Britain entered into more specific obligations to other allies. In April 1915, it signed a secret treaty promising Constantinople to Russia, thus explicitly jettisoning Britain's long-standing reservations about Russian control of the Straits. (In fact, British governments since the time of Lord Salisbury at the turn of the century had resigned themselves to eventual Russian control of Constantinople.) At the same time, as part of the price of persuading Italy to enter the war on the Allied side, Britain agreed in the Treaty of London that, in a postwar carve-up of the Ottoman dominions, Italy would receive southwest Anatolia. Under an agreement negotiated in 1916 between Sir Mark Sykes and François Georges-Picot, Britain promised France most of Syria, Cilicia, and the oil-bearing region around Mosul in northern Mesopotamia. Most fraught with evil consequence for the British was the Balfour Declaration of November 1917 in which Britain undertook to facilitate the establishment of a national home for the Jewish people in Palestine—with provisos protecting the "civil and religious rights of the existing non-Jewish communities" and the rights of Jews in other countries. All of these engagements were designed to serve urgent wartime objectives rather than long-term interests.

These overlapping (many said conflicting) claims came home to roost at the Paris Peace Settlements in 1919, at which all parties presented their claims. Both the Zionists and the Arabs were represented by pro-British leaders: the Zionists by Chaim Weizmann, the Arabs by a Hijazi delegation headed by Amir Faisal (Faisal I ibn Hussein). T. E. Lawrence acted at the conference as adviser to Amir Faisal, who conformed to British desires in all matters—even to the extent of making friendly gestures toward Zionism. The French, however, proved less amenable. They spoke darkly of "a new Fashoda" and vigorously asserted their territorial demands in the Levant and Anatolia.

In large measure, Britain, as the power in possession, was able to impose its own design on the region. Its forces, commanded by Allenby, were in occupation of the Fertile Crescent and Egypt. Although Allenby's army included French, Italian, and other national units, these were too weak to form a counterweight to British military might. The Bolshevists had in the meantime published the text of the Constantinople convention and renounced their predecessors' claim to the city. The implosion of Russian power and the outbreak of the Russian civil war eliminated Britain's great historic fear of Russian movement south toward the Mediterranean, the Persian Gulf, and India.

British solider and author T. E. Lawrence joined the British Expeditionary Force with the rank of major in 1917, and helped to coordinate the Arab revolt against the Turks. Better known as Lawrence of Arabia, he made friends with the Arabs, learned their language, wore their clothing, and ate their food. **© Library of Congress. Reproduced by permisison.**

Postwar Consolidation of British Influence

Overwhelming military power also enabled the British to dispose of indigenous challenges to their

authority. Rebellion in Egypt in 1919 was repressed by Allenby with a dexterous mixture of force and diplomacy. Revolt in Iraq in 1920 was put down by General Arnold T. Wilson with an iron fist. Riots in Palestine in April 1920 and May 1921 were suppressed, in the latter case by bombarding villages from the air, and succeeded by political concessions.

The Paris Peace Conference did not, in fact, achieve a resolution of territorial issues in the Middle East. In August 1920, the Treaty of Sèvres, by which Turkey gave up all its non-Arab provinces as well as parts of Anatolia, was signed by the Allied powers and representatives of the Ottoman government, which by this time was little more than a diplomatic ghost. Simultaneous secret agreements among the Allies provided for an additional carve-up of much of what remained of Turkish Anatolia. The treaty never came into effect. As a result of the Kemalist revolt, it was disavowed by the Turks and fell into abeyance.

Following the peace conference, France continued to squabble with Britain over a division of the Middle East spoils. The British conceded control of Syria and Lebanon to their erstwhile ally. They were dismayed, however, when the French, in July 1920, unceremoniously ejected Faisal from Damascus, where his enthusiastic supporters had proclaimed him king of Syria. Faisal arrived in British-controlled Palestine as a refugee with a large entourage. A harried British governor of Haifa complained that they were "in and out like a swarm of bees" and warned that "they cannot stay here indefinitely." There was no disposition, however, on the part of his British patrons to seek to reinstall Faisal in Damascus. As a kind of consolation prize, the British arranged for his "election" by cooperative Mesopotamian notables as king of Iraq.

The British successfully resisted broader French territorial aspirations. The northern oil-bearing region of Mesopotamia, inhabited mainly by Kurds, was assigned to British-controlled Iraq. This departure from the wartime agreement had been informally agreed to at a meeting of the British prime minister, David Lloyd George, and the French prime minister, Georges Clemenceau, in November 1918, but the French continued for some time to grumble about the arrangement. French aspirations to a role in Palestine, where they saw themselves as historic protectors of Christian interests, were thrust aside by the British.

Meanwhile, in Transjordan, Faisal's brother, Abdullah I ibn Hussein, had suddenly appeared in October 1920 at the head of a motley army, threatening to attack the French in Syria and to reclaim his brother's "kingdom" there. The British government saw little advantage in taking over the unfertile hollow of the Fertile Crescent. On the other hand, they could not permit Abdullah to drag them into a war with the French. The foreign secretary, Lord George Nathaniel Curzon, reluctantly sanctioned the dispatch of some British officers to the territory, ostensibly to prevent its "relapse into anarchy"—in reality to restrain Abdullah from adventures against the French.

In March 1921, Churchill, then colonial secretary, convened a conference in Cairo of British officials in the region. This meeting set out broad lines of British administration in the Middle East that were to endure for the next decade. Under this arrangement, Abdullah was established as amir of Transjordan; the territory was to form part of the British mandate over Palestine without, however, being open to Jewish settlement. While Abdullah formally ruled the country, the British resident and a small number of other officials discreetly steered policy in directions compatible with British interests.

Reduction of Military Presence

Having established their paramountcy, the British rapidly reduced their military establishment in the Middle East. In the early 1920s, the conservative press in Britain, particularly newspapers owned by Lords Northcliffe and Beaverbrook, agitated against large military expenditures in the region and called for a British exit from recent acquisitions there. In a general climate of demobilization and budget cutting, the government felt obliged to withdraw the bulk of its troops. Henceforth, except in times of crisis, the British did not maintain a large standing army in any part of the Middle East except at the strategically vital Suez.

For the rest of the period between the wars, the British maintained security in the Middle East mainly with locally recruited forces financed by locally collected revenues. Riots, disturbances, and

other challenges to British authority were suppressed by the new tactic of aerial bombardment, demonstrative shows of strength, and limited political concessions.

In the age of Gordon and Kitchener, Middle East empire building had a jingoistic tinge, but after 1914 this tendency disappeared. Unlike other parts of the empire—notably, regions of white settlement—Middle East imperialism had no significant popular constituency in Britain. (France, where there was a strong pressure group on behalf of Roman Catholic interests in Syria, was very different.)

At the same time, the legend of Lawrence of Arabia, stimulated first by public lantern shows in Britain and America and later by T. E. Lawrence's writings on the Arab revolt, encouraged the growth of public interest in Arabia. Although the Arab revolt had only minor military significance, it formed the basis of myth and countermyth. The myth was of a natural affinity between the British Empire and Arab desert warriors. The countermyth was of the betrayal of Arab nationalism by duplicitous British diplomacy. Both myths exercised a powerful subliminal influence on Anglo–Arab attitudes over the next generation. The Arab vogue was further encouraged by the writings of Middle Eastern explorers, travelers, and administrators, such as Freya Stark, Gertrude Bell, and Ronald Storrs. The great Victorian classics of Arabian exploration by writers such as Charles Doughty and Richard Francis Burton were revived and achieved a certain réclame.

The official mind of British imperialism, however, was shaped less by sentimental considerations than by hardheaded, realistic calculation of national interest. More than anything, official thinking was predicated on concern about India—specifically, about the security of routes to the subcontinent and the Far East and the possible effects of Middle East developments on internal security in India. With the growth of aviation as well as sea traffic, the need for a string of secure air bases was seen as vital. Indian priorities also lay behind British officials' anxiety about the inflammatory threat, as they saw it, of growing pan-Islamic feeling on the large Muslim minority in India. As it turned out, such fears proved exaggerated: Indian Muslims were not greatly preoccupied by Middle Eastern concerns.

Horatio Herbert Kitchener had a highly successful military career. Among his duties, he was sirdar (or commander) of the Anglo/Egyptian army in 1892, involved in the 1898 battle of Omdurman and Fashoda incident; governor-general of the Sudan in 1899; and commander in chief of British Forces in South Africa from 1900 to 1902. **© HULTON-DEUTSCH COLLECTION/CORBIS. The resurgence of Turkey under Atatürk caused some anxiety in Britain and led to a momentary crisis at Chanak (near Constantinople) in the autumn of 1922. As the revived Turkish army advanced on Constantinople, British and French forces, in occupation of the city, prepared to resist. Lloyd George, who had given encouragement to the disastrous Greek invasion of Anatolia, was at first inclined to order British forces to stand and fight. But there was no enthusiasm in Britain for such a war. The episode led to the withdrawal of Conservative support for Lloyd George and his fall from power. With the evacuation of British and French forces

from Constantinople, the crisis passed. The new Turkish regime signed the Treaty of Lausanne in July 1923, giving up any claim to the Ottoman Empire's former Arab provinces—but holding on to the Turkish, Kurdish, and former Armenian regions of Anatolia.

With the settlement in 1923 of differences over the border between Palestine and Syria, British diplomatic conflict with the French diminished. Disputes with the United States over oil concessions were settled in 1925 with a division of interests in the northern Iraqi petroleum industry. For the next decade, Britain could control the region without worrying about any significant great-power competitor.

British policymaking in the Middle East was not centralized in any one government department. The foreign, colonial, India, and war offices all held responsibility at certain periods for different parts of the region. Broadly speaking, the foreign office was responsible for Egypt, the India office for the Persian Gulf, and the colonial office (from 1921) for the mandates in Palestine, Transjordan, and Iraq. Each of these departments refracted its specific angle of vision and concerns in its formulation of policy. Aden, for example, whose importance to Britain was primarily as a coaling station for ships en route to India, was ruled until 1932 directly from Bombay; after that, responsibility was taken over by the central government in Delhi, and, beginning in 1937, Aden became a crown colony. In some cases, diffusion of responsibility led to conflict between departments: Palestine, over which the colonial and foreign offices clashed repeatedly, was a case in point.

Indirect Rule and "Benevolent Paternalism"

Britain's favored method of rule in the Middle East was indirect and inexpensive: this was a limited liability empire. The model was not India but Egypt, where British advisers had guided government policy since the start of the British occupation. Hardly anywhere did direct rule by a British administration survive intact until after World War II. Typical of British attitudes throughout the region during the period was the comment of the colonial secretary, Lord Cranborne, in 1942: "We not only disclaim any intention of establishing direct rule, but also quite sincerely and genuinely do not wish to do so." Warning against direct British administration of the tribal hinterland of Aden colony, Cranborne added: "We must keep steadily in front of us the aim of establishing in Aden protectorate a group of efficient Arab authorities who will conduct their own administration under the general guidance and protection of His Majesty's government." The characteristic tone of British governance was set by Sir Percy Cox in Iraq and by Allenby in Egypt: benevolent paternalism in time of peace; readiness to resort to brute force in reaction to civil unrest.

The British did not believe in large public investment in this new empire. They nevertheless greatly improved the primitive economic infrastructure bequeathed them by their Ottoman predecessors, established sound public finances, built solid judicial and (though slowly) educational systems, rooted out corruption, and protected minorities. Efficient government was not the primary purpose of imperial rule, but the British installed it almost by reflex.

The mandatory system in Palestine, Transjordan, and Iraq was a constitutional innovation. Formally, the British ruled these territories not as a colonial power but under the ultimate authority of the League of Nations. Mandatory government was to last for a limited period with the specific goal of preparing the countries for self-rule. All this, in the eyes of most observers, was merely a fig leaf to cover the nakedness of imperial acquisition. Although Britain was ultimately responsible to the league for its conduct of affairs in the mandated territories and was obliged to render account annually of its administration, the league exercised little influence over policy. In effect, Britain ruled the mandated territories as if they were colonies, though here too they sought to establish limited local self-government.

As in other parts of the empire, British power ultimately rested on a collaborative equation with local elements. Its exact form varied depending on local contingencies. In some places, the British practiced a variant of the politics of notables inherited from the Ottomans. In others, they established mutually beneficial alliances with minorities—as with the Jews in Palestine for a time. Elsewhere, they combined these policies with patronage of dynastic rulers, particularly with the family of Sharif Husayn.

Britain's patronage of the Hashimites was dealt a blow in 1925 when Sharif Husayn was driven out of the Hijaz by the resurgent Wahhabi army of Ibn Saʿud, ruler of Najd. Husayn escaped in a British ship bound for Cyprus. Although Ibn Saʿud had been granted a British subsidy in 1916, he had not joined in the Arab revolt and had remained jealous of his Hashimite neighbor. Compelled to accept realities, the British quickly came to terms with Ibn Saʿud. In 1927, they signed a treaty with him that recognized his sovereignty over the Hijaz and, as a result, his leading position among native rulers in the Arabian Peninsula.

Although Ibn Saʿud employed a freelance British adviser, Harry St. John Bridger Philby, a convert to Islam, the Saudi regime's relations with Britain were never intimate. In the kingdom of Saudi Arabia, which Ibn Saʿud proclaimed in 1932, U.S. rather than British companies were favored in the scramble for oil concessions. At the time, this seemed of minor importance; later, when vast oil reserves were discovered, the British regretted the failure. Oil production on a large scale, however, did not begin in the country until after World War II.

Until the late 1930s, the limited liability system survived more or less intact. The independence granted to Egypt in 1922 and Iraq in 1932 did not fundamentally affect Britain's paramountcy. In each case, Britain retained effective control over vital strategic and economic interests. The continuation of this "veiled protectorate," as it became known in the Egyptian case, exacerbated nationalist frustrations and resentments, but these posed no imminent threat to Britain. Independence in Iraq was followed by the mass killing of members of the Nestorian Christian community, known as Assyrians. Thousands fled overseas. Like other minorities, they had looked to the British for protection; the failure to assure their security left a dark stain on Britain's imperial record in the country.

Increasing Threats to British Control

From 1936 onward, Britain's dominance in the Middle East was increasingly threatened from within and without. Mussolini's determination to create an Italian empire around the Mediterranean and the Italian conquest of Ethiopia in 1935 posed a sudden danger to Britain. The powerful Italian broadcasting station on the island of Bari began broadcasting anti-British propaganda to the Middle East. The Italian dictator wooed Ibn Saʿud and other Middle Eastern rulers and gave covert support to anti-British elements in the region, including the anti-British leader of the Palestine Arab nationalist movement, Hajj Amin al-Husayni. The Palestine Arab Revolt between 1936 and 1939 tied down large numbers of British troops at a time when, with the Nazi threat looming in Europe, the British could ill afford such a diversion.

Conscious of their limited resources, particularly of military manpower, the British faced unpalatable policymaking dilemmas in the final months of the peace and felt compelled to subordinate all other considerations to the imperatives of imperial security: hence, the White Papers on Palestine of May 1939, which reversed the Balfour Declaration policy of support for a national home for the Jewish people and restricted Jewish immigration to Palestine at a time of mounting danger to Jews in Europe.

World War II

During World War II, the Middle East played a vital part in British strategic calculations. As prime minister from May 1940, Churchill placed a high priority on bolstering British power in the region. At a critical phase in the war, he insisted on dispatching large numbers of tanks and men to reinforce British forces confronting the Italians, and later the Germans, on the border between Egypt and Libya.

The British could no longer afford the luxury of a piecemeal bureaucratic approach to the Middle East. Economic planning and supply questions for the entire region were coordinated by the Middle East Supply Center in Cairo. A British minister resident was sent to Cairo to take charge of overall policy making. (One incumbent, Lord Moyne, a close friend of Churchill, was murdered in November 1944 by Zionist terrorists as a protest against British policy in Palestine.)

After Italian entry into the war in June 1940, the danger of attack in the Mediterranean precluded use of the Suez Canal by British ships carrying supplies to and from India and the Far East. Ships carrying reinforcements to British forces in Egypt had to take the Cape of Good Hope route before passing through the canal from south to north.

Except in Egypt, where they built up their forces to confront the Italians and later the Germans, the British could not afford to maintain more than a thin crust of military control in most of the region during the war. Yet by a mixture of diplomacy, guile, and occasional demonstrative concentrations of force, they succeeded in averting serious challenge from nationalist opponents. The two most dangerous threats came in Iraq and Egypt. A pro-Axis coup erupted in Iraq in April 1941, headed by Rashid Ali al-Kaylani, aided by Italian and Nazi agents and by the ex-mufti of Jerusalem, Hajj Amin al-Husayni. With pro-Vichy forces in control of Syria and Lebanon, British power throughout the Fertile Crescent seemed for a moment on the verge of toppling. But in May, a small British force from the Habbaniya air base moved into Baghdad. Al-Kaylani and the ex-mufti fled to Germany where they devoted themselves to anti-British propaganda. The following month, British and Free French forces, operating from Palestine, advanced into Syria and Lebanon and installed new French administrations sympathetic to the Allied cause.

The other threat appeared in Egypt, where nationalist elements, particularly in the Egyptian army, were impressed by Axis military successes and sought to take advantage of Britain's moment of weakness. The British reacted firmly. In February 1942, British tanks surrounded the royal palace as a weeping King Farouk was forced by ultimatum to appoint a prime minister acceptable to the British, Mustafa al-Nahhas, head of the Wafd party. From the British point of view, the Abdin palace coup, as the episode became known, gave a salutary demonstration of British resolve at a time of acute military pressure from the Germans in the western desert.

The battle in the western desert swung to and fro. In the initial phase, between June 1940 and February 1941, a British army under General Archibald Wavell beat back an offensive by Italian forces under Marshal Rodolfo Graziani and advanced into Cyrenaica. In the spring of 1941, however, Axis forces were bolstered by the arrival of the German Afrika Korps commanded by General Erwin Rommel, a brilliant strategist. The tide was reversed: the British were routed from Libya, and the British garrison at Tobruk was besieged and captured. By mid-1942, the Germans had advanced deep into Egypt. Government departments in Cairo began burning secret documents, and emergency evacuation plans were prepared.

In November 1942, the critical battle of the campaign was fought against Rommel at al-Alamayn by the British Eighth Army under General Bernard Montgomery. Months of careful planning coupled with imaginative mobile tactics, intelligent exploitation of ultra signals intelligence, as well as British superiority in numbers of men and machines, brought a decisive victory. This was, in Churchill's phrase, "the end of the beginning." Thereafter, the British strategic position in the region eased. Almost simultaneously in Morocco and Algeria, Operation Torch, the landing of U.S. and British forces commanded by General Eisenhower, had opened a new front against the Axis. By May 1943, the Germans and Italians had been cleared out of northern Africa.

Churchill's preoccupation with the Mediterranean led him up some blind alleys. He tried repeatedly to draw Turkey into the war on the Allied side but without success. Turkey remained neutral until early 1945, when it declared war on Germany at the last moment in order to qualify for membership in the United Nations (UN). The United States opposed Churchill's Mediterranean strategy both on military grounds and because the United States did not wish to give the appearance of propping up British imperial interests. Ibn Saʿud, too, remained neutral until the last moment, though he received handsome subsidies from the British and the United States and made some gestures of support for the Allied cause.

Britain did not seek territorial acquisition in the Middle East in World War II. It nevertheless found itself drawn into new responsibilities. Following the German attack on the Soviet Union in June 1941, Britain joined the USSR in occupying Iran. Arms and other supplies to the Soviet Union were sent by rail through Iran. With the expulsion of the last Axis forces from Libya in 1943, that country was placed under military administration—French in the Fezzan and British in Tripolitania and Cyrenaica. British forces also occupied the former Italian possessions of Eritrea, Abyssinia, and Italian Somaliland. Abyssinia was restored to its indigenous imperial ruler. Eritrea remained under British rule until 1952 when it was annexed by Abyssinia. Italian

Somaliland was returned to Italy as a UN trusteeship in 1950. Libya became independent in December 1951, though Britain was granted the right under the Anglo–Libyan Alliance Treaty of 1953 to maintain military installations there.

During the war, large reserves of oil in the Arabian Peninsula had come onstream. Because of the closure of the Mediterranean to British commercial shipping, British use of Middle East oil during the war was mainly restricted to the area east of the Suez. Elsewhere, Britain mainly relied on imports from the Americas. After the war, the balance changed. Over the next three decades, Britain became steadily more dependent on oil imports from the Middle East, especially Kuwait.

Postwar Loss of Empire and the Cold War

In the later stages of the war, the British government, seeing the nationalist mood in many Arab countries, tried to move toward a new relationship with the Arabs. Following a speech by the British foreign secretary, Anthony Eden, in which he indicated British sympathy for the idea of Arab unity, a conference of Arab states at Alexandria in October 1944 approved the foundation of the League of Arab States. The effort to ride the tiger, however, had only limited success; the British soon found that Arab nationalism turned strongly against them.

