouse for the liberal Young Ottoman ideas then in vogue. Like

many of the Young Ottomans, Şinasi found himself at odds with the more autocratic Tanzimat officials of the day, including Ali Paşa and Fuad Paşa, and he was forced to leave Istanbul in 1864. He remained in Paris until his return to Istanbul shortly before his death.

ZACHARY KARABELL

ŞIRKET-I HAYRIYE

Nineteenth-century Istanbul ferryboat company for the Bosporus Straits.

This was the first substantial joint-stock company established in the Ottoman Empire. It was founded in 1849 with two thousand shares and sixty thousand Turkish lire in capital with the support of Mustafa Reşid Paşa, one of the leaders of the mid-nineteenth-century reforms called Tanzimat. Created to provide ferry transport on the Bosporus in Istanbul, the company bought its boats for seven thousand Turkish lire each from a British company.

The company was promoted by Reşid Paşa as an example of new economic forms. To demonstrate the security of joint-stock companies, he encouraged several other government officials to invest in the ferryboat firm. Similar companies were soon founded in the 1850s, including the Bank-ı Osmani, the Aydin-İzmir Railroad, and Şirket-i Osmaniyyesi.

SIRRY, GAZBIA

[1925–]

Egyptian painter.

Gazbia Sirry (also Jadhbiya Sirri) is one of the most prominent and influential painters in Egypt. Sirry trained at the Faculty of Fine Arts in Cairo and received additional tutelage in Paris under Marcel Gromaire as well as at the Slade School of Art in London. A prolific painter as well as an art educator, she has held more than fifty solo exhibitions, received many prizes both in Egypt and abroad, and established a fund in her name to support young Egyptian artists. Throughout her career, she has been concerned with the fusion of the personal with the social or political, describing her work as embodying her "sensual relationship with color" and her "obsession with the human condition." Sirry was a member of the Group of Modern Art in the 1950s, which adopted the ideology of modernization. Sirry's contribution was to portray nationalist subjects (e.g., martyrdom against British occupation; peasant mothers) in a figurative style inspired by pharaonic representation and also international Expressionism. With the increasing problems of the Nasserist regime and the Arab defeat in the 1967 war, Sirry took on grim subjects such as imprisonment, grief, and racial discrimination. In the 1970s and 1980s, her concerns shifted to crowded urban environments and, in contrast, the sparse landscapes of the desert and the sea. The changes in Sirry's subjects and styles parallel the ebbs and flows in the general outlook of Egyptian intellectuals toward politics and society during her career.

JESSICA WINEGAR

SISCO, JOSEPH

[1919–]

U.S. diplomat at the heart of Henry Kissinger's shuttle diplomacy.

Educated in Illinois, Joseph Sisco gained his Ph.D. (University of Chicago) between periods of service in the army (1941–1945) and in the CIA (1950–1951). From 1951 to 1968 he worked at the State Department on UN affairs, then was appointed assistant secretary for Near East and South Asian affairs in 1968 and undersecretary of state for political affairs in 1974. By that time, Sisco was Secretary of State Henry Kissinger's key adviser on the Middle East, and third in seniority in the State Department. From 1968 to 1976 Sisco played a key role in attempts to mediate between Israel and neighboring Arab states, notably the series of interim peace settlements reached through U.S. *shuttle diplomacy*—a term Kissinger attributed to Sisco underscoring the role of American mediators flying between enemies that refuse to meet.

Sisco had not served in the Middle East and did not speak Arabic, and he began his term as assistant secretary for Near East affairs with a personnel reshuffle that some saw as marginalizing its "Arabist" diplomats. Both Arab and Israeli critics claimed that Sisco's attempts to forge realistic interpretations of UN Resolution 242 were biased, but the shuttles nevertheless proved crucial in the 1974 and 1975 disengagement agreements between Egypt and Israel.

Sisco later became a member of several company and university boards, president of American University, chairman of the American Academy of Diplomacy, and a partner in the management consultancy Sisco Associates. He coauthored a Trilateral Commission report on the peace process in 1981, and was a regular commentator on Mideast policy thereafter.

GEORGE R. WILKES

SISTAN AND BALUCHISTAN

Province in the southeast of Iran.

The formerly separate provinces of Sistan and Baluchistan united in 1959 to form one administrative unit (Baluchistan is also a contiguous Pakistani province). The region is fertile but has a hot, arid climate. The Helmand is the principal river and the source for agriculture in the region. Major cities include Zahedan (the capital), Zabol, and Iranshahr. Although each province has a separate but intertwined history, the ethnic groups residing in each are distinct. The population of Baluchistan is composed mainly of Baluchi tribespeople who speak Baluchi, a western Iranian language now heavily influenced by eastern regional languages. Standard Persian is more common in Sistan, but the eastern language known as Sistani is still spoken to some extent. According to the 1996 census, the population of the combined province was 1,722,579.

See also BALUCHISTAN.

PARVANEH POURSHARIATI

SISTANI, ALI AL-

[1930–]

Leading Shiʿite cleric in Iraq.

The most senior Shiʿite cleric in Iraq by early 2004, Ali al-Husayni al-Sistani is actually an Iranian who, despite having lived in Iraq for decades, speaks Arabic with a heavy Persian accent. Al-Sistani was born in Mashhad, Iran, to a family of well-known Shiʿite religious figures. His father was Mohammad Baqir, and his grandfather was a famous cleric known as Sayyid Ali. Al-Sistani studied theology in Qom, Iran, and first traveled to al-Najaf, Iraq, in 1951 to continue his studies. He lived in al-Najaf for most of the rest of his life.

By 1960 he had been certified as a *mujtahid,* one of the few Shiʿa permitted to interpret Islamic practice. Al-Sistani eventually obtained the rank of grand ayatullah *(ayatullah uzma).* After the death of Grand Ayatullah Abu al-Qasim al-Kho'i (1899–1992)

in 1992, al-Sistani was the unquestioned leading Shiʿite in Iraq. He also became the sold surviving *marja al-taqlid* (source of imitation) for Shiʿa worldwide.

The breakdown of security in Iraq following the American invasion in March 2003 led to the death of two potential rivals for influence among Iraq's Shiʿa. Ayatullah Muhammad Baqir al-Hakim (1939–2003), leader of the Supreme Council for the Islamic Revolution in Iraq, returned from two decades of exile in Iran only to be killed in a massive bombing in al-Najaf in August 2003. Another potential rival was killed earlier in April 2003: Abd al-Majid al-Kho'i (1962–2003), son of the Grand Ayatullah Abu al-Qasim al-Kho'i.

The clear leading figure among Iraqi Shiʿa by late 2003, al-Sistani was in a position to influence the United States' attempt to politically reconstruct the country. Unlike some of his contemporaries, including Iran's late Ayatollah Ruhollah Khomeini, with whom he studied when they were both young, al-Sistani called for maintaining the separation of politics and religion. Although he made it clear that he wanted U.S. forces to leave the country as soon as possible, he urged the Shiʿa not to resist them. Since then he has pointedly refused to meet with U.S. government representatives, but has granted audiences to others from his secluded residence. It was his opinion that prompted the U.S. to allow the UN a greater role in Iraq's reconstruction as well as to allow a constitution to be written prior to elections (which he urged be held as soon as possible). Al-Sistani's influence was also what prompted a last-minute delay in the signing of the new, interim Iraqi constitution in early March 2004.

SIVAS CONFERENCE (1919)

Convened (4–11 September 1919) to resist plans of the Triple Entente to dismember the Ottoman Empire; a significant step in the progression of events leading to the Turkish revolution.

The official communiqué issued by the Sivas Conference was the first Turkish declaration against the partitioning of lands under Ottoman sovereignty that had taken place when the Mudros Armistice was signed. The same document summoned the sultan to call for a general election and announced the creation of the Association for the Defense of the Rights of Anatolia and Rumelia, whose Representative Committee was designated to act as a provisional government in Anatolia until May 1920.

AHMET KUYAS

SIWA OASIS

Oasis in northwest Egypt.

The Siwa oasis, 186 miles (300 km) west of Marsa Matruh, had an estimated population of 23,000 in 2002. In ancient times Siwa was the seat of the oracle of Jupiter Ammon, visited by Alexander the Great in 331 B.C.E. It has historically served as both Egypt's western boundary and the easternmost area inhabited by Berbers. The spoken Siwan dialect is a Berber language heavily influenced by Arabic. In the nineteenth century it was one of the centers of the Sanusi Order, and some fighting took place there during World War I. The people of Siwa pride themselves on their differences from other Egyptians and

their ability to resolve disputes without resort to bloodshed. The oasis is a center for date palm agriculture. Formerly isolated, it has become accessible by motor transport and is now being developed for tourism. Siwa is also the name of a town in the southern part of the oasis.

ARTHUR GOLDSCHMIDT

SLAVE TRADE

The buying and selling of humans for servitude was an old tradition in the Middle East as in many other parts of the world.

Since antiquity, slavery was an integral part of the various societies that inhabited the Middle East. Men, women, and children were enslaved within these lands or imported into them from neighboring and faraway regions. From the early sixteenth to the early twentieth centuries, the Middle East was part of the Ottoman Empire, in which slavery was legal and the slave trade active. The traffic in slaves was substantially reduced toward the end of the nineteenth century, and slavery died out in most of the Middle East during the first decade of the twentieth. In certain parts of Arabia, the practice lingered on well into the second half of this century, and various forms of slavery continue to exist even today.

"Slavery" in Middle Eastern—and other—societies can be difficult to define. Some attempts to answer the question "who is a slave?" have resulted in "one whose labor is controlled and whose freedom is withheld," a person "in a state of legal and actual servility or [who is] of slave origins," or a "natally alienated and generally dishonored person" under "permanent, violent domination." In Islamic legal terms, slavery grants one person ownership over another person, which means that the owner has rights to the slave's labor, property, and sexuality and that the slave's freedoms are severely restricted. But in sociocultural terms, slavery sometimes meant high social status, or political power, for male slaves in the military and bureaucracy (Mamluks and *kuls*) and female slaves in elite harems. Even ordinary domestic slaves were often better fed, clothed, and protected than many free men and women. In any event, slavery was an important, albeit involuntary, channel of recruitment and socialization into the elite and a major—though forced—means of linking into patronage networks.

Slavery gradually became a differentiated and broadly defined concept in many Islamic societies since the introduction of military slaves into the Abbasid Caliphate in the ninth century. In the Ottoman Empire, military-administrative servitude, better known as the *kul* system, coexisted with other types of slavery: harem (quite different from Western fantasy), domestic, and agricultural (on a rather limited scale). While the latter types of slavery remained much the same until late in the nineteenth century, the *kul* system underwent profound changes.

From its inception, the *kul* system was nourished on periodical levies of the unmarried, able-bodied, male children of the sultan's Orthodox Christian subjects, mostly from the Balkans. This child levy was known as the *devşirme.* The children were reduced to slavery, converted to Islam, and rigorously socialized at the palace school into various government roles, carrying elite status. However, freeborn Muslims gradually entered government service, and the *kul* system evolved to accommodate this change. Ultimately, the child levy was abandoned during the seventeenth century, the palace school lost its monopoly on the reproduction of military-administrative slaves, and a new, *kul*-type recruitment-cum-socialization pattern came to prevail.

With the evolution of the *kul* system, the classification of *kuls* as slaves was gradually becoming irrelevant. Ottoman officials of *kul* origins and training held elevated, powerful positions with all rights, privileges, and honors, and cases in which the sultan confiscated their property or took their life became increasingly rare. Whereas *kuls* and non-*kuls*

were subject to the sultan's "whims" to the same extent, the intimacy and mutual reliance of the master-slave relationship often provided the *kul* with greater protection than that enjoyed by free officials. Harem women of slave origins were in much the same predicament, playing a major role in the reproduction of the Ottoman elite. Toward the nineteenth century, the servility of persons in the *kul*/harem category becomes more a symbol of their high status and less a practical or legal disability. All that has led some scholars to question the very use of the term "slaves" for such men and women. In any event, the Hatt-i Serif of Gülhane of 1839 freed government officials from the last vestiges of servility attached to their status.

In the Ottoman Middle East, and with local modifications also in other Muslim societies, there was a continuum of various degrees of servility rather than a dichotomy between slave and free. At one end of that continuum were domestic and agricultural slaves, the "real slaves" in Ottoman society, while at the other were officeholders in the army and bureaucracy, with little to tie them to actual slavery. In between, but close to officeholders and far from domestic and agricultural slaves, came officials of slave origins (*kul*-type) and then harem ladies of slave origins.

The overwhelming majority of the slaves living in the Middle East during the Ottoman period were female, black, and domestic; they served in menial jobs in households across a broad social spectrum. A smaller number of white female slaves also worked in similar circumstances, as did a number of black and white male slaves. African male slaves were employed in the Red Sea, Persian/Arabian Gulf, and Indian Ocean as pearl divers, oarsmen, and crew members in sailboats, in Arabia as agricultural laborers (in date, coffee, and other plantations) and outdoor servants, and in Egypt as cotton pickers in the 1860s. African men were used as soldiers in scattered instances in Yemen and other parts of Arabia, as in Egypt where the experiment of Muhammad Ali Pasha to recruit Sudanese slave soldiers failed. *Kul* and harem slaves were a relatively small minority among Middle Eastern slaves in the nineteenth century.

At the time, a fairly steady stream of about eleven thousand to thirteen thousand slaves per year entered the region from central Africa and the Sudan, from western Ethiopia, and from Circassia, Abkhazia, and Georgia. They were brought in by caravan and boat via the Sahara desert routes, the Ethiopian plateau, the Red Sea, the Nile river valley, the Mediterranean, the Persian Gulf, the Black Sea, and the pilgrimage routes to and from Arabia. After raids, sales, and resales, they reached their final destinations in the great urban centers of the Middle East, where they were sold in markets or in private homes of slave dealers.

Whereas slaveholding was still legal at the beginning of the twentieth century, the slave trade into the region had already been prohibited by law for several decades. The traffic in Africans and Caucasians practically died down, although it would pick up from time to time on a small scale. Slavery was gradually being transformed into free forms of service-cum-patronage, such as raising freeborn children (mostly female) in the household, socializing them into lower- or upper-class roles—as talent and need determined—and later marrying them off and setting them up in life. Ottoman elite culture was articulating a negative attitude toward the practice and gradually disengaging from it on moral grounds. This was a significant development, given the fact that slavery enjoyed Islamic legitimacy and wide social acceptance in the Middle East and that, except for cases of cruelty and ill-usage, it was a matter over which no serious moral debate ever arose.

The profound change that occurred was part of a major reform program introduced into the Middle East during the nineteenth century. Much of this happened during the Tanzimat (loosely covering the 1830s to the 1880s), generally regarded as a period of change in many areas of Ottoman life, although it is not certain how deeply the reforms affected the over-whelming majority of the population or even the peripheral groups within the Ottoman elite. Visible changes in the army, the bureaucracy, the economy, law and justice, education, communication, transportation, and public health went along with the reinvigoration of central authority. This was the work of a strongly motivated, Ottoman-centered group of reformers, who implemented their own program and political agenda and were not merely the tools of Western influence. While the government came to possess more efficient

means of repression, its reforms also sowed the seeds of political change, giving rise to a strong constitutional movement, although the extent to which Western ideas—not just technology and fashion—were assimilated into Middle Eastern culture is still under debate.

Having abolished slavery by the end of the first third of the nineteenth century, the powers of Europe now turned their zeal to slavery in the Americas. But in the 1840s, the British government and public opinion were already beginning to take an interest in the abolition of slavery in the Ottoman Middle East. Attempts to induce Istanbul to adopt measures to that effect soon proved futile. Instead—and as an alternative method that would ultimately choke slavery for want of supply—a major effort was launched to suppress the slave trade into the region. The essence of that long-term British drive was to extract from the Ottomans, on humanitarian grounds, edicts forbidding the trade in Africans and Caucasians. The implementation of such edicts was then carefully monitored by British diplomatic and commercial representatives throughout the Middle East and reported back to London. In turn, London would press Istanbul to enforce the edicts, and so on.

This pattern yielded the prohibition of the slave trade in the Gulf in 1847, the temporary prohibition of the traffic in Circassians and Georgians in 1854–1855, the general prohibition of the African slave trade in 1857, the Anglo-Egyptian convention for the suppression of the slave trade in 1877, and the Anglo-Ottoman one in 1880. The campaign reached its climax in the Brussels Act against the slave trade, which the Ottoman government signed in 1890. From the mid-1850s onward, Caucasian slavery and slave trade were excluded from the realm of Anglo-Ottoman relations. In that area, the Ottomans initiated some major changes, acting alone and according to their own views.

One of the most important factors that shaped Ottoman policy toward Caucasian slavery was the large number of Circassian refugees—estimates run from 500,000 to 1 million—who entered Ottoman territory from the mid-1850s to the mid-1860s. That Russian-forced migration contained about 10 percent unfree agricultural population, which put the question of non-African slavery into a different perspective. Increased tensions between refugee owners and slaves, at times causing violence and disturbance of public order, induced the Ottoman government in 1867 to design a special program for slaves who wished to obtain their freedom. Using an Islamic legal device, the government granted the slaves the land they were cultivating in order to purchase manu-mission from their own masters.

In 1882, the authorities moved further in the same method to facilitate the conscription of Circassian and Georgian slaves. Such a step was necessary because only free men could be drafted into the army. Measures were also taken from the mid-1860s onward to restrict the traffic in Circassian and Georgian children, mostly young girls. Thus, by the last decade of the nineteenth century, the trade in Caucasian slaves was considerably reduced. The remaining demand was maintained only by the harems of the imperial family and the households of well-to-do elite members. The imperial harem at the time contained about 400 women in a wide array of household positions quite different from those consigned to them by Western fantasy. Those harems also continued to employ eunuchs, and as late as 1903, the Ottoman family alone owned 194 of them. In the nineteenth century, a perceived decline occurred in their political influence, both as individuals and as a distinct corps in court politics. Whether officially abolished by the 1908 revolution, or only later by the new Turkish republic, Ottoman slavery died piecemeal, not abruptly, with the end of the empire.

Except for the issue of equality for non-Muslims, the call for the abolition of slavery was perhaps the most sensitive and culturally loaded topic processed in the Tanzimat period. Although it was rarely debated in the open, this was a matter of daily and personal concern, for both the public and private spheres of elite life were permeated by slaves on all levels. Faced with British diplomatic pressure to suppress the slave trade into the Middle East and with the zeal of Western abolitionism, Ottoman reformers and thinkers responded on both the political and the ideological planes. However, that response came when slavery was already on the wane, doomed to disappear with other obsolete institutions.

EHUD R. TOLEDANO

SMILANSKY, MOSHE

[1874–1953]

Israeli author, peace advocate, and agricultural pioneer.

Moshe Smilansky was born in Kiev province in Russian Ukraine to a family of farmers. He emigrated to Palestine in 1891 and helped to found the Hadera settlement, farming in various places before settling in Rehovot in 1893. There he spent the remainder of his life as a citrus plantation owner, writer, and agricultural leader (heading the Histadrut ha-Ikarim, or Farmers' Association). A disciple of Ahad Ha-Am, he took issue with Theodor Herzl's political Zionism and sought coexistence with Arabs throughout his career, gaining prominence among the binationalists after the 1936 Arab uprising.

Smilansky's Hebrew stories depicting Arab life, written under the pseudonym Khawaja Musa, were collected in a single volume entitled *Benei Arav* (1964; Arab sons). Through his writing, Smilansky hoped to show the benefits of cooperation between Arabs and Jewish pioneers. His most famous works on the pioneers are the six-volume *Perakim be-Toledot ha-Yishuv* (1959; Chapters in the history of the Yishuv) and the four-volume *Mishpahat ha-Adamah* (1943–1953; Family of the soil). His works were highly criticized at the time, but have had greater impact on students of Hebrew literature since. His son is the noted writer S. Yizhar.

ANN KAHN
UPDATED BY GEORGE R. WILKES

SNEH, MOSHE

[1909–1972]

Israeli politician and statesman.

Born in Poland where he became an active Zionist, Moshe Sneh emigrated to Israel in 1940. He was active against British anti-Zionist policy, and was chief of the Haganah high command from 1941 to 1946. Between 1945 and 1946 Sneh was a member of the Jewish Agency's executive committee, but he resigned in 1946 when they decided to refrain from further sabotage against the British occupation forces in Palestine. He served as director of the Jewish Agency's European office from 1946 to 1947. Sneh was also a physician active in the Zionist movement in its early years, and later in the MAPAM party. From 1949 to 1965 he was a member of the Knesset from Maki, the Israeli communist party, and editor of its daily newspaper. In the Knesset Sneh advocated self-determination for the Palestinian nation and recognition of Palestinian rights to a state of their own. After being out of the Knesset from 1965 to 1969 he was reelected in 1969 and served until his death in 1972.

SOBOL, YEHOSHUA

[1939–]

Israeli playwright.

The plays of Yehoshua Sobol reflect common Israeli themes, including the Holocaust, the Zionist state-building enterprise, and the Arab-Israel conflict. A graduate of the Sorbonne in Paris, Sobol has worked as artistic director of the Haifa Municipal Theater since 1984, and most of his plays have premiered there. His most famous work is *Ghetto* (1984), one of three related plays about the Vilna ghetto. Other works include *Soul of a Jew* (1982), *The Days to Come* (1971), and *Shooting Magda,* or *The Palestinian Girl* (1985). Sobol has made it his artistic mission to explore the problematic roots of the Zionist project, as he did most forcefully in his 1977 production, *Night of the Twentieth,* and to show the consequences for both Jews and Arabs of succumbing to political interests rather than fulfilling nationalist ideals. Many of his later plays, such as *Kefar* (1996), have also probed the difficulties of trying to assimilate personal lives into paradigms created by historical developments. Looking at history as a way of examining contemporary Israeli society, Sobol is particularly interested in the intersection between the personal—even the emotional—and the political. His plays emphasize that while Zionist ideals could not extinguish personal desires, they did complicate the formation of strong, secure individual identities. *Almah* (1999) extends his focus on individual personality by meditating on the life of Alma Mahler Gropius Werfel and her torturous efforts to form an authentic, creative public life. Sobol's plays, always sensitive to the morally problematic compromises imposed upon by history and circumstance, have been produced all over the world and in many languages.

UPDATED BY DONNA ROBINSON DIVINE

SOCIAL DEMOCRATIC PARTY OF AZERBAIJAN

Political party in Iranian Azerbaijan.

The Firqa-ye Ijtimaʿiyun-e Ammiyun (Social democratic party), also called *Mujahid,* was active mainly in Iranian Azerbaijan. It may have been an offshoot of the Adalat (Justice) party, a nominally social democratic, but actually anticolonial, organization formed in 1904/05 by Azerbaijanis in Baku (on the Caspian Sea) who were involved in the social democratic party Hümmet (Endeavor). Adalat was created for workers from Iran employed in the Baku petroleum industry.

In August or September 1906, members of the founding committee of the party established a "secret center" in Tabriz, then cells in Ardebil, Rasht, and Enzeli; these organizations apparently remained under the direction of a central committee in Baku. The party program demanded a constitution in Iran, ministerial responsibility to the Majles (Iran's legislature), establishment of universal suffrage, and civil liberties. It pointed to Qurʾanic precedents and the example of "every civilized state of Europe and Asia."

The party was apparently suppressed around 1909 but served as a model to the later Communist Tudeh Party.

AUDREY L. ALTSTADT

SOCIAL DEMOCRATIC POPULIST PARTY

Center-left political party in Turkey, 1985 to 1998.

The Social Democratic Populist Party (Sosyal Demokrat Halkçi Partisi, or SHP) was formed in November 1985 as a result of the merger of two left-of-center parties, the Social Democratic Party (SDP), founded in 1983 by Erdal İnönü, and Necdet Calp's Populist Party, which also was founded in 1983. In the parliamentary elections of November 1983 the Populist Party had won the second largest number of seats in the Turkish Grand National Assembly. The SDP had been banned from participating in those elections, but the National Security Council did allow it take part in the 1984 local elections, and it emerged at the local level as the main opposition to the ruling Motherland Party of Turgut Özal. The Populist Party received less than 10 percent of the vote in the local elections and thus won no seats on the municipal councils, although it remained the main opposition to the Motherland Party within the National Assembly. Because they espoused a similar political ideology and appealed to the same voting constituency, the two parties joined to form the SHP. İnönü became the chair of the SHP, which presented itself as an heir to the Republican People's Party (CHP), which had been founded by his father, İsmet İnönü, and Mustafa Kemal Atatürk. In the 1991 parliamentary elections the SHP emerged as the third largest party in the National Assembly, with 88 seats. Subsequently, it joined with the True Path Party of Süleyman Demirel as the junior partner in a coalition government. The SHP's participation in this coalition became controversial because a small group of SHP deputies charged that the True Path Party sanctioned civil-rights abuses, especially in the Kurdish areas, and that these violations compromised democratic practices and also Turkey's chances for membership in the European Union. Most prominent among these dissidents was Deniz Baykal, who left the SHP in 1992 and announced that he was reactivating the CHP. Although several of its deputies in parliament defected to the CHP, the SHP remained in the coalition government until the 1996 parliamentary elections, when it lost many seats. Subsequently, the SHP entered into negotiations with the CHP and merged with it following the February 1997 "soft coup" by the military against the Refah Party–dominated coalition government of Prime Minister Necmeddin Erbakan.

SOCOTRA

Largest island of Yemen.

Measuring 1,200 square miles, Socotra (also Suqutra) Island is located in the Arabian Sea, about 500 miles from Aden and less than 200 miles from Somalia. The sparsely populated island has a mountainous interior and most of its population engages in farming or fishing; the most striking feature of this isolated place is its biodiversity and the great number of unique flora and fauna. The ruler of the Mahra Sultanate of Qishn and Socotra resided there under British rule during much of the nineteenth and twentieth centuries. The island became a part of South Yemen in 1967 and, with Yemeni unification in 1990, it became a part of the Republic of Yemen (ROY). Given its location near the sea lanes, Socotra was long thought to be of strategic value by Western imperial powers. During the latter half of the Cold War, South Yemen allowed the Soviet Union to maintain a submarine base and other military facilities there; Russia continues to maintain a modest naval presence. During the late 1990s there were rumors about a deal between the United States and the ROY over military facilities on the island, but the complicated, if not strained, relations between the two countries, beginning with the bombing of the U.S.S. *Cole* in Aden in 2000, squelched this talk. The considerable activities regarding Socotra now focus on its development as a tourist destination featuring and protecting its unique biodiversity.

ROBERT D. BURROWES

SOHEYLI, ALI

[?–1954]

Iranian politician.

Ali Soheyli was born in Tabriz and studied at the military school in Tehran. After several cabinet positions, he was named minister of foreign affairs in 1937 and served three times as prime minister during the tenure of Mohammad Reza Shah Pahlavi. In 1947, because of pressure from the parliamentary faction loyal to Mohammad Mossadegh, Soheyli, a royalist, was put on trial. He was charged with mishandling of public funds, illegal intervention in elections in the south of the country, disrespect for the constitutional provision of free speech and a free press, and conspiracy against the nationalist government. After being acquitted of all charges, Soheyli resumed political activity as a minister without portfolio. Famous for his skill in handling foreign diplomats in Iran, he enjoyed amicable relations with both the Russian and the British legations in Tehran. In 1953, he sought appointment as prime minister but failed to get it. The shah appointed him ambassador to Britain, where he died of leukemia.

NEGUIN YAVARI

SOKOLOW, NAHUM

[1859–1936]

Hebrew journalist, author, Zionist diplomat and leader.

Born and educated in Poland, Nahum Sokolow was a journalist for the Hebrew language newspaper *ha-Tzfira,* becoming editor in 1885. Sokolow published numerous books on the sciences, Hebrew literature, and the historical roots of Zionism, among other topics, writing in six languages. He was a strong supporter of Theodor Herzl and a principal spokesman for Zionism in eastern Europe. He was appointed secretary-general of the World Zionist Organization (WZO) in 1906, whereupon he established the WZO's official newspaper, *ha-Olam.*

In 1911 Sokolow was given the political portfolio on the Zionist Executive, and he traveled extensively as a diplomat for the Zionist cause, meeting with leaders throughout Europe and with Arab leaders in Lebanon and Syria. He chaired the committee that drafted the Balfour Declaration in 1917, and in 1919 led the Zionist delegation to the Paris Peace Conference. In 1929 he became chairman of the expanded Zionist Executive. At the 17th Zionist Congress in 1931, Chaim Weizmann was defeated in his reelection bid for the presidency of the WZO after a bitter challenge from Vladimir Jabotinsky and the Revisionists. Sokolow, a broadly respected Zionist leader, took Weizmann's place and was reelected president at the 18th Congress in 1933. When the Revisionists withdrew from the WZO in 1935, Weizmann resumed the presidency. Sokolow died in London the following year.

SOLTANI, ABDELLATIF

[1904–1983]

Islamic religious scholar in Algeria.

Shaykh Abdellatif Soltani was a highly respected, independent religious scholar and a staunch critic of the socialist orientation of the postindependence Algerian regime. Soltani was born in 1904 in Biskra, northeast of Algiers, and received a religious education at the Zaytouna mosque in Tunisia. He became closely associated with the Islamic reformer Abdelhamid Ibn Badis, the founder of the Association of Algerian Scholars, which was established in 1931 to promote Arabic and Islamic teachings and to reassert the Algerian identity. Soltani worked as an educator and as an imam in a number of mosques that became bastions of Islamic activism. He taught religious subjects to young Algerians, some of whom later became leaders of the Islamic Salvation Front, the main Islamic opposition party in Algeria.

In 1974 Soltani published a book, *Mazdaqism Is the Origin of Socialism,* that was published in Morocco and banned in Algeria, in which he scathingly criticized the country's ruling elite and secular intellectuals for their deviation from the true Islamic principles and for their adoption instead of foreign ideologies. He also criticized the regime for its intolerance of dissent and defended the country's scholars against attempts to marginalize them. His other two books were *Arrows of Islam* and *Toward Islamic Doctrine.*

Following the eruption of violent clashes in 1982 between Islamist and communist students at the main campus of the University of Algiers, Soltani, along with Abbasi al-Madani and Ahmed Sahnoun, issued a statement, "The Statement of Advice," in which they criticized the secular policies of the state and demanded the promotion of Islam in government and society. Soltani was placed under house arrest until his death in 1983.

SOMIKH, ABDULLAH

[1813–1880]

Iraqi rabbi.

Somikh, one of the most venerated rabbinic authorities in Baghdad in the nineteenth century, was instrumental in renewing Jewish religious studies in that city. In 1840 he established its first modern rabbinic seminary, Bet Zilkha. He wrote a commentary on Shulhan Arukh and a number of volumes of responsa that often addressed problems arising from the incursion of technology and modern education into the life of the Mizrahi (Jews of Middle Eastern, North African, and Western Asian origin) —for instance, whether a telegraphic message can be used as evidence in a Torah court. Somikh often dealt with religious questions addressed to him by Iraqi Jews who had settled in India, China, and other Far Eastern nations. In the 1860s, when the Alliance Israélite Universelle was established in Baghdad, he sent his son to study there, ignoring the protestations of conservative rabbis who strongly disapproved of secular education. Somikh died in Baghdad during a plague epidemic.

SONATRACH

Holding company for the state's interests in Algeria's hydrocarbon sector.

In the events leading up to the independence of Algeria in 1962, the French government attempted to create a number of arrangements for continued access to Algerian oil, which had been discovered in the Sahara regions of the country a few years earlier. As part of its strategy to put the proceeds from oil sales into industrialization, the government of Algeria formed SONATRACH (Société Nationale de Transport et de Commercialisation des Hydrocarbures). It was headed initially by Abdessalam Belaid, who would become the country's head of centrally guided industrialization—a strategy in which SONATRACH was seen as the financial cornerstone.

The initial difficulty faced by SONATRACH was that all production and marketing of hydrocarbons in the country had been geared toward the requirements of France's economy, a goal now incompatible with the socialist and inward-oriented new development strategy of the Algerian government. Initially restricted to pipeline development and marketing abroad in an effort to break the French monopoly, SONATRACH eventually branched out into all aspects of oil exploration, refining, and marketing, often entering into joint ventures with foreign oil companies for exploration and production. By the early 1970s SONATRACH had become a giant state enterprise and the single largest employer

in the country. It not only exercised control over the recovery of oil but managed the major refineries in Algiers, Arzew, and Skikda, and it was the domestic distributor for Algerian oil. In addition, the state enterprise also controlled a large number of oil-related subsidiaries that fueled much of the country's industrialization drive.

Because Algeria was estimated to possess the fourth-largest gas reserves in the world, the Algerian government under President Houari Boumédienne (1965–1978) attempted to index the price of natural gas to that of petroleum. At the same time SONATRACH increased its exploration activities substantially, at a time when the world demand for Algerian natural gas was stagnant or declining. The strategy necessitated heavy investments, among other items, in liquefaction plants built on the Algerian coast, for which the country borrowed extensively on the international market, starting in the mid-1970s. Neither the indexing nor the investments proved sound decisions, and by the early 1980s SONATRACH was forced to renegotiate most of its major contracts and accept lower prices for its natural gas exports. By 1970 SONATRACH directly controlled an estimated 30 percent of Algerian oil production, which accounted for some 34 percent of the country's gross domestic product. By 1977, after a series of nationalizations that ended in 1971, its participation had increased to approximately 75 percent.

The death of President Boumédienne in 1978 brought to a halt the socialist experiment that Algeria had adopted after independence. The June 1980 party congress, guided by the new president, Chadli Bendjedid, stressed the need for increased privatization and liberalization in the Algerian economy. Bendjedid advocated a reorganization of the huge national enterprise to make it more competitive and efficient. A decentralization process thus began, and the giant company was divided into smaller companies, each of which would compete for clients.

Since the early 1990s international companies have been allowed to work in existing oil fields, but the state-owned company still controls the industry. A new hydrocarbon investment law was drafted in 1991, but SONATRACH's complete privatization stalled as it faced staunch opposition from trade unions and, most important, from certain factions within the regime that resisted losing control over the most valuable resource of political and economic power in Algeria. As of 2003, SONATRACH continued to provide the Algerian economy with over 90 percent of its foreign currency revenues.

SOROUSH, ABDOLKARIM

[1944–]

Iranian religious reformer and author who became internationally known during the 1990s for his liberal interpretation of Islam.

AbdolKarim Soroush was born Farajollah Dabbagh in Tehran in 1944. After being educated at a religious high school and at Tehran University, he went to England for graduate studies in pharmacology and philosophy. Returning to Iran in 1979, he became a vocal advocate of the newly inaugurated Islamic Republic of Iran. Adopting the name *Soroush* (meaning angel, especially the archangel Gabriel, in Persian), he became a major promoter of Islamic ideology, mainly writing against and debating Marxists, who were seen as ideological rivals. In the early 1980s Soroush was involved in the Cultural Revolution, a project that imposed "Islamic" curricula on Iranian universities and purged them of dissidents—mostly leftist students and professors—many of whom were imprisoned or executed.

However, as the Islamic Republic faced mounting problems in its second decade, Soroush emerged as a leader in a movement of loyal dissidents calling themselves "religious intellectuals." In numerous books, essays, and public lectures, he argued against turning religion into a political ideology and urged that Islam was open to a plurality of interpretations. Eclectically drawing on philosophy of science, modern hermeneutics, rationalist theology, and mysticism, Soroush holds that humans are able to understand and appreciate revelation according to their rational faculties and cultural limitations. His

constant challenge to the clergy's claim to binding religious authority thus prompts some to portray him as something of a Muslim "Protestant." Similarly, his controversial proposal for a "democratic religious government" is a challenge to the Shiʿite clergy's hold on political power in Iran.

Soroush's ideas gained further attention during the first presidential term of another "religious intellectual," Mohammad Khatami (1997–2001). However, during Khatami's second term (2001–present), the limitations of "Islamic democracy" as envisioned by Soroush and his like-minded colleagues became more evident as clerical hard-liners contained the movement to reform the Islamic Republic from within.

SOUSSE

Northeast coastal town in Tunisia on the Gulf of Hammamet.

Sousse (also Susa; ancient Hadrumetum) was founded as a Phoenician commercial post and became the center of Sousse province under French colonialism (after the protectorate of 1881). After the independence of Tunisia in 1956, it was made the center of the Sousse governorate. In 2002, its estimated population was 177,450. It is a busy port, handling mostly phosphates and olive oil, and the tourist trade centers on a well-preserved medieval Islamic fortress.

Matthew S. Gordon

SOUSTELLE, JACQUES

[1912–1990]

French statesman.

A faithful adherent of General Charles de Gaulle, Jacques Soustelle was governor-general of Algeria (1955–1956), where he combined social reforms with harsh repression of the Front de Libération Nationale (FLN; National Liberation Front). He broke with de Gaulle in 1960 over concessions to the FLN, and following the failed army coup of 1961, Soustelle left France under the threat of arrest because of his hard-line *pied noir* sympathies. He remained in exile until 1968.

SOUTH ARABIAN ARMED FORCES

Short-lived army of the Federation of South Arabia.

The armed forces of the ill-fated Federation of South Arabia were created by the merger of the Federal National Guard and the Federal Regular Army in mid-1967, on the eve of South Yemen's rushed independence. By this time, however, the national struggle had rendered these forces unreliable, and they were to play no real part in the collapse of the federation and the transfer of power from the British to the National Liberation Front (NLF).

Robert D. Burrowes

SOUTH ARABIAN LEAGUE

Group promoting independence of Britain's protectorates in southern Arabia.

The South Arabian League was the oldest (founded 1950) of the major nationalist groups created to change the status of Britain's possessions in southern Arabia. Its goal was to unite the various principalities of Aden and the Protectorate States into an independent state, to be called South Arabia.

The league's politics tended to be reformist and conservative, and it received much of its support from Saudi Arabia during the 1960s, when the conflict over the future of the protectorates and Aden became a major issue. In 1967, they became part of South Yemen.

MANFRED W. WENNER

SOUTHEASTERN ANATOLIA PROJECT

A massive integrated regional development scheme for the Euphrates and Tigris river basins in Turkey (in Turkish, Güney Anadolu Projesi, or GAP).

The project area covers about 27,000 square miles (70,000 sq. km) in six provinces of the Anatolia region of Turkey, lying between the Anti-Taurus mountains and the border with Syria: Adiyaman, Diyarbakir, Gaziantep, Mardin, Sanliurfa, and Siirt. The project is designed to create economic, social, and spatial changes through the construction and integration of dams, hydroelectric power plants, and irrigation projects, and infrastructural improvements in transportation, health, education, and nonagricultural employment opportunities. Estimated completion is in 2013.

GAP is composed of thirteen subprojects, of which seven are on the Euphrates and six on the Tigris. These comprise fifteen dams, fourteen hydroelectric power stations, and nineteen irrigation projects. The completed project will also incorporate the already completed Keban Dam and will vastly increase the extent of irrigated land in what has been the most economically depressed region of Turkey. As of the early 1990s, only some 315,000 acres (about 127,000 ha) were irrigated in this region—or about 4 percent of the total irrigated land in Turkey. Upon completion, almost 5 million acres (some 2 million ha) will be irrigated. The project will also double Turkey's electrical output by generating 22 billion kilowatt-hours of electricity each year.

The World Bank refused to provide project loans until an agreement had been reached with Syria and Iraq on sharing the water of the two rivers. Because foreign currency has been in great shortage in Turkey, international contractors who had been awarded contracts were replaced by Turkish firms. Since Turkish firms have proven themselves capable of completing the project, international financial circles have been persuaded to make loans. In 1985, the Export-Import Bank of New York and Manufacturers-Hanover Trust lent Turkey 111 million U.S. dollars for the Atatürk Dam, and European banks are providing another 440 million dollars for equipment purchases.

GAP has caused friction with Turkey's neighbors. The Euphrates and Tigris rivers are important sources of water for both Syria and Iraq, and the governments of both countries have expressed reservations about the project. The official Turkish position is that year-long regulation of the flow of the rivers will increase the amount of water available to Syria and Iraq. In July 1984, Turkey and Iraq signed a protocol guaranteeing a minimum flow of 654 cubic yards (500 cu. m) per second, which did not include Syria. In July 1987, a similar agreement was signed with Syria, and further negotiations were held in March 1991. The agreements have not ended the political tensions created by GAP: Turkish forces stood guard in January of 1990 when the Euphrates river was cut to divert water into the reservoir for the Atatürk Dam, which reduced the flow of water into Syria and Iraq by 75 percent.

A number of problems have delayed completion of the project. Because the dam sites are located in remote mountainous areas, roads, worker accommodations, and other infrastructure services must be provided. There are also shortages of skilled labor and engineers. Finally, the reservoirs created by the two Karakaya and Atatürk dams alone will force the relocation of an estimated seventy thousand people, with more relocations to come in the future.

SOUTH LEBANON ARMY

Israeli-supported militia in southern Lebanon.

Renegade Lebanese army Major Saʿd Haddad founded the Free Lebanon Militia (FLM) to combat the Palestine Liberation Organization (PLO) in southern Lebanon during Lebanon's civil war (1975–1990) and made common cause with Israel when it invaded Lebanon in March 1978 to drive PLO guerrillas away from the Israeli border. Israel withdrew from Lebanon in June 1978 and turned over to Haddad a buffer zone three to six miles (5 to 10 km) wide along the Lebanese side of the border. Israel funded and trained Haddad's renamed South Lebanon Army (SLA) in return for SLA efforts to prevent the return of elements hostile to Israel to the area.

Israel's 1982 invasion of Lebanon to rout the PLO deepened the relationship between the Israel Defense Force (IDF) and the SLA. Headquartered in Marjayoun, Lebanon, the SLA's twenty-five hundred fighters were Maronite Christians (40%) and Shiʿa Muslims (60%), although Christians predominated among the officers. Haddad died in January 1984 and General Antoine Lahad replaced him. In 1985 Israel withdrew from Lebanon, leaving behind a small force to advise the SLA. The rise of Hizbullah, a Shiʿite militia created to liberate southern Lebanon from Israel and its SLA client, provoked SLA-Hizbullah battles and drew IDF troops back into Lebanon. By the late 1990s IDF fatalities in Lebanon led to an Israeli grass-roots campaign for a unilateral withdrawal. When the IDF withdrew from Lebanon suddenly on 24 March 2000, the SLA disintegrated, and its members either surrendered to Hizbullah or to the Lebanese army, returned quietly to their villages, or sought emergency refuge, along with their families, in Israel. Military courts in Beirut sentenced hundreds of SLA members to prison terms ranging from months to years for collaborating with the enemy, while SLA commanders tried in absentia received death sentences. SLA families struggled to adjust to Israeli society; most returned to Lebanon or moved to other countries within several years of the SLA's collapse.

SOUTH PERSIA RIFLES

British-organized paramilitary unit in Iran during World War I.

The South Persia Rifles was a largely indigenous, paramilitary force of about 8,000 men trained and paid by Britain. Its headquarters was in Shiraz, with secondary bases in Abadeh and Kerman. Britain dispatched Major (later Brigadier General) Sir Percy Molesworth Sykes (1867–1945) to southern Iran in 1916 to organize a military force to counter the presumed pro-German sentiments of the Swedish-officered gendarmerie in Fars and Kerman provinces. It thus could protect British interests—southern Iran was adjacent to British India—from perceived threats by agents of Germany, Britain's enemy during World War I (1914–1918). The reluctance of the Iranian government to recognize the South Persia Rifles encouraged the largest and most militarily powerful tribal confederation in southern Iran, the Qashqaʾi, to attack the force in May 1918. Sykes and his troops were besieged for several weeks at Shiraz before they finally defeated the Qashqaʾi tribesmen. Following the 1921 coup d'état in Tehran, Minister of War Reza Khan, the future Reza Shah Pahlavi, ordered the disbanding of the South Persia Rifles.

JACK BUBON
UPDATED BY ERIC HOOGLUND

SPAIN AND THE MIDDLE EAST

The Kingdom of Spain, located in southwest Europe, has ties with the Middle East and North Africa that go back to the early medieval period.

Between 711 and 1492, the Iberian Peninsula witnessed the growth of several Islamic administrations, which ruled over a multiethnic and multireligious population in a space that would be known as *al-Andalus.* The arrival of Berber troops under Arab leadership in 711 was followed by the establishment of a governorate dependent on the Umayyad caliphate based in Damascus (711–756). With the onset of the Abbasid revolution in the east, the Umayyad Abd al-Rahman I established an independent emirate based in Cordova (756–929). In 929, Abd al-Rahman III proclaimed himself caliph and turned Cordova into the most important cultural and intellectual center of Western Europe (929–1008). Cordovese splendor lasted for a century, after which the Christian kingdoms of the north began pushing southward, conquering Muslim territory while taking advantage of the weakness of the petty kingdoms (1031–1086). An invasion by North African Berber tribes (Almoravids and Almohads; 1086–1232) temporarily halted the Christian advance. The Nasrid kingdom of Granada (1232–1492), last Muslim stronghold in the peninsula, fell in 1492 to the armies of the Catholic monarchs of Castile and Aragon, Isabella and Ferdinand. The monarchs decreed that Iberian Jews must either convert or be expelled; in 1502, Castilian Muslims were forced to convert to Christianity, and Aragonese Muslims were forced to do so in 1525. Zealous religious authorities were suspicious of the fidelity of new Christians (Jewish *conversos* and Muslim *moriscos*), who fell under the scrutiny of the Inquisition. Morisco rebelliousness against the abuses of the old Christian settlers led to the uprising of the Alpujarras (1568–1571). In 1609, Phillip III decreed the mass expulsion of the remaining *moriscos.* Throughout the sixteenth century, the rivalry between imperial Spain and the Ottoman Empire led to the Spanish occupation of several North African ports—Oran, Budjia, Algiers, Tripoli, and Tunis—under Charles V. The diminution of the rivalry with the Ottoman Empire, the economic crisis that affected the Spanish Empire in the seventeenth century, and Spain's colonial enterprise in the Americas put a hold on Spanish incursions in North Africa.

In 1859–1860, Spain waged war against Morocco. Franco-Spanish rivalry in North Africa led to the establishment of a Spanish protectorate in northern Morocco (1912–1956) and the Western Sahara (1884–1975); Spanish troops fiercely repressed the Berber liberation movement of the Rif region (1921–1927). After the Spanish Civil War (1936–1939), General Francisco Franco maintained an official policy of "friendship" toward Arab countries. In 1975, King Hassan II of Morocco organized the Green March toward Western Sahara and occupied the former Spanish protectorate. The signing of the Madrid Agreements (1975), in which Spain ceded the territory to Morocco and Mauritania, ignored the wishes of the inhabitants of the region and was opposed by POLISARIO; almost thirty years after the signing of the Madrid Agreements, the Saharan conflict is pending resolution under UN supervision. Upon joining the European Economic Community (E.E.C.) in 1986, Spain—then under a democratic socialist government—established diplomatic ties with Israel. In 1991, the socialist government supported the international coalition against Iraq. That same year, Spain hosted the Madrid Peace Conference. Subsequently, Spain became an important mediator in the Palestinian-Israeli conflict. Throughout the last quarter of the twentieth century, Spain and Morocco maintained a bitter contest over the sovereignty of the Spanish cities of Ceuta and Melilla and over fishing rights along the Moroccan coast.

Under the Conservative government of Prime Minister José María Aznar (1996–2003), Spain aligned itself with the policies of the United States. In the aftermath of the 11 September 2001 attacks on the United States, Aznar was a staunch ally of U.S. policies in the Middle East and became one of the international anchors of the war against Iraq in 2003. Despite widespread popular opposition—90 percent of the population opposed military intervention in Iraq—the Spanish government supported the U.S. occupation and stationed troops in the Diwaniyah region.

VANESA CASANOVA-FERNANDEZ

SPANISH MOROCCO

Portions of northwest Africa held by Spain from the 1500s until 1975.

The presence of Spain along the coast of northwest Africa was initially manifested during the 1400s and 1500s—after centuries of Muslim rule in the Iberian Peninsula had been overturned by warfare and the Moors retreated to North Africa. The Mediterranean port cities of Melilla and Ceuta came under Spanish rule in 1496 and 1578, respectively, and remain so today, as do three tiny islands off the Mediterranean coast of Morocco. In the late nineteenth century, Spain joined the European scramble for overseas territories. Spain expanded its Ceuta and Melilla enclaves, asserted itself militarily in the Rif mountains, and temporarily occupied Tetuan in 1860; an 1860 treaty committed Morocco to ceding land along its southern coast for the establishment of Spanish fisheries, eventually resulting in Spain staking claim to Ifni. Further south, Spain established coastal trading stations at Villa Cisneros (Dakhla), Cintra, and Cape Blanca. In December 1884, a Spanish protectorate was declared along the Saharan coast, a claim recognized by the Berlin Conference in 1885.

Spanish holdings in both the north and south were expanded by three treaties between Spain and France, the last in 1912. Spain then nominally held full sovereignty over Saguia el-Hamra and Rio de Oro (Spanish Sahara, now Western Sahara), 102,703 square miles (266,000 sq km) of territory, below the twenty-seventh parallel, wedged in between the Atlantic Ocean and what are today the internationally recognized boundaries of Morocco, Algeria, and Mauritania. Implementation of Spanish authority came in stages: Control of Tarfaya, north of the twenty-seventh parallel, was taken in 1916; La Guera, in the extreme south of Rio de Oro, in 1920; the 580-square-mile (1,502 sq km) Ifni zone, between Tarfaya and Agadir, in 1934; and Smara, in the Saharan interior, also in 1934. Spanish Sahara and the Ifni and Tarfaya areas were governed between 1934 and 1958 as parts of Spanish West Africa, whose military governor was based in Ifni.

Part of the "Green March" moves into Spanish Morocco in November 1975. During the Green March, hundreds of thousands of Moroccan civilians marched across their border into Spanish Morocco at the behest of King Hassan II, as part of an effort to assert Morocco's claim to the territory. **© ALAIN NOGUES/CORBIS SYGMA. REPRODUCED BY PERMISSION.**

The Spanish protectorate in the north, established in 1912, was one-twentieth the size of the French zone. Tangier was made part of the Spanish zone from 1940 to 1945, but then reverted to its previous international regime. The Spanish zone's population in 1955, including Europeans, was about one million, nearly 10 percent of Morocco's total population. Economic resources were few and the area underwent little development, constituting an economic liability to Spain.

Spain was both a competitor and sometimes junior partner of France, often working in tandem politically and militarily—the latter during the Rif rebellion led by Muhammad ibn Abd al-Karim al-Khattabi from 1921 to 1926; in the southern campaigns in 1934; and again in 1957–1958 against the irregular Moroccan Army of Liberation, following Morocco's achieving independence in 1956. Nonetheless, Spanish rule was both weaker and often less

dominating than that of France. Spain returned Tarfaya and its surroundings to Morocco in 1958 and the Ifni enclave in 1969.

Phosphates were first discovered in Spanish Sahara during the 1940s, and proved to be of high grade and large quantity. Exports began in the early 1970s. By 1975, exports stood at 2.6 million tons (2.36 million metric tons), the sixth largest in the world. In 1974, the Spanish presence numbered just over 26,000; a 1974 census of the native Sahrawi population counted 73,497 persons, most of whom had been sedentarized from their nomadic life.

In 1973, Spain decided to introduce internal self-government, to deflect international pressure for decolonization. But by mid-1974, following the collapse of Portugal's Africa empire, Madrid promised to implement United Nations calls for a referendum in the territory during the first half of 1975. In September 1975, Spain's foreign minister and POLISARIO representatives agreed on a mutual release of prisoners and the principle of an independent Sahrawi state in return for fishing and phosphate concessions to Spain. But following Morocco's Green March in the Western Sahara War, and with Spain's Generalissimo Francisco Franco on his deathbed, Spain, Morocco, and Mauritania signed a tripartite agreement in Madrid on 14 November 1975, administratively dividing the region into Moroccan and Mauritanian zones and setting up a transitional tripartite administration. The final Spanish departure from its Saharan colony came on 26 February 1975.

SPECIAL FORCES OF THE LEVANT

Military group under the French mandate in Lebanon.

After France gained control of Lebanon through the mandate from the League of Nations, it formed the Troupes Spéciales du Levant, which recruited Lebanese and Syrian soldiers and was commanded almost exclusively by French officers. It was devised to legitimize French police and military activities in the region and to give the impression of local rule. The percentage of officers who were Lebanese or Syrian increased over the years although the power of command and control remained in French hands. By 1945, 90 percent of the officers in the 14,000-strong Special Forces were Arabs.

During World War II, Lebanese Special Forces troops were ordered to fight on the side of the Vichy French against the British and Free French. When the Vichy forces in the Middle East surrendered in 1941, volunteers from the Special Forces were recruited by the Free French to fight actively in North Africa, Italy, and southern France. In 1945 three thousand Lebanese troops in the Special Forces formed the nucleus of the Lebanese Army.

As'ad AbuKhalil

SPHINX

Mythological human-headed lion carved from rock at the pyramids of Giza.

The Sphinx is 190 feet (27 m) long and 66 feet (20 m) tall at its highest. It probably represents the pharaoh Khafre (c. 2550 B.C.E.), whose pyramid is nearby. Arabs called it Abu al-Hawl, "father of terror." Like the pyramids, it has become a symbol of Egypt, first appearing on postage stamps in 1867 and replacing the bust of King Farouk (1936–1952) on coins in the 1950s.

SPRINZAK, JOSEPH

[1885–1959]

Israeli political leader.

Born in Moscow, Joseph Sprinzak was one of the founders of Tze'irei Zion in Russia (1905) and was a delegate to Zionist Congresses.

He began medical school at the American University in Beirut but then settled in Palestine in 1908, where he was an early activist in the Labor movement. He was a founder of the Histadrut and the MAPAI party and served in leadership positions in both organizations. Unanimously elected speaker of the first Knesset in 1949, he served in that capacity until his death. He also was acting president of Israel while Chaim Weizmann was ill and after Weizmann's death (1952), until the election of Yizhak Ben-Zvi.

BRYAN DAVES

SRVANTZIANTS, GAREGIN

[1840–1892]

Armenian ecclesiastical leader, ethnographer, and folklorist.

Garegin Srvantziants was born in Van and educated in local parochial schools. He became a teacher and was ordained a celibate priest in 1867. While assigned ecclesiastical responsibilities in Van, Erzurum, Bitlis, and Harput, he organized a number of schools and was the assistant prior of the Armenian monastery of Surp Karapet (Holy Precursor), one of the most hallowed sites of Armenian religious pilgrimage, at Moosh. After his investiture as a bishop in 1886, he was appointed prior of Surp Karapet. A fervent preacher and exponent of Armenian emancipation, he was removed from office and placed under surveillance in Istanbul.

Well before his confinement to the Ottoman capital, Srvantziants had published what in the aggregate may be considered the most important ethnographic data on the Armenians yet gathered at the time. As an associate of Mkrtich Khrimian, he had traveled with the later catholicos through the Armenian provinces in 1860 and 1861. Recognized much like his mentor for the kinship he felt with his own people, Srvantziants was instructed by the Armenian patriarch of Istanbul, Nerses Vazhapetian, to investigate and report on the condition of the Armenian communities in eastern Anatolia after the Russian–Ottoman War of 1877 and 1878, while Khrimian prepared to plead the Armenian cause at the Congress of Berlin.

During these trips, and at all other opportunities, Srvantziants tirelessly recorded the folklore of the Armenian rustic population. He released the results of his expeditions in a series of works issued in the 1870s and 1800s. In *Grots u brots* (The written and the spoken, 1874), he published popular Armenian folk stories and traditions. In *Hnots yev norots* (From the old and the new, 1874), he published Armenian stories from manuscript records. *Manana* (Manna, 1876) included proverbs, riddles, songs, and epigraphs from the Van region. In *Hamov-hotov* (The flavorful and the colorful, 1884), he described the topography, climate, and monuments of Armenia. The most significant of his discoveries was the first cycle of what was later recognized as the Armenian national folk epic *Sasna Tsrrer* (The daredevils of Sasun), more popularly known by the name of its hero. Srvantziants recorded the section called "Sasuntsi Davit kam Mheri tur" (David of Sasun, or the Gate of Mher). Srvantziants also published important studies on the subjects he recorded and was elected an honorary member of the Imperial Academy of Antiquities in Saint Petersburg. He died in Istanbul.

ROUBEN P. ADALIAN

STACK, LEE

[1868–1924]

Governor-general of the Sudan and sirdar (commander) of the Egyptian army.

Sir Lee Stack was assassinated in Cairo as part of an Egyptian nationalist campaign to gain complete independence from Great Britain. He had joined the Anglo-Egyptian army in the Sudan in 1899 (when it became an Anglo-Egyptian condominium after its conquest, 1896–1898). As governor-general, he contributed to the economic and political development of the Sudan.

OLES M. SMOLANSKY

STANHOPE, HESTER
[1776–1839]

English aristocrat and traveler.

Hester Stanhope was the eldest of three daughters of Charles, third earl of Stanhope, and Lady Hester Pitt, sister of William Pitt the Younger. She emerged in London society as hostess and private secretary to her uncle, the prime minister, and was known for her satiric tongue. After Pitt's death in 1803, dissatisfied with a quiet life in London, she tried Wales but left for the eastern Mediterranean in 1810. By 1818 she had settled in Lebanon, befriending the Druze Amir Bashir al-Shihabi, whom she later opposed. She built an elaborate manor with lush tropical gardens on a hilltop above the village of Jun (7 miles northeast of Sidon), where she maintained a large pool of servants and a camel caravan to supply the manor with drinking water. Known as *al-Sitt* (the lady), she was both imperious and generous to the local population; some believed her to have special spiritual powers. She seems to have had considerable influence, since Ibrahim Pasha, about to invade Ottoman Syria in 1832, is said to have wanted her to declare neutrality.

Stanhope visited mosques in Damascus dressed as a young male Arab and organized a lavish procession to Palmyra, where the Bedouin apparently called her "the second Queen Zenobia." To maintain her estate, she fell into heavy debt to local moneylenders, despite the pension the British government had given her after Pitt's death, and she died poor. She was buried on her estate but her remains were transferred to a British cemetery near Beirut in 1989. Not only her own memoirs but remembrances by Charles Kingslake and Alphonse de Lamartine enhanced her notoriety; early twentieth-century Arab feminists memorialized her as a negative exemplar.

MARILYN BOOTH

STARK, FREYA
[1893–1993]

British author and explorer.

Born in Paris into an expatriate English family and raised largely in Italy, Freya Madeleine Stark moved to England in 1911 to study English and history at Bedford College. When World War I interrupted her studies, she returned to the Continent, where she volunteered as a nurse. After the war, Stark studied Arabic in London, followed by a more intensive course in the Levant. The Arab world became her passion, and in 1927 she began extensive travels in the region, publishing newspaper articles in the *Baghdad Times* and elsewhere about the Middle East.

Stark's visit to the remote castles of the Assassins in western Iran in 1930 and 1931 led to the publication of her first book, *The Valleys of the Assassins* (1934). It brought instant recognition, together with financial success; its photographic observations set the style for her future work. Stark next journeyed south to Arabia in 1935, which resulted in the publication of *The Southern Gates of Arabia* (1935), followed by *Winter in Arabia* (1940). Stark spoke English, French, German, and Italian in addition to Arabic, Persian, and Turkish. Her knowledge of languages greatly facilitated her travels across the eastern Mediterranean and over much of the Asian continent.

Stark's remarkable life spanned almost the entire twentieth century. She mapped remote regions

of the Arab world, and her cartographic accomplishments were honored by the Royal Geographic Society. However, it is as an author that she is most remembered. Freya Stark was the most gifted and widely read female travel writer of her time. She published more than thirty books, most of which were highly personal travel adventures and many of which remain in print.

STAR OF NORTH AFRICA

The first Algerian political movement to call openly for independence.

The Star of North Africa, also known as the Etoile Nord-Africaine (ENA) was founded in 1926 in Paris by Hadj Ali Abd al-Qadir and Messali al-Hadj. With a base in the large Algerian immigrant community that was influenced by the Communist-dominated French labor movement, it also propounded a leftist social and economic agenda.

The movement was banned in 1929 but grew clandestinely until it reappeared in reorganized form in 1933. Messali al-Hadj returned to Algeria in the summer of 1936 to address the Algerian Muslim Congress that was designing a program of reforms within the Colonial framework. Before that audience, he became the first individual to speak openly of independence within Algeria itself. He then turned to organizing ENA cells across the country. Authorities in January 1937 banned the ENA. Its successor was the Parti du Peuple Algérien (PPA), which was outlawed, in its turn, in September 1939.

STATE PLANNING ORGANIZATION (SPO)

Organization set up in Turkey in 1960 to administer national economic development.

Turkey first experimented with central planning in the 1930s, but with the focus only on industrialization. Between 1950 and 1960, the Democratic Party governments were criticized for their opposition to any kind of economic planning. The agricultural sector was virtually tax exempt. After the military intervention of May 1960, planning became a priority. Accordingly, the principle of indicative, not compulsory, planning was written into the 1961 constitution. The State Planning Organization (SPO) was created to draw up five-year plans covering all aspects of economic development, as well as long-term plans and annual programs. The institutional structure of the SPO was designed to create a degree of independence and security for the technical experts charged with preparing the plans and to facilitate cooperation between them and political authorities. The final authority was supposed to lie with the High Planning Council.

During the discussion of the first five-year plan, there were differences of opinion between planners and military bureaucrats. In contrast to the planners' liberal-productive conception of the state, the military bureaucrats remained loyal to an etatist patrimonial tradition that gave priority to social justice and full employment over economic growth and efficiency. With the transition to civilian rule in October 1961, the climate changed radically. The Justice Party viewed the SPO as a political tool of a military-cum-bureaucratic elite, to which they were opposed by both interest and instinct. Although the party had to implement the constitutional requirement, the party leadership was anxious to limit the planners' power.

After 1965 representatives of the private sector, who had been virtually excluded from the preparation of the first plan, were fully consulted on the second, which was to run from 1967 to 1972. The new constitution of 1982 endorsed planning, and a decree of 1984 reorganized the SPO and attached it to the office of the prime minister.

The SPO is headed by an undersecretary. It consists of eight departments: Economic Planning; Social Planning; Coordination; Priority Regional

Development; Relations with the European Union; Credit Allocation; Foreign Capital Investment; and Evaluation of Yearly Programs. The SPO also maintains permanent representatives in international economic organizations and major foreign capitals. In spite of its elaborate organizational structure and its constitutionally defined task, the state bureaucracy regards the suggestions and recommendations of the SPO as a hindrance to its administrative tasks.

The most important achievement of the SPO is the realization of the Southeastern Anatolia Project (GAP). This project is a multisector and integrated regional development effort approached in the context of sustainable development. The project covers nine administrative provinces established in the basin of the Euphrates and Tigris Rivers. The program envisages the construction of 22 dams and 19 hydraulic power plants and irrigation of 1.7 million hectares. The total cost is estimated at $32 billion (in 1997 prices). The GAP represents a major part of the Eighth Five-Year Development Plan (2001–2006). The SPO also is involved in the preparation of the pre-accession structural changes required by the European Union.

NERMIN ABADAN-UNAT

STERN, ABRAHAM

[1907–1942]

Jewish underground leader during the British mandate of Palestine.

Abraham Stern (nicknamed Yaʿir) was born in Poland but spent many of his formative years in Russia. He moved to Palestine in 1924 where he studied Latin and Greek at Hebrew University and later began to study for his doctorate in Florence, Italy. Stern served in the Haganah starting in 1929 but broke off in 1931 to form the Irgun Zvaʾi Leʾumi (IZL), through which he smuggled weapons into Palestine and established contacts with the Polish military. In 1934 he gave up his academic interests to devote himself fully to the underground.

Stern returned to Palestine in 1939, following the publication of the British White Paper, to organize resistance to the British. He was detained by the British for ten months, until his friends in the Revisionist movement arranged for his release. In 1940 he broke with the Irgun and its leader, David Raziel, and formed a new group, Lohamei Herut Yisrael, also known as Lehi, or the Stern Gang, because he did not feel the Irgun was militaristic enough. His ideological manifesto, "Eighteen Principles of Renaissance," included many controversial ideas, including that the new Zionist goals should be a land of Israel extending from the Nile to the Euphrates Rivers.

During World War II, unaware of the realities of the Holocaust, Stern sought links with Fascist Italy and Nazi Germany, although they did not result in anything. Stern, who appeared on British "wanted" posters for bank robbery and murder, was found and killed by British policemen in 1942.

JULIE ZUCKERMAN

STOCK MARKET

Middle Eastern stock markets are small and often closed to foreign investors.

The stock markets of the Middle East tend to remain relatively small relative to the respective economies of each country, and except in Turkey and Israel are not used by entrepreneurs to fund their operations.

Even in countries where economic liberalism is embedded in the economic life, such as Saudi Arabia, capital markets are heavily regulated and have not had any major influence in helping non-government firms raise capital from the public at

large. Exchanges suffer from a lack of reliable information on and from the companies, insider trading is often a problem, and accounting practices are not reliable enough for private investors and funds to make adequate judgment on the value of the companies. Governments tend to interfere with the markets, either to limit their expansion through overregulation or to limit the losses in downtrends, as was the case in Kuwait in 1982. In most countries the markets have little depth and are closed to foreign investors. Since 1998 there have been some efforts to use the markets to improve privatization efforts. Foreign investors have been welcomed in some bourses, such as those of Egypt, Lebanon, and Israel. However, most other markets have limited foreigners to investment through small mutual funds managed by local banks, as in Saudi Arabia. The Saudi market has the largest capitalization of the Arab world, at about US$100 billion.

Major stock markets within the Middle East, 2003

Country traded	Number of companies	Capitalization (in millions of U.S. $)
Israel	617	40,900
Turkey	262	33,800
Saudi Arabia	68	100,000
Kuwait	93	35,100
Jordan	76	1,664
Iran	324	65,000
Egypt	1,110	18,400

SOURCE: Zawya, online at http://www.zawya.com; Tehran Stock Exchange, online at http://www.tse.or.ir; Istanbul Stock Exchange, online at http://www.ise.org; Tel Aviv Stock Exchange, online at http://www.tase.co.il; *Middle East Economic Survey*; Saudi Arabian Monetary Agency, online at http://www.sama.gov.sa

TABLE BY GGS INFORMATION SERVICES, THE GALE GROUP.

Bahrain

The market in Bahrain is still very small and highly regulated. However, it is beginning to open up to foreign investors if they reside in Bahrain. Each foreign investor is limited to a maximum 1 percent stake in a company. If markets become more deregulated in Bahrain and if Saudi Arabia—the main center for private industrial ventures—approves, this stock market could become an important place for Persian (Arabian) Gulf industries to raise capital.

Iran

In the liberalization of 1992 the Iranian stock market was expected to be the transmission belt between Iranian capital at home and abroad and the companies to be denationalized. Foreign capital was permitted to buy minority positions. However, the move toward liberalization seems to have stalled, and the market is not very active.

Israel

The Israeli stock exchange is located in Tel Aviv. It lists about 654 companies and has a capitalization of US$41 billion. The market is open to foreign investors. Technically, the market is quite advanced, with computer support similar to that of U.S. markets. However, volumes traded are relatively low, in the average range of $36 million per day in 2002. The market tends to be somewhat volatile due to the low number of buyers and sellers. The progress of the markets is marked by the TASE index.

Jordan

The Jordanian market, which was started in 1977, is still small in terms of volume but has a good reputation among investors. Foreign investors need to be approved by the government, which greatly limits the liquidity of the shares and the potential growth of the market.

Kuwait

Until 1982 the Kuwaiti capital markets were the largest in the Middle East. After the crash of the Suq al-Manakh, the government enforced old regulations and introduced new ones. The number of brokers, the number of companies eligible to be traded, and the daily volumes are limited. The 1991 Gulf War, which caused many industrial companies to disappear, limited the number of tradable issues to the financial institutions. Kuwaiti-owned companies based in Bahrain and elsewhere in the Gulf also are traded. No foreigners are allowed to trade in Kuwaiti shares, except Gulf Cooperation Council nationals.

Saudi Arabia

Saudi Arabia, despite having the largest volume of shares traded in the Gulf, does not have a stock exchange or trading floor. All shares are exchanged

The Istanbul Stock Exchange was established in 1986 and is an autonomous organization that provides trading in equities, bonds and bills, revenue-sharing certificates, private sector bonds, foreign securities, real estate certificates, and international securities. © AP/WIDEWORLD PHOTOS. REPRODUCED BY PERMISSION.

and cleared through the banks. To have shares traded, companies must be registered as Sharikat al-Musahama, a registration somewhat similar to a U.S. Corporation C. To obtain this status, companies must be vetted by the Saudi Arabian Monetary Agency and, until 1992, also needed approval by the king. Only firms not involved in defense or oil are allowed to register. Thus, Saudi firms have a very difficult time raising money directly from the public through the stock market. No foreign capital is allowed to trade in Saudi shares, except in limited circumstances if originating from within the Gulf Cooperation Council. Since 11 September 2001, the Saudi stock market index has become more popular. The number of shares traded has increased from 691 million in 2001 to 1736 million in 2002. In an overall declining world market, TASI, the Saudi stock exchange index, increased 5.7 percent between 2001 and February 2003.

Turkey

The stock exchange in Turkey got its impetus from a 1989 law on investments. The law strongly restricts insider trading, provides for proper financial reporting by companies, and authorizes foreigners to invest. By 1993 the Turkish market had become one of the leading emerging markets, with investments from many U.S. and European mutual funds.

JEAN-FRANÇOIS SEZNEC

STORRS, RONALD
[1881–1955]

British colonial official.

After studying classics at Pembroke College, Cambridge, Ronald Storrs served as Lord Horatio Kitchener's Oriental secretary in Egypt prior to and during World War I. In this capacity, he met with Amir Abdullah ibn Hussein in April 1914, one of the Hashimites' early attempts to determine Britain's attitude toward their ambitions. Storrs later played an important role in the Anglo–Hashimite dialogue and the Arab Revolt, traveling from Egypt to the Hijaz on several occasions in 1916, including a journey with T. E. Lawrence, to cement Britain's relationship with the Hashimites.

In December 1917, Storrs was appointed the first military governor of Jerusalem after Allied troops entered the city. He believed that the role of Britain's military government in Palestine was simply to administer the country, not to introduce fundamental social or political changes. Britain, however, had pledged to support Zionist settlements in Palestine through the Balfour Declaration. In April 1918, Storrs formally received the Zionist commission, headed by Chaim Weizmann, which had traveled to Jerusalem to begin making arrangements for implementing the Balfour Declaration. He felt that the commission's dismay at the negative attitude displayed toward it and Zionism in general betrayed a fundamental naïveté about the Palestinians and their understanding of Zionism.

Palestinian nationalist frustrations were manifested in the Nabi Musa disturbances (April 1920). As governor of Jerusalem, Storrs subsequently dismissed the mayor of Jerusalem, Musa Kazim al-Husayni, for his role in the affair. Husayni went on to become the senior Palestinian nationalist figure in the 1920s, as head of the Arab Executive.

Storrs took an interest in cultural preservation in Jerusalem, forming the Pro-Jerusalem Society to restore historic monuments in the city. He arranged for Armenian artisans to produce tiles for the Islamic shrines at the Haram al-Sharif as part of these efforts.

Following the introduction of civil rule in Palestine in the mid-1920s, Storrs was Jerusalem's

first civilian governor. After leaving service in Palestine, he became governor of Cyprus in 1926 and of Northern Rhodesia in 1932. He retired from colonial service in 1934.

STRAITS CONVENTION

International agreement, signed in 1841, on access to the Black Sea; it denied passage in peacetime to non-Ottoman warships through the Straits connecting the Mediterranean and Black seas.

Until 1774, when the Russian Empire under Catherine the Great acquired territory on the north shore of the Black Sea, there was no question concerning passage of ships between the Black and Mediterranean seas because the Black Sea was essentially an internal Ottoman sea. After 1774 access to the Straits presented a persistent problem in international affairs. Russia sought to ensure its right to passage while opposing similar rights for other maritime powers; Britain, in particular, wanted to restrict Russian access to the Mediterranean as a threat to its aspirations in the Levant. The Ottoman Empire considered its control of the Straits essential to its sovereignty and a guarantee of its security and independence.

The Straits Convention of 1841 resulted from internal Ottoman problems and imperial rivalries. The Ottoman Empire had been wracked by the aspirations of Greece for independence and the threat posed by Muhammad Ali of Egypt in his efforts to establish control over Syria and possibly to replace the Ottomans as head of the empire. Russia and most other European powers supported the Greek cause. France supported Muhammad Ali in hopes of reaping benefits as his ally. Russia wanted unhampered access to the Mediterranean and acknowledgment of its claim of protection over Christian Orthodox subjects of the Ottoman Empire. Britain and Austria-Hungary were suspicious of Russian designs.

Muhammad Ali originally supported the Ottomans in their struggle against the Greeks seeking independence; he sent his son Ibrahim ibn Muhammad Ali with an army to help the Ottomans subdue the Greeks in 1825. The venture was not successful, and by 1828 Ibrahim's army had withdrawn from Greece. Muhammad Ali then turned his attention to Syria in an attempt to expand his control of the eastern Mediterranean, launching an army led by Ibrahim against the Ottomans in the first Syrian war (1831–1833). France tacitly supported this effort; Britain, distracted by other international problems (particularly Belgium), did not; the Russians supported the Ottomans. Ibrahim's forces came within 150 miles of Constantinople, but in February 1833 Russia sent a naval force and troops to support the Ottoman defense of the city. France and Britain, fearing the prospect of Russian influence in the Ottoman Empire, called for mediation. The Convention of Kütahya (8 April 1833) conceded Ottoman Syria to Egypt but prevented Egyptian control of the empire as a whole. Because of its support, Russia retained its position as the Ottomans' principal ally. This was reflected in the Treaty of Hunkar-Iskelesi (8 July 1833), in which Russia and the Ottoman Empire pledged mutual support in any future conflict. The treaty also called for closure of the Straits to any naval forces threatening Russia.

The agreements of 1833 did not last long. In 1839 Sultan Mahmud II decided to deal with Muhammad Ali's threat by sending a military force against his son, Ibrahim, in Syria; thus began the second Syrian war. In spite of a force developed by Helmuth von Moltke of Prussia, the Ottomans were defeated at Nesib on 24 June and the Ottoman fleet defected to Egypt. Fearing that the breakup of the Ottoman Empire would not be in the best interests of Britain, Lord Palmerston, foreign minister and later prime minister, called for talks with Russia, Austria, and Prussia in London in 1840. In July the ambassadors of the four powers persuaded the Ottomans to recognize Muhammad Ali as hereditary

pasha of Egypt and grant him control of Palestine (southern Syria) in return for a cease-fire within ten days. France, although now under a government more favorable to Britain, was noncommittal, and Muhammad Ali refused the compromise. The British, with help from Austria, occupied Beirut and Acre in October and November and helped the Ottomans defeat Ibrahim's forces in Syria. Muhammad Ali, no longer counting on French help, was forced to accept Egypt as a hereditary domain and return the Ottoman fleet to the control of Constantinople.

Russia, Austria, Prussia, Britain, and France then signed the Treaty of London on 13 July 1841, ratifying these agreements. Appended to the treaty was an agreement on the Straits question: "Warships of foreign powers have always been forbidden to enter the Straits of the Dardanelles and of the Bosporus." Lord Palmerston had succeeded in strengthening Britain's position in the Middle East, preventing France from gaining influence in Syria, and containing Russian advances in the Ottoman Empire. That empire was thus preserved for a time, its existence now guaranteed by the five major European powers. Muhammad Ali remained in control of Egypt, with special rights in the Sudan. Although all parties seemed to have gained something, the stage was set for continued jockeying for position in the Middle East.

DANIEL E. SPECTOR

STRAITS, TURKISH

A strategic 200-mile (320 km) natural waterway that joins the Black and Aegean seas.

Less than 30 percent of the length of the Straits—the Bosporus, starting in the Black Sea, and the Dardanelles, ending in the Aegean—are natural straits; between them lies the inland Sea of Marmara. So long as the Black Sea was Ottoman and the only approaches flowed through the sultan's domain, he alone decided what ships might visit what parts of his realm. Foreign naval vessels did not enter Ottoman inland waters except on calls of courtesy or for repairs—unless in time of war they sought to breach the sultan's naval defenses. At the Straits and in the Ottoman-dominated river mouths of the Black Sea, attempting such a breach would have entailed over-whelming risks. The fact that at its southern end the Bosporus divided the imperial capital between Europe and Asia enhanced the Ottoman security planners' sensitivity to the movement of foreign vessels through the Straits. By the eighteen century, commercial ships arriving from the Mediterranean were permitted into the Sea of Marmara only as far as Constantinople. From that point north, all trade with Black Sea ports moved on Ottoman ships.

MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

Once Russia captured primary river outlets to the Black Sea (such as the Dnieper and the Don—the latter connected to the Black Sea by the Sea of Azov), and thus could validly claim riparian status, the situation changed. The Treaty of Kuçuk Kaynarja, which in 1774 ended a six-year war with the

Ottoman Empire, opened all water lanes with outlets on the Black Sea to Russian commercial shipping. The Ottomans subsequently bestowed the privilege of free merchant navigation through the Straits upon other seafaring powers of Europe and even the United States. This was done by separate act for any Western state enjoying capitulatory (extraterritorial) privileges that requested it. The Ottoman government in 1822 notified all powers that "the passage of the Bosporus is closed to the ships of nations to whom the Porte never accorded the right of entry to . . . [the Black] sea." Not until the Treaty of Paris in 1856 was commercial freedom conferred on all flags.

The transit of war vessels was also resolved by international agreement, starting with the Straits Convention, signed in London on 13 July 1841. Article 1 expressed the sultan's firm resolve "to maintain . . . the principle . . . [whereby] it has . . . been prohibited for the Ships of War of Foreign Powers to enter the Straits . . .; and . . . so long as the Porte is at peace . . . [to] admit no foreign Ship of War into the said Straits." In the same article the powers of Europe pledged "to respect this determination." In Article 2 the sultan reserved "to himself . . . to deliver f[e]rmans [edicts] of passage for light vessels under flag of war . . . employed . . . in the services of the Missions of foreign powers."

The defeat in World War I of the Ottoman imperial government ended the 1841 agreement. Under the Armistice of Mudros in 1918, the victors (chiefly Britain, France, and Italy) imposed a naval occupation on the Sublime Porte, and in 1922 on its successor, the Republic of Turkey. The powers of Europe assumed the role of Straits traffic regulator until the ratification in 1923 of the Treaty of Lausanne. For a dozen years, an International Straits Commission oversaw the flow of all Straits traffic. In 1936 the Montreux Convention restored sovereign authority to the Republic of Turkey.

In conferences with Britain and the United States at Tehran in 1943 and at Yalta in 1945, the Soviet Union declared the Montreux Convention prejudicial to its security interests. It acknowledged that in wartime Turkey had acted with goodwill in defense of the Straits. Nevertheless, Moscow demanded revision of the 1936 convention to assure its warships free movement through the Straits at all times.

When the issue was reviewed at Potsdam in mid-1945, the Western powers agreed that each of the Big Three would hold talks with the Turkish government on revising the 1936 instrument "to meet present-day conditions." After a year of diplomatic exchanges, Moscow's insistence on sharing in the defense of the Straits led to a stalemate in August 1946. The Soviet Union refused to modify its demands, and Britain and the United States gave full support to Turkey. Seven months later, President Harry Truman promulgated the U.S. strategy for the global containment of the Soviet Union "and international communism" thereby marking the formal start of the Cold War.

STRUMA

Ship on which Jewish World War II refugees died, in part because of Britain's wartime refugee policy.

In October 1941, the 180-ton Romanian coastal vessel *Struma,* which normally carried one hundred passengers, sailed for Haifa with almost one thousand Jewish refugees. The ship broke down at Istanbul on 16 December because of overloading, a leaking hull, and defective engines. Turkey would not permit the passengers to land without British certificates for Palestine, but the British refused to issue them.

Since the refugees could not go forward and could not return to Romania, the *Struma* remained in port for ten weeks. The British refused the appeal of the Jewish Agency to permit the refugees entrance to Palestine—if only for later transport to Mauritius, an island in the Indian Ocean. On 24

February, Turkey towed the *Struma* with its passengers out to sea, where six miles from shore it sank; it is not known whether it capsized, struck a mine, or was hit by a torpedo. Some 70 children, 269 women, and 428 men drowned—only 2 swam to safety.

This event became the symbol for the Jewish community in Palestine (the Yishuv) of Britain's unrelenting World War II policy toward the Jewish refugees of Nazi-occupied Europe.

MIRIAM SIMON

STUDENTS IN THE LINE OF THE IMAM

An organization of Iranian students that held U.S. hostages for over one year.

Students in the Line of the Imam was a militant group formed after the Iranian Revolution (1979). It advocated radical policies that its members insisted were supported by the revolution's leader, Ayatollah Ruhollah Khomeini, whom they called *imam.* The group acquired domestic and international attention when it seized the U.S. embassy in Tehran in November 1979 and announced that captured U.S. diplomatic personnel would be held until the United States extradited the deposed shah, Mohammad Reza Pahlavi, to Iran for trial. This action began the most dramatic of regional hostage crises, one that would not be resolved for 444 days. During the crisis, the students pasted together shredded secret documents pertaining to U.S. policy that they found in the embassy compound. They published the U.S. documents in several volumes and also used the material in the documents to discredit moderate politicians mentioned in them. Although the Students in the Line of the Imam group gradually was relegated to the margins of Iranian politics after the hostage crisis was resolved in January 1981, several of its leaders subsequently played important roles. Abbas Abdi, for example, became an influential editor and champion of the reform movement in the 1990s. Maryam Ebtehar, media spokesperson for the Students in the Line of the Imam, became Iran's first woman vice president in 1997.

NEGUIN YAVARI
UPDATED BY ERIC HOOGLUND

SUARÈS FAMILY

Prominent Sephardic family, influential in Egyptian society and economy.

The Suarès family settled in Livorno, Italy, then went to Egypt during the first half of the nineteenth century. Menachem Suarès della Pegna settled in Alexandria while his brother Isaac settled in Cairo. In the mid-1870s Isaac's sons—Joseph (1837–1900), Félix (1844–1906), and Raphael (1846–1902)—created the Banque Suarès, which until 1906 served as mediator for European capital investment in Egypt. Given Raphael Suarès's connections with British industrial investors, he channeled British investments into such enterprises as the construction of the first Aswan Dam, the National Bank of Egypt, and the khedivial estates *(al-da'ira al-saniyya).* The Suarès family was not only involved in banking and finance but also transportation, establishing in Cairo the first public transportation company and building railway lines between Cairo and Helwan, Qina and Aswan. Members of the family owned real estate in the heart of Cairo where Suarès Square bore Félix Suarès's name (Maydan Suarès was renamed, in 1939, Maydan Mustafa Kamil).

One family member, Edgar Suarès, was involved with a major shareholders' company. Owing to his initiative, vast areas of land—several thousand *feddan* (a *feddan* is approximately one acre)—were purchased in Upper and Lower Egypt. Edgar Suarès reclaimed them and introduced modern irrigation facilities

for large-scale agricultural development. He subsequently sold the land as small holdings to rural Egyptians at low prices and long-term credit. The Suarèses were not very active in Jewish communal affairs; only Edgar Suarès served very briefly as president of Alexandria's Jewish community during World War I. Their influence in Egyptian society and the economy declined after the 1930s.

MICHAEL M. LASKIER

SUBLIME PORTE

Residence/office of the Ottoman sultan.

In the Ottoman Empire, the sultan would appoint a grand vizier to head the government. Just as the prime minister of Great Britain resides at 10 Downing Street, the grand vizier of the Ottoman Empire lived and worked in the Sublime Porte. This term is a French translation of *al-Bab al-Ali,* which means literally "the High Door." In the nineteenth century, it became common to refer to the entire Ottoman government as "the Sublime Porte," as it is common today to refer to the U.S. government as "the White House."

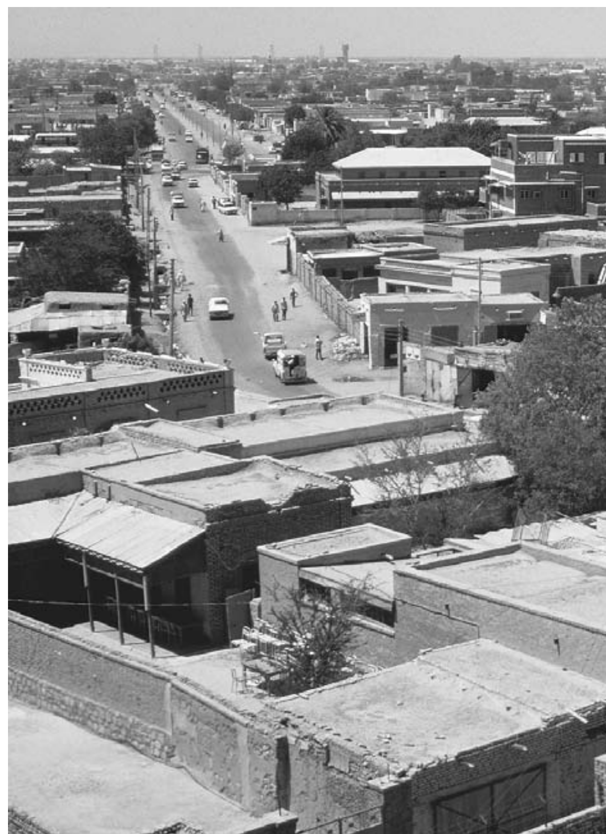
ZACHARY KARABELL

SUDAN

A country in northeast Africa located south of Egypt on the Nile.

Known in the past as *bilad al-sudan* (the land of the black people), Sudan is the largest country in Africa, covering one million square miles. Its nearly thirty million residents, who live scattered across the wide expanse, differ along lines of ethnicity, language,

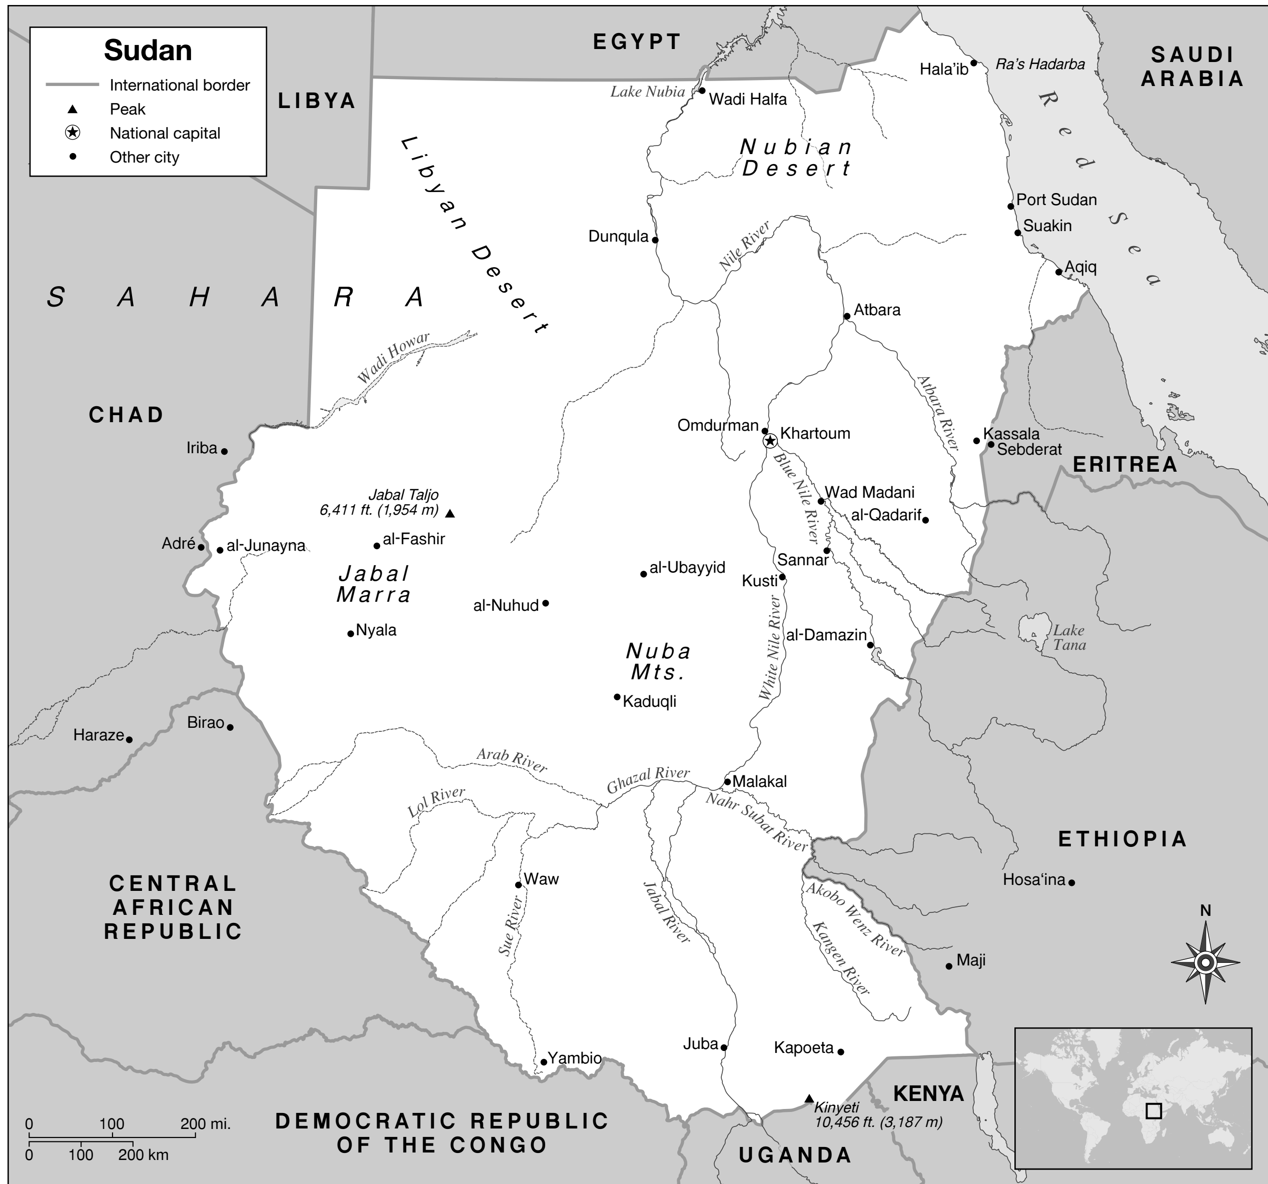


Omdurman is the largest city and chief commercial center of Sudan. It is located across the White Nile from Khartoum, the country's capital. **© CORBIS. REPRODUCED BY PERMISSION.**

and religion. The country's political instability is, in part, a result of this diversity. Moreover, given its geostrategic location astride the Nile, it has been vulnerable to foreign pressure.

Peoples

Sudan contains more than fifty ethnic groups, which are subdivided into at least 570 tribes. The principal groups in the north are Arab, Beja, Nuba, Nubian, and Fur. Nearly half the population identifies itself as Arab, generally meaning peoples who speak Arabic and reflect its cultural heritage. The Arabs along the northern and central Nile valley tend to dominate Sudanese political and economic life. The Beja, who comprise 6 to 7 percent of the population, are concentrated in the east along the Red Sea and coastal mountain ranges; they are Muslim but speak a distinct language. The Nuba, residing in the Nuba mountains of southern Kordofan, are 5 percent of the population and also speak their own



MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

languages, not Arabic; some are Muslim, others Christian or adherents of traditional African religious beliefs. About 3 percent are Nubians, who traditionally lived along the northern reaches of the Nile, merging into Egypt. In the early 1960s, many Nubians were relocated to Khashm al-Ghirba in central Sudan when the construction of the Aswan High Dam flooded their homes. They speak their own ancient languages; they were early converts to Christianity but converted to Islam several centuries ago. The Fur, 2 percent of the population, live in the far west; like the Nubians, they have a tradition of independent kingdoms. The Sultanate of Fur lasted from the fifteenth century until the early 1890s. Many other non-Arab peoples live in villages in the west, notably the Berti, Zaghawa, Borgu, and Massalit.

In the southern third of Sudan, the Dinka are 40 percent of the population, or 12 percent of the Sudanese as a whole. The Nuer are 5 percent of the whole Sudanese people, and the Shilluk are 1 percent. None of those groups are homogeneous, and they compete for territory, cattle, and trade routes.

The numerous groups that live in Equatoria, the southernmost area, differ in language, customs, and religion. Overall, the ethnic fragmentation in the south is greater than in the north.

In addition to those indigenous groups, 6 percent of the Sudanese are migrants from West Africa who settled in western and central Sudan in search of employment or on their way to or from Mecca, the most important site for Muslim pilgrims. Known by the pejorative term *fellata,* they lack many of the legal and economic protections accorded to full Sudanese citizens.

Language overlaps with ethnicity as a basic distinguishing trait among the Sudanese. Half the population speaks Arabic as its native tongue. At most, half the adults are literate (far fewer than that in the wartorn south and Nuba Mountains), and indigenous languages remain important. Arabic serves as the lingua franca among the educated classes in the north. Although residents of the south resisted learning Arabic and were taught English in the missionary schools, Arabic has made inroads there in recent decades.

Religion also divides the population—65 to 70 percent are Muslim, 20 to 25 percent follow traditional beliefs, and 5 to 10 percent are Christian. The north is overwhelmingly Muslim, with pockets of Christians in the Nuba Mountains and in urban areas. Many Muslims belong to the networks of Sufi *tariqas* (brotherhoods) that formed around holy men and serve economic, social, and political as well as religious functions. The brotherhoods cut across tribal and ethnic allegiances: For example, many Beja belong to the Khatmiyya order, which is led by the Arab riverain Mirghani family. Otherwise, most of the divisions reinforce cleavages, particularly the Arab/Muslim separation from the African/non-Muslim.

Geography and Economy

Sudan is predominantly rural, with a third of the population living in urban areas. (That share is growing as people flee famine in the outlying provinces.) Two-thirds of the labor force works in agriculture or herding, and a third of the gross national product was derived from agriculture until the advent of oil exports in 1999. Northern Sudan is largely flat savannah and desert where cattle, camels, and sheep are raised, sorghum and sesame are grown, and gum arabic is harvested. Meat and grains are sold in large amounts to oil-rich states in Arabia, and gum arabic is exported to Europe and the United States for use in soft drinks. Along the Blue and White Nile, south of Khartoum, cotton and peanuts are grown for export on large-scale agricultural holdings called *schemes.* Rains are heavier in the tropical south than in the north, but development in the south has been hampered by civil war and difficult conditions, such as the vast swamp known as the Sudd (barrier). The north suffers from severe deforestation: The forest cover diminished annually by one percent in the 1980s and 1990s due to overgrazing, charcoal burning, and drought.

Men in Rashayda build a mud hut. In many areas of Sudan, there is little building material to work with other than what nature has provided. Even some government facilities, such as immigration and customs centers, are wattle-and-daub structures. **© CORBIS. REPRODUCED BY PERMISSION.**

Industry is based on agriculture, and its products are consumed within the country. Manufactures include sugar refining, flour milling, vegetable oil processing, canning, and textiles. Cement, tire, and cigarette production is also important for the domestic market.

There are substantial untapped deposits of copper and other minerals in Sudan. Chinese and French joint ventures export gold from the Red Sea Hills. Oil has now become the most important resource.

In 1979 the Chevron Oil Company discovered oil in Bentiu (Upper Nile) and Muglad (southern Kordofan). Extraction was blocked by the civil war

that resumed in 1983. Chevron sold out its share to the Sudanese government in 1984. In the mid-1990s the government resumed exploration, utilizing the skills of a consortium of Canadian, European, Chinese, and Malaysian oil companies. Export began in August 1999, when the pipeline to Port Sudan was completed. Since then Sudan has become self-sufficient in oil. It exports increasing amounts of crude and refined oil, particularly to East Africa and Asia. The Canadian Talisman company sold its share to the Indian state oil company in 2002 after widespread protests by human-rights groups against the government's expulsion of Nuer from Upper Nile in order to ensure central control over this vital resource.

Oil exports have enabled Sudan to have a positive balance of trade for the first time in decades and to start to reduce its heavy debt burden. That burden is estimated at $23 billion, most of which is long in arrears. U.S. government sanctions, imposed in November 1997, ban U.S. companies from conducting transactions in Sudan, with the exception of those for gum Arabic.

Urban Areas

The urban population is centered in the Three Towns—Khartoum, Omdurman, and Khartoum North—which serve as the political and economic capital and together house at least 1.2 million people. Port Sudan (pop. 300,000), built by the British in 1910, remains the only port on the Red Sea, although efforts have been made to revive the historic port at Sawakin. Kassala (pop. 235,000) and Qadarif (pop. 190,000) are the main towns in the grain-growing east, and Wad Madani (pop. 220,000) is the capital of the cotton-growing Gezira area. In the west, al-Ubayyad (pop. 230,000) serves as the capital of Kordofan, and al-Fashir—on the border with Chad—is the capital of Darfur; both are important trading centers. Juba (pop. 115,000), the capital of Equatoria, was the capital of the south when it was unified from 1972 to 1983; it has been isolated from the surrounding countryside by the rebel forces of the Sudan Peoples Liberation Army (SPLA) since 1985.

History since 1821

The territory that now comprises Sudan was not unified until the Turco-Egyptian invasion of 1821, which imposed centralized control over most of the north relatively quickly. The Turco-Egyptian forces did not conquer Darfur until 1874 and never subdued the southern tribes. Their raiders seized gold, ivory, and slaves from the south, deeply alienating those African peoples.

The indigenous politico-religious movement called the Mahdiyya overthew the Turco-Egyptian government in 1885 and ruled until 1898. Muhammad Ahmad ibn Abdullah called himself the *mahdi* (messiah) in 1881, gathering his followers on Aba Island (White Nile) and later in Kordofan, from which he launched attacks against the Turco-Egyptian army. The mahdi died shortly afterward. His successor *(khalifa)* Abdullahi al-Taʿisha consolidated control over northern Sudan and attempted to seize territory from Ethiopia and Egypt. He established a religious-based government that continued to raid into the southern areas, seizing slaves and promoting Islam.

British forces, marching south from Egypt, overran the country in 1898 to 1899 and imposed the Anglo-Egyptian condominium. Messianic anticolonial revolts broke out in the west and center, and were finally subdued in 1912. Sultan Ali Dinar was not defeated in Darfur until 1916. In the early 1920s nationalist outbreaks called for Sudan's independence, or for its linking with Egypt: Those two strands persisted in the northern nationalist movement until Egypt renounced its claim to Sudan in the 1950s. One enduring legacy of British rule was the virtual separation of the south from the north; from 1922 to 1946 the southern provinces and Nuba Mountains were isolated from the rest of the country. Meanwhile, considerable economic and educational development took place in the north, centered on the Gezira agricultural scheme (opened in 1925) and Gordon Memorial College (opened in 1903). In 1938 the graduates formed the Graduates Congress, which lobbied for independence during World War II. By then, several northern political parties also competed for influence. Britain established a legislative assembly in 1948; this led to self-government in 1952 and the election of the first parliament in the next year. Sudanization of the army and administration began in 1954. Those measures primarily benefited the north; the south was compelled to accept a subordinate position at the Juba Conference (1947) and hardly benefited from Sudanization.

When Sudan gained independence on 1 January 1956, parliamentary rule was established. The two leading religious orders—the Ansar and the Khatmiyya—predominated in the new governments, although secular nationalists, communists, and southerners gained token positions in the parliament. The democratic institutions had not had taken root by the time General Ibrahim Abbud instituted military rule on 17 November 1958. His rule lasted until November 1964, when a popular uprising led to a renewed democracy. That, too, proved unstable as the traditional politicians jockeyed for power, were challenged from the religious right by Hasan al-Turabi's Islamist Party, and failed to deal with the rebellion that had accelerated in the south during Abbud's era.

Young officers led by Muhammad Jaʿfar Numeiri launched a coup d'état on 25 May 1969 and crushed the traditional political groups. Numeiri turned against his left-wing allies in 1971 but mollified the south by granting regional autonomy in 1972. He instituted major economic development programs in the mid-1970s, backed by the party, the Sudan Socialist Union. Economic development remained hampered by poor planning, high-level corruption, and skyrocketing oil prices. In 1977 to 1978 Numeiri sought to widen his base of support by reconciling with the traditional and fundamentalist religious forces. That led to the gradual Islamization of the political system. Numeiri instituted Islamic criminal punishments in September 1983, which he enforced against widespread opposition by draconian emergency measures. By spring 1985 Numeiri's support was confined to Turabi's Islamic movement—northern secularists, the banned political forces, and the southerners (who resumed their civil war in 1983 under the banner of the Sudan People's Liberation Movement) actively sought to overthrow him.

In April 1985 a popular uprising led to a bloodless coup and the installation of a one-year Transitional Military Council. Elections were held in April 1986, and northern religious-oriented political movements won 85 percent of the seats. Turabi's National Islamic Front (NIF) won 20 percent of those seats. African (southern and Nuba) and northern secularist (communist) parties controlled only 15 percent of the parliamentary seats. Al-Sadiq al-Mahdi, leader of the Umma Party and the Ansar religious order, became prime minister. Despite his pledges to institute a liberal government and to negotiate an end to the fighting, he failed to cancel Numeiri's Islamic laws. Instead, he announced that he would not enforce them in the south, a move that alienated the southerners as well as northern secularists. Mahdi's rival Muhammad Uthman al-Mirghani, leader of the Khatmiyya Sufi order and head of the Democratic Unionist Party (DUP), won acclaim for reaching an agreement with the SPLM to freeze the Islamic laws pending the convening of a constitutional conference. Mahdi and Turabi joined to force the DUP out of the government, but the senior army officers then compelled Mahdi to endorse Mirghani's agreement and negotiate with the SPLM.

On 30 June 1989, hours before the government could finalize the freezing of Islamic law, Brigadier Umar Hasan Ahmad al-Bashir overthrew the government. The coup d'état was orchestrated by Turabi's NIF, which vehemently opposed the annulment of Islamic law. Once again, constitutional institutions were banned: Bashir closed the parliament, banned political parties and trade unions, and shut down independent newspapers. The government accelerated the fighting in the south and in the Nuba mountains. The civil war was redefined as a jihad (holy war) against infidels and apostates. The regime instituted Islamic legal codes in 1991 and an Islamic constitution in 1999. In the late 1990s it reintroduced carefully controlled parliamentary elections and a direct presidential election, which Bashir won handily. In late 1999 Bashir and Turabi had a major falling-out after Turabi sought to sideline Bashir. Bashir, using his power as president and commander of the military and security services, decreed emergency rule and closed down the parliament. From early 2001 until late 2003, Bashir kept Turabi either in jail or under house arrest.

The political and trade union groups that had benefited from the short-lived parliamentary system formed the National Democratic Alliance (NDA) in October 1989. NDA members inside Sudan attempted to mount protests and petitions, which were crushed by the military regime. Most of the leaders fled into exile, from which they continued to try to overthrow the government and reinstitute democracy. The NDA attempted to mount military operations in eastern Sudan, but it lacked

the strength to bring down the regime either militarily or politically. The government even attracted Mahdi back to Khartoum in 2000, but it failed to provide him with a significant political position.

Sudan Today

The geostrategic location of Sudan contributes to its sociopolitical instability. Located astride the Nile River, which flows north from Ethiopia and Uganda into Sudan and through Egypt to the Mediterranean Sea, Sudan has been the object of contention by those neighbors as well as external powers. Egypt cannot tolerate the presence of a hostile government in Khartoum, because the Egyptian economy depends on the Nile waters. Sudan and Egypt worry that Ethiopia might dam the Blue Nile and deprive them both of water. Sudan also borders the Red Sea, a major artery of international trade, and adjoins nine countries (Egypt, Libya, Chad, Central African Republic, Congo, Uganda, Kenya, Ethiopia, and Eritrea). Lacking the capacity to police its remote desert borders and its lengthy coast along the Red Sea, Sudan is vulnerable to incursion. Refugees from neighboring civil wars and famines find haven in Sudan, and hostile governments support rebellious Sudanese groups. Sudanese governments have meddled in the politics of such neighbors as Ethiopia, Chad, and Uganda, although those countries can easily undertake reprisals.

Some view Sudan as a *terra media,* lying between and linking Africa and the Arab world; others see it as lying on the fault line between the two peoples, torn between them and unable to unite. Nearly fifteen years after achieving independence, Sudan's national identity and political system are still violently contested.

SUDANESE CIVIL WARS

Two wars fought since the independence of Sudan in 1956.

There have been two prolonged civil wars in Sudan since independence in 1956. The first lasted from August 1955 to March 1972, and the second began in May 1983. Although both wars have been fought largely in the southern third of the country, their aims have diverged. The first aimed at independence, or at least autonomy for the south, whereas the second primarily aimed at restructuring the central political institutions and devolving power on marginalized areas. Secession is the fallback position should restructuring fail.

The background for the wars lay in the tension between north and south Sudan, the former largely Arabic speaking and Muslim and the latter home to diverse African peoples who adhered to traditional religions or converted to Christianity. Southern peoples had resisted Turco-Egyptian and Mahdist slave raids in the nineteenth century; the British did not manage to subdue them until the 1920s. Britain then imposed the Closed Districts Act (1925) and other measures that banned northern traders and Muslim preachers from the south and even banned Arab-style dress and the use of the Arabic language

in government offices and schools. Britain failed to promote education and economic development in the south, leaving it far behind the north when the two parts were merged at independence under a centralized system that placed power in the hands of northerners. Many southerners felt that they had not gained independence but had, instead, exchanged one foreign ruler for another.

First Civil War, 1955–1972

The first civil war was triggered by the Torit mutiny (August 1955) of the Southern Defence Force and was heightened by the northern politicians' rejection of federalism. Under the parliamentary system (1956–1958), the south was marginalized politically. Under the military rule of General Ibrahim Abbud (1958–1964), the religious and ethnic norms that predominate in the north were imposed on the south: Arabic became the language of government and education, Islam was promoted and Christianity repressed, and increasingly harsh military means were used to quell the revolt. The return to civilian rule in late 1964 did not, in itself, end the conflict. Although the Roundtable Conference of March 1965 examined southern grievances, the ruling northern political parties still sought to establish an Islamic state, which was anathema to southerners and northern secularists. Only after Muhammad Jaʿfar Numeiri seized power in May 1969 was an effort made to recognize the inherent ethnic and religious diversity in Sudan and negotiate with the Anya-Nya rebels. The Addis Ababa Accord of 27 February 1972, which ended the first war, was implemented through the Regional Self-Government Act for the Southern Provinces (promulgated on 3 March 1972) and incorporated into the permanent constitution of 1973. The three southern provinces became one large region with its own regional assembly and High Executive Council (HEC). The south gained considerable autonomy in the social and economic fields. Religious discrimination was prohibited, and English was recognized as the principal language in the south because it had been the common language used in schools. Efforts were made to reintegrate the refugees who had fled the country during the seventeen years of fighting and to absorb the Anya-Nya into the regular armed forces.

Despite constitutional safeguards against altering provisions of the Addis Ababa Accord, Numeiri interfered continually in the implementation of the accord. At times, he dissolved the regional assembly, dismissed the HEC, and tried to prevent potential oil revenue from accruing to the south. Finally, he decreed on 5 June 1983 the redivision of the south into its three original provinces. That illegal action completed the dismemberment of the accord. By then, members of the absorbed Anya-Nya forces had engaged in sporadic mutinies, culminating in mutinies in Bor and Pibor in spring 1983. When Numeiri sent troops to crush the mutineers, they fled to the bush, where they were joined by Colonel John Garang de Mabior, head of the army research center in Khartoum.

Second Civil War, 1983

By midsummer 1983 Garang had molded the Sudan People's Liberation Army (SPLA) and its political wing, the Sudan People's Liberation Movement (SPLM) into a militant force that supported the continued unity of Sudan, but on a new basis, requiring proportional sharing of power among the various peoples and regions; special attention to the socioeconomic needs of the deprived east, west, and south; and nondomination by any one religious or racial group over the others. The SPLM gained support as Numeiri's policies led to economic ruin and his institution of Islamic law in September 1983 alienated a wide array of citizens. Numeiri's overthrow in April 1985 did not, however, end the rebellion. The transitional government (April 1985 to April 1986) and the elected government under Prime Minister al-Sadiq al-Mahdi (May 1986 through June 1989) failed to respond to the underlying demands of the SPLM and SPLA. The governments sought to modify, rather than annul, Islamic laws, and they treated the SPLM merely as a southern movement. Nonetheless, in spring 1989 the high command of the armed forces compelled the politicians to negotiate an accord with the SPLM that involved canceling Islamic laws until a constitutional conference could resolve the issue of the legal basis of rule. By then, the SPLA controlled nearly 90 percent of the countryside in the south and had made inroads into areas in the north. Fighting had spread into the Nuba Mountains and the southern Blue Nile Province, where the Ingessana people held economic and political grievances against their Arab overlords.

The Sudan People's Liberation Army fought for a unified Sudan during the country's second civil war. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

That effort to negotiate a solution was undermined abruptly by the coup d'état on 30 June 1989—the coup's leaders rejected the agreement to hold the constitutional conference and insisted that Islamic laws be retained. A comprehensive Islamic legal system was instituted in the north and the south was fragmented into ten provinces. After the coup, the SPLM aligned with the exiled opposition National Democratic Alliance in March 1990 and gained the support of the ousted high command of the armed forces in September 1990. The SPLM became the most militarily active element in the nationalist opposition to the Islamist military government. By 1991 the SPLA controlled nearly all the south. However, the fall of Mengistu's government in Ethiopia, which had provided essential support for the SPLA, deepened internal tensions inside the SPLA. Commanders in Upper Nile defected in August 1991, thereby enabling the armed forces to recapture many garrisons and to put the SPLA on the defensive.

Prospects for a negotiated solution seemed to vanish. At negotiations in Abuja, Nigeria, in 1992 and 1993, the SPLM proposed establishing a confederal system, just short of secession, but the government responded that "secession will come at the barrel of the gun" (Wondu and Lesch, p. 51). The Organization of African Unity's East African Intergovernmental Authority on Drought and Desertification (IGADD) initiated negotiations in 1994. IGADD called for the formation of a secular state in Sudan; absent a secular, democratic system, the south should have the right to secede. This position pleased the SPLM but infuriated the government in Khartoum. Only in 1997 did the government allow the issue of self-determination to be an agenda item in the negotiations. Soon after, Khartoum's incentive to negotiate diminished: The export of oil from Upper Nile, which began in August 1999, enabled the government to double its arms purchases within two years and establish military industries. The expulsion of the indigenous (largely Nuer) population from the oil fields area accelerated in the late 1990s and early 2000s. This deepened the already severe humanitarian crisis on the south.

After 11 September 2001, the government began to respond to U.S. pressure to negotiate. It reengaged in negotiations (the African body having been renamed the Intergovernmental Authority on Development—IGAD) and signed a potentially breakthrough accord with the SPLM at Machakos (Kenya) in July 2002. This accord called for the formation of a confederation between the north and south that would last for a transitional six years. Negotiations during the winter of 2002 to 2003 over the specifics of power and resource sharing and the relation of religion to the state remained acrimonious and it remained uncertain whether a fundamental accord was possible. The future status of the other marginalized areas also remained uncertain.

The two civil wars sought to deal with the underlying problem of Sudan—how to build unity in a multiethnic and multireligious country. The first war proposed regionalism as the means to give each community a degree of autonomy; the second war proposed restructuring power in the center so that regional autonomy could be secure. Sudanese politicians still grapple with that fundamental problem.

SUDANESE WOMEN'S UNION

Women's-rights organization.

The Sudanese Women's Union (SWU), an affiliate of the Sudanese Communist Party and an heir of the Educated Girls' Association and the Association of Sudanese Women as well as other organizations of the 1940s, was founded in 1952. Its first executive committee was composed of Fatima Talib, Khalda Zahir, and Fatima Ahmed Ibrahim.

The SWU was active during the late nationalist period (1952–1956). It reached its zenith in 1965, when it had branches throughout the country and a successful monthly publication, *Sawt al-Mar᾽a* (Woman's voice), and had made gains in women's rights such as suffrage, equal pay, and maternity leave. In addition, its president, Fatima Ibrahim, was the first woman elected to parliament. Under Ibrahim's leadership, the SWU gained prominence as one of the largest and most effective women's organizations on the African continent, boasting some 15,000 members at its peak.

Political repression under successive military governments took a toll on the SWU. Ultimately, with the Islamist military coup d'etat in 1989, the SWU was forced underground and Ibrahim into exile in London. Nonetheless, in the 1990s Amnesty International and the United Nations presented the SWU with human-rights awards for its history of struggle and its efforts in exile.

SUDD

Great swamps of the Upper Nile.

Sudd (in Arabic, *sadd,* or barrier) was the word used by European and Arab merchants to describe the largest swamps in the world, which are situated on the Upper Nile in Sudan. It had prevented passage up the Nile River until 1841, when Salim Qapudan, acting on the orders of Muhammad Ali Pasha, viceroy of Egypt, was the first person to pass through its labyrinthine channels. Although open to navigation, the Sudd continues to present a formidable barrier to the passage of water from the equatorial lakes to Sudan and Egypt. Its size expands and contracts depending on the amount of water from the

lakes, and its slope, only a few inches per mile, spreads any additional water across the Nilotic plain. The average annual amount of water flowing into the Sudd in the twentieth century is 33 billion cubic meters, of which only half, some 16 billion cubic meters, leaves the Sudd for Sudan and Egypt. In 1976 the French Compagnie de Constructions Internationales (CCI) began the excavation of the Jonglei Canal to permit water from the Lake Plateau to bypass the swamps. The excavation of the 225-mile canal past the Sudd threatened to disrupt the seasonal movement of livestock and the migrations of great herds of African wildlife. When the Sudan People's Liberation Movement/Army (SPLM/A), led by John Garang de Mabior, revolted against the Sudan government in May 1983, his forces terminated the canal's construction at mile 166. It has never been resumed.

ROBERT O. COLLINS

SUEZ CANAL

Channel built from 1856 to 1869 that links the Mediterranean Sea to the Red Sea.

Several early rulers of Egypt constructed canals for the passage of seagoing ships, usually linking the Nile River to the Gulf of Suez. The followers of Saint-Simon, the French utopian socialist (Claude Henri de Rouvray, Comte de Saint-Simon, 1760–1825), proposed building a canal linking the Mediterranean to the Red Sea in the early nineteenth century. The entrepreneur who actually carried out this scheme was Ferdinand de Lesseps, a former French diplomat who was on friendly terms with Muhammad Saʿid Pasha. As soon as Saʿid became Egypt's viceroy in 1854, de Lesseps described to him his plan for constructing and financing this waterway, which would be the largest public-works project in Egypt since the pyramids. Saʿid consented, but it took some time for de Lesseps to secure approval from the sultan of the Ottoman

The Suez Canal was inaugurated on 17 November 1869. The waterway, which extends one hundred miles and has been enlarged twice since its completion, is used to transport 41 percent of goods and cargo that reach the Persian/Arab Gulf ports and 14 percent of total world trade. **© BETTMANN/CORBIS. REPRODUCED BY PERMISSION.**

Empire and the European powers (Britain was strongly opposed to a canal that might imperil its defense of India) and to raise the necessary capital.

The construction cost, estimated at more than 450 million French francs (worth about $100 million at that time), was borne mainly by Egyptian taxpayers and by thousands of unpaid or underpaid Egyptian peasants who were forced into corvée labor until the European powers and the Ottoman government enjoined the Universal Maritime Suez Canal Company to stop this practice.

When the 100-mile waterway was opened in 1869, it was 30 feet deep and 100 feet wide, adequate for most oceangoing vessels at the time. It soon became a main trade route for steam-driven passenger and cargo ships because it reduced travel time between Europe and East Africa, South Asia, China, Japan, and the East Indies. The canal was supposed to be open to ships of all nations in war or peace, but Britain made sure that it was closed to shipping for Germany and its allies in both world wars, and Egypt barred its use to Israel and to other countries' ships carrying goods for Israel until 1975. The canal was administered by the Canal Company until it was nationalized by Egypt under Gamal Abdel Nasser in 1956. Since then it has been admin-

TABLE BY GGS INFORMATION SERVICES, THE GALE GROUP.

istered by the Suez Canal Authority. It was closed from 1956 to 1967 and from 1967 to 1975 because of the Arab-Israel conflict.

The canal was enlarged from 1960 to 1964 and from 1975 to 1980 to accommodate larger oil tankers, which have become its main users; in 1992, it was 590 feet wide at its narrowest point and had a maximum draught of 53 feet. Transit time is now 15 hours, and 80 ships can transit per day. The Suez Canal is a major route for transport of crude oil from the Persian Gulf. In 2000 the northbound tankers from the Gulf carried 28.2 million tons of crude oil (about 580,000 barrels per day) and in 2001 28.8 million tons (about 592,000 barrels per day).

The transit rates are established by the Suez Canal Authority. They are computed to keep the canal transit fees attractive to shippers. For example, in January 2002, the fee for the transport of crude oil for very large tankers was $1.21 per ton above the first 30,000 tons. Such a rate would amount to approximately $190,000 for a 150,000-ton oil tanker.

SUEZ CANAL UNIVERSITY

Public university founded in Ismaʿilia, Egypt, in 1976.

Egypt's President Anwar al-Sadat (1970–1981) founded Suez Canal University as part of his plan to rebuild and symbolically reclaim the war-damaged Suez Canal cities. In 1975 he had reopened the canal, which had been blocked since the June 1967 Arab–Israel War. With five colleges in Ismaʿilyya and two each in al-Arish and Suez, the university has a teaching staff of 638, 12,312 undergraduates, and 1,588 graduate students.

DONALD MALCOLM REID

SUEZ CRISIS (1956–1957)

The British and French challenging of Egyptian President Nasser's nationalization of the Suez Canal, also involving Israel, and ending in the achievement of control of the Canal by Egypt.

On 26 July 1956, before 100,000 Egyptians in the main square of Alexandria, Egyptian President Gamal Abdul Nasser announced his decision to nationalize the Suez Canal Company. This came as a rebuff to the recent withdrawal of the United States and Great Britain from their pledge to finance the construction of a high dam across the Nile River near Aswan. The Suez Canal lay formally under Egyptian sovereignty, but the implementation of these sovereign rights was regulated by an international convention agreed upon by Egypt and several maritime powers in 1888 in Constantinople. The revenue and daily administration of navigation through the canal were handled by an international company based in Paris and owned mainly by British and French shareholders. There was nothing illegal in the act of nationalization, since Nasser promised to

compensate the shareholders faithfully and ensure there was no disruption of navigation. But Great Britain and France saw in Nasser's act a defiant blow to their prestige and political standing in the Middle East and North Africa.

Within hours the British and French decided jointly to make every effort, including the use of military action if necessary, to regain control of the Canal. They ordered their chiefs of staff to plan an invasion of Egypt. Under the command of British general Sir Charles Keightley and French admiral Pierre Barjot, a large force assembled in several Mediterranean ports and operative plans were laid out for an operation code-named "Musketeer." The U.S. administration, while in agreement on the need to ensure the international nature of the Canal, made clear from the outset its strong objection to the use of force for this purpose. Also, considering the support Nasser was allegedly giving to Arab rebels in Algeria, French public opinion supported its government's hard-lined intention. Public opinion in Britain, even within the ruling Conservative Party, was, however, divided.

In order to overcome these difficulties and save the time needed for the preparation of the military operation, some preliminary diplomatic measures had to be taken. While British Prime Minister Sir Anthony Eden and French Prime Minister Guy Mollet interpreted these measures as preparation of the military operation, American Secretary of State John Foster Dulles took them as an opportunity to calm his allies and forestall any resort to force. As expected, the Soviet Union and several "neutral" states led by India unequivocally supported Egypt's position. A conference was held between 18 and 23 August in London, at the end of which a resolution signed by eighteen of the participating maritime states was presented to President Nasser by Australian Prime Minister Sir Robert Menzies. The resolution demanded that Egypt agree to the empowerment of a new international agency that represented the interests of the canal users and took over the administration of canal affairs.

The French and British, having almost completed their military preparations, were ready to take the next diplomatic step of bringing the issue before the United Nations (UN) Security Council. But Dulles feared that such a move would lead to an impasse and precipitate the use of force. He persuaded his allies and several other maritime states to convene once more on 19 September for a second conference in London. On 21 September the group announced the formation of a Suez Canal Users' Association (SCUA), which was supposed to deal with matters of finance and administration of the canal on a practical level and uphold the users' rights. But SCUA was stillborn, since in the meantime Nasser had replaced all the old company's navigators and arranged for uninterrupted operation of the canal under Egyptian management. Prudently, Nasser decided at this stage not to force the issue of payments for the passage in the canal, rendering SCUA nothing more than a paper declaration.

At the end of September Britain and France, becoming restless as their assembled invasion force began to exact a heavy burden, filed a formal complaint in the Security Council. Dag Hammarskjöld, the UN secretary-general, tried to mediate a compromise in private meetings with foreign secretaries Selwyn Lloyd (Great Britain), Christian Pineau (France), and Mahmud Fawzi (Egypt), and formulated a six-point draft proposal to be elaborated at a later stage. But France and Great Britain were not looking for a compromise in defeating Nasser. Despite the fact that the Security Council voted favorably on Hammarskjöld's "Six Points," Lloyd and Pineau insisted on another formal Security Council resolution that would condemn and nullify the nationalization act. This proposal was defeated by a Soviet veto and the council disbanded without a practical solution to the crisis.

From the British and French standpoint, by the middle of October 1956 all diplomatic measures were exhausted and the time was ripe for the "Musketeer" operation. But in view of the smooth operation of the canal, mounting opposition inside Britain, and repeated warnings of the American administration against the use of force, Eden procrastinated. It seemed that he had lost a clear and compelling casus belli.

From the beginning of the crisis the British, knowing of the warm relations developing between France and Israel over recent months, had insisted on a strict separation between their quarrel with Nasser and the Arab–Israeli conflict. Israel, Britain

maintained, should be left outside the imbroglio. Despite having many grievances against Egypt and despite the disruption of the balance of power introduced in September 1955 by a huge Soviet-Egyptian arms deal, Israel preferred to concentrate all its energies on absorbing the large quantities of armaments acquired from France since the end of June. The French, on the other hand, whose part in "Musketeer" was to operate on the east bank the Canal, sought to examine the possibility of getting tactical assistance from Israeli forces, if they could press the Egyptians in the Sinai Peninsula from the east. By the end of September, recognizing Eden's hesitations, the French had begun to consider triggering the entire situation by inducing Israel to take the initiative and attack Nasser first.

Invited by the French, Golda Meir, Israel's minister of foreign affairs, together with General Moshe Dayan, the Israel Defense Force (IDF) chief of staff, and Shimon Peres, the director-general of the Ministry of Defense, arrived in Paris on 30 September for exploratory talks. The St. Germain Conference did not yield any definitive military plans, however, since the situation at the UN was not resolved and Britain's position remained unclear. Under the assumption that Israel might be invited at some point to participate in the war, further French armaments were rapidly shipped to Israel and a group of high-ranking French officers, headed by Major General Maurice Challe, proceeded to Tel Aviv to explore operations possibilities. Having become better acquainted with Israel's capabilities, Challe conceived a new plan: Israel would initiate an assault on the Sinai, and the French and British would issue an ultimatum to Israel and Egypt to withdraw so that French and British forces could occupy the canal and assure free and secure navigation. Assuming that Nasser would reject the demand, the road for "Musketeer" was open.

Eden was persuaded to join in this collusion, under the strict condition that it not look as if Great Britain had invited Israel's attack, and that Great Britain appeared to be reacting to a new situation provoked by Israel. Prime Minister of Israel David Ben-Gurion considered the proposal humiliating; he also did not trust the British intention to fulfill their share of the "scenario." To unravel the complex situation, a highly confidential meeting took place between 20 and 23 October at a small private villa in Sèvres, outside Paris. A series of meetings involving Ben-Gurion, Moshe Dayan, and Shimon Peres from Israel; Guy Mollet, Christian Pineau, and Maurice Bourges-Maunoury, the French minister of defense, and briefly also involving Selwyn Lloyd of Great Britain, took place. After the group reached agreement on slight changes in the Challe scenario, and the French assured Israel of military reinforcement, the Sèvres Protocol was signed by Ben-Gurion, Pineau, and Patrick Dean, a senior British official.

On 29 October, an Israeli parachute battalion was dropped east of the Mitla Pass, about forty miles east of Port Suez, and Israeli armor and infantry began to push west into the heart of Sinai. In accordance with the Sèvres Protocol, the next day an appeal was made jointly by the French and British governments demanding that the belligerent parties clear the canal zone. Israel, not intending to reach the banks of the canal anyway, acceded to the request. Nasser, as expected, declined. Thirty-six hours later, on the evening of 31 October, the British and French launched heavy air attacks on Egyptian airports and other military and supply installations, operating from their bases in Cyprus and from aircraft carriers off the shore of Egypt, and started the six-day naval voyage of their invasion forces from Malta, Toulon, and Algiers.

The thinly disguised deception and the unwarranted attack on Egypt incensed President Eisenhower who started, in concert with the Soviet Union and almost the entire international community, to put pressure on the colluding parties. Because British and French vetoes would be used to stymie the Security Council, a special emergency session of the General Assembly convened under the "Uniting for Peace" formula (which had been used during the Korean crisis in 1950). On 5 November French and British paratroopers dropped near the towns of Port Said and Port Tawfiq at the northern edge of the canal, while Israel had by this point already completed the conquest of the entire Sinai Peninsula. The landing from the sea of further troops the next day completed the capture of Port Saʿid, but their advance was arrested about thirty miles to the south. The mounting pressure of the UN, threats of the Soviet Union, and heavy pressure of public opinion in Great Britain opposing the war, were all factors that moved Eden to order a cease-fire.

Following a proposal devised by Lester Pearson, the Canadian minister of foreign affairs, the UN established a special Emergency Force (UNEF) under the command of Canadian general E. L. M Burns. The invading parties now succumbed to international pressure and withdrew their forces from the Canal on 22 December, assuming that UNEF would take responsibility for the management of the areas they evacuated. But, acting on their sovereign prerogatives, the Egyptians immediately took over those territories and UNEF moved eastward into Sinai to shadow the gradually retreating Israeli forces. By the middle of February 1957, after the IDF completed the evacuation of almost the entire peninsula, a crisis developed because Israel had hoped to hold on to the Gaza Strip and to the entrance to the Gulf of Aqaba (Elat) at Sharm al-Shaykh. Heavy American pressure and the threat of UN sanctions moved Ben-Gurion to withdraw Israeli forces to the old armistice demarcation lines by 6 March 1957. The UN force was newly deployed along the Egyptian side of the Egyptian-Israeli frontier, but the Egyptians refrained from returning to the Sinai Peninsula and the Gaza Strip with more than token forces. Both these measures put an end, at least for the following ten years, to the many frictions that had inflamed relations along those frontiers before the war, and left the Straits of Tiran open to Israeli navigation.

The 1956 Suez War is commonly considered a major blunder in modern international relations and a watershed leading to the final demise of British and French colonialism. Within a few years both Great Britain and France lost their positions in the Middle East and North Africa, and their status as first-rate powers waned while dependence on U.S. power grew. The Eisenhower Doctrine of January 1957 gave a symbolic imprimatur to the evolving new situation in the Middle East. The main winner of the entire affair was President Nasser, who not only achieved nationalization of the Suez Company and expelled the last vestiges of British presence along the canal, but also emerged as the uncontested leader of the Arab people and became, along with India's Jawaharlal Nehru and Yugoslavia's Josef Broz Tito, one of the outstanding leaders of the neutralist bloc of nations.

MORDECHAI BAR-ON

SUEZ–MEDITERRANEAN PIPELINE

Pipeline linking the Red and Mediterranean seas.

The Suez–Mediterranean Pipeline (SUMED) was opened in 1977. It consists of two pipelines 210 miles long and 42 inches in diameter. It has a capacity of 2.4 million barrels per day. SUMED allows the Persian Gulf oil-producing states to bypass the Suez Canal, which cannot accommodate tankers larger than 200,000 tons. The pipeline can provide an alternative route to Gulf exporters if the Suez canal is blocked, as happened in 1973. Half of the pipeline is owned by the Egyptian General Petroleum Company. The balance is divided among PETROMIN of Saudi Arabia, the Abu Dhabi Oil Company, and the Qatar General Petroleum Company.

SUMED is designed to allow easy transshipment and dispatch to numerous destinations with minimal disruption. It can transport different grades of crude oil with minimal contamination. The terminals at Ayn Sukhna, on the Red Sea, and at Sidi Krayr, near Alexandria, can accommodate both very small tankers and those over 500,000 tons. Many tankers too large to use the Suez Canal can unload

a portion of their oil in Ayn Sukhna, sail through the canal, and reload in Sidi Krayr.

Seventy-three percent of the oil transported by SUMED is destined for Europe. The pipeline has more than forty clients. The main ones are the major oil companies, Arabian American Oil Company, and the National Iranian Oil Company.

SUFISM AND THE SUFI ORDERS

Islamic mysticism.

The word *Sufi* is generally assumed to derive from *suf* (wool), in reference to the simple clothing of the early ascetic mystics. It refers to the practice and philosophical tradition in Islam that relates to spiritualism and mysticism.

Theological and Philosophical Basis

Mysticism in Islam has two distinct origins. The first is the Qurʾan itself, which postulates an intensely personal and direct relationship between the individual and God. This fervent devotion was expressed in the early practice of Hasan al-Basri (d. 728) and the poetry of Rabiʿa al-Adawiyya (d. 801) and gave rise to spiritual Sufism. Practiced by preachers who embraced a simple—almost ascetic—life, it also included celibacy and extensive religious worship and contemplation carried out individually or, more often, in a *halaqa,* or circle of devotees.

The second source is the mystical doctrines of other religious traditions, including gnosticism, Christianity, Zoroastrianism, and Hinduism, which converts to Islam brought into their new faith, giving rise to theosophical Sufism. These traditions had elaborate theosophical doctrines, at the heart of which lay the concept of the unity with the divine, the ultimate goal of the mystic. However, the principle of *tawhid* (divine unity), the cornerstone of orthodox Islamic belief, establishes God's absolute unity and absolute transcendence, thereby precluding any possibility of the creature joining with the Creator.

Theosophical Sufism eventually resolved this contradiction through the elaboration of a number of paradoxical concepts that maintain at once unity and difference, annihilation of self into the divine *(fana)* and self-persistence *(baqa),* presence and absence, intoxication and sobriety. The analogy of seeing God in a mirror image of oneself is often used to explain this unity with the divine. The reinterpretation of *tawhid* as unity of being, according to which the mystic could claim unity with divine existence or attributes while preserving the transcendence of divine essence, allowed Sufism to claim adherence to fundamental orthodox Islamic dogma and gave Islamic mysticism its distinctive flavor.

Idris I (1889–1983) became king of Libya in 1951, when the country declared its independence. He ruled until 1969, when he traveled to Turkey for medical treatment and Muammar al-Qaddafi overthrew the monarchy. © HULTON-DEUTSCH COLLECTION/CORBIS. REPRODUCED BY PERMISSION.

On the basis of this new interpretation, divine truth *(haqiqa)* became the ultimate object of the Sufi gnosis, which was called *maʿrifa* (intuitive knowledge) to set it apart from the rational and exoteric discourse of the law; the law itself became secondary—either a mere step to reach unity with the divine or a hindrance that could be dismissed after a certain level of illumination. Knowledge of the divine

Iraqi Sufis practice a mystical form of Islam that focuses heavily on enlightening the soul through internal holiness, rather than external surroundings. Pictured is a group of Sufis praying at their shrine in Baghdad. © BENJAMIN LOWY/CORBIS. REPRODUCED BY PERMISSION.

nature was called *kashf* and was considered to be infallible, a characteristic that in orthodox Islam is attributed only to Prophetic revelation. The concept of the unity of being was tied to the Hellenistic understanding of God as a First Intellect from whose self-contemplation the world emanates, and that was reinforced by the Greek-inspired Muslim philosophers, who adopted that understanding against the dogma of the Muslim theological schools. The articulation of theosophical Sufism and its harmonization with the *shariʿa* (Islamic law) was carried out by Muhyi al-Din ibn al-Arabi (d. 1240), who systematized a sainthood hierarchy that culminated in a "seal of sainthood" parallel to the Qurʾanic "seal of prophecy" that he attributed to himself.

Although at first fought by the orthodox, this process of presenting the theosophical concepts in Islamic terms and justifying them through the esoteric interpretation of the Qurʾan eventually made Sufism legitimate. The process was furthered by the elaboration of a body of Sufi prophetic sayings *(hadith)* that justified Sufi practice (although that led to the elaboration of anti-Sufi *hadith.*) The full adherence by theosophical Sufism to the *shariʿa* and the nominal adherence to the concept of *tawhid* met the main legal requirement of the faith. In addition, the materialism that accompanied the economic, technological, and cultural expansion of the Islamic empire in Umawi and Abbassid times, as well as the tendency among literalist jurists and theologians to

reduce the law and the faith to a numbing amalgam of rules and rituals, helped the spread of Sufism by causing a popular reaction against these trends. In the eleventh century, Abu Hamid al-Ghazzali (d. 1111), who dominated the orthodox movement with his powerful intellect, strongly defended the spiritual dimension in Sufism against the impoverished literalist views of its most vocal opponents and integrated it into the theological expression of the faith; and although he opposed the unity of being and the asceticism and withdrawal preached by some Sufis, the stature of al-Ghazzali helped validate Sufism. Sufism could now spread unimpeded in all its various expression, although any unambiguous claim of having achieved unity with the divine met with retribution or persecution from the orthodox theologians (as happened to Husayn bin Mansur al-Hallaj, executed for heresy in 922.)

Sufi Orders

Partly because orthodox resistance precluded its integration in the theological disciplines and partly because of its very nature, Sufism did not become an organized discipline and came to refer to anything from intense piety to specific devotional steps to mystical philosophy. Most often, however, a Sufi cell (called *tariqa* or *zawiya* or *ribat*) was formed around a teacher, and spiritual doctrine and practice could vary widely from one cell to another. Generally, the Sufi experience centers on a number of practices (including *dhikr* or recitation of the Qurʾan, contemplation, prayer, singing, dancing, and fasting) prescribed by the Sufi shaykh, who determines the progress of the disciple through the *maqamat* (stages of spiritual development, codified by Dhu Nun, d. 859.) Sufism contributed greatly to Islamic art in poetry (that of Jalal al-Din al-Rumi, d. 1273, is the best known in the Muslim world as well as in the West) and in literature and music.

By the middle of the ninth century, Sufi orders had established schools throughout the Muslim world. Since any teacher could establish a cell, these were innumerable. However, the main Sufi schools established a *silsila* (chain) through which the master's teachings were transmitted from teacher to disciple, and a loose lineage was traced back either to Abu al-Qasim al-Junayd (d. 910) in the Arab world or to Abu Yazid al-Bistami (d. 874) in Central Asia and Iran. Within the Arab tradition, the Rifaʿiyya (Ahmad al-Rifaʿi, d. 1182), became know for some wild practices and spread widely until overtaken in the fifteenth century by the Qadiriyya (Abd al-Qadir al-Jilani, d. 1166), whose orthodox bent and more flexible teachings became popular. Less famous because of its emphasis on strict mystical discipline was the Suhrawardiyya (al-Suhrawardi, d. 1168), which gained favor with the upper classes. Within Central Asia and Anatolia, were the Mawlawiyya (also Mevlevis; Jalal al-Din al-Rumi, d. 1258), an introspective order known for its use of chanting and its dancing dervishes, the nomadic Yasawiyya (Ahmad al-Yisavi, d. 1166), and the powerful and orthodox Naqshbandiyya (Muhammad Bahaʾ al-Din al Naqshabandi, d. 1389), which was popular with the elite in India and Central Asia. Also popular in the Indian subcontinent was the Chishtiyya (Muʿin al-Din Chishti, d. 1236). In Africa, the Badawiyya in Egypt (Ahmad al-Badawi, d. 1276) and the Shadhiliyya (Abu al-Hassan al-Shadhili, d. 1258) had emerged from the Rifaʿiyya, though the latter was more insistent on following the Sunna (tradition of the Prophet) and discouraged asceticism. The Tijaniyya (Ahmad al-Tijani, d. 1815) became very active in fighting European colonization in Northern Africa in the nineteenth century. Amongst the Shiʿa, the most popular orders were the Safawiyya (Safiy al-Din, d. 1334), which originally had been a Sunni movement, and the Niʿmatullah (Niʿmatullah bin ʿAbdullah, d. 1431). The orders shared the same general structure, an initiation ceremony during which the disciple (or the affiliate) was inducted in a similar path, marked with individual and collective rituals that focused on total obedience to the Sufi master.

These orders contributed greatly to the spread of Islam and often served as social protest movements, through their association with craft and commercial guilds, against state authority and abuses of power. But the veneration of the saints and the belief in their power to perform miracles (a claim that was eventually sanctioned by orthodoxy) slowly degenerated in popular practice into a muddle of saint worship, fatalism, superstition, and magic and cultic practices. This was accentuated by the excesses of the more extreme Sufi organizations, which demanded profession of faith in the saints as part of the *shahada* (Muslim creed); other organizations allowed followers to use illicit

substances and disregard the law in the pursuit of the loftier goal of achieving knowledge of the divine; still others preached extreme asceticism and withdrawal from the world. Such excesses had always met with strong disapproval from orthodox jurists, although all of the jurists accepted the spiritual dimension of Sufism, but it was not until the reform movements of the eighteenth century that a reaction against these excesses took place. Building on the criticism of theosophical Sufism by Taqiyy al-Din ibn Taymiyya, Muhammad ibn Abd al-Wahhab (d. 1792) introduced a strict return to the pristine sources of Islam, namely the Qurʾan and the *Sunna* (the Prophet's tradition), and condemned the morally lax practices and quasi-worship of the saints and the Prophet that were practiced by Sufis.

In India and North Africa, reform was also under way, although for different reasons. The Sufi movements, whose active preaching had brought massive conversions to Islam in those areas, had adopted beliefs and practices from their converts that were at times clearly in opposition to Islamic belief and to the *shariʿa.* Alarmed by this syncretism, Sufi masters including Muhammad al-Baqi Billah and Ahmad Sirhindi in India and Muhammad ibn Idris in North Africa initiated a move to restore orthodoxy and in the process reinterpreted the Sufi concepts and shifted their content from unity of being to unity of witnessing God *(wahdat al-shuhud)* and from a traditional Sufi path *(tariqa)* centered on a saint to a *tariqa Muhammadiyya* (the Prophet's *tariqa*) centered on the emulation of the Prophet through strict and active observation of the *shariʿa.* But the threat that European colonialism posed to the Muslim movements transformed their efforts from religious and social reform to a national jihad against the invaders, which only hastened the disintegration of a Sufi worldview based on otherworldliness and ascetic withdrawal. Modern Muslim movements facing many of the same political challenges have generally been critical of Sufism and have espoused more and more a legalistic interpretation of the faith. However, despite the decline of the Sufi orders in recent history, many of the Sufi rituals and traditions survive today in individual and communal practice.

The Muslim world's understanding of its faith has constantly oscillated between the poles of excessive spiritualism and legalistic interpretation, although the existence of these poles has kept Islam from falling permanently into one or the other extreme, in the one case by preserving the spiritual dimension of the faith and preventing the reification of religious consciousness and in the other by grounding the faith in textual sources and moral activism. The great jurists and theologians have attempted to maintain a balance between these two dimensions of Islam, and despite opposition to certain elements in it, Sufism is generally seen as part of normal religious commitment. Thus, it was considered perfectly acceptable during the 1980s for the vice president of Cairo University, a noted scholar in Arabic-Islamic philosophy, to serve as the leader of Sufi circles in Egypt. Popular religion, however, has generally swung from one extreme to the other.

SUISSA, ALBERT

[1959–]

Israeli author.

Suissa was born in Casablanca, Morocco, and emigrated to Israel in 1963. He grew up in Jerusalem, where he studied in an Orthodox school. Later he moved to Paris and studied mime, taught theater, and performed with a mime troupe. He now lives in Paris and Jerusalem.

Akud (The bound, 1990), Suissa's only book, consists of novellas that cumulatively form a variation of a bildungsroman. The protagonist is a child of an immigrant North African family uprooted and replanted on the outskirts of Jerusalem—for that matter, on the margins of Israeli society. Rich with ornamental details, fantasy, and ethnic authenticity, the novel relates the development of a child whose

disintegrating family has had its very foundations undermined by its transplantation. Pitted against the slogans of Eastern European Zionism and mainstream Israeli culture, the impotence and irrelevance of the family is portrayed boldly. Both the original home and the new home seem to be driven by violence and oppression, which breed a devastating alienation. Suissa's language and the structure of the novel are arabesque in pattern and logic, baroque in style, and modern in psychological sensitivities.

ZVIA GINOR
DONNA ROBINSON DIVINE

SULAYMAN, HIKMAT

[1889–1946]

Iraqi government official.

Hikmat Sulayman held various senior administrative positions and ministerial posts in Iraq in the 1920s and 1930s. Associated first with Yasin al-Hashimi and Rashid Ali al-Kaylani, he fell out with them in 1935. His friendship with Bakr Sidqi led to his becoming prime minister after the latter's coup in October 1936, a post he held until Sidqi's overthrow in August 1937.

PETER SLUGLETT

SULAYMANIYA

Town in northeastern Iraq, capital of Iraqi Kurdistan.

A market town in Kurdistan, Iraq, 60 miles (96.5 km) east of Kirkuk, Sulaymaniya is bounded on the east and south by Iran. Its name was linked to Süleyman Paşa, *wali* of Baghdad when the town was founded in 1781. Surrounded by mountains, the town has cold winters and mild summers. It has archaeological sites (some in caves) that date to about fifty thousand years ago.

Most of the population are Kurds. Dokan Dam, 37 miles (60 km) northwest of the town, has a hydroelectric station.

NAZAR AL-KHALAF

SULEIMAN, MULAY

Alawi sultan of Morocco, 1792–1822.

Heir to the badly divided government of his brother and predecessor, Mulay Yazid (ruled 1790–1792), Suleiman also faced provincial unrest and a weakened tax base. He brought much of coastal and central Morocco under *makhzan* control, although his capture and subsequent release by Berber forces in the central Atlas mountains in 1819 underscored the limits of the crown's control over large provinces of Morocco. Suleiman is also known for his bid to suppress popular Sufism and other local socioreligious activities. In the face of growing European pressures, Suleiman adopted a generally hostile and insular stance.

MATTHEW S. GORDON

SULH, KAZEM AL-

[1909–1977]

Lebanese politician, diplomat, and journalist; former ambassador to Iraq; member of parliament, 1960–1964.

Kazem al-Sulh (also al-Solh) was born into a prestigious Sunni family that was active in the Arab nationalist movement at the turn of the century. He emerged in the 1930s as one of the most articulate advocates of an independent, sovereign Lebanon

that would be free from French control but would also remain separate from Syria. In defending the territorial boundaries that the French mandatory power had established, he went against the dominant opinion of people in his community, who still favored reintegrating into Syria those regions the French had annexed to Mount Lebanon in 1920.

Unlike many of his Muslim contemporaries, Kazem al-Sulh understood very early on that independence from France could only be gained by reaching out to moderate Christians, particularly Maronites. He argued that the Maronites would more easily loosen their ties to France and join the nationalist cause if they could be reassured that independence would not be followed by absorption into Syria, or by policies that would undermine Lebanon's political autonomy vis-à-vis other Arab countries. He aspired to create an independent Lebanon based on Muslim-Christian accommodation. It would be possible to achieve this goal, he believed, if the Sunnis agreed to a historic compromise: if they would shed their traditional demand for reunification with Syria in exchange for the Maronites' abandoning their call for a Christian Lebanon and renouncing French protection and interference in Lebanese affairs.

To promote these ideas, Kazem al-Sulh created a group called al-Nida al-Qawmi (The National Appeal), which attracted moderate Sunnis and became a political party in 1945. Although it never was able to develop a mass following, the group played an important role in mobilizing Sunni support for an independent Lebanon. It also strengthened the hand of Maronite leaders like Bishara al-Khuri who were arguing within their own communities for the very kind of cross-confessional compromise that Kazem al-Sulh and like-minded Sunni notables and intellectuals were advocating. Some measure of the influence of Kazem al-Sulh and groups such as al-Nida al-Qawmi can be gotten by noting that the aspirations they articulated were eventually embodied in the 1943 National Pact. Kazem and his brother Taki al-Din are usually credited with facilitating the conversion of their first cousin Riyad al-Sulh to the cause of an independent, sovereign Lebanon managed through a Maronite-Sunni partnership.

Although his ideas had a critical impact on the course of Lebanese history, Kazem al-Sulh played only a marginal role in post-independence Lebanese politics. Although he was a gifted writer and political thinker, he never was a particularly effective politician. By the late 1950s, al-Nida al-Qawmi had ceased to function, a victim to the rising tide of Arab nationalism. Kazem al-Sulh's politics had always been based on compromise, tolerance, and conciliation, and this approach had become increasingly inappropriate in the context of an Arab world that, caught in the ferment of the 1950s and 1960s, witnessed the radicalization of the Sunni masses. Kazem al-Sohl served as Lebanese ambassador to Iraq during the 1940s and 1950s, and he was criticized by pan-Arab intellectuals and politicians for the part it was alleged he played in designing the ill-fated Baghdad Pact. Thanks to Christian votes, he was elected a Sunni representative from Zahle to the parliament (1960–1964). Kazem al-Sulh ended his career as a relatively uninfluential politician, largely discredited within his own community.

SULH, RASHID AL-

[1926–]

Lebanese politician; prime minister, 1974–1975 and 1992.

Rashid al-Sulh (also Solh), born into a minor branch of the prestigious Sunni Sulh family, was brought up in the house of former prime minister Sami al-Sulh. After studying at the College of the Christian Brothers and al-Maqasid College, he received his LL.B. from Saint Joseph University in Beirut and became a lawyer and a judge. Elected deputy for Beirut in 1964 and 1972, he inherited the political mantle of Sami al-Sulh following the latter's death in 1968. Considered a moderate among Sunni leaders in the 1970s, Sulh nevertheless devel-

oped a reputation as a champion of the working class and maintained a close relationship with Kamal Jumblatt. While still a relative newcomer among Sunni political bosses, he was chosen as prime minister by President Sulayman Franjiyya in October 1974; he held the premiership until May 1975, when he resigned. He thus presided over the outbreak of the Lebanese Civil War, which he was unable to prevent or stop. Before stepping down, Sulh denounced the inertia of Lebanon's society and the political and administrative corruption and nepotism that, he claimed, had thwarted the implementation of his reforms. He warned that unless the entire political system was overhauled, the country was headed toward political chaos and disintegration.

In May 1992, Sulh became prime minister again, following the demonstrations and riots that brought down the government of Umar Karami. He held the position until October, when he was replaced by Rafiq Hariri. During his short tenure, he was frequently criticized for subservience to Syria. In particular, his insistence on proceeding with parliamentary elections in the summer of 1992 alienated many Lebanese, who opposed the timing of these elections. Beirut's electorate severely punished him for this and other decisions that were seen as bowing to Syria's wishes. The electoral list he headed was soundly defeated by that led by Salim al-Hoss. Although he managed to win a seat in parliament, Sulh received the fewest votes (11,428) of any Sunni elected, and no other Sunni on his list was elected (three Armenian Orthodox candidates and one Armenian Catholic were).

SULH, RIYAD AL-

[1894–1951]

Lebanese politician; prime minister, 1943–1945 and 1946–1951.

Riyad al-Sulh (second from right) was the first prime minister of independent Lebanon. He played an instrumental role in ending French control of the region and in establishing Lebanon's sectarian political system. He is shown here at a meeting of the Arab League in Aley, Lebanon, 1947. © Hulton-Deutsch Collection/Corbis. Reproduced by permission.

Riyad al-Sulh (also al-Solh) was born into a prominent Sunni family that had played a major role in the Arab nationalist movement during the last decades of the Ottoman Empire. Unlike many other aristocratic families in Beirut, whose concerns revolved around parochial issues, the Sulhs were known for their cosmopolitanism, sophistication, and wide-ranging contacts throughout the empire. His father, Rida, had served as governor *(mutasarrif)* in Salonika and in 1909 had been elected one of Beirut's two representatives in the Ottoman parliament at Constantinople.

Sulh studied law at the University of Istanbul and at St. Joseph University in Beirut. After World War I, he and his father were elected to the National Congress of Syria, which proclaimed Amir Faisal king of an independent Syria. Following the military defeat of Faisal by France in July 1920, and the establishment of Greater Lebanon two months later, he became a vocal opponent of France's mandate. Forced to flee Lebanon, he was sentenced to death in absentia and spent most of the 1920s in exile, primarily in Paris and Geneva, where he worked closely with other Arab nationalists. In 1929, Sulh was allowed to return to Lebanon after Emile Eddé intervened on his behalf with the government of Charles Dabbas. From then on, except for another

brief period of exile in 1935, he lived in Beirut. By the early 1930s, he had become one of the most influential Arab nationalist politicians, despite France's efforts to contain his power.

In the late 1930s, Sulh was progressively converted to the concept of an independent Lebanon that would be free of France's control and separate from Syria. This position, which he adopted in part under the influence of his cousins Kazem al-Sulh and Taki al-Din al-Sulh, reflected the growing recognition among large segments of the Sunni community that their interests lay in the preservation of existing boundaries and an alliance with moderate Maronite leaders.

The outbreak of World War II made possible the Christian-Muslim alliance that Sulh had advocated. The war weakened France's influence and prestige in Lebanon and thus undermined those in the Maronite community, led by Eddé, who insisted on a Christian Lebanon closely aligned with France. By the same token, it strengthened the hand of those Maronites, led by Bishara al-Khuri and his Constitutional Bloc, who called for an independent and sovereign Lebanon based on Muslim-Christian accommodation. Taking advantage of this changing balance of power within the Maronite community and of active support for Lebanese independence by Britain and the United States, Khuri and Riyad al-Sulh formed an alliance that led the movement for an end to France's mandate.

After parliament elected him president of Lebanon in September 1943, Khuri immediately chose Sulh as his prime minister. The two quickly concluded the informal agreement known as the National Pact, which embodied the "historical compromise" between Muslims and Christians that they had supported for some time. Because of his role in the National Pact, which became the backbone of postindependence politics in Lebanon, Sulh can be regarded as one of the founding fathers of independent Lebanon. His pragmatism and tolerance made him ideally suited to play a leading role in designing a system based on interconfessional accommodation, while his charisma, dynamism, and political skills ensured that he could deliver the support of his community. His vision of a secular, sovereign Lebanon based on a cross-confessional understanding and open to the outside world continued to inspire generations of Lebanese politicians long after his death, and despite its shortcomings, it permitted Lebanon to experience several decades of political stability, remarkable economic growth, and rapid modernization. It is important to note that Sulh appears to have been aware of the limits of the political formula embodied in the National Pact, which called for the distribution of positions in the government and the bureaucracy among the country's various sects. He saw this confessional system as only a temporary expedient that would have to be eliminated in the long run. He once described political sectarianism as "an obstacle to national progress, impeding the representation of the national will and poisoning the good relations between diverse elements of the Lebanese population."

One of the first decisions of Sulh's government was to abrogate the parts of the 1926 constitution that limited Lebanon's sovereignty to the benefit of France. The mandate authorities responded by arresting Khuri, Sulh, and all but two members of the cabinet. Strikes and widespread demonstrations and riots ensued; together with pressure by Britain and the United States on the government of Free France, they forced the latter to reverse its policy and reinstate Khuri and Sulh on 22 November 1943. This date effectively marks the emergence of independent Lebanon.

Until the beginning of Khuri's second term in 1949, Sulh maintained a close working relationship with the president. Between 1943 and 1951, he headed six cabinets for a total of some sixty-five months. For most of his tenure as prime minister, he was involved in all important decisions and was widely seen as almost an equal of Khuri, for whom he was a precious ally because of the weight his opinions carried with the Sunni masses. Following Khuri's reelection, however, strains developed between the two men, largely as a result of the president's increasing tendency to bypass the cabinet and rely instead on a group of cronies, influence peddlers, and advisers headed by his brother Salim. Sulh resigned on 14 February 1951. He was assassinated on 16 July by a member of the Syrian Social Nationalist Party (SSNP), who killed him at the airport in Amman, Jordan, in revenge for Lebanon's 1949 execution of Antun Saʿada, the SSNP's founder and leader.

SULH, SAMI AL-

[1890–1968]

Lebanese Muslim politician.

Sami al-Sulh (also al-Solh), born to a prominent Sunni Muslim family, studied in Beirut and earned a law degree from Istanbul. He went to France to obtain a doctorate in law but returned to Lebanon before completing his studies. He claimed that while in Istanbul he had joined Arab secret societies working against the government of the Ottoman Empire, but no documentation supports his claims. He is accused of having supported the Ottoman government when other educated Arabs were struggling for Arab independence. He was a judge from 1920 to 1942, and, with French support, he was appointed prime minister in 1942. He represented Beirut in the Chamber of Deputies from 1943 to 1960 and from 1964 to 1968 and was prime minister seven times between 1945 and 1958.

The most controversial aspect of al-Sulh's political career was his support for Camille Chamoun. During the 1958 civil war he refused to criticize Chamoun, opposing the tide of Muslim public opinion. Al-Sulh was seen as a weak prime minister who did not stand up to President Chamoun. Chamoun used al-Sulh as a token Muslim because al-Sulh did not object to Chamoun's pro-Western foreign policy. His close association with Chamoun earned him the wrath of the Muslim masses, and his house in Beirut was burned down. He fled Lebanon for several months, then settled in the predominantly Christian area of Beirut. Al-Sulh surprised all those who had prematurely written his political obituary by returning to public life in 1964 after winning a parliamentary seat from Beirut. Christian support in his district of course helped make his victory possible, but within a few years he was able to win the backing of some Muslims who had declared him a traitor in 1958. He spent the rest of his life defending his position in 1958, writing two memoirs to vindicate himself. He claimed that he never opposed President Gamal Abdel Nasser of Egypt, and that he was a staunch defender of the Palestinian cause. He blamed Nasser's supporters in Lebanon for the anti-Nasser reputation that was associated with his name after 1958.

Being the oldest deputy made al-Sulh president protem of the parliament. Members of the Christian establishment saw al-Sulh as demonstrating how Muslim politicians should conduct themselves. His support for Chamoun was viewed by the Phalange party, which supported him, as evidence of his patriotism. He was nicknamed Abu al-Faqir (Father of the Poor) because he championed the common people.

AS'AD ABUKHALIL

SULH, TAKI AL-DIN AL-

[1909–1988]

Lebanese journalist and politician.

A first cousin of Riyad al-Sulh, Taki al-Din al-Sulh (also al-Solh, Taqi al-Din or Takidedine) was born in Beirut and educated at the American University of Beirut, where he studied literature and history. During the 1930s, he worked as a journalist, literature teacher, and director of the Ministry of Information. With his brother Kazem, he founded the al-Nida al-Qawmi (The National Appeal), a group of moderate Sunni politicians and intellectuals who advocated a free and sovereign Lebanon, independent from the French and separate from Syria. A traditional, nonideological politician, al-Sulh proved either unwilling or unable to build a strong political machine and consequently did not develop a wide base of popular support. He nevertheless—because of his connection to a prestigious family—occupied several important political positions in the 1960s: he was a member of parliament (1964–1968) and a minister of the interior (1964–1965).

Al-Sulh's early career reached its zenith in July 1973 when President Sulayman Franjiyya called upon him to become prime minister. During his fifteen months in office, he was unable to prevent Lebanon's slide toward political disintegration. His tenure was marked by economic crisis and political turmoil, student and labor unrest, a growing rift between Muslims and Christians, repeated clashes between the Lebanese army and Palestinian commandos, and numerous Israeli raids in southern Lebanon. He resigned in September 1974 and was replaced by Saʾib Salam, but served as prime minister again in 1980.

SULTAN

Title implying political power; a king or sovereign, especially of a Muslim state.

The title of sultan came to prominence around 1000 C.E., after the political position of the caliphate (office of the leader of Islam) had eroded around the time of the establishment of the Seljuk sultanate. Turko–Iranian dynasts used the title as an equivalent of the Eurasian steppe title khan. Later, it was used generally in Islamic lands by many states large and small. In some cases, for example, in Persia (now Iran), from 1500 on, the term was further devalued to denote a governor, not even a petty ruler.

In the Ottoman Empire, sultan, along with *padishah* and khan, was one of the titles of the sovereign (for example, Sultan Süleyman Khan), as well as the other members of the ruling family. The ruler's sons and grandsons, who served as governors and thus shared political power in the steppe manner, were all styled sultan. In the case of the female members of the ruling house, the title followed the personal name of the main designation—for example, Hürrem Sultan, *valide sultan* (dowager queen), *khasseki sultan* (favorite consort), or Mihrimah Sultan, who was a princess. The sultanate of the Ottoman Empire was abolished in 1922, just before the Republic of Turkey was founded.

SULTAN AHMET MOSQUE

Ottoman mosque.

Popularly known as the Blue mosque because of the predominantly turquoise-colored faience tile panels that embellish its vast prayer hall, the mosque of Sultan Ahmet I (1590–1617) stands next to Istanbul's Hippodrome. Supporting a domed, cruciform superstructure and six slender minarets, it is the major work of the architect Sedefkar Mehmet Ağa.

SULTAN HASAN MOSQUE

One of the finest examples of Arab Egyptian architecture; situated below the citadel in Cairo.

Sultan Hasan mosque was built for the Mamluk Sultan Hasan al-Nasir in 1356–1363. The ground plan of the mosque takes the form of an irregular pentagon and occupies 9,450 square yards (7,800 sq m). It boasts a 267-foot (88 m) minaret in its south corner, the tallest in Cairo, and a massive main door at the north corner that is almost 85 feet (26 m) high. The exterior walls echo an ancient Egyptian temple, with large expanses of stone that are relieved by blind niches and double round arched windows. Stalactitic cornices, heavily restored, crown the facades. The mausoleum, which extends from the southeast wall, carries a 180-foot-high (55 m) dome of the Arab Turkish style that was almost completely rebuilt in the eighteenth century.

SULTANI SCHOOLS

Ottoman intermediate schools.

Sultani lycées were higher secondary schools funded by the sultan's personal treasury. The first and most famous of these was Lycée Galatasaray (also called Mekteb-i Sultani), founded in 1868 in Istanbul and modeled on the French lycée. An 1869 educational reform law provided for one sultani lycée in each provincial capital. In an expansion of the humanist education offered at these schools, in 1908 ten former İdadi schools, whose curriculum had partly overlapped that of the lycées, were renamed sultani schools. By 1914 there were 8,380 students, mostly from elite backgrounds, enrolled in twenty-four sultani schools across the Ottoman Empire.

SUMUD

Principle adopted by the Palestinian national movement of clinging to the soil of the homeland.

The Sumud (Steadfastness) Fund was established at the Baghdad Arab Summit in 1978 to discourage Palestinian emigration from the territories occupied by Israel in 1967. The annual budget of $150 million was to be administered by the Joint Committee, composed of members from the Palestine Liberation Organization (PLO) and the government of Jordan. Funds were distributed to Palestinian leaders, trade unions, universities, newspapers, and cooperatives. Sumud paid unemployment benefits and pensions for retirees and granted interest-free housing loans. In the early 1980s, about $87 million per year was transferred to the occupied territories. Funds dried up in the mid-1980s as oil-rich Arab countries defaulted on their contributions.

In the late 1980s, the principle of *sumud* was revived in an altered form by Palestinian residents of the Gaza Strip, Golan Heights, and West Bank who resented their passive role as welfare recipients. Under the leadership of Dr. Hisham Awartani, an economist at al-Najah University in Nablus, *sumud* was transformed into a call for Palestinian residents to think and act for themselves.

SUNAY, CEVDET

[1899–1982]

Turkish military officer and politician; president of Turkey, 1966–1973.

Cevdet Sunay was born in Trabzon, the son of a village effendi in the Ottoman Empire. He attended the Küleli military high school and fought in Palestine in World War I. In the Turkish War of Independence (1921–1922), Sunay fought on the Maraş, Gaziantep, and Western fronts, finally chasing enemy armies to İzmir. He became a staff officer for the new Republic of Turkey in 1930, after completing studies at the War Academy; he was promoted to general in 1958. In 1961, he was appointed chief of staff, following the military coup, although he apparently did not play a direct role in the plot against Adnan Menderes.

Sunay resigned his office to become president of Turkey in 1966 in an alliance between the Justice party and military interests. He served as president through the 1971 coup, in which some observers said he played a key role. Sunay's presidency ended in 1973, when his bid for an extended term fell one vote short in the assembly. His term in office is associated with the continued penetration of the military into Turkish politics.

SUN LANGUAGE THEORY

A 1930s movement that claimed Turkish was the mother of all languages.

H. F. Kvergic is credited with inventing this theory in 1935, although numerous others contributed to its general formulation. The theory draws its name from Kvergic's initial proposition that a Turkish man was first inspired to create language while looking at the sun. Others, such as Ibrahim Necmi Dilmen, presented charts of concept groups drawn from the sun—for example, light/beauty, fire/excitement, and motion/time. Supporters of the theory held that since Turks inhabited the so-called cradle of civilization, central Asia, their language was the origin for later languages, such as those of the Hittites, Arabs, and Europeans.

Although criticized for fantastic speculations, the theory attracted interest in the mid-1930s for several reasons. Some supporters, including Atatürk, used it to stem the drastic expurgation from the modern Turkish language of foreign words by language reformers. Supporters argued that since foreign words were derived from Turkish, they should remain in use. Others found in the theory justification for radical nationalist Turkist ideologies in their vaunting of the Turks' ancient heritage. They also used its link to the Hittites to establish a long history for the Turks in Anatolia. By World War II, interest in the theory faded, although Atatürk's support of it is occasionally evoked today by opponents of the direction of Turkish-language reform.

ELIZABETH THOMPSON

SUNNA

Literally, trodden path, *meaning* norm *or* practice.

The *Sunna* refers to the divine physical and moral laws set out in the universe and in the Qurʾan. However, the term is used most commonly in reference to the example and customary practice of the prophet Muhammad. The Prophet's *Sunna* has more than one usage in Muslim tradition. As a technical term used in the *shariʿa* (Islamic law), it refers to the binding rules derived from the Prophet's sayings, or *hadith.* The *Sunna* then represents the laws that can be extracted from the *hadith.* As such, it is the second most important source of law after the Qurʾan. In a more general meaning, often used by jurists and theologians, the *Sunna* refers also to all the customs and habits of the Prophet, including his everyday life practices, that are not considered by the *shariʿa* as obligatory. Hence the term *Sunna* is often used in the sense of *recommended* or *good practice.* Examples of this are the supererogatory prayers and fasting the Prophet performed over and above the prescribed rituals. These are referred to as *Sunna* prayers or *Sunna* fasting. Certain very strict Muslim movements make the nonbinding *Sunna* obligatory, and extreme Muslim parties have, at times, after seizing power, imposed it on all Muslims and made practices such as wearing beards mandatory, although the enforcement of any practice that is not legally binding is considered illegitimate in Islamic law.

SCOTT ALEXANDER
UPDATED BY MAYSAM J. AL FARUQI

SUNNI ISLAM

The largest branch in Islam, sometimes referred to as "orthodox Islam"; its full name is ahl al-Sunna wa al-jamaʿa *(the people of* Sunna *and consensus), and it represents about 90 percent of the world Muslim population.*

The Sunni movement can be identified in terms of its differences with the second largest division of Islam, the Shiʿite, with whom it shares the fundamental creed of Islam. After the death of the Prophet, the political issue of how leadership was to be chosen split the new community. The Shiʿa of

Ali (literally, the party of Ali) insisted that the Prophet had intended for his cousin Ali to succeed him, while the majority of Muslims maintained that the caliph should be elected and did not have to belong to the Prophet's family. The Sunnis maintained that since the Prophet had not clearly designated a successor, his *Sunna* (example, custom), by which they were to abide (hence their name), mandated elections. Of course, the Shiʿa also consider the *Sunna* of the Prophet as binding and second only to the Qurʾan in authority, but they differ on the actual content of the *Sunna* in regard to the matter of the divinely appointed leaders from the Prophet's family (imams), who in their view are the legitimate rulers. In addition to the concept of divinely appointed leadership, the Sunnis also reject the notion of a *mahdi* (messiah) as an integral part of the creed, and they emphasize exoteric interpretation of the Qurʾan over the esoteric approach followed by the Shiʿa.

The Sunni Schools of Law

In addition to the Qurʾan and the *Sunna* as primary sources of Islamic law, Sunni jurists also admit *ijma* (consensus) and *qiyas* (personal parallel reasoning) as legitimate sources for legal judgment. *Qiyas,* the fourth source of law, is a form of *ijtihad* (exercising personal judgment in legal interpretation). All schools of law generally admit *ijtihad,* but with different definitions and restrictions. At first, *raʾy* (personal opinion issued without justification) was exercised, but its unrestricted use was deemed too arbitrary and it was eliminated in favor of *qiyas,* a form of reasoning that identifies an *illah (ratio legis)* parallel or similar to another already established by the Qurʾan or the *Sunna.*

Ijma, or consensus, constitutes the third source of law and it takes precedence over *qiyas.* There was disagreement among the Sunni schools of law as to the nature of consensus. While all jurists accept the consensus of the companions of the Prophet, the more liberal schools will also admit of the consensus of the schools of law at any given time. The more conservative schools will only accept a global community consensus, which cannot be easily achieved, so in effect the Sunni schools of law did build the legal system on the basis of juristic consensus. However, the right to dissent *(ikhtilaf)* was scrupulously maintained by all schools. In contrast, the Shiʿa eschew *ijma* in favor of the *ijtihad* of the imam or his representative. That the Sunnis consider the law to be a matter of consensus (whether juristic or communal) is underscored in their name, *ahl al-Sunna wa al-jamaʿa.*

Over time, the various Sunni schools of law coalesced into four major schools: the Hanafi (founded by Abu Hanifa, d. 767), the Maliki (founded by Malik ibn Anas, d. 795), the Shafiʿi (founded by Shafiʿi, d. 820) and the Hanbali school (founded by ibn Hanbal, d. 855). The most widespread is the Hanafi, which was favored by various Muslim governments, most notably by the Ottomans, since it was not as strict as the other schools in its acceptance and use of less rigorous tools of legal interpretation. The Hanafis can be found throughout the Muslim world, while the Malikis are mostly found in Egypt and North Africa, the Shafiʿis in Southeast Asia, and the Hanbalis in the Arabian Peninsula.

Historical and Modern Developments

Tensions between Sunnis and Shiʿa (especially with the sectarian movements derived from the Shiʿa, such as the Ismaʿilis) were very high in early Muslim history as Shiʿite groups tried to destabilize the Sunni caliphate and ensure leadership to the followers of the imams. The problems subsided after the decisive victory of the Ayyubids over the Shiʿite regimes of Egypt and the Near East in the late twelfth century and the subsequent coming to power of the Ottoman Turks, who had always been staunch Sunnis. Tension still exists between local Sunni and Shiʿite groups, although most of it is due more to ethnic and tribal strife than to religious divisions, as can be seen in Lebanon and Pakistan. However, the rise among the Sunnis of strict reform movements (such as the Wahhabi movement), which came to oppose any deviation from their interpretation of the Islamic creed, has exacerbated existing tensions with the Shiʿa in the Persian Gulf area and wherever Wahhabism has spread.

The theological and juristic views on which the four major Sunni schools agree are considered to form the core of orthodox Islam. Although some of these views have coalesced into dogma, others have been subject to changes of interpretation through the years. Specifically, the eventual reliance by

Sunni jurists on *taqlid* (imitation or continuation of established past consensus) led to a reification of thought and law that gave rise to reform movements in the eighteenth century. Taking a stand against past consensus and building on the thought of the Hanbali ibn Taymiyya, the reform movements (the Wahhabis of Arabia, the Sanusis of North Africa, and the followers of Sirhindi in India), rejected *ijma* and emphasized *ijtihad,* considering themselves *ghayr muqallidin* (against imitation) and underscoring the need for new thought in Islamic law. Today, however, and after most Muslim countries have adopted the secular constitutions imposed on them by colonial powers in the nineteenth and early twentieth centuries, the major concern of the various contemporary Sunni Muslim movements is how to restore Islamic law and make it compatible with the demands of modern life.

UPDATED BY MAYSAM J. AL FARUQI

SUPHI EZGI

[1869–1962]

Turkish composer and musicologist.

Suphi Ezgi was born in Istanbul and attended the Military Medical Academy. At the same time, he was studying music with Turkish masters like Dede Zekai. Between 1913 and 1920, Suphi Ezgi, along with Sadeddin Arel and Rauf Yekta Bey, created modern Turkish musicology. Suphi Ezgi was also an accomplished singer and tanbur player and composed more than seven hundred pieces. The most important of this fourteen books on musicology is the five-volume *Nazari ve ameli Türk musikisi* (Turkish music in theory and practice).

DAVID WALDNER

SUPREME MUSLIM COUNCIL

Muslim institution in Palestine, 1921–1948.

During Ottoman rule in Palestine (1516–1917), Muslim *waqf* (plural, *awqaf*) and *shariʿa* courts were headed by the Shaykh al-Islam, and in the nineteenth century they were administered by the Ministry of Awqaf in Constantinople (now Istanbul). The British occupation of Palestine, which started in 1917, severed all ties with Constantinople, and these Muslim institutions were placed under British officials. Palestinian Muslims were alarmed at the prospect of their religious affairs being controlled by a Christian power headed by Zionists: Sir Herbert Samuel, the first high commissioner, and Norman Bentwich, legal secretary in charge of the *awqaf* and *shariʿa* courts. The Muslims complained of religious discrimination and demanded control over their affairs. Anxious lest the 1921 anti-Zionist disturbances recur and wanting to provide the Palestinians with autonomous institutions that the Zionists were granted, Samuel proposed that the Muslim secondary electors to the last Ottoman parliament choose a higher body that would control the affairs of the Muslim community.

Samuel issued an order in December 1921 establishing a Supreme Muslim Council (SMC) constituted for "the control and management of Moslem awqaf and Shariʿa affairs in Palestine." It was to consist of a president and four members, two of whom were to represent the district of Jerusalem and the remaining two to represent the districts of Nablus and Acre. All were to be paid from government and *awqaf* funds. In the first election, held on 9 January 1922, the mufti of Jerusalem, Hajj Amin al-Husayni, was elected president; his budget was 50,000 British pounds.

Husayni initiated an Islamic cultural revival in Palestine in the 1920s. Through the SMC, he established an orphanage, supported schools, expanded welfare and health clinics, and renovated religious buildings. The most ambitious and impressive project was the renovation of the two dilapidated mosques within the Haram al-Sharif, the third holiest shrine of Islam. The restored structures enhanced the importance of Jerusalem in the Muslim and Arab worlds and asserted Jerusalem's centrality within Palestine. By the end of the decade, the mufti had consolidated his religious power and had increased his po-

litical influence throughout Palestine. He used his enhanced political position to advocate Palestinian self-determination. After he led the Palestine Arab Revolt (1936–1939), however, the British dismissed him and dissolved the SMC in 1937.

SURSOCK, LADY COCHRANE

Lebanese cultural official.

Yvonne, Lady Cochrane Sursock is the daughter of Alfred Bey Sursock, a Levantine aristocrat who came to Lebanon from Turkey at the beginning of the twentieth century, and Donna Maria Theresa Serra diCassano, daughter of Francesco Serra, seventh Duke of Cassano. She is the wife of Sir Desmond Cochrane, whom she married in 1946. She has played an active public role in Lebanon since her young adulthood, particularly in the arts. She was president of the committee and general manager of the Nicolas Sursock Museum in Beirut (1960–1966) and founder and president of the Association for the Protection of the Natural Sites and Ancient Buildings (APSAD; Association pour la protection des sites et anciennes demeures) in Lebanon (1960–2002). She is currently involved in projects to stem the exodus of Lebanese by rerooting them in their villages of origin and creating jobs in the fields of agriculture, textiles, and handcrafts. Lady Cochrane has been a pioneer in the protection of the environment and in developing Lebanese citizens' awareness of the unique architectural and cultural heritage of Lebanon.

SURSUQ FAMILY

Prominent Lebanese landowning business family.

One of the wealthiest Greek Orthodox families in Beirut, the Sursuqs (also Sursock or Sursok) benefited from the 1858 Ottoman land reform to acquire large tracts of fertile land in northern Palestine. They were also bankers who controlled cotton and grain trade in Acre. The family was associated with controversial land sales to Zionists before and after World War I.

Various family members were active in Beirut politics before World War I, with Albert Sursuq a leading member of the Beirut Reform Society and Michel Sursuq a member of the Ottoman parliament. After the war, the family became a target of anti-Zionist criticism when their land sales to Jews in the Jezreel valley and at Lake Hula displaced hundreds of peasants. The family remained prominent among Beirut's Europeanized elite after World War II. In the 1960s, the family villa was turned into the Nicolas Sursuq Museum.

SUWAYDI FAMILY

Iraqi family prominent in religious affairs and politics.

The Suwaydi family of al-Karth district of Baghdad traces its origins to Abbas, the uncle of the Prophet Muhammad, whose descendants founded the Abbasid dynasty that ruled Baghdad from 750 to 1258. A well-known member was Shaykh Abdullah al-Suwaydi, a Sunni jurist who took part in the famous theological conference at al-Najaf in 1773 that sought to bring about reconciliation between the Sunni and Shiʿa sects.

The Suwaydi family also has played a leading role in the affairs of modern Iraq. For example,

Yusuf Suwaydi (1854–1925), a *shar'ia* (religious) judge, played a leading role in the Arab movement against the Ottoman Empire. He was imprisoned in 1913 and 1914 for his political activities and later released. He also was involved in the revolt against the British in 1920.

Two of Yusuf's children, Naji and Tawfiq, completed their legal training in Istanbul in the early part of the twentieth century and helped to draft Iraq's constitution. Both of them were elected deputy and senator, and both served as prime minister. Naji advocated pan-Arabism and resented British interference in Iraq. He participated in the 1941 uprising against the British. When the uprising failed, he was exiled to Rhodesia, where he died in 1945. Tawfiq was a pro-British activist. After the revolution of 1958, he was sentenced to life imprisonment but was released in 1962. Tawfiq moved to Lebanon where he died in 1968.

AYAD AL-QAZZAZ

SUWAYDI, TAWFIQ AL-

[c. 1889–1968]

Iraqi politician.

Tawfiq al-Suwaydi, a pro-British moderate, was born in Baghdad to an influential Sunni family. His origins trace back to Abbas, the uncle of the Prophet Muhammed, whose descendants established the Abbasid dynasty that ruled Baghdad from 750 to 1258. Suwaydi attended school in Baghdad and studied law in Istanbul and France. He was elected to parliament and served in various government capacities: minister of education (1928), ambassador to Iran (1931), minister of justice (1935), and minister of foreign affairs (1934, 1937, 1941). Suwaydi was prime minister three times (1929, 1946, 1950). During his second term he legalized previously banned political parties. In his last term, he initiated negotiations for a new oil agreement, established the Board of Development to improve economic conditions, and enacted a law permitting Iraqi Jews to leave the country, provided they gave up their citizenship and property. In the aftermath of the 1958 revolution, Suwaydi was sentenced to life imprisonment. In 1962 he was permitted to leave Iraq for Lebanon, where he died.

SUWAYDIYA OIL FIELDS

Largest oil field in Syria, with a yearly output of 1 million tons (907,000 t).

The first Suwaydiya oil well was discovered toward the end of 1960 by the German company Concordia at a depth of 5,617 feet (1,712 m). This well is located southeast of Qarah Shuk in al-Jazira plateau in northeastern Syria. It was the second oil field to be discovered in Syria after the Qarah Shuk field, which was discovered in 1958 and contained nine wells. Between 1960 and 1962, the Concordia Company's field showed minimal progress. Three more wells were drilled in the Suwaydiya field, capable of production from the upper Cretaceous rock layer, with average depths of 5,000 feet (1,525 m). But the heaviness of the crude oil produced was discouraging, unless it was blended with lighter crudes from Iraq, in which case the Homs refinery could handle it. At that time, the Suwaydiya reserves were assessed at about 35 million tons (31.7 million t). The Suwaydiya fields were then thought capable of producing 12,000 barrels per day. In 1964, Concordia, which had begun a deep test-well a year earlier, had its license suspended when the Syrian government nationalized the oil industry. The Syrian Petroleum Authority, which was attached to the Ministry of Industry, undertook drilling with assistance from Soviet geophysicists and drillers.

In 1965, the Suwaydiya oil fields were considered commercial. Toward the end of 1974, a ministry for oil and mineral resources was established

in Syria. It became responsible for concerting efforts with foreign oil companies for oil drilling, which has intensified since then. Compared with the Qarah Shuk, the Rumayla, and the Tayyim oil fields, the Suwaydiya fields are the largest, with an established reserve of 410 million tons (372 million t) and a yearly output of 1 million tons (907,000 t).

ABDUL-KARIM RAFEQ

SUWAYHLI, RAMADAN AL-

[?–1920]

Tripolitanian nationalist.

Ramadan al-Suwayhli was a member of a prominent Arab family from the eastern Tripolitanian coastal town of Misurata. They opposed the interests of the other leading family, the Muntasirs.

Suwayhli had been tried and acquitted of murdering Abd al-Qasim Muntasir shortly after the Young Turk Revolution of 1908, when Tripolitania was part of the Ottoman Empire. Suwayhli had played a vital role in supporting the Ottomans against Italian and Sanusi incursions. After the Treaty of Ouchy (1912), which ended the war between Italy and the Ottoman Empire, Suwayhli sought an independent Tripolitania. He had been instrumental in founding the short-lived Tripolitanian republic in 1917, which had not been recognized by Italy but was tolerated (even after the laws of 1919, the *Legge Fondamentale,* when alternative administrative structures were established). Its members, including Ramadan al-Suwayhli, were paid large stipends by the Italian authorities until the structure of the republic collapsed. Italy then connived in Suwayhli's death, at the hands of the Muntasir family (who still held him responsible for Abd al-Qasim's murder) and Abd al-Nabi Bilhayr, leader of the Warfalla (who had fallen out with him concerning the republic).

GEORGE JOFFE

SYKES, MARK

[1879–1919]

British soldier, orientalist, politician, and emissary.

An artistocrat, Mark Sykes first visited the Ottoman Empire as a boy and returned there as a Cambridge undergraduate. As an honorary consul in Constantinople who was sympathetic to the old Ottoman regime, he rode on horseback through many regions that the British would occupy after defeating the Turks in World War I. Sykes served as an officer in the Boer War. In two books and several articles, he revealed his preference for the religious, rural, and traditional elements of the East over the materialism and cosmopolitanism he so disliked in its cities. Sir Mark became a conservative member of Parliament in 1911.

After serving briefly on the Western front in World War I, Sykes was attached to the general staff of Lord Kitchener. Kitchener sent Sykes to the Middle East and India, where he found poor communication and little coordination among British officers and officials. To deal with these problems, he founded the Arab Bureau in Cairo after he returned to London and then made comprehensive plans for the postwar Middle East. Sykes advocated a large, loose Arab confederation under Husayn, the Sharif of Mecca, except for an international area around Jerusalem, holy to Christians, Muslims, and Jews. Sykes and his French counterpart, François Georges-Picot, negotiated a secret wartime agreement that was signed by tsarist Russia, but later repudiated by the Bolsheviks. Sykes was deeply impressed by Zionism in Russia, where he believed Jews would fight for Zion if not the tsar.

In the last two years of the war, when Sykes was attached to the War Cabinet Secretariat, he drafted various statements for the British entry into Jerusalem,

Baghdad, and Damascus that were in line with the anti-imperialism and self-determination favored by the United States, which had not declared war against the Turks. His third wartime mission to the Middle East failed to get any consensus among Arabs, Armenians, and Jews. Sykes then attended the peace conference at Paris, where he contracted influenza and died.

SYKES–PICOT AGREEMENT (1916)

World War I document of 1916 that would have divided the Middle East into British and French spheres.

The Sykes–Picot Agreement was one of the pivotal diplomatic documents of World War I concerning the Middle East. It was negotiated in secret at the end of 1915 by Sir Mark Sykes of Great Britain and Georges François Picot of France, with full knowledge by their respective foreign ministries. It provided for a partition of the Middle East into French and British spheres.

The French were to have direct control of Syria, Lebanon, and Cilicia plus a zone of influence extending east from Damascus and Aleppo through Mosul. The British were granted direct control of the Mesopotamian provinces (now Iraq) of Baghdad and Basra as well as a zone of influence extending from Basra to Palestine. Palestine was itself to be placed under international administration.

Under the subsequent Anglo–Russian–French Agreement of 1916, the Russians adhered to Sykes–Picot after extensive discussions between Sykes and the Russian foreign minister, Sergei Sazanov. In return for their support, the Russians were granted direct control over much of eastern Anatolia. In a successful attempt at embarrassing the coalition, the terms of the Anglo–Russian–French Agreement were made public by the Bolsheviks in the spring of 1918. The Arabs claimed that Sykes–Picot contradicted promises made to them by the Hussein–McMahon Correspondence, and the Jews claimed that it contravened the Balfour Declaration. U.S. President Woodrow Wilson wished to annul Sykes–Picot, and even Sykes soon repudiated the agreement. Nonetheless, though the French renounced their claim to Mosul and Britain won control of Palestine, the Middle East treaties framed at the Paris Peace Settlements after World War I closely mirrored the Sykes–Picot Agreement.

ZACHARY KARABELL

The world-renowned Great Mosque was constructed in the eighth century, when Damascus was the seat of the Umayyad dynasty. Most Syrians are Sunnis, with far smaller numbers of other Muslims as well as a sizable minority of Christians, primarily Greek Orthodox and Armenian Gregorian. Islamic fundamentalists are active but not in a position of power; the socialist Baʿth Party violently suppressed an uprising of the Muslim Brotherhood in 1982. © CORBIS. REPRODUCED BY PERMISSION.

SYRIA

Formally, the Syrian Arab Republic (al-Jumhuriyya al-Arabiyya al-Suriyya).

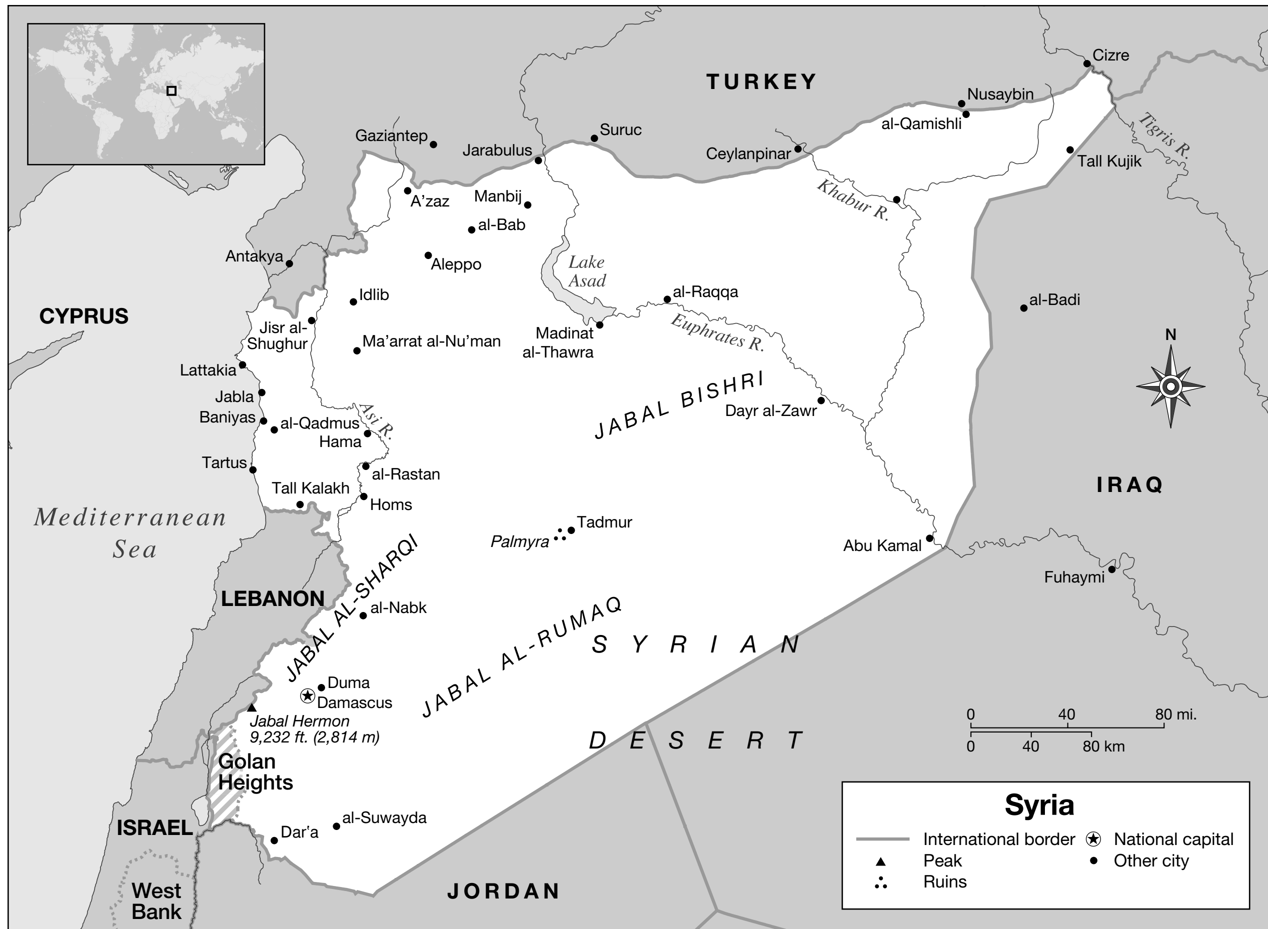
Syria's 71,500 square miles include a narrow plain along the Mediterranean between Turkey to the north and Lebanon to the south, which contains the ports of Latakia and Tartus; fertile highlands between the capital, Damascus, and the border with Jordan, called the Hawran (Hauran); an extensive central plain, in which are situated the cities of Homs, Hama, and Aleppo; the Euphrates River valley, in which are the cities of al-Raqqa (Rakka) and Dayr al-Zawr; an eastern plateau bounded by Turkey to the north and Iraq to the east, whose major centers are al-Hasaka and al-Qamishli; and a large southeastern desert adjacent to Iraq and Jordan, whose oases contain the ruins of ancient fortifications and trading posts.

Syria has three major rivers. The largest, the Euphrates, enters from Turkey and is joined by the Khabur and the Balikh before crossing into Iraq southeast of Al Bu Kamal. The Euphrates system is regulated by the Euphrates Dam at Tabaqa, just west of al-Raqqa, which stores water for use in irrigation and power generation. Running south from mountains in the pre-1920 Syrian province of Iskenderun (now the Turkish province of Hatay), through the fertile Ghab basin and past the cities of Hama and Homs, is the Orontes river (Nahr al-Asi). The Yarmuk river, across which small irrigation dams were constructed during the 1980s, defines the border between Syria and Jordan. At current rates of use, Syria's groundwater reserves are expected to run dry by 2010, leaving the country entirely dependent on river water.

Population

The total population is estimated to be 17.6 million (2002) with Damascus and Aleppo the major population centers. Population growth averaged over 3 percent annually for much of the second half of the twentieth century but then slowed to 2.45 percent (2002). On the other hand, the death rate plunged from 21 deaths per 1,000 during the early 1950s to 5 per 1,000 in 2002. Several thousand Armenians moved to Syria from the Soviet Union in 1945–1946, and founded a sizable community in Aleppo. After the establishment of the state of Israel, virtually all of the Syrian Jewish population emigrated, and about 100,000 Palestinians fleeing Israel's takeover of the Galilee in 1948 ended up in camps on the fringes of Damascus.

Muslims make up 85–90 percent of the population; approximately 75 percent of this number are Sunnis, 13–15 percent are Alawis, about 1 percent are Ismaʿilis, and less than 1 percent are Twelver Shiʿites. Some 3 percent of Syrians are Druze, a sect



MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

that follows a mixture of Christian and Shiʿa doctrines. Isolated pockets of Yazidis exist in the hills outside Aleppo and northeast of al-Qamishli. About 10 percent of the population are Christians, divided among at least a dozen sects. The Greek Orthodox and Armenian Gregorian communities are the largest and most influential.

Administration

Syria's governmental structure is highly centralized and strictly hierarchical, concentrating power primarily in the hands of the president and secondarily with the top leadership of the Baʿth party. This system was developed after March 1963, when military supporters of the Baʿth overthrew the parliamentary order that had reappeared following the dissolution of the union with Egypt in 1961. In November 1970, Gen. Hafiz al-Asad, minister of defense and head of the Baʿth party's military wing, seized power. He served as head of state, commander in chief, and secretary-general of the Regional (Syrian) Command of the Baʿth until his death in June 2000. Shortly after coming to power, the new regime appointed a representative body, the People's Council, to draft a permanent constitution. This document, approved in March 1973, provides for a seven-year presidential term of office; it empowers the president to appoint and remove the vice presidents, the prime minister, and other cabinet ministers. In addition, it grants the president the authority to dissolve the People's Council and call national plebiscites to ratify legislative measures not adopted by the parliament. Upon the death of Hafiz al-Asad, his second son, Bashshar al-Asad, was elected president in July 2000.

Syria consists of thirteen provinces, each administered by a governor. Each governor is advised by a provincial council, one-fourth of whose mem-

bers are appointed and the remainder of whom are elected by popular balloting. Since 1970, these councils have exercised little decision-making autonomy. Municipal councils provide public services, license businesses, and supervise the collection of local taxes. Each municipal council is headed by a mayor. Damascus city constituted a separate governorate until 1987, when it merged with the surrounding province of Damascus to form a single administrative unit.

Economy

Syria's economy expanded dramatically during the 1940s, due to a combination of restrictions on imports and heightened spending by British and French occupation forces. The Korean War perpetuated the boom by creating greater demand for Syrian cotton on world markets. Private enterprise provided the main impetus for economic growth until the union with Egypt in 1958, when state officials introduced an extensive program of land reform, nationalization of industry, and regulation of commercial transactions. The short-lived parliamentary regime that seceded from the union in 1961 attempted to resurrect the private sector, but the Baʿth-affiliated officers who overthrew the civilian regime in March 1963 gradually extended government control over most sectors of the economy. State intervention peaked with the nationalization of industry, banking, and trade that began in January 1965. Under the regime of Salah Jadid (1966–1970), extensive state control accompanied the establishment of a network of production and distribution cooperatives, state farms, and Baʿth-affiliated popular-front organizations.

By the end of the 1960s, Syria's public-sector enterprises were experiencing severe financial difficulties. The government responded by relaxing restrictions on the activities of private business, particularly in construction and trade. Private enterprise quickly moved into agriculture and manufacturing as well, supported both by the return of large amounts of local capital that had fled the country during the late 1950s and by an influx of investment from the oil-producing Arab Gulf states. Government spending jumped from around 29 percent of gross domestic product (GDP) in 1972 to some 37 percent of GDP in 1987. This rise was not matched by an increase in current revenues, resulting in large budget deficits. The shortfalls resulted primarily from sharp increases in military spending; by 1987, support for the armed forces accounted for 39 percent of total state outlays. With an imbalance of this magnitude sustainable only through heavy reliance on the Communist bloc and Arab oil states, the implosion of the Soviet Union during the early 1990s forced the Syrian government to take austerity measures.

The economy grew at a rate of more than 9 percent per year during the 1970s, slowed to around 2.2 percent during the 1980s, rebounded to more than 5 percent during the 1990s, and continued to grow at an annual rate of 2.5 to 3.5 percent during the early years of the twenty-first century. Income per capita was approximately $1,000 (2002). With the growth in population approximating 2.5 percent, the World Bank has estimated that Syria would need real economic growth of more than 5 percent to improve the welfare of its people. Major distortions contribute to the overall weak performance of the Syrian economy, including multiple exchange rate and exchange controls, restrictions on private sector activity, price controls, major agricultural subsidies, an inefficient state-owned financial system, and the dominance of state-owned enterprises.

The Syrian government implemented limited economic reforms after 2000, permitting Syrians to hold foreign currency and licensing the first public banks, an essential step in modernizing the state-dominated economy. However, the far-reaching economic reforms required to modernize the economy were put on hold for fear that widespread economic change could lead to calls for concomitant political reform and democratization. As a result, sweeping economic reform remains the number one priority in the Syrian domestic agenda.

Education

Since 1967, Syria's schools, technical institutes, and universities have been supervised by the Ministry of Education or the Ministry of Higher Education. Successive Baʿth regimes have expanded the education system, and have taken steps to reduce illiteracy by establishing adult and women's education programs. Elementary education is free and compulsory. Secondary education, which consists of three years of preparatory school and three years of high school, is free but not compulsory. The great

majority of children attend public schools; several private schools in Damascus serve foreign nationals and the elite. The Ministry of Education regulates textbooks, curricula, and teacher certification.

Syria has four universities. The largest and most prestigious is Damascus University, founded in 1923, which had some 60,000 students by 2002. The University of Aleppo, chartered in 1958, serves around 30,000 students. Tishrin University in Latakia and al-Baʿth University in Homs offer limited curricula. The University of Aleppo operates a faculty of agriculture in Dayr al-Zawr. Technical institutes are scattered throughout the country. The language of instruction is Arabic, although English and French are required as second languages by many faculties.

History

Syria's modern history began with the end of the Egyptian occupation (1831–1840). After the reassertion of Ottoman control, European manufactured goods flooded the country, ruining the textile industry and leading urban merchants to invest in agricultural land. The trend toward private estate ownership was reinforced by the Ottoman land law of 1858, which allowed landholders to convert nominally state-owned communal lands in the villages into private property. At the end of the nineteenth century, French enterprises won numerous concessions in exchange for loans to the Ottoman authorities. French firms invested in ports, railroads, and highways, opening the cities of the interior to the outside world. As manufacturing continued to contract, to the evident benefit of Syria's well-connected minority communities, anti-Christian and anti-European riots, like the 1860 massacres in Damascus, erupted. These drew European governments into local politics, and growing outside interference generated rising disaffection with Ottoman authority among Syria's Arab elite.

During the 1890s, clubs advocating Syrian independence formed in Aleppo, Damascus, and Beirut. These coalesced into political parties after the 1908 revolution that brought the Committee of Union and Progress (CUP) to power in Constantinople (now Istanbul). Members of an underground CUP branch in Damascus led popular demonstrations in support of the coup, prompting prominent religious notables to form an organization of their own, the Muslim Union. Candidates sympathetic to the latter won the parliamentary elections of 1909. Liberal opponents of the CUP openly denounced the regime in Constantinople, setting the stage for new elections in 1912, which were rigged to ensure that only CUP supporters won seats in parliament.

Following the balloting, influential Syrian liberals emigrated to Cairo, where they formed the Ottoman Party of Administrative Decentralization to seek greater autonomy for the empire's Arabic-speaking provinces. The publication of its program accompanied widespread anti-CUP agitation orchestrated by secret societies including the Constantinople-based Qahtan society, the Paris-based Young Arab Society (al-Fatat), and the Iraq- and Syria-based Society of the Covenant (Jamʿiyyat al-Ahd). The seeds of Arab nationalism germinated among these societies prior to World War I.

Nationalist sentiment blossomed during the war, and when Faisal I ibn Hussein of the Hijaz led an Arab army into Damascus in October 1918, he was welcomed as a liberator and Damascus declared itself an autonomous Arab administration for the whole of greater Syria. Faisal attempted to consolidate popular support by calling elections in mid-1919, but CUP sympathizers won most of the seats representing Damascus. Members of the Young Arab Society dominated the rest of the assembly, and in the fall of 1919 this organization formed the Committee of National Defense to resist Faisal's alleged willingness to capitulate to French demands. Faisal responded by forming the National Party, whose platform called for the establishment of a constitutional monarchy with French assistance. The assembly, led by Hashim al-Atasi of Homs, acclaimed Faisal king of an independent Syria. His acquiescence in the declaration led France to occupy Damascus in 1920, establishing a tutelary regime that governed the country for the next quarter-century.

After independence in 1946, the armed forces became a major means of advancement for Syria's minority communities, particularly poorer Alawis and Druze, who entered the military academy in rapidly growing numbers. There they encountered radical political ideas, including those of the Baʿth and the local communist party. Rising disaffection within the ranks prompted the military high com-

Markets remain a focus of life in Syria. Agriculture, like construction, trade, and manufacturing, has benefited from an influx of private capital since the 1960s. © CORY LANGLEY. REPRODUCED BY PERMISSION.

mand to champion social reform programs and solidarity with nationalists in neighboring Arab states. Popular and parliamentary discontent over Syria's defeat in Palestine persisted through the winter of 1948–1949, and in March 1949 a clique of commanders led by Col. Husni al-Zaʿim overthrew the elected government. Zaʿim abrogated the 1930 constitution, suppressed all political parties, and ruled by decree. That June he was assassinated by rival officers, who restored civilian rule and called for elections to a popular assembly to frame a new constitution. The assembly fragmented along regional lines, and in December a group of junior officers led by Col. Adib Shishakli seized power. Shishakli's regime adopted a revised constitution in 1950 but soon resorted to severe tactics to control the resurgent labor unions and peasant movement, and was ousted in 1954.

The new military-civilian coalition restored the 1950 constitution and held parliamentary elections, in which the Arab Baʿth Socialist party won a substantial number of seats. Leftist forces were unable to form a coalition cabinet, and the liberal People's party took over the government. This development sparked renewed militancy among workers and peasants, convincing the cabinet to implement wide-ranging agricultural and industrial reforms. Startled by the reforms, as well as by demands for greater change from the Baʿth and the communists, conservatives in parliament mobilized support for former President Shukri al-Quwatli, who won the presidency in 1955. By 1957 escalating tensions among pro–United States, pro-Egypt, and Syrian nationalist politicians led to a postponement of local elections while military intelligence officers uncovered an elaborate plot by agents of Iraq to undermine the government. These developments sent Chief of Staff Afif al-Bizri to Cairo to request immediate union with Egypt. In 1958 President Quwatli announced the creation of the United Arab Republic.

Downtown Damascus shows clear signs of Syria's efforts since the 1980s to modernize its economy, with some additional reforms taking effect after 2000. Many sectors of the economy, however, have long been run by the state; the country has been firmly under the centralized, hierarchical control of the Baʿth party, with the backing of the military, since 1963. © AP/Wideworld Photos. Reproduced by permission.

Efforts to unify the two countries eventually provoked widespread unrest in Syria. When the cabinet nationalized and redistributed the assets of private enterprises during the summer of 1961, largely in response to problems in Egypt, merchants and tradespeople in Syria's cities agitated for dissolution of the union. A group of military officers and civilian politicians orchestrated secession that September. Over the next two years, Syria's politics consisted of jockeying among socialists, who favored continued state control over key sectors of the economy; large landholders and rich merchants, who advocated the restoration of private property and parliamentary rule; and moderates, including a wing of the Baʿth party led by Michel Aflaq, who supported maintaining a mixed economy. In 1962, a compromise government supported by the military high command took steps to dismantle the public sector and remove doctrinaire socialists from the armed forces, moves that precipitated both resistance among Baʿth and communist officers and growing Islamist opposition. Spurred by threats to the position of radicals within the military and by burgeoning popular unrest, members of the military committee of the Baʿth carried out a coup in 1963, ushering in a period of Baʿth party–military rule.

Gen. Hafiz al-Asad, who played a major role in the 1963 coup, was promoted to commander of the air force in 1964, serving also as a senior leader in the Baʿthist military command. Mastering the survival techniques necessary in the factional politics plaguing Syria, he seized control of the government in November 1970, dismissing or purging opponents and initiating three decades of rule. Characterized by internal political stability and continuity, the Asad regime ushered in a new chapter in both

domestic and foreign policies. On the domestic front, it stressed the need for reconciliation and national unity, built stable state institutions, and courted disenchanted social classes with measures of economic and political liberalization. At the same time, it tolerated no opposition, attacking the Muslim Brotherhood and viciously suppressing an uprising in Hama in February 1982. In addition to the army, the institutional pillars of the regime were a multilayered intelligence network, formal state structures, and revitalized Baʿth party congresses.

In foreign policy, the Asad regime succeeded in transforming Syria into a regional middle power out of all proportion to its size, population, and economic resources. The regime began by moving quickly to end Syrian isolation in the Arab world, focusing on Egypt, Jordan, and Saudi Arabia. Accepting UN Security Council Resolutions 242 and 338, it agreed to a May 1974 disengagement agreement with Israel in the wake of the 1973 Arab-Israel War, but then worked to kill the 1983 Israel-Lebanon accord. Syrian military power expanded steadily in this period; by 1986, it had a very large military force for a state of its size. Personal animosity, together with geopolitical rivalry and a Baʿth party schism, separated Asad's Syria from Saddam Hussein's Iraq. Syria sided with Iran during the Iran-Iraq War and adhered to the Western-led anti-Iraq coalition during the Gulf War. A new entente with Egypt, and Syria's subsequent involvement in the U.S.–sponsored Middle East peace process that started with the Madrid Conference in October 1991, led the Syrian government for the first time into face-to-face negotiations with Israel. Stalled in 1996, talks with Israel again foundered in 1999. However, the positions of the two protagonists were closer than ever before, and a future agreement seemed possible.

President Hafiz al-Asad died of natural causes on 10 June 2000 and was replaced by his son, Bashshar al-Asad, on 17 July 2000. Dual themes of continuity and change characterized the early policies of the new regime. Bashshar al-Asad cautiously promoted limited socioeconomic change to stimulate the economy and generate popular support, but delayed broader economic reforms out of fear they would cause political destabilization. In foreign affairs, he maintained his father's commitment to a just and lasting Middle East peace in which Syria would regain all occupied lands. However, the Israeli-Palestinian struggle, the U.S. occupation of Iraq, and Syria's uncertain place in the war on terrorism combined to limit Bashshar al-Asad's scope for regional and international initiatives.

SYRIAN DESERT

A huge stretch of mostly barren land covering parts of four countries: Syria, Iraq, Jordan, and Saudi Arabia.

Known in Arabic as *Badiyat al-Sham* after the nomadic bedouin (Badu, hence Badiya) who roam its parts in search of pasture, it is also known as the Greater Badiyat al-Sham (Badiyat al-Sham al-Kubra) because it extends between the desert of al-Nufud on the Arabian peninsula and the Euphrates river. Badiyat al-Sham covers about two-thirds—about 52,000 square miles (130,000 sq. km)—of the overall area of Syria. It is divided into two parts: the first, in the northeast, is called Badiyat al-Jazira, and the second, in the southeast, is called al-Shamiyya or Badiyat al-Sham, that is, the Syrian desert. This desert begins at the Syro-Jordanian border, skirts the frontier of settlement toward the north at a line east of Jabal Druze, al-Ghuta oasis of Damascus and its *marj* (meadow), then up along the Qalamun mountains, then east of al-Jabbul, the finally ends at Meskene on the Euphrates.

The Syrian desert, in turn, is divided into two parts, which differ in their surface structure. The first, a plateau in the southwest, is more elevated than the other part and also much drier. The part to the northeast starts at lower elevation in the south—2,208 feet (673 m)—and ends at 623 feet (190 m) in the north. This part is dry and has dry river channels (wadis) exposed to flooding. These wadis range in length from 93 to 186 miles (150–300 km) and in width from 0.3 to 0.6 miles (0.5 to 1 km). Annual precipitation in the Syrian desert does not exceed 5.85 inches (150 mm).

The few plants and animals of the Syrian desert are of the type that can withstand a subtropical climate. The nomads raise sheep and camels, and they move according to the seasons, from one region to the other across political frontiers seeking pasture. Phosphates, oil, and butane gas have been discovered in this desert, and modern network of roads and railways makes the exploitation of the desert much easier than before.

ABDUL-KARIM RAFEQ

SYRIAN SOCIAL NATIONALIST PARTY

Political party established in Lebanon in 1932 with the aim of uniting the Syrian nation.

Syrian Social Nationalist Party militia watch over the streets of Beirut. After decades of division and weakness, the radical party reached a more pragmatic accommodation with the Syrian government of Hafiz al-Asad in the 1980s. © SAMER MOHDAD/CORBIS. REPRODUCED BY PERMISSION.

The Syrian Social Nationalist Party (SSNP) was founded in Beirut by Antun Khalil Saʿada, a Greek Orthodox intellectual, in November 1932. He served as the party's leader until his death in 1949, and the organization reflects his personality and ideas. The SSNP had a strong political influence on the twentieth-century history of the two states, Lebanon and Syria, where it was the most active. It was the first political party in the region to embrace radical, secular ideas which later had an impact on virtually every radical group organized in the two countries, especially the Baʿth Party. The SSNP offered minorities, particularly Greek Orthodox Christians, a vehicle for political action. Its ideology also influenced the development of Pan-Arabism, defining inter-Arab relations in the Levant.

The party's ideology, as defined by Saʿada, was grounded in three related tenets: radical social reform along secular lines, fascist-style rituals and organization, and a Pan-Syrian doctrine. Best known for its Pan-Syrian approach, emphasizing Syrian history and culture but opposing Arab unity, the SSNP called for the creation of a "Greater Syria," encompassing Cyprus, Jordan, Lebanon, and Palestine, in addition to Syria. In one of his publications, Saʿada wrote: "[The] Syrian homeland is that geographic environment in which the Syrian nation evolved. It has natural boundaries which separate it from other countries, extending from the Taurus range in the north-west and the Zagros in the

northeast to the Suez Canal and the Red Sea in the south and including the Sinai peninsula and the Gulf of Aqaba, and from the Syrian Sea (Mediterranean) in the west, including the island of Cyprus, to the arch of the Arabian desert and Persian Gulf in the east. (This region is also called the Syrian Fertile Crescent, the island of Cyprus being its star.)" While this Pan-Syrian emphasis was the most prominent aspect of SSNP ideology, its appeal and influence also stemmed from its fascist qualities and emphasis on radical social reform.

Saʿada argued that Lebanon did not constitute a separate entity but was instead part of the Syrian nation. This philosophy led to clashes with Lebanese authorities. In 1949 Saʿada declared an armed revolt against the government and called on his supporters to carry weapons and attack police stations. With the help of Syrian leader Husni al-Zaʿim, Lebanese authorities retaliated and arrested Saʿada. He was executed in July 1949. Saʿada's death led to the overthrow of Zaʿim in Syria and to increased popularity for the SSNP in the 1950s. The killing of a major Baʿth party official and the adversarial relationship between SSNP members and Arab nationalists later caused the party to lose its support in Syria.

In the Lebanese upheaval of 1958, the SSNP allied itself with President Camille Chamoun against pro-Arab nationalist forces in Lebanon. Under attack in Syria, the leaders of the SSNP rightly feared that a victory of the government's opponents would close Lebanon to them. At the end of 1961, the SSNP was involved in an unsuccessful coup against the Lebanese government. As a result, the party was banned in Lebanon as well as in Syria. Many of the party leaders were arrested, and the other party members dispersed or left the organization.

During the Lebanese civil war (1975–1976), the SSNP regained some strength but remained a divided party. One faction retained Saʿada's original ideology. Another group, led by Inʿam Raad, believed it possible to combine Marxist doctrine with the ideology of the SSNP. This group also considered violence a legitimate means of achieving political aims. Raad and his group split from the original SSNP and joined the Lebanese National Movement. In September 1977 a third splinter of the SSNP was formed for the purpose of unifying the party.

The party, whose radical secular ideology is centered around the concept of a "Greater Syria," comprising not only Syria and Lebanon but also Cyprus, Jordan, Iraq, Kuwait, and Palestine. **© Samer Mohdad/Corbis. Reproduced by permission.**

Syrian president Hafiz al-Asad's government later co-opted Pan-Syrianism into what has been characterized as Syro-centric Arabism, and the Baʿth Party and SSNP cooperated as never before. Several factors helped to explain the reconciliation that took place. Asad grew up in a time and place in which SSNP ideology enjoyed great strength; the family of his wife had close ties to the party; and Asad saw practical, political advantage in accommodating the SSNP. Following decades of competition, they thus reached a mutually beneficial accommodation in which the SSNP became a client of the Syrian state. Even though it remained discredited in its pure, ideological form, a reborn, pragmatic Pan-Syrianism became more significant during the 1980s and after than at any time since the 1920s. For example, in the 1990 and 1994 elections, an SSNP member was elected to the Syrian parliament, albeit standing formally as an independent.

The Syrian Social Nationalist Party has had a profound impact on politics in Lebanon and Syria, introducing a variety of new ideas to the region, including the ideological party, fascist leadership, complete political secularism, and the destruction of existing borders between states. Its repeated challenges to the Lebanese state also served to undermine the power and prestige of the Beirut government. Finally, it led the way in the use of violence to destroy the existing political order, with virtually

every radical group in the region adopting aspects of its program.

SYRKIN, NACHMAN

[1867–1924]

Early Socialist Zionist.

Nachman (also spelled Nahman) Syrkin wrote a brochure in German, "The Jewish Problem and the Socialist Jewish State," under the pseudonym Ben Elieser, in Switzerland in 1898. The pamphlet was his considered opinion on solving the Jewish problem with Socialist Zionism. Born a Russian Jew who subsequently went to the West for an education, Syrkin drew on his experience of both Russian socialism and the misery and suffering of Russian Jewish life. He was one of the first to do so.

He attended the first Zionist Congress in 1897 and remained in the World Zionist Organization until 1905, when at the seventh Zionist Congress it was clear that the British offer of Uganda as a place for a Jewish state was impossible. He moved to the United States in 1907 to continue as an official of the Labor Zionist movement and worked as a territorialist (a member of Israel Zangwill's Jewish Territorial Organization [ITO], willing for the Jewish people to settle any unpopulated area). He also wrote and edited journals in Yiddish and Hebrew in support of his views.

Syrkin's socialism was utopian and ethical, not Marxist. At the base was his view that the common people would realize a Jewish state, not the successful or wealthy; and the state was necessary, since even a new socialist order would not integrate the Jewish minority. He reasoned that modern antisemitism was different from historical forms that had been unleashed in earlier eras, since it stemmed from dislocations of modernization.

DONNA ROBINSON DIVINE

SZOLD, HENRIETTA

[1860–1945]

Founder of Hadassah, the largest Jewish women's organization.

Henrietta Szold was the daughter of a modernist rabbi from Baltimore. After visiting Palestine in 1909, she resolved to bring modern medical care and hygiene to the area and to establish a health-care system to meet the needs of the Jewish community there. Szold was the first director of the Youth Aliyah.

MIA BLOOM

T

TABA

A piece of land disputed by Egypt and Israel.

Taba is a 250-acre patch of land that juts into the Gulf of Aqaba, a dozen miles south of Elat. When the Israeli and Egyptian governments finalized terms on 19 January 1982 for the return of the entire Sinai peninsula to Egypt, Israeli negotiators claimed that Taba should remain within Israel. They based their claim on alleged ambiguities in the physical description of Taba in the 1 October 1906 accord that demarcated the administrative border between Palestine and Egypt. Israel reinforced that claim by constructing two hotels, after spring 1982, within the Taba zone. Article 7 of the Egypt-Israel peace treaty of 1979 provided for mediation or arbitration of such differences if direct negotiations failed to resolve them. Egypt urged the formation of an international arbitration team, but the Israeli cabinet did not agree to the principle of arbitration until 13 January 1986. The membership and terms of the arbitration team were agreed upon by 12 September 1986. The three-person panel was empowered to decide on the location of the boundary pillars as of 1948, the end of the Palestine Mandate, and its rulings were final and binding on both parties. On 29 September 1988, the panel ruled in favor of Egypt. Israel evacuated Taba on 15 March 1989. Egyptian sovereignty was restored over Taba and over the hotels that Israel had constructed. However, Israelis could visit the enclave without obtaining an Egyptian visa, and Israel continued to supply Taba's water and electricity from Elat. The Taba accord was a rare example of the resolution of a contentious issue through judicial means.

TABA ACCORDS

See TABA; TABA NEGOTIATIONS (1995, 2001)

TABA NEGOTIATIONS (1995, 2001)

Two separate Israeli-Palestinians negotiations that led to an accord on interim arrangements in 1995, and to bridging differences on the final status issues in 2001.

The Taba resort in Egypt was the site of the Israeli-PLO negotiations that concluded with the Israeli-Palestinian Interim Agreement, West Bank–Gaza Strip, also known as the Taba Accords or Oslo II, which was signed in Washington, D.C., on 28 September 1995. The agreement dealt with such issues as civil affairs, economic relations, legal matters, the Palestinian election of an 88-member Palestinian Legislative Council, and security arrangements. The West Bank was divided into areas A, B, and C. In area A, Israel was to redeploy from six cities, whose overall security would be placed in Palestinian hands. In area B, Palestinian towns and villages, Israel would be responsible for security and the Palestinians for public order. In area C, unpopulated areas, Israel would maintain full control. Negotiations for permanent status of the territories were to begin in May 1996, but were delayed for four years.

Five years after the first Taba negotiations, President Bill Clinton convened a summit on 11 through 24 July 2000 at Camp David between Israeli Prime Minister Ehud Barak and PLO Chairman Yasir Arafat and their teams to negotiate the final status issues, but the parties failed to reach an agreement. More negotiations took place, especially at Bolling Air Force Base in December 2000; these ended on 23 December with Clinton issuing what became known as the Clinton proposals or parameters. These meetings and Clinton's intervention set the stage for the last Israeli-Palestinian meeting of the Oslo peace process, which took place at Taba between 21 and 27 January 2001.

Thanks to the Clinton proposals the two parties at Taba were able to narrow their differences on final status issues, though, since there was no official note taking, there are conflicting accounts about the extent of the progress. Both sides made unprecedented concessions. The Israelis reportedly agreed to withdraw from 100 percent of the Gaza Strip and 92 percent of the West Bank, coupled with a 3 percent land swap. The Palestinians accepted Israeli annexation of clusters of settlements but were seeking sovereignty over 98 percent so as to have maximum contiguity in the West Bank. These figures are in dispute, since both sides do not agree on how to calculate withdrawal percentage, especially on whether East Jerusalem, parts of the Jordan Valley, and other parts should count as part of the West Bank. When these parts are counted, the withdrawal figures are smaller than those cited above. On Jerusalem, the Palestinians conceded the Jewish Quarter, including the Western Wall, and Israel agreed to return noncontiguous parts of East Jerusalem. The parties discussed the return of 100,000 to 150,000 Palestinian refugees, out of some 3.7 million, to what is now Israel, but they remained apart on this and other issues.

While the Israeli offer was far-reaching, it was not enough for the Palestinians, because it would not have allowed for a contiguous capital in East Jerusalem, the settlement clusters that Israel wanted to annex would have reduced contiguity in the West Bank, and Palestinian inability to control their borders and air space would have negated Palestinian sovereignty. The two sides needed more time to bridge their differences, but time ran out. The negotiations were interrupted by the departure from office of Clinton on 20 January 2001, and by the defeat of Barak in the Israeli elections of 6 February 2001. But the narrowing of differences at Taba in 2001 had been significant and was hailed by several of the negotiators as representing the closest the two sides had ever come to an agreement.

PHILIP MATTAR

TABAQA DAM

Dam on the Euphrates river built to irrigate Syria.

Started in 1968, the dam was finished in 1973 with Soviet assistance, at a total cost of US$600 million. It forms Lake Asad on the Euphrates, above Raqqa, Syria. It is intended to irrigate 1.5 million acres (640,000 ha) by the year 2005 and produce six

hundred megawatts of electricity. By the mid-1980s, only about 187,500 acres (75,000 ha) were under irrigation and five of the eight power generators were not operating.

When all projects are completed, the dam will take seven billion cubic meters of the thirty billion cubic meters of water that once entered Iraq each year. Iraq complains of this and that the upstream irrigation projects lower Iraq's water quality by raising salinity levels. Turkey also has ambitious irrigation projects under way at Keban and Karababa, which will reduce Iraq's share to eleven billion cubic meters. Syria has protested to Turkey about excessive use of Euphrates water and tried in 1984 to block Arab oil states from making loans to Turkey for construction of the Karababa dam. No treaty exists for sharing the flow, thus this serious dispute has no foreseeable prospect of resolution.

John R. Clark

TABATABAʾI, MOHAMMAD

[1841–1920]

Persian religious scholar; one of the principal leaders of the Constitutional Revolution, 1905–1909.

Born in Karbala in 1841 to a family with illustrious scholarly antecedents, Mohammad Tabatabaʾi spent his early childhood in Hamadan in the care of Aqa Sayyed Mehdi, his paternal grandfather, before moving to Tehran, the capital, where his father, Sayyed Sadeq, was firmly established as a leading religious authority. There he studied jurisprudence with his father and other prominent scholars, philosophy with Mirza Abul-Hasan Jelve, and—most significant for his political activity in later years—ethics with Shaykh Hadi Najmabadi, many of whose opinions were regarded as subversively liberal. At the same time, through reading newspapers and closely questioning returning travelers, Tabatabaʾi began taking an interest in the affairs of Europe, which was atypical for the religious scholars of his time.

In 1882, Tabatabaʾi set out from Tehran with the intention of making the pilgrimage to Mecca. He took a circuitous route, traveling via Russia, Anatolia, and Istanbul, meeting new scholars and men of state wherever he alighted, and he arrived in Mecca too late for the pilgrimage. Cholera was raging in the Hijaz, so he left promptly for the area that is now Iraq, where he joined the circle of the great scholar Mirza Hasan Shirazi in Samarra. He spent more than ten years with Shirazi, perfecting his command of Shiʿite jurisprudence and acting as the trusted adviser of his teacher in political matters. It was in this capacity that he was addressed a letter by the celebrated Jamal al-Din Asadabadi (Afghani), then resident in London, calling on him to make greater political use of Shirazi's prestige, which had been inaugurated by the Tobacco Revolt and boycott of 1891.

Despite the oppositional tendencies that Asadabadi correctly perceived in him, Tabatabaʾi's return to Tehran was due to an initiative of Naser al-Din Shah. The monarch wished to create in Tehran a counterweight to Mirza Hasan Ashtiani, a cleric whose prestige had grown considerably in the course of the tobacco boycott, and he accordingly suggested to Shirazi that he should send one of his prominent disciples to Tehran. Shirazi selected Tabatabaʾi, who arrived back in Tehran in the fall of 1893. His father had died almost a decade before, but Tabatabaʾi fell heir to his influence in the Iranian capital with little difficulty. The shah's expectations of Tabatabaʾi were disappointed; not only did he establish cordial relations with Mirza Hasan Ashtiani, but he also emerged as an implacable critic of the corruption and tyranny of the court. Indeed, in 1911 he claimed to have begun working for the cause of constitutional government immediately after his return from Samarra, preaching from the pulpit on the need for establishing a consultative assembly. On another occasion, he stated frankly that he and his colleagues in the clerical class had no direct acquaintance with the concept of constitutionalism, having learned of it from those with experience of Europe. During the decade leading up to the Constitutional Revolution he deepened both his understanding of con stitutional government and his contacts with secular intellectuals working for the same goal.

The beginnings of the revolution may be dated to an alliance concluded by Tabatabaʾi with another leading cleric of Tehran, Sayyed Abdollah Behbahani,

on 23 November 1905, initially for the purpose of obtaining the dismissal of Ayn al-Dowleh, the prime minister. Soon thereafter, the two clerics joined a group of bazaar merchants who had taken sanctuary in the Shah Mosque in Tehran to protest government policies. After Tehran's *imam jomeh* (the highest-ranking paid government-appointed cleric) had the group forcibly evicted from the mosque, Tabataba'i and the clerics led a migration of their colleagues and supporters to the shrine of Shah Abd al-Azim, south of Tehran, where they formulated the demand for an *adalat-khaneh* (house of justice) as a condition of their return. Their demand was formally accepted, and on 12 January 1906 Tabataba'i and Behbahani returned to the capital in triumph. Ayn al-Dowleh remained in office, however, and he stalled implementing the royal decree for convening a house of justice. The tensions that persisted between him and the constitutionalists led to a new and more significant migration of Tabataba'i, Behbahani, and their associates, this time to Qom, on 15 July 1906. They demanded the dismissal of Ayn al-Dowleh, in addition to the establishment of a consultative assembly. Their demands were accepted, and on 18 August 1906 Tabataba'i and Behbahani were able to reenter Tehran. Tabataba'i exercised great influence in the *majles* (assembly) that was convened soon thereafter, attempting to preserve the alliance of personalities and interests that had made possible the introduction of constitutional government. His success was limited, however, and the majles was in a state of chronic dissension when its debates were brought abruptly to an end by the royal coup of 23 June 1908. Tabataba'i was arrested and taken in chains to the garrison at Bagh-e Shah. After a spell of imprisonment, he lived in seclusion in Shemiran, north of Tehran, before being banished to Mashhad. He returned to Tehran on 24 August 1909, one month after the restoration of the constitution, but thereafter tired of direct political involvement. He spent the rest of his life in Tehran, with the exception of a journey in 1917 to the shrine cities of Iraq.

Tabataba'i stands out above all as the most prominent religious leader of his time to have understood fully and accepted the far-reaching implications of constitutionalism for Iranian society, recognizing, for example, that it required a modernization of the educational system. This broadness of outlook may have been connected to the Freemasons' affiliations he had inherited from his father, which led him also to join the Masonic Lodge Reveil de l'Iran, the first Iranian lodge officially affiliated to the Grand Orient of France.

TABATABA'I, ZIYA

[c. 1889–1969]

Anglophile Iranian politician and journalist.

Born in Iran, in the southeastern city of Yazd, Ziya Tabataba'i began his public career as a journalist in Shiraz, publishing a series of newspapers—*Islam Sharq* (The east), and *Barq* (Lightning)—in which he supported the causes of constitutional government and social reform. He next moved to Tehran, where during World War I he published *Ra'd* (Thunder), a journal staunchly supporting British policy in Iran. This earned him favorable standing with the British, enabling him to act as a go-between for Iranian notables who wanted their checks cashed by the British-owned Imperial Bank of Persia, which in turn gained for him considerable influence in Tehran society. In 1919, Tabataba'i traveled to Baku (in Azerbaijan) to negotiate on behalf of Iran a political and commercial treaty with the temporarily independent states of the south Caucasus, taking advantage of the opportunity to impress other members of the delegation with his political acumen. In 1920 and 1921, he was active in the Anjoman-e Pulad (Steel Committee), a reformist political committee that was the offshoot of a similar organization established by the British in Isfahan and sought to bring together politicians and military officers to initiate change. At the same time, he maintained close links with the head of the British military mission in Iran. These relations with the British enabled him, together with Reza Khan (later Reza Shah

Pahlavi), then a commander of the Iranian Cossack Brigade, to launch a coup d'état on 21 February 1921, that resulted in the appointment of Tabataba'i as prime minister.

The real significance of this coup was that it marked the first stage in the rise of Reza Khan to supreme power and the replacement of the Qajar dynasty by the Pahlavis, and the premiership of Tabataba'i did not last long. He began energetically enough, banning newspapers hostile to his government and imprisoning many of the titled landowners for whom he nurtured a lifelong enmity. He then concluded a treaty of friendship with the Soviet Union and formally abrogated the already moribund Anglo-Iranian Agreement of 1919. His intention, as he privately informed the British minister in Tehran, was to "throw dust in the eyes of the Bolsheviks and native malcontents" (*Documents on British Foreign Policy,* 1919–1939, London, 1963, vol. 13, p. 731). However, differences soon arose. Over the objections of Tabataba'i, on 6 May 1921, Reza Khan succeeded in bringing the gendarmerie under the control of the Ministry of War and then, some two weeks later, in obtaining the dismissal of the British officers who had been seconded to the Iranian army. The swift erosion of Tabataba'i's position became fully apparent on 24 May, when most of the enemies he had had arrested were released without his permission; the following day he went into exile.

Tabataba'i spent the next nine years in Switzerland, moving in 1930 to Palestine, where he lived for thirteen years under the protection of the British mandate government. In the course of World War II Reza Khan was deposed by the Allies (1941), and in September 1943 Tabataba'i was able to return to Iran—in the face of strong objections from the Iranian court, the Soviet Union, and the United States, which were overcome only by the energetic representations of the British.

Embarking on the second half of his political career, Tabataba'i first aligned himself with the Patriotic Caucus (Fraksiun-e Mihan), a pro-British grouping in the Majles (Iran's legislature). Soon, however, he founded his own party, the Fatherland party (Hezb-e Vatan), which early in 1944 was reorganized along authoritarian lines and renamed the National Will party (Hezb-e Erade-ye Melli). He launched yet another newspaper, *Ra'd-e Emruz* (Today's thunder), in which he denounced the remnants of the military dictatorship established by Reza Khan, the continued hold on national life of the landowning oligarchy, and the growing influence of the communist Tudeh party. Tabataba'i's views won him the support of many bazaar merchants and guild leaders, as well as some lesser-ranking religious scholars, but his National Will party did not contest parliamentary elections. Nonetheless, he was elected to the Majles as deputy from Yazd, under the auspices of the Patriotic Caucus. He opposed a whole series of prime ministers, including most notably Qavam al-Dowleh, who had him arrested for several months in 1946, probably to placate the Soviet Union, the patron of the Tudeh party. Despite his rooted aversion to the Tudeh party, Tabataba'i sided with it in 1948 when efforts were under way to wrest control of the army from the shah. This tactical alliance did not last long, and it was in part because of a growing dependence on the Tudeh party that Tabataba'i opposed the government of Mohammad Mossadegh from 1951 onward (his continued alignment with the British was, no doubt, a more important factor in this regard).

Tabataba'i appears to have withdrawn from active political involvement even before the royalist coup of August 1953 that restored full-fledged autocracy to Iran. He spent the remaining years of his life in the village of Sa'adatabad, dying there in 1969. Notwithstanding his earlier hostility to the Pahlavis, he is said to have become a trusted consultant of the shah during the last phase of his life, meeting with him regularly at least once a week.

TABRIZ

Provincial capital in northwestern Iran.

Tabriz, the capital of East Azerbaijan, is Iran's fourth largest city, with 1,191,000 inhabitants according to the 1996 census. The city dates back to the Parthian period (approximately 238 B.C.E. to 224 C.E.). The Blue Mosque, built in the fifteenth century, and the Rubʿe Rashidi, constructed by the famous Mongol vizier Rashid al-Din Fazl Allah, are among its archaeological sites. In 1295 the Mongol ruler Ghazan Khan made Tabriz the capital of his empire. In the fourteenth century Tamerlane conquered Tabriz. The Safavid Shah Ismaʿil I made it his capital in 1501. At that time, Tabriz, with a population estimated at 250,000, was one of the world's largest cities. Most of the city was destroyed in the massive earthquake of 1721, which left it devastated, and according to some accounts, caused 80,000 to 100,000 casualties. In the Qajar period (between 1779 and 1925) Tabriz was the seat of the crown prince and a major military headquarters against the Russian frontier. During the Constitutional Revolution (1905–1911) it was a site of antigovernment activity, and Russians occupied the city from 1911 to 1917. Soviet troops occupied the city in 1941 and in 1945 supported the Autonomous Government of Azerbaijan, a secessionist movement headed by Jaʿfar Pishevari. The Soviets withdrew in 1946, and subsequently Iranian forces occupied Tabriz and put an end to Pishevari's government. As an important commercial center, Tabriz also played a prominent role in the revolution of 1979.

Tabriz is one of Iran's most important centers for manufacturing industries, producing chemicals, metals, machinery, and textiles. Hand-knotted carpets made in the city have had an international reputation for quality and design for more than a century. Agricultural products from the Tabriz region include wheat, barley, potatoes, and onions; this region is also a considerable producer of fruits and nuts exported from Iran. The variety of agricultural products has contributed to Tabriz becoming a major food-processing center.

NEGUIN YAVARI

TABRIZ UNIVERSITY

University in Tabriz, Iran.

Established in 1949 as the University of Azerbaijan, the University of Tabriz had 5,187 students by 1970. It includes schools of literature, agriculture, science, and engineering, as well as an institute for advanced studies. The faculty of literature and philosophy publishes a journal with a solid reputation. According to the university's own statistics, the total student population in 2002 exceeded 10,000, and the faculty numbers about 500, with some 900 administrative personnel.

PARVANEH POURSHARIATI

TAGGER, SIONEH

[1900–1988]

Israeli artist.

Sioneh Tagger was born at the turn of the century in Jaffa to Sephardic Jews who had settled there in the nineteenth century. Her parents helped to found the modern city of Tel Aviv. She studied art at the Herzliya Gymnasium in 1919/20 with a Russian sculptor, Joseph Constant, who introduced her to cubism and European modernism. In 1921 she moved to Jerusalem to study at Bezalel on condition that she live with her grandfather's family, who were religious people. Her works from this period include drawings of elderly Jews and "Oriental types" of Jews, as well as decorative metalwork and painting of miniatures. In 1924 she went to study in Paris, where she learned to build her drawings based on simple geometric structures. Tagger was influenced by several painters from the Jewish School of Paris, as well as by André Derain and Picasso, whose influence can be seen in *Clown* (1925) and *Harlequin* (1901). Later in life, Tagger painted on plexiglass, inspired by memories of glass paintings decorating quotations from the Qurʾan hanging in Arab homes in Jaffa (she, though, used Jewish themes).

JULIE ZUCKERMAN

TAHA, MAHMUD MUHAMMAD

[c.1909–1985]

Founder of the Republican Brotherhood.

Mahmud Muhammad Taha was born in Rufaʿa, in central Sudan, in either 1909 or 1911. He graduated from Gordon Memorial College (now the University of Khartoum) in 1936 and practiced agricultural engineering in the Gazira, where his interest

in local and nationalist politics grew. Taha founded the New Islamic Mission or Republican Brotherhood in 1945. His first arrest was in 1946, for leading a demonstration for the release of a midwife detained for performing a circumcision on a young girl just after the British had outlawed the practice. Taha's point was that the colonial authorities had no legitimacy to legislate morality that could only change with the equality of women in society.

Taha was both theologian and political leader. The Republican Brotherhood movement was one of the many nationalist movements that agitated for the independence of Sudan from British colonialism. In addition, Taha's "second message" of Islam was among the earliest of the liberal Muslim reformist movements now called "progressive Islam." He argued for a scientific understanding in Islam rendering it capable of resolving the problems of modern life. He argued against the application of the *hadd* punishments of amputation for theft as a violation of *shariʿa* and of Islam because their imposition presupposes a level of education and social justice that are lacking in today's society. He also argued for equal rights for women in marriage in Islamic law. The community of "Republicans," which included significant numbers of women, put into practice the egalitarian ideas of the movement. The movement was also notable for its emphasis on the rights of non-Muslims in predominantly Muslim Sudan, especially recognizing the oppressed southern masses whose resistance has been manifested in decades of protracted civil war.

Taha and the Republican movement opposed the imposition of *shariʿa* as state law in September 1983 because it divided Muslims from the large non-Muslim Sudanese population and thus was contrary to national unity. They argued that non-Muslims should enjoy full rights as citizens and called for repeal of the "September laws." As a result of this protest, Taha was tried by the Islamist government of Jaʿfar Nimeiri for apostasy. He was found guilty and hanged by the regime on 18 January 1985.

TAHIR, KEMAL

[1910–1973]

Turkish novelist.

The son of a naval officer, Kemal Tahir was born Ismail Kemalettin Demir in Istanbul and attended the prestigious Galatasaray Lycée (secondary school), though he did not graduate. In 1932, he began writing for newspapers and periodicals, as well as historical novels that glorified the Ottoman past. Between 1938 and 1950, he was imprisoned, along with the poet Nazim Hikmet, by the government of Turkey because of his ideological views and political convictions. During his incarceration, Tahir collected the observations of villagers who were in prison with him; he used these as the basis for a series of novels that authentically depicted the mentality, social structure, and mode of life in the villages of central Anatolia. He was released from prison in 1950 as part of a general amnesty.

Tahir's novels and his political-cultural theories influenced many Turkish authors, known collectively as Tahiris. His influence spread beyond the realm of literature into cinema, inspiring filmmakers to create films rooted in popular Turkish culture, not Western masterpieces. One of Tahir's last novels, *Mother State,* which took as its subject the founding of the Ottoman Empire in the thirteenth century, signaled a transition in Turkish literature

from portraying social realities to searching for new models for change.

DAVID WALDNER

TAHTAWI, RIFAʿA AL-RAFI AL

[c. 1801–1873]

Egyptian writer and educator and the founder of the translation movement; precursor of modern Arab secular thought.

Rifaʿa al-Rafi al-Tahtawi was born in Tanta, in upper Egypt, into a family of rural notables with a religious learning tradition, whose genealogy went back to al-Husayn ibn Fatima, grandson of the prophet Muhammad. In his early childhood, his family was exposed to pecuniary difficulties following the confiscation by Muhammad Ali of the *iltizamat* (tax farms).

Education

He was educated in al-Azhar in the traditional range of religious and linguistic studies, but was exposed there to the influence of the unconventional Shaykh Hasan al-Attar who advocated a broader out-look to *ilm* (knowledge) than the range to which al-Azhar was confined. His career was further inspired in Paris (1826–1831), where he was attached to the first mission of students from Egypt, initially as an imam (prayer leader) but soon as the mission's only translation student. Tahtawi read in a wide range of subjects, became acquainted with French liberal tradition, established direct contacts with leading French orientalists and noted the institutionalization of Arabic studies in L'Ecole Spéciale des Langues Orientales Vivantes. He also followed closely the 1830 revolution, studied the structure of the French political system and keenly observed Parisian social life and manners. He provided in great detail the first documented Arabic account of modern encounters with Western life and society in his *Takhlis al-Ibriz fi Talkhis Bariz* (The extraction of gold in the summary of Paris, 1935).

Institutional Career

Tahtawi's institutional career thrived during the reigns of Muhammad Ali and Ismaʿil in two distinct and separate phases. In each phase, he held several positions, all at the same time. The first of these phases (1837–1849), started toward the end of Muhammad Ali's expansion of education and continued up to the large-scale closure of schools at the time of Abbas (1848–1854). During that phase, Tahtawi directed the newly established *Madrasat al-Alsun* (School of languages), then founded and headed *Qalam al-Tarjama* (Translation department) and became chief editor of *al-Waqa'i al-Misriyya* newspaper in 1842. The second phase (1863–1873), corresponds to the reign of Ismaʿil (1863–1879), during which new activity in translation and education was initiated. In this second phase, Tahtawi headed the reinstated Qalam al-Tarjama, participated in *Qumisyun al-Taʿlim* (a central commission for educational planning), and was chief editor of a new fortnightly *(Rawdat al-Madaris al-Misriyya).* He continued to hold these positions until his death in 1873. During the long interlude between these phases (1849–1863), a general trend of reductions in education, and hence translation, prevailed under Abbas (1848–1854) and Saʿid (1854–1863). Tahtawi, virtually exiled to the Sudan for four years (1850–1854), was kept from institutional channels of influence, not-withstanding a relatively short-lived assignment to run a new military school with wide-ranging departments from its opening in 1855 to its closure in 1860.

Educational Agenda and Influence

Tahtawi practically founded the translation movement in Egypt. Works translated by Tahtawi and his pupils into Arabic and Turkish number more than two thousand, many of them geared to a wide variety of educational and general policy requirements. As an educator, he was equipped to run an integrated syllabus of studies. When initial contractions in Muhammad Ali's military establishment forced retrenchments in education, several schools were amalgamated in 1842 into a single institute under Tahtawi's directorship. He ran in that expanded do-

main the first curriculum that offered a combination of Islamic studies—including law—and European studies, in an educational milieu which had been characterized by strict dualism. These orientations earned Tahtawi the resentment of the *ulama,* whose traditional positions (that is, as judges) were being threatened by his pupils. During the reign of Ismaʿil, Tahtawi cosubmitted a project *(Makatib al-Milla)* for the establishment of a new educational administration to promote and supervise an integrated syllabus in existing elementary schools of traditional learning *(Katatib),* and to sponsor the opening of a network of similarly oriented government elementary schools.

Towards the end of his life, Tahtawi articulated prescriptive reformist views on knowledge, education and the political order in *Manahij al-Albab al-Misriyya fi Mabahij al-Adab al-Asriyya* (The paths of Egyptian minds to the joys of modern manners, 1869) and *al-Murshid al-Amin fi Tarbiyyat al-Banat wa al-Banin* (The honest guide in the upbringing of girls and boys, 1874). Within the context of a dominating traditional heritage, Tahtawi challenged traditional notions on knowledge and education in effective support for state-managed change. He preached that any branch of learning which contributed to human welfare fell within the realm of necessary ilm, that civilization had a material component acquired through adoption of rational sciences from advanced sources in Europe by appropriately prepared calibers, and that education should therefore be aimed at producing new men of knowledge capable of making such adoptions. On these premises, the existing state of al-Azhar *ulama* was criticized and education reforms were advocated, including girls' education, a call that coincided with the opening of the first girls' school in Egypt at the time of Ismaʿil.

Political Perspective

Tahtawi's prescriptions for political reform involved a blend of traditional Islamic and modern secular orientations. He referred to Egypt as a distinct and historically continuous entity, and perceived of the community in terms of a social and political order pertinent to a territorial nation *(watan)* whose members were bound by the common tie of nation-hood and were equally entitled to freedom of belief. He recognized that the social order could be organized on the basis of a man-made law equally applied to all members in the national community *(al-jamʿiyya),* that the political order involved three distinct functional organs, including a legislative organ, and that its role in binding the community made it a necessity to include basic political education in schools' syllabi. But the inherent secular and liberal orientations were constrained by traditional premises and dimensions. Religion was maintained as a determinant within the political community by the perception that a common religious law was among the binding elements for a nation and by preaching equal civil rights of non-Muslims on an appeal to tolerance and justice based on *shariʿa* (Islamic law) rather than on the implications of equality inherent in nation-hood. The absolute authority of the monarch was maintained by requiring that absolute obedience was due to him, that he was not held accountable to his subjects, and that the parliamentary organ's functions were only consultative and supportive. It is on the basis of his general exposure of the Arab mind to reform issues, rather than on the specific positions taken on each, that the origin of modern Arab secular thought is identified with Tahtawi.

Analysis of His Role

His role through state-sponsored institutions, as well as the congruence and timing of specific elements of his thought with specific policy measures, prompted a perception of him as an etatistic ideologue. The mix of reformist and conservative notions in his writings is interpreted accordingly by Israel Altman. Based on this perception, Tahtawi's thought is seen to have reflected a blend of vested interests in educational reform, intellectual commitment to the cause, and self-assertion vis-à-vis the Turco-Circassian bureaucratic superiors, all characteristic of Egyptian officials who participated in state reform policies between 1830 and 1880.

The Western influence on Tahtawi is generally emphasized. However, the contention that his thought was largely a process of acculturation to the West was recently challenged, and it was shown that Tahtawi's work involved "the reestablishment of direct contact with certain elements of classical Islamic [rationalist] tradition." The genuine and indigenous elements in Tahtawi's thought, and in the Arab "renascence" in general, are accordingly highlighted and emphasized.

Tahtawi produced over thirty publications of translations and original works, including Fénelon's *Les aventures de Télémaque* (1867), the first translation into Arabic of a work of Western literature. Among his other important original writings were two attempts made to simplify the teaching of Arabic grammar, the second of which, *al-Tuhfa al-Maktabiyya li-Taqrib al-Lughat al-Arabiyya* (The bookshelves' [or library's] Antique [*sic*] for the Simplification of Arabic Language, 1869) involved a departure from the prose-memorizing method applied then to the presentation of rules in a tabulated and systematic form. As chief editor of *al-Waqa'i al-Misriyya,* he introduced the newspaper article as a new genre of writing through various commentaries on current affairs. He wrote in serial form, in *Rawdat al-Madaris al-Misriyya,* the first sira (prophet's biography) in modern times, later published as *Nihayat al-Ijaz fi Sirat Sakin al-Hijaz* (The ultimate brief on the biography of the resident of Hijaz, 1876).

Notwithstanding the specific differences in interpreting his role and in classifying his political thought, Tahtawi's contributions to the policies and notions of cultural change, as well as his contributions to Arab secular thought, continue to be recognized. More than a century after Tahtawi's death, he remains relevant to contemporary endeavors. During Nasser's era, the widely circulating Egyptian daily *al-Ahram* used his words as epigraph for its opinion page: "Let the watan, the fatherland, be a place for our common happiness, which we build with freedom, intellect, and factories."

TAʾIF ACCORD

Agreement ending the civil war in Lebanon, 1989.

In July 1989, the Arab Tripartite Committee (Morocco, Saudi Arabia, and Algeria) made recommendations to resolve Lebanon's civil war: expanded Lebanese sovereignty, a pullback of Syria's forces, and formalization of Syria and Lebanon's relationship with Israel. Syria promptly rejected them. In September, in the city of Taʾif, Saudi Arabia, representatives of the various Lebanese factions accepted a new National Unity charter. Under it, Syria would restrain Shiʿite groups backed by Iran in exchange for recognition of its dominance in Lebanon and the isolation of the Christian military figure Michel Aoun; vacant parliamentary seats would be filled by the new government before holding elections; Syria was empowered to become involved in reconstituting national governmental authority; redeployment of its forces left Syria firmly in control of territory strategically important for access to Beirut; and the governments of Syria and Lebanon were permitted to conclude secret agreements. The Taʾif Accord came under heavy criticism because several of its clauses were never implemented. Foremost was the issue of Syrian troops' presence in Lebanon. In 2002 and 2003, the Syrian regime implemented symbolic minor withdrawals from some areas in Lebanon, including Beirut. As of today, there are still more than 25,000 Syrian troops in Lebanon.

BRYAN DAVES
UPDATED BY GEORGE E. IRANI

TAʾIF, AL-

A highland city in Saudi Arabia's al-Hijaz region.

Al-Taʾif is about 75 miles southeast of the holy city of Mecca. Although located on a sandy plain, it possesses plentiful water, making it an important agricultural center serving Mecca and Jidda. Many inhabitants are immigrants or the descendants of immigrants from throughout the Islamic world, especially Yemen, the Indian subcontinent, and central Asia. Al-Taʾif was the first city of al-Hijaz to fall to the Al Saʿud in 1924, and the Ikhwan armies that first entered the city plundered it and massacred many of its inhabitants. It has long served as a

summer residence for kings and wealthy Meccans, who are a mainstay of its economy, along with several Saudi military bases. Estimates in the early twenty-first century placed its permanent population at about 350,000, with a seasonal increase to 500,000. The nearby district of al-Shafa is a popular summer resort.

TAʾIF, TREATY OF AL-

Treaty that concluded the 1933–1934 border war between Saudi Arabia and Yemen.

The treaty that ended the border war between Saudi Arabia and Yemen and set up a framework for peaceful relations was signed in al-Taʾif (Hijaz) in May 1934. After Saudi Arabia's occupation of the port city of Hodeida, Yemen—and under pressure from Great Britain and Italy, which were wary of the extension of Saudi Arabia's power nearer their colonies (Aden and Eritrea, respectively)—King Abd al-Aziz (Ibn Saʿud) and Imam Yahya agreed to settle the border issue. Yemen recognized Saudi Arabia's sovereignty over Asir and the towns of Najran and Jizan and agreed to pay Saudi Arabia an indemnity of 100,000 pounds sterling in gold. In exchange, Saudi Arabia evacuated its forces from Hodeidah and other areas of Yemen it had captured. The border area was to be demilitarized, and its demarcation was outlined from the Red Sea coast to just east of Najran; beyond that point it was undefined. A committee was to be established in order to work out the limits of tribal areas. In addition, the treaty called for the renewal of its terms in twenty years. Its terms were reaffirmed and expanded in a June 2000 international border treaty between the two countries.

TAʿIZ

Province and largest city in the south of North Yemen.

Taʿiz Province is, along with Ibb Province, the heart of the Shafiʿi south of North Yemen. It embraces the Hujariyya region, and the city of Taʿiz is its soul. The southern uplands of Taʿiz Province, at a few thousand feet, have a more temperate climate and more rainfall than do the northern highlands, and the agriculture of the province has in the past supported a larger, denser population than that of provinces farther north. In the past, the city of Taʿiz was an important center of power in North Yemen, especially under the Rasulids from the mid-thirteenth to the mid-fifteenth centuries; more recently, Imam Ahmad insisted on residing there between 1948 and 1962. Linked since the late nineteenth century to British Aden by an increasing stream of workers, merchants, and students, and then linked through Aden to the outside world, Taʿiz became a part of world commerce and was in touch with the modern world and its ideas far more than was Sanʿa; by the 1940s, it had become the hotbed of modernist, republican, and even revolutionary ideas in the Yemen ruled by the imams. Thus, through the 1970s, Taʿiz was compared favorably to Sanʿa, and especially by many southerners.

By the 1980s, however, Sanʿa had outstripped it in size and political importance and Hodeida had outstripped it in commercial importance; its basic infrastructure—including electricity, water, and roads—was allowed to degrade. Still, Taʿiz remained in the 1990s and thereafter a major center of business and light industry; its links to Aden, and the new economic role of the latter, may enhance the position of Taʿiz in unified Yemen, or unification may lead to a bypassing of Taʿiz. In any case, the Taʿiz of old is no more. Within defining walls and highlighted by great whitewashed mosque minarets and domes, its back pressed against the cloud-topped mountain named Jabal Sabr, which towers over it, the old Taʿiz

was a jewel of a small Arab Islamic city. The Taʿiz of today has burst its walls, and unattractive modern construction has replaced, crowded out, and hidden most of the old. The population of Taʿiz and the villages it has absorbed is about 700,000.

ROBERT D. BURROWES

TAJIKS

People of Central Asia; the original Iranian population of Afghanistan and historic Turkistan.

The Tajiks are Muslim people of Central Asia living in the countries of Afghanistan, Tajikistan, and Uzbekistan. Their population is thought to be about 10 million, with more living outside of Tajikistan than within. About 3.5 million live in Afghanistan. Although their history is not well known, Tajiks are thought to be the original inhabitants of Central Asia, perhaps the direct descendants of the ancient Aryans. Their language, Tajiki, is a dialect of Persian.

Tajiks in Afghanistan live primarily in the northern and western provinces, where they are mainly settled farmers and landowners. Most Tajiks in Afghanistan, like most Afghans, identify with their local village or valley and are not always aware of their ethnic name. In fact, *Tajik* is sometimes used to describe any Persian speaker in Central Asia, whether or not the people themselves so identify.

In Afghanistan the Tajiks played an important role in the civil war of the 1980s and 1990s, especially those in the Panjsher Valley. The famous Afghan resistance leader Ahmad Shah Masoud was a Panjsher Tajik.

Although historically the Tajiks have not played an important role in the governance of Afghanistan, their position changed after 11 September 2001. The Northern Alliance, which had strong Tajik leadership, took control of Afghanistan in November 2001. Tajiks occupied a number of key Afghan ministries in the government of Hamid Karzai, including foreign affairs and defense. They have continued to play a dominant role in the Karzai government.

TAKFIR WA AL-HIJRA, AL-

Egyptian Islamic fundamentalist organization.

Al-Takfir wa al-Hijra is one of the most notorious radical Egyptian fundamentalist organizations. Its real name is the Society of Muslims (Jamaʿat al-Muslimin). The group was formed in 1969 by Shukri Mustafa, who had been arrested in 1965 and served prison time with the influential Sayyid Qutb (an Egyptian who came to be considered the most radical fundamentalist thinker in the Arab world). Mustafa argued that the Egyptian society is living in a corrupt, decadent, and non-Islamic state of paganism *(jahiliyya).* His solution for the group was to withdraw itself from society and forge a new, purely Islamic society, in the unpopulated hinterland off the Nile River Valley. Though the group did spend some time living in caves, for most of its existence members lived in shared apartments in the poor neighborhood of Cairo. When the government arrested and detained several members in 1977, the organization responded by kidnapping, and ultimately murdering, a former minister for religious endowments. After a large-scale shootout with the police, several hundred members of the group were arrested and tried. Shukri Mustafa and four other leaders were sentenced to death, and others received prison sentences ranging from five to twenty-five

years. Today, the group is considered to be part of the Arab Afghans and is led by Ahmad al-Jazaʾiri.

At the ideological level, Mustafa delineates two stages for the organization: First, the stage of weakness *(istiddʿaf),* during which the group builds itself; and second, the stage of action *(tamkin),* during which the group attacks the *jahili* society. Hence the group's popular names *al-takfir* (excommunication) and *al-hijra* (migration). Furthermore, the group rejects mainstream doctrines accepted by traditional scholars and moderate fundamentalists. Thus, it does not believe in the validity of consensus *(ijma)* or independent reasoning *(ijtihad)*—it only believes in the literal validity of the Qurʾan and the *Sunna* of the Prophet, which are the basis of constructing divine governance *(hakimiyya)* and destroying worldly paganism. The group adheres to a militant view of jihad (holy war) and makes the whole world its enemy; thus, the United States, the United Nations, and Israel as well as the Islamic states are viewed as illegitimate systems of government that should be toppled.

TALABANI, JALAL

[1934–]

Kurdish leader.

Leader of one of the two main Iraqi Kurdish political parties, Jalal Talabani was born in 1934 near Koi Sanjaq, in Iraqi Kurdistan. The son of a Qadiri (Sufi) *murshid* (teacher) belonging to a very famous Kurdish family, Talabani studied law in Baghdad. In 1962 he joined General Mustafa Barzani in the armed struggle of the Kurds against the Arabs. The bright leftist intellectual Talabani could not get along with the more traditional, conservative Barzani, and from 1966 until 1970 Talabani led a group of government mercenaries *(jash)* fighting against the Kurdistan Democratic Party (KDP). After the 11 March 1970 autonomy agreement between General Barzani and Iraq's then vice president Saddam Hussein, Talabani lived in exile in Beirut and Damascus. After the collapse of Barzani's movement (caused by the Algiers Agreement in March 1975), Talabani founded in 1977 the Patriotic Union of Kurdistan (PUK). Since then he has competed with Masʿud al-Barzani (the general's son) for the leadership of the Iraqi Kurdish movement. After the Gulf War (1990–1991) and the formation of the Kurdish Autonomous Zone, Talabani shared power with Masʿud al-Barzani from the elections of May 1992 until May 1994, when fighting resumed between the two leaders. In 1996 Talabani established his own Kurdish Regional Government in Sulaymaniyya. Since the Washington Agreement of September 1998, Talabani has coexisted with Barzani, and on 8 September 2002 he signed the agreement of Sari Rash, which paved the way for the first full session of the Kurdish Parliament on 4 October 2002 and the normalization of the relations between the KDP and PUK. In 2003, after the fall of Saddam Hussein, Talabani was appointed a member of the Iraqi Governing Council.

TALAL IBN ABDULLAH

[1909–1972]

King of Jordan who, during his brief reign, encouraged democracy.

Talal ibn Abdullah assumed the duties of king at a critical period of transition in Jordan's history. When King Abdullah I ibn Hussein was assassinated

Talal ibn Abdullah, crown prince of Jordan, stands to the left of his father King Abdullah bin Al-Hussein in the Palace Gardens of Amman, Jordan, 1948. Talal became king on 5 September 1951 after the assassination of his father, but due to his poor mental health he was forced to abdicate in favor of his son on 11 August 1952. © Bettmann/Corbis. Reproduced by permission.

on 20 July 1951, a group of Jordanian royalists determined that King Abdullah's chosen successor, his grandson Prince Hussein ibn Talal, was too young to govern. The only way to ensure the legitimacy of transition to Hussein was for Crown Prince Talal, who suffered from acute depression and paranoia, to be crowned king. The alternatives were either to crown Prince Na'if, the regent and Talal's half-brother, or to accede to some form of union with Iraq, in which case a member of the Iraqi branch of the Hashimite dynasty would succeed to the Jordanian throne. Hence, Talal was considered an interim figure, yet he became significantly more during his tenure.

On 5 September 1951, the cabinet proclaimed Talal king, and the newly elected parliament confirmed Talal on the throne on receipt of a medical report by Minister of Health Jamil Tutunji. Prince Na'if, the regent, flew to Switzerland to escort his brother home.

The most notable legacy of King Talal's brief reign was to transform Jordan into a true democracy. Under Talal's instructions, the veteran prime minister, Tawfiq Abu al-Huda, won a vote of confidence in parliament on 24 September 1951. A new constitution was promulgated, declaring the people the source of all power. Citizens were guaranteed individual liberty and equality before the law. The constitution was approved by the lower and upper houses and was signed by King Talal on 1 January 1952. It enshrined the freedom of opinion, the right to hold public meetings and form political parties and trade unions, the freedom of conscience and worship, compulsory free education, as well as the right to own property. The new constitution made the cabinet collectively and individually responsible to parliament. Ministers could be impeached. The king could dissolve parliament, but new elections had to be held within four months, otherwise the old parliament would be reinstated. According to Article 93, parliament could override the king's veto over legislation by a two-thirds majority. Parliament was empowered to ratify treaties and could assemble without being called to do so by the king, but the king could declare martial law by decree with the consent of the cabinet.

The king's foreign minister declared in September 1951 that Jordan was not seeking union with Iraq. In December 1951, the king visited Saudi Arabia and made clear his desire for good relations with the house of Saʿud. He was skeptical of Western alliances, and in January 1952, he led Jordan into acceptance of the Arab Collective Security Pact.

Despite his popularity, after eight months the king's psychological troubles returned. While vacationing in Europe in May 1952, the cabinet transformed the Regency Council into a Crown Council, which exercised the powers of head of state for the rest of Talal's reign. On 11 August 1952, parliament deposed him and proclaimed Prince Hussein king. King Talal accepted gracefully. The duties of king were assumed by a Regency Council until Hussein came of age.

The deposed king moved to Egypt then took up residence in Turkey, where he died twenty years

later. Talal was the first king of Jordan to graduate from the Royal Military College at Sandhurst, an English school, and while there had absorbed democratic ideals. Sir John Bagot Glubb recalls in his memoir, *A Soldier with the Arabs*: "The tragedy of King Talal seemed to be rendered more poignant by the fact that, apart from his insanity, he appeared so ideally fit to be king. . . . He was of acute intelligence, outstanding personal charm, faultless private morals, and inspired by a deeply conscious wish to serve his country and his people, with no selfish motives."

TALAT, MEHMET

[1874–1921]

Turkish statesman.

Born in Edirne, Mehmet Talat Bey became chief administrator of the telegraph and postal office in Salonika in the Ottoman Empire. There, he became part of the secret Committee for Union and Progress. After the Young Turk revolution, he went to Istanbul in December 1908 to assume a leading position in the Young Turk government, rising to minister of interior. After 1913 and until the Ottoman defeat in World War I, Talat Paşa, Enver Paşa, and Cemal Paşa comprised the unofficial triumvirate that controlled the Ottoman Empire. While Enver was a military leader and Cemal was famous for his ruthlessness, Talat was a sophisticated diplomat and a consummate politician. In February 1917, Talat became grand vizier and held that position until 8 October 1918, just before the armistice of Mudros, which signaled the Ottoman surrender to the Allies. On 2 November, three days after the armistice was signed, Talat left Istanbul on a German ship and was murdered in Berlin in 1921.

TALEQANI, AZAM

[1943–]

Iranian advocate for women's rights, social justice, and democracy.

Azam Taleqani, daughter of the radical cleric Ayatollah Mahmud Taleqani, was born in 1943 in Tehran. She obtained her B.A. degree in Persian literature and was a schoolteacher and principal. She was politically active before Iran's Islamic Revolution and a political prisoner under the shah. After the revolution she was elected to the first parliament (1980–1984). Her quest for social justice led her to focus on the plight of women. In 1979 she founded the Iranian Islamic Women's Institute and started publishing a magazine, *Payam-i Hajar,* which has been closed down temporarily several times. Along with the members of her institute, she assists urban poor and rural women, providing them with legal advice, organizing conferences on women's problems, and creating jobs for women carpet weavers, tailors, and the like. *Payam-i Hajar* was the first journal to publish an article (in 1992) that refuted the legal basis of polygyny and men's superiority and proposed a new interpretation of the Qurʾanic verse *al-Nisa* (Women) founded on Iranian social, demographic, and cultural realities. Taleqani registered to run as a candidate in the 1997 presidential elections in order to challenge the traditional views on women. She and seven other women candidates were disqualified by the Council of Guardians, which provided no reason for their disqualification. She also was disqualified in the 1999 municipal elections. She criticizes personal enrichment on the part of the power elite and the widening gap between the rich and the poor, and continues to advocate social justice and democracy.

Azadeh Kian-Thiébaut

TALFA, ADNAN KHAYR ALLAH

[1940–1989]

Iraqi government official; relative of Saddam Hussein.

Adnan Khayr Allah Talfa was Saddam Hussein's brother-in-law and a maternal cousin; Saddam is married to Talfa's sister Sajida. Talfah was born in Tikrit and combined military and political careers in Iraq. In 1977, when still a colonel, through Saddam Hussein's pressure he became a member of the Regional Leadership of the Baʿth party and of the Revolutionary Command Council, as well as minister of defense. During the Iran-Iraq War (1980–1988), he played a major role in mediating between the civilian leadership and the military. In 1988 his relations with Saddam Hussein became strained through a family dispute. In May 1989 he was killed in a helicopter crash amid rumors of foul play on the part of Saddam.

TALIBAN

Islamic fundamentalist group in Afghanistan.

The Taliban appeared in Afghanistan in late 1994. In September 1996 they took Kabul and hanged Najibullah, Afghanistan's Soviet-sponsored president. Subsequently, they banned female access to education and employment, and imposed draconian Islamic laws that called for severe punishments, including the stoning to death of proven adulterers and the amputating of thieves' hands and feet. The Taliban's Islamic fundamentalism was a kind of transnational street force that had the potential to topple established governments through agitation, or to terrorize even much larger nations. Increasingly, fear of Islamic fundamentalism replaced the old dread of communism in the United States.

The term *taliban* is derived from the Persian and Pashtun plural of the Arabic word *talib* ("seeker of knowledge"). Before 1947, Afghan religious students studied in India, and when it was partitioned, they went to Pakistan. Their favorite *madrasa* in India was the Dar al-Ulum (House of Sciences) of the University of Deoband in Uttar Pradesh, which was established in 1862. It was known for its anti-Western orientation and stood for the independence of a united India. The Deoband Dar al-Ulum trained young, working- and lower-middle-class Muslims, who received a traditional religious education and joined the ranks of "big" and "small" mullahs in *masajid* (mosques).

Intellectually, the Taliban are heirs to the traditional affinity between the Deoband Dar al-Ulum and the Afghan *ulama* (Islamic scholars). After 1947, *ulama* in Pakistan established Houses of Science (Diyar al-Ulum) in all the provinces of Pakistan. The number of graduates of different levels of education from these institutions, especially from 1982 to 1987, was impressive. The Taliban leaders were the product of these theological seminaries. Their education is frozen in time: All Sunni theological institutions' curricula are based upon the curriculum established by the eighteenth-century scholar Mullah Nizam-ud-Din, who flourished during the period of Aurangzeb (d. 1707). This curriculum comprises:

1. Arabic grammar;
2. syntax;
3. rhetoric;
4. philosophy of logic;
5. dialectical theology *(ilm al-kalam)*;
6. Qurʾanic exegesis *(tafsir)*;
7. Islamic jurisprudence *(fiqh)*;
8. roots of Islamic jurisprudence *(usul al-fiqh)*;
9. accounts of sayings and deeds by the Prophet and immediate followers *(hadith)*; and
10. some mathematics.

The Taliban's educational system emphasized *taqlid,* the following of traditional Islam, which neglected modern scientific training. They divided the world into *Dar al-Islam* (the Muslim states, especially Saudi Arabia, the United Arab Emirates, and Pakistan,

which had recognized their rule) and *Dar al-Harb* (the non-Muslim states, which were projected as the enemies of Islam and Muslims). This bifurcation of the world into external enemies and permanent friends generated an exceptionally intolerant mind-set, which distinguished the Taliban's educational system.

The Taliban's political structure was based, according to them, on that of the four "rightly guided" caliphs (632–662) who succeeded the prophet Muhammad. The Taliban were "committed to establishing an exemplary Islamic rule" for the world, and especially for the Muslim states. Emulating the early caliphate, the Taliban created a supreme council (Majles al-Shura) of twenty individuals. Almost 1,500 Sunni *ulama* who represented various ethnic tribes elected young Mullah Muhammad Omar *amir al-muʾminin* ("commander of the faithful"). The majority of the council members were Pashtuns; fourteen of them had suffered corporeal loss while fighting against the Soviet Union (Mullah Omar, for example, lost an eye). Because of the Pashtun ethnic origin of the Taliban, their jihad became a struggle for power against the Tajiks in the Panjsher Valley and the Uzbeks in the north.

During the 1980s, Osama bin Ladin established guerrilla warfare bases in Afghanistan against the Soviet Union. After the Soviet withdrawal from Afghanistan in 1989, bin Ladin turned his attention to the United States. On 11 September 2001 his terrorists attacked the World Trade Center in New York City and the Pentagon outside Washington, D.C. In retaliation, the United States invaded Afghanistan, eliminated the Taliban's rule, and destroyed bin Ladin's terror infrastructure.

TALLAL, CHAIBIA

[1929–]

Moroccan painter.

Chaibia Tallal is a self-taught painter who was "discovered" and encouraged by Pierre Gaudibert, director of the Museum of Modern Art in Grenoble, France. She gained recognition in Europe and in the Arab world for her bright paintings, done in what has been called a naive style. Chaibia (who is known by her first name) was born in the village of Chtouka and came to the suburbs of Casablanca as a girl but counts her experience in the village as formative. Her memories of being unusual in her community, of making things with flowers and covering herself with them, and of a dream that motivated her to paint help explain how a woman who was not born into the urban life of art and intellectuals came to be an internationally celebrated artist. Chaibia is primarily a colorist who has been described as capturing the vibrancy of Moroccan life and landscape. Like Matisse's Moroccan work, her paintings feature human figures and flora and fauna rendered in expressive, often broad, brushstrokes and fields of rich color. Chaibia has exhibited throughout Europe, mainly in Paris, and also participated in the Havana Biennial. In 1984 one of her paintings served as the poster for the Contemporary Women's International Art Exhibition in France.

TALL AL-ZAʿTAR REFUGEE CAMP

Refugee camp in East Beirut, Lebanon.

Built in 1950 by UNRWA (United National Relief and Works Agency for Palestinian Refugees in the Near East), Tall al-Zaʿtar's Palestinian and South Lebanese population exceeded thirty thousand refugees by the early 1970s. In perhaps the bloodiest battle of the Lebanese Civil War that started in

1975, members of the Christian Phalange laid siege to the camp 22 June 1976. Thousands of residents are believed to have been killed during the siege and the mass killings that followed the Phalangist victory 12 August. The remaining population of the camp was transferred to West Beirut. The Phalangists' intent is believed to have been the expulsion of all non-Christians, and particularly the Palestine Liberation Organization (PLO), from East Beirut. The Christian militias had largely avoided direct confrontations with the PLO until the Syrian army entered the war in Lebanon on the Christian side 31 May 1976. The PLO defended the camp for fifty-two days before it fell with the help of Syrian artillery.

TALL, MUSTAFA WAHBI AL-

[1899–1949]

Jordan's most famous poet.

Mustafa Wahbi al-Tall's use of colloquial expressions in his poetry plus mentions of geographical places helped establish a unique Jordanian literary tradition in the Arabic language. Despite numerous positions in the government of Jordan, his populist politics and anti-establishment behavior landed him in prison or exile on several occasions. He is also the father of the Jordanian politician Wasfi al-Tall.

MICHAEL R. FISCHBACH

TALL, WASFI AL-

[1920–1971]

Prime minister of Jordan (1962–1963, 1965–1967, 1970–1971).

Wasfi al-Tall was born in Irbid, in northern Jordan. After being educated at the American University of Beirut, he served as an officer in Britain's army (1942–1945), then joined Jordan's civil service, rising to the rank of ambassador to Iraq (1961–1962). Tall was expelled from Baghdad for alleged subversive activities against the regime of Abd al-Karim Qasim; he was also channeling funds to the anti-Nasser Syrian Social Nationalist party in Lebanon.

Tall formed his first cabinet in January 1962 and embarked on an efficiency campaign in the civil service and attempted to promote economic development. He also launched a policy designed to show that Jordan was the true repository of Palestinian aspirations; it was a failure.

A Jordan–Saudi Arabia summit in August 1962 resulted in an agreement to coordinate foreign policy. When a coup took place in Yemen in October 1962, resulting in the proclamation of the Yemen Arab Republic, Jordan and Saudi Arabia backed the insurgents under Imam al-Badr. In November 1962, Tall supervised parliamentary elections in which political parties were banned. Baʿathist coups in Baghdad in February 1963 and in Damascus in March 1963 led Iraq and Syria to launch unity talks with Egypt. A shift in policy was required, so Tall resigned at the end of March.

In February 1965, Tall began his second term as prime minister. He helped King Hussein ibn Talal reactivate the entente with Saudi Arabia, and on 9 August 1965, a treaty was signed delimiting borders between the two countries. Jordan joined an alliance of Islamic states organized by Saudi Arabia and directed against Egypt, Syria, and Iraq.

Al-Fatah raids into Israel began. Under pressure from the Arab League, Jordan agreed to set up "summer camps for military training and moral guidance" for Palestinian recruits. In June 1966, King Hussein said there could be no cooperation with the Palestine Liberation Organization (PLO), and Tall prevented elections for the PLO National Council.

Tall closed the PLO office in Amman and expelled Ahmad Shuqayri, head of the PLO. In retaliation for an operation by al-Fatah guerrillas supported by Syria, Israel launched a raid against

Jordan, demolishing the village of Sammu on 13 November 1966. Residents of the West Bank and refugee camps hated Tall because of his disbanding of the National Guard, which had been stationed in frontier villages. Under the press law of 1 February 1967, instigated by Tall, all existing papers and periodicals were closed down, and newly licensed publications had to have 25 percent government ownership. Tall resigned in March 1967 and was appointed chief of the royal court, in which position he tried unsuccessfully to keep Jordan out of the Arab–Israel War of 1967.

Tall began his third term as prime minister on 26 September 1970. The following day, King Hussein and PLO chairman Yasir Arafat signed an agreement in Cairo that called for the withdrawal of Palestinian guerrillas from the cities but allowed them to continue the battle against Israel from the countryside. Tall and the military, however, devised a plan to drive the guerrillas out of Amman, Irbid, Jarash, and Ajlun. It was all over by 18 June 1971. In revenge, during a visit to Cairo in September 1971, Tall was assassinated by the Black September Group.

TALMUD

The Jewish teachings of the sages.

The Pentateuch *(Torah),* Prophets *(Nevi'im),* and Hagiographa *(Ketuvim)* constitute the written law of Judaism. Over the years, that law was discussed, interpreted, and transferred. These teachings of the sages are known as the oral law. Eventually, the oral law *(torah she-b'al peh)* was written down and formed the basis of the Talmud. While *torah* refers only to the written law and *talmud* to the oral law, both terms essentially carry the same meaning: teaching or study. Since it is incumbent upon the children of Israel to follow the path of their ancestors, it is necessary for the Jewish people to continually teach and study the law until they understand and follow it completely.

Scholars differ as to when the Talmud began to be written down and whether it was based on notes or recorded upon its completion. It is generally accepted that Rabbi Yehuda ha-Nasi (170–219 C.E.) compiled and edited the first section of the Talmud, the Mishnayot (pl. of *mishna,* or teaching, to distinguish it from Torah) from a multitude of manuscripts, perhaps in different dialects and languages.

The Mishnayot are organized into six sections, or *sedarim,* each dealing with a particular subject. The sections are then subdivided into tracts (or *mesekhtot,* singular *mesekhta*) that deal with matters relating to those sections. The sections are: Seeds (or *Zera'im,* which includes laws relating to vegetables; offerings; tithes; and *shmitta,* the sabbatical year); Festivals (or *Mo'ed,* holidays; the Sabbath; and more general laws affected by the festivals); Women (or *Nashim,* including marriage and divorce); Damages (or *Nezikin,* laws of property; penalties; and morals); Sacred Things (or *Kodashim,* sacrifices; laws of the first born; and slaughtering); Purifications (or *Tohorot,* defilement and purification in general; and defilement of vessels, tents, and menstruating women).

The Mishnayot were imparted with a degree of sanctity that dictated that nothing could be added to or subtracted from them. Upon their completion, religious colleges were established in Palestine and Babylonia to explain their meaning and to extrapolate the laws that emanated from them. This task was complicated by contradictory Mishnayot and by

the discovery of new texts that had not been incorporated in the Mishnayot. The body of knowledge that developed from the discussions and the explanations of the Mishna came to be called *Gemara* (Aramaic for *teaching*). The tractates of the Gemara are arranged like the sections of the Mishnayot. The Mishna opens the tractate and is followed by the Gemara. The Mishna and the Gemara together constitute the Talmud.

At the time of Rabbi Yehuda ha-Nasi's death, the Roman-dominated Middle East was characterized by political strife, which led many Jews to leave Galilee for Persian-ruled Babylon. The development of the Talmud continued there. The Palestinian Talmud, also known as the Jerusalem Talmud *(Talmud Yerushalmi),* was finalized in about 400 C.E. (although it might have been much later). The Babylonian Talmud (*Talmud Bavli,* which might have developed without its formulators knowing about the Jerusalem Talmud) was finalized in about 500 C.E. Although the Jerusalem Talmud includes more tracts (thirty-nine to the Babylonian's thirty-seven), it is considerably smaller (about one-fourth the size) and less elaborate, especially in the field of religious law *(Halakhah).* It is stronger in *Aggadah,* a collection of legends and stories, proverbs, parables, and mystic and veiled religious wisdom. The Babylonian Talmud, with its emphasis on religious law, became the dominant focus of study. This was partially determined by the political situation, which allowed the Jews in exile to study the Talmud to a greater degree than Jews could in Palestine. It is the Babylonian Talmud that continues to dominate today.

Talmudic rulings have served as the basis for religious law in Judaism throughout the generations. A vast rabbinic literature now exists based on discussions and analyses stemming from Talmudic discourse. Whereas elementary school education includes the study of the Pentateuch and Prophets, advanced religious education in higher *yeshivot* (Torah seminaries) concentrates on the study of the Talmud. Religious traditionalists reject the scientific approach to the study of the Talmud, which has developed in the university. Many similarly reject the desire of a small but increasing number of Orthodox women who wish to take part in intensive religious study, believing that only men are allowed to learn this sacred text.

TAMI

See ISRAEL: POLITICAL PARTIES IN

TAMIMAHS

Paramount shaykhs of larger Omani tribal groupings.

Tamimahs are selected from an elite family within the tribe, and their main functions are to resolve disputes and provide a focus of leadership among lineages within the tribe. The title implies complete or total authority to the extent that the bearer has the power to impose the death penalty on a tribesman, although this is rarely the case at the tribal level in Oman.

CALVIN H. ALLEN, JR.

TAMIMI, AMIN AL-

[1892–1944]

Palestinian politician.

Born to a Muslim family in Nablus, Palestine, Amin al-Tamimi studied in Istanbul, where he encountered Arab literary and political circles before World War I. After the war, he served as an adviser to the regime of the Syrian king, Faisal I ibn Hussein, in Damascus and joined delegations to Istanbul and to Lausanne in 1922 to seek Turkish support for Arab independence. He was a leader of the Nablus Muslim–Christian Association, and a member of the Supreme Muslim Council of the *mufti* (interpreter of the law of Islam) in Jerusalem from 1926 to 1938.

Tamimi went to Iraq in 1939 and participated in the 1941 Rashid Ali al-Kaylani revolt of pan-Arabism against Britain. The British then interned him in Rhodesia, where he died. He was proclaimed a martyr in the streets of Jerusalem. His son Adnan, an Iraqi citizen, was a United Nations official until 1983.

TAMIR, SHMUEL

[1923–]

Israeli politician and attorney.

Shmuel Tamir was born in Jerusalem as Shmuel Katsnelson. He was influenced by the 1929 Hebron massacre, during which sixty Orthodox Jews were murdered by Arab rioters. The rioters were themselves reacting to a demonstration by Jews who demanded access to the Western Wall in Jerusalem, At age fifteen he joined Irgun Zvaʾi Leʾumi. He was arrested in 1947 and deported to Kenya, where he was allowed to take his final law examinations. Returning to Israel after it became a state, he changed his name to Shmuel Tamir (his underground name) and was active in the Herut movement, where he was viewed as a natural heir to Menachem Begin.

He established a reputation as an outstanding attorney and was involved in some well-known cases, including the Kasztner trial in 1954, in which Reszo Kasztner brought suit against Malkiel Grunwald, who had accused Kasztner of being a traitor and causing the deaths of many Jews by negotiating with the Nazis. As Grunwald's attorney, Tamir framed the trial as being about Kasztner rather than Grunwald. The judge, Benjamin Halevi, accepted most of Tamir's arguments and accused Kasztner of having "sold his soul to the devil." Before the verdict was handed down, Kasztner was murdered by nationalist extremists who took Halevi's words literally. In the end, the court exonerated Kasztner on all charges except that he had helped Nazis escape from justice.

Tamir was a member of sixth through ninth Knessets, representing several different parties, including Gahal, the Free Center, Likud, and the Democratic Movement for Change. In 1977, when Tamir joined the Democratic Movement for Change, he was appointed minister of justice under Begin. In 1981, he left politics and returned to his legal practice.

TAMMUZ, BENYAMIN

[1919–1989]

Israeli novelist and journalist.

Benyamin Tammuz was born in Kharkov, in the Ukraine, and emigrated to Palestine in 1924. Throughout his life he worked for various newspapers, including *Haaretz.* Tammuz was a founding member of the Canaanite movement, which advocated the creation of a Hebrew, rather than a Jewish, state in Israel. This association undoubtedly influenced his earlier works, which were republished as *Angioxyl, Terufah Nedirah* (1973; A rare cure, 1981). He left the movement following a stay in Europe, which brought him into close contact with European Jews. Tammuz served as cultural attaché at the Israeli embassy in London in 1971.

In his works, Tammuz criticizes Israeli society's loss of soul and its lack of normalcy. *Requiem Le-Naʿaman* (1978; Requiem for Naʿaman, 1982) is considered his most forceful work. He deals with the seemingly intractable Arab-Israel conflict in his metaphorical *Ha-Pardes* (1971; The orchard, 1984)

and in *Taharut Sehiya* (1952; Swimming race, 1953). In his *Mishlei Baqbuqim* (1975, Proverbs of bottles), Tammuz addresses Israel's lack of spirituality, while in *Pundaqo Shel Yirmiyahu* (1984, Jeremiah's inn), he satirizes the involvement of the ultra-orthodox in Israeli politics.

TANBURI CEMIL

[1871–1916]

Ottoman Turkish musician and composer.

Tanburi Cemil was born in Istanbul into a family of musicians. He enrolled in the Mulukhiyya but left before finishing his studies and began to study music. By his death at the age of forty-five, he was considered the foremost Turkish virtuoso. Although he was most well known for playing the *tanbur* (guitar), an instrument he had mastered as a child, Tanburi Cemil was equally proficient on the *kemençe* (a small three-stringed violin) and the *lavta* (lute). Tanburi Cemil's compositions, characterized by a refined sensitivity, are considered among the masterpieces of Turkish music. Among his best-known works are *Ferahfeza Saz Semaisi, Mahur Peşrevi, Muhayyer Saz Semaisi,* and *Hicazkar Saz Semaisi.*

DAVID WALDNER

TANER, HALDUN

[1916–1986]

Turkish writer.

The son of a university professor, Haldun Taner was born in Istanbul, where he attended Galatasaray Lycée. He studied political science at Heidelberg University in 1938 and later studied literature in Istanbul. He then taught literature and art history for a number of years at the Journalism Institute and at the Ankara Language, History, and Geography School. Taner became popular in the 1950s for his short stories about the urban middle class, which have been translated from Turkish into more than a dozen languages. He worked as a journalist and in 1960 became editor-in-chief of the Istanbul daily *Tercüman.*

Taner also made his mark in the theater world, joining a young generation of playwrights in the 1950s who addressed the tensions between traditional values and the demands of modern life. He drew on the epic traditions of Turkey for his play *The Ballad of Ali from Keshan,* which was also made into a film. He won a prize with Orhan Kemal in 1957 for their screenplay *Ferhat, the Mountain Lover.* Taner also founded a private theater, the Devekusu Kabare Tiyatrosu.

TANPINAR, AHMED HAMDI

[1901–1962]

Turkish professor and author.

The son of a *qadi* (judge), Ahmed Hamdi Tanpinar was born in Istanbul and moved with his father to various cities of the Ottoman Empire. He graduated from the Antalya secondary school and studied at the Faculty of Literature, where he was a student of Yahya Kemal. After graduating in 1923, he taught at secondary schools, including the Fine Arts Academy, until 1939, when he was appointed professor of modern Turkish Literature at Istanbul University.

He wrote a major volume on post-Tanzimat-era Turkish literature, a monograph on Tevfik Fikret, and a series of critical essays.

Tanpinar also wrote poetry, novels, and short stories. In his novels, he studied the era from the Crimean War (1854) to World War II (1939), portraying developments within Turkish society and the fate of traditional ties in a modernizing society. In 1942, Tanpinar was elected to the parliament, representing Maraş.

TANTAWI, MUHAMMAD SAYYID AL-

[1928–]

Shaykh of al-Azhar.

Born in Suhaj in Upper Egypt, Muhammad Sayyid al-Tantawi earned a Ph.D. in Qur'anic Exegesis and *Hadith* (sayings of the Prophet) from al-Azhar University in 1966. In 1976 he became a professor; ten years later he became dean of the Islamic and Arabic Studies faculty and was appointed the grand mufti, Egypt's highest religious juristic authority. In 1996 he was appointed shaykh of al-Azhar, making him the forty-third shaykh of al-Azhar. Muslims seek his advice on new controversial matters.

As a mufti, Tantawi issued opinions representing the views of the government. His *fatawa* (legal opinions) have mostly been at odds with those of al-Azhar. But once he became shaykh of al-Azhar, he began oscillating between the opinions he issued as mufti and pronouncements more faithful to al-Azhar. He is under constant pressure from religious scholars to follow al-Azhar's conservative line of thinking. Many civil and human-rights organizations welcomed the appointment of this liberal shaykh to the top religious post in Egypt, but his *fatwa* prohibiting the boycott of U.S. goods brought about major protests by Christians as well as Muslims. The powerful and conservative Front for the Scholars of al-Azhar, founded in 1946, had been critical of Tantawi since he became mufti, challenging him on his giving permission to deal with banks based on interest, his prohibition of suicide attacks committed by HAMAS in Palestine, his meeting the chief rabbi of Israel, and his reduction of secondary education to three years. He was able to get the government to dissolve the Front in 1998, and he fired many outspoken scholars from al-Azhar.

On the touchy issue of female circumcision, Tantawi, as the mufti, argued against its validity. However, as shaykh of al-Azhar he gave in to the Azharite establishment. Later, when the Ministry of Health banned the practice, Tantawi changed his view again. Also, as a mufti, Tantawi viewed the *hijab* (head cover) as a woman's choice, but as shaykh, he upheld the Azhar view that it was mandatory. But on the issue of organ transplants, he held to his original position, and promised to donate his own organs after his death. On the political level, when Tantawi became shaykh, his political views became more obvious. For instance, he asked Muslims to launch jihad (holy war) against Israel to prevent the Judaization of Jerusalem, and to defuse religious sectarian tensions in Egypt, he met with Pope Shenouda III and other Christian personalities. These changes of opinion seem to be the result of both political expediency and an attempt to serve the interests of the Egyptian government.