During the war, the Soviet Union had cautiously raised its diplomatic profile in the Middle East. After 1945, the region became a secondary arena of great-power conflict in the Cold War. In 1945 and 1946, the USSR signaled its newly aggressive posture by attempting to establish pro-Soviet administrations in northern Iran. Eventually British and American, as well as Russian, forces withdrew from Iran and a pro-Western regime was consolidated under Mohammad Reza Pahlavi.

Elsewhere, Soviet influence was exercised by propaganda and subversion rather than direct military intervention. Although Communist parties remained weak in the region, Soviet sponsorship of Arab nationalist movements posed a growing threat to Western interests in general and the British in particular.

The end of British rule in India in 1947 lessened the strategic argument for a major British military commitment in the Middle East. But oil—both investments and supply—and the security of the Suez Canal remained central British concerns. British policy now faced acute difficulties in the Middle East: on the one hand, Britain retained vital interests there; on the other, its postwar economic debilitation left it unable to muster the military forces required to meet any serious challenge to control those interests.

As a result, Britain was increasingly overshadowed by the United States in the Middle East. Under the Truman Doctrine, enunciated in 1947, the United States replaced Britain as the main provider of military and economic assistance to Greece and Turkey. The United States had already begun edging the British out of monopolistic control of oil concessions. Now, the United States became the dominant external diplomatic power, particularly in Saudi Arabia. It established a large air base in Saudi Arabia, built the Trans-Arabian Pipeline, and became the major external source of arms and other aid. Saudi relations with Britain were meanwhile clouded by the Buraymi Oasis Dispute (claimed by Abu Dhabi and Oman, which were both under British protection). The dispute flared into military conflict in 1952 and again in 1955; it led to a breach in Anglo–Saudi diplomatic relations between 1956 and 1963.

Palestine. British military and political weakness was damagingly demonstrated to the world by the collapse of the British mandate in Palestine. In spite of the presence of substantial British forces and the experience gained in crushing Arab insurgency between 1936 and 1939, the mandatory government proved unable to assert its authority in the face of a revolt by the half million Jews in the country.

The international ramifications of the Palestine conflict created serious difficulties for the British between 1945 and 1948. In the British-occupied zones of Germany and Austria, the military authorities were faced with growing numbers of Jewish displaced persons, the majority of whom demanded to be allowed to proceed to Palestine. In the United States, on which Britain depended for economic aid, the assertive and electorally significant Jewish community pressed Congress and President Harry Truman to secure a pro-Zionist outcome in Palestine. Meanwhile, British diplomats

throughout the Arab Middle East reported that the Palestine question had become a central mobilizing issue for Arab nationalists and anti-British agitators.

Although the colonial office remained formally responsible for Palestine, these international complications led the foreign office to take effective control of British policymaking on the issue after 1945. The Labour Government's foreign secretary, Ernest Bevin, adopted an anti-Zionist position, which at times tipped over the edge into antisemitism; his undiplomatic outspokenness secured applause from frustrated officials but was bitterly resented by many Jews. In the final stages of the crisis (1947–1948), the British publicly washed their hands of the matter, professing to leave it to the decision of the United Nations. Yet, following the decision of the UN General Assembly on 29 November 1947 to partition Palestine into Jewish and Arab states, the British barely cooperated in implementing the decision. Privately, Bevin encouraged the government of Transjordan to reach a modus vivendi with the Zionists on the basis of a different kind of partition, one in which the Transjordanians would take over the Arab-inhabited hill regions of the country and coexist with a Jewish state in the rest of Palestine. In the end this was, broadly speaking, the outcome.

The Arab–Israeli War, which lasted from 1947 to 1949, tightened the British connection with Transjordan. Although the country had been granted independence in 1946, it remained under British tutelage. In March 1948, an alliance treaty was concluded in which the two countries promised each other military assistance and Transjordan agreed to the stationing of British forces in the country "until such a time . . . that the state of the world renders such measures unnecessary." Britain was the only country in the world to recognize the Jordanian annexation of the West Bank.

The Zionists' feat in driving the British out of Palestine in 1948 depressed British prestige throughout the region. The British government after 1945 made strenuous efforts to dissociate itself from Zionism; Arab nationalists for the next generation nevertheless attributed the creation of Israel in large measure to Britain's earlier support of a national home for the Jewish people.

British Influence in Decline

After Palestine, the second significant test of British political will in the Middle East came in Iran. In 1951, the Anglo–Iranian Oil Company, in which the British government owned 51 percent of the shares, was nationalized by legislation in the Iranian parliament. A nationalist government, headed by Mohammad Mossadegh, defied British attempts to secure a reversal of the nationalization. With the support of major international oil companies, the British government organized a boycott of Iranian oil. Diplomatic relations between the two countries were broken. The departure of foreign oil exports led to closure of the Abadan oil refinery. As the oil companies refused to process, ship, or purchase Iranian oil, the entire petroleum industry in the country ground to a halt. At the height of the crisis in 1953, the Shah, who strongly opposed Mossadegh, fled the country.

Meanwhile, in November 1952, the British had approached the United States about the possibility of organizing a joint covert operation to protect western interests in Iran. Shortly afterward, an Iranian army coup, engineered by the U.S. Central Intelligence Agency with British help, overthrew Mossadegh and brought about the return of the Shah. The Iranian oil industry was reorganized: The British granted formal recognition of Iranian ownership of the oil industry in exchange for the lease of its operations to a multinational consortium. The British share in this consortium was reduced to under a half, with the remainder held mainly by U.S. companies.

Of even greater concern to British governments was the deterioration of the British position in Egypt. Egyptian nationalists, chafing under what was seen as continued behind-the-scenes British influence, demanded the renegotiation of the Anglo–Egyptian treaty of 1936 and the closing of British bases. There was also conflict with Britain over the Sudan, which was ruled by Britain though it was formally an Anglo–Egyptian condominium; the Egyptian government now sought to annex the country to Egypt. In January 1952, anti-British riots broke out in Egypt and paved the way for the revolution of July 1952 in which a group of military officers, headed by Muhammad Naguib and Gamal Abdel Nasser, seized power, deposed the king, and declared a republic.

The British now began to consider moving the center of gravity of their Middle East operations to a more secure point. A first step was the decision in December 1952 to move the Middle East headquarters of the British armed forces from Egypt to Cyprus.

In the hope of constructing a bulwark against Soviet subversion and of limiting the growth of anti-Western influences in the region, Britain and the United States had proposed in October 1951 the creation of the Middle East Defense Organization. Turkey, which was concerned about Soviet pressure for a new regime at the Straits, expressed willingness to join such an alliance; but Egypt rejected it, and no other Middle Eastern state expressed interest, whereupon the scheme was abandoned.

Other such proposals met similar fates. The Baghdad Pact of 1955 represented a final attempt by the western powers, with the United States by this time playing the leading role, to create a regional framework under their auspices. The core of the scheme was a multilateral military aid treaty signed by Britain, Iraq, Turkey, Iran, and Pakistan, with the United States acting as an interested outside party. No Arab state apart from Iraq could be induced to join the pact, and Egypt, in particular, opposed it vigorously. The failure to attract Arab members was seen as a further sign of the decline of British authority in the region.

In Jordan, the young King Hussein ibn Talal, educated at Harrow and Sandhurst, became the most pro-British of postwar Middle East rulers. His cultural formation was as much British as Arab; he maintained a home in Britain and was the one Arab ruler who was a popular public figure in Britain (his second wife was British). Such personal predilections, however, could not overcome the larger forces shaping events. Hussein, whose long career was marked by frequent shifts of policy consummated with supreme maneuvering skill, found himself compelled to bend to the anti-British wind. In March 1956, responding to external and internal political pressures, he dismissed the British commander of his army, Sir John Bagot Glubb. Since the formation of the Transjordanian emirate in 1921, the state's army, the Arab Legion, had always been commanded by a British officer. In his ability to reconcile loyalties to the British and to his Arab employer, Glubb had been characteristic of a fading type of British officer in the Middle East. While commanding the Arab Legion he had routinely supplied the British government with secret copies of Jordan's war plans. The dismissal of "Glubb Pasha" was generally regarded as the end of an era and a telling sign of the decline of British influence.

The Suez Canal

The supreme crisis of British power in the Middle East came later that year, appropriately at the focal point of Britain's interests in the region and the reason d'être of its presence there—the Suez Canal. In spite of its gradually diminishing economic position relative to other powers, Britain remained the world's foremost shipping nation, and the British merchant fleet was by far the largest user of the canal. With the growth of motor transport and the switch from coal to oil as the main industrial fuel, Britain had become overwhelmingly reliant on the importation of Middle East oil carried through the canal in tankers. Pressure from the Egyptian government for a British evacuation of the Suez Canal zone, therefore, encountered stiff resistance.

In October 1954, Britain had promised to withdraw all its force from the canal zone by mid-1956. The agreement, however, was hedged with several provisos reminiscent of the veiled protectorate, among them a stipulation that Egypt continue to offer Britain "such facilities as may be necessary to place the Base [in the canal zone] on a war footing and to operate it effectively" if any outside power attacked a member of the Arab League or Turkey. In November 1955, British troops withdrew from the Sudan as the country moved toward full independence in January 1956. The following July, in accordance with the 1954 agreement, Britain withdrew the last of its troops from the canal zone.

Nationalism and the Brink of War. Hardly had the last British soldiers packed their bags, however, than the Egyptian president afforded the British a pretext to return. On 26 July, Nasser, infuriated by the withdrawal of an offer by the United States, Britain, and the World Bank to finance the construction of a new dam at Aswan, announced the nationalization of the Suez Canal Company, which operated the canal. The British *locus standi* in the matter was doubtful. The British government owned a minority stake

in the company, but nationalization in itself was no offense against international law, provided compensation was paid, and the Egyptians insisted that they would continue to operate the canal as before.

The nationalization was, nevertheless, regarded by the British prime minister, Anthony Eden, as an intolerable affront. When diplomacy failed to secure an Egyptian retreat, the British prepared for war. They were joined by France, which had its own reasons for opposing the Nasser regime on account of Egypt's support of Algerian rebels. Israel, which had suffered a series of border incursions from Egypt, was also drawn into military and diplomatic planning. Conspiratorial discussions among representatives of the three countries at a villa in the Paris suburb of Sèvres from 22 to 24 October culminated in a secret treaty. The agreement mapped out a scenario for war with Egypt. Israel would attack first across the Sinai peninsula. The British and French would then enter the conflict, ostensibly to secure the Suez Canal, in fact to destroy Nasser's regime.

The Israelis attacked on 29 October, and the British and French duly issued an ultimatum the next day calling on Israel and Egypt to withdraw to positions 10 miles east and west of the Suez Canal (the Israelis had not yet, in fact, reached the canal). In the absence of Egyptian acquiescence, British and French planes began bombing Egyptian military targets on 31 October. On 5 November, the two powers landed paratroops. The next day, however, British policy went into reverse as a result of U.S. opposition to the invasion and of growing market pressure on sterling. Britain and France were humiliatingly obliged to agree to a cease-fire, and by Christmas they had withdrawn their forces from Egypt.

Britain's collusion with France and Israel in the events leading to the Suez war became the subject of bitter controversy in Britain. The issue is said to have divided the nation more than any foreign-policy question since Munich. The Labour Party, a small part of the Conservative party, some foreign office officials, and most enlightened opinion were hostile to Eden's policy. For the British government, Suez was an unmitigated catastrophe—not least in the severe strains it placed on relations with the United States. Eden resigned a few weeks later, complaining of ill health.

Although Suez is generally regarded as a watershed in British history, heralding a wider imperial withdrawal, Britain continued for another decade to maintain a substantial military presence in the Middle East and to be ready on occasion to use it forcefully in defense of its interests.

Last Vestiges of Empire

The next flashpoint was Jordan. In March 1957, a nationalist government in Jordan abrogated the Anglo–Jordanian Treaty. In July 1958, the Jordanian regime was severely shaken by the revolution in Iraq, in which the Hashimite regime was ousted and the young King Faisal II ibn Ghazi and the pro-British Prime Minister Nuri al-Saʿid were both murdered. British paratroops were sent, at the request of King Hussein, to prevent a similar revolution in Jordan. Two aspects of this intervention, code-named Operation Fortitude, illustrated the changed political environment within which the British, perforce, now operated. First, the cabinet refused to commit British forces until the approval of the U.S. government had been secured. Second, the British requested and received permission from Israel to overfly Israeli territory in order to transport troops from bases on Cyprus. The British force succeeded in bolstering the Hashimite monarchy without firing a shot. The pro-British Jordanian monarchy survived, but Britain lost its bases in Iraq as well as its oil interests there.

In 1961, when Kuwait, hitherto a British protectorate, secured independence, the military regime in Iraq threatened a takeover of the oil-rich principality. As at the time of the intervention in Jordan in 1958, the British made sure that they had U.S. approval before taking military action. Eight thousand British troops were sent to Kuwait and remained there as a deterrent against Iraqi invasion until 1963.

In Aden in the mid-1960s, British forces conducted a miserable campaign against nationalist insurgents supported by Egypt. The British military headquarters at Aden were evacuated in November 1967 when the Federation of South Arabia achieved independence as the People's Democratic Republic of Yemen. Although the writing was on the wall for what remained of British power in the Middle East, there was no complete pullout yet. With the liqui-

dation of the base at Aden, Britain expanded its military presence in Bahrain and other Gulf principalities.

In the crisis prior to the outbreak of the Arab–Israel War of 1967, the British government of Harold Wilson briefly considered participating in the dispatch of an international naval flotilla to assert the right of passage to Israel through the Strait of Tiran, which the Egyptian government had declared closed against Israeli and Israeli-bound ships. But no other country was prepared to join in the effort, and the idea was dropped. Although both Wilson and his foreign secretary, George Brown, were sympathetic to Israel, their attitude was not governed by any pro-Zionist altruism. The British remained vitally interested in free passage through the Suez Canal. Upon the outbreak of war with Israel in June 1967, Nasser closed the canal to all shipping; it did not open again until 1975. The closure severely affected the British balance of payments. The British economy was blown off course, and the government was compelled, against its wish, to devalue sterling in November of that year.

Only in 1968 did the Wilson government abandon pretensions to world-power status by dropping the east-of-Suez defense policy. In March 1970, the revolutionary government in Libya, headed by Colonel Muammar al-Qaddafi who had attended an officers' training school in Britain, ejected the British from their bases in the country. British forces withdrew from Bahrain in 1971, but retained naval facilities there. Also in 1971, British forces left Abu Dhabi, whereupon the seven Trucial Coast shaykhdoms formed the federation of the United Arab Emirates. The British retained troops in Oman, where they helped suppress a leftist rebellion in the Dhufar region. Although British forces were formally withdrawn in 1976, many senior British officers remained on individual contracts as commanders of the Omani army. Only in 1984 was the British commander in chief of the country's armed forces replaced by an Omani. After that, the sole remaining permanent British military presence in the Middle East was in the sovereign bases on Cyprus.

With the elimination of its military power in the region, Britain found itself relegated to a secondary role in Middle Eastern politics. More and more, Britain was buffeted and unable to deflect ill political and economic winds blowing from the Middle East.

Militant Leila Khaled was one of the two hijackers who placed a time bomb on an American TWA plane and damaged the jet in Damascus, Syria, on 29 August 1969. Pictured with a machine gun, she rejoined her guerrilla unit in Amman, Jordan.

Oil, Terrorism, and the British Economy

During the 1970s, the exploits of Palestinian Arab terrorists and the anti-Western rhetoric of Middle East leaders like Qaddafi evoked some admiration on the radical left of the political spectrum in Britain as elsewhere in Europe. Episodes such as the hijacking by Palestinian terrorists of two planes to a desert aerodrome in Jordan—the episode that occasioned the Black September conflict between the Jordanian government and the Palestine Liberation organization in 1970—riveted television audiences in Britain. In that instance, the government of Prime Minister Edward Heath decided to give way to terrorist demands and released an imprisoned Palestinian, Leila Khaled, who became a folk hero of the revolutionary left.

The Arab–Israel War of 1973 and the ensuing international energy crisis had dramatic and damaging effects on the British economy. The sudden huge increase in the price of oil and the restriction of supply by the oil producers' cartel, the Organization of Petroleum Exporting Countries (OPEC), were the major causes of the stagflation that afflicted Britain in the mid-1970s. The coal miners' union attempted to seize the opportunity offered by the general rise in energy prices to secure a large increase in wages paid by the nationalized coal industry. The miners' strike ushered in a bitter confrontation with the Conservative government of Heath, which called a general election on the issue in February 1974 and narrowly lost to the Labour Party.

As a member of the European Economic Community (EEC) from 1973 onward, Britain generally sought to adjust her diplomacy in the Middle East to conform to a consensus of EEC members. In the aftermath of the 1973 and 1979 oil crises, this resulted in a suddenly humble attitude by former imperial powers to sometime protégés such as Iran and the Gulf emirates. A case in point was the Venice Declaration, issued by the EEC in June 1980, which marked a significant shift in diplomatic posture toward the Arab position in the conflict with Israel.

The power of OPEC enabled the producing states at last to seize effective control over their oil industries. During the 1970s and 1980s, they moved toward vertical integration of the industry, nationalizing the extraction installations, establishing refineries and petrochemical industries, investing in their own transportation of products by tanker or pipeline, and creating their own marketing mechanisms. The power of the international oil companies in the region consequently dwindled. The British government's direct interest in Middle East oil evaporated in the 1980s when the government of Prime Minister Margaret Thatcher sold off government share holdings in British Petroleum and Anglo–Dutch Shell.

Unlike most western industrial countries, however, Britain enjoyed fortuitous good fortune in the discovery and successful development of indigenous oil resources. Its dependence on Middle East oil imports ended after 1980 with the arrival onstream of large oil reserves from the North Sea. As Britain's oil production grew, it was able to play a major role in weakening and ultimately destroying the effectiveness of OPEC. Although oil production costs were much higher in the North Sea than in the Middle East, the British, in concert with other non-OPEC producers, proved able to undercut the floor prices set by OPEC. Several OPEC members, desperate for revenues to sustain their commitments to large expenditures on armaments or social programs, broke cartel discipline and secretly sold at lower prices. With demand flagging, this led in 1986 to a sudden collapse in oil prices.

In the 1980s, Middle Eastern politics spilled over onto the streets of London with a spate of terrorist incidents, including assassinations, bombings, and embassy seizures. In 1984, a British policewoman was murdered in the street during a demonstration in front of the Libyan People's Bureau in Saint James's Square in London. The gunshots were fired by a Libyan diplomat from within the embassy. There were also attacks on several Israeli and Zionist targets in Britain, as well as on Jewish institutions that had nothing to do with Israel. The most shocking terrorist incident was the midair explosion in 1988 aboard a Pan Am plane over Lockerbie, Scotland, in which all the passengers and crewmembers were killed. Scottish and U.S. prosecutors sought to secure the extradition of two Libyan citizens suspected of responsibility for planting the bomb. But the Libyan government long refused to yield up the men, in spite of the imposition of economic sanctions by the United Nations in 1992.

Perhaps the most bizarre of all these episodes was the *fatwa* (legal opinion) issued in 1989 by the leading Iranian cleric, Ayatollah Ruhollah Khomeini, pronouncing a death sentence against the British novelist Salman Rushdie, who is of Indian Muslim background. Rushdie's novel *The Satanic Verses* was held by some, but not all, devout Muslims to contain blasphemous libels against Islam. Rushdie was forced to live in hiding for several years, protected by the British security services. In spite of pressure, at first private and discreet, later public and emphatic, from the British and other western governments, the Iranian theocracy proclaimed itself unable to rescind the decree even after Khomeini's death in 1989.

By the 1990s, the Middle East occupied a relatively lower place in British diplomatic preoccupations than in any other decade since World War I. British economic interest in the region became focused primarily on trade rather than investment. But with their reduced purchasing power following the collapse of the oil cartel, the Middle East oil producers no longer offered such abundant markets. British arms and engineering exports to the Middle East assumed greater importance as the balance of oil imports decreased. During the long-drawn-out Iran–Iraq war between 1980 and 1988, Britain, like other western countries, sold arms to both sides.

This policy rebounded against the British government in 1990 when Iraq invaded and occupied Kuwait. The British joined the United States and twenty-six other countries in sending forces to the Gulf to eject the Iraqis from Kuwait in 1991. Although Britain played only a secondary role in the war, the crisis lit a slow-burning fuse in British internal politics in the shape of a scandal concerning the authorization of earlier British arms sales to Iraq. The Conservative government was gravely discredited by the affair and several senior politicians and civil servants were strongly criticized by a committee of inquiry in 1995.