TANZIMAT

Mid-nineteenth-century Ottoman reform movement.

The Tanzimat-i Hayriye (Auspicious Reorganization) was a series of governmental reforms between 1839 and 1876 that sought to centralize and rationalize Ottoman rule and capture more tax revenues for the military defense of the empire. The Tanzimat period is usually associated with particular personalities in the central government: the sultans Abdülmecit II and Abdülaziz, and the high-ranking bureaucrats Mustafa Reşid Paşa, Ali Paşa, and Fuad Paşa. The Tanzimat was preceded by earlier reform efforts since the eighteenth century, particularly by Abdülmecit I and Abdülaziz's father, Mahmud II,

between 1808 and 1839. And it would be followed by reforms in the early reigns of Abdülhamit II and the Young Turks.

Order and Justice

The thirty-seven years of the Tanzimat period are significant in this long process for establishing the basic principles and the governmental apparatus of reform. The bywords of the movement were justice and order, which were seen as prerequisites to effecting substantial social and economic change. The major product of the movement was a huge increase in the power of the central state. The major edicts of the Tanzimat significantly enlarged the scope of government activity by creating new fiscal, legal, and administrative instruments. For example, the edict that inaugurated the Tanzimat, the 1839 Hatt-i Şerif of Gülhane, proposed replacing inefficient tax farms with a centralized revenue service and establishing a new imperial council, the Meclis-i Vala, to formulate and direct reform policy. Subsequent edicts sought to promote justice and confidence in government, such as those of 1840, 1850, and 1870 to 1876 that laid out uniform codes of law for commerce, civil transactions, and criminal cases. A series of provincial reforms culminating in the 1864 Vilayet Law regularized the structure of local government and strengthened lines of authority to Constantinople (now Istanbul). And in the capital itself, government was reorganized into formal departments and specialized ministries. During the Tanzimat period, the Ottoman state also began to intervene in society in new ways. The 1839 Gülhane edict and other laws expanded military conscription. And the state established new elite secular schools. The 1869 Regulation of Public Instruction introduced an empire-wide school system intended to produce bureaucrats and military officers at every level of government equipped with the skills necessary to implement policy.

Defense and International Affairs

But the Tanzimat was not solely a project of administrative reform. Its goals of order and justice were often ancillary to other, more immediate goals. The 1839 Gülhane edict was issued when the Ottomans were fighting to regain territory captured by Egypt in 1832. Greece had already won its independence in 1839, and in the Crimean War (1853–1856) the Ottomans would again go to war with Russia. Hence, the 1839 edict would promise to continue the military buildup begun by Mahmud II to defend the empire from external threats. The military was reorganized in 1842 and 1869, producing a larger, more unified structure under the *serasker,* a combined chief of staff and war minister. And many other reforms were explicitly intended to raise more revenue for defense.

Tanzimat goals were further complicated by international affairs with the growing influence of France and England in the empire. The Ottomans sought European alliances for protection against Russian and Egyptian invasions. This alliance was bought at a price. For their own domestic reasons, and to further their interests in the empire, France and England pushed another set of often contradictory goals. While the Europeans advocated equal rights and democratic participation in the empire, they also acted to protect the privileges and separate status of non-Muslim millets. So, while the Gülhane edict and the 1856 Hatt-i Hümayun proclaimed equality of all citizens regardless of religion, and new secular courts were established to offset any prejudice in *shariʿa* (Islamic law) courts, in fact, society remained divided by religion in subcommunities with separate legal and social institutions.

Economic Concerns

Missing from the great initiatives of the Tanzimat was serious fiscal and economic reform. Roger Owen explains the neglect of economic reform thus: "Limited financial resources, the lack of competent administrators, the growing technological gap between Europe and the rest of the world, and the constraints imposed by Turkey's social structure and weakened international position all combined to set strict limits on the types of economic politics pursued" (Owen, p. 116). Restricted in their development of policy, the Ottomans were also plagued by the misfortune that they were attempting reform precisely during a period of economic boom in France and England.

The Tanzimat coincided with the first wave of industrial imperialism. France and England used their diplomatic influence in Constantinople to facilitate imperialist expansion at the expense of economic reform within the empire. For example, the

1838 Anglo-Turkish commercial convention, which preceded British support in fighting Egypt, promoted the spread of European imports in Ottoman markets. In the 1850s and 1860s, the British and French established new kinds of investment banks equipped to funnel domestic savings into overseas loans and projects. These banks played no small part in encouraging Ottoman indebtedness. The first foreign loan was taken out in 1854, for 3 million British pounds, to pay war expenses. Twenty years later, the Ottoman government would devote more than half of its budget to servicing foreign loans totaling 242 million British pounds.

The Tanzimat reforms had not yet produced a government apparatus capable of mounting an economic defense. For example, attempts to increase collection of taxes (and avoid foreign loans) faltered without trained personnel until well after 1859, when the Mekteb-i Mülkiye school to train bureaucrats was established. And although the 1858 land code sought to encourage more efficient exploitation of agriculture by promoting private land ownership, poor administration derailed it. In many areas, wealthy absentee landowners succeeded in registering large tracts of land, taking control away from the peasants who, if they had owned the land, might have found incentive to improve efficiency in cultivation. Instead, sharecropping discouraged investment in the land.

This is not to say that there was no effort at economic development, but rather that these efforts were overwhelmed by external factors. The Tanzimat period saw the first boom in building roads, ports, and other economic infrastructure that facilitated the transport of goods. But the tariff structure made the new transport more profitable to foreign traders than domestic merchants. While Ottoman exports increased nearly 500 percent between 1840 and the 1870s, these exports represented less than 10 percent of total production in the empire and were largely in the form of raw agricultural materials sent to England and France. In the meantime, the empire's terms of trade with Europe actually worsened. Ottoman industry, especially textiles, was undermined by unprecedented foreign competition. Although Ottoman officials established an industrial reform commission in the 1860s, they produced no significant industrial policy. So while Ottoman port cities boomed in this period, producing the first bloom of bourgeois culture, their wealth came from the profits of international trade, not from local production. The empire still relied overwhelmingly on an agricultural economy, and peasants remained as destitute as ever. And despite pockets of prosperity, the empire as a whole would sink so far into debt that it would declare bankruptcy in 1875.

It would be misguided, however, to conclude that the Tanzimat was the handmaiden of European imperialism. Older theories that it was primarily European pressure that forced the Tanzimat on the "sick man of Europe" have been substantially revised. Scholars like Shaw and Ortayli have suggested that the main impetus for reform came from bureaucrats, most prominently Mustafa Reşid Paşa, author of the 1839 edict. They acted from alarm at internal corruption and weakness, as well as from the desire to advance their own interests and protect their rights against the power of the sultan. Hence the 1839 edict abolished the sultan's right to confiscate property, commonly practiced on bureaucrats. Disenchanted bureaucrats led a second reform movement, the Young Ottomans, who in the 1860s and 1870s advocated liberalization and curtailment of the sultan's power. This led to a coup in 1876 that established a short-lived constitution and parliament.

European Influences and Internal Motivations

European influence, while not a primary motive of reform, was nonetheless significant. French and British diplomats repeatedly contributed to drafts of the various Tanzimat reform edicts, particularly those issued in times of war, as in the 1839 expulsion of the Egyptians and in 1856, at the end of the Crimean War. And Ottoman reformers often turned to European institutions for inspiration, as in the 1864 restructuring of provincial administration, the 1868 Council of State, and the 1869 Education Law, all modeled on French institutions.

Finally, a motive for reform came from the peoples of the empire. Dissatisfaction with Ottoman military weakness and a growing perception of alternatives to the current regime promoted unrest. This included not only the often cited Balkan nationalist movements, but smaller intermittent outbreaks, like the 1860 riots in Mount Lebanon and

in Damascus that grew out of economic upheaval. Religious leaders, too, organized protest, as in the 1859 Küeli Incident in Constantinople. And religious minorities agitated against the oppressive and often corrupt rule of their state-sponsored patriarchs, leading to reform of the millets in the 1860s. Provincial notables used the local councils established in 1840 as a forum for protest and as a vehicle for negotiating the path of reform.

Design and Implementation of Efforts

In assessing the success of the Tanzimat, it is important to recognize that it was not a coherent, prefabricated plan; the Gülhane proclamation was not a blueprint. The Tanzimat took shape through efforts in Constantinople and in the provinces of Ottoman officials and notables to reconcile the many pressures on the empire. In Istanbul, the Meclİs-İ Vala, in concert with the grand vizier and sultan, had to weigh a variety of simultaneous and often conflicting interests, including military challengers like the Russians, Egyptians, and separatist movements in the Balkans; entrenched interests like those of landowners and the religious hierarchy; and the expanding aims of France and England. In the provinces, local representative councils and governors faced their own spectrum of interests to satisfy: landowners, *ulama* (Islamic clergy) who resented the new secular courts and schools, artisans hurt by European imports, and peasants who could not pay the new taxes.

Tanzimat goals were thus formulated and implemented through bargains made among opposing forces. Policy steered between the simultaneous aims of central control and provincial autonomy, between the ideal of a universal and equal Ottoman citizenry and reality of divisive religious social structures and nationalist particularisms, between the need to appease international challenges and the need to protect domestic interests, and between the efficacy of autocratic, top-down reform and the equally necessary participation of the public in effecting change.

Summary of Accomplishments

In the end, the reform program succeeded most in its goal of order: reorganizing the central and provincial bureaucracy, restructuring the military, and building infrastructure for trade and transport. Less auspicious was its progress toward justice; while law codes were rationalized and venality in office reduced through improved salaries, economic inequalities increased and political participation remained minimal. The concentration of power in Constantinople lent itself to abuse. The Tanzimat period would conclude with a far more effective administrative and legal apparatus, but one that would be commandeered by an autocratic sultan, with the accession of Abdülhamit II in 1876. And in some ways, the Tanzimat was too little, too late. Efforts to strengthen the military and to integrate a population riven with religious and ethnic differences would not proceed quickly enough to avert the dismemberment of the Balkan provinces and the disastrous Russo-Turkish War of 1877/78.

The Tanzimat was, however, a bold and often impressive attempt to restructure the Ottoman polity; it simply did not have the time or opportunity by 1876 to effect significant social and economic change. Much of what the Tanzimat started, however, would bear fruit under Abdülhamit, who continued the Tanzimat's pursuit of order. And while Abdülhamit would leave behind other significant aspects of the Tanzimat, like justice and political participation, these would be taken up again with the rise of a new generation trained in the Tanzimat's schools and the 1908 constitutional revolution.

ELIZABETH THOMPSON

TAQLA, PHILIPPE
[1915–]

Lebanese politician and banker.

Philippe Taqla was born into a well-established Greek Catholic family with a long history of involvement in Lebanese politics. His father, Salim Taqla, was a minister in the cabinet that amended the Lebanese constitution and was, as a result, jailed by the French on 8 November 1943. He was released on 22 November 1943. A member of Bishara al-Khuri's Constitutional Bloc party, Philippe Taqla became a minister for the first time in 1946, the year his father died. In 1947, he was elected to parliament, and he held several ministerial positions between 1946 and 1952. His opposition to President Camille Chamoun (1952–1958) kept him out of power for several years, although he was again elected to parliament in 1957.

Under presidents Fu'ad Chehab (1958–1964) and Charles Hilu (1964–1970), he was minister of foreign affairs in eight separate cabinets, for a total of some fifty-seven months—a record by Lebanese standards. From 1965 to 1966, he was head of the Bank of Lebanon. In 1967, he became the permanent representative of Lebanon to the United Nations, and from 1968 to 1971 he was the ambassador to France. During his public career, which spanned the three decades from 1946 to 1976, he belonged to more cabinets than any other Lebanese politician except the late Prince Majid Arslan. From 1975 to 1976, he was a member of the Syrian-sponsored National Dialogue Committee, which unsuccessfully sought to put an end to the civil war that had just broken out. The war ended Taqla's public career. Since the end of the Lebanese civil war, Taqla has been serving on the board of one of Lebanon's largest commercial banks, BLOM Bank (Banque du Liban et d'Outre-Mer).

TARHAN, ABDÜLHAK HAMIT
[1852–1937]

Turkish poet, diplomat, and politician.

Abdülhak Hamit Tarhan was born into a wealthy Istanbul family; his grandfather was physician to the sultan of the Ottoman Empire. He was privately tutored, then enrolled in a French school, and after a tour of Europe became one of the first Muslim students to enroll at Robert College (now part of Bosporus University). In 1871, he married into an aristocratic family and served in the empire's embassy in Paris. In 1878, his play *Nestren* was deemed subversive, and he was dismissed. In 1881, he was readmitted to the Ottoman foreign service and was posted abroad (in Paris, Bombay, London, and Belgium) until 1921. This was also his most active period of literary production. In 1922, he returned to Turkey, where he was soon elected to represent Istanbul in the new Turkish Grand National Assembly.

Tarhan was a major writer of the Tanzimat era. His participation in the *Servet-i Fünun* (Wealth of Sciences) movement, with its concern for technique and its valorization of art for its own sake, helped to prepare an environment for the flowering of modern literature in Turkey. The sheer extent of his output—the drama *Finten* is five hundred pages—is more remarkable than the quality of his prose,

with its mixed meters and bombastic language. Tarhan is not widely read today.

TARIKH TOLANA

The Afghan Historical Society.

Tarikh Tolana (Long History) is the Afghan name for the Historical Society of Afghanistan. Tarikh Tolana was founded in 1941 by Zahir Shah to promote the historical study of Afghanistan. Tarikh Tolana produced many publications, including the journals *Aryana* and *Afghanistan. Aryana* appeared in Pushto and Dari from 1942 to 1985, and *Afghanistan,* also in Dari and Pushto, from 1945 to 1975. The society later became part of the Afghan Academy of Science. The society fell into disarray as Afghanistan disintegrated in civil war in the 1980s and although it has never officially been disbanded, it no longer functions.

GRANT FARR

TARIKI, ABDULLAH

[1919–]

Cofounder of the Organization of Petroleum Exporting Countries and prominent Saudi government minister during the 1950s and 1960s.

Born in 1919 in the Najd town of Zilfi and educated in Cairo and at the University of Texas, Abdullah Tariki was a prominent figure among Saudi Arabia's first generation of technocrats. He became head of the Directorate of Oil and Mining Affairs in 1955 and was instrumental in guiding Saudi domestic and international oil policies. In 1959, Tariki met with Juan Pablo Pérez Alfonso of Venezuela and representatives of Iran, Iraq, and Kuwait in order to establish a consultative commission designed to regulate oil prices, establish national companies, and oppose the fifty-fifty participation agreements with Western oil companies that characterized oil concessions of the day. This informal group coalesced into the Organization of Petroleum Exporting Countries (OPEC) on 14 September 1960, after Western oil companies initiated a price cut without consulting with nationals of the oil-producing countries.

Because of his opposition to the often overbearing and exploitative practices of U.S. oil companies in Saudi Arabia and his strong support for Arab nationalism, including that of Egypt's Gamal Abdel Nasser, Tariki's detractors called him "the Red Shaykh." In 1962, Crown Prince Faisal replaced him with Ahmad Zaki Yamani. From 1962 to 1976, Tariki remained politically active, writing articles and serving as a consultant for petroleum-producing countries, including Muammar al-Qaddafi's Libya. His nationalism and populism led him to denounce Western oil companies and urge Arabs to take full control over their natural resources so they could better advance their societies.

TASHILHIT LANGUAGE

Berber dialect spoken in the south of Morocco.

The Berber language as a whole is composed of three dialects: Tashilhit, used in the region of Agadir and

Sous (southwest of Marrakech); Tamazight, widespread in the Middle Atlas and High Atlas mountains in the heart of Morocco; and Tarifit, spoken in the Rif, a region in the north of Morocco. *Tifinagh* is the name given to the writing of Tashilhit.

RAHMA BOURQIA

TAURUS MOUNTAINS

Major mountain chain of southern Turkey.

The Taurus chain is composed of several parallel limestone ranges rimming and reaching the Mediterranean, for about 930 miles (1,500 km), from Muğla in the west to Lake Van in the east. The summits often exceed 10,000 feet (3,000 m), the highest nonvolcanic peak being 12,323 feet (3,756 m)—the Aladağ—north of Adana. The average width of the range is 95 miles (150 km), and it forms a barrier to the Anatolian plateau but provides a valuable source of water for irrigation, forest products, and summer pasture. The most important pass is north of Tarsus, called the Cilician Gates. To the northeast is the extension of the range, called the Anti-Taurus.

TAX FARMING

Means of managing agrarian revenues, as well as of financing governmental programs.

Similar to the contemporary concept of privatization, tax farming is a poorly understood phenomenon in Middle Eastern history. It is often linked to the abuse of state power and debates on the institutional causes of the fall of premodern Islamic states. In essence, however, tax farming refers to any type of tax collection conducted by private individuals rather than salaried state personnel. These individuals acquire the right, often by auction, to collect a defined revenue for a specific period of time. From the Umayyads onward, Islamic states contracted out collection of taxes in proximate and more distant provinces. Tax farming allowed administrators a degree of flexibility and an opportunity to strike a compromise between the old and the new. Indeed, the earliest Islamic administrators of Egypt awarded contracts to Copts and women. Although the powers of tax farmers were contingent on the type of revenue collected, the status of taxpayers, and the degree of state oversight, Islamic governments found ways to curb abuse and default of contract by requiring financial guarantors and subdividing responsibilities. As this form of collection falls under the legal notions of contract, Islamic lawyers usually separate the discussion of tax farming from the actual fiscal responsibilities of Muslim and non-Muslim subjects in terms of alms *(zakat),* tithes *(ushr),* and poll taxes *(jizya).*

There are few comprehensive studies of tax farming during the period between the Abbasids and the Mongols, though Middle Eastern states contracted out to private agents many types of taxes, both those that were Islamically recognized and those that were not. More than an institutional or legal question, tax farming may be regarded as a window on the evolving structure of premodern Islamic states and its relation to society. Because most of the Islamic schools of law regarded conquered land of non-Muslim populations *(kharaj)* to be, effectively, state land, tax farming was utilized alongside the *iqta* or tax fief, a form of resident administration, as an important means of managing agrarian revenues. Pending further research, one may speculate that the alternation between military and privatized forms of tax collection preceding and after the thirteenth-century Mongol invasions was not only the result of corruption of institutions or abuse of office, as the private auction of tax fiefs during the later Mamluk period in Egypt suggests, but also a means of coping with the dislocation of agrarian populations, greater demand for cash revenues, and changing land-use patterns.

Although the forms of tax farming in the Middle East after the sixteenth century have similar legal bases, the practices coincide with new worldwide trends, namely the escalating costs of warfare and expanding global trade. In the Ottoman Empire, for example, tax farming before the sixteenth century had been largely limited to certain commercial revenues and tariffs, and many of the tax farmers were non-Muslims. But as participants in the "gunpowder revolution" and the battle for Europe and

West Asia, the Ottomans required ever greater sources of cash to pay their infantries. Auctions of revenue contracts were a means of borrowing: They allowed the state to anticipate future tax receipts, albeit at a certain loss. Although the Ottoman state continued to administer many taxes directly, over the seventeenth century, many Muslim Ottoman officers and civilians bid for rights to collect taxes on the extensive crown and vizierial domains, tariffs, and manufacturing and tribal taxes, as well as to hold certain offices. A 1695 decree gave Muslim tax farmers the right to hold contracts for life *(malikane mukataa)* and to pass these holdings on to male heirs. Although this extensive use of tax farming produced many problems, it also reinforced the loyalty of Muslim tax farmers, if only by dint of self-interest, to the state, which awarded and recognized these rights.

Since the French Revolution, social scientists have tended to regard fiscal decentralization as one of the ancien régime's greatest evils as did the Ottoman state planners who tried to restrict and then eliminate tax farming in the early decades of the nineteenth century. Despite good intentions, Middle Eastern reformers were frustrated by chronic fiscal shortfalls and lack of administrative staff. No such compunctions about modern statecraft burdened the French colonial regime in Algeria, however. Well into mid-century, French imperialists continued to adapt an older tax-farming system to new political and fiscal purposes.

TCHERNICHOVSKY, SAUL
[1875–1943]

Hebrew poet, translator, and physician.

Saul Tchernichovsky (also Tsharnikhousky) was born in Mikhailovka, a village bordering on the Ukraine and Crimea. The most versatile of Hebrew poets, he was instrumental in the development, both in form and content, of Hebrew poetry. He published his first poem, *Ba-Halomi* (1892; In My Dream), at seventeen in the U.S. Hebrew paper *Ha-Pisgah.* His first book of poetry, *Hezyonot U-Manginot* (1898; Visions and Melodies), is romantic in style and deals with love and nature. From 1899 to 1906, he studied medicine in Heidelberg and Lausanne. During this period he wrote the first of his "Greek" poems—an indictment of Judaism's weakness vis-à-vis the vitality of Greek culture. The most powerful of these poems is *Lenokhah Pesel Apollo* (In the Presence of Apollo's Statue). In 1906 he returned to Russia, and until World War I, he held various positions as a doctor. The turbulent period in Russia following the war is described in his collection *Sonnetot Krim* (Crimean Sonnets). His *Lashemesh* (To the Sun), a series of sonnets written beginning in 1919, is in stark contrast to the surrounding darkness. In 1922 he left Russia but, failing to reach Palestine, he settled in Berlin where he translated such classical writers as Goethe, Molière, Shakespeare, and Homer. In 1929 he began to publish a ten-volume jubilee edition of his poetry, short stories, plays, and translations.

In 1931, at the invitation of Dr. A. M. Masie's family, Tchernichovsky arrived in Palestine to complete and edit a medical dictionary begun by the deceased doctor. The result was a trilingual work in Latin, English, and Hebrew, *Sefer Ha-Munahim Li-Refuah U-Lemadaei Ha-Tev'a* (1934, A Book of Terminologies in Medicine and the Natural Sciences). Tchernichovsky first resided in Tel Aviv and then moved to Jerusalem, where he wrote his final works of poetry. In 1937 he published *Kol Shirei Shaul Tcher-*

nichovsky (The Poems of Saul Tchernichovsky). In 1942 the Tel Aviv municipality established a prize in his name for translations of classics and world classical literature with Tchernichovsky as its first recipient. Once in Palestine, his poems became strongly nationalistic, and in the resettlement of Eretz Yisrael, he saw the redemption and rejuvenation of pre-exilic Judaism. He expressed all these sentiments in ballad form, such as in *Amma Dedhahaba* (1943; The Golden People). Tchernichovsky died after a long illness and was buried in Tel Aviv's old cemetery.

ANN KAHN

TEA

A drink for social occasions and after meals.

In the Middle East, tea is a popular drink brewed with the leaves and water in a kettle (although tea bags are becoming more common). Hot tea is strained into small glasses, often set in decorative metal holders, and served with various additions depending on region and personal taste. These include sugar, honey, lemon, apple flavoring, and mint. (Mint tea is also a very popular digestive drink; it is made solely from mint leaves of the genus *Mentha,* which grow throughout the Mediterranean region and Eurasia.)

Tea is imported to the Middle East from the Asian tea plantations of China, Japan, India, Sri Lanka, and islands of the East Indies. It is also cultivated along Iran's Caspian Sea coast and Turkey's Black Sea coast. Originally it came into the region by way of ancient caravan routes along the Silk Road (from China to Iran to the Black Sea and Constantinople) or ship routes from the South China Sea and the Indian Ocean into the Arabian Sea, the Persian Gulf, and the Red Sea.

TEBU TRIBE

See TRIBES AND TRIBALISM: TEBU TRIBE

TECHNION-ISRAEL INSTITUTE OF TECHNOLOGY

Israeli university.

The Technion-Israel Institute of Technology, located in Haifa, was founded because of the lack of opportunities for technical studies for Jews in places such as Russia. This void meant that Jews were excluded from technical professions and pushed into urban commercial occupations. While the cornerstone was laid in 1912, World War I delayed the opening. The first classes were held in 1924. Hebrew became the language of instruction only after a long "language conflict" over whether German or Hebrew should be used.

There are faculties and departments in aeronautical engineering, agricultural engineering, architecture and town planning, chemical engineering, chemistry, civil engineering, electrical engineering, food and biotechnology, general studies, industrial and management engineering, materials engineering, mathematics, mechanical engineering, mechanics, nuclear sciences, physics, and teacher training. The number of undergraduate and graduate students enrolled in 1999/2000 was 12,700.

MIRIAM SIMON

TEHIYA

See ISRAEL: POLITICAL PARTIES IN

TEHRAN

Capital of Iran since the late eighteenth century.

In 1800, Tehran was a small city with an estimated population of 20,000; it was surrounded by twenty-foot mud walls with four gates. The wall was encircled by a moat, which was up to 40 feet wide and between 20 and 30 feet deep. Although several new buildings were constructed during the reign of Fath Ali Shah Qajar (1797–1834), the first major expansion of Tehran dates from the reign of Naser al-Din Shah (1848–1896), the third Qajar monarch. The old walls were pulled down, plans for an octagonal wall on a French model were followed, and twelve gates were built. New grounds were added to the city compound, as well as large boulevards and imposing

public and private buildings, designed with many European features. The city had a small railway leading to a place of pilgrimage in the south, and the summer resorts in the Alborz Mountains in the north were developed and became popular with richer Tehranis. In 1852, a first census and a count of all the buildings were made, which show how small the city still was: It had only 12,772 buildings, 8,697 houses, and 4,220 shops. The second census, prepared in 1869, gave the population as 150,000.

Tehran's second phase of development dates to the reign (1926–1941) of Reza Shah Pahlavi, founder of the Pahlavi dynasty. The city was expanded outside its old walls, especially to the north and the northwest. A notable feature was the neoclassical buildings, designed mainly by European architects, especially exiles fleeing the Russian Revolution but also Iranians who had studied abroad. Houses began to be built facing outward, to the street, instead of inward, to the courtyard, and streets were planned for the passage of automobiles. The ornate gates, a special feature of old Tehran, were pulled down, as were many buildings of the Qajar dynasty period.

Tehran's third phase of development dates to the early 1950s, when a new generation of Iranian architects and technocrats, who had studied in U.S. universities, returned to erase many of the remaining features of the old city. Tehran began expanding rapidly and haphazardly, because of the petroleum industry, oil-induced construction, and the industrialization boom of the 1960s and 1970s. Between 1956 and 1976, the city's population tripled, from 1.5 million to 4.5 million. Despite the economic, political, and social upheavals caused by the Iranian Revolution (1979) and the Iran–Iraq War (1980–1988), Tehran's population continued to grow at an average annual rate of 3.5 percent from the mid-1970s to the late 1980s. Thereafter, population growth declined by about 1 percent per year within the city, but nearby towns and rural areas experienced rapid growth as they were developed as suburban communities to the east, south, and west of Tehran. According to the 1996 census, a total of 6,759,000 people lived in the city of Tehran; more than 1.3 million lived in suburbs, including the densely populated communities of Islamshahr and Karaj.

TEKELI, ŞIRIN

[1940–]

A feminist activist in Turkey.

Şirin Tekeli is the foremost feminist author and activist of second-wave feminism in Turkey. Born in 1944, she is the only child of two philosophy teachers. She received her high school education in Ankara and completed her college education in political science in Lausanne University, Switzerland. She studied the work of David Easton for her Ph.D. in political science in Istanbul University, where she was employed as an assistant professor. The thesis she wrote in 1978 for promotion to associate professor was on women's political participation, and prompted her feminist activism. Published in 1982 as a book called *Kadınlar ve Siyasal-Toplumsal Hayat* (Women and political-social life), this study was the first serious and comprehensive discussion of women's marginalization in sociopolitical life written in Turkish and from a predominantly Marxist perspective. Her interviews with Turkish women parliamentarians, which she included in the book, exposed their striking marginality and problems in political life. The book was widely read, moving beyond a narrow academic circle, and had immediate and long-lasting influence in shaping a feminist culture in Turkey.

Tekeli resigned from her position as an associate professor in 1981 and began her career as a feminist activist, translating and editing books. She engaged in organizing consciousness-raising groups and feminist publication circles in early 1980s and initiated the founding of the Kadın Eserleri Kütüphanesi ve Bilgi Merkezi (Women's Library and Information Center) and Mor Çatı Kadın Sığınağı (Purple Roof Women's Shelter) Foundations with her friends in 1990. She worked as a volunteer in the Women's Library between 1990 and 1996 and helped the institution develop into a vital organ of feminist dialogue. In 1997, she responded to the hunger strikes that were staged in prisons by deciding to work for women's entry into the parliament. She founded KADER, Kadın Adayları Destekleme ve Eğitme Derneği (Association to support and educate women candidates) in 1997 and served as its president between 1997 and 1999. The French government presented her with the award of *Officier* of *l'Ordre des Palmes Academiques* in 1996.

YEŞIM ARAT

TEKKE

Local headquarters for Sufi orders.

Tekke is the Turkish word for the local meeting and living center of a Sufi fraternity. The Persian equivalent, *khangah,* is commonly used in most non-Turkic contexts, while *zawiya* (Arabic) functions as a distinctively North African synonym.

The late tenth and eleventh centuries saw a rise in the popularity of Sufi teachings and charismatic leaders, as well as the concurrent evolution of various Sufi organizations or "fraternities." As they expanded, these fraternities began to establish special living quarters for their members, as well as space for the various ritual, scholarly, and social service activities conducted by the local chapters of what gradually grew into international Sufi orders. In different contexts, either the state or private citizens endowed a vast network of tekke and khangah complexes designed to serve as regional headquarters for the fraternities. Many of these were composed of residence cells, a large kitchen-refectory for members and guests, a Qurʾan school for local youth, a library for advanced study, a tomb-shrine of a deceased spiritual master, and a mosque. Partly because the money used to endow tekkes and khangahs was often invested in local business and agriculture, a number of them throughout the late medieval and early modern Muslim world (c. 1200–1900) functioned as important economic, cultural, and political centers. In fact in some regions—particularly southern Asia, western North Africa, and the Balkans—tekkes and khangahs played a role in the Islamization of local peoples and cultures. Although the institution of the tekke generally flourished under Ottoman patronage, the stridently secularist vision of Mustafa Kemal Atatürk and his regime led to the 1925 closing of all the great Anatolian tekkes—including that of the Mevlevi Brotherhood (the famed "whirling dervishes") in Konya—and the subsequent abolishment of nearly all institutional Sufi activity in the new Turkish republic.

SCOTT ALEXANDER

TEL AVIV

Coastal city founded in Ottoman Palestine in 1909; capital of Israel, 1948–1950.

Tel Aviv is a sprawling metropolis surrounded by suburbs; it was the first city to be established by Jews in the modern era. As numerous Jewish settlers arrived in Palestine in the late nineteenth century, they had increasing difficulties finding accommodations at affordable prices in the overcrowded residential areas of Jerusalem and Jaffa. In both cities, Jews began to purchase land and build new suburbs.

Jaffa is adjacent to, and today part of, Tel Aviv because Ahuzat Bayit, the building society, purchased beachfront property and underwrote the construction of Tel Aviv's first sixty houses in 1909—initially intended as a new suburb of Jaffa. Important differences between this project and other suburbs could be immediately discerned. Architects and engineers helped design the arrangement of houses

and streets; individual land grants were large; all connecting roads and streets were paved; and running water was supplied to each house. Ahuzat Bayit became the most spacious and comfortable suburb in all Palestine. The building society changed the name to Tel Aviv in 1910, marking both a biblical text (Ezekiel 3:15) where the name appears and mention in Nahum Sokolow's translation of Zionist leader Theodor Herzl's *Alteneuland* (The Old New Land). Initially planned as a residential suburb, all of Tel Aviv's first settlers worked in Jaffa. Many of Tel Aviv's founders had private capital; they owned businesses and worked in the free professions. Jewish engineers and contractors built the city's first houses with supplies furnished by Jewish factories. Symbol of the New Yishuv (Jewish community), Tel Aviv's relatively rapid expansion paused during World War I, but resumed and intensified during the British mandate (1923–1948).

Although Zionism stressed agricultural settlement, and donated funds subsidized the cost of collective and communal settlements, most immigrants chose to live in cities and many selected Tel Aviv. By 1935, the population had grown from 2,000 to 120,000 and Tel Aviv became the political, economic, and cultural center of the Jewish National Home. Factories and businesses stood alongside the Histadrut (Jewish Labor Federation) and military headquarters. Publishing firms, major newspapers, several dance and theater companies, the symphony, and an important museum were founded. Transport and roads radiated out to other cities and the countryside.

In May 1948, David Ben-Gurion proclaimed the independence of the State of Israel at a meeting held in the Tel Aviv Museum. In 1950, the commercial port city of Jaffa was incorporated with Tel Aviv, forming the twin city of Tel Aviv-Jaffa. Tel Aviv-Jaffa has benefited from Israel's rapid economic growth, today numbering more than 350,000 residents. (The population of Tel Aviv and its outskirts numbers 2.5 million.) The Histadrut headquarters no longer dominates the skyline or the city's economy. Art, music, and drama flourish in galleries and theaters, and there is an impressive array of shops, cabarets, and restaurants (both kosher and non-kosher). Much of Tel Aviv's cosmopolitan core now remains open on the Jewish Sabbath, presenting an urban profile that differs in scale and tone from that projected by Jerusalem.

TEL AVIV UNIVERSITY

Israeli university.

In 1953 the city of Tel Aviv founded the university to meet the higher education needs of the populous, developing area.

The university offers programs in the arts and sciences within the nine faculties of engineering, exact sciences, humanities, law, life sciences, management, medicine, social sciences, and visual and performing arts, as well as schools of dental medicine, social work, education, and environmental studies. In 2002 the student population was approximately 26,000.

TEL HAI

Pioneer Jewish settlement in Palestine that became a national symbol.

Tel Hai is a Jewish settlement founded in 1918 in Galilee, on the northern frontier of Palestine, as an attempt to influence the drawing of the boundary between British and French colonial possessions. After the British gave up responsibility for Syria and Lebanon at the end of World War I, and before the French Mandate began, a hiatus in authority led to

irregular warfare endangering Jewish settlements in the undefined upper Galilee/northern border area. Many Zionist leaders, among them Vladimir Ze'ev Jabotinsky, advised the small number of settlers at Tel Hai to withdraw because a reasonable defense could not be mounted. They remained, and six Jews died in the final attack in 1920, among them the military hero Yosef Trumpeldor, who had been sent to organize their defense. Tel Hai became a national symbol of the determination of Zionists to hold on to settlements at all costs and a metaphor for the principle that Jewish national life in Palestine required personal sacrifice.

TEMPLARS

German evangelical settlers in Palestine in the late nineteenth century.

The Temple Society (Tempelgesellschaft) was founded in the mid-nineteenth century in the Kingdom of Württemberg. Pietistic Evangelicals, the Templars criticized the church and decided at first to settle and found colonies and, later, to improve the land in Palestine as they awaited the imminent Kingdom of Heaven. They established a colony in Haifa in 1868 and brought modern European methods of agriculture. They also established the carriage trade from Jaffa to Jerusalem, exported wine, and established settlements in Jaffa, Haifa, Sarone (part of modern Tel Aviv), Jerusalem, Wilhelma, Galilen Bethlehem, and Waldheim. Individuals settled in Jerusalem and founded a German colony there that, although denied official support by the German government, numbered some 1,200 people by 1914.

Deported as enemy aliens by the British from 1917 to 1918, as German nationals they kept a low profile after they were permitted to return during the Palestine Mandate. Their religious fervor had decreased by the third generation and, as Germans, many were receptive to National Socialism, even though there was no official advocacy of support for the Nazi Party. Many sympathetic members were allowed to join the party; they also enlisted their children in the Nazi Youth and disseminated Nazi propaganda. With the outbreak of World War II, there were approximately 1,500 Germans of Templar origin who were interned, and afterward they were repatriated to Germany in exchange for Palestinians who had fallen into German hands. Some were deported to Australia. In 1948 their property was taken over by the Israeli government and placed under the Guardian of German Property; it was later taken into account during the negotiations over Nazi Holocaust reparations conducted by the World Jewish Congress and the West German government.

TERRORISM

Violence directed primarily and randomly against civilians with the aim of intimidating them, achieving political goals, or exacting revenge for perceived grievances.

Since the 11 September 2001 terrorist attacks that destroyed the twin World Trade Center skyscrapers in New York City and killed nearly 2,800 persons, terrorism arising out of conflicts in the Middle East has been a focus of international media attention. Concern about violence undertaken by groups and states it considered to be terrorists prompted the United States to declare a war on terrorism, two manifestations of which have been the wars in Afghanistan and Iraq. Despite this close association of terrorism with the Middle East, with the notable exception of the year 2001, the majority of terrorist incidents committed worldwide and the majority of victims of terrorism have been outside of or unrelated to political conflicts in the Middle East. Nevertheless, it is true that civilians somewhere in the Middle East have been victims of politically motivated violence every year since at least 1992.

Defining Terrorism

In trying to assess the significance of terrorism, the most difficult problem is the lack of an agreed-upon understanding of what the word *terrorism* means. Political scientists tend to restrict terrorism to acts of violence carried out by nonstate actors against civilians. Historians, sociologists, and experts in international humanitarian law, however, tend to use a broader definition that includes all premeditated acts of violence against civilians, whether carried out by nonstate political groups or by states. Governments—especially those confronting armed opposition groups—and the media generally use the political-science definition of terrorism, often expanding it to include violent acts against military as well as civilian victims. In contrast, the nonstate perpetrators of violence consider their actions to be legitimate forms of resistance to state terrorism aimed at suppressing self-determination, even though they may be directed against civilians (Kimmerling, p. 23). The notion of a legitimate right to resist state oppression is controversial, and no international legal convention addresses this matter. Nonstate groups generally cite the 1960 United Nations General Assembly Resolution on the Granting of Independence to Colonial Countries and Peoples as recognizing their right of resistance. Indeed, that resolution declares, "forcible resistance to forcible denial of self-determination . . . is legitimate," and it says that nonstate groups may receive external support from other governments.

Giving a measure of international legitimacy to resistance struggles has complicated the problem of defining terrorism because it essentially has become a political decision whether a nonstate actor is deemed a terrorist or a genuine national liberation movement fighting for independence from foreign control or occupation. During the Cold War rivalry between the Soviet Union and the United States (1947–1991), such decisions tended to be based more on ideological factors than on objective assessments of the goals and motives of particular nonstate groups. For example, the Soviet Union provided clandestine support for the South Yemen independence movement (1963–1967) and for the Dhufar liberation movement in Oman (1965–1971) primarily because both areas at the time were under the control of Britain, a major U.S. ally. Similarly, the United States provided covert assistance to the Kurds in Iraq (1970–1975) and the Mojahedin in Afghanistan (1979–1989) primarily because in both cases the nonstate groups were fighting for independence from Soviet client regimes. The Soviet Union and the United States condemned as

Social worker Farida Djefel (right) comforts Khalti Taous at the offices of the National Association for the Families of Terrorism Victims in Algiers, Algeria, in 1999. Taous's son, a policeman, was killed by suspected Islamic militants in 1994. © AP/Wide World Photos. Reproduced by permission.

terrorists those nonstate groups that were fighting against regimes the other country favored, and they praised as national resistance heroes those groups fighting against governments they opposed.

Over time, a special vocabulary of terrorism emerged. For instance, the term *state terrorism* came to be used for violent acts used by disfavored states to suppress resistance movements. The Soviet Union used this term to describe the policies of two U.S. allies: Israel, for the repression of Palestinians in the occupied West Bank and Gaza Strip after 1967; and Turkey, for the repression of its Kurdish minority after 1984. The United States, in turn, used *state terrorism* as early as the mid-1970s to describe the repressive domestic policies of states it considered to be Soviet allies, such as Iraq, Syria, and South Yemen. During the 1980s another term, *state sponsor of terrorism,* emerged to describe the support for nonstate groups provided by countries that clearly were not allied to either the Soviet Union or the United States. Iran and Libya were identified as the main state sponsors of terrorism, the former because of its assistance after 1982 to Hizbullah in Lebanon. In the case of Libya, the United States accused that country of supporting Palestinian groups that targeted U.S. and Israeli interests in Europe and of assisting several terrorist groups operating in north and central Africa.

Origins of Terrorism in the Arab–Israel Conflict

The superpower rivalry in and rhetoric about the Middle East tended both to obscure the local origins of terrorism and to frustrate efforts to address the multifaceted consequences of violence. This problem is best revealed in the Arab–Israel conflict, which began in 1948 separately from but in tandem with the Cold War and still continues unresolved even though the superpower conflict has ended. One significant legacy of the Cold War relationship to the Arab–Israel conflict has been a great volume of partisan literature, especially in the years after the formation of the Palestine Liberation Organization (PLO) in 1964. The Israeli–Palestinian struggle

over pre-1948 Palestine (which became Israel plus the territories of the Gaza Strip and the West Bank in 1948) is the core of the Arab–Israel conflict. The literature on this aspect of the conflict illustrates the controversies in trying to achieve any relatively objective consensus on what groups merit designation as terrorists and what kinds of violent acts constitute terrorism. For this reason, it is a useful case to study.

For nearly thirty years prior to the signing of the Oslo Accord in September 1993, the State of Israel proclaimed the PLO and the various Palestinian resistance groups that comprised its membership to be terrorist organizations. Inevitably, there emerged a body of writings that supported the Israeli position, not just in Israel but also in Europe and North America. Although some of these studies were sophisticated and scholarly analyses of the PLO's goals and methods, other accounts were merely polemical denunciations of PLO tactics. Beginning in 1968 and continuing for more than a decade, armed Palestinian groups known as *fida'iyyun* (guerrillas) carried out numerous, violent operations that resulted in the deaths of civilians. Many of their actions were sensational incidents that attracted considerable media attention—a PLO objective, as the guerrillas hoped publicity would further their cause. The several international airplane hijackings, for example, culminated in September 1970 (known as Black September) with the hijacking of four planes in as many days, precipitating a civil war between the PLO and the army of Jordan. Attacks on Israeli interests abroad culminated in the seizing of Israeli athletes as hostages at the 1972 Olympic games in Munich, an incident that left eleven athletes dead. Sporadic cross-border raids into Israel (from Jordan and Lebanon) culminated in the temporary seizure of buildings in the northern Israeli towns of Kiryat Shmona and Maʿalot (April and May 1974) and the deaths of thirty-eight civilians, including many children. Rather than winning sympathy for the Palestinians as the perpetrators expected, such incidents created and reinforced a public image of the PLO as a terrorist organization.

In contrast to the official Israeli and U.S. views, the PLO saw itself as a national liberation movement dedicated to achieving Palestinian rights and resisting what it termed Israeli state terrorism. Its fighters were lauded as heroes and martyrs, and its operations against Israeli civilians were justified as defense of, or reprisals for, Israeli attacks on Palestinian refugee camps and assassinations of PLO leaders. The Soviet Union, the primary international backer of the PLO after 1968, tended to remain silent about many of the more sensational acts of violence by Palestinian guerrillas, but it continued to promote the PLO as a national liberation movement. Soviet support was especially significant after 1974 when Moscow encouraged diplomatic recognition of the PLO as the legitimate representative of the Palestinian people. Quite separate from the Soviet backing for the PLO, a few academic studies and advocacy articles appeared that were sympathetic to Palestinian claims and rights. Although these writings were scarcer than the volumes of pro-Israeli literature and never achieved a similar impact on the mainstream U.S. media, they did have some influence on intellectuals in Africa, Asia, and Europe.

The Israeli–PLO conflict affected both regional and international politics by the late 1970s. This is because the PLO used Lebanon, where a large number of Palestinian refugees had lived since 1948, as a base for operations against Israel throughout the 1970s, and Israel responded with retaliatory raids against what it termed "terrorist nests"—suspected PLO facilities in refugee camps. Many Lebanese and Palestinian civilians died in these raids, and their deaths were described officially as "collateral damage" in a larger operation against "terrorist infrastructure." The PLO condemned Israeli air strikes as further evidence of state terror and also cited them as justification for its own continuing attacks across the Lebanon-Israel border. The escalating cycle of attacks and reprisals contributed to the civil war in Lebanon (1975–1989) and also led to an Israeli invasion of southern Lebanon in 1978. Israeli forces occupied a 6-mile-wide security strip, ostensibly to prevent attacks into Israel; this occupation lasted until 2000. A second Israeli invasion of Lebanon in 1982 resulted in a war with the PLO, its forced withdrawal from Lebanon under international protection, and the Israeli occupation of Beirut and all of southern Lebanon. However, almost as soon as the threat from the PLO seemed to be contained, Israel faced a new source of terrorism that stemmed directly from its occupation of Lebanon (which lasted until 1985).

A Lebanese group, Hizbullah, was formed in late 1982 with the initial aim of expelling Israeli forces from Lebanon. Hizbullah's tactics, which included suicide bombings against French and U.S. military forces in 1983 and, beginning in 1984, the kidnapping of European civilians to use as hostages for the release of its members held in Israeli jails, earned it an international reputation as a terrorist organization. Hizbullah, however, neither sought nor received any support from the Soviet Union. Like the revolutionary government that assumed power in Iran in 1979, Hizbullah was equally hostile to Soviet and U.S. policies in the Middle East. Although its objectives were first and foremost political, Hizbullah also was inspired by its own interpretation of Shiʿite Islam. Its frequent use of religious rhetoric to explain or to justify its actions tended to alienate the Soviet Union even more than its direct criticisms did. Thus, Hizbullah became one of the first major nonstate groups in the Middle East to lack a superpower patron. Despite or perhaps because of this status, Hizbullah succeeded in establishing a permanent presence in Lebanon's politics and in becoming a nonstate group whose actions Israel neither could control nor ignore.

Meanwhile, the removal of the PLO to Tunisia did not end its political influence among Palestinians, and when an intifada (uprising) erupted in December 1987 among Palestinians living under Israeli occupation in the West Bank and Gaza Strip, the PLO gradually emerged as a main coordinating force for the resistance. New groups unaffiliated with the PLO also emerged during the intifada, principally HAMAS and Islamic Jihad. Unlike the PLO, which claimed to be inspired by secular ideas, HAMAS and Islamic Jihad cited religious ideals and percepts as at least partial justification for their resistance against Israeli rule. Concern about the increasing influence of groups such as HAMAS and Islamic Jihad may have prompted the leaders of Israel's Labor Party to begin negotiations with the PLO to end the long conflict. The political rapprochement between Israel and the PLO in 1993 not only was unexpected, but it also necessitated a re-evaluation of the negative ways each side had depicted the other. However, the years of intellectual and emotional investment in the terrorism paradigm made it difficult for some people on both sides to view formerly hated terrorists as legitimate partners in peace negotiations. Thus, from the outset of the Oslo peace process, some Israelis and Palestinians were skeptical of the agreement and even were determined to overturn it. The assassination of Israeli prime minister Yitzhak Rabin in November 1995 (by an Israeli opposed to the Oslo Accord) and the first suicide bombings undertaken in 1996 by HAMAS were significant terrorist incidents that led to multiple actions and reprisals that cumulatively undermined popular support for the peace process among both Israelis and Palestinians.

A 1999 wanted poster for Osama bin Ladin, leader of the al-Qaʿida terrorist network. The poster depicts the carnage from bombings of the U.S. embassies in Kenya and Tanzania on 7 August 1998, an act that the United States blamed on bin Ladin. The terrorist attacks of 11 September 2001 would bring far greater infamy to bin Ladin in the future. © CORBIS. REPRODUCED BY PERMISSION.

It was in this increasingly tense atmosphere that Israeli politician Ariel Sharon intervened in a manner that would have the effect (albeit at the time,

unforeseen) of overturning the peace process. Sharon was one of those Israelis who distrusted and even opposed the Oslo Accord, and it is plausible that he never had changed his conviction that the PLO was a terrorist organization. When in September 2000 he led a group of Knesset members, under armed escort, into the Muslim religious complex in Jerusalem known as al-Haram al-Sharif, his intention was to assert Israeli sovereignty over a site that Jews claim is the Temple Mount—the location of their ancient temple destroyed by the Romans more than 2,000 years ago—and thus to prevent its possible return to Palestinian sovereignty, which had been proposed by some members of the Labor Party. The incident provoked clashes with Palestinian worshipers, and the next day Israeli police killed four protesting Palestinians as they emerged from Friday prayers at the al-Aqsa Mosque in al-Haram al-Sharif complex. The situation escalated rapidly as Palestinian policemen, in an effort to protect civilians, clashed with Israeli soldiers at checkpoints in the West Bank. The al-Aqsa intifada thus began, and subsequently its characteristic features included targeted assassinations of suspected Palestinian resistance leaders by Israel and retaliatory Palestinian suicide bombings at crowded civilian sites inside Israeli cities. By early 2001, Israel and its supporters were labeling all acts of violence from the Palestinian side as terrorism.

The U.S. "War on Terrorism"

Middle East terrorism, except for incidents such as the attack at the Munich Olympic games in 1972, generally has stayed within the region. However, Middle East–related terrorism acquired a global dimension with the 11 September 2001 attacks in the United States by nineteen members of the al-Qaʿida network. Al-Qaʿida is a political organization founded by Saudi Arabian national Osama bin Ladin, and its objectives after 1991 were to attack the United States and its interests because it viewed the U.S. government as the main sponsor of regimes that it defined as "unjust," oppressive, and illegitimate. Ironically, bin Ladin collaborated with U.S. officials during the 1980s when he and the United States shared the same goal of forcing the Soviet Union to withdraw its troops from Afghanistan. But when the United States dispatched troops to Saudi Arabia in 1990, bin Ladin viewed this development as being no different from the situation of Soviet troops in Afghanistan—in both cases the army of an "imperialist" superpower occupying a weaker and Muslim country. Furthermore, the presence of U.S. military forces in Saudi Arabia meant that a non-Muslim army for the first time in more than 1,400 years was occupying the religiously sacred land in which were located Islam's two holiest sites, the cities of Mecca and Medina. Even though bin Ladin believed and practiced a very conservative interpretation of Sunni Islam, his primary objectives vis-à-vis the United States are political, not religious. Beginning with the bombing in the underground parking garage of the World Trade Center in 1993, persons close to his al-Qaʿida organization were implicated in several terrorist attacks. The most sensational incidents included suicide bombings outside the barracks housing U.S. military personnel in Saudi Arabia in 1996 and outside two U.S. embassies in East Africa in 1998. The 2001 attacks prompted the United States to declare a "war on terrorism," and the Taliban regime in Afghanistan became the first target because it provided sanctuary to al-Qaʿida and rejected requests for the extradition of bin Ladin and other leaders.

Its war on terrorism policy led the United States to focus on groups it designated as terrorist to an unprecedented extent. One consequence of this new preoccupation was that after 2001 Washington accepted the argument of Israeli prime minister Sharon that PLO chairman and Palestinian Authority president Yasir Arafat was condoning terrorist actions by groups such as HAMAS, Islamic Jihad, and his own Al-Fatah movement. When in spring 2002 the Israeli army reoccupied West Bank towns and villages that were supposed to be under the control of the Palestinian Authority, the United States effectively did not protest. Thus, the peace process between Israel and the PLO, seriously ailing since fall 2000, became an indirect but fatal casualty of the war on terrorism.

The war on terrorism is cause for concern among legal experts in the field of international humanitarian law, especially because states identified as sponsors of terrorism, such as Iraq, become legitimate targets for attack because they are thought to possess weapons of mass destruction that they might provide to terrorist groups. The experts believe that civilians, who have been the primary vic-

tims of violent conflicts since the early 1990s, will be the main victims again, and they cite statistics that demonstrate that this has been the case in both Afghanistan and Iraq.

The phenomenon of terrorism has prompted the drafting of several conventions, most notably the Rome Statute, that would make the intentional killing of civilians a war crime, no matter who is responsible (i.e., a government or a nonstate group). The intent is to criminalize violence against civilians so that individuals can be prosecuted. The European Union generally, and its member states such as Belgium specifically, have made the most progress in terms of accepting the idea that violence against civilians, whether undertaken by a state or nonstate organization, is terrorism and needs to be punished. Other states, including major countries such as China, Israel, Russia, and the United States, reject categorically the notion of state terrorism and insist that international laws pertaining to terrorism must limit definitions to nonstate groups that target civilians. Ultimately, one of the most effective ways of reducing terrorism is for states to identify and remove the causes that motivates terrorists, such as the denial of freedom and political participation, repressive political occupation, and poverty and despair.

TETUAN

Provincial capital of Morocco's northern Rif region.

Tetuan, with a population of about 466,000 (projection for 2001 based on 1994 census number of 363,813), was founded (1306–1307) by the Maranid sultan to serve as a base for attacks against Ceuta. It was destroyed by Henry III of Castile in 1400, and rebuilt around 1492. Tetuan was occupied by Spain on 6 February 1860, after they had defeated the Anjar tribesmen.

As the first part of Morocco to be occupied by Europeans in two centuries, Tetuan symbolized the threat from Christian Europe. Pressure by Britain and rethinking within Spain's leadership resulted in Spain's agreement to evacuate the city (2 May 1862) in return for a lower indemnity payment. In 1906, Spain was given responsibility for policing the port of Tetuan by a thirteen-nation conference called to maintain the balance of power between European states in Morocco, and to institute economic reforms and an open door policy. Three years later, Spain began its conquest of northern Morocco and built road links to Tetuan. It was made the capital of the Spanish protectorate in 1913, and remained so until Morocco attained independence in 1956 and Spain evacuated the area.

BRUCE MADDY-WEITZMAN

TEVFIK FIKRET

[1867–1915]

Ottoman Turkish poet and editor.

Tevfik Fikret, the son of a bureaucrat in the foreign service, was born Mehmet Tevfik in Istanbul. He studied literature at the prestigious Galatasaray lycée,

where his teachers included Muallim Naci and Recaizade Mahmud Ekrem. At the age of fifteen, he published his first poetry in the newspaper *Tercüman-i Hakikat* under the name Nazmi. He entered the civil service but later resigned, drawing public attention when he donated his salary to the refugee commission, saying that it was "a disgrace to accept so much money for so little work." In 1896, he became the editor of *Servet-i Fünun,* the main journal of the new literary movement. At this time, he became known as Tevfik Fikret. Under the influence of the French Parnassian school, his pre-1901 poetry emphasizes art for its own sake, preferring form and technique over content, and poetry over prose. Generally written in the *aruz* meter, Fikret's poetry draws from scenes of everyday life, as in the poems "Hasta çocuk" (The sick child), "Balikçilar" (The fishermen), and "Bir içim su" (A drink of water). In 1899, Fikret became professor of literature at Robert College. Following the Young Turk Revolution in 1908, he joined with Hüseyin Cahit Yalçin in establishing the newspaper *Tanin* (The echo).

DAVID WALDNER

TEXTILE INDUSTRY

Production of fibers, filaments, and yarns used in making woven or knitted cloth for domestic or foreign trade is widespread in the Middle East.

The oldest textile materials produced and used in the Middle East—linen and wool—go back to remote antiquity. Cotton and silk, which originated in India and China, respectively, came into the region during the Roman Empire, in the early centuries of the Christian era. By the early Middle Ages, quantities of flax (for linen) were exported to Europe, chiefly from Egypt; of raw cotton from Syria and Egypt; of silk thread from Iran, Syria, and the Bursa region (northwest Turkey); and of mohair from Turkey. Flax and silk fibers and fabrics were traded to Europe for many centuries, but flax was gradually produced in many European nations, and the silks of India, China, and Japan competed with Middle Eastern silks and cottons as well as with cottons from the newly colonized Americas and from India. In the nineteenth century, however, the introduction of long-staple cotton made Egypt an important producer, and in the twentieth century, Egypt was joined by Turkey, Syria, Sudan, and Israel. In the 1990s, the Middle East produced 75 percent of the world output of long-staple cotton but only about 8 percent of the total world output of all cottons.

Although the preeminence of the Middle East in the manufacture of handloomed textiles goes back to antiquity, by the late Middle Ages, European products—woolens, fine silks, and linens—were fine enough to be imported by the Middle East. Until the middle of the eighteenth century, the Middle East continued to export cotton cloth and yarn to Europe, but European protective tariffs soon restricted even that trade. With the Industrial Revolution, European machine-loomed fabrics overwhelmed Middle Eastern handmade products and local markets. The number of Middle Eastern handlooms and

Textiles are the major export for the Turkish economy. Pictured is a Turkish woman weaving a carpet. © JOSÉ F. POBLETE/ CORBIS. REPRODUCED BY PERMISSION.

their total output declined sharply; for example, in Bursa, output of cloth fell from 20,000 pieces in 1843 to 3,000 in 1863. In Aleppo and Damascus combined, the number of looms dropped from about 12,000 in the 1820s to some 2,500 in the 1840s. Middle Eastern weavers were able to recover by using improved looms, importing cheaper and better European yarns, concentrating on inexpensive products, and drastically reducing wages. Handcrafted fabrics continued to form a large proportion of the textile output until after World War II. In Syria, in the 1930s, there were some 40,000 handweavers, and in Egypt in the 1940s, some 50,000. In Turkey and Iran, carpetmaking was greatly stimulated by rising foreign demand, lower freights that reduced export costs, and some foreign capital investments in the industry. Just before World War I, in 1913, Turkey exported 1,500 tons of carpets, then worth three million U.S. dollars, but the subsequent world wars devastated the industry. Persian carpet exports in 1914 were then worth five million U.S. dollars, and by the 1950s Iran's rugweaving and carpetmaking employed some 130,000 people—with exports of 5,000 tons, then worth twenty-five million U.S. dollars, the carpets accounted for 16 percent of Iran's non-oil exports.

Mills

Textile factories, or mills, were first used in the Middle East in the 1830s, in the modernizing program of Muhammad Ali's Egypt. The mills exported large amounts of cotton textiles, but they did not survive his death. A few small factories were also set up in Turkey in the nineteenth century, and by World War I, several textile centers had been developed in Turkey—notably in Adana, İzmir, and in the Salonika region. Egypt also had cotton-spinning mills in Alexandria and Cairo. Iran had a small spinning mill in Tehran, but other unsuccessful mills had closed. In Syria, one small mill, founded in Damascus in the 1860s, was operating, but two others, in Beirut and Antioch, had failed. Some two hundred small silk-reeling factories were set up in Lebanon, with others in Bursa, İzmir, and other silk-growing regions of Turkey. In Iran, there was a mill in Gilan.

After World War I, the textile industry wove rayon as well as cotton and wool and expanded greatly, especially after the tariff reforms. Table 1 shows the situation in the cotton industry in 1939, at the outbreak of World War II. By then, textile factories had been built in all the main towns and cities of the Middle East, and local production of cotton yarn and fabrics met 35 to 50 percent of total domestic demand within the larger countries.

During World War II, the region's textile industry expanded by about 50 percent, and the expansion continues—with several additional countries,

CHARLES ISSAWI

THAALBI, ABD AL-AZIZ

[1874–1944]

Tunisian political leader and founder of the Destour party.

Abd al-Aziz Thaalbi's father was a notary whose family had emigrated to Tunis following the French occupation of Algeria in 1830. During his studies at Zaytuna University, Thaalbi became conversant with Salafiyya concepts. For a year following his graduation from Zaytuna in 1895, he published a religious journal called *Sabil al-Rashid* (the Proper Path). When the French authorities suspended the journal, Thaalbi left the country and traveled in Libya, Egypt, and India until 1902. Soon after his return to Tunis, he was imprisoned by a beylical tribunal for making a reformist attack on the local saints, who formed an important part of popular religious practices. In 1904, he published, in both an Arabic and a French edition, *L'esprit libérale du Coran* (The liberal spirit of the Qurʾan), which criticized the religious establishment. At this time, Thaalbi established links with the Young Tunisians. He became the editor of the Arabic edition of its newspaper, *Le Tunisien,* in 1909 and participated in all of its political activities until his expulsion from Tunisia in 1912. He returned to the country at the start of World War I.

At the end of the war, Thaalbi joined a delegation of former Young Tunisians that went to Versailles to petition the Allies for a relaxation of French control. Frustrated by France's unwillingness to make concessions, Thaalbi wrote *La Tunisie martyre* (Tunisia martyred) in early 1920. In this book, he stressed the need for restoration of the Tunisian constitution of 1861, the creation of an elected assembly and an independent judiciary, the development of education, and the safeguarding of individual liberties. He also urged that the establishment of the protectorate had stalled Tunisian development. Thaalbi was arrested and brought back to Tunisia. Upon his release in 1921, he assumed the leadership of a group of middle-class merchants, artisans, and lower level *ulama,* many of them formerly affiliated with the Young Tunisians, that had evolved into a political party, the Destour, based on the program elaborated in *La Tunisie martyre.*

In response to Destour demands, France introduced a series of limited reforms in 1922. Thaalbi guided Destour's rejection of these changes, arguing that they fell too far short of Tunisian requirements to merit consideration. The death in 1923 of the Tunisian ruler Nasir Bey, who had sympathized with Destour, and the growing impatience of the protectorate authorities with the party convinced Thaalbi that his political activism would not be tolerated much longer, and he fled the country in the same year.

After fourteen years of exile in Egypt, Iraq, and India, he returned in 1937, when the relative liberalism of the French Popular Front government created a more congenial atmosphere for the expression of nationalist grievances. By that time, however, the remnants of Thaalbi's Destour party had given way to the Neo-Destour, whose youthful, dynamic, and secular leaders had little use for Thaalbi or for the traditional Arab-Islamic values he stressed. Finding support among only a small segment of the population and encountering opposition from Neo-Destour militants who disrupted his public appearances, Thaalbi attempted to revive Destour but failed miserably, though the party survived in moribund form until his death in 1944.

THARTHAR PROJECT

Reservoir constructed in eastern Iraq to control flooding and provide irrigation.

The Wadi al-Tharthar is a vast natural depression forty-two miles (68 km) southwest of Samarra and one hundred miles (160 km) north of Baghdad between the Tigris and Euphrates rivers. The Iraqi Development Board, on the recommendation of the International Bank for Reconstruction and Development, created an enormous storage reservoir in the Wadi al-Tharthar depression to drain runoff from the Tigris and thereby protect Baghdad from flooding. Staged construction of the reservoir, the largest earth-moving project of its kind in the Middle East, began in 1952. A regulator built on the Tigris near Samarra diverted excess water into the reservoir, which was also connected by a channel with the Euphrates. By 1972, with a capacity of 110 billion cubic yards (85 billion cu. m) when filled to a height of 200 feet (60 m) above sea level, the water contained in the reservoir could be used to irrigate nearly half a million acres (200,000 ha) of land.

THARWAT, ABD AL-KHALIQ

[1873–1928]

Egyptian politician.

A graduate of the School of Law in Cairo, Abd al-Khaliq Tharwat was one of the first Egyptian nationalist leaders and a founder of the Liberal Constitutionalist Party. His negotiations with Britain's high commissioner for Egypt, Edmund Allenby, led to the declaration of Egyptian independence from Britain in 1922. Tharwat supported the declaration, even though it guaranteed the maintenance of British influence in Egypt, because he believed that it made possible the drafting of a constitution and the establishment of parliamentary politics. He formed the first government following the declaration and helped to draft the post-independence constitution. Tharwat was opposed by Sultan Fuʾad, who objected to being reduced to a constitutional monarch, and by the Wafd party, which objected to the preservation of British control. Tharwat resigned as prime minister in November 1922. He formed a second ministry in April 1927, but again confronted opposition from Fuʾad—who had taken the title of king in 1922—and the Wafd. He resigned in February 1928.

THEATER

Overview of the region's numerous traditional and indigenous dramatic art forms and performances.

The Middle East comprises four regions: The Arab world (22 countries), Iran, Turkey, and Israel. This area did not know theater (in the Western sense of a space containing stage and auditorium, and dramas with the three unities of time, space, and plot) in its pre-modern periods. However, the whole region had numerous traditional and indigenous dramatic art forms and performances. Through colonialism and cultural exchanges with Europe in the early nineteenth century, theater as a space and a mode of writing and presenting found its way into the various Middle Eastern cultures. In the modern period, as a form of cultural identity, many Middle Eastern theater artists have tried to honor their traditional art forms and rituals by incorporating aspects of them with their stage events. This endeavor is a prevalent feature, and an ongoing trend, in Middle Eastern theater.

Arab Theater

The ancient Arab literary tradition did not encompass dramatic texts; however, the countries that constitute today's Arab world have always incorporated

dramatic and mimetic arts within their performance and literary traditions. Among the various Arab performance arts that thrived throughout the premodern periods are *al-hakawati* (storytellers), dance, ritual reenactments, shadow plays, puppetry, poetry recitations, *maqama* (outdoor dramatic enactments in poetry and prose), street performance by traveling troupes called *al-muhabizun,* and *al-samir* (village gatherings that included dramatizations). Many of these art forms continue, albeit in a state of decline, but others have died away as a result of competing modern entertainment.

In the nineteenth century, contact with the European theatrical tradition through colonialism, educational exchanges, and translations sparked a theatrical movement in the Arab world. In 1848, the Lebanese writer Marun al-Naqqash (d. 1855) mounted in his own home performances of plays based on Molière's dramas as well as adaptations of tales from *A Thousand and One Nights.* This process was continued in Damascus by Abu Khalil al-Qabbani (d. 1902), whose attempts to stage dramatic performances aroused the opposition of the religious establishment. Al-Qabbani moved to Egypt, where artists were able to exercise more freedom.

In Egypt, Yaʿqub Sanu (d. 1912), considered by many the father of Egyptian theater, formed a troupe of actors and in 1870 opened the first Egyptian playhouse under the auspices of the khedive. Sanu wrote and directed his own plays and introduced women to the Egyptian stage for the first time. His theater was an immediate success but was closed down by the authorities in 1873 on the grounds that his plays were politically subversive.

By the turn of the century, many theater troupes were presenting musicals, dramatic adaptations, and Arabizations of world drama, but no original plays in Arabic. A number of Egyptian poets wrote verse dramas; among them was the poet laureate of Egypt, Ahmad Shawqi. However, those plays were not stage successes, since their poetic merit exceeded their dramatic construction.

The towering figure of prose drama in Egypt and the Arab world is Tawfiq al-Hakim (1898–1986). His family sent him to France to obtain a doctorate in law. Instead, he spent his time there learning the Western theater tradition. When he returned to Egypt, he took up writing for the stage. His dearest wish was to establish a modern Egyptian dramatic tradition based on Western notions of the unity of space, time, and action. He spent five decades of his life working to enrich the Arab dramatic tradition, and enrich it he did. He wrote more than seventy plays of exceptional variety, experimenting with dramatic form and offering various dramatic styles. He also presented a variety of dramatic themes, some of which he categorized as the theater of ideas, the theater of social themes, and the theater of the absurd.

During the second half of the nineteenth century, many young playwrights emerged, theaters were built, and theater troupes were established around the Arab world. The 1960s is regarded as the golden age of Arabic theater for its impressive theatrical movement, which gave rise to great playwrights, actors, and directors throughout the region, including Nuʿman Ashur, Yusuf Idris, Alfred Farag, Mikhaʾil Ruman, and Najib Surur in Egypt; Saʿdallah Wannus, Walid Ikhlassi, and Yusuf al-Ani in Syria and Iraq; Isam Mahfuz and Roger Assaf in Lebanon; and Izz al-Din al-Madani, Ahmad al-Ilj, and al-Tayyib al-Siddiqi in the Maghrib.

In Palestine, under the watchful eye of the Israeli armed forces, theater troupes like the Balalin and Hakawati have produced highly experimental dramas that comment on the plight of their fellow countrymen. Alongside the male dramatists, directors, and critics, a large number of Arab women have contributed to the modern Arab stage, including playwrights Fathiyya al-Assal, Nehad Gad, Andre Chided, and Nawal al-Saadawi; director Nidal al-Ashqar; and critic Nehad Selaiha.

Israeli Theater

The Israeli theater is essentially modern; whereas pre-1960s theater was heavily influenced by Russian social realism, in the 1960s it diverged and presented experimental drama. Until the early 1970s, most of the theatrical repertoire in Israel continued to be European classics and modern plays. However, in the 1970s and 1980s, playwrights focused more on the contemporary Israeli's predicament and identity. From the 1980s onward a shift became noticeable in the Hebrew stage, from a commitment to the ideology of the Jewish national

The courtyard and entrance to the Jerusalem Center for the Performing Arts in Jerusalem, Israel. © DAVE G. HOUSER/CORBIS. REPRODUCED BY PERMISSION.

movement to debates over secularization and cultural identity.

After the 1948 war, two Israeli playwrights rose to prominence in the newly established state. In 1949, Moshe Shamir wrote *Hu Halah Basdot* (He walked in the fields), and Yigal Mossinsohn produced *Be'arvot Hanegev* (In the plains of the Negev). The first is a stage adaptation of a novel—a prevalent practice in late 1940s and 1950s Israel due to the limited number of playwrights. The second is a war story that tries to uphold the ideals of the new Israeli society; its success was based more on audience reaction then than on artistic excellence.

In the 1950s, Israeli theater focused on realism and produced plays concerned with the social realities of Israel after the 1948 war. One of the major themes that preoccupied dramatists was the realities of coexistence between early and new immigrants, and between Palestinians and Israelis. Some of the playwrights who tackled these issues were Ephraim Kishon, Yigal Mossinsohn, and Hanoch Bar-Tov.

In the 1960s, Israeli theater departed from realism and created a non-mimetic experimental theater, opening itself to the influence of modern European drama as well as to new themes, forms, and theatrical devices. Using techniques from the Theater of the Absurd, Israeli playwrights set out to depict the grotesque and absurd in their society. Without reference to particulars, their criticism was conveyed through abstractions, symbolism, and distancing techniques. Among the most talented playwrights of that decade are Nessim Aloni (b. 1921), Ben-Zion Tomer (b. 1928), Yosef Bar-Yosef (b. 1933), and A. B. Yehoshua (b. 1936). Their efforts propelled Israeli theater away from a provincial outlook to universal themes.

In the 1970s, Israeli theater became self-reflective and began expressing doubts about the means of

realizing the Zionist dream. For some, those were introspective years of self-reevaluation. Two new stars became the focus of the Israeli stage: Yehoshua Sobol (b. 1939) and Hanoch Levin (b. 1943). Sobol's writing style is naturalistic. Some of his earlier works are semifictitious and based on documentary material. Levin, on the other hand, is famous for his biting satire and tendency to break taboos. He continues to be one of the most provocative and controversial figures in Israeli theater.

The following decades show a variety of dramatic themes and approaches, from social and political disillusionment, as many Israelis call for an alternative to war, to fears about the demise of the Zionist dream. Common themes include nationhood, selfhood, and secularization. In addition, many theaters continue to present world classics and modern comedies. At the top of the list of thriving theater companies in Israel are the Habima (also ha-Bima), the Cameri, and the Haifa Municipal Theaters.

Persian Theater

Persian theater can be divided into three categories: traditional, which comprises ritual reenactments, puppetry, and improvised street theater; modern, which is primarily modeled on Western paradigms; and diasporic, which laments the separation from the homeland after the 1979 revolution.

The most famous traditional Persian theater is Taʿziyeh, which encompasses cycles of passion plays intended not for entertainment but rather to console the devout Shiʿite population by reenacting the events that led to the martyrdom of their beloved imam (spiritual leader) Husayn, grandson of the Prophet. The house of Husayn in its entirety was decimated in the city of Karbala, in Iraq, by Muʿawiyah, the governor of Syria, who the Shiʿa believe usurped the throne from Ali, Husayn's father, closest cousin and confidant of the Prophet. The suffering and death of this holy family is the central theme of elaborate mourning rites, in Iran and wherever there is a considerable Shiʿite population. Those rites take place on the tenth day of Muharram, the first month of the Islamic calendar.

Two categories of Taʿziyeh plays deal with the tragic events of Karbala, and others refer to those events indirectly. However, those dealing with the martyrdom of Husayn and his family are the most popular and moving. Taʿziyeh is written in verse by anonymous writers and its stagecraft is extremely simple, with virtually no scenery. Settings are indicated symbolically, and men play the women's roles. The most important component of these plays is the music: Players chant and sing, and musical instruments are used to heighten the mood. Although professional Taʿziyeh players exist, the plays are frequently presented by amateurs as an act of piety.

By the turn of the twentieth century, and as a result of Western impact, Taʿziyeh went into a decline. Today, there is a great deal of interest in the performance and study of Taʿziyeh, both inside and outside of Iran.

During the early nineteenth century, Western drama found its way into Persian culture in the form of translations of European and Turkish plays. This was followed by a period of Persian dramatic and satirical composition that took reform as its main subject matter. During the first half of the twentieth century, a number of didactic dramas upholding the modernizing and educational efforts of Reza Shah Pahlavi were on the rise. Among the most popular playwrights of this period are Sayyed Ali Nasr (1893–1965), who founded and headed the Komedi-e Iran in 1918, and Sadegh Hedayat (1903–1951).

The second half of the twentieth century was characterized by severe censorship, which led playwrights to find refuge in symbolism, Theater of the Absurd, and psychological themes. Gifted playwrights emerged during this period and produced exciting works. Among them are Ali Nasirian, Gholamhossein Saʿedi (working under the pseudonym Gowhar Morad), and Bahram Beyzai.

After the 1979 revolution, a number of artists, disillusioned by the new regime, left the country with no intention of returning. Living in exile, they write dramas that are inherently Iranian and intensely nostalgic for the homeland. Among those is Parviz Sayyad, who continues to produce plays that have been categorized as theater of diaspora.

Turkish Theater

The first Western-style Turkish play performed in Istanbul was *Vatan yahut Silistre* (Fatherland), by Namik Kemal, in 1873. From that date onward theater in

Turkey following the Western paradigm was a vital element in the country's cultural life.

Turkey has been home to a wide array of popular performance arts and entertainments since the thirteenth century, including dances, peasant plays, pageants, rites, processions, mock fights, festival acts, acrobatics, mime, puppetry, marionette performances, clowning, juggling, and magic. The most dramatic and popular of all are the *meddahs* (who are panegyrists, storytellers, and comedians), *karagoz* (shadow plays), and *ortaoyunus* (improvised plays). *Meddahs* were solo performers who told traditional tales of heroism and religious narratives. *Karagoz,* have the longest history and continued to be practiced until the 1940s. They are being resurrected in many contemporary plays. They were essentially a one-man act. The presenter manipulated flat leather figures behind a linen screen and played all characters. *Ortaoyunu,* the indigenous Turkish theater-in-the-round, is the most mimetic premodern performance art form. It borrowed many of its basic plots and characters from the *karagoz,* and the actors performed in the middle of a circle of spectators. The characters were presented as stereotypes, depending on wordplay and comic situations. All three ancient art forms had declined severely by the early twentieth century due to competition from Western-style theater and cinema.

The second half of the nineteenth century introduced Western theater into Turkey. A number of local theater troupes were created, mainly by Armenians, and they presented European plays in both their original languages and in translation. The first Turkish play published was *Shair Evlenmesi* (The poet's marriage, in 1860), by Ibrahim Shinasi, and the first produced on stage was *Fatherland.* In spite of the quick strides that playwrights made by the late nineteenth century, severe censorship by the sultan slowed the progress of Turkish drama. However, theater was given new vigor in 1908 by an era of political freedom under a constitutional government. Until 1923, Turkish theater featured a variety of new naturalistic and satirical plays reflecting social problems and expressing a need for political reform. One of the most celebrated playwrights of that period was Abdulhak Hamit (1852–1937), who produced verse and history plays. In 1916, the government-subsidized City Theater in Istanbul was established; it remained a vital core of Turkey's theatrical scene until the 1950s.

With the founding of the Turkish Republic under Mustafa Kemal Atatürk, theater received greater government support and funding. Mushin Ertuğrul, artistic director of the City Theater, shaped the modern theater movement in Turkey by creating a children's theater, encouraging young playwrights, and establishing a network of regional theaters. In 1936 the State Conservatory for Music and Drama was inaugurated, and in the 1940s the State Opera. Since the 1960s Turkey has established twenty-six state theaters in sixteen provinces, and state theaters are continually opening in Istanbul. In the 1950s and 1960s a number of private theaters were established in both Istanbul and Ankara.

In the 1960s, a number of excellent playwrights contributed to the Turkish stage, including Turan Oflazoglu, Necati Cumali, Gunger Dilmen, and Haldun Taner. In the 1970s and 1980s, the varying strengths and weaknesses of the Turkish theatrical scene reflected the political and economic situation. During the following two decades Turkish theater witnessed a rising number of experimental plays by a younger generation wishing to explore new ground and possibilities.

TIBERIAS

Town located on the eastern shore of Lake Tiberias (also referred to as the Sea of Galilee or Kinneret) in northern Israel.

The town of Tiberias was founded by Herod Antipas (c. 20 C.E.) and named for the Roman emperor Tiberius. It was an important center of Jewish learning, law, and religion from the second through fifth centuries. Over the course of its history, Tiberias was controlled by Arabs, Crusaders, and Ottoman Turks. Early Zionist pioneers set up kibbutzim in this area around the turn of the twentieth century. The city's population quadrupled after the establishment of the state of Israel in 1948. In the 1948 Arab-Israel War, fighting broke out with an Arab attack on Jews in the older sections of the town. Jewish fighters were able to push out their Arab adversaries, and eventually the Arab inhabitants fled.

Tiberias, which has a relatively warm climate in winter, is a favorite tourist site, featuring boating, lakefront hotels, and a hot springs spa. Its 2004 population was about 43,000, the majority of them immigrants from North African and Eastern European countries.

BRYAN DAVES

TIGRIS AND EUPHRATES RIVERS

River systems that join to drain into the Persian Gulf.

The Tigris (Arabic, *Shatt Dijla*; Turkish, *Dicle*) rises in a lake in the mountains north of Diyarbakir, in southeastern Turkey. It picks up major tributaries, the Zab rivers, downstream from Mosul, then the Diyala, just past Baghdad—flowing some 1,180 miles (1,900 km). It ends at the confluence of the Euphrates, in southeast Iraq, to form the Shatt al-Arab, which empties into the Gulf. With its short tributaries flowing directly from the mountains, it floods in April, about one month before the Euphrates, and with about 50 percent greater flow.

The Euphrates (Arabic, *Furat*; Turkish, *Firat*) also originates in Turkey, from a spring in the Taurus mountains. It flows for 1,740 miles (2,800 km), passing through northern Syria and providing that country with an important water source. In 1973, Syria completed construction of the large Euphrates Dam. From Syria, the Euphrates flows into Iraq, where it joins the Tigris.

Since the Sumerian era (3500 B.C.E.), canals have connected tributaries to the Tigris-Euphrates confluence area, although the lower course was farther west at that time. The capitals of great empires—Ashur, Nineveh, Seleucia, Ctesiphon, and Baghdad—were built on or near its banks. In 1990, Turkey completed the Atatürk Dam, the first of twenty-two dams, as well as a series of hydroelectric power stations, planned for the Tigris and Euphrates. Turkey's huge diversion of water may pose serious problems for countries such as Syria and Iraq. Most of Iraq's future irrigation schemes rely on Tigris water.

TIKRIT

Iraqi city on the Tigris River northwest of Baghdad, on the main road to Mosul.

Tikrit (also Takrit) is located in north-central Iraq, some 100 miles north-northwest of Baghdad. The fortress around which the city was built was constructed by a Sassanid Persian king as a border post against the Byzantines. The first dwellers of the city belonged to the Banu Iyad tribe of Christian Arabs, and its name is believed to have honored the tribal chief's daughter. It was conquered by Muslims in the mid-600s C.E. Tikrit's population is now mainly Sunni Arab, with some Kurds. The Kurdish Muslim hero Salah al-Din al-Ayyubi (Saladin, 1137–1193) was born in Tikrit.

With the decline in sales of *kalak*s (rafts of inflated skins), for which the city was noted, many people moved to Baghdad during the nineteenth century. Under the monarchy, some entered the military academy with the help of an influential Tikriti. After the 1968 coup by the Baʿth party, Tikritis became the single most powerful group in Iraq's senior officer corps and in the civilian flank of the party. Both Ahmad Hasan al-Bakr and Saddam Hussein were from Tikrit, so they invested large sums in modernizing the city. In 2003, its population numbered about 30,000.

AMATZIA BARAM
UPDATED BY MICHAEL R. FISCHBACH

TIKRITI FAMILIES

Iraqi families from Tikrit.

The Tikriti trace their origins to the city of Tikrit in Iraq. Tikrit is located on the Tigris River halfway between Baghdad and Mosul, and has a rich history that goes back to the Assyrian empire. The famous Muslim leader Saladin, who defeated the Crusaders, was born in Tikrit. In recent history, Tikrit was a small, sleepy town with a few thousand inhabitants.

The military coup of 1963 temporarily brought to power a few people who were born in Tikrit. Hasan al-Bakr, who became prime minister, and Hardan al-Tikriti, who became a defense minister, were born in Tikrit. The coup of 1968 brought to power more people from Tikrit, who controlled and shaped Iraqi politics from 1968 until the U.S. invasion of Iraq in March 2003.

The most prominent one was Saddam Hussein, who dominated Iraqi politics after 1968, and was born on 28 April 1937 in the small village of al-Awja, a village that belongs to the city of Tikrit. Like many other Tikritis, he belonged to the Al Abu Nasir tribe. He was vice president of Iraq until 1979, when he became president. He was removed from office when the United States invaded Iraq in 2003.

Hussein relied heavily on his immediate family, close relatives, and members of his tribe to govern the country, putting them into top positions in the bureaucracy, the armed forces, the police forces, and the local governments. In most cases, they were chosen mainly for their loyalty rather than for their skills and qualifications. During the Hussein regime, Tikrit was transformed into a large modern city with a university, modern facilities, and services. It also became the capital of the newly established province of Salah al-Din in the early 1980s.

AYAD AL-QAZZAZ

TIKRITI, HARDAN AL-

[1925–1971]

Iraqi military officer and official of the Baʿth party.

Born in Tikrit to the family of a Sunni Arab police officer, Hardan al-Tikriti graduated from both flight and staff academies. He also joined the Baʿth party in 1961. After the Ramadan Revolution, from February to November 1963, he commanded the Iraqi air force. After the second Baʿthist coup of July 1968, he served as deputy commander in chief of the armed forces, deputy prime minister, minister of defense, and member of the Revolutionary Command Council. In 1970, after a power struggle with his two distant relatives, Ahmad Hasan al-Bakr and Saddam Hussein, he was dismissed from his posts and promoted to the ceremonial position of vice president. He was then formally dismissed and exiled. He was assassinated in Kuwait in 1971 by Hussein's agents.

TIMAR

Land rights earned in exchange for service to the Ottoman state.

The *timar* system began under Murad I (1359–1389), who granted land rights as payment to his military officers. In the fifteenth and sixteenth centuries timars became the primary means of financing the Ottoman military. The typical timar holder was a provincial cavalry officer who contributed troops and supplies when called up for battle. He financed these through his timar, a state grant of nonhereditary rights over land, usually in the village where he lived. The officer kept a set amount of the tax revenue as his salary and delivered the remainder to the central state.

With economic and technological change in the late sixteenth and seventeenth centuries, tax farms gradually supplanted timars. The state confiscated timars from officers who died or could no longer afford to send troops, and reassigned them to notables who would contract to collect taxes in exchange for monetary compensation. Although they contributed less and less to imperial tax revenues, timars continued to exist on a small scale through the nineteenth century.

UPDATED BY ERIC HOOGLUND

TINDOUF

A strategically important Saharan town in western Algeria, situated near large mineral deposits.

Tindouf is close to Algeria's borders with Mauritania, Morocco, and Western Sahara. It was an administrative outpost built largely by the French colonial government and became a political and economic hub in the years after Algeria gained independence from France in 1962. Rich deposits of phosphates and iron ore dominate the region, particularly at Gara Djebilet, 93 miles (150 km) to the southeast. Tindouf became the capital of the Western Saharan government-in-exile after Morocco's invasion of what was then the Spanish Sahara in 1975 and 1976. Both Algeria and Libya assisted POLISARIO (Frente Popular para la Liberación de Saguia el Hamra y Río de Oro) in its bid for an independent state, which froze relations between Algeria and Morocco throughout the 1980s and 1990s. Since then, oil and natural gas deposits discovered nearby have increased Tindouf's importance in regional politics and economic development. The Algerian government signed exploratory agreements with major European energy companies in the early 2000s for the Tindouf basin, and Morocco signed similar agreements with American energy companies for Western Sahara. This heightened competition over natural resources threatened what had been improving relations between Algeria

and Morocco as well as the fragile cease-fire agreement between Morocco and POLISARIO.

The 1998 Algerian census estimated Tindouf's population at 27,000. However, this figure does not include the nearby refugee camps, which are estimated to house 180,000 Reguibat refugees from Western Sahara.

TIRAN, STRAIT OF

A strategic strait connecting the Gulf of Aqaba and the Red Sea.

The Strait of Tiran is barely 2.5 miles wide at one point; it provides narrow passage for ships traveling from the Red Sea to the Jordanian port of Aqaba and the Israeli port of Elat. Near the coast of the Sinai Peninsula at the mouth of the strait are several islands, including Tiran and Sanafir, that Saudi Arabia permitted Egypt to claim in 1949. Egypt subsequently asserted that its territorial waters extended across the strait, and closed the passage to ships bound for Elat on two occasions as part of its political and military conflict with Israel. The first instance, in the early 1950s, was one of the reasons for Israel's attack on the Sinai in 1956. The second blockade was established in May 1967 and precipitated the 1967 War. Israel occupied the islands and reopened the straits to its ships after the war. As a result of the peace treaty between Egypt and Israel in 1979, the Strait of Tiran was recognized as an international waterway. Israel relinquished the islands to Egypt in 1982 as part of its withdrawal from the territories it had occupied in the Sinai in 1967.

TLAS, MUSTAFA

[1932–]

Syrian military officer and politician.

Born in al-Rastan, near Homs, Mustafa Abd al-Qadir Tlas attended Syria's military academy in Homs (1952–1954). Commissioned in the tank corps, he served in Egypt (1959–1961) during the period of the United Arab Republic.

Tlas joined the Baʿth Party in 1947. The Baʿthist military committee that overthrew Syria's government in 1963 brought him into its ranks after the coup. Tlas was granted important positions through which he proved his loyalty to the party and the military committee. He was elected to the Regional Council of the Baʿth Party in 1965 and headed courts trying persons accused of plotting against the regime, including the regime established following the 1964 anti-Baʿthist violence in Hama. As commander of the garrison at Homs in 1965, Tlas was associated with the "radical" faction of the Baʿth during the period of growing intra-Baʿthist friction. Removed from his post in December 1965 after trying to dismiss officers loyal to President Amin al-Hafiz, Tlas returned to the military after Salah Jadid's "radical Baʿth" coup in 1966.

Tlas's most important contribution in Syrian history, however,lies in his long-standing and loyal association with the powerful Baʿthist figure Hafiz al-Asad. Tlas and Asad studied together in the military academy and came from similar backgrounds. Although Tlas was a Sunni Muslim and Asad an Alawi, both were of humble village origins and both supported the secular, pan-Arab socialist ideology of the Baʿth. As Asad's confidant, Tlas quickly rose to high positions in the military and the regime. While defense minister, Asad appointed Tlas chief of staff and deputy defense minister (1968). When Baʿthist rivals tried to depose the two in 1970, Asad seized power, and he appointed Tlas defense minister in 1972. Tlas has been Syria's defense minister

since then, overseeing tremendous growth in the size and technological sophistication of the nation's military through Soviet assistance in the 1970s and 1980s. In 1972, he attended staff training at Voroshilov Academy in Moscow. Elected to the Baʿth central committee in 1980, he remained a key member of the Asad regime until Asad's death in 2000, after which he continued as defense minister under Syria's new president, Asad's son Bashshar.

Tlas is known as an outspoken hard-liner in Syria's frosty relationship with the Palestine Liberation Organization (PLO) and its chairman, Yasir Arafat, since the mid-1970s. Tlas and Syria's military had assisted guerrillas from Arafat's al-Fatah movement in the 1960s and during the PLO's conflict with Jordan in 1970, but he became increasingly hostile to Arafat after Syria intervened against the PLO in Lebanon's civil war in 1976 and the bitter Syria-PLO relations that followed.

Tlas runs a publishing house, Dar al-Tlas, in Damascus, and has written numerous books on military science, literature, and other topics.

TLATLI, MOUFIDA

[1947–]

Tunisian film director, editor, and screenwriter.

Moufida Tlatli was born in 1947 in picturesque Sidi Bou Said, Tunisia. Following her graduation from the Institut des Hautes Etudes Cinématographiques (IDHEC) in Paris, Tlatli worked as a writer and production manager for the Office de la Radiodiffusion-Télévision Française (ORTF) from 1968 to 1972. Returning to Tunisia, Tlatli edited and wrote screenplays for a number of important Arab films, such as Allouache's *Omar Gatlato,* Ben Ammar's *Aziza,* Louhichi's *L'ombre de la terre,* and Boughedir's *Halfaouine.* Tlatli's own award-winning first film, *Les Silences du palais* (Samt al Qusur, 1994), which takes place on the eve of independence from the French in the 1950s, traces the systemic and internalized oppression suffered by generations of servant women working in the kitchens of the Bey's relatives. Like *Silences,* Tlatli's second film, *La saison des hommes* (2000), set on the island of Djerba, focuses on mothers and daughters confronting patriarchal traditions, now exacerbated by economic pressures that have made their husbands internal migrants who come home one month a year. Tlatli's rich, sensuous imagery, slow rhythms, and retrospective narrative structures translate unspoken feelings of isolation and desire into the body language of women who long to emancipate themselves—not from Tunisian men or Arab culture, but from the everyday practices and social systems, both local and global, that entrap them.

LAURA RICE

TLEMCEN

City near the Moroccan border in eastern Algeria.

Situated on a high ridge of the Little Atlas mountains thirty miles (50 km) inland from the Mediterranean Sea, Tlemcen has a population of 155,000 (1998). The Almoravids founded Tlemcen in the eleventh century, on an ancient Berber, Phoenician, and Roman site. It was an important trade and political center in the Middle Ages, as capital of the Arab sultanate, and was Abd al-Qadir's capital from 1837 to 1842, when it came under French colonial rule. Tlemcen had received many of the Moors expelled from Spain after 1492. The city came under the Ottoman Empire in 1555 and was attached to Algeria in 1942.

LAURENCE MICHALAK

TLILI, MUSTAFA

[1937–]

Tunisian novelist.

Mustafa Tlili was born in Fériana, Tunisia. He attended the *madrasa* (traditional school) in his native

city and later received a bilingual education at the Sorbonne, where he received a *diplôme d'études supérieurs de philosophie.* He also studied at the UN Institute for Training and Research and worked for almost thirteen years at the UN offices in New York. He moved to France in 1980, and he was made a Knight of the French Order of Arts and Letters.

Tlili has published four novels, all written in French. Each reflects in its own way the writer's preoccupation with life's meaning. He is determined to denounce corruption, especially among the aristocracy, whether in the Arabian Peninsula, as revealed in *Gloire des sables* (1982; Glory of the sands); in Paris, as described in *La rage aux tripes* (1975; Visceral anger); or in New York, as in *Le bruit dort* (1978; The noise sleeps). Tlili's fourth and last novel, *La montagne du lion* (1988; Lion mountain), centers on corruption in Tunisia. Tlili's language reflects a playful anger and humorous cynicism toward the upper classes of society.

In spite of Tlili's global outlook, he remains strongly linked to the Maghrib. His multilingual and multicultural background enhances his novels and reflects a new trend among Maghribi writers who write in French: Instead of being confined to two cultures—Arabic and French—as their predecessors were, they are expanding their horizons. With Tlili it is possible to speak of the beginning of the cultural liberation of the French-educated Maghribi writers.

TOBACCO REVOLT

A popular rebellion (1891–1892) in Iran that defeated a tobacco monopoly granted to British interests.

One of the most controversial concessions that Iran's Qajar monarchy granted to foreign nationals in exchange for monetary compensation was a complete monopoly on the production, domestic sales, and export of tobacco. This was granted to Major G. F. Talbot of Britain and was registered in March 1890 as the Imperial Tobacco Corporation of Persia. Talbot agreed to pay 25,000 pounds immediately for the concession and to provide an annual payment of 15,000 pounds to the Imperial Treasury. This payment was to be accompanied by a 25 percent share of the net profits after deduction of a 5 percent shareholder's dividend. The arrangement was to be maintained for a period of fifty years.

Beginning in the spring of 1891 the implications of the monopoly became apparent to merchants and the Iranian population at large, the majority of whom consumed some form of tobacco on a daily basis, arousing nationalistic fervor. The void in leadership prompted the politicization of the intellectuals and the clergy. As the events of 1891 unfolded, the *ulama* (the clergy) successfully mobilized crowds against the government and its foreign policies. Under the leading *ulama,* protests began in Shiraz and Tabriz, principal market centers for domestic tobacco production, and then spread throughout the rest of the country. In Isfahan two leading *ulama,* Aqa Najafi and his brother Shaykh Muhammad Ali, pronounced the use of tobacco unclean as their followers took to the streets and broke all visible water pipes in the bazaars. In December the most prominent *mujtahid* (expert on Shiʿite Islamic law), Mirza Muhammad Hasan Shirazi, who resided in Ottoman Iraq, issued a *fatwa* (legal opinion) forbidding all forms of smoking until the tobacco concession was abolished. Shops throughout the bazaars closed and smoking was completely abandoned, even in the shah's own palace.

The value of the shares paid to the Imperial Bank was reduced by 50 percent. On Christmas Day, placards were hung throughout the Isfahan bazaar threatening a jihad against Europeans. Three days later, the shah announced the conditional withdrawal of the tobacco concession and requested that the population resume smoking. The suspicious crowds awaited word from Shirazi that the *fatwa* had been rescinded, but it did not arrive. The agitated shah, Naser al-Din, sent a personal letter to Tehran's leading *mujtahid,* Mirza Hasan Ashtiani, demanding that he immediately resume smoking or leave the country. As the news of the shah's message spread through the capital, the enraged crowds occupied the streets surrounding the shah's palace.

Fearing for the safety of the shah, the government's troops opened fire on the rioters, killing seven people, including the *sayyid* who originally had led the crowds. With the help of the merchants, Ashtiani and other *ulama* sent a strong message to Naser al-Din Shah and his prime minister, Amin al-Soltan. Realizing the severity of the situation, the shah in January 1892 abolished the concession completely, agreed to pay compensation to the families of those killed, and pardoned all leaders of the revolt. Shirazi telegraphed a few days later to say that Muslims could resume smoking.

TOBRUK

Small Libyan seaport west of the Egyptian border; scene of fierce fighting during World War II.

Tobruk had been occupied by General Erwin Rommel's Afrika Korps but fell to British forces under General Archibald Wavell on 22 January 1941 during World War II. In April 1941, Rommel's counteroffensive left Tobruk under siege until December, when it was retaken by the British. Rommel's drive into Egypt in May 1942 led to the surrender of 25,000 troops at Tobruk on 21 June, after a one-day assault. Tobruk remained in German hands until liberated by General Bernard Law Montgomery's Eighth Army, after Britain's successful conclusion to the battle of al-Alamayn in November 1942.

In the 1960s, port facilities in the town were expanded to provide links to nearby oil fields. The population of Tobruk in 2004 was estimated at 157,800.

TOPKAPI PALACE

Governmental seat of the Ottoman Empire.

The New Palace (Saray-Cedid), now known as the Topkapi Palace (in reference to the eighteenth-century royal summer residence next to the seaside Cannon Gate), occupied the site of Byzantium's ancient acropolis in what was then the city of Constantinople (now Istanbul). Enclosed by protective walls, the Topkapi Palace stood in the middle of a vast woodland. It served for nearly four centuries as the principal center of governance for the entire Ottoman Empire.

The administrative functions of the government were located in the outer *(birun)* court of the fortress-palace, and the inner *(enderun)* court included space for the royal pavilions and the palace school. The quarters for the sultan's pages surrounded the inner court; the harem quarters were behind its northern wall, overlooking the section of Istanbul known as the Golden Horn.

The Topkapi Palace lost its importance when the court moved to the Dolmabahçe Palace in 1854. After that date, aside from certain ceremonial occasions involving the holy relics of Islam (kept in the privy chamber), it hardly ever was used. Since its renovation in the 1930s, the Topkapi Palace has been a museum.

TOUMI, KHALIDA

[1958–]

One of the pioneers of the feminist movement in Algeria.

Khalida Toumi was known as Khalida Messaoudi before she reclaimed her maiden name. She was born in 1958 in Sidi Ali Moussa, a village in the Kabylie region, and entered the University of Algiers in 1977 to pursue a degree in mathematics. After graduating from the École Normale Supérieure, she taught mathematics until 1993. In 1981, she founded the Collectif féminin (Women's Grouping) not only to oppose the ministerial interdiction on Algerian women leaving the country unless accompanied by a male family member, but also to oppose state endorsement of the discriminatory Family Code, which the National Assembly eventually adopted in 1984. Following the adoption of this code, Toumi presided over the Association for Equality between Men and Women, founded by a group of Trotskyite militants. In 1985, she cofounded and became a member of the executive committee of the Algerian League of Human Rights. She later distanced herself from the Trotskyite militants and in 1990 founded the Independent Association for the Triumph of Women's Rights. She staunchly opposed Islamist ideology and endorsed cancellation of the January 1992 legislative elections, which the Islamic Salvation Front (FIS) was poised to win. She considered the FIS to display "absolutely all the classic ingredients of totalitarian populist movements." During the years of terrorism in Algeria, she traveled to Western countries to provide an anti-Islamist perspective. A member of the Rassemblement pour la Culture et la Démocratie (RCD), she won a seat in the assembly and served as the RCD's national vice president for human rights and women's issues. After profound disagreements with the RCD's president Said Sadi, she severed relations with the RCD in January 2001, at the peak of the crisis in her native Kabylie; she was subsequently expelled from the RCD. In May 2002, she became minister of culture and communication, as well as the government's spokesperson, the first woman ever to hold that job. Khalida Toumi has in recent years lost her credibility as a staunch proponent of democracy because of her loyalty to President Abdelaziz Bouteflika, harshly criticized today for his authoritarianism and alliance with Islamists. The independent press and most advocates of democracy do not wish to see Bouteflika re-elected in April 2004.

TOURISM

An economic and social activity that has widely varying manifestations in the Middle East and North Africa.

Since the rise of civilization, the Middle East has been rich in notable sights and sites, and people have been visiting them for millennia. The Great Pyramids, the Hanging Gardens of Babylon, and places of religious significance such as Jerusalem and Mecca were drawing visitors long before the invention of the word *tourism*. And while travel for the purpose of seeing religious sites or carrying out religious obligations may be rightly termed "pilgrimage," the social and economic effects of this sort of travel are essentially indistinguishable from travel for purely secular reasons. If one accepts a broad definition of tourism, then it has been going on for centuries, on a large scale, to the region's many religious destinations. If one defines tourism more narrowly, as secular travel for the purposes of sightseeing and leisure on a scale large enough to be economically significant, then tourism, especially by Europeans, became important in the region only in the second half of the nineteenth century, when transportation methods improved and leisure time increased along with disposable income.

Europe's interest in the region historically had a religious component: Its Christians and Jews were keenly aware of the Holy Land, and much of the literature of European travelers to Palestine is intertwined with religious themes. Colonialism also drove European curiosity. The French and British occupations of parts of Egypt brought a flood of information about the land of the pharaohs. And with

Tourists take in the sights of Istanbul. Tourism is Turkey's second-largest source of foreign currency earnings, bringing in approximately US$10 billion a year. Upwards of thirteen million people typically visit Turkey annually, though recent terrorist activity in the country has severely curtailed those numbers. © David Keaton/Corbis. Reproduced by permission.

the coming of steamship travel and the wealth and leisure generated by the industrial revolution in Europe, tourism as an organized industry spread from Europe to the Middle East. The first tours of Egypt from England were organized by Thomas Cook in 1868, and the first editions of Baedeker's guides for Palestine, Syria, and Egypt were published a few years later, first in German and later in French and English.

Early tourists were drawn by the region's sites of religious and historical importance, and today many still flock to such world treasures as the Great Pyramids at Giza, the Blue Mosque of Istanbul, and the old medina of Fez. As modern governments and private investors attempt to increase tourism revenues, they are adopting new strategies to attract visitors and keep them entertained. Egypt, Syria, Morocco, and some Persian Gulf countries have been developing waterfront resorts. Turkey, long a summertime destination for many Europeans, has begun to develop mountain areas for winter tourism. Bahrain expanded its International Exhibition Centre in 1999 and plans to construct facilities for international-caliber formula-one auto racing. Dubai, in the United Arab Emirates, has for years been hosting international tennis and golf tournaments. Several countries have built large exhibition and convention facilities, new sports venues, and a variety of resorts, from Tunisia's Saharan winter resorts to beach complexes on the Mediterranean, Red Sea, Persian Gulf, and Gulf of Oman and Indian Ocean coasts.

Turkey has the largest volume of annual tourist arrivals in the region, with about 11.6 million visitors recorded in 2001. Tunisia also has an active tourism sector, with an average of about 5 million visitors between 1999 and 2001. Morocco, where tourism is important in the country's development strategy, averaged more than 2 million arrivals between 1999 and 2001. Countries with the least tourist activity were Algeria, Iraq, Oman, Qatar, and Yemen.

The political and security situations in a country can have a markedly negative impact on tourism. Periods of prolonged conflict can cut the number of visitors drastically, even in places where tourism often is encouraged. For example, despite a highly developed and well-funded tourism infrastructure and an active Ministry of Tourism, tourist arrivals in Israel dropped from 2.3 million in 1999 to 1.2 million in 2001, due in large part to continuing violence. The fact that arrivals in Algeria, a country with tremendous tourist potential, numbered fewer than 200,000 between 1998 and 2000 can be attributed in large part to the unsettled security situation there. Violent groups sometimes attempt to make a political statement by attacking tourists or other foreigners. This was the case in Egypt when Islamists carried out a number of deadly attacks in the late 1990s. The government responded by increasing security measures, including the hiring of special "tourist police." In Yemen it has been the

practice of some tribes to put pressure on the government by taking hostages, often foreign tourists. After the events of 11 September 2001, security became more perilous as the government, in cooperation with the United States, attempted to capture or kill al-Qaʿida members and sympathizers.

TRADE

The geographical position of the Middle East has made the region part of far-flung trade networks, as both market and supplier, since antiquity.

The Middle East is the cradle of civilization, the place where agriculture and urban life are thought to have originated. The region was economically vibrant and a center of trade in early antiquity, and it connected far-flung markets across the Eastern Hemisphere during Roman times. The collapse of the Roman Empire fragmented governing institutions in northwestern Europe, dividing its markets from the rest of the world. The rise of Islam during the seventh century C.E. and its subsequent diffusion spread Arabic and a common legal system *(shariʿa)* across the southern Mediterranean and as far east as what now is Indonesia. Trade was reinvigorated and, following the Mongol conquest and consolidation in east and west Asia, overland trade between the Middle East and China along the Silk Road also thrived.

Trade before the Modern Period

Before the modern period, the Middle East exported mainly high-quality manufactured products to Europe and Africa, with which it generally enjoyed a trade surplus. Raw materials and manufactured products went to Asia but, like others trading with this region, Middle Eastern merchants often ran deficits with their east Asian partners.

The area around the Indian Ocean was a main market and supplier of goods to the Middle East. Pepper and spices came from the East Indies and were re-exported as well as consumed locally. Teak for ship construction and other tropical woods were imported from India; porcelain and silk came from China. After silkworms were smuggled out of China during the sixth century C.E., the Middle East also became a producer and exporter of silk cloth. Arab and Iranian shipping dominated the Indian Ocean as far as the Straits of Malacca, where Chinese junks took over, sailing to Guangzhou (Canton) and other Chinese ports to sell carpets, linens, cotton and wool fabrics, metalwork, iron ore, pearls, and ivory.

Overland trade with the Baltic region went via the Volga and other Russian rivers. Along these routes, Middle Eastern traders exchanged manufactured goods for furs, wax, amber, and slaves. The ancient sea trade with East Africa expanded greatly with the spread of Islam and with the establishment of branches of family trading concerns by Arabs and Iranians down the East African coast. Middle Eastern traders exchanged cloth, glassware, weapons, and trinkets for Africa's wood, ivory, palm oil, and gold. Slaves were sent from Africa to the Middle East in large numbers, most remaining in the countries bordering the Red Sea and Persian Gulf, but some going as far as India and China. The trans-Sahara trade blossomed following the introduction of caravans between Egypt, North African ports, and tropical Africa, exchanging African gold, ivory, pepper, and slaves for salt, weapons, copper, textiles, glassware, and trinkets.

Trade with Europe eventually would come to dominate Middle Eastern exchange relations, but Europe's lagging development following the sack of Rome confined most European exports to the Middle East to raw materials such as wood, iron, furs, and slaves. In exchange, Europeans received the high-quality manufactures for which the Middle East had long been famous: glassware, metal goods, and fabrics. As corruption eroded Egypt's competitive position during the fourteenth century, manufactures brought by Venetian traders began to displace local products. During the first half of the sixteenth century, Portugal invaded and took control of the Indian Ocean trade, constructing fortifications in ports like Bahrain and charging protection rents to merchants for allowing their goods to pass. The Dutch then displaced the Portuguese from much of their empire, and Portuguese interference with

Dubai, the chief commercial center of the United Arab Emirates, boasts the world's largest man-made harbor, Jabal Ali Port. It is the most frequented port outside of the United States, with sixty-seven berths and an impressive dry-dock facility. © PETER BLAKELY/CORBIS SABA. REPRODUCED BY PERMISSION.

local shipping waned. Shipbuilding thrived in the Persian Gulf during the eighteenth century, and merchant families grew rich from pearling and long-distance trade. Gulf-based merchants carried a wide variety of goods—including live horses—east to South Asia and west to the African coast. Their predominance in their own region was challenged and gradually eroded during the nineteenth century. In mid-century, competition from British steam-powered ships began taking business from Arab shippers who relied on wind-powered dhows and boums. Near the end of the century, the British navy established protectorates over the smaller emirates near the mouth of the Gulf and soon dominated that sea.

During the nineteenth century, the terms of trade between the Middle East and Europe gradually shifted as Europeans penetrated Middle Eastern markets and pressed governments for changes favoring imports over articles produced locally. High value-added products (i.e., manufactured or processed goods rather than raw materials) increasingly came from Europe rather than being produced at home. For example, Morocco had been famous for its refined sugar, but its Middle Eastern markets were overtaken by sugar from southern Europe and by sugar from the New World that had been refined in Europe. A similar displacement occurred later with respect to coffee. Manufactured goods were similarly displaced as fine silk and woolen fabrics, high-quality paper, and glass, which formerly had gone from the Middle East to Europe, began to flow from Europe to the Middle East. New European products, such as clocks, spectacles, and weapons, entered Middle Eastern markets without local competition. Although yarn exports to Europe continued until the end of the eighteenth century, it was clear by the time of the industrial revolution that the Middle East was becoming a peripheral actor in world trade, exporting mostly primary products and importing mostly manufactured and processed goods from the industrializing European core.

Shifting trade patterns accelerated during the nineteenth-century era of globalization, which ended with World War I. Total world trade rose from some $1.7 billion in 1800 to $42 billion in 1913. During this period, the share of world trade going to the Middle East was halved, falling from about 3 percent in 1800 to 1.5 percent in 1913. The slope of the upsurge in trade reflected European investment in steamships and railroads, and what economists like John Gallagher and Ronald Robinson called "the imperialism of free trade": in the name of open markets, Britain forced weaker trading partners to abolish monopolies and local trade regulations and to adopt low uniform tariffs on imports. Referred to as *capitulations,* these institutional changes ensured that the market effects of competition from an industrializing Europe on artisan production in the Middle East (and elsewhere) would not be moderated by the state. This virtually guaranteed that the region would be incorporated into the global trading system as a dependent exporter of raw materials: tobacco, dried fruits, and cotton from Turkey; silk and opium from Iran; wheat, barley, and dates from Syria and Iraq; silk from Lebanon; oranges from Palestine; and coffee beans from Yemen.

Foreign investment and loans were key elements changing the terms of trade and fostering trade dependency. Egyptian overinvestment in cotton production during the U.S. Civil War displaced local food production and, when cotton prices collapsed, increased Egypt's foreign debt. The protection of foreign creditors served as a justification for imposing on the Egyptian government a joint British-French commission in 1876. Britain used this

opportunity to take control of the Suez Canal and, in 1882, of Egypt itself. Trade deficits combined with heavy foreign borrowing caused the Ottoman Empire to declare bankruptcy in 1875 and, six years later, led to the establishment of the Ottoman Debt Commission. This essentially parallel ministry of finance represented the interests of the Ottoman Empire's creditors, and imposed an early version of conditionality (i.e., the surrender of control over fiscal policy to an agent of foreign creditors) to ensure that they would be repaid.

The Modern Period

The discovery of oil in Iran at the turn of the twentieth century confirmed the position of the Middle East as a supplier of raw materials, defining its position in world trade for the next century. Competition between France and Britain for control of Iraqi oil influenced the way the defeated Ottoman Empire was divided into mandates governed by these two victors after World War I. During the interwar period, oil was found in Bahrain, Kuwait, and Saudi Arabia, while the Iraqi oil industry became the balance wheel regulating the development of production capacity in the region via the Red Line Agreement of 1928. During World War II, trade volume declined regionally and globally owing to blockades, dangers to shipping, and shut-in oil production. Afterward, the production and sale of petroleum came to dominate interregional trade. Starting in 1960, the Organization of Petroleum

TABLE BY GGS INFORMATION SERVICES, THE GALE GROUP.

Exporting Countries (OPEC) struggled to reverse the unfavorable terms of trade that had beset its Middle Eastern members since the nineteenth century by halting and then reversing the incipient decline in real oil prices that threatened to erode oil-exporter income.

Oil exports altered economic positions intraregionally. Until 1948, Egypt and Turkey accounted for the majority of Middle Eastern trade. After that, the oil-producing countries captured an enormous proportion of total regional trade, especially exports. Attempts to foster intraregional trade through common markets and regional organizations such as the Gulf Cooperation Council mostly foundered on the shoals of economies deformed by dependent development—that is, development strategies emphasizing oil and gas production rather than goods and services aimed primarily at domestic and regional markets. Local industrial development also was affected by what is sometimes called "Dutch disease" (because the same situation affected Holland during the heyday of its exploitation of the riches of the East Indies), oil export–induced monetary inflation that decreased the competitiveness of local goods as compared to imports. Dutch disease makes domestic production uncompetitive, even at home, further discouraging economic diversification.

The Arab League trade boycott, imposed against Israel after its creation in 1948 and still in effect in a number of Arab countries, was another factor retarding the development of local industries in Arab countries; it also deprived Israeli farms and

factories of a nearby market for their products and increased Israel's already massive dependence on foreign assistance. Together, these outcomes increased the power of government over civil society, both in Israel and in the Arab states, by diminishing the capacity of domestic business interests to exercise checks on the state. The boycott also aggravated a conflict that all the region's governments used to their advantage to discourage if not repress domestic dissent.

Middle Eastern trade oscillates in response to political crises and wars, many connected to the Arab–Israeli conflict. In general, crises tend to depress Middle Eastern oil exports, either through oil embargoes or as a result of war-induced oil price increases. For example, the global position of Arab oil exporters was gravely damaged by consumer efforts to find other sources of hydrocarbon imports following the 1973 Arab-Israel war and the Arab oil embargo, which enabled OPEC to raise crude oil prices to what then were unheard-of levels. Ten years later, the volume of oil exports from OPEC countries was half what it had been in 1973. (Oil income did not fall in proportion because of further oil price increases during that period.) Other conflicts, such as the revolution in Iran and the subsequent U.S. trade sanctions against it, and the three Gulf Wars in which Iraq was a major belligerent (1980–1988; 1990–1991; and 2003), also affected regional trade. The first Gulf War, between Iran and Iraq, was fought in part with oil exports. Iraqi exports were occasionally halted by Iranian attacks but Iraq continued to receive oil income from Saudi and Kuwaiti sales of oil from the former Neutral Zone. Meanwhile, Iran suffered under U.S. trade sanctions, which depressed its export income.

As regards the balance of trade overall, oil-exporting-country revenues usually have exceeded the cost of imported goods and services. Non-oil exporters, such as Egypt, Israel, Syria, Jordan, Yemen, and Turkey, ran trade deficits, some incurred to pay for oil imports. The deficits were covered by foreign aid and loans, leading to large foreign debts. These macro-level effects mask significant changes in non-oil-exporting economies. For most, the composition of exports has changed. Traditional raw-material exports like cotton and grain have declined owing to greater processing and consumption at home. A growing export trade in manufactured goods, such as high-tech equipment and finished textiles, is bringing new trade income to Israel, Turkey, Egypt, Syria, and Lebanon. On the import side, rising incomes from oil exports have trickled down to non-oil-exporting neighbors via labor migration and, prior to the collapse in oil prices in 1986, through intraregional foreign aid. This allowed imports of foodstuffs, durable consumer goods, industrial and transport machinery, and raw materials to rise.

The most disturbing component of Middle Eastern trade is armaments. Higher oil prices in the 1970s were offset by the aggressive marketing of weapons to Middle Eastern Muslim countries. The motives of arms buyers were diverse. Some, such as Iran, Iraq, and Saudi Arabia, sought arms from external patrons as a way to assert their political and religious authority in the region. Others felt themselves to be at a disadvantage as compared to their neighbors, especially Israel, with its virtually First World military industries and its ability to acquire weapons and advanced military technologies, mostly free, from the United States. The overall decline in the world economy following the 1973 Arab-Israeli war made trade-surplus oil exporters attractive targets of marketing efforts by arms exporters from throughout the world. Britain, France, China, and Russia joined the United States in building arms export markets in the Middle East. Beginning in the 1980s, when U.S. policy shifted toward greater marketization of supporting strategic industries by encouraging them to market weapons abroad, then expanding during the 1990s, following the collapse of the Soviet Union, even materials for so-called weapons of mass destruction became widely available for import into the Middle East and elsewhere.

UPDATED BY MARY ANN TÉTREAULT

TRAD, PETRO

[1876–1947]

Lebanese politician.

Petro Trad was born to a Greek Orthodox family in Beirut and received a law degree from the University of Paris. Known for his eloquent presentations, he was one of a handful of wealthy lawyers who monopolized law practice in Beirut. Trad was also involved in politics; he was one of six signatories to a petition presented to the French Foreign Ministry in 1913 on behalf of Christian sects in Beirut, that demanded an end to Ottoman control of Syria (including Palestine and Lebanon) and called for a separate entity run by "French specialists." This petition so angered Cemal Paşa against Arabs in general and Christians in particular that he asked the War Council in Alayh to execute the six signatories. They fled Lebanon.

After the World War I, Trad returned to Beirut as an ally of the French and founded the League of Christian Sects, which comprised the elite of Beirut society and demanded a French mandate over Syria and Lebanon. His law firm attained fame throughout the region, partly because he would defend poor persons who could not afford his fees. He was elected deputy from Beirut in 1925, with both Arab and French support. Trad served in the parliament for much of the 1920s and 1930s, either elected or appointed by the French authorities. He was a member of the parliamentary committee that worked on the French-Lebanese treaty of 1936. The French rewarded his support by appointing him speaker of parliament in 1937, a post he held until September 1939.

Trad could not stay neutral in the political feud between the staunchly pro-French Emile Eddé and the moderately pro-French Bishara al-Khuri. In his memoirs al-Khuri accuses Trad of supporting Eddé. In fact, Trad believed that both al-Khuri and Eddé were incapable of winning the presidency. He promoted himself as a consensus candidate.

Trad became president by default. He was briefly appointed by the French government, to oversee the election of a new president by members of an appointed parliament. The election of al-Khuri made it clear to him that his chances of winning the presidency were nil. He died in Beirut.

TRANS-ARABIAN PIPELINE

Pipeline transporting crude oil from Saudi Arabia to the Mediterranean.

The Trans-Arabian Pipeline (Tapline) was constructed by the Arabian American Oil Company (ARAMCO) to carry crude oil from Abqaiq, Saudi Arabia, to the Mediterranean coast. As originally conceived during World War II, the line was to follow a great circular route running northwest through Saudi Arabia and Jordan, which would have located the Mediterranean terminus at Haifa, then part of the British Mandate of Palestine. The postwar conflict over the disposition of Palestine ended in the Arab–Israel War (1948) that put Haifa in the new state of Israel. Tapline's route, more than 1,000 miles long, was altered to run through Syria and site its western terminus a few miles south of Sidon, Lebanon.

The construction of Tapline was hastened by the end of the Red Line Agreement, which brought a new infusion of capital into ARAMCO as the result of the removal of the restriction preventing Standard Oil of New Jersey (now Exxon) and Socony Vacuum (now Mobil; both combined as Exxon Mobil) from joining the partnership then composed of SOCAL (now Chevron) and Texaco. Capital was not the only requirement in short supply. Steel was also scarce following the end of World War II, and its allocation was controlled by the U.S. government. A second important factor speeding the construction of Tapline was support from the administration of U.S. president Harry S. Truman, which regarded Middle Eastern oil as crucial to the success of the Marshall Plan.

When Tapline was built, it was the world's largest privately financed construction project. At the peak

of construction, it employed more than sixteen thousand men. Towns were constructed at Qaysumah, Rafha, Badana, and Turayf, where the four main pumping stations in Saudi Arabia were located. Initial capacity was 320,000 barrels per day. In 1957 auxiliary pumping stations were installed, raising capacity to 450,000 barrels per day. Tapline's capacity in 2003 was 500,000 barrels per day.

Tapline increased ARAMCO's capacity to export crude oil and reduced its oil-transport expenses. This prompted the government of Saudi Arabia to demand 50 percent of Tapline's profits under the fifty-fifty profit-sharing agreement that governed oil production. ARAMCO argued that transport was not covered under the profit-sharing agreement and claimed that Tapline was not an affiliate of ARAMCO but a separate company. After years of negotiations, the company agreed in 1963 to pay Saudi Arabia half the difference, after costs were deducted, between the price of petroleum at Ra's Tannūrah and the price at Sidon. The agreement, retroactive to 1953, netted the government $93 million in arrears.

Tapline and other pipelines in the region not only reduce transport costs and increase oil-export capacity but also provide alternatives to shipping from the Persian Gulf or through the Suez Canal. However, pipelines have security problems. Syria halted the passage of oil through Tapline for twenty-four hours in October 1956 during the Arab–Israel War, and in Syria a tractor ruptured Tapline in May 1970, just as Libya was restricting the production of Occidental Petroleum during the early days of the "squeeze." This blocked the transit of 500,000 barrels of crude from Saudi Arabia to the Mediterranean, triggering an immediate threefold rise in oil-tanker rates. The vulnerability of Tapline was highlighted by several incidents of sabotage in 1973, including an armed attack on the Sidon terminal and attacks on the pipeline itself in Syria and in Saudi Arabia.

In order to counter some of the strategic liabilities of relying so heavily on Tapline for pipeline transport, Saudi Arabia constructed a 720-mile crude-oil pipeline, Petroline, from the eastern oil fields to Yanbu, on the Red Sea, in 1981. A parallel line, connected to a spur running from Iraq's southern oil fields, was constructed to enable Iraq to export oil from Saudi Arabia during its war with Iran. This line was closed under United Nations sanctions following Iraq's invasion of Kuwait. The Saudis seized ownership in June 2001. Petroline, located entirely within Saudi Arabia, carried a maximum of 5 million barrels per day at its peak. In 2003 utilization was about half this capacity to accommodate the conversion of the line to carry natural gas. Like Tapline, Petroline increases the kingdom's export flexibility and demonstrates its commitment to a secure supply of hydrocarbon fuels to consumers.

TRANS-IRANIAN RAILWAY

North-south railroad completed in 1938, which links Caspian ports in the north to Tehran and Persian/Arabian Gulf ports in the south.

The Trans-Iranian railway, one of the great engineering feats of the twentieth century, was commissioned by Reza Shah Pahlavi after his consolidation of power in Iran in 1925. Preliminary planning and construction efforts were contracted with KAMPSAX, a Scandinavian syndicate, in 1933. With the hub at Tehran, single tracklines were laid north and south through mountain and desert terrain to newly constructed ports on the Caspian Sea and Persian Gulf coasts. The 865-mile (1,392-km) railroad became operational in 1938, with 190 tunnels, totaling 47 miles (76 km), and traversing mountain passess higher than 7,000 feet (2,135 m).

The railway symbolized the new regime's goals of nationalism, independence, and modernization. To avoid foreign exploitation, particularly from English and Russian interests, it was financed by taxes on the popular subsistence items of tea and

sugar. Ironically, during World War II, the railroad was commandeered by the Allies as a major supply route to the Soviet Union.

TRANSJORDAN FRONTIER FORCE

Military group established to defend Palestine and Transjordan (1926–1948).

The Transjordan Frontier Force (TJFF) was organized by the high commissioner for Palestine to fulfill Britain's responsibility under terms of the mandate treaty. The TJFF should not be confused with the Arab Legion, from which it was entirely separate.

Confusion arose out of the TJFF's having a name identifying it with Transjordan but being a part of the imperial forces in Palestine and thus a Palestinian responsibility. In the end, the British treasury agreed to have Palestine pay five-sixths of the cost of the TJFF and Transjordan pay one-sixth, following the line of reasoning that security in Transjordan contributed to security in Palestine.

Further disagreement arose over the need for a force to undertake responsibilities many believed could be handled by the Arab Legion. The high commissioner for Palestine, Lord Plumer, considered that the frontiers with Syria and Saudi Arabia were vulnerable. The latter frontier was regarded as particularly open to the possibility of expansion efforts by Abd al-Aziz ibn Saʿud Al Saʿud, who had proclaimed himself king of the Hijaz in January 1926 and conceivably would seek to expand into areas controlled by the Hashimites, particularly Transjordan. The TJFF proved incapable of patrolling the desert of Transjordan and retired across the Jordan river to Palestine in 1930 when John Bagot Glubb created the Desert Mobile Force, which became the nucleus of the Arab Legion, and took over responsibility for the frontiers.

When the TJFF was formed, its recruits came from the disbanded Palestine gendarmeries, including noncommissioned officers and enlisted men who had had five years of experience. Some 70 percent of the recruits were Arabs from Palestine, mainly literate fallahin from the villages. In addition, there was a camel company of Sudanese enlisted men; it was replaced in 1933 by a mechanized unit. Some Jews and town Arabs served in administrative and technical services. Before 1935, about 25 percent of the force were Circassians.

The TJFF was under direct control of the high commissioner in Jerusalem, and above him the War Office in London. Non-British officers were not to attain command positions that gave them seniority over British personnel. Therefore, the officer corps and squadron commanders (majors or above) were British. Troop commanders (captains) and below included Palestinians, Syrians, Sudanese, Circassians, and a few Jews.

Initially the TJFF had three squadrons of two companies each, plus one camel company. In 1930, a mechanized company was added, bringing the total to eight companies. After the camel corps was replaced by a mechanized company, the TJFF consisted of three squadrons and two mechanized companies until the TJFF was disbanded.

All in all, there were some one thousand officers and men in the TJFF. Command headquarters, al-Zarqa, near Amman, was headed by a British lieutenant colonel. By 1935, there were twenty-four British officers in command of the TJFF: the commanding officer, seven majors, and sixteen captains. This complement remained more or less constant.

TRANSPORT

Ships, caravans, railroads, and pipelines carry Middle Eastern goods to market.

Until the twentieth century, and in many places until the middle of that century, people, animals, and

water were the primary modes of transport in the Middle East.

Shipping

Waterways are few and not always navigable, but coastal navigation has always been important. Of the various river systems, only two were navigable—the Nile and the Tigris and Euphrates system. All were used for irrigation as well as transport, and canal systems were built to extend their benefits. The Nile runs north through East Africa, emptying across a broad delta into the eastern Mediterranean Sea. The longest river in the world, it flows from Lake Victoria through Uganda, Sudan, and Egypt. Since the prevailing winds are northerly, boats without motors can sail upstream and float downstream. The Tigris and Euphrates rivers are less suited to navigation, since their currents are swifter, their levels vary, and they often change course before merging into the Shatt al-Arab, which drains into the Persian Gulf. Because of these means of access to the sea, both areas have long transported bulk goods by water and built seaports that accommodated goods from other coastal trading areas, such as Turkey and Syria. Since antiquity, the coastal people of the Mediterranean have traded, traveled, and warred among themselves over the riches of one another's lands.

Caravans

For the local movement of goods to rivers or seaports, and even for long-distance overland journeys, caravans were relied on. Caravans of mules and, especially, camels, took over from wheeled traffic at the end of the Roman era. Camel loads varied, generally ranging from 550 to 660 pounds; the speed of a caravan was 2.5 to 3 miles per hour; the usual daily stage was 15 to 20 miles. Caravans differed greatly in size, depending on need and the availability of people and animals: In 1820, before the Suez Canal was built, the Suez caravan had about 500 camels; in 1847, the Baghdad–Damascus caravan had some 1,500 to 2,000 camels; and the Damascus–Baghdad caravan, some 800 to 1,200. During the 1870s, some 15,000 pack animals made three round trips a year on the Tabriz–Trabzon route (Iran to Turkey), carrying the equivalent of the contents of seven or eight sailing ships each way. Boats and pack animals were adequate for the relatively small volume of traffic under traditional conditions before the advent of the industrial revolution and the expansion of European trade and imperialism into the Middle East.

After an agreement was negotiated between French engineer Ferdinand de Lesseps and the Egyptian government, construction of the Suez Canal began in 1859 and continued for ten years. The canal links two oceans and two seas, and transports 14 percent of total world trade. © Peter Turnley/Corbis. Reproduced by permission.

Steamships

During the nineteenth century, transport was revolutionized. During the 1820s and 1830s, regular steamer lines linked the Middle East with Europe

In the 1830s, the East India Company began to use steamships to travel between Bombay and Suez. In these early days, ports were inadequate for loading and unloading, and cargo had to be ferried out to the ships in smaller boats. © Jack Fields/Corbis. Reproduced by permission.

across the Mediterranean, with Russia and Austria across the Black Sea, and with India through the Red Sea. Later, services were established in the Caspian Sea and the gulf. By the closing decades of that century, the bulk of the region's foreign trade was carried on steamships, and freight costs were drastically reduced. Starting in the 1830s, steam tugs and steamboats were used on the Nile and on the Euphrates, soon carrying a large portion of domestic trade. Since no port improvements had occurred since Roman times, the steamers were loaded and unloaded by lighters, which were boats used to carry cargo from ships to ports. The first modern port facilities were installed in Alexandria in 1818 (followed by later improvements), at Suez in 1866, in İzmir in 1875, in Aden in 1888, in Beirut in 1895, and in Istanbul in 1902. Except for Alexandria and Suez, all these harbors were built with European capital. The opening of the Suez Canal in 1869 by a French company was a major advance for world navigation.

Railroads

The first railway in the Middle East was begun in 1851, at British insistence, to link Alexandria with Cairo and Suez, speeding transport on the Mediterranean–India route. Like all Egypt's main lines, it was financed by the government. Soon after, British capital built two lines from İzmir in Turkey to the countryside. The Ottoman Empire, however, wanted a railroad that linked Istanbul with their provinces of Anatolia, Syria, and Iraq; following the completion of the Vienna–Istanbul line in 1888 (which became the Orient Express), it gave a concession to a German company for an Istanbul–Ankara line, later extended to Basra. This Berlin–Baghdad Railway aroused much international controversy, which was settled just before the outbreak of World War I. When the war ended in 1918, the line reached Aleppo in northern Syria, and a small stretch had been built in Iraq. Other foreign-owned short lines were built in Palestine, Lebanon, and Syria. The Hijaz Railroad (1903–1908), linking Damascus, in Syria, to Medina, in western Saudi Arabia (near Mecca), was financed by contributions from Muslims throughout the world. During World War I, the British army built extensive rail lines in Iraq and Palestine and put the Arabian section of the Hijaz railroad out of service. In Iran, the Russians built a line to Tabriz. After the war, Turkey doubled its mileage and Iran built a railroad between the Caspian Sea and the Persian Gulf. Since then, important lines have been built in Iran, Saudi Arabia, and Syria. Table 1 shows the length of rail lines built from 1870 to 2000. Rail service reduced both the time and costs of transport. On the Ankara–Istanbul route, the rate per ton-mile fell from 10 cents to 1 cent; on the Damascus–Beirut line, from 4.5 cents to 1.5 cents; the journey from Damascus to Cairo was reduced from 25 days to 18 hours. In some areas, telegraph lines accompanied or preceded the railroads.

Length of rail service (in kilometers)

Country	1870	1890	1914	1939	1948	1975	2000

TABLE BY GGS INFORMATION SERVICES, THE GALE GROUP.

Modern Services

From the mid-1900s on, the Middle East has been served by an extensive network of telegraph and telephone lines, which extend to all cities and towns, and to almost all villages. Computer, electronic mail, and Internet and fax services exist in main centers as well.

Modern roadways were first built during the late nineteenth century; except for those in northern Iran and Lebanon, they played no significant role in the transport system of the period. After World War I, and then again after World War II, they were greatly expanded and improved. Motor vehicles, which came to the Middle East before World War I, carry the bulk of inland transport. Air transport has a similar history: every country has its own airline and the region has become a hub of air traffic, connecting North America and Europe with Africa, India, and Asia.

Because of the Suez Canal, the Middle East plays an important part in world navigation. Just before Egypt nationalized the canal in 1956, it carried 13 percent of world shipping but 20 percent of oil tankers. The canal has been repeatedly enlarged and deepened to accommodate increasingly larger tankers and supertankers. During the 1990s, most petroleum producers maintained a large fleet of tankers, and oil-refining and consumer nations had sizeable merchant and tanker fleets; still, the share of the Middle East in world shipping was only 1 percent, and its share in world tankers only 3 percent. Nationalization of all transport facilities has been a fact of Middle Eastern life, beginning with Turkey's railways during the 1920s.

Oil has brought another form of transport to the region: pipelines. The first, opened in 1934, carried Iraq's oil to the Mediterranean. Since then, far longer and larger pipelines have been built to transport Saudi Arabian and Iraqi oil through Syria to the Mediterranean, as well as Iraqi oil through Turkey and Saudi Arabia. Many pipelines no longer operate due to various political conflicts. Oil-producing countries also have extensive networks of internal pipelines that transport crude petroleum to refineries.

TRANS-TURKEY PIPELINE

Oil pipeline connecting fields in Iraq and Turkey.

The Iraq-Turkey pipeline connects the rich oil fields around Kirkuk, Iraq, to the Mediterranean port of Yumurtalik in Turkey. It consists of two parallel pipes, 584 miles (941 km) long (398 miles or 641 km in Turkey), with a total capacity of 14 million barrels of crude oil. The first line was opened in 1977; the second, in 1987. It is operated jointly by the national oil companies of Iraq and Turkey. Oil flows through the pipeline ceased in 1991, in accordance with UN sanctions against Iraq after its invasion of Kuwait.

NIYAZI DALYANCI

TREATY OF 1815

Agreement between the United States and the ruler of Algiers that ended U.S. annual tribute payments.

In 1815, after the *dey* (ruler) of Algiers had declared war on the United States and began to tolerate corsair attacks on American shipping in the Mediterranean Sea, Washington dispatched to the area a ten-ship squadron under the command of naval hero Stephen Decatur (1779–1820). Decatur's objective was to punish Algiers and to assert freedom of the seas for trade. Decatur defeated the Algiers fleet and threatened to bombard the city unless the dey signed a new treaty promising to protect American ships and seamen from corsairs. The treaty signed on 30 June 1815 abolished U.S. indemnity payments, freed all U.S. prisoners without any ransom, and granted U.S. ships trading privileges in ports that recognized the suzerainty of Algiers.

TREATY OF PROTECTION (1886)

British treaty made with south Arabian rulers.

This formal treaty of friendship and protection between Britain and the rulers of Qishn and Socotra in 1886 was followed by similar treaties with the rulers of the other states along the southern coast of the Arabian Peninsula and with the major tribal shaykhs of the interior that were deemed crucial to the security and commerce of Aden. Designed to end growing threats posed by the Ottoman Turks in North Yemen and by other European imperial powers, these treaties were a major step toward the creation of the Aden Protectorates and the binding of Aden to the interior territories in modern times. The local rulers traded control of foreign policy for British protection and modest subsidies. Between 1886 and 1895, Britain signed treaties with the Aqrabis, Lower Aulaqis, Fadhlis, Hawshabis, Alawis, Lower Yafais, and some of the Wahidis.

Arabian Peninsula

In the peninsula, a tribe is a group defined by perceived descent from a common male ancestor.

The word *qabila* (tribe) refers not only to a kinship group but also to a status category: *qabili* families claim descent from one of two eponymous Arab ancestors, Adnan or Qahtan, and feel themselves to be distinct from and superior to the nontribal *khadiri,* freeborn people who cannot claim such descent. The *khadiri* included most of the tradesmen, artisans, merchants, and scholars of pre-oil Arabia.

People of *qabili* status divide themselves into superior and inferior tribes, with the former able to claim purity in blood and origin *(asl).* The most prominent of the superior tribes of Arabia are the Aniza, Shammar, Harb, Mustayr, Ajman, Dhafir, Banu Khalid, Banu Hajir, al-Murrah, Qahtan, Utayba, Dawasir, Sahul, Manasir, Banu Yas, Sibay, Qawasim, Banu Yam, Za'ab, and Banu Tamim. The main tribes considered inferior are the Awazim, Rashayda, Hutaym, Aqayl, and Sulubba. The Sulubba, who traveled the desert as tinkers and metalworkers in service to the more affluent bedouin, were at the bottom of the tribal social scale.

Marriage between individuals of *qabila* and *khadiri* status, and between individuals of superior and inferior tribes, is frowned upon. Since the *qabili* claim to status is dependent upon purity of descent through the paternal line, the children of such a marriage would suffer the taint of mixed blood and reflect on the status of the tribe as a whole. These status barriers to marriage are beginning to break down in contemporary Saudi Arabia as access to education and economic advantage have created new status categories, which are beginning to compete with tribal affiliation and are undermining its importance in the social hierarchy.

The proportion of the population of Saudi Arabia that claims a tribal affiliation is unknown. Nearly all nomadic people are organized in tribal associations, and in 1950 Saudi Arabia's nomadic population was estimated at 50 percent. Since, historically, branches of tribal groups have lived in agricultural settlements at least part of the year or were permanently settled in towns, an estimate (according to a study done in the late 1970s) that the proportion of the population who claim a tribal affiliation could be as high as 80 percent would seem reasonable. A more recent study, however, suggests that the bulk of the settled population in Najd were nontribal *khadiri,* many of whom intermarried with the *abd,* or black slaves. Since the major cities of the Hijaz—Jidda and Mecca—and the towns of the Persian (Arabian) Gulf have long attracted foreigners, it is likely that the proportion of the contemporary Saudi population claiming a tribal affiliation is far smaller.

Structurally, nomadic tribal groups are organized by patrilineal descent, which unites individuals in increasingly larger segments. The smallest functional unit is the *hamula* (lineage), which consists of three to seven generations of one family related through the paternal line. Since lineage members are patrilineal cousins, the *hamula* is also referred to as one's *ibn amm* (father's brother's son), or *ahl* (people). The residential unit within the lineage is the *bayt* (house or tent), usually consisting of members of a nuclear family, including wife or wives and children.

Members of a single lineage usually camp close to one another and herd their animals as a unit. The lineage shares joint responsibility for avenging wrongs suffered by its members and pays compensation for any caused by its members. Although tribes may differ in status, all lineages within a given tribe are considered equals. Water wells, aside from the newer deep wells drilled by the government, are held in common by lineages. Among nomads, lineage membership is the basis of summer camps, and all animals, though they are owned by individual households, bear the lineage's brand. In terms of social relationships, access to government bureaucracy, and economic well-being, connection with the lineage is the most important relationship for the individual member of a tribe.

Bedouin nomads gather to eat at a camp in the Sahara Desert of Tunisia. © CORBIS. REPRODUCED BY PERMISSION.

Above the level of lineage there are larger segments that together make up the tribe. The *fakhd* (thigh) consists of a number of lineages that together control pasture and wells in the tribal area, while the *ashira* (plural *ashaʾir*) consisting of numerous *fakhds,* is the largest segment below the tribe. While the system allows lineages to locate themselves genealogically relative to other groups in the same tribe, in general the larger the tribal segment, the smaller its function in the daily life of the individual.

In eastern Arabia, there is a recognized division among tribal groups based on perceived origin: the Yamani (or Qahtani) who predominate in Oman are believed to have emigrated in ancient times from Yemen in the south, while the Adnani (or Nizari) tribes—settled in northern Oman, the Trucial coast, Bahrain, and Qatar—are believed to have come from the north and are considered racially less "pure" than those from the south. Most of the tribal groups in Qatar, despite their common origin, are also located throughout eastern Arabia. The ruling family of the State of Qatar are the Al Thani, originally part of the Banu Tamim tribe of central Arabia who arrived in Qatar in the early seventeenth century. The Manasir, one of the most widespread tribes of eastern Arabia, are mostly bedouin and range from the al-Buraymi oasis across the United Arab Emirates to Qatar and al-Hasa in the west, with some residing in Sharjah and Raʾs al-Khayma, and in the al-Shafra and al-Liwa oases in western Abu Dhabi. Some sections of the formerly powerful al-Naʿim tribe of Oman reside in Qatar as well as in the rest of eastern Arabia. The Quabysat section of the Banu Yas Tribe tried unsuccessfully in the early twentieth century to settle at Khawar al-Udayd, a marshy inlet at the eastern base of the Qatar peninsula.

In Saudi Arabia, a new national consciousness to compete with tribal identities is starting to emerge as the centralized state undercuts tribal autonomy, sedentarization undermines the economic benefits of tribal organization, and children are exposed to a common government-imposed school curricu-

lum. Tribal affiliation, however, especially for nomadic people, plays a pivotal role in relations between individuals and the central government. Since the mid-1980s, the central government has assumed the right to officially designate tribal leaders who may act as representatives on behalf of tribal members' interests. These leaders are expected to work through district amirs and governors and to deal with such issues as education, agricultural development, assistance in legal matters, transportation and communication improvement, welfare and social assistance, and helping to attain citizenship privileges.

For many tribal groups such as the al-Murrah, the National Guards have institutionalized tribal solidarity and strengthened tribal ties to the central government. Membership in individual National Guards units is based on tribal affiliation, and leadership of each tribal unit can be synonymous with traditional tribal leadership. Through the National Guards, former nomads receive training and the potential for higher-level careers, instruction in military sciences, housing, and health and social services for dependents and families.

For those tribal people who continue to live as bedouins, the government also provides water taps; market areas in cities, towns, and villages that are used in marketing livestock; veterinary services; subsidized fodder; and buildings for storage. It has been estimated that only 5 percent of the Saudi population today remain wholly nomadic.

Most tribes are affiliated with the House of Saʿud through marriage ties as the product of Ibn Saʿud's deliberate policy of cementing ties between himself and the tribal groups. Today the political alliance between tribe and state is being reinforced through marriage between tribal women and government officials as well as Saudi princes. Among the al-Saʿar bedouin in southern Arabia, for example, these marriages are encouraged by tribal leaders as a means of ensuring ongoing access to governmental leaders.

ELEANOR ABDELLA DOUMATO

BUTAYNA TRIBE

One of two major factions within the Sibaʿa (also Asbiʿa) tribe of Syria.

The Sibaʿa is a major tribe of the Anaza confederation of tribes. The other faction is al-Abda tribe. Both factions were divided into clans. Those clans spend the summer season north of al-Salamiyya in Syria, to the east of Hama, and also east of Homs.