Britain's Legacy in the Middle East

The cultural and social residue of Britain's Middle East empire was slight. Unlike France, Britain left behind no significant network of religious or educational institutions. Anglican Christianity had found few adherents in the region. Its mainly British clergy in the Middle East was gradually replaced at all levels by indigenous priests. The British Schools of Archaeology in Jerusalem, Ankara, and Baghdad continued to make a central contribution to excavations; but the one in Baghdad was defunct by the 1990s, and the Jerusalem school was largely inactive after the 1967 War (it later opened an Amman branch). In the Sudan, the Christian population in the south retained some links with the Church of England, but the University of Khartoum (formerly Gordon College) no longer looked to the English university system as a model. In Jordan, the royal court and the army maintained intimate links with Britain and copied British styles. Elsewhere, few relics of British cultural influence remained. Unlike most other parts of the former British Empire, the imperial language did not survive into the postcolonial era in the Middle East as the primary means of communication. Insofar as English continued to be spoken, this was a reflection of new American, not old British, influence. Probably the most significant British cultural export was the World Service of the BBC: Its broadcasts in English, Arabic, and other languages commanded a wide audience in the region.

At no time in the twentieth century did the Middle East take priority over the rest of the world in British diplomatic or strategic preoccupations. Yet the most striking land victories of British arms in both world wars were won respectively at Megiddo in 1918 and at al-Alamayn in 1942; the resignations of three British prime ministers (Lloyd George, Eden, and Heath) were occasioned by Middle East conflicts; and Britain's most severe economic recession after the 1930s came about as a direct result of the interlinked political and energy crises in the Middle East in 1973. For all these reasons, the Middle East occupied a central position in the history of British external relations in the twentieth century.

BERNARD WASSERSTEIN

BRITAIN AND THE MIDDLE EAST UP TO 1914

Britain's engagement in Middle East affairs has a long and troubled history.

In the Middle East, Great Britain is remembered most for its interlude of paramountcy. The political-geographical concept of the Middle East was coined early in the twentieth century, several decades after Britain entered the region. In a review of Britain's relations with the region before then, and how it rose to the top, this must be kept in mind. Most of the territory that composed its Middle East empire from the end of World War I to the end of World War II had once been under Ottoman rule. Before the ratification in 1924 of the peace settlement with the Turkish Republic, the Ottoman Empire's lineal successor, the inspiration and rationale for adding each politically identifiable unit, with the arguable exception of Sudan in 1899, had come from the perceived need to defend British India.

On India's north (Afghanistan) and northwest (Persia—Iran after 1935—and the Ottoman Black Sea coastline and its interior), Russia's southward thrust stirred anxiety among Britain's empire builders. In the southern Mediterranean, France's tenacious pursuit of influence in Egypt made both Britain and India, as guardians of the imperial routes to the subcontinent, nervous. The anxiety dated from Napoléon's dramatic appearance in the self-governing Ottoman province of Egypt in 1798, through the opening in 1869 of the French-built Suez Canal, to the long-lived yet contested British presence that began in 1882.

In the first half of the twentieth century, to confirm its regional primacy, Britain served in effect as Europe's imperial coordinator in the Ottoman succession. Later, in the crisis of its global imperial mobilization in World War II, Britain was the region's unifier, after 1941 in close harmony with the United States. In retrospect, if the port of Aden (even including its insular appendages, it encompasses little more than 100 square miles [260 sq km]) is set aside, the rise and fall of Great Britain's regional preeminence lasted less than a century (1878–1971). This is not to suggest that the Ottoman sultan's Asian Arab and adjacent northeast African provinces were available earlier for easy European plucking. They were not.

The Levant and East India Companies

Napoléon's appearance in Egypt in 1798 with a massive armada and the declared aim of shortening the sea route to India, in order to reconquer the empire there that France had lost to Britain over the preceding half-century, marked a change in Britain's relations with the Sublime Porte from commercial to political imperialism and diplomacy. During Britain's monopoly of commerce under successively renewed royal charters (1581–1825), the Levant Company had cultivated trade with the Ottoman Empire's eastern Mediterranean territories from Greece to Egypt. As late as 1798 the company, at its own expense but in the name of Britain, handled all formal diplomatic and consular relations with the Ottoman Empire. It also paid the salaries of the British ambassador and the consul general in Constantinople (now Istanbul), and of other British consular officials in Aleppo and selected Ottoman ports. Beginning in the mid-eighteenth century, the ambassadors, though still on the company payroll, were gradually integrated into the regular diplomatic service. The Foreign Office did not begin paying their salaries until 1804 (five years after Britain entered into its first formal alliance with the Sublime Porte). The consuls remained employees of the Levant Company until just before its dissolution in 1825.

Once the industrial revolution had taken hold in Britain late in the eighteenth century, the Levant Company faced no serious competition from Western European rivals. With few exceptions, even during the French Revolution and the Napoleonic wars (1789–1815)—indeed, until 1825—the company enjoyed the most profitable phase of its 244 years of Anglo–Ottoman monopoly trade. Given the long head start before the industrial revolution crossed the English Channel, Britain captured and held first place in the external Ottoman trade until World War I. In the middle decades of the nineteenth century, the Ottoman Empire was Britain's third-best foreign customer.

Early on, the Levant Company yielded to the reality that the deep interior of its assigned zone lay beyond reach and released the privileges to the East India Company (1600–1858). The oldest charters of the two companies, both issued under authority of Queen Elizabeth I, were mirror images. But in the pursuit of monopoly commerce in the allotted areas, the prospects for each differed sharply. The East Indies titled not a fixed state, like the Ottoman Empire, but a zone in South Asia lacking precise geographic definition. At its height the Mogul Empire (1526–1857) ruled much, but not all, of the subcontinent and lacked diplomatic ties to Europe. Although the East India Company (EIC) trade centered on the Indian subcontinent, that sphere spread over more than a single suzerainty.

EIC agents moved freely, seizing commercial opportunities, including those in the Islamic empires (Ottoman, Persian, and Omani) and self-ruling shaykhdoms around the Gulf, with half the Gulf's littoral. Persia lay beyond the Levant Company's assured circuit. But in theory that circuit did embrace the Ottoman Gulf littoral, which varied in the seventeenth, eighteenth, and nineteenth centuries. Beyond Ottoman reach, and thus freely claimed for EIC trade, sprawled Oman (variously known as Muscat or as Muscat and Oman) and the "independent" shaykhdoms along the lower Gulf and the Arabian Sea as far as the entrance to the Red Sea.

Despite its exercise of Britain's diplomatic and consular duties, the Levant Company remained to the end a trading association. The EIC, by contrast, had become the primary instrument for conquering India and integrating it into the British Empire. In 1757 it rose from a decade-long war with its French rival as the governing agent for Britain. Within a dozen years the French company expired. After yet another war with France (1778–1783), the EIC absorbed the remaining Mogul provinces and districts until the Islamic empire passed out of existence in 1857. (By the 1780s French India had shriveled into the Union of Pondichéry, comprising four disconnected enclaves in the subcontinent's southeast with a total area of 143 square miles [372 sq km].)

Not until the shock of Napoléon's lightning entry into Egypt (July 1798) and his stealthy personal departure (August 1799), leaving behind for two years a large French military and civilian body of occupation, did British India begin building a durable political presence and strategy in the Gulf. At the EIC's request, the sultan of Oman signed a pledge—not honored by his successors—that nationals of France and the Netherlands, Britain's Gulf

rivals in the preceding two centuries through their own East India companies, would be shut out of his realm. Oman was then more substantial than a shaykhdom yet less than a suzerain state (on European criteria). Thus, the true meaning of a second agreement, early in 1800, that looked like a provision for the Gulf's first permanent, if only quasi-diplomatic, mission, was that it reflected the dramatic structural transition of the EIC, which since 1757 had blossomed into the government of British India.

Parliament toughened its supervision of the EIC. In 1784, following the second and virtually complete rout of French rivals from the subcontinent, Parliament passed the Government of India Act, laying down strict rules of accountability. The president of the company court (board) of directors was given a nonvoting seat in the British cabinet, to serve as the channel for guiding the EIC's governance of India. To carry out the new duties of protecting and promoting British interests, the company began reorganizing its own administrative structure. Starting in the 1820s, the EIC changed its former commercial residencies into political residencies and agencies at key ports in the Gulf, broadly interpreted to include Basra and Baghdad, which could be reached by vessel via the Shatt al-Arab and the Tigris and Euphrates rivers.

Relations of Britain and British India with Persia in the eighteenth century had been the least satisfactory in the Gulf, because of the domestic political chaos in the decades between the effective end in 1722 of the Safavid dynasty and the rise of its Qajar successor, which in 1794 reunited the shahdom. As part of the strategy of defense in depth against Napoleonic France, in 1801 the EIC signed commercial and political agreements with the new dynasty designed to establish continuous diplomatic links. Fath Ali Shah (1797–1834), however, repudiated both agreements because British India had dallied for six years before returning the ratifications. The Foreign Office in London and the EIC unknowingly had separately framed plans in 1808 for fresh exchanges with Persia—the Foreign Office, out of anxiety about Russia; the EIC, about France. Their emissaries met for the first time in Tehran. In stages, from 1809 to 1814, a treaty of defensive alliance emerged, laying the base for Britain's permanent diplomatic relations with Persia. From then on, Persia fell into the diplomatic jurisdiction of the Foreign Office, with only two lapses (1823–1835, 1858–1859) when the Asia-focused Political and Secret Department of the Bombay Presidency managed Britain's interests in Tehran.

Britain and the Arabian Peninsula

In 1858, after the last vestige of Mogul rule had vanished, the EIC charter was revoked. Responsibility for governing India passed from Calcutta—and for managing British affairs in the Gulf, from Bombay—to London. In London the secretary of state for India, with full voting rights in the cabinet but no longer attached to a nongovernmental company, presided over the India Office and thus over framing imperial policy. Even then, anxiety over India's defense colored all major decisions on the Middle East until World War II. By then, British India had to share the center of imperial concern with Britain's interest in Gulf oil, which at that time still came largely from Iran, with a modest supplement from Iraq.

Against this background it becomes possible to chart the origins, rise, and style of British Middle East imperialism east of the Red Sea and the complementary yet reactive diplomacy and imperialism in the Ottoman Empire. During the century-long conquest of the Mogul Empire, British India was distracted enough not to plan simultaneous expansion beyond the subcontinent. The distraction went far to explain India's nervous yet cautious reply to inflated fear of perils looming in and around the Gulf, reaching back to 1798. From time to time (1806, 1809, 1819), the EIC deployed in the lower Gulf, chiefly for service along the coast of the Arabian Peninsula, vessels of the Bombay Marine to suppress what the Anglo–Indian monitors labeled a rampant tribal piracy that "even preyed upon" vessels flying the Union Jack.

In 1820 the coastal shaykhs and their neighbors as far as the Bahrain archipelago were forced to sign a general treaty banning piracy and the slave trade. The pact was renewed semiannually until 1835 by all (except Bahrain), and then annually until 1843, when it was prolonged for a decade and finally hardened into a permanent maritime truce. By then the EIC had come to view the Persian Gulf as an Anglo–Indian lake. Upon authorization by

Tehran, the EIC named the British consul at Bushehr on the Persian coast as the EIC political resident, with the duty of observing the execution of the truce and guarding against piracy. He was assisted by the political agent for the Trucial Coast (at Sharja) and, at the turn of the century, by political agents named to the other pact signatories. In 1822, for the resident's service, British India deployed vessels of the Bombay Marine and, after 1879, of the Indian navy, berthed at the rented Basidu based on Persia's Qeshm Island, at the entrance to the Persian Gulf.

It was the port of Aden, however, lying outside the Gulf, that became Britain's first onshore presence in the Middle East. By the beginning of the second third of the nineteenth century, new anxieties had arisen. As seen in Britain and in India, the benefits of the dramatic shrinkage between the two of distance and time in transport and communication were risks when they served an imperial rival such as France. By the 1830s the EIC had developed a regular route between India and England via the Mediterranean and Red seas, with overland transfer in Egypt of passengers, goods, and mail between Alexandria and Suez in both directions.

In the Mediterranean, which had British bases at Gibraltar and Malta, there were no bunkering problems. East of Suez, the company chose Aden as the site for resupply of fuel and other needs of increasingly larger and more modern oceangoing ships. After six years of talks with the sultan of Lahij, punctuated by forcible occupancy, two treaties and a bond defined the terms of the Anglo–Indian use of the harbor at Aden, for an annual rent of £1,300 ($6,500). By handling its first onshore presence in the Middle East as a quasi-commercial station with a modest rental, British India minimized the likelihood of tribal hostility.

In 1854, the five virtually unpopulated Kuria Muria islets, east of Aden on the southwest coast of Oman, were given to Britain by the sultan of Oman for a telegraph station. The experiment (1859–1860) in the Red and Arabian seas with submarine cables to tie into the European lines failed. Britain finally built alternative routes to British India via the Ottoman Empire as well as Russia and Persia. Attached by conquest to Aden in 1857 was the strategic islet of Perim, not quite in the center of the Bab al-Mandab Strait, then the only water entrance to the Red Sea. All the islands annexed by Britain were virtually uninhabited. Aden remained Britain's first and only dependency in the Middle East until 1878. Even with the port's enlargement by the addition of Little Aden in 1868 and its further enlargement by British India's purchase of the adjacent promontory belonging to Shaykh Uthman in 1862 and 1888, Aden's total area, islets and all, barely exceeded 100 square miles (260 sq km). Until 1937, it was administered as if it were the Bombay Presidency's private colony.

Britain and the Eastern Mediterranean

Also in the 1830s, Britain's primary Middle East attention, still inspired by India, moved from the Gulf and the periphery of the Arabian Peninsula to the eastern Mediterranean, and basic policymaking, from the Political and Secret Department in Bombay to the Foreign Office in London. With Viscount Palmerston as foreign minister (1830–1834, 1835–1841, 1846–1851) and as prime minister from 1855 until his death in 1865, Britain dug in its heels to deny France economic and strategic domination of the key link between Western Europe and South Asia. In 1840 and 1841 Palmerston framed a strategy that rested on an Anglo–Ottoman alliance and committed the major powers to preserve the European balance by upholding the territorial sovereignty and integrity of the Ottoman Empire. By consensual diplomacy the powers, with Britain serving as the balancer, prevented the overthrow of Muhammad Ali, the self-made governor of Egypt, by internal revolt (in 1839–1841); the shrinkage of the Ottoman Empire by European conquest (by Russia in 1854–1856 and by France in 1860–1861); and the unilateral revision of a concert agreement (by Russia of its 1856 Straits Convention with the Ottoman Empire, in 1871). In each European–Ottoman dispute, Britain kept France and Russia apart by forming temporary great-power coalitions that isolated the would-be offender.

Despite Palmerston's precautions, Anglo–French rivalry in and over Egypt deepened. In the 1840s French engineers began framing feasible designs for linking the Mediterranean and Red Seas by canal, to assure uninterrupted ocean travel from Britain and Western Europe to the African and

Asian rims of the Indian Ocean, as well as Australia and New Zealand. In the mid-1850s, once Ferdinand de Lesseps pocketed a ninety-nine year concession for building and running the waterway, French magnates and bankers promptly oversubscribed the operating company. But at the height of the Anglo–Ottoman alliance (from 1841 to 1879–1882), Palmerston's diplomacy had interrupted the canal's construction for more than a decade. At his urging, in order to escape an imperial contest for dominance in Egypt, British investors put their sterling into an Alexandria–Suez railroad via Cairo, completed in the 1850s.

In November 1869, four years after Palmerston's death, the French promoters finally opened the Suez Canal. As might have been expected, ships flying the Union Jack made up 70 percent or more of the traffic in the first years. The absence of British shareholders, however, denied British users a voice in canal policy. Even the secret purchase in 1875 of the 44 percent interest in the company owned by Egypt's khedive, making Britain the largest single shareholder, proved inadequate to modify rates and other rules of use. Nor did the boost to Egypt's treasury long delay Khedive Isma'il's fiscal collapse. In 1876 he accepted a Dual Control, the working title of the Anglo–French Public Debt Commission, to manage Egypt's finances. Two years later, after the dual controllers reported continuing breach of the commission's rules, the khedive installed a cabinet government, with the Briton as finance minister and the Frenchman as minister of public works. When Isma'il tried to restore direct rule by abolishing the cabinet in June 1879, British diplomacy in Constantinople brought his son Tawfiq to the governorship.

Occupation of Cyprus and Egypt

While Anglo–French rivalry in and over Egypt was turning explosive, a crisis in the north had led Russia to declare war against the Ottoman Empire in April 1877; eleven months later it imposed a humbling peace on the Sublime Porte that was promptly ratified. Britain saw its eastern Mediterranean interests squeezed yet again between renewed threats from Russia and continuing ones from France. Benjamin Disraeli's cabinet cobbled together a strategy of detaching Austria from its alliance with Russia, wooing France with an offer not to oppose its conquest of Ottoman Tunisia, and coercing the reluctant sultan into allowing Britain to occupy Cyprus, purportedly to inhibit further intrusion by Russia into the Islamic realm.

After deliberate delay, with the secret deal on Cyprus in hand, Disraeli finally agreed to attend the Berlin Congress (13 June–13 July 1878), called by Chancellor Bismarck of Germany to cool the overheated diplomacy in Europe through top-level accord. Only toward the close of the congress did Disraeli divulge the text of the Cyprus convention for integration into the collection of approved actions. The congress modified Russia's crippling terms and sorted out the imperial rivalries, thus avoiding wider war in Europe. Nevertheless, the Ottoman Empire paid the price by having to make major land transfers to Russia in northeastern Anatolia and, to Russia and its Balkan allies, in southeastern Europe; placement of Cyprus under Britain's occupation without fixed time limit; and—unmentioned—Britain's promise to France of diplomatic support in assimilating Ottoman Tunisia. In the Ottoman view, the congress, by annulling the ban on European expansion into the Ottoman Empire, had erased the essence of its durable alliance with Britain. Britain's replacement by Germany came four years later.

Once on Cyprus, Britain added two other Ottoman provinces—Egypt and Sudan—to the western portion of its future Middle East empire. It is far from clear, however, that the island was originally meant to be the first such unit. Occupation by formal, if also forced, agreement without time limit was intended as notice that Cyprus had been taken over only temporarily. The island's administration, without transfer of ownership title, was simply handed to Britain for such use as might serve its immediate imperial interest and, it was claimed, that of the Sublime Porte, which received a British pledge to stop deeper penetration by Russia into Anatolia. Britain had already denied Russia possession of the Turkish Straits and Constantinople. Without the Turkish Straits, Russia could not become a Mediterranean power. To buttress the notion of a rental contract, the Disraeli government assured the Sublime Porte that all public revenue, beyond administrative needs, would revert to the sultan along with a fixed annual payment of £5,000 ($25,000).

More important, yet unmentioned in the convention, Britain saw Cyprus as a convenient military base to shore up its political and military stance in the eastern Mediterranean as a deterrent to both France and Russia. Within a fortnight of the outbreak of the Russian–Ottoman war in April 1877, Britain had warned Russia against blockading the Suez Canal and/or the Turkish Straits or occupying Egypt and/or Constantinople. The security planners in London felt a gnawing need for a nearby military presence to defend the Suez Canal, which they had come to see as the lifeline to India and to Britain's widening empire along the rim of the Indian Ocean and beyond. In this scheme, Cyprus "would enable us without any act of overt hostility and without disturbing the peace of Europe, to accumulate material of war and, if requisite, the troops necessary." This observation was embodied in Foreign Minister Salisbury's instructions to the British ambassador in Constantinople, charged in mid-May 1878 with imposing on the Sublime Porte the convention for Britain's open-ended occupation of Cyprus. (Egypt, though unmentioned, also was firmly in mind.)

Britain finally occupied Egypt in 1882 to quiet the long-standing fear of French conquest. The war in Europe that the British action threatened did not break out, even though the major powers withheld de facto recognition of the reality for nearly a quarter-century. After the British invasion, six years elapsed before the European maritime powers initialed a convention to assure free transit through the Suez Canal in peace and war, and seventeen more passed before its ratification. France kept goading Britain to fix a date for military withdrawal; Britain, no less stubbornly, insisted on recognition as the canal's sole defender for the duration of its military presence in Egypt.

Together with Russia, France did not stop condemning Britain for its occupation of Egypt, and particularly its refusal to share the Suez Canal's protection with the convention's signers. Nonstop collaboration against Britain in Egypt contributed to a Franco–Russian entente on European imperial issues in 1894. Ten years later, France and Britain finally signed their own Entente Cordiale in a trade-off: Britain's free hand in Egypt in return for France's free hand in Morocco. Within a year, the Suez Canal convention finally went into effect, carrying with it European de facto recognition of Britain's occupation of Egypt and, for its duration, as the waterway's exclusive guardian.

Conquest of Sudan

Lacking any document in its files to verify an unqualified Ottoman surrender of legal titles to Cyprus and to Egypt, Britain did not seriously seek the Sublime Porte's recognition of the conquest of Sudan in 1896 through 1898. Judged by the record, Britain seems to have concluded that without legal confirmation, it would be best to continue needed imperial expansion on the Mediterranean side of the Middle East by means of temporary tenancy. For this, given the Ottoman denial of legitimacy, the search for European recognition seemed the logical course of action.

The political status of Sudan had been complicated ever since 1885, when all British and Egyptian troops were pulled out after defeat by the self-proclaimed Mahdi (Messiah), Muhammad Ahmad, and his *mujahidin* (religious warriors). The mahdi did not long survive his declaration of Sudan's independence. But the independent Mahdiyya of Sudan survived under his dynastic *khalifa* (successor) for more than a decade, until Major General Horatio Herbert Kitchener, commanding a modest Egyptian force, reclaimed the province in the name of Egypt (1896–1898). The victory was capped by an Anglo–French standoff at Fashoda (19 September–3 November 1898), micromanaged by the Foreign Office in London and the Foreign Ministry in Paris.

Kitchener was pitted against Major Jean Baptiste Marchand, a desert explorer who for more than two years had trekked some 3,000 miles (4,800 km) from the Atlantic seaboard of French Equatorial Africa, with a small band of infantry volunteers, before arriving at the southern reaches of the White Nile. Fifteen months before Marchand and his commandos set out in June 1896, the undersecretary of state for foreign affairs, Sir Edward Grey, announced in Commons that the entire Nile (White and Blue) basin, from sources to mouth, formed a British sphere of influence. Any intrusion would be viewed as an unfriendly act. En route from the Atlantic to the White Nile, Marchand and company received little public notice, less the result of planned secrecy than of crude communications.

At Fashoda, one of the few rural towns along that stretch of the White Nile, Marchand subdued the *mudir,* who surrendered the patch of well-watered desert that made up his *mudiriyya* (municipality). On that basis, Marchand, as instructed, claimed for France all of southern Sudan, as yet without boundaries and thus undefined. The situation was formally resolved not by Marchand and Kitchener, on the bank of the White Nile, but by the foreign secretaries on the banks of the Thames and the Seine. Indeed, a confident Kitchener reached Dover on 27 October 1898 (before France had officially backed down) for weeks of national celebration.

The decision on how to factor Sudan into Britain's burgeoning Middle East empire was left to Lord Cromer, the British agent and consul general in Cairo. He rationalized a complex arrangement to establish Britain's right to rule Sudan at its pleasure, yet leave no more than a nominal role for Egypt, and to do so without seeking the Sublime Porte's approval. Cromer devised a formula to assure British supremacy while calming France and denying European powers capitulatory privileges.

The British claim to dominance in governing the Anglo–Egyptian condominium rested on the right of conquest, in the name not of the Ottoman sultan but of his viceroy, the Egyptian khedive, though the occupation had nullified the khedive's subordination to the sultan. In Cromer's scheme, except for the low-level civil and military service, Egypt had little more to show than its flag. Even that had to fly below the Union Jack. Though run as an undeclared British colony, Sudan was governed by the Foreign—not the Colonial—Office, which prided itself on installing a paternalistic regime. Until 1914, however, Sudan's public revenues came primarily not from local sources or Britain's Exchequer but from interest-free loans granted by Egypt.

In Sudan, as in Cyprus and Egypt, the Sublime Porte was infuriated by the denial of a policy voice or even of a nominal administrative role. In all three cases, the Foreign Office was pressed into an unaccustomed Colonial Office role by having to recruit and supervise senior administrative personnel. The makeshift handling of Cyprus had set the precedent for the later assimilation of Egypt and Sudan into the expanding western sector of Britain's Middle East empire. Named custodian of such borrowed territory was the Foreign Office, the branch of the British government best equipped to cope with problems of international law and diplomacy, but one of the most poorly equipped for colonial administration.

In Cyprus, Egypt, and Sudan, Britain did not stray from the fiction that the Foreign Office's exercise of Britain's de facto sovereignty had introduced neither legal nor political change into the former Ottoman provinces. The Ottoman Empire responded with an absolute refusal to surrender the title of ownership. Thus, the western sector of Britain's rising Middle East empire still lacked legal solidity at the outbreak of war in Europe in 1914—indeed, for a decade longer, until the peace settlement with the Turkish Republic.

Humbling the Gulf

In contrast with the political tenancies that Britain imposed on the Sublime Porte, British India continued to devise its own forms of British primacy along the periphery of the Arabian Peninsula. This activity must be seen in the context of India's progressive intrusion into the Gulf in the nineteenth century. The office of resident was a title that the EIC had used, ever since its arrival in South Asia, to identify its factors (merchants) at chosen commercial posts. The step-by-step politicization of the office traced back to the 1820 maritime truce and reflected the slow conversion after 1757 of the EIC from a merchants' monopoly into Britain's formally recognized empire-building and governing agency in the subcontinent. As early as 1822, the Bombay Presidency began appointing a "resident in the Persian Gulf" at Bushehr, on Persia's upper Gulf Coast, to oversee the truce, with instructions to take action against violators and advise on policy. Commonly a middle-level officer of the Indian army or navy, the resident was authorized to call upon the Indian navy (known as the Bombay Marine until 1830), which from 1822 deployed a token squadron at the rented base of Basidu on Qeshm Island, near the Gulf entrance. Soon after the EIC lost its charter in 1858, the Indian navy's facilities and manpower were folded into the Royal Navy.

The long-delayed 1841 British commercial treaty with Persia had reaffirmed the right of the

resident to keep his office at Bushehr. Not much later, Persia grudgingly allowed Britain to confer on the incumbent a second and separate title of consul general for the coastal provinces, thus formally assuring that his jurisdiction embraced the Gulf's entire rim except for the Ottoman segment. Nominated through 1872 by the Bombay Presidency and thereafter by the governor-general and viceroy in Calcutta, the political resident, as he had been formally designated for some time, was still British India's senior official and policy coordinator in the Gulf. He also served as envoy at large to the Arab tribalities, shaykhdoms, and ministates on the coast of the Arabian Peninsula. As necessary, British India delegated political agents to selected shaykhdoms growing into ministates; and by the turn of the twentieth century, political officers were delegated to troublesome tribalities. Meanwhile, from the start of the truce, Indian naval officers who served on patrol duty at times doubled as surveyors to map the Gulf and its bed for navigation, pearl fisheries, and other marine sources of commercial value.

By 1880, British India's presence rested on a system of control by an experienced and informed bureaucracy that steadily deepened its knowledge of the Gulf and its rim's inhabitants. With such proved interests, British India was ready to fend off aspiring European rivals. The Anglo–Indian custodians of the British Empire then, and for some time to come, persisted in viewing the Persian/Arabian Gulf and the Arabian Peninsula not as part of the Middle East (a term not yet invented) but as a region that fell into the subcontinent's influence sphere. Still, British India's uncontestable presence remained offshore.

The Sublime Porte inadvertently sparked the growth of British India's onshore presence. On reabsorbing al-Hasa in 1871, the Ottoman Empire had reentered Gulf politics. Hasa's governor later gave asylum to a disgruntled faction of the Al Khalifa, the clan that ruled the Bahrain archipelago. To British India's political resident, the Sublime Porte appeared to be testing a rediscovered political option in 1879, when Hasa's governor and Isa ibn Ali, Bahrain's ruler, explored the rental of a coaling bunker on one of his islands. The action was seen as a likely Ottoman first step in claiming Bahrain, lying off Hasa's coast.

In December 1880, India undertook to protect Isa and his heirs as the shaykhdom's governing dynasty, assuring it full domestic sovereignty and a guaranteed safeguard against local opponents. In return, the ruler surrendered to Britain, and to India acting in Britain's behalf, the archipelago's external sovereignty. He agreed to an absolute ban on relations with other governments, the nearby shaykhdoms excepted, expressly disallowing the creation on his territory of "diplomatic or consular agencies or coaling depots . . . unless with the consent of the British Government." In March 1892, Shaykh Isa more explicitly reaffirmed his original surrender of external sovereignty by adding a general nonalienation clause that he would "on no account cede, sell, mortgage or otherwise give for occupation any part of my territory save to the British Government." Thus Bahrain became the model for what British India later called a system of independent states in special treaty relations with Great Britain.

In 1887 a first version of parallel exclusionary pacts with the shaykhs of the six tribalities of the Trucial Coast proved porous. Defying the Anglo–Indian ban, French agents appeared in 1891, seeking to open formal relations with the Trucial six by tempting them with such promises as the revival of slave trading under the French flag. India finally plugged the leak in 1892. In the next twenty-four years India, in Britain's name, absorbed the external sovereignty of Kuwait (1899) and, in World War I, of Najd (1915) and Qatar (1916). In the Trucial Coast, Fujayra broke away from Sharjah in 1902 but did not receive Britain's formal recognition until a half-century later. Between 1913 and 1932, starting with Kuwait's shaykh, British India won explicit pledges from the rulers of Bahrain and each Trucial shaykhdom never to grant an oil concession to anyone except an official British governmental nominee. In the accords with Najd and Qatar, such commitments were assumed in promises to issue no concessions whatsoever without British consent.

Meanwhile, in 1891, Sayyid Faysal ibn Turki of Oman also had placed himself in nonalienation bondage. Clearly, Oman still had not been reduced to the status of a shaykhdom. It persisted in styling itself a sultanate, and as such it remained larger than 80,000 square miles (208,000 sq km), nearly nine-tenths the size of Great Britain and Northern

Ireland. Oman still flaunted imperial pretensions with the residual possession of Gwadar, a port on the Baluchi coast with some 300 square miles inland that was not returned to Pakistan until 1958. Indeed, in earlier decades of the nineteenth century, Oman had held long-term leases on the island of Qeshm and the nearby port of Bandar Abbas, issued by Persia's Fath Ali Shah and renewed by his successor. Until 1856 it also comprised the African islands of Zanzibar and Pemba and the coastal towns of Mombasa and Dar es-Salaam, which collectively had served as the major conduit of the once thriving slave trade in the Gulf. For that commerce the realm's capital, Muscat, served as the entrepôt.

The key to understanding Oman's vague ties to the system of protected ministates was Britain's inability to gain full command over the sultanate's foreign relations. By the time British-India began moving to tighten its hold on the ministates, Oman had long since entered into capitulatory treaties with the United States (1833), France (1844), and the Netherlands (1877). Its ruler could not unilaterally cancel such instruments, even if he had wished to. Nor did Britain, in the exercise of its treaty rights in the sultanate, ever vigorously challenge the capitulatory powers, with the occasional exception of France.

Britain's management of its affairs in the Persian Gulf after 1858 was settling slowly and not always happily into the joint duty of the Foreign and India offices. Through World War I, the top administrator was recruited from the British officer cadre of the Anglo–Indian Army at the rank of lieutenant (or full colonel) and held appointments from both offices. In the overseas hierarchy of the Foreign Office he was the consul general at Bushehr, attending to Anglo–Indian and British interests in Persia's coastal provinces of Fars and Khuzistan and its islands in the Gulf. At the India Office and in India he was titled political resident in charge of Anglo–Indian affairs along the Gulf peninsular coast. Accountable to him in that role by 1914 were political agents for Bahrain and Kuwait, and political officers for the Trucial Coast and later also Qatar, all drawn from British India's political service. The political resident in the Persian/Arabian Gulf was thus responsible to the Anglo–Indian government and ultimately to the India Office in London for basic policy, at first with advice from the Foreign Office, largely regarding interactive Gulf politics of Persia and the Arab ministates. But the Foreign Office's influence steadily increased as the Gulf was drawn, issue by issue, into European imperial politics after Britain's occupation of Cyprus and Egypt.

Sole Policeman in the Gulf

An immediate effect of abandoning the long-lived alliance with the Sublime Porte was that Britain lost its leverage in the European imperial rivalry over Ottoman territory. That loss promptly encouraged Russia and France to cooperate against Britain on Ottoman issues. No less important, it opened the way for Germany's belated entry into the competition. Germany, in fact, replaced Britain as the Porte's durable ally, a friendship that lasted until the armistice ending World War I in 1918. At first, Chancellor Bismarck still discouraged official promotion of German interests in the Ottoman Empire despite the Porte's receptivity. In 1881, when Germany sent its first military mission to Constantinople on Ottoman invitation, the chancellor cut the mission's formal national ties. By the time of Kaiser Wilhelm II's accession in 1888, the new friendship came into the open. German industry had made such striking advances after the nation's unification in 1870 that it sought new markets. Between 1886 and 1910, Germany vaulted from fifteenth to second place in Ottoman foreign trade, surpassed only by Britain.

Much of this upturn could be attributed to the kaiser's enthusiastic response to Sultan Abdülhamit II's national goal of building railroads across his Asian domains to underpin their economic expansion, unity, and defense. With official encouragement, investors in France centered their projects in Palestine, Syria, and the latter's adjacent zone in southern Anatolia. The sultan's chosen enterprise was a trans-Anatolian railroad linked to Europe via its international railway complex. The sultan coaxed the new kaiser, on his first visit to Constantinople, to arouse interest in the plan among German bankers and entrepreneurs. An initial segment was promptly begun that would link Constantinople to Europe's international railway complex. By 1896 the German-built segment (with limited French investment) had pierced western Anatolia as far as Eskişehir with a spur to Konya.

There the venture stalled. On a second visit to Constantinople in 1898, the kaiser's zeal was rehoned. But ahead, between Konya and Basra, lay the mountains of eastern Anatolia and Mosul province, where it would be far more expensive to build each kilometer of roadbed than it had been in the plains of west Anatolia. Also envisaged were four spurs along the way: to Aleppo, Urfa, and Khanaqin (on the Persian side of the Ottoman border, some 90 miles [154 km] north of Baghdad), and from Zubayr (9 miles [14.5 km] south of Basra) to a point on the Persian Gulf "to be agreed upon." Wilhelm II enlisted the aid of Georg von Siemens, director of the Deutsche Bank, to promote the project as a German national interest, and the sultan issued a preliminary concession in 1899. Limiting its concern largely to the venture's commercial side, the bank did not agree to the definitive concession until 1903, after having canvassed banks of other nations—notably France and Britain—to invest in the project. In March 1903 the Deutsche Bank finally signed a ninety-nine year concession for the Berlin–Baghdad Railway.

The quickening of European interest in the Persian/Arabian Gulf, especially the confirmation of the Berlin–Baghdad Railway concession on 5 March 1903, led Britain to update its defensive strategy. Precisely two months later, on 5 May 1903, Foreign Secretary Lord Lansdowne disclosed the commercial and strategic principles that would guide Britain's government in the future. Although high priority would be given to "protect and promote British trade" in the inland waters, Lansdowne ruled out the notion of excluding "the legitimate trade of other Powers." Yet he left no doubt that Britain would "regard the establishment of a naval base, or of a fortified port, in the Persian/Arabian Gulf by any other Power as a very grave menace to British interests and we should certainly resist it with all the means at our disposal."

The British strategy of depriving other European powers of a military presence in the Persian/Arabian Gulf, never seriously disputed, remained fixed through World War II and, with the exception (from 1949) of a modest U.S. naval station in Bahrain, lasted until Britain's final withdrawal in 1971.

Unlike the British-occupied Ottoman provinces, which European powers recognized but the Sublime Porte did not, the protected ministates in the Gulf won the approval of neither. Still, the European governments—not even Germany, the latest entrant into the contest—did not effectively dispute Britain's exercise of rights in the shaykhdoms. In the decade before the eruption of war in 1914 the Gulf's guardians, particularly in British India but also in Britain, perceived a mounting threat from Germany, which was enlarging its trade with Ottoman Asia and opening markets in the Gulf. In 1906 the Hamburg–Amerika Line began calling on a fixed monthly schedule at promising ports, offering lower rates and better banking services that those of the entrenched Anglo–Indian and British shipping firms.

In 1911, less concerned than British India, Britain finally responded to the persistent overtures of Germany and the Ottoman Empire to reconsider the differences over completing a railway with a terminal at the head of the Gulf. Britain felt the least pressure, since the Porte depended on British assent to increase the tariff rates, the only reliable funding source for Ottoman subsidies to the railway builders. Britain insisted on preserving its role as the Gulf's sole policeman to safeguard Anglo–Indian commercial and maritime primacy. On these terms Britain consented to pursue, with the Ottoman Empire and Germany, a multilateral settlement by weaving together three bilateral accords: British–Ottoman, British–German, and German–Ottoman.

From the outset the Sublime Porte had challenged the legality of Britain's protected ministate of Kuwait so as to reassert the sultan's suzerainty in the shaykhdom. Instead, the convention initialed in July 1913 gave the Porte only the symbols of political ownership. Although obliged to fly the Ottoman flag (with the inscription "Kuwait"), the shaykh was assured of "complete administrative autonomy." The Ottomans also conceded the validity of the shaykh's agreements with Britain. The purpose of the accord—whether, when, and under what terms the railroad might build its terminal in Kuwait—was described and the decision deferred. Beyond assuring Britain membership on the Berlin–Baghdad Railway directorate and guaranteed equal rates for all users, the British–German convention, initialed in June 1914, stated that the Baghdad–Basra extension would be built and run by a separate Ottoman

company with an assured 40 percent British interest and a pledge of no extension to the Gulf without full prior approval by Britain, Germany, and the Ottoman Empire.

A fourth bilateral accord, framed by the Deutsche Bank and the French-dominated Imperial Ottoman Bank, was reached and initialed in February 1914. It was essentially designed to protect the special position of France's railroad entrepreneurs in Syria and Alexandretta, as well as their planned branches in western Anatolia, all to be linked to the German trunk line.

Ratification of the bilateral instruments awaited the drafting of the Ottoman–German convention. Preliminary talks, begun in June 1914 but interrupted by war in August, ended in a secret treaty of defensive alliance. The Sublime Porte became an active ally of Germany and Austria late in October. Early in November, Britain amplified the existing territorial guarantees to Shaykh Mubarak by declaring Kuwait, together with its islands and the ruler's date groves in the Faw district of the Basra *vilayet,* "an independent Government under British protection" as a reward for his pledged cooperation in the war effort.

Aden: Settlement and Protectorates

Reshaping the British protected shaykhdoms in the Gulf into potential ministates had run parallel with dividing Aden's upcountry, between 1880 and 1914, into projected tribalities that remained politically frozen in that condition until after World War II. The two imperial initiatives were sparked by perceived threats to Anglo–Indian security. Also, both Arabian coastal zones were recurrently infused with tribal migrants from the interior. Some tribal groups in each zone had passed in and out of the Ottoman Empire. This occurred for the last time in the early 1870s, when the sultan's troops reannexed Hasa, on the Gulf, and Yemen, on the Red Sea. In both retaken provinces, the Ottoman Empire did not simply seek recognition for its new international borders. The Sublime Porte clearly hoped to regain more of the land lost and to reintegrate tribal groups on the southern edges of Hasa and Yemen.

British India's imperial process in the southwestern Arabian Peninsula differed from that in the Gulf. Under the Gulf's enforced maritime truce, adjacent shaykhdoms gradually began to settle their common borders. Except for Aden itself, however, few upcountry tribalities had mutually defined borders before the eve of World War I. Instead, the process was essentially limited to those blending into unmarked edges of Yemen on the north. In this period British India had not yet negotiated Aden's upcountry periphery alongside Oman on the east or the suitably named Rub al-Khali (Empty Quarter) at the southern rim of the vast Arabian Desert. On neither of the two frontiers did the British face obstructions comparable with those in Ottoman Yemen.

Until January 1873, the Bombay Presidency had served as British India's ultimate custodian of the Gulf. Thereafter, it became accountable to the viceroy in Calcutta; beyond that, to the India Office; and, within the British cabinet after 1882, increasingly to the Foreign Office. Yet in regard to running Aden and its interior until 1932, the Bombay Presidency seems largely to have slipped through the net of accountability. From the outset, the Bombay Presidency treated the town of Aden as a private colonial trust. Even Aden's bureaucracy, below the top level, was almost wholly recruited in Bombay, joined in time by a swelling number of Indian settlers, mostly immigrant shopkeepers.