The Sibaʿa tribe as a whole numbered about 4,000 households *(bayt)* in the early 1930s. A *bayt* or *khayma* (tent) numbered about 5 persons, according to the Ottoman *Salname* (yearbook). Thus the Sibaʿa would total 20,000 persons. It is not known what percentage of this total the Butayna tribe represented.

ABDUL-KARIM RAFEQ

DAWASIR TRIBE

A sharif tribe of central Saudi Arabia, centered in the Wadi al-Dawasir south of Riyadh.

The Dawasir are notable for their great success as landowners and oil contractors and for their maintenance of tribal solidarity. The Al Sudayri family is the most famous to have come from the tribe; through it the tribe's influence has been felt throughout Saudi Arabia.

See also AL SUDAYRI FAMILY.

ELEANOR ABDELLA DOUMATO

FADAN KHARASA TRIBE

Kharasa is one of two factions of the Fadan, which is a major tribe in the Anaza confederation of tribes.

The other faction is the Fadan Waʿad. The Kharasa numbered 1,500 *bayt* (household) or *khayma* (tent) in the early 1930s. According to the Ottoman *Salname,* which gives the size of the *khayma* as equal to about five persons, the total number of the Kharasa would have been 7,500 inhabitants. The Kharasa spread in the summer season along the Balikh and the Euphrates rivers in Syria; they are not allowed by the Syrian authorities to cross both rivers to the west. In winter, they go eastward into Iraq, especially during the years of drought. The Kharasa are divided into smaller clans, and they are on the whole warlike tribes.

ABDUL-KARIM RAFEQ

GUISH TRIBES

Tribes in the military service of the Makhzen in precolonial Morocco.

The most important of the Guish tribes were the Sherarda, Sheraga, and Udayay. Guish tribes were distinguished from the Naiba tribes, which were occasionally recruited to serve the Makhzen militarily. They lived on a plot of land offered by the sultan and did not pay taxes. Most of the administrators of the Makhzen were recruited from the Guish tribes.

RAHMA BOURQIA

HASSANA TRIBE

A major tribe of the Anaza confederation of Arab tribes who were known for their bravery.

In the second half of the eighteenth century, the Hassana tribe headed towards Syria from Najd, pushed by the Wahhabis. They reached the confines of Homs and Hama and clashed with the Mawali bedouin in control there. The weakened Mawali relinquished their positions and retreated towards Salamiyya and Maʿarrat al-Nuʿman. The Hassana numbered 400 *bayts* (households), that is, about 2,000 persons (the *bayt* or the *khayma* [tent], according to the Ottoman *Salname,* included about five persons). The Hassana additionally had 300 *bayts* of followers.

ABDUL-KARIM RAFEQ

MATAWIRAH TRIBE

One of four major tribal confederations into which the Alawite community of Syria is divided.

The other three Alawite confederations are the Khayyatin, the Haddadin, and the Kalbiyya. Each of these confederations is made up of a number of clans, each of which carries a specific name. A case in point is the Numaylatiyya clan, which is part of the Matawirah tribe.

MUNTAFIQ TRIBE

A tribal confederation in southern Iraq.

Muntafiq designates a 300,000-member tribal confederation of settled, seminomadic, and nomadic tribes, including the Ajwad, Bani Malik, Bani Saʿid, Dhafir, and Jashaʿam. They occupied the banks of the Euphrates from Chabaish to Darraji, and the Shatt al-Gharraf as far as Kut al-Hay. Led by the al-Saʿdun family, they were independent from the Ottomans, who relied upon them to defend lower Iraq against the Wahhabis and the Persians. Before and during the Mamluk period (1749–1831), they contested the court of Baghdad for power over Basra. After 1831, the policy of Iltizam, which required tribal shaykhs to collect government duties and revenues, eroded tribal relationships as the leaders demanded ever-increasing taxes on behalf of the government. When the Saʿdun became Ottoman landlords and government officials in 1870, reducing their tribes from landholders to tenants, the intense sense of betrayal further undermined their authority and weakened tribal power.

ALBERTINE JWAIDEH

MURRAH, AL-

A bedouin tribe of Saudi Arabia.

The al-Murrah inhabit the Empty Quarter (Rub al-Khali), southern Najd, south-central al-Hasa, and as far west as the Najran oasis. Considered to be a Sharif tribe (one claiming noble descent), they are renowned both for their utilization of the Empty Quarter for grazing camels and for skills of desert tracking, and have therefore been called the "nomads of the nomads." Although the majority still remain nomadic, in recent years al-Murrah households have begun to build permanent housing near traditional watering places, replacing camel herding with herding sheep and goats, and to derive part of their income from urban occupations and service in the Saudi National Guard.

ELEANOR ABDELLA DOUMATO

MUTAYR TRIBE

A tribe of northeastern Arabia.

The Mutayr cover an area that ranges from Kuwait in the north to al-Dahna, the sand belt in the south. The Mutayr were active in the Ikhwan movement in the first quarter of the twentieth century. Among the first to be induced to settle under the movement's influence, Mutayr tribespeople in 1912 built al-Artawiya, an Ikhwan settlement that achieved fame for its zealotry in attempting to create a religious community living by God's laws, and for trying to convert others to the same goal. Some of the Mutayr, such as Faysal al-Duwish, led the Ikhwan rebellion against King Ibn Saʿud in 1929/1930.

See also IKHWAN.

ELEANOR ABDELLA DOUMATO

QASHQAʾI

Turkic-speaking (western Oghuz Turkic) tribal people of the southern Zagros Mountains of southwestern Iran, in the vicinity of the city of Shiraz.

The Qashqaʾi form a historically important tribal confederacy that originated in the late eighteenth century. Until the 1960s, the majority of Qashqaʾi were nomadic pastoralists. In the 1990s, many Qashqaʾi continue to rely on nomadism (increasingly by motorized vehicles) for a livelihood. Many have settled in villages, some for part of the year, and agriculture plays an increasingly important economic role.

Qashqaʾi territory is ecologically rich and diverse. Low-altitude winter pastures near the Persian Gulf and high-altitude summer pastures to the north and northeast are separated by hundreds of miles, and the migrations of spring and autumn each last from two to three months. The people follow Shiʿism and numbered approximately 600,000 in 1990. The Qashqaʾi have a strong sense of ethnic and national-minority identity, especially because of periodic repression of them by Iranian state rulers.

LOIS BECK

QURAYSH TRIBE

The tribe of the Prophet Muhammad and the leading tribe of Mecca in the Prophet's time.

Before being converted to Islam, the Quraysh provided the strongest opposition to Muhammad, because the monotheism preached by the Prophet appeared to undermine tribal wealth derived from the pilgrimage to the Kaʿba, then a house of idol-worship. In classical theory it was held that the leadership of the Muslim *umma* (community) should be held only by a descendant of the Quraysh tribe, and this idea has been used by political opposition groups in contemporary Saudi Arabia to challenge the legitimacy of the Al Saʿud family, who are of the Anaza tribe. It has also been used to strengthen the legitimacy of the Sharifian dynasty of Morocco, which claims descent from the Quraysh.

See also KAʿBA.

ELEANOR ABDELLA DOUMATO

Shammar

A tribe of north-central Saudi Arabia.

The Shammar are a sharif tribe (a tribe claiming noble descent), centered in northern Najd in the region of Haʾil, Jabal Shammar, and the Nafud. The Shammar are led by the Al Rashid family, former rulers of Haʾil who captured Riyadh in 1891 and were ousted by Ibn Saʿud in 1902. Divided into four sections—Abda, Aslam, Al Sinjara, and Tuman—the Shammar tribe was primarily camel-herding bedouin. Some few lineages live in farming villages. Many of their lineages, including the ruling Al Rashid, were seminomadic, maintaining oasis gardens during part of the year and grazing their animals in the desert in the wake of winter rains. In the nineteenth century, the Al Rashid were active proponents of the Muwahhidun reform movement, though they opposed the extension of Al Saʿud family rule into their territory, encouraged Qurʾanic education for boys and girls, and required Friday attendance in the mosque by men. In the twentieth century, the Shammar intermarried with the Al Saʿud family and benefit today from the patronage of the ruling family, although they have been generally excluded from governing posts.

Eleanor Abdella Doumato

Tebu Tribe

Group of black Africans of unknown origin centered in the Tibesti mountains of the Sahara.

The Tebu are located in both southern Libya and northern Chad. Their language is part of the Nilo-Saharan family. The Tebu are Muslims, their form of Islam strongly influenced by the Libyan Sanusi movement of the nineteenth century. Their economy is a combination of pastoralism, farming, and date cultivation.

Utayba Tribe

The most powerful tribe in central Arabia.

The Utayba (also Otayba) were wealthy in camels and horses, which were sold on the international market, and strong in arms. In nobility, the Utayba were second only to the Anaza tribe of the Al Saʿud, and they ranged from the eastern Hijaz to central Najd. In the nineteenth century, there were settled villages of Utayba as well as large, fully nomadic confederations. The Utayba joined the Ikhwan in the early years of the twentieth century, with some sections of the tribe settling in Artawiya and Ghatghat, the most fervent of the Muwahhidun religious settlements. The religious zealot who led the attempt to seize the Grand Mosque at Mecca in 1979, Juhaiman al-Utaybi, was a member of the Utayba.

Eleanor Abdella Doumato

Yazidis

Kurdish tribe.

A Kurdish tribal group of nomadic clans numbering 60,000 to 70,000 persons indigenous to the area of northern Iraq (Mosul) and eastern Turkey (Diyarbekir), they practice a heterodox religion incorporating Islamic, Christian, Jewish, and pagan elements. These include baptism, dualism, the prohibition of certain foods, circumcision, fasting, pilgrimage, interpretation of dreams, and transmigration of souls. Though they possess two sacred books—*Kitab al-Jilwa* (Book of revelation) and *Mashaf Rash* (Black book)—written in Arabic, they are not accorded the status of Ahl al-Kitab (protected minority status).

The Yazidis (the name does not seem to be related to *Yazid* but probably to the Persian word *ized* or angel) refer to themselves as Dasin or Dawasin (possibly from the name of an old Nestorian diocese). They believe themselves to be a unique people; not, for instance, descended directly from Adam and Eve like the rest of humanity. They practice a form of dualism between God and the peacock angel, with whom Shaykh Adi (to whose tomb annual devotional pilgrimages are made) was united through transmigration. Figures of peacocks made of bronze or iron are ritual devotional objects. There is a hierarchy of clerics, tribal shaykhs, and lesser priests, headed by a religious chief shaykh and a lay leader, Mirza Beg.

Pejoratively labeled "devil worshipers" or associated with the Caliph Yazid, they were branded as heretics, and numerous unsuccessful attempts by Turks and Kurds were made to convert or completely annihilate them.

YEMINI

Yemeni tribes, rather than being mere vestiges of the past, are vital forces that continue to play determinant roles in the political, social, and cultural spheres.

Despite the tendency to characterize the highlands of Northern Yemen as "tribal" and southern Yemen as "peasant," tribes and tribalism are part of the cultural, social, and political landscape of nearly all regions of Yemen, even the Tihama coast and Wadi Hadramawt. For centuries, however, what has distinguished the northern highlands from the other regions of the country is the importance of the tribe as a unit of identification and action and the great extent to which tribes can be mobilized and organized into larger confederations when the interests of the tribe or tribal system are at stake. Although many residents of the southern uplands and the Hadramawt claim a tribal lineage, this often seems to be less important as a basis of personal identity than does place of origin—a village, valley, or region—or some other attribute. By contrast, many men of the highlands define themselves primarily in terms of their tribes, and many of these northern highland tribes with their present names were in existence at least a thousand years ago.

The majority of tribesmen in most parts of Yemen are sedentary farmers who grow sorghum, but the sparsely populated arid land on the edge of the Rub al-Khali (Empty Quarter) and the Ramlat al-Sabatayn is home to nomadic tribes principally engaged in animal husbandry. These bedouin populations have declined in recent years, in part because they were forced to give up their traditional roles as guardians and pillagers of the old trade routes, and now constitute a tiny portion of the total population of unified Yemen.

ROBERT D. BURROWES

TRIPARTITE DECLARATION (1950)

Declaration issued by the United States, Britain, and France guaranteeing borders in Middle Eastern states.

On 25 May 1950 the United States, Britain, and France jointly issued the Tripartite Declaration, which guaranteed the territorial status quo determined by Arab–Israeli armistice agreements and stipulated close consultation among the three powers with a view to limiting the Arab–Israeli arms race. The aim of the Western powers was to contain the Arab–Israeli conflict in order to focus the attention of the states of the Middle East on anti-Soviet defense plans.

In June 1952 the Western powers set up the Near East Arms Coordinating Committee (NEACC), through which they coordinated their arms sales to all parties in the conflict. In fact, the United States sold virtually no arms in the Middle East, leaving those markets to Britain and France. Despite fierce Anglo-French competition, the NEACC functioned reasonably well for more than three years. Both Britain and France periodically withheld arms from the rivals in the Arab–Israeli dispute, primarily when those states took action that threatened British or French regional interests. The Czech arms deal of September 1955, by means of which the Soviet Union agreed to sell Egypt $250 million worth of modern weaponry, made irrelevant Western efforts to limit the flow of arms. In April 1956 France began to transfer large quantities of modern arms to Israel.

TRIPARTITE TREATY OF ALLIANCE

Agreement regulating Allied occupation of Iran during World War II.

Following the German invasion of the Soviet Union in June 1941, the British and Soviet governments jointly demanded that Iran, which bordered the southern Soviet Union, expel an estimated 2,000 Germans working on various projects there. Dissatisfied with the pace of Iran's response, British and Soviet military forces jointly invaded Iran on 25 August 1941, routed its armed forces within days, and occupied the country. To harmonize the occupation with the aims of the Atlantic Charter, which had been promulgated by Britain and the United States less than two weeks before the invasion, Britain and the Soviet Union signed a Tripartite Treaty of Alliance with Iran on 29 January 1942. Under the terms of this agreement, the Allies pledged to respect the territorial integrity, sovereignty, and political independence of Iran, and to withdraw all their military forces from the country within six months after the cessation of all hostilities.

ERIC HOOGLUND

TRIPOLI

City on the Mediterranean coast of northwest Libya.

Tripoli is the capital, largest city, and chief seaport of Libya. The city was founded by the Phoenicians on a small, rocky promontory. Known by the Romans as Oea, it formed (with Sabrata and Leptis Magna) the *tripolis* (Greek, three towns) from which its modern name derives. (In Arabic Tripoli is known as *Tarablus al-Gharb*—Tripoli of the West—to distinguish it from Lebanon's Tripoli.) Tripoli owed its preeminence to a fair harbor on the short sea route to Malta, Sicily, and Italy; to good water supplies and a moderately productive oasis and hinterland; and to domination of the northern ends of the shortest trade routes from the Mediterranean to central Africa via Fezzan.

After a history of foreign and local rule, prosperity declined by the end of the nineteenth century with the demise of Barbary Pirates and Mediterranean corsairing as well as the collapse of the trans-Saharan trade system. In 1911, the population was estimated at some 20,000, when Tripoli was the prime objective of the Italian invasion. It remained in Italian hands throughout the varying fortunes of Italy's presence in Libya. Under Italian rule, and especially during the post-1922 Fascist era, Tripoli was developed outside the walled Old City and acquired modern municipal services and the appearance of an Italian provincial town. In 1934, it became the capital of the colony of Libya, combining Tripolitania and Cyrenaica. During World War II, Tripoli fell, with little damage, to the invading British Eighth Army in January 1943 and became the seat of the British military administration that ruled Tripolitania until Libya's UN-supervised independence in 1951. On independence, Tripoli became joint capital of the Libyan federal kingdom, with Benghazi.

The oil boom of the 1950s and 1960s brought commercial expansion and increased population, with development into the outlying villages of the oasis. Shantytowns—which housed migrants from the countryside—proliferated on the outskirts. The United States had a large air base at Wheelus (al-Mallaha) to the east of the city, and the international airport was developed at the Royal Air Force base at Idris, near Gasr ben Gashir to the south. After the 1969 revolution, Tripoli became the sole capital of Libya and, following expulsion of its remaining Italian and Jewish communities, took on a more overtly Arab and Muslim character. Shanty towns were cleared and large public-housing schemes and commercial developments spread in a six-to-ten mile (10–15 km) radius from the city center. The population doubled between 1973 and 1984.

Attempts by the royalist regime to create a new capital at Baida and move the central administration to the central Libyan oases did little to diminish Tripoli's political, commercial, and social preeminence. It dominates one of Libya's main agricultural and industrial regions, and its port, airport,

and roads to Tunisia, Fezzan, and Cyrenaica make it a key communications and transshipment center.

In 1986 the United States bombed Tripoli because of Libya's involvement in international terrorism. Some of the city was destroyed. Its population in 2003 was estimated at 1,775,000.

TRIPOLI CONFERENCE (1977)

Conference of Arab leaders in Tripoli, Libya.

The Tripoli Conference was convened 2 December 1977 in response to Egyptian President Anwar Sadat's trip to Jerusalem the previous month. It established the Steadfastness and Confrontation Front to oppose Sadat's peace initiative toward Israel. The front was joined by all of the attending heads of state, from Libya, Syria, Algeria, and South Yemen, and by leaders of Palestine Liberation Organization (PLO) factions.

Iraq, which sent a minor delegate, refused to join. On 5 December, Sadat broke diplomatic relations with all countries that attended the conference. A second result of the conference was the brief reunion of feuding PLO factions under Syria's sponsorship.

ELIZABETH THOMPSON

TRIPOLI PROGRAMME (1962)

Document representing the first comprehensive endeavor to define an identity and direction for independent Algeria.

At the end of the Algerian War of Independence, the Tripoli Programme, one of the most important documents in modern Algerian history, was introduced, the product of the meeting in Libya of Algeria's Front de Libération Nationale (National Liberation Front, FLN). This occasion in June 1962 marked the last time the wartime FLN convened before the intraelite conflict of that summer, which established the new government under Ahmed Ben Bella.

The program proposed a "socialist option" for Algeria's development. According to its chief authors, Redha Malek, Mohamed Bedjaoui, and Mohamed Benyahia, the quest for democracy necessitated class conflict and economic transformation. It projected the nationalization of foreign interests, the establishment of an industrial economy, and the inauguration of agricultural cooperatives. Stridently anticolonial, the program viewed the recently signed Evian agreements with France as neocolonialist. The Tripoli Programme was complemented in April 1964 by the Algiers Charter and by Algeria's National Charter (1976; 1986).

PHILLIP C. NAYLOR

TRIPOLITANIA

A region in Libya.

The three historic North African regions of Tripolitania, Cyrenaica, and the Fezzan combine to make up the modern state of Libya, which is officially known as the Great Socialist People's Libyan Arab Jamahiriya. Tripolitania is the most populous of the three regions, with almost 80 percent of the country's five million people. It is located in the northwestern part of the country and covers an area of approximately 140,000 square miles (365,000 sq. km). Bordered on the north by the Mediterranean Sea, its boundaries stretch east to the Gulf of Sidra and Cyrenaica, west to Tunisia, and south into the Saharan Desert, where it adjoins the Fezzan.

In classical times, three ancient cities, Leptis Magna, Oea, and Sabratah, flourished on the northern coast of Tripolitania. Founded by Phoenician colonists, each was situated at the end of a long caravan route winding south into the heart of sub-Saharan Africa. All three cities enjoyed naturally safe harbors; lying at the end of ancient routes to the south, what began as primitive trading posts soon turned into flourishing caravan centers.

During the Roman period, Leptis Magna developed into one of the finest examples of an African city. A key factor in its development was its location on the Mediterranean Sea, sheltered by a promontory at the mouth of the Wadi Lebda, and near the relatively well watered hinterland of Tripolitania. Leptis, over time, became much more important as a commercial center than either Oea or Sabratah. Leptis Magna is the most impressive archaeological site in Tripolitania, and in Libya as well. The Severan Arch, erected in honor of a visit from Emperor Septimius Severus in 203 C.E., and the Hadrianic Baths complex are particularly noteworthy.

Tripolitania shares a common history and close ties with the Maghrib, the western Islamic world traditionally comprising Algeria, Morocco, and Tunisia. It is a part, both geographically and culturally, of the Maghrib and is sometimes included in descriptions of that region. Libyan migration from Tripolitania to Tunisia, in particular, has been commonplace for centuries. Cross-border migration was especially heavy during the Italian occupation, which began in 1911, as many Tripolitanians fled Libya to escape the Italian invaders. In consequence, many Tunisians are of Libyan descent, and related families are often found on opposite sides of the Libya-Tunisia border.

At the outset of the twentieth century, the Italian occupation of Libya stimulated political consciousness throughout Tripolitania. Consequently, it was from this region that the strongest impulses supporting unification with Cyrenaica and the Fezzan developed. The ill-fated Tripoli Republic, proclaimed in the fall of 1918, was the first republican government formally created in the Arab world. However, the creation of the Tripoli Republic, together with a declaration of independence and subsequent attempts to promote Libyan independence at the 1919 Paris Peace Conference, stirred little enthusiasm among the major powers of the world. By 1923 the Tripoli Republic had disintegrated.

Following World War II, a wide variety of political groups and parties were formed in Libya, and especially in Tripolitania. All of them favored a free and united Libya with membership in the Arab League. However, they differed widely in their choice of leadership for an independent Libya. When the foreign powers charged with determining Libya's future were unable to reach agreement, the traditional elites in Tripolitania, together with their peers in Cyrenaica and the Fezzan, agreed in 1950 to form a federal government, known as the United Kingdom of Libya, under the leadership of King Idris I. The monarchy was later replaced by a revolutionary government headed by Muammar al-Qaddafi in September 1969.

Located on the site of the ancient city of Oea, Tripoli is the capital of Tripolitania as well as the de facto capital of Libya. The area surrounding Tripoli as far south as the Jabal Nafusa is rich agricultural land with large groves of fruit and olive trees as well as date palms. Much of Libya's food comes from this region. South of the Jabal Nafusa, the desert begins, providing spectacular scenery most of the way to the Fezzan. Tripolitania also includes limited oil reserves and scattered iron ore deposits.

RONALD BRUCE ST JOHN

TRUCIAL COAST

Colonial precursor of the United Arab Emirates.

The Trucial Coast was known to Europeans as the Pirate Coast in the late eighteenth and early nineteenth centuries, when the powerful federation of the Qawasim, operating primarily from the port of Ra's al-Khayma, ravaged shipping in the lower Persian (Arabian) Gulf. The government of British India sent several expeditions against them, finally subduing them in 1819. In the following year, Britain through the General Treaty of Peace, imposed a truce that condemned piracy and implied Britain's obligation to maintain peace in the Gulf. Subsequent treaties (truces) made the agreements

more explicit, and the territories ruled by the shaykhs who were signatories to them became, in European usage, the Trucial Coast. The terms "Trucial States" and, confusingly, "Trucial Oman" were also used.

Fear of European rivals led Britain to establish "exclusive agreements" with these shaykhs in 1892. These engagements made Great Britain, through the colonial government in Delhi, responsible for the foreign relations of these shaykhdoms and, by implication, for their protection. The British, interested primarily in the security of the Gulf, kept their involvement on land to a minimum. Their intervention however, tended to freeze political relationships. This situation remained essentially unaltered until the interwar period, when the British government forced the rulers to deal only with prospecting oil companies of which it approved. Britain's simultaneous establishment of an air route across the Gulf began to open the area to the outside world, especially Sharjah, where an Imperial Airways airfield was established. Moreover, oil concession agreements created the need for the novel concept of fixed borders, which the British began to establish.

After World War II, Britain was much more fully involved in the affairs of the Trucial States. After 1947, with India's independence, the states became the responsibility of the Foreign Office in London. Britain's representative in the Trucial States was a permanent political officer assigned to Sharjah in 1948 (upgraded to political agent in 1953), and several state institutions were established. In 1951 the Trucial Oman Levies, a small force with British officers, was created to keep order in the Trucial States. Expanded and renamed the Trucial Oman Scouts in the mid-1950s, it became the nucleus of the United Arab Emirates, armed forces in 1971. In 1952 the Trucial States Council was created; though limited to a consultative role, it provided the first forum in which the rulers of the seven shaykhdoms could discuss common concerns. From 1965 until independence a Development Office, operating under the aegis of the Council, carried out infrastructure projects financed through a development fund to which Britain, Kuwait, Bahrain, Qatar, and Abu Dhabi contributed; Abu Dhabi carried the lion's share as its oil income expanded from the mid-1960s.

In December 1968, Britain's Labor government, beset by a balance-of-payments crisis, decided to withdraw military forces and relinquish responsibilities in the Gulf by the end of 1971. Though some of the rulers viewed Britain's withdrawal with alarm, Shaykh Zayid of Abu Dhabi and Shaykh Rashid of Dubai, the wealthiest of the seven Trucial States, agreed, as early as February 1968, to form a federation that would include Bahrain and Qatar. Despite British encouragement of this venture, it had foundered by early 1971. On 2 December 1971, a few months after Bahrain and Qatar had become separately independent, Sharjah, Umm al-Qaywayn, Ajman, and Fujayra joined Abu Dhabi and Dubai in the federation of the United Arab Emirates. In February 1972, Ra'ʾs al-Khayma belatedly joined the United Arab Emirates.

TRUE PATH PARTY

A major centrist political party in Turkey from the late 1980s to the end of the 1990s.

The True Path Party (Doĝru Yol Partisi, or DYP) was founded in 1983 by former members of the Justice Party. The military's National Security Council had banned former Justice Party chair Süleyman Demirel from active participation in politics until 1987; nevertheless, he was the behind-the-scenes driving force for the organization of the DYP. After his political activity ban had been lifted, Demirel became DYP's chair and led it to victory in the 1991 parliamentary elections. DYP won the largest number of seats, but not an absolute majority, and so formed a coalition government with the Social Democratic Populist Party (SHP). Upon the sudden death of President Turgut Özal in 1993, the Turkish Grand National Assembly voted for Demirel to

be the new chief of state, and he resigned as the party's chair. DYP then chose Tansu Çiller as its leader, and she subsequently formed a new coalition government with SHP as Turkey's first woman prime minister. DYP lost its parliamentary plurality to the Refah Party in the 1995 elections. It formed a brief coalition with its rival, the Motherland Party, in early 1996, then joined Refah in a coalition from June 1996 to June 1997. Nevertheless, DYP's appeal continued to erode, and in the 1999 parliamentary elections it secured just 15 percent of seats. In the 2002 elections DYP fared even worse, receiving less than 10 percent of the overall nationwide vote and thus no seats in the parliament.

TRUMAN, HARRY S.

[1884–1972]

Thirty-third president of the United States.

At the end of World War II, the Middle East was not among the United States' strategic priorities. Even after the Iranian crisis of 1945 and 1946 and following the promulgation of the Truman Doctrine in 1947, the American administration seemed reluctant to involve the United States in an area that had been part of the British, and partially French, sphere of influence. Indeed, Truman and his assistants hoped that, even after the British withdrawal from Greece and Turkey, London would be able to retain control of the Middle Eastern "inner core" and to resist any threat of Soviet infiltration into the area. Although members of the Truman administration held negative opinions about the effects of British (and French) colonialism on emerging Arab nationalism, nevertheless geostrategic necessities led the United States to favor some continuation of British influence in the region.

This inconsistency also applied to American policy on the "Zionist question." The foundation of a Jewish state in Palestine became one of the main issues of Truman's worldview, although the U.S. president was annoyed by Zionist importunity and influenced by the State Department's negative opinion. However, advised above all by his special counselor, Clark Clifford, and by David Niles, Truman believed that the birth of Israel would represent a strategic asset for Washington's Middle East policy. So the United States favored the new Jewish state, with the negative repercussion that its relations with the Arab Middle East became problematic. Fearing that some Arab countries would be drawn into the Soviet orbit, Truman tried to implement a policy of appeasement toward the Arabs. In this connection, he attempted to find a solution (via the UN Conciliation Commission for Palestine) to the question of the Palestinian refugees of the 1948 Arab-Israel War. This issue was not resolved and, along with other unresolved questions, became the inheritance of Truman's successor, Dwight D. Eisenhower, and Secretary of State John Foster Dulles.

Antonio Donno

TRUMPELDOR, YOSEF

[1880–1920]

Zionist leader and military organizer in Palestine.

Born in the northern Caucasus in Russia, Yosef Trumpeldor served in the tsar's army during the Russo–Japanese War (1904–1905). He was wounded

and lost an arm but returned to combat, which earned him decorations and promotion as the first Jewish officer in the Russian army.

Ardent about Zionism and an advocate of agricultural settlements, he organized Jewish self-defense groups in Russia (for emigration) and later in Ottoman Palestine, where he immigrated. During World War I he lobbied for the creation of a British-backed Jewish Legion, serving as second-in-command in what became the Zion Mule Corps. After the war he was affiliated with ha-Halutz (the agricultural pioneers) and encouraged Russian Jewish youth to go to Palestine to create agricultural and industrial settlements. Just before the British and French mandates took effect in the Middle East, he was sent to organize the defenses of Tel Hai, a pioneer Jewish settlement in northern Galilee. He died defending it on 1 March 1920. His last words, reported as "never mind, it is good to die for our country," initially became the motto of a nationalist myth and more recently have been material for humorous subversions of the legend that both signify and contribute to the erosion of classical Zionist ideology in Israel.

DONNA ROBINSON DIVINE

TSEMEL, LEAH

[1945–]

Israeli lawyer and human rights activist.

Leah Tsemel was born in Haifa in 1945. Her mother and father were Jewish émigrés from Russia and Poland, respectively. Tsemel graduated from the Hebrew University of Jerusalem with a degree in criminal law in 1968. While at university she joined Matzpen, a radical left group a of the 1960s and 1970s that opposed Zionism and occupation.

Her distinguished legal career reflects a passionate and uncompromising commitment to human rights and progressive political positions, including support for establishing an independent state of Palestine with the 1967 Green Line as its borders, a unified Jerusalem as the capital of both Israel and Palestine, and the recognition in principle of the right of return of Palestinian refugees.

Since the 1970s, Tsemel has represented Palestinians in legal cases involving identity card confiscation, family reunification, house demolitions, deportations, political prisoners and administrative detainees, accused suicide bombers, and land confiscation. Her efforts to contest the use of torture on Palestinians are internationally recognized. In 1996, she received the Human Rights Award of the French Republic on behalf of the Public Action Committee against Torture in Israel. Tsemel was instrumental in a landmark Israeli Supreme Court decision of 6 September 1999 prohibiting the use of torture in interrogations by the Israeli General Security Services.

In 1972, Tsemel married Michael Warshavsky, a journalist and peace activist. They have two children.

MONA GHALI

TUBI, TAWFIQ

[1922–1994]

Israeli Palestinian politician.

Born in Haifa, Tawfiq Tubi was educated at the Mt. Zion school in Jerusalem. He joined the Palestine Communist party in 1941 and later was one of the founders of the League for National Liberation, which originally opposed partition of Palestine but later came to accept it, after the Soviet Union indicated that it would support partition. After the state of Israel was proclaimed (1948), he became a member of the Knesset on the Maki (Israel Communist

Party) list and a member of the Central Committee. In 1976, he was elected secretary general of the Hadash political faction. He was also the editor of *al-Ittihad.*

BRYAN DAVES

TUDEH PARTY

The main orthodox Communist organization in contemporary Iran.

The Tudeh Party (Hezb-e Tudeh-ye Iran; the Party of the Iranian Masses) was formed in 1941 in Iran by members of the famous Fifty-three, who had been arrested in 1937 but were released immediately on the British-Soviet occupation of Iran during World War II. The Fifty-three were predominantly young, university-educated Marxist intellectuals from middle-class and Persian-speaking families. The Tudeh Party quickly grew to become the organization of the masses in reality as well as in name. It did so in part because its labor unions mobilized a significant portion of the wage-earning population; in part because it attracted many civil servants, professionals, and intellectuals; and in part because it successfully portrayed itself as the champion of patriotism and constitutional liberties against foreign imperialism and the threat of royal dictatorship. By 1945, the list of Tudeh sympathizers read like a Who's Who of Iran's intelligentsia.

After 1945, however, the Tudeh suffered a series of setbacks. Its patriotic credentials were undermined when it supported the Soviet-sponsored revolt in Azerbaijan, echoed the demands of the Soviet Union's Josef Stalin for an oil concession, and failed to give full backing to Mohammad Mossadegh's campaign to nationalize the petroleum industry. Its constitutional and democratic credentials were brought into question once it declared itself a Marxist-Leninist party and became a formal member of the Soviet-led Communist movement. Moreover, its ability to function was drastically curtailed—first in 1949, when the party was banned after an attempt was made on the life of Mohammad Reza Shah Pahlavi; and second after the 1953 coup, when SAVAK, the secret police, helped by the U.S. Central Intelligence Agency, vigorously unearthed its underground network. Over forty Tudeh members were executed in the 1950s.

The Tudeh was further weakened by two major internal disputes. In the aftermath of the Azerbaijan revolt, a number of intellectuals left the party and in later years joined Mosaddegh's National Front (Jebhe-ye Melli). In the 1960s, at the height of the Sino-Soviet dispute, a number of younger activists, denouncing the Tudeh leadership as reformist and revisionist, formed their own pro-Chinese Sazman-e Engelab-e Hezb-e Tudeh-ye Iran (Revolutionary Organization of the Tudeh Party of Iran).

By the time of the Iranian Revolution (1979), little remained of the Tudeh within Iran. Despite this, the party tried a comeback; it instructed its cadres to return and elected as its first secretary Nur al-Din Kianuri, the proponent of an alliance with Ayatollah Ruhollah Khomeini. The previous first secretary, Iraj Iskandari, had favored the secular liberals, especially the National Front. From 1978 until 1983, the Tudeh supported the Islamic Republic of Iran, even when much of the left denounced the regime as a medieval theocracy.

This support ended abruptly in 1983, in the midst of the Iran–Iraq War, after Khomeini ordered Iranian troops to cross the border into Iraq. As soon as the Tudeh criticized this action, most of the party's leaders and cadres were arrested and tortured into confessing that they were "spies and traitors plotting to overthrow the Islamic Republic." The most extensive recantation came from Ehsan Tabari, a member of the Fifty-three and the most important intellectual in the Tudeh leadership. Tabari died in prison from heart failure, but 163 of his colleagues were killed—some under torture, others by hanging. A few party leaders escaped to Western Europe, where they continue to be active. They publish a biweekly, *Nameh-ye Mardom* (People's newsletter) and a periodical, *Donya* (The world), and run a clandestine radio station. They held a party congress in 1998 in Germany and often send delegates to international communist meetings.

ERVAND ABRAHAMIAN

TUHAMI AL-GLAWI

[1879–1956]

Pasha of Marrakech under the French protectorate in Morocco, 1912–1956.

The younger brother of Madani al-Glawi, who established the power of the family, Tuhami ibn Muhammad al-Mazwari al-Glawi first served as pasha of Marrakech under Morocco's Sultan Abd al-Hafid from 1908 to 1911. He then benefited from Madani's alliance with the protectorate government of France in 1912, and following Madani's death in 1918 Tuhami was named pasha of Marrakech. A staunch supporter of the French protectorate and a wily politician, he accumulated enormous wealth and power as viceroy of southern Morocco and gained a reputation of being greedy and oppressive. His leadership of the movement to depose Sultan Muhammad V (1953), part of a pro-French effort to prevent the collapse of the protectorate, gained him much notoriety among Moroccan nationalists. He died in 1956, after the independence of Morocco.

EDMUND BURKE III

TUMAN BEY

[1473–1517]

The last independent Mamluk sultan of Egypt.

After the death of Qansuh al-Ghuri al-Ashrafi in the battle of Marj Dabiq near Aleppo (August 1516), the Mamluks selected his viceroy, Tuman Bey, to continue the struggle against the invasion of Sultan Selim the Grim.

Superior Ottoman tactics and weaponry forced the Egyptian ruler to hurriedly manufacture cannons and raise an infantry corps that used muskets similar to those used by the janissaries. He rejected an offer to submit to Ottoman suzerainty in exchange for being allowed to remain governor of Egypt. The two armies met in Raydaniyya, near Cairo, on 22 January 1517. The Mamluk cavalry again suffered defeat, and Selim entered the capital in triumph. On 28 January, Tuman Bey launched a surprise night attack against the Ottomans in Bulaq. The battle raged for four days, with both sides displaying extreme ferocity, but the Mamluks finally withdrew to the haven of Upper Egypt. There, Tuman Bey raised an army composed of a combination of Arab bedouins and Mamluks, and he returned, on 2/3 April, to attack Selim near Giza. After another defeat, Tuman Bey escaped north to a village near Damanhur, where he was captured by Ottoman troops. He was hanged a fortnight later in Cairo.

BASSAM NAMANI

TUNB ISLANDS

Islands near the entrance to the Persian Gulf that are controlled by Iran and claimed by the United Arab Emirates.

The Greater and Lesser Tunbs are two small islands in the Persian (Arabian) Gulf close to the Strait of Hormuz. Greater Tunb, 17 miles (27 km) southwest of the large Iranian island of Qeshm, has a total area of about 3 square miles (7.5 sq. km). There are no permanent freshwater sources on the island and historically no permanent settlements, although it was occupied seasonally. Lesser Tunb, about 5 miles (8 km) east of Greater Tunb, is less than 2 square miles (5 sq. km) in area and has no fresh water or inhabitants.

Historical evidence for the ownership of the Tunbs prior to the mid-nineteenth century is sketchy, but by the mid-1880s, both Iran and the shaykhdom of Raʾs al-Khayma were claiming sovereignty over the islands. Raʾs al-Khayma was a British protectorate, and in 1904 Britain sided with its dependency by expelling the Iranian customs officers from Greater Tunb. Iran protested the action and periodically asserted its claim to the Tunbs, most notably in 1968 after Britain announced that it would recognize the full independence of its Persian Gulf protectorates. Britain mediated an agreement for shared sovereignty over the nearby island of Abu Musa, but the ruler of Raʾs al-Khayma declined to accept such an arrangement for the Tunbs. Consequently, one day before the British treaty of protection with Raʾs al-Khayma was due to expire, Iran forcibly occupied the Tunbs (30 November 1971); Britain took no action. After the shaykhdom joined the new United Arab Emirates (UAE), the dispute with Iran remained dormant for twenty years. The UAE raised the issue of Iran's occupation in 1992, in conjunction with the dispute over Abu Musa. Since then, the Tunbs have been a source of contention between Iran and the UAE.

MALCOLM C. PECK
UPDATED BY ERIC HOOGLUND

TUNIS

Capital of the Republic of Tunisia.

Tunis is the largest city in Tunisia. The population of the greater Tunis urban area is estimated at 2,083,000 (2001), more than one-quarter of the country's total population of 9,673,000. (In 1984 the population of the city itself was estimated at about 600,000.)

In 1160, Tunis became the provincial capital of the Moroccon-based Almohad dynasty. The Almohads built the *qasba* (citadel) that remained the seat of political power in the city until France's protectorate (1881). In the thirteenth century, under the Hafsid dynasty, Tunis became the national capital, a distinction it has retained ever since.

Tunis had only one congregational mosque, that of al-Zaytuna, until 1252, when the mosque of al-Tawfiq was constructed. Subsequently congregational mosques were built throughout the city. Following their seizure of Tunis in 1574, the Ottomans converted the mosques of the qasba and al-Qasr to follow the Hanafi usage, the school of Islamic law to which they adhered. In the seventeenth and eighteenth centuries, the Tunis skyline was altered by construction of new mosques, including those of Yusuf Dey (1612), Hammuda Pasha (1655), and Sidi Mahriz (1692), and the New Mosque of Husayn (1726).

Corsair wealth of the deys and beys transformed Tunis into a cosmopolitan complex dominated by mosques, madrasas (Islamic secondary schools), *zawiyas* (Islamic mystic centers), palaces, and elegant homes. The Turks also constructed a *maristan* (hospital) in the seventeenth century.

Prior to 1858, Tunis was organized into a quarter system centered on major mosques. The gates between quarters were locked at night and whenever public disturbances occurred. Each quarter was self-sufficient, with its own bread ovens, markets, bathhouses, wells, cisterns, Qurʾanic schools *(kuttab),* and prayer mosques *(masjid).* Daytime security was provided by the *dawlatli* (a position directly descended from the dey). The *shaykh al-madina* (chief guild leader, akin to city mayor) controlled nighttime security patrols.

This loose administration ended in 1858, when Muhammad Bey established the City Council *(al-majlis al-baladi).* He appointed the shaykh al-madina to head this council of fifteen members. Today the shaykh al-madina is president of the City Council and is appointed by the country's president.

France's protectorate (1881–1956) brought changes to Tunis. A deep-water channel was constructed that made it possible for oceangoing vessels to dock in the port of Tunis, near the modern city's downtown area. A causeway beside this channel connects Tunis and its suburbs of La Goulette (now Halq al-Wadi), Carthage, Sidi Bou Said, and La Marsa. France also drained the swamp that sep-

arated the walled old city from the Lake of Tunis and built there a new European-style city with parks, broad avenues, cathedrals, an embassy, and modern housing.

In the twentieth century, Tunis became the major destination of rural-to-urban migration because of its being the political, social, educational, economic, and entertainment center of Tunisia. It is the seat of the national government and the national headquarters of the government party, the Constitutional Democratic Rally (Ralliement Constitutionel Démocratique; RCD), and the site of the national university.

LARRY A. BARRIE

TUNISIA

This entry consists of the following articles:

TUNISIA: OVERVIEW
TUNISIA: PERSONAL STATUS CODE
TUNISIA: POLITICAL PARTIES IN

OVERVIEW

Arab republic in central North Africa.

Tunisia is bordered by Algeria on the west, the Mediterranean on the north and east, and Libya on the southeast. It includes the Kerkenna Islands off the east coast and the island of Djerba in the southeast. In 1993, Algeria and Tunisia settled a border dispute that had been under negotiation since 1983.

Geography and Climate

Tunisia's landmass comprises 59,984 square miles (155,360 sq. km); the total area is 63,170 square miles (163,610 sq. km). The country has three distinct regions: the northern Tell or high plains; the central steppes; and the arid south, characterized by date palm oases and numerous *shatts* (salt marshes), the largest of which is the Shatt al-Jarid.

The Dorsale massif, an extension of the Atlas Mountains, limits rainfall on the central steppes. The highest point in the chain is Mount Chambi (1,544 meters; 5,066 feet). The mountains enter Tunisia northwest of Fernania and veer northeast across Cape Bon before plummeting into the Mediterranean near El Haouaria.

One of Tunisia's few perennial rivers, the Medjerda, rises in Algeria, crosses northern Tunisia, and empties into the Gulf of Tunis. Most other Tunisian streams, except the Miliana, dry up during the summer. Since antiquity the Medjerda valley has contained Tunisia's richest farmland.

The central steppes are high near the border with Algeria and low near the coast, then merge into the Sahel (coast), an area lying between Hammamet (near Cape Bon) and Sfax. Farther south lies the Sahara.

The north and the Sahel are the most urbanized and most densely populated regions of Tunisia. Tunis is the largest city and the national capital. The second largest city, Sfax, has half as many inhabitants as greater Tunisia (2 million). Other important cities are Qairawan (an important religious center and the first Arab town in the country, founded in 670 C.E.), Sousse, Gafsa, and Bizerte.

Tunisia's natural resources include phosphate mines near Gafsa and a developing natural gas and petroleum industry. Foreign companies compete for oil concessions and continue to explore for new fields. Tunisia also produces small quantities of iron ore, lead, zinc, and salt. The Sahel region is a rich olive-growing area, and the southern oases contain extensive date-palm groves.

Northern Tunisia has a Mediterranean climate with cool, damp winters and warm, humid summers. Precipitation declines south of the Dorsale along the coast and is minimal in the interior steppes and Sahara, where winter days are mild but nights can be bitterly cold. Summer daytime temperatures in the interior steppes and southern desert can be very high. Temperatures at Tunis range from 6°C (43°F) to 33°C (91°F). Precipitation averages 60 inches in the north and 8 inches in the Sahara.

The People, the Language, and Religion

Tunisia's 8.4 million people are concentrated in the north, in the Sahel, and in regional urban centers such as Qairawan and Gafsa. More than half the population lives in the northern Tell and the Sahel, on about 20 percent of Tunisia's total land surface. About 53 percent (4,452,000) of Tunisians live in cities. Population density is 133 persons per

square mile. Family planning programs in the 1970s and 1980s managed to lower the population growth rate from over 3 percent to about 2.1 percent by 1992; 38 percent of Tunisians were under age fifteen in that year. Many Tunisians engage in agricultural pursuits, but a growing number are in the tourist industry, humanities and professions, commercial sector, and government.

Map by XNR Productions, Inc. The Gale Group.

Tunisia's ethnic base is primarily mixed Arab-Berber or Arabized Berber. There are a few Berber speakers in isolated regions of the south. A tiny Jewish minority still exists; most Tunisian Jews left the country after 1957. Some European Christians live in Tunisia, primarily in the capital.

Tunisia's national language is Arabic (the first language of at least 98 percent of the people); French is the major second language as well as the dominant language of commerce and education. Although the print and audiovisual media use standard Arabic, most Tunisians speak their own dialect, which has three variations: an urban dialect, a rural village and small-town dialect, and a Bedouin dialect. Knowledge of the Egyptian dialect has been increasing since the 1970s because of Egypt's domination of the Arab cinema and television soap operas.

Islam is the official state religion. At least 98 percent of the population are Sunni Muslims. The island of Djerba harbors many Khariji Muslims. In the 1980s the Islamic Tendency Movement (Mouvement de Tendance Islamique; MTI) was formed, with Rached Ghannushi and Abdelfattah Mourou as its ideological leaders. Observance of Islamic rituals increased considerably in Tunisia during the 1980s and early 1990s. In recognition of this fact, and to thwart the designs of Islamists, the government sought to control all mosque appointments and to encourage moderation in religion. The government has grown more outwardly Islamic, following such traditional practices as waiting for the new moon before announcing the start of the Ramadan fast, and the firing of cannon to herald the first and last days of Ramadan.

The Economy

Tunisia's economy has improved due to good harvests (since 1990), economic restructuring, a growing manufacturing industry, a developing oil and gas sector, remittances from expatriates (an estimated 400,000 Tunisians work overseas), and a healthy tourist trade. Economic growth since 1988 has averaged about 4.2 percent, peaking at 8.6 percent in 1992. Unemployment ranges from the official 15 percent to a high of 20 to 50 percent in informal sectors of the economy. High rural unemployment has caused many young people to mi-

grate to urban centers in search of work, causing deterioration of public services and the taxing of city resources, especially in Tunis.

Tunisia's gross domestic product is about US$10 billion, and per capita income is about US$1,235. Agriculture comprises some 16 percent of the gross domestic product, and industry accounts for about 38 percent. The workforce is estimated at 2,250,000, with 34 percent in industry, 26 percent in agriculture, and 40 percent in services. Women make up just under 25 percent of the workforce (probably a much higher percentage of the rural "informal" sector). Labor unions have organized between 11 and 20 percent of the working class. The General Union of Tunisian Workers (Union Générale des Travailleurs Tunisiens; UGTT), headed by Ismail Sahbani, collaborates closely with the government and the Tunisian Union of Industrialists, Businessmen, and Artisans (Union Tunisienne des Industrialistes, Compagnies, et Artisans; UTICA).

History

Tunisia's geographic openness has made its history one of periodic invasions. Berber peoples settled the country in the fifth and fourth millennia B.C.E. The first outside civilization to make an impact came from Phoenicia, when émigrés from Tyre founded Carthage in 814 B.C.E. Carthage developed a maritime empire in the western Mediterranean and in the third century B.C.E. confronted Rome for control of the western Mediterranean. Three conflicts ensued that came to be known collectively as the Punic Wars. In the final battle of the Second Punic War (Zama, 202 B.C.E.), Rome's Scipio Africanus defeated Carthage's Hannibal. Rome now supplanted Carthage as mistress of the Mediterranean and dominated North Africa until the Vandal invasion of 429 C.E. Following the Vandals, the Byzantines in 533 extended their hegemony over Tunisia.

The most enduring historical legacy for Tunisia derives from the Arab invasions of the late seventh

century. From 643 until 698, the Arabs struggled to defeat the Berbers and impose the Arabic language and Islam upon them. Qairawan was the capital for most medieval Tunisian dynasties. Founded in 670, it survived for centuries as the main garrison town and political and religious center.

The Aghlabid dynasty (800–909) ruled from Qairawan. The Shiᶜite Fatimids (909–969) moved their capital to Mahdiya, then Egypt, founding a new imperial capital at Cairo. They left their lieutenants, the Zirids, in charge of North Africa. In 1049 the Zirids broke with the Fatimids who, in retaliation, unleashed the Banu Hilal nomads. They disrupted the countryside, intensified the renomadization of the steppes, and introduced a new dialect. Their defeat at Haidaran in 1052 and the sack of Qairawan in 1057 led the Zirids to move to Mahdiya.

The Almoravids, a Tuareg puritanical religious group, swept out of the western Sahara in the eleventh century. In the middle of the twelfth century, the Berber Almohads came down from the High Atlas and extended their domains into Tunisia.

By 1250, Almohad power had waned to such a degree that a successor dynasty, the Hafsids, emerged in Tunisia to rule for the next three centuries with Tunis as their capital. In 1574, an Ottoman Turkish fleet under Sinan Pasha landed forces at La Goulette (now Halq al-Wadi). Following a brief siege, those forces seized Tunis and laid the foundations for Ottoman control that continued until the imposition of a protectorate by France in 1881. To collect taxes and to maintain security, the Ottomans established a rudimentary administration. Initially an Ottoman *bulukbash* (commander) was placed in charge of the janissary garrison *(ocak)*. In 1590, rebel janissaries formed a government dominated by the deys, who ran the country through the *diwan* (council). After 1640, an important tax-collecting official, the bey, emerged, and the powerful

Tunis, the capital of Tunisia. Tunis is built near the site of Carthage, an ancient enemy of Rome that was later incorporated into its empire. Buildings that date back to Carthage's time as one of the major cities of the Roman Empire can be seen here on Byrsa Hill. **© Laure Communications. Reproduced by permission.**

Muradid family exercised considerable control over the government. During a civil war from 1702 to 1705, Ibrahim al-Sharif seized power. In 1705 an associate of al-Sharif, Husayn ibn Ali Turki, proclaimed himself bey of Tunis. In 1710 the Ottoman sultan officially recognized Husayn and legitimized his rule. The Husaynid dynasty ruled the country independently until 1881, and thereafter under France's control until 1956.

In the nineteenth century, the Husaynids accepted the suzerainty of the Ottoman Empire while pursuing their own reform agendas and independent foreign policies vis-à-vis Europe. Misguided military reforms in the 1840s, financial mismanagement in the 1860s, and increasing pressures from Europe in the 1870s culminated in France's protectorate based on the treaty of Bardo (1881) and the La Marsa Convention (1883).

The protectorate authorities speeded up the economic development of Tunisia, built a physical infrastructure, reformed the educational system, and imposed a political administration while retaining the bey as figurehead ruler. Simultaneously they heeded settler demands for land, sweeping aside informal tribal and village ownership agreements. Arabs were excluded from participation in politics. French settlers dominated the political structures, the courts, and the media.

Although there had been armed resistance to the French occupation from southern tribal elements, most of it was crushed by the end of 1883. The first stage of Tunisian nationalism was an intellectual elitist movement known as the Young Tunisians, which aimed to assimilate to the civilization of France so they could eventually rule their own country. They agitated for equal treatment because of their accomplishments, but the French did not take them seriously. A more serious stage in protonationalist agitation occurred just before and just after World War I in a movement led by Abd al-Aziz Thaalbi. The third stage came in the 1930s when a young lawyer, Habib Bourguiba, broke with the Destour Party and proclaimed the Neo-Destour.

World War II slowed the development of nationalism in Tunisia. After the war, however, Bourguiba followed a staged process, arguing that its cumulative effect would result in political independence. By late 1955, Algeria violently challenged France's rule through a war of national liberation. France therefore agreed to Tunisia's autonomy in 1955 and to its independence in March 1956. In 1957 the Republic of Tunisia proclaimed Bourguiba its first president.

In Tunisia's first decades of independence, continued dominance of the Neo-Destour, which became the Socialist Destour in 1964, and the government's antireligious attitude tarnished the nation's image. Police intimidated those who sought to chant the Qur'an in public, often beating and imprisoning them. In protest, pious intellectuals organized the Society for the Preservation of the Qur'an and, in the early 1980s, created the MTI.

Bourguiba's anti-Islam policies led to Zayn al-Abidine Ben Ali's palace coup of 7 November 1987. Ben Ali tried to co-opt the Islamists for the promised elections of 1989. To demonstrate his piety, he appeared on television participating in Ramadan rites at al-Zaytuna mosque in Tunis. In the spring of 1989, however, Ben Ali hedged on his promise to recognize the MTI if they removed religious terminology from their name. As the April elections approached and MTI changed its name to the Renaissance party, the government refused to recognize it.

Ben Ali's regime considers the Islamists to be the major challenge to its survival, equating them with terrorists. Ben Ali announced in late 1993 that national elections would be held in March 1994. He promised that seats would be set aside for minority party candidates. Ben Ali then announced his candidacy for a second presidential term.

Tunisia's "regime of change" has tamed the Islamist movement for the moment, has modestly improved its human-rights and democratic credentials, and has continued economic restructuring and privatization. The economy is functioning reasonably well, harvests continue to be good, tourism has rebounded dramatically, and the immediate prospects for the future appear good.

TUNISIA: PERSONAL STATUS CODE

Set of family laws that reduced gender inequality in Tunisia.

On 13 August 1956, less than five months after the proclamation of independence from French colonial rule, the Republic of Tunisia promulgated the Code of Personal Status (CPS). A set of laws regulating marriage, divorce, custody, and inheritance, the code profoundly changed family law and the legal status of women. Together with the Turkish civil code of 1926, the Tunisian CPS of 1956 represented a pioneering body of legislation that reduced gender inequality before the law in an Islamic country.

A reform from above, the CPS was initiated by the political leadership in the absence of a feminist grassroots mass movement. Although it expanded women's rights, the CPS should not be seen as a response from the state to pressures from women's protest groups. Individual women had participated in the struggle for national liberation and espoused a nationalist ideology, but no women's mass movement defending women's causes had developed in Tunisia in the 1950s. The initiators of the CPS described it primarily as an instrument of change, a way of bringing about a transformation in kinship patterns and family life, which they saw as a necessary condition for broader social, political, and economic changes.

The Tunisian code is called the *majalla* in Arabic. Several amendments further equalizing the legal status of men and women have been made and the text has been regularly updated since 1956. The CPS altered regulations on marriage, divorce, alimony, custody, adoption, and to a lesser extent inheritance, leaving few, if any, aspects of family life untouched. The best known and most daring reforms embodied in the CPS concern polygamy, or the man's right to have as many as four wives, and repudiation, or the unilateral right of the husband to end the marriage at will. The *majalla* outlawed polygamy altogether. It stated unequivocally that polygamy was forbidden. An attempt at marrying again while one was still married was punished with imprisonment of a year and a fine of approximately $500, which represented the equivalent of a year's income for many Tunisians when the CPS was promulgated in 1956. The CPS also abolished repudiation and changed regulations on divorce in fundamental ways. A divorce could now only take place in court. The wife and husband were equally entitled to file for divorce, and they could do so by mutual consent. One of them could also file alone, in which case the judge would determine whether compensation should be given by one spouse to the other and what the amount ought to be. A woman was liable to pay compensation to her husband if the judge estimated that it was the husband who had been wronged.

Among other innovations, the CPS made the wife responsible for contributing to the expenses of the household and to the financial support of children, if she had to means to do so. It expanded the right of mothers to have custody of their children. It made the registration of marriages and divorces mandatory, something that was not systematically the case earlier. It made adoption legally valid. It somewhat modified the rules on inheritance by fa-

voring the spouse and female descendants over male cousins in some specific kinship configurations.

The CPS gave women greater rights by increasing the range of options available to them in their private lives. It also gave them greater obligations, as for example in the case of divorce and with respect to the financial responsibility for the household. Some aspects of the CPS overtly maintained gender inequality, however. The code left unaltered the general rule according to which women inherit half as much as men. The 1956 text required a wife to obey her husband; this was later debated and changed in the 1990s.

The reforms of the CPS can be seen as an effort to reshape kinship in Tunisian society in the aftermath of independence from colonial rule. The CPS replaced the vision of the family as an extended kinship group built on strong ties crisscrossing a community of male relatives with the vision of a conjugal unit in which ties between spouses and between parents and children are prominent. The elite in power in the 1950s treated family law reform as part of the transformation of society necessary for the development of a modern state.

TUNISIA: POLITICAL PARTIES IN

Tunisia has eleven active political parties.

There are eight legal political parties in Tunisia, including the government party. There are also three parties that have not been authorized: the Popular Unity Movement (Mouvement de L'Unité Populaire; MUP), a socialist party founded by Ahmed Ben Salah, former planning minister who fled Tunisia in 1973; the Tunisian Communist Workers Party (Parti Ouvrier Communiste Tunisien; POCT), a Maoist group; and the Renaissance Party (Hizb al-Nahda in Arabic), the party of Islamists, founded by Rashid Ghannushi. The legal parties are the Constitutional Democratic Rally (Ralliement Constitutionnel Démocratique; RCD), the Movement of Socialist Democrats (Mouvement des Dèmocrates Socialistes; MDS), the Popular Unity Party (Parti D'Unité Populaire; PUP), the Movement of Renewal (Harakat al-Tajdid), the Progressive Democratic Party (Parti démocrate progressiste; PDP), the Unionist Democratic Union (Union Démocratique Unioniste; UDU), the Socialist Liberal Party (Parti Socialiste Liberale; PSL), and the Democratic Forum for Labor and Freedoms (Forum démocratique pour le travail et les libertés; FDTL).

Tunisian president Zayn al-Abidine Ben Ali (b. 1936) came to power in 1987 when previous leader Habib Bourguiba was dismissed on grounds of failing mental capabilities. Once in power, Ben Ali changed the Destourian Socialist Party to the Democratic Constitutional Rally, and he easily retained his office in the country's first free elections in 1989. © AFP/CORBIS. REPRODUCED BY PERMISSION.

RCD

The RCD has dominated all governmental institutions since Tunisia's independence in 1956. The party was founded by Habib Bourguiba and others in 1934 as the Neo-Destour. They broke away from the Destour (Constitution) Party, established by Abd al-Aziz Thaalbi in 1920. Bourguiba's group felt that the Destour had become too elitist and sought to build a grassroots party that could appeal to the rural and small-town folk that the Destour failed to represent. In 1964 the party changed its name to Socialist Destour Party (Parti Socialist Destourien; PSD). The party's final name change occurred in 1988, when the party congress adopted the name Constitutional Democratic Rally. This expressed the new direction of the government party following a coup that replaced Bourguiba with Zayn al-Abidine

Ben Ali. Moderate and pragmatic, the RCD has opened up the political system to multiple parties and has attempted to refashion a market economy to replace the earlier centralized socialist planning system. President Ben Ali is party president, and Ali Chaouch occupies the post of secretary-general. The party claims over 1.5 million members, distributed in thousands of cells nationwide. It controls the national parliament (Chamber of Deputies).

MDS

Ahmad Mestiri, formerly a member of the ruling party, founded the MDS in 1978 and welded the new party into the largest opposition to the RCD. With its forty thousand members, the MDS offers almost the same program as the RCD, except that it is more Arab nationalist and socialist. Ismaïl Boulahya is secretary-general.

PUP

Headed by Mohamed Belhaj Amor, the PUP offers a nationalist and socialist program. It splintered off from the MUP in 1981 and in 1985 it was renamed the Parti d'Unité Populaire (PUP). Amor was succeeded in 2000 by Mohamed Bouchiha.

Movement of Renewal

Secretary-General Mohamed Harmel is a longtime Communist Party activist. The Movement adopted the name Mouvement Ettajdid (Arabic, Harakat al-Tajdid) in 1993, dropping the name Tunisian Communist Party (Parti Communiste Tunisien; PCT). It now follows a leftist, non-Marxist ideology that offers an alternative for leftists and intellectuals. It remains a small party whose membership numbers somewhere in the low thousands.

PDP

Nejib Chebbi, a lawyer, heads the Progressive Democratic Party, the former Socialist Progressive Rally (RSP), which has a nationalist and socialist emphasis. PDP leaders are willing to accommodate all nonviolent political viewpoints in national elections. The PDP seeks a broader role for Tunisia in Arab politics. Regarded as the most critical of the opposition parties, it did not gain any seats to the Chamber of Deputies in the legislative elections of 1999.

UDU

Abderrahmane Tlili founded the Unionist Democratic Union (UDU). It has close ties with the Union Générale des Travailleurs Tunisiens (UGTT), the country's largest labor union. A high concentration of union members makes up UDU's constituency. UDU espouses both Arab nationalism and Israel-PLO peace talks.

PSL

In 1993 the Social Party for Progress (PSP) became the Socialist Liberal Party (PSL). Led by Mounir Beji, a lawyer, the PSL supports liberalism, economic privatization, and American foreign policy interests in the region. Despite being considered the weakest legal party, it obtained two deputies in the 1999 legislative elections.

FDTL

Founded in 1994, the Democratic Forum for Labor and Freedoms (FDTL) was legalized in 2002. Its secretary-general, Mustapha Ben Jaafar, a former leader of the MDS, defines its ideology as social-democratic.

Since 1993, new laws have been implemented aimed at encouraging political pluralism. Accordingly, and as of 2003, the legal opposition parties share 34 seats, out of 182, in the Chamber of Deputies. The results of the legislative elections of 1999 were as follows: RCD, 148 deputies; MDS, 13; PUP, 7; UDU, 7; Ettajdid, 5; PSL, 2; PDP, 0.

TUNISI, BAYRAM AL-

[1893–1961]

Egyptian poet.

Born into a small merchant family in a popular quarter of Alexandria, Bayram al-Tunisi studied at religious schools but learned the form of poetry called *zajal* by memorizing oral poetry. In 1919, he began to publish poetry critical of Egypt's monarchy and of the British occupation, in the journal *Issues,* leading to a long period of exile in France and Tunisia. After his return to Egypt in 1938, al-Tunisi published poetry in various Egyptian newspapers.

DAVID WALDNER

TUQAN, FADWA

[1917–2003]

Palestinian poet.

Fadwa Tuqan was born to the eminent Tuqan family of Nablus, one of the leading traditional families of central Palestine, which produced several notable figures in Palestinian education, literature, and politics. Like her elder brother, Ibrahim, she became one of the most influential poets in modern Palestinian literature, publishing her first collection of poetry, *Wahdi ma al-Ayyam* (Along with the days), in 1952.

Her work is noted for having broken with traditional Arabic poetic styles, introducing, for example, free verse into modern Arabic poetry. Tuqan's poetry is also noteworthy for discussing sensual themes, as well as for depicting the social conditions facing Palestinians, especially Palestinian women. Her 1985 autobiography, *Rihla Jabaliyya, Rihla Saʿba* (A mountainous journey, a difficult journey), provides a forceful discussion of the plight of women in Palestine prior to the first Arab–Israel War and the creation of Israel in 1948. Starting with the Israeli occupation of her native West Bank in June 1967, Tuqan also began writing poetry with nationalist themes. Some of her poems were printed in the underground nationalist publication *Filastin* in the mid-1970s. Israeli general and politician Moshe Dayan once remarked that the power of just one of her poems, like her famous "The Freedom Fighter and the Land," was equal to that of several Palestinian guerrilla fighters. She was not above participating in secret Arab-Israeli contacts, however. Dayan met with her twice in late 1968, when he was Israel's defense minister, as part of his secret effort to strike up a dialogue with Arab leaders. Tuqan once passed along a message from Dayan to Egyptian President Gamal Abdel Nasser, and offered to contact Yasir Arafat, leader of the al-Fatah movement.

In 1990 she was awarded the Palestine Liberation Organization's Jerusalem Award for Culture and Arts, as well as the Honorary Palestine Prize for Poetry in 1996. Fadwa Tuqan died in Nablus, where she had lived all her life, on 13 December 2003. A line from one of her poems sums up her wish to be buried in her native Palestine: "Enough for me to die on her earth, be buried in her, to melt and vanish into her soil."

TUQAN FAMILY

Prominent Palestinian family from Nablus.

Descended from an ancient Arabian tribe, the Tuqans settled in Nablus during the twelfth century. Through the nineteenth century, they were associated with other Qaysi tribes in rivalry with the local Yemeni federation. By the 1800s they had amassed great wealth, owning an imposing palace as well as a number of villas in Nablus. They shared the post of governor with the Abd al-Hadi family and used their land and tax-farm wealth to build up Nablus's famed soap and olive oil industries. Their political dominance in Nablus lasted through the

1970s as various family members gained posts under the rule of Jordan.

Prominent family members include Hafiz, a late-nineteenth-century banker; Ahmad (1903–1981), a Cambridge University graduate who was prominent in education under the British Mandate and Jordanian rule; Sulayman (1893–1958), mayor of Nablus from 1925 to 1948 and a leader of resistance to Zionism; Fadwa (1917–2003) and Ibrahim (1905–1941), sister and brother who became noted poets; Qadri (1911–1971), an educator and writer who sat in the Jordanian parliament from 1951 to 1955 and became Jordan's foreign minister in 1964; Baha al-Din (1910–1998), a historian and politician in the Jordanian government; and Aliya (1948–1977), daughter of Baha al-Din who became the third wife of Jordan's King Hussein ibn Talal from December 1972 until her death in a helicopter crash in February 1977.

ELIZABETH THOMPSON
UPDATED BY MICHAEL R. FISCHBACH

TURABI, HASAN AL-

[1932–]

Fundamentalist Islamic thinker.

Born in the city of Kasla in Sudan to a family of religious learning and traditions, Hasan al-Turabi earned a B.A. in law from the University of Khartoum, an M.A. in law from the University of London, and a doctorate in constitutional law from the Sorbonne in Paris. He became dean of the University of Khartoum Law School in 1964, then attorney general in 1979, and a member of the Sudanese parliament in 1965. In 1977 he became a minister of justice.

Turabi is the leader of the Sudanese branch of the Muslim Brotherhood, which was transformed into the National Islamic Front (NIF) in 1985 under his leadership. In 1988 the NIF joined the coalition government of Sadiq al-Mahdi, and Turabi served first as minister of foreign affairs and later as deputy prime minister. He was the ideological power behind the military regime of Hasan al-Bashir in Sudan in 1989. In 1996 Turabi became the speaker of the parliament, and his influence spread throughout the state organization and political parties. He fell out of favor with President al-Bashir's regime and since 2000 has been either in prison or under house arrest. However, Turabi's importance lies not in his statesmanship, but in his intellectual and ideological developments as well as his impact on Islamism in North Africa in particular and the Arab world in general.

Turabi is a fundamentalist Islamic thinker because he views Islam as the ultimate ideological and political authority for both the state and society. He views Islam as containing all the necessary elements for the creation of a viable and modern civilization and culture. Rather than a return to earlier Islamic social and political practices, Turabi advocates a progressive Islamic revival that incorporates into Islam the best of traditional Islam and Western culture. He argues that the state's only purpose is to set rules to enable society to conduct its affairs, and that it must allow society, the primary institution in Islam, to freely pursue its interests. The *shariʿa* and the Islamist jurists ensure that the role of the state remains limited. Because any society has the right to exercise *shura* (consultation) and *ijma* (consensus), and because this requires producing *ijtihad* (opinions), pluralism is necessary to enable society to identify which policies best serve its interests. As such, Turabi argues, *democracy* is simply a Western term identical to Islam's *shura* and *ijma.* Although ultimate sovereignty belongs to God, practical and political sovereignty belong to the people. Society, therefore, always remains free to choose its rulers and representatives. In this fashion, Islam can bring the best of its own civilization along with other civilizations.

Turabi distinguishes the conditions of contemporary life from those present during the rise of Islam in the seventh century. Because Muslims are living in a world much different from the one that Islamic jurisprudence legislated, they must look toward radical social and political reforms in order to

In 1964, Hasan al-Turabi participated in a revolt in Khartoum, the capital of Sudan, fighting for the formation of an Islamic government. He fought alongside, and became the leader of, the Muslim Brotherhood. He helped the group grow and gain power, and it eventually became the National Islamic Front. Turabi would then go on to help install President Omar Hassan al-Bashir, who vowed to rule the country under Islamic law. **© AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.**

bring about the necessary Islamic revival. The historical development of Islamic jurisprudence must be rejected in favor of a process that depends on free thinking, and the state must establish a new circle of *ulama* (Islamic clergy) while continuing to derive its jurisprudence from the people. Any democratic developments in Islam must extend to the institutions of society and the family, each segment of which must work to further Islamic revival in both public and private life. Political freedom is an original part of creed and nature because freedom is what distinguishes man from animal. This includes the freedom of expression, which is stipulated in the *shariʿa.*

As for the individual, Turabi notes that man is not forced to worship God, but chooses to do so. Individual freedom is essential and cannot be taken away by the state, institutions, or society. This freedom, he argues, must be embodied in a constitution to ensure that the strength of any political leader may be checked by representative councils. Because institutionalization of freedom inevitably leads to its destruction, individual freedoms are bound and protected by Islam.

Turabi's views and writings on Islam seem to place him in the category of moderate Islamist thinkers, but the practice of his authority in Sudan suggests otherwise. Although he has called for freedom of association and multiparty representative bodies, the current Sudanese government has systematically destroyed most civic associations and remains one of the most oppressive regimes and egregious human-rights violators in the Middle East.

TURABI, WISAL AL-MAHDI

[?–]

Supporter of women's rights in Sudan.

Wisal al-Mahdi Turabi, a member of the large landowning al-Mahdi aristocracy, is the wife of Hasan al-Turabi, founder of the Sudanese Muslim Brotherhood and architect of the National Islamic Front (NIF) takeover of Sudan by military coup d'etat in 1989. Her brother, Sadiq al-Mahdi, is a leader of the influential Umma Party who has twice been prime minister of Sudan. Although the Umma Party and the NIF have been rivals, they both support Muslim women's activism, in which Wisel al-Mahdi has played a prominent role.

When the NIF seized power in 1989, the activist band of Islamists mobilized its female adherents. Wisal al-Mahdi became a spokeswoman for NIF policies such as mandatory veiling and the removal of women from "humiliating" public jobs, such as

waitresses and gas station attendants. She upheld the right of women to hold high-status positions, such as judges and government ministers, and she supported *shariʿa* as state law.

Although a trained lawyer, Wisal al-Mahdi has not practiced law and appears to adhere to a conservative Muslim role for women, maintaining a proper *Shariʿ* home and providing support for her husband's national and international roles as a leading figure in the global Islamist movement. Nevertheless, some of her public comments reveal a radical Islamist feminism, blaming Arab patriarchy for the oppression of women in Sudan and elsewhere.

TÜRKES, ALPARSLAN

[1917–1997]

Turkish military officer and leader of the ultrapatriotic National Action Party.

Alparslan Türkes was born in Cyprus and graduated from the Turkish military academy. Due to his involvement in pan-Turkish propaganda during World War II, he was arrested in 1944 but released after an investigation. During the 1950s he served on the general staff and with NATO. He emerged as a key player in Turkey's 1960 military coup, and in its aftermath he was a member of the National Unity Committee (NUC) that was in charge of the government. Due to his radicalism, he was removed from the NUC in November 1960 and sent to New Delhi as a military attaché. After his return to Turkey in 1963 he became active in politics, eventually becoming the leader of the Republican Peasants Nation Party in 1965. He developed the doctrine of Nine Lights, which stressed nationalism and order in society. Under his leadership, the party transformed itself into the ultrapatriotic Nationalist Action Party (1969–1980). He served as vice-premier in Süleyman Demirel's National Front governments of 1975 and 1977. After the 1980 coup, Türkes was arrested and the party was banned; he reentered the political arena in 1983, became the leader of the Nationalist Worker Party, and entered parliament in 1991.

UPDATED BY M. HAKAN YAVUZ

TURKEY

Modern republic formed from the central regions of the Ottoman Empire.

The Republic of Turkey (Türkiye Cumhuriyeti) was established in 1923. Its government was an authoritarian, one-party state until 1946, when the first competitive elections were held. In subsequent decades there have been three military coups, and one instance of military pressure that forced a civilian government to resign.

According to the 2000 census, Turkey's population was 67,844,903, an increase of 18.34 percent over the population of 56,473,035 enumerated in October 1990. In 2000 the population distribution was 65 percent urban and 35 percent rural.

The total area of Turkey is 300,948 square miles (779,456 sq. km). The Asian portion of Turkey, Anatolia (historically Asia Minor), comprises 291,773 square miles (755,693 sq. km), or about 97 percent of the total; the section located on the European continent totals 9,175 square miles (23,763 sq. km). The European portion of Turkey is separated from the Asian by the Sea of Marmara, which in turn is connected to two larger bodies of water by two narrow straits. In the northeast, the Bosporus Strait connects the Sea of Marmara to the Black Sea, while in the southwest, the Dardanelles Strait connects it to the Aegean Sea. Turkey borders the Aegean Sea and Greece on the west, Bulgaria on the northwest, the Black Sea on the north,

Georgia on the northeast, Armenia on the east, Iran and Iraq on the southeast, and Syria and the Mediterranean Sea on the south.

The capital of Turkey, Ankara, is located in the central Anatolian plains; a small market town in 1923, Ankara today is home to more than 3.5 million people. The largest city, Istanbul, straddles the European and Asian sides of Turkey and has a population of 9.1 million. An important historical city, Istanbul (formerly Byzantium, then Constantinople) was first the capital of the Byzantine Empire and later the capital of the Ottoman Empire. Today, it is the cultural and business capital of Turkey. The third-largest city is İzmir (English, Smyrna), a major industrial center with a population of 2 million. Other major cities, each with populations over 1 million, include Adana, Bursa, and Konya.

Geographically, Turkey consists of a ring of mountains that enclose a series of plateaus that lie between 2,625 and 6,560 feet (800 and 2,000 m) above sea level. The highest mountains are in the east, with Mount Ararat reaching 16,945 feet (5,165 m). In the west, the highest mountain, Mount Erciyas, reaches 12,800 feet (3,900 m). The coastal regions on the south, west, and north are extremely narrow. Most of the coastal regions receive adequate rainfall; as much as 100 inches (254 cm) falls annually on the eastern Black Sea coast, and almost as much on the Aegean coast. The central plateau, on the other hand, is sheltered by its ring of mountains and receives little rainfall, generally under 10 inches (250 mm) annually. There are extensive expanses of arid steppe and even desert. Turkey's two major rivers, the Tigris and Euphrates, are both in the east. There are many lakes, both salt and freshwater; the largest is Lake Van, which covers 1,100 square miles (2,850 sq. km). Climate in the central plain ranges from severe winters with temperatures often dropping to minus 22 degrees Fahrenheit (minus 30 degrees Celsius) to hot and dry summers, with temperatures ranging from highs of 85 to 110 degrees Fahrenheit (30 to 43 degrees Celsius) in the southeast. In the western region, winters are relatively mild, hovering around freezing, and summers are hot. The Aegean coast is mild in winter and temperate in summer.

Turkey is divided into seventy-three provinces, each administered by a governor. According to the 1982 constitution, legislative power is vested in a unicameral Grand National Assembly composed of 400 deputies elected by universal adult suffrage and serving five-year terms. In 1987 the number of deputies was raised to 450. Executive power is vested in the office of the prime minister and in the office of the president, who is elected to a seven-year term by the assembly. Although the prime minister heads the government, the president has the power to appoint a prime minister, senior civil servants, and senior members of the judiciary; submit constitutional amendments for popular referenda; challenge the constitutionality of laws by submitting them to the constitutional court; call for new elections; declare martial law; and order the armed forces into action domestically or internationally. In addition, the National Security Council—composed of the president; prime minister; chief of staff; heads of the army, navy, air force, and police; and

Suleimaniye Mosque is one of the highlights of Istanbul. Turkey is overwhelmingly Muslim, but the military has determinedly kept religion out of government. Istanbul, formerly Constantinople, Turkey's largest city was the capital of the Eastern Roman, or Byzantine, Empire for more than 1,000 years and then of the Ottoman Empire for another 450 years. **© Corbis. Reproduced by permission.**

The ancient city wall still stands in Alanya, southern Turkey, along the Mediterranean Sea opposite Cyprus. A significant link between Europe and Asia, Turkey has roots dating back many millennia. © CORBIS. REPRODUCED BY PERMISSION.

ministers of interior, foreign affairs, and defense—has the power to present compulsory orders to the government in matters of national security.

There are no official census data on the ethnic, religious, and linguistic composition of the population of Turkey. The majority of Turks are native Turkish speakers. Ethnically, they trace their roots back to central Asia, although many Turks are Caucasians, particularly Circassians and Georgians. There is also a significant population of Kurds, a people of Indo-European descent who speak Kurdish, a language closely related to Persian. Kurds comprise an estimated 15 to 20 percent of Turkey's total population. Kurds are concentrated in the east and southeast and along the Syrian and Iraqi borders, but significant numbers have migrated to major cities in western Turkey. A large number of Arabs inhabit the region of Hatay, a small territory formerly part of Syria but ceded by the French to Turkey in 1939. The large populations of Greeks and Armenians in the nineteenth century were reduced by war and deportations during and after World War I to relatively small numbers living in Istanbul: roughly 6,000 Greeks and 60,000 Armenians. The vast majority of Turkish citizens are Muslim. Most Kurds and Turks are Sunni Muslims, but an estimated 20 to 30 percent of the population are Shiʿite Muslims, primarily of the Alevi sect. There are also small numbers of Jews (22,000), Greek Orthodox, Armenian Orthodox, and Assyrian Christians.

Agriculture and Industry

Turkey's major agricultural products are cereals, cotton, tobacco, grapes, figs, olives, hazelnuts, oilseeds, and tea. Until 1980 agricultural products, particularly cotton, provided the bulk of exports. Despite continued government attention to raising agricultural output, growth has been slow, limited by the lack of irrigated land and the low rainfall on the central plateau. Only about one-third of all land is cultivated, mostly on family-size plots, with larger farms in the coastal regions. Agriculture provides about 20 percent of the gross national product.

The Turkish government initiated a strategy of state-led industrialization in the 1930s, when a series of public enterprises were established. After 1950 increasing support was given to the private sector, so that by 1970, private-sector industrial output and investment was almost equal to that of the public sector. In 1980 the government launched a program of liberalization, designed to diminish state economic intervention and increase the role of market forces. Since 1987 the government has been privatizing some state economic enterprises, though progress has been slow. The largest industry is textiles, providing about one-third of output and export earnings. Turkey's production and export of iron and steel have increased rapidly, as has production of cement and paper products. Motor vehicle production began in the 1950s but consists mostly of assembly industries; because production has been spread out over a large number of small plants, production costs are high and exports have been negligible. Turkey's petrochemical industry produces fertilizers and a range of industrial inputs.

MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

Other manufacturing industries include tobacco, chemicals, pharmaceuticals, glassware, and engineering.

Turkey has a large mining industry, mostly in the public sector, employing over 200,000 workers. Important mineral resources include bauxite, borax, chromium, copper, iron ore, manganese, and sulfur. The center of coal mining is at Zonguldak, on the Black Sea coast. Oil was discovered in 1950 in the southeast, but production is limited, accounting for about 10 percent of domestic consumption; the remainder is imported. In 1990 petroleum products accounted for about 15 percent of all imports. Of Turkey's natural mineral resources, only borates and petroleum products are exported, in small quantities.

Imperial History

Urban culture in Asia Minor dates to the second millennium B.C.E. In 330 C.E., the Roman emperor Constantine founded the city of Constantinople (now Istanbul), which became the capital of the Eastern Roman, or Byzantine, Empire. In the eleventh century, Ghuzz Turks who had established the Seljuk empire in the area that is today Iran and Iraq began to migrate into Anatolia, conquering territory from the Byzantine Empire. By the thirteenth century, independent princedoms were established in Anatolia, including the principality of the House of Osman, or Othman, in the northwest. Over the next several centuries, the Ottoman (from Othman) Empire conquered all of the Byzantine Empire, capturing Constantinople in 1453, as well as much of eastern Europe and the Middle East.

By the year 1800, however, several European states as well as the Russian Empire had become stronger than the Ottoman Empire. Throughout the nineteenth century, the government undertook various reform efforts to strengthen the Ottoman military, administration, political organization, and economy in order to meet the competition presented by rivals.

In the course of the nineteenth century, a middle class emerged in the Ottoman Empire. Educated in the new schools of the empire, members of the middle class had a vision of a liberal society ruled by a constitutional government and formed movements to achieve their goal, such as the Young Ottomans and later the Young Turks. These groups alternately were supported by reformist governments or suppressed by autocratic governments. In 1908, the Committee of Union and Progress (CUP) overthrew Abdülhamit II and restored the constitution. The CUP government initially enjoyed widespread popular support. But subsequent opposition to its modernizing reforms, combined with foreign wars, led the CUP to establish its own dictatorship. In 1914 the CUP formed an alliance with the Central Powers and entered World War I. After four years of fighting a bitter defensive war against the Allies on many fronts, the empire was defeated; Allied armies captured the Middle Eastern territories of Palestine, Syria, and Iraq; and Allied forces occupied Istanbul. On 30 October 1918 the Turks signed an armistice at Mudros.

Birth of the Modern Republic

On 15 May 1919, Greek forces invaded western Turkey, triggering the formation of a new Turkish army that would defeat the Greeks and then establish the modern Turkish republic. The leader of the Turkish war of liberation was Mustafa Kemal, later given the name Atatürk (Turkish: "father of the Turks"). On 23 July 1919 Kemal convened a nationalist congress in Erzurum, delegates to which later issued the National Pact (Mithaq al-Watani), a declaration calling for the dissolution of the empire and control over non-Turkish provinces, the end of foreign occupation, and the independence of all areas inhabited by Turks. Pulling together an army, the independence movement succeeded in defeating the Greek army and negotiating a withdrawal of Allied forces. The Treaty of Mudanya recognizing Turkish sovereignty was signed on 24 July 1923. On 29 October 1923 Turkey was declared a republic with Kemal as its first president and Ankara as its capital.

Modernization

The next two decades were years of reform, as Kemal and his associates attempted to complete the now 100-year-old project of modernizing Turkey. The 1924 constitution created an elected parliament as the sole repository of sovereignty and a presidency exercising executive power. In practice, however, Kemal's government was a dictatorship. A single party, the Republican People's Party (RPP), was formed as the agent of central government rule and control. In 1924 the caliphate, the highest religious office, was abolished, and in 1928 Turkey was declared a secular state. The old legal codes were annulled and replaced with civil and criminal codes adopted from Europe. The fez, the trademark Ottoman headgear adopted in the nineteenth century, was considered a symbol of the old order and was declared illegal, while the Arabic alphabet was replaced with a Roman one.

In 1929, with the onset of the Great Depression and the lapsing of the Treaty of Lausanne, which had imposed a laissez-faire trade policy on Turkey, Kemal launched a program of state-led economic development. Influenced by the Soviet experiment with its five-year development plans, in 1934 the government formulated its own five-year plan for industrial investment. Completed in 1939, the plan introduced heavy industry into Turkey while allowing the country to weather the depression with a trade surplus.

During the 1930s Kemal transformed the RPP on the model of European fascist parties. The distinction between party members and government officials was blurred, as all public officials were expected to work to implement the new ideology of the party. This ideology, officially adopted in 1931 and known as Kemalism, emphasized six themes: republicanism, nationalism, populism, statism, secularism, and *devrimçilik,* which was interpreted by moderates as reformism and by radicals as revolutionism. In 1938 Kemal Atatürk died and was replaced as president by his lieutenant, Ismet Inönü. Although Inönü kept Turkey neutral during World War II, a number of government policies on resource mobilization created widespread economic austerity, alienating large sectors of the population including those businessmen who opposed the policy of state-led economic development.

Political Reforms and Military Coups

The post–World War II period was a new era for the Turkish republic. Responding to the dissatisfaction

of wartime economic policies and feeling the need to win American support against Soviet encroachments, Inönü announced the resumption of multiparty politics and competitive elections. There had been two experiments with a second party in the 1920s, but in both cases the opposition party was closed down after a short life. This time, the commitment to political pluralism was greater, and in the general elections of May 1950, the chief opposition, the Democrat Party (DP), won an overwhelming victory. The DP had campaigned on a platform of economic and cultural liberalism and increased political freedoms. Its new economic policies, based on import-substituting industrialization and the encouragement of agriculture, increased the standard of living of wide sectors of the population, particularly peasants. The DP permitted more freedom of religion than the Kemalists, who were militantly hostile to religion. But the DP increased the role of the state in the economy instead of reducing it; as the 1950s passed, the party showed signs of becoming dictatorial. A combination of incipient economic crisis and antidemocratic measures prompted a military coup on 27 May 1960.

Mustafa Kemal (who later took the name Atatürk, or "father of the Turks") led the Turkish war of independence in 1919, marking an end to the long-declining Ottoman Empire and the birth of the Republic of Turkey in 1923. As its first president, Kemal forcefully transformed the Islamic country into a modernized, secular, authoritarian state before his death in 1938. **© Bettmann/Corbis. Reproduced by permisison.**

The new military rulers formed a thirty-seven-member National Unity Committee (NUC) and convened a constitutional convention, dominated by supporters of the RPP. A new constitution was promulgated in 1961, and it included several liberal provisions. The NUC also allowed political parties to resume their activities. The two principal parties, the RPP—still led by Inönü—and the Justice Party (JP), the successor to the DP, formed a series of short-lived coalition governments, first together, and later between the RPP and several smaller parties, and then the JP with smaller parties. In October 1965 the JP, led by Süleyman Demirel, won a majority. The Turkish economy, now supervised by the State Planning Organization, which issued five-year development plans, grew at a rapid rate during the 1960s. But political instability came from two sources: numerous defections of members from existing parties and the proliferation of smaller parties; and the eruption of street violence as radical students and organizations on the left clashed with extremist students and organizations on the right.

On 12 March 1971 the military leadership accused the government of allowing the country to slip into anarchy and called for the creation of a stable government. The Demirel government resigned, and subsequently martial law was declared. After martial law was finally lifted in September 1973, Turkey was ruled by a series of weak coalition governments as economic conditions deteriorated. By the end of the decade, the economy was in critical condition; beginning in 1978, political violence once again erupted in the streets. On 12 September 1980 the military intervened for the third time in two decades. All existing political parties were banned, and their members prohibited from engaging in politics. A new constitution, promulgated in 1982, reversed some of the liberal measures of the 1961 constitution by enhancing the authority of the president and the cabinet vis-a-vis parliament and placing restrictions on political activity.

Party Politics

In 1983 elections were held among three new parties. The winning party was the Motherland Party (Anavatan Partisi; ANAP), led by Turgut Özal, a technocrat who had designed the January 1980 measures. Özal formed a new government and

accelerated the strategy of economic liberalization and encouraging exports. Despite some success at economic liberalization, persistent government deficits resulted in high inflation and eroded popular support for the government. New parties emerged to rival ANAP: the True Path Party (TPP; Doğru Yol Partisi), a continuation of the Justice Party, led by Süleyman Demirel after 1987; the Social Democratic Populist Party (Sosyal Demokrat Halkci Parti; SHP), a continuation of the RPP under the leadership of Erdal Inönü, the son of Ismet Inönü; and the Refah Party, the continuation of the National Salvation Party. In 1989 Özal was elected president. In the 1991 elections ANAP, now led by Mesut Yilmaz, came in third, and the top two parties, the TPP and the SHP, formed a coalition government. On 17 April 1993 Özal died, and Demirel replaced him as president. On 13 June 1993 Tansu Çiller, an American-trained economist and former professor at Bosporus University, became the new head of the TPP and prime minister. Çiller was the first woman to serve as prime minister of Turkey.

In the 1995 parliamentary elections, the Refah Party obtained the largest number, but not a majority, of parliamentary seats, the first time an avowedly religious party had done so well since the establishment of the republic more than seventy years earlier. In 1996 Necmeddin Erbakan formed a coalition government, but the military effectively forced him to resign one year later. During the next five years, a series of coalition governments that purposefully excluded Refah and its successor failed to implement programs to deal with the country's economic problems. In the fall 2002 elections, the Justice Party and the Development Party, one of the successor parties to Refah, won an overwhelming majority of parliamentary seats in an election that saw the virtual elimination of ANAP and TTP from politics.

TURKI, FAWAZ

[1940–]

Palestinian writer.

Fawaz (also Fawwaz) Turki was born in Haifa, Palestine, but grew up as a refugee in Beirut after his family fled Palestine during the Arab–Israel War of 1948. He later worked in Saudi Arabia, has taught in Europe and in Australia, and has traveled widely in India, the Middle East, and the United States. Turki has written several personal accounts dealing with aspects of Palestinian struggle and identity, including his acclaimed *The Disinherited: Journal of a Palestinian in Exile.* His later book, *Exile's Return,* was noteworthy for its criticism of Palestinian society.

His style is noteworthy for his exceptional and forceful command of English, and his ability to offer a penetrating view of Palestinian life for an English-speaking audience. His writings include poetry and newspaper columns as well as novels.

TURKISH–AFGHAN TREATY (1928)

Agreement between Turkey and Afghanistan designed to secure their independence from Soviet and British influence.

The Turkish–Afghan treaty, signed 28 May 1928, was the third in a series of bilateral agreements between Turkey and Afghanistan, non-Arab Muslim states bordering the Soviet Union. While the treaty did not include a mutual defense pact, it did proclaim peaceful relations between the two countries, barred either party from entering into a hostile alliance against the other, and called for mutual consultations in the event of threat of aggression from third parties.

TURKISH GRAND NATIONAL ASSEMBLY

The legislative body of Turkey.

The first parliament in Ottoman/Turkish history was convened in 1876 and was short lived. The second attempt, in 1908, also lasted for only a brief period. After the collapse of the Ottoman Empire, the Turkish Grand National Assembly (Türkiye Büyük Millet Meclisi) was founded on 23 April 1921, at the outset of the Turkish War of Independence; it proclaimed the republic on 29 October 1923. The assembly functioned as a legislature with one party until 1946; a transition to multiparty politics was initiated by the original party, the Republican People's Party (RPP; or Cumhuriyet Halk Partisi, CHP).

Two-Party Politics

According to the constitution, the assembly represented the expression of national sovereignty. Its function was to legislate, control the executive via the budget, and elect the head of state. From 1950 to 1957 the assembly was headed by the Democrat Party. In the 1950, 1954, and 1957 elections, the two major parties collectively received more than 90 percent of the total votes and controlled 98 percent of the parliamentary seats. The traditional center-periphery or elite-mass cleavage that the Turkish Republic inherited from the Ottoman Empire shaped the emerging political dualism. The Democrat Party projected the image of representing the interests of the periphery, including their religious aspirations, while the RPP was identified with the elitist and secularist orientation of the political center. Institutional factors also proved to be important. The simple plurality electoral system with multi-member districts worked to the advantage of the two strongest parties.

Financial and economic crises and the electoral losses of the Democrat Party in 1957 led to the adoption of authoritarian policies and laws, which brought about the military coup of 1960. The activities of the assembly were suspended for a year; all the deputies and cabinet members of the Democrat Party were prosecuted and parliament was dissolved.

1961 Constitution

The 1961 constitution, drafted by a constituent assembly, placed importance on the division of powers and broadened civil liberties. Broadcasting and higher education were granted autonomy. Numerous checks and balances were introduced, aimed at controlling arbitrary executive rule. A bicameral legislature was formed. The lower house, the National Assembly (Millet Meclisi), had 400 members elected for four-year terms. The upper house, the Republican Senate (Cumhuriyet Senatosu), consisted of 150 members elected for six-year terms, plus fifteen additional senators appointed by the president of the republic on the basis of merit, a varying number of ex-officio life members who belonged to the National Unity Committee of the interim military government, and former presidents of the republic. The legislative powers of the Senate remained limited and subordinate to the National Assembly. Joint sessions of the two assemblies constituted the new Turkish Grand National Assembly (TGNA). After the military coup of 1980, the Senate was abolished. On 12 September 1980, the legislature was dissolved and all political parties banned. The interim regime lasted two years. An appointed consultative assembly prepared a new constitution.

Yalim Erez (in the background, at left), the minister for industry and an independent deputy in the Turkish Grand National Assembly, formed a new Turkish government in 1998. It was one of several coalition governments established between 1996 and 2002 in an effort to deal with serious economic problems. © ABC Ajansi/Corbis Sygma. Reproduced by permission.

1982 Constitution

The 1982 constitution was approved by a referendum on 9 November 1982. It vests legislative power in a unicameral assembly, elected by universal adult suffrage (the age at which one could vote was at first twenty-one but in 1995 was lowered to eighteen) for a maximum of five years. By-elections are to be held once between elections unless the number of vacancies reaches 5 percent of the parliament. The president of the republic is elected by the TGNA from among its members or from among candidates who have a higher education and are over forty. The president serves for a single term of seven years; a successor must be elected within thirty days. If no successor can be elected by the fourth ballot, parliament must dissolve itself. After the presidencies of Turgut Özal and Süleyman Demirel, in 2000 the TGNA elected Ahmet Necdet Nezer, former chair of the Constitutional Court. The prerogatives of the president are more extensive than in the previous constitution; they include the power to dissolve parliament. The 1987 elections enlarged the membership of the TGNA from 400 to 450; in 1995, the number of seats was raised to 550. The main functions of the TGNA are enacting, amending, and repealing laws; supervising the Council of Ministers; authorizing the Council of Ministers to issue governmental decrees that have the force of law; approving the budget; declaring war; ratifying international agreements; and proclaiming amnesties and pardons. Legislators exercise control in the form of written questions, investigation, and interpellation. Members of parliament are granted parliamentary immunity with regard to freedom of speech and, under certain circumstances, freedom from arrest.

As of 1993, constitutional amendments require a two-thirds majority. If no quorum is achieved, the president of the republic can return the amendment

to parliament or refer the amendment to a popular vote. The state monopoly on television was eliminated, opening television to national and international channels; the right of government officials to organize unions was granted; prisoners were given the right to vote; political parties were permitted to establish women's and youth branches; discretionary power was allocated to the executive to declare early local elections or to postpone them. In the summer of 2002, new amendments legalized Kurdish-language radio and television, private-school education in Kurdish, and the abolition of capital punishment.

Under the current electoral rules, a party must receive 10 percent of the vote to gain representation in parliament. After 1987, this threshold was increased by adding a district-level quota (calculated by a simple proportion of the valid votes) to the parliamentary seats per district. This practice left a number of parties out of parliament. The Kurdish parties were eliminated despite their high regional return because their nationwide vote was less than 10 percent. Parties that do receive 10 percent of the national note win a proportionally higher share of parliamentary seats. For example, the Justice and Development Party (Adalet ve Kalkınma Partisi) under the leadership of Tayyip Erdoğan received 34.2 percent of the votes but 363 seats, eliminating all competing parties with the exception of the RPP, which received 19.3 percent of the votes and 178 seats. With the phasing out of sixteen political parties, 45.3 percent of the voters remained without representation. This brought Turkish politics back to a dual party system. In parliament, 89 percent of the members were newcomers. More than 80 percent of the parliamentarians had a higher education; they were predominantly lawyers, engineers, businessmen, and economists. The representation of women registered a slow gain. Despite the active support of women's organizations, the number of women parliamentarians registered only a slight increase, from 23 in 1999 to 24 in 2002.

Realignment

Looking at the political composition of the TGNA, a significant voter realignment can be seen, and high volatility in Turkey's major parties. Beginning in the 1980s and continuing in the 1990s, the moderate right parties registered a steady decline. Özal's party, the Motherland Party (Anavatan Partisi), winner of the 1983 elections, fell from having 292 representatives in 1987 to having 88 in 1999. On the moderate left, a similar phenomenon took place. The RPP was left out of parliament in 1999 with 8.7 percent of the votes and returned in 2002 with 19.3 percent; Bülent Ecevit's party, the Democratic Left Party (Demokratik Sol Partisi), gained 22.2 percent in 1999 but was eliminated with 1.2 percent in 2002.

This realignment pushed the extreme right, exemplified by the ultra-right-wing Nationalist Action Party (Milliyetçi Hareket Partisi) and the much smaller nationalist Great Unity Party (Büyük Birlik Partisi), into the political spectrum. The Islamist Welfare Party (Refah Partisi) and its successor the Virtue Party (Fazilet Partisi) also benefited from this realignment. The coalition governments of the 1990s were dominated by these political groups. The results of the 2002 election indicate that the center-periphery cleavage has lost its determining relevance. Instead, protest voting seems to have gained ascendancy.

The performance of Turkey's parliamentary system offers an important example of how electoral processes have played a critical role in opening the political system after each military intervention. Another new aspect of Turkish political life is the growing importance of local elections. With the increasing weight of large cities and metropolitan areas, urban problems influence electoral choice at the local and national level. The recent electoral success of the Justice and Development Party is partly due to the reputation Erdoğan, the former mayor of Istanbul, acquired. Major conflicts in national politics, such as those over secularism, affect voting patterns at both levels. Although Turkey's democratization started during the late 1940s, democracy has not been fully achieved, but the country's relatively long and continuous experience with democratic politics in twenty-two national elections represents a significant achievement.

TURKISH HEARTH ASSOCIATION

Group formed to promote Turkish nationalism.

Toward the end of the Ottoman Empire, Ziya Gökalp and other Turkish intellectuals founded the Turkish Hearth Association (Türk Ocaği) in 1911 to promote nationalism, especially Gökalp's synthesis of Turkism, Islamism, and modernism. The association provided the Union and Progress political party with ideological direction. With government support, this private association sponsored nationalistic publications, speeches, sports, health, and economic development projects. By 1930, the association had 254 branches in cities and towns across Turkey. In 1931/32, the Republican People's party dissolved the association, took over its property, and established the People's Houses *(Halk Evleri)* in its place.

TURKISH HISTORICAL SOCIETY

Academy dedicated to the study of Turkish history.

The forerunner to this society was the Turkish Historical Committee of the Turkish Hearth (Türk Ocaği Türk Tarih Heyeti) formed on 4 June 1930. This committee was reorganized as the Society for the Study of Turkish History (Türk Tarihi Tetkik Cemiyeti) on 12 April 1931 (officially recognized on 15 April 1931), and renamed the Turkish Historical Society (Türk Tarih Kurumu) on 3 October 1935. On 7 November 1982, the society was made subordinate to the Atatürk Kültür, Dil ve Tarih Yüksek Kurumu that now oversees the cultural, linguistic, and historical societies. The society has convened historical congresses (the first one, held 2-10 July 1932), publishes the journal *Belleten,* as well as monograph series devoted to all periods of the history of Turkey from the civilizations of ancient Anatolia to the modern day. It also serves as an academy for historical sciences honoring Turkish and foreign scholars.

ULI SCHAMILOGLU

TURKISH–ITALIAN WAR (1911–1912)

War launched by Italy against Turkey for control of Libya.

The Turkish–Italian War (29 September 1911 to 8 October 1912) was initiated by Italy in Libya as a step toward acquiring a modern empire. The diplomatic ground for this move was prepared by reaching secret bilateral agreements with Britain, France, Germany, Austria-Hungary, and Russia, all of which gave Italy a free hand in Libya in exchange for reciprocity elsewhere. This was in violation of the Congress and Treaty of Berlin (1878), in which the European powers guaranteed the sovereignty and territorial integrity of the Ottoman Empire.

Italy sent an ultimatum to the Ottoman government on 26 September 1911, declaring that it would occupy Libya within twenty-four hours unless the Ottoman Empire undertook immediate measures to protect the security of Italian citizens residing in Libya and also their property. Italy also said that Istanbul's dispatch of weapons to Libya was a provocation because these would be used against "peaceful" Italian colonists. When its demands were not met, Italy declared war against the Ottoman Empire (29 September), placed a blockade on the Libyan coast, and started landing in Tripoli (4 October). The conquest of the coastal towns was swift: Tripoli (12 October), Derna (18 October), Benghazi and Khoms (21 October), and the smaller towns soon after.

The Ottoman military force in Libya was small and much below standard. When war broke out, the Ottomans could not forward military support to

Libya due to the Italian sea blockade and the decision of Britain and France to prevent the passage of military reinforcements to the belligerents through Egypt or Tunisia.

As a result of these conditions, the Ottoman authorities in Istanbul allowed volunteers to infiltrate into Libya. (Among them were Enver Paşa, who later became the minister of war, and Mustafa Kemal Atatürk, the founder of the Turkish republic.) They left the actual direction of the war to the Ottoman military command in Libya, which decided to retreat from the coast—where the Italians had a clear military advantage owing to the size and quality of their forces. An Ottoman-Libyan force was established, composed of tribal soldiers, Ottoman professionals, and a mixed Ottoman-tribal command, which in Cyrenaica was connected with the Sanusi leadership and network of *zawiyas* (religious compounds).

The Italian invading forces were the first to make military use of airplanes (for reconnaissance and bombing). They made no meaningful gains after their initial conquests because they attempted to fight a trench war against the resistance, which engaged in guerrilla warfare and took advantage of the hilly or desert terrain and the support of the population. Failing to advance into the hinterland, the Italians widened the scope of the war to the eastern Mediterranean to put more pressure on the Ottomans. During April and May 1912, Italy occupied the Dodecanese islands, tried to enter forcibly the Dardanelles channel connecting Istanbul to the Aegean Sea, and bombarded some Ottoman ports, including Beirut. These operations caused the Ottomans heavy damage, aroused strong apprehension among the European powers, and provoked international efforts to solve the crisis.

In the Balkans, increasing unrest led to the outbreak of the first Balkan War on 8 October 1912. Unable to fight on two major fronts, and perceiving the Balkans as more important to the empire than Libya, the Ottoman government decided to end the war in Libya. The Treaty of Peace, concluded in October 1912, stipulated that Ottoman forces were to depart Libya, but that the Ottomans could send Muslim religious representatives there. The Ottoman withdrawal was to be followed by an Italian evacuation of the Dodecanese. The issue of sovereignty was not settled conclusively: Although Italy regarded Libya as part of the Italian homeland following its declaration on the extension of Italian law over Libya (5 November 1911, only one month after the war had started and before any peace treaty had been concluded), the Ottomans told the local population that they were being granted autonomy under Ottoman rule. Most Ottoman forces left Tripolitania, but many remained in Cyrenaica, and reinforcements also were sent later, especially during World War I. Until then, Italy managed to occupy most of Tripolitania and prevented the functioning of the Ottoman-chosen religious representation.

TURKISH LANGUAGE

Türkçe; official language of the Republic of Turkey.

Turkish is one of the Turkic languages of the Altaic language family, one of the world's major language families. Turkic, Mongolian, and Manchu-Tungus constitute the Altaic language family, which originated around the Altai mountain ranges in central Asia, straddling Mongolia, China, and Russia. Altaic languages usually are grouped with the Uralic languages—for example, Samoyed, Finnish, and Hungarian. Debates continue about whether the typological and lexical similarities between the two language families signal a common ancestor language or prolonged contact.

The Turkic Languages

The Turkic language group includes most of the languages and dialects spoken along a wide Eurasian belt that extends from eastern Siberia to eastern Europe and the Balkans. The major representative Turkic languages are (starting in the east) Yakut, Altai, Khakas, Uygur, Kyrgyz, Kazakh, Uzbek,

Turkmen, Bashkir, Tatar, Chuvash, Azeri, and Turkish. With the exception of Turkish, all of these languages are spoken in the republics and territories of the former Soviet Union or in northwestern China.

Turkish, Azeri (also referred to as Azerbaijani Turkish), and Turkmen are the major members of the southwestern, or Oghuz, branch of the Turkic languages. In demographic terms, this branch is the most important Turkic group. The Azeri language is spoken in the Republic of Azerbaijan and in northwestern Iran. Turkmen is spoken in the Republic of Turkmenistan and in adjoining territories in northern Iran and Afghanistan, as well as in Iraq. Lesser-known members of the southwestern branch are Gagauz, spoken in the Balkan states of Bulgaria and Moldavia, and Qashqaʾi, spoken in parts of southwestern Iran. The languages of this branch are closely related and have a relatively high degree of mutual intelligibility. What interferes with the complete comprehension of written material is mainly vocabulary, which was developed or acquired by each language while functioning in different historical and cultural spheres, and the different alphabets they use (Arabic and Latin). In oral communication, differences in pronunciation slow down comprehension.

Turkish was introduced to the Middle East with the westward migration of various Turkish tribes, who had converted to Islam by the ninth century, from the western regions of central Asia. By the end of the eleventh century, these Muslim Turks had conquered Asia Minor, and the Turkish language began to be established in Anatolia. As the official administrative language of the Ottoman Turks, Turkish spread further with the continuing Ottoman conquests, into the Balkans and central Europe to the north and into the Arab lands and North Africa to the south. Turkish became the lingua franca in many of these regions, and the impact of Turkish on the indigenous languages after centuries of contact is clearly discernible today.

Old Anatolian, Ottoman, and Modern Turkish

The earliest written Anatolian Turkish materials are in Arabic script and date from the thirteenth century. Three basic periods are recognized for the historical development of the Turkish language, based on written data: (1) Old Anatolian Turkish for the thirteenth through fifteenth centuries; (2) Ottoman Turkish for the fifteenth through the early twentieth centuries; (3) Modern Turkish since 1928. The linguistic base remained remarkably stable, particularly for the spoken language, so that some poetry, including early hymns of Sufism and Sufi orders from the fourteenth century still can be understood and appreciated by a general audience. However, in the process of adapting to Islam and the Arab-Persian culture, Turkish gradually acquired many words and some syntactic elements from Arabic and Persian. As the Ottoman Turks became the standard-bearers for the Islamic world, borrowings from both Arabic and Persian accelerated to such an extent that by the nineteenth century an official or literary Ottoman Turkish text could be understood only by an educated elite conversant in Turkish, Persian, and Arabic.

By the start of the twentieth century—and hastened by the post–World War I disintegration of the Ottoman Empire—nationalistic notions about a distinct Turkish identity inspired moves to rid the language of excessive foreign elements. The Alphabet Reform of 1928 abandoned the Arabic script and mandated a phonetic Turkish script based on the Latin alphabet; this was a crucial factor in the emergence of Modern Turkish. The new writing system was tailored exclusively to the vowel-rich Turkish sound system, eventually setting up a well-defined modern national standard for Turkish based on the dialect of Istanbul, the old capital of the Ottoman Empire and the educational, cultural, and intellectual center of the country.

The Turkish language shares a core vocabulary with the other Turkic languages and exhibits characteristic common features: vowel harmony, agglutination, and, on the syntactic level, left-branching. Turkish has eight vowels, four pairs with corresponding front/back, high/low, and rounded/unrounded sounds, which form the basis for vowel harmony. According to vowel harmony rules, vowels of suffixes must have the same properties as the vowel in the last syllable: either front/back or rounded/unrounded. Twenty-one letters represent the consonants. Agglutination in Turkish takes the form of suffixes attached to the end of a word, whether noun or verb. Suffixes add to the word's

meaning and/or mark its grammatical function. Turkish does not have a definite article, nor does it have gender pronouns (one word signifies *he, she, or it*). Sentence construction follows the subject-object-verb pattern. As a left-branching language, all modifiers precede the element modified.

A lexical inventory of Modern Turkish clearly shows that the Turkish language has enriched itself by borrowing freely from other languages and continues to do so. In 1931 the Turkish Linguistic Society undertook reforms that effectively resulted in eliminating Arabic and Persian words not fully assimilated into the Turkish language. However, these words were replaced with neologisms or borrowings from European languages.

TURKISH LAW ON THE PROTECTION OF THE FAMILY (1998)

Turkish law to protect women.

The Law on the Protection of the Family primarily aims to improve the handling of domestic violence cases. Before its enactment, such cases were tried in accordance with the Criminal Code, thus requiring victims to appeal to the police and to obtain a report from a state hospital. Women's organizations have claimed that such requirements inhibit women's appeal to legal recourse, because police and doctors are usually more interested in the "reconciliation" of spouses than in initiating legal action. With the introduction of the law, the complaint of the victim or the decision of the public prosecutor suffices to order immediate removal of the abuser from the domicile or imprisonment for up to six months.

The issue of domestic violence is central to Turkey's post-1980 feminism, and the enactment of the law illustrates a successful collaboration between activists and the state. Among many others, three organizations—the Purple Roof Foundation, the Altındağ Women's Solidarity Foundation, and Women for Women's Rights—have closely worked with the General Directorate on the Status and Problems of Women to secure support from parliamentarians, jurists, and the media.

The impact of the law on social attitudes is, however, questionable. The number of reported cases of domestic violence did not decrease significantly in the five years after passage of the law, and, according to a study conducted among college students, most males still approve of wife beating.

BURÇAK KESKIN-KOZAT

TURKISH LINGUISTIC SOCIETY

Organization devoted to the study of Turkish and the Turkic languages.

The Society for the Study of the Turkish Language (Türk Dili Tetkik Cemiyeti) was founded on 12 July 1932, on the model of a similar society that already existed for the study of Turkish history. In 1934, its

name was updated to the Türk Dili Araştirma Kurumu reflecting the society's interest in purging the Turkish Language of its numerous borrowed Arabic and Persian words. In 1936, the name was changed again to the Turkish Linguistic Society (Türk Dil Kurumu). On 7 November 1982, the society was made subordinate to the Atatürk Kültür, Dil ve Tarih Yüksek Kurumu that now oversees the cultural, linguistic, and historical societies. The society has convened linguistic congresses (the first congress opened in 1932), publishes the journal *Türk Dili,* and publishes dictionaries and other works related to Turkish and all the other Turkic languages. In contrast to other such societies in Turkey, the activities of the Turkish Linguistic Society have not been led by scholars of the Turkish language, and one result has been that the society's activities have assumed a populist character. The society has also been at the center of recurring and intense national debates over language reform, most recently over the degree to which vast numbers of neologisms (new words or word forms adopted from foreign words) should be introduced into the Turkish language (often over the objections of many politicians and scholars).

TURKISH NATIONAL PACT

A resolution that stated the goal of political independence for Turkey.

This resolution adopted by the Ottoman parliament in Istanbul on 17 February 1920, declared support for the demands of the nationalist movement led by Mustafa Kemal Pasha (Atatürk). It included: the integrity of all territories inhabited by "an Ottoman Islamic majority"; popular plebiscites to determine the future of territories whose status was in doubt (Kars, Ardahan, and Batum in the Caucasus; western Thrace; and areas with Arab majorities); "protection" of the city of Istanbul and the Sea of Marmara and negotiation regarding trade and commerce in the Bosporus and the Dardanelles; recognition of minority rights provided reciprocal rights were extended to Muslim minorities in other countries; and recognition of full independence and sovereignty for "the country." This was essentially the program implemented in the wake of the defeat of the Greek army in western Anatolia and the withdrawal of British power from Istanbul and its environment in 1922. Functionally, the national pact served as a declaration of independence by nationalist Turkey.

TURKISH SCRIPT

Latin alphabet used predominantly in Turkey to write Turkish.

Contemporary Turkish is written in the Roman alphabet; the Turkish script is composed of eight vowels and twenty-one consonants, which are marked by various diacriticals. The first writings in Turkic language date to about 700 C.E. and use a runic alphabet. Later, Turkish came to be written in the Arabic alphabet. The earliest writings of Turkish in the Arabic script date to the thirteenth century and show strong Arabo-Persian linguistic influences. The fourteenth and fifteenth centuries show a boom in textual production. The literary Ottoman Turkish of this period was far removed from the spoken language. Beginning in the eighteenth century, with the decline of the Ottoman Empire, movements in favor of a language with stronger Turkish and less Ottoman characteristics gained momentum. In 1909, the Turkish Club began promoting a simpler Turkish, comprehensible across social strata. Mustafa Kemal Atatürk later founded the Turkish Language Academy. As part of Atatürk's sweeping reforms, the Turkish script was officially switched from the Arabic to the Roman alphabet in 1928.

TURKISH WORKERS PARTY

Turkish political party, 1961–1971.

This first avowedly socialist group to make a significant impact on the Turkish party system was founded in February of 1961. Its emergence signified the relative liberalism of the political order in the wake of the military intervention of 27 May 1960. The party competed successfully in the elections of 1965 and 1969, polling about 3 percent of the vote and gaining fifteen seats in the former and two in the latter election (the difference is attributable to changes in the electoral law). Its presence on the scene may have pulled the centrist Republican People's party (RPP) to the left. The party was subject to official and mob harassment, including violent attacks on its facilities and members. It was dissolved by order of the constitutional court in July 1971 on grounds that its leaders had encouraged communism and ethnic divisiveness (specifically, Kurdish separatism).

TURKISM

Political and cultural movement that emerged in the late nineteenth century and helped to form the new Turkish republic.

A movement of many tendencies, Turkism evolved largely in response to European nationalism and to the perceived failure of Ottomanism, as the empire was rocked by minority nationalist movements in the Balkans and Armenia. Sentiments of Turkish nationalist feeling can be traced to historical writings of the mid-nineteenth century, such as those of Ahmet Vefik Paşa (1823–1891). The first Ottoman Turcologist was Necib Asim (1861–1935). Politically, Turkism was most prominently expressed by the Young Turk movement, first in exile in the 1890s in Europe and Egypt and later in Anatolia after the 1908 Young Turk revolution. Competing tendencies included Anatolian nationalism, which traced Turkish roots in the territory to ancient times, and pan-Turkism, espoused especially by Turkish refugees from Russia and central Asia. The political manifesto of pan-Turkism is considered Russian-born Yusuf Akçura's 1904 essay, "Üç Tarz-i Siyaset" (Three Kinds of Policy), which rejected Ottomanism and Islam as bases of national identity and policy.

A major Turkish literary movement appeared in the early twentieth century, with groups like the Genç Kalemler (Young Pens) founded in 1911 in Salonika and the Türk Deneği (Turkish Society) founded in 1908 in Constantinople (now Istanbul). These and other groups were devoted to reviving Turkish folklore, studying the roots and branches of the various Turkic languages, and purifying the Ottoman language of non-Turkish words. The most important ideologue of the Young Turk era was the pan-Turkist writer and sociologist, Ziya Gökalp (1876–1924), who developed a populist vision of the rebirth of Turkish society. Eventually, Anatolian-based Turkism would prevail, with Mustafa Kemal's revolution and war of independence, beginning in 1919.

TURKMANCHAI, TREATY OF (1828)

Treaty by which Iran ceded its territories in the Caucasus to Russia.

The Treaty of Turkmanchai concluded a war between Iran and Russia that Iran initiated in 1826

with the aim of recovering territory in the Caucasus region that it had lost to Russia in 1813. The war went very badly for Iran, which was forced to accept unfavorable peace terms in the treaty signed in the village of Turkmanchai, about 80 miles southeast of Tabriz, on 21 February 1828. Under the treaty, Iran ceded its remaining provinces north of the Aras River (Yerevan and Nakhichevan) to Russia; extended preferential trade rights to Russian subjects; recognized Russia's exclusive naval rights in the Caspian Sea; accepted the application of Russian law to Russian subjects in Iran involved in civil or criminal legal cases; and agreed to pay Russia an indemnity of 20 million rubles.

TURKO–IRANIAN WAR (1821–1823)

The final war between the Qajar Persians and the Ottoman Turks.

This conflict began in 1821 when the Persian governor of Erzerum gave protection to tribes fleeing Azerbaijan. Actually, the conflict was instigated by Russia, which was anxious to weaken the Ottoman position in the Greek Revolution. The Russians induced Abbas Mirza, son of Fath Ali Shah Qajar, to invade Ottoman Turkey. He did, occupying Kurdistan and all the districts adjacent to Azerbaijan. As a counter move, the Ottoman viceroy of Baghdad invaded Persia but was defeated and chased back to Baghdad. In retaliation, Fath Ali Shah Qajar's oldest son, Mohammad Ali Mirza, laid siege to that city; his illness, and later death, lifted the siege, and the action shifted to the north. In the battle of Erzurum (1821) Abbas Mirza's army of 30,000 men defeated an Ottoman army of over 50,000. An epidemic of cholera precluded further action in the south, and the two powers ended hostilities with the Treaty of Erzurum on 28 July 1823. This treaty involved no change in territorial borders, but it did guarantee Persia access to the holy places in Iraq and Arabia; Ottoman suppression of Kurdish raids on Persian territory; release of the possessions of Persian merchants in Turkey; and an exchange of ambassadors.

TURKOLOGY

The academic study of the languages and civilization of the Turkic peoples with a traditional emphasis on sources written in Turkic languages.

The modern Turkic languages include Turkish, Uzbek, Kazakh, Azeri, Kazan Tatar, Turkmen, Kirghiz, Chuvash, Bashkir, Karakalpak, Yakut, Kumik, Crimean Tatar, Uighur, Tuvan, Gagauz, Karachay, Balkar, Xakas, Noghay, Altay, Shor, Dolgan, Karaim, and Tofalar. Native scholars have been writing descriptions of the Turkic dialects since the eleventh century. In the West, the earliest works on Turkey appeared in the fifteenth and sixteenth centuries, and the first descriptions of the Turkish language were published in the seventeenth century. The formal study of Turkish and other Turkic languages was introduced in Europe in the eighteenth century, and by the end of the nineteenth century, there were prominent centers of Turkology at universities in Paris, Moscow, Saint Petersburg, Kazan, Budapest, and Vienna. Today Turkology is widely taught in modern political units representing individual Turkic peoples: the Turkish republic, the Turkic republics of the former USSR, and the Uighur Autonomous Region in the People's Republic of China, where it is synonymous with the study of the local national culture. Turkology is also offered at major universities in Europe and North America, though the study of the language and civilization of the Turkish republic is far better represented than the study of the Turkic peoples as a whole.

ULI SCHAMILOGLU

TURKS

Ethnic group living in Turkey; also used to refer to Turkic-language speakers in Central Asia.

Turks are an ethnolinguistic group living in a broad geographic expanse extending from southeastern Europe through Anatolia and the Caucasus Mountains and throughout Central Asia. Thus Turks include the Turks of Turkey, the Azeris of Azerbaijan, and the Kazakhs, Kyrgyz, Tatars, Turkmen, and Uzbeks of Central Asia, as well as many smaller groups in Asia speaking Turkic languages. In a legal sense, however, *Turks* refers only to citizens of Turkey, even those (up to 20% of the population) who are not ethnically Turkish.

Nomadic Turks began infiltrating into Iran from Central Asia as early as the eighth century. Although the initial contacts generally were peaceful, by the tenth century large groups of Turks were invading Iran, and in the eleventh century they began invading Anatolia. First the Seljuk Turks and subsequently the Ottoman Turks established kingdoms in Anatolia. The Ottomans conquered the Byzantine imperial capital Constantinople (now Istanbul) in 1453, and this city then became the center of the Ottoman Empire, which at its height in the sixteenth and seventeenth centuries spanned three continents. Although the Ottoman Empire was multiethnic, Europeans often referred to its subjects as Turks and used "Ottoman Empire" synonymously with "Turkey."

During the nineteenth century, some Ottoman/Turkish intellectuals began to advocate pan-Turanism, a movement to unite all Turkic-language peoples under the Ottoman Empire. After the establishment of the Republic of Turkey in 1923, the government rejected pan-Turanism as an official policy. Nevertheless, interest in the cultural, if not political, unity of Turkic peoples has been a strong current among intellectuals in Turkey and has been revitalized since the collapse of the Soviet Union in 1991 and the emergence in Central Asia of several new Turkic-speaking countries.

TWAREG

Berber-speaking people of the Sahara, mostly in Algeria.

Twareg is an apparently non-Berber plural; the singular is *targui* or *targi.* Twareg (also Tuareg) call themselves, according to the region, *amahagh, amaiagh,* or *amashagh,* all reflexes of *amazigh,* the term more widely used for Berber in the rest of North Africa. It is estimated that there are 400,000 to 500,000 Twareg-language/dialect speakers. Most are fair-skinned Europids, although many are descendants of or mixed with negroid populations (of whom most were slaves). Twareg traditionally distinguish socially between the "noble" clans, camel nomads who in the past could range far and wide, wage war, and claim a share of the resources of groups they dominated (and whose protection they assured), and "vassal" clans, also nomadic but essentially herdsmen (mainly goats, but also camels belonging to the nobles, and cattle in some places), subjects of the noble clans. Other groups often are counted as Twareg, notably sedentary former slave populations (now primarily agriculturalists in the oases and artisans).

The requirements of modern states—fixed borders, schooling of children, control of territory and citizens—and the industrial exploitation of resources

have placed extreme pressures on the nomadic existence and traditions dear to the Twareg. They nonetheless maintain such traditional cultural traits as a strong matrilineal principle (in much of their inheritance of property, succession to chieftainship, rights and obligations toward vassal groups, etc.) and the strict veiling of men (women, however, typically are not veiled).

TWAYNI, GHASSAN

[1926–]

Lebanon's best-known journalist and publisher; former minister, ambassador, and representative from Lebanon to the United Nations.

A Greek Orthodox born in Beirut, Ghassan Twayni (also Tueni) has been one of the most influential figures in post–World War II Lebanon. His impressive and multifaceted career as academic, journalist, businessman, politician, diplomat, and man of letters has made him a prime shaper of public opinion in his country and one of the most respected commentators on Lebanese and Arab affairs throughout the United States and Europe.

He received a bachelor of arts degree in philosophy from the American University of Beirut (AUB) in 1945 and a master of arts degree in political science from Harvard University in 1947. After a year as a lecturer in political science at AUB (1947–1948), he became editor in chief of the daily newspaper *al-Nahar* in 1948, a position he occupied until he turned it over to his son, Jubran, in December 1999. He worked in journalism and publishing most of his life, and was active as the founder and chairman (from 1960 onwards) of Press Cooperative S.A.L. publishing group, editor-publisher of the *al-Nahar* S.C.P.A. Publishing Company after 1963, publisher and editor in chief of the French-language dailies *Le jour* (1965) and *L'orient-Le jour* (1970–1991), and chairman of the board of the Société Générale de la Presse et d'Edition (1985–1991).

In 1951, embarking on a political career, Twayni won a parliamentary seat after running successfully in Mount Lebanon as a candidate of the Socialist National Front, a loose coalition of politicians headed by Camille Chamoun and Kamal Jumblatt that called for the resignation of President Bishara al-Khuri, whose second term in office had become tainted with charges of nepotism, administrative corruption, and heavy-handed tactics. Twayni was reelected in 1953 and 1957, both times as a representative for Beirut, and was deputy speaker of parliament between 1953 and 1957. By then, he had established himself as one of the most prominent and competent members of a new generation of young, well-educated, reform-minded professionals who had become active in politics in an effort to modernize the Lebanese state. It was this reputation that led to his appointment in October 1970 as deputy prime minister and minister of information and education in President Sulayman Franjiyya's first cabinet (the so-called Youth Cabinet, headed by Saʾib Salam and composed predominantly of young technocrats recruited from outside parliament). Twayni resigned in January 1971, however, in protest against the president's and the prime minister's unwillingness to support the educational reforms he had proposed. He was subsequently appointed minister of labor and social affairs, tourism, and industry and oil in a cabinet headed by Rashid Karame (July 1975 to December 1976).

After the 1960s Twayni frequently represented his country abroad, both in official and unofficial positions. Following the Arab–Israel War (1967), he was ambassador-at-large and personal representative of President Charles Hilu on a special mission to the United States. In December 1976 he was President Ilyas Sarkis's special emissary to Washington, D.C. His diplomatic skills and achievements eventually led to his appointment in September 1977 as ambassador and permanent representative of Lebanon to the United Nations, a position he held until September 1982. Between 1982 and 1988 he served as special adviser to President Amin Jumayyil. His responsibilities during this period included coordinating negotiations for the withdrawal of foreign forces from Lebanon. In the early 1990s he was president of Balamand University, and he remains on the board of trustees of AUB. He continues to shuttle back and forth between Lebanon, Europe, and the United States.

TWIN PILLARS POLICY

U.S. policy to promote Iran and Saudi Arabia as local guardians of U.S. interests in the Persian Gulf region.

The decision by Great Britain in the late 1960s to withdraw its military forces from the Persian Gulf and to grant independence to its ten protectorates along the east coast of the Arabian Peninsula confronted the United States with a strategic dilemma. It was the height of Cold War rivalry with the Soviet Union, and the United States was deeply involved in Vietnam. Consequently, the United States decided instead of direct intervention to build up its two regional allies, Iran and Saudi Arabia, as local powers that could protect the region from the spread of Soviet influence. As the "twin pillars" of U.S. policy, both countries were encouraged to acquire billions of dollars of the most advanced arms during the 1970s. Iran embraced the twin pillars policy more enthusiastically than Saudi Arabia and intervened militarily, with U.S. approbation, in Iraq and Oman. The policy collapsed suddenly in 1979, when the shah (king) of Iran was overthrown in a revolution that brought to power a republican regime opposed to U.S. influence in the region.

TYRE

Historic coastal city in south Lebanon on the Mediterranean Sea.

Throughout its history, Tyre (now Sur), which is located fifty-two miles (83 km) from Beirut, has known several invasions and occupations. In the eighth century B.C.E., Tyre rebelled against the Assyrians, and in the sixth century B.C.E., the population of Tyre organized a revolt against the Chaldeans. In 333 B.C.E., following his defeat of the Persians, Alexander the Great was welcomed by all Phoenician cities with the exception of Tyre.

Tyre has also had a golden age (especially under the Romans) because of its flourishing glass and purple dye manufacturing. It was under the Romans that Christianity reached Tyre in the person of Saint Paul, who visited the city and stayed for ten days. In 638 C.E., Tyre fell under the control of the Fatimids, where it remained until 1124. In that year Tyre was besieged by the Crusaders and was incorporated in the kingdom of Jerusalem, as a part of which it grew prosperous. The city was recaptured and destroyed by the Mamluks in 1291.

Oranges, citrus, bananas, and sugar cane are the major fruits and vegetables produced in Tyre. Some of the inhabitants of the city and the surrounding region also make their living as fishermen. The old Phoenician city today has a large number of banks and financial institutions, several educational and humanitarian institutions, and hospitals and health centers to serve its population of 30,000 (1996). In a city that also has an active sport life, soccer clubs are especially popular.

UGANDA PROJECT

Proposal for a Jewish state in British territory in East Africa.

In 1902 Theodor Herzl petitioned the Royal Commission for Alien Immigration in London for assistance in alleviating the plight of Jews. In the summer of 1903, the British colonial secretary informed the World Zionist Organization of Great Britain's agreement in principle that East Africa could serve as a potential Jewish homeland. The apparent motivation for this plan, which became known as the Uganda Project or Uganda Scheme, was a desire to help the Jews as well as to develop the area for further colonization and perhaps to minimize further Jewish immigration to Great Britain.

The Sixth Zionist Congress met shortly thereafter, and Herzl presented the Uganda Scheme (it was actually Kenya), urging its acceptance as a temporary measure. Max Nordau, Eliezer Ben-Yehuda, Nachman Syrkin, and Rabbi Yitzhak Yaacov Reines supported it, whereas Menachem Ussishkin and Ber Borochov, as well as Vladimir Ze'ev Jabotinsky, staunchly opposed it. The proposal became the subject of one of the fiercest debates in Zionist history. When Herzl won, and the Congress voted, 295 to 178, in favor of a proposal to investigate the plan's viability, the opposition stormed out and agreed to return only after Herzl assured them of his allegiance to Palestine as the ultimate objective of Zionism.

In spring 1904 the British government withdrew its offer. Herzl died before the Seventh Zionist Congress, in 1905, at which the scheme was overwhelmingly rejected by a majority of the 497 delegates.

ULAMA

Muslim religious scholars.

The term *ulama* literally means those who possess knowledge (*ilm*), particularly of Islam. The *ulama* emerged as the first interpreters of the Qurʾan and transmitters of *hadith,* the words and deeds of the prophet Muhammad. These scholars also became the first to outline and elaborate the basic principles of Islamic law *(shariʿa).* The *ulama* were central to Islamic education in the premodern Middle East. They regulated instruction at all levels and were instrumental in the process of training Islamic scholars in *madrasas* (residential colleges), which were established by the eleventh century. These medieval institutions developed a rigorous curriculum centered around instruction in the law, training future jurists, theologians, and state functionaries. This system of higher education was the first in a series of successful attempts to link the *ulama* to political authority in the Islamic world. Members of the *ulama* might also participate in Islamic mysticism as members—even leaders—of organized Sufi fraternities.

Now under the leadership of Ayatollah Seyed Ali Khamenei, the Shiʿite *ulama,* or cultural elite acting as guardians and interpreters of Islamic faith, have exercised unequaled political as well as religious authority in Iran since the revolution of 1979. This is in contrast to the deep divides over the authority of the *ulama* in the Sunni world. © AP/Wideworld Photos. Reproduced by permission.

The *ulama* are often defined as a class when in fact the socioeconomic status of their membership remained quite varied. Lawyers and judges were key members of the *ulama*; their legal skills were critical to the regulation of Islamic society in social and commercial matters such as wills, marriage, and trade. The *ulama* also included theologians, prayer leaders, and teachers, many of whom continued to participate in the economy as traders or artisans. Until the mid-nineteenth century, state bureaucracies in the Middle East employed members of the *ulama* as tax collectors, scribes, secretaries, and market inspectors. The *ulama* formed a cultural elite and retained the admiration and respect of the Muslim masses because they, not the rulers, were perceived as the true guardians and interpreters of the Islamic faith. As long as the *ulama* remained independent of state control, they continued to represent a base of potential support or opposition to ruling elites.

The advent of secularism and nationalism in the Middle East aroused the resistance of the *ulama,* who, increasingly, were perceived as obstacles to modernism and reform. The traditional power of the Sunni *ulama* over law, education, and bureaucracy was stripped away in the nineteenth century throughout the Ottoman Empire and in Egypt. Confiscation of *Waqf* properties, the traditional means of economic support for the *ulama,* increased their reliance on government authority for economic maintenance and served to compromise the group's independent religious and political influence. In the late nineteenth century individual members of the *ulama,* such as Muhammad Abduh, directed their influence in educational and religious reform through Egypt's famed Sunni theological center al-Azhar. More recent twentieth-century Islamic political movements in Egypt, such as the Muslim Brotherhood, successfully circumvented what was perceived as the compromised model of the traditional *ulama.*

The problem for the contemporary Sunni *ulama* rests in the definition and scope of their authority. Challenges to the sole Sunni legal authority of al-Azhar have arisen in Saudi Arabia with its state-sponsored Permanent Council for Scientific Research and Legal Opinions. Hanbali jurists who issue *fatawa* (sing.: *fatwa*) through this medium are able to affect much of the Arabic-speaking world through the power of electronic communication. The tendency toward such authoritarian discourses in the Sunni world has been challenged by individuals who wish to assert the egalitarian possibilities of a more accessible *ulama.* Sudanese President Hasan al-Turabi has argued that the *ulama* should consist of all devout, educated Muslims, not only those strictly trained in legal and theological matters. Such populist assertions undermine premodern precedent and underscore the deep divide within Sunni Muslim society today over the definition of religious and legal authority. The continued power and legitimacy of the *ulama* as leaders for the Sunni Muslim majority worldwide remains a matter of heated debate.

In contrast, the role of the *ulama* in Shiʿite Iran has reached new heights of political and religious authority since the Iranian Revolution of 1979. Under the weak Safavid and Qajar dynasties the strength of the *ulama* increased. Beginning in 1925, despite the Pahlavi regime's attempts at secular government and bringing the *ulama* under state control, the scholars remained a potentially potent source of opposition. The *ulama* assumed leadership in the organized resistance to the shah, which culminated in the 1979 revolution and the formation of the Islamic Republic of Iran. The Shiʿite *ulama* in Iran successfully utilized their religious prestige as the only legitimate interpreters of Islam as a revolutionary weapon against a modern secular government.

UMAR, MADIHA

[1908–]

Syrian painter.

Madiha Umar was born in Syria. She is widely regarded as a pioneer in using the abstract elements of Arabic calligraphy in modernist painting. This innovation, turning an element of historical Islamic art into a recognized modernist form, was later to emerge as a major trend in contemporary art throughout the Arab world and in other majority-Muslim countries. Although some artists have focused on the Arabic word as communicative of spiritual power (a concept in Islam), Umar concentrates on the beauty of individual letters, including their formal possibilities and their figurative associations. This interest in letters originally stems from her early fascination with the Arabic calligraphy on mosque domes and minarets. During the 1930s, Umar trained in England and also spent time in Iraq, taking classes and teaching. She completed her M.F.A. at the Corcoran School of Art in Washington, D.C. Her works were exhibited in the United States as early as the 1940s.

UMAYYAD MOSQUE

Mosque established in Damascus by the Umayyad Caliph Walid ibn Abd al-Malik (705–715).

To construct and decorate the mosque, Walid employed the best craftsmen from Constantinople (now Istanbul) and from the Umayyad Empire. The design included a large open courtyard, a covered area on the side closest to the *qibla* (the direction of Mecca), and walls covered with elaborate mosaics. The mosque was one of the spectacular results of

the building program of the Umayyads, who made Damascus the capital of their empire. The Umayyad mosque is one of the most monumental artistic structures in modern Syria.

UMM AL-QAYWAYN

The emirate in the United Arab Emirates with the smallest population.

Umm al-Qaywayn lies south of Raʾs al-Khayma, the northern-most emirate, and north of Sharjah on the coast of the Persian (Arabian) Gulf. It possesses the second-smallest territory, approximately 300 square miles, and its population was estimated in 1997 to be about 39,000. The capital town of the same name, which contains most of the emirate's population, was established on a sand spit for physical security. Only Abu Dhabi shares Umm al-Qaywayn's advantage of being located in a single contiguous territory.

Along with Ajman and Fujayra, Umm al-Qaywayn is one of the poorest of the United Arab Emirates and is heavily dependent on development funds from Abu Dhabi. It has very modest gas production, and few industries, the most important being cement production. Like Dubai, the emirate has established a free zone to attract overseas investment in manufacturing and trade. Nonetheless, much of Umm al-Qaywayn's population engages in the traditional pursuits of fishing and shipbuilding.

The ruling family is the Muʿalla, sometimes referred to as the Al Ali. The current amir, Shaykh Rashid ibn Ahmad, has ruled since 1981, when he succeeded his father, Shaykh Ahmad ibn Rashid al-Muʿalla, whose rule had begun in 1929.

UMM AL-QURA UNIVERSITY

Saudi Arabian university.

King Abd al-Aziz University was founded in Jidda in 1967 as a private college. Later taken over by the Saudi state, it opened branches in Mecca and Medina; the former became independent as Umm al-Qura ("The Mother of Villages," a name for Mecca) University in 1979. It opened another campus at al-Ta'if in 1981. Umm al-Qura University offers programs in the sciences, Islamic studies, Arabic language, education, and agriculture. Student enrollment numbers more than 20,000. King Abd al-Aziz University employs more than 2,000 teachers and has a student population of more than 39,000.

KHALID Y. BLANKINSHIP

UMMA PARTY

Political party in Sudan founded by Abd al-Rahman al-Mahdi in 1945.

Sayyid Abd al-Rahman al-Mahdi (1885–1959), the posthumous son of Muhammad Ahmad Abdullah al-Mahdi (1848–1885), used his wealth acquired by his loyalty to the British during World War I and his religious influence as the leader of the Ansar to enhance his political ambitions by launching a newspaper, *al-Umma.* Then, in February 1945, he mobilized his followers, the Ansar, to establish the Umma political party. The name refers to the community of Islam *(umma).* Its political platform, however, promotes a Sudan for the Sudanese, evoking

the legacy of the Mahdist State, founded by his father, which was hostile to the imperial ambitions of Egypt. The founding members included prominent Mahdists. Although Abd al-Rahman publicly remained aloof, he provided the funds and spiritual guidance for the party, which alienated many non-Mahdist Sudanese who were deeply suspicious that he was using the party to further his monarchical ambitions. The opposition gravitated to the Ashiqqa (Brothers) Party founded by Ismaʿil al-Azhari (1900–1969), which advocated the union of the Nile Valley with Egypt.

Frequent attempts to reconcile the unionists and the Umma failed when Azhari broadened his narrow political base to found the National Unionist Party (NUP) with Sayyid Ali al-Mirghani and his Khatmiyya Brotherhood, bitter rivals of the Ansar and historically pro-Egyptian. The Umma lost the elections in 1952 to the NUP, and Azhari declared the Sudan independent on 1 January 1956. The Umma Party continued to play a powerful role in the first parliamentary government (1956–1958) and even under the military regimes of Major-General Ibrahim Abbud (1958–1964) and Colonel Muhammad Jaʿfar Numeiri (1969–1985), when political parties were officially proscribed. It sustained an intense rivalry with the Democratic Unionist Party (the former NUP), whose patrons, the Mirghani family, played a role similar to that of the descendants of Sayyid Abd al-Rahman—his son Siddiq al-Mahdi and grandson Sadiq al- Mahdi—in the Umma Party.

The Umma Party was not without internal rivalry, particularly among the more conservative Ansar, who were led by Imam al-Hadi until he was killed in the suppression of the Ansar by Numeiri in 1970. Since then, Sadiq al-Mahdi, the great-grandson of the Mahdi, has led the Umma Party. He served as prime minister in all the coalition governments between 1986 and 1989, after which he was placed under arrest by Brigadier Umar Hasan Ahmad al-Bashir, who seized control of the government in his coup d'état of June 1989. Although all political parties except Bashir's National Islamic Front (NIF) were proscribed, the organization of the Umma Party in the Sudan remained in place and its leadership joined the other opposition parties in exile who had formed the National Democratic Alliance (NDA) in Asmara, Eritrea.

In December 1996 Sadiq made a spectacular escape from house arrest to join the NDA in Asmara. Thereafter, he played an ambiguous role, seeking control of the NDA on the one hand and a rapprochement with the Bashir government on the other, both of which weakened the authority of the NDA. He failed to dominate the NDA; but when President Bashir permitted political parties to once again be openly active in Sudan, Sadiq signed the Djibouti Agreement with President Bashir in November 1999 and was able to return to lead the Umma as an opposition party. Although a body of the Umma leadership defected from the Umma to join the government, Sadiq remained in Khartoum and was confirmed leader of the opposition Umma Party in April 2003 at its first general conference in fifteen years.

ROBERT O. COLLINS

UMM KULTHUM

[c. 1904–1975]

The most famous Arab singer of the twentieth century.

Umm Kulthum performed for more than fifty years, beginning in the villages and towns of the Egyptian delta in the early twentieth century and continuing until her final illness in 1973. In the course of her long career, Umm Kulthum recorded over three hundred songs and appeared in six films. She performed throughout the Arab world and is often considered the most accomplished singer of her time.

The Egyptian singer Umm Kulthum, photographed in Cairo in 1968, enjoyed immense popularity throughout the Arab world from the 1920s until her death in 1975. She supported Arab culture through her performances of populist songs derived from Arab music and poetry, as well as by speaking out for government support of such music and the musicians who played it. © BETTMANN/CORBIS. REPRODUCED BY PERMISSION.

She was born in the Egyptian village of Tammay al-Zahayra in the province of Daqhaliya to Shaykh Ibrahim al-Sayyid al-Baltaji (died 1932), the imam of the village mosque, and his wife, Fatima al-Maliji (died 1947). Her father augmented his income by singing religious songs for local celebrations. Umm Kulthum learned the songs while listening to him train her brother Khalid as his accompanist. Impressed with the power of his young daughter's voice, Shaykh Ibrahim eventually included her along with Khalid and their cousin Sabr in his performances.

The young girl with the very strong voice became the family's star attraction. To protect her reputation, the father had her wear a boy's coat and head covering, and he conducted all business on her behalf. By 1917, the family began to consider a serious singing career for Umm Kulthum and in about 1922 they moved to Cairo to launch her in the commercial music business. In Cairo, Umm Kulthum was not an immediate success. Compared with the women already established as successful performers and recording stars, including Munira al-Mahdiyya and Fathiyya Ahmad, she was viewed as unsophisticated and countrified. She engaged music teachers and endeavored to copy the manners of the elite women in whose homes she sang. Like other aspiring performers, she was aided and schooled by a number of mentors, including singer Shaykh Abu al-Ilah Muhammad, poet Ahmad Rami, and the amateur musician Amin al-Mahdi. By 1928, she surpassed the popularity of her competitors and remained at the top of musical society for the remainder of her career.