The presidency also kept watch on Aden town's hinterland, which widened eastward from slightly more than 30 miles (48 km) at the harbor to about 200 miles (320 km) and a total length close to 500 miles (800 km), for possible Ottoman or European intrusion. By 1902 Aden's administration in the interior covered some twenty-five to thirty local rulers with a wide range of titles—sultan, amir, sharif, *naqib,* shaykh. Even after agreements with the presidency, their number kept changing as a result of tribal fission and fusion in what finally compassed a thinly populated expanse of 112,000 square miles (291,200 sq km). Its eastern two-thirds was largely desert; its western sector, partly desert and partly hill country. Frequent regime changes reflected the absence of Anglo–Indian dynastic guarantees and stabilizing boundaries, and they revealed the rulers' loss of much domestic as well as all external sovereignty. They thus resembled less the Gulf's shaykhdoms than the contemporary European colonies on the nearby Horn of Africa.

In 1900 Aden town was renamed the Aden Settlement, to sharpen its distinction from the inland protected tribalities it administered. The resident was accordingly retitled governor. Nature roughly fixed the frontier with the Rub al-Khali. Like most boundary lines separating ownership claims to deserts that seem to have little or no commercial prospects, a straight line sufficed. That was also true, for the most part, of the eastern border with Oman.

From 1902 to 1905, when it came to marking the boundaries of Yemen, once again an Ottoman province after 236 years, the issue could not be resolved by British India in exchanges with Yemen. Only Britain could deal with the Sublime Porte. Because of Ottoman delays, the accord was not ratified until 1914, too close to the outbreak of war to take solid effect. Indeed, in 1915 Ottoman troops occupied a few adjacent British-protected tribalities and stayed for the duration of the war. The unresolved problem of legal title was thus left for renegotiation with the sovereign imamate of Yemen, which after World War I because an Ottoman successor state.

Persia and Afghanistan

The Anglo–Russian imperial rivalry over Persia, which traced back to the Napoleonic wars, grew menacing after the 1860s. It was then that Russia completed the conquest of Central Asia, thus extending its border with Persia to its full length (the formal line was not confirmed until 1885). Russia's territorial advance coincided with Britain's continuing effort to consolidate its strategic control of the Persian Gulf—in the case of Persia, by locking in its coast, the longest national segment on the Gulf's rim. Simultaneously, the tension roused by the imperial competition in and over Persia enveloped Afghanistan, which in the south looked to India, and in the north, to Russian Central Asia. The two Asian countries had thus become trapped between expansion by Russia and by British India. For the security planners in Britain and India at the turn of the century, Russia's designs on Persia appeared more threatening than those on Afghanistan.

To underpin eventual imperial claims to Persia, the contenders began laying the groundwork in the last quarter of the nineteenth century. They extracted military and fiscal privileges from the shah that trimmed his power. An 1879 agreement provided for a Persian Cossack Brigade, which enlisted Persians to serve under Russian officers chosen by Russia and paid by Persia. It remained a nominal brigade even after the murder of Naser al-Din Shah in 1896, when it was upgraded to an imperial guard for protecting the monarch and the dynasty, and even a decade later, when the Persian Cossacks, joined by a contingent of the regular Russian Army, failed to prevent adoption of the new constitution and the inauguration of a parliamentary regime—both realized with the implied blessings of Great Britain. (Only in 1916 did Russia finally transform the Cossacks into a fighting division and pay fully for its upkeep.) British India did not start responding until 1911, when it recruited and financed a gendarmerie or provincial police under Swedish officers. (In November 1916, the gendarmerie, without the Swedes, was integrated into the newly raised South Persia Rifles, trained and commanded by British officers.)

Less concealed and in most respects far more effective were the encroachments on the shah's fiscal sovereignty. In 1889, Baron Julius de Reuter, backed by the Foreign Office and the British legation in Tehran, procured a sixty-year concession to open the Imperial Bank of Persia, the first such institution in Persia. Its branches, in all the cities and larger towns, introduced the country to modern banking services. More significantly, the Imperial Bank received the exclusive right to serve as the fiscal agent of Persia and had the authority to issue banknotes. Two years later, Russian nationals, with active endorsement of their government, procured a parallel concession to launch the Banque de Prêts, originally designed to provide small-scale loans to Persians. Russia's Ministry of Finance bought the bank in 1894 and, under its new name, Banque d'Escompte de Perse, it pursued a deliberate policy of offering generous mortgages to rich landowners.

Russia's Foreign Ministry opened consulates not only in Mohammerah (present-day Khorramshahr), at the lower end of the Shatt al-Arab, but also in the major gulf ports of Bushehr and Bandar Abbas, where it sought to build coaling bunkers. In 1901 and 1902 the Banque d'Escompte issued personal loans to the shah totaling £3.4 million ($17 million). As surety, Russia's Finance Ministry won the pledge of customs, without explicitly omitting

those collected in the Gulf ports. The Finance Ministry also lowered the customs rates on Russian imports while doubling them on those from Britain and British India, thereby violating their entitlement to most-favored-nation treatment under an 1841 commercial treaty. After briefly trying to soften Britain's rigid stance against such a meddlesome presence on the Gulf coast, Russia ended its discriminatory practice. Soon thereafter the customs service was transferred to Belgian officials employed by Persia.

Even more clearly in Afghanistan, Britain's imperial thrust was driven by strategic rather than economic concerns. Before 1747 Afghanistan had never formed a united independent state. It had passed back and forth, in whole or in part, between Persia and the Mogul Empire. From the mid-eighteenth century, the ruling dynasties came from tribesmen in the Kandahar area. Yet even after tearing itself away from the neighboring Asian empires, Afghanistan did not remain united. In the middle of the nineteenth century, rival khanates or principalities once again were struggling for supremacy.

While the outcome of the Russian–Ottoman War and the search for a renewed consensus in Europe at the Congress of Berlin in 1878 fully engrossed Britain, a small Russian force entered Afghanistan, seeking to round out Russia's recently captured Central Asian provinces. Anglo–India refused to tolerate such a prospect. In the early fall of 1878, the Russian mission and its Afghan puppet fled before advancing Anglo–Indian troops. Amir Shir Ali named his eldest son, Yaʿqub, regent at Kabul. In the treaty of peace of May 1879, Yaʿqub Khan surrendered Afghanistan's external sovereignty to Britain, accepted a resident Anglo–Indian mission at Kabul, and ceded the Khyber Pass and other strategic districts to British India. Yaʿqub abdicated five months later.

Not until the midsummer of 1880 did British India finally inaugurate a new regime that took three years to put in place. The authority of Abd al-Rahman Khan, Yaʿqub's cousin, at first did not reach beyond the district of Kabul. After demonstrating his ability to rule and his loyalty to British India, in 1883 he was finally allowed, with Anglo–Indian financial and military support, to take over the districts of Kandahar and Herat, thereby reuniting the country. In June 1883, Abd al-Rahman reaffirmed the status of Afghanistan as a British protectorate, in return receiving assurance that he and his dynasty would be insured against external aggression and that he would receive a monthly subsidy of £10,000 ($50,000) to cover the costs of his troops and related expenses.

The border with British India was drawn in 1893 at a line, traced under the supervision of the foreign secretary in Calcutta, Sir Henry Mortimer Durand, that confirmed the cession to the British of the Khyber Pass and adjacent areas. Two years later, the Amu Darya River was accepted as Afghanistan's northeast boundary with Russia's Central Asian Tajik province.

Given the mutual fears aroused by the hardening rival positions, the European imperial strategies had been shaped to shut the adversary out. With boundaries fixed by the turn of the century, Afghanistan was removed temporarily from the zone of British–Russian contention. After the close of the Victorian era in 1901, Britain favored the division of Persia into mutually recognized spheres of imperial influence: Russia's in the north and Britain's in the south, with the two separated by a buffer. The Russian–Japanese war (1904–1906) interrupted exploratory talks that were resumed in the spring of 1906 and concluded in the summer of 1907. The convention divided Persia as originally agreed. Russia recognized Afghanistan as a British protectorate, won equal commercial opportunity, and gained the right to conduct local, nonpolitical frontier relations with Afghanistan.

The Coming of the Oil Age

Baron Julius de Reuter's 1889 bank concession in Persia included—as had his aborted railway concession more than a quarter-century earlier—the exclusive right to search for and develop mineral resources, including oil. To this end, he founded the Persian Bank Mining Rights Corporation, which never seriously pursued oil exploration. A decade later the Persian government canceled the mineral privileges. In 1901, William Knox D'Arcy, a wealthy British speculator with gold-mining experience in Australia, won the sole right to a sixty-year concession to explore for and extract oil across Persia except for the five northern provinces. The first

commercial well in Persia was drilled in 1908, in the southern province of Khuzistan. A year later D'Arcy founded the Anglo–Persian Oil Company (APOC) to activate the concession. By 1912, on Abadan Island in the Shatt al-Arab, APOC put into operation the first units of its refinery to distill crude oil into fuel.

APOC's discovery of oil coincided with the British Admiralty's shift from coal to oil as the fuel for its war vessels. "In the year 1909," First Lord of the Admiralty Winston Churchill reported to the House of Commons on 17 July 1913, "the first flotilla of ocean-going destroyers wholly dependent upon oil was created, and since then, in each successive year, another flotilla of 'oil only' destroyers has been built. There are now built or building more than 100 [such] destroyers. . . . Similarly, during the last five years, oil has been employed in coal-burning battle-ships and cruisers, to enable them to realise their full powers in an emergency."

Churchill's statement prepared Parliament for the British government's partnership in APOC, so as to assure both British India and the Admiralty access to much of their oil needs at reduced cost. In an agreement of 20 May 1914, Britain bought 51 percent of APOC's shares and amended the company statutes to empower the government to veto any policy inconsistent with the national/imperial interest. As a further precaution, British India obtained explicit pledges from the shaykhs of Kuwait (1913) and Bahrain (1914) "never [to] give a[n oil] concession . . . to any one except a person appointed from the British Government."

Oil also figured prominently in the Anglo–German talks of 1913 and 1914. By then three groups were pursuing oil concessions in the Ottoman provinces of Mosul and Baghdad: the Deutsche Bank, APOC, and the Anglo–Saxon Oil Company (a subsidiary of Royal Dutch–Shell, an Anglo–Dutch combine). The Deutsche Bank's claim rested on a 1904 option that had been allowed to lapse; APOC's, on a series of appeals to the Sublime Porte after 1906, with the active backing of the British embassy in Constantinople; and that of Royal Dutch–Shell, on "the good offices of Mr. C. S. Gülbenkian, an Ottoman subject of considerable influence and ability, sometimes called the Talleyrand of oil diplomacy." Britain insisted that APOC be given the largest share. When the two other groups acceded, a deal was framed at the Foreign Office in London on 19 March 1914. APOC procured a 47.5 percent interest in the Turkish Petroleum Company; the Deutsche Bank, 25 percent; the Anglo–Saxon Oil Company, 22.5 percent; and Gulbenkian, "a beneficiary five percent . . . without voting rights." On 28 June 1914, the Sublime Porte promised Britain and Germany that it would issue an oil concession in the Mosul and Baghdad *vilayets.*

The 1914 agreement etched the guidelines that, with appropriate adjustments to reflect the evolving postwar realities, assured Britain the largest share of the output of an international consortium that became operative in 1928, with a French company taking over the German allotment and a group of American companies, half of APOC's.

BRITISH–FRENCH OIL AGREEMENT

Agreement that placed Palestine and Iraq under British mandate and the newly partitioned Syria and Lebanon under French mandate.

The British–French Oil Agreement was announced on 5 May 1920 at the meeting of the Supreme Council of the League of Nations. It was held in San Remo, Italy in response to and in repudiation of the March 1920 Damascus resolution of the General Syrian Congress that proclaimed the independence of Syria. Under the agreement, Greater Syria was partitioned into Syria and Lebanon, which were placed under French mandate while Palestine was placed under British mandate. The British mandate for Palestine was charged with implementing the Balfour Declaration of 2 November 1917, which called for the establishment of a homeland for the Jewish people without having to "prejudice the civil and religious rights of existing non-Jewish communities in Palestine." Under the terms of British–French Agreement, Iraq in its entirety came under British mandate.

The agreement also gave the British permanent control over any entity exploiting Mesopotamian oil, including the Turkish Petroleum Company (TPC), which was established with the successful manipulation of the Armenian businessman Calouste Gulbenkian. Mesopotamia was strategically important to the British because of its military and commercial routes to India. With its decision before World War I to replace coal with oil as the main source of energy for its naval fleet, Britain planned to control the possible sources of the Iraqi oil even before the TPC was established in 1912. Even though Iraq became a British mandate in 1920, there was no guarantee that TPC was to be given a concession for oil exploration in Iraq. Complications arose from terms of the San Remo Agreement, which stipulated that Iraq could hold 20 percent interest in TPC if it invested. In spite of Iraq's objection, it was decided that Iraq would receive a flat fee as royalties per ton payable in British pounds, but with a gold clause, meaning in units of gold per pound on the day of the agreement. Iraq meant to safeguard the future payments it receives from royalties from possible devaluations of the pound. TPC won the oil exploration concession in Iraq in 1925, and the discovery of oil in the vicinity of Kirkuk occurred on 15 October 1927. TPC was renamed Iraq Petroleum Company (IPC) in 1929.

In its quest to have control over Iraq, the British–French Agreement—known also as the San Remo Agreement—was preceded by several relevant developments. The most important one was the conclusion of the secret 1916 Sykes-Picot Agreement by Britain, France, and Russia, which divided the spheres of influence over Syria and Iraq, the latter of which would be under the domain of the British. In fact, the French–British Agreement was simply a formulation of what had been secretly agreed. Following the communist revolution in 1917, terms of the Sykes-Picot Agreement were revealed by Moscow in order to embarrass both England and France and to give a push to Arab revolt and nationalism.

BROOKINGS REPORT (1975)

Study that encouraged U.S. mediation in Arab–Israeli peace process.

In December 1975 a study group at the Brookings Institution, a liberal Washington, D.C., think tank, issued a report endorsing five principles for an Arab–Israeli peace. The intent of the report was to be more precise than the United Nations Security Council Resolution 242 had been in directing U.S. policymakers on the degree of mutual recognition that would be necessary, and it urged U.S. acceptance of Israel's 1967 borders and Palestinian national aspirations.

The sixteen-member Middle East Study Group met monthly from June 1974, particularly encouraged by Princeton University sociologist Morrow Berger and former diplomat Charles Yost, who argued that the outcome of the 1967 and 1973 Arab–Israel wars favored a U.S. peace initiative. The group balanced pro-Arab and pro-Israeli perspectives, and included academics and former U.S. officials and ambassadors from Republican and Democrat administrations, including Robert Bowie, Philip Klutznick, and Najeeb Halaby (father of the future Queen Noor of Jordan).

The report's deliberately general compromises were widely taken as an indication that solid grounds existed for a phased settlement between Israel and its neighbors. Moreover, two key study-group members—Zbigniew Brzezinski, Carter's National Security Adviser, and William Quandt, National Security Council Director for Middle Eastern Affairs—subsequently helped to guide Jimmy Carter's administration to the Camp David Accords (1978). The report complemented Brzezinski's work with Carter on a wider security "architecture" at the Trilateral Commission (a non-governmental organization established in 1973 to promote coordination between North American, Western European, and Japanese foreign policies), encouraged the administration's inclusion of the 1967 borders and Palestinian autonomy in U.S. policy, and directly informed the Camp David discussions, at which Brzezinski and Quandt played active roles.

GEORGE R. WILKES

BROWNE, EDWARD GRANVILLE

[1862–1926]

British Iranologist.

Born of a wealthy Gloucestershire family, E. G. Browne was educated at Eton and Cambridge, England, where he qualified as a physician. In 1877, his interest stimulated by the Russian–Ottoman War, he began a largely informal study of Turkish, followed by Persian and Arabic. Elected a fellow of Pembroke College at Cambridge, he spent the year 1887–1888 in Iran, which he described in *A Year amongst the Persians* (London, 1893, reprint 1926). On his return he was appointed university lecturer in Persian, then in 1902 Sir Thomas Adams Professor of Arabic. He married in 1906 and remained in Cambridge until his death.

As a rich man holding a virtual sinecure, Browne was able to direct his enormous energy and phenomenal memory into an almost virgin field. In

Britain, Middle East studies had formerly been concerned mainly with Arabic. Persian studies, a legacy via the "back door" from the Mogul Empire (of India, which had become part of the British Empire following the Sepoy mutiny of 1857), had been confined to the few literary classics used in examinations for the Indian Civil Service. Browne unlocked the "front door" to post-Islamic Persia (now Iran) and to the full range of New Persian studies—including the modern spoken and literary language, religious history, and politics.

His most important contribution is the four-volume *A Literary History of Persia* (1902, 1906, 1920, 1924), still a valuable resource for scholars. It quotes extensively from original sources and from information provided by his Iranian friends and correspondents, including major writers and scholars of the time such as Ali Akbar Dehkhoda and Mohammad Qazvini. Apart from his large scholarly output, Browne also promoted Oriental studies at Cambridge by attracting prospective diplomats and administrators to an academic training; these included later historians of the Middle East, such as Laurence Lockhart and Sir Reader Bullard.

Even before his journey to Iran, Browne had taken a sympathetic interest in the Babis movement (c. 1844–1853) and its successors, the Azali and Bahaʾi faiths. He wrote a detailed account of these for the Royal Asiatic Society in 1889, met with leading adherents of the sects (especially Azalis), and published some of their works. He is best remembered in Iran for his active support of the constitutional movement from 1905 to 1911, which was characteristic of his liberal sympathies with all aspirants to self-determination. In 1908 he helped found the Persia Committee, composed of prominent members of the British Parliament (MPs); through this pressure group, in lectures, and in letters to the press, Browne sharply criticized his own government's and Russia's machinations in Iran. His book *The Press and Poetry of Modern Persia* (1914) is not merely a supplement to his *Literary History* but an avowedly partisan promotion of the democratic ideals he saw in the vigorous free press of constitutionalist Iran.

Browne was awarded the Persian Order of the Lion and Sun and, on his sixtieth birthday, he received accolades from his Iranian admirers and his British colleagues. Both as a scholar and an activist, he did much to present a sympathetic picture of Iran's people and culture to a Western public, whose view of the Middle East was already being shaped chiefly by the dictates of geopolitics, and petroleum.

JOHN R. PERRY

BUBER, MARTIN

[1878–1965]

Religious and social philosopher.

Martin Buber is most prominently known for his volume of 1923, *I and Thou (Ich und Du),* in which he introduced his concept of dialogue, or an attentive and sympathetic listening to the Other, in which one suspends one's pre-established opinions and categories of perception and judgment, thus allowing the Other (*qua,* Thou, that is, an autonomous subject) to stand before oneself in the fullness of his or her existential reality. A life-long Zionist, Buber applied this principle to the "Arab Question," concluding that the land the Jews call *Eretz Yisrael* and the Arabs, Palestine, is "a land of two peoples." The fact that both Jew and Arab regard the land as their home and birthright must serve as the moral and political basis of a just and humane solution to the conflict between the two peoples. Accordingly, he supported binationalism, which envisioned shared political sovereignty over Palestine, with neither national community dominating the other.

In 1942, Buber joined Judah Magnes (1877–1948), then president of Hebrew University of Jerusalem, in founding the *Ichud* (or *Ihud,* i.e., Union), a political party that regarded "the Union between the Jewish and Arab peoples as essential for the upbuilding of Palestine." In a testimony before the Anglo-American Inquiry Committee, which convened in Jerusalem in March 1946 to explore solutions to the question of Palestine, Buber presented the vision of the *Ihud*: ". . .Jewish settlement [in

Palestine] must oust no Arab peasant, Jewish immigration must not cause the political status of the present inhabitants to deteriorate. . . A regenerated Jewish people in Palestine has not only to aim at living peacefully together with the Arab people, but also at a comprehensive cooperation with it in developing the country." Earlier, shortly after his emigration to Palestine in March 1938, in an open letter to Mohandas K. Gandhi, he set forth the presuppositions of this vision. It is the duty of the Jews, he explained, "to understand and to honor the claim which is opposed to ours" and to seek to reconcile the two claims that tragically divide Jew and Arab. For "we love this land and we believe in its future; and, seeing that such love and faith are surely present also on the other side, a union in the common service of the Land must be within the range of the possible." Although the political circumstances would radically change with the establishment of the state of Israel and, its wake, the displacement of hundreds of thousands of Arabs, this remained Buber's conviction.

BUBIYAN ISLAND

Island at the head of the Persian/Arabian Gulf, off the north coast of Kuwait and west of the Shatt al-Arab.

Separated from Kuwait by a narrow waterway, Bubiyan is Kuwait's largest island. Along with al-Warba Island, it lies at the mouth of Iraq's Gulf port, Umm Qasr. Both islands have been the focus of Iraq's territorial claims. In 1990, before invading Kuwait and announcing an annexation of Kuwaiti territory, Iraq's President Saddam Hussein demanded that Kuwait cede its sovereignty over both islands. Following Iraq's defeat in spring of 1991 by a United Nations coalition of forces, and the restoration of Kuwait's ruling Al Sabah family, this boundary dispute cooled but has not been settled.

BUCHAREST, TREATY OF (1812)

Treaty ending the Ottoman–Russian war by which Russia returned territory to the empire.

After six years of war between the Ottoman Empire and Russia, the Treaty of Bucharest was concluded between 16 and 18 May 1812. With Napoléon Bonaparte, emperor of France, prepared to attack Russia, Tsar Alexander I renounced Russian rights to the Romanian principalities and evacuated most of the Black Sea coast territory that Russia had won during the war, excepting Bessarabia. The treaty also contained a provision for autonomy of the Serbs, who had rebelled against the Ottomans.

BUDAPEST CONVENTION (1877)

Agreement between Austria and Russia regarding Russia's planned war against Ottoman Empire.

Determined to amend the decisions made by the 1876 Istanbul Conference, Russia made plans for war against the Ottoman Empire. By the Budapest Convention of 15 January 1877, Austria agreed to remain neutral in the coming war in return for the provinces of Bosnia and Herzegovina. Provision was also made for the partition of the Balkans in the event the Ottoman Empire collapsed.

BUGEAUD DE LA PICONNERIE, THOMAS-ROBERT

[1784–1849]

French military officer; governor-general of Algeria, 1841–1847.

In the early nineteenth century, North Africa was under the Ottoman Empire, but local rulers sponsored corsairs, pirates, and the slave trade in their coastal towns. The Europeans tried to salvage Mediterranean shipping from attack and end the taking of Christian sailors as slaves. In 1830, a French force took Algiers, but by 1832, local leader Abd al-Qadir of Mascara defeated the French and was recognized as dey of Mascara. Abd al-Qadir repeatedly defeated French forces from 1835 to 1837.

Marshal Thomas-Robert Bugeaud de la Piconnerie was sent to negotiate the Treaty of Tafna between France and Abd al-Qadir (30 May 1837), which abandoned most of Algeria to Abd al-Qadir. In 1839, the French broke the treaty, and in 1841 Bugeaud led a large force on the offensive against Abd al-Qadir. Bugeaud served as governor-general from 1841 to 1847. He was recalled to France and forced to resign in 1847 for disobeying orders; ironically that was the year that Abd al-Qadir surrendered to the French.

BU HAMARA

[1865–1909]

The nickname of al-Jilali ibn Idris al-Zarhuni, a Moroccan pretender to the Alawi throne.

Initially a minor official in the Alawite dynasty in Morocco, Bu Hamara (Arabic, "the man with the she-ass") was imprisoned in 1894 on charges of forgery. Between 1901 and 1903, passing himself off as a brother of the sultan Abd al-Aziz, he rallied the forces of the Ghiyata tribal confederation in the middle Atlas mountains. His activity can be understood as one in a series of rural movements opposed to heavy-handed policies by the *makhzan* government. Bu Hamara effectively controlled northeastern Morocco until his defeat in 1908 and execution in 1909 by the new sultan, Mulay Hafid (Abd al-Hafiz).

BUHAYRA

Egypt's westernmost delta province (governorate).

This province has existed as an administrative unit since Fatimid times. Nearest of Egypt's rural provinces to Alexandria, it was known while under the Mamluks and under the Ottoman Empire as a center of rebellious bedouin Arab tribes. Its capital is Damanhur. The estimated 1986 population of Buhayra was 1.8 million. Of its entire area, some 4,000 square miles (10,150 sq km) are in the Nile delta.

BULGARIAN HORRORS

Phrase coined by British politician Gladstone to describe the atrocities perpetrated by the Turks in putting down the revolt of the Bulgarians in 1876.

In 1875, a revolt began in Bosnia and Herzegovina that spread to neighboring Bulgaria the next year. Public opinion in Serbia and Montenegro soon caused them to declare war against the Ottoman

Empire in an effort to intervene on behalf of their fellow Slavs. Meanwhile, eyewitness reports revealing that more than 10,000 Christians had been slaughtered in Bulgaria by Turkish irregulars reached England, which had fought the Crimean War to preserve the Ottoman Empire and was intensely interested in the conflict. A wave of moral indignation swept over the country, fired by the revelations of the liberal press, the high point of which was an indictment by William Ewart Gladstone of Turkish rule in his pamphlet, "Bulgarian Horrors and the Question of the East." In it he argued passionately in favor of autonomy for the empire's Christian subjects, with little effect.

Although Gladstone was successful in rallying public opinion in Western Europe on behalf of the Bulgarians, the situation there was not resolved until after Russia attacked Turkey in 1877. In the following year, the treaties of San Stefano and Berlin established Bulgaria as an autonomous principality under Turkish sovereignty.

BUNCHE, RALPH J.

[1903–1971]

U.S. diplomat.

Ralph Bunche was born in Detroit, Michigan. His father was an itinerant barber. Orphaned at eleven, he was brought up by his grandmother in the Watts district of Los Angeles. Success at school both as student and athlete took him to the University of California, Los Angeles and, as a graduate student, to Harvard University. Colonialism was the subject of his Harvard doctoral thesis, and he did field work in Cameroon, French Togo, South Africa, Kenya, and Congo.

His writings on the race problem in the United States are part of the earliest literature of the Civil Rights movement. In *A World View of Race* (1936) he made a spirited connection between the nature and causes of the race problem in United States and of the international phenomenon of colonialism. In 1935, with A. Philip Randolph, he founded the National Negro Congress to give a voice to wider spectrum of the black population. He was chief assistant and researcher to Gunnar Myrdal in writing the classic *An Ameran Dilemma: The Negro Problem and Modern Democracy,* eventually published in 1944.

During World War II Bunche worked in the Office of Strategic Services (OSS). In 1944 he moved to the State Department and was its first black official. There, and at the 1945 San Francisco Conference, he was the principal drafter of Chapters XI (Non-self-governing Territories) and XII (The International Trusteeship System) of the United Nations Charter.

In 1946 Bunche set up the Trusteeship Division of the United Nations Secretariat. In 1947 in Palestine, he wrote both the majority (partition) proposal and the minority (federation) proposal of the UN Special Committee on Palestine. In 1948, as chief assistant to the UN mediator, Count Folke Bernadotte, he set up the UN Truce Supervision Organization in Palestine. When Bernadotte was assassinated in Jerusalem by the Stern Gang in September 1948, Bunche took over as mediator and negotiated armistice agreements between Israel and its four Arab neighbors. For this feat he was awarded the Nobel Peace Prize. From 1953, as Under Secretary-General for Special Political Affairs, Bunche was the chief political adviser to Secretary-General Dag Hammarskjöld, and to Hammarskjöld's successor, U Thant. During the Suez Crisis in 1956, he set up the first UN peacekeeping force, the United Nations Emergency Force in Middle East (UNEF I) and organized and directed subsequent peacekeeping forces in Lebanon, the Congo, and Cyprus. He personally led the largest of these, in the Congo, in 1960.

Bunche's complete integrity and fair-mindedness were universally acknowledged and respected, and his intellectual grasp, ingenuity, and determination as a negotiator were widely admired. He turned down efforts by successive U.S. presidents to woo him away from the United Nations. At his death in 1971, U Thant hailed him as "an international institution in his own right."

BUND

Jewish socialist workers' association.

The Bund (full name in Yiddish: Algemeyner Yidisher Arbeiter-Bund in Rusland und Poylen, translated as "General association of Jewish workers in Russia and Poland") was founded in Vilna (now Vilnius, Lithuania) in 1897. It was opposed to the emigration of Jews from Eastern Europe and asserted that the survival and development of Jewish life was dependent, instead, on Jews joining the struggle for social change and social justice in their respective countries of origin. It was staunchly opposed to Zionism as well as to the Zionist emphasis on Hebrew as the Jewish national language. It promoted the value of Yiddish. It was originally neutral on the notion of a collective Jewish national identity, but in 1901 it endorsed the ethnicity of Russia's Jews, and in October 1905 it adopted the notion Jewish cultural autonomy.

After the Bolshevik Revolution (1917), government repression led to the Bund's demise in the Soviet Union. The Bund continued to play an influential role in Poland until the Nazi invasion in 1939 and the beginning of World War II. After the war, the remnants of the Bund in Europe and the United States continued to oppose vigorously the establishment of a Jewish state.

BURAYMI OASIS DISPUTE

Territorial dispute over the oasis villages in the Buraymi region, 1952–1974.

The oasis settlements of the Buraymi region have been coveted by regional powers for centuries. The principal contenders for sovereignty during the nineteenth century were the rulers of Muscat, Dubai, and Abu Dhabi, and the Al Saʿud. In the first half of the twentieth century there were nine villages in the Buraymi region, of which three were claimed by Oman, six by Abu Dhabi.

The scramble for oil helped to intensify territorial claims in the region after World War II, and the Buraymi dispute arose when the Saudis aggressively asserted their claim to the oasis region. In 1952, in support of claims by Abu Dhabi and Muscat, a British official established himself in the village of Buraymi. In opposition, a group of Saudi officials occupied the village of Khamasa. With military conflict looming, a standstill agreement was signed in 1952, and an international tribunal created in 1954. Disagreements among the parties precipitated the collapse of the tribunal in 1955. The rulers of Oman and Abu Dhabi subsequently sent a military force to occupy the Buraymi villages and expel the Saudis. In 1972 the United Arab Emirates and Oman divided the Buraymi oasis among themselves. In 1974 Abu Dhabi ceded to Saudi Arabia a territorial corridor to the Persian Gulf south and east of Qatar in exchange for recognition of the Abu Dhabi–Omani claim to Buraymi.

BURCKHARDT, JOHANN LUDWIG

[1784–1817]

Swiss explorer; known in the Arab world as Ibrahim ibn Abdullah.

Born in Switzerland to an Anglophile father, Burckhardt was educated at Leipzig University in Germany, then hired by the London-based Association for Promoting the Discovery of Africa. To perfect his disguise as a Muslim traveler, he gained their approval to study Islam in the Middle East. In this manner, he became the first European to produce detailed eyewitness accounts of Mecca and Medina and rediscovered Petra in 1812. Burckhardt wrote *Travels in Syria and the Holy Land* (1822), *Travels in Arabia* (1829), and *Notes on the Bedouins and Wahabys* (1830).

BENJAMIN BRAUDE

BUREAU OF TRANSLATION

Ottoman agency (Bab-i Ali Tercüme Odasi) that also served as a training ground for diplomats and government officials.

Having long employed Greeks as translators, in 1821 the Ottoman Empire reacted to the Greek war of independence (1821–1830) by dismissing the last Greek translator of the Imperial Divan, appointing a Bulgarian convert to Islam to replace him. In 1821, Mahmut II created the translation office, which led an obscure existence for the next twelve years—serving more as a school than as a translation bureau, because few Muslims then knew European languages well enough to translate. Upgraded during the Ottoman–Egyptian diplomatic crisis of 1832 and 1833 (during which Muhammad Ali of Egypt demanded all Syria as a reward for his aid in Greece), the translation office assumed an important role in preparing young men to serve abroad as embassy secretaries; some of these later became ambassadors, foreign ministers, even grand viziers. Primarily a diplomatic translation bureau, the office became part of the Foreign Ministry (Hariciye Nezareti) when it was organized in 1836.

For a generation, the translation office was one of the best sources of Western education in Istanbul, and men trained there dominated the ranks of reforming statesmen, Westernizing intellectuals, and opposition ideologues. Patterns of bureaucratic mobility changed within the Ottoman civil service, but this office kept its prestige as a place to begin a career, and it continued to function until the end of the empire (1922).

BUREAUX ARABES

French military administration in Algeria, 1830–1847.

The expansion of French power and influence in Algeria after the July 1830 conquest of Algiers necessitated intermediaries besides interpreters to deal with both Arab and Berber tribes. A systematic administration run by specially trained military officers was structured by Governor-General Thomas-Robert Bugeaud de la Piconnerie and established by decree in 1844 to execute this service. These *bureaux arabes* provided the governor-general with mediation and intelligence. The officers viewed their operations as a civilizing mission and were often paternalistic and protective of native rights. The civilian colons (European settlers in Algeria) resented this flaunted example of "rule by the sabre." After Bugeaud's departure (1847), the personnel and performance of the *bureaux arabes* declined. A French decree in October 1870 restructured the administration, which effectively ended the system though an analogous organization continued in south Algeria. The military resumed a similar political and social mission with the Sections Administratives Spécialisées (SAS) during the Algerian War of Independence (1954–1962).

Phillip C. Naylor

BURG, AVRAHAM

[1955–]

Israeli political leader.

Avraham Burg was born in Jerusalem in 1955, the son of Yosef Burg, veteran and founder of the National Religious Party. After serving in the Paratroop Division of the Israel Defense Force, Burg became a leader of the Yesh Gvul protest movement against the war in Lebanon. In 1985, Prime Minister Shimon Peres appointed Burg to serve as his adviser on Diaspora Affairs. Burg held that position until 1988, when he was elected to the Knesset with the Alignment Party. While in the Knesset Burg served on several key committees, including the Foreign Affairs and Defense Committee, the Finance Committee and the State Control Committee. He was reelected to the Knesset in 1992, and continued to serve as chairman of the Knesset Education and Culture Committee.

In 1995 Burg was elected chairman of the executive of the Jewish Agency for Israel and the World Zionist Organization and resigned from the Knesset. As chairman of the Jewish Agency for Israel he led policy initiatives in restitution of Jewish property stolen during the Holocaust and religious pluralism and tolerance among Jews. He held that position until 1999, when he once again ran for the Knesset on the One Israel list, a new political alignment including the former Labor Party. After being reelected Burg was chosen in July 1999 to be speaker of the Fifteenth Knesset.

BURG, YOSEF

[1909–1999]

Israeli politician.

Born and educated in Germany, Burg received a doctorate in philosophy from the University of Leipzig and later was ordained as a rabbi at the Rabbinical Seminary in Berlin. Emigrating to Palestine in 1939, he was a research fellow at the Hebrew University of Jerusalem. From 1945 to 1949, he worked in Paris as director of the Religious Rescue Projects in Europe, caring for Holocaust survivors.

He served in the Knesset from 1949 until 1988. He helped found the National Religious Party (NRP). From 1951 to 1986 Burg served in every Israeli government; he was minister of health (1951–1952), posts (1952–1958), social welfare (1959–1970), interior (1970–1984), and religious affairs (1984–1986). He was relatively moderate on Arab-Israel relations. As a member of Menachem Begin's 1977 Likud government, he participated in negotiations with Egypt following the Camp David Accords. Burg resigned from the government in October 1986, to make way for younger leadership when Yitzhak Shamir succeeded Shimon Peres as prime minister in the rotation of the National Unity government.

In 1977 Burg was elected president of the World Mizrahi Movement. He was selected as a member of the Presidium of the Zionist Actions Committee in 1992. He died in October 1999.

BURLA, YEHUDA

[1886–1969]

First modern Hebrew writer of Middle Eastern Jewish descent.

Yehuda Burla was born in Jerusalem, the child of a family of Turkish rabbis and scholars who settled in Ottoman Palestine in the eighteenth century. He was educated at yeshivas (Hebrew schools) and at the Jerusalem Teachers' Seminary. He served as an interpreter for the Ottoman Empire during World War I. After the war, during the British mandate over Palestine, he directed and taught at various Hebrew schools. From 1930, he headed the Arab department of Histadrut, was envoy of Keren ha-Yesod to Latin America, was director of Arab affairs in the ministry of minorities, and served as president of the Hebrew Authors' Association.

After reading the works of modern Hebrew writers, Burla realized that they dealt exclusively with Ashkenazim. He was therefore determined to present the rich world of Middle Eastern Jewry. His first novella, *Lunah* (1918), is a love story among Sephardim in old Jerusalem. His first novel, *Ishto ha-Senu'ah* (1928, His hated wife), concerns a man who hates his wife but, fearing economic ruin, does not divorce her. He also wrote about bedouins in *Beli Kochav* (1937, Without a star). Burla was a realist; his style is narrative and the mood evoked is romantic.

BURSA

Fourth largest city of Turkey, in northwest Anatolia.

Bursa was the first major conquest of the early Ottomans in 1324. A modest Byzantine provincial market town, it quickly developed as the first capital of the growing Ottoman Empire, featuring many of the finest examples of early Ottoman architecture. Positioned on the northern foothills of Uludağ (Bithynian Mount Olympus) close to the Sea of Marmara, with easy access to the Mediterranean and on the natural extension of Anatolian routes, it became a major international commercial center, where European, mainly Genoese, merchants bought silk and other Eastern goods. It was also widely known for its abundant hot springs and magnificent baths.

Even after the conquest of Constantinople (now Istanbul) in 1453, when it became the definitive capital of the empire, Bursa remained an imperial city and a thriving international market, with significant manufacture of cotton and silk textiles, in addition to its long-established role as terminus for long-distance Asian caravan trade. With a population of about 40,000 in the sixteenth century, it was the largest city in Anatolia. Bursa's growth was hampered in the seventeenth century as a result of the Ottoman policy of promoting İzmir as the major port for Asian and European trade, but the city retained its position as a prominent, if less prosperous, cultural, manufacturing, and commercial center. During the Tanzimat period of free trade, with competition from industrialized Europe, Bursa's silk and cotton textile manufacture suffered significantly, but both the Ottoman policy of industrialization and private investment in steam-powered plants allowed recovery of local production before the end of the century. Bursa became the seat of an enlarged province incorporating several northwest Anatolian districts. Abdülhamit II's efforts to glorify the early Ottoman heritage also contributed to the city's growing fortunes.

Bursa was occupied by the Greek army after World War I, and the city suffered during the ensuing Turkish War of Independence, especially with the destructive retreat of the Greek army in 1922 and the loss of its non-Muslim population. As a result of the state-led industrialization during the 1920s and 1930s, Bursa recovered its textile manufacturing prominence, but its real growth came in the 1960s, with the establishment by private enterprises first of large-scale canning and food processing and then of the automotive industry. In 2000, Bursa was the third largest contributor to Turkey's gross domestic product, with its population of 2,106,687, of whom 1,288,068 reside in the city center. It also ranked fifth among Turkish cities

with respect to socioeconomic development. Even with this rapid industrial transformation, however, Bursa still maintains its role as a spa and a heritage center; Uludağ has recently become a favorite winter resort and its highland pastures have regained their early-Ottoman importance for summering. Uludağ University, opened in 1975, aims to foster the city's traditional position of cultural and intellectual prominence.

BURTON, RICHARD FRANCIS

[1821–1890]

British explorer, orientalist, author, and consul.

Richard Francis Burton was born in England the son of a gentleman army officer and raised in Europe. He was expelled from Oxford University and became an intelligence officer in the army of the British East India Company, before being sent home after exposing the common resort of British soldiers to Indian brothels. During years of exploration and service to the British Empire, Burton learned forty languages and dialects, mostly by mixing with locals in India, the Middle East, Africa, the Americas, and Europe. A consistent admirer of Arab Islamic culture, in 1853 Burton posed as an Afghan doctor and joined the *hajj* (pilgrimage), gaining celebrity status in Britain after publishing his *Personal Narrative of a Pilgrimage to Al-Madinah and Meccah* (1855–1856). In 1856 he was sent to explore the Nile by the British Foreign Office. This led to a competition with John Speke over who could find the headwaters or source of the Nile; Speke won. Burton went on to serve as British consul in West Africa (1861), South America (1865–1868), and Damascus (1869–1871).

His last years were spent publishing acclaimed translations of Arabic and Indian literature on religion, society, and sexuality, notably the *Kama Sutra* (1883) and "The Arabian Nights," which was published as *The Thousand Nights and a Night* (1885). Burton also published much-noted works on Africa, encouraging a wave of British explorers to follow in his stead.

Updated by George R. Wilkes

BUSH, GEORGE HERBERT WALKER

[1924–]

U.S. president (1989–1993).

George H. W. Bush was born in the state of Connecticut. He was a decorated naval combat pilot in the Pacific during the Second World War despite the fact that he was the youngest pilot in the U.S. Navy. After the war he graduated from Yale University, and moved to Texas to work as an oil executive. Bush later entered public life and served in the U.S. House of Representatives, and was director of the Central Intelligence Agency, American ambassador to the United Nations, and vice president of the United States, among other positions.

During Bush's presidency, the United States undertook several major initiatives in the Middle East. He continued the first official U.S. dialogue with the Palestine Liberation Organization, which had begun in December 1988, the month before Bush took office, and which lasted until June 1990. The U.S.-led military engagement that defeated Iraq's occupation forces in Kuwait during the Gulf Crisis of 1990–1991 marked the first major American military involvement in the Middle East. Following Iraq's defeat, Bush decided to take advantage

of the new regional climate to convene the Madrid Conference in October 1991, the first face-to-face Arab–Israeli peace negotiations since the 1979 Israel–Egypt peace treaty. The United States and the Soviet Union presided over both bilateral and multilateral talks among Israeli and Arab delegations, including Palestinians for the first time as part of a joint Jordanian-Palestinian delegation.