Umm Kulthum began to make commercial recordings in 1924. Although recording companies were usually conservative and disinclined to take a chance on an unknown singer, they vied with each other for the largest possible share of the market; as a result the relatively unknown Umm Kulthum was recruited by Odeon Records and recorded fourteen songs in 1924 and 1925. These were immediately successful, for, as she later explained, her long years of performing in the delta provided her with a larger audience outside Cairo than most other singers. This experience awakened Umm Kulthum to the nature of her potential audience. During the late 1920s and the 1930s she began her lifelong involvement with the mass media: commercial recording (1924), radio (1934), film (1934), and television (1960). Commercial recordings had been circulating in Egypt since about 1904 and, despite the relatively high cost of phonograph players and records, were widely accessible. They were installed in public places, such as coffee houses, where even those who could not afford the equipment could hear the records. (Later, radios, televisions, and cassette players were similarly shared.) From 1937 until her final illness, her concerts on the first Thursday of each month were broadcast live to an ever growing audience. These concerts were certainly her best-known professional activity and allowed Umm Kulthum to count among her audience

millions of listeners beyond the ticket-buying audience in Cairo.

She started with a repertoire of traditional, predominantly religious songs as a child; in the late 1920s and 1930s, she began to sing new virtuosic songs, often composed for her by Muhammad al-Qasabji on the romantic poetry then in vogue by Ahmad Rami. During her golden age in the 1940s and 1950s, she sang colloquial songs of populist expression written by Zakariyya Ahmad and Bayram al-Tunisi and serious neoclassical songs by Riyadh al-Sunbati and Ahmad Shawqi; these have become her best known. In the late 1950s and 1960s, she commissioned new love songs by younger poets and composers and finally collaborated with her colleague and rival, Muhammad Abd al-Wahhab; they produced ten songs, which retain great popularity to the present day.

In her later years, she was recognized as an important public figure, in general, and a symbol of authentically Egyptian and Arab culture and art. She served seven terms as president of the musicians' union and as a member of the selection committee for radio and of several national commissions on the arts. After the Egyptian defeat in the Arab-Israel War (1967), she initiated a series of benefit concerts in Egypt and throughout the Arab world designed to replenish the Egyptian treasury. She appeared in Morocco, Libya, Sudan, Lebanon, Abu Dhabi, and Tunisia, and her trips to these countries took on the character of diplomatic visits.

Health problems that had plagued Umm Kulthum for much of her life worsened as she aged, and she spent most of the last year of her life under medical treatment. She died on 3 February 1975.

UMM NAʿSAN

Second largest of the thirty-three islands in the archipelago that constitutes the State of Bahrain.

Umm Naʿsan occupies some 8.5 square miles (22 sq. km) and lies approximately 2.5 miles (4 km) off the western coast of the main island of Bahrain, the largest in the archipelago. It is reserved for the private use of the ruler. Several small springs provide water for a limited pastureland, and date palm gardens grow along its western shore, gardens planted and stocked with deer and gazelle by Shaykh Hamad ibn Isa Al Khalifa during the 1930s. Ruins dot the surface of the island, lending credence to local legends that it was the seat of the ancient rulers. The causeway from Saudi Arabia to the main island, Bahrain, passes through Umm Naʿsan.

UNION DÉMOCRATIQUE DU MANIFESTE ALGÉRIEN (UDMA)

A moderate Algerian organization whose goals changed from autonomy within the colonial system to full independence.

The Union Démocratique du Manifeste Algérien (UDMA; Democratic Union of the Algerian Manifesto) was founded by Ferhat ABBAS during the spring of 1946 and ceased to exist in April 1956 when Abbas, in Cairo, announced his alliance with the Front de Libération Nationale (FLN; National Liberation Front). It grew out of the moderate wing of the Algerian political spectrum, which in the 1930s had sought reform within the colonial system. When the colons refused such reform, it moved in the 1940s toward Algerian autonomy.

Winning eleven of the thirteen Algerian seats in the second French Constituent Assembly in 1946, Abbas proposed an autonomous Algeria within the framework of the French Union. When this program failed to carry, the party was diminished considerably in influence. Representing mainly educated, middle-class levels of society, the party had some three thousand members by 1950 and participated actively in the Algerian Assembly established by the Organic Law in 1947.

After joining the FLN, Abbas and other UDMA leaders served in the Conseil National de la Révolution Algérienne (CNRA; National Council of the Algerian Revolution) and subsequently in the Provisional Government of the Algerian Republic (Gouvernement Provisoire de la République Algérienne; GPRA).

UNION GÉNÉRALE DES TRAVAILLEURS MAROCAINS (UGTM)

Moroccan labor union.

The Istiqlal Party founded the General Union of Moroccan Workers (UGTM) in 1959 to compete with the Moroccan Labor Union (Union Marocaine du Travail, UMT), then associated with the National Union of Popular Forces (Union Nationale des Forces Populaires, UNFP). The UGTM represents the labor branch of the Istiqlal Party, which emphasizes nationalistic, pro-Islamic, and pan-Arab policies. The UGTM takes a pragmatic stance toward the government, not hesitating to support its policies. This was particularly true when the Istiqlal Party was represented in the cabinet (1977–1984). During the 1980s the UGTM gained ascendancy within various sectors, but especially in the rural milieu and agriculture.

The UGTM competed with the UMT in the 1970s and with the Democratic Confederation of Labor (CDT), created in 1978, in the 1980s. However, in the 1990s the UGTM joined forces with the CDT. The socioeconomic situation of the country had been steadily worsening since the 1980s, and both unions called for strikes during the 1990s to force the government into a dialogue with labor representatives. Similar tactics were repeated in 2002 under the government of Abderrahmane Youssoufi. The strikes concluded the following month with a social pact negotiated by the government, the employers, the CDT, and the UGTM.

As of 2003, the modification of the current Labor Code, which could represent a limitation on the right to strike, is an issue of great concern to both unions. UGTM's secretary general is Abderrazak Afilal.

UNION GÉNÉRALE DES TRAVAILLEURS TUNISIENS (UGTT)

Tunisian labor union.

The Union Générale des Travailleurs Tunisiens (General Union of Tunisian Workers) is the strongest labor union in Tunisia. Founded in 1946 by Ferhat Hached, the union was the first indigenous attempt to organize Tunisia's workers. Hached broke with the French, communist-led General Confederation of Workers (*Confédération Générale des Travailleurs*; CGT). The new union worked closely with the nationalist movement in Tunisia. Consequently, members of the French resistance organization Red Hand assassinated Hached in 1952.

From 1952 until 1969, the union was under the influence of Ahmed Ben Salah and his socialist economic policies. The fall of Ben Salah in 1970 led to its reorganization and reemergence in 1976 under the charismatic leadership of Habib Achour, who dominated the UGTT until 1989. From the late 1970s to the early 1980s, the union exerted a fierce opposition to the government. The UGTT tended to oppose economic liberalization because this

would lessen its control of the labor movement and adversely affect workers. Achour signed the Social Contract of 1977, which stipulated that the union would control labor unrest. Deteriorating economic conditions, however, caused Achour to break this pact. A wildcat work stoppage at Qsar Hellal in October 1977 led to a confrontation between the army and striking workers, the first time the government had used the army to suppress labor. In early January 1978, the UGTT issued a resolution extremely critical of the economic policies of Habib Bourguiba's regime. On 26 January 1978, called "Black Thursday," a bloody clash left 150 people dead. The government declared a state of emergency and arrested UGTT leaders. Achour was tried for sedition and sentenced to ten years in jail. The regime imposed a new executive bureau on the union and weakened it as a force of opposition to the government's economic policies.

Pardoned in 1981, Achour returned to the post of UGTT president, with leftist Taieb Baccouche as secretary-general. Privatization measures of the mid-1980s eroded the UGTT's clout. In January 1984, riots broke out as a result of an increase in the price of bread. The ensuing violence led the union to harden its stance toward the government. By 1985, the UGTT had again run afoul of the government by threatening to strike if the decline in workers' real wages was not reversed. In December, the government again disbanded the union and jailed its leadership on various charges.

The 1987 palace coup of Zayn al-Abidine Ben Ali led to improved relations between the government and the UGTT. Internal dissent, exemplified by the split that in the early 1980s created the National Union of Tunisian Workers (*Union Nationale des Travailleurs Tunisiens;* UNTT), had weakened the organization as the main opposition force. The union, therefore, started to lose its role as the country's leading social movement to the Tunisian League for the Defense of Human Rights (LTDH).

In 1989, encouraged by the government, the reunification of the UGTT and the UNTT was made official and the union leaders were substituted. Achour was replaced by Ismail Sahbani and Ali Romdhane. In late December 1993, Sahbani consolidated his position and expelled his chief opponents from the UGTT's executive bureau.

The union's nineteenth congress, held in April 1999, elected Sahbani as secretary general for the third time. There was, however, increasing discontent among the UGTT membership over his authoritarian leadership style and his conciliatory attitude toward the regime. Forced to resign, Sahbani was replaced by Abdessalem Jerad in September 2000.

UNION MAROCAINE DU TRAVAIL (UMT)

Morocco's oldest trade union.

The Moroccan Labor Union (Union Marocaine du Travail, UMT) was formed in 1955 with the help of the nationalist Istiqlal Party. It reportedly had a membership of over 600,000 in the early years of Morocco's independence, becoming the nation's largest labor organization. It enjoyed a monopoly of Moroccan unionism until the Istiqlal Party founded the General Union of Moroccan Workers (Union Générale des Travailleurs Marocains, UGTM) in 1959, which took over 10 percent of its membership.

Although affiliated with the National Union of Popular Forces (Union Nationale des Forces Populaires, UNFP) from 1959 to 1962, the UMT declared its autonomy from political parties at its Third Congress (1963). In the 1960s the government declared a state of emergency, during which political and union activity was restricted for several years. During this period the UMT saw its membership decline sharply. The state of emergency ended in July 1970, prompting a rapid rise in labor unrest soon afterward. Nevertheless, the UMT remained weak, affected by organizational and leadership problems.

By the mid-1970s internal dissent had emerged within the organization. Some criticized the union

leadership for inaction and subordination to the state. Mahjoub Ben Seddiq has been its secretary general since 1955. In 1978 the USFP founded the Democratic Confederation of Labor (Confédération Démocratique du Travail, CDT), an organization that soon attracted former UMT union members. In the 1990s UMT's political activism was surpassed by the CDT, which, in alliance with the UGTM, has become the leader of trade union militancy in Morocco.

UNION NATIONALE DES ETUDIANTS MAROCAINS (UNEM)

Originally left-wing opposition group in Morocco that came to be dominated by Islamists in the 1990s.

The Union Nationale des Etudiants Marocains (UNEM), originally supported by teachers and high school students, was involved in extralegal and radical activities against the monarchy and its governments during the 1960s and 1970s, when it was associated with the progressive faction of the Istiqlal Party and the Union Nationale des Forces Populaires (UNFP). Its agenda was redress of political, social, economic, and educational grievances. In July 1963 Hamid Berrada, secretary-general of the UNEM, was condemned to death for allegedly plotting against the state in support of Mehdi Ben Barka. He fled the country and, with Ben Barka and Muhammad al-Basri, initiated a campaign to denounce the monarchy. One year later, UNEM's president, Muhammad Halaoui, was arrested for having criticized Berrada's sentencing. Between 1963 and 1973 UNEM leaders were repeatedly arrested and imprisoned for organizing strikes and engaging in subversion. The peak of the government's crackdown came in April 1972 with a mass trial of eighty-one student leaders on charges of treason. Twenty-eight received long jail sentences.

The UNEM was dissolved in 1973 and reconstituted in 1978. The new leadership initiated a number of demonstrations between 1979 and 1981 that resulted in further clashes with the authorities, but in general the political calm in Morocco during the 1980s was reflected in the UNEM's relatively low profile. In 1991 clashes on university campuses between leftists and Islamists were related, in part, to their respective attempts to gain control of the UNEM. Mostly affiliated with Jamiʿat al-Adl wa al-Ihsan (Justice and Charity Group), the leading Islamist extraparliamentary movement, Islamist students came to control most of the country's student organizations by the end of the decade, including the UNEM, and found themselves in periodic confrontations with the authorities.

UNION NATIONALE DES FORCES POPULAIRES (UNFP)

One of Morocco's leading leftist political parties.

The Union Nationale des Forces Populaires (National Union of Popular Forces, UNFP) was founded in December 1959 by progressive and leftist elements of the Istiqlal Party, Morocco's most important nationalist force. Among its founders were Mehdi Ben Barka; Abdullah Ibrahim (prime minister from 1959 to 1960); Mahjoub Ben Seddiq (secretary-general of the Union Marocaine du Travail [Moroccan Labor Union], UMT); Abderrahmane Youssoufi; Mohamed Fqih Basri; and Abderrahim Bouabid. Following two failed coup attempts in 1971 and 1972, the government arrested many UNFP members and placed them on trial. In 1972, internal disputes led to the emergence of two blocs within the party: the Casablanca group led by Ibrahim, and the Rabat section led by Bouabid. During 1973, a series of detentions forced the Rabat group to put its activities on hold for a period of four months. The political turmoil led to severe

divisions within the party, causing the UNFP section in the city of Rabat to split from the party and found a new party, the Union Socialiste des Forces Populaires (Socialist Union of Socialist Forces, USFP), in 1974. Because most of the UNFP's members joined the USFP, the remnant UNFP headed by Ibrahim became an insignificant party under the guidance of the UMT. The UNFP boycotted the 1977 elections and the municipal and parliamentary elections of 1983 and 1984.

The ideology of the UNFP was socialist, calling for a transformation of the social structure, nationalization of the means of production, greater rewards for workers, and land reform. It consistently opposed the leadership of King Hassan II and called for the creation of a representative democracy. In the international arena, the UNFP supported Arab unity within a socialist democratic framework, favored developing nation revolutionary movements, and opposed Western involvement in the national economy. Strongly nationalist, the party and its successor, the USFP, unconditionally supported the government line in Western Sahara and refused to agree to any form of settlement that would relinquish Moroccan sovereignty rights over the territory.

Ben Barka served as the UNFP's general secretary until his assassination in France in 1965. The party's principal leadership structure consisted of a central committee, an administrative commission, and a general secretariat. In 1967, the UNFP created a political bureau composed of Bouabid, Ibrahim, and Ben Seddiq, which the party's administrative commission dissolved in 1972. The leadership of the UNFP was often divided. The party held its second and last national congress in 1963. The UMT provided most of the party's infrastructure at the local level.

After briefly heading the government in 1959 and 1960, the UNFP joined the opposition. At the height of its power during the early 1960s, it won 414 out of 765 seats in the 1960 local elections and 28 out of 144 seats in the 1963 parliamentary elections. Severe repression after 1962 and a split with the UMT caused it to lose much of its strength during the late 1960s.

The UNFP had a diverse membership united more by a commonality of interests than a common ideology. Second-generation nationalists from the Istiqlal with modest family backgrounds and French educations held top positions. Professionals, teachers, and government workers composed much of the party's middle-level hierarchy. Rank and file members were largely trade union members and students. Wealthy members of the UNFP provided most of its financing. It had a diverse constituency, attracting its greatest support from workers living in Atlantic coast cities and from government cadres, students, and traders in the Sousse region.

UNION OF TUNISIAN WOMEN

The largest and oldest women's organization in Tunisia.

In 1956, L'Union Nationale des Femmes Tunisiennes (Union of Tunisian Women; UNFT) was formed with the explicit goal of elevating the cultural, social, economic, and political status of Tunisian women. As a women's auxiliary of the national Neo-Destour Party, the UNFT was primarily responsible for communicating, supporting, and implementing the Neo-Destour Party's initiatives and policies. Among its early initiatives were literacy and education campaigns and awareness-raising programs about the personal status code and women's rights. The UNFT became a prominent organization in the years after independence, with nearly 14,000 members in 1960 and more than 38,000 in 1969. By 2000, the UNFT had grown to a membership of more than 135,000, with regional offices and regional delegates in each of Tunisia's twenty-three governorates.

The UNFT has been primarily dedicated to women's advocacy at the national level, urging the

implementation of state-sponsored programs. With the goal of promoting women's interests in all areas of society, the UNFT has sponsored and implemented projects relating to business, culture, science, health, and education. The social condition of women and the elimination of poverty continue to be of particular concern to the organization, and the UNFT works with both governmental and nongovernmental organizations to address women's needs and represent women's interests.

UNION SOCIALISTE DES FORCES POPULAIRES (USFP)

Moroccan Socialist political party.

The Union Socialiste des Forces Populaires (Socialist Union of Popular Forces, USFP) was formed in 1974 by a large breakaway faction of the Union Nationale des Forces Populaires (National Union of Popular Forces, UNFP) led by Abderrahim Bouabid. A member of the Socialist International and strongly nationalist, the USFP supports the Moroccan government's stand on Western Sahara and it has consistently opposed the United Nations referendum plan for the region. The position of general secretary has been held by Bouabid (1974–1992) and Abderrahmane Youssoufi (1992–). Most of its members—primarily teachers, students, and government workers—come from urban middle-class backgrounds. During the 1990s the party, which in the past had a strong constituency among students, workers, and the unemployed, lost ground in favor of Morocco's Islamist parties, mainly the moderate Justice et Développement Party (Justice and Development, PJD) and the now illegal Al-Adl wa'l Ihsan (Justice and Charity Organization) headed by Abdessalam Yassine. The USFP is closely allied with the Democratic Labor Confederation, one of Morocco's leading trade unions.

Following the establishment of a bicameral system in 1997 and the elections that took place amid wide accusations of fraud, King Hassan II appointed Youssoufi prime minister in February 1998. Together with the Istiqlal Party, the USFP formed the core of the new government. The USFP won the legislative elections of 27 September 2002, which were marked by low participation (51.5%) and the success of the Islamist PJD. After the elections, the USFP announced that it would not form a cabinet with the PJD but would instead resuscitate its alliance with the Istiqlal Party. Despite the victory of the USFP, the king appointed Driss Jetou of the Istiqlal Party prime minister in October 2002, amid protests from the USFP and other parties. Differences over the USFP's role after 1998 have caused strains in relations with other member parties of the national democratic bloc, or Kutla. In the municipal elections of September 2003, which took place in the aftermath of bomb attacks that killed forty-five people in Casablanca and severely restricted the participation of Islamist parties, the USFP ranked second after the Istiqlal party, winning 14.2 percent of the vote and 3,373 of the total 23,689 local council seats.

UNION TUNISIENNE DES INDUSTRIALISTES, COMPAGNIES, ARTISANS (UTICA)

Tunisian federation of employers.

The Tunisian Union of Industrialists, Businessmen, and Artisans (UTICA) was created during the third congress of the Neo-Destour Party on 17 October 1948. Initially called Union Tunisienne de l'Industrie et du Commerce (Tunisian Union of Industry and Commerce) and later the Union Tunisienne de l'Industrie, du Commerce, et de l'Artisanat (Tunisian Federation of Industry, Commerce, and Handicrafts), the union represents the interests of Tunisian employers as signatories of pacts regarding wages and work conditions in the Tunisian market. As of 2003, Hédi Djilani became the president of the union.

UTICA regularly negotiates wages and working conditions with the government and the Union Générale des Travailleurs Tunisiens (General Union of Tunisian Workers; UGTT). Based on these negotiations, the government sets annual wages for the labor force. The 1956 labor code guarantees a minimum wage, provides for arbitration to settle disputes, authorizes union membership, sets the work week and other labor standards, and provides for social security and disability insurance payments. The government also seeks to ensure that wages do not lag behind inflation. In May 1999, the Tunisian government increased minimum monthly wages in the public and private sectors by between 3.3 percent and 3.7 percent. Amendments to the labor code in 1994 and 1996 allowed firms to consider an employee's productivity when evaluating salary, to set working hours according to their needs, and to base part of an employee's salary on productivity; it also allowed layoffs based on economic or technological needs.

Since 1986, Tunisia's economic restructuring program has led to the privatization of a number of public conglomerates, the reduction of food subsidies, and a general liberalization of the economy. Tunisia's economic liberalization is linked to structural adjustment policies under the patronage of the International Monetary Fund and the World Bank, upon which the country depends for financial support. The liberalization of Tunisia's economy has taken place within the framework of a structural adjustment program (1986); adherence to the General Agreement on Terms of Trade (GATT) in 1989 and membership in the World Trade Organization since 1994; and the signing of a free-trade agreement with the European Union in 1995.

UTICA supported the construction in 1999 of the Elgazala Technology Park in Ariana (a city north of Tunis). The union views the transfer of technology and automation to Tunisia as a key to the country's economic diversification and a necessary step toward attracting foreign investment.

In the international sphere, UTICA has become prominent in strengthening economic ties between the Tunisian government and other developing nations. In March 2003, UTICA signed a series of agreements with its Moroccan counterpart, the Confédération Générale des Enterprises du Maroc (General Confederation of Enterprises in Morocco), to promote the integration of both economic regions. The two organizations called for the implementation of the Moroccan-Tunisian free-trade agreement, the creation of a databank of joint industrial projects, and the deregulation of customs duties. Outside the Arab world, UTICA has played a prominent role in the strengthening of commercial ties between Tunisia and Pakistan. In October 2002, UTICA signed an agreement with its Pakistani counterpart to set up a joint business council between their respective national chambers of commerce.

UPDATED BY VANESA CASANOVA-FERNANDEZ

UNITED ARAB EMIRATES

Federation of seven shaykhdoms at the southern end of the Persian Gulf.

The United Arab Emirates (U.A.E.) is bounded on the north by a small portion of Qatar, the Persian (Arabian) Gulf, and a detached segment of Oman. The country shares a long, undefined border with Saudi Arabia (west and south) and Oman (east). It has an area of just over 32,000 square miles, about the size of the state of Maine. Abu Dhabi occupies nearly 87 percent of the total; Dubai, less than 5 percent; and Sharjah, just more than 3 percent. The emirates of Ra's al-Khayma, Fujayra, Umm al-Qaywayn, and Ajman occupy the remainder. The country has a flat coastal plain; an interior desert, part of the Empty Quarter (Rub al-Khali); an elevated plateau; and the Hajar Mountains, shared with Oman. Principal oasis regions are Liwa and Buraymi. Rainfall is highly seasonal, localized, and scanty. Summer temperatures often reach 115°F on the humid coast, and higher in the dry interior. From October to March the weather is mild and pleasant.

The U.A.E.'s population has risen from about 180,000 in 1968 to approximately 3.1 million in 2000; the influx of expatriate workers and their dependents account for most of the growth and some 80 percent of the total population. The U.A.E. is overwhelmingly urban, and the largest cities are (in descending order) Dubai, Abu Dhabi, Sharjah, and Ra'ʾs al-Khaymah. Nearly all U.A.E. nationals and expatriates are Muslims; significant exceptions include some Indians, Filipinos, and Westerners. Sunnis account for about 85 percent of all Muslims. Tribal affiliation remains very important among Emiratis, whose rulers are drawn from the leading families of the dominant tribes.

History

Most of the current ruling families took power in the early part of the nineteenth century when Great Britain imposed a general truce after a series of violent clashes with the Qawasim seafaring forces who had opposed Britain's military and commercial ascendancy in the lower Persian Gulf. A series of treaties between these rulers and Britain codified Britain's predominant position and gave rise to the region being called the Trucial Coast or Trucial Oman. The area was known as Sahil Oman (Oman Coast) by Arabic-speakers. These treaties had a tendency to reinforce the leading role of the local rulers and create a powerful political status quo. However, local politics, mainly in the form of family disputes and alliances, have resulted in some changes. For example, Dubai became independent of Abu Dhabi in 1833, Raʾs al-Khayma seceded from Sharjah in 1869, and Fujayra gained independence from Sharjah in 1952. A treaty in 1892 further codified British power in the region, prohibiting rulers from engaging in diplomacy with non-British powers or ceding their territories to outsiders without British approval. In the nineteenth and early twentieth century, fishing, pearling, trade, and agriculture were the main sources of income for the inhabitants of the emirates. However, the world depression of the 1930s and the collapse of the Persian Gulf pearl market plunged the region into great poverty, forcing many to migrate elsewhere.

Traditions, including camel races in the desert, and tribal affiliations remain important elements of life in the United Arab Emirates, even as this federation of seven shaykhdoms experiences widespread change thanks to its oil wealth. © Alain Le Garsmeur/Corbis. Reproduced by permission.

Britain instigated the first efforts at federation when it established the Trucial Council in 1952, an administrative body made up of the seven rulers. However, rivalries and philosophical differences prevented the rulers from joining in federation until 1971, when all but Raʾs al-Khaymah formed the U.A.E. (Raʾs al-Khaymah joined the federation the following year.) The ruler of Abu Dhabi, the largest and wealthiest emirate, Shaykh Zayid ibn Sultan al-Nahayyan, became president of the U.A.E., and Dubai's Shaykh Rashid ibn Saʿid al-Maktum became vice president. While much of the political history of the emirates has revolved around relations among the ruling families, it also has been affected by interactions with regional powers such as Oman, the rulers of Najd (later Saudi Arabia), Bahrain, Qatar, and Iran. At its inception Abu Dhabi's dispute with Saudi Arabia and Oman over the Buraymi (al-Ayn) Oasis remained unresolved; traditional rivalries among the seven amirs threatened the federation's viability; and Iran coerced Sharjah into a joint occupation of Abu Musa island (which contributed to a coup attempt that took the life of Sharjah's ruler, Shaykh Khalid ibn Muhammad), and forcibly seized the Tunb Islands from Raʾs al-Khayma.

Economy

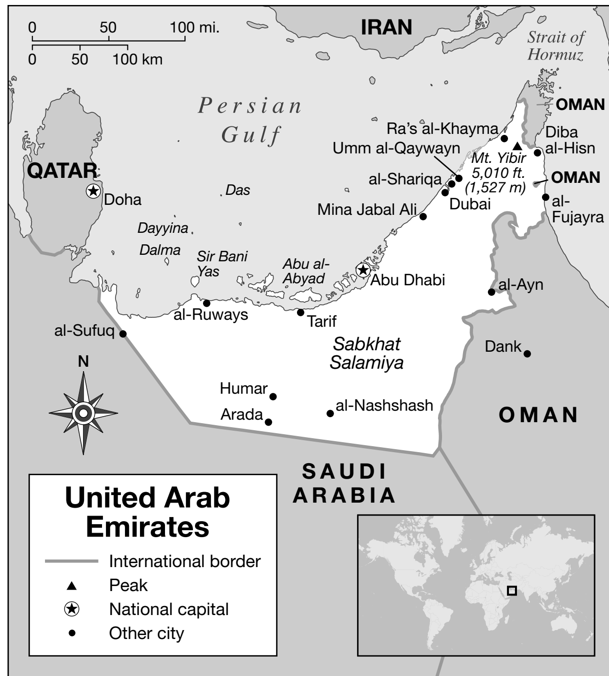
Since the early 1960s, when Abu Dhabi began exporting oil, the U.A.E. economy has been dominated by this sector. The country's proven oil reserves, 94 percent of which were located in Abu

Dubai, the largest city in the United Arab Emirates, has undergone considerable and almost continuous transformation since this late 20th-century photograph along Dubai Creek. Although Abu Dhabi has by far the most land and greatest amount of oil and natural gas reserves of the U.A.E.'s seven shaykhdoms, Dubai has a vital function with its extensive port facilities and free-trade zone. © CHRISTINE OSBORNE/CORBIS. REPRODUCED BY PERMISSION.

Dhabi emirate, amounted to some 98 billion barrels in 2001, more than 9 percent of the world's total. Dubai possesses 4 billion barrels; Sharjah, 1.5 billion; and Ra'S al-Khayma, 100 million. Abu Dhabi also has the bulk of the country's 212 trillion cubic feet of natural gas reserves. The gap in economic development between Abu Dhabi, Dubai, and Sharjah, on the one hand, and the rest of the emirates is considerable, though it is moderated by federal government spending on infrastructure, with most of the funding from Abu Dhabi. Dubai, long the major trading center of the lower Gulf, is the region's leading entrepôt with the most extensive port facilities. Its Jabal Ali free zone has helped expand the U.A.E.'s nonoil sector to 60 percent of total GDP. Promotion of traditional economic activities, including agriculture and fishing, has created employment opportunities in the poorer emirates and achieved significant import substitution.

Government and Politics

The U.A.E.'s constitution provides for federal legislative, executive, and judicial institutions. The political system is a mix of presidential and parliamentary features, with the greatest power in the executive Federal Supreme Council, whose members are the rulers of the seven member states. Zayid has been president since independence, and Rashid served as both prime minister and vice president, posts assumed by his son Maktum in 1986, following Rashid's incapacitation. The legislature, called the Federal National Council, has only consultative powers, despite being given a somewhat greater role in the 1990s. Its forty members are appointed by the rulers: eight each from Abu Dhabi and Dubai,



MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

six each from Sharjah and Ra᾽s al-Khayma, and four apiece from the remaining emirates. Real legislative authority resides in the Council of Ministers, which initiates most laws, oversees implementation of federal laws, and prepares the federal budget.

Considerable powers are left to the individual emirates, each governed in an essentially traditional manner by a hereditary ruler. Even in foreign affairs, defense, and finance, theoretically federal concerns under the constitution, the individual emirates act autonomously. Each emirate has pursued its own oil policy. Dubai and Sharjah maintained business as usual with Iran while the federal government tilted toward Iraq during the Iran-Iraq War (1980–1988). Zayid has championed a centralized U.A.E., whereas others, especially his former rival, Rashid, have favored the loose federal arrangement.

Foreign Relations

The U.A.E. maintains generally friendly relations with its neighbors, although these can be complicated by the independent actions of various emirates. It has played an active role in the Gulf Cooperation Council (GCC), which promotes economic and security ties to the other five conservative Gulf Arab states. Zayid has assumed a major role in the Arab world as a force for moderation, as in his efforts to promote Egypt's reintegration into the Arab League. Relations with the United States have been friendly, though sometimes strained because of what is seen as a one-sided American policy toward the Arab-Israel conflict. The United States, Japan, and the United Kingdom are the U.A.E.'s major trading partners. After the Iraqi occupation of Kuwait, the U.A.E. cooperated closely with the United States and other members of the anti-Iraq coalition. However, during the late 1990s the country modified its stance, sending food and medicine to Iraq, and opposing a U.S. attack on the country. In a dramatic break from precedent among countries in the Arab League, the U.A.E. suggested in early 2003 that Saddam Hussein step down as leader of Iraq as a way to avoid imminent war with the United States.

MALCOLM C. PECK
UPDATED BY ANTHONY B. TOTH

UNITED ARAB REPUBLIC (UAR)

Union of Syria and Egypt, 1958–1961.

By the late 1950s, Egypt was the most powerful Arab state. Many Arabs were enamored of President Gamal Abdel Nasser's advocacy of pan-Arab unity under Egypt's leadership. Syria, which shared Egypt's anti-Western stance, was considerably weaker, facing both external threats and an unstable internal political situation. For some Syrians, particularly members of the Baʿth party, union with Egypt offered hope for resolving a host of problems. As early as November 1957, Syria's National Assembly called for union with Egypt. Nasser agreed, but only on his terms: full union (not a federation) under his leadership. On 1 February 1958, he joined Syria's president, Shukri al-Quwatli, in announcing the formation of the United Arab Republic (UAR). A referendum on union and Nasser's presidency was approved on 21 February.

New governmental institutions were created in March 1958. Four vice presidents were appointed: two Egyptians (Abd al-Hakim Amir and Abd al-Latif al-Baghdadi) and two Syrians (Akram al-Hawrani and Sabri al-Asali). Amir also was commander of the joint UAR military. A regional council of ministers was established for each province, as was a unified cabinet (whose members were appointed in October). In March 1960, a new National Assembly was created. Nasser appointed its delegates—a higher proportion of whom were Egyptians—who first met that July. He also imposed Egypt's one-party system on Syria. Only the National Union, established in Egypt in May 1957, was allowed to function.

Formation of the UAR threatened the West with the prospect of Arab unity under Nasser's leadership. That the UAR immediately tried to draw in other states furthered this perception. In March 1958, the United Arab States was forged with Yemen and would last until December 1961. More significantly, cooperation talks were held between the UAR and the government that came to power during the July 1958 revolution in Iraq. Although the two never unified, Britain and the United States were unsettled by the prospect. Formation of the UAR, the civil war in pro-Western Lebanon, and the revolution in Iraq, formerly the West's leading Arab client, prompted the dispatch of U.S. troops to Lebanon and British troops to Jordan in July 1958, to bolster anti-UAR Arab governments.

Syria soon became disappointed with the UAR. Baʿthists were angered at being barred from power in a union that some Syrians felt more closely approached Egypt's occupation of Syria. By late 1959, major Baʿthists had been dismissed from the government. The powerful Syrian bourgeoisie was alienated by Nasser's state-managed economic policies, especially limits on landholdings and the 1961 socialist decrees. In August 1961, Nasser strengthened his centralized control by abolishing the two councils of ministers and the cabinet, and adding three new vice presidents, for a total of seven (only two of whom were Syrians).

Syria's units of the UAR army in Damascus launched a secessionist coup on 28 September 1961. Following limited fighting, Nasser decided against enforcing union militarily. The breakup of the UAR was a tremendous blow to Nasser's prestige and the dream of pan-Arab unity. Egypt used the name United Arab Republic until 1971, when it became the Arab Republic of Egypt.

UNITED JEWISH APPEAL (UJA)

The main organization through which U.S. Jews support Jews abroad.

In 1939 the United Palestine Appeal joined with the American Jewish Joint Distribution Committee and the National Refugee Service to form the United Jewish Appeal (UJA). Most of what it raises goes to what is now called the United Israel Appeal, which operates through the Jewish Agency in Israel. Funds

are also given to support Jewish communities in other parts of the world. The UJA operates through hundreds of federations and welfare funds in the United States.

Between 1939 and 1967 the UJA raised an estimated $1.925 billion, including $147 million in 1948, the year that the state of Israel was created, and $250 million in 1967, when the 1967 War occurred. Nearly $1 billion was distributed to the UJA and its predecessor, the United Palestine Appeal (UPA).

In 1999 the UJA, the United Israel Appeal (UIA), and the Council of Jewish Federations merged to form the United Jewish Communities (UJC). In the same year the UJC was reported to have raised $524 million, making it the seventh-largest charity in the United States. The UJA Federation of New York was reported to have raised $157 million.

UNITED NATIONS AND THE MIDDLE EAST

The United Nations (UN) has played a prominent role in the Middle East, passing resolutions, facilitating negotiations, and organizing peacekeeping operations.

The world organization's most important contributions since 1948 are discussed in chronological order.

Arab–Israel War (1948)

The problem of Palestine was brought before the United Nations in April 1947. In May, the General Assembly set up the United Nations Special Committee on Palestine. In its August report, the majority recommended a plan of partition. On 29 November 1947, the General Assembly adopted one and decided that the British Mandate over Palestine should be terminated not later than 1 August 1948. The Jewish Agency accepted the partition plan, but the Arab Higher Committee and all Arab states rejected it.

On 14 May 1948, the British Mandate over Palestine expired. The Jewish Agency proclaimed the State of Israel on the territory allotted to the Jewish community under the partition plan. On the following day, the Arab states instituted armed action in Palestine. On 21 May, the Security Council appointed Folke Bernadotte the United Nations mediator for Palestine.

Fighting ended in June with a truce, which was followed by the dispatch of a military observer mission, the United Nations Truce Supervision Organization (UNTSO), the first UN peacekeeping operation. Bernadotte's mediation activities were cut short when he was assassinated in Jerusalem on 17 September 1948 by the Stern gang (LEHI). His work was immediately resumed by Ralph Bunche. On 11 December 1948, the General Assembly set up the UN Conciliation Commission for Palestine (France, Turkey, and the United States).

Between February and July 1949, Israel concluded armistice agreements with Egypt, Lebanon, Jordan, and Syria under Bunche's auspices; he was awarded the 1950 Nobel Peace Prize for his efforts. The agreements gave temporary control of the Gaza Strip to Egypt; of the West Bank, including East Jerusalem, to Jordan; and of the remaining parts of Palestine to Israel. With three of the four armistice agreements signed, Israel was admitted to the United Nations on 11 May 1949.

In December 1949, the General Assembly established the United Nations Relief and Works Agency to provide assistance to Palestinian refugees. The Trusteeship Council drafted a statute for the internationalization of Jerusalem in April 1950; it was rejected by Israel and Jordan.

After the conclusion of the armistice agreements, the responsibility for promoting a final settlement of the Palestine problem fell on the Conciliation Commission, but no progress was achieved. Despite the efforts of UNTSO, the situation along the armistice demarcation lines remained tense. Palestinian *fida'iyyun* (freedom fighters) carried out frequent raids against Israel, which were invariably followed by harsh retaliation by Israel's armed forces.

Suez Crisis

Tension in the region rose to a critical level in 1956, when Egypt's Gamal Abdel Nasser nationalized the Suez Canal Company, which was controlled by British and French interests. While UN secretary-general Dag Hammarskjöld endeavored to work out a compromise solution, Israel's troops invaded Egypt on 28 October 1956 and within a few days occupied the Gaza Strip and most of the Sinai Peninsula, while an Anglo-French force landed in the Suez Canal Zone. To help resolve the crisis, the Security Council established the United Nations Emergency Force (UNEF) to separate Egyptian and Israeli forces along the Gaza and Sinai frontiers.

Six-Day War

On 18 May 1967, UNEF was withdrawn at Egypt's request. Three weeks later, war broke out. Hostilities started on the Egyptian front on 5 June and soon thereafter spread to the Jordanian and Syrian fronts. The war ended on 10 June with a cease-fire. By that time, Israel had taken Sinai and the Gaza Strip from Egypt, the West Bank (including East Jerusalem) from Jordan, and the Golan Heights from Syria.

On 22 November 1967, the Security Council unanimously adopted Resolution 242, known as the land for peace resolution, which remains the basis for a negotiated settlement. It called on the parties to seek a comprehensive settlement in the Middle East and stipulated that the establishment of a just and lasting peace should be based on the withdrawal of Israel's armed forces from territories occupied in June 1967 and the recognition of the right of all states in the region to live in peace within secure boundaries. Gunnar Jarring, special representative of the secretary-general, began a mediation mission in December 1967, but little progress was made. The mission lapsed in early 1973.

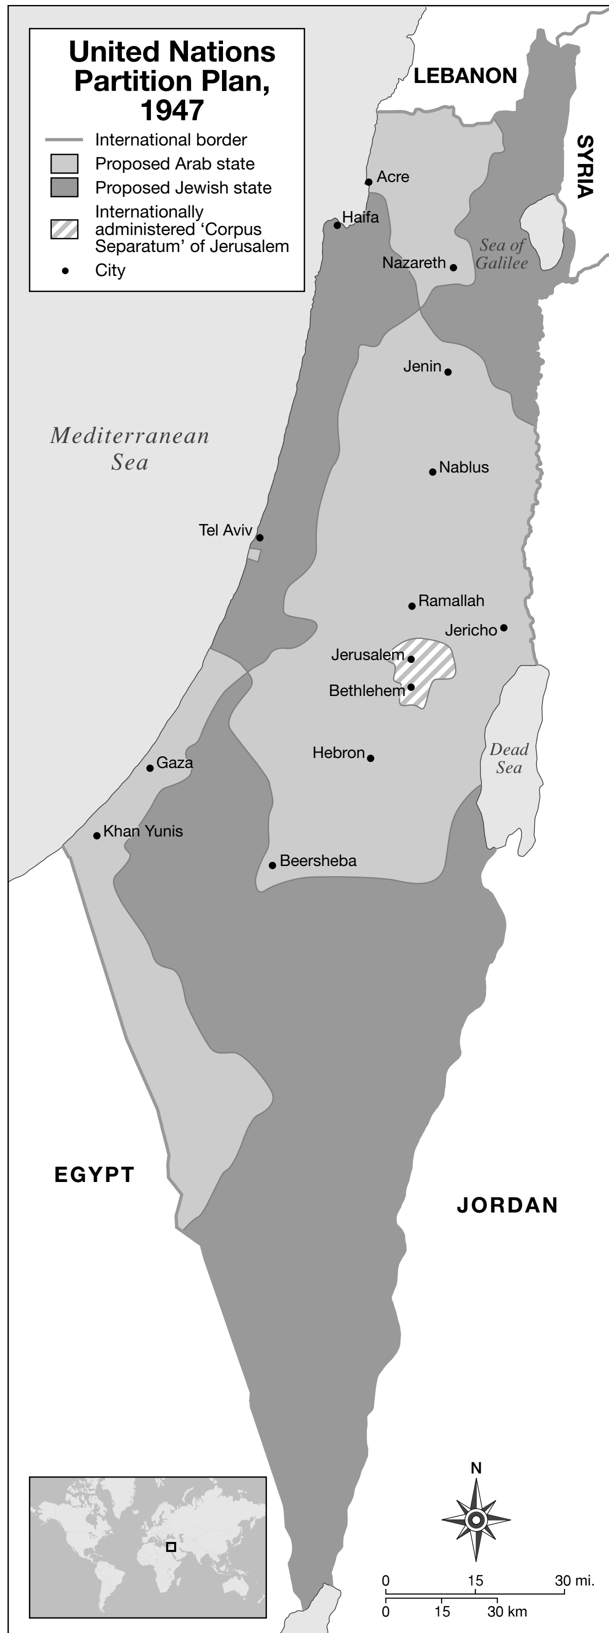
October 1973 War

War broke out on 6 October 1973, when Egypt's and Syria's forces launched simultaneous attacks against Israel's posts in the Suez Canal Zone and on the Golan Heights in order to liberate their occupied territories. As fighting intensified, especially on the Egyptian front, the Security Council met on 22 October and adopted Resolution 338, which called on belligerents to cease fighting and begin negotiations to establish a just and durable peace on the basis of Resolution 242.

Count Folke Bernadotte (1895–1948) was sent by the UN, in 1948, to the newly formed nation of Israel, in order to assist in mediating the conflict between Israel and surrounding Arab countries. While in Israel, Bernadotte was assassinated by Jewish terrorists. © NATIONAL ARCHIVES/USHMM PHOTO ARCHIVES. REPRODUCED BY PERMISSION.

But the fighting continued. At the request of President Anwar al-Sadat of Egypt, the Soviet Union agreed to send troops to the area, a move that the United States strongly opposed. On 25 October 1973, the Security Council ordered an immediate cease-fire and established the second United Nations Emergency Force (UNEF II) to supervise it.

A peace conference convened in Geneva under U.S. and Soviet sponsorship in December 1973. Chaired by UN secretary-general Kurt Waldheim, it was attended by Egypt, Israel, and Jordan. Syria refused to participate, and the Palestine Liberation Organization (PLO) was not invited. The conference lasted only two days, but it paved the way for U.S. mediation, which led to military disengagement agreements between Israel and Egypt and Syria.



Map by XNR Productions, Inc. The Gale Group.

The Camp David Accords and the Egypt–Israel Peace Treaty

The peace process was revived in November 1977, when President Sadat traveled to Jerusalem. His visit was followed by direct negotiations between Egypt and Israel under U.S. auspices, which led to the Camp David Accords in September 1978 and the peace treaty between Egypt and Israel in March 1979. Sadat and Israeli Prime Minister Menachem Begin shared the 1978 Nobel Peace Prize.

It was the clear intention of the parties to the peace treaty to use UNEF II and UNTSO military observers for peacekeeping along the border, but the Soviet Union, which strongly opposed the peace treaty, made it clear that it would veto an extension of UNEF II. The Security Council therefore decided to let the UNEF's mandate lapse. The U.S. later organized and financed the Multinational Force and Observers to carry out the peacekeeping functions that the UNEF II had been expected to perform.

Israel's Invasions of Lebanon

Although relations between Egypt and Israel were normalized with the peace treaty, other aspects of the Arab–Israel conflict deteriorated after Israel's invasion of Lebanon in March 1978, following a terrorist raid against Israel by PLO fighters based in southern Lebanon. On 19 March, the Security Council called on Israel to withdraw from Lebanon's territory and established the UN Interim Force in Lebanon (UNIFIL) to confirm the withdrawal process. UNIFIL was unable to fulfill its mandate, however. In 1982, Israel again invaded Lebanon. In 1985, Israel's forces withdrew from most of the occupied territory but continued to hold a border area known as the security zone. UNIFIL remains in southern Lebanon.

Resumption of the Peace Process

The Madrid Peace Conference on the Middle East was convened in November 1991 by the United States and the Soviet Union to promote a comprehensive settlement of the Arab–Israel conflict on the basis of Security Council Resolutions 242 and 338. On 13 September 1993, Israel and the PLO signed the Declaration of Principles for interim self-government for the Gaza Strip and Jericho. Although the agree-

ment is known as the Oslo Accord because of the secret negotiations held there, the PLO and Israel actually signed the text in Washington. The Oslo Accord was renegotiated in 1995 (known as Oslo 2). The United Nations played a marginal role in negotiating and implementing these agreements, but the world body's ability to continue virtually came to a halt during the second intifada early in September 2000 (see below). It has, however, been active in international assistance supporting the implementation of the declaration of principles.

The United Nations maintains three peacekeeping operations in the area: the UN Disengagement Observer Force on the Golan Heights, UNIFIL, and UNTSO. UNRWA assists about 3.2 million Palestinian refugees in Gaza, the West Bank, and neighboring Arab states.

The Rebellion in Lebanon

In May 1958, a rebellion by armed Muslims broke out in Lebanon when President Camille Chamoun, a Christian Maronite, announced his intention to seek a constitutional amendment that would enable him to stand for a second term. Lebanon's government brought the matter before the Security Council, charging that the United Arab Republic (formed temporarily by the union of Egypt and Syria under Nasser) was supporting the rebellion.

By Resolution 128 of 11 June 1958, the Security Council decided to dispatch the UN Observation Group in Lebanon (UNOGIL). By August 1958, General Fu'ad Chehab, the Maronite commander of the army, had been elected president of Lebanon, effectively removing the question of a second term for Chamoun. In November 1958, Lebanon's government informed the Security Council that cordial and close relations had been reestablished between Lebanon and the United Arab Republic. UNOGIL was terminated the following month.

Yemen

In September 1962, a rebellion led by the army overthrew Imam Muhammad al-Badr and proclaimed the Yemen Arab Republic. Following his overthrow, the imam rallied the tribes in the northern part of the country and, with financial and material support from Saudi Arabia, the royalists fought a fierce guerrilla war against republican forces. At the beginning of October 1962, Egyptian troops were dispatched to Yemen at the request of the revolutionary government. After the 1962 session of the General Assembly, UN Secretary-General U Thant undertook a peace initiative. In April 1963, Egypt, Saudi Arabia, and the Yemen Arab Republic accepted his disengagement plan. Saudi Arabia would terminate all support to the Yemeni royalists and Egypt would withdraw its troops from Yemen. A demilitarized zone would be established on each side of the border between Saudi Arabia and Yemen, and impartial observers would monitor the disengagement.

The UN Observation Mission in Yemen (UNYOM) began operations in July 1963. Following the conference of Arab heads of state at Cairo in mid-January 1964, relations between Egypt and Saudi Arabia improved markedly. UNYOM was withdrawn on 4 September 1964.

Economic and Social Commission for Western Asia (ESCWA)

On 9 August 1973, Economic and Social Council (ECOSOC) Resolution 1818 established the Economic Commission for Western Asia as the successor to the United Nations Economic and Social Office in Beirut to facilitate development within and outside the region. Largely because of the awkwardness of excluding Israel from the "region," this was the last UN regional commission to be created (the first began in 1947), and on 26 July 1985 ECOSOC added social aspects to the commission's work and changed its title to the Economic and Social Commission for Western Africa (ESCWA). As a result of insecurity, the headquarters were relocated temporarily from Beirut to Amman, and then to Baghdad in 1982. After the beginning of the Gulf War, the headquarters were relocated to Amman once again in 1991. In July 1994, the General Assembly decided that the commission would return to Beirut; and UN secretary-general Kofi Annan inaugurated the permanent headquarters in March 1998.

Cyprus

Following the outbreak of fighting between the Greek and Turkish communities on Cyprus in December 1963, the conflict was brought before the

The United Nations grants admission to Israel, 1949. © HULTON-DEUTSCH COLLECTION/CORBIS. REPRODUCED BY PERMISSION.

Security Council. By Resolution 186 of 4 March 1964, the council established the UN Peacekeeping Force in Cyprus (UNFICYP) to prevent a recurrence of fighting and to return normal conditions to the island. UNFICYP became operational on 13 March. After August 1964, quiet was restored, and it lasted until July 1974, when supporters of *enosis* (union of Cyprus with Greece) staged a coup d'état against the Cyprus government. Turkey launched an extensive military operation on the island. The fighting ended in August 1974. By that time, Turkey's army controlled about 38 percent of northern Cyprus. To prevent a recurrence of fighting, UNFICYP established a zone across the island between the Cyprus National Guard to the south and the Turkish and Turkish Cypriot forces to the north.

Resolution 186 also asked the UN secretary-general to appoint a mediator to promote a peaceful settlement of the Cyprus problem. The first mediator, Galo Plaza Lasso, reported in April 1965 that a settlement could best be achieved on the basis of a unitary government with adequate protection and guarantees for individual and minority rights. His report was rejected by the Turkish side and Plaza Lasso resigned in December 1965. Intercommunal talks began in 1968 under the auspices of the UN secretary-general, but they made little progress.

In February 1975, the Turkish Cypriot leadership announced the establishment of the Turkish Federated State of Cyprus in the northern part of the island. Known after 1983 as the Turkish Republic of North Cyprus, it failed to receive international recognition. UN-sponsored intercommunal negotiations finally resulted, in February 2004, in an agreement to have a unified island become a member of the European Union in May 2004. UNFICYP, whose mandate has been repeatedly extended, continues to deploy military personnel.

Bahrain

Bahrain, which until 1970 had "special treaty relations" with the former colonial power, Britain, was claimed by Iran because the island had been under its sovereign jurisdiction before 1783. Britain announced its intention to withdraw from East of Suez in 1968, and in early 1969 Iran and Britain asked Secretary-General U Thant to help resolve the disputed territory. Following nearly one year of negotiations, an agreement was reached under which U Thant would appoint a personal representative to ascertain the wishes of the people of Bahrain.

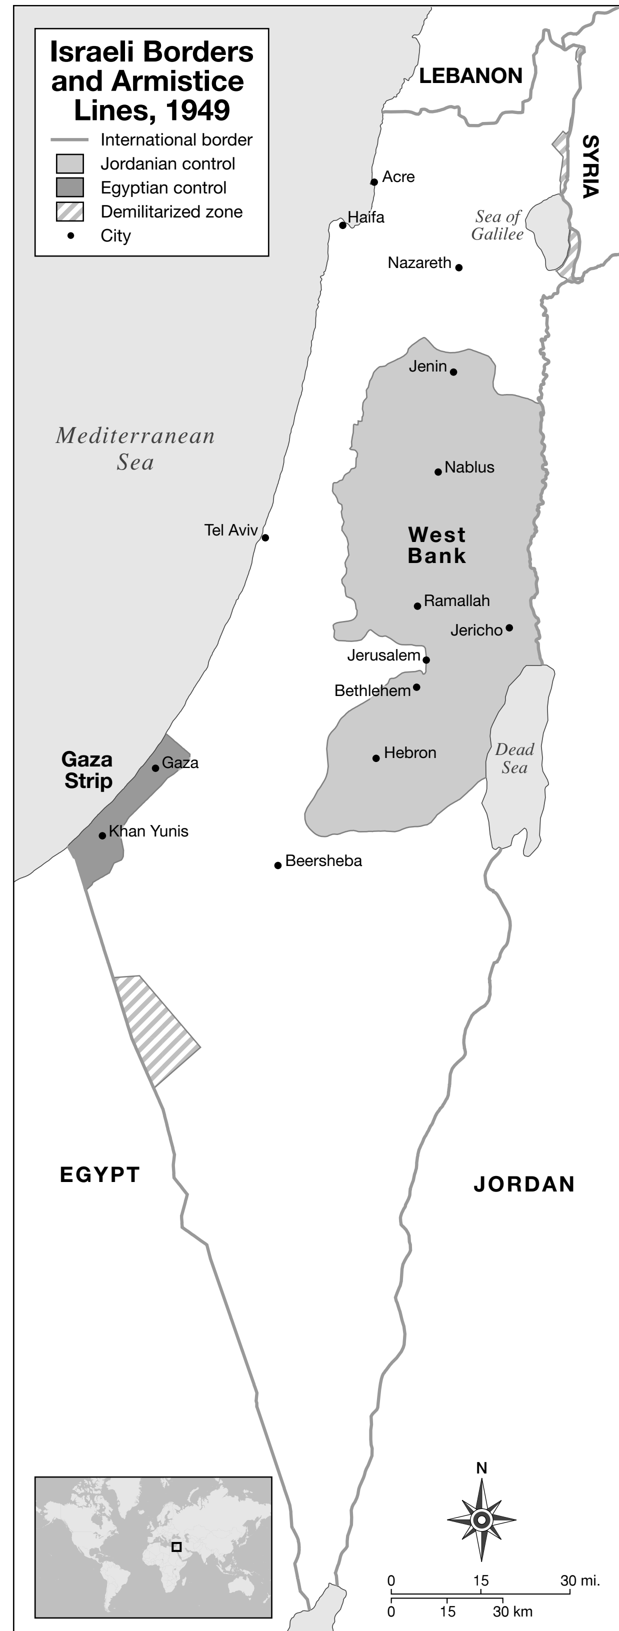
A resulting April 1970 report affirmed that the overwhelming majority of the people of Bahrain wished it to be a fully independent and sovereign state. On 11 May 1970, the Security Council endorsed the findings. Shortly thereafter, Bahrain gained its independence; it became a UN member in September 1971.

Afghanistan

On 27 December 1979, the Soviet Union entered Afghanistan to assist the communist-led government in its fight against insurgent movements. It was soon embroiled in a guerrilla war with the fighters of the Afghan resistance, known as Mojahedin, who received substantial financial and material support from Pakistan and the United States. During the hostilities, some 3 million refugees fled to Pakistan and about 2 million to Iran.

On 14 January 1980, the General Assembly adopted a resolution that called for the withdrawal of all foreign troops from Afghanistan. In February 1981, UN secretary-general Kurt Waldheim appointed Javier Pérez de Cuéllar as his personal representative to deal with the situation. When Pérez de Cuéllar succeeded Waldheim as secretary-general in January 1982, the mission was taken over by Diego Cordovez.

Afghanistan and Pakistan agreed in 1982 to engage in indirect negotiations, with Cordovez as intermediary. Those negotiations led to the conclusion, in Geneva, of the April 1988 Agreements on the Settlement of the Situation relating to Afghanistan. Both Afghanistan and Pakistan undertook not to interfere in the internal affairs of the other state, and the Soviet Union and the United States agreed not



MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

to interfere in the internal affairs of Afghanistan and Pakistan. The agreements also provided for a phased withdrawal of Soviet forces from Afghanistan by 15 February 1989 and for the establishment of the UN Good Offices Mission in Afghanistan and Pakistan (UNGOMAP), which was set up at the end of April 1988, to monitor implementation. Besides monitoring the withdrawal of the Red Army, UNGOMAP assisted in the voluntary return of refugees to Afghanistan. The final withdrawal of the Soviet Union's 100,300 troops was completed on 12 February 1989. UNGOMAP was terminated in March 1990.

The civil war continued after the Soviet withdrawal, and the two superpowers continued to send weapons until January 1991. In May 1991, the UN secretary-general proposed a peace plan that called for free and fair elections leading to the establishment of a broad-based government. In April 1992, the communist regime collapsed with the defeat of the government forces, but this did not stop the civil war; fighting continued between rival Mojahedin factions.

In September 1996, the Taliban, a group comprised of Afghans trained in religious schools in Pakistan and former Mojahedin fighters, captured Kabul with the stated aim of setting up a pure Islamic state. Following an American attack (see below), the Taliban was ousted from power on 17 November 2001, and in December the Afghan Interim Authority (AIA) was established after a number of prominent Afghans met under UN auspices in Bonn, Germany, led by Special Representative of the Secretary-General Lakhdar Brahimi. The AIA was inaugurated on 22 December 2001, with a six-month mandate, to be followed by a two-year transitional authority.

Iran–Iraq War

On 22 September 1980, the armed forces of Iraq invaded Iran and soon occupied a sizable portion of its territory. By Resolution 479 of 28 September 1980, the Security Council called upon Iran and Iraq to refrain from further use of force and to settle their dispute by peaceful means, but Iran rejected the resolution as one-sided. On 11 November, Secretary-General Waldheim appointed Olof Palme as his special representative to promote a peace settlement. Palme made some initial progress, but a peace settlement remained elusive.

During the initial phase of the war, Iraq's forces advanced inside Iran. In December 1980, Iranian forces stopped the advance, and by late 1982 they had pushed the Iraqi troops back in some areas beyond the border. Then fighting settled into a stalemate. Both parties engaged in frequent air attacks against military and oil installations and urban civilian areas.

Facilitated by the waning of the Cold War, on 20 July 1987 the Security Council adopted Resolution 598, which demanded that Iran and Iraq observe an immediate cease-fire and withdraw their forces to the international border. Intensive diplomatic negotiations lasted until 8 August 1988, when both parties formally accepted the cease-fire arrangements.

The next day, the Security Council established the UN Iran–Iraq Military Observer Group (UNIIMOG) to supervise the cease-fire and the withdrawal process. The mission began operations in mid-August with 400 military observers and about 500 military support personnel. After the cessation of hostilities, Iran and Iraq began direct talks to settle outstanding issues. On 15 August 1990, shortly after its invasion of Kuwait, Iraq lifted its claim over the Shatt al-Arab, thus removing a major cause of conflict with Iran. UNIIMOG was terminated on 28 February 1991.

Following the war, Pérez de Cuéllar used the close relationship he had developed with Iran's leaders to obtain the release of hostages in Beirut. After securing Iran's cooperation in 1989, he asked Giandomenico Picco to deal with this matter in a one-man secret mission. Almost four years later, the mission resulted in the release of eleven Western hostages detained in Beirut and of ninety-one Lebanese held by kidnap groups.

Western Sahara

In 1985, Secretary-General Pérez de Cuéllar and the chairman of the Organization of African Unity sought to promote a peaceful settlement of the conflict between Morocco and POLISARIO (Frente Popular para la Liberación de Saguia al-Hamra y Río de Oro) over Western Sahara. In August 1988, the two warring parties accepted the settlement proposals in principle. Those proposals envisaged a

The United Nations tours the Jenin refugee camp in Palestine, surveying the damage from an Israeli military strike. © AP/WORLD WIDE PHOTOS. REPRODUCED BY PERMISSION.

cease-fire followed by a referendum that would enable the people of Western Sahara to choose between independence and continued union with Morocco.

In April 1991, the secretary-general submitted to the Security Council a detailed plan for implementing the settlement proposals. It provided for the establishment of the UN Mission for the Referendum in Western Sahara (MINURSO) and contained a tentative timetable for the operation, according to which the referendum would be held twenty weeks after the ceasefire. On 29 April 1991, the Security Council approved the implementation plan and established MINURSO, and on 24 May the secretary-general announced that the cease-fire would enter into effect on 6 September 1991. As an interim measure, military observers were sent to Western Sahara to monitor the ceasefire.

MINURSO's Identification Commission was established in May 1993, and registration of voters began in August 1994 and was completed in December 1999. A crucial issue in the process involved the identification of applicants from three contested tribal groups. Although divergent views still exist between the parties and elections are yet to be held, the situation in Western Sahara has been generally quiet.

The Gulf Crisis and its Aftermath

On 2 August 1990, Iraq invaded Kuwait, quickly occupied the country, and annexed it. On the same day, the Security Council condemned the invasion and demanded the immediate withdrawal of Iraq's forces. When Iraq failed to comply, the council met again on 6 August and imposed economic sanctions. On 29 November, it adopted Resolution 678, which authorized member states cooperating with Kuwait to use all necessary measures to implement its resolutions if Iraq failed to withdraw by 15 January 1991.

On 16 January 1991, coalition forces led by the United States launched military operations against Iraq. The United Nations was on the sidelines during the Gulf War, but it played a key role again after the military operations were suspended on 28 February. At that time, coalition forces had driven Iraq's troops from Kuwait and had occupied southern Iraq.

On 2 March 1991, the Security Council demanded that Iraq implement all its resolutions and specified the measures to be taken to end the hostilities. The next day, an informal cease-fire was signed by military commanders in the field. On 3 April 1991, the Security Council adopted Resolution 687, which laid down in detail the specific terms that Iraq must accept in order to obtain a formal cease-fire. After receiving Iraq's official acceptance, the Security Council established the UN Iraq-Kuwait Observation Mission to supervise the cease-fire and monitor a demilitarized zone between Iraq and Kuwait.

In the aftermath of the Gulf War, the Kurdish population in northern Iraq and the Shiʿites in the south rebelled against the government, which took harsh actions to suppress the rebellions. By Resolution 688 of 5 April 1991, the Security Council demanded that Iraq immediately end the repression and give international humanitarian organizations access to all those in need of assistance within its territory. A UN humanitarian operation to provide food and essential relief supplies in all parts of Iraq, especially in the northern Kurdish area, was launched. Indeed, this was the first in a series of military interventions in the 1990s to foster humanitarian values as the theme of "sovereignty as responsibility" gained resonance.

Sanctions were not lifted by the Security Council until May 2003 (see below) because Iraq under Saddam Hussein never fully complied with the conditions of the initial resolutions to end the war or with the thirteen subsequent ones passed by the Security Council between 1991 and 2002. The negative impact of sanctions on the lives of Iraqis became controversial even after the institution of an oil-for-food program. An innovation approved by the Security Council in Resolution 687 was the UN Special Commission (UNSCOM), which from 1991 to 1998 sought to find and eliminate Iraq's weapons of mass destruction. Iraq's lack of compliance and the eventual rejection of UNSCOM would later become an issue in the United States–United Kingdom invasion of Iraq in March 2003 (see below).

After 11 September 2001: Wars in Afghanistan and Iraq

The attack by al-Qaʿida operatives on the World Trade Center and on the Pentagon on 11 September 2001 altered substantially the security equation in the Middle East and around the world. On 12 September, the Security Council adopted the strong condemnatory Resolution 1368, which termed these assaults a threat to international peace and security and referred to the right of self-defense. Later that same month, Resolution 1373 obliged member states under Chapter VII of the UN charter to cooperate in the fight against terrorism and also created the Counter-Terrorism Committee. Also in September, the General Assembly condemned the devastating attacks. Citing the provisions for self-defense under UN Charter Article 51, the United States began military operations against Afghanistan on 7 October 2001 and overthrew the Taliban government in November (see above). With the United Nations playing a substantial role in helping to rebuild political structures, almost 10,000 U.S. troops remained in the country along with the UN-approved International Security Assistance Force (ISAF) under NATO auspices. ISAF maintained security around Kabul but resisted pressures to deploy elsewhere until late 2003, when a decision was made to do so. At the same time, the security situation remained tenuous, with al-Qaʿida's leader, Osama bin Ladin, apparently at large.

In the fall of 2002, the United States opened a new front in its war on terrorism and weapons of mass destruction with an attack on the regime of Saddam Hussein in Iraq. In December 1999, the Security Council had created the UN Monitoring, Verification, and Inspection Committee (UNMOVIC) to replace UNSCOM; in October 2002, resolution 1441, which had unanimous support, granted UNMOVIC unconditional and unrestricted access to locations in Iraq, including those previously termed sensitive sites. UNMOVIC's mandate was to disarm Iraq of its weapons of mass destruction and to mon-

A United Nations convoy travels through Lebanon. © AFP/CORBIS. REPRODUCED BY PERMISSION.

itor conformity with its obligations not to reacquire the weapons prohibited by the Security Council. Citing Iraq's lack of compliance with UN resolutions, the United States and the United Kingdom went to war in Iraq on 23 March 2003 without Security Council approval. They had withdrawn a draft resolution following a heated debate that reflected divisions not only among Western states but throughout the world. One of the main points of contention was the need to permit more time for inspections. Saddam Hussein's regime fell on 9 April 2003 and U.S. president George W. Bush declared victory on 1 May, although substantial resistance continued.

Security Council Resolution 1483 brought the United Nations back into the picture and led to the end of sanctions and the beginning of the world organization's involvement on the ground. U.S. insistence on maintaining political and military control inside occupied Iraq prevented a more diverse international presence. The attack on the UN's Baghdad headquarters on 19 August 2003 led to the highest death toll in the history of the organization, killing twenty-two people, including the special representative of the secretary-general, Sergio Vieira de Mello.

The United States and the United Kingdom returned to the United Nations in the hope of securing more international military and financial support for the war's aftermath. The Security Council passed Resolution 1511 on 16 October 2003, which appeared to have been helpful in securing modest financial pledges at a donors' conference held shortly thereafter in Madrid. However, the resolution did not secure substantial military forces from other states, which sought a clearer role for the United Nations. At the outset of 2004, there was still no evidence that Iran had either weapons of mass destruction or links to al-Qaʿida, which were the main reasons the administrations of U.S. president George W. Bush and U.K. prime minister Tony Blair had cited for going to war.

Ongoing Israeli–Palestinian Conflict

The second armed intifada, or uprising, began in September 2000 after a near-breakthrough in the final days of the administration of President Bill Clinton, who had sought to bridge the divide between Israeli prime minister Ehud Barak and Palestine Authority president Yasir Arafat. Following the election of Ariel Sharon as prime minister of Israel, violence involving Palestinian suicide bombings of Israeli civilians and harsh Israeli repression and assassinations continued and worsened. A suicide bombing at a Netanya hotel during the Passover holiday led to a massive Israeli attack against the Jenin refugee camp in April 2002, and a fierce battle ensued. In response to Palestinian accusations of a massacre, the Security Council asked the United Nations to investigate the events in Jenin, but Israel, after having initially agreed to permit access, did not do so. Under pressure after widespread criticism of its unilateral approach to Iraq and to international relations more generally, in April 2003 the Bush administration published a "road map" to encourage a break in the violence and eventual political negotiations for the creation of a Palestinian state. The road map was created by a quartet, whose members were the United States, the United Nations, Russia, and the European Union.

UNITED NATIONS CONCILIATION COMMISSION FOR PALESTINE (UNCCP)

Commission appointed to deal with the problem of dislocated Palestinians and to help reach a comprehensive peace settlement after the 1948 Arab–Israel War.

Following debate on the Bernadotte report, a UN General Assembly resolution on 11 December 1948 established the Conciliation Commission for Palestine, instructing it "to take steps to assist the parties concerned to achieve a final comprehensive peace settlement of all questions outstanding between them" and to facilitate the repatriation or resettlement with compensation of the Palestinian refugees. The commission was composed of repre-

sentatives from France, Turkey, and the United States. The commissioners began with a round of shuttle diplomacy in Middle Eastern capitals, held a conference with Arab representatives in Beirut, and then convened a major conference, meeting separately with Arab and Israeli representatives, in Lausanne between April and August 1949. These meetings, along with a further series of discussions in Geneva in 1950, produced little apart from declarations of good intention (including the Lausanne Protocol), preparations to unblock frozen Arab bank accounts in Israel, and a scheme for family reunification.

At a conference of Arab and Israeli delegates in Paris in late 1951, the commission tried but failed to achieve agreement on specific proposals for a peace settlement. After the breakdown of the conference, the commission, convinced that the parties were not yet prepared to make peace, confined its efforts to dealing with the Palestinian refugee problem. Even then, it was able to make only limited progress, mainly on background studies of the technical aspects regarding future compensation. Despite the lack of progress, the commission still exists and the General Assembly still continues to pass annual resolutions calling on it to continue its efforts to carry out its original mandate.

UNITED NATIONS ECONOMIC SURVEY MISSION (1949)

Mission to recommend effects of 1948 Arab–Israeli war and origins of UNRWA.

On 23 August 1949 the United Nations Conciliation Commission for Palestine (UNCCP) established the Economic Survey Mission, instructing it to recommend a program to assist in the recovery of the countries affected by the 1948 Arab-Israel War. The principal impetus for the creation of the mission was the failure of the UNCCP to make progress toward a political solution of the Palestinian refugee problem, but the UNCCP appointed Gordon R. Clapp, former director of the U.S. Tennessee Valley Authority, to chair the mission, thus focusing instead upon fostering the economic conditions requisite to a peace settlement. Within three months the mission concluded that the large-scale undertakings it hoped would fully reintegrate the refugees, such as Arab-Israeli cooperation in a development project for the Jordan River, were politically unfeasible.

In mid-November 1949 the mission recommended that the United Nations General Assembly both adopt a more circumspect program of public works as a first step toward rehabilitating the refugees, and assist needy individuals. On 8 December 1949 the General Assembly responded by passing Resolution 302, thereby creating the United Nations Relief and Works Agency. The agency coordinated its activities with the local governments and allocated $49 million for eighteen months of operations, but it continued to function after that in order to prevent a further deterioration of the refugees' conditions.

UNITED NATIONS EMERGENCY FORCE

Peacekeeping operation established during the Suez crisis.

The Suez crisis, during which Israel, France, and Britain invaded Egypt and occupied sizable portions of its territory, was brought before the United Nations (UN) General Assembly in early November 1956. Secretary General Dag Hammarskjöld submitted a plan for setting up an emergency UN force to supervise the cessation of hostilities on 5 November. The General Assembly then authorized the establishment of the United Nations Emergency Force (UNEF), the first UN peacekeeping force.

UNEF was composed of contingents provided by member states. Troops from the five permanent members of the Security Council and any countries that might have a special interest in the conflict were excluded. UNEF's establishment in the conflict area required the consent of all parties concerned. Its soldiers had light defensive weapons but were not authorized to use force except in self-defense.

UNEF, operational by mid-November 1956, initially had about 6,000 troops from Brazil, Canada, Colombia, Denmark, Finland, India, Indonesia, Norway, Sweden, and Yugoslavia. Its first commander was Major General E. L. M. Burns of Canada. As the troops were deployed to supervise the cease-fire, negotiations were being carried out for the withdrawal of the occupation forces. A phased withdrawal began under the supervision and with the assistance of UNEF. The withdrawal of Britain's and France's forces was completed by 22 December 1956, and that of Israel's forces in March 1957.

After the withdrawal, UNEF was deployed along the Egypt–Israel border and maintained a post at Sharm al-Shaykh, which controlled access to the Gulf of Aqaba. By 1967 UNEF had been reduced to about 3,400 troops.

In May 1967, as tension arose again to a critical level in the Middle East and, despite Secretary General U Thant's appeal, President Gamal Abdel Nasser of Egypt requested the withdrawal of UNEF. UNEF therefore discontinued its operations on 18 May 1967. Three weeks later there was a new war in the Middle East.

UNITED NATIONS INTERIM FORCE IN LEBANON

UN force in Lebanon to confirm Israeli withdrawal and assist the Lebanese government with restoring order and security.

Israel's invasion of southern Lebanon in March 1978, at a crucial stage in negotiations between Egypt and Israel, caused the United States to insist on rapid United Nations Security Council action. Resolution 425 of 19 March called on Israel to withdraw its forces and established a United Nations Interim Force in Lebanon (UNIFIL) to confirm Israel's withdrawal, restore peace and security, and assist the Lebanese government in regaining its authority. The force, initially 4,000 strong, later increasing to 6,000, began to arrive in early April 1978.

UNIFIL had no mandate to deal with the various Palestine Liberation Organization (PLO) groups and Israel's proxy South Lebanon Army, irregular forces that dominated the region. The Lebanese government had no wish to reestablish its authority in the area. Southern Lebanon was a peacekeepers nightmare.

Despite humiliations, including being swept aside during Israel's 1982 invasion, and sustaining almost 250 casualties, UNIFIL remained in place because it provided some measure of security, stability, and humanitarian protection in an extremely volatile border area. When Israel finally withdrew in May 2000, UNIFIL deployed to the border. The Lebanese government, deaf to all exhortations, left the radical Shiʿite movement Hizbullah in control of the border area, and many incidents resulted. In

2002 UNIFIL was restructured as a 2,000-strong armed observer force with contingents from France, Ghana, India, Italy, Nepal, Poland, and Ukraine. Its mandate ran to July 2003.

UNITED NATIONS RELIEF AND WORKS AGENCY FOR PALESTINE REFUGEES IN THE NEAR EAST (UNRWA)

Organization that aids Palestine refugees.

The United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA) was created by UN General Assembly Resolution 302 (IV) on 8 December 1949, with the mandate to provide humanitarian assistance and emergency relief to Palestine refugees who had lost their homes and livelihood as a result of the Arab–Israel War of 1948. Palestine refugees within the purview of UNRWA are persons whose normal residences were in Palestine for a minimum of two years before the 1948 war, and their descendants. In 1949 UNRWA extended assistance to some 750,000 refugees, practically all of them Palestinian Arabs. By 2001 UNRWA had 3,874,738 registered refugees on its rolls, and was present in 59 refugee camps in the Middle East.

UNRWA's humanitarian activities have centered on three major programs: an educational program that ran 647 elementary and preparatory schools and vocational centers with 457,349 students in 1999; a health program with a network of units and medical staff that registered 7,163,056 patient visits in 1999; and a relief and social services program to assist disadvantaged groups. UNRWA also has set up special programs to improve the living conditions in refugee camps, especially housing and environmental sanitation, and to respond to emergencies. UNRWA has often had to carry out its mission in the midst of civil strife and military conflict. During the Arab–Israel War of 1967, more than 350,000 Palestinians fled from the territories seized by Israel; these included 200,000 refugees from the 1948 war, who were displaced for a second time. Later, the 1970 fighting between Jordan's army and the armed elements of the Palestine Liberation Organization (PLO) stationed in Jordan, another Arab–Israel War (October 1973), the Lebanese civil war that started in 1975, Israel's invasions of Lebanon in 1978 and in 1982, the Palestinian uprising (Intifada) and Israel's response to it, and more recently, Iraq's invasion of Kuwait and the Gulf Crisis (1990–1991) all had serious effects on the conditions of Palestine refugees and the work of UNRWA. The organization was long headquartered in Beirut, but due to the Lebanese civil war it moved to Vienna in 1978. In 1994 it announced that it was moving to Gaza, to territory controlled by the Palestinian Authority. The move was completed by July 1996.

UNRWA's budget is funded 95 percent by voluntary contributions. In 2002 the UN General Assembly approved a cash and in-kind budget of $326.2 million, of which UNRWA actually received $305.9 million. With the significant increases in costs associated with the wide-scale destruction wrought during the al-Aqsa Intifada that began in October 2000, the agency's budgetary needs have increased considerably. Yet the shortfall had to be made up by cutbacks. Actual expenditures during 2002 were $293.8 million, $32.3 million less than had been budgeted for by the General Assembly. By early 2003, UNRWA was facing a dire financial situation, and had made six emergency appeals for additional funding within a year.

UNITED NATIONS SPECIAL COMMISSION (UNSCOM)

Commission charged with eliminating Iraq's weapons of mass destruction.

After the end of the first Gulf War (1991), the United Nations Security Council passed several resolutions concerning Iraq. Resolution 687, which was passed on 3 April 1991, was the most important one. It set forth the continuation of the sanctions and the embargo on Iraq until it dismantled its weapons of mass destruction (WMD) program, which included all ballistic missiles with a range of 90 miles (150 km), and all chemical, biological, and nuclear facilities. Resolution 687 also banned the development of such weapons in the future. A related resolution, 715, adopted on 11 October 1991, called for the establishment of a long-term comprehensive monitoring system covering all current and future facilities related to weapons of mass destruction.

The United Nations Security Council created a special commission, the United Nations Special Commission (UNSCOM), which it charged with eliminating Iraq's nonnuclear WMD covered by Resolution 687. Also, UNSCOM would assist with the International Atomic Energy Agency (IAEA) inspections in the nuclear area. UNSCOM was given sweeping powers to do on-site inspections of Iraq's biological, chemical, and missile capacities, to remove and render harmless all chemical and biological weapons, to supervise the destruction of all ballistic missiles with a range exceeding 90 miles (150 km), and to verify Iraq's compliance with Resolution 687.

With a great deal of reluctance, the Iraqi government accepted Resolution 687 in May 1991. The government did not have much choice, as the resolution had passed the Security Council unanimously. Furthermore, the United States and Britain were ready to implement it and they were willing to use force if necessary.

UNSCOM operations lasted about eight years. The commission was first chaired by Rolf Ekeus, a Swedish career diplomat. From the beginning, the relationship between UNSCOM and Iraq was strained and shrouded in suspicion. On many occasions, Iraq acted in bad faith by delaying and hesitating to fulfill both the letter and the spirit of Resolutions 689 and 715. When Iraq tried to prevent UNSCOM inspectors from using their aircraft for security and political reasons, the UN Security Council adopted Resolution 707 on 15 August 1991, calling for Iraq to give full access to UNSCOM inspectors, full disclosure of weapons programs, and full disclosure of all suppliers' names. UNSCOM team members came from various countries, but the majority of the members were American and British.

The tension continued between Iraq and UNSCOM throughout the commission's operation in the country. Several confrontations between the parties prompted the United States to launch short military operations against targets inside Iraq. In July 1997 Ekeus was replaced by Richard Butler, an Australian disarmament expert who lacked diplomatic finesse, and who began to work more closely with the U.S. government. After a series of confrontations in 1997 and 1998 between Iraq and UNSCOM, the United States launched Operation Desert Fox in December 1998. The operation lasted for four days and consisted of aerial bombardments of military targets. It put an end to UNSCOM inspections, because Iraq refused further cooperation. The United Nations Security Council struggled for a year to come up with a new arms inspection formula that was acceptable to the members of the council. In January 2000 the UN adopted Resolution 1284, which formed a new commission, the United Nations Monitoring, Verification, and Inspection Commission (UNMOVIC). For two years Iraq refused to deal with the new commission.

Both Iraq and UNSCOM were responsible for confrontations. To Iraq, Resolution 687 and the commission it created impinged on Iraqi sovereignty, because Iraq's weapons program was one of the mainstays of Saddam's power, both domestically and regionally. Iraq accused the inspectors of trying to strip the nation of its industrial and technological capacity, and it objected to UNSCOM's intrusive and confrontational approach. In addition, Iraq accused the United States of using and

subverting UNSCOM to gather intelligence in order to change the government in Iraq.

UNSCOM, on the other hand, allowed itself to be used by the United States government to collect intelligence data by the U.S. members of the inspection teams, according to Dilip Hiro (pp. 97, 107, and 119). The United States started to subvert UNSCOM operations as early as 1992 by using its intelligence agents and technicians trained in handling communications and bugging devices to intercept microwave transmissions sent by the Iraqi military. In the aftermath of Operation Desert Fox, several damaging revelations appeared in the U.S. press about the infiltration of UNSCOM by U.S. intelligence agencies.

By 1998, despite the tension between Iraq and UNSCOM, the commission had accomplished most of its job of discovering WMD, destroying them, and establishing a comprehensive remote monitoring system. According to Scott Ritter, the bulldog of UNSCOM, Iraq no longer possessed any meaningful quantities of chemical or biological agents, if it had possessed any at all (*New York Times,* 3 July 2000). In the spring of 2003 U.S. armed forces invaded and occupied Iraq; despite intense searching, as of the following spring they had failed to discover any weapons of mass destruction.

UNITED NATIONS SPECIAL COMMITTEE ON PALESTINE, 1947 (UNSCOP)

Committee created in 1947 to deal with the future government of Palestine.

Following the end of World War II the Arab-Zionist conflict in Palestine was internationalized, and greater efforts were made to resolve it. After a few unsuccessful Anglo-American endeavors, in February 1947 the British handed over the Palestine problem to the United Nations.

In May 1947 the UN General Assembly created a Special Committee on Palestine (UNSCOP) with eleven members—Australia, Canada, Czechoslovakia, Guatemala, India, Iran, the Netherlands, Peru, Sweden (chair), Uruguay, and Yugoslavia. It was mandated to investigate all matters relevant to the Palestine problem and to submit a report, including proposals for a solution, to the General Assembly.

The committee visited Palestine and heard testimonies from Jewish representatives, and it witnessed the dramatic capture by the British of the ship *Exodus,* which carried 4,500 European Jewish refugees. The Palestinian Arab leadership refused to testify, but the committee nevertheless met in Lebanon with representatives of the Arab states. Members of the committee also met Jewish inmates of displaced persons camps in Europe.

The UNSCOP Report, submitted on 31 August 1947, unanimously supported the termination of the British mandate in Palestine. The representatives of Iran, India, and Yugoslavia supported a federal solution (known as the minority plan) that envisaged Arab and Jewish regions within a federal union with Jerusalem as its capital. The representatives of the other states (except Australia) favored a partition into two separate independent states (the majority plan) with Jerusalem as a *corpus separatum* under an international regime.

On 29 November 1947 the General Assembly adopted Resolution 181, based on the UNSCOP majority plan, by a 33–13 vote, with 10 abstentions. The Jewish Agency accepted the resolution, and the Arab Higher Committee rejected it.

UPDATED BY JOSEPH NEVO

UNITED NATIONS TRUCE SUPERVISION ORGANIZATION (UNTSO)

United Nations (UN) peacekeeping machinery in Israel and neighboring Arab countries.

The United Nations Truce Supervision Organization (UNTSO) was created through several UN resolutions to oversee the Security Council truce agreement between Israel and the Arab states that went into effect on 11 June 1948. Unarmed UN military observers were first sent to Cairo and throughout Palestine. After hostilities in the 1948–1949 Arab-Israel war ended, UNTSO was expanded and charged with overseeing the signatories' application of the four armistice agreements. Its observers were stationed along armistice lines between Israel and Egypt, Syria, Lebanon, and Jordan. Observers remained in the region through the 1956 Suez crisis and were supported by the new and more broadly empowered UN Emergency Force. In June 1967 UNTSO demarcated the cease-fire lines between Israel and Syria, supervised the cease-fire, and oversaw renegotiations for observers along the Suez Canal. UNTSO observers assist other armed peacekeeping operations in the Middle East, such as the UN Interim Force in Lebanon. In March 1996 UNTSO had 178 observers, down from its maximum strength of 572 observers in 1948; 28 have died in service since 1948. UNTSO is headquartered in Jerusalem and has offices in Beirut and Damascus.

CHARLES U. ZENZIE
UPDATED BY NEIL CAPLAN

UNITED STATES OF AMERICA AND THE MIDDLE EAST

The Middle East has been an area of vital interest to the United States since World War II.

Although U.S. interest in the Middle East can be traced to the early years of the American republic, the region has been a principal focus of U.S. foreign policy since World War II. Oil investments and the special U.S. relationship with Israel were the chief reasons for U.S. involvement in that area of confrontation between the United States and the Soviet Union during the Cold War.

U.S.–Middle East Relations

U.S. contacts with the Middle East started in about 1800 in North Africa. U.S. naval forces defeated the Barbary pirates in 1816, but most relations in the nineteenth century were educational and commercial in nature. Protestant missionaries established several schools, medical facilities, and colleges in Egypt, Turkey, Syria, and Lebanon.

In 1919 President Woodrow Wilson sent the King–Crane Commission to inquire into the wishes of the Syrian and Palestinian people as to their political future. In the 1920s and 1930s U.S. oil companies invested heavily in Iran, Iraq, Bahrain, Saudi Arabia, and Kuwait. During World War II, the United States participated in the Allied battles for North Africa and established the Persian Gulf Command to transport lend-lease materials from the Gulf, through Iran, to the Soviet Union. By 1945 several U.S. air bases, supply depots, and transportation facilities were operating throughout the Middle East. From the end of World War II until the collapse of the USSR in the early 1990s, a major objective of U.S. foreign policy was to prevent Soviet penetration of the Middle East. When British political and military commitments in the area diminished, several Middle Eastern countries signed agreements with the United States, and the region became the recipient of the greatest portion of U.S. military and economic aid.

Soviet pressure on Turkey and Iran marked the beginning of the Cold War, and the Truman Doctrine of 1947 represented one of the first efforts in the new "containment" policy to halt Soviet expansion. Responding to feared Soviet encroachments

in Greece, Turkey, and Iran, the United States, under the Truman Doctrine, sent $400 million in aid to Greece and Turkey, and helped modernize Turkey's armed forces. U.S. advisers were also sent to Iran.

Founded in 1948 with U.S. support and, by the 1960s, viewed as an important strategic asset, Israel became the largest single recipient of U.S. economic and military assistance. Close ties with Israel were reinforced by humanitarian impulses inspired by knowledge of the Holocaust. The assistance to Israel made it difficult for the United States to establish closer ties with the surrounding Arab nations. During the 1950s Egypt refused to join a Middle East defense organization proposed by the United States, Great Britain, and France. Instead, the Northern Tier or Baghdad Pact, which was based on a military alliance between Turkey, Iraq, Iran, and Pakistan, was devised. The pact was linked with other containment alliances through Turkey's membership in the North Atlantic Treaty Organization in the West and Pakistan's affiliation with the Southeast Asia Treaty Organization in the East.

Efforts by Western countries to keep Soviet influence out of the Middle East were undermined by the events leading up to the Arab–Israel War of 1956. Attempts by the United States to cultivate better relations with Egypt were subverted when the United States refused to provide Egypt with aid to construct the Aswan High Dam; as a consequence, President Gamal Abdel Nasser nationalized the Suez Canal in July 1956. Despite the strain in relations between the two countries, the Eisenhower administration strongly opposed the invasion of Egypt by Britain, France, and Israel in October 1956, and joined the Soviet Union in condemning the attack.

Following the war, unrest throughout the Middle East and the spread of nationalist doctrines that the U.S. government perceived as leftist led in January 1957 to the Eisenhower Doctrine, whereby military and economic assistance was dispensed to the Middle East and the use of U.S. forces was provided to protect countries in the region "against overt aggression from any nation controlled by international Communism." The doctrine was tested in April 1957 when the U.S. Sixth Fleet was sent to the eastern Mediterranean to support Jordan's King Hussein. After the 1958 revolution in Iraq, Lebanon's

U.S. secretary of state Madeleine Albright listened in as Palestinian leader Yasir Arafat talked with President William J. Clinton by telephone from Arafat's office in Gaza in September 1999. Despite initial progress toward final settlement of disputes about Palestine, Clinton's efforts to achieve Camp David Accords of his own in summer 2000 ultimately collapsed and were soon followed by a new and bloody Palestinian uprising against Israel. **© Reuters NewMedia Inc./Corbis. Reproduced by permission.**

President Camille Chamoun also called on the United States for assistance to protect his regime from revolutionary forces, and President Eisenhower responded by sending 14,000 marines. They were withdrawn a few weeks after a truce was arranged, through intervention of the United States, between the various conflicting Lebanese parties.

The United States's efforts to resolve the Arab–Israel dispute during the Eisenhower administration centered on the Arab refugee problem and projects intended to achieve the economic reconstruction of the Middle East through cooperative development of the region's water resources. Although he was successful in achieving a de facto regional water-sharing accord, Eric Johnston, Eisenhower's special representative, failed to obtain agreement for proposals to resettle the refugees. During 1955 and 1956 the United States also joined Britain in a secret operation, code-named "Alpha," which was designed to coerce Egypt and Israel into direct talks. The operation ended in failure when another Eisenhower emissary, Robert Anderson, returned to Washington in March 1956 after a fruitless round of shuttle diplomacy. The Kennedy administration sought to promote good relations with

U.S. deputy secretary of defense Paul Wolfowitz, addressing a pro-Israel rally on 15 April 2002 in front of the U.S. Capitol, expressed President George W. Bush's "solidarity" with Israel. The United States supported the creation of Israel in 1948 and developed closer ties, including large amounts of economic and military aid, beginning in the late 1960s—which in turn often strained its relationship with Arab nations. © AFP/CORBIS. REPRODUCED BY PERMISSION.

"progressive" Middle Eastern countries concerning containment. Kennedy also approved the first U.S. sale of a major weapons system to Israel.

UN Resolutions

After the Arab–Israel War of 1967 between Israel and Egypt, Syria, and Jordan, UN Security Council Resolution 242, drafted with U.S. help, became the basis for U.S. policy in the Arab–Israel conflict. Its requirement that Israeli forces withdraw from territories occupied during the war hinged on the achievement of a comprehensive peace settlement. The Nixon administration's Rogers Plan, which was based on Resolution 242, called for Israel to withdraw to its pre-June 1967 borders (with minor exceptions). After the 1967 war, Egypt and Syria were rearmed by the Soviet Union, with whom they signed defensive alliances. In 1968, when the British announced their planned withdrawal from the Persian Gulf, the United States decided to build up the military forces of Saudi Arabia and Iran. Ties between Israel and the United States were greatly strengthened after the 1967 war when Israel demonstrated its potential as a strategic ally by shipping great quantities of captured Soviet-made weapons to the United States for close analysis. Ties were also aided by a strong pro-Israel lobby that influenced Congress, the White House, and the media. During the Reagan administration a memorandum of understanding was signed between Israel and the United States calling for cooperation to "deter all threats from the Soviet Union to the region." The pact provided for joint military exercises and working groups for cooperation in development and in the defense trade. In 1987 the U.S. Congress formally designated Israel a "major non-NATO ally." Israel was considered a special case in U.S. efforts to curb the expansion of nuclear powers and was not pressured to join the Nuclear Nonproliferation Treaty.

During the 1973 October War between Israel and Egypt and Syria, U.S.–Soviet relations worsened. Moscow and Washington provided their respective clients with billions of dollars in arms; a threat by the Soviets to send troops to assist Egypt and nuclear alert by the United States brought the two countries to the brink of war. After the outbreak of the war in late October, the Arab oil-producing nations imposed an oil embargo that created an energy crisis in the United States and Western Europe. A peace conference at Geneva in December 1973 broke up after two days without settling the conflict, but Secretary of State Henry Kissinger subsequently initiated step-by-step negotiations that resulted in disengagement agreements between Israel, Syria, and Egypt and provided for Israel's withdrawal from parts of Sinai and the Golan area.

Relations between Egypt and the United States improved after 1973 as Egypt's President Anwar al-Sadat shifted from relying on Soviet aid to being receptive to U.S. influence. Hoping to capitalize on the improved diplomatic climate, President Jimmy Carter attempted to reconvene the Geneva Peace Conference in 1977, but Sadat flew to Jerusalem in November to start direct negotiations with Israel.

U.S. president Jimmy Carter (center) engaged in intensive diplomacy with President Anwar al-Sadat (left) of Egypt and Prime Minister Menachem Begin of Israel in 1978 to bring about the Camp David Accords, for which the two Middle Eastern leaders were awarded the Nobel Peace Prize. The agreement resulted in the Israeli return of the occupied Sinai Peninsula to Egypt and Egyptian recognition of Israel, but it did not lead to an overall settlement of the Arab–Israel conflict. COURTESY OF JIMMY CARTER LIBRARY.

Sadat's dramatic initiative began a new peace process based on direct bilateral contacts between Egypt and Israel. When bitter disagreements between the two adversaries threatened to disrupt negotiations, Carter intervened personally. He invited Sadat and Israel's Prime Minister Menachem Begin to Camp David, where two frameworks for peace were hammered out—one dealing with Egyptian–Israeli relations and the other with the Palestinian issue. Under Carter's guidance, the Camp David Accords were shaped into the Egyptian–Israeli peace treaty that was signed in Washington, D.C., in March 1979. At the Camp David summit Carter persuaded Begin to include establishment of a Palestinian "self-governing authority" in the final accords. "Palestinian homeland" and "Palestinian rights" were accepted for the first time as legitimate concepts by the U.S. government.

Elsewhere in the Middle East, Carter's policy of containing Soviet influence in the Persian Gulf was undermined when his close ally Mohammad Reza Pahlavi, the shah of Iran, was overthrown in 1979. The president's efforts to obtain the release of U.S. hostages held by the new revolutionary government in Tehran took over a year to resolve successfully, and this delay was a factor in his loss of the 1980 presidential election.

An American soldier in Baghdad, Iraq, looks for the enemy after a rocket-propelled grenade hit a U.S. Army vehicle, killing three other soldiers and a translator. U.S., British, and other forces rapidly took control of Iraq and ousted Saddam Hussein as its ruler in April 2003, but the occupation was marked by numerous daily attacks on American and coalition troops, as well as civilian supporters and aid workers, which continued after the capture of Saddam in December. © AP/WIDEWORLD PHOTOS. REPRODUCED BY PERMISSION.

Presidents Ronald Reagan and George H. W. Bush continued the containment policies of their predecessors and also became deeply involved in the Arab–Israel conflict. During the Lebanese war in 1982, Reagan sent the Sixth Fleet and the U.S. Marines to Beirut as part of a multinational peacekeeping force. Lebanese militias attacked the marines, inflicting heavy casualties, and the marines were withdrawn soon after. The Reagan plan for Middle East peace envisioned "self-government by the Palestinians . . . in association with Jordan" as the "best chance for a durable, just, and lasting peace." Bush's attempts to continue negotiations based on the Reagan plan and Resolution 242 were stymied until 1991, when the Madrid Conference convened. Cosponsored by the United States and Russia, the new peace process provided for bilateral talks between Israel and Syria, Lebanon, and joint Jordanian–Palestinian delegations. It also included a series of multilateral meetings on such substantive issues as security, environment, economic development, water, and refugees.

President Bush involved the United States in its largest foreign military operation since Vietnam when in 1991 he sent U.S. forces to drive Iraq from Kuwait. From a military perspective, the operation was a success because the United States and the allied forces sustained only minor casualties. Bush was sharply criticized, however, because Iraq's President Saddam Hussein remained in power despite his defeat on the battlefield.

Post–Cold War Policy

When the Soviet Union collapsed in 1991, a new phase of U.S. foreign policy began; containment was no longer the principal objective. Instead, Russia and the United States cooperated in regard to the Middle East. As Soviet influence in the region declined, the United States became the dominant power, and its influence was paramount. This situation greatly facilitated Washington's goal of maintaining the political status quo through its support of friendly regimes. It also made it easier to intervene when U.S. concerns such as assured access to oil and the security of Israel appeared to be threatened.

Initial attempts by President William J. Clinton to resolve the Arab–Israel conflict seemed encouraging, but the failure of an Israeli–Palestinian summit at Camp David in July 2000 contributed to a second Palestinian intifada (uprising) against Israel's occupation of the West Bank and Gaza. By 2003 hostilities degenerated into a low-intensity war between Israel and Palestinians that threatened U.S. policies aimed at maintaining stability in the region through support for the status quo.

An attack by Middle Eastern terrorists destroyed the World Trade Center in New York and severely damaged the Pentagon in Virginia on 11 September 2001, resulting in thousands of casualties. The September attack intensified President George W. Bush's war on terrorism, leading to a U.S.-led attack on Afghanistan. The war in Afghanistan resulted in expulsion of the Taliban government in Kabul and establishment of a new regime allied with the United States. Bush renewed efforts to overthrow Saddam Hussein in 2002 and 2003, charging that he was a threat to international peace and that he had developed weapons of mass destruction in violation of UN Security Council resolutions. U.S. forces were assembled in surrounding countries, and invaded Iraq in March 2003.

UNITY PARTY

Turkish political party, active in the 1960s and 1970s.

The Unity party came to be identified with the Shiʿite Alevi minority community. It changed its name to the Turkish Unity party in November of 1971, perhaps to overcome this image. With the outlawing of the Turkish Workers Party, eight of its former members were allowed to run as independents on the Unity party's election list in 1973, giving it a distinct leftist inclination. It polled only 1 percent of the vote and gained only one seat, however, compared to nearly 3 percent and eight seats in 1969. In 1977 it did even less well, failing to win any seats at all.

UNIVERSITY OF JORDAN

The main public university in Jordan.

The University of Jordan was established in 1962 on a picturesque hillside in the western outskirts of Amman that formerly was the site of an agricultural research station. The university comprises eighteen faculties, including arts, sciences, economics and commerce, *shariʿa* (Islamic law), medical sciences (including general medicine, nursing, and pharmacy), education, agriculture, engineering and technology, law, and physical education, and as of 2003 boasted 961 faculty members. It awards both undergraduate and graduate diplomas, and also has a teaching hospital. As with all public universities in Jordan, students pay nominal tuition and are able to buy books and materials at subsidized prices. In 2003, the university student population stood at 25,000, eighty-eight percent of which came from Jordan.

UNIVERSITY OF KHARTOUM

A Sudanese institution established in 1902.

Horatio Herbert Kitchener, Lord Kitchener of Khartoum, established the Gordon Memorial College in the memory of the British general Charles George Gordon, who died at Khartoum in 1885, to establish a formal seat of learning in the Sudan. Kitchener opened the college on 8 November 1902. During the first half of the twentieth century, Gordon Memorial College was transformed from a secondary school to a college with a more sophisticated curriculum and a more renowned faculty. Most graduates during these years became civil servants in the British administration of the Sudan.

Its function as a vocational training institute was substantively changed when the college was affiliated with London University in 1945 to grant equivalent degrees; in 1951 the Gordon Memorial College and Kitchener School of Medicine were combined to create the University College of Khartoum. Upon Sudan's independence in 1956 the University College abandoned its connections with the University of London to become the University of Khartoum. Since then it has expanded to include numerous research institutes and a variety of schools.

As the campus lies in the heart of Khartoum, the university's faculty, staff, and particularly its students have played a significant role in the political life of Sudan. Its graduates organized and led the Graduates' General Congress in 1938, which played a dynamic role in the evolution of Sudanese nationalism and in Sudan's governments after independence. After the coup d'état of 30 June 1989 by Umar Hasan Ahmad al-Bashir, the National Islamic Front (NIF) government reoriented the university's curriculum and purged the Western-educated Sudanese and expatriate faculty, replacing them with instructors more suitable to the NIF's Islamist ideology. At the same time the government launched a dramatic expansion of the university, so that in 2002 there were 17,000 undergraduates, 6,000 graduate students, and an academic staff of more than 1,000.

UNIVERSITY OF TEHRAN

The first modern university in Iran.

In May 1934, the Majles (national assembly) passed a law to incorporate five existing public colleges as a new University of Tehran. The original faculties included law, literature, medicine, science, and technology (engineering). Reza Shah Pahlavi officially inaugurated the University of Tehran in February 1935 by laying the foundation stone for its campus in an area northwest of the then new administrative and commercial district. Subsequently, faculties of agriculture, fine arts, and theology were added, as well as a printing press and a central library.

In 1943, the university became independent of the ministry of education and a board of directors was organized. Elected by the faculty, the new governing body also elected the dean. This independence was undermined after 1953, when the election of the dean became a formality, since the new dean had to be approved by the shah. By the late 1960s, the shah was making appointments from among politicians instead of academics, further undermining the university's academic integrity. These efforts at political control, however, did not prevent the University of Tehran from becoming the nurturing ground for all the opposition movements against Mohammad Reza Shah Pahlavi's regime, including the opposition that eventually led to the Iranian Revolution (1979).

The 1979 revolution and the Iran–Iraq War slowed the development of the university, but since 1989 it has continued to develop and expand, adding several new faculties and institutes. Despite the establishment of other universities in both Tehran and other Iranian cities, the University of Tehran has an unrivaled reputation in the country for academic excellence. During the early 2000s, the annual enrollment was about 30,000 students, over 60 percent of whom were female; the faculty exceeded 1,500. The administration of the university is still based on the pattern established during the previous regime.

MANSOUREH ETTEHADIEH
UPDATED BY ERIC HOOGLUND

UQBI, TAYYIB AL-

[1888–1960]

Prominent member of the Algerian Association of Reformist Ulama.

Born near Biskra in Algeria, Tayyib al-Uqbi (also Tayeb el-Okbi) studied in Medina and was influenced by the Muwahhidun movement of Islam. He was known as an eloquent and controversial Islamic scholar. In 1936 al-Uqbi was accused of planning the murder of the *mufti* (canon lawyer) of Algiers but was acquitted in 1939. Al-Uqbi criticized Shaykh Abd al-Hamid Ben Badis's political involvements and left the association in 1938; he preferred discussion of religious and spiritual questions as disclosed by his journal, al-Islah.

URABI, AHMAD

[1841–1911]

Egyptian nationalist leader and army officer.

Ahmad Urabi, the son of a village shaykh of Iraqi Arab origin, studied for two years at al-Azhar in Cairo and then entered the Cairo military academy at the behest of Saʿid Pasha in 1854/55 and soon earned his commission. After the deposition of Khedive Ismaʿil in 1879, he is said to have supported the emerging National Party of Egypt, but his first proven act was to represent a group of discontented ethnic Egyptian officers who were protesting against the favoritism shown to Turkish and Circassian officers by War Minister Uthman Rifqi. Khedive Tawfiq and Prime Minister Riyadh intended to dismiss Urabi and his group for insubordination, but other Egyptian officers seized control of the war office and rescued Urabi in February 1881. Subsequently, the khedive agreed to replace Rifqi with Mahmud Sami al-Barudi as war minister. On 9 September fearing a khedival counterplot, the Egyptian officers surrounded Abdin Palace, confronted Tawfiq, and obliged him to set up a constitutionalist government with Muhammad Sharif as prime minister and to increase the size of the Egyptian army.

As Britain and especially France—concerned about the safety of the Suez Canal, their investments, and their citizens in Egypt—became increasingly hostile to the Urabist movement, the Nationalists replaced Premier Sharif with Mahmud Sami al-Barudi in February 1882, and Urabi became war minister. The Nationalists continued to fear a khedival counterplot and took steps to weaken the Turks and Circassians within the officer corps, also stirring up popular feeling against the European powers. Riots broke out in Alexandria in June 1882, and many European residents fled. Britain and France threatened military intervention to support the khedive (whose relationship with the Nationalists seems to have been ambivalent) and to protect their citizens. They demanded that the Egyptian army remove all fortifications from Alexandria, and, when Urabi did not comply quickly enough, British ships began bombarding them, leading to the outbreak of fires in Alexandria. British troops (unaided by France, which had withdrawn because of a ministerial crisis) landed at Alexandria and later at Isma'ilia to restore order. Urabi and the Egyptian army continued to resist the British, even after the khedive had gone over to their side, until their crushing defeat at al-Tall al-Kabir on 13 September 1882. Once the British entered Cairo, Urabi surrendered, was put on trial for treason against the khedive, but was not executed. He was exiled to Ceylon—until he was allowed by Khedive Abbas Hilmi II to return in 1901. He played no part in the later National party of Mustafa Kamil, died in obscurity, and was generally scorned by educated Egyptians until the 1952 revolution. Since then he has been rehabilitated by Gamal Abdel Nasser and his fellow officers—whose occupational and class backgrounds paralleled his own. Now he is generally considered a patriot who resisted the British, the

khedive, and the aristocracy in favor of constitutional government and the welfare of Egypt's common people.

His writings include *Kashf al-Sitar an Sirr al-Asrar,* published in two volumes (Cairo, 1925).

URBANIZATION

The growth of cities and the social and physical transformations arising from this phenomenon.

The Middle East is home to the world's first cities as well as some of its most notable ones. The first cities, which developed in southern Mesopotamia (now in Iraq) about 3500 B.C.E., had small populations by modern standards—not exceeding about 20,000 inhabitants. By 3000 B.C.E. cities also grew along the Nile in Egypt. From these early centers, urban life spread throughout the world.

Until about 1800 most of the great cities such as Babylon, Alexandria, Ctesiphon, Constantinople (now Istanbul), Baghdad, and Cairo could grow large because they had access to water transport and income from an imperial tax base. Industry and trade were the main sources of income for smaller cities, including Tyre, Sidon, Beirut, Carthage, Tabriz, Palmyra, and Mecca. The development of some cities was heavily influenced by their religious significance; these include Jerusalem, Karbala, Mashhad, Mecca, Medina, and Qom. The proportion of the total population living in cities in what became known as the Middle East seldom exceeded 15 percent before the nineteenth century.

New factors contributed to the growth of cities after 1800, including modern transportation, new trade patterns, and European penetration. Following World War I and the fall of the Ottoman Empire, nationalist regimes were established, first in Iran and Turkey, later in Iraq, Jordan, and Syria. These focused development inward. East of Libya, the capitals of the large countries are all inland (Ankara, Cairo, Damascus, Baghdad, Riyadh, Sanʿa, Tehran) and since their development policies were statist, these cities expanded. After World War II, rail and road networks that centered on the capitals were extended, facilitating migration to them. At the same time, rapid rural population growth and the mechanization of agriculture, largely implemented after 1945, pushed farmers from the land. Millions of people in the region moved to cities in search of jobs, education, and other services.

Israel was established in 1948 after a period of conflict, and its urban growth—mainly Tel Aviv and Haifa—was fueled by an influx of Jewish immigrants. Palestinians left or were expelled by Israeli forces in 1948, swelling cities in neighboring countries including Lebanon (Tyre, Sidon, and Beirut), Jordan (Amman), and Kuwait, as well as the territories of the West Bank and the Gaza Strip.

Oil boomtowns (Abadan, Abu Dhabi, Dhahran, Kuwait City) grew rapidly for short periods, but they never became as large as the major political and commercial centers. In the larger countries (Algeria, Egypt, Iran, Morocco, Turkey) close to 50 percent of the population was urban by the mid-1990s. In some of the smaller countries (Israel, Lebanon, Kuwait, the United Arab Emirates) the proportion is as high as 90 percent.

JOHN R. CLARK
UPDATED BY ANTHONY B. TOTH

URBAN PLANNING

Effect on city organization of colonialism and petroleum wealth.

In the modern period two major influences have shaped contemporary urban planning in the Middle East: colonialism and petroleum. These two influences, and a host of other minor factors, have had different roles during three phases of constructing urban landscapes: the colonial period (c. 1800–1945), a transitional period (c. 1945–1972), and the oil-boom era (post-1972). Within these three stages, urban planning has shifted from being primarily involved in physical planning and urban design to integrating socioeconomic and physical planning.

The Colonial Period (1800–1945)

Although not all countries in the Middle East were colonized at the same time or in the same pattern, a common thread connects the urban-planning process. Europeans used urban planning successfully to establish and maintain the colonial extractive system. Physical segregation was the main tool used in implementing this policy. Urban planning in this period was dominated by physical land-use planning and urban design, which chiefly concerned the arrangement of urban infrastructure and land use. The colonial use of physical planning established and maintained a trading network and facilitated a suitable living environment for European colonial administrators, workers, and their households.

European colonialists built port cities to collect and ship goods (for example, Aden, Casablanca, Tunis, Suez, Hormuz, and Port Saʿid). They also built interior towns to serve as military centers, local administrative capitals, or collection points for regional resources, and they built infrastructure, such as roads and railways, to connect interior cities to ports. This trade-related settlement system became the new colonial urban hierarchy that is still common all over the Middle East.

Urban planning then played its second major role in this period by maintaining and servicing the influx of European military personnel, administrators, businesspeople, settlers, and fortune seekers. Planning was utilized to build the segregated city, in which a European, upper-class quarter was separated from the rest of the city. French Morocco offers the most vivid example of this kind of city planning: European quarters were built separate from the old medinas; important urban cultural sites were preserved; and the European part of the city utilized the most up-to-date urban-planning techniques. Similar practices were followed in Algeria, Tunisia, Libya, and Egypt. These urban plans segregated Europeans, along with some local resident minority groups (such as Coptic Christians and Jews) and a small community of the native rich, from the indigenous population, resulting in a dual city. A parallel but noninstitutionalized development in Palestine was the building of Tel Aviv as a Jewish city adjacent to Arab Jaffa.

In the dual city, a disproportionate share of the urban revenue was spent on the European quarters, even though taxes were raised mostly from the native quarters. As a result, the European neighborhoods had large residential plots, low densities of population, and broad tree-lined roads and streets. They were also better connected to urban amenities like water, electricity, and sewage facilities. These low-density residential quarters with their superior facilities and other urban benefits provided healthier environments for their residents. In addition, they provided the Europeans with a culturally familiar environment, making them more interested in working in colonies and thus maintaining the colonial system.

In countries where local rulers had more autonomy or colonialism was not officially present, rulers tried to copy European styles of design and urban planning. In Egypt before British control began in 1882, Khedive Ismaʿil (r. 1863–1879), influenced by his visit to Paris, tried to follow for Cairo the urban plans of Baron Georges-Eugène Haussmann. Later, in Iran, Reza Pahlavi Shah (r. 1925–1941) promoted a grid design for Tehran and constructed wide avenues through the old quarters of the city, and a "modern" city along the lines of the European model was built in north Tehran, where the rich began to reside. It was thought that

copying Western urban form would lead to modernization, but the end result was the growth of dual cities similar to those that developed in colonized countries. Indeed, the internal structure of most Middle Eastern cities still can be traced back to this period.

The Transitional Period (1945–1972)

Urban planing assumed a lesser role in the Middle East during this politically active period. Since most of the countries in this region either had just become politically independent or were in the process of becoming so, urban planning was less important than ongoing political struggles and social movements. In the immediate postcolonial period, a spontaneous population movement occurred within some major Middle Eastern cities. In particular, the space formerly occupied by Europeans was taken over by the indigenous elites. In countries such as Morocco and Tunisia, this transition occurred in a peaceful and orderly fashion, but in a few countries, most notably Algeria, the rapid exodus of foreign settlers resulted in more diverse economic classes taking over the quarters formerly occupied by colonialists. Nevertheless, most Middle Eastern cities maintained their dual character.

Major concerns for urban planners were to provide housing for new migrants from rural areas and to bridge the gap between the former European and traditional quarters. To consolidate power, new rulers provided various social groups with land, housing, and urban amenities in return for their political support. In Israel, for example, the Labor Party provided temporary housing in the 1950s for Jews immigrating from postwar Europe and from other areas of the Middle East. Later, these immigrants were resettled in new urban neighborhoods and in newly established development towns in less populous areas.

Urban planning also began to develop in a new direction, emphasizing company-town building, master-plan technique, and economic development. This aspect was particularly evident in the Persian Gulf states of Iran, Iraq, Kuwait, Qatar, and Saudi Arabia. The steady growth of oil revenues beginning in the late 1950s encouraged governments to devise long-term economic development plans or to invest in industrial projects. These policies had a major impact on developing urban planning into an integrated physical-economic approach.

U.S. and British oil companies also established company towns for their workers. The Arabian-American Oil Company (ARAMCO), for example, used Western planners and engineers to lay out company towns such as Dhahran and Abqaiq using a system of blocks with a grid pattern. Similarly in Iran, British planners modeled the city of Abadan on the landscape of suburban England. Middle Eastern countries depended on the West for qualified planners and consultants to carry out urban planning. Consequently, a planning technique then common in the West, the master plan, was imported to the Middle East and soon became ubiquitous throughout the region. Most plans were end-state master plans, in that the ultimate look of the city in the future was already predetermined. Most plans were also unclear about the process of city planning or procedures for implementation. Additionally, the plans were usually static and design-oriented, with little consideration for the social and economic needs of the majority. Although very few master plans actually were implemented, the process of designing master plans proved to be a positive development for urban planning.

The Oil-Boom Era (1973 to the Present)

In the 1970s the role of urban planning underwent a rapid transformation, particularly in the oil-producing countries, where the rise in oil revenues enabled governments to embark on a variety of grandiose urban projects. A major focus was on comprehensive planning, which involved the private sector and considered spatial development concerns. The construction of new towns absorbed considerable investment. Three major goals prompted the building of new towns: to relieve the population pressures on the major cities by drawing migrants away from already overcrowded cities; to accommodate the growing population of industrial workers and to facilitate industrialization; and to accommodate military bases throughout the region. Primarily, Western firms have undertaken the planning of these new towns, especially those in oil-rich countries. Although efforts to incorporate aspects of indigenous culture into the design of these towns have been made, such efforts have not been fully successful. Most of these towns have used zoning to isolate

economic activities, in contrast with the mixed-use tradition in the region, and their layouts are designed for the use of the automobile.

With the oil wealth–fueled economic growth of the Persian Gulf countries serving as a catalyst, the rejection of end-state master plans soon became common all over the Middle East in favor of new city plans that give more consideration to social and economic factors. In addition, the new plans were integrated into broader regional and national planning strategies based on large urban centers in such countries as Egypt, Iran, Morocco, and Saudi Arabia. The new dynamic style of planning is also evident in the use of Integrated Urban Development Projects (IUDPs) among local planners and planning consultants. The emphasis of IUDPs is on the sectoral and spatial integration of projects, operating alongside, although often effectively replacing, comprehensive master planning. For example, the IUDP for Baghdad consisted of three integrated plans for central Iraq, greater Baghdad, and Baghdad the city. Three models—urban corridors, growth poles, and dispersed settlements—were used to develop comprehensive alternative strategies based on future scenarios. After evaluating the scenarios, a hybrid of all three models applicable to Iraq's needs was adopted.

Although the focus of making plans had changed, the tools for implementing them remained inadequate in most Middle Eastern countries. The reasons include a lack of cooperation among decision makers, a lack of enforcement legislation, and the conflict between the beautification and modernization of the city and the meeting of basic needs of the inhabitants. Thus, urban planning in the Middle East still is grappling with numerous problems. One major issue in large cities of oil-rich countries is how to allocate resources between immigrants and the native population. These immigrants, often from other Middle Eastern countries, are not granted citizenship or the right to own property, placing a heavy burden on the rental markets. In addition, a new form of segregation is taking place: Housing estates are planned so as to minimize contact between immigrants and the indigenous population. For example, in the new towns of Jubail (Saudi Arabia) and Umm Said (Qatar), dormitory-style housing for single expatriate workers secludes them from the native population.

Perhaps the most important issue for city planning is rapid population growth and urbanization. At approximately 3 percent per annum, the region's population growth rate is higher than the figure for any other world region with the exception of sub-Saharan Africa. The urbanization rate, at more than 4.5 percent for most countries in the Middle East, is also among the fastest in the developing world. Most large cities of the region suffer from overcrowding; squatter settlements; housing shortages; poverty; unemployment; lack of adequate urban infrastructure, services, and amenities; and escalating environmental degradation, including unbearable pollution. These and other urban problems are placing increasing stress on the budgets, resources, and planning capacities of municipal governments, forcing planners and policy makers to seek new ways of managing urban growth. In fact, this need to cope with many intertwined urban problems often has led to planning being used as a tool to anticipate future problems and merely manage current ones, rather than solve them. A more preventive approach to urban planning must take the place of the existing curative approach.

URWA AL-WUTHQA, AL-

Anti-British Muslim newspaper.

Edited from Paris by Jamal al-Din al-Afghani and Muhammad Abduh, *al-Urwa al-Wuthqa* was published between March and October 1884. The title, meaning "the firmest bond," alludes to the Qurʾan; it had been used by Afghani in 1883 to refer to the pan-Islamic caliphate of the Ottoman sultan. After eighteen issues had appeared in 1884, the paper suddenly ceased publication, probably owing to lack of funds. (The closing is usually atributed to the British banning the paper from entering India and Egypt, but since it was distributed free throughout the Muslim world, this measure should not have stopped it.) The financing of *al-Urwa al-Wuthqa* is unclear, although documents suggest that a Tunisian general, probably Wilfrid Blunt, and possibly the former Egyptian Khedive Ismaʿil were involved. Subsidization afforded wide distribution, which helped to enhance the reputation of the paper and its editors.

Most of the political articles in the paper championed the struggle against British imperialism in Muslim lands. The more theoretical articles were mainly devoted to an activist reinterpretation of Islamic ideas and to a call for unity among Muslims. *Al-Urwa al-Wuthqa,* which contributed to the fame of its editors in the Muslim world, was the first forum in which Afghani stressed Muslim unity, or pan-Islam, the ideology with which he is most associated.

NIKKI KEDDIE

UŞAKLIĞIL, HALIT ZIYA

[c. 1866–1945]

Turkish novelist, journalist, and poet.

Halit Ziya Uşakliğil was born in Istanbul, the son of a businessman from a prestigious İzmir family. When he was fourteen years old, the family returned to İzmir, where in 1884 he published the city's first daily newspaper, *Nevruz.* He started up other İzmir newspapers while working in Istanbul as a French teacher and bank employee. In the 1890s, he became active in the Servet-i Fünun (Wealth of Knowledge) literary movement and began writing novels. In 1909, he became a professor of literary history and aesthetics at Istanbul University.

Uşakliğil is considered a top Turkish novelist who bridged the nineteenth-century Tanzimat (reform) and twentieth-century republican periods, combining the complex storylines and heightened rhetoric of the former period with the cosmopolitan tastes and psychological realism of the later one. In the 1920s, he turned from novels to other forms, particularly short stories, and published about two hundred. He also published poetry, several plays, literary studies, and memoirs.

ÜSKÜDAR

The oldest and largest district of Asian Istanbul.

Situated across the Bosporus from the walled city of Constantinople, Üsküdar was called Chrysopolis in ancient times and Scutari in the Byzantine era. In the period of Ottoman rule, Üsküdar became more integrated into the life of the capital city, as it became the center of several dervish orders and tekkes, military barracks, and, in the nineteenth century, textile and other factories. In the 1860s, it was formally incorporated into the municipal government of Constantinople (now Istanbul). It was in Üsküdar that Florence Nightingale set up her famed hospital during the Crimean War (1853–1856). And in

the late nineteenth century, Russian Turks established the first center of Turkic studies in the empire in an Üsküdar *tekke.* The district, known for its fine gardens, in recent years has become a large residential quarter of the city with a population over 200,000.

USSISHKIN, MENAHEM

[1863–1941]

Zionist leader.

Menahem Ussishkin, engineer and leader of the Russian-based Zionist movement Hibbat Zion, was a spokesman for a practical Zionism favoring land settlement, diaspora activities to aid distressed communities, and cultural autonomy, even after the World Zionist Organization insisted on suspending such actions until a political charter recognizing Jewish national rights in Palestine was secured. Ussishkin replaced Chaim Weizmann as head of the short-lived Zionist Commission after the end of World War I and later served as chairman of the Jewish National Fund until his death in 1941. A fervent advocate of expanding Jewish land ownership as a tool for strengthening Zionism's political claims, he was equally passionate about reviving Hebrew as a spoken language and expanding educational institutions in Palestine.

USULI

Philosophy of Islamic law.

The Usuli school of Shiʿite jurisprudence, developed in contrast to the Akhbari (traditionalist) school, argues for the primacy of the *ulama* as interpreters of Islamic law and prophetic and imami traditions. The Usulis favor the legitimacy of reasoning (*aql*) and interpretation (*ijtihad*) of traditions of the Prophet and the imams as sources for the derivation of Islamic law. Thus, they allow for the emulation of prominent Shiʿite *ulama* by the believers, who are incapable themselves of interpreting the Qurʾan or the teachings of the Prophet and the imams. In addition, the Usulis believe in critical readings of the contents of major Shiʿite compilations of prophetic and imami traditions. They also prohibit the emulation of past masters of religion, so that the centrality of living *ulama* as interpreters of Shiʿite jurisprudence is preserved. Rivalry between the two schools heightened in the Safavid period, with the Usulis emerging as the ultimate victors by the eighteenth century.

Shiʿite *ulama* were able to play a prominent role in the constitutional movement of Iran (1905–1911), drawing on elements of Usuli thought to justify both the ratification of the constitution and the participation of clergymen in political affairs. The evolution of the Usuli doctrine of a hierarchical clerical establishment made for the creation of clerical ranks such as *hujjat al-islam, ayatollah,* and the *marja al-taqlid* (source of emulation) in contemporary Shiʿism. In addition, Usuli discourse made for the legitimation of the doctrine of *velayat-e faqih,* or governance of the jurisconsult, in post-1979 Iran.

UTAYBA TRIBE

See Tribes and Tribalism: Utayba Tribe

UTAYBI, JUHAYMAN AL-

[c. 1940–1980]

Saudi ideologue and leader of the Mecca insurrection, 1979.

Utaybi was born in a bedouin settlement at Qasim in central Saudi Arabia. It is unclear whether he received any formal education during his childhood. Utaybi served in the National Guards for about eighteen years, and toward the end of this period he studied at the Islamic University in Medina.

The year 1974 seems to have marked Utaybi's break with formal state institutions. The circumstances under which he left the National Guards are unknown; his departure from the university resulted from his disagreement with his teachers' applied interpretation of Islamic law in relation to the Saudi regime. He began a period of self-education and preaching, drawing a circle of followers. His first *risala* (treatise), "Al-imara wa al-bayʿa wa al-taʿa" (Rulership, allegiance, and obedience), appeared in 1974. Utaybi was arrested with ninety-eight others in 1978; all were released without trial.

At least eleven *risalas* by Utaybi were printed between 1974 and 1979. His writings combined a strict application of the Wahhabi (Muwahhidun) doctrine with widely accepted traditions having a messianic dimension. He accused the Saudi rulers of doctrinal deviation, greed, and corruption. He also accused the religious establishment of complicity and preached that it was the duty of Muslims to combat the evils of the regime.

Utaybi anticipated that the regime would pursue and persecute its puritan opponents, whose sole and ultimate refuge would be the Kaʿba (the holy shrine inside the Grand Mosque at Mecca). There, the *mahdi's* (messiah's) appearance would be established, armed resistance would start, and the Muslims would be victorious in the Arabian Peninsula and beyond. On 22 November 1979 Utaybi led a heavily armed group, estimated at between 500 and 2,000, who seized the Kaʿba. They were ousted two weeks later. For their crime, Utaybi and sixty-two others were beheaded on 9 January 1980.

UTHMAN, MUHAMMAD ALI

[c. 1908–1973]

North Yemen political leader.

Muhammad Ali Uthman was a Yemeni nationalist and republican, a strong supporter of both the 1962 revolution that resulted in the Yemen Arab Republic (YAP) and the 1967 coup that replaced the al-Sallal regime with that of Qadi Abd al-Rahman al-Iryani. He was a member of the Republican Council, the plural executive created by the al-Iryani regime, from 1967 until his assassination in 1973. His murder, the result of a local dispute, was at the time attributed wrongly to leftist dissidents supported by the revolutionary regime in South Yemen; it was seized upon by the government as an excuse to crack down on leftists. Uthman was a traditional local notable and landowner, and a Sunni Muslim of the Shafiʿi sect, with much influence in part of the Hujariyya, Jabal Sabr, and the lower elevations south of Taʿiz City. He is memorialized in a very

good English-language school in Taʿiz (grades 1 through 12), which was named after him shortly after his death.

UTHMAN, UTHMAN AHMAD
[1917–1999]

Egyptian civil engineer, construction magnate, and cabinet minister.

Born in Ismaʿiliyya and educated at Cairo University, Uthman Ahmad Uthman founded a civil engineering company soon after graduation instead of entering government service. But he quickly discovered that the booming oil industry in Saudi Arabia offered him better opportunities for advancement than did Egypt. His construction firm, the Arab Contractors, founded in 1940, expanded until it was able to bid on multimillion-dollar projects in the United Arab Emirates (then called Trucial Oman), Iraq, Kuwait, and Libya. Although his company was sequestered by Gamal Abdel Nasser in 1961, Uthman remained in control and played a major role in constructing the Aswan High Dam.

He became highly visible in Egyptian public life during the period of the Infitah policy of Anwar al-Sadat, building a new bridge across the Nile River and various traffic flyways in downtown Cairo. His firm also deepened the Suez Canal and built the Dhahran International Airport, the Kuwait Municipal Building, the Benghazi (Libya) sewer system, the Kirkuk (Iraq) feeder canal, and a first-class hotel in Khartoum (Sudan). He became minister for reconstruction in 1973, adding housing to his portfolio in 1974. His son married one of Sadat's daughters.

During the Sadat era, Uthman accumulated power and wealth in ways that aroused widespread suspicion, in part by being both a minister who could issue tenders on contracts and a contractor who could bid on them. Under Husni Mubarak he became vulnerable to criticism by journalists, the Engineers' Syndicate, and even his son, but his firm has remained prominent in Egypt, other Arab states, and other African countries. Although he was a fervent advocate of free-enterprise capitalism, Uthman's personal success depended on his political connections as much as on his intelligence and hard work.

UZBEKS

A Central Asian people.

In the 1920s and 1930s, before the Soviet Union implemented language and nationalities policies, the Uzbek language, an eastern Turkic language of the Altaic family generally known as Turki (Chaghatai), was written in Arabic script and was the principal literary language for all Turkic-speaking central Asians. When they were forced to adopt Cyrillic script (i.e., the Russian and Slavic alphabet), Uzbeks and other central Asian Turks were denied easy access to their rich literary heritage, which dates to the fifteenth century.

Uzbeks practice Islam; they are Sunni Hanafi Muslims. Originally pastoral nomads, by the early part of the twentieth century they were predominantly sedentary subsistence farmers, herders, or

inhabitants of small towns engaged in producing and marketing crafts. Until the mid-nineteenth century, the Uzbeks were politically the preeminent force in the region. From the 1860s to 1991, the Uzbeks and other central Asian Muslims suffered colonial occupation of their lands by czarist Russia and its successor, the Soviet Union. As of 2001, Uzbeks constitute more than 80 percent of the population of the independent state of Uzbekistan; about 15 million Uzbeks speak the Northern Uzbek language. Uzbeks are also one of the larger ethnic minority groups in neighboring Tajikistan and in the northern part of the Islamic State of Afghanistan, where Southern Uzbek, a related but distinct language, is spoken.

V

VAʿAD LEʾUMI

National Council of the Jews in Mandatory Palestine.

The Vaʿad Leʾumi (VL) was the supreme executive authority and representative organ of the Yishuv (Jewish community in Palestine) between 1920 and 1948. Functioning much like a cabinet, each Vaʿad Leʾumi was composed of members of an Asefat ha-Nivharim (elected assembly), and its day-to-day operations were largely in the hands of a chairman and a smaller executive committee. For most of the Mandate period the executive was headed by a praesidium of Yizhak Ben-Zvi, Yaakov Thon, and David Yellin.

One of the main functions of the VL was to act as official representative for the heterogeneous, highly politicized Jewish community in Palestine. The VL served as a high-level public forum for debating the divergent viewpoints and conflicting interests of religious versus secular Jews; farmers and employers versus organized labor; and native versus newly arrived immigrant groups having differing traditions (e.g., Sephardim versus Ashkenazim). The Palestine Royal Commission Report (1937) credited the VL and its local educational system with counteracting these divisive forces by the forging of a "national self-consciousness of unusual intensity."

The VL was frequently beset by organizational difficulties and jurisdictional squabbles with the Palestine Zionist Executive and the Jewish Agency Executive (both responsible to the World Zionist Organization). While most matters of high policy were decided by Zionist leaders and organs in Palestine and abroad, the VL was able to exercise its autonomy mainly in the spheres of education and local communal affairs. After 14 May 1948 the functions and departments of the VL and those of certain sections of the Jewish Agency came under the authority of a provisional state council of the State of Israel.

VAKA-I HAYRIYE

Turkish for "the beneficial event"; the end of the janissary corps in 1826.

The term *vaka-i hayriye* has been used by Turkish historians to describe the government-ordered destruction of the Ottoman Empire's military unit, the janissary corps, on 15 June 1826. This momentous event resulted in considerable bloodshed (6,000 dead, according to conservative estimates) and was received with dismay and mixed emotions by large segments of the populace. In an attempt to gain public approval, Mahmud II's regime, using the services of the *ulama* (Islamic scholars), presented the incident as unavoidable and necessary to protect the very survival of Islam and the Ottoman Empire. Immediately following the destruction of the janissary corps, Mahmud II ordered the court chronicler, Mehmet Esad Efendi (c. 1789–1848), to record the official version of events, *Üss-i Zafer* (Foundation of victory), which was printed in Istanbul in 1828 and served as the main source for every other Ottoman account of this period.

VANCE, CYRUS

[1917–2002]

U.S. lawyer and government official.

Cyrus Vance, born in Clarksburg, West Virginia, received a bachelor of arts degree from Yale University in 1939 and a law degree in 1942. After serving as a junior naval gunnery officer in the Pacific Theater in World War II and practicing law, he served in a number of government positions, including general counsel for the Department of Defense (1961–1962), secretary of the army (1962–1963), deputy secretary of defense (1964–1967), and secretary of state (1977–1980). He continued to be active in international affairs after his resignation in 1980. His work with Middle Eastern and Eastern European problems included service as President Lyndon Baines Johnson's special representative on Cyprus in 1967, helping to ensure that Greece and Turkey would not be drawn into war over the conflict. He received the Medal of Freedom from the U.S. president for his work. Before returning to federal service, Vance and Daniel Yankelovich founded the respected Public Agenda, a nonprofit and nonpartisan research organization in New York. His most prominent role in the Middle East was as secretary of state under President Jimmy Carter, during which he had a leading role in the Camp David Accords: He held extensive consultations with Israeli prime minister Menachem Begin and Egyptian president Anwar al-Sadat at Camp

David, Maryland, which led to the September 1978 peace agreement between the two countries. Vance resigned from the Carter administration in 1980 because he disagreed with the president's decision to use force to rescue the U.S. citizens held hostage in Teheran. Widely respected for his integrity and range of international contacts, Vance worked with the United Nations to secure the cease-fire in Croatia in 1991, and later helped to resolve creditor claims in a real estate case in New York in 1993. Vance died in 2002 after an extended bout with Alzheimer's disease.

VAN, LAKE

Salt lake in eastern Turkey.

Lake Van is the largest lake in Turkey, some 5,600 feet (1,600 m) above sea level, with a surface area of 1,400 square miles (3,700 sq. km). Having no outlet, its waters evaporate and concentrate salts, including carbonates and sulphates of soda; the resulting blue-green color creates a startling, austere beauty. Lake Van is stocked with darek, a herring-like fish consumed locally.

VANUNU AFFAIR

A controversy over divulging Israeli nuclear information to a British newspaper.

In October 1986, Mordechai Vanunu (1954–), a former employee of the Dimona nuclear reactor in Israel, provided the *Sunday Times* of London with information and photographs of the plant, claiming Israel was producing nuclear arms and that it had stockpiled between one hundred and two hundred nuclear weapons. Israel denied the charges and stated that it did not possess nuclear weapons and would not be the first Middle Eastern country to introduce nuclear arms to the region.

Vanunu was kidnapped in Italy by the Mossad and returned to Israel, where he underwent a seven-month-long secret trial for treason and espionage against the state. The three-judge court's sixty-page verdict was almost completely classified; only one sentence was made public: "We decided the defendant is guilty on all three counts." The three counts involved espionage, the unauthorized transmission of information, and helping Israel's enemies in a time of war.

Vanunu was widely portrayed in the Israeli press as a traitor and as mentally deranged. His prison sentence at times included solitary confinement, and his cause was taken up by human rights and disarmament groups and scientists around the world. European disarmament groups claimed that he was a hero and he was nominated for the Nobel Peace Prize. World opinion was that the bulk of Vanunu's story and data was accurate, demonstrating that Israel did indeed have a substantial nuclear arsenal.

VARLIK VERGISI

Capital tax levied in Turkey during World War II.

Adopted in November 1942 to finance Turkey's emergency military expenditures during World War

II, the Varlik Vergisi was heavily criticized as confiscatory and discriminatory. It was abolished in March 1944. Justified as a social equalization measure against those who profiteered during the war, up to 75 percent of net profits were collected as tax from trade companies. Istanbul merchants and non-Muslims were taxed far more heavily than Muslims and farmers. The tax produced long-term political effects in the fear of government as a threat to private property and in highlighting the dangers of one-party rule.

VATICAN AND THE MIDDLE EAST

The Roman Catholic Church struggles to maintain its presence in the Middle East.

The presence of the Roman Catholic Church in the Middle East goes back to the Roman and Byzantine empires, to the Crusades, and to European imperialism and colonialism. Following the Second Vatican Council (1962–1965), Vatican diplomacy in the Middle East focused on three goals: preserving Christianity and a Christian presence in what Christians term the Holy Land, fostering peace with justice between Israel and the Palestinians, and maintaining Lebanon as an example of coexistence between Christians and Muslims.

The Vatican faces problems of demographic changes in the Middle East, especially in Jerusalem and the West Bank, where Christian Arabs are leaving because of their minority status; the resurgence of Islamic and Jewish fundamentalisms; and unstable economic and political situations. The relationship between the Vatican and Israel is a mixture of theological prejudice and political pragmatism. In recent years, however, the Holy See has established diplomatic relations with Israel (December 1993) and with the Hashemite Kingdom of Jordan (April 1994), and in 2000 the Vatican signed a Basic Agreement with the Palestine Liberation Organization (PLO). This agreement called for the resolution of the Israeli-Palestinian conflict on the basis of the various relevant UN resolutions. In March 2000 Pope John Paul II undertook a historic trip to Israel and the Palestinian-controlled territories, only the second time since 1964 that a sovereign pontiff set foot in the Holy Land. Throughout the Oslo peace process and the al-Aqsa Intifada the Vatican used its influence to ensure that the papacy's concerns and interests in Jerusalem and Christian holy sites were taken into consideration by U.S. president Bill Clinton, Israeli prime minister Ehud Barak, and PLO chairman Yasir Arafat.

The Lebanese Civil War (1975–1989) was a major challenge to the papacy. Several mediation missions were dispatched by both Pope Paul VI and Pope John Paul II, and in 1995 the latter convened in Rome a synod of Roman Catholic bishops, with Muslim and Orthodox Christian observers, for the express purpose of addressing the Lebanese situation. It is clear that if Lebanon were to fail as an example of coexistence, the Vatican's position in the region would be weakened.

GEORGE E. IRANI

VAZHAPETIAN, NERSES

[1837–1884]

Armenian patriarch of Istanbul, 1873–1884.

Born in Istanbul, Nerses Vazhapetian spent his entire life in or near the Ottoman capital. Although deprived of a formal education at the age of fifteen after the death of his father, Vazhapetian became a teacher and joined the clergy of the Armenian Apostolic Church. Anointed a celibate priest in 1858, he was a bishop by 1862. Active in the administrative affairs of the Armenian Millet, Vazhapetian had a hand in drafting the so-called Armenian national

constitution by which the Armenian Church and millet were regulated in the Ottoman Empire. In 1873, at age thirty-seven, he was elected Armenian partiarch of Istanbul.

The Russo-Ottoman War of 1877–1878, partly waged over the Armenian-populated provinces of eastern Anatolia, brought the issue of the Armenians to the fore of the diplomatic contest for influence in the Ottoman Empire. When the extent of the Kurdish predations over the Armenian communities became known, Vazhapetian, who had issued an encyclical supporting the Ottoman war effort, was authorized by the Armenian national assembly to appeal to Grand Duke Nicholas at San Stefano for consideration of local self-government in the areas of Armenian concentration. In the formal Treaty of San Stefano, signed on 3 March 1878, by the Ottomans and Russians, Article 16 provided for reforms and security under Russian trusteeship in the so-called Armenian provinces.

While Russian withdrawal from these areas was conditional on implementation of the reforms, the Congress of Berlin revised the terms of the treaty. The Armenian delegation sent by Vazhapetian to Berlin received no hearing, and Article 61 of the Treaty of Berlin, signed 13 July 1878, provided only for reforms as those territories were returned to the Ottomans. Still Armenians expected an international treaty to prove more binding on the Ottomans than mere promises. The failure of the European powers to require Sultan Abdülhamit II to proceed with reforms became the source of disillusionment. By the time of Vazhapetian's death in Istanbul, small groups of provincial Armenians had began to resort to self-defense in the face of continued insecurity in what became known as the Armenian Revolutionary Movement.

VAZIR AFKHAM, SOLTAN ALI KHAN

[1867–1918]

Iranian courtier of the Qajar period.

Soltan Ali Khan was in the service of Mozaffar al-Din Qajar from the time the latter became crown prince in Tabriz. Upon the shah's ascension to power, Soltan Ali Khan was first appointed head of the Royal Correspondence Office and then minister of revenues, and in 1901 he received the title Vazir Afkham. In 1907, he was made prime minister and minister of interior under Mohammad Ali Qajar and headed the first Iranian cabinet after the Constitutional Revolution. Opposed by the Constitutionalists, he was deposed in 1909 and died in 1918, the same year his oldest son was killed in a romantic feud.

See also CONSTITUTIONAL REVOLUTION; MOHAMMAD ALI SHAH QAJAR; MOZAFFAR AL-DIN QAJAR.

NEGUIN YAVARI

VAZIRI, QAMAR AL-MOLUK

[1905–1959]

Considered the first professional female singer in Iran.

Qamar al-Moluk Vaziri was born to a middle-class family in the city of Kashan, Iran, in 1905. Raised by her grandmother, a religiously inclined woman who performed as a eulogist in women's gatherings, Qamar accompanied her to these events, where she herself also performed eulogies. She later studied under masters of Persian classical music and acquired fame as a singer. Numerous recordings were made of her songs. The singer died in 1959 from heart disease and was buried in Dhahir al-Dowleh cemetery in northern Tehran.

PARVANEH POURSHARIATI

VELAYAT-E FAQIH

Theory of governance in Shiʿite Islam.

From the Arabic term for "the authority, or governance, of the jurist," the doctrine of *velayat-e faqih* was associated particularly with Iran's Ayatollah Ruhollah Khomeini. It holds that those scholars of Shiʿite Islam most qualified in terms of piety

and erudition are to exercise the governmental functions of the Twelfth Imam during his major occultation (absence from the terrestrial plane), which began in 939 C.E. and still continues. Even before the occultation, the imams would delegate certain of their functions, particularly in the judicial sphere, to qualified members of the Shiʿite Islam community as a matter of practical necessity. It was therefore natural that after the beginning of the occultation, other executive functions of the imam also should be assigned to the Shiʿite jurists, including, for example, the collection and disbursement of religiously mandated taxes *(zakat* and *khoms),* but not the waging of offensive jihad (holy war) or (according to some jurists) the holding of Friday prayers. This led to the crystallization of the theory of the *niyabat-e amma* (general deputyship) of the jurists, a process that was complete by the middle of the sixteenth century. Already in the Safavid period (1501–1702) the general deputyship occasionally was interpreted to include all the prerogatives of rule that in principle had belonged to the imams, but no special emphasis was placed on this. Similarly, although *velayat-e faqih* began to be discussed as a distinct legal topic in the nineteenth century, against a background of enhanced social authority for the Shiʿite jurists, no concrete political conclusions were drawn from the concept.

It was left to Ayatollah Khomeini to claim, in typically radical and comprehensive fashion, the right or even duty of the leading Shiʿite scholars to rule. He did this in his first published work (*Kashf al-Asrar,* 1944), again in a technical work on Shiʿite jurisprudence, and most fully and importantly, in a series of lectures delivered in 1970 during his exile in Iraq; these lectures were published under the title *Hokumat-e Islami* (Islamic government).

Khomeini's arguments in the lectures are both scriptural and rational, traditional and revolutionary. Asserting that Islamic government differs from all other forms of rule by being based on the implementation of divine law, Khomeini attributes the disarray of the Islamic world in general and Iran in particular to the prevalence of arbitrary rule and its concomitant man-made laws. He then demonstrates the centrality of government to the Islamic worldview and ridicules the opinion that the validity of the laws contained in the Qurʾan (the holy book of Islam) and other sources should have been restricted to the first few centuries of the Islamic era. Next, he reviews in great detail the Qurʾanic verses and traditions of the prophet Muhammad and the imams, which, in his estimation, support the thesis of *velayat-e faqih*; cites the opinions of previous, mostly recent, Shiʿite scholars on the subject; and reaches the conclusion that "the same governance that was exercised by the Most Noble Messenger and by the Imams is also the prerogative of the jurists" (Khomeini).

In the last of the lectures, Khomeini laments the prevalence of the "pseudo-saintly" in the religious institution, and it was indeed several years before a sizable number of Khomeini's colleagues came to accept his thesis. It was the repressive policies of the shah of Iran, Mohammad Reza Pahlavi (ruled 1941–1979), that impelled the religious scholars to conceive of broad and radical aims and enabled them to gain a favorable response from much of the Iranian public. Nonetheless, although by the autumn of 1978 a clear majority of Iranians had come to favor the institution of an Islamic government under the leadership of Khomeini, it cannot be said that *velayat-e faqih* was a prominent slogan of the Iranian Revolution. Khomeini himself made no mention of it in the proclamations he issued during the revolution.

Not until the constitution of the Islamic Republic of Iran was elaborated by the Assembly of Experts that convened in the fall of 1979 did *velayat-e faqih* emerge as the pillar of the new order. It was enshrined in the preamble to the constitution in Article Five ("During the Occultation of the Lord of the Age [that is, the Hidden Imam], the governance and leadership of the nation devolve upon the pious and just jurist who is acquainted with the circumstances of his age; courageous, resourceful, and possessed of administrative ability; and recognized and accepted as leader by the majority of the people"); and in Articles 107 to 112, which specify the procedure for selecting the leader and list his constitutional functions.

Khomeini's own view was that these provisions did not do justice to *velayat-e faqih,* and in February 1988 he propounded the theory of *velayat-e motlaqa-ye faqih* ("the absolute authority of the jurist"). He declared obedience to the ruling jurist to be as incumbent on the believer as the performance of prayer, and his powers to extend even to the tem-

porary suspension of such essential rites of Islam as the hajj (pilgrimage to Mecca). Although this formulation of the theory might appear to be an ideal prescription for theocratic absolutism, in fact, Khomeini was not seeking to extend his control of Iranian affairs (which in any event was far less than absolute). Rather, he was seeking to provide theoretical justification for government attempts to break the stalemate on controversial items of social and economic legislation.

The actual implementation of *velayat-e faqih,* moreover, was destined to change in a quite different direction. When Ayatollah Hosainali Montazeri was compelled in March 1989 to resign as designated successor to Khomeini, none of the other senior religious scholars seemed qualified for the position. When Khomeini died on 4 June of the same year, it was therefore Hojjat al-Islam Ali Khamenehi—a relatively junior figure in the religious hierarchy, despite his political prominence—who was chosen as leader of the Islamic Republic. This necessitated the modification of Article 109 of the constitution to remove scholarly seniority from the qualifications of the leader, a change that was approved in a referendum held in August 1989. It has been argued credibly that the resulting disjunction of political leadership from seniority in the learned hierarchy of Iranian Shiʿism effectively brings the implementation of *velayat-e faqih* to an end. If this is true, *velayat-e faqih* must be designated as a theory that was, to a degree, workable only because of the unique qualities and appeal of Khomeini, and that falls short of being a permanent solution to the problem of governance in a Shiʿite Muslim society.

VELAYATI, ALI AKBAR

[1945–]

Foreign minister of Iran, 1981–1997.

Born in Tehran in 1945, Ali Akbar Velayati received a doctorate in pediatrics from Tehran University in 1971. After completing postgraduate work, he left for further studies in the United States, where he joined the Organization of Iranian Moslem Students. Returning home, he taught at his alma mater and was appointed deputy health minister in the first government appointed by Ayatollah Ruhollah Khomeini in 1979. He also served in the first parliament in 1980.

Before the Iranian revolution, Velayati was a member of the Hojjatieh group, an anti-Bahai conservative group that eventually challenged the dominance of the Islamic Republican Party (IRP). He left the group in 1983 when Khomeini denounced its activities, and he joined the Jamʿiat Motalefeh Islami (Islamic Society, or JME), a group very close to the conservative *ulama* and bazaari merchants. In 1980 the IRP and JME unsuccessfully had pressed Iran's current president, Abolhasan Bani Sadr, to appoint Velayati as a foreign minister. In 1981 President Hojatoleslam Seyed Ali Khamenehi nominated Velayati for premier but could not win support from the parliament. Khamenehi accepted the parliament's choice of Mir Hossein Mousavi as prime minister if Velayati were appointed as foreign minister—a position Velayati held for more than sixteen years and through four administrations until 1997.

Velayati is a conservative pragmatist who helped to move Iran out of its revolutionary isolation and temper its adventurist foreign policies of the early 1980s. However, he opposed ties with the United States as an archenemy of the Islamic Republic and regards Israel as an illegitimate state in the heartland of Islam. He helped Iran to join international organizations and favored developing ties with Europe and developing countries.

Internally, his tenure in the foreign ministry has been criticized for putting more emphasis on loyalty than on professional qualifications. He is regarded as a nonclerical protégé of the religious elite who owes his long presence in Iranian politics to his loyalty to the supreme leader, Ayatollah Khamenehi. In 1997 he was named by a German court as a member of the Special Operations Committee that approved the 1992 assassinations of three Kurdish

Democratic Party leaders in the Mykonos Restaurant in Berlin.

Since his departure from the foreign ministry, Velayati has been a member of the Expediency Council, serves as an adviser on international affairs to Ayatollah Khamenehi and conducts foreign policy assignments, and continues to teach in the university and write articles and books on the history of Iran and the Iranian revolution for government publication. He also serves as the secretary-general of the Ahlul Bayt World Assembly—a religious institution named after the descendants of the prophet Muhammad and established to advance the Shiʿite cause around the world.

VERSAILLES, TREATY OF (1920)

Treaty ending World War I; it established the mandate system for the governance and eventual independence of the Central Powers' former colonies.

The armistices of October and November 1918 ending hostilities in World War I were followed by the Conference of Paris at which World War I victors and associated powers determined the terms for dealing with Germany and her allies during the war. The conference, which officially began on 18 January 1919, resulted in five treaties. The Treaty of Versailles, signed on 28 June at Versailles, France, and ratified on 20 January 1920, addressed the terms of peace with Germany. The treaties of Sèvres, Neuilly, St. Germain, and Trianon dealt with the Ottoman Empire, Bulgaria, Austria, and Hungary, respectively. Besides setting forth the terms for dealing with Germany after World War I, the Treaty of Versailles established the League of Nations and the mandate system for governing territories surrendered by Germany. This treaty included the Covenant of the League of Nations as Part I, with Article 22 giving the league the power to supervise mandated territories consisting of former German colonies. The other treaties included the covenant in their texts.

The armistice with Germany and the Conference of Paris were both predicated on U.S. President Woodrow Wilson's Fourteen Points for peace enunciated in his address to Congress on 8 January 1918. In addition to his vision of a League of Nations, these included an adjustment of all colonial claims giving equal weight to the interests of colonial populations and to those of countries with colonial claims. This led many to believe that the peace conference would lead to the independence of the Arab portions of the Ottoman Empire. Based on this, Prince Faisal I ibn Hussein arrived in Paris in January 1919 as head of the Hijaz delegation and with the objective of securing an independent Arab state. At first the French opposed recognition of the Hijaz delegation based on the fact that the Hijaz was not one of the Allied belligerent states. The British, however, intervened, and the Hijaz delegation was recognized. On 29 January Faisal submitted a statement to the conference defining Arab claims. He requested recognition as "independent sovereign peoples" for those Arab-speaking peoples of Asia from the Alexandretta–Diyarbekir line south to the Indian Ocean. Essentially, this included what is now Syria, Lebanon, Israel, Jordan, and Iraq. Faisal exempted the Hijaz as already independent, as well as British Aden. The prince addressed the conference on 6 February, stressing the principle of the consent of the governed. He then proposed a commission to visit Syria and Palestine and ascertain the wishes of the populace. The French were not inclined to support this, but pressure by Wilson resulted, on 25 March, in the approval of a commission, later known as the King–Crane Commission.

Despite the sincere desires of Wilson to forge a new world in which all peoples would be the ultimate determiners of their national destinies and the eloquent arguments of Faisal and others on behalf of the Arabs, the Conference of Paris yielded to the imperial interests of Britain and France and, to a lesser extent, to those of Italy and Japan. The colonial territories of Germany and the Arab portions of the Ottoman Empire were assigned to members of the League of Nations under the mandate system

established in the covenant. In the case of the Middle East, agreements made during World War I played a large role in distribution of mandates. The secret Anglo–Franco–Russian agreement of 16 May 1916, commonly known as the Sykes–Picot Agreement, divided the Arab dominions of the Ottoman Empire between Britain and France. Britain received the areas that are now Iraq, Jordan, and Israel; France got what is now Syria and Lebanon. The Balfour Declaration of 2 November 1917, also played a role in the disposition of Arab territories by the Conference of Paris. This was a letter from Lord Balfour, British foreign secretary, to Lord (Edmond de) Rothschild, a prominent British Zionist, that supported the establishment of a national home for the Jewish people in Palestine. These two documents, more than anything else, shaped the fate of the Middle East in the post–World War I era. The San Remo Conference of April 1920 awarded Syria, including Lebanon, as a Class A mandate to France; Iraq and Palestine, including Transjordan, became Class A mandates under British supervision. The mandate for Palestine endorsed the provisions of the Balfour Declaration. In 1921 Britain separated Transjordan from Palestine, exempting it from the provisions of the Balfour Declaration. As Class A mandates, all three were to be given independence when it was determined that they were able to stand on their own. In the case of Iraq and Transjordan, Arab dignitaries were given royal status in preparation for the eventual independence of these areas. Prince Faisal became the king of Iraq, and Prince Abdullah I ibn Hussein became the amir of Transjordan. The League of Nations confirmed these mandates in 1922, some of which outlived the international organization under which they were formed. The first mandate to obtain independence was Iraq, in 1932, followed by Syria and Lebanon in 1941. Transjordan, now Jordan, gained its independence in 1946. Palestine, much of which is now Israel, gained independence in 1948.

VICTORIA COLLEGE

British-style public school in Alexandria, Egypt.

Victoria College was founded in 1901 on the initiative of eight resident merchants, bankers, and shipping magnates, six of whom were British, one Syrian, and one the Austro-Hungarian president of the Jewish Community of Alexandria. The makeup of the entering classes of 1902 reflected the cosmopolitanism that was to characterize the institution up to the mid-1950s—eight of the students were Syrian, including George Antonius and his three brothers, three were Greek, three were Egyptian Muslims, one was English, and ten were identified in the language of the time as "Israelite." In those early decades the language of instruction was English, but the study of Arabic and French was mandatory. The school also placed a strong emphasis on cricket, soccer, and hockey. Under the leadership (1901–1922) of its first headmaster, Charles Lias of King's College, Cambridge University, Victoria adopted the Oxford and Cambridge Joint Board Examination, the qualifying exam for English medical and engineering schools as well as for Oxford and Cambridge. Victoria boys obtained outstanding exam results, and the school became a breeding ground for university education in England and elsewhere. For example, between 1908 and 1913, thirty-three Victoria graduates attended European or U.S. universities, including nine at Cambridge, four at Toulouse, and one at the University of Edinburgh Medical School.

In 1906 the campus moved from downtown to the city's eastern suburbs. There its stately buildings and spacious playing fields stood out as an Alexandrian landmark and were the envy of other, less privileged schools. For more than half a century, Victoria College played an important role in providing a first-rate European education along British public-school lines to successive generations of well-born Egyptians—Muslims, Copts, and Jews—as well as foreign residents in Egypt, whatever their

race, color, or creed. Primary identification with the school blurred ethnic and religious differences and created an atmosphere of tolerance within the tightly knit student body. The school's prestige extended well beyond Egypt under its second headmaster, R. W. G. Reed of Oxford, and it began to attract the scions of the English-speaking ruling elite in the rest of the region: Thus, King Hussein ibn Talal of Jordan and his brother, Prince Hassan; the last Hashimite king of Iraq, Faisal II ibn Ghazi, and his uncle, the regent Abd al-Ilah; the former sultan of Zanzibar; and the king of Albania were students at Victoria.

Along with all other foreign schools, Victoria was nationalized by Gamal Abdel Nasser in the wake of the Suez War in 1956 and now survives as a pale reflection of its former self, under the label of Victory College. In the 1990s, as a coeducational institution, its 6,000 students were jammed into a campus originally built for 500.

VILLAGE INSTITUTES

Turkish institutes for training primary-school teachers.

The Village Institutes (Köy Enstitüleri) of Turkey represented a short-lived (1940–1950) but highly innovative experiment in primary-school teacher training. In the 1930s, over 75 percent of Turkey's people lived in some 35,000 villages, and over 80 percent of these villagers were illiterate. Only a small proportion of villages had primary schools, and most of their urban-born teachers had difficulty coping with rural conditions. After the dissolution of the Ottoman Empire and the establishment of the Republic of Turkey in 1923, Mustafa Kemal (Atatürk) and his ruling Republican People's Party (RPP) planned to design a national system of compulsory secular education to enculturate a new generation of Turks in the principles of modern science and Turkish nationalism. Educational reform and a cadre of new, secular teachers were to spread Kemalism and lift the masses from the depths of poverty and ignorance. While impressive educational gains were achieved in the cities, most villages remained without schools.

Ismail Hakki Tonguç, the director general of primary education, and his colleagues designed a plan they hoped would produce teachers capable of living in the villages and able to make a comprehensive impact on them. The plan called for creating special teacher-training institutes, recruiting village students to them, teaching these students general subjects plus useful village technology, and then sending them back to the villages to teach in five-year primary schools.

Shortly after the Turkish Grand National Assembly passed the necessary legislation in 1940, fourteen Village Institutes opened their doors to eager recruits. Actually, many of the institutes' facilities were incomplete, so teachers and students worked side by side building classrooms, dining halls, and dormitories. In the process, students acquired useful carpentry, masonry, and other construction skills.

The ministry of education intentionally located the institutes in rural areas, so that students could practice farming, plant orchards, develop water and sanitation systems, and generally confront typical village problems with modern skills and science. Youths of both sexes, between the ages of twelve and sixteen, who were graduated by a five-year village primary school, qualified for admission to a village institute. The government offered this education free to students who pledged to teach in an assigned village for twenty years after graduation.

Twenty-five percent of the Institute's five-year curriculum was devoted to agriculture (crop production, zootechnology, apiculture [beekeeping], and silkworm culture); 25 percent was devoted to technology (carpentry, construction, blacksmithing, health, and childcare for female students); and 50 percent dealt with general education (the Turkish language, history, literature, geography, math, bi-

ology, and civics). In 1950, the curriculum was expanded to six years. As village teachers, institute graduates were expected to teach general education subjects to children, adult-literacy classes, scientific farming and animal husbandry, and handicrafts; they were obligated to play a central role in the community and generally awaken the civic conscience of the rural population.

The institutes provided some of the most idealistic and dedicated rural teachers in Turkey's history. These young men and women inspired many villagers to continue their educations beyond primary school; some even went to the university. A number of village teachers, such as Mahmut Makal (author of *Bizim Köy,* translated as *A Village in Anatolia*), became famous writers who pioneered a new literary genre that focused on peasant life.

From their inception, however, the Village Institutes were subject to controversy. Political opponents described them as indoctrination agencies of the ruling party. Some educators claimed they failed to prepare students adequately for their exhaustive duties as rural teachers. Very conservative villagers complained that institute graduates preached revolutionary and antireligious ideas in their villages. More extreme opponents accused the institutes of teaching communism.

When the new opposition party, the Democrat party (DP), came to power in 1950, they removed institute supporters from the ministry of education and abolished the twenty-one existing institutes by transforming them into ordinary teacher-training schools. Before their demise, the institutes had graduated 15,767 men and 1,395 women.

VOLPI, GIUSEPPE

Governor of Libya from 1922 to 1925, after a short period as governor of Tripolitania.

Giuseppe Volpi abandoned the policy of trying to govern Libya through Libyan representatives in the aftermath of the first Italo–Sanusi War. This had involved recognizing a Sanusi amir in Cyrenaica or trying to use the leaders of the Tripolitanian republic in Tripolitania.

Instead, Volpi gave a free hand to the military commanders on the spot, Rodolfo Graziani and Pietro Badoglio. His new policy was enthusiastically endorsed by the Fascists when they came to power in October 1922. It had been signaled the previous April, when he sanctioned an attack on Misurata, and achieved its fullest expression with the outbreak of the second Italo–Sanusi War in early 1923.

Volpi's three-year tenure as governor also marked the introduction of an intensive colonization scheme. He sought to increase the amount of state funds made available for it, alienated to the state all uncultivated land and all rebel-held land, once it was conquered, and provided tax-relief schemes to attract investment funding. By doing this, he prepared the way for the legislation introduced by Emilio de Bono, who actually began the process of large-scale Italian peasant migration into Libya.

GEORGE JOFFE

VOZUQ AL-DOWLEH, MIRZA HASAN KHAN

[1873–1950]

Iranian politician.

Mirza Hasan Khan was the nephew of Mirza Ali Khan Amin al-Dowleh, the famous prime minister under Mozaffar al-Din Qajar, and he was also the brother of Ahmad Qavam al-Saltaneh. In 1892, he replaced his father as tax collector of Azerbaijan, and four years later he was granted the title Vozuq al-Dowleh. He was elected to the first parliament from Tehran (1906), and, after holding several ministerial posts, he was appointed prime minister and minister of foreign affairs (1916). In 1918, he was reappointed prime minister for the purpose of forming a cabinet, and he headed the ministry of the interior. It was during his tenure as premier that the infamous Anglo-Iranian Agreement of 1919, transforming Iran into a British protectorate, was ratified. Following the conclusion of the agreement, Vozuq al-Dowleh received 60,000 pounds from the British government, but he was forced to return the sum to the Iranian government after Reza Shah Pahlavi took office. In 1921, Vozuq al-Dowleh was appointed minister of finance by the prime minister. After Reza Shah was forced by the Allied powers to abdicate in 1941, Vozuq al-Dowleh returned to private life as a land speculator.

WADI HADRAMAWT

Great valley in eastern Yemen.

Wadi Hadramawt is a 400-mile-long (640 km), well-watered valley east of Aden that constitutes one of the most agriculturally rich areas in Yemen. It produces millet, cotton, wheat, qat, and a variety of fruits and vegetables. The wadi dissects and drains the high plateau of eastern Yemen and is at the center of the Hadramawt, a distinctive geographic and sociopolitical region that was a famous trading state in ancient, pre-Islamic times.

ROBERT D. BURROWES

WADI NATRUN

Principal site of Coptic monasteries in Egypt.

Wadi Natrun is an elongated valley in Egypt's western desert near the Cairo-Alexandria road. As many as 500 Coptic monasteries, once housing up to 50,000 monks, were built there beginning in the fourth century, Four are currently in use: Dayr al-Baramus, Dayr Abu Maqar (St. Macarius), Dayr Anba Bishoi, and Dayr al-Surian. Dayr Anba Bishoi was the site of the enforced exile of Pope Shenouda III by President Anwar al-Sadat in 1981; he was released in 1985. Dayr Abu Maqar has witnessed a revival of Coptic monasticism since it was reopened by a dozen hermit monks in 1969. Since that date, rising numbers of Egyptian Christians have elected to spend part of their lives at Wadi Natrun's monasteries. Several are also open to tourism.

RAYMOND WILLIAM BAKER
UPDATED BY ARTHUR GOLDSCHMIDT

WAFD

Major Egyptian nationalist party organized in 1919.

The Wafd Party took its name from the delegation (in Arabic, *wafd*) composed of Saʿd Zaghlul and other notables who called for the complete independence *(istiqlal tamm)* of Egypt from the British immediately after World War I. When Britain refused to negotiate with the Wafd and exiled its leaders, Egypt launched a full-scale rebellion in 1919. A sophisticated network of organizers in key cities and villages allowed the Wafd to dominate the political scene.

Mustafa al-Nahhas (right), seen here with President Giuseppe Motta of Switzerland at a conference in 1937, was president of the Wafd Party, which fought for years after World War I to achieve Egyptian independence from Great Britain. He became prime minister in 1941, but the Wafd lost popular support as he worked with the British during World War II. © BETTMANN/CORBIS. REPRODUCED BY PERMISSION.

The Wafd did not become a formal political party until 1924, six years after its inception. The party was organized along hierarchical lines, with an executive council. Although the party enjoyed the support of a cross section of the Egyptian populace, its leaders were predominantly urban, upper- and middle-class, modern, and secular. The highly charismatic Zaghlul served as its president until his death in 1927. The Wafdist leadership also included both Muslims and Copts, notably Makram Ubayd. Women, particularly Zaghlul's wife, Safiyya, and Huda al-Shaʿrawi, became leaders in the struggle for women's voting rights, acting on the principle that the struggle against imperialism had to be accompanied by a similar struggle for gender equality. Between the two world wars, the Wafd engaged in a three-way struggle with the British and the Egyptian monarchy. Seeking to undercut Egypt's demands for independence, Britain unilaterally declared Egypt independent in 1922 and promulgated a constitutional monarchy in 1923. As the only party to enjoy widespread popular support for its anti-British stand, the Wafd won the 1924 elections and all subsequent elections that were not manipulated or rigged by King Ahmad Fuʾad or his son Farouk.

Following Zaghlul's death, Mustafa al-Nahhas became president of the party and continued its struggle against the British. In 1936 he signed the Anglo-Egyptian Treaty, which formalized Egyptian and British relations but permitted both the continuation of a British military presence along the Suez Canal zone and British control over the Sudan.

This failure to secure complete independence, coupled with allegations of nepotism and corruption within the party, undermined some of its popular support. In the 1930s many Egyptian youths joined various fascist and radical groups, and the Wafd countered by creating the Blue Shirts, a paramilitary youth organization. In 1941, fearing a pro-Nazi Egyptian government, Britain's ambassador Miles Lampson (later Lord Killearn) forced King Farouk to accept Nahhas as prime minister. Nahhas's willingness to work with the British throughout

World War II further undercut the Wafd's credibility as a nationalist and anti-imperialist party.

Following the 1952 military coup that deposed Farouk, the Wafd was formally disbanded (1953); some of its leaders were then tried for corruption and crimes against the state. In 1976, when Anwar al-Sadat announced the return to a multiparty system, the Wafd was revived under the leadership of Fuʾad Siraj al-Din. The New Wafd called for a parliamentary, multiparty system and the dismantling of socialist measures that had been enacted under Egypt's former president, Gamal Abdel Nasser. In a short time, the Wafd gathered a notable degree of support, particularly among Copts and in the richer urban areas. The Wafd voted to disband in reaction to Sadat's political crackdown in late 1978, but it was revived after Sadat's assassination by Islamists in 1981. In the 1984 elections the New Wafd cooperated with the Muslim Brotherhood and won 58 seats in parliament. By 1990 the New Wafd opposed the government and the continuation of the state of emergency, and it boycotted the 1993 elections. Its newspaper, *al-Wafd,* remained one of the few opposition publications. Following Siraj al-Din's death in 2000, Nʿuman Jumaʿa, a university professor, was elected the new leader in a notably open and transparent election. Representing the new generation, Jumaʿa pushed for political and economic changes; but without grassroots support, the Wafd remained a minority party in parliament.

WAFDIST WOMEN'S CENTRAL COMMITTEE

Egyptian women's committee of the early Wafd party.

Early in the twentieth century Egypt took steps toward forming a *wafd,* or delegation, to demand independence from British rule. In 1910 the National Party (al-Hizb al-Watani) held a congress in Brussels, where Inshirah Shawqi's appeal for independence was read by a man because Egyptian gender conventions prevented her from speaking publicly. Later, Indian nationalist Bhikaji Cama confronted the Wafdist men on the issue of women's participation in the Egyptian nationalist movement. Women's participation in Egyptian civil society became a mobilizing component of the fight for independence, a struggle in which women played a key role.

As women began to enter the Egyptian public sphere, so too did they begin to enter the realm of politics. Wafd members' wives and other women took up the national cause and established the Wafdist Women's Central Committee (Lajnat al-Wafd al-Markaziyya lil-Sayyidat, WWCC) on 12 January 1920 in a meeting at St. Mark's Cathedral. When Wafd leader Saʿd Zaghlul was deported to the Seychelles in 1921, the WWCC continued to work for the nationalist cause in his absence. They coordinated embargoes against British goods and managed the financial side of the nationalist movement. Huda al-Shaʿrawi was elected president of the committee, and other founding members included Ulfat Ratib, Regina Habib Khayyat, Wissa Wasif, Ahmad Abu Usba, Sharifa Riyad, Ester Fahmi Wissa, Louise Majorelle Wasif Ghali, Ihsan al-Qusi, and Fikriyya Husni. Most came from large land-owning families, although some were middle-class Cairenes. The WWCC solidified links between various women's associations in Cairo in the nationalist cause, such as the New Women Society (Jamʿiyat al-Marʾa al-Jadida, founded by Shaʿrawi in 1919), the Society of the Renaissance of the Egyptian Woman (Jamʿiyyat Nahdat al-Sayyidat al-Misriyyat), and the Society of Mothers of the Future (Jamʿiyyat Ummuhat al-Mustaqbal). In addition, women from the WWCC helped to found women's organizations outside Cairo in Minya, Asyut, and Tanta.

Before the WWCC was a year old, members were bitterly disappointed when Saʿd Zaghlul and other Wafdist men did not consult them on a proposal for independence. They published a critique of the Wafdist men's actions and eventually founded the Egyptian Feminist Union (al-Ittihad al-Nisaʾi al-Misri). When Shaʿrawi left, other Wafdist women renamed their group the Committee of Saʿdist Women (al-Lajna al-Saʿdiyya lil-Sayyidat) and remained loyal to Zaghlul. Shaʿrawi and other women

went on to dedicate their efforts to the feminist movement while the Wafd Party's role of serving as a vehicle for women's concerns diminished.

WAHRHAFTIG, ZERAH

[1906–2002]

Israeli legal expert and politician.

Zerah Wahrhaftig (Warhaftig) was born in Belorussia and emigrated to Israel in 1947 via Poland, Lithuania, Japan, and the United States. Before his death in September 2002 at age 96 he was one of the last two living signers of the Israel's Declaration of Independence. As a young man he was active in the National Religious Front. He was a member of the Provisional Council of State, and after being elected to the first Knesset was continuously reelected to the Knesset through the ninth Knesset in 1981. Wahrhaftig served as deputy minister of religious affairs from 1952 to 1958 and as minister of religious affairs in three governments, from 1961 to 1974. He was a member of the National Religious Party's moderate wing.

Wahrhaftig was an expert on the legal and constitutional system of Israel. As chairman of the Knesset Committee, he helped to draft legislation creating rabbinical courts and religious councils, enforcing sabbath law, the Israel Lands Law, and the 1950 Law of Return, which allowed Jews to settle in Israel. After the 1967 war, Wahrhaftig wrote a decree guaranteeing religious autonomy for Jews, Muslims, and Christians in the newly Israeli-administered Jerusalem, and drafted a constitutionally binding edict protecting respective holy sites.

WALLACH, YONA

[1944–1985]

Israeli poet.

Yona Wallach was born in Kiryat Uno, near Tel Aviv, to a veteran pioneer family. Her father was killed in the War of Independence when she was four, a trauma that haunted Wallach throughout her short life. Her widowed mother owned the only local cinema, where the impressionable Wallach absorbed the new-wave films that later echoed in her writing. A misfit in her small town and a high school dropout, Wallach, who wrote her first poem when she was seven, studied art, joined the Tel Aviv Circle of Poets, and published in their avant-garde periodicals.

Seeking relief from her emotional unrest, she turned to mental institutions and drugs, diving uninhibitedly into intense experiences. Life and writing became one, and when her first book, *Devarim* (Words, or Things, 1966), appeared, it shook the Israeli literary world with its inner demons, imaginary and absurd situations, surreal connections, bold depictions of sexuality, and fluid, violent, and seemingly unstructured diction.

In the five books that followed, Wallach took on the feminine revolution in Hebrew writing. She subverted religious and national preconceptions unprecedentedly and often used sexual encounters as the arena for examining issues of social injustice. Her poems blur boundaries between female and male, conscious and subconscious, horror and beauty, sensuality and spirituality. The self is shattered, and its components become separate entities.

Wallach, a precursor of postmodernism, led Israeli literature to uncharted lands. She died of cancer at the age of forty-one.

NILI GOLD

WAQF

An Islamic endowment created by its founder to dedicate specific property for the benefit of a particular public good (waqf khayri) *and/or the donor's family* (waqf ahli).

A *waqf* (Arabic plural, *awqâf*) may be composed of any kind of durable property whose use or income provides communal benefits, including mosques, hospitals, libraries, schools, canals, roads, and water fountains. The donor will write the charter for the administration of the *waqf* and appoint its initial trustees. The *kaʿba* in Mecca, the center of the Muslim pilgrimage, is the archetype of a *waqf.*

The first *waqf* established by Muhammad's community was the mosque at Quba in Medina. Charitable *waqfs* were established soon after when Muhammad dedicated seven orchards inherited from a follower to provide for the poor and needy. During the caliphate of Umar some donors established family *waqfs,* dedicating the income from their estates first to provide for their own descendents, with the surplus going to the poor. In the classical period of Islamic civilization the *waqfs* were an integral part of the economic and civil society infrastructure.

In the nineteenth and twentieth centuries, after the colonial powers had, to varying degrees, marginalized the *waqfs,* the secular states that succeeded them dismantled or appropriated them to a significant degree throughout most of the Muslim world. Motivations were partly economic (that the permanent nature of *waqfs* tied up resources that might be more effectively reallocated), but mainly political, aiming to increase state function, authority, and wealth at the expense of the civil (especially, the religious) sector. After appropriation of *waqf* lands for the benefit of multinational corporations by the shah of Iran, for example, migration of evicted tenant farmers to the cities contributed to the discontent leading to the revolution that established the Islamic Republic in 1979.

Despite the diminution in their properties, size, and autonomy, the *waqf* remains a significant element of Islamic society. In recent years they have experienced a resurgence, especially in Lebanon, Turkey, Jordan, and Algeria.

UPDATED BY IMAD-AD-DEAN AHMAD

WAR IN IRAQ (2003)

Controversial U.S.-led invasion and occupation of Iraq.

During the decade following the Gulf War of 1991, U.S.–Iraqi relations remained tense. At issue was the extent to which Iraq was cooperating with international monitors looking for evidence that the country was free of any weapons of mass destruction (chemical, biological, nuclear weapons). The United States was the leading force within the UN Security Council urging that the crippling international economic sanctions against Iraq that had been in place since August 1990 be continued until the United Nations Special Commission (UNSCOM) could certify Iraqi compliance. Several times during the administration of U.S. president William J. (Bill) Clinton, the situation deteriorated into crisis, including the December 1998 U.S. attack on Iraq known in the United States as Operation Desert Fox. Shortly thereafter, Iraq announced that UNSCOM's mission was over altogether.

Hardening of U.S–Iraq Relations under George W. Bush

The administration of President George W. Bush brought about a marked hardening of U.S. attitudes toward Iraq once he took office in January 2001. Bush, son of former president George H.W. Bush,

who had led the 1991 Gulf War against Iraqi president Saddam Hussein, filled his administration with many veterans of his father's war with Iraq. These included Secretary of State Colin L. Powell, who had been chairman of the joint chiefs of staff of the U.S. military at the time of the Gulf War, and Vice President Richard Cheney, who had been secretary of defense for the elder Bush. The attacks carried out by al-Qaʿida on 11 September 2001, and Bush's decision to invade Afghanistan in October 2001, only hardened his resolve to confront Iraq. In his 30 January 2002 state of the union address, Bush included Iraq along with Iran and North Korea in what he called an "Axis of Evil." He pointed to what he claimed was evidence of Iraq's noncompliance with UN Security Council resolutions calling for disarmament, including a document purporting to show that Iraq had attempted to purchase 500 tons of uranium from Niger in 2000 (the International Atomic Energy Agency later proclaimed the document to be counterfeit). After months of claiming that Saddam Hussein constituted a clear threat to the United States, Bush convinced the U.S. congress to authorize him to use force against Iraq. The U.S. media offered no serious challenge to the administration's agenda.

Iraq agreed to allow UN weapons inspectors to return in September 2002, but an international debate over how to proceed ensued. The Bush administration encountered significant difficulties when it tried to convince other nations to support the use of force against Iraq if it failed to comply fully with UN resolutions. Not only did Bush face opposition from traditional rivals such as Russia and China, but he also had problems with longstanding U.S. allies within the North Atlantic Treaty Organization (NATO), including Germany and France. Those four nations, all of which sat on the UN Security Council at that time (Russia, China, and France as permanent members), remained adamant that the weapons inspectors be allowed to resume their activities before they would countenance any talk of war. Among U.S. allies, only Britain and Spain offered their full support to the U.S. hard line.

On 8 November 2002 the UN Security Council finally passed Resolution 1441, which demanded that Iraq allow the return of weapons inspectors. Iraq accepted, and officials of the United Nations Monitoring, Verification, and Inspection Commission (UNMOVIC), created in December 1999 to replace UNSCOM, began their work on 27 November. In a 27 January 2003 report, chief inspectors Hans Blix and Muhammad El Baradei generally praised Iraqi cooperation and noted that they had not uncovered any evidence of weapons of mass destruction in the approximately 300 inspections that UNMOVIC had carried out to that date. The United States and Britain continued to make the case that Iraq had such weapons and constituted an immediate threat. On 3 February British prime minister Tony Blair posted a document on his official Web site that he claimed showed Iraqi weapons violations, based in part on British intelligence (parts of the document were later shown to have been plagiarized from open sources, not intelligence reports). U.S. secretary of state Colin Powell addressed the Security Council five days later, using props such as intercepted audiotapes of Iraqi military commanders' conversations, to convince the council that Iraq continued to disregard the international community. The U.S. administration also shifted its rationale for war during late 2002 and early 2003, mentioning banned weapons, then discussing possible Iraqi links to the al-Qaʿida network, then discussing the need to liberate Iraqis from Saddam's Hussein's dictatorial rule.

During the weeks of this debate there was unprecedented popular global opposition to waging war against Iraq. Demonstrations were held on all seven continents in early 2003, including at the McMurdo scientific research station in Antarctica. It has been estimated that 30 million people worldwide participated in antiwar demonstrations in 600 cities in dozens of countries during a weekend of global protest from 14 to 16 February. Countries whose governments supported the war—Britain, Spain, Italy, and the United States—were the scenes of what were perhaps their nations' largest ever public rallies. Huge demonstrations were held in Italy, where Pope John Paul II appealed for peace from the hawks. A January 2003 demonstration in freezing temperatures in Washington, D.C., was called the largest demonstration in the United States since the era of the Vietnam war protests.

Undeterred by such massive global opposition, including from longstanding U.S. allies, the United

States tried twice, in late February and early March, to convince the Security Council to adopt a resolution stating that Iraq had failed to comply with Resolution 1441 and calling for "serious consequences." These attempts failed. On 15 March UN Secretary-General Kofi Annan weighed into the debate by saying that an attack on Iraq absent a new resolution would constitute a violation of the UN charter. Bush, however, gave a televised speech the following day in which he demanded that Saddam Hussein and his sons Uday and Qusay leave Iraq within 48 hours or face attack. They refused. In Britain, the House of Commons voted two days after that, on 18 March, to support war.

The war commenced on 20 March with aerial bombing of Baghdad. Ground forces of a U.S.-led coalition invaded from Kuwait the next day while airborne troops based secretly in Jordan captured air bases in western Iraq. In addition to 255,000 Americans, this coalition eventually included 45,000 British troops, 2,000 Australians, and 200 each from Poland, Slovakia, and the Czech Republic. Fighting was fierce, but Iraqi forces were doomed from the start. By 6 April U.S.forces had captured Karbala and British troops had entered Basra. By 9 April U.S. forces had entered Baghdad as Saddam's regime crumbled. There were scenes of wild jubilation in parts of Baghdad at Saddam's downfall, as, for example, when crowds (and a U.S. tank) pulled down a huge statue of the deposed leader that had stood in Firdaws Square in downtown Baghdad. Tragically, the looting that swept through the city spread to some of Iraq's most important archaeological museums. The National Museum in Baghdad was sacked between 9 and 12 April, and both common pilferers and professional art thieves stole nearly 15,000 artifacts, some of them priceless treasures. Working with INTERPOL, U.S. officials worked to track down stolen artifacts that had been smuggled out of Iraq. By September 2003 more than 3,400 items from the National Museum had been recovered in Iraq, Jordan, Italy, and elsewhere. There was at least one case in which members of the U.S. forces themselves took an artifact from an Iraqi museum: The helmet of an Israeli aviator shot down over Iraq in June 1967 was taken from a display in a Baghdad military museum and given to Israeli authorities in Jordan in August 2003.

In the north, Kurdish forces joined the fight and helped to capture Mosul and Kirkuk. Saddam Hussein and other leading Iraqi officials went into hiding. The fighting was largely over by 16 April, and Bush declared on 1 May that "major combat operations" were over. At that point, U.S. and British military deaths in combat totaled 120. Iraqi deaths during that time, both civilian and military, were much more difficult to ascertain; estimates range from between 5,000 to 7,000 civilians killed, and 4,800 to 6,300 Iraqi soldiers. Saddam Hussein's sons Uday and Qusay were killed in a shootout with U.S. troops in Mosul on 22 July. Saddam himself was eventually captured by U.S. forces near Tikrit on 14 December.

Occupation of Iraq

To administer the occupied country, the United States created the Office for Reconstruction and Humanitarian Assistance. On 21 April 2003 former U.S. army general Jay Garner (1938–) was appointed as its head. Garner served as the civilian governor of occupied Iraq until he was replaced on 6 May by former U.S. State Department official L. Paul Bremer III (1941–). Bremer was named the administrator of the new Coalition Provisional Authority (CPA; in Arabic, Sultat al-I'tilaf al-Mu'aqqata), a division of the U.S. Department of Defense. As a result, Bremer became the civilian head of a U.S. military occupation administration. Through Security Council Resolution 1483 of 22 May 2003, the UN formally recognized the United States and Britain as occupying powers and lifted the sanctions imposed on Iraq, even though UNMOVIC had not yet certified Iraqi disarmament, as required by the sanctions resolutions. U.S. officials stated that the occupation was costing the United States approximately $1 billion per week, although some of those costs included items such as military salaries that would have been paid anyway. The United States also dispatched former secretary of state James Baker on an international campaign to convince Iraq's creditors to forgive the country's debts that had been accumulated by Saddam.

On 13 July 2003 Bremer created the Iraqi Governing Council (IGC) as an advisory body. The IGC included representatives from Iraq's main ethnic and religious groups, opposition politicians such as the Kurdish leaders Jalal Talabani and Masʿud

Barzani, and returned exiles such as former diplomat Adnan Pachachi and Ahmad Chalabi, founder of the Iraqi National Congress. The IGC was allowed to form a cabinet, but final authority lay with Bremer, who retained veto powers over the IGC's decisions.

Armed resistance to the occupation escalated in the summer of 2003, as did attacks on a variety of Iraqi political and religious figures and foreign officials. On 19 August a car bomb at UN headquarters in Baghdad killed the top UN envoy to Iraq, Brazilian Sergio Vieira de Mello (1948–2003). Ten days later, on 29 August, leading Shiʿite cleric Ayatullah Muhammad Baqir al-Hakim (1939–2003) was assassinated in a massive bomb explosion in al-Najaf. By early 2004 guerrillas were carrying out increasingly more sophisticated bombings and other attacks on U.S. and other occupation troops, which had expanded by early 2004 to include combat and noncombat forces from thirty additional countries besides those that originally participated in the war. These attacks became an almost daily occurrence, not so much in the Shiʿite and Kurdish regions of Iraq as in the "Sunni Triangle" north of Baghdad, near towns such as Falluja and Tikrit. In addition, numerous car bombings killed scores of Iraqi civilians and officers of the reconstructed Iraqi police. On 2 March 2004, over 140 Iraqi Shiʿa were killed during attacks in Baghdad and Karbala that came during the important Shiʿite religious celebration of Ashura. By late February 2004, 548 U.S. soldiers had died in Iraq since the beginning of the war, 337 as a result of hostile activity. Iraqi civilian deaths since the war began ranged somewhere between 8,000 and 10,000.

Controversy continued to swirl after the onset of the occupation. Although the presence of weapons of mass destruction was the major ostensible reason for going to war, by early 2004 occupation authorities had still not found any such stockpiles, a situation that eventually led President Bush, in January 2004, to call for a formal inquiry into prewar U.S. intelligence failures. In late 2003 in Britain, Prime Minister Blair was also engulfed in a controversy over the accuracy of his government's handling of intelligence. Paul Bremer was adamant by early 2004 that the CPA would turn over "sovereignty" to the Iraqi people on 30 June 2004, although coalition troops would remain in the country. There were conflicting opinions about the shape of the new governmental system. Bremer's proposals for regional caucuses as the basis for constructing a new Iraqi legislature and interim government were rejected by most Iraqis, and he backed away from the idea in mid-February 2004. The leading Shiʿite cleric, Ayatullah Ali al-Husayni al-Sistani (1930–), wanted direct elections held as soon as possible. Iraq's Shiʿite Arabs and Kurds were much better organized politically than other ethnic and religious groups, including Sunni Arabs, Turkmen, Assyrians, and others, who were fearful that such quick elections could produce a Shiʿite-dominated country. In addition, the fact that al-Sistani is originally an Iranian (who came to Iraq decades ago) has raised some Sunni suspicions about Iranian influence. UN Secretary-General Kofi Annan sent special envoy Lakhdar Brahimi to Iraq to produce a recommendation for how to proceed, and stated in late February that it was not feasible to hold direct elections prior to the handover of sovereignty on 30 June. Fearing the possibility that Iraqis might draft a constitution that proclaimed *shariʿa* to be the basis for legislation in the new Iraq, Bremer announced on 16 February that he would veto any such proposal coming from the IGC. On 8 March 2004, the IGC signed a provisional constitution for a federal Iraq that granted the Kurds a considerable voice in government. The constitution also called *shariʿa* "a source" of legislation, as opposed to "the source."

WARNIER LAW

Law passed by France's National Assembly in 1873 to establish individual titles on previously undivided lands held by families and tribes in Algeria.

The Warnier Law greatly facilitated land purchases by European settlers and appropriations by the state domain. It also hastened the appearance of small and dispersed properties insufficient to support the indigenous rural population.

Peter von Sivers

WAR OF ATTRITION (1969–1970)

Egypt's unsuccessful campaign to drive Israel back from the Suez Canal.

After the Arab–Israel War in 1967, fighting continued along the borders of the new territories captured by Israel, particularly along the Suez Canal. Violations of the cease-fire proliferated in September 1968, when Egypt concentrated some 150,000 troops along the west side of the canal. Heavy fighting took place on 8 and 9 March 1969, causing the death of Egypt's chief of staff, General Abd al-Munʿim Riyad. On 23 July of that year, President Gamal Abdel Nasser formally declared a war of attrition. He stated that, although his country was incapable of regaining the Sinai Peninsula by force, it could and would wear Israel out—hoping that Egyptian artillery barrages would make Israel withdraw its troops from the Suez Canal. Israel responded by building a system of thirty strongholds along the canal, known as the Bar-Lev Line.

On 31 October 1968 Israel had destroyed a power station at Naj Hamadi in upper Egypt, but it was not until July 1969 that it began regular aerial attacks that devastated Egyptian cities along the canal and turned their residents into refugees. In early 1970 Egypt received substantial amounts of Soviet military aid, including surface-to-air missile batteries that could down Israeli aircraft. After a number of aerial battles between Israeli planes and Russian-flown MiG fighters, the United States introduced its Rogers Plan and pressed Egypt and Israel for a new cease-fire, which went into effect on 7 August 1970.

Some controversy exists among military scholars as to which country actually won the war of attrition. Israel certainly proved its military superiority, especially in aerial dogfights with Egyptian pilots, but Egypt gained a diplomatic victory in persuading the Soviet Union to provide military assistance and in moving SAM missile batteries, which Egypt used in the 1973 Arab–Israel War, close to the Suez Canal. The long-term effect of the war of attrition has been to make Israel more suspicious of international peace proposals and Egypt more precise in its strategic military planning.

WATER

Because of its scarcity, water plays a central role in Middle Eastern politics and society.

Nowhere in the world is water more important than in the Middle East and North Africa. In no other region do so many people strive so hard for economic growth on the basis of so little water: here is found 5 percent of the world's population but only 1 percent of its fresh water. Of the ten nations with the least water per capita, six are in this region. No wonder that both Jewish and Muslim scriptures are full of references to water.

The Dead Sea is the lowest point on earth and the culmination of the Jordan River. Its high concentration of mineral salts makes this body of water lifeless but also makes its visitors buoyant, creating a popular tourist attraction along the border between Israel and Jordan. © RICHARD T. NOWITZ/CORBIS. REPRODUCED BY PERMISSION.

Role of Climate

The more heavily populated parts of the Middle East are semiarid, with rainfall of 10 to 29 inches (250 to 750 mm) per year. However, low rainfall is less of a problem than variability in rainfall. The great bulk of the rain falls in four winter months, with none falling during the rest of the year. Rainfall also changes rapidly with distance, from more than 20 inches (500 mm) on the coast of Lebanon to 8 inches (200 mm) in the Biqa, only an hour away by road but across the Lebanon mountains.

Seasonal and spatial variations in rainfall are sharp but predictable. What makes planning difficult is the sharp variation from one year to the next. Reliable flow in the rivers (the flow that can be expected nine years out of ten) is only 10 percent of the average. In northern latitudes, water planning can be built around statistical averages; here, it must be built around extremes.

This already difficult water situation will likely get worse. Population growth rates are high, and most climate change models suggest higher temperatures, lower rainfall, and more frequent droughts for the region.

Role of History

Development in the Middle East and North Africa has always been more dependent on water than on any other resource, including oil. By the fourth millennium B.C.E., the Sumerians had built a paradise in what is now Iraq through intricate canals for irrigating crops; two millennia later it had largely collapsed because of salinization of the soil. Ancient cities, such as Palmyra in Syria, were possible only because of carefully engineered tunnels, called *qanats* (*foggaras* in Iran), to bring water from springs tens of kilometers away.

Over the years, the peoples of the Middle East have made water a preoccupation, and each nation has a central agency, typically a full ministry, to deal with water. Many of the principles for good water management were worked out in the Middle East—although just as often they were ignored for political, financial, or social reasons.

Water Sources

The Middle East includes two of the mightiest river systems in the world. The Nile has two main branches: The White Nile originates in Uganda, and the larger Blue Nile (together with the Atbara) originates in Ethiopia; they join near Khartoum and flow northward through Egypt to the Mediterranean. The Tigris and Euphrates both originate in Turkey and flow south-southeastward through Syria and Iraq before joining and flowing into the Persian Gulf via the Shatt al-Arab, at the Iranian border.

The region also includes numerous medium-sized rivers, such as the Jordan, which flows from three springs through the Sea of Galilee (one of the few natural lakes in the region) and into the Dead Sea, 415 meters below sea level. Only Turkey has an

Atatürk Dam, built across the Euphrates River in southeastern Turkey and in use since 1990, is one of the largest dams of its kind (earth and rock fill) in the world. Dams such as these are not only expensive but are also costly in terms of reducing the flow of water to countries lying downstream, contributing to a growing shortage of fresh water in much of the region. © Ed Kashi/Corbis. Reproduced by permission.

abundance of river water, but its big rivers are only found in the eastern part of the nation. Finally, there are small coastal rivers (many of them ephemeral), and a few major wetlands, such as the marshlands in southern Iraq and the Sudd swamp in southern Sudan.

The construction of new dams and pipelines to deliver water from major rivers in the Middle East will cost two or three times as much per unit of water as current supplies, and if construction occurs in upstream countries, such as Ethiopia and Turkey, it will reduce flows downstream. Therefore, the region will increasingly shift toward the use of underground water, which has the great advantage of not evaporating. (Lakes and reservoirs in the region lose meters of water per year to evaporation.)

Historically, underground water was tapped by shallow wells dug in unconsolidated materials to get small flows of water. Today, much larger volumes of water are extracted from wells drilled tens to hundreds of meters into aquifers, which are rock layers with pores that contain water. Renewable aquifers are replenished (generally slowly) by rainfall; nonrenewable, or fossil, aquifers contain water trapped in sediments laid down millions of years ago.

Just more than 10 percent of the water supply for the region comes from aquifers, but in Israel and Jordan the share approaches 50 percent, and in Kuwait and parts of the Arabian Peninsula it approaches 100 percent (apart from desalination). Libya's Great Man-Made River pumps water from fossil aquifers in the south of the country and moves it 930 miles (1,500 km) to farms and cities in the north.

The third most important source of water in the Middle East is recycled sewage, which is treated and reused, mainly for irrigation. Despite common

Lake Van, a salt lake in eastern Turkey near the border with Iran, is the largest lake in the country. Turkey is the source of the Tigris and Euphrates as well as numerous lesser rivers, and it is one of only a handful of nations in the region where water is abundant. © ADAM WOOLFITT/CORBIS. REPRODUCED BY PERMISSION.

belief (shared by both Muslims and non-Muslims), there is no objection in Islamic law to the reuse of sewer water provided it is properly treated.

More than half of the world's desalination capacity is found in the region, mainly in the oil-producing nations of the Arabian peninsula with lots of by-product natural gas that was formerly flared. (Desalination is an energy-intensive process.) Costs for desalination have fallen to a level that makes it feasible as a source of potable water but still too expensive for irrigation.

Other sources of water are individually small but collectively provide sizable amounts of water. Water harvesting gathers rain that falls over a wide area and directs it to one field through small channels and micro-barrages. The technique can allow crops in areas where rainfall is only 4 inches (100 mm) per year. Rainwater is also collected from rooftops and stored in cisterns. If handled carefully, rooftop water can be used for drinking.

Uses of Water

By far the largest share of water in the region goes to agriculture—as much as 90 percent of total water use in some countries, and 60 percent in the more industrialized countries.

Drinking requires only a relatively small volume of water, but it must meet higher standards than that used for irrigation. Thirty liters of potable water per person-day is generally regarded as the minimum for drinking, cooking, and washing.

Industrial water use is low. Food and beverage processing are the largest industrial consumers. More is withdrawn for cooling but most of this water is recycled or returned to the watercourse.

A hidden but critical amount of water must be left in place to support fisheries and hydropower, as well as to protect habitat. This use is typically neglected by governments when they drain swamps, canalize rivers, or extend land. As a result, not only has the environment been degraded, but fish catches have declined and the salinity of groundwater has increased.

Problems

The nations of the Middle East all face three overlapping sources of stress in their water management: 1) quantity, which has been a source of stress since history began; 2) quality, which is a newer stress but increasingly important; and 3) equity, which occurs when the same water is subject to competing demands.

Quantity. Iran, Iraq, Lebanon, Sudan, Syria, and Turkey are fairly well endowed with water, with more than 1 million cubic meters (Mcm) per capita; Algeria, Egypt, Israel, Morocco, and Palestine form a middle group; and Jordan, Libya, Tunisia, and the countries of the Arabian Peninsula are least well endowed, with less than 500 Mcm per capita. However, water availability is declining in every nation, which means that current patterns of water use are not sustainable. Some projections for the Jordan River basin suggest that by 2025 household and industrial uses will require all the fresh water, leaving none for farmers. Most nations are also drawing down their renewable aquifers and mining fossil ones. Some have annual water deficits of several thousand Mcm.

Water quantity problems in the region can be resolved in small part by exploiting additional

Freshwater withdrawals by country and sector

Estimates for 2000

Country	Total	Per capita	Use (%)	(cubic km/a)		% with safe (cubic m/p) drinking water
				Domestic	Industry	
Afghanistan	26.1	1,020	1	0	99	13
Algeria	4.5	142	25	15	60	94
Bahrain	0.2	387	39	4	56	100
Egypt	55.1	809	6	8	86	95
Iran	70.0	916	6	2	92	95
Iraq	42.8	1,852	5	3	92	85
Israel	1.7	280	36	11	51*	100
Jordan	1.0	155	22	3	75	96
Lebanon	1.3	393	28	4	68	100
Libya	4.6	720	11	2	87	72

sources of supply but in much larger part by better use of the water that is already available. People in the region use less water than those elsewhere in the world, but as a result of poor management and misguided economic policies conservation here (as in most other parts of the world) remains far short of its potential. Many nations lose half the water put into municipal systems to leaks, and they typically deliver piped water at low (or no) price. Cost-effective savings of 25 to 50 percent are possible in most uses.

Moreover, every country in the region provides water to farmers at highly subsidized prices. Under the influence of higher prices, Israeli scientists developed drip irrigation systems that have cut water use per hectare by 40 percent. However, drip irrigation is expensive and not appropriate for all crops. Lower-cost sprinkler systems, used at night to minimize evaporation, can also increase irrigation efficiency, as can irrigating only at times critical to plant growth.

Most analysts find that water is tens of times more valuable in industrial or household uses than in agriculture. Therefore, crops grown in the region will gradually be replaced by imports. It takes roughly a thousand tons of water to produce one ton of wheat. Using that ratio, Middle Eastern nations already import grains with a virtual water content equal to the flow of the Nile.

Quality. Much of the limited fresh water in the Middle East is polluted from growing volumes of human, industrial, and agricultural waste. Three problems stand out: 1) Overpumping of wells causes a decline in the water table—by as much as a meter a year in some areas. This decline adds to pumping costs and permits lower-quality water (or, if near the coast, seawater) to flow inward and contaminate the aquifer. The only way to avoid the problem is to match pumping rates to inflow. 2) Agricultural runoff is the major non-point source of water pollution—mainly sediment, phosphorus, nitrogen, and pesticides. Better farming methods, such as conservation tillage, contour planting, and terracing can control soil erosion and cut pollution by half or more. 3) Urban sewage systems have either begun to deteriorate or cannot handle the growing

loads placed on them. Large investments are needed to improve their physical infrastructure.

Equity. Most of the larger rivers in the region cross an international border—some cross several borders—or form a border. No tabulation exists for aquifers that underlie national borders, but there are many.

Despite many statements suggesting that the next war in the Middle East will be over fresh water, there is little evidence for this. Not a single war has been fought over water for hundreds of years, but many treaties dealing with water have been signed. Water will be a source of conflict, but the conflicts will mainly be intranational rather than international. Likely sources of conflict include rural and urban users contending for the same water and rising demands from poor farmers, who are often disadvantaged in their access to water, and from women, who typically want more water for their households while men prefer to use it to grow cash crops. Israeli control of water in the West Bank is contentious, but even here experts have shown that compromise is feasible.

None of the three stresses on water in the Middle East will be easily resolved. Most of the nations in the region have already reached or are fast approaching the limits of their indigenous water supplies. Although higher prices for water and technological advances may defer the crisis, the only long-term solutions involve much greater efficiency in use, full reuse of wastewater, and gradual shifts of water from agriculture to other sectors. All of the nations of the Middle East and North Africa must revise their water policies to provide for a sustainable future, and they must find equitable ways to share water within and between nations.

DAVID B. BROOKS

WATTAR, AL-TAHER

[1936–]

Algerian novelist, short-story writer, and journalist.

Al-Taher Wattar (also spelled Tahar Ouettar and Tahir Watter) was born in Sedrata (department of Souk Ahras, eastern Algeria). His studies, exclusively in Arabic schools, took him to the Ibn Badis Intitute of Constantine and then to the Zeitouna University of Tunis in 1954. In 1955–1956 he published his first short stories in newspapers and joined the Civil Organization of the FLN (Front de Libération Nationale). After the war, he edited two periodicals in Tunisia and Algeria: *al-Jamahir* (The masses) from 1962 to 1963 and *al-Ahrar* (Free people) from 1972 to 1974. He also served as a civil servant of the FLN and general director of Algerian Radio. Since 1989, Wattar has served as president of *al-Jahidhiya,* the Algerian literary and cultural association. An important figure in Algerian literature, he is one of the few novelists who have attempted to

make up for the lack of conventional types in the Arabic novel.

His writings present a panorama of Algeria's postindependence history, with a look back at the Algerian War of Independence and a subtle treatment of postcolonial Algerian politics, culture, and society. His nationalistic works defend the socialist ideology and the role played by the communists in the Algerian War of Independence. His novel *L'As* (1974; The genius), in particular, reveals the communists' involvement in the fighting; Wattar used this book as a first step to indict those in power for their many failures. His *al-Shamʿa wa ad-Dahalib* (1995; The candle and dark tunnels), addresses the fall of the Soviet Union and its aftermath.

The symbolic novel *al-Hawwat wa al-Qasr* (1980; The fisherman and the palace) reveals the disappointments of the people with the political agenda of independent Algeria. Another controversial subject Wattar raises is the abuses by the opportunists who benefited from both war and peace. His novels *al-Zilzal* (1974; The earthquake) and *Urs Baghl* (1978; A mule's wedding) are primarily allegorical writings with a deep vein of satire and provide insight into Algerian culture, politics, society, and psychology. His novel *al-Wali al-Tahir yaʿud ila Maqamihi al-Zaki* (1999; Saint Tahir returns to his holy shrine), deals with the Islamic renaissance. Wattar's *al-Shuhada Yaʿudun Hatha al-Usbu* (1980; Martyrs come back this week), a collection of seven linked short stories, dramatically portrays the national betrayal of the memory of the martyrs of the War of Independence.

The novel *al-Ishq wa al-Mawt fi al-Zaman al-Harrashi* (1980; Love and death in the Harrashi time) expresses Wattar's great optimism during the rule of President Houari Boumedienne. But changes on the political scene ended his dreams, and the novel *Tajribatun fi al-Ishq* (1994; An experience in passion) is the cry of a disappointed man.

AIDA A. BAMIA
UPDATED BY AZZEDINE G. MANSOUR

WAUCHOPE, ARTHUR

[1874–1947]

British high commissioner in Palestine and Transjordan, 1931–1938.

Sir Arthur Grenfell Wauchope, a Scotsman, was a professional soldier who served in the Second Boer War and, from 1903 to 1914, in India. During the first two years of World War I he served on the western front. In 1916 he was transferred to Mesopotamia in command of the Highland Battalion and was wounded at the battle of Shaykh Saʿd. After the war he served in Germany, Great Britain, and Northern Ireland. He retired from the army as a lieutenant-general in 1931 and was appointed high commissioner of Palestine and Transjordan. The prime minister, Ramsay MacDonald, said that Wauchope was "a general who does it with his head, not his feet." As high commissioner, Wauchope compared the difficulty of dealing with the Arabs and Jews to that of a circus performer riding two horses at once. The early years of his tenure were marked by unprecedented levels of Jewish immigration and by growing political tension. Wauchope's proposal in 1935 for the establishment of an elected legislative council was rejected by Arabs and Jews as well as by the British parliament. In 1936 the three-year-long countrywide Palestine Arab revolt broke out. At first Wauchope urged restraint, but when clashes between British forces and Arab rebels intensified, he recommended the use of large-scale armed force to quell disorder. He retired on grounds of ill health in February 1938, before completing his second five-year term.

KAREN A. THORNSVARD
UPDATED BY BERNARD WASSERSTEIN

WAVELL, ARCHIBALD PERCIVAL

[1883–1950]

Commander in chief of British forces in the Middle East; British general in World War II; Viceroy of India, 1943–1947.

Archibald Percival Wavell was born in Colchester, England, and graduated from Sandhurst, the British military academy. He served under General Edmund Allenby in Palestine in World War I. In 1937 he was again sent to Palestine to deal with the unrest between the Arabs and Jews. He successfully quelled the Palestine Arab Revolt and returned to Britain in 1938. In 1939, he became commander in chief for all British forces in the Middle East, where he defeated the Italian forces in North and East Africa (1940–1941). He was not successful in preventing the fall of Greece and Crete, and when he succumbed to General Erwin Rommel's Afrika Korps in 1941, he was reassigned to Southeast Asia. Wavell concluded his career as viceroy of India (1943–1947), the last viceroy before Lord Mountbatten, who helped ease India into independence from the British Empire.

DANIEL E. SPECTOR

WAZIR, INTISAR AL- (UMM JIHAD)

[1941–]

Palestinian political figure.

Intisar al-Wazir was born in 1941 in Gaza city. In 1965 she married Khalil al-Wazir (Abu Jihad) a cofounder of al-Fatah and leader of the first Palestinian uprising, who was assassinated by Israeli commandos in Tunisia in early 1988. In 1965 she also participated in founding the General Union for Palestinian Women (GUPW) to support Palestinian women socially, economically, and legally. She served as the secretary-general of the GUPW between 1980 and 1985.

Al-Wazir founded numerous centers for women that focused on literacy training and rehabilitation, including the Social Affairs Committee, the Martyrs' Families Organization, and the Committee for Prisoners and the Injured. Upon the creation of the Palestinian Authority, al-Wazir served as the first Palestinian minister for social affairs between 1996 and 2003.

In addition to her prominent role in social activism, al-Wazir has held important political positions since the early days of her public career. She joined al-Fatah in 1959 as its first female member. She has been a member of the Palestinian National Council since 1974 and a member of the Fatah Central Committee since 1987. In 1983 she served as the deputy secretary-general of the Fatah Revolutionary Council.

Al-Wazir lived in exile for thirty years, returning to the Gaza Strip in 1995. She was elected to the Palestinian Legislative Council (PLC) in 1996.

KHALED ISLAIH

WAZIR, KHALIL AL-

[1935–1988]

Also known as Abu Jihad, one of the founding members of al-Fatah.

Khalil Ibrahim al-Wazir was born on 10 October 1935 to a Palestinian Sunni Muslim shopkeeper in Ramla in Mandatory Palestine. When its inhabitants were summarily expelled by Israeli forces in July 1948, al-Wazir made his way to Gaza City, where he resumed his education at a United Nations Relief and Works Agency school.

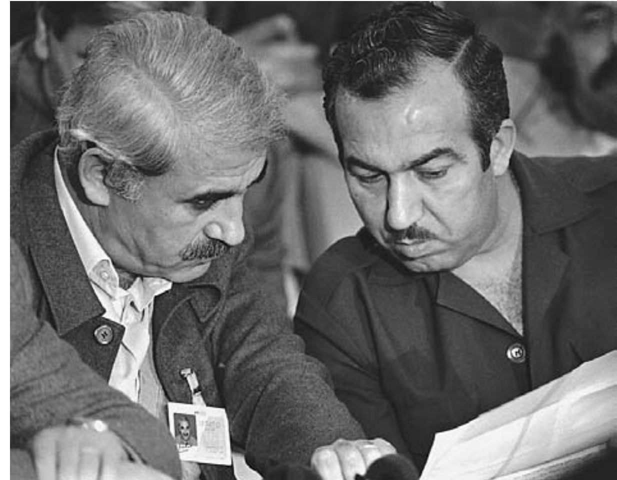
Al-Wazir first became politically active in 1953, covertly receiving military training in the Egyptian-administered Gaza Strip. Probably affiliated with

the Muslim Brotherhood at this time, he formed his own commando unit, whose activities led to his brief imprisonment by the Egyptian authorities in 1954. In 1954 he also first met the future Palestine Liberation Organization (PLO) chairman, Yasir Arafat, beginning a lifelong partnership and friendship, which, in association with future PLO deputy chairman Salah Khalaf (Abu Iyad), was to form the resilient core leadership of the contemporary Palestinian national movement.

After completing his studies in Cairo, where he had moved in September 1956, al-Wazir left in 1957 for Kuwait as a schoolteacher. His meeting there with Arafat that fall, a meeting of minds regarding the need to establish an independent, armed Palestinian movement, sowed the seeds for the formation of the Palestine National Liberation Movement (al-Fatah) in 1959. Al-Wazir would serve on its Central Committee and the subsequently established Revolutionary Council for the rest of his life.

Among al-Fatah's founders, al-Wazir alone had prior experience in forming a guerrilla organization and played a leading role in its development. In 1963 he went to Algiers to open al-Fatah's first diplomatic mission and organize military training for its recruits. He used this post to establish relations with China (al-Fatah's first non-Arab source of arms), North Korea, and Vietnam; meet guerrilla theoretician Che Guevara; and participate in the 1964 Palestine National Council, which founded the PLO. During this period he also remained, with Arafat, the leading advocate within al-Fatah's Central Committee for an immediate start to military operations. When the debate was resolved in late 1964, al-Wazir was appointed deputy commander in chief of al-Fatah's military wing, al-Asifa (The Storm).

After the PLO came under the control of al-Fatah and other guerrilla organizations in 1968–1969, al-Wazir additionally assumed the post of deputy commander in chief of PLO military forces. Although this position gave him only limited authority over non-Fatah forces, al-Fatah's preponderance within the PLO ensured that he played a central role in PLO military affairs until his death. He firmly believed armed struggle was legitimate and consistently sought to escalate it. He also did not hesitate to attack or retaliate against civilian targets



Khalil al-Wazir (right) with George Habash at the 16th Palestinian National Council Meeting in 1983. Al-Wazir was one of the original members of the Palestinian Liberation Organization and played an important role in many of its operations up until his assassination in 1988. **© Alain Nogues/Corbis Sygma. Reproduced by permission.**

when he thought this necessary but opposed the use of violence outside the region.

Al-Wazir, who furthermore directed al-Fatah's Department of the Occupied Homeland, was also among the first of his colleagues to grasp the importance of complementing armed struggle in Gaza and the West Bank with political mobilization. Particularly after the PLO's evacuation from Beirut in 1982, he worked hard to develop al-Fatah's political infrastructure in the West Bank and Gaza Strip, thus helping prepare the ground for the popular uprising, or Intifada, which erupted in December 1987. It was primarily on account of his leading role in assisting the uprising's clandestine leadership and channeling support to the West Bank and Gaza that he was assassinated by an Israeli commando squad (which filmed the event) in Tunis on 16 April 1988. His death precipitated the most serious disturbances the West Bank and Gaza Strip had witnessed since 1967, and his funeral in Damascus was attended by hundreds of thousands, including representatives from all Palestinian factions. He is survived by his wife, prominent Fatah militant Intisar al-Wazir, and four of their five children.

Along with Khalaf, Khalil al-Wazir was the most important PLO and Fatah leader after Arafat and,

in internal debates, consistently Arafat's closest ally. The achievements and failures of these organizations and of the Palestinian people generally during his time are therefore equally his.

A straightforward nationalist whose mind was attuned to practical action and organizational matters, al-Wazir was among Palestinians respected in life and venerated in death. Though denounced as a reactionary by more radical elements during the 1970s for his conservative positions, he enjoyed extensive contacts among other factions and later emerged as a prominent mediator. As with all Palestinian nationalist leaders during his lifetime, he was viewed by Israel as a terrorist, and Israel rejected his support of a negotiated settlement.

Neither an intellectual nor an orator, al-Wazir does not have any writings to his name and gave fewer press statements than his colleagues.

Mouin Rabbani

WAZZANI, MUHAMMAD HASSAN AL-

[1910–1978]

Moroccan nationalist.

In the early 1930s, Muhammad Hassan al-Wazzani, a native of Fez, was a leader of the Comité d'Action Marocaine (CAM). He was elected secretary-general of the Bloc d'Action Nationale in October 1936, but the following year founded the Parti Démocratique Constitutionnel (PDC). Wazzani was imprisoned for nine years (1937–1946) on political charges. Periodically, he cooperated with the Istiqlal, and from 1953 to 1954, he and his followers joined the National Front. Wazzani was named minister of state without portfolio in King Hassan's 1961 coalition government. He was among those wounded in 1971 in the attempted coup against the king.

See also Parti Démocratique Constitutionnel (PDC).

Bruce Maddy-Weitzman

WEIZMAN, EZER

[1924–]

Israeli politician and soldier; president of Israel (1993–2000).

Born in Haifa, Ezer Weizman is the nephew of Chaim Weizmann, Israel's first president. In 1942 Weizman joined the Royal Air Force and served in Rhodesia, Egypt, and India. In 1946 and 1947 he studied aeronautics in Britain. From 1946 to 1948 he was a member of the prestate underground Irgun Zvaʾi Leʾumi.

Weizman was one of the founding fathers of the Israeli Air Force (IAF). Following the United Nations vote to partition Palestine, he worked in the Air Service, the IAF's predecessor, and during the 1948 war he commanded an IAF squadron. In 1950 he became IAF chief of operations, and in 1956 commander. In 1967 he became chief of the general staff.

In 1969 Weizman entered politics. He served as leader of the GAHAL Party and was minister of transportation in Levi Eshkol's Government of National Unity. He resigned from the government in 1970 and went into private business, but continued on the Herut Executive Committee. In 1977, when the Likud (formed from the merger of Herut, Gahal, and other right-of-center parties) won its first national election, Weizman was campaign manager.

Having been appointed minister of defense by the new prime minister, Menachem Begin, Weizman supervised the invasion of Lebanon in 1978; he also was a moderating influence in the Camp David peace talks in September 1978. Although he was perceived as a hawk when he joined the Begin government, Weizman increasingly argued for a more moderate approach; this led to conflicts with other members of the Likud. In May 1980 he resigned from the cabinet; six months later he voted

against the government on a no-confidence vote, charging that Begin was intentionally frustrating the peace process.

In 1984 Weizman's political party, Yahad, won three seats in the Eleventh Knesset. Following the elections, Weizman was appointed minister of science in a National Unity government. In 1986 Yahad officially joined the Labor Party. In 1987 Weizman was the first member of the Labor Party in the Knesset to call for negotiations with the Palestine Liberation Organization (PLO). In 1990 he was accused of undertaking secret meetings with PLO officials (illegal at the time), but charges were never filed. He resigned his seat in the Knesset before the 1992 election, ostensibly because he was frustrated with the slow pace of peace negotiations, and in March 1993 the Labor Party nominated him as its candidate for president. He became the president of Israel on 14 May 1993 and was reelected to a second term as president in 1998.

Weizman introduced the modern presidency to Israel, breaking from the traditional model in which "nonpolitical" presidents avoided partisan politics. He was unapologetic about taking controversial positions, and on several occasions his actions caused political disruption. He resigned his presidency in July 2000. An investigation by the attorney general found that Weizman had received more than $300,000 from a French Jewish businessman between 1987 and 1993; the scandal resulted in his being the first Israeli president to be the subject of police investigation, and the first president to resign.

GREGORY S. MAHLER

WEIZMANN, CHAIM

[1874–1952]

Zionist leader; first president of Israel, 1948–1952.

Chaim (also Hayyim) Weizmann was born in the Jewish community of Motol, near Pinsk, in Belorussia, part of the Pale of Settlement, the region into which Jews were largely confined by the Russian empire. His father, a moderately prosperous timber merchant, educated his twelve children in the modern style. Chaim went to a Russian secondary school in Pinsk, studied in Germany, and earned his doctorate in chemistry in Geneva in 1899. From 1900 to 1904 he taught at the University of Geneva.

From his earliest youth Weizmann was a convinced Zionist. Committed to the promotion of Haskalah (secular modern Hebrew literature and culture), he encouraged a group of young Zionists, called the Democratic Fraction, to challenge the cautious policies of established Zionist leadership. Their initial project, the creation of a Jewish university in Palestine, widened the rift between secular and religious Zionists. In 1904 Weizmann took a position at the University of Manchester in England. He continued to participate in Zionist activities and, in the course of election campaigns in Manchester, met Arthur Balfour and Winston Churchill.

The outbreak of World War I dislocated the World Zionist Organization (WZO). Weizmann accepted a government appointment to supervise the synthetic production of acetone, a vital necessity for the production of mortar shells. As the war progressed, Weizmann's professional and political standing grew. Helped by C. P. Scott, editor of the *Manchester Guardian* and a sympathizer with Zionism, he met David Lloyd George, Herbert Samuel, and other Liberal ministers. Without the formal authorization of any official Zionist agency, Weizmann was instrumental in persuading British politicians to support Zionist aims. He argued that a British-sponsored Zionist entity in Palestine would enhance British strategic interests in the Middle East and secure imperial lines of communication to India. The Balfour Declaration of 2 November 1917, which promised British support for the establishment in Palestine of a Jewish National Home, was Weizmann's great diplomatic achievement and a turning point in modern Jewish history.

In 1918 Weizmann headed the Zionist Commission, which visited Palestine and established a basis for cooperation with the British military administration there. He led the Zionist delegation to the Paris Peace Conference signalling the end of World War I 1919 and helped to secure confirmation of the British Mandate for Palestine. The terms of this document, which he negotiated in 1920 to 1922, established the legal basis for the Jewish National Home in Palestine. As president of the WZO from 1920 to 1931 and 1935 to 1946, Weizmann championed policies that strengthened the Jewish presence in Palestine without antagonizing the British. He called the alliance between Zionism and Britain the "Rock of Gibraltar" of his policy.

In spite of his diplomatic achievements, Weizmann was disappointed by the slow pace of Zionist development in Palestine in the 1920s. His energy was dissipated in quarrels with other Zionist leaders, in particular Louis D. Brandeis and Vladimir Zeʾev Jabotinsky, as well as in fundraising to meet the chronic financial difficulties of the WZO. Weizmann's Union of General Zionists adopted a moderate, centrist position on most issues. Although he was not a socialist, Weizmann formed an alliance with the more militant socialist-Zionists in Palestine. He promoted pioneer agricultural communities as an effective way of attracting Jews to Palestine.

Increasingly concerned with the need to broaden the basis of the Zionist movement, Weizmann pushed through a proposal in 1929 to include leaders of non-Zionist organizations in the Jewish Agency, the official liaison with British authorities in Palestine. The Palestine riots of 1929 and the subsequent wavering in British support for Zionism led Weizmann to resign in protest from his joint presidency of the WZO and the Jewish Agency, but his skillful lobbying in London induced the prime minister, J. Ramsay MacDonald, to issue a clarifying letter in 1931 that reaffirmed Britain's commitment to the Balfour Declaration. Weizmann failed, however, to be reelected president of the WZO, which was headed from 1931 to 1935 by his close colleague Nahum Sokolow.

Weizmann returned to leadership of the movement in 1935. In the following year he gave powerful evidence to the Palestine Royal Commission, headed by Earl Peel. Weizmann's testimony and his subsequent private discussions with the commission helped bring about its recommendation for the partition of Palestine. In 1937 he succeeded in persuading a majority within a reluctant Zionist Congress to accept partition in principle. But the British government, which had initially approved the concept, changed its mind and in May 1939 issued a White Paper strictly limiting Jewish immigration and land purchase in Palestine.

Britain's shift in policy away from Zionism, and the consequent growth of Zionist hostility to Britain, weakened Weizmann's authority and diminished his stature. After the outbreak of World War II, the Palestinian labor-Zionist leader David Ben-Gurion superseded him as the dominant figure in the movement. By the end of the war Weizmann's paramount influence with the British and within Zionist circles was all but spent. His stern denunciation of Jewish terrorism earned him many enemies in the movement. Weizmann's tenure as president of the WZO ended in 1946, but out of respect for him no successor was named. He remained politically active and helped to persuade U.S. president Harry S. Truman to support the establishment of Israel upon the termination of the British Mandate in 1948. Weizmann served as first president of Israel, but he

was frustrated by the largely ceremonial nature of the position. He lived on the grounds of the scientific institute at Rehovot, which was later named after him, until his death in November 1952.

WEIZMANN INSTITUTE OF SCIENCE

A center of scientific research and graduate study in Israel.

Founded in 1934, the Weizmann Institute of Science is located in Rehovot, Israel. Dr. Chaim Weizmann, a world-renowned chemist, was the first president of the institute and later became Israel's first president. He organized the institute to pursue "pure" science while also dealing with practical problems facing the country and its economy. In the 1930s, Weizmann started work on projects relating to the citrus industry, dairy farming, and medicine. The institute was formally dedicated 2 November 1949.

The Weizmann Institute has nineteen departments grouped into five faculties: biology, biochemistry, chemistry, physics, and mathematics and computer science. It also encompasses several multidisciplinary research centers and institutes. In 2002, 2,500 scientists, technicians, and students were engaged in study and research at the Weizmann Institute.

WEST BANK

Territory disputed between Israel and the Palestinians, demarcated by the Green Line to the west and the Jordan River to the east.

The West Bank refers to the territory situated west of the Jordan River that was not included as part of Israel following the establishment of the state after the Arab–Israel War of 1948. The West Bank's total area is 2,270 square miles (5,880 sq. km), smaller than the area that was originally allocated to a future Arab state by the United Nations partition resolution of November 1947. It is demarcated by the Green Line (the armistice line set by the 1949 Jordanian-Israeli talks at Rhodes) in the west and the Jordan River in the east.

The West Bank occupies a place in the international consciousness far larger than its geography would suggest. The term acquired greater political significance and only came into common usage after the 1967 Arab-Israel War, when the area was separated from the rest of the Kingdom of Jordan (the East Bank). Many Israelis—and in particular the settlers—use the biblical term "Judea and Samaria" (Hebrew, Yehuda ve Shomron) to describe this region.

King Abdullah I ibn Hussein annexed the area to Jordan in April 1950 but, with only Great Britain and Pakistan recognizing this move, the region has remained without any clear status in international

MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

law. During the 1967 Arab-Israel War, Israel captured the region, occupying it fully until 1994, and parts of it thereafter. Since 1994, parts of the West Bank have been transferred to the Palestinian Authority under the terms of the 1993 Oslo Accord. The region forms the core of a possible future sovereign Palestinian state.

According to international law, Israel has administered the West Bank since June 1967 as a belligerent occupant. On 7 June 1967 Israel's area commander for the West Bank issued a military proclamation declaring the assumption by the Israel Defense Force (IDF) area commander of all governmental, legislative, appointive, and administrative power over the region and its inhabitants. Palestinian inhabitants of the West Bank continued until 1995 to be ruled under this system of military government. Municipal governments and village councils administered local services. As the occupying power, Israel both permitted and canceled scheduled elections for local governments and appointed and dismissed elected and appointed Palestinians as officials.

The region has been subject to widespread Israeli settlement activity since 1967. The settlements are administered under a municipal system separate from that of the Palestinian towns and villages. In 1992 the Israeli settlement of Maʿale Adumim, with a population of 15,000, became the first Israeli city in the West Bank.

On 27 June 1967 Israeli law, jurisdiction, and public administration were extended over a 28-square-mile (73 sq. km) area of the West Bank, including the 2.3 square miles (6 sq. km) that had constituted the municipal boundaries of East Jerusalem under Jordanian rule. This de facto annexation placed East Jerusalem and its Palestinian inhabitants under Israeli sovereignty. East Jerusalem is now considered by Israel an indivisible part of its capital city. Palestinians view East Jerusalem as the capital of their future state.

Other cities in the West Bank include Hebron, Bethlehem, Ramallah, Nablus, Jenin, and Jericho. The total population of the region in 2003 consisted of some 2 million Palestinians in the West Bank, with a further 180,000 Palestinians in East Jerusalem. Over 200,000 Israeli settlers lived in the West Bank and a further 170,000 Israelis in East Jerusalem.

In 1967 the Palestinian population of the region was largely agricultural, but under Israeli rule many left agriculture to find employment in the Israeli cities as menial laborers. Following the onset of the first intifada in 1987, most of the Palestinians were excluded from the Israeli labor market, giving rise to widespread unemployment and severe poverty. In early 2003 the economic situation of the population was worse than it had ever been since 1967.

In September 1993 the signing of the Oslo Accord marked the beginning of a transition to Palestinian self-rule. The West Bank was divided into Areas A, B, and C, with the Palestinian Authority taking over full administration in Area A, including all of the major urban centers, and partial control in Area B, including most of the Palestinian villages, while Israel retained full control in Area C, including most of the Jordan Valley, the areas in

close proximity to the Green Line boundary, and around Jerusalem. Following the al-Aqsa Intifada, which began in September 2000, the Sharon government sent the IDF to reoccupy some Palestinian towns. The status of the West Bank was still awaiting resolution when a package of proposals, known as the "Road Map," was drawn up and sponsored by "the Quartet"—the United States, the European Union, Russia, and the United Nations—in 2003.

GEOFFREY ARONSON
UPDATED BY DAVID NEWMAN

WESTERNIZATION

The relatively uncritical adoption of first European and then North America cultural and sociopolitical attitudes and practices on the part of the non-European and non–North American world.

Westernization is sometimes inaccurately equated with modernization, and by extension with modernization theory, a construct very much in vogue in "development" and foreign aid circles between the 1950s and 1970s. In spite of a certain estrangement in the early modern period, and because of its geographical location, the Middle East never entirely lost the contacts that it had had with Europe in the high Middle Ages. However, the Arab, Iranian, and Turkish world did not experience the European humanist Renaissance, or any equivalent of the European Reformation, and by the sixteenth and seventeenth centuries had lost most of the preeminence in science and technology that it had enjoyed earlier.

More regular contacts between the West and the Middle East were reestablished at the end of the eighteenth century, partly as a result of Napoleon's expedition to Egypt in 1798, although the Ottoman Empire was probably as much if not more affected by the territorial losses inflicted upon it by Austro-Hungarian and Russian military superiority earlier in the century. By this time, the West was clearly "ahead" in economic, material, political, and scientific terms, so that the relationship became one of dependency, by the Middle Eastern "periphery" on the Western "center." Between 1798 and 1914, much of the region became politically subject to Britain and France (and to a lesser extent to Italy, Russia, and Spain), and the areas that were not directly colonized became part of the "informal empire," that is, part of the orbit of the capitalist West.

In the course of the nineteenth century, many of the states in the region, particularly Egypt, Qajar Iran, the Ottoman Empire, and Tunisia, underwent programs of administrative, educational, judicial, and finally constitutional reform. To some extent these programs reflected pressures from Europe and incorporated deliberate borrowings from European models, but they were also responses to widely felt local needs to achieve greater administrative efficiency and consistency, to reduce arbitrariness and despotism, and to introduce concepts of legal equality and citizenship into public life. Thus the *Hatt-i Şerif* of Gülhane of November 1839, one of the key texts of the Ottoman *Tanzimat* reforms, declares that all Ottoman subjects should have complete security for life, honor, and property, and that they shall be taxed and conscripted fairly and equitably, but also that "these imperial concessions extend to all our subjects, of whatever religion or sect they may be."

The extent and speed of the changes that took place in the nineteenth and twentieth centuries often introduced considerable confusion into the lives

and thought of those involved. For example, the growing secularism of late nineteenth- and twentieth-century Europe has not been easily transposed to the Middle East, with the result that the relationship between Islam and modernity, or the West, has never been satisfactorily worked out. It has proved almost impossible for believing Muslims to apply the same critical-historical methodology to Islamic history as most Christians or Jews would apply to discussions of Christian or Jewish history. At the same time, some Western social attitudes, especially those concerned with consumerism, dress, the consumption of alcohol, and the social mixing of the sexes, have either been vigorously embraced or equally vigorously rejected by Middle Easterners. The Persian author Jalal Al-e Ahmad coined the phrase *Gharbzadagi,* or "Westoxification" to describe this awkward and often disturbing ambiguity. In general, the notion that the Middle East simply copied everything from the West is too simplistic; the reality is far more complex and nuanced.

PETER SLUGLETT

WESTERN SAHARA

Former Spanish colony in northwest Africa; once called Spanish Sahara.

This area of some 102,700 square miles (266,000 sq km) is bordered by Morocco, Algeria, Mauritania, and the Atlantic Ocean. It has been the subject of a dispute involving the POLISARIO (Frente Popular para la Liberación de Saguia el-Hamra y de Río de Oro; Popular Front for the Liberation of Saguia el-Hamra and Río de Oro) independence movement, Morocco, Algeria, Mauritania, and Libya. In 2003 Western Sahara remained the last colonial territory on the African continent whose political status had not been definitively determined and legitimized by the international community. To rectify this, the United Nations has been attempting since 1986, when the Western Sahara War was still raging, to negotiate and implement a referendum among the inhabitants.

Geography and Population

The Western Sahara territory is part of the Sahara desert and consists of *hammada* (mostly barren rocky plateaus), coarse gravel, and sandy plains. It is extremely arid, receiving an average of less than 2 inches (5.1 cm) of rainfall annually, but rich in natural resources such as phosphates, minerals, and coastal fishing grounds. It is sparsely populated—Spain's 1974 census counted 73,497 persons, which was probably an underestimate; a U.S. Central Intelligence Agency publication placed the 1991 population at 196,737, including, presumably, the tens of thousands of Moroccans who have settled there since 1976. The annual growth rate was put at 2.6 percent. The capital is Laayoune (El-Aiun or al-Ayun).

The indigenous Sahrawi population is a mixture of Berber tribes (whose presence in the region dates from at least the first century B.C.E.) and thirteenth-century Arab migrants from southern Arabia. Until the twentieth century, social organization was tribal, along the lines of confederations, factions, and subfactions. Linguistically, the Hasaniyya dialect of Arabic, brought by the Arabian tribes, gradually supplanted Berber dialects. Economically and socially, the tribes were entirely nomadic. Calling themselves the "sons of the clouds," the Sahrawis roamed constantly in search of grazing land and water for their herds, traded with neighboring sedentary groups, engaged in livestock raiding from one another, and participated in the trans-Saharan caravan trade. Since the nineteenth century, the Reguibat have been the largest tribal grouping.

The nomadic way of life did not fit comfortably with European-introduced notions of fixed terri-

torial delimitations. When coupled with twentieth-century events—prolonged droughts, fighting against French and Spanish colonialism, gradual sedentarization, economic change, and, finally, the outbreak of war following Spain's departure—probably as many Sahrawis came to live in neighboring countries (whose boundaries were themselves of twentieth-century origin) as within Western Sahara.

Political History

The political status of the area was rarely defined, since it belonged to what is known in Moroccan history as *bilad al-siba,* the lands of dissidence, as opposed to *bilad al-makhzan,* the areas of central, sultanic authority. (Ironically, the Almoravid Empire, the first dynasty to unite Morocco during the eleventh century, originated in Western Sahara and Mauritania.) Political linkages and affiliations with Moroccan sultans in the north varied, depending on the relative strength of the sultan and the various tribes, the relations between individual tribes and the government in the north, and relations among the tribes themselves.

Spain proclaimed a protectorate over part of the region in 1884. The Moroccan nationalist movement, which first emerged in the 1930s, claimed the area as part of its natural patrimony (along with Mauritania and parts of Algeria and Mali as well). The area's status was changed by Spain in 1958 from colony to overseas province. From the late 1950s, the newly emerging state of Mauritania also claimed it, partly to deflect Morocco's threat against Mauritania itself. POLISARIO's emergence in 1973 linked for the first time the notions of decolonization and independence for the territory, setting the stage for conflict. Spain agreed to relinquish the area in 1975, and it was divided between the two neighboring claimants, Mauritania and Morocco. Mauritania gave up its claim in 1979. Morocco has occupied the bulk of the territory since then.

In 1976, the POLISARIO established the Sahrawi Arab Democratic Republic (SADR) and organized a government-in-exile. During the following years, with Algeria's support, dozens of states, mainly developing and nonaligned countries, recognized the republic. After war broke out between Morocco and the POLISARIO, between 50,000 and 150,000 Sahrawi refugees fled to the Algerian Tindouf region, and as of 2003 remained there under the administration of the POLISARIO.

King Muhammad VI visited Western Sahara in 2001 to reassert Moroccan authority in the region. Morocco has occupied most of the disputed territory since Mauritania relinquished its claim on the southern portion in 1979. **© AP/Wideworld Photos. Reproduced by permission.**

From the mid-1970s on, in his effort to fully integrate the Saharan provinces into Morocco, King Hassan II launched investment projects aimed at promoting the economic development of the territory and attracted settlement with special incentives. Civilian and military expenditures related to Western Sahara represented a considerable burden for Morocco's state budget, particularly from the late 1970s to the mid-1980s.

Morocco's claim over the Saharan territory helped King Hassan II build a national consensus in a period of internal instability. At the regional level, however, it has severely affected Moroccan relations with neighboring Algeria, which was a staunch supporter of the Sahrawis' right to self-determination. Consequently, the process of regional integration, which had been inaugurated with great fanfare in 1989 with the creation of the Arab Maghreb Union (UMA), remained stalled as of 2003.

Toward a Negotiated Settlement

It was not until 1991 that the parties officially accepted a UN-sponsored ceasefire, allowing it to set up MINURSO (United Nations Mission for the Referendum in Western Sahara). Besides monitoring the ceasefire, the objective of this UN mission was to prepare a list of people eligible to vote in the referendum on self-determination, which it would oversee, that would put an end to the conflict. According to the original settlement plan, the referendum should have taken place in 1992. Morocco and the POLISARIO, however, disagreed over voter eligibility criteria.

The situation remained deadlocked until 1997, when UN Secretary-General Kofi Annan, in an attempt to break the stalemate, appointed former U.S. Secretary of State James A. Baker as his personal envoy to try to settle the differences between the parties in conflict. After four rounds of negotiations, Baker managed to get an agreement between Morocco and the POLISARIO to resume the voter identification process, as well as a code of conduct to govern the parties during the referendum campaign.

However, the voter identification process still encountered serious difficulties, forcing continued postponement of the referendum and a continued presence for MINURSO in the disputed territories. When in early 2000 the UN mission finally made public the official list of voters, Morocco expressed its disagreement because a low percentage of its proposed candidates was accepted. The ensuing appeals process again delayed the referendum. The UN secretary-general subsequently concluded that the settlement plan was not a viable solution and suggested exploring other ways of ending the dispute.

Overall, the incompatibility of Morocco's discourse on territorial integrity and the POLISARIO's defense of the Sahrawi right to self-determination, coupled with geopolitical developments, had, as of 2003, left the dispute unresolved. Baker's latest UN-sponsored plan was to establish a transitional autonomous regime over a period of five years, at the end of which a referendum on self-determination would be scheduled. Participation was to include at least some of the Moroccans who had settled in the area. After considerable Algerian prodding, POLISARIO accepted the plan. Morocco, however, rejected the idea, fearing that its claim to sovereignty would be undermined.

BRUCE MADDY-WEITZMAN
UPDATED BY ANA TORRES-GARCIA

WESTERN SAHARA WAR

Conflict over control of Western Sahara, a former Spanish colony in northwest Africa.

Contention over the control of Western Sahara began on the eve of Spain's withdrawal in February 1976. The main protagonists were Morocco, which claimed the territory as an integral part of its historical patrimony, and the Algerian-backed POLISARIO independence movement. Algeria's patronage of POLISARIO was rooted in its larger geopolitical and ideological clash with Morocco. The dispute poisoned their bilateral relations and for a time held out the specter of Algerian–Moroccan fighting. Mauritania, the weakest of the states bordering Western Sahara, initially occupied part of the territory as well but was forced to disengage and then maintain a vulnerable neutrality.

Internationally, both the United States and France had strong strategic, political, and economic interests in North Africa. The conflict did not become an arena for Cold War competition because the Soviet Union adopted a low, pragmatic profile. The Organization of African Unity (OAU) was actively involved in attempting to mediate the dispute between 1976 and 1981 but then became an additional arena for it, resulting in temporary organizational paralysis. Beginning in the late 1980s, successive UN secretaries-general energetically pro-

moted a diplomatic solution, albeit without success, as of 2003.

Outbreak of War

The parameters of the conflict took shape in the fall of 1975. The International Court of Justice issued an advisory ruling regarding the legal status of the territory that was ambiguous, but tilted away from Morocco's position. In response, Morocco's King Hassan II seized the initiative by dispatching hundreds of thousands of unarmed Moroccans in a great spectacle of nationalist and religious fervor across the Moroccan–Spanish Sahara frontier. This "Green March" catalyzed the transfer of Spanish control of the territory to Morocco and Mauritania, enshrined in the tripartite Madrid Accords of 14 November 1975. Spain's formal termination of control came on 26 February 1976. Moroccan troops immediately completed their takeover of the northern two-thirds of Western Sahara, and Mauritania took the southern third.

Meanwhile, fighting had already begun between Moroccan forces and POLISARIO units. On one occasion, Algerian forces assisting POLISARIO clashed with Moroccan troops. Concurrently, there was a large-scale civilian exodus (35–65% of the population) to camps in the Tindouf region of Algeria.

Militarily, POLISARIO's small units could not hope to block Morocco's advance. POLISARIO thus redirected its military efforts to focus on Mauritania, the weaker of its adversaries. Between 1976 and 1979, POLISARIO attacks helped to destabilize the regime of President Mokhtar Ould Daddah, who was overthrown in July 1978. After renewed pressure, the new Mauritanian military junta agreed in August 1979 to cede their portion of Western Sahara, Tiris al-Gharbia, to POLISARIO. However, the Moroccan army immediately preempted POLISARIO and took control itself.

The next few years witnessed fierce fighting. Morocco was on the defensive against highly motivated and tactically superior POLISARIO mobile units, which conducted a war of attrition against Moroccan forces within Western Sahara and southern Morocco. POLISARIO's goal was to render the economic and political cost too great for Morocco to bear. Morocco responded by tripling the size of its armed forces to approximately 150,000, stationing more than half of them in Western Sahara, and conducting large-scale sweeps of its own. It also threatened to invoke, but never implemented, the right of hot pursuit against POLISARIO sanctuaries situated in both Algeria and Mauritania.

In the fall of 1980 Morocco began constructing a system of defensive sand walls (berms) studded with fortified positions, observation points, and early warning equipment. By 1987 the sixth wall was completed, the network ran over 2,000 miles in length, and POLISARIO had been effectively closed off from 80 percent of the territory. No longer could its Land Rovers traverse the trackless territory from Algeria to the Atlantic; POLISARIO was increasingly limited to sporadic raids along the wall. Concurrently, Morocco poured hundreds of millions of dollars into the region, building schools, hospitals, and telecommunications facilities, staffed by tens of thousands of Moroccan civilians. Morocco's consolidation of its presence was made possible by generous military and civilian aid from France, the United States, and Saudi Arabia.

Whereas POLISARIO's military fortunes declined by the mid-1980s, politically it achieved a number of successes: diplomatic recognition from more than seventy countries for its government in exile, the Saharan Arab Democratic Republic (SADR), and full membership in the OAU. On the other hand, Algeria gradually reduced its aid to POLISARIO and retired to a mere supporting role for the UN secretary-general's renewed diplomatic efforts. The overall result by the late 1980s was a stalemated conflict, with neither side able to impose its will. By the beginning of 1990 POLISARIO was almost completely dependent on the UN-sponsored process. As of 2003 more than ten countries had withdrawn their earlier diplomatic recognition of SADR.

During the first years of the conflict POLISARIO had believed that time was on its side, and therefore refused to countenance any solution that fell short of full independence. King Hassan II, for his part, had staked his throne on the issue, making it the glue by which he consolidated and reinforced his political authority at home. Strategically, he never wavered in his goal to incorporate Western Sahara into his kingdom. Tactically, he showed great

A refugee camp, located at Polisario, houses 40,000 Sahrawi refugees. These people seek protection after having been displaced from their homes during the Western Sahara War. © NOGUES ALAIN/CORBIS SYGMA. REPRODUCED BY PERMISSION.

flexibility and skill. For example, in 1981, operating from a position of relative weakness, he demonstratively accepted the principle of a referendum among the Sahrawi population during an OAU summit at Nairobi and thus bought much-needed time. By 1990, while still negotiating the details of the proposed UN-sponsored referendum, Morocco was operating from a position of strength, as regional and international constellations had shifted in its favor.

UN Efforts at Diplomacy

In April 1991 the UN Security Council authorized the establishment of a combined military and civilian force, the United Nations Mission for t he Referendum in the Western Sahara (MINURSO), to organize and implement a referendum process between September 1991 and January 1992. Eligible Sahrawis were to choose between independence for the territory, necessitating immediate Moroccan withdrawal, and union with Morocco, necessitating the disbanding of POLISARIO. The 6 September 1991 cease-fire called for in the UN plan came into effect, but the timetable for full deployment of MINURSO and implementation of the referendum was repeatedly delayed. This was due to continuing disagreement over the question of voter eligibility. The Spanish census of 1974 served as the basis for the voter registration list—numbering around 74,000—prepared by UN officials. Morocco, however, insisted on major changes to include up to 150,000 persons who it said belonged to Western Saharan tribes but had migrated north during previous decades for economic or political reasons. POLISARIO wanted small-scale modifications to include more of its supporters.

The efforts of the UN secretary-general's personal representative, former U.S. secretary of state James Baker, generated renewed diplomatic momentum. In 1997 Baker hosted four separate

rounds of talks between Moroccan and POLISARIO representatives, the last in Houston, Texas in September. A number of outstanding issues pertinent to the organization of the referendum were resolved, and the laborious process of identifying eligible voters was reinvigorated. However, by the beginning of 2000, hopes for holding the long-delayed referendum faded. The provisional list of eligible voters was approximately 90,000 only, while 140,000 other applicants, nearly all from the Moroccan side, had been rejected. Morocco, fearing electoral defeat, was determined to block the referendum and therefore insisted on appealing the rejections, a lengthy process that would take years. The UN Security Council, led by France and the United States, was unwilling to force Morocco to accept a UN *diktat.* Consequently, Baker floated variations of an old-new "third way" proposal that would bypass the referendum and create an autonomous Saharan entity federated to Morocco in all or part of the territory, or, alternatively, postpone the issue of sovereignty for anywhere between five and thirty years. The protagonists continued to meet periodically under Baker's good offices and even engaged in occasional confidence-building measures such as the release of prisoners of war. But as of 2003 a solution remained out of reach. SADR's political successes internationally had not paved the way to independence, marking a major departure from prevailing patterns of decolonization in developing nations. Morocco still desired de jure legitimation of its incorporation of Western Sahara, but its de facto rule there seemed to be accepted as unalterable by a large portion of the international community. The unresolved question continued to be the single most divisive issue between Morocco and Algeria.

WESTERN WALL

The extant part of the retaining wall surrounding the Temple of Solomon; a Jerusalem landmark and a holy prayer site for Jews.

The Hebrew Ha-Kotel Ha-Maʿaravi refers to the western retaining wall surrounding Jerusalem's Temple Mount. Sometimes called the "Wailing Wall," since Jews pray and cry near it, it is built of large limestones hewn for the Second Temple, which was enlarged during the reign of Herod (37–4 B.C.E.), king of Judea. It was destroyed by the Romans in 70 C.E.

Since then, the remaining wall has stood as a reminder and symbol of lost glory and the redemption to come; Jews turn toward it when they pray. By tradition, notes to heaven are placed in its cracks. During the British mandate, Jews had limited access in bringing religious appurtenances, which had to adhere to certain rules (e.g., using a curtain to separate men and women) or else were banned. During Jordanian rule, Jews' access to the wall was denied. After the reunification of Jerusalem in 1967, the area was excavated and became again a place of public prayer and assembly. The surrounding plaza is also the site of many national assemblies and civil religious events.

WESTERN WALL DISTURBANCES

A September 1928 dispute over Jewish religious rights at the Western Wall that led to political violence in August 1929.

The Western, or Wailing, Wall has been holy to Muslims because it is the western part of the Temple Mount and Haram al-Sharif where, Muslims believe, the prophet Muhammad tethered his "fabulous steed," al-Buraq, while on a nocturnal journey to heaven. The wall is also the holiest shrine of Judaism because it is the remnant of the western exterior of the Temple of Herod, built on the site of Solomon's temple. Jews placed a screen at the wall to separate men and women on 23 September 1928, the eve of the Day of Atonement. The Palestinians protested that the screen violated the status quo ante; the British authorities agreed and forcibly removed it. The incident was politicized by both communities over the next few months, a response that led to tensions and events such as a Revisionist Zionist demonstration on 15 August 1929 and a Palestinian counterdemonstration the following day.

Violence began in Jerusalem on 23 August when Palestinians attacked Jews in Meah Sheʿarim. The rioters attacked the largely non-Zionist religious communities of Hebron and Safed, killing sixty-four and twenty-six people, respectively. Jewish rioters in turn killed Palestinians in a number of cities, but most were shot—some of them indiscriminately—by British troops and police suppressing the disturbances. The violence took the lives of 133 Jews and at least 116 Palestinians.

The Shaw Commission, which investigated the disturbances, determined that the immediate cause of the riots was the Jewish and Arab demonstrations of 15 and 16 August and that the ultimate cause was Palestinian fear that Jewish immigration and land purchase would lead to Jewish domination.

WEST GERMAN REPARATIONS AGREEMENT

Accord with Israel following World War II.

In September 1945 Chaim Weizmann, on behalf of the Jewish Agency, asked the governments that occupied Germany at the end of World War II—the United States, the Soviet Union, the United Kingdom, and France—to secure financial compensation for the Jewish people.

On 10 September 1952 the government of the Federal Republic of Germany (West Germany) agreed to pay 3.45 billion German marks ($845 million) in the form of goods to Israel, in installments between 1953 and 1966. The Conference on Jewish Material Claims against Germany was to allocate 450 million marks ($110 million). Thirty percent of the funds were allocated for the purchase of oil in the United Kingdom and 70 percent for goods bought directly by the Israeli government. These funds played an important role in the development of Israel's economy in the 1950s.

The agreement was the result of an Israeli claim for US$1 billion in compensation from West Germany (and a claim for $500 million from East Germany, which was never submitted because the powers occupying Germany refused to deal with the claim) to cover the cost of absorbing 500,000 victims of Nazi persecution, estimated at US$3,000 each.

The signing of the agreement led to serious political divisions in Israel; riots broke out on 7 to 9 January 1952 in Jerusalem outside the Knesset. The government favored a pragmatic policy toward Germany that would bring much-needed foreign currency to Israel; the opposition, led by Menachem

Begin, was ideologically opposed to reconciliation with Germany.

WHEELUS AIR FORCE BASE

U.S. Air Force base located near Tripoli, Libya.

Wheelus was established as an American military installation in 1954. In return for base rights, the regime of King Idris received military assistance grants and the right to purchase excess stocks of U.S. weapons.

In 1964, Arab nationalism and anti-Western sentiment forced King Idris to call for a withdrawal of Britain's and America's forces. Following the overthrow of Idris in 1969, the United States completed its planned withdrawal and turned the facility over to Libya on 11 June 1970. Libyan pilots subsequently trained there under the guidance of French instructors. Since 1970, 11 June has been a national holiday in Libya.

WHITE FLAG LEAGUE

Sudanese nationalist movement founded in 1924.

Ali Abd al-Latif founded the White Flag League when the Sudan was governed by the Anglo-Egyptian Condominium Agreement. The group consisted of about 150 minor officials and junior officers in the Egyptian army. Representing an alliance of Sudanese and Egyptian nationalists, it advocated the union of the entire Nile valley under the Egyptian crown.

The White Flag League was largely responsible for the 1924 revolt against the British. Events reached a crisis following the assassination of Sir Lee Stack in Cairo; Britain's Field Marshal Edmund Allenby demanded the immediate withdrawal of Egyptian units from the Sudan. Refusing to obey the order to evacuate, the Egyptian and Sudanese league troops mutinied in Khartoum. When Egypt ordered its units to withdraw, however, they complied. The Sudanese were left to confront the British on their own; their defeat marked the end of the revolt and also that of the White Flag League.

KENNETH S. MAYERS

WHITE PAPERS ON PALESTINE

British policy statements about mandatory Palestine issued from 1922 to 1939.

The British government, which ruled Palestine from 1917/1918 to 1948 under a League of Nations mandate, issued periodic policy statements called white papers that related to the tensions and recurring violence between the Arab and Jewish communities there.

Two precursors to the series of white papers on Palestine were the Palin Commission Report (1 July 1920) and Haycraft Report (Command 1540, 21 October 1921), which concluded that the Palestinian Arabs' feelings of "hostility to the Jews were due to political and economic causes, and connected with Jewish immigration and with their conception of Zionist policy" as leading to a Jewish state in which Palestinians would be subjugated.

Subsequently, the Churchill White Paper of June 1922 (Command 1700) attempted to placate both communities. It stated that the Jewish national home existed by right, but that the Palestinians should not be subordinated to the Jewish community. It declared that all Palestinians were equal before the

law and described the Jewish national home as simply "a center in which the Jewish people as a whole may take, on grounds of religion and race, an interest and a pride." Jews would have the right to immigrate to Palestine, but their immigration must not exceed "the economic capacity of the country at the time to absorb new arrivals." Moreover, London aimed to establish full self-government in Palestine in "gradual stages" and would hold elections for a legislative council. The white paper thus reassured Arabs that they would have a political role and that Jewish im migration would be limited. Nonetheless, the Arab Executive objected to the reaffirmation of the Balfour Declaration (1917), which had supported the establishment of a Jewish home in Palestine, and rejected the legislative council as not guaranteeing majority rights. The World Zionist Organization criticized the limits on immigration and the proposed legislative council, which it wanted to postpone until the Jewish population was larger.

The colonial secretary issued the next white paper (Command 3229) on 19 November 1928, as Muslim-Jewish tension escalated over mutual claims at the Western (Wailing) Wall in Jerusalem. The white paper affirmed that no benches or screens could be brought to the wall by Jews, since they had not been allowed during Ottoman rule. Tension escalated, leading to Palestinian attacks against Jews at the wall and in several other towns in August 1929.

Four white papers issued in 1930 tried to defuse the conflict. The Shaw Commission of Inquiry (Command 3530, 30 March 1930) found that Jewish immigration and land purchases were immediate causes of "the Arab feeling of disappointment of their political and national aspirations and fear for their economic future," and that these were the underlying causes of the violence. The report declared that the government must issue clear statements safeguarding Arab rights and regulating Jewish immigration and land purchase. Another white paper (Command 3682, 27 May 1930) reaffirmed those findings, welcomed an investigation by an international commission of the conflicting claims to the Western Wall, and recommended appointing a special commission to assess the problems facing landless Palestinian peasants and the prospects for expanded agricultural cultivation.

Sir John Hope-Simpson's report, dated 30 August 1930 (Command 3686), was published simultaneously with the Passfield White Paper (Command 3692) of 21 October 1930. Hope-Simpson recommended a drastic reduction in the volume of Jewish immigration because of insufficient cultivable Palestinian land and widespread Palestinian unemployment. He criticized the Jewish National Fund, the Zionist Organization's land-purchasing agency, for forbidding Jews from reselling land to Arabs and banning Arab laborers on Jewish farms. The white paper concurred that stricter controls should be placed on Jewish immigration and land purchase, and asserted—for the first time—that the British government had obligations "of equal weight" to both communities and that it must renew the effort to establish the legislative council proposed in 1922.

The Arab Executive was pleased with these British policy recommendations because they acknowledged Arab concerns. But Chaim Weizmann, head of the Jewish Agency, resigned in protest when the Passfield White Paper was issued. London then backtracked. Zionist officials helped to draft a letter, signed by Prime Minister Ramsay MacDonald, to Weizmann on 14 February 1931 that expunged all damaging aspects of the Passfield White Paper and upheld the primacy of the government's promises to the Jewish community. Mollified, Weizmann withdrew his resignation, but the MacDonald "Black Letter," as it became known, infuriated the Arabs.

The white paper of 17 May 1939 (Command 6019) followed three years of Arab rebellion. The Peel Commission had recommended on 7 July 1937 that territorial partition between Arab and Jewish states was the only solution because Arab and Jewish aspirations were irreconcilable. Nonetheless, the Woodhead Partition Commission concluded on 9 November 1938 that partition was not feasible. The British government then convened the London Conference, which brought together the Jewish Agency, Arab governments, and Palestinian Arabs in lengthy but fruitless discussions. Afterwards, London issued a white paper that repudiated partition and proposed to create self-governing institutions over a ten-year period. Authority over the eventual independent state would be shared by its Arab and Jewish citizens. The white paper limited Jewish immigration to 75,000 over five years; sub-

sequent immigration would require Arab approval. Jews' purchase of land would be limited in some parts of Palestine and forbidden in others.

Jewish and Palestinian Arab nationalisms were too intense and too antagonistic for this plan to succeed. The Zionists viewed the Balfour Declaration as a pledge to establish a Jewish state. When the white paper of 1939 withdrew the Peel Commission's partition proposal, their reaction was strongly hostile, particularly because the restrictions on immigration occurred just as Jews sought to flee Nazi persecution in Europe. Palestinians were relieved that London had set aside partition and would restrict Jewish immigration and land purchase, but were skeptical that London would fulfill its pledges. The MacDonald white paper remained mostly unimplemented, apart from the enforcement of immigration restrictions.

WHITE REVOLUTION (1961–1963)

Program of reforms initiated by the shah of Iran in 1963.

Iran's ruler, Mohammad Reza Shah Pahlavi (r. 1941–1979), in January 1963 launched a series of reform policies that he called the White Revolution. The domestic aim was to undermine the political appeal of an influential but diffuse opposition movement by appropriating programs such as land tenure reform that it long had advocated. There also was an international objective: to win favor with Iran's principal foreign ally, the United States, which then was a major source of economic and military assistance. During the administration of John F. Kennedy (1961–1963), U.S. policy supported economic and social reforms in countries such as Iran as a means of undercutting the appeal of antiregime movements that were perceived as being allied with the Soviet Union. Thus the major element of the shah's White Revolution was a land reform program (actually begun a year earlier) that eventually would redistribute about one-half of private agricultural land to peasants holding traditional sharecropping rights (approximately one-half of all village families).

Five other programs also comprised the White Revolution at its outset. These included the nationalization of forests; sales of shares in (some) government-owned industries; plans for workers to share in profits of large factories; voting rights for women; and the formation within the army of a literacy corps of draftees assigned to villages as teachers. Later, the literacy corps model was extended to a health corps (for draftees who had college-level training in medicine) and a development corps (for college graduate draftees). By the mid-1970s the White Revolution comprised a total of eighteen programs.

The results of the White Revolution were mixed. On the positive side, about half a million peasants obtained adequate land under the land reform program to engage in profitable farming, primary schools were established in several hundred villages that previously had none, and small towns and rural areas benefited from various government development initiatives. On the negative side, perhaps the most serious deficiency of the White Revolution was the raising of popular expectations that remained unfulfilled. With respect to land reform, for example, one-half of all rural families received no land at all; among those obtaining land, about 73 percent got less than six hectares, an amount sufficient only for subsistence farming. The net result was the creation of widespread disillusionment in villages. This pattern—some benefits accruing to a minority but overall disappointment for the majority—characterized many of the White Revolution programs by the early 1970s. At the same time, a class devoted to the White Revolution became part of the

required curriculum in Iran's high schools. Criticism of the White Revolution—or any other policy of the shah—came to be regarded as a punishable political offense. As expressing praise for the White Revolution came to be associated with professing loyalty to the shah's regime, and, conversely, criticizing it came to be associated with opposition, any objective assessment of its actual achievements and failings in the years leading up to the 1979 Iranian Revolution became virtually impossible.

WIFAQ, AL-

An organization formed in Morocco to cultivate Muslim–Jewish relations.

Al-Wifaq (French, *Entente*) was an organization founded under the aegis of the Istiqlal Party in Rabat in January 1956 to promote Muslim–Jewish rapprochement on the eve of Moroccan independence. The organizers included a number of Moroccan Jewish political activists, among them Marc Sabah, a protégé of Mehdi Ben Barka, and Albert Aflalo, Sabah's nephew and an employee of the U.S. embassy.

The movement enjoyed little success because of the indifference of the Muslim elite, the apprehensions of the Jewish community at large, and increased tensions caused by events in the Middle East.

WILSON, ARNOLD T.

[1884–1940]

British soldier, explorer, colonial administrator, oil company executive, author, and politician.

Sir Arnold Talbot Wilson spent the first part of his career in the Persian/Arabian Gulf and Mesopotamia (now Iraq), transferring from the Indian Army to the Indian Political Department in 1909. He was British consul in various parts of southwest Persia (now Iran) between 1907 and 1914 and carried out the earliest cartographic surveys of the area *(South-West Persia: A Political Officer's Diary, 1940).* He was also a member of the commission to delineate the frontier between the Ottoman Empire and Persia in 1913–1914.

For most of the next six years, Wilson was an administrator in Mesopotamia, first as deputy chief political officer to the Indian Expeditionary Force, then as deputy civil commissioner, serving under Sir Percy Cox in both capacities. In Cox's absence in Tehran between 1918 and October 1920, Wilson was appointed acting civil commissioner in Mesopotamia and the crown's political resident in the Gulf. Comparatively young for such responsibilities, Wilson proved an energetic and tireless administrator and inspired intense loyalty in his subordinates (although not in the Civil Commission's oriental secretary, Gertrude Bell). Nevertheless, a combination of temperament and political inclinations made it difficult for him to accept that Britain could not continue to exercise direct colonial control over Iraq as part of any postwar settlement. His refusal to make any concessions to nationalist sentiment was an important, though by no means the only, factor in precipitating the Iraqi revolution against British rule in the summer and autumn of 1920.

Wilson resigned from his post in Baghdad just before Cox's return to the city in October 1920 and spent the next twelve years working for the Anglo–Persian Oil Company, first in Persia and then in London. He was elected to Parliament as a Conservative in 1933 and 1935 and chaired several parlia-

mentary committees. He published two books about his experiences in Iraq (*Loyalties: Mesopotamia, 1914–1917* [1930] and *Mesopotamia, 1917–1920: A Clash of Loyalties* [1931]). They were colored by his anger at what he saw as the failings of British policy and perhaps as the betrayal of his own ideals.

PETER SLUGLETT

WILSON, WOODROW

[1856–1924]

U.S. president, 1913–1921.

Woodrow Wilson led the United States into World War I with his Fourteen Points as war aims. Among them was the promise of self-determination for the peoples of enemy states, including the Ottoman Empire. Self-determination reflected American idealism, but it conflicted with the imperial ambitions of Britain and France, the nation's wartime allies.

At the Paris Peace Conference held in 1919, the Hashimite leaders of Arabia sought a sovereign Arab state (including Palestine). This had been promised to them by the British in return for their revolt against the Turks. This state was supported by U.S. Protestant missionaries who had been resident for decades in the Ottoman territories. Also, the leaders of the Zionist movement sought access to Palestine for Jewish immigration based on a promise (the Balfour Declaration) made to them by the British in return for wartime support.

President Wilson led the U.S. delegation to the Paris Peace Conference. There he came under pressure from both Zionists and those supporting an Arab state. One result of this situation was the creation of the King-Crane Commission, the mission of which was to determine the popular will of the people of "Greater Syria." At the same time the president came under pressure to modify his support for self-determination so as to accommodate the imperial designs of his allies. The compromise realized here was a "mandate system" under the auspices of the League of Nations. It was Wilson's belief in the "backward" nature of non-European populations that allowed him to accept the mandate system. The King-Crane Commission report was shelved, leaving imperialism triumphant in the guise of mandates.

ZACHARY KARABELL
UPDATED BY LAWRENCE DAVIDSON

WINGATE, CHARLES ORDE

[1903–1944]

British military officer who supported Zionism.

A Scot fluent in Arabic, Charles Orde Wingate was sent to Palestine in 1936 as an intelligence officer in the British army, where he translated his Protestant millenarian sentiments into support for Zionism. Ordered by the commander of British forces in Palestine, General Sir Archibald Wavell, to train mixed British and Zionist units in night fighting and guerrilla tactics during the Arab revolt (1936–1939), Wingate implemented the doctrine of "active defense." His "special night squads" were organized to protect the Iraq Petroleum Company pipeline. They inflicted casualties on the rebels and attacked guerrilla villages in Syria and Lebanon.

Heroic to the Zionists and ruthless to the Arabs, Wingate's actions appeared to cement a British–Zionist alliance. Wingate was removed from Palestine in 1939 by the British, who considered his Zionist sympathies an embarrassment. During World War II he served as a brigadier in Ethiopia and Burma. He died in an airplane crash in Burma.

REEVA S. SIMON

WINGATE, REGINALD

[1861–1953]

Sirdar (commander in chief) and governor-general of the Sudan, 1899–1916; high commissioner in Egypt, 1916–1919.

Sir Francis Reginald Wingate was educated at the Royal Military Academy, Woolwich, England, and attained the rank of general in the British army. He served in India and participated as director of military intelligence in the campaign led by Lord Kitchener to conquer the Sudan (1896–1898).

During his seventeen-year term as governor-general of the Sudan, Wingate, who spoke Arabic and had detailed knowledge of the country, earned a reputation for competence and hard work. He was an ardent supporter of the Arab Revolt (1916) during World War I and consistently urged additional British monetary and military aid for the effort. In 1916, he was appointed high commissioner in Egypt.

With his extensive knowledge of the country, Wingate recognized the rise of Egyptian nationalism, caused in part by increased British military presence and controls during the war. Even before it ended, he advised the British Foreign Office and the British government to make some conciliatory gestures toward Egyptian nationalist feelings. After meeting with the nationalist delegation (Arabic, *wafd*), in November 1918, Wingate recommended that Wafd members be allowed to travel to London for direct negotiations; but Wingate lacked sufficient influence, and his recommendations were curtly rebuffed.

In the face of mounting violence and nationalist demonstrations in Egypt, Wingate was hastily removed from office while vacationing in Britain in 1919; he was replaced by the popular war hero Field Marshal Viscount Edmund Allenby.

JANICE J. TERRY

WISE, STEPHEN S.

[1874–1949]

U.S. Jewish leader.

Stephen S. Wise was born in Hungary and was brought to the United States as a small child. He received rabbinical training from Adolf Jellinek in Vienna and earned a doctorate at Columbia University. At the turn of the century, Wise was among a handful of card-carrying Zionists in the United States. In 1898 he served as a delegate to the Second Zionist Congress and subsequently helped to establish the Federation of American Zionists (later renamed the Zionist Organization of America [ZOA]). In 1907 Wise founded the Free Synagogue in New York City. Thereafter, his political activity brought him into close contact with U.S. Progressives and the left wing of the Democratic party. He developed close ties to Woodrow Wilson, Louis D. Brandeis, Felix Frankfurter, and Franklin D. Roosevelt.

Wise's public activity included the cofounding of the National Association for the Advancement of Colored People (1909); the establishment of the American Jewish Congress during World War I; securing U.S. support for the Balfour Declaration of 1917; serving as a Zionist spokesman at the Paris Peace Conference after World War I; cofounding the American Civil Liberties Union (1920); leading the ZOA, the United Palestine Appeal, and the American Zionist Emergency Council during the 1930s and 1940s; founding the Jewish Institute of Religion (1922); creating the U.S. anti-Nazi boycott of the 1930s and the World Jewish Congress (1936); and co-founding the American Jewish Conference (1943).

During World War II, Wise emerged as a champion of Roosevelt's wartime strategy. At Roosevelt's request, he even suppressed initial reports of the Holocaust. Wise's stance conflicted with Rabbi Abba Hillel Silver, a right-wing U.S. Jewish leader who advocated Zionist militancy and immediate U.S. intervention on behalf of European Jewry. In 1943 the Wise-Silver clash reached a climax, and Silver displaced Wise as American Zionism's undisputed leader.

WOLFF, HENRY DRUMMOND

[1830–1908]

British mission head who gained economic concessions from Iran.

Sir Henry Drummond Wolff was the head of a special British mission sent to Iran (then Persia) after 1881, when, under a conservative government, the British started actively to support concessions. He was instrumental in obtaining important economic and financial concessions from the Persian government and was sent to Persia in 1888 as British envoy. As a result of Wolff's pressure, the Qajar dynasty monarch, Naser al-Din Shah, opened Persia's only navigable river, the Karun, to international navigation. Wolff, with Baron Julius de Reuter's son, was instrumental in settling claims to the Reuter Concession obtained in 1872. One concession granted by Persia was the right to establish a national bank, the Imperial Bank of Persia, which gave the concessionaires exclusive rights to issue bank notes and other negotiable papers. In 1890, Wolff obtained from the shah for British financiers a monopoly over the production, sale, and export of Iranian tobacco. This concession triggered one of the first successful mass demonstrations in the modern history of Iran, the Tobacco Revolt, and so the concession was abandoned.

WOMEN AND FAMILY AFFAIRS CENTER

An independent Palestinian women's organization.

In 1988, empowered by the Palestinian women's movement during the first Intifada, the Women's Affairs Center was established at the initiative of the novelist Sahar Khalifa. Other independent women's organizations followed, staying outside the control of Palestinian political parties. The center's founding committee included Rita Giacaman, Rema Hammami, Islah Jad, Sahar Khalifa, and Amal Nashashibi. The board include some prominent educated women, mainly from Nablus city. The center was established as a women's research and training organization. In 1991, it opened a branch under the same name in Gaza City. In 1994, the steering committee formally separated the two centers and the Nablus center became the Women and Family Affairs Center. Another branch was opened in Amman (Jordan) but did not last long. The center produced a few issues of a journal, *Women's Affairs,* before it ceased publication. The center works to promote women's rights and gender equality within Palestinian society, and its main mandate is in the city of Nablus. It has no relations with Israelis. It focuses on training and advocacy to promote women's rights. It is difficult to measure the impact of its efforts due to the political instability of the times. The center coordinates some of its activities with other nongovernmental organizations in Nablus, but it has no formal links with the Palestinian Authority and depends on external funding.

WOMEN IN BLACK

Israeli movement in support of the first Intifada (1987–1991), promoting a network of women's peace activities in Israel, the Occupied Territories, and the world.

In 1988, a small group of Israeli women responded to the outbreak of the first Palestinian Intifada by protesting in the streets of cities and towns across the country, dressed in black as a sign of mourning. Their regular vigils have inspired protest groups across the Western world. The Women in Black have worked together with other feminist and nonfeminist peace groups in protests against all aspects of the military occupation of the West Bank and Gaza and have given their name and support to groups of women opposed to engagement in other military conflicts as well. In Israel, they are opposed by Women in Green and other right-wing settler movements riled by the apparent success of the women's peace movements in capturing public attention.

The first Jewish Women in Black movement was organized against the oppression of Soviet Jews in the 1970s; it was, in turn, inspired by South African women who stood silently, wearing black sashes, in protest against apartheid. Both the Jewish and the South African groups, often made up of middle aged and middle-class women, successfully demonstrated the power of activism by women's groups standing against the compromise and complacency of the largely male establishments in South Africa and the Jewish community.

Israeli women's groups have drafted a series of peace platforms, formed committees to monitor the treatment of civilians, and engaged from the outset—at first illegally—in dialogues with Palestinian women. The Israeli Women in Black have sought to maintain the spontaneous nature of their demonstrations, aiming to draw together women of different political beliefs and from different organizations. Their efforts were reinvigorated in the late 1990s by the success of the Four Mothers movement in shifting public opinion in favor of Israel's withdrawal from South Lebanon. The Four Mothers movement was founded by four Israeli mothers who had sons serving in Lebanon in 1997, after a helicopter crash in that country that left seventy-three soldiers dead.

WOMEN'S AFFAIRS CENTER (GAZA)

A Palestinian women's organization in Gaza.

The Women's Affairs Center is a Palestinian nongovernmental research and training center that promotes women's rights and gender equality within Palestinian society. It was established in Gaza City in August 1991; the founding committee included (alphabetically) Rita Giacaman, Rema Hammami, Sahar Khalifa, Islah Jad, I'timad Muhanna and Amal Nashashibi. In 1994, the center separated from a similar organization in Nablus and a change in the board followed to include prominent educated men and women, mainly from Gaza. In 1995, another change in board membership took place. The center aims at empowering women in Gaza through advocacy and research, and through training women in professional and technical skills in research, media, and management. Its goal is gender equity. It is difficult to assess its impact on women, but the center has managed to train some women in research and media skills. The center has no formal links with the Palestinian Authority and has wide networks of relations with other women's organizations in Gaza, the West Bank, and the Arab world; it has no relations with Israelis. The center depends on external nongovernmental funding and since the second Intifada, in September 2000, has faced financial difficulties.

WOMEN'S CENTRE FOR LEGAL AID AND COUNSELING

Women's organization based in Jerusalem.

The Women's Centre for Legal Aid and Counseling was established in 1991, during the first Intifada, as a unit of the Women's Action Committee, a branch of the Democratic Front for the Liberation of Palestine, at the initiative of Siham Barghouthi, Amal al-Juaʿaba, and Zahira Kamal. A board was formed, including Lamis Alami, Siham Barghouthi, Rawda el-Basir, Arham el-Damen, Samar Hawash, Zahira Kamal, Rana Nashashibi, Mukarram Qassrawi, and Lamia Quttineh. After a split with the

Popular Front, the center became an independent organization in 1992. It is based in Jerusalem, with one branch in the Old City of Jerusalem and one in Khalil/Hebron. It works to advance the legal and social status of Palestinian women through programs advocating women's legal rights, and through research and advocacy based on the international principles of human rights. The center's activities encourage the Palestinian Authority to adopt the Convention for the Elimination of All Forms of Discrimination against Women. The center has a wide network of relations with local, regional, and international organizations, including Israeli organizations, as well as with the Palestinian Authority.

WOMEN'S FORUM FOR RESEARCH AND TRAINING (YEMEN)

A women's forum in Yemen.

The Women's Forum for Research and Training (Multaqa al-marʾa lil-dirasat, wa al-Tadrib, WFRT) was established in 2000 to mobilize women's and human-rights organizations to work together for empowering women. The forum's main objective is to advance the rule of law regarding women's issues and rights and to build consensus in society at large on the urgency of incorporating gender dimensions in all fields of development and law. The forum's work recognizes that even though Yemeni legislation on human rights is among the best in the Arab world, women's rights are regularly violated and women lack knowledge of their rights. To accomplish its goals, the forum works on several levels, including arranging workshops for state officials, introducing human-rights issues to key figures in nongovernmental organizations and development agencies, and arranging training courses for grassroots activists. The forum has its office in Taʿiz, and its staff includes very young people. The initiator and manager of WFRT, Suʿad al-Qadasr is one of the most prominent Yemeni human rights activists. Prior to founding WFRT she was the chairperson of the Yemeni Women's Union Taʿiz branch and a leading figure in Human Rights Information and Training Centre. WFRT publications include research and surveys (*Street Children Phenomenon in Yemen,* 2003), the periodical *Multaqa* (Forum), and the leaflet "Suʾal wa jawab" (Questions and answers). WFRT is located on the Internet at <www.geocities.com/taralws/wfrt.htm>.

SUSANNE DAHLGREN

WOMEN'S INTERNATIONAL ZIONIST ORGANIZATION

Organization founded to address the needs of women immigrants in Palestine.

Established in London on 11 July 1920 by the Federation of Women Zionists of the United Kingdom, the Women's International Zionist Organization (WIZO) focused on agricultural training for women immigrants in Palestine, and on these women's role as citizens and as primary providers of education to children. The founders and leaders of the movement were Vera Weizmann, Edith Eder, Romana Goodman, Henrietta Irwell, and Rebecca Sieff, who served as the first president of WIZO until her death in 1966.

Initially headquartered in London, the organization established a network of federations throughout the world (except in the United States and the USSR). A member of both the World Zionist Organization and the World Jewish Congress, WIZO is now based in Israel, where it supports numerous institutions, such as baby homes for children of preschool age, youth clubs, summer camps and kindergartens for schoolchildren, secondary and agricultural schools, and community centers in border settlements and development towns.

WOMEN'S LIBRARY AND INFORMATION CENTER (ISTANBUL)

Istanbul foundation established for the preservation of the history of women.

The Women's Library and Information Center (Kadin Eserleri Kütüphanesi ve Bilgi Merkezi) was established in Istanbul as a foundation by Asli Davaz Mardin, Sirin Tekeli, Jale Baysal, Füsun Akatli, and Füsun Ertug-Yaras. It opened on 14 April 1990 in a historic building owned by the Istanbul municipality and overlooking the Golden Horn. The foundation declaration stated that the purpose of the library was "to gather knowledge about the history of women, to present this information in an organized way to those who do research today, and to preserve the written documents of the past and of today for future generations." A general board administers the library and an executive board, elected annually, directs its activities. The library has a collection of more than 8,500 books written by or about women; Ottoman, Turkish, and some foreign-language periodicals on women; more than 1,300 articles in women's studies; a collection of newspaper clippings since 1990; a collection of ephemera; a special collection to preserve the personal documents of women, including those presented by Hasene Ilgaz, Müfide Ilhan, and Süreyya Agaoglu; a collection on women artists and their works; a collection on women authors; an audio-visual collection; and an oral-history collection.

The library operates as a center of feminist activism, organizing women's exhibitions and special events, and cultivating international links to extend its feminist networks. It has helped to legitimize and institutionalize second-wave feminism in Turkey. In 1991 the library organized the First International Symposium of Women's Libraries in Istanbul. It has generated projects on women's oral history and women's publications.

The library is financed by donations made by its members and by the sale of its publications and annual diaries. It has cultivated amicable relations with different political parties that came to power in the Istanbul municipality, including the pro-Islamists, and has received some support on certain projects from the Turkish government and the Global Fund for Women.

WOMEN'S ORGANIZATION OF IRAN (WOI)

Iranian women's activist organization.

The Women's Organization of Iran (WOI) emerged in 1966, reflecting decades of Iranian women's activism. During the 1950s, as their awareness of progress elsewhere grew, Iranian women formed numerous organizations and sought the right to vote. Princess Ashraf Pahlavi, the shah's sister, bolstered these organizations, forming a committee in 1959 to prepare the articles of association for the High Council of Women's Organizations in Iran. An umbrella group, the high council coordinated the election of a 5,000-member assembly of women representatives approving the WOI's charter on 19 November 1966 in Tehran. A nonprofit institution run mostly by volunteers, the WOI had local branches receiving charitable donations and benefited from national fundraising. By 1975, the International Year of the Woman, the WOI had established 349 branches, 120 women's centers, and a center for research. The centers provided literacy classes and vocational training, family-planning information, and legal advice. The WOI supported the international feminist movement, formulating a national plan of action that resembled the United Nations General Assembly's World Plan of Action. Although anxious to avoid conflict with the religious authorities, the WOI with its successes nevertheless alienated senior clerics. Ironically, the political awareness gained through WOI projects enabled increased and effective women's participation in the Islamic revolution, which ultimately undid the WOI.

HALEH VAZIRI

WOMEN'S PEOPLE'S PARTY (1923)

The first and the only women's party founded in the Republic of Turkey.

The Kadinlar Halk Firkasi (Women's People's Party) was founded on 16 June 1923 in Istanbul. Among its founders were the leading feminists of the time, including Nezihe Muhittin (president), Nimet Remide (vice president), Şüküfe Nihal (general secretary), and Latife Bekir (party spokesperson). The Istanbul Provincial Administration rejected their petition for authorization, stipulating that women did not have the right to vote and hence could not establish a political party. The real reason for the rejection, however, was preparation for the Kemalist Republican People's Party (RPP), which was then being formed and which ruled the country single handedly until 1950.

Undiscouraged, the women established the Kadinlar Birliği (Women's Federation) on 7 February 1924, with the same leadership and objectives but a less political name, which did not intimidate the Kemalists. The federation intended to ameliorate rural women's conditions and, more importantly, to achieve woman suffrage. The latter was very much contingent upon the Kemalist cadre's wishes and did not happen until the eve of the twelfth congress of the International Women's Union, which was held in 1935 in Istanbul. Ten days after the congress, the federation dissolved itself under strong pressure from the RPP that it had fulfilled its primary task.

BURÇAK KESKIN-KOZAT

WOMEN'S RELIGIOUS RITUALS

In addition to observing their formal religious duties, women of various religious communities have developed their own rituals to meet their spiritual needs and personal aspirations.

Traditionally, women in all the major religious communities in the Middle East and North Africa have had less access to religious learning than have their male counterparts; they have been excluded from the formal clerical hierarchy, and their active role in official and public communal rituals has been, to different degrees, limited. Muslim women's access to the mosque has been restricted, as has that of Jewish women to the synagogue, and these restrictions are sometimes more the result of tradition than of religious law. At the same time, women have created their own rituals, which allow their active involvement in gender-segregated settings, often in the private sphere.

Rituals at Home and outside the Home

One woman-dominated activity is visiting neighborhood shrines and other holy sites—a practice common among Muslims, Jews, Christians, and Zoroastrians. Women use these occasions to pray, ask intercession, and find support from other pilgrims. Some of these shrines are dedicated to female holy figures, such as Rachel's tomb in Bethlehem and the shrine of Zaynab in Damascus; a number are guarded by women and visited solely by female believers. In North Africa, the veneration of *marabouts,* holy men and women, living and deceased, plays a central role. Their graves and their descendants are frequented by women for blessings *(baraka)* and guidance.

Many women's rituals take place at home, transforming domestic spaces into places of worship. In addition to individual prayers of petition *(duʿa),* Muslim women sponsor collective rituals, like prayer meetings of gratitude or entreaty, and gatherings to

Women in chadors pass in front of a mosque in Iraq. As with other monotheistic religious faith communities in the Middle East, Muslim women—whose access to mosques have been restricted—have developed a variety of rituals, performed in the home and elsewhere. **© PETER TURNLEY/CORBIS. REPRODUCED BY PERMISSION.**

read the Qurʾan, chiefly during the month of Ramadan. The Prophet's birthday is celebrated with the chanting of poems about his life. Shiʿa women especially partake in a great variety of religious rituals. The days of birth and martyrdom of the imams, as well as significant dates in the lives of some of their female relatives, are commemorated with either festive gatherings or recitals about their sufferings and ritual crying. Women from Iran and Central Asia also prepare and offer a *sofreh,* a ritual meal dedicated to a holy figure.

For Christian women in the Arab world, the month of May is a special time of religious devotion, processions, prayer services, and reflection. This is the month of the Virgin Mary, a period during which women ask special favors, make pledges *(nadhr),* and attend daily prayer gatherings and special masses in church. May is also a time of religious processions to shrines to Mary, in which members of other faith communities frequently participate, as in the procession to the church at Harissa in Jounieh, Lebanon.

Food and cooking play a central role in women's ritual activities throughout the Middle East. In addition to the religious obligation of lighting the Sabbath candles, Orthodox Jewish women are responsible for kosher cooking. Zoroastrian women prepare the food offerings for the religious ceremonies, and during Ramadan Muslim women prepare special meals for their families and guests to share after sunset to break the daily fast. A common ritual is the distribution of votive dishes.

Vows, Cults, and Holy Women

Vows are an integral part of women's religious rituals. In personal or collective prayers, they ask God for favors, or petition a saint to intercede with God on their behalf, promising to fulfill some kind of return service—for example to help the poor. The assistance of supernatural forces is sought for problems over which women have little control: illness, infertility, the lost love of a husband, financial problems, or worries about children. In times of crisis women also contact local ritual experts—religious authorities, holy women and men, healers, midwives—for amulets, divination, and cures. Many rituals concern the individual life cycle. Prayers, recitations from the holy book, and amulets serve to ensure a quick conception, a safe pregnancy, or an easy delivery, or to ward off evil influences harmful to the mother and newborn child or to a newly married couple. Muslim women gather at weddings, chanting religious songs. They gather for the formal naming of a child and for a circumcision. They perform the lament for deceased family members at home and recite prayers for their souls.

Particularly in North Africa, Egypt, Sudan, the countries around the Persian Gulf, and Yemen, Muslim women also take part in spirit possession and healing cults, most commonly referred to as *zar.* Ritual masters, who are often women, try by means of trance and dance to pacify the spirits that have afflicted the women who consult them. They are sometimes also consulted by Christian women. By claiming to be possessed by a malevolent spirit, women can overstep the boundaries of acceptable behavior and demand, in the name of the spirit, concessions from their husbands.

Women may also become members of Sufi orders. Especially in North Africa, Turkey, and Pakistan the *zikr* (remembrance of God) includes ecstatic chanting, dancing, and drumming. These rituals are sometimes connected to a healing cult.

In addition to their religious importance, rituals serve to gain merit for a woman in the next

world and to secure the well-being of women and their family members—living as well as deceased. The women sometimes perform the ritual in the name of a male relative or a child, acting as representatives to the supernatural. In all Middle Eastern religious communities, women have played a central role as preservers and transmitters of faith. Further, at collective rituals, women can establish emotional and supportive bonds with others not family members. For traditional women, these rituals often represent the only socially accepted activity outside the house. Excluded from the male religious hierarchy, women find in rituals the possibility of acting as religious experts, thereby gaining esteem, income, and mobility.

Women have developed a great variety of rituals, which differ from country to country and change with historical circumstances. Some are performed by women as well as men, others exclude men. Urban women generally have developed a richer religious life than village and nomad women. Popular rituals are the sphere in which the boundaries between the different religions are most fluid. Zoroastrian women display *sofreh* like Shiʿa women, and in Egypt and Lebanon Muslim women may in times of crisis visit a church or consult a priest. Many women's religious rituals have an ambiguous status and are dismissed by the religious orthodoxy. In Saudi Arabia under the Wahhabis, most Muslim women's rituals have been forbidden. In Soviet Central Asia, women's domestic rituals played an important role in the survival of religious beliefs. With increasing literacy and access to religious learning, women have begun to renegotiate their role within the religious tradition and their activities have become more visible. At the same time Muslim women's less orthodox traditional rituals have become a point of attack by Islamic revivalists, male as well as female, who regard them as superstition.

SABINE KALINOCK

WOMEN'S RENAISSANCE CLUB

The first women's association in Iraq.

The Women's Renaissance Club was established on 24 November 1923, mainly by wives of leading politicians and women from socially prominent families. Its aim was to promote women's welfare by emphasizing charity, education, and the arts. The club worked to increase the number of schools for girls, raise women's educational levels through literacy and sewing classes, and provide for the education and care for orphans. It worked to "combat unacceptable customs that are rejected by all God's precepts, and social customs that violate honor and goodness, and hinder the economy of the country."

The club was essentially a charitable organization to assist less fortunate women. Although it did not fight for the removal of the veil, it considered the veil an issue that could be resolved by social education. This incurred the wrath of conservatives, particularly Muslim conservatives, who felt that the club would corrupt family morals and bring Westernization. Although it was no more than a social club for upper-class women, its advocacy of education for girls was enough that it was forced to close in 1925 under pressure from conservatives.

Jacqueline Ismael

WOMEN'S SERVICES

Services available to women in Turkey.

The Turkish parliament's confirmation of the United Nations convention against discrimination based on sex in October 1980 formed the legal basis for the government's providing services to women. It started with the establishment of a Women's Unit within the State Planning Organization in 1985. It was followed by the creation of the General Directorate of Women's Affairs (Kadının Statüsü ve Sorunları Genel Müdürlüğü) within the Ministry of Labor and Social Security in 1990. This directorate was to collect data concerning the status of women in Turkey and their major problems. It was transferred in 1991 to the office of the prime minister.

In 1993, an independent undersecretary for women's affairs and social services (Başbakanlik Kadin ve Sosyal Hizmetler Müsteşarlığı) was created within the office of the prime minister, and the general directorate came under the supervision of this undersecretary. In 1991, the directorate had a staff of five; in 1994, the staff had grown to forty-two. The provincial network has not yet been established. In 1994, its budget was about 0.002 percent of the national budget.

Special women's units have been set up in the ministries of Health, Labor and Social Security, and National Education. In 1993 the State Statistical Institute created a data bank for women's issues.

Several Turkish universities have established women's studies centers that offer graduate courses and M.A. degrees:

1. Istanbul University Women's Studies Center (Istanbul Üniversitesi Kadin Sorunları Araştırma ve Uygulama Merkezi), in 1990
2. Marmara University Women's Labor Force and Employment Center (Marmara Üniversitesi Kadın İşgücü İstihdamı Araştırma ve Uygulama Merkezi), in 1990
3. Ankara University Women's Studies Center (Ankara Üniversitesi Kadın Sorunları Araştırma ve Uygulama Merkezi), in 1993
4. The Middle East Technical University Women's Studies Graduate Program (ODTÜ Kadın Çalışmaları Yüksek Lisans Programı), in 1994

In 1980 local governments started to sponsor literacy courses, legal-advice centers, and occupational orientation services for women. However, these programs remained confined to municipalities in the metropolitan areas. In 1993 labor unions began to establish women's commissions in order to acquaint female workers with their legal rights. Almost all major political parties also have women's commissions as well.

Nongovernment organizations concerned with women's issues number 211. Their major endeavors have been to increase women's visibility on the national level and create favorable public opinion regarding legislative and administrative initiatives that benefit women. They are instrumental in raising consciousness and establishing various types of platforms, particularly combating sexual harassment and violence in the family. The Women's Library and Data Bank (Kadın Eserleri Kütüphanesi ve Bilgi Merkezi Vakfi), which is supported by a foundation and the city of Istanbul, has been active in collecting oral histories of women leaders and artists and creating an archive for historical records.

Nermin Abadan-Unat

WOMEN'S STUDIES CENTER (JERUSALEM)

A women's organization in Jerusalem.