BUSH, GEORGE WALKER

[1946–]

U.S. president (2001–); dramatically increased America's role in the Middle East.

The son of President George H. W. Bush, George W. Bush earned a B.A. in history from Yale University in 1968 and an M.B.A. from Harvard in 1975. Like his father, he worked in the petroleum industry and he later served as governor of Texas (1995–2001). George W. Bush was elected president as a result of controversial elections of November 2000, in which his opponent, Albert Gore, actually received more popular votes than Bush but failed to win the presidency after the U.S. Supreme Court intervened in a disagreement over which candidate had carried the vote in Florida.

Attacks against targets in New York and Washington, D.C., mounted by the al-Qaʿida organization of Osama bin Ladin on 11 September 2001, profoundly changed the Bush presidency and America's role in the Middle East and southwest Asia. Bush's earlier disdain for involvement in the region's complexities gave way to his need to respond to the biggest terrorist attack in American history. He ordered the invasion of Afghanistan in October 2001, which succeeded in destroying the government of the Taliban and severely disrupting the al-Qaʿida network, which had used the country as a base for training and operations. The United States then worked with the United Nations in trying to rebuild the country around President Hamid Karzai. Beginning in 2002, Bush dramatically escalated pressure on Iraq and its president, Saddam Hussein. Claiming that Iraq still possessed weapons of mass destruction such as chemical and biological weapons, he argued that the country constituted a threat to U.S. security. Despite massive global opposition, even from traditional American allies like Germany and France, U.S. and British forces invaded the country in March 2003 and overthrew Saddam Hussein's government.

Bush also picked up the efforts of his predecessor, Bill Clinton, to forge peace between Israel and the Palestinians. He became the first U.S. president openly to call for the creation of a Palestinian state, although his administration refused to deal with Palestinian Authority leader Yasir Arafat and pressured Arafat to cede some of his powers to a newly created prime minister's position. On the other hand, Bush was willing to work with Israeli prime minister Ariel Sharon, whom he called a "man of peace." The Bush administration, along with the United Nations, Russia, and the European Union, developed a "Road Map" for peace between the two sides, which Bush tried to push in 2003.

BUSNACH FAMILY

Prominent Jewish family of Algeria.

The Busnach (in Arabic, Bu Janah) family was one of three Livornese (Italy) Jewish families (the others were the Boucharas and the Cohen-Baqris) that were prominent in Algerian commerce and politics throughout the eighteenth and early nineteenth

centuries. The patriarch of the clan, Naphtali Busnach, established a shipping business in Algiers in the early 1720s. He was also involved in the ransoming of European captives of the corsairs (Barbary pirates).

His grandson Naphtali II was the right-hand man of Mustafa Bey of Constantine. When Mustafa was chosen dey in 1797, Naphtali became his chief courtier. At about the same time, Naphtali went into partnership with Joseph Baqri, with whom he was related by ties of marriage, and the firm of Baqri & Busnach came to hold a virtual monopoly on trade with the regency. Naphtali was appointed *muqaddam* (chief) of the Jewish community by the dey in 1800. Naphtali, who had survived one attempt on his life during a failed coup in 1801, was assassinated by a janissary in 1805. The incident touched off anti-Jewish riots among the Ottoman troops. Most of the Busnachs fled to Livorno at this time, although their relatives, the Baqris, remained in Algiers.

NORMAN STILLMAN

BUSTANI, SULAYMAN

[1856–1925]

Ottoman writer and government official.

Born to a Maronite Christian family in the village of Bkashtin in the Shuf region of Mount Lebanon, Sulayman Bustani was educated from 1863 to 1871 in the National School (al-Madrasa al-Wataniyya) in Beirut (founded by his relative Butrus al-Bustani). There he studied English and French in addition to Arabic and Turkish. He traveled extensively in the Arab provinces of the Ottoman Empire and beyond, to Persia and India. He assisted Butrus al-Bustani and his sons, Salim and Najib, in writing and editing the first Arabic encyclopedia, *Daʾirat al-maʿarif,* and contributed to the periodical *al-Muqtataf,* published in Cairo, Egypt. In 1904, he published his most important contribution to the interaction between Arabic culture and Greek literature—the first Arabic translation of Homer's *Iliad.*

In 1908, after the coming of the Young Turks to power in Istanbul and the beginning of the second Ottoman constitutional period, Bustani published *Ibra wa Dhikra aw al-Dawla al-Uthmaniyya Qabla al-Dustur wa Baʿdahu* (A lesson and a memory, or the Ottoman state before the constitution and after it), which implicitly criticized the autocratic rule of Sultan Abdülhamit II and sang the praises of liberal policies in all aspects of political, social, economic, and religious life. He hammered away at the theme of allegiance to the Ottoman state and criticized Western educational institutions in the country, which undermined that allegiance. Bustani also believed that the best way to eradicate religious fanaticism was to make the Christians serve alongside the Muslims in the Ottoman army. Further, he thought the best way to eradicate ethnic conflict was to spread the Turkish language among the population by making it mandatory in all the empire's schools.

In 1908, Bustani was elected to serve as deputy for the province of Beirut in the lower chamber of deputies in Istanbul; in 1911, he became a member of the upper chamber. In 1913, he was appointed minister for commerce, agriculture, forests, and mines—he resigned, however, at the end of the following year when the Committee for Union and Progress, the effective Ottoman power, decided to enter World War I on the side of Germany. Bustani then belonged to a group of Ottoman officials who held that a policy of neutrality would serve the empire best.

CAIRO

The capital of Egypt, the largest city in the Middle East and Africa, and a major political, religious, and cultural hub for the Arab, Islamic, and African worlds.

A city with fertile hinterland and a crossroads location for river, sea, and land trade has flourished near the juncture of the Nile valley of Upper Egypt and the delta of Lower Egypt for five thousand years. In 640 C.E. the conquering Muslim Arabs founded al-Fustat (now *Old Cairo* to Westerners), which superseded the Babylon of the Romans and its predecessor across the river, the Memphis of the pharaohs. In 969 the invading Fatimids founded al-Qahira (the Victorious), and Cairo acquired its current name and resumed its ancient role as an imperial center. (In Arabic, *Misr* has long been used interchangeably for both Egypt and Cairo.) The Fatimids established the renowned mosque-university al-Azhar, and Salah al-Din (Saladin) of the Ayyubid dynasty built the hilltop Citadel, which remained the seat of power until the mid-nineteenth century.

Its population weakened by epidemics and the ruling Mamluks' internecine warfare, Cairo fell to the Ottomans in 1517. By the seventeenth century the Cape of Good Hope route had deprived Cairo (reduced once more to the status of a provincial city) of much of its spice trade. Europeans no longer spoke with awe of the city Egyptians called the Mother of the World. In 1798 the cartographers of Napoléon Bonaparte's military expedition found a city of a quarter of a million people, half of the population of Cairo at its fourteenth-century peak. The narrow, irregular streets of the preindustrial city served pedestrians, riders, and pack animals well enough, and balconies provided welcome shade. Gates that closed at night and dead-end alleys marked off city quarters, which were defined mainly along religious, ethnic, and occupational lines. Waqf endowments supported mosques, schools, Sufi lodges, baths, fountains, and hospitals.

The military, economic, administrative, and educational reforms introduced during Muhammad Ali's reign (1805–1848) left few external marks on Cairo, and the city's population, checked by epidemics and competition from burgeoning Alexan-

Cairo's famous al-Azhar mosque was built in 970 C.E. on the orders of the Fatimid caliph al-Muʿizz. Shortly after its completion, the mosque became known as a center of religious and secular learning, and the university which sprang up around it is generally considered to be the oldest in the world. © AP/Wide World Photos. Reproduced by permission.

dria, remained stagnant until the middle of the century. After 1850, however, the population grew because of lower mortality rates, an influx of people from the countryside, and the immigration of European and Levantine entrepreneurs. The Alexandria-Cairo Railroad and the Suez Canal, whose construction was completed respectively in 1855 and 1869, quickened the pace of life in Cairo. The city's share of Egypt's total population, which had dipped from 5.8 percent in 1800 to a low of 4.7 percent in 1865 (when Alexandria was in full bloom), rose to 6.9 percent in 1897. Today it accounts for over a quarter of the total population of Egypt.

Under Muhammad Ali's grandson Ismaʿil (r. 1863–1879) and the British occupation (1882–1922), the unused space between Cairo and its river ports Bulaq and Old Cairo was developed. Inspired by the municipal improvements effected in Paris by Baron Georges Haussmann and determined to impress the Europeans at the ceremonies celebrating the Suez Canal's completion, Ismaʿil instructed engineer Ali Mubarak to equip the suburb Ismaʿiliyya with Parisian-style boulevards, traffic hubs, gardens, palaces, and even an opera house. Ismaʿil had two boulevards for vehicle traffic cut through the old city before the bankruptcy of Egypt intervened and cost him the throne. European connoisseurs of "Oriental Cairo" persuaded his successor to found the Comité de Preservation des Monuments de l'Art Arabe (1881), and preservationists still fight to save some monuments and neighborhoods in Cairo from relentless overpopulation, decay, and demolition for urban renewal.

Under the British, Cairo's European population (30,000, or 6 percent of the city's population in 1897) dominated big business and filled the fashionable new quarters of Heliopolis, Garden City, Maʿadi, and Zamalek with their Mediterranean-style villas. European concessionaires developed the

Boasting an ever-expanding population of seventeen million, Cairo, the largest city in the Middle East and Africa, lies at the center of all routes leading to and from the continents of Asia, Africa, and Europe. The city covers an area of more than 453 square kilometers and is located on both banks of the Nile River. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

water, gas, electricity, telephone, and tramway services, and built the bridges across the Nile. Bridges made accessible the first artery to the West Bank in 1872. By 1914 the access provided by additional bridges to more arteries to the West Bank and to the islands of Rawda and Gazira resulted in rapid development. Between 1896 and 1914 electric tramways (soon replaced by motor vehicles) revolutionized transportation within the city and made possible the swift development of suburbs to the northeast (Abbasiyya, Heliopolis), the north (Shubra), and the west (Rawda, Zamalik, Giza).

Between 1922 and 1952 the domination by Europeans of economic and political life in Egypt ebbed. In 1949 the closing of the Mixed Courts put an end to special privileges for Westerners, and Cairo belatedly acquired a municipal government that was distinct from the national ministries. Life in the old city deteriorated (see the masterful portrayal of this time by novelist Najib Mahfuz). Well-to-do Egyptians left for the suburbs, Egyptians from rural parts of the country crowded in, and the overflow of tens of thousands of inhabitants spilled over into the cemeteries of the City of the Dead.

Cairo Population Estimates

1798:	264,000
1846:	257,000
1897:	590,000
1927:	1,065,000
1947:	2,048,000
1960:	3,416,000
1970:	7,000,000
2003:	9,600,000

Sources: Abu-Lughod, Janet. *Cairo: 1,001 Years of the City Victorious.* Princeton, NJ: Princeton University Press, 1971; *World Almanac 2004*. New York: World Almanac Education Group.

Under Gamal Abdel Nasser (r. 1952–1970) there was an acceleration of both planned and unplanned urban development. Private utility and transport concessions reverted to the state, *waqf* reform freed land for development, a new airport opened, and a revamped road network briefly alleviated some of the traffic congestion. The Corniche exposed Cairo to the river, and Maydan al-Tahrir became the city center. The Nile Hilton and the new Shepheard's were the first of many luxury hotels built to cater to the expanding tourist trade. Heavy industry was set up in suburban Hilwan and Shubra al-Khayma. The 1956 Master Plan for Cairo recommended that the city limit its population to 3.5 million (a maximum that had already been exceeded) and advocated planned satellite communities and development on desert rather than on agricultural land. The resulting Nasr City—with government offices, housing blocks, schools, a 100,000-seat stadium, and a new campus for al-Azhar—was a success, but Muqattam City, perched high on the desert cliffs, was not.

Since 1970 the Hilwan–al-Marj metro line has been opened in Cairo, sewer and telephone systems have been upgraded, and more satellite cities have been built in the desert (Sadat City, 10th Ramadan, 6th October, al-Ubur, 15th May). The population crush nevertheless threatens to dwarf such efforts. The runaway sprawl into agricultural lands in the delta and Giza continues while the problem-plagued desert satellite cities sit half empty and a purple cloud of polluted air regularly hangs over Cairo. Opportunities for jobs, schooling, housing, and healthcare are better in Cairo than in the teeming countryside, and people from rural areas keep pouring in. Shanty towns proliferate. One out of every four Egyptians lives in this Third-World megalopolis of seventeen million people.

Cairo remains the cultural capital of the Arab world. Its assets include al-Azhar and four modern universities, twenty-odd museums, a major movie industry and playhouses, a radio and television industry, bookshops and publishing houses, *al-Ahram* and other periodicals, a zoo, a new opera house, the headquarters of the Arab League, and the Academy of the Arabic Language.

CAIRO CONFERENCE (1921)

Meeting of Middle East experts to decide on administration of British mandates of Iraq and Transjordan.

The Cairo Conference was convened by Winston Churchill, then Britain's colonial secretary. With the mandates of Palestine and Iraq awarded to Britain at the San Remo Conference (1920), Churchill wished to consult with Middle East experts, and at his request, Gertrude Bell, Sir Percy Cox, T. E. Lawrence, Sir Kinahan Cornwallis, Sir Arnold T. Wilson, Iraqi minister of war Jaʿfar al-Askari, Iraqi minister of finance Sasun Effendi (Sasson Heskayl), and others gathered in Cairo, Egypt, in March 1921. The two most significant decisions of the conference were to offer the throne of Iraq to Amir Faisal ibn Hussein (who became Faisal I) and the emirate of Transjordan (now Jordan) to his brother Abdullah I ibn Hussein. Furthermore, the British garrison in Iraq would be substantially reduced and replaced by air force squadrons, with a major base at Habbaniyya. The conference provided the political blueprint for British administration in both Iraq and Transjordan, and in offering these two regions to the Hashimite sons of Sharif Husayn ibn Ali of the Hijaz, Churchill believed that the spirit, if not the letter, of Britain's wartime promises to the Arabs would be fulfilled.

CAIRO FAMILY PLANNING ASSOCIATION

Egyptian association to promote family planning.

In 1967, the Cairo Family Planning Association (CFPA) was established as a branch of the Egyptian Family Planning Association. Dedicated to the promotion of voluntary family planning, the CFPA advocates for the creation of comprehensive family planning services and health education. The CFPA is comprised of thirty-four associations and, in conjunction with the Ministry of Social Affairs, supervises forty-one health centers in Greater Cairo. The CFPA provides technical, administrative, and organizational support to member associations, directs two model reproductive health clinics, and has supervised the renovation of eighteen health centers in Cairo.

The activities of the CFPA are not limited to family planning. Conceptualizing family planning as a human right, the CFPA is also involved in direct service, research, and media campaigns on issues such as infertility, prenatal and pediatric care, and female circumcision. In 1979, the CFPA became a pioneer in the field of female circumcision, establishing the first seminar in Egypt on the subject. Dedicated to combating the practice, the CFPA has conducted studies, sponsored seminars and lectures, and trained health service providers to increase awareness about the detrimental health implications of female circumcision. The CFPA also documents and disseminates information about reproductive health through the production of a quarterly bulletin highlighting news, research findings, and recent publications.

CAIRO UNIVERSITY

Flagship modern university in Egypt.

Cairo University's early founding and location made it a model for later universities throughout the Arab world. Opened as the small, private Egyptian University in 1908 and taken over as a state university in 1925, it became Fuʾad I University in 1940 and Cairo University in 1954.

The retirement in 1907 of Britain's consul general, Lord Cromer (formerly Sir Evelyn Baring), who had opposed a university for fear of Egyptian nationalism, allowed the plan for the private university to proceed. Egypt's minister of education Saʿd Zaghlul, feminist judge Qasim Amin, and others insisted that Egypt needed a Western-style university to complement its state professional schools and the Islamic religious university of al-Azhar. Europe provided the models and a number of the professors when the university opened with Prince Ahmad Fuʾad as rector in 1908.

In 1925 Fuʿad, by then king, transformed the Egyptian University into a major state institution, with colleges of arts, science, law, and engineering—the latter two formed from existing higher schools. Other schools were introduced later: engineering, agriculture, commerce, veterinary science, and the teachers college of Dar al-Ulum. The university now has seventeen colleges and six institutes in Cairo and a number of branch colleges in Fayyum, Bani Suayf, and Khartoum. Alexandria (then Farouk I) University split off in 1942; today Egypt has a dozen state and several new private universities.

During the quarter-century after 1925, the British overtook the French in influence at the university, but slowly lost out themselves to pressures to Egyptianize the faculty. The battle for coeducation was won, with the first women graduating in 1933. In

the 1930s Ahmad Lutfi al-Sayyid, rector, and Taha Husayn, dean of arts, fought for university autonomy from palace and cabinet interference, as the students were inevitably caught up in turbulent national politics.

At serious cost in quality, Gamal Abdel Nasser opened Cairo and other universities more widely to provincials and the poor. His purge of 1954 crushed student and professorial opposition until after the 1967 war. President Anwar al-Sadat initially encouraged Islamist groups on campus to counter the left, and campus Islamists remain a major challenge to the regime of Husni Mubarak. With about 155,000 students in 2003, Cairo University still has its pockets of excellence, but it is desperately underfunded and overcrowded and continues churning out thousands of poorly educated graduates onto a glutted job market.

CALAND, HUGUETTE

[1931–]

Lebanese artist and fashion designer.

Huguette Caland is an abstract painter and sculptor who has also worked in fashion design (notably for Pierre Cardin) and filmmaking. The daughter of a former president of Lebanon, she trained under Fernando Manetti and George Apostu and at the American University in Beirut. In Lebanon, she cofounded the Inʿash al-Mukhayyim art center. She lived in Paris for many years and participated in individual and group exhibitions, primarily in Europe and Lebanon. In her paintings, Caland has brought out the sensuous properties of color, the emotive qualities of line, and the tensions that can be created by the juxtaposition of different colors and lines in compositions that often involve the innovative use of negative space. She has participated in major exhibitions in Europe, notably the Venice Biennial.

CALIPHATE

The caliph was the temporal and spiritual ruler of Islam until the office was abolished in 1924.

The Ottoman dynasty's claim to the office had been widely recognized in the Muslim world by the end of the nineteenth century, even though its historical basis was controversial. The claim was based on an alleged transfer of caliphal authority to the House of Osman after Ottoman armies conquered Mamluk Egypt. There an Abbasid caliph with descent from the Quraysh tribe of the Prophet Muhammad had been maintained as a dependent figurehead.

Nationalism and the Caliphate

The caliphate signified the ideal of pan-Islamic unity and solidarity and served as a psychological rallying point for Muslims against imperialist encroachments. The impending collapse of the Ottoman Empire at the end of World War I mobilized Muslims worldwide to campaign for the retention of the caliphate. The India Khilafat Congress was especially active in this cause during the peace negotiations of 1919, since Indian Muslims were seeking self-determination based on allegiance to the caliph.

After the Ottomans were defeated in the war, the Anglo-French occupation of Constantinople (now Istanbul), the seat of the caliphate, further compromised the authority of Sultan-Caliph Mehmet VI Vahidettin. Mustafa Kemal (Atatürk) and other leaders of the Anatolian independence movement declared that a principal objective was to liberate the sultanate and the caliphate from occupation forces. At the same time, Vahidettin denounced the resistance on Islamic grounds. Political and military

circumstances, however, gradually transformed the nationalists' attitude toward the caliphate. In view of the successes of the independence struggle and the complicity of Vahidettin with the occupying powers, the rival Ankara government promulgated in January 1921 the Fundamental Law which established the nation's sovereignty. On 1 November 1922, it passed legislation to abolish the Ottoman monarchy, separating the sultanate from the caliphate and maintaining the caliphate as a vague spiritual and moral authority. On November 16, Vahidettin sought asylum with British authorities and left Constantinople for Malta and later the Hijaz.

A Caliphate without Political Authority

The new law authorized the Turkish Grand National Assembly to select a meritorious member of the Ottoman dynasty as caliph. As the Muslim world debated the legitimacy of a caliphate without political authority, the assembly conferred the title of caliph on Abdülmecit II (1868–1944), son of Sultan Abdülaziz. The separation of the caliphate from the defunct monarchy was a tactical step toward abolishing the House of Osman and soothing domestic and international Muslim public opinion.