The Women's Studies Center was established at the initiative of the Women's Action Committee (the women's branch of the Democratic Front for the Liberation of Palestine) in 1989. The founding members were Siham Barghouthi, Penny Johnson, Amal el-Juaʿabeh, Zahira Kamal, Randa Siniora, and Lisa Taraki. In 1992, the center declared itself an independent nongovernmental organization. It works to promote women's rights and improve their social status through research, training, advocacy,

and media research and training. The center has a wide network or relations with local, regional, and international women's organizations and was the coordinator for the Arab Women's Network for many years. It has no relations with Israelis. The center depends on external funding. Due to financial problems it was in the process of being integrated into the Palestinian Agricultural Relief Committees in 2003.

WOODHEAD COMMISSION (1938)

British investigatory commission to Palestine.

The commission, led by Sir John Woodhead, was formed in March 1938 in response to dissension within the British government over the July 1937 Peel partition plan for Palestine and the re-ignition of the Arab revolt that had followed its promulgation. The new commission was instructed to gather evidence from the various parties and to recommend boundaries for two self-sufficient states, one Arab and one Jewish, to replace the British Mandate.

The Arab and Jewish positions were irreconcilable. All Palestinian Arab factions and the surrounding Arab states were unified in their opposition to partition and demanded the creation of an independent Arab state on the entire Mandate territory. The Jewish Agency proposed an increase in the territory designated for the Jewish state by Lord Peel. On 9 November 1938 the Woodhead Commission issued its report, which stated that two independent states would be impracticable on financial and administrative grounds. It called for a conference of all relevant parties in London to work out a compromise. The parties met at the St. James Round Table Conference in February/March 1939, which ended in deadlock. In order to enhance its security and improve its position with Arab states on the eve of war, the government then issued the MacDonald White Paper of 17 May 1939.

TABLE BY GGS INFORMATION SERVICES, THE GALE GROUP.

at the most competitive rates. IBRD lends to the more advanced developing countries on creditworthy and productive projects. Pricing is based on the cost of funds to the bank. Loans are made to governments or are guaranteed by governments. Total IBRD loans made in 1994 totaled US$20,836 million. IFC, established in 1956, and MIGA, established in 1984, deal with the private sectors of the developing countries. MIGA is mandated to encourage private equity investments by providing noncommercial risk guarantees. IDA lends interest free to the very poor countries with an annual per capital GNP of US$650 or less per year. The loans have very long maturities and up to a ten-year grace period.

The World Bank's executive board is responsible for the general operations of the bank. The board approves projects, funding programs, and general management of both the IBRD and the IDA. The board is composed of twenty-four members. Each member represents and votes for his country as per its percentage contribution to the capital of either IBRD or IDA. Certain countries also will represent blocs of smaller members and vote on their behalf. The largest vote belongs to the United States, which contributes 17.42 percent of IBRD capital and 15.67 percent of IDA capital. Saudi Arabia has the largest single Arab state representation on the World Bank board with 2.79 percent of the votes of the IBRD.

In the Middle East, the World Bank's stated goals are "to emphasize sustained commitment to operations and analytical work, to promote employment-led growth, to foster human resources development, and to improve natural resource management." The bank provides support to countries that agree to implement stabilization and structural reform. These conditions imply substantial efforts to reduce budget deficits, cut subsidies, allow currencies to reach their market levels, and privatize the economy.

WORLD FEDERATION OF SEPHARDI COMMUNITIES

Organization to support Sephardic settlement in Palestine/Israel.

The organization was founded at a conference of Sephardic communities in Vienna in 1925, prior to the Fourteenth Zionist Congress. The creation of Sephardic settlements at Kfar Hittim, Tzur Moshe, and Bet Hannan followed. After the establishment of the State of Israel, the Sephardi World Congress was convened in Paris in 1951 to renew the organization's activities on behalf of the Sephardic population in Israel, in the areas of education, housing, welfare, and preservation of their heritage. A second congress was held in Jerusalem in 1954. Now

known as The World Sephardi Federation, its activities in Israel have been concentrated in education and in helping economically underprivileged Sephardic communities. It also works to promote the bond between Diaspora and Israeli Sephardic communities.

MIA BLOOM

WORLD ORGANIZATION OF JEWS FROM ARAB COUNTRIES (WOJAC)

International organization created in 1975.

WOJAC's charter states that Jews from Arab lands can and should form a bridge of understanding between the Arab countries and Israel. Its spokesmen stress that United Nations Resolution 242, which spells out "the necessity for a just settlement of the refugee problem," refers to all refugees, Jews and Palestinian Arabs alike; thus the legitimate rights of post-1948 Jewish refugees from Arab countries will be acknowledged. These Jews or their descendants would then be entitled to indemnification for immovable assets they left behind in their former lands.

WOJAC credits the State of Israel for its efforts to absorb the Jews from Arab lands, despite the difficulties and discriminatory policies these refugees encountered, socially and economically, during their integration processes. On the other hand, it claims that, whereas Israel solved the problem of Jewish refugees from Arab lands, the Arab states are to be faulted for failing to rehabilitate the Palestinians after 1948, rendering the latter eternal refugees as well as political pawns in inter-Arab politics.

Until 1992, when Syria finally allowed Syrian Jews to emigrate freely, WOJAC actively supported Israel's and the Jewish Agency's position that the regime permit all Jews who wished to emigrate to do so. This was in accordance with the promise made by the late Syrian president Hafiz al-Asad to then–U.S. president Jimmy Carter at Geneva in 1977.

WORLD WAR I

War involving the Central powers (Germany, Austria-Hungary, Bulgaria, and the Ottoman Empire) against the Allies (Britain, France, Russia, Belgium, Greece, Romania, Italy, Portugal, Serbia, Montenegro, Japan, and the United States).

World War I (then called the Great War) began on 28 July 1914, when Austria declared war on Serbia (ostensibly because a Serbian nationalist assassinated the heir to the throne, Austrian Archduke Franz Ferdinand, and his wife on 28 June); on 1 August, Germany declared war on Russia; on 3 August, Germany declared war on France; on 4 August, Germany invaded Belgium.

In retaliation and to aid an ally, Britain declared war on Germany on 4 August. The Russians crossed their western border at the Ukraine to enter Austro-Hungarian Galicia and pressed on to battle Germany, losing the Battle of Tannenberg (26–30 August), on what came to be called the Eastern Front. Germany marched on France in late August but was stopped in the First Battle of the Marne (6–10 September) on what came to be called the Western Front; here trench warfare ensued until March 1918.

In the Middle East, the leadership of the Ottoman Empire was divided among those who desired neutrality, those who wanted to join the Allies, and those who preferred to join the Central powers. The last group, led by Minister of War Enver Paşa prevailed. The Ottoman cabinet signed a secret alliance with Germany on 2 August. The next week the Ottomans purchased the German cruisers *Goeben* and *Breslau,* replacing two Turkish ships (being built by Britain but confiscated by Britain at the outbreak of war). Renamed *Sultan Selim Yavuz* and *Midilli,* they shelled Sevastopol and Odessa, Russian cities on the Black Sea, 28 October, bringing the Ottoman Empire into the war; Russia declared war on the Ottomans 4 November; Britain and France declared war on them 5 November. Germany dominated Ottoman military actions, with General Otto Liman von Sanders directing the army and Admiral Wilhelm Souchon, the navy.

In November 1914, a British naval contingent bombarded the entrance to the Dardanelles, and in January 1915 the British organized to break through

An Australian soldier carries a wounded comrade to a field hospital on the beaches of Gallipoli, Turkey, during World War I (1914–1918). The Allies began an assault on the Gallipoli Penninsula in April 1915, as the first step in a plan to overtake the Ottoman Empire's capital, Constantinople. The plan failed and the Allies were forced to evacuate Gallipoli by the end of the year. © Corbis. Reproduced by permission.

the Turkish Straits (from the Mediterranean into the Black Sea at the Bosporus and Dardanelles). Britain's First Lord of the Admiralty Winston Churchill convinced the war cabinet that an amphibious attack could accomplish this, thereby taking the Ottomans out of the war and opening a supply route to Russia. Britain's War Secretary Lord Kitchener sabotaged the plan by refusing to send the necessary land troops. Britain's navy unsuccessfully attacked in February and March; in April an Anglo-French army landed on the Gallipoli peninsula, where the Ottoman Turks caused heavy casualties to the Allies, which by then included Italian forces. The British-French-Italian forces almost broke through twice, but the lack of cooperation by the Russians at the Bosporus end of the Straits, faulty intelligence and, most of all, skillful tactics by the Turks and Germans led to a stalemate. The Allies withdrew from the Straits in January 1916.

Another area of major Middle Eastern hostilities was Egypt, under British protection since 18 December 1914. Khedive Abbas Hilmi II was deposed, and the British appointed Sharif Husayn ibn Ali to be sultan of Egypt. Cemal Paşa, Ottoman minister of marine, took over the Fourth Ottoman army—thereby controlling Syria, including Palestine. He sent his forces to make a surprise attack on

the Suez Canal in February 1915; they crossed the Negev desert without detection. The Turkish forces could not hold the eastern bank of the canal and retired to the Sinai desert, maintaining bases in Maʿan, Beersheba, and Gaza. Cemal continued to raid the Suez Canal by air, forcing the British to keep a large force there, but in the end the British prevailed. A second assault on the canal was delayed until the summer of 1916 and failed totally. The Turco-German forces were on the defensive there until the end of the war, although in March and April 1917 they withstood a heavy British attack at Gaza, and moved to the offensive in the Yilderim Operation commanded by General Erich von Falkenhayn. But the Turko-German forces were defeated by a combination of factors, including the troops of British General Edmund Allenby (commander of the Egyptian Expeditionary Force), failure of some of their transport, and sabotage.

Major battles were fought in Russia, where in late 1914 the Turks attempted to take Kars and Batum. In the battles of 1915 and 1916 the Russians took Erzerum, Van, Trabzon, and Erzinjan. They were aided by Armenians—revolutionaries and irregulars. In 1916, Mustafa Kemal (Atatürk), commander of the Second Ottoman Army, joined the Third Army on the Caucasus front, but little was accomplished due to scarce ammunition, impossible conditions for transportation, and rampant disease. The two revolutions in Russia also affected the Caucasus front, as the Russian troops (except the Armenian and Georgian divisions) withdrew and went home to attend to domestic affairs in 1917. The Turks then occupied Kars, Ardahan, and Batum, but Georgian and German forces retook Batum. A Bolshevik-Armenian coup in Baku and the killing of ten thousand Turks there produced a Turkish drive to recapture the city in September 1918 and to kill many Armenians. At the end of the war, the Caucasus became the Allies' problem.

Iraq was the scene for the major hostilities of the Mesopotamia Campaign. British forces from India seized Basra before Turkey declared war. Traveling up to the confluence of the Tigris and Euphrates rivers, the Anglo-Indian forces under General Sir Charles Townshend took Kut al-Amara in 1915. In November, his army was defeated south of Baghdad and surrendered to the Sixth Turkish Army at Kut al-Amara in April 1916. Halil Paşa erred in allowing the Anglo-Indian forces to remain in the south, for they reestablished their hold there, built a railroad, and under Britain's General Sir Frederick Stanley Maude, retook Kut al-Amara in March 1917. Baghdad fell immediately after, and the Anglo-Indian forces headed north to Mosul (on the west bank of the Tigris), which they failed to reach by the time of the Mudros Armistice (30 October 1918).

Enver Pasha, Minister of War and Commander-in-Chief of the Ottoman military during World War I (1914–1918). Enver Pasha was instrumental in bringing the Ottoman Empire into the war on the side of the Central Powers, a decision that eventually led to his downfall and the end of the Ottoman Empire. COURTESY OF THE LIBRARY OF CONGRESS.

Two national groups within the Ottoman Empire openly aided the enemy during the war: the Arabs and the Armenians. The Armenians followed the orders of the head of the Armenian Orthodox Church (who lived in Yerevan in the Caucasus) that

the Russian czar was the protector of all Armenians. Some Armenians rebelled; in the region of Van and Erzurum, Armenians openly battled the Turks proclaiming an Armenian government in Van, April 1915—which touched off the Armenian deportations and the massive killing of Armenian civilians by the Turks in 1915/16.

Cemal Paşa's actions in Syria—in arresting and hanging about thirty Arabs in Beirut and Damascus 1915/16, many from prominent families, as well as his refusal to share grain with the starving Lebanese in 1916—pushed many Arabs to desire independence from Ottoman Turkey. This desire was furthered by the proclamation of Arab independence by Sharif Husayn ibn Ali of the Hijaz in June 1916. Husayn's action was part of the outcome of the secret Husayn-McMahon Correspondence.

Another secret negotiation over the division of the Arab Middle East was the Sykes-Picot Agreement between France, Britain, and Russia. An open negotiation between the Zionists and the British had led to the issuance of the November 1917 pro-Zionist Balfour Declaration, concerning a "Jewish national home" in Palestine.

The failure of the German-Turkish campaigns led to the buildup of British troops in Egypt and their move into Palestine. General Allenby led his Egyptian Expeditionary Forces west of the Jordan river, and Jerusalem fell to them in December 1917. Joined by French military detachments, he moved north to take Lebanon, while Hijazi forces, aided by Colonel T. E. Lawrence (of Arabia), Colonel C. C. Wilson, and Sir Reginald Wingate, paralleled Allenby's actions east of the Jordan River. Damascus fell in October 1918—and although Mustafa Kemal (Atatürk) and the Seventh Turkish Army held Aleppo, the armistice at Mudros ended all fighting, 30 October 1918.

Four years of war had devastated Ottoman Turkey, and the old order died. A new period for the Middle East began with the peace treaties, the rise to power in Turkey of Mustafa Kemal, the fall of empires, and the creation of new nation-states and spheres of influence.

SARA REGUER

WORLD WAR II

War involving the Axis (Germany, Italy, Japan, Hungary, Romania, and Bulgaria) against the Allies (Britain, France, the United States, the Soviet Union, Australia, Belgium, Brazil, Canada, China, Denmark, Greece, the Netherlands, New Zealand, Norway, Poland, South Africa, and Yugoslavia).

When World War II began on 1 September 1939, the Middle East consisted of independent, semi-independent, and colonial states. From east to west they included the following: Iran and Turkey were independent, with Iran under Reza Shah Pahlavi and Turkey a republic. Syria and Lebanon were republics but under French control. Transjordan and Iraq were monarchies but under British control. Palestine was a League of Nations mandate under British control. The Arabian peninsula consisted of Saudi Arabia and Yemen, both independent, and Oman and a variety of Persian/Arabian Gulf states within the British sphere of influence. Egypt (with the strategic Suez Canal) and the Sudan were nominally independent but really under British control. Libya was an Italian colony. The French effectively controlled the rest of North Africa—Tunisia, Algeria, and Morocco—except for the western regions under Spanish rule.

In World War II, Britain and France were allied against Germany and Italy. All except Germany had significant imperial holdings and interests in the Middle East. Germany wanted not only the defeat of Britain and France, but German gains in this region. As the war began, the Axis powers controlled only a small part of the Middle East—Libya and some other Italian territory taken during the Ethiopian annexation in 1935. The fall of France to Germany in May 1940 and the establishment of the quasi-independent Vichy republic in June 1940 dramat-

ically altered the balance of power: In addition to Italy's territories being in their sphere of influence, the Axis powers had acquired France's territories.

North and East African Campaigns

The British initiated their first military action in the Middle East by an attack on French naval vessels at Oran, Algeria, 3 July 1940—which crippled the French fleet there (and resulted in 1,300 French dead). This was part of an effort to ensure that the Axis powers could not use the French fleet; the French squadron at Alexandria was disarmed while two French submarines in British ports joined the Free French forces fighting with the British. The next day, Italian forces from Ethiopia occupied border towns in the Sudan, and within six weeks they penetrated British Kenya and seized British Somaliland. On 13 September, Italian forces under Rodolfo Graziani invaded Egypt; they penetrated some sixty miles (90 km) within a week, and dug in along a fifty-mile (80 km) front from the coast to Sidi Barrani.

Since the threat to the Suez Canal was of primary importance, the British countered first against Graziani's army of 200,000. General Sir Archibald Wavell launched a surprise attack with an army of 63,000 on 6 December and drove through the Italian lines at Sidi Barrani, capturing 40,000 Italian troops by 12 December. The campaign continued for two months, ending with Italian surrender at Benghazi, Libya, on 7 February 1941. With advance units at al-Agheila, the British had advanced about five hundred miles (800 km), captured 130,000 Italian soldiers, and taken four hundred tanks and one thousand guns.

On 15 January 1941 the British launched an attack against Italian forces in East Africa, from the Sudan. Mogadiscio, capital of Italian Somaliland, fell on 26 February, followed by Neguelli in southern

Ethiopia on 22 March; the capital, Addis Ababa, fell on 6 April.

These British successes were soon to be reversed. Germany had not yet committed her forces to Operation Barbarossa, the invasion of Russia (22 June 1941), and in February and March was able to reinforce the Italians in western Libya with two divisions under General Erwin Rommel. In the meantime, the British had turned their attention to the defense of Greece, diverting troops from North Africa.

Rommel opened his attack on 3 April, and the British retreated from their recent gains in Libya. The Axis forces drove the British back to the Egyptian frontier by 29 May. The tables then turned when Germany diverted troops from North Africa for the invasion of Russia. The British launched an offensive on 11 December and were able to drive into Libya as far as Benghazi by 25 December. A reinforced Rommel was able to begin a drive on Egypt on 22 May 1942 that did not end until checked at al-Alamayn (El Alamein), just eighty miles (127 km) from Alexandria. General Montgomery's offensive from al-Alamayn began on 23 October, resulting in expulsion of Axis forces from Egypt by 12 November and the end of the threat to Egypt and the Suez Canal.

General Erwin Rommel with soldiers of the 15th Panzer Division in 1941, in Libya between Tobruk and Sidi Omar. Rommel earned the nickname "the Desert Fox" for his skillful leadership of Axis forces in North Africa during World War II (1939–1945). NATIONAL ARCHIVES—STILL PICTURE REFERENCE (NWCS-STILLS REFERENCE) NWDNS-242-EAPC-6-M713A. REPRODUCED BY PERMISSION.

At about the same time, on 8 November, a British-American force under U.S. General Dwight D. Eisenhower began Operation Torch, the invasion of North Africa. Allied forces disembarking in French Morocco and Algeria faced some opposition from Vichy forces, but by 11 November, the two sides had reached an armistice. Pressed by Montgomery's Eighth Army in Libya and the new threat from the west, Rommel concentrated the Axis forces in Tunisia. Into 1943, bitter fighting continued, particularly at the Kasserine Pass, but by 12 May all German and Italian resistance had ended. The Axis powers had 950,000 men dead or captured and had lost 8,000 aircraft and 2.4 million tons of shipping.

Southwest Asia and Turkey

While the significant fighting of World War II in the Middle East was in Africa, the British still faced serious threats in Southwest Asia. The regimes in both Iran and Iraq flirted with support of the Axis powers as a means of diminishing British influence over their affairs. On 2 May 1941, pro-Axis sympathizers in Iraq tried to seize power. British forces intervened and put down all resistance by 31 May. Fearing that Reza Shah Pahlavi might take Iran into the German camp in the summer of 1941, British and Soviet forces entered Iran in late August and forced him to abdicate in favor of his son, Muhammad Reza Pahlavi, on 16 September. These actions effectively secured Iraq and Iran for the Allies.

The fall of France in June 1940 threatened to bring Syria and Lebanon into the Axis sphere of influence. Quick action by the British and Free French forces prevented this. On 8 June these forces occupied Syria and Lebanon. On 16 September Syria was proclaimed an independent nation, as was Lebanon on 26 November. Both remained loyal to the Allies during World War II, but soon after the end of hostilities they were able to assert their independence and obtain the withdrawal of Allied forces from their territory.

World War I had led to the disintegration of the Ottoman Empire and the creation of the Turkish

republic under Kemal Atatürk. Turkey then faced pressure from both sides and from within as World War II loomed on the horizon. Atatürk and his successor, İsmet İnönü, favored the British as the power they believed would ultimately win. Other Turks feared Britain's ally, the Soviet Union, as a traditional enemy and realized that by June 1941 German troops were within 100 miles (160 km) of Istanbul. Still others remembered the disastrous decision of October 1914, when the Ottomans joined the Central Powers in World War I.

Shortly after the beginning of World War II, on 19 October 1939, Britain and France concluded a fifteen-year mutual assistance pact with Turkey. German success in 1940 and the invasion of Russia in 1941, however, led many Turkish leaders to favor the Axis. Thus, on 1 November 1940, İnönü declared it to be Turkish policy to remain a nonbelligerent in the war, while maintaining friendly ties with both Britain and the Soviet Union. The Allies, of course, continued to pressure Turkey for support, and on 3 December 1941, just before the United States declared war, the American Lend-Lease program was extended to Turkey. İnönü still pursued a neutral course but by 1943 realized that the Axis would lose. In August 1944, Turkey broke diplomatic relations with Germany, and on 23 February 1945 it formally declared war to comply with requirements for participation in the UN conference to be held in San Francisco in April.

Palestine

The Jewish and Arab populations of Palestine greeted World War II with mixed emotions. Neither was content with British rule. The Arabs resented the rule of their country by a European power pledged to uphold the Balfour Declaration (sanctioning Palestine as a haven for persecuted Jews from all parts of the world). The Jewish population, the Yishuv, suspected British commitment to the Balfour Declaration, especially since the British banned Jewish immigration into Palestine after 1939.

In light of the antisemitism of Nazi Germany and its extermination of European Jewry as a matter of state policy, the Yishuv had little recourse but to support the Allies. The resources of the Jewish community in Palestine were put at the disposal of the British, and efforts (often resisted by British authorities) were made to raise Jewish military units to support the war effort. Early in the war the Yishuv devised the Carmel Plan, to create a Jewish enclave on the Palestine coast, near Haifa, to resist a German landing and occupation. Fortunately, this never became necessary.

A small minority of Jews did continue to resist British control of Palestine. The LEHI (Stern Gang), under Abraham Stern, urged rebellion against the British and even approached the German representatives in Vichy-controlled Syria with an offer of support against the British in Palestine. Even after this offer was rejected and Stern killed in confrontation with British authorities in early 1942, this splinter group continued to resist the British; other Jewish groups then began to oppose the British as the war progressed, since British support of the Zionist cause seemed less than enthusiastic.

Some Arabs viewed Germany as an instrument to rid themselves of British rule. The mufti of Jerusalem, Hajj Amin al-Husayni, lent his support to the Nazi cause, and when fleeing from Jerusalem in 1937 and from Beirut in October 1939 to Baghdad, he established contact with the German ambassador to Turkey, Franz von Papen, offering Arab support. After an anti-British revolt in 1941, the British reestablished control of Iraq in May 1941. Hajj Amin, who participated in the revolt, left for Turkey and later for Rome and Berlin to support the Axis powers after they promised to free the Arab world and support its independence and unity. He was able to generate some support for the Axis among the Arabs, but the defeat of the Italians and Germans in North Africa prevented this from becoming a factor in the war.

The War's Effect on the Middle East

World War II ended with British and French control of most of the Middle East. The war did, however, shatter the aura of the invincibility of their arms. Consequently, rapid changes occurred in the region—Arab states asserted their independence, and the Jewish population of Palestine declared the State of Israel in 1948. Iran and Turkey insisted on full partnership in the international community. The European powers would no longer have undisputed control over the fates of the peoples in this region.

With the end of the war the United States emerged the premier Western power, but the challenge of the Cold War with the Soviet Union would soon have its own impact on the oil-rich Middle East.

WORLD ZIONIST ORGANIZATION (WZO)

Organization that transformed the Zionist idea of establishing a Jewish state into reality.

Founded in 1897 by Theodor Herzl at the first Zionist Congress in Basel, Switzerland, the Zionist Organization, as it was originally known, was created to serve as the organizational framework for the Zionist movement. It was to be composed of "all Jews who accept the Zionist program and pay the shekel (a nominal membership fee, differing from country to country)."

The Zionist Congress was established as the supreme governing body of the WZO. Before 1948 congresses were held in many European cities; thereafter, beginning with the twenty-third congress in 1951, all congresses were held in Jerusalem. At first they were held every one or two years; more recently they have been convened every four years. Herzl, the first president of the WZO, chaired its first five congresses. After his death in 1904 the movement was headed by lackluster figures until the election of Chaim Weizmann as its president in 1920.

Between congresses, the movement was guided by a Greater Actions Committee, or General Council, and a Smaller Actions Committee, or Executive. Under the aegis of the WZO, the Jewish Colonial Trust was formed at the second Zionist Congress to serve as the bank of the Zionist movement. The Jewish National Fund was initiated at the fifth Zionist Congress to act as a land-purchasing agent in Palestine for the Jewish people.

Membership in the World Zionist Organization was initially on a regional basis, but as ideological differences emerged the membership structure splintered along ideological lines. Distinct political parties were formed, of which the most important were the Labor Zionists, the General Zionists (liberal centrists), the Mizrahi (religious Zionists), and (after 1925) the Revisionists (right-wing nationalists). The latter, led by Vladimir Zeʾev Jabotinsky, split from the WZO altogether in 1935 and formed the New Zionist Organization.

During the period of British mandatory rule in Palestine between 1920 and 1948 the WZO assumed many of the powers of a quasi-government of the Jewish community in the country. Article 4 of the Mandate provided for the establishment of a Jewish Agency, which "shall be recognized as a public body for the purpose of advising and cooperating with the administration of Palestine in such economic, social, and other matters as may affect the establishment of the Jewish national home and the interests of the Jewish population in Palestine." Until 1929 the WZO acted as the Jewish Agency for Palestine; thereafter, the agency was enlarged to include non-Zionists, but the WZO remained the dominant power within the new body. The political department of the Jewish Agency functioned, in effect, as the foreign ministry of the WZO throughout this period.

After the establishment of the State of Israel in 1948 the WZO gradually evolved into a foreign propaganda and political mobilization arm of the Is-

raeli government. Many of the WZO's functions were assumed by the new government, but the Jewish Agency was not dismantled. In 1952 the Law of the Status of the WZO-Jewish Agency was promulgated whereby primary responsibility was assigned to the Jewish Agency for the development and settlement of the land and for the absorption of immigrants. In 1960 the WZO adopted a new constitution under which individuals were denied eligibility for membership, which was thereafter reserved for organizations.

Y

YA'ARI, ME'IR
[1897–1987]

Israeli political leader.

Born in Galicia, Me'ir Ya'ari was educated at the Vienna Academy of Agriculture and the University of Vienna. During World War I, he served as an officer in the Austro-Hungarian army. In Vienna, he was a leader of the ha-Shomer ha-Tzaʿir youth movement before emigrating to Palestine in 1919. Founder of the first kibbutz of ha-Shomer ha-Tzaʿir and the Histadrut, Ya'ari was also an early leader of the Kibbutz Artzi of the ha-Shomer ha-Tzaʿir movement in Israel and abroad. He was elected to the first Israeli Knesset, in which he remained until 1973, and served as general secretary of MAPAM. A prolific writer on Zionist ideology, Ya'ari was a principal intellectual force in the MAPAM movement.

YACINE, ABDESSALAME
[1928–]

Islamic intellectual and spiritual leader in Morocco.

Abdessalame Yacine is one of the foremost Islamic intellectuals in Morocco and the spiritual leader of the al-Adl wa al-Ihsan (Justice and Charity) movement. A former teacher and school principal, Yacine became an Islamic activist in the early 1970s after having been religiously awakened by an encounter with Sufism. Following his bold criticism of King Hassan II in an open letter entitled "Islam or the Deluge" in 1974, Yacine was jailed on a few occasions, and ultimately put under house arrest between 1989 and 2000. Besides this clash with the monarchy, he has mostly distinguished himself through a prolific literary production and the originality of his philosophy. Deeply influenced by his short Sufi experience, Yacine developed a nonviolent Islamism based on spiritual regeneration. His major works in Arabic and French underline the importance of spiritual guidance (*tarbiya*), proper companionship (*suhbah*), and prayer. In doing so, Yacine invites Muslims to reach a higher stage of

consciousness called *ihsan* in order to become truly benevolent and build a better society. Yacine thus wishes to instill justice, honesty, and responsibility within various spheres, from family life to politics. His emphasis on spiritual growth, which he attempts to reconcile with the dryness of Islamic law, sets him apart from the more rigorist Islamists in Morocco and elsewhere. Nevertheless, al-Adl wa al-Ihsan, officially founded in 1987, is currently one of the most important Islamic organizations in the country. Although Yacine continues to criticize the Moroccan monarchy and government within acceptable limits, he has so far eschewed direct political involvement.

Henri Lauzière

YACOUBI, RACHIDA

[1946–]

Moroccan writer.

Rachida Yacoubi's first novel, *Ma vie, mon cri* (My life, my scream; 1995) described the poor condition of women in Moroccan society and caused a shock both in Morocco and abroad. Based partly on her own experience, the book tells the story of a woman whose husband is an alcoholic. She divorces him to stay alone with four children in a shantytown. This was almost the first time that a story so violently against male domination of society was published in Morocco. It was a great success and Yacoubi was invited to Europe on many occasions to speak about the condition of women.

Before Yacoubi's book, the condition of women in Morocco had been addressed only by male novelists (Tahar Ben-Jelloun, Driss Chraibi, Abdelhak Serhane) or by researchers (Souad Filal, Fatima Mernissi, Soumaya Naamane-Guessous). Following the publication of Yacoubi's novel, other Moroccan women published books about gender issues in Morocco. They include Halima Benhaddou (*Aïcha la rebelle,* 1982), Leila Houari (*Zeida de nulle part,* 1985), Nafissa Sbaï (*L'enfant endormi,* 1987), and Fatiha Boucetta (*Anissa captive,* 1991). In 2002, Yacoubi published an essay about the time she spent in prison ("Je dénonce"; I denounce), showing the inequality of men and woman before the judicial system in Morocco

Rabia Bekkar

YADIN, YIGAEL

[1917–1984]

Israeli archaeologist, general, and politician.

Born in Jerusalem, the son of the archaeologist E. L. Sukenik, Yigael Yadin studied archaeology and Semitic languages at Hebrew University (1935–1945), later earning his Ph.D. (1955) studying the Dead Sea Scrolls. He joined the Haganah and adopted the personal code name Yadin, which later became his surname. Yadin was chief operations officer in the 1948 war and later chief of staff (1949–1952); he is credited with creating the principles of Israel's citizens' army reserve system. He resigned from the chief-of-staff position in 1952 because of budgetary disputes and joined the Hebrew University faculty in 1953, where he was appointed professor of archaeology in 1963. In 1976 he was a founder of the centrist Democratic Movement for Change, and from 1977 to 1981 he was a member of the Knesset and deputy prime minister. In 1981 he returned to Hebrew University. Yadin followed his father in studying the Dead Sea Scrolls. With Nahman Avigad, he published *Genesis Apocryphon* (1956), *Ben Sira from Masada* (1965), and *Temple Scroll* (1977). His most important archaeological achievements were the large-scale excavations at Hazor, the Cave of Letters in the Judaean desert, Masada, Megiddo, and Bet Sheʾan.

YAD MORDEKHAI

Kibbutz that was the site of an important battle in the Arab–Israel War (1948).

Yad Mordekhai, named for Mordekhai Anilewitz, commander of the Warsaw Ghetto uprising, is located between Gaza and Ashkelon on the road to Tel Aviv. Founded in 1943, the kibbutz was attacked by Egypt's army on May 19, 1948. It held out for four days without relief; on the fifth day, the survivors broke through Egypt's lines to the settlement of Gvar Am. The attackers suffered 300 casualties.

Today the kibbutz has 700 inhabitants. The kibbutz supports itself through agriculture; industry, especially bee products from its apiary; and tourism, with visitors to a reconstructed battlefield from the 1948 war and a museum devoted to the Holocaust, Jewish resistance in Europe, the immigration of Holocaust survivors to Palestine during the British Mandate, and Israel's War of Independence.

YAD VASHEM

The Holocaust Martyrs' and Heroes' Remembrance Authority, as well as a site in Israel dedicated to commemorating the Jewish victims of Nazi persecution and extermination.

Established on the authority of the 1945 London Zionist Congress, Yad Vashem (from Isaiah 56:5) includes a museum of the Holocaust, facilities for conferences and memorial gatherings (Holocaust Remembrance Day ceremonies are held there on 27 Nisan), and a research institute. Yad Vashem is a feature of foreign dignitaries' official visits to Israel.

Yad Vashem's task is to perpetuate the legacy of the Holocaust to future generations so that the world never forgets the horrors and cruelty of the Holocaust. Its principal missions are commemoration and documentation of the events of the Holocaust; collection, examination, and publication of testimonies to the Holocaust; the collection and memorialization of the names of Holocaust victims; and research and education.

YAHYA IBN MUHAMMAD HAMID AL-DIN

[1867–1948]

Imam of Yemen, 1904–1948; king of Yemen, 1918–1948.

Yahya ibn Muhammad Hamid al-Din took the patronymic al-Mutawakkil ala Allah on becoming imam in 1904. He succeeded to the imamate upon the death of his father Muhammad ibn Yahya, who had inaugurated a new period of rebellion against the rule of the Ottoman Empire in the highlands of Yemen in 1891.

Although Yahya was sometimes amenable to concessions and negotiations with the Ottoman authorities, he approved of the desire of the Zaydi people to be free of Ottoman rule. When Yahya received the *bayʿa* (oath of allegiance), he immediately called for a full-scale revolt against the Ottomans; his major motivation appears to have been the May 1904 boundary agreement about Yemen's southern borders, signed between the Ottomans and British, since he considered himself to be the legitimate ruler of both "north" Yemen and the territories held by the British in "south" Yemen.

Imam Yahya continued to lead the revolt against the Ottomans throughout the period before World

War I. His political shrewdness as well as his ability to wage irregular war against the Ottoman state forced it to negotiate with him, most importantly in the Treaty of Da'an in 1919, which granted most of his demands and gave him an almost free hand in matters of taxation, religious affairs, and judicial appointments.

During World War I, however, the imam sided with the Ottomans as fellow Muslims—the only Arab regime to do so. At the end of the war, the Ottomans departed Yemen and officially recognized Yahya as ruler there. For Imam Yahya, however, this was only the first step in creating the Yemen he perceived to be the patrimony of the Zaydi imams.

Yahya's primary policy objectives in the postwar period appear to have been: (1) to bring all of Yemen under his direct control; (2) to make Yemen completely independent of the influence and/or control of other states (to have complete autarky); (3) to weaken the cohesion and power of the tribes (to prevent them from developing a common front against the central government and resisting its policy objectives); and (4) to establish the ascendancy of Islamic law *(Shariʿa)* throughout Yemen.

The methods Yahya employed to bring about his goals were diverse, and some were, in today's light, brutal. At first he paid subsidies and bribes to various tribal elements; later, when the treasury could clearly not support the demands of these payments, he sent military units to quell uprisings against his decisions, and also employed a traditional Yemeni technique—he took hostages from the tribes, typically the sons of the tribal Shaykhs. These hostages were kept in the imam's fortresses (where they were also educated) to guarantee the good behavior of their own tribes or tribal alliances. Yahya was assassinated in 1948.

MANFRED W. WENNER

YAMANI, AHMAD ZAKI

[1930–]

Saudi official influential in world petroleum politics in the 1960s and 1970s.

Born in Mecca in 1930, Ahmad Zaki Yamani was educated at Cairo, New York, and Harvard universities. He began working for the government of Saudi Arabia in 1958 and rose to become minister of petroleum and mineral resources in 1962, a post he held until 1986. He is noted for his success in asserting Saudi control over the country's oil resources, helping to establish the Organization of Arab Petroleum Exporting Countries (OAPEC), and increasing the profits of oil-producing countries through asserting their rights to set production and pricing policies. He was instrumental in establishing the General Petroleum and Mineral Organization (PETROMIN), a Saudi company created to develop oil resources, and the College of Petroleum and Minerals in Dhahran. In response to Israel's victory in the October 1973 War, Yamani succeeded in leading an embargo of oil shipments by Arab producers to the United States and other supporters of Israel. He served as secretary-general of OAPEC in 1968 and 1969 and was seen as a prominent voice for moderation in the organization. In 1986 he established the Centre for Global Energy Studies.

See also ORGANIZATION OF ARAB PETROLEUM EXPORTING COUNTRIES (OAPEC).

ANTHONY B. TOTH

YANBU

A port on Saudi Arabia's Red Sea coast.

Located in the Hijaz region, Yanbu traditionally served the city of Medina. Originally Yanbu was divided into the port itself, Yanbu al-Bahr, and the inland agricultural settlement of Yanbu al-Nakhl. In the 1970s, along with al-Jubayl on the Persian Gulf, Yanbu became the center of a massive industrial development scheme that included oil refining, petrochemical industries, and heavy manufacturing complexes based on hydrocarbon fuels. Yanbu was planned as the smaller of the two sites, with two petroleum refineries, a natural gas processing plant, a petrochemical complex, other light industries, an industrial port, and a new city of 100,000 inhabitants. Energy for these projects was to be supplied via oil and gas pipelines from the Eastern Province, and the terminus of the Iraqi pipeline across Saudi Arabia was located nearby; the Iraqi pipeline was closed after Iraq's invasion of Kuwait in 1990, but

the capacity of the Saudi east-west pipeline was later increased to nearly five million barrels per day. By 1999 Yanbu's population was about 70,000.

YARIV, AHARON

[1920–1994]

Israeli career officer, cabinet minister and defense analyst.

Born in Russia in 1920, Aharon Yariv moved to Palestine at the age of fifteen and joined the Haganah in 1939. During World War II, Yariv fought in the British army, helping to liberate concentration camps. He was the first Israeli to attend the French Military Command and Staff School.

Yariv served in many positions in the Israel Defense Forces (IDF), including commander of the IDF Command and Staff School (1954), head of Central Command (1956–1957), commander of the Golani Brigade (1960–1961), and most significantly as chief of the Intelligence branch (Aman; 1964–1973) during which he provided the intelligence information responsible for the Israeli victory in 1967. From 1957 to 1960, he served as military attaché in Washington, D.C. Yariv left the Intelligence branch shortly before the 1973 Arab–Israel War, although he served as head of the Israeli delegation during the Kilometer 101 disengagement talks.

Elected to the eighth Knesset on the Labor Alignment ticket, Yariv became minister of transport under Golda Meir and later minister of information under Yitzhak Rabin. Together with another minister, Yariv wrote a formula for peace negotiations that recommended Israel carry out negotiations with any Palestinian faction that would recognize Israel's right to exist and that would not engage in terrorism. Yariv founded the Center for Strategic Studies at Tel Aviv University in 1977 and served as its head until his death.

JULIE ZUCKERMAN

YARMUK RIVER

Tributary of the Jordan river.

The Yarmuk river forms boundaries between Jordan, Syria, and Israel, all of which have contested its use as a water source. About fifty miles (80 km) long, the Yarmuk rises in southern Syria and flows westward through a deep gorge along the Jordanian border of the Golan Heights region of Syria annexed by Israel in 1981. It empties into the Jordan river four miles (6.4 km) south of the Sea of Galilee. Although much smaller than the Euphrates (in Turkey, north Syria, and Iraq) or even the Litani (in Lebanon), the Yarmuk supplies up to 50 percent of the water flow in the lower Jordan river.

The Yarmuk shares a long and storied past with the Jordan river valley, as recounted in archaeological evidence, holy scripture and medieval chronicles. A Roman fortress town was built at the junction of the two rivers, and ruins of Roman- and Byzantine-era synagogues have been found nearby. In the early seventh century, it was through the Yarmuk gorge that Arab armies invaded the Jordan valley.

The Yarmuk's strategic importance has continued into the modern era. Today, it is the only undeveloped tributary of the Jordan river, in a region that now exploits the maximum capacity of existing water sources. Its only significant exploitation has been Jordan's East Ghawr Canal, built in 1964 to irrigate thirty thousand acres (12,150 ha) of farmland east of the Jordan river. Jordan plans to extend the nearly 50-mile (80-km) canal and build a 328-foot (100-m) dam at Maqarin to store the Yarmuk's waters for agriculture and for the cities of Irbid and Amman. Syria plans a series of small dams on the upper Yarmuk to benefit agriculture in the Hawran region.

But these plans require agreement from all parties enjoying riparian rights to the river—not just Syria and Jordan, but also Israel. Israeli interest in the Yarmuk began shortly after World War I, when Chaim Weizmann, later Israel's first president, proposed borders for Palestine that would include the river. In 1932, the Palestine Electric Corporation (now the Israel Electric Corporation) built a hydroelectric generating plant at the junction of the Yarmuk and Jordan rivers. It was destroyed by the Arab Legion in the 1948 war, but Israel has

continued to claim the water rights to the Yarmuk granted by the British mandate.

Since 1948, the contest for the Yarmuk has at times been violent. Efforts in the 1950s to coordinate joint use of the Jordan river basin, like the 1953 Johnston Plan, failed to gain agreement from all sides. While Jordan pursued its unilateral East Ghawr Canal, Israel, between 1953 and 1964, built its National Water Carrier, which diverts the Jordan's water from north of the Sea of Galilee to Tel Aviv and the Negev desert. In response, the Arab League in 1960 coordinated a plan to develop the Yarmuk for the benefit of Jordan, Syria, and Lebanon. The project, begun in 1964, was to divert the Jordan's northern headwaters to the Yarmuk, where a dam on the Syrian-Jordanian border would also be built. In 1965 and 1966 Israel attacked bulldozers and facilities at construction sites in Syria. Israel's 1967 occupation of the Golan Heights put a final halt to the project. In 1969 Israeli raids destroyed part of Jordan's East Ghawr Canal, which was subsequently repaired.

After years of opposition, in 2003 Syria finally agreed to allow Jordan to begin construction of the Maqarin dam.

YARMUK UNIVERSITY

A public university in Jordan.

Established in 1976 on the outskirts of Irbid in northwest Jordan, Yarmuk University was the kingdom's second public university, opened in response to the rapidly increasing demands for higher education. The main campus of the university was built over a fifteen-year period and includes faculties of arts, economics, education and fine arts, engineering, Islamic studies, law, science, and an institute for archaeology and anthropology, as well as centers in various disciplines. At its inception, Yarmuk University pioneered new programs, including a center for Jordanian studies, a department of communications and journalism, a department of continuing education, a school for public health, and a department of computer science. In the 1999/2000 academic year, student enrollment was 17,800.

YASAR KEMAL

[c. 1923–]

Long despised by Turkish intellectuals, who considered his "popular frescoes" as second-rate literature, Yasar Kemal is today Turkey's most famous living fiction writer.

Yasar Kemal's family was from Ercis, a small town near Van, in the Kurdish region of Turkey. During World War I, his father settled in the plain of Tchukurova, near Adana, where Yasar was born around 1923. He does not know his exact date of birth, but it was probably after 1923 because he was named Mustafa Kemal, after the founder of the Turkish Republic. During his childhood, he experienced considerable violence—an atmosphere that permeates his books, which are full of bandits and honor killings. Yasar Kemal's maternal uncle was one of Turkey's most renowned bandits, and Yasar Kemal himself was hardly five when his father was murdered in a mosque by his adoptive son.

After his father's death, his family was destitute and Yasar Kemal went to work on other people's land. During this time he observed nature, which he describes at length in his books. The land and

its transformations as the seasons change are an important part of his novels. He also describes the poor peasants' fight for land that has been confiscated by rapacious *aghas* and *beys* (landowners)

At seventeen, Yasar Kemal became a leftist political activist. He was introduced to Marxism by Arif and Abidine Dino, two brothers who had been exiled to Adana, and he later became a member of the Central Committee of the Turkish Communist Party. After many menial jobs, he became a journalist, working for *Cumhuriyet* from 1951 to 1963 while writing his first three novels. From 1963 onwards he earned his living as a novelist, writing full-time.

Among his more than twenty-five books, the most famous are *Murder in the Ironsmith Market; Iron Earth, Copper Sky; The Wind from the Plain; The Undying Grass*; and his most famous, *Memed, My Hawk.* Most of them were translated into English by his wife, Thilda. During the early years of the twenty-first century, Yasar Kemal worked on a trilogy about the 1923 exchange of Greek and Turkish populations after the dismembering of the Ottoman Empire, and on his memoirs.

Although many of the secondary characters in his novels are Kurdish, Yasar Kemal used to deny that he was a Kurd. Since the 1990s, however, he has claimed his Kurdish identity, saying, "I am writing in Turkish, I never wrote a line in Kurdish, but I am a Kurd."

See CLOTHING

YASIN, AHMAD ISMAʿIL

[1936–2004]

Founder of HAMAS.

Ahmad Ismaʿil Yasin was born in 1936 in the village of al-Jurah, south of Gaza. His family moved to the Gaza Strip after the 1948 Arab–Israel War. He had an accident in his youth (while playing sports) that resulted in his paralysis. He studied Arabic language and religion, became a teacher in both fields, and rose in prominence as a militant preacher in the mosques of Gaza. He headed the Islamic-oriented al-Mujamma al-Islami. In 1983 Yasin was arrested and charged with possession of weapons, then was released in 1985 during a famous prisoner exchange between Israel and the Popular Front for the Liberation of Palestine–General Command.

Yasin was the key founder and leader of HAMAS (acronym for the Arabic name of the Islamic Resistance Movement), which was officially begun in 1987. HAMAS's ideology is a militant and more violent version of the Muslim Brotherhood, and it analyzes the Arab–Israeli conflict in purely religious terms. Palestine is seen as a religious waqf land that belongs to Muslims, and enmity is expressed toward Jews. The movement calls for armed struggle, but unlike the secular Palestinian organizations of the 1960s and 1970s, it considers this struggle to be obligatory jihad. HAMAS played a key role in the Palestinian Intifada of 1987, and Yasin was arrested in 1989 and sentenced to life in prison. He was released in 1997, when Israel had a deal with Jordan's King Hussein after a failed assassination attempt in Jordan against the head of the Political Bureau of HAMAS, Khalid Mishʿal. Despite Yasin's feeble physical state, he provided a strong leadership for the movement. He had a weak voice and a variety of ailments (some resulting from torture and mistreatment in Israeli jails), but he could inspire the masses. Although he left military decisions to the military branch of HAMAS, he legitimized the suicide attacks that characterized the second (al-Aqsa) Intifada of 2000. Yasin succeeded in turning HAMAS into the second most important Palestinian organization after Yasir Arafat's al-Fatah movement. His militancy did not prevent him from reaching pragmatic agreements with Palestinian organizations, including Marxist groups, and he had a large following in the Persian Gulf region, where he raised much of the money for HAMAS before U.S. pressures led Gulf governments to curtail fundraising for the movement. In 2003 Yasin survived an Israeli bomb attack on a house he was thought to inhabit. Yasin was assassinated outside a Gaza mosque on 22 March 2004 by a missile fired from an Israeli helicopter.

ASʿAD ABUKHALIL

YATA, ALI

[1920–1997]

Moroccan journalist and left-wing politician.

Ali Yata was the first Muslim secretary-general of the Moroccan Communist Party. He served until it was banned in 1959. Later he established the party of Liberty and Socialism (1968) and the party of Progress and Socialism (1974, as its secretary-general). He also founded the newspaper *al-Bayane.* Yata was elected deputy in the 1977 elections saying that democratic progress had begun, but he demanded annulment of the 1983 local elections alleging fraud. He participated in the 1984 legislative elections. Yata supported Moroccan claims to the Sahara in the 1960s and to the Western Sahara in the 1970s and 1980s.

C. R. PENNELL

YAZD

Ancient Iranian city located in an oasis in the central desert region.

Yazd is the name of a province and its capital city in central Iran. The province, which extends over an area of 27,027 square miles (70,000 sq km), is largely desert, with the great salt desert known as the Kavir in the north merging into the great sand and stone desert (the Lut) of southeastern Iran. The province has lead and zinc deposits, many of which are sites of major commercial mining operations.

The city of Yazd was an important Zoroastrian religious center during the Sassanian dynasty (226–642 C.E.) and has remained a stronghold of Zoroastrianism up to the present, although adherents of this faith comprise less than 10 percent of the city's population. In the early 2000s, about one-half of all Zoroastrians in Iran lived in Yazd, and the fire temples there and in some surrounding villages had become historic pilgrimage sites. Between the thirteenth and nineteenth centuries, the city was internationally renowned for its silk, cotton, and woolen textiles, but these handicrafts declined dramatically after 1850 as the volume of European manufactured textiles imported into Iran increased. By the mid-twentieth century, entrepreneurs had established modern cotton and woolen textile mills in the city, and Yazd gradually recovered its status as a regional commercial and production center. The railroad from Tehran to the Gulf of Oman port of Bandar-e Abbas, completed in 1995, passes through Yazd; its construction helped stimulate development in and migration to the city. Between 1976 and 1996, the population of Yazd increased more than 140 percent (an average of 7 percent per annum), from 135,925 to 326,776.

ERIC HOOGLUND

YAZDI, IBRAHIM

[1931–]

Iranian politician.

Born in Qazvin, where his father made his living as a retailer, Ibrahim Yazdi studied pharmacology at Tehran University and emerged as one of the leaders of the Muslim Student Association. In 1952 he galvanized student support in favor of Mohammad Mossadegh's oil nationalization platform. He co-edited two journals, *Forugh-e Elm* (The resplendence of knowledge) and *Ganj-e Shayegan* (The magnificent treasure), and was employed at the Worker Social Security Organization. Following the CIA-sponsored coup that ousted Mossadegh in 1953, Yazdi joined the newly formed National Resistance Movement. The movement was effectively crushed in 1957 but resurfaced in 1960 as the National Front, of which the Liberation Movement of Iran (formed in 1961 by the more religiously minded members of the original nationalist coalition) was a splinter group. Yazdi was a member of the nascent Liberation Movement of Iran, and after he left Iran for the United States in about 1960 was instrumental in organizing its opposition activities abroad, both in the United States and elsewhere. He also studied for his doctoral degree in the United States.

In 1978 he frequented Ayatollah Ruhollah Khomeini's headquarters in France. When he returned to Iran in 1979, he was appointed deputy prime minister, and in 1980 he became foreign minister in the cabinet of Mehdi Bazargan's provi-

sional government. He was among the group of Bazargan's friends who constituted the nonclerical, moderate figures in the Islamic movement and who cooperated closely with the Revolutionary Guards. He also headed the nationalized Kayhan Publishing Group, which produced a daily newspaper whose circulation rate exceeded that of all the other Tehran dailies. He was elected to the Islamic parliament as a deputy from Tehran (1980–1984). In the falling-out between the moderates and the more radical Islamic Republican Party affiliates (1979–1981), the latter won. After falling from political favor, Yazdi devoted his energies to revitalizing the Liberation Movement of Iran, which now functioned as the only tolerated—albeit eventually officially banned—opposition party in the political landscape of Iran.

During the late 1980s and early 1990s, Yazdi's activities consisted primarily of criticizing the government's economic policies and its failure to deliver the political rights promised by the revolutionaries in 1979. Taking advantage of the liberalizing policies of President Ali Akbar Hashemi Rafsanjani, Yazdi in this period advocated—in various speeches, articles, and manifestos—fiscal reform, equitable distribution of income, and the normalization of ties with the United States. In 1995, after the death of Mehdi Bazargan, Yazdi emerged as the leader of the Liberation Movement of Iran. In 1996, he made an unsuccessful bid in the parliamentary elections as the Liberation Movement of Iran candidate for a seat from Tehran. In 1997 he was arrested for a short while after signing a letter protesting maltreatment by Ayatollah Khamenehi, the leader of Iran, of Grand Ayatollah Hosayn Montazeri, Ayatollah Khomeini's designated successor until he fell out with the regime in 1989, shortly before Khomeini's death. The judiciary arrested all senior members of the Liberation Movement of Iran in 2000, but Yazdi escaped arrest because he was in the United States undergoing treatment for prostate cancer. He was charged with antigovernment activity when he returned but was allowed to remain free after posting bail. His trial was still continuing at the end of 2003, although there were periods of several months' duration during which no court sessions were scheduled.

YAZIDIS

See TRIBES AND TRIBALISM: YAZIDIS

YAZIJI, IBRAHIM

[1847–1906]

A leading figure in the Arabic literary revival of the nineteenth century.

Ibrahim Yaziji was a Greek Catholic poet, grammarian, and man of letters from Mount Lebanon. Following in the footsteps of his father, Nasif, who had done pioneer work in rediscovering the Arabic literary heritage, he made a significant contribution to the Arab cultural and political awakening of the late nineteenth century. Like his father, he maintained a close relationship with the American and British Protestant missionaries in Beirut and played an important role in the revitalization of Arabic as a literary language. A member of the Syrian Scientific Society, an early secret society made up of Arab intellectuals and military officers who agitated for Arab independence from the Ottoman Empire, Yaziji is best remembered for an ode, first recited at a secret meeting of the society, which called upon Arabs to remember their past greatness and shake off Turkish rule. This ode and several other poems of his were memorized by a generation of Arab nationalists and inspired the incipient political movement for Arab independence.

Guilain P. Denoeux

YAZIJI, NASIF
[1800–1871]

Lebanese Christian scholar and author.

Nasif Yaziji played a significant role in revitalizing Arabic literary traditions. He was employed by Bashir Chehab, the amir of Lebanon, and moved to Beirut in 1840 to help U.S. missionaries prepare Arabic text-books for use in Christian mission schools. Yaziji appreciated classical Arabic literature and campaigned to eliminate the corruptions that had been absorbed into the language. His writings helped revive practices of classical scholarship and made classical literature important in contemporary Arab culture.

YEHOSHUA, AVRAHAM B.
[1936–]

Israeli novelist, essayist, and professor of literature.

Avraham Yehoshua was born in Jerusalem into a fifth-generation Sephardic family and now lives in Haifa, where he teaches literature at the University of Haifa. A peace activist and a staunch defender of the Zionist project in his essays, he is best known as one of Israel's foremost novelists. Although he has published both plays and collections of short stories, the latter in his early writings, his greatest works are his seven novels, all of which have been translated into English. His novels are complex, full of humor and compassion, at times highly innovative in style, steeped in the classical modernist tradition, and always crafted with the highest literary skill. Recurrent themes in his novels are love and identity, history and choice, dialogue, and desire, all of which are embedded in the drama of the Jewish people and modern Israel. His masterpiece, *Mr. Mani,* highlights his skill at its finest, rivaling the best of world literature produced in the twentieth century. Israel's equivalent of U.S. novelist William Faulkner, Yehoshua has been the recipient of many prizes: the Brenner Prize in 1983, the Alterman Prize in 1986, the Bialik Prize in 1988, and the American Prize for the Best Jewish Book in 1990 and 1993. He was the inaugural winner of the Israeli Booker Prize in 1991 and in 1995 he received Israel's highest literary honor, the Israel Prize. His books have been translated into many languages. They have also been made into movies and adapted for the stage, television, and radio.

YELLIN-MOR, NATAN
[1913–1980]

Israeli underground leader.

Born Nathan Friedman-Yellin in Grodno, Poland, Yellin-Mor was an activist in the Polish branch of Betar and the Irgun Zvaʾi Leʾumi. He was coeditor, along with Abraham (Yair) Stern, of *Di Tat,* the Irgun's Polish newspaper. He followed Stern to Palestine and became a major figure in Stern's virulently anti-British underground, Lohamei Herut Yisrael (LEHI: Freedom Fighters of Israel). In December 1941 he attempted to reach neutral Turkey via Syria to negotiate with Nazi representatives for a mass release of Jews from Eastern Europe in exchange for LEHI's cooperation in fighting Britain.

Upon his return he was imprisoned by the British but escaped in 1943. After Stern's death, Yellin-Mor became a member of the LEHI triumvirate, along with Israel Eldad and Yitzhak Shamir. In 1949 he was tried and convicted for the September 1948 assassination of United Nations emissary Count Folke Bernadotte, but the sentence was commuted in exchange for an oath to desist from any further violent activities. He led the left-wing faction of both LEHI and its post-statehood political entity, the Fighters Party, and he was elected to the First Knesset (1949–1951). In the ensuing years he moved increasingly to the left. He renounced Zionism and advocated a pro-Soviet foreign policy and the creation of a single Arab-Jewish socialist state in all of what had been Mandatory Palestine.

UPDATED BY PIERRE M. ATLAS

YEMEN

A state on the southwestern corner of the Arabian Peninsula.

The Republic of Yemen was created in May 1990 as a result of the merger of the two previous states that used the name Yemen: the Yemen Arab Republic (YAR; often called North Yemen) and the People's Democratic Republic of Yemen (PDRY; often called South Yemen). The merger brought together two disparate political systems: the North had been governed by a military/tribal elite, which supported a free-market economy, whereas the South had been governed by a Marxist-Leninist political elite, which had introduced one of the most centrally directed economies in the modern world. After a transition period, the president of the North, Ali Abdullah Salih, was made president of the new unified state.

Population

In 2000, the population was estimated at 17.5 million, not including an indeterminate number of Yemenis living and working abroad, primarily in Arabian Peninsula states. Yemen has one of the highest birthrates in the world, as well as a high infant mortality rate; the net rate of annual increase is estimated at 3.6 percent.

Area and Borders

Since Yemen is one of the few states in the modern world without completely demarcated borders, it is not possible to give a precise figure for its total area. The northeast and east still have no internationally (or even locally) accepted borders. This has led to numerous border disputes and even wars between Saudi Arabia and both of the previously existing Yemens since the 1920s. The border with Saudi Arabia was demarcated as far as the Najran oasis after the Saudi-Yemeni War of 1934; this conflict also gave control of the Asir region to the Saudi state through a treaty renewed every twenty years, creating continued difficulties in relations between the two states. In the northeast, the generally recognized end of Yemeni sovereignty lies east of Maʾrib; with the discovery of oil and gas deposits in this area, however, new conflicts over the border between the two states arose in this area in the late 1980s and early 1990s. The demarcation of the border with Oman was officially completed in 1995, but despite repeated memoranda of agreement with Saudi Arabia in the 1990s, as well as a contract with a German firm to undertake its delineation in 2001, that process has yet to be completed. In the mid-1990s, a new set of border disagreements arose; these involved numerous islets in the Red Sea, the ownership of which was disputed with Eritrea as well as Saudi Arabia. A UN arbitration panel awarded the islands to Yemen in 1999, but the agreement specifically avoided defining the maritime boundary in a way that would offend the claims of Saudi Arabia. To the south, Yemen lies on the Gulf of Aden. The old border between the North and South—created by the Ottoman and the British empires in the early years of the twentieth century and technically abolished as a result of the union of 1990—nevertheless continues to be of some political importance.

Major Cities

Sanʿa is the most important, largest, and probably the oldest city in Yemen—it is mentioned in the Bible under its old name, Uzal. By 2000, its population was considerably more than 1 million. It has been the capital city of Yemen for most of the past

two millennia (with the exception of the reign of Imam Ahmad, 1948–1962, in which he moved the capital to Taʿiz) and became the administrative (political) capital of the new republic after unification. Its old city has been placed on the list of World Heritage Sites because of its unique architecture and historical importance; many of the buildings are more than 800 years old.

Aden, the capital of the former PDRY, has the best port on the Arabian Peninsula. For more than a century, until the late 1960s, it was a major British military and commercial possession. After unification, it was made the economic and commercial capital of the country, but its role in the civil war of 1994 and subsequent events caused it to lose some of its significance.

Hodeida (al-Hudayda) is the major port of the former North Yemen. Its facilities were extensively modernized by the Soviet Union in the 1960s. Consequently, it grew rapidly from a sleepy Red Sea fishing port handling primarily local trade to a major metropolitan area.

Taʿiz, the major city of the southern highlands of the former North Yemen, is located in one of the richest agricultural areas. Its population, predominantly of the Islamic Shafiʿi sect, had the longest and best-developed contacts with the outside world during the reigns of Imams Yahya and Ahmad in the twentieth century.

Although the country has a few smaller cities (e.g., Ibb, Dhamar, Saʿada and Zabid in the north, and Mukalla, Tarim, and Shibam in the south), the vast majority of the population lives in villages, each with an average population of fewer than 200 people. Yemen probably has the most decentralized population of any contemporary state.

Geography and Climate

Yemen's location, combined with its geographical characteristics, gives it the most favorable climate and agricultural resources of any country on the Arabian Peninsula. The country is divided into a number of relatively clear zones: The first of these, along the Red Sea and the Arabian Sea coasts, is hot and humid; from there, the land slopes upward into the first range of hills and low mountains, where the climate is considerably more temperate; eventually, after a series of high plains, the peaks of the cen-

tral massif reach between 11,000 and 13,000 feet (3,355–3,965 m). These mountains have been terraced from time immemorial, and a vast array of fruits, vegetables, and grains (and the infamous qat plant) can be raised in the many microclimates created by this geography. In the central mountains, the humidity is low and the temperatures moderate, although in the winter it is not unusual to find temperatures below freezing and the occasional snow or ice storm. Over the centuries, the Yemenis have developed plant strains to occupy the many microclimates. On the other side of the central massif and away from the monsoons, which deliver the rain that makes extensive agriculture possible on the westward side, the land slopes away into the great central desert of Arabia, the Rub al-Khali, broken only by the great Hadramawt Valley, the home of numerous towns exploiting the limited water resources found there. The rainfall that the various mountain ranges wring out of the prevailing winds varies widely—from less than 3 inches (7.62 cm) per year in the deserts and northern reaches of the country to about 38 inches (96.52 cm) per year in some of the areas around Taʿiz—about the same as in Seattle, New York, or Chicago.

Political Subdivisions

Administratively, the two preunification Yemeni states varied considerably. The units into which the two states were organized were frequently modified, sometimes as the result of political expediency and at other times due to the nature of the personnel available for major administrative duties. For example, in the PDRY, the first administrative reorganization sought to get rid of the old tribally organized political entities, which had been called the protectorates. Later, the state undertook to recreate some of these entities under new names to regain popular support. In the North, after the revolution, the number of administrative units (governorates) rose with the growth in the population as well as with the increasing number and variety of

demands for governmental services. In the immediate aftermath of reunification, the number and characteristics of the administrative subunits within the two separate entities were largely retained. On the other hand, electoral districts have been substantially increased and modified over the years.

The Economy

The natural resource base of Yemen has begun to be developed, largely because it was not until the 1960s that either the North or the South had the opportunity to assess that base or attempt its development. The most important contemporary resources are oil and gas deposits, which were discovered in both North and South Yemen prior to unification and which contributed significantly to the push for unification. The majority of the population of Yemen continues to be employed in the agricultural sector, although productivity is not adequate to the requirements of the population. The multiplicity of microclimates makes it possible to grow just about any fruit or vegetable, from the citrus fruits, bananas, and cotton of the hot coastal plain, through the coffee, grains, and qat (a small tree valued for the alkaloids contained in its leaves) of the middle highlands, to the pears, grapes, and nuts of the high mountains.

Although industrial development has been a priority in both North and South Yemen since independence, it has not reached the stage where industry is a significant factor in the economy of either region. In fact, Yemen operates a monumental deficit in its current accounts because it has few exportable resources. Until 1991, the most important positive element in its balance of payments was the remittances of its large workforce in the various Gulf states and in other countries. Following the 1991 Gulf War, however, the majority of Yemenis abroad were forced to return home (some 800,000 from Saudi Arabia alone), creating a massive social and economic problem. Since then, a variety of international loans and development assistance funds have helped to ameliorate the continuing economic problems.

Culture

The population of Yemen is ethnically Arab, although of different origins. The majority is descended from the ancient south Arabian peoples, and the remainder immigrated from the Fertile Crescent area more than a thousand years ago.

Arabic is the official language. Although everyone speaks it, there are substantial differences in dialect from region to region. In some of the more remote areas of the island of Socotra (located in the Gulf of Aden) Mahri is still spoken.

The overwhelming majority of Yemenis are Muslims. They are, however, divided into different sects: In the northern areas, the Zaydis, members of a branch of Shiʿism, predominate; in the southern areas, the Shafiʿis, who follow a branch of Sunni Islam, are in the majority. There are, in addition, Ismaʿilis, members of another branch of Shiʿism, in the northern mountains; in and around Saʿada there are also small settlements of Jews.

The educational infrastructure is in a state of flux. Until the revolution of 1962, an insignificant number of people received any formal education. After the revolution, the government embarked on a major program to establish educational institutions, from primary schools to universities, of which there are several, including those at Sanʿa, Taʿiz, and Aden; these were, in the overwhelming majority of cases, coeducational. In the 1990s, however, Islamists gained increasing political power and began to impose their views on the educational establishment. Owing to several incidents in which the government saw the hand of Islamic extremists, the government began to implement earlier legislation intended to bring independent religious institutions under the control of the Ministry of Education, closing many, eventually even the private al-Iman University, operated by perhaps the most extreme Islamic leader in Yemen, Shaykh Abd al-Majid al-Zindani, and considered the center of Islamic extremism.

Government

Yemen is governed under a constitution that was approved by the parliaments of the two Yemens in 1990 and by popular referendum in 1991. This constitution declares Yemen to be a parliamentary democracy, with an executive appointed by and responsible to the parliament (the Council of Deputies). In 1994, Ali Abdullah Salih was elected by the coun-

A woman carries a child through an alley in Sanʿa, Yemen. © CHRIS LISLE/CORBIS. REPRODUCED BY PERMISSION.

cil to a five-year term as president. In 1999, due to changes in the law, the first direct elections to the presidency were held; Salih was overwhelmingly elected to a seven-year term. His only real opponent was the son of the former leader of the PDRY, Najib Qahtan al-Shaʿabi, although there were two additional candidates.

Elections to the new parliament were held in April 1993, with some eight parties and a sizable number of independents taking seats. Three parties dominated the outcome: the General People's Congress (GPC), formerly dominant in the North and associated with Ali Abdullah Salih; the Islah, now commonly referred to as the Yemeni Islah Party (YIP), a coalition of tribal and Islamic interests led by the second most influential political figure in the country, Shaykh Abdullah al-Ahmar of the Hashid Tribal Confederation; and the Yemeni Socialist Party (YSP), formerly dominant in the South and led by Ali Salim al-Baydh, who had become vice president of the new state. Other parties exist, including a Nasserist party. The second election to the Council of Deputies took place in 1997; the aftermath of the 1994 civil war, however, meant that the role and influence of the YSP was considerably reduced, and the YSP boycotted the elections (al-Baydh went into exile). Consequently, the GPC gained 187 of the 301 seats, with its only serious competition, the YIP, gaining only 53. In the next round of elections, in April 2003, the GPC's margin of victory increased to 238 of 301 seats; the YIP could only manage 46 seats, and the YSP was reduced to 8 seats.

History

Some 2,000 years ago, Yemen (known as Arabia Felix to the Roman geographers) was famous and its city-states (e.g., Saba/Sheba, Maʿin), grew powerful and wealthy due to their monopoly over the trade in frankincense and myrrh. Once this monopoly was

broken, Yemen retreated from the world stage. It was not until coffee became an important international trade commodity in the sixteenth through eighteenth centuries that Yemen once again achieved renown. However, its early monopoly over coffee was broken by foreign traders and governments, and it once again became a little-known province of various empires on the Red Sea.

The contemporary state of Yemen was created by two states with different historical experiences during the past two centuries. Although occasionally united in the past, they had not been so since 1728. Developments in the nineteenth century, however, are most important to an understanding of the events that led to the reunification of North and South Yemen in 1990.

In 1839, the British took the city of Aden in South Yemen in order to have a major port in the western Indian Ocean and to forestall further expansion by other parties in the Arabian Peninsula. Over the years, British interests continued to grow, and they eventually established extensive links with the multitude of principalities located in Aden's (Yemeni) hinterland.

Meanwhile, the Ottoman Empire, which had occupied Yemen for a variety of strategic and economic reasons but which had departed in the early seventeenth century, decided to return. One motive was to play a role in the Red Sea trade, as it had in the past, although there were other factors; this goal increased in importance with the completion of the Suez Canal in 1869. Eventually, British and Ottoman interests in southwestern Arabia clashed; the two powers decided to negotiate a frontier between their zones of influence and interest. Beginning in 1902, they agreed to demarcate a border between them; the agreement that was eventually signed in 1914 created the frontier between the Ottoman possession that became the Kingdom of Yemen (North Yemen) after World War I and the British Aden Protectorates, which became South Yemen.

Under the reigns of Imams Yahya and Ahmad (1918–1962), North Yemen remained largely cut off from the rest of the world, while Aden and the protectorates in the south received British subsidies and Aden developed into one of the world's busiest ports. Both states, however, had political movements that sought change. In 1962, a revolution broke out in North Yemen, which sought to create a republic and remove the conservative Zaydi imam(s) from power. After an eight-year civil war, the two major factions compromised and created the Yemen Arab Republic. Imam Muhammad al-Badr, the titular head of the effort to restore the imamate, fled to Saudi Arabia and eventually died in exile in Great Britain. Shortly after the revolution broke out in North Yemen, various groups in South Yemen began to work for independence from Great Britain. After a lengthy and often violent conflict, the British agreed to withdraw from Aden and its protectorates in 1967. The group to which they ceded power, the National Front for the Liberation of South Yemen, created the People's Republic of South Yemen (later the People's Democratic Republic of Yemen).

Although both Yemens spoke of the goal of reunification, relations between them were often extraordinarily poor, due largely to their different economic and political systems. The North was governed by a military elite, which was tied to the West and permitted an almost unrestricted, though underdeveloped, capitalist economy to operate; in the South, a Marxist-Leninist political elite took power and tied the country to the communist bloc. Relations between the two states deteriorated into two separate wars—in 1972 and 1979.

In the late 1980s, oil (and later natural gas) was discovered in both Yemens; more importantly, it was found in the disputed border areas between them. The effort to develop these deposits without wasting further resources in fruitless wars largely overlapped with the decline of the Soviet Union (and some of its satellites that had provided important assistance to South Yemen). As a result, the potential benefits of a unified effort to develop their oil and gas deposits overcame the mutual suspicions and frictions that had characterized the previous twenty-five years, leading to the unity agreement of 1990. Friction between the North and the South did not disappear, however. Disputes within the original coalition government of the General People's Congress and the Yemeni Socialist Party led to a civil war from May through July 1994. The South suffered a complete defeat, which resulted in the forced exile of its leaders and the concomitant ascent of the Islah Party (YIP).

Perhaps the most important development of the 1990s, however, was the increase in Islamist sentiment and support. Fearful of its growing influence, the GPC (and Salih) undertook various measures to limit Islamist power, including seeking a rapprochement with a truncated YSP. The growing influence of the Islamists in Yemen was most dramatically illustrated by the attack, in 2000, by allies and supporters of al-Qaʿida against the USS *Cole* while it was refueling in Aden. Numerous incidents of political violence involving previously unknown groups (e.g., the Sympathizers of al-Qaʿida) heightened fears in Yemen and the West that the country had become a major breeding and training ground for radical Islamist groups. Salih's government had to walk a fine line between recognizing the increased Islamist sentiment in the population and accommodating the interests and concerns of its grantors of financial and political support, including the United States. The fact that the government did not control all of its territory and that its borders were porous did nothing to assuage the fears of the United States and Europe.

YEMEN ARAB REPUBLIC

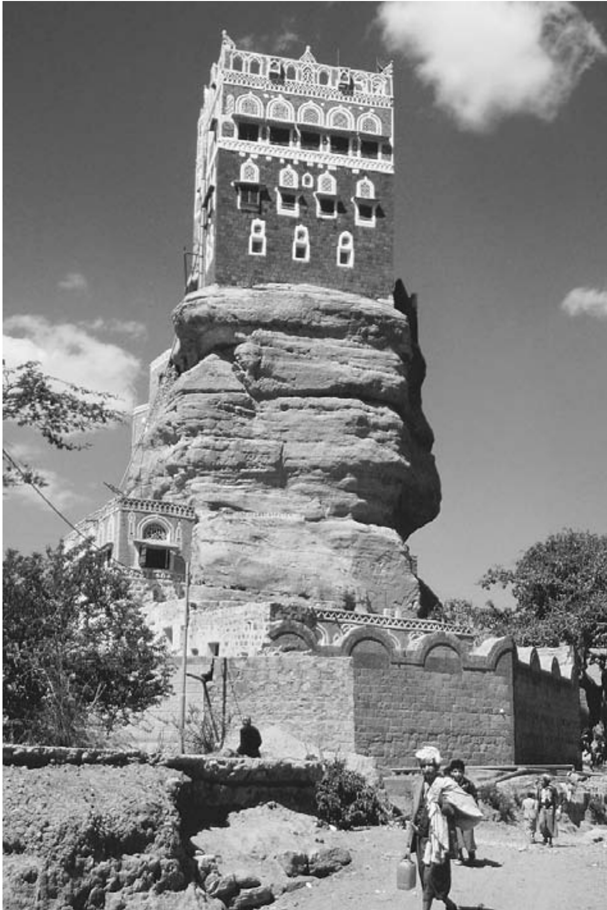
The official name of North Yemen from 1962 until its 1990 merger with South Yemen.

The emergence of North Yemen as a single political unit in modern times was largely a function of both the reoccupation of the country by the Ottomans in 1849 and the Yemeni resistance to this presence that coalesced around the imamate near the turn of the century. Defeat in World War I forced the Ottomans to withdraw in 1918, and a resurgent imamate state seized the opportunity. From 1918 until 1962, Yahya ibn Muhammad Hamid al-Din and his son Ahmad ibn Yahya Hamid al-Din acted to forge a monarchy much as the kings of England and France had done centuries earlier. The two imams strengthened the state, thereby securing Yemen's borders and pacifying the interior to degrees rarely known over the past millennium.

The imams used the strengthened imamate to revive North Yemen's traditional Islamic culture and society, this at a time when traditional societies around the world were crumbling under the weight of modernity backed by imperial power. They were aided in their efforts to insulate Yemen by the degree to which its agricultural economy was self-contained and self-sufficient. The result was a "backward" Yemen, though a small but increasing number of Yemenis exposed to the modern world wanted change and blamed the imamate for its absence. This produced a fateful chain of events: the birth of the Free Yemeni movement in the mid-1940s; the aborted 1948 revolution that left Imam Yahya dead; the failed 1955 coup against Imam Ahmad; and, finally, the 1962 revolution that yielded the Yemen Arab Republic (YAR).

Major Eras

In retrospect, the history of the YAR can best be divided into three periods. (1) The Sallal era (1962–1967), the wrenching first five years under President Abdullah al-Sallal, was marked by the revolution that began it, the long civil war and Egyptian



The Dar al-Hajar, or Rock Palace, in Wadi Dhahr, Yemen. This palace was built for Imam Yahya in the 1930s. After the fall of the Ottoman Empire in 1918, Imam Yahya assumed control over North Yemen. His family ruled the country until revolutionaries ended their authoritarian rule and created the Yemen Arab Republic in 1962. © EARL & NAZIMA KOWALL/CORBIS. REPRODUCED BY PERMISISON.

intervention that quickly followed, and—above all—the rapid and irreversible opening of the country to the modern world. (2) A ten-year transition period (1967–1977) was marked by the end of the civil war, the republican-royalist reconciliation under President Abd al-Rahman al-Iryani, and the attempt by President Ibrahim al-Hamdi to strengthen the state and restructure politics. (3) The Salih era (1978–1990) is identified with both the long tenure of President Ali Abdullah Salih and the change from political weakness and economic uncertainty at the outset to relative political stability, the discovery of oil, and the prospect of oil-based development and prosperity in more recent years.

Of the many important changes that took place in the YAR since its birth in 1962, most of the positive ones have been compressed into the years since its fifteenth anniversary in 1977. Nevertheless, the previous decade was important, a transition in which much-needed time was bought by a few modest but pivotal acts and, most important, by economic good fortune. Global and regional economic events over which the YAR had no control facilitated a huge flow of funds into the country in the form of both foreign aid and remittances from Yemenis working abroad. This period of transition was necessary because the changes that had buffeted Yemen in the five years following the 1962 revolution had left it both unable to retreat into the past and ill-equipped to go forward. The ability to advance rapidly in the 1980s seems very much the result of the possibility afforded for a breather in the 1970s.

Establishing Sovereignty

Given the isolation and the decentralized nature of North Yemeni society, much of the YAR's first quarter-century was taken up with the effort to establish sovereignty over the land and people. The Yemenis who made the revolution in 1962 were preoccupied from the outset with the need to create a state with the capacity to maintain public security and provide services. The long civil war that came on the heels of the revolution both increased this need and interfered with meeting it. Yemeni state-building was more hindered than helped by the fact that the new state was largely built and staffed by Egyptians and by the fact that Egyptian forces did most of the fighting on behalf of the Yemenis.

The balance of power between the tribal periphery and the state at the center tipped back toward the tribes during the civil war. As a result, the reach of the YAR extended little beyond the triangle in the southern half of the country that was traced by the roads linking the cites of Sanʿa, Taʿiz, and Hodeida (al-Hudayda).

State-Building Efforts

The YAR created in 1962 lacked modern political organization. A major theme of its first twenty-five years consisted of attempts to fashion the ideas and organization needed to channel support and de-

mands from society to the regime and, conversely, to channel information, appeals, and directives from the regime to society. The civil war strained and even deformed the new republic, deferring any major effort at political construction under President al-Sallal. Egypt's heavy-handed tutelage left little room for Yemeni national politics and politicians to develop.

As with other late-developing countries, the tasks of state-building in the new YAR went beyond the maintenance of order and security to include the creation of a capacity to influence, if not control, the rate and direction of socioeconomic change. The wrenching effects of the sudden end of isolation and of virtual self-sufficiency made it obvious that state-building in all of its aspects was desperately needed. No less than the viability and survival of Yemen in its new external environment depended upon it, just as the civil war and the political weakness of the YAR made it unlikely.

The Egyptian exodus in 1967 led to the quick overthrow of President al-Sallal and the republican-royalist reconciliation that finally ended the civil war in 1970. Some state-building of importance was achieved thereafter by the regime headed by President al-Iryani. A modern constitution was adopted in 1970, and some of the ministries and other agencies erected after the revolution were strengthened. Economic needs as well as political constraints caused Yemeni leaders during the al-Iryani era to focus on financial and economic institutions; only halting first steps were taken toward reform of the civil service and the armed forces, matters of great political sensitivity. President al-Hamdi, who forced President al-Iryani into exile in 1974, believed in the modern state and worked to realize it. He promoted efforts to build institutions at the center, initiated the first major reform and upgrading of the armed forces, and fostered the idea of exchanging the benefits of state-sponsored development for allegiance to the state.

The results of efforts by the Iryani and Hamdi regimes at political construction were modest. The price of the reconciliation was the first-time granting of office and influence in the state to leading tribal shaykhs and the expulsion of the modernist Left from the body politic—prices that weakened the position of all advocates of a strong state. The result was the narrowly based center-right republican regime, which, with changes, persisted from the late 1960s until at least the early 1980s. The chief institutional focus of politics during the Iryani era was the Consultative Council, which first convened after elections in early 1971. However, political parties were banned and, in the absence of explicit organizational and ideological ties, the council functioned as an assembly of local notables, especially the shaykhs.

President al-Hamdi was unable to strengthen his position by translating his great popularity into political organization. Indeed, his major political achievement actually narrowed the political base of his regime and shortened the reach of the state. Aware that the shaykhs were using their new positions to protect the tribal system, al-Hamdi moved swiftly to drive them from the Consultative Council and from other state offices. To this end, he dissolved the council and suspended the 1970 constitution. The tribes responded with virtual rebellion. Al-Hamdi's efforts to make up for this loss of support by reincorporating the modernist Left were hesitant. In addition to maintaining ties to old leftist friends, he launched both the Local Development Association (LDA) movement and the Correction movement. Despite their initial promise, al-Hamdi seems to have had second thoughts and to have pulled back from efforts to use these two initiatives as bases for a broad, popular political movement. His subsequent plans for a general people's congress ended with his assassination in 1977. Frustrated by his failure to grant them reentry into the polity, several leftist groups in 1976 created the National Democratic Front (NDF), which a few years later became the basis of the rebellion that challenged the Salih regime.

Socioeconomic Development of the 1970s

The civil war finally behind it, the YAR in the 1970s did undergo significant socioeconomic development based upon the rapid creation of a modest capacity to absorb generous amounts of economic and technical assistance from abroad and, most important, from the massive inflow of workers' remittances that fostered unprecedented consumption and prosperity. Whereas the remittances largely flowed through the private sector, the modest strengthening of state

institutions and the increase in their capacities were the critical factors in Yemen's ability to absorb significantly increased foreign aid. By the late 1970s, work on a broad array of state-sponsored, foreign-assisted infrastructure, agricultural, and human resource development projects existed side by side with high levels of remittance-fueled consumption and economic activity in the private sector.

The Salih Regime

President Salih's long term in office, beginning in 1978, was witness to major gains in state-building. After a shaky start, the Salih regime slowly increased the capacity of the state in the provinces as well as in the cities, for the first time making the republican state more than just a nominal presence in the countryside. The armed forces were upgraded again in 1979 and, more recently, in 1986 and 1988. Modest efforts were made to improve the functioning of the civil service, ministries, and other agencies.

The Salih regime increased its dominance over lands controlled by the tribes, especially the large area that fans out north and east from San'a, the capital. However, the best evidence of the growing ability of the YAR to exercise power within its own borders was the political-military defeat of the NDF. With its origins in the expulsion of the Left from the republic in 1968, the NDF rebellion had finally burst into flame over a wide area by early 1980. This uprising was extinguished in 1982, and the state was able at last to establish a real presence in lands bordering South Yemen.

In 1979, the Salih regime had little political support outside the armed forces. After the failure of ad hoc efforts to change this, the regime put in place an impressive program of political construction during the first half of the 1980s. This phased, sequential program began in early 1980 with the drafting of the National Pact. The pact then became the subject of a long national dialogue and local plebiscites orchestrated by the National Dialogue Committee. Elections to the General People's Congress (GPC), and its several-day session, were held in mid-1982 to review and then to adopt the National Pact. This done, the GPC declared itself a permanent political organization, which would be selected every four years, meet biennially and be led by a seventy-five-member Standing Committee headed by President Salih.

The key to the success of the Salih regime's political effort lay in the flexible, step-by-step process by which it moved the Yemeni polity from where it was in 1979 to the holding of the GPC in 1982. By design and a bit of luck, moreover, this sustained initiative also provided a political process largely managed by the regime into which elements of the Yemeni left could be safely incorporated when, in 1982, the NDF rebellion was quelled. Two dialogues, the one between the regime and the NDF as well as the more public one between the regime and the rest of the nation, converged in a structure that facilitated a second national reconciliation.

Although President Salih insisted that the GPC was not a political party, its activities were clearly aimed at consensus-building, guidance, and control—typical functions of a party. In fact, the GPC did become an umbrella party, a loose organization of organizations in a society that was not well organized politically for many of the tasks of the modern world. The Salih regime was also buttressed by constitutional change during the 1980s. The 1970 constitution, suspended by al-Hamdi in 1974, had been reinstated confusingly in 1978 without its centerpiece, the Consultative Council, and with an amendment that formally created the presidency. Clarity and closure on a number of issues were not achieved until July 1988 when a new Consultative Council was finally chosen in accordance with the constitution. The council elections, the first since 1971, were hotly contested and relatively fair and open; despite the ban on parties, much partisanship was in evidence. In mid-July, the new council elected President Salih to a new term and then gave approval to the composition and program of the new government. As a result, for the first time since the Iryani regime was ousted in 1974, the head of state and the government were selected in accordance with the 1970 constitution, that is, by a properly chosen Consultative Council.

Oil and the Economy

The modest prosperity that the YAR enjoyed after the mid-1970s was paralleled by the modern sector's increasing vulnerability to negative economic and political forces, domestic and external. Politi-

cal uncertainty early in the Salih era threatened the limited capacity of the state to foster and manage development, and this was followed by the fall in oil prices and worldwide recession that led to sharp drops in aid and remittances to Yemen. Faced with economic crises, the regime in the early 1980s adopted austerity measures, and these had some success in forcing the country to live within more modest means in a less generous world.

The YAR's long-term development prospects improved abruptly when oil was discovered in commercial quantities in 1984. This event also placed severe demands on the still very limited capacities of the state. With the oil find, the twin tasks facing the Salih regime were to maintain the new discipline and austerity of the past few years and to gear up to absorb efficiently the oil revenues that were expected to start flowing in late 1987. Despite the politically difficult combination of rising expectations and continued hard times, the regime during this period of transition was able to limit imports and government expenditures. Changes in organization and the appointment of top technocrats to key posts contributed to the modest success of the transition. Although oil for export did begin to flow in late 1987, the regime was forced in 1989 to reimpose austerity measures that it had relaxed prematurely the previous year. Nevertheless, at the same time that it wrestled with these politically hard choices, the government proceeded as fast as financing would allow with development of the oil and gas sector as well as with key infrastructure and agricultural projects.

Development in the 1980s

In the 1980s, the increasing capacity of the Yemeni state for development also helped it to perform its more traditional functions and was partly understood and justified in these terms. This was especially the case when the regime stepped up efforts to extend its reach into NDF-influenced and tribal areas. Certain development efforts made the periphery more accessible and made possible the delivery of basic services to places where the state was regarded with suspicion or scorn. Hence the emphasis on pushing roads into such areas as soon as they were pacified. President Salih came to justify development efforts in terms of nation-state building—in terms of national integration—as well as economic gains. The development activities of the second half of the 1980s, as well as the content of the third Five-Year Development Plan adopted in 1988, reflected the continuing influence of these ideas.

This third period of YAR history, spanning the 1980s, ended with the creation of the Republic of Yemen, headed by President Salih. It was the political and economic turnaround of the YAR after the 1970s, as well as the sudden weakening of South Yemen in the late 1980s, that made possible the YAR-initiated merger.

YEMEN CIVIL WAR

The long, bitter, and costly struggle in North Yemen fought by the republicans and royalists between 1962 and 1970.

The Yemen Civil War began with the 1962 revolution and dragged on intermittently until 1970. The second half of the war coincided with a long drought, and the two forces in combination caused hunger, economic hardship, social dislocation, and many deaths in most parts of the country. Without a doubt, the struggle remains as one of a few defining memories of one if not two generations of Yemenis.

In addition, the civil war forced the deferral of most major efforts at political and socioeconomic

development in what would become the Yemen Arab Republic (YAR) until the 1970s. Indeed, it was not until after reconciliation that the Yemenis could really begin to take the destiny of Yemen into their own hands. At the height of the struggle, the republicans, who were committed to creating a modern state and using it to overcome the weakness and "backwardness" of Yemen, controlled little more than the third of the country defined by the triangle formed by the roads connecting Sanʿa, Taʿiz, and Hodeida (al-Hudayda)—and much within the triangle was outside their effective control. Another third was controlled by the royalists and their tribal allies, and the last third by tribes and others either concerned with their own autonomy or willing to go either way if the price were right. If anything, the balance between the tribes and the state during these years was more in favor of the former than had been the case under the imamate just before the revolution.

The young imam Muhammad al-Badr survived the revolution on 26 September 1962, escaped from Sanʿa, and went on to rally many of the northern tribes and other allies of the imamate for an assault upon the new republic. The civil war was quickly regionalized when Egypt came in strongly on the side of the republicans and Saudi Arabia sided with the imam and the royalists; it was internationalized when the Soviet Union and Eastern Europe supported Egypt and the new YAR, and the United States and the United Kingdom deferred to the Saudis and their interests. As a result, the Yemen Civil War became a microcosmic battleground for the "Arab cold war" between revolutionary Arab nationalist republicans and conservative monarchists and, to a lesser extent, between the Soviet Union and its socialist bloc and the Free World.

The Egyptians, who clearly saved the republic in those first years, took control of fighting the civil war and came to look over time more and more like an occupier; bogged down, they came to call the Yemeni civil war "our Vietnam." Seen as a puppet of Egypt's President Gamal Abdel Nasser, the regime headed by President Abdullah al-Sallal lost credibility and legitimacy. When Nasser withdrew his forces from Yemen on the occasion of the Arab-Israel War of 1967 (the Six-Day War), the Sallal regime collapsed in a matter of weeks, opening the way to the republican-royalist reconciliation that took another two years to consummate.

Although it put much state-building as well as socioeconomic development on hold and exacted a terrible price in human suffering, the civil war did open up an isolated and insulated Yemen to a flood of new ideas, institutions, and practices. The Yemen of the 1970s and later was able to grasp and utilize many of these new elements in a way that was impossible in the 1960s.

YEMEN DYNASTIES

Ruling families of the area known today as Yemen.

The Zaydi imamate in Yemen has its origins in 897, when al-Hadi ila al-Haqq Yahya became the first Zaydi imam (with his seat in Saʿda). His fame as an intellectual as well as a leader led to the invitation to Yemen; there he developed a multitude of policies that eventually became the basic guidelines for the religious as well as political characteristics of Yemeni Zaydism.

Yahya, however, was not able to consolidate his rule in all of Yemen; there were revolts as well as segments of the population that did not accept his pretensions to religio-political rule. Although he did not succeed in establishing any permanent administrative infrastructure, Yahya's descendants became the local aristocracy, and it is from among them that the imams of Yemen were selected for the next one thousand years.

Yemen throughout most of that period was only rarely a unified political entity; in fact, what was included within its frontiers varied widely, and it has not been governed consistently or uniformly by any single set of rulers. It existed as a part of a number of different political systems/ruling dynasties between the ninth and sixteenth centuries, after which it became a part of the Ottoman Empire.

After Imam Yahya's death, a multitude of smaller dynasties and families established themselves in the Tihama (the low coastal plain) as well as in the highlands. Among the better known of these are the Sulayhids, the Hatims, the Zuray'ids, and the Yu'firids. It was during this period, when the Fatimid state was influential, that a portion of the population was converted to Isma'ili Shi'ism.

Beginning with the conquest of Yemen by the family of Salah al-Din ibn Ayyub (Saladin) in 1174, a series of dynasties exercised a modicum of control and administration in Yemen for roughly the next 400 years; these are, in chronological sequence, the Ayyubids, from 1173/74 to 1228; the Rasulids, from 1228 to 1454; the Tahirids, from 1454 to 1517; and the Mamluks, from 1517 to 1538, when the Ottoman Empire took the Yemeni Tihama.

During most of this period, the dynasties and their rulers were primarily engaged in familial, regional, and occasionally sectarian disputes. Ironically, the Sunni Rasulids, who eventually concentrated their rule in southern Yemen for precisely that reason, were the dynasty under which the region experienced the greatest economic growth and political stability.

Very little is known about the Zaydi imams and their efforts to establish themselves and develop some form of administration (including tax collection), or their success in promoting Zaydi goals during this period. From the available evidence, there was very little continuity and a great deal of competition among the Zaydi families and clans. For example, in a presumably representative two-hundred-year period from the thirteenth to the fifteenth centuries, there appear to have been more than twenty different candidates for the imamate, representing more than ten distinct clans.

Eventually, as the Europeans entered the Middle East, specifically the Portuguese and then others in the effort to control the Red Sea trade, Yemen and its Zaydi imams were increasingly unable to maintain their independence. It was not until the ascendancy of Imam Qasim ibn Muhammad and his son al-Mu'ayyad Muhammad in the early seventeenth century that the Zaydi Yemenis were able to resist the Ottoman Empire's forces and become an independent political entity.

YEMEN HUNT OIL COMPANY

U.S. company that first discovered and developed oil in Yemen.

The Yemen Hunt Oil Company (YHOC), a subsidiary of the Hunt Oil Company of Dallas, was the first foreign company to discover and develop oil in North Yemen; the location was the Ma'ib al-Jawf basin, on the edge of the desert in the eastern part of the country, and the year was 1984. Partnering with Exxon and a Korean oil company, the company rapidly developed the production-for-export capacity of that basin and built a pipeline to a terminus on the Red Sea; crude oil began to flow in 1987. YHOC also discovered very sizable natural gas deposits in the area, as yet undeveloped. In addition, it was the operator in another consortium that discovered, developed, and then began producing oil during the 1990s in what, prior to Yemeni unification, was the neutral zone between the Ma'ib al-Jawf basin in North Yemen and the Shabwa region of South Yemen. Called the Jannah field, this area became an important contributor to oil production in unified Yemen. Hailed from the mid-1980s to the mid-1990s as the ally and economic savior of Yemen, the YHOC in recent years has become something of a whipping boy over such issues as "Yemenization" and allegedly questionable accounting procedures.

YEMENI SOCIALIST PARTY

Yemeni political party.

Created in October 1978 as the "vanguard party" required by Marxist-Leninist theory, the Yemeni Socialist Party (YSP) superseded the United Political Organization of the National Front, which in

turn had replaced the National Front for the Liberation of Occupied South Yemen (the National Front), created in 1963. The latter, which was made up of seven smaller groupings, including the Arab Nationalist movement, eventually emerged as the strongest and best organized of the various groups competing for leadership of Aden and the protectorates in opposition to the British presence.

As the sole party in the People's Democratic Republic of Yemen (PDRY), it was the organization that arranged the union of the People's Democratic Republic of Yemen with the Yemen Arab Republic (YAR) in 1990. Thereafter, it became one of the three major parties in the unified state. However, the elections of 1993 led to a civil war between the former PDRY and YAR, with the leaders of the YSP declaring a new Democratic Republic of Yemen in the South in May 1994. Soundly defeated by the central government, the party's leaders went into exile. Thereafter, the party's northern branch elected a new leadership, none of whose members had participated in the Democratic Republic of Yemen.

Tensions between the other two major parties in the unified Yemen, and the YSP's continued significant support in the South, resulted in a desire to return the YSP to some role in the central government in the late 1990s. Although the YSP boycotted the 1997 elections, some of its members were elected as independents. By the time of the 1999 presidential election, northern members of the YSP had been reintegrated into the political system, and although the actual head of the YSP was disqualified as a candidate, Najib Qahtan al-Shaʿabi, the son of the first president of South Yemen, was approved. In 2000, the YSP joined a bloc of opposition parties to create the Supreme Opposition Council, and in 2003 it participated in the parliamentary elections, gaining 8 percent of the seats.

YEMENI WOMEN'S UNION

Oldest women's organization in Yemen.

The Yemeni Women's Union (YWU; Ittihad Nisa al-Yaman) is the oldest women's organization in Yemen, with roots in the preindependence era. The present organization was formed in 1990 by combining the northern and southern branches following the unification of Yemen. In the north, the Yemeni Women's Association (YWA) was established in 1965 with branches in the biggest towns. Without official recognition, the main task of the YWA was to promote literacy and job skills among women. In the south, the General Union of Yemeni Women was formed in 1968 to continue the work of two women's organizations (the Arab Women's Club and the Aden Women's Association) established during the British colonial era. It played a vital role in empowering women and promoting the politics of women's emancipation. Soon after unification, the YWU lost official backing, its funding was minimized, and it faced problems in harmonizing its activities. Whereas the southern branch was dominated by socialists, the Sanaa branch in the north was run by women from the Islah Party. The membership of the united organization is around 4,000. The YWU aims at attaining rights and legitimacy for women, gender equity, and women's advocacy. The union has played an important role in promoting women's increased participation in elections. YWU branches are found today in most governorates, with projects funded by foreign donors. These include microcredit schemes, basic health-

care services, and job-skills training for women. The union is an active participant in fighting violence against women, the goal that unites most Yemeni nongovernmental organizations.

YESHIVA

A school in which the Talmud, Jewish legal codes, and rabbinic literature and commentaries are the primary subjects of study.

Although *semikha* (rabbinic ordination) may be an outcome of yeshiva study, yeshivas are institutions intended for all Jewish males who wish to advance their study of Judaism. Originally, it was the local place to sit and study texts. Yeshivas became places where scholars gathered, where each famous and learned teacher attracted his own students. In eighteenth-century Lithuania, where the modern form was developed, yeshivas drew students from a variety of European localities and provided the students with a formal curriculum, a place to stay, and often a stipend as well.

Yeshiva education consists of endless hours of vocal and intensive review of texts with fellow students *(khavruseh).* Usually once a day, after posting a bibliography and a series of textual glosses that students must explore in advance, a teacher will give a *shiur* (lesson in Talmud). Some modern yeshivas include secular studies as well (they are often called day schools in North America and *yeshivot tikhoniyot* in Israel).

In Israel, yeshivas are numerous; some embrace the ideals of religious Zionism, and some deny them. The former encompass *hesder* yeshivas, whose students combine military service with study; the latter have students who are exempted from military service. Among the most prominent of the former are the Etzion Yeshiva, Merkaz ha-Rav Kook, and Kerem b'Yavneh. Among the latter are the Ponovez Yeshiva, in B'nei B'rak, and the Mir Yeshiva, in Jerusalem. The greatest growth has been in yeshivas connected with Sephardim.

YIDDISH

A vernacular language used by Ashkenazic Jews.

A language based on Germanic dialects infused with Hebrew and loanwords from areas in Europe in which it was spoken, Yiddish is the vernacular used by Ashkenazic Jews since the European Middle Ages. As Hebrew became primarily the language of liturgy and religious scholarship, Yiddish, by the end of the eighteenth century, emerged as the vehicle for the expression of secular literature, drama, poetry, and popular literature. By the nineteenth century, Yiddish was established as the la nguage of a secular European Jewish culture found mainly in Eastern Europe.

The Zionist ideology that stressed the return to Palestine and the use of Hebrew as the language of the Jewish nation was instrumental in the revival of Hebrew. In the language controversy that ensued in the early part of the twentieth century, Hebrew gained prominence over Yiddish and became the official language of the Yishuv and, later, the State of Israel. Yiddish increasingly became identified with Jews and Jewish culture of the diaspora. In response to the Holocaust and the liquidation of Yiddish culture under Soviet rule there has been a resurgent interest in the Yiddish language both in Israel and in North America. As a spoken language Yiddish has become the established vernacular of Orthodox Haredi and Hasidic Jews.

YILDIRIM ARMY

Special Ottoman strike force, also known as the Thunderbolt, or Seventh Army.

The army was organized in early 1917 by Enver Paşa to defend the Eastern Front in World War I. It comprised fourteen Ottoman divisions headed by German General Erich von Falkenhayn and included six thousand German soldiers and sixty-five top Ottoman officers, including General Mustafa Kemal (Atatürk). Enver Paşa had originally planned this special army to recapture Iraq but, in March 1917, sent it to block the new British and Arab campaign in Palestine, where they joined the Fourth Army at Gaza and won an initial victory.

The Ottoman-German effort, however, was weakened by conflicts over jurisdiction, by Turkish nationalist dissent toward the German leadership, and by matériel disadvantages. In the autumn of 1917, the British and Arab offensive forced an Ottoman withdrawal to Damascus, with heavy losses on 27 December. The Allied drive resumed the next autumn, and, on 1 October 1918, British General Edmund Allenby and the Arab nationalist revolt forced the Ottomans to evacuate the Syrian capital. Allenby's troops, aided by French forces landing at Beirut, nearly annihilated the Yildirim Army as the Ottomans were driven back to Alexandretta within two weeks. General Otto Liman von Sanders gave command of the Yildirim to Mustafa Kemal after the Mudros Armistice took effect 31 October, and Kemal surrendered at Adana on 13 November 1918.

YISHUV

The Jewish community in Palestine from the Ottoman period through the British Mandate.

Yishuv refers to the Jewish population—including the pre-Zionist Jewish community known as the Old Yishuv—living in Palestine before the State of Israel was proclaimed in 1948. The Old Yishuv had its roots in a religious revival among Jews in Eastern Europe at the end of the eighteenth century, which inspired increasing numbers to journey to Ottoman Palestine and settle in what they deemed the holy cities of Tiberias, Safed, Hebron, and Jerusalem. Motivated by a desire to observe Jewish religious commandments, scholars and pious men came to pray and study as preconditions to salvation. Palestine's Jewish population steadily increased from approximately 4,200 in 1806 to 26,000 on the eve of the first Zionist-sponsored immigration in 1882.

The Old and the New Yishuv

Concerned Jews in Europe sent financial aid to these pious communities as a way of sharing in the holiness of living and studying in the land of Israel. The collection and distribution of this aid (in Hebrew, *halukkah*) to support pious Jews and their religious institutions in Palestine was institutionalized in 1810 by a wealthy Dutch Jew, Rabbi Zvi Hirsch Lehren, who founded the Pekidim and Amarkalim of Eretz Yisrael (Officials of the Land of Israel) in Amsterdam.

Even with a sophisticated system of external funding, as the numbers of Jews in the Old Yishuv increased, their economic lot deteriorated. A few enjoyed economic security, but most lived in poverty. The religious schools *(kollelim)* provided their own subsidies, sometimes offering rent, health care, and support for widows and orphans, but all charitable services depended on budgetary circumstances and on the intellectual status of the scholars, with those from the wealthiest diaspora communities receiving the highest payments.

By 1882, Zionism had emerged in Europe, and Zionists began to sponsor immigration into Ottoman Palestine. Their goal was a self-supporting secular, egalitarian society based on productive labor and a Hebrew cultural renaissance; they named their community the New Yishuv. Proclaiming the need for social change, economic transformation, and

A ship filled with Jewish refugees docks in Haifa Port in 1945. Between 1945 and 1948, 69,000 Jews relocated from Europe to Palestine. Many did not successfully complete the journey and ended up in British detention camps in Cyprus. © PHOTOGRAPH BY ZOLTAN KLUGER. GOVERNMENT PRESS OFFICE (GPO) OF ISRAEL. REPRODUCED BY PERMISSION.

political reform, Zionist activities ruptured traditional patterns of pious Jewish life in Palestine and triggered intense competition for diaspora charity.

In Zionist historiography, the differences between Old and New Yishuv have been described as immense. In fact, there was some overlap. A generation of Jews who matured in Jerusalem during the Ottoman reform era of the 1860s responded to the challenge of meeting daily needs as well as to the spirit of the age by calling for the creation of a productive Jewish economy. Yosef Rivlin, Yoel Moshe Salomon, and Israel Dov Frumkin, prominent cultural and religious figures, became builders of new neighborhoods and founders of a new Jewish infrastructure. Among the housing projects outside the

Old City that they developed or supported were Nahalat Shiva, Mea Sheʿarim, Mishkenot Israel, Kiryah Ne'emana, and Bet Yaʿakov. By 1880, 2,000 Jews lived outside the Old City and 16,000 lived within the walls. A similar impulse drove Jaffa's Jewish leaders to establish the new suburbs of Neve Shalom, Yefe Nof, and Ahva. Some also advocated educational reform and contributed to the revival of Hebrew.

As for the Zionists, some came from traditional backgrounds and never gave up their faith or observance of religious ritual. Permanent alliances across the two communities were generally short lived, however; they often split over religious stipulations constraining the establishment of a modern Jewish society.

Zionism

Although immigrants driven by piety continued to arrive alongside Zionists, it was the Zionist vision that created Palestine's new institutions. Between 1882 and 1948, the Zionist movement established about 250 towns, villages, and cities designed by a corps of planners and officials pursuing national political goals. Schools, libraries, newspapers, workshops, and cultural and commercial enterprises were established—even in Jerusalem, the heart of the Old Yishuv.

After World War I and the dissolution of the Ottoman Empire, the British, under a mandate from the League of Nations, ruled Palestine. British doctrine recognized the Yishuv as one of Palestine's religious communities but in practice provided it with the opportunity to operate national-style institutions. Zionists brought their political parties with them to Palestine. From the early years of the twentieth century, a number of Zionist-Socialist parties (Poʿalei Zion, ha-Poʿel ha-Tzaʿir, Left Poʿalei Zion) as well as Mizrahi, the religious Zionist movement, had adherents and activists in Palestine. Political parties opened employment offices and founded agricultural collectives, soup kitchens, loan funds, newspapers, and schools. They provided recreational and cultural activities for members. Many of these activities were absorbed in 1920 by the Histadrut, which became one of the central vehicles of state-building for the Yishuv. Histadrut operations—labor exchanges, construction companies, and an underground army—were crucial in helping Jewish immigrants find work and community in their new homeland. The Histadrut became the base of power for David Ben-Gurion, who used his position as secretary-general to bring together several of labor's political parties in 1930 to form MAPAI, dominant in Yishuv politics and eventually in the World Zionist Organization. With backing from both the Histadrut and MAPAI, Ben-Gurion was able to outmaneuver political rivals such as Vladimir Zeʾev Jabotinsky and Chaim Weizmann.

Palestine's Jewish community organized itself in explicitly political structures, beginning with an assembly (Knesset Yisrael) elected by people who were more than twenty years old and had at least three months' residence in the region. Between sessions, the assembly delegated its powers to the Vaʿad Leʾumi (National Council), appointed from its ranks. The council nominated from among its members an executive charged with the actual administration of the community. Policies generated by the self-governing institutions of the Yishuv covered matters of health, social welfare, defense, and education. Without the authority to tax, however, Knesset Israel and its constituent institutions had limited power. Its funding depended on allocations from the World Zionist Organization. Some of Palestine's Orthodox Jewish residents remained aloof from the organization and did not participate in elections, since they objected to female suffrage and to the secular aims of Zionism. They insisted on their organizational separateness and retained an allegiance to the principles of the Old Yishuv.

Palestine was governed as a colony, but significant policies were often formulated by England's highest elected officials, including the prime minister and parliament. Yishuv politicians such as Ben-Gurion understood the pressing need to influence policymakers in London as well as those implementing regulations in Palestine. Hence, much power was assigned to international Zionist agencies and to their leaders, who attained global stature (e.g., Weizmann).

Until the creation of an expanded Jewish Agency in 1929, the Zionist executive's political department was also the central mechanism for creating contacts with Arab leaders within and outside of Palestine. Founded and directed by Chaim Kalvaryski, this de-

partment initiated contacts with Palestinian personalities willing to sit with Jews in institutions established on the basis of the Mandate's political framework. The department extended funds to village shaykhs, municipal leaders, newspapers, and movements deemed moderate on the issue of a Jewish national home in Palestine. In 1929, the Jewish Agency and the National Council set up the Joint Bureau to handle relations with the League of Nations and with Britain in both London and Palestine.

Two developments in the 1930s augmented the authority of Yishuv institutions. The first was an increase in the number of Jewish immigrants, who were now fleeing fascist Europe. This increased the number of people who participated in elections and other voluntary political activities. The second was the outbreak of the Arab Revolt in 1936 and the need for a larger Yishuv defense force. The Yishuv assumed responsibility for helping fund such a force through a voluntary tax levy. Yishuv institutions still drew their authority primarily from the networks created with various political movements and the leadership of the Jewish Agency, but as the legitimacy of these institutions strengthened they also began to function more effectively on their own.

When British rule began in Palestine, there were 56,000 Jews in a total population of 640,000. By the end of Britain's political tenure, the Jewish population had increased to 650,000, with substantial immigration occurring in the Mandate's last decade. Undoubtedly, the rise of Nazism and the threat of war expanded both interest in immigration and the actual numbers of Jewish immigrants, despite Britain's attempts to control the number of Jews entering Palestine.

The outbreak of the war in 1939 and the genocidal policies of the Nazis created enormous difficulty for the Yishuv. On the one hand, these policies substantiated the Zionist claim that diaspora Jewry lived in fragile, untenable conditions; on the other hand, by slaughtering the movement's potential population, they threatened the possibility of achieving the Zionist dream of sovereignty. However, World War II ended with the beginning of the Cold War, and the dramatic shift in the balance of world power helped the Yishuv win the international support necessary for Jewish statehood, especially from those interested in the dismantling of Great Britain's empire.

YIZHAR, S.

[1916–]

Israeli novelist.

The grandnephew of Israeli author Moshe Smilansky (1874–1953), S. Yizhar was born in 1969 in Rehovot, Israel. Yizhar's most famous novel, *Yeme Ziklag* (1958), is considered a work of great literary distinction. It describes seven days of battle during the Arab–Israel War of 1948 and underscores the burdens imposed on a society trying to fulfill the Zionist mission. His language and detailed descriptions of the land have influenced all subsequent generations of Israeli writers. His later novel, *Mikdamot* (Foretellings, 1992), views the Zionist pioneering enterprise through the eyes of a child. Yizhar served

in the Knesset from 1949 to 1967 as a representative of the mainstream labor movement and also taught school for many years.

YOSEF, OVADIAH

[1920–]

Israeli religious and political leader.

Ovadiah Yosef, Israel's most prominent Mizrahi religious leader, was born in Baghdad but has lived in Palestine since infancy. He was educated at the Sephardic Porat Yosef yeshiva in Jerusalem, and he was recognized as a brilliant scholar with a phenomenal memory from an early age. A rabbi by the age of twenty, he was deputy chief rabbi of Cairo when the state of Israel was founded in 1948. He returned to Israel in 1950, where he became a religious judge. In 1968 he was appointed chief rabbi of Tel Aviv. He served as the Sephardic chief rabbi of Israel from 1973 to 1983—a tenure marred by bickering with the Asheknazic chief rabbi, Shlomo Goren. His religious authority and personal charisma led his followers to continue to accord him higher status than that given to the Sephardic chief rabbis who followed him in that post. His weekly Saturday night talks are broadcast by satellite around the world. These talks are followed closely by Israeli journalists, who are eager to report his often provocative and colorfully worded statements and rulings. These included his declaration that the six million Holocaust victims were "reincarnations of the souls of sinners. . . They had been reincarnated in order to atone."

Yosef's biography includes a series of frustrations and personal slights. He was never invited to join the Ashkenazic Council of Torah Sages of the Agudat Israel party—then the highest political and spiritual authority in the ultra-Orthodox world. In Ashkenazic circles he was dismissed as a person who memorized texts rather than an original thinker. His own religious mentor, Rabbi Eliezer Schach, announced that, because they still needed to follow Ashkenazic guidance, "the time has not yet come for Sephardim to take positions of leadership." Yosef was thus induced to support the first ultra-Orthodox Sephardi SHAS (derived from *Sephardim Shomrei Torah,* or Sephardi Torah Guardians) party, founded in 1983 by disaffected members of the Ashkenazic dominated Agudat Israel party. SHAS won 11 of the 120 parliamentary seats in the 2003 elections (down from 17 in 1999). Yosef's intended purpose is to restore the "crown of glory" to Sephardic Judaism—to reestablish the dominance of the Halakhah in accordance with Sephardic custom in Israel. He is now the ruling force behind the SHAS party, instructing the elected Knesset members how to vote in parliamentary issues.

Yosef's most famous work, *Yabiah Omer,* deals with halakhic problems in daily life. His religious rulings have been original, but also at times controversial, as when he recognized Ethiopian Jews as being fully Jewish during the 1970s. His leniency in religious ruling is sensitive to the diversity of religious observance among Sephardic Jews. He generally seeks accommodation rather than confrontation in Jewish-Arab issues, even as he sometimes uses abusive language (for example, "beasts of prey") to describe his enemies and those of Israel.

UPDATED BY EPHRAIM TABORY

YOUNG ALGERIANS

A group of French-educated men who, early in the twentieth century, became the first Algerians to attempt reform within the colonial political system.

Estimated to number between 1,000 and 1,200, the Young Algerians *(Jeunes Algériens)* included intellectuals, members of the liberal professions, and individuals who had succeeded within French business

circles. Most prominent among the group's members were Dr. Benthami Ould Hamida, Omar Bouderba, Fekar Ben Ali, Chérif Benhabylès, and—beginning in 1913—Khaled ibn Hashimi ibn Hajj Abd al-Qadir, grandson of Algerian patriot Abd al-Qadir.

While there were differences in the emphases of the Young Algerians, most were attempting to win for themselves rights approximating those of Frenchmen. Their agenda, before World War I, included exemption of at least some Algerians from the exceptive Code de l'Indigénat, more equitable distribution of taxes, easier access to French citizenship, and greater political participation for the educated. The agenda also included programs for the masses, including greater access to education, opening of grazing and forest lands, protections for property, and more careful monitoring of government abuse.

Despite support from many liberals in France, attempts to negotiate concessions failed in 1913 and 1914, largely because of colon opposition. During World War I, when thousands of Algerians served in the French armed forces, a grateful Prime Minister Georges Clemenceau promised reform. The resulting Jonnart Law of 4 February 1919, however, was viewed by most Young Algerians as being very far from what they had been promised. For a few years after the war, Khaled ibn Hashimi ibn Hajj Abd al-Qadir continued to lead the movement for reform within the system, but, by 1923, he gave up the effort and went into exile in the Near East.

YOUNG EGYPT

A patriotic association of Egyptian youth established in October 1933.

In 1937, Young Egypt (Misr al-Fatat) became a formal political party in Egypt; in 1940, the name was changed to the Islamic Nationalist party (al-Hizb al-Watani al-Islami); in 1949, it became the Socialist party of Egypt (Hizb Misr al-Ishtiraki).

The dominant figure in Young Egypt throughout its history was the lawyer/politician Ahmad Husayn. In the 1930s, the movement's program combined a vehement, anti-British Egyptian nationalism, an antiparliamentary outlook, an emphasis on the paramilitary training and mobilization of youth, and a call for greater social justice. Politically opposed to the Wafd, Young Egypt aligned itself with the anti-Wafdist forces centered around the Egyptian palace; its paramilitary squads of Green Shirts periodically fought with the Blue Shirts of the Wafd.

Although it was suppressed during World War II, it afterward dropped its paramilitary features while retaining, but relabeling, much of its prewar populism. Like all Egyptian political parties, it was abolished in January 1953, after the Free Officers, led by General Muhammad Naguib, seized power from the monarchy of King Farouk.

JAMES JANKOWSKI

YOUNG OTTOMANS

Ottoman intellectuals and bureaucrats who constituted the first organized opposition to the pro-West modernizing elite of the Tanzimat.

Members of the group called themselves New Ottomans, while contemporary European observers referred to them as Young Turks. The latter term came to be used more specifically in reference to the next generation of liberal opponents of Sultan Abdülhamit as distinct from Young Ottomans, which has become the synonym of New Ottomans.

The Young Ottomans began their activities in Constantinople (now Istanbul). They faced repression and were forced into exile in Europe and other parts of the Ottoman Empire. Prominent Young Ottoman leaders were Namik Kemal (1840–1888), İbrahim Şinasi (1824–1871), Agha Efendi (1832–1885), Abdülhamit Ziya Paşa (1825–1880), and Ali Suavi (1838–1878). The group received important financial and moral support from a disaffected member of the Egyptian khedival family who had entered the Ottoman service, Mustafa Fazil Paşa (1829–1875). While these leaders were united in their opposition to the Tanzimat elite, and to the

autocratic ministry of Paşas Fu'ad and Ali, they had hardly been bystanders to the Tanzimat. They had matured intellectually and professionally during the Tanzimat period. Many had served in the Translation Bureau, a breeding ground for Tanzimat bureaucrats. Some were stimulated by the frustration of their career ambitions under the Tanzimat regime.

The Young Ottomans differed in social and professional background. Ziya Paşa, the oldest in the group, was a writer and poet and had served as third secretary to Sultan Abdülmecit II. Namik Kemal, also poet and writer, came from a distinguished bureaucratic family. Şinasi, an army captain's son who held a post in the imperial arsenal before he was sent to Paris to study finance, was the most innovative and versatile from a literary point of view. Ali Suavi was a middle-school teacher and a religious-minded writer, even agitator.

The forerunner of the group was the Alliance of Fidelity or Patriotic Alliance, a loose group consisting of literary men and functionaries, which first met in Constantinople in June 1865. Organization was secret and conspiratorial, apparently modeled along the Carbonari of Italy, Spain, and France and led by a French-educated agitator, Mehmet Bey. The group did not publicize a program. The members were motivated by recent Ottoman setbacks in the Balkans and Lebanon and fear of disintegration. They felt constitutional government was necessary to preserve the empire and to ward off Europe's economic domination and diplomatic interventions. The group's expanding membership included bureaucrats, *ulama* (Islamic clergy), and army officers.

In 1866/67 Namik Kemal and Ali Suavi published newspapers *(Tasvir-i Efkar* and *Muhbir)* in which they vehemently criticized the government's policy regarding the insurrection in Crete and the impending surrender of Serbia. They published an open letter from Mustafa Fazil, who had left the empire over issues pertaining to his political ambitions in Egypt, which addressed the sultan and amounted to a liberal manifesto. The government ordered Namik Kemal, Ziya, and Ali Suavi to domestic exile and closed their newspapers. Instead, they accepted an invitation from Mustafa Fazil Paşa and fled to Paris. At this time, the government also uncovered the group's contacts with top security officials in preparation for a coup against Abdülaziz that was organized by Mehmet Bey.

The regrouping of the liberal-minded elements of the Patriotic Alliance as New Ottomans occurred in exile at the end of May 1867. In Paris and later London, they published the newspaper *Hürriyet,* edited by Namik Kemal and Ziya Paşa with financial support from Mustafa Fazil. They promoted liberal political principles and demanded a parliament. At the same time, they denounced liberal economic policies and advocated measures to buttress indigenous trade and to promote industry.

Despite considerable variation in their outlook on politics, society, and religion, the Young Ottomans projected an Islamic modernist synthesis. They opposed Western political and economic interference and wholesale adoption of Western thought and culture. Nevertheless, they were sympathetic to Western political institutions. Their thought was premised on the existence in Islamic political traditions of the concepts and institutions fundamental to a liberal political system based on representative principles. The Young Ottomans reinterpreted and popularized the concept of *watan* (homeland) to advance a political allegiance to the Ottoman state. They sought a contractual relationship between the subjects and the ruler, based on the Islamic principles of *shura* (consultation) and *ijma* (consensus), within the framework of an Ottoman watan. These views represented the first systematic expression of Islamic modernist ideas in the Muslim world.

The Young Ottoman movement was not the first expression of political protest against the Tanzimat. As early as 1859, a group of *ulama* and army officers had led a coup d'état aimed at Abdülmecit in resentment of Tanzimat policies that enhanced the status of the non-Muslim minorities vis-à-vis the Muslims, and—perhaps more importantly—had left the payment of officers in arrears (the Küleli Incident). The Young Ottomans constituted the first opposition group that attempted to offer alternative programs, inspired by Western thought but consistent with Islamic political ideals.

The movement signifies the beginnings of a campaign for social mobilization and the forging

of a public opinion in the Ottoman Empire, even though the group's propaganda remained restricted to a literate Turkish-speaking intelligentsia. Their ideas appealed to disfranchised Westernized groups, students, Muslim commercial associations, and religious conservative opponents of the Tanzimat. They propagated their views through newspapers and literature utilizing a simplified Ottoman-Turkish. They were influenced by contemporary Turkish discoveries, which reinforced the Islamist and anti-imperialist outlook, especially in the pen of Ali Suavi.

The Young Ottomans pioneered journalism and introduced new genres and themes to Ottoman literature. Indeed, future members of the group began their oppositional activity in the first privately published Ottoman journals that appeared in the early 1860s (such as *Tercüman-i Ahval* and *Tasvir-i Efkar*). They introduced the genres of the novel and the drama to Ottoman literature, popularized them, and effectively used them as vehicles of political propaganda. The pioneer in this journalistic and literary activity was Şinasi. The Young Ottomans also translated into Turkish the works of European Enlightenment philosophers and authors such as Rousseau, Montesquieu, Voltaire, Molière, and Lamartine.

The Young Ottomans did not constitute a party organization despite their espousal of political propaganda and promotion of political agendas. After the early 1870s, the group lost its cohesion. Ideological and personal differences led to estrangement in European exile. Several leaders, including the benefactor Mustafa Fazil Paşa, accepted Abdülaziz's amnesty offer to return to Constantinople. Following the death of their nemesis, Ali Paşa, in 1871 the movement went into disarray in the capital. However, under the duress of the political and financial crises of the 1870s, progressive Ottoman statesmen started to look with favor upon Young Ottoman ideas about constitutional government. Midhat Paşa, known as the architect of the Ottoman constitution and parliament, emerged as the leading proponent of change and set out to give concrete expression to Young Ottoman ideas on constitutional government, drawing also on the services of Young Ottoman leaders. Namik Kemal and Ziya Paşa were members of the committee that drafted the Ottoman constitution of 1876. Namik Kemal's long struggle to promote the Young Ottoman cause, his refusal to compromise, his passionately patriotic poetry and drama, and his lucid political writings stressing the notion of popular sovereignty gave him a reputation as the most influential Young Ottoman activist and author, as well as making him a source of inspiration for later constitutionalists.

Due to the absence of a party organization and their dependence on literary forms for the propagation of their ideas, the Young Ottomans had no direct impact on non-Turkish-speaking parts of the empire. For instance, their Islamic modernist ideas did not have an appreciable influence on later and similar currents in the Arab-populated areas. The Young Ottoman movement, however, was the ideological forerunner and inspiration of the later and more broadly based Young Turk movement. The Young Ottomans may not have offered a coherent political philosophy, but they were the precursors of most modern intellectual and political movements in the Middle East.

YOUNG TUNISIANS

Tunisian reform movement that championed Tunisian rights during the French protectorate.

The imposition of the French protectorate over Tunisia in 1881 propelled a group of reform-minded urban elites, known as the Young Tunisians, to challenge the traditional order that it blamed for the country's economic and political misfortunes. The Young Tunisians initially acquiesced to French oversight as a practical step toward the modernization of state and society, but they were also intent on reforming native institutions in order to maintain and renew the Muslim heritage and identity of

Tunisia, and to this end, they founded the Khaldunniyya School in 1896. The nucleus of the Young Tunisian movement thus included modernists from the religious notability, such as Abd al-Aziz al-Thaalbi, as well as graduates of French universities or of the European-inspired Sadiqiyya College, such as Bashir Sfar, Ali Bash Hamba, and Hassan Gallati. By 1900, however, growing frustration with their political and economic marginalization was leading many Young Tunisians to intensify their criticism of the protectorate and its various forms of discrimination.

In 1907 Sfar, Bash Hamba, and al-Thaalbi launched French and Arabic editions of the journal *Le Tunisien* to promote and champion indigenous rights. The movement was radicalized further between 1911 and 1912 by the Italian invasion of Libya, and by the Protectorate's use of disproportionate military force against civilian demonstrators in November 1911 (the Jallaz Incident), and again in February 1912 against striking tramway workers. The authorities accused the Young Tunisians of instigating popular unrest, and deported al-Thaalbi, Sfar, Gallati, and Bash Hamba. Thus, on the eve of World War I, the Young Tunisian movement had been effectively decapitated and driven underground, but its popular anticolonial platform was soon resurrected in the 1920s by the Destour Party and its calls for Tunisian self-determination.

YOUNG TURKS

Name given to groups in Ottoman society who demanded and strove for political and social change in the last several decades of the Ottoman Empire.

"Young Turk" is an expression coined in Europe that invokes three distinct phases of the Ottoman constitutionalist movement: the anti-Tanzimat current better known to historians as the "Young Ottoman" movement; the constitutionalist opposition to Sultan Abdülhamit; and the Second Constitutional Period introduced by the reinstitution of the constitutional regime in 1908. There was at no point a distinct organization called the Young Turks; nor did the groups recognized as Young Turks generally embrace this name. Nevertheless, historians identify the last three decades of the empire in reference to Young Turks, while "the Young Turk period" corresponds more precisely to the decade of their political predominance from 1908 to 1918.

Young Turk activity began in the late 1880s. Until the revolution of 1908, their opposition to Abdülhamit manifested itself both within the empire and abroad. The two spheres of activity were linked together only loosely. When a group of medical students in Constantinople (now Istanbul) founded in 1889 the secret cells of what would develop into the Committee for Union and Progress (CUP), individual intellectuals in exile had already launched a political and journalistic campaign against the Hamitian regime. The best known in the latter group was Khalil Ghanim, a Syrian Christian, who published a journal called *La jeune Turquie (Young Turkey).*

The Constantinople secret committee spread rapidly in the capital's higher schools and soon became known to the authorities. Reprisals forced many to exile, whereupon an expatriate liberal opposition came together around Ahmet Riza, a French-educated official in the Ministry of Agriculture. Influenced by European positivists, he failed to return from a mission in 1889 and turned into a vocal critic of the Hamitian regime. In 1895, he joined Khalil Ghanim, Alber Fua (a Jew), and Aristidi Paşa (a Greek) to publish *Meşveret,* which became the leading voice of Young Turks.

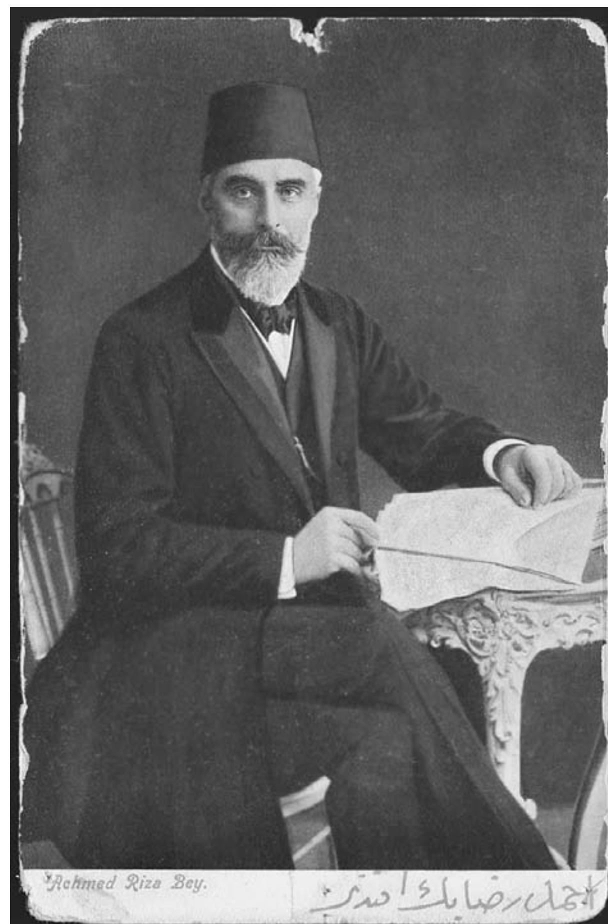
The next year, a member of the Constantinople secret committee, Murat Bey, fled to Cairo and later to Geneva. A Russian Turk who taught at the influential Mülkiye (civil service) school, Murat Bey was better connected with the liberal currents in Constantinople. His *Mizan* outshone *Meşveret,* both of which were smuggled into the empire. Murat was an Islamist-Turkist revolutionary, in contrast to Ahmet Riza's elitist and gradualist outlook. The two men were united in their anti-imperialism and de-

nunciation of the Hamitian autocracy. Murat, however, joined Abdülhamit in 1897. Rivalries within the Young Turk movement in exile continued with the publication in Geneva of *Osmanh* by İshak Süküti and Ahmet Cevdet Paşa, founding members of the CUP in Constantinople. As repression increased in the empire, Young Turk activity shifted almost entirely to Europe and Egypt for a decade. The flight of Damad Mahmud Paşa, the brother-in-law of the sultan, to join the Young Turks in Europe opened a new phase in Young Turk activities.

Under the moral guidance and financial support of ailing Mahmud Paşa and the presidency of his son Sabahettin, the Young Turks held a conference in Paris in February 1902, which crystallized the divisions within the movement. Representatives of all major religious groups in the empire attended. The meeting revealed the separatist inclinations of Christian factions, while two groups around Ahmet Riza and Sabahettin divided over the suitability of centralist versus decentralist policies in achieving the ultimate aim of preserving the integrity of the empire. Subsequently, Sabahettin formed the Society of Administrative Decentralization and Private Initiative, modeled along the teachings of economist Frédéric Le Play and Edmond Demolins and as a rival to the CUP. A second conference in 1907 aimed at a reconciliation failed to bring Greek, Albanian, and some Armenian factions to the table.

Meanwhile, domestic opposition and conspiracy against the Hamitian regime regrouped in Macedonia. Different oppositional groups coalesced to revitalize the CUP, which in 1907 contacted the Ahmet Riza group in Europe. However, the exile communities had no role in the immediate circumstances that led to the Young Turk Revolution. If international events like the Japanese victory over Russia and the Russian and Iranian revolutions energized Young Turks everywhere, the nationalist activity among the Balkan peoples and the perceived threat to the empire by enhanced relations between Britain and Russia impelled the unionists in Salonika and Monastir to action.

Due to the role they played in the revolution, leaders of the Macedonian branches of the CUP eclipsed the other factions after 1908. They were, however, too inexperienced to take the helm of government and too insecure to embrace other Young



Ahmet Riza circa 1910. Riza was one of the leaders of the Committee for Union and Progress, one of several groups that collectively came to be known as the Young Turks. The Young Turks sought to reform and modernize the Ottoman Empire. They succeeded in taking control of the government in 1908 but fell from power after defeat in World War I (1914–1918).
© Rykoff Collection/Corbis. Reproduced by permission.

Turk groups, including the CUP leadership in Europe. The differences within the Young Turk movement were now expressed in multiparty politics. The decentralists under Sabahettin formed the Liberal party before the 1908 elections. Even though they failed to block the election of a large majority of CUP candidates to parliament, the decentralists became an increasingly more potent opposition to the CUP, supported by autonomy-minded minority groups. Other parties that formed in 1910 and 1911 soon merged in the Ottoman Liberty and Entente party. The CUP's attempts to manipulate the elections to retain power undermined parliamentary rule, eliciting an ultimatum from a group of military

officers called Saviors. Coupled with foreign preoccupations such as the Italian and Balkan wars, the Young Turk governments gave way to governments led by old-school politicians in 1912. In 1913 the CUP wrested power with a coup d'état. Despite conciliatory measures to the liberals, the CUP remained as that faction within the Young Turk movement that dominated Ottoman politics until the end of the empire.

The Young Turks promoted the ideology of Ottomanism in an attempt to foster in all peoples of the empire a commitment to the Ottoman homeland within the framework of a constitutional government. There were organizational similarities, some ideological continuity, and shared political goals between the Young Ottomans and Young Turks. Despite what the ethnocentric term "Young Turk" suggests, the movement represented ethnically and religiously a much more diverse group than the Young Ottomans.

The Young Turk movement embraced varied ideological orientations (Westernism, Islamism, Turkism, positivism, centralism, decentralism), socio-economic backgrounds (lower middle-class students and officers, high officials, members of Ottoman and Egyptian royal households), and ethnic-religious affiliations. It was unified in the conviction for the necessity of reform designed to preserve the empire. The Young Turks were responsible for instituting the beginnings of modern politics in the Middle East, for expanding education and journalism, and for realizing economic, social, and administrative reforms. The movement provided the political nuclei for the successor states of the Ottoman Empire.

YOUSSEF, MULAY

Alawi sultan of Morocco, 1912–1927.

The ouster by France of Youssef's predecessor, Mulay Abd al-Hafiz, signaled the subordination of the Moroccan sultanate to French colonialism and a serious loss of prestige by the Moroccan ruling house. Mulay Youssef's reign was marked largely by the implementation of the Treaty of Fes (March 1912) and the aggressive administration of French rule by the resident general, Marshal Louis Lyautey, who held office from 1912 to 1925. The period of Youssef's reign also witnessed several significant movements against colonial rule, the most important of which was that of Abd al-Karim (al-Khattabi) in the Rif region from 1919 to 1926.

YOUSSOUFI, ABDERRAHMANE

[1924–]

Moroccan prime minister, 1998–2002.

Abderrahmane Youssoufi was the first opposition politician to occupy the position of Moroccan prime minister since 1958. Born into a Berber- and French-speaking family from the international zone of Tangiers, Youssoufi joined the Istiqlal Party when it was founded in 1944. His European education led him to cultivate personal and ideological ties with Mehdi Ben Barka and the leftist wing of the Istiqlal. In 1959, along with Ben Barka, Youssoufi became one of the founders of the socialist-oriented National Union of Popular Forces (Union Nationale des Forces Populaires, UNFP). Arrested in 1963 during the first major wave of repression against leftist militants, he served eighteen months in prison for his alleged participation in a plot against the monarchy. Pardoned, he left Morocco after the murder of Ben Barka in 1965. During his fifteen-year exile in

France, Youssoufi was a particularly active advocate for human rights. He returned to Morocco in 1980, resumed political action within the Socialist Union of Popular Forces (Union Socialiste des Forces Populaires, USFP), which was created in 1975, and became its secretary-general in 1992. To enhance the credibility of the kingdom's reforms, Hassan II named Youssoufi prime minister in 1998. Youssoufi uneasily presided over a coalition government whose key ministries were reserved for the king's collaborators. Such restrictions limited Youssoufi's capacity to further the democratization process and to address social issues. Priority was given to the creation of a suitable environment for private investors, particularly through a campaign against the corruption of civil servants and court officials. Accused of lacking initiative and compromising with the palace, Youssoufi was replaced by Driss Jettou in November 2002.

Henri Lauzière

YOUTH ALIYAH

Organization that benefits immigrant youth in Israel.

Even before Hitler became Germany's chancellor in 1933, Youth Aliyah (in Hebrew, *Aliyat ha-Noar*), a project that brought Jewish children to Palestine and provided them with vocational training, had been established by Recha Freier in response to the deteriorating condition of Jews in Germany. It was organized in Palestine by Henrietta Szold, with the cooperation of the Jewish Agency, the Vaʿad Le'umi (National Council), and the kibbutz movement. Originally, parents paid for their own children's transportation to Palestine and their room and board. For a number of years, British authorities did not count these children in the official immigration quota for Palestine.

During the mid-1930s the organization expanded its activities and rescued increasing numbers of children from Nazi Germany and later from Austria. Starting in 1939 with the outbreak of World War II, Youth Aliyah brought children from the battle zones to Great Britain, Scandinavia, Belgium, the Netherlands, and even Palestine (such as the Polish children called "the Tehran children," who traveled in 1943 via the Soviet Union and Iran). From 1945 to 1948, Youth Aliyah located orphaned children of the Holocaust and brought some 15,000 to Palestine as "illegals." With the establishment of the State of Israel in 1948, Youth Aliyah focused on rehabilitating needy immigrant children from countries of the Middle East and on helping adolescents in distress and/or in dire poverty. Youth Aliyah programs, mostly financed by the Jewish Agency, have helped integrate more than 300,000 children into Israeli society.

YOUTH MOVEMENTS

Social and political groupings and organizations formed for Middle Eastern adolescents and young adults.

Youth movements have played an important role in Middle Eastern politics and society. Until the late nineteenth century, the defense of neighborhoods was frequently ensured by *futuwwa* and other informal associations of young men operating as local militias. These "gangs" provided internal order and protection against outside threats and were often engaged in welfare and charitable activities; however, they sometimes preyed on the people instead.

Although in the twentieth century most of these groups disbanded, new kinds of youth movements developed that transcended residential loyalties. Between the two world wars, scouting and Young Men's Muslim associations made their appearance in many Middle Eastern countries. These nonpolitical youth groups frequently provided the nucleus from which full-fledged political movements developed. Initially, for example, the Muslim Brotherhood relied heavily on the scouting movement to spread its religious message.

In the 1930s, several Middle Eastern countries spawned right-wing paramilitary youth associations and sporting clubs that were inspired by Hitler's

Germany, Mussolini's Italy, and Franco's Spain. These intensely nationalistic groups recruited primarily among newly educated middle-class students disillusioned with Western-style liberal democracy. They drew their appeal from an admiration of fascist discipline, unity, militancy, organization, and power—and from the hope that Germany and Italy might eliminate Franco-British influence in the Middle East. Members of these groups wore uniforms and followed rituals patterned after those of the Hitler Youth and Franco's Falange. The Phalange party (al-Kata'ib) and the Helpers (al-Najjada), in Lebanon, and Young Egypt (Misr al-Fatat) developed out of such paramilitary groups. The youth groups called Betar, which played an influential role in the development of revisionist Zionism in Europe and in Palestine under the British mandate, were also influenced in their organization and methods by the fascist youth movements.

In Palestine, from 1922 until the early years of the State of Israel, youth movements affiliated with the major Zionist political parties, the National Religious party (NRP) and the Histadrut (Israeli Federation of Labor Unions), played key roles as vehicles of socialization and integration into the Zionist polity and as agents of elite recruitment. Ha-Halutz (The Pioneer), a Zionist farming organization, trained young European Jews to join the agricultural movement in Palestine. The role of the youth branches of Israel's major political parties declined after the mid-1950s, except for B'nei Akivah, the NRP's youth branch, whose regular expansion since 1960 has contributed to the growth of religious nationalism in Israel.

In other Middle Eastern countries, governments have tried to prevent the development of autonomous youth movements. In one-party regimes, the ruling party usually has its own youth section. The most developed example of this is probably the Federation of Iraqi Youth, attached to the Iraqi Baʿth party. Under the auspices of athletic and cultural activities, the federation (which is itself divided into several programs catering to specific age groups) tries to diffuse the party's views among Iraq's younger generation.

Throughout the region, youth movements fueled by rapid population growth have played a leading role in antiregime activities. Student activism was a recurrent feature of political life in the 1970s and 1980s in countries as different as Morocco, Egypt, Lebanon, Iran, Turkey, Sudan, and Tunisia, where student associations sometimes joined forces with other social groups to participate in riots against the government. In particular, through a variety of Marxist and Islamic-leftist organizations, young people were actively involved in the 1979 downfall of the shah of Iran. More generally, the Islamic resurgence of the 1970s and 1980s has been primarily a movement of disaffected youth (particularly high school and university students of provincial origins and middle- and lower-middle-class backgrounds) who have organized themselves through informal religious associations.

Youth associations also contributed to the turmoil of the 1970s in Turkey, where the ultranationalist far-right National Action party used youth groups to spread its message and carry out its actions. Similarly, some of the organizational roots of the Intifada, the uprising of Palestinians that broke out in December 1987 in the Israeli-occupied territories, can be found in youth clubs formed in the 1970s and 1980s. These groups were initially created for cultural, social, and athletic activities, but they rapidly developed into a political movement of resistance to Israel's administration. Youth associations enabled a new generation—often the youth of Palestinian refugee camps, who had known only Israeli rule but who, unlike their elders, could no longer bear to live under such control and felt they had little to lose—to vent its anger, frustration, and hatred.

Middle Eastern youth movements also include scouting and Young Men's/Women's Christian associations in Egypt, Lebanon, Jordan, and the Israeli-ruled territories. In Israel, a Young Men's/Women's Hebrew Association is similar. In the 1970s, a Young Men's and a Young Women's Muslim Association were formed in the West Bank. Like scouting, these associations are concerned with organizing social, cultural, self-help, charitable, skill-training, and athletic activities.

GUILAIN P. DENOEUX

YÜCEL, HASAN ALI

[1897–1961]

Turkish educator, publisher, and writer.

Born in Istanbul, Hasan Ali Yücel obtained a degree in philosophy from Istanbul University in 1921. After teaching philosophy for a few years, he worked in the new Republic of Turkey's education directorate and published poetry and books on Turkish literature in the late 1920s and 1930s. He also joined the Turkish language-reform movement and eventually became a protégé of Atatürk. Yücel served as minister of education between 1938 and 1946, when he became known as an active reformer and supervised the publication of hundreds of translations of world classics. He also fostered the development of Village Institutes, which trained local teachers. President İsmet İnönü promoted his strict and controversial language reforms in school text-books.

In 1946, Yücel was accused by retired general Fevzi Çakmak of harboring communists in the Village Institutes. Although Yücel's name was cleared by a libel suit, during the trial accusations by Islam's religious right—that he supported subversive literature—cast a pall of self-censorship over public debate, and his successor undid many of his reforms. In the 1950s, Yücel worked for a publishing house and returned to writing, producing poetry and books of prose on citizenship, England, and Cyprus.

ELIZABETH THOMPSON

YÜKSEK ÖĞRETIM KURULU (YOK)

The Turkish Council of Higher Education, a policy-making and planning body.

The Yüksek Öğretim Kurulu originally was established in 1973, but in 1975 Turkey's Constitutional Court found its mandate to be incompatible with academic freedom and in conflict with the administrative autonomy of the universities. However, constitutional amendments after the 1980 military coup enabled its resurrection. Since then it has served as a liaison among the state, government, and universities. Its primary functions are to coordinate all resources allocated to higher education and to regulate academic activities. Its chairperson and some of its members are directly appointed by the president of the republic. The remaining members are appointed by the president from among candidates nominated by the government, the chief of the general staff, and the university senates.

Both in 1973 and much more urgently in 1981, the bureaucratic-military elite felt the need to depoliticize higher education. To this end, YOK ended the tradition of individual university senates electing deans and rectors. Instead, YOK gives the president a list of candidates it deems appropriate. Many political party leaders criticize YOK as an antidemocratic organization that restrains academic freedom, both directly and indirectly. Since the mid-1960s, numerous pieces of proposed legislation have sought to curb YOK's authority to intervene in academic issues.

YOK sought to standardize higher education in the early 1980s by determining the curricula to be followed in all universities, and soon became the target of widespread protests. Its position on the practice of veiling on university campuses also met with vociferous criticism. In 1983, it introduced the first nationwide prohibition against female students attending classes and taking examinations while wearing the veil. The Parliament overruled this ban in 1988 with a law that allowed "the covering of the head and the body on the basis of religious faith," but this law was annulled by the Turkish Constitutional Court. When the escalating Islamist mobilization in the 1990s rendered secularism the most crucial issue, and YOK its most reliable vanguard, the Council's authoritarian decisions went unobjected to by the state elites, despite vehement social opposition.

With the pro-religious Justice and Development Party's accession to the government in November

2002, a proposal to reform YOK's mandate was reinvigorated. This proposal endorsed a maximum of four years of service for Council members and rectors; selection of the chairperson by the Council; appointment of rectors by the President upon the recommendations by the university senates; nullification of all disciplinary charges against the faculty and students; and pardoning of students that dropped out because of academic absence. In this respect, the proposal attempted to restrict the YOK's administrative powers and to restore educational rights to veiled students who had been dismissed from the university. Although almost all social groups agree on the democratization of YOK's mandate, the proposal is regarded, especially by secularists, as hastily prepared and as an attempt to expel its current chairperson, Kemal Gürüz, rather than to initiate real reform.

UPDATED BY BURÇAK KESKIN-KOZAT

YUNIS JABIR, ABU BAKR
[1940–]

Libyan general.

A brigadier general and de facto chairman of the joint chiefs of staff, Abu Bakr Yunis Jabir was born in 1940. Educated at the military college in Benghazi, he was a classmate of Muammar al-Qaddafi and a founding member of the Free Unionist Officers movement. Yunis Jabir participated in the September 1969 coup that overthrew King Idris and was one of the original members of the Revolutionary Command Council (1969–1977). He has served the Qaddafi regime in a variety of military positions since 1969, most recently as chief military commander.

RONALD BRUCE ST JOHN

YURDAKUL, MEHMET EMIN
[1869–1944]

Turkish poet and politician.

Known as the "national poet" for his patriotic verses (he published a famous collection in 1897, *Türkçe Şiirler*), Mehmet Emin Yurdakul was born in Istanbul during the Ottoman Empire, the son of a ship captain. He entered the civil service and was appointed governor of the Hijaz.

In 1912, Mehmet Emin was a founding member of Türk Ocaği (Turkish Hearth), and during World War I he joined the National Turkish party. After the war he became a member of parliament in the new Republic of Turkey, taking the surname Yurdakul (slave to the homeland). Although he was an admirer of Atatürk, Mehmet Emin expressed several disagreements with the ideology of the new government. His poetry, still memorized today by Turkish schoolchildren, was characterized by an unadorned style and unabashed praise for the Turkish nation.

DAVID WALDNER

YUSUFIAN, BOGHOS
[1775–1844]

Armenian minister of commerce and foreign affairs in Egypt in the 1820s and 1830s.

Boghos Yusufian, better known as Boghos Bey, was born in İzmir to a family well connected to the Ar-

menian merchant class involved with overseas commerce. He made his money in Egypt as a customs official and trader. He was skilled in languages and served the British as an interpreter in the campaign against the French. He was first hired by Muhammad Ali as an interpreter and rapidly progressed to the position of personal secretary. Consolidating his rule in Egypt, Muhammad Ali found in Boghos an instrument for pursuing policies independent of his Ottoman sovereigns. Having earned Muhammad Ali's trust during his service in the palace in Cairo, Boghos was made minister of commerce in 1826. He ran his office from Alexandria and proved an adept intermediary between Egyptian economic policy and European commercial interests. In a reorganization of the government in 1837, Muhammad Ali created the joint ministry of commerce and foreign affairs and appointed Boghos Bey head of the department, leading many foreigners to assume that Boghos was the "prime minister" of Egypt.

To help modernize the administration of the country and improve its economy, Muhammad Ali became a great patron of the Armenians. In his early bid for power in Egypt, Muhammad Ali, then a small tobacco merchant of no military repute, had found an Armenian, Yeghiazar Amira, who was willing to give him a loan. Muhammad Ali repaid Amira many times over. He also encouraged Armenian settlement in Egypt. With Boghos Bey as its leading figure, the Armenian community in Egypt grew from a few dozen to two thousand. Among them were many relatives of Boghos whom he had brought over from İzmir, including the Nubar and Abro families. Arakel Bey Nubar (1826–1859) followed in his uncle's footsteps and became Egypt's minister of commerce. Boghos Bey's more famous nephew, however, was Nubar Pasha, who served three terms as prime minister of Egypt in the last quarter of the nineteenth century. Dicran Pasha d'Abro was minister of foreign affairs in the 1890s.

Among his many assignments, Boghos had also been entrusted by Muhammad Ali with training new and capable administrators. Charged with sending the most promising to Europe for further education with the approval of the pasha, Boghos also sponsored the education of the sons of many Armenian merchants in the service of Muhammad Ali. Among them was his successor to the ministry of commerce and foreign affairs, Artin Chrakian (1804–1859), whom Muhammad Ali appointed upon Boghos's death. It is reported that Boghos Bey died a man of modest means, all his resources having been placed in the service of his master.

YUSUF, YUSUF SALMAN

[1901–1949]

Secretary-general of Iraq's Communist party, 1941–1949.

Yusuf Salman Yusuf, known as Comrade Fahd, was a Chaldean Christian. He attended the KUTV in Moscow (1935–1937). On his return to Iraq in 1938, he became a member of the Central Committee of the Communist party; he became its secretary-general in 1941. In 1947 he was condemned to death, but the sentence was commuted to penal servitude. He ran the party from prison until his retrial and execution in February 1949.

ZAB RIVERS

Great Zab of Turkey and Iraq and Little Zab of Iran and Iraq; major tributaries of the Tigris river.

The Great Zab rises in the mountains of southeast Turkey and runs for 260 miles (420 km), flowing southwest into the Tigris below Mosul, Iraq. The Little Zab rises in the Zagros mountains and flows for about 230 miles (368 km) southwest into the Tigris, some 50 miles (80 km) below the Great Zab. Their violent seasonal spring flow contributes about half the flood crest of the Tigris.

ZABUL

Afghan province.

Zabul is the name of both a province in Afghanistan and an Iranian city. The Afghan province of Zabul is located in southeastern Afghanistan, bordering Pakistan on the south and the province of Kandahar on the west. Zabul province has a population of approximately 200,000, most of whom are Pushtun, though some Hazara live in the north. The provincial capital is Kalat, which lies along the main highway from Kabul to Kandahar. Zabul, which is famous for its almonds, is in a very dry and windy region, where agriculture is limited to a few irrigated valleys. The drought of the late 1990s and early 2000s hit this area particularly hard. Many of the tribes in Zabul province were strong supporters of the Taliban movement, and security remains problematic in this area.

The Iranian city of Zabul is in the Sistan-Baluchistan province and is situated near the Afghan border across from the Afghan city of Zaranj. The population of Zabul in 2001 was 126,000.

GRANT FARR

ZACH, NATAN

[1930–]

Israeli poet and critic.

Zach, one of the best known Israeli poets abroad, has been called "the most articulate and insistent spokesman of the modernist movement in Hebrew poetry." He had a profound influence on Israeli poetry and literature during the 1950s and 1960s. Zach was born in Berlin and emigrated to Palestine in 1935. He studied at the Hebrew University in Jerusalem and later at the University of Essex, England, where he wrote his doctoral dissertation. After returning to Israel, he lectured at Tel Aviv University and was later appointed professor at Haifa University. He also served as chairman of the repertoire board of two of Israel's leading theaters, the Ohel and the Cameri. In addition to his poems, Zach published critical essays and edited several literary publications. Nationally and internationally acclaimed, Zach was awarded the prestigious Bialik and Israel prizes as well as the Feronia Prize (Rome).

In 1967, together with the late Palestinian-Israeli poet Rashid Husayn, he assembled and translated the first collection of Palestinian folk poems. Individual poems of his have been published in Afrikaans, Arabic, Czech, Dutch, English, Estonian, French, German, Greek, Hungarian, Italian, Japanese, Polish, Portuguese, Russian, Serbo-Croatian, Spanish, Yiddish, and Vietnamese.

One of Zach's most instrumental contributions to the national literature was his conscious rejection of the national symbolism and ethnic sentimentality of mainstream Israeli poetry prior to 1948. Zach's early poems, *First Poems* and *Different Poems* (in Hebrew), exhibit a marked disassociation with the specifics of time and place, expressing instead the voice of the individual. Through emphasizing the more morbid aspects of human existence, Zach sought to undermine both the form and content of traditional Israeli poetry. To achieve that, he introduced new and unique poetic forms into Hebrew, including rhythm, rhyme, language, and metaphor. Other hallmarks of Zach's poetry are its intellectual detachment, emotional restraint, and subtle irony, all of which are employed against the excessive sentimentality and pathos of his predecessors. Zach influenced Hebrew poetry as well through his articulate and vociferous writings on its behalf. He published numerous essays promoting his modernist literary agenda both as a critic and as literary editor.

Zach's publications (in Hebrew) include *First Poems* (1955), *Other Poems* (1960), *All the Milk and Honey* (1966), *Northeasterly* (1979), *Anti-erasure* (1984), *Dog and Bitch Poems* (1990), *Because I'm Around* (1996), and *Death of My Mother* (1997).

YARON PELEG
UPDATED BY ADINA FRIEDMAN

ZAGHLUL, SAʿD

[1857–1927]

Egyptian nationalist and leader of the Wafd, the nationalist party founded in Egypt in 1919.

A lawyer by profession, Saʿd Zaghlul served as Egypt's minister of education (1906), earning the praise of Lord Cromer. As vice-president of the Legislative Assembly (1913), Zaghlul attracted attention with his charismatic oratory. His wife, Safia, known in Egypt as "Mother of the People," was the daughter of Egypt's wealthy and pro-British prime minister, Mustafa Fahmi.

After World War I, Zaghlul led a delegation (Arabic, *wafd*) to Cairo to ask Britain's High Commissioner Reginald Wingate for permission to argue the case for Egypt's independence directly before the British government in London. Britain refused and in 1919 deported Zaghlul and other leading members of the wafd to Malta. The deportations precipitated the 1919 uprisings, when Egyptians of all classes, throughout the nation, boycotted British goods and sometimes violently attacked British in-

stallations and personnel. In an attempt to halt the rioting, the British reluctantly permitted Zaghlul and others to present the Egyptian nationalist case to the great powers attending the Paris Peace Settlements.

Although he enjoyed the support of the vast majority of Egyptians, Zaghlul failed to achieve independence from the British in these and subsequent negotiations. When he continued to demand the abolition of the protectorate over Egypt and nationalist agitation increased, the British deported Zaghlul again in 1921. The deportations only strengthened the Wafd and contributed to Zaghlul's popularity.

After the British had unilaterally declared the independence of Egypt in 1922 and King Fu'ad had signed the new constitution in 1923, Zaghlul was permitted to return to Egypt where he promptly resumed leadership of the Wafdist nationalist forces. Following the Wafd's overwhelming victory in free elections, Zaghlul became prime minister in 1924.

Zaghlul's triumph was short-lived, for in November 1924 Sir Lee Stack, *sirdar* (commander in chief of the Egyptian army) and governor-general of the Sudan, was assassinated while visiting Cairo. The assassination, coupled with Britain's demands for apologies and reparations, precipitated a government crisis and forced Zaghlul's resignation. Although Zaghlul remained the most popular Egyptian leader, he was prevented by the British from becoming prime minister in subsequent governments. In 1927, he died quietly in his home.

JANICE J. TERRY

ZAGROS

Mountain range in Iran.

The Zagros mountain range is the largest in Iran, stretching for 1,400 miles (2,253 km) from Armenia in the former U.S.S.R. in the northwest to the Persian Gulf in the south, and thence eastward to Baluchistan. It consists of a number of parallel ranges, the highest peak of which rises to 14,000 feet (4,270 m). It separates the Iranian plateau from the plains of Mesopotamia and Iraq in the west and the Persian Gulf in the south. Together with the Elburz (also known as Alborz) ranges in the north, the Zagros was formed from the Paleozoic to the Pliocene period.

PARVANEH POURSHARIATI

ZAHAWI, JAMIL SIDQI AL-

[1863–1936]

Prominent Iraqi poet, philosopher, and educator, known for his defense of women's rights.

Jamil Sidqi al-Zahawi was born in Baghdad. During the Ottoman era, he held numerous positions: as a member of the Baghdad education council, where he championed education for women; as editor of the only newspaper in Baghdad, *al-Zawra*; as a member of the Supreme Court in Yemen and in Istanbul; as a professor of Islamic philosophy at the Royal University; and as a professor of literature at the College of Arts in Istanbul. After Iraq's independence in 1921, he was elected to parliament twice and appointed to the upper chamber for one term.

He was one of the leading writers in the Arab world, publishing in the major newspapers and journals of Beirut, Cairo, and Baghdad. Describing his life in a collection of his poems, he wrote, "In my childhood I was thought of as eccentric because of my unusual gestures; in my youth, as feckless because of my ebullient nature, lack of seriousness, and excessive playfulness; in my middle age as courageous for my resistance to tyranny; and in my old age as an apostate because I propounded my philosophical views" (Najim, p. 173, translated by author). In the 1930s, because of his political views, he was marginalized by the political establishment.

JACQUELINE ISMAEL

ZAHEDAN

Main city of southeastern Iran and administrative center of Sistan and Baluchistan province.

Zahedan occupies an upland plateau (4,718 ft./ 1,438 m in elevation) north of Mount Taftan, an active volcano in southeast Iran. It is just south of the area where the borders of Afghanistan, Iran, and Pakistan meet and 60 miles (96 km) northwest of Mirjaveh, the Iranian customs and passport control checkpoint on the border with Pakistan. Zahedan is a modern city that developed in the twentieth century. During the nineteenth century, the agricultural village of Duzhab occupied the site, one of the few areas in extremely arid Baluchistan with adequate groundwater for irrigated cultivation. During World War I, when Pakistan was part of British India, the British extended the imperial railway from Calcutta to Quetta westward to Duzhab. Later, during the reign of Reza Shah Pahlavi (r. 1926–1941), the village was officially renamed Zahedan after the medieval capital of Sistan, which had been destroyed by the Mongols, and the administrative center for Sistan and Baluchistan was moved here from Khash.

Zahedan had developed into a small town of 17,500 inhabitants by 1956. After Iran and Pakistan joined the U.S.-sponsored Central Treaty Organization in 1958, Zahedan, as a frontier town, became a site for military facilities and related infrastructure projects that spurred rapid growth. By 1976 the population had quintupled to 93,740. However, the ethnic composition of the population also changed, from a majority of local Baluchis and Persian-speaking Sistanis to a majority of migrants from the central areas of Iran. In the 1980s thousands of refugees from Afghanistan resettled in the city. By 1996 Zahedan's population had reached 419,500.

Population growth has spurred the establishment of small and medium-size businesses, including cotton textile manufacturing, woven and knotted carpet production, reed mat and basket making, leather processing, food processing, livestock feed production, ceramics, brick kilns, and grain milling. Zahedan is a large market for foreign goods, a significant proportion of which are smuggled over the border with Pakistan. Zahedan also is believed to be a major center for the illegal processing of opium—smuggled into Iran from Afghanistan and Pakistan—into illicit narcotics.

ERIC HOOGLUND

ZAHIR SHAH

[1914–]

King of Afghanistan, 1933–1973.

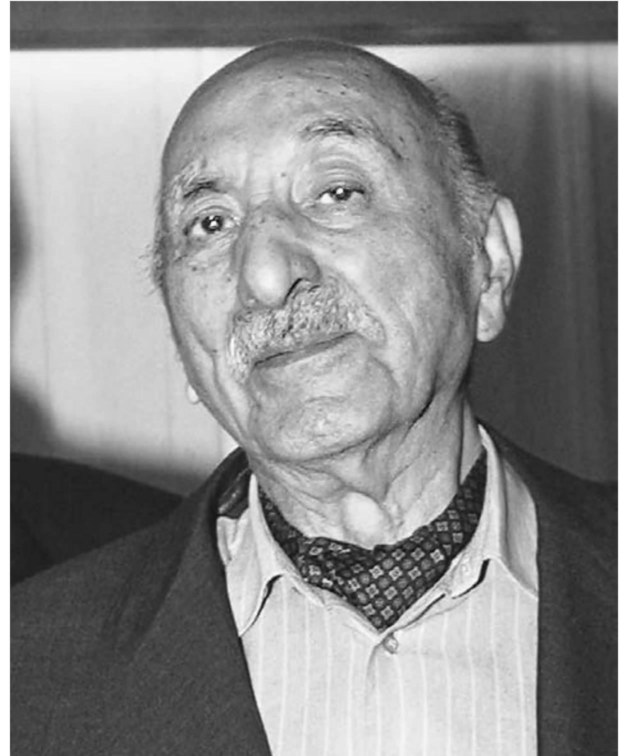
Born in Kabul, the capital of Afghanistan, Zahir attended Habibia and Istiqlal schools (1920–1924), then accompanied his father, Mohammad Nadir Khan, to France, where he continued his studies. Zahir's father was the second eldest and most influential of five Musahiban brothers, members of the Muhammadzai royal clan of the Barakzai Pashtun tribe, who enjoyed considerable power in court during the 1910s and 1920s. During the turbulent rule of the modernizing King Amanullah Barakzai (1919–1929), the Musahiban brothers fell into disfavor. In 1929, when popular rebellions forced Amanullah's abdication, followed by a nine-month interregnum of rule by a rural Tajik, Amir Habibullah, Zahir's father returned to eastern Afghanistan from France. With assistance from the British in India, Pashtun tribesmen, and religious leaders, Nadir Khan claimed the Afghan throne, declaring himself Muhammad Nadir Shah on 15 October 1929—thereby establishing the Musahiban dynasty.

Zahir returned to Kabul in October 1930 and attended the Infantry Officers School for one year. In 1931, he married the daughter of Ahmad Shah, a court minister. The only surviving son of Nadir Shah, Crown Prince Zahir at age seventeen was appointed assistant war minister (1932), then minister of education (1933). On 8 November 1933, following the assassination of his father, he was proclaimed King Mohammad Zahir Shah, with the religious title al-Mutawakkil ala Allah (he who puts his faith in Allah). To ensure the continuation of Musahiban rule, his accession to the throne was unopposed by his three surviving uncles. For the next thirty years, Zahir Shah simply reigned while two of his strong-willed and autocratic uncles held actual power as prime ministers—Sardar (Prince) Muhammad Hashim Khan (1933–1947) and Sardar Shah

Mahmud Khan (1947–1953), followed by Zahir Shah's cousin and brother-in-law, the dictatorial prime minister Sardar Muhammad Daud (1953–1963). During this period, although Afghanistan was officially a constitutional monarchy, power and decision making were monopolized by a few elder members of the Musahiban oligarchy; they maintained family unity through intermarriage, assuring continuation of their rule by stifling liberal expression and political freedoms with an oppressive police state.

Following a rift with Daud and his resignation as prime minister, Zahir Shah took power into his own hands in 1963 by appointing a nonrelative as prime minister. He then launched his program of Demokrasy-i Now (New Democracy)—a period of experimentation with democratic liberalization that lasted for a decade. During this decade, he encouraged the development of a new liberal constitution, supported relatively free elections, extended freedom of the press, and tolerated the formation of many political movements with diverse orientations. Indecisiveness and inaction on the passage of legislation governing political parties and his inability to prevent government interference by family members and friends undermined the democratic experiments. In 1973, while receiving medical treatment in Europe, Zahir Shah was overthrown in a military coup led by his paternal cousin (and sister's husband), Daud. Zahir Shah remained in foreign exile in Italy with his family, and Daud established a republic.

Zahir Shah is considered a mild-mannered, soft-spoken kindly gentleman who lacks energy and is devoid of initiative. He abdicated his throne and passively watched the people's struggles opposing Soviet occupation, communist rule, and civil strife that began in Afghanistan in 1978. Zahir Shah's written statement welcoming the initial fall of Mazar-e Sharif to Taliban in 1997 deeply saddened the peoples of northern Afghanistan. However, some of his former associates and officials also living in exile advocate his return to Afghanistan and possible restoration of the monarchy especially after the fall of the Marxist regime in 1992 and again after the fall of the Taliban regime in 2001. One of Zahir Shah's delegates to the Bonne Conference (December 2001), Hamid Karzai, was appointed chairperson of the interim post-Taliban government. In April 2002 he ended his exile in Rome and returned to his palace in Kabul, renouncing all claims to the throne. The emergency Loya Jerga of June 2002, which he officially opened, gave him the title of "Father of the Nation." His title was reaffirmed by the Constitutional Loya Jerga of December 2003.



Zahir Shah in his residence in Rome, 2001. Zahir was the last king of Afghanistan, reigning from 1933 until he was deposed in a bloodless coup in 1973. After more than 25 years in exile, he acquired a reputation as an elder statesman and was given the symbolic title "Father of the Nation" upon his return in 2002. **© Reuters NewMedia Inc./Corbis. ZAHLA

The capital of Lebanon's Biqa valley and the center of its economic activity.

Under the mandate, Zahla (also Zahleh) was a small town growing silkworms for export to France; it has developed into a major economic hub for the Biqa Valley, with a population of 55,000 (2002). The city's geographic location makes it an important station for commercial trucks coming into or leaving Lebanon. Zahla's main economic activity centers around the farming and poultry industries.

ZAʿIM

See GLOSSARY

ZAʿIM, HUSNI AL-

[1894–1949]

Syrian military officer and politician.

Born in Aleppo to a Kurdish business family, Husni al-Zaʿim was captured by the British while serving in the Ottoman army and later joined the Troupes Spéciales in the French Mandate forces. Promoted to lieutenant colonel in 1941, he was charged with embezzlement by the Vichy government and was later arrested by the Free French. He was promoted from director of public security to chief of staff of the army in May 1948. As a precursor to his coup d'état, al-Zaʿim defied President Shukri al-Quwatli's order to arrest Col. Antoine Bustani, the scapegoat of a minor scandal, and gave him a position in the defense ministry instead. In the spring of 1949, Colonel al-Zaʿim overthrew the government of Khalid al-Azm and arrested President al-Quwatli.

Encouraged by the local representatives of U.S. intelligence in Damascus, and supported by the future Syrian president Adib Shishakli, the Zaʿim coup marked the first comprehensive takeover by the military in regional politics. The Syrian military would never be far from control of the political institutions. Al-Zaʿim's short rule sought to forcibly strip many traditional customs that appeared to inhibit progress. He even tried to explore the possibility of achieving a peace agreement with Israel. But his inconsistent foreign and domestic policy cost him the support of neighboring Arab regimes and of Syrian public opinion. His regime was overthrown on 14 August 1949 by Sami al-Hinnawi, and al-Zaʿim was executed. It is believed that Zaʿim paid with his life for his betrayal of Antun Saʿada, the leader of the Syrian Social Nationalist Party, whom al-Zaʿim backed at first but then handed over to the Lebanese authorities, who sentenced him to death in July 1949.

ZAMZAM

The famous well of Mecca.

According to Muslim legend, Zamzam was opened by the angel Gabriel to provide for Hagar and Ismaʿil, who were in danger of dying of thirst after Abraham deposited them in what was then an unpopulated desert valley. History suggests that it was the coexistence of this well and the adjacent shrine (Kaʿba) that led to the emergence of Mecca as an important commercial and cultural center in pre-Islamic Arabia. For centuries Muslims have cherished the brackish water of Zamzam as sacred and have sought to benefit from its reputed blessings. To this day, pilgrims to the Meccan sanctuary descend the enclosed staircase to the well and either

draw water for themselves to drink, or bottle it and take it home for a relative or friend who is ill.

See also KAʿBA.

SCOTT ALEXANDER

ZANA, LEYLA

[1961–]

Kurdish member of Turkey's parliament sentenced to jail for defending the rights of the Kurdish people.

Leyla Zana was born in 1961 in a Kurdish village near the town of Silvan in eastern Turkey. When she was fourteen her father married her to his cousin, Mehdi Zana, a political activist. In 1976 the couple moved to the Kurdish city of Diyarbakir, where Mehdi was elected mayor a year later. Arrested during the 1980 military coup d'état, he was sentenced to thirty years in prison.

Defending the rights of her husband as a political prisoner, Zana became an activist, and organized other women visiting their jailed family members. Meanwhile, she studied on her own, obtained a high school diploma, and engaged in journalistic and human rights activism, which led to her arrest in 1988.

In 1991 she became the first Kurdish woman elected to the parliament, and the first to break the ban on speaking in Kurdish in the parliament. She advocated in her native tongue for fraternal relations between Kurdish and Turkish peoples. Declared a "separatist," "traitor," and member of an illegal party, she was tried, convicted, and sentenced to fifteen years in jail in 1994. Since her imprisonment she has received several peace awards, including the European Parliament's Sakharov Prize for Freedom of Thought, and was nominated for a Nobel Peace Prize. In 1998 she was sentenced to two more years in jail for writing an article about the Kurdish new year *(Newroz).* In April 2003, a retrial convened under pressure from the European Union (which Turkey aspires to join) did not lead to her release.

SHAHRZAD MOJAB

ZANAN MAGAZINE

An independent Iranian women's magazine.

The first issue of the monthly magazine *Zanan* (Women) appeared in February 1992 under the editorship and management of Shahla Sherkat. Fired after ten years of working in the editorial board of *Zan-i Ruz* (Today's woman) because of her "growing modernist, Western, and feminist tendencies" (Sherkat, 2003, p.4), Sherkat launched *Zanan* as an independent feminist journal. Although initially produced in a small room borrowed from the office of *Kian,* a reform-oriented journal, and with limited resources and the cooperation of only a couple of journalists, *Zanan* has grown into a professionally produced magazine with about thirty staff members and several freelance contributors; it has its office in an independent office building. *Zanan*'s survival (104 issues published as of December 2003) against financial odds and political pressures is a remarkable record of success in the history of Iran's usually short-lived independent publications in general and of its women's publications in particular.

Zanan represents a gradual shift among numerous Muslim women activists from radical Islamism or conservative patriarchal traditionalism to a liberal spiritualism and modernist egalitarian reformism that is described by some as Islamic feminism. This evolution, occurring within the context of widespread ideological disillusionment with militant and totalitarian Islamism, represents the gender dimension of a growing reform movement toward democracy, pluralism, secularism, and civil rights in Iranian society at large.

Zanan has played a pioneering role in Islamic women's rethinking of gender and reconstruction of womanhood. With significant contributions by Muslim feminist theologians such as Seyyed Mohsen Saʿidzadeh and secular lawyers such as Mehrangiz Kar, *Zanan* began challenging the patriarchal presuppositions that have shaped the dominant interpretations of Islam and the construction of *shariʿa* law and policy concerning women's rights, male-female relationships, sexual mores, and gender roles under the Islamic Republic of Iran.

Believing that *ijtihad* (reasoning from faith) is an obligation of every responsible adult, *Zanan* has expanded the domain of modern Islamic interpretation. It has embarked on a thorough and radical

project aimed at "decentering the clergy and placing woman as interpreter and her needs as ground for interpretation" (Najmabadi, 1998, p. 71).

Zanan's agenda has not been limited to the reinterpretation of the Islamic canon. Each issue includes sections addressing social problems and contentious issues; theoretical debates, interviews, and cultural studies; critique of law and legal advice; feminist critique of literature and films; health issues, sports, and leisure; and new books and news. It also carries advertisements, which are not always free of stereotypical marketing techniques geared toward modern homemakers. Some *Zanan*'s writers, especially the younger ones such as Parastu Dokoohaki, Shadi Sadr, and Roya Karimi-Majd, have produced courageous and provocative reports highlighting not only oppressive and sexist traditions but also modern social ills affecting girls and the younger generation of women, including poverty, prostitution, drug abuse, addiction, and violence. Although it is circulated in different parts of Iran and in some diaspora circles, *Zanan*'s readers are primarily in the modern middle class and for the most part are middle-aged urban women.

In the 1997 presidential elections and the subsequent parliamentary elections, *Zanan* played a considerable role in mobilizing women's votes for Mohammad Khatami and moderate candidates for the Iranian parliament, the majlis. Yet through its critical monthly reports on the works of the majlis deputies and the policies of Khatami's government, and especially through challenging interviews and panel discussions, *Zanan* also took the reformers to task by highlighting their shortcomings and failures to safeguard women's rights and achieve progress on gender issues.

Adopting a nonviolent, spiritual, Sufi-like language in its editorials, *Zanan* has emphasized "autonomy and choice as the first pillar of freedom" (Sherkat, 1992, pp. 2–3). By inviting contributions from Iranian secular and Islamic feminists, living inside as well as outside the country, *Zanan* has provided a nonsectarian and inclusive forum for dialogue between secular and faith-based feminists. Its openness, however, is constrained by censorship as well as by the ideological and political constraints imposed by the regime. By introducing feminist theories, reports on women's status and movements in other parts of the world, and translations of Western feminist literature, *Zanan* has avoided a reactive gender conservatism and a phobia about Western ideas, weaving textual, artistic, and intellectual connections between Muslim women and Western feminism. *Zanan* has altered the terms of the debate and dialogue not only among Islamic women activists, but also between Islamic and secular feminists.

ZANGWILL, ISRAEL

[1864–1926]

British novelist and playwright; early Zionist.

Israel Zangwill was a sophisticated British wit whose reputation was established with his novel *Children of the Ghetto* (1892), which depicted Jewish immigrant life in the East London ghetto. He joined in the Zionist cause of Theodor Herzl in 1895, arranging for Herzl a series of community meetings with prominent members of English Jewish society. He introduced Herzl to the Maccabeans, a society of Jewish authors, artists, and professionals, and helped organize the Maccabean Pilgrimage to Palestine in 1897. He also helped and employed the wandering Hebrew poet Naphtali Herz Imber, author of the

Zionist anthem "Hatikvah," during his stay in England (1889–1892) and made him famous as a character in his writings.

During the period of the Uganda Project, Zangwill founded and led the Jewish Territorial Organization for the Settlement of the Jews within the British Empire (1905–1925); it pursued the possibility of an East African province for a Jewish settlement, a so-called provincial Palestine. Zangwill felt that "any territory which was Jewish [and] under a Jewish flag, saves the Jew's body and the Jew's soul." Many Zionists broke with him over this issue, since his group did not acknowledge any organic connection between Zionism and Palestine.

During the early 1900s, Zangwill scored tremendous success as a playwright in England and in the United States. He also continued to write novels and produced his last play, *We Moderns* (1924), in New York City.

ZANZIBAR

Islands and coastal land in East Africa.

From the tenth century, many Arabs emigrated to Zanzibar, the 640-square-mile (1,658 sq. km) island of that name (also neighboring islands and the adjacent coast of East Africa). In 1698 Oman seized Zanzibar from the Portuguese, and in 1841 Oman's ruler, Shaykh Sayyid Saʿid, permanently moved his capital there from Muscat. Wealthy Omanis established an extensive plantation economy centered on clove production using African slave labor. After Saʿid's death in 1856, contention between his sons led to Britain's Canning Award (1861), splitting Oman and Zanzibar into separate sultanates. The latter declined, partly because of British suppression of the slave trade in 1873, and became a British protectorate in 1890.

Following Zanzibar's independence (1963) and union with Tanganyika (1964), the Arab population was severely mistreated by the Africans. Several thousand emigrated, mostly to the capital area of Muscat in Oman, after the accession of Sultan Qabus in 1970. In Zanzibar in 2000 and 2001, political tensions and violence followed elections that observers denounced as irregular. The major political parties signed an agreement in October 2001 calling for electoral reforms.

ZARANIQ CONFEDERATION

Tribal grouping on North Yemen's largely nontribal coastal desert, the Tihama.

The Zaraniq, the largest and most formidable tribal grouping of the Tihama, stood in the way of efforts by Imam Yahya to extend control of the imamate state and were compelled to submit to the imam only after a savage two-year campaign in the late 1920s. An important part of the history of the Tihama for many centuries, the Zaraniq were known in the past

as the Maʿaziba tribe and, like other tribes on the Tihama, claimed descent from the Akk tribe.

ZARQA, AL-

Jordanian city.

Lying some 14 miles (23 km) northeast of Jordan's capital, Amman, al-Zarqa is Jordan's second-largest city (pop. 421,000 in 2002). The village witnessed tremendous growth beginning in the 1950s through the presence of a major military base, the development of industry and a free trade zone, and the influx of Palestinian refugees (who constitute some 60 to 70 percent of the population).

ZAWIYA

See GLOSSARY

ZAYDAN, JURJI

[1861–1914]

Early pan-Arab nationalist, author, and publisher.

Jurji Zaydan (also spelled Gurgi Zaidan) was born into a poor Greek Orthodox family in Beirut and, through self-education, obtained entry to the Syrian Protestant College in 1881. After a year in the medical school, he participated in a student strike and was expelled. As did many of his contemporaries, he went to Cairo, where he embarked on a career as a journalist, publisher, novelist, scholar, and pronationalist intellectual. He was a major contributor to Arab literature. During the thirty years of his life in Cairo, he produced twenty-one historical novels dealing with Arab history; a five-volume history of Islamic civilization (*Tarikh al-Tamaddun al-Islami,* Cairo, 1901–1906); a four-volume history of Arabic literature (*Tarikh Adab al-Lugha al-Arabiyya,* Cairo, 1910–1913); and a dozen other books on history, language, and literature. In 1892, he founded the magazine *al-Hilal,* which he authored, published, and distributed for the next twenty-two years practically single-handedly. With *al-Muqtataf,* it became the most important forum of the Arab Nahda (Renaissance) for the discussion of history, nationalism, secularism, modern sciences, and political institutions. In addition, Zaydan was also the author of the first autobiography in Arabic, *Mudhakkirat Jurji Zaydan.*

At the end of the nineteenth century the European presence in the Middle East became ubiquitous and overwhelming in all its cultural, intellectual, political, and economic aspects. The task of the Arab intellectual was to respond to a twofold challenge: to adapt to life in the modern Europe-dominated world while continuing to assert the independent identity and viability of Arab society. It was exactly this twofold challenge that Zaydan made his life task to tackle. Less the political activist than the educator of the nation, he aimed at informing his Arab compatriots about the modern world as well as about their own past and national identity. Even as he familiarized his Arab readers with modern Europe and introduced them to European thought, he established the foundations for a pan-Arab national identity. He was the first to try in a scholarly and systematic fashion to reconstruct a history of the Arabs separate from Islamic history. By incorporating pre-Islamic Arabian and even Babylonian history into Arab history, Islam became only one phase. This perspective also made possible a future for the Arab nation independent from Islam. On the popular level, he tried to spread this idea along with national identity through his historical novels—a genre that he introduced to Arabic literature.

In addition to history, language assumed a central place in Zaydan's thinking. It was the symbol of national identity, a means of achieving such identity, and an expression of one's national culture and heritage. For him, the vitality of the language meant the viability of the nation. Drawing on concepts of evolution and progress, he attacked the classicist ideal and the religious rigor of archaic literary Arabic and insisted that developments and changes in the language were positive, proving its vitality. Especially through his magazine, *al-Hilal,* he contributed greatly to the simplification in style of formal literary Arabic and popularized new terms and concepts that reflected modern thought and knowledge.

His unceasing and successful effort to establish an Arab national identity defined by history and

language created the foundations of political pan-Arab nationalism as it arose after the collapse of the Ottoman Empire.

ZAYDISM

The sect of Shiʿite Islam that prevails in the northern highlands of North Yemen and the political system that has existed to defend and advance that sect almost continuously since the late ninth century.

The Zaydi sect takes its name from Zayd ibn Ali Zayn al-Abidin, the fifth Shiʿite imam and the grandson of Husayn, who was one of the two sons of Ali and Fatima, the cousin and daughter of the prophet Muhammad. (Because Zayd was the fifth imam, Zaydis are sometimes called Fiver Shiʿa.) The doctrine of the sect as developed by Zayd and his followers was pragmatic, rational, and open to extension by critical examination and interpretation; and it rejected such features of other Shiʿite sects as the ideas of a "hidden" imam, an occult explanation of the Qurʾan, systematic dissimulation, and mysticism. Often referred to as the "fifth school" of Sunni Islam, Zaydism differs from Sunni orthodoxy primarily in its insistence on the institution of the imamate and the right of the descendants of Ali and Fatima to rule the world of Islam through that religio-political institution.

The founder of the Zaydi imamate in Yemen was al-Hadi ila al-Haqq Yahya ibn Husayn. He did so in the year 897 after being invited by tribes in the area around Saʿda to come from his native Medina to mediate their disputes and govern them. Al-Hadi's fourteen-year reign established in the highlands of North Yemen the Zaydi imamate, a state and political system that was to persist with numerous changes of fortune and breaks in continuity for over one thousand years into the 1960s, all the while maintaining many of the features that he and his immediate successors had decreed for it. The strong imams of the first decades of the twentieth century, Imam Yahya and his son, Imam Ahmad ibn Yahya, served as the spiritual leaders, temporal rulers, and defenders of the community of Islam much as had their predecessors a millennium earlier. The Zaydi imamate was abolished on the occasion of the 1962 revolution that created the Yemen Arab Republic, but northern Yemen, and Saʿda in particular, is still known for its Zaydi population.

ROBERT D. BURROWES

ZAYTUNA UNIVERSITY

Prominent university in Tunis.

Built as a mosque in the eighth century, Zaytuna was enlarged by the Aghlabids in 864 when the Abbasid caliph al-Muʿtasim ordered the addition of a wing. It continues to serve as a school mosque and houses a huge library that in the fourteenth century was administered by the Malikite theologian Muhammad ibn Arafa. One of Zaytuna's students was Abd al-Rahman ibn Khaldun, the well-known Arab historian and philosopher. In modern times alumni include the leader of the Tunisian Destour party, Abd al-Aziz Thaʿlabi. In addition many Zaytuna graduates staffed the cadres of the Neo-Destour party.

Although at first traditional, teaching at Zaytuna was gradually modernized. The last reform came in 1933, at the hands of its students. Upon Tunisia's independence the Zaytuna became the *shariʿa* (Islamic law) school of the University of Tunis.

In 1945, Zaytuna had five branches in various cities of Tunisia and three thousand students in the secondary and college levels combined. The regional branches were not very active, and their ties

with Tunis were very weak. With the appointment of al-Taher ben Ashour as the director of Zaytuna, new branches were opened in Tunisia and even in Algeria, raising their number to twenty-five. All became very active. The number of students in the main and the regional branches jumped to 20,000.

The growing national role of Zaytuna University in opposing French colonialism and the leadership of its graduates in the nationalist movement, caused it to become the target of the French colonial government. The university gradually found itself at odds with the political powers, and its activities were curtailed. The great cultural support Tunisia received from the Arab League allowed it to pursue the spread of Arabic culture and language teaching through Zaytuna University as well as other centers of learning, thus counteracting the colonial cultural policy of promoting French at the expense of Arabic. Zaytuna University was instrumental in safeguarding Arabic culture in Tunisia and also helped its neighbor Algeria, a country that did not have a similar cultural center.

ZAYYAT, LATIFA

[1923–1996]

Egyptian university professor, literary critic, political activist, essayist, and fiction writer.

Latifa Zayyat was a cultural icon of nationalist and feminist commitment. Born in the Delta city of Dimyat (Damietta), she received her university education and in 1957 her doctoral degree in English literature from Ain Shams University, Cairo. She taught there from 1952 until her retirement and was briefly director of the Arts Academy in Cairo during the 1970s.

Throughout her life she remained politically active. Involved in nationalist and student politics in the 1940s, she was a leader of the National Committee of Students and Workers. From 1979 until her death she chaired the Committee for the Defense of National Culture, formed to counter the possible cultural effects of Anwar al-Sadat's normalization policy toward Israel and his *infitah* ("Open Door") economic policy; along with many other activist intellectuals, Zayyat was arrested in 1981—not her first experience as an Egyptian political prisoner.

The activism of the 1940s forms the historical backdrop to her novel *al-Bab al-maftuh* (*The Open Door,* 1960), a landmark work of Arab feminist literature, narrating the physical, social, and political awakening of a middle-class Egyptian girl. After a long hiatus, Zayyat published additional novels, short stories, and a play; her short story collection *al-Shaykhukha wa qisas ukhra* (Old age and other stories, 1986) was notable for its focus on aging and its cross-genre formal experimentation. She also published critical studies in Arabic and English, and translations into Arabic of T. S. Eliot's essays and other texts. In 1992, she published a controversially frank memoir, *Hamlat taftish: Awraq shakhsiyya* (Arrest/search campaign: personal papers). She was awarded Egypt's State Prize for Literature in 1996, a few months before her death.

ZBIRI, TAHAR

[1930–]

Algerian officer.

Born in the Annaba region, Tahar Zbiri supported Messali al-Hadj before joining the Armée de Libéra-

tion Nationale (ALN). He had a distinguished record during the Algerian War of Independence (1954–1962), participating in the initial attacks of 1 November 1954, escaping with "historic chief" Moustafa Ben Boulaid from the French, and breaching the Morice Line in 1960. Although he served as chief of staff of the Armée Nationale Populaire (ANP) under President Ahmed Ben Bella, Zbiri's loyalties were to Houari Boumédienne, and he arrested Ben Bella during the June 1965 coup. Zbiri remained chief of staff but opposed Boumédienne's increasing authoritarianism. In 1967 he organized a military revolt that failed, resulting in his arrest and exile. President Chadli Bendjedid pardoned Zbiri in 1980 and he returned to Algeria. Immediately after the suppression of the October 1988 riots, Zbiri and other prominent veterans and ex-ministers urged Bendjedid to convene a national conference to organize a new, democratic Algeria. The president rejected this proposal and Zbiri aligned with the anti-Bendjedid faction within the Front de Libération Nationale (FLN). Zbiri was selected to preside over a commission to monitor the parliamentary elections of May 1997. He is also identified with Algeria's liberalizing economy as a supporter of the private Khalifa group, a controversial conglomerate that collapsed in 2003.

ZEID, FAHRALNISSA

[1901–1991]

Turkish artist.

Fahralnissa Zeid was the daughter of a prominent Turkish general. Like many Middle Eastern artists of the early twentieth century, she came from an elite family of politicians and intellectuals. Zeid studied under Namik Ismail at the Academy of Fine Arts in Istanbul and then at the Académie Ranson in Paris, starting in 1927. She later returned to Turkey to join the famed D Group of contemporary artists, who attempted to develop Turkish art along the European model in line with the new Turkish republic. Zeid married the Hashimite ambassador to Turkey and assisted him in diplomatic posts throughout Europe. She was one of the first Middle Eastern artists to show her work in the West, including exhibits in London, New York, and the Salon des Réalités Nouvelles in Paris as early as the 1940s. In the 1970s she went to Amman and founded the Fahralnissa Zeid Institute of Fine Arts, thereby influencing generations of future Jordanian and Palestinian artists. Zeid's work was influenced by Byzantine portraiture, medieval stained glass patterns, and the tradition of Turkish miniature paintings. Her cubist-inspired abstract art was the first art of its kind to gain wide exposure in Jordan, as her openings garnered extensive media coverage. She also did fanciful scenes and portrait painting, working in oil, collage, and stained glass.

[1914–1984]

Israeli poet.

Born Zelda Shneurson and also known as Zelda Mishkovsky, she signed her poems with her first name only. A devout Hasidic Jew, she was well versed in ancient sacred and traditional Jewish texts. In 1926 she emigrated to Israel from her native Ukraine. Her first book, *Leisure,* was published in 1968. Zelda published six other volumes of poetry: *The Invisible Carmel, Be Not Far, Neither Mountain nor Fire, Tiny Poems, The Spectacular Difference,* and *Beyond All Distance.* Her work is acclaimed by secular Israeli readers for its gentle, transcendental, mystic quality. Her poem "Each Person Has a Name" describes the characteristics acquired by individuals through the names assigned them and has been embraced by Israelis as an expression of their own collective and personal experiences with trauma and loss. The melancholy underlying her worldview is lightened by a sense of acceptance, a faith in the possibility of glory, and an enchantment with the beauty and sanctity of life.

ZELL AL-SOLTAN, MASʿUD MIRZA

[1850–1918]

The eldest son of Persia's Naser al-Din Shah.

Masʿud Mirza Zell al-Soltan (Shadow of the Sovereign) was excluded from succeeding Naser al-Din because his mother was not of the Qajar dynasty. He became governor of Isfahan in 1874 and from 1881 to 1887 was the powerful and oppressive ruler of much of southern Iran. He had a large private army and kept the local tribesmen under control, killing an important Bakhtiari chief in 1882. He had contempt for the *ulama* (Islamic clergy). The rival of his half-brother and future monarch, Mozaffar al-Din, governor of Azerbaijan, Zell al-Soltan was opposed at court in Tehran by Ali-Asghar Amin al-Soltan. In 1888, because of his excesses, his power was restricted to Isfahan. During the Constitutional Revolution, he hoped to replace Mohammad Ali as shah and, consequently, aided the revolutionaries by supplying some financial support.

ZEROUAL, LIAMINE

[1943–]

President of Algeria, 1994–1999.

Born in Batna, Liamine Zeroual (also al-Amin Zirwal) joined Algeria's National Liberation Army (ALN) at the age of sixteen. Later he attended a military school in the Soviet Union and France's Ecole de Guerre. Upon his return, he took over the military school of the National Popular Army (ANP) in Batna. Zeroual held various operational jobs within the ANP, including that of commander of the prestigious Military Academy in Cherchell. He earned the rank of general in 1988 and commanded the Land Forces. Zeroual resigned from the ANP in 1989 because of a conflict with President Chadli Bendjedid about the restructuring of the military. He was appointed ambassador to Romania in 1990. In 1991 he retired to Batna.

After Bendjedid was deposed in 1992, Algeria was ruled by the High State Council. In 1993 General Khaled Nezzar, a powerful member of the Council, called Zeroual back from retirement as his replacement as minister of defense. In January 1994, with the dissolution of the Council, Zeroual was appointed president of Algeria. In November 1995 he was elected president with 60 percent of the popular vote in the country's first pluralist presidential election. His mission was to reestablish peace and security, to build legitimate state institutions, and to break with the old regime. Zeroual was able to build an institutional edifice. A political party, the Rassemblement National Démocratique (RND), was created in February 1997 to support his policies. The party obtained the majority in the June 1997 legislative elections. In a surprise move, Zeroual announced on 11 September 1998 that he would step down in February 1999. In April 1999 Abdelaziz Bouteflika, following a controversial election, became his successor.

ZIADEH, MAY

[1886–1941]

Poet, translator, orator, essayist, and critic.

Marie Ziadeh (also Ziyada) was born in Nazareth to a Lebanese father and a Palestinian mother. After her family emigrated to Cairo in 1908, Ziadeh be-

gan her writing career, which was facilitated by her father becoming editor of the Cairo weekly *al-Mahrusa.* After initially writing under pseudonyms, she changed her name from Marie to May (or Mayy), and quickly distinguished herself as a prolific poet, translator, orator, essayist, and critic. She studied at the Egyptian University, mastered five languages, cooperated with early feminist groups such as the one led by Huda Shaʿrawi, and as early as 1913 started a literary salon in her parents' house.

Ziadeh's early work is characterized by romanticism, but increasingly her writing took on sociopolitical themes relating to socialism, colonialism, freedom of the press, and especially women's rights. Among her groundbreaking publications are her biographical accounts of the pioneer women writers Warda al-Yaziji, Aʾisha Taymur, and Bahithat al-Badiya. Ziadeh was also associated with the *mahjar* (émigré) Arab writers, particularly Kahlil Gibran, with whom she had an intense, lengthy correspondence. Although they never met, there has been much speculation on the nature of their relationship, and much written about her as his muse. Her articles on Gibran were widely read in the Arab world and helped make him famous, while also establishing her as a critic.

Ziadeh is most famous for her literary salon, which met weekly for over twenty years. Unlike other salons, hers was open to men and women of mixed religious, national, and social backgrounds. It drew some of the most prominent intellectuals of Egypt and provided her with a platform for both social acceptability and intellectual opposition.

After her parents died, the salon dissolved, and Ziadeh's final years were enmeshed in accusations of insanity and conjecture about her enigmatic life. In recent years, her work has received considerable attention, and she is now acknowledged to be one of the Arab world's most prominent emancipators.

ELISE SALEM

ZIKHRON YAʿAKOV

Village located 19 miles (31 km) south of Haifa.

In 1882, Romanian Jews founded Zikhron Yaʿakov, one of the early settlements of the Hovevei Zion (Hibbat Zion) movement. Financially supported in part by the Baron Edmond de Rothschild, the settlement, shortly after its founding, was given its present name in memory of the baron's father, Jacob (Zikhron Yaʿakov means "The Memory of Jacob"). Baron de Rothschild promoted the planting of grapes, and vineyards were established in the settlement as well as one of the largest wine cellars in Israel. In 1954, Baron de Rothschild and his wife were buried in Zikhron Yaʿakov. Located in the foothills of Mount Carmel, the village (pop. 12,000 in 2002) is a tourist site that draws visitors to the Rothschild mausoleum, botanical garden, and winery.

ZILI, RIDHA

[1942–]

Tunisian poet and photographer.

Ridha Zili was born in Monastir, Tunisia. He received a bilingual (Arabic and French) education but writes in French only. Zili's writing is greatly influenced by his work as a photographer, especially in his concept of the image. His only published collection of poetry, *Ifrikiya, ma pensée* (1967; Africa in my thoughts), describes his love of peace and his search for happiness. Zili rejects sadness and the nonsensical violence in the world and values his Tunisian African roots.

ZIONISM

Movement for the establishment of an independent state in Palestine for the Jewish people.

Zionism may be seen as a national liberation movement for a Jewish homeland based on a nineteenth-century European political model. It defined Jews as a nation whose collective future depended upon the establishment of a national territorial entity in

Eretz Yisrael (in Hebrew, "the land of Israel"), from which most Jews had been dispersed by the Roman Empire at the beginning of the second century C.E. The movement's name was coined by the Viennese Jewish writer Nathan Birnbaum in 1885 and derives from *Zion,* one of the biblical names for Jerusalem, the focus of worldwide Judaism.

Zionists believed that antisemitism was endemic to the diaspora; thus, the achievement of national and civil rights in host nations, while desirable, was insufficient to secure economic and cultural interests for Jews in the long run. Few Zionists believed that the diaspora would be swept away (as was attempted a century later by Hitler's Nazi Germany), but a Jewish homeland—which would serve as a cultural and political model and as a magnet for its finest sons and daughters—could help to secure a future for Jews.

Foundations of Zionism

Through the centuries of exile, ritual, prayer, and the study of sacred texts preserved for Jews the knowledge that Judaism had developed in Eretz Yisrael and Zion. In nineteenth-century Europe during the Haskalah (the Jewish Enlightenment), revival of the Hebrew language as a nonreligious, literary medium transmitted secular works and secularized versions of sacred histories to assimilated generations losing faith in religion and religious authority. If Zionism were to ensure the survival of the Jewish people, it could do so only by going through the modern European Jewish experience, not by denying it. Zionists were Jews who believed that only in Zion could Jewish culture and the Jewish people be re-established and secure. At that time, however, Zion was located in Palestine, within the Ottoman Empire, and was populated by Arabs under Ottoman jurisdiction.

A "proto-Zionism" had existed in fact before it was fully defined or before the word itself was coined. As a way of helping the indigent and scholarly Jewish populations in Ottoman Palestine, Western European philanthropists such as Edmond de Rothschild and Sir Moses Montefiore proffered aid to projects that later would come to be associated with the Zionist movement—the purchase of land for settlements, farms, and businesses from Ottoman officials and Arab landlords; the building of schools for vocational training; and the opening of medical facilities.

Jewish emigration to Eretz Yisrael also antedated the emergence of a Zionist movement. Jewish religious leaders had always endorsed the idea of living in the Holy Land as a means of discharging religious duties, and had actively promoted the expansion of Jewish communities in Safed, Tiberias, Hebron, and Jerusalem, creating financial mechanisms to meet the immigrants' material needs.

The wave of pogroms that followed the assassination of Russia's Czar Alexander II in 1881 turned an attachment for Zion into an ideology embraced by some of Russia's secular Jewish leaders and intellectuals. Newly promulgated regressive legislation and the resuscitation of antisemitic rhetoric dashed the hopes of those who had believed Russia's polity would evolve into a democracy, with basic rights granted to its population and the ideals of tolerance espoused. Although emigration to the United States and Britain was a popular way of escaping the immediate disabilities imposed by Russian policies, some educated Jews saw that moving to another land would neither end antisemitism nor secure a Jewish future. They argued that only a purposeful immigration with the goal of establishing a Jewish majority in a territory would achieve international respectability for Jewry and help protect Jews everywhere against discrimination. For those who called on Jews to liberate themselves, the Zionist idea supplanted the ideal of assimilation. Zionism was presented as resolving the Jewish problem by normalizing the conditions of Jewish existence.

Development of Zionist Organizations

Although many rabbinical authorities opposed Zionism for its secular and humanistic principles, many rabbis—most notably Samuel Mohilever and Isaac Jacob Reines—welcomed Zionism; they affiliated with Hibbat Zion, the first international Zionist organization to be founded, partly because they reasoned that in Eretz Yisrael a social and cultural environment could be created that was conducive to religious observance.

The Orthodox rabbinate did not, however, establish an entirely harmonious relationship with the secular leadership in Hibbat Zion. Many Orthodox

Theodor Herzl addresses a meeting of the Zionist Congress in Basel, Switzerland. The Zionist Congress was dedicated to establishing institutions necessary for the support of a Jewish state. **© ISRAEL GOVERNMENT PRESS OFFICE (GPO) OF ISRAEL. REPRODUCED BY PERMISSION.**

rabbis could not abide the dynamics of a political struggle that effected compromises between the demands of Zionism's secular and religious constituencies. Nor were the Orthodox entirely comfortable in an organization that did not acknowledge the primacy of religious law and rabbinic authority. The first nonsecular Zionist group, the Mizrahi, opened its office in 1893, but most rabbis, though comfortable with the nationalist claims of Zionism, were unwilling to accede to Zionist demands to share power and resources in local Jewish communities. As a consequence of the frustrating handicaps under which Hibbat Zion labored in the 1880s and 1890s, Zionism was at an impasse when Theodor Herzl undertook to lead the struggle for a Jewish state.

Unaware of developments in Eastern Europe, Herzl, a Viennese journalist, championed the idea of Jewish nationhood in response to the outbreak of antisemitism in France during the fraudulent espionage trial of Alfred Dreyfus (1894–1895). In 1896 Herzl published *Der Judenstaat (The Jewish State),* a book that set forth the argument that both the world and the Jews needed a Jewish state. In 1897 Herzl succeeded in drawing together representatives from the local and regional Hibbat Zion organizations in eastern Europe and Jews from western Europe, establishing and becoming president of a new Zionist framework, the World Zionist Organization (WZO). Authorized by the WZO to secure international recognition for Zionist political goals, Herzl pursued in the capitals of Europe and in the Ottoman capital, Istanbul, official sanction for Jewish colonization in Palestine, but his efforts, albeit feverish and intense, were unsuccessful. The Ottoman sultan Abdülhamit II was not persuaded that a larger Jewish population in Palestine was consistent with his imperial political objectives or that such a population would promote economic development.

Theodor Herzl (1860–1904) was the founder and first president of the World Zionist Organization, a group whose purpose was to establish a Jewish homeland in Palestine. © LIBRARY OF CONGRESS. REPRODUCED BY PERMISSION.

Herzl's leadership did broaden the popularity of Zionism in western and eastern Europe and enlarge its Orthodox membership. Herzl focused the activities of the WZO on diplomacy and finances. This approach mobilized the support of a number of Orthodox rabbis concerned with easing the economic hardships in Palestine for eastern European immigrants and hopefuls, as well as with the creation of a hospitable political climate there. By permitting groups to shift the mode of their representation from regional affiliation to ideological, the WZO was also used advantageously by the Orthodox to influence the direction of policies and, for a number of years, to exclude Jewish culture from the scope of Zionist activities.

Zionism's preoccupation with political solutions and stratagems triggered opposition. Against the political orientation associated with the leadership of Hibbat Zion, the writer Ahad Ha-Am argued that the purpose of Zionism ought to be to revive a modern Jewish culture through the medium of the Hebrew language and a renewed interpretation of classic religious texts; a new Jewish state could only be founded with new artifacts of Jewish culture. Cultural Zionist Ahad Ha-Am's insights on the problems besetting the Jewish people and the Zionist movement helped to inspire a group opposing Herzl's leadership and political Zionism—the Democratic Faction. This group, led by the scientist Chaim Weizmann, did not repudiate political methods or consider them insignificant; rather, they insisted that just as legal titles (to land) could facilitate resettlement, so could settlement lead to concrete political gains. Insisting that the structure of the WZO must be reformed to increase popular participation and broaden its agenda, the Democratic Faction defined its own priorities as the investigation of the physical, political, and social conditions of Palestine for purposes of increasing Jewish immigration.

Creating a Jewish community in Palestine was not simply the solution to continuing antisemitism but also the opportunity to establish a whole and vigorous modern Jewish life. In the early years of the twentieth century, efforts to create a youth movement and to popularize Zionism among the young led several Zionist leaders to synthesize socialism with Zionism. No longer would Jews have to choose between socialism (popular in Russia and in the Pale of Settlement) and Zionism. Some Socialist-Zionists promoted a non-Marxist socialism, emphasizing social welfare and justice; others insisted that even the Marxist version of socialism could be combined with Zionism. Branches of the first Labor Zionist party, Poʿalei Zion, founded in 1906, opened in many towns and cities of eastern Europe, attracting many educated Jewish teenagers. Ha-Halutz, the young pioneer farm movement, was nonpartisan and attracted many capable Austro-Hungarian Jewish youth, especially when it was funded by the WZO after World War I.

Before the conclusion of World War I, Zionists were unable to engage openly in mass mobilization in many countries. In the United States and western Europe, where organizations could operate freely, Zionism did not hold the imagination of most immigrants, who were struggling to work their way

out of grinding poverty. In Russia, where the majority of Jews presumably felt sympathy with Zionist aims, Zionist activities were hobbled by the Russian Revolution, Soviet dictatorship, and persecution.

Establishment of the Jewish State in Palestine

With the issuance of the Balfour Declaration in 1917 and the Sèvres Treaty of 1920, Britain became formally committed to the establishment in Palestine of a Jewish national home. This gave Zionism its first major political victory. World War I had changed the map of Eastern Europe as well as that of the Middle East, thereby providing Zionists an opportunity to engage in grassroots political organization among previously isolated Jewish communities. Youth groups expanded, and camps were created to offer vocational and Hebrew-language training to prepare Jews for life and work in Palestine.

Throughout its history, the Zionist movement has had to make crucial choices among several options: Eretz Yisrael (Palestine) versus another territory, such as Uganda, Canada, Australia; a national home versus a cultural center for world Jewry; a Jewish nation-state versus a binational state in which Jews and Arabs might share political power; neutrality during World War I versus pro-British cooperation; high political profile versus quiet political lobbying; and uniformity versus diversity in political goals. Each decision was made after great debate during and outside of Zionist congresses, often triggering enmity, hard feelings, and the creation of new splinters and factions. One of the most serious splits occurred when Vladimir (Zeʾev) Jabotinsky left the WZO to create his own Revisionist Zionist movement.

With increasing knowledge of the extent of the Holocaust during World War II, the Zionist movement chose Jewish survival over acquiescence in British restrictions on immigration, which resulted in an anti-British militancy aimed at gaining free entry for Jewish refugees into Palestine from 1944 until 1948. With the establishment of the State of Israel in May 1948, the fulfilment of one of Zionism's goals was endorsed by international consensus—majority support at the United Nations, official recognition by many of the world's nations, and acceptance by most Jews (religious Jews excepted). The Arab and Muslim world remained outside this consensus. Post-1948 Zionism evolved into a movement dedicated to immigration (aliyah) for as many Jews as possible, land purchase for continued settlement, and political and economic support for Israel through institutionalized activity. Despite the recent "post-Zionist" intellectual trend that urges a redefinition of Israel as an inclusive state for all its citizens and detaches it from its special diaspora Jewish connections, many Jews continue to consider themselves Zionists in affirming this connection and the importance of Israel in sustaining their Jewish identity.

ZIONIST COMMISSION FOR PALESTINE

Official representative of the World Zionist Organization in Palestine until 1921; a precursor of the Jewish Agency Executive.

The Zionist Commission was an informal group established by Chaim Weizmann as president of the World Zionist Organization (WZO) to advise the British on policies regarding the establishment of the Jewish national home. It carried out initial surveys of Palestine and aided the repatriation of Jews sent into exile by the Ottoman Turks during World War I.

It expanded the WZO's Palestine office (established 1907) into small departments for agriculture, settlement, education, land, finance, immigration, and statistics. In 1921, the commission became the Palestine Zionist Executive, which acted as the Jewish Agency, designated to advise the British mandate authorities on the development of the country in matters of Jewish interest.

ZIONIST ORGANIZATION OF AMERICA

U.S. organization supporting Zionism.

The Zionist Organization of America (ZOA) traces its origins to the 1898 founding of the Federation of American Zionists (FAZ) one year after Theodor Herzl created the World Zionist Organization (WZO). The FAZ sought to mobilize support for Herzl's plan "to create for the Jewish people a national home in Palestine secured by public law" (Basle Program, 1897). At first, the U.S. Zionist organization encountered great difficulty in attracting adherents within a mainly immigrant community concerned about its own integration into mainstream America. Indeed, in its early years, the FAZ, forerunner of the Zionist Organization of America, was perceived as a minor, fringe organization within the U.S. Jewish community. However, during World War I, a combination of factors—the plight of two-thirds of world Jewry in war-torn zones; the decision of the prominent U.S. Jew Louis Brandeis to head the FAZ; and the issuance of Great Britain's Balfour Declaration, which "view[ed] with favour the establishment in Palestine a national home for the Jewish people"—enabled the ZOA (FAZ's successor) to increase its membership from less than 12,000 in 1914 to 180,000 in 1918.

After unsuccessfully challenging the leadership and direction of the World Zionist Organization immediately following the war, the ZOA continued U.S. Zionists' erstwhile policy of loyally supporting the policies of the world Zionist movement and, since 1948, the State of Israel. At times, however, leaders emerged who challenged the policies and directions of the Zionist movement and Israeli government. During the Holocaust, ZOA leader Rabbi Abba Hillel Silver urged the WZO to stop trying to reach a modus vivendi with the British Mandate for Palestine and to seek instead to replace the Mandate Authorities with a Jewish State.

Led by its president Morton A. Klein, in 2003 the ZOA had 50,000 members in more than twelve local chapters. It actively advocates for Israel by combating what it views as "the anti-Israel bias of the media" and by promoting pro-Israel legislation on Capitol Hill. Sometimes, however, the Zionist Organization of America finds its advocacy at odds with the Israeli government itself; it opposes, for instance, former prime minister Yitzhak Rabin's signing of the Oslo Peace Process Agreement and Ehud Barak's negotiations with the Palestinian Authority.

UPDATED BY JERRY KUTNICK

ZIONIST REVISIONIST MOVEMENT

The political party that represented the revisionist oppositional trend in Zionism; led by Ze'ev Jabotinsky from the 1920s through the 1940s.

The Zionist Revisionist Movement sometimes referred only to the political party (Ha-Zohar; Union of Zionist-Revisionists) and sometimes to various subsidiary bodies and institutions that expressed the revisionist ideology and accepted the leadership of Vladimir Zeʾev Jabotinsky, in particular the Betar youth movement, an avant-garde mass movement of youth and incipient army founded in 1923. Hence, a distinction must be made between, on the one hand, any discussion of the political history of the union and, on the other hand, the history of Betar, the National Labor Federation, and Brit ha-Hayyal (a union of Polish army veterans)—all of which were part of the Revisionist Movement (although they preferred to regard themselves as belonging to the "national movement" or to the "Jabotinsky movement").

The union itself was founded in 1925 in Paris by a group of veteran Zionists, most of them Russians, to propose a "revision" in the aims of Zionism, which basically meant a return to the principles of political Zionism espoused by Theodor Herzl. It found its greatest support among the Jewish communities of Eastern Europe (Poland and the Baltic states), but it had branches worldwide. It grew rapidly; in the elections for the 1927 Zionist Congress, it drew 8,446 votes and in the 1933 elections, 99,729 votes. Consequently, its representation grew at the Zionist Congress and in the Asefat ha-Nivharim (the parliament of the Jewish Yishuv in Palestine), and it became the major opposition party, taking on the image of the Zionist Right or even Zionist fascism, from the end of the 1920s. This electoral growth and development of revisionist institutions led to a number of controversies between the revisionists and the labor movement and the "official" Zionism. This division was often expressed in acts of violence, leaving a deep imprint on the political history and political culture of Zionism and the Yishuv. An internal conflict also existed between moderate elements that wanted to remain within the Zionist Federation and those that demanded that the union break away. It was resolved in 1933 when the moderates seceded from the union and founded a small independent party called the Jewish State Party.

Zeʾev Jabotinsky (bottom right) meets with Betar leaders in Warsaw, Poland, 1936. Jabotinsky founded the Zionist Revisionist Movement and its related organizations such as Betar in order to bring greater pressure to bear on Great Britain and mainstream Zionists to create a large and well-defended Jewish state in Palestine. © GOVERNMENT PRESS OFFICE (GPO) OF ISRAEL. REPRODUCED BY PERMISSION.

A specific point of controversy with official Zionism was the union's "independent diplomacy." This was expressed in various activities, primarily in attempts to obtain the support of European countries, in particular of Poland, to pressure Britain in the Mandate Council of the League of Nations in Geneva. In 1934 the union organized a mass petition denouncing British policy, and after the rise of the Nazis to power, it organized a boycott against German goods. From the mid-1930s, it began disseminating propaganda (and engaging in clandestine activity) to encourage a mass emigration of 700,000 to 1.5 million Jews from Europe to Palestine within a ten-year period (the Evacuation Plan and the Ten-Year Plan). It also was active in organizing illegal immigration to Palestine.

In 1935, the union broke away from the Zionist Federation and set up the New Zionist Federation (NZO) that met with wide popular support. In 1945, it rejoined the Zionist Federation. The union maintained an extensive organizational system with

centers in Paris, London, and Warsaw. In Palestine, the Ha-Zohar was the second-largest political party. After establishment of the state, the Irgun Zvaʾi Leʾumi (IZL) founded an independent party while veteran members of the union had their own Revisionist Party, which never attained any representation, so most of its members finally joined the new party.

The movement's platform reflected Jabotinsky's program and ideology: the future establishment of a Jewish state on both sides of the Jordan river under Jewish sovereignty. As an interim measure, a colonization regime would be set up to create the conditions necessary to achieve a demographic Jewish majority—a prerequisite for a state. For this purpose, it called on the mandatory government to adopt an economic and settlement policy that would foster Jewish immigration and settlement. It also demanded that the Jewish Legion be reinstated, i.e., that Jewish military units be activated as an integral part of the British garrison in Palestine.

The official program relating to socioeconomic matters was a combination of etatism (state socialism) and liberalism: on the one hand, support for the private sector and on the other a demand for involvement by the mandatory government and the Jewish Agency in the creation of infrastructure, in providing assistance to the private sector, and in setting up legal arrangements to prevent strikes. The union viewed Palestinian Arabs as citizens with equal rights, on condition that they do nothing to impair the national character of the Jewish state. The revisionists believed that cooperation with the mandatory government and with Britain was essential. But to prevent Britain from reneging on its commitments, they thought it necessary to bring political and propaganda pressure to bear on Britain. In their view, the strategic cooperation in Palestine and Britain's readiness to help Europe's Jews in their distress were the basis for such cooperation. The party was not monolithic, and various views came to the fore. In the 1930s, its dominant mood was that of the "radical nationalists," who called for a more activist policy toward the British, beginning in 1930 but in particular after the events of 1936 (the revisionists opposed the partition plan recommended by the Peel Commission Report in July 1937).

As a result of the internal disputes, there was a great deal of tension in the movement, particularly between the union and Betar and various maximalist groups. This internal strife led to the creation of new organizations, weakly linked organizationally to the union (in particular, the IZL).

ZIWAJ MUTʿA

Temporary marriage.

Temporary marriage *(ziwaj mutʿa),* which was practiced in early Islamic Arabia, is a contract between a man and an unmarried woman for a particular duration of time. A man can marry numerous temporary wives in addition to his permanent wife or wives. Umar (r. 634–644), the second caliph, outlawed temporary marriage, but Shiʿites did not find his position legally binding because the Prophet and the Qurʾan permitted *mutʿa* marriage. Even a few Sunni societies continued to practice certain forms of *mutʿa* marriage.

Social and economic circumstances shaping modern Shiʿite societies led to the emergence of new and at times arbitrary forms of temporary marriage. After the rise of the Iranian Islamic Republic in 1979, temporary marriage became popular, particularly among the urban lower classes. It also surfaced in Lebanon and other Arab Shiʿite com-

munities. Shiʿite jurists debated several conditions relating to temporary marriage, but the law remained vague and ambivalent about women's rights. It is rare for a woman to negotiate a share of her husband's inheritance. A man is expected to provide for his children from a temporary marriage, but there are no institutional guarantees. A temporary marriage can be terminated by mutual consent before the end of the stipulated period. Overall, men have greater legal rights and control over the conditions of *mutaʿa* than women.

RULA JURDI ABISAAB

ZIYA, ABDÜLHAMIT

[1825–1880]

Young Ottoman writer.

The son of a customs clerk, Ziya Paşa was educated in one of the first secular Ruşdiye schools in Istanbul. He began work in the translation office and, through the support of Tanzimat reformer Reşit Pasa in 1854, became a secretary to Sultan Abdülmecit I. He lost his palace job in 1861 with the accession of Sultan Abdülaziz and held several minor posts in the 1860s. By 1866 he had joined the Young Ottoman Society in Europe and, with Namik Kemal and İbrahim Şinasi, became a leading intellectual of the period. Under Abdülaziz's rule, Ziya's political satires and other writings were banned as seditious, and he was posted as governor of Syria, in virtual exile.

Ziya Paşa's greatest influence was through his writings. He warned against blind imitation of Europe and criticized autocracy and poor policies such as the growing Ottoman debt. In 1868 he wrote a famous article, "Poetry and Prose" (Şiir ve Inşa), in which he criticized Ottoman literature as mere imitation of Arabic and Persian traditions and called on writers to seek inspiration in Turkish folk literature.

ELIZABETH THOMPSON

ZOHAR, URI

[1935–]

Israeli actor and comedian who became a rabbi and teacher.

Uri Zohar began his professional acting career in 1953 and quickly rose to fame as a satirist and humorist. He starred in Israeli films in the 1960s, including *A Hole in the Moon* and *Every Bastard a King.* He was the first cinema artist to win the Israel Prize (which he refused), in 1976.

In the 1970s he became a sectarian Orthodox Jew and a rabbi and teacher in a yeshiva (religious school). He is active in the movement to attract secular Jews to religious orthodoxy, and uses his entertainment skills to promote this objective. He wrote an account of his religious transformation, *Ubaharta bahaim,* (1983)—which was subsequently translated as *Waking Up Jewish* (1985)—as well as several other volumes that espouse his views on secular Israeli society. In 1999 Zohar directed a widely distributed videotape and CD, titled *Ani Me-ashim* (I accuse) in which the former Shas political party leader Arye Deri alleged that the fraud charges of which he was accused (and for which he was imprisoned) were an Ashkenazic-elitist conspiracy against not only him but also the Sephardim as a group.

CHAIM I. WAXMAN

ZOHRAB, KRIKOR

[1861–1915]

Armenian writer and deputy in the Ottoman parliament.

Krikor Zohrab, also known as Grigor Zohrap, was born in Istanbul. He was educated in his birthplace

and practicing law by 1883. He distinguished himself as an attorney who defended cases against the government until he was deprived of his license in 1905 and went abroad to France and Egypt. With the end of the Hamidian autocracy and the restoration of the Ottoman constitution, Zohrab returned to Istanbul. From 1908 to 1915, he was a member of the Armenian National Assembly. He also was elected a deputy to the Ottoman parliament where he defended the cause of universal social justice and gained distinction as an orator. Shocked by the 1909 mass killings of Armenians in Adana, he published his findings in Paris under the pseudonym of Marcel Leart as *La Question Arménienne à la Lumière des Documents.*

Zohrab also earned fame as an author of short stories and novellas in the realist style. The subjects of social inequality, injustice, and prejudice preoccupied him. His more important works include *Anhetatsads Serunt Me* (A vanished generation, 1887), *Khghjmdanki Tzayner* (Voices of conscience, 1909), *Kyanke Inchpes Vor e* (Life as it is, 1911), and *Lur Tsaver* (Silent sorrows, 1911). He also published essays on literature, politics, and the Armenian community. Before his own demise, he protested to Talat, the Young Turk minister of the interior, the summary arrest on the night of 24 April 1915, and subsequent execution of the Istanbul Armenian community leaders. His own immunity as a parliamentary deputy did not spare him from being arrested on 3 June, deported, and killed near Diyarbekir.

Rouben P. Adalian

ZONNENFELD, YOSEF HAYYIM

[1849–1932]

Rabbi; leader of ultra-Orthodox Jerusalem community.

Yosef Hayyim Zonnenfeld was born in Verbo, Slovakia, and educated in the yeshiva in Pressburg. Settling in Jerusalem in 1873, he actively opposed secular Zionist educational activities and became a leader of the Old City Jewish community, assisting in the founding of the Meah Sheʿarim community and others. A staunch sectarian, he opposed all cooperation between the Orthodox and non-Orthodox Jewish communities. He was one of the founders of the separatist rabbinic court in Jerusalem, and in 1920 he was elected rabbi of the separatist Orthodox community of Jerusalem. He was also a founder of the Agudat Israel in Palestine. Despite their warm personal relationship, he opposed Rabbi Abraham Isaac Hacohen Kook as rabbi in Jerusalem and, subsequently, as chief rabbi of Palestine. Nevertheless, Zonnenfeld was a strong supporter of Jewish settlement in Eretz Yisrael.

See also Agudat Israel; Eretz Yisrael; Kook, Abraham Isaac Hacohen; Meah Sheʿarim.

ZOROASTRIANISM

Pre-Islamic religion founded by the Iranian prophet Zarathushtra (Zoroaster).

Founded as early as 1400 to 1200 B.C.E., Zoroastrianism spread from central Asia to Iran around the ninth century B.C.E., where it was propagated by priests called the *magi*, or *mobeds.* Zoroastrianism remained the major faith in Iran until the Sassanian state fell to the Arabs in 651 C.E. Thereafter, the religion lost many followers through conversion to Islam between the eighth and the thirteenth centuries. Zoroastrianism reached India in the tenth century, when some Zoroastrians migrated from Iran to avoid adopting Islam. Descendants of these immigrants are called the *Parsis* (Parsees). Those who remained behind sought refuge from Islam by moving to sparsely populated regions in central Iran. By the thirteenth century, extensive contact between Parsis and Persian Zoroastrians had recommenced. In 1854, when the Parsis sent an emissary to the Qajar court, the poll tax levied on Iranian Zoroastrians by the Muslim state was abolished. The community in India flourished, and in the mid-1990s it numbered around 72,000.

Zoroastrians in Iran encountered less success, though there was a respite from financial hardship

and pressure to practice Islam during the Pahlavi dynasty (1925–1979). Since the Iranian Revolution, despite being recognized as an official minority of about 30,000, Zoroastrians are offered little protection from their Muslim neighbors, and many have fled Iran. International dispersion during the twentieth century has produced Zoroastrian communities in Pakistan (3,700), England (7,000), Australia (1,000), the United States and Canada (10,000), and other countries. By the early 1990s, low birthrates together with widespread nonacceptance of converts contributed to an overall decline in the number of Zoroastrians.

The faith's central canon is the Avesta (Pure instruction), a scripture that includes the Gathas (Songs), which were probably composed by Zarathushtra himself. Prayers recited by the laity in daily religious observances are compiled in a text known as the Khorde Avesta (Shorter Avesta). Next in importance are religious exegeses written in Pahlavi, a Middle Iranian language; among these are the Zand, a commentary on the Avesta, and the Bundahishn (Book of creation). There are more recent Zoroastrian texts in the New Persian, Gujarati, and English languages that transmit tenets of the faith and the meanings of rituals to believers who no longer understand the Avestan and Pahlavi languages.

The religion proposes an ethical dualism—which later became a cosmic dualism—between righteousness and falsehood, personified by a pair of primal spirits: Ahura Mazda (Ohrmazd), the Lord Wisdom, and Angra Mainyu (Ahreman), the Destructive Spirit. Ahura Mazda, the supreme deity, is believed to have created the spiritual and material worlds completely pure. Evil, disease, pollution, and death are attributed to Angra Mainyu, the devil. According to Zoroastrianism, Ahura Mazda created six *amesha spentas,* or beneficent spiritual beings, and other minor good spirits to assist him in protecting the material creations. Angra Mainyu produced numerous *daevas,* or demons, to defile the spiritual and material worlds. Zoroastrian texts claim that human beings were created by Ahura Mazda as allies in the struggle against Angra Mainyu, and that humans entered into a covenant with their creator to combat the forces of evil through daily good deeds.

Between the ages of seven and twelve, each Zoroastrian child undergoes initiation into the religion.

A Zoroastrian priest in London officiates at an initiation ceremony for children between seven and twelve years old. Founded more than 3,000 years ago in central Asia, Zoroastrianism was the major religion in Iran until the emergence of Islam. During the past 200 years, thousands of its adherents have established communities in India and, in much smaller numbers, in the West. **© Tim Page/Corbis. Reproduced by permission.**

The ritual, which symbolizes a spiritual rebirth, is termed *sedra pushun* in Iran and *navjote* in India. Every initiate dons a white undershirt called the *sedra,* or *sudra,* and ties a sacred girdle known as the *kashti,* or *kusti,* around the waist. The girdle, which most Zoroastrians continue to wear, should be untied and retied with the recitation of prayers on awakening each morning, and prior to performing worship. Many rituals, such as the *jashan,* or thanksgiving ceremony, are conducted within buildings known as fire temples. Fire is one of the seven sacred creations; the others are water, earth, metal, plants, animals, and human beings. Moreover, fire is believed

to destroy evil, and thus it became the religion's icon. Sacred fires burn constantly in altars at major temples at Sharifabad, near Yazd, in Iran and at Surat, Navsari, and Bombay in India. Smaller temples in Iran and India and elsewhere do not maintain constantly burning fires; rather, a fire is lit in an altar prior to acts of worship. Because impurity is thought to arise from evil, Zoroastrians undergo elaborate rituals to ensure their spiritual purity. In addition to rituals of worship and purification, other acts of devotion include seven feasts, such as that celebrating Nav Ruz, the new year.

Zoroastrian doctrine holds that earth, fire, and water are polluted if a corpse is buried, cremated, or placed in water. Consequently, corpses are washed, then placed in a *dakhma* (funerary tower), which is open to the sky and accessible to birds of prey. Thereafter, the bones are collected and disposed of. Exposure of corpses has been phased out in Iran since the 1940s, replaced with interment (burial), but many Parsis in India and Pakistan continue the tradition of exposing bodies in funerary towers, particularly at Bombay and Karachi. Most Zoroastrians elsewhere follow their Iranian coreligionists' adaptation. Certain Zoroastrian communities, particularly those in North America, now perform cremation. Zoroastrians believe that after death each individual's soul is judged by a triad of gods—Mithra, the keeper of covenants; Rashnu, the judge; and Sraosha, the messenger—at the Bridge of the Separator, which connects earth to heaven over the pit of hell. If the soul's good deeds are greater than its evil deeds, it is led across the bridge into paradise. When its evil deeds outweigh the good, the soul is cast into hell until the day of universal judgment. In cases where a soul's good and evil deeds are equal, it is consigned to limbo. The faithful believe that at the end of time a savior *(saoshyant)* will resurrect the dead. Thereafter, Ahura Mazda will descend to earth and separate the righteous individuals from the evil ones. Each sinner will be purified of his or her transgressions and granted immortality. Then Angra Mainyu will be forced back into hell, and the world will become free of evil and impurity forever.

ZUBAYRI, QA'ID MUHAMMAD MAHMUD AL-

[1919–1965]

Yemeni political reformer.

Born in Sanʿa, Qaʾid Muhammad Mahmud al-Zubayri left North Yemen after a brief career as a government official. With Ahmad Muhammad Nuʿman, he began his lifelong effort to reform Yemen's imamic government. He participated in the founding of the Liberal party and the Free Yemeni movement. At this time, his poetry, in particular, earned him a literary reputation. Zubayri strongly supported the revolution of 1962 but quickly became disillusioned with the policies of Abdullah al-Sallal. He founded the "Third Force" as an alternative to the royalists and republicans but was assassinated in 1965.

MANFRED W. WENNER

ZUʿBI, MAHMUD AL-

[1938–2000]

Syrian politician and long-serving prime minister.

Hailing from a Sunni family in the southern village of Khirbat al-Ghazala, al-Zuʿbi was a Baʿth party member in high school and studied agronomy in Cairo. He ascended in the party's agricultural bureaucracy to become head of the general authority for development of the Euphrates river basin from 1973 to 1976 and, from 1980 to 1981, director of the *maktab al-fallahin* (the peasants' office). In January 1980 he became a member of the Baʿth Regional (Syrian) Command. Al-Zuʿbi was continually responsive to agrarian concerns in his capacity as he

rose in government, both as speaker of parliament (1981–1987) and, later, as long-time prime minister (1987–2000) during the presidency of Hafiz al-Asad. He was dismissed in March 2000 and accused of corruption, after which he committed suicide on 31 May 2000.

ZURAYK, CONSTANTINE

[1909–2000]

Syrian intellectual and educator.

Constantine Zurayk (also Qustantin Zurayq) was born in Damascus. He received a B.A. from the American University of Beirut (AUB) in 1928, an M.A. from the University of Chicago in 1929, and a Ph.D. from Princeton University in 1930. He was an assistant professor of history at AUB (1930–1945) and later distinguished professor (1958-1977). He also served as counselor to the Syrian legation and then as minister to the United States (1945–1947), AUB vice president (1947–1949, 1952–1954), rector of the Syrian University in Damascus (1949–1952), and AUB acting president (1954–1957).

Zurayk, a prominent Arab intellectual, wrote *Maʿna al-Nakba* (1948; The meaning of the disaster), the first substantial critique of Arab society in light of the 1948 defeat in Palestine. An advocate of rationalism, scientific and cultural progress, and secular nationalism, he produced many other influential works, including *Nahnu wa al-Taʾrikh* (1959; Facing history), *Fi Maʿrakat al-Hadara* (1964; In the battle for civilization), and *Nahnu wa al-Mustaqbal* (1977; Facing the future), as well as translations and editions of European and Arabic works on cultural history. In 1963 he helped found the Institute for Palestine Studies, and served as its chairman until 1984. Zurayk died in Beirut on 12 August 2000.

Genealogies

In the following genealogies and lines of succession, an asterisk preceding a name indicates that the Encyclopedia contains an entry for that individual. The names of those who ruled are indicated by boldfaced type. The following genealogies are not exhaustive, including only well-known figures and those in the direct line of succession. Where possible, the existence of additional family members has been indicated with arrows. With a few exceptions, female descendants are not included because they are typically denied inheritance of a throne and, consequently, little information is available about them.

FIGURE 1

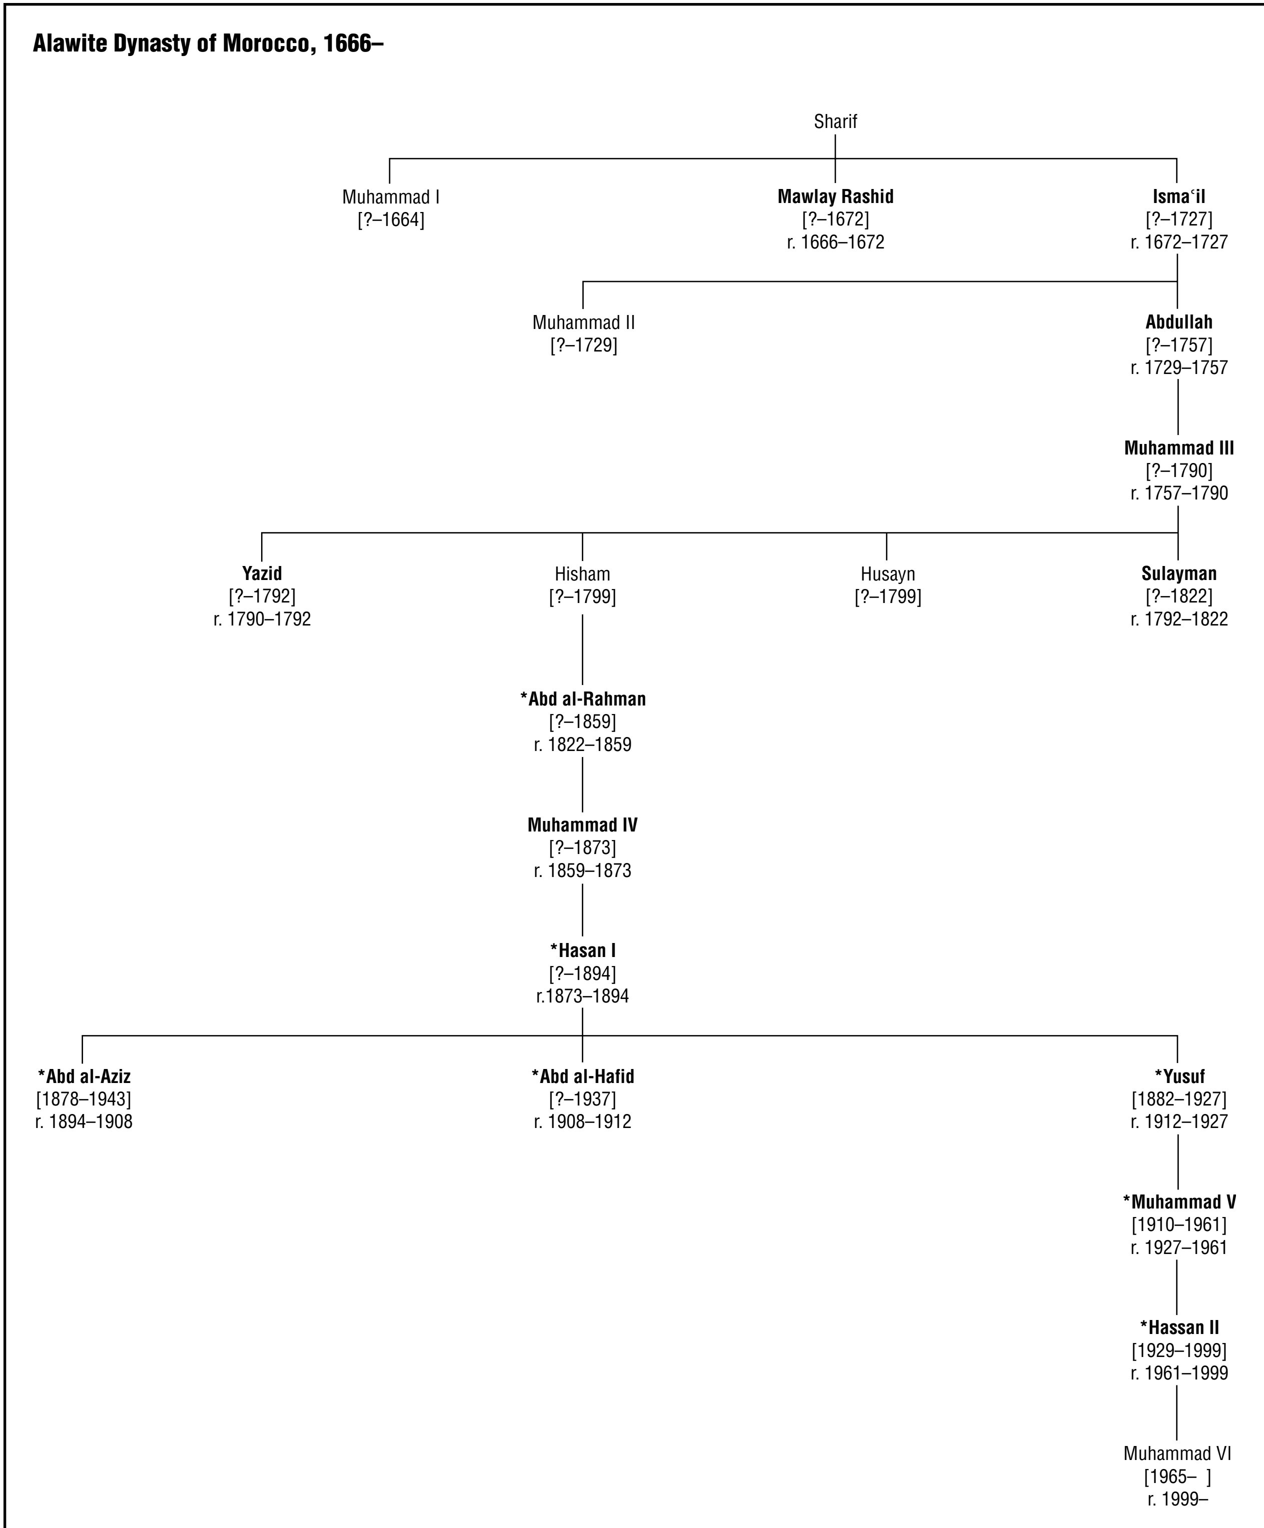

FIGURE 2

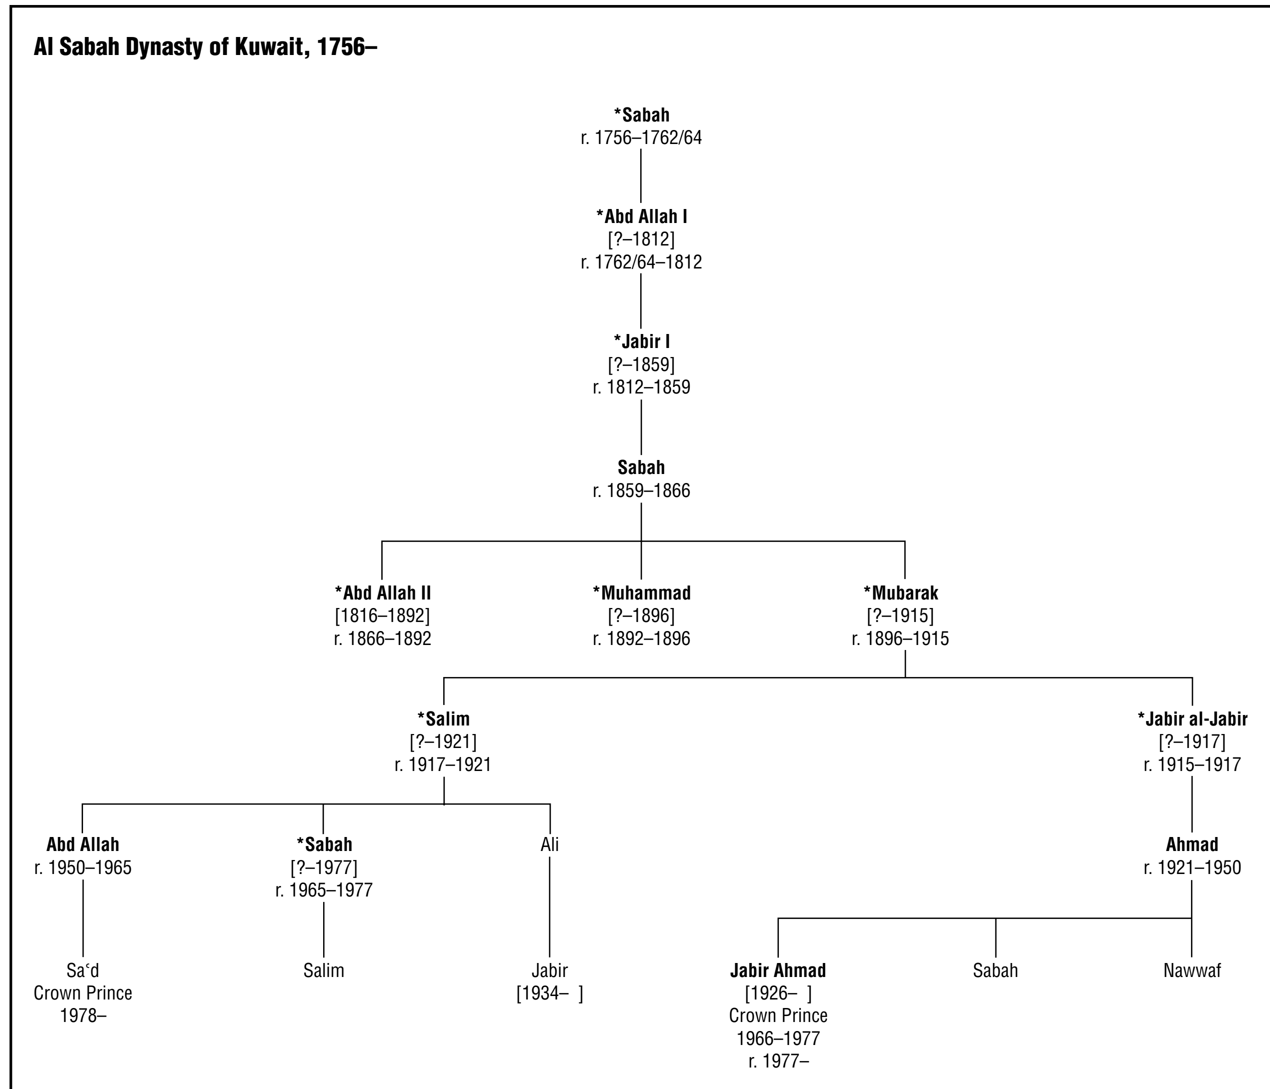

FIGURE 3

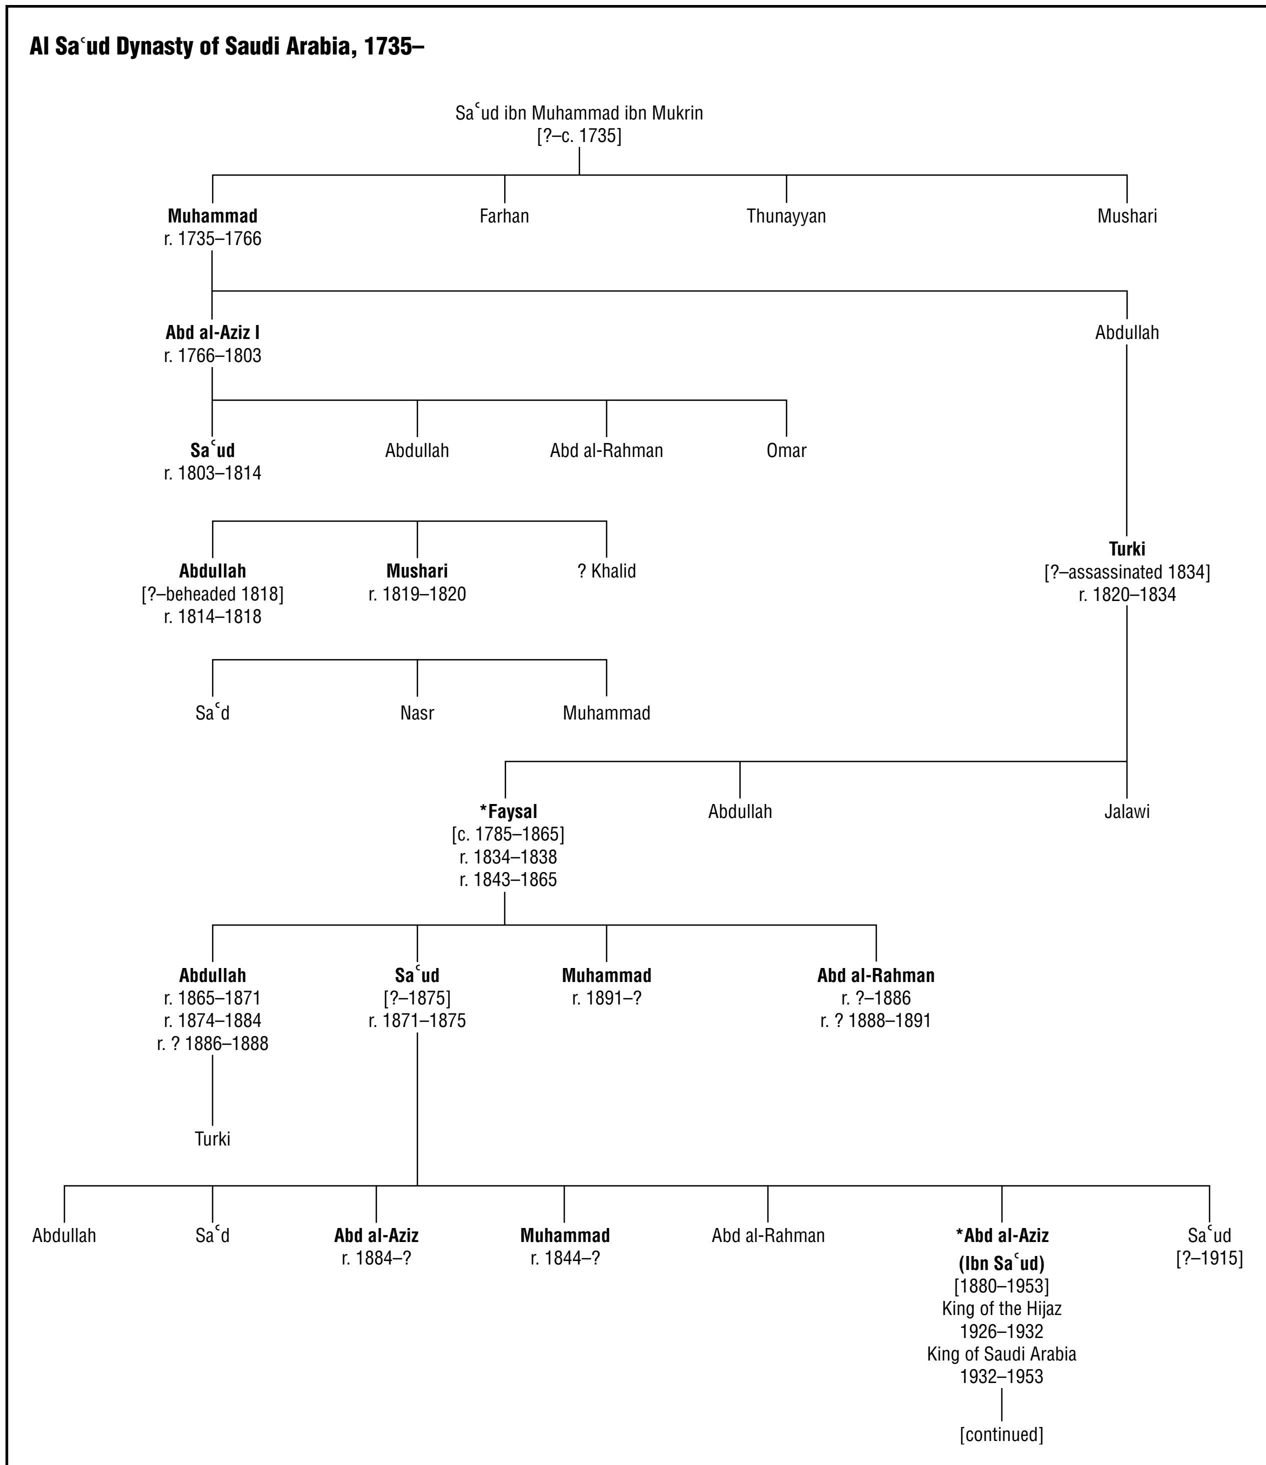

FIGURE 3 (*continued*)

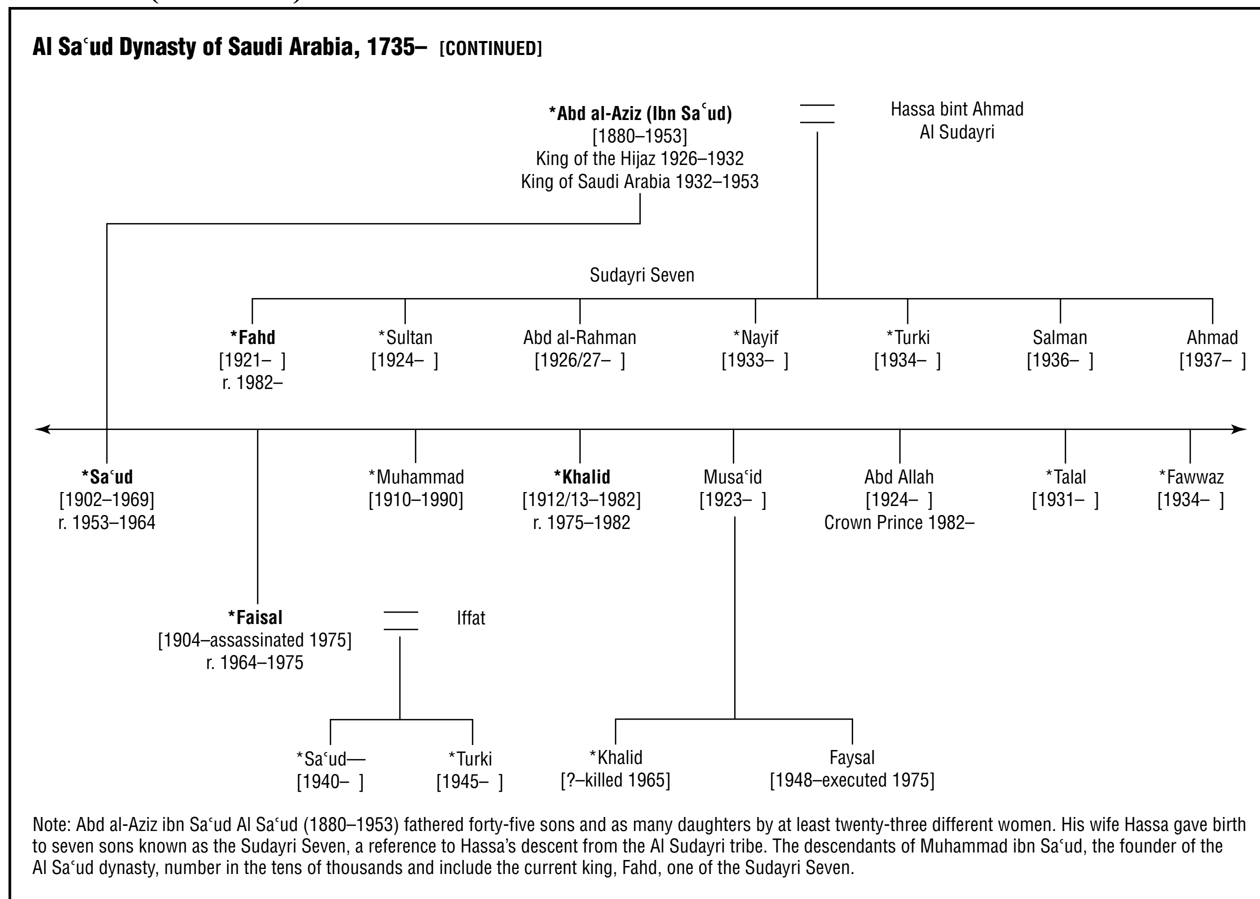

Note: Abd al-Aziz ibn Sa'ud Al Sa'ud (1880–1953) fathered forty-five sons and as many daughters by at least twenty-three different women. His wife Hassa gave birth to seven sons known as the Sudayri Seven, a reference to Hassa's descent from the Al Sudayri tribe. The descendants of Muhammad ibn Sa'ud, the founder of the Al Sa'ud dynasty, number in the tens of thousands and include the current king, Fahd, one of the Sudayri Seven.

Twelve Imams of Shiʿa Islam

Ali ibn Abi Talib (d. 661, al-Najaf)
Hasan (d. 669, Medina)
Husayn (d. 680, Karbala)
Ali Zayn al-Abidin (d. 712, Medina)
Muhammad al-Baqir (d. 731, Medina)
Jaʿfar al-Sadiq (d. 765, Medina)
Musa al-Kazin (d. 799, Baghdad)
Ali al-Rida (d. 818, Mashhad)
Muhammad al-Taqi al-Jawad (d. 835, Baghdad)
Muhammad al-Naqi (d. 868, Samarra)
Hasan al-Askari (d. 873, Samarra)
Muhammad al-Mahdi al-Muntazar (the Hidden Imam, 873)

Glossary

A

Abd: *Arabic for "slave."* Abd means slave. It is also often seen as part of Islamic male names. In such cases, "abd" is always followed by one of the 99 names of God, and denotes "servant of." For example, Abd al-Rahman ("servant of the Forgiving One"), or Abd al-Jabbar ("servant of the Almighty"). Abdullah means "servant of God."

Abu: *Form of the Arabic word* ab *("father").* When it is followed by a first name—usually, the name of a man's first-born son—it means "father of ___." "Abu so-and-so" is used in lieu of calling a man by his first name.

Agha: *Socio-political title of authority.* Agha ("chief," "master") was associated with certain administrators in the Ottoman empire. It is also used in other settings, such as among Kurds.

Allah: *Arabic word for "God."* Allah is simply Arabic for "God"; It is not the name of God. Both Christian and Muslim Arabs use the word Allah in their scriptures.

Amir: *Political title.* Amir (also emir) is derived from the Arabic word *amara* ("to command"), and is a title given to a person of high political rank. It is often translated as "prince."

Ashur: *Islamic tithe.* Also called zakah or zakat, ashur (from the Arabic word for "ten") is a charitable tithe prescribed in Islam. In North Africa, ashur also denotes the tenth month of the Islamic calendar, Muharram.

Ayatullah: *Shiʿite religious title.* Ayatullah (also ayatollah) is a title denoting a very high level *mujtahid* cleric. It is the highest rank a Shiʿite cleric can attain. See also "mujtahid."

B

Baraka: *Arabic, "blessing."* Baraka means a blessing from God, and can also refer to good luck in general. It is also the spiritual benefit that can be bestowed on someone by a saintly figure, and can also refer to a donation to some charitable institution.

Bedouin: *Arab nomads.* The term comes from the Arabic word *badu,* meaning "those who live in the *badiya,* (desert)." Bedouin formerly lived as pastoral nomads in the desert regions of the Arab world, although by the twentieth century, few true nomads remained. The term is still used, however, to denote those tribes and families who are of bedouin origin.

Bey: *Political title.* Bey is a Turkish term often translated as "prince." In the Ottoman empire's administration and military, it was given to mid-level officers. In modern Turkey, it is often used as a suffix to a man's first name as a polite form of address.

Bilharzia: *See Schistosomiasis.*

Bint: *Arabic, "girl."* Female children in the Arab world sometimes are referred to by making reference to their father. Thus, "so-and-so, bint [daughter] so-and-so." See also "ibn."

C

Casbah: *Old quarters of an Arabic city.* From the Arabic *qasaba* ("divide," "cut up"; also, "citadel" or "capital"), it is a term often used by Europeans to denote the older, native quarters of a town, as distinct from the newer areas in which foreigners lived.

D

Derb: *Street or neighborhood.* Moroccan cities were made up of various streets and neighborhoods. Each of these was referred to as a derb, from the Arabic *darb* ("street" or "path").

Dey: *Political title.* The Turkish word for maternal uncle, the position of dey originally was military, but came to denote administrative power in as well. Deys were found in North Africa, especially Tunisia and Algeria, from the late seventeenth through the early nineteenth centuries.

Dinar: *Monetary unit.* Dinar is derived from the Greek "dinarion" and the Latin "denarius." During the early Islamic period, it was a type of gold coin. Currently it serves as the currency of Algeria, Bahrain, Iraq, Jordan, Kuwait, Libya, Tunisia, and parts of the former Yugoslavia.

Dirham: *Monetary unit.* During the early Islamic period, the dirham was a type of silver coin. Currently it is used in Morocco, Libya, the United Arab Emirates, and Jordan.

Dunum: *Unit of surface area.* The dunum is used to measure surface area in parts of the Fertile Crescent. During the late Ottoman period, it equaled 919 square meters. In the 1920s, it was enlarged to 1,000 square meters (about 0.25 acre) in Lebanon, Syria, Palestine, and Transjordan. In Iraq, the dunum is 0.618 acre.

E

Effendi: *Honorific title.* The origins of this title are Greek, and refer to a man of property or education. During the late Ottoman period, it was used as a sign of respect for middle class males as well as for some bureaucratic positions. Another form of the word, effendum, is still used in Egypt to mean "mister" or "sir."

F

Feddan: *Unit of surface area.* Deriving from an Arabic term for a yoke of oxen, it referred to the amount of land such animals could farm. Thus the actual surface area called a feddan varied from region to region. In Egypt, where it remains the standard unit of surface area today, it equals 4,200.883 square meters, slightly more than one acre.

Fellagha: *Term denoting outlaws.* Fellagha (also fallak) derives from colloquial Tunisian Arabic. It was widely used by the French press to refer to Tunisian guerrilla groups fighting colonial rule, and was eventually used by the fighters themselves. It was also used in reference to anti-French fighters during the early days of the Algerian war of independence.

Fellah: *Peasant.* Fellah (also fallah; plural: fallahun, but more commonly fallahin following colloquial usage) derives from the Arabic verb *falaha* ("cultivate"). It refers to small scale, subsistence level cultivators in Arab countries, but can be used, often derisively, by urbanites to refer to the rural population generally.

G

Ghazel: *Type of poetic form.* The word is Arabic (ghazal; "flirtation" or "love poem"), and is also seen as gazel or ghazal. A lyrical poetic mode often expressing romantic love or eroticism, the form passed into Turkish, Persian, and Urdu poetry as well.

Ghorfa: *Arabic for "room."* The Arabic *ghurfa* refers to a room. In southern Tunisia, seminomadic peoples, usually Berbers, built fortress-like, multistoried structures to store grain. Examples still exist near Tataouine, Ksar Haddada, and Médenine.

H

Hajj: *Islamic pilgrimage.* Hajj (with a short "a" sound) is one of the "Five Pillars of Islam," and refers to a Muslim's obligation to make a pilgrimage to the holy sites in the cities of Mecca and Medina, in today's Saudi Arabia. Islam requires all Muslims who are physically and financially able to make the hajj at least once in their lifetime. The title "hajj" or sometimes "hajji" (with a long "a" sound) is the title given to a man who has completed the hajj. The female equivalent is "hajja."

Halal: *Arabic for "lawful."* In Islamic usage, it refers to aspects of life that are religious acceptable or lawful. It is especially used to refer to meat that has been slaughtered and prepared in accordance with Islamic law. See also "haram."

Haram: *Arabic for "forbidden."* Haram refers to aspects of life, including acts, food, etc., that are forbidden by Islamic law. See also "halal."

Hezbollahi: *"One of the Party of God."* It comes from an Arabic term *hizbullah,* found in the Qurʾan that stems from *hizb* ("party") and *Allah* ("God"). In Iran, a hezbollahi came to mean a zealous and sometimes violent supporter of the concept of an Islamic state.

Hoca: *Honorific title.* Hoca is a Turkish word derived from the Persian *khwaja.* In the Turkish speaking parts of the Ottoman empire, it denoted religious scholars and certain administrative bureacrats. It is still used in modern Turkey to refer to teachers and religious scholars. See also "khawaja."

Hosainiyeh: *Place of a certain type of religious ceremony.* In Iran, it is a place where the martyrdom of the Imam Husayn ibn Ali is commemorated, especially on Ashura, the tenth day of the Islamic month of Muharram. It refers to the death of Husayn, grandson of the prophet Muhammad, in 680 at the hands of the Umayyads at Karbala, in Iraq. Traditionally, a hosainiyeh was a different structure than a mosque, and was a populist institution rather than one under the control of the Islamic clerics.

I

Ibn: *"Son."* Male children in the Arab world sometimes are referred to by making reference to their father. Thus, "so-and-so, ibn [son] so-and-so." See also "bint."

Iltizam: *Tax farm.* The Arabic term *iltizam* refers to a duty or obligation. During the Ottoman empire, it referred to a type of taxation whereby the authorities auctioned the rights to collect taxes to an individual, who became known as a *multazim.* The multazim paid the auction amount to the government, and was free to extract as much in taxation as possible from those living within the iltizam. It usually denoted the right to collect taxes from a specific area, but sometimes referred to taxes collected from a certain trade or profession. It was also called *muqataʿa* in some areas. The Ottoman government tried on several occasions in the late nineteenth century to abolish the practice, but it remained in parts of the empire until the early twentieth century.

Imam: *Religious title.* The term derives from the Arabic *amma,* "to lead." Among Sunni Muslims, and imam refers to the leader of the prayers in a mosque. For Shiʿite Muslims, however, the term refers to the legitimate leader of the Muslim community, a position extending back to the first imam, Ali ibn Abi Talib, the cousin and son-in-law of the prophet Muhammad who also became the fourth caliph. Following Ali's death, the imamate devolved to his sons Hasan and Husayn, and thereafter to their descendants.

The Shiʿite concept of imam involves considerably greater power and influence than for Sunnis, for the Shiʿite imams possessed special spiritual powers to interpret the will of God.

Imamzadeh: *Persian term referring to the descendant of an imam or the tomb of such a person.* Among Twelver Shiʿa in Iran, the term is used to denote the descendant of one of the first eleven imams, as well as the tomb built over the burial place of such a person. Visiting such tombs is considered a meritorious act than can impart a special spiritual blessing, or baraka, to the visitor. See also "baraka."

Inqilab: *Revolution or uprising.* In modern Arabic political usage, the term inqilab is usually used to connote a sudden seizure of political power, often via a military coup d'état. In Persian, the term means "revolution," such as the 1979 revolution in Iran.

Izlane: *Berber songs.* The singular is izli. These are short (usually no longer than two lines) poetic songs among Berbers in the Middle Atlas mountains. The songs are sung at festive occasions, accompanied by drums and clapping, and often speak of love. They are also a vehicle for social and political commentary.

J

Jihad: *"Struggle" in the service of Islam.* Jihad derives from the Arabic verb *jahada,* "to struggle" or "to endeavor." In Islam it can refer to a number of sacred endeavors, from an individual's personal attempts to live his/her life properly according to Islamic principles, to armed struggle in the defense of Islam or Islamic territory. The term mujtahid derives from *jahada* as well. See also "mujtahid."

K

Karakul: *Afghani sheep.* Karakul is the name of a breed of short-tailed sheep raised in northern Afghanistan, largely by Turkmen and Uzbeks. The fleece is used for making hats.

Kaza: *Ottoman administrative unit.* Kaza is a Turkish word derived from the Arabic *qada.* By the late Ottoman empire, a province (*vilayet*; Arabic: *wilaya*) was divided into governorates called *sanjaks* (Arabic singular: *sanjaq*) or *livas* (Arabic singular: *liwa*). These in turn were divided into smaller units called kazas. Kaza can also refer to the judgment of a *qadi,* or judge. See also "liwa," "qaʾimmaqam," and "vilayet."

Khan: *Highway inn for travelers, or a warehouse for merchandise.* Khans were built as rest stops for travelers and caravans. A khan was also an urban complex for storing merchandise and hosting merchants.

Khanjar: *Type of Arabic dagger.* A khanjar usually refers to a slightly curved, double edged dagger that tapers to a point. The hilt is often decorated.

Khatib: *Islamic preacher.* A khatib is the religious official who delivers the sermon during Friday prayers in a mosque, usually from a raised pulpit called a *minbar.* See also "minbar."

Khawaja: *Honorific title of Persian origin.* In Egypt and parts of the Fertile Crescent, khawaja was a title used to denote a non-Muslim, both foreigners as well as native Christians and Jews. The term comes from the Persian *khwaja.* See also "hoca."

Khawr: *Natural harbor; also part of place names.* The term is used in the Persian/Arabian Gulf region.

Khedive: *High-level title used in Egypt from 1867–1914.* Khedive is a Persian word for a high prince that was used by the governors of Ottoman Egypt from 1867–1914 to replace the title "pasha" carried by other governors in the empire. It was first used by Ismaʿil Pasha, grandson of Muhammad Ali, who secured this right from the Ottoman sultan in order to differentiate and elevate himself from other provincial governors. The term was replaced with "sultan" by the British, who occupied Egypt starting in1882. See also "pasha" and "sultan."

Koran: *See Qurʾan.*

Kochi: *Afghani pastoral nomads.* Derived from the Pushtu term koch ("pack"), kochi referes to pastoral nomads, mostly Baluchis and Pushtuns, in Afghanistan.

Komiteh: *Armed Islamic revolutionary group in Iran.* Prior to merging with the official armed forces in 1991, the Komitehs (Islamic Revolutionary Committees) developed out of mosque-based revolutionaries in Tehran in 1978. Ayatollah Ruhollah Khomeini gave them official status in 1979, as did the Iranian majles (legislature) in 1983. The Komitehs served as a type of police force, combating drug trafficking, "immoral" behavior, as well as working against groups opposing the new regime.

L

Laz: *Ethnic group in Turkey.* The Laz live on the Black Sea, near Turkey's border with Georgia. The Laz language belongs to the Kartvelian language family, and is related to Georgian.

Lazma: *Plot of land in Iraq.* Tribes living in Iraq would distribute irrigated land to cultivators, called lazma, who then obtained prescriptive rights to that land by virtue of their ongoing cultivation of it. This came despite the fact that the land was not formally registered to the tribe.

Leff: *Type of political coalition in North Africa.* Coming from the Arabic word *laffa* ("to wrap"), a leff refers to political coalition whose members assist one another during disputes with other leffs. It is also called *saff* in some parts of North Africa and the Fertile Crescent.

Lira: *Ottoman monetary unit.* The lira, or pound, was named after an Italian silver coin, and was the currency used in the Ottoman empire. Modern Turkey, Syria, and Lebanon continue to use the lira as their national currencies.

Liwa: *Ottoman administrative unit.* During the late Ottoman empire, a province (*vilayet*; Arabic: *wilaya*) was divided into liwas (called liva in Turkish). A liwa was also called a *sanjak* (Arabic: *sanjaq).* These in turn were divided into smaller units called qadas or kazas. See also "kaza," "mutassarif," and "vilayet."

Luti: *Term implying deviation from moral standards.* In Iran during the late nineteenth and early twentieth centuries, the term originally referred to a member of a chivalrous brotherhood. It later assumed more negative connotations implying drunkenness and moral deviation. In parts of the modern Arab world, luti is a term used for a homosexual. Some surmise that the term derives from the biblical figure Lot, son of Noah.

M

Madrasa: *Arabic for "school."* Madrasa is the Arabic word for school. In Sunni Islam it referred to a school for teaching Islamic law, or shariʿa. It retains that meaning in parts of the contemporary Islamic world, although in modern Arab countries, the term is more broadly used to denote schools in general.

Majles: *Legislature or parliament.* Majles is the Persian form of the Arabic *majlis* (in Turkish, *meclis*), which is derived from the verb *jalasa* ("to sit"). It can mean a meeting, or sitting, in a number of senses, both private and public. In the public realm, it became the term used for legislatures in the Middle East and North Africa once these began to emerge in the nineteenth century. It can also refer to an appointed consultative body.

Malik: *"King" in Arabic.* Malik derives from the Arabic verb *malaka* ("to own"). It has been used in the modern Arab world to mean king.

Maʿpalim: *Illegal Jewish immigrants to Palestine.* Maʿpalim (Hebrew, "the daring ones") were Jewish immigrants who entered Palestine in violation of immigration quotas established by the British Mandate in Palestine, especially after the 1939 White Paper. The Zionist community in Palestine established the clandestine organization Mossad le-Aliyah Bet in 1938 to assist Jews fleeing Nazi persecution in Europe in reaching Palestine. British forces intercepted many maʿpalim and interned them in camps in Cyprus, including the 4,515 passengers aboard the ship *Exodus,* whose detainment in 1947 helped turn international sentiment against British rule in Palestine.

Mellah: *Jewish quarter of Moroccan towns.* Mellah derives from the Arabic word for salt. It stems from the forced resettlement of the Jewish community in Fez to an outlying saline area, and came to denote Jewish areas throughout Morocco. In urban

areas, mellahs were gated quarters of cities. In rural areas, they were separate Jewish villages.

Minbar: *Pulpit in a mosque.* In a mosque, the sermon (*khitab*) is delivered by the preacher (*khatib*) from a raised pulpit called a minbar, derived from the Arabic *nabara* ("to raise the voice"). See also "khatib."

Mizrahim: *Jews from Islamic countries.* Mizrahim means "the easterners" in Hebrew. It is a term used in modern Israel to denote Jews whose origins extend back to North African, Middle Eastern, and West or South Asian Jewish communities. Some of these communities were quite ancient, especially those in Iraq, Iran, Syria, and Yemen. Most of these communities moved to Israel after its creation in 1948. The term Mizrahim has started to replace "Sephardim," which for a long time was loosely used to denote all Jews who were not European ("Ashkenazim"), but which in a strict sense only refers to the Jews who were expelled from Spain in 1492. See also "Sephardim" and the encyclopedia entry "Adot ha-Mizrah."

Moslem *See Muslim.*

Muezzin: *The one who calls Muslims to pray.* A muezzin (Arabic: *muʾadhdhin)* calls the Muslim faithful to pray, usually from a minaret. The call to prayer must be in Arabic, even though most of the world's Muslims do not speak Arabic.

Mufti: *Type of Islamic cleric.* A mufti is an expert in Islamic law empowered to given religious opinions on various matters. Such an opinion is called a fatwa. See the encyclopedia entry "fatwa."

Mujtahid: *Type of Shiʿite Muslim cleric.* A mujtahid is a Shiʿite religious scholar who is authorized to practice *ijtihad,* or interpretation. While the "door of interpretation" was closed for Sunni Muslims approximately 1,000 years ago, high level Shiʿite clerics called mujtahids still practice *ijtihad.*

Mukhtar: *Chief or headman.* Deriving from the Arabic word *khatara* ("to choose" or "select"), a mukhtar ("selected one") was an official appointed by the Ottoman authorities to serve as a go-between between the government and a tribe, village, or urban quarter. The function was part of the Ottomansʾ centralization efforts, efforts that included attempts to undercut traditional religious figures who had maintained levels of local influence. The position is still found in parts of the Arab world.

Mulai: *Title and form of address.* In Arabic, "my lord." Also mawlai, mawlay. A form of address formerly used when speaking to a king, sultan, or caliph. It is still used in Morocco when referring to the crown prince.

Muslim: *Follower of the Islamic religion.* Muslim (sometimes rendered Moslem) is someone who follows the religion of Islam.

Mutasarrif: *Ottoman provincial official.* A mutasarrif was the recipient of taxes from sub-provincial governorates in the Ottoman empire. By the late Ottoman era, the term denoted the government-appointed head of a governorate, or sanjak (also liwa). See also "liwa."

N

Narghila: *Water pipe.* A narghila (also called *arghila, qalyan,* and *shisha)* is a water pipe used in the Middle East and North Africa to smoke tobacco, usually flavored tobacco called *tombac.* They are commonly seen in all-male coffee houses.

O

Oasis: *Watered area surrounded by desert.* An oasis is a fertile area, watered by wells, that is found in the midst of a desert. They can be small or large.

Oglu: *Turkish for "son of."* When used as part of a male name, it means "son of. . ." For example, Süleimanoglu ("son of Süleiman"). In 1935, the Turkish government obliged Turks to adopt Western-style last, or family, names. Many Turks used this form to create family names.

P

Pasha: *Ottoman administrative and military title.* The Ottomans introduced the title "pasha" (modern Turkish, *paşa)* in the fourteenth century. It was used for the governors of sanjaks, or liwas, but

later was bestowed upon other men of high military or governmental rank. With the reorganization of the Ottoman administration in 1864, governors of provinces (vilayets) were given the title pasha. The term remained in use in Turkey and some Arab countries, although it was banned in most of these in the twentieth century. It is still sometimes used, but only to refer to a man in an honorific fashion. See also "liwa" and "vilayet."

Pesh Merga: *Kurdish, "those who face death."* Modern term used to denote armed Kurdish fighters. It first appeared during the Kurdish war against the Iraqi government that began in 1962.

Q

Qaʾid: *Arabic for "leader."* Arabic term denoting political leadership.

Qaʾimmaqam: *Ottoman provincial official.* The term itself is Arabic, and was the title given by Ottoman authorities to the official appointed to head a subgovernorate called a kaza (also qada). See also "kaza," "liwa," and "vilayet." It was also used to denote a low ranking military officer.

Qanat: *Canal.* A qanat (also qana) can mean an underground water channel for irrigating fields, but can also denote a surface level canal, both small and large (such as the Suez Canal).

Qat: *Plant with mildly stimulant effect.* The leaves of the qat (also khat) plant, Catha edulis, are chewed in southwestern Arabia and eastern Africa for their mildly stimulant effect. Similar to the stimulant qualities of caffeine, qat is chewed in the company of others as an important form of social gathering. In this regard, gathering together to chew qat is akin to gathering in a coffee house to drink coffee or tea. Qat chewing is a major activity in Yemen, whose economic as well as social impact on the country is profound. It is also chewed in African countries like Somalia.

Qibla: *Direction of Islamic prayer.* The qibla is the direction in which Muslims must pray. The first qibla was Jerusalem, but this was quickly changed in the seventh century to the direction of Mecca. Muslims around the globe all pray in the direction of Mecca.

Qirsh: *Monetary unit.* The Arabic word qirsh, and Turkish word ghurush or kuruş, is translated as piastre, itself the Italian name for the medieval peso duro. The qirsh was introduced into the Middle East in the early seventeenth century and became a unit of Ottoman currency equivalent to one-hundredth of a lira. It is still used as a small unit of currency in parts of the Middle East.

Qurʾan: *Holy book of Islam.* The Qurʾan (also Koran) is the holy book of Islam. It consists of *suras* (roughly, chapters) containing *ayas* (verses), and is believed by Muslims to be the literal word of God, as revealed in Arabic to the prophet Muhammad through the medium of the Angel Gabriel. The Qurʾan was redacted within several generations of the Prophet's death in 632, and is read and revered by Muslims worldwide as God's final and definitive message (Arabic: *risala*) to humanity.

R

Reʿaya: *Subjects of the Ottoman government.* Ottoman society was divided into two segments: rulers and ruled. The latter were called the reʿaya, from the Arabic word denoting "flock." The ruling institution—the sultan and his government—were obliged to protect the reʿaya, who in return paid taxes.

Reuter Concession: *Exclusive economic concession proposed by the Shah of Iran to Baron Julius de Reuter.* In July 1872, Nasir al-Din Shah, ruler of Iran, granted Baron Julius de Reuter, a British subject, a sweeping and exclusive seventy-year concession to carry out a number of business ventures within Iran. Among these were the construction of a railroad linking the Caspian Sea and the Persian Gulf, construction of streetcar lines, and operation of mines, among other ventures. Reuter, owner of a news agency, would have been granted an amazingly large amount of economic power with Iran. Opposition to the deal grew, both within Iran and in Europe (particularly Russia, which also had interests in Iran), and the concession was withdrawn in November

1873. Reuter did eventually maintain certain mining and banking rights in Iran, which led to the creation of the Imperial Bank of Persia.

Riyal: *Monetary unit.* The word *riyal* is of Spanish and French origin. The coin was introduced into the Ottoman empire in the nineteenth century, and first used in Iran in 1930, where it was popularly known as the kran. It is the basic currency unit of several Middle Eastern countries today, including Saudi Arabia, Iran, Oman, Yemen, and Qatar.

Roshanfekr: *Persian word for intellectuals.* Roshankekr (Persian, "enlightened thinker") is the Persian word for intellectual.

Ruzname: *Ottoman treasury offices and its registers.* The term comes from the Persian words *ruz* ("day"), and *name* ("book"). The Ottoman government used to term to denote a financial journal or ledger, and referred both to these and the Ottoman treasury offices as ruzname.

S

Salname: *Ottoman government yearbook.* Salname comes from the Persian words *sal* ("year"), and *name* ("book"). Salnames were statistical, geographical, and biographical yearbooks that were first published by the central Ottoman government in 1847 and later, beginning in 1865, by provincial authorities as well. Salnames contained information on population, expenditures, and education. They were discontinued after1922.

Sanjak: *See liwa.*

SAVAK: *Imperial Iranian intelligence agency.* SAVAK was the Persian acronym for the State Security and Intelligence Organization, and was formed by Mohammad Reza Pahlavi, Shah of Iran, in 1967. SAVAK was originally designed to ferret out communist activity, but grew to monitor all forms of internal dissent and external opposition and to censor the press. It was attached to the prime ministry. SAVAK became a feared organization within Iran and among Iranian exiles abroad, and was abolished after the 1979 revolution.

Sayyid: *Arabic word for "master," "lord," "chief," or "mister."* Prior to the coming of Islam, *sayyid* (plural: *sada* or *asyad*) was used in Arabia to denote a tribal chief. After the coming of Islam, it assumed a particular meaning: descendants and certain relatives of the prophet Muhammad. The term *sayyid* thereafter came to denote the direct descendants of the Prophet through his two grandsons, Hasan and Husayn, the sons of the union of the Prophet's daughter, Fatima, and his son-in-law (and cousin), Ali. In some part of the Arab world, notably in the Hijaz region of Arabia and parts of the Fertile Crescent, *sayyid* came to denote those who were part of the lineage of Husayn, while the term *sharif* denoted those descendant from Hasan. *Sayyids* were held in high social esteem. However, the terms *sayyid* or *sid* (also, "sidi": "my lord") have also been used in a variety of Islamic societies as a form of address for holy men and religious figures. It also is the modern Arabic equivalent of "mister." See also the encyclopedia entry "sharif."

Schistosomiasis: *Disease carried by small worms.* Also called bilharzia, the disease is spread by a small worm, known as the blood fluke, that attaches onto snails. Countries such as Egypt have witnessed the spread of the disease thanks to the development of dams, irrigation canals, and other such developmental projects. The medication that kills the snails that carry the disease is both expensive and unsuitable for use without close medical scrutiny. The result is that the disease has spread considerably, and constitutes one of the modern world's most significant parasitic infections.

Sefaretname: *Ottoman diplomatic report.* Derived from the Arabic word *safara* ("trip" or "journey") and the Persian word *name* ("book"), a sefaretname was a report written by an Ottoman diplomat upon his return from a foreign assignment.

Semites: *Members of the Semitic language family.* Semite (adjective: semitic) stems from the Hebrew *Shem,* the name of one of the sons of the Biblical figure Noah. Semites are peoples in the Middle East and Africa who speak one of the Semitic languages, which are branches of the Afro-Asiatic family. Examples of such languages are Amharic, Arabic, Aramaic, and Hebrew.

Sephardim: *Jews in medieval Spain and their modern descendants.* The term comes from the Biblical Hebrew word *Sepharad,* which while probably referring to the city of Sardis in Asia Minor, came to refer to the Iberian peninsula by the time of the Dark Ages in Europe. Sephardim thus referred to the Jews of Spain, who participated in the glittering civilization of Islamic Spain. However, with the Roman Catholic conquest of the final remaining Islamic part of Spain, Granada, in 1492, the Sephardim expelled or forced to convert. The exiles settled in a number of places, including the New World, European regions such as Italy and the Netherlands, and the Ottoman empire. In the latter, they established communities in the Balkans, Egypt, the Fertile Crescent, and North Africa. In their exile, they continued to speak Ladino, a form of medieval Castilian Spanish written in Hebrew letters. The term Sephardim eventually came to be used in an imprecise manner to mean all non-Ashkenazic Jews (Yiddish speaking Jews from central and eastern Europe), including those in Islamic regions like Iraq, Yemen, and Iran, whose ancestors never had lived in Spain. Increasingly, the term "Mizrahim" is being used to denote the Jews of North Africa, the Middle East, and west and south Asia, some of whom were descendants of the Spanish exiles but most of whom were not. See also "Mizrahim" and the encyclopedia article "Ashkenazim."

Serasker: *Highest Ottoman military rank in the nineteenth century.* Created in 1826, the officer of serasker represented the head of the Ottoman military. During the Tanzimat reorganization of government from 1839–1876, the serasker became a powerful figure, in control of his own treasury. The power of the serasker was reduced by Sultan Abdülhamit II, and was renamed minister of war in the early twentieth century. See also "seyfiyye."

Seven Sisters: *Group of Western oil companies in the Middle East.* The Seven Sisters were a cartel of Western oil companies that dominated the Middle Eastern oil industry from 1930–1970. They were: Standard Oil of New Jersey (Exxon), British Petroleum, Royal Dutch Shell, Chevron, Texaco, Mobil, and Gulf Oil. They increasingly lost power starting in the 1950s and 1960s as Middle Eastern countries began nationalizing their oil industries. With the merger of Chevron and Gulf in 1986, the number of "sisters" dropped to six, which remain important companies in the fields of oil refining and distribution.

Seyfiyye: *Ottoman military bureaucracy*. Derived from the Arabic term *sayf* ("sword"), the Ottomans used the term seyfiyye, "men of the sword," to refer to the various types of troops in the Ottoman military. The seyfiyye was replaced by the serasker in 1826, who unified the various types of military forces (with the exception of the navy). See also "serasker."

Shah: *Persian word for "king."* Shah is a title used by several different dynasties that ruled Iran.

Shuttle Diplomacy: *Term denoting a diplomatic intermediary shuttling back and forth between countries in an effort to arrange an agreement among contending countries.* The term was first raised to the level of public discourse to describe the efforts of American Secretary of State Henry Kissinger to bring about a disengagement of forces after the October 1973 Arab–Israeli war. Kissinger had to shuttle back and forth between the capitals of Egypt, Syria, and Israel, carrying his proposals, because the parties could not agree to meet together.

Sidara: *Type of cap used in Iraq.* The sidara was a type of cap introduced in Iraq in the 1920s that resembled a Western military cap that is called a variety of names, including side cap, for-and-aft cap, or overseas cap. Commonly black velvet, it became the emblem of the Iraqi governing and professional classes. It is no longer in use in Iraq, although a similar type of black cap is used by Muslims elsewhere, especially in south and southeast Asia.

Sitt: *Arabic for "lady."* Sitt is often used in female royal titles.

T

Taqlid: *Islamic legal term.* In Sunni Islam, the term taqlid came to mean "deference" or "imitation," in the sense that religious jurisprudents were obliged to defer to the doctrinal precedents of their respective schools of law (the

Shafiʿi, Hanbali, Hanafi, and Maliki schools). This, then, reduces the realm of individual interpretation (*ijtihad*). In Shiʿite Islam, however, the position of marja al-taqlid is quite different, and denotes an elite jurist who is spiritually empowered to employ *ijtihad.* See the encyclopedia article "Marja al-Taqlid."

Tariqa: *Sufi order or brotherhood.* Tariqa is an Arabic word derived from the term meaning "the way." It is used to denote sufi mystical orders. See the encyclopedia entry "Sufism and the Sufi Orders."

Tell: *Hill or mound.* The Arabic word *tall* means a hill, and is used to describe such geographical features. In archeological parlance, however, it refers to a mound containing ancient archeological remains. Finally, it also refers to a large region of North Africa from Morocco to Tunisia.

Thalweg Line: *Maritime boundary.* The thalweg principle of international law, whereby a river or some other body of water constitutes an international border, was most notably used in the Middle East in the case of the border between Iraq and Iran. While at one point in history, the thalweg of the Shatt al-Arab river between the two left the entire river in Iraqi hands, a 1975 treaty moved the thalweg to the midpoint of the river. Overturning this treaty was one of the motivating factors that led Iraq to attack Iran in 1980.

Tishrin: *Arabic term for the tenth and eleventh months of the Gregorian calendar.* In the modern Arab world, Tishrin al-Awwal ("First Tishrin") refers to the Gregorian (Western) month of October, while Tishrin al-Thani ("Second Tishrin") refers to November. Some Arab countries, notably Saudi Arabia, do not use the Gregorian calendar but only the Islamic (hijri) calendar. It is also the name of a newspaper in Syria, named after the initial Arab victories in the October 1973 Arab–Israeli war.

Tiwizi: *Community agricultural support in Berber societies.* Tiwizi is a principle whereby Berbers provide agricultural workers to assist families who need more hands in the fields, and is a socially-mandated obligation.

Toman: *Iranian monetary unit.* Toman is a word of Tatar origin referring to a military unit of 10,000 men, and refers to a gold coin worth ten silver krans (riyals), or 10,000 dinars. It first appeared in Iran ca. 1600. See also "dinar" and "riyal."

Turkmen: *Turkic peoples in Turkmenistan, Iran, and Afghanistan.* The Turkmen are speakers of Western Oghuz Turkic, and were originally pastoral nomads. They lived east of the Caspian Sea and west of the Amu Darya (Oxus) River. In addition, Turkmen minorities today reside in Iraq, Syria, and Turkey.

U

Umma: *Arabic word for community, especially the Islamic community.* The Arabic word umma, derived from *umm* ("mother"), is a term used in Islam to denote the worldwide community of the faithful. In the twentieth century, the term was sometimes used by Arabs to mean "nation" in a political sense, both in global terms (the pan-Arab umma) and local terms (a specific nation).

Urf: *Arabic customary law.* Urf refers to largely unwritten tribal or customary codes that govern social relations, in contradistinction to Islamic law (*shariʿa*) or state legal codes (qanun).

Ustadh: *Arabic for "teacher" or "master."* This term (also ostad or ustaz) is used to denote a teacher or professor, but can also be used as a polite form of address for any educated person.

Uzi: *Type of Israeli firearm.* The uzi is a short submachine gun designed by the Israeli army office Maj. Uziel Gal, after whom it is named.

V

Vali: *Ottoman provincial governor.* The term vali is the Turkish and Persian rendition of the Arabic *wali,* referring to someone who has been deputized to exercise authority. It meant "governor." The Mamluks assigned valis to their smallest administrative units, whereas in Iran and later in the Ottoman empire, a vali was the governor of the largest type of administrative unit. In the Ottoman empire, a vali was head of a *vilayet,* or province. See also "kaza," "liwa," and "vilayet."

Vilayet: *Ottoman Turkish term for province.* A vilayet, from the Arabic word *wilaya,* was the largest administrative unit within the Ottoman empire. See also "vali."

Vizier: *Type of government official; "minister."* Under the Ottomans, the vizier (Arabic: *wazir;* Turkish: *vezir*) served as a government minister. The vezir-i azam, or grand vizier, was the functional equivalent of a prime minister under the sultan. The Ottomans replaced the term with *vekil* (Arabic: *wakil*) in the 1830s, although *wazir* is still in use to denote a government minister in the Arab world.

Y

Yarmulke: *Jewish skullcap.* Jewish males have long worn a skullcap to indicate their submission to a higher authority, that is, God. The very religious wear one at all times, while more secular Jews only don them for religious ceremonies. The Hebrew term for this cap is *kippa.* Some speculate that the term yarmulke is an acronym for *yarai mʾElohim,* "one who is in awe of God."

Z

Zaʿim: *Arabic for "boss" or "leader."* Usually used in an informal manner to denote a strong leader. It is also used as a military rank in some Arab countries.

Zakat: *Islamic tithe, or almsgiving.* Zakat (also zaka) is one of the "Five Pillars of Islam," and is an important religious obligation for Muslims. It requires the giving of an individual's wealth. Historically, it was levied in Islamic countries as a tax upon adult Muslims.

Zawiya: *Islamic religious compound.* From the Arabic word for "corner" or "place of seclusion," a zawiya refers to the compound housing a Sufi brotherhood or the residence of a prominent Sufi master. See the encyclopedia article "Sufism and the Sufi Orders."