Foreign reaction was apathetic as the Khilafat Congress recognized the new caliph. In Turkey, though, the caliph quickly became the focus around which the proponents of the constitutional monarchy rallied. In October 1923, Mustafa Kemal declared the Turkish republic. The designation of the president of the republic as the head of state further compromised the caliph's position.

In December 1923, Indian Muslim leaders Amir Ali and Aga Khan, the imam of the Ismaʿili sect, wrote a letter to the Turkish prime minister Ismet Inönü urging retention of the caliphate. The Indian plea only accelerated the end. The Kemalists denounced the intervention of the two Muslim leaders as interference in the affairs of the new state and discredited them as Shiʿite British proxies. Indian religious scholars called for an international conference to determine the status of the caliphate. On 3 March 1924, the assembly passed legislation eliminating the office as part of a string of secularizing measures, including the abolition of religious education. The Kemalists argued that the caliphate was superfluous because the government of each Muslim country should administer both temporal and religious affairs.

Attempts to Create a New Caliphate

Abdülmecit left Turkey for Switzerland and later France. Since Turkey had emerged as the strongest independent country in the Muslim world, its abandonment of the caliphate elicited concern and disapproval from colonized Muslims, while in Turkey and other independent Muslim countries there was relative indifference. There was no Muslim consensus on how to respond to the Turkish fait accompli. The sharif of Mecca, now the king of the Hijaz, Husayn bin Ali, immediately put forward his claim, which was sanctioned by Vahidettin. King Fuʾad of Egypt and Imam Yahya of Yemen also emerged as possible candidates, as did the Moroccan and Afghan kings. Others advocated the continued recognition of Abdülmecit as the legitimate caliph. Husayn had a strong claim due to his prestige and descent from the Hashimite family of the Quraysh. Further, the British had revived the notion of a Meccan caliphate on the eve of the Arab Revolt. However, by 1924 Husayn lacked real political authority. In fact, Indian Muslims were inclined toward his rival, Abd al-Aziz ibn Saʿud of Najd. Ibn Saʿud, surrounded by Hashimite power in the Hijaz, Iraq, and Transjordan, felt even more threatened by Husayn's caliphal ambitions and invaded the Hijaz, forcing Husayn to exile.

There could be no agreement on a single candidate when no consensus existed on the continuation of the office. A Caliphate Congress *(muʾtamar al-khilafa)* convened in Cairo in May 1926 with the participation of *ulama* (clergy) from several Muslim countries. At this conference, King Fuʾad hoped to promote his claim, but the relative apathy toward the meeting and disagreement about eligibility requirements resulted in its adjournment with only the group's affirmation of the need to reinstitute a caliph. Yet the caliphate appeared as an ever-more-incongruent political institution in a Muslim world that was becoming increasingly fragmented. The issue of caliphal succession became embroiled in the nationalist rivalries and inward-looking struggles of the Muslim countries.

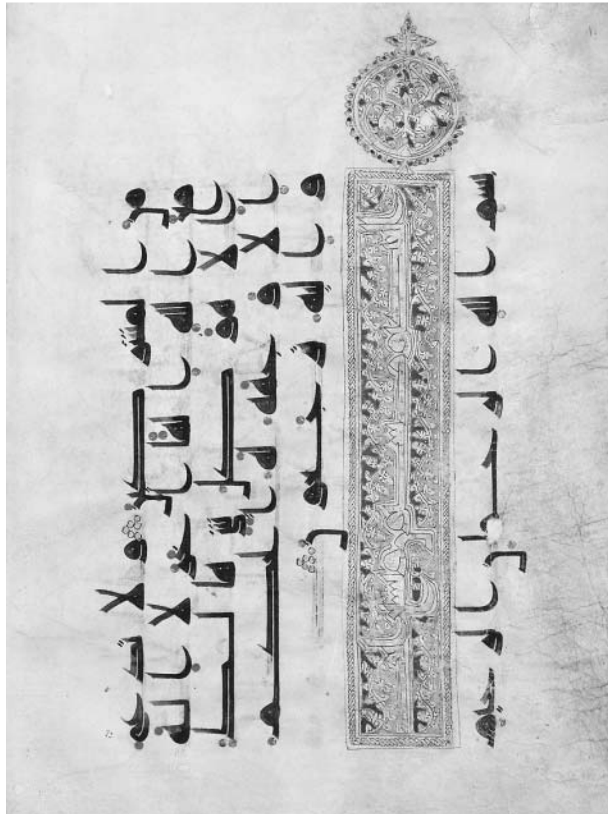
CALLIGRAPHY

Fine Islamic writing as an art form.

In the Islamic context, calligraphy refers to the artistic writing of the Arabic script, either in the Arabic language or in other languages transcribed with the Arabic script. Originally, Islamic calligraphy was an expedient to ensure legibility. It soon became the primary visual art in the realms of Islamic religious influence and remained so at least until the nineteenth century.



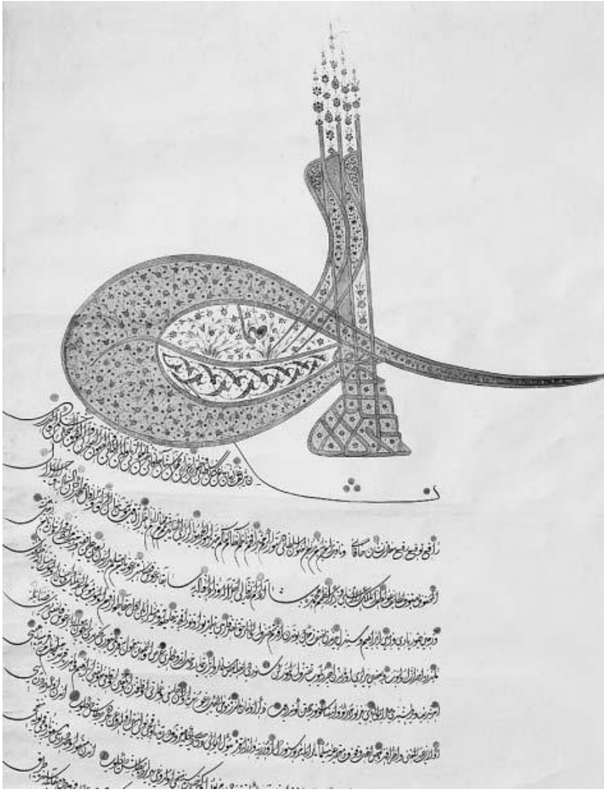
Qur᾽an leaf with heading of sura 29. Possibly dates from Iraq, before 911 c.e. © Art Resource. Reproduced by permission.

Islamic calligraphy shares the characteristics of other fine arts: a long and well-documented history, an extensive roster of renowned practitioners, an elaborate educational protocol, a wide selection of acknowledged masterpieces, a variety of media that are peculiar to it, and a wide range of accepted techniques and styles. In addition, there are religious and cultural regulations that pertain to the teaching, production, and display of Islamic calligraphy. There are also ancillary professionals and amateurs who produce the tools and materials used in the production of the art works, such as inks, marble paper, and pens. Finally, a well-developed body of literature deals with the criticism and appreciation of Islamic calligraphy.

From the beginning of the Islamic period, and possibly substantially before it, two types of writing were used, according to occasion, in the Hijaz region of the Arabian peninsula. One was a simple, loose, and informal script for everyday use. The other—reserved for special purposes, especially religious uses that demanded a spectacular presentation—was the "dry" or stiff style of writing commonly, albeit incorrectly, called Kufic. In Islamic times, this became the favored style for Qur᾽anic transcriptions, due to its gravity, legibility, grace, and sheer visual impact.

By the tenth century, new scripts had taken shape from the earlier, informal writing and had gained in popularity. Because the shapes and sizes of the letters were calculated geometrically, these scripts were called "the proportioned scripts." They include the Thuluth, Naskh, and Muhaqqaq scripts. These are commonly referred to as Naskhi (supposedly meaning cursive), a name that has no basis in history.

Four important calligraphers, working in Baghdad during the Abbasid caliphate, founded the modern trend in Islamic calligraphy. These were Muhammad ibn Muqla (d. 940); his brother Abu Abdullah ibn Muqla (d. 939); Ali ibn Hilal, called Ibn al-Baw wab (d. 1022); and Yaqut al-Musta'simi (d. 1298). Through the works and teachings of these



Monogram of Sultan Murat III. The monogram was created in 1575 for Murat III, who was sultan of the Ottoman Empire from 1574 until his death in 1595. © ARCHIVO ICONOGRAFICO, S.A./CORBIS. REPRODUCED BY PERMISSION.

masters, the art of calligraphy radiated to other important Islamic cultural centers.

By the sixteenth century, the center of Islamic calligraphy was to be found in Constantinople (now Istanbul) of the Ottoman Empire. There the pivotal Şeyh Hamdullah (1429–1520), a lifelong calligrapher, completely revised the structure of the basic scripts, of Thuluth and Naskh in particular, giving them a more precise, lighter, and more dynamic look. Since the life and teaching of this great master, the Ottoman Turkish method has been paramount. This method is distinguished by its special teaching protocols, its attention to detail, and its insistence on the highest standards.

Another Ottoman master, Mehmet Asat Yesari (d. 1798), took the Persian style Nastaʿliq and, while maintaining its basic rules, transformed it into a powerful visual instrument, especially in its large (Celali) version.

Other trends in Islamic calligraphy of significant historical and artistic merit have existed continuously in the Maghrib-Andalusian orbit, in the Persian orbit, and in China. Although Islamic calligraphy reached its apogee in the late nineteenth century, it is experiencing a revival today, in particular due to the efforts of the Research Centre for Islamic History, Art, and Culture in Istanbul (IRCICA). The art continues to reign supreme in its ability to convey in the most emphatic way the written Islamic texts.

CAMBON–LANSDOWNE AGREEMENT (1904)

Pact between France and Great Britain affecting each country's activities in Egypt and Morocco.

After having been rivals for a long time, France and Great Britain mutually agreed to desist. According to the agreement, France had total freedom of action in Morocco; meanwhile France would stop interfering with English financial activities in Egypt, as it had since 1882. The English enjoyed immediate but limited advantages. As for the French, it meant getting potential interests and indicated the end of an obsessional opposition. The agreement

took place on 8 April 1904 in a general atmosphere of mutual reconciliation, for the two countries were worried about Germany's growing power.

RÉMY LEVEAU

CAMELS

Domesticated ruminant of central Asia, Arabia, and North Africa.

A domesticated animal, with one or two humps, that is used as a mode of transportation in the Middle East, the camel is a survivor of an almost vanished group of ungulates (hoofed mammals) that once populated all the large land masses of the world except Australia. Its close relatives are the South American llama, alpaca, guanaco, and vicuña. The only camels existing today are two domesticated species: the Arabian dromedary, *Camelus dromedarius* (or *ibil*), which has one hump and is used for riding; and the two-humped Bactrian camel, *Camelus bactrianus,* which has shorter legs and is more heavily built. A few survive in the Gobi Desert.

Traditional belief has it that one-humped camels do not adapt well to cold or moist climates nor the two-humped camel to extremely hot climates. Both store fat in their humps, have long necks suitable for feeding on bushes and trees, and have padded feet suited for travel on sand but ill-suited for travel on mud. Both have the capacity to go long intervals without water. Camels do not store water as some folk stories allege. Rather, they conserve it through highly efficient kidneys that allow them to process water with a high concentration of impurities; they also have the capacity to absorb heat by allowing their blood temperature to rise, without ill effect. The horn of Africa constitutes the largest and most abundant camel territory in the world and today Somalia alone has a camel population exceeding four million. Camel milk is a dietary staple in Somalia. Camels exist as a form of wealth and nourishment and form part of the traditional bride-price.

MIA BLOOM

CAMP DAVID ACCORDS (1978)

Agreements signed by Egypt, Israel, and the United States on 17 September 1978.

In November 1977, Egyptian president Anwar al-Sadat shocked the world by announcing his readiness to travel to Israel to resolve the Arab–Israel conflict, and Israeli prime minister Menachem Begin promptly issued an invitation. Sadat's visit to Israel on 19 and 20 November included an electrifying speech before the Knesset and inaugurated a series of unprecedented direct Egyptian–Israeli peace negotiations. The talks bogged down, however, over Israel's withdrawal from and Egypt's demilitarization of the Sinai and the future status of Gaza and the West Bank (all occupied by Israel in the June 1967 war), and over terms of normalization between Israel and Egypt. When it appeared that the negotiations would collapse, U.S. president Jimmy Carter invited Sadat and Begin to the presidential retreat at Camp David, Maryland.

The Camp David conference, 5 through 17 September 1978, ended with two accords signed by Egypt, Israel, and the United States: "A Framework for Peace in the Middle East" and "A Framework for Conclusion of a Peace Treaty between Egypt and Israel." Participants included the three leaders, their foreign and defense ministers, and teams of top civilian and military officials. Sadat and Begin's acrimonious relationship threatened to derail the conference, but President Carter's personal intervention saved it from failure. Sadat and Begin later received the Nobel Peace Prize.

The relatively straightforward framework for an Egypt–Israel peace embraced UN Security Council Resolution 242 and called for a treaty implementing the land-for-peace principle: Israel would return the Sinai to Egypt and Egypt would make peace with Israel. Also anticipated was the full normalization of diplomatic, economic, and cultural relations. The Egyptian–Israeli Peace Treaty of 26 March 1979 conformed to these September 1978 expectations.

With its complex and problematic formula for Palestinian self-rule, the framework for Middle East peace was crucial to Sadat's defense against Arab charges that he had sold the Palestinians short by making a separate peace with Israel. The other Arab states were invited to follow Sadat to the negotiat-

ing table. This framework envisioned Egypt, Israel, Jordan, and representatives of the Palestinians negotiating a five-year, three-stage plan for the future of Gaza and the West Bank, including full autonomy for the inhabitants of the West Bank and Gaza; the withdrawal of Israel's military government and civilian administration; the election of a self-governing Palestinian authority; and the redeployment of Israeli forces. Final-status negotiations during the five-year transitional period would resolve the disposition of the West Bank and Gaza, the refugee problem, and the entire Israeli–Palestinian conflict in a manner that would "recognize the legitimate rights of the Palestinian people and their just requirements."

The Camp David Accords were not without opposition. The Knesset ratified the agreements, but more members of the opposition than of the prime minister's coalition supported them. Those who abstained or voted against them scored Begin for accepting the precedent of territorial concessions for peace and for recognizing the Palestinian people as a negotiating partner. In Egypt, opposition elements, including Islamic, Nasserist, and other Arab nationalist groups, protested the peace negotiations with Israel. No Arab states supported the accords, and the Palestinians, aware of Begin's extremely narrow interpretation of "full autonomy," rejected them and demanded statehood. The refusal of the Palestinians and Jordan (the latter mentioned no less than fifteen times in the document) to cooperate with Egypt and Israel made the "Framework for Peace in the Middle East" a dead letter. Dependent only upon the actions of Egypt and Israel themselves, however, the second of Camp David's two frameworks—"For the Conclusion of a Peace Treaty Between Egypt and Israel"—came to fruition in the signing of the Egyptian–Israeli Peace Treaty of March 1979.

DON PERETZ
UPDATED BY LAURA Z. EISENBERG

CAMP DAVID SUMMIT (2000)

Failed Israeli–Palestinian negotiations, mediated by the United States (11 July–24 July 2000).

At the initiative of President Bill Clinton and Israeli prime minister Ehud Barak, an Israeli–Palestinian summit was convened at the U.S. presidential retreat at Camp David, Maryland, on 11 July 2000 to discuss the final-status issues foreshadowed by the 1993 Oslo Accords regarding such issues as Jerusalem, Jewish settlements, Palestinian refugees, and the borders of a Palestinian state. Because no official records or documents were exchanged, most public knowledge about the discussions comes from some of the participants and the media.

Regarding Jerusalem, Israel reportedly proposed turning some Palestinian villages and neighborhoods over to the Palestinian Authority (PA) and allowing Palestinian autonomy in the Muslim and Christian quarters within the Old City, with Israel retaining sovereignty over the rest of East Jerusalem and the Old City. The Palestinians reportedly proposed that East Jerusalem should be capital of the new Palestinian state and that Israel should withdraw to its pre-June 1967 borders, in accordance with UN Resolution 242.

On the issue of refugees, the Palestinians maintained the 3.7 million Palestinian refugees should have the right of return to their homes in what is now Israel or the right to receive compensation, in

accordance with UN General Assembly Resolution 194 of December 1948. Israel rejected the right of return as a demographic threat to its Jewish character and denied that Israel had any legal or moral responsibility for the refugee problem. However, it would permit the return of a large but limited number of refugees to the state of Palestine under Israeli supervision and would allow some Palestinians to return to Israel as a family reunification measure.

Regarding Jewish settlements (of which there were in 1999 some 125, with about 200,000 settlers), Israel apparently proposed annexing some 10 percent of the West Bank territory, in which some 80 percent of the settlers lived, and ceding the remaining 90 percent to the Palestinians. The Palestinians disputed these figures because they did not include Jerusalem, parts of the Jordan Valley (which the Israelis wanted to lease for a long period), and other areas. The Palestinians were prepared to accept Israeli annexation of the largest West Bank settlement blocs, although they objected to the size, in exchange for an equal amount of territory in Israel of similar arable quality. After fourteen intense days of negotiations, the parties could not bridge their differences.

In the months and years following the summit, each side blamed the other for the failure. In a failed effort to ensure Barak's reelection, President Clinton publicly blamed Yasir Arafat, despite the fact that he had promised the Palestine Liberation Organization chairman—who had been reluctant to come to the summit because he said the parties were not prepared—that he would not be blamed if the discussions broke down. Barak also vigorously blamed Arafat, who he said was intent on the destruction of Israel, even though Arafat had championed the two-state solution embodied in the Oslo Accords in 1993 and had recognized Israel and endorsed UN Resolution 242 a dozen years before. The Palestinians blamed Barak, even though he was politically courageous in making far-reaching proposals, a number of which broke long-standing Israeli taboos, such as sharing Jerusalem, returning 90 percent of West Bank lands, and swapping territory.

The media and public of all sides accepted their governments' respective official versions, even though each was a distortion of what happened at Camp David. In reality, all three sides contributed to the breakdown of the negotiations. Barak wasted several months negotiating with Syria; reneged on a third partial redeployment of troops from the West Bank and on handing over three villages near Jerusalem to the PA; continued to confiscate Palestinian land for Jewish settlements and access roads; and allowed for the increase of settlers in the territories, all of which raised suspicions among Palestinians about his sincerity. At Oslo, Barak's negotiating style—refusing to negotiate directly with Arafat, revising supposedly final offers, and presenting take-it-or-leave-it proposals—further alienated the Palestinians, who viewed him as arrogant. His demand for sovereignty over the Haram al-Sharif/Temple Mount was difficult for Arafat to accept for fear of Palestinian, Arab, and international Muslim reaction. In addition, Barak's offer, while generous from an Israeli point of view, would not have allowed for a contiguous and independent Palestinian state.

The Palestinians, on the other hand, in addition to being unprepared, seemed bereft of any strategy, were internally divided, and—most significantly—did not make serious, clear, and specific counteroffers to the Israeli side. Arafat—whose popularity was declining due to his inability to stop the settlement expansion and the obvious corruption in the PA, and who feared a trap by the Israelis and the Americans—was reluctant to make major concessions and seemed more interested in surviving the negotiations than in viewing them as a historic opportunity for peace.

The Americans ignored the extent to which settlement expansion had poisoned the peace process among the Palestinians and insisted on convening a meeting for which none of the parties was truly prepared. Although they were supposed to be honest brokers, their position—due to domestic pressure and the cultural and strategic relationship between the United States and Israel—was so close to the Israelis' that at times they presented Israeli positions. It was not until after Camp David that the United States presented its own position, called the Clinton proposals, on 23 December 2000. After the failure at Camp David, Palestinian and Israeli teams resumed negotiations in Taba, Egypt, and thanks to Clinton's suggestions, considerably narrowed their differences. The process begun at Camp

David might have thus ended successfully, but time ran out when—against the backdrop of the escalating violence of the al-Aqsa intifada—Clinton left office on 20 January 2001 and Barak was defeated by Ariel Sharon in the Israeli elections of 6 February 2001.

CAMUS, ALBERT

[1913–1960]

French Algerian author.

Albert Camus was born in eastern Algeria at Mondovi near present-day Annaba. His father represented grape-growing and wine-making interests and also served as a Zouave, an Algerian member of a French infantry unit. He died in 1914 from wounds received at the Battle of the Marne in France. His mother was illiterate and of Spanish descent. Camus grew up with her and her extended family in the poor Belcourt neighborhood of Algiers. He received a degree in philosophy from the University of Algiers. During the 1930s, he publicized Kabyle deprivations and briefly joined the Algerian Communist Party. He distinguished himself in the Resistance by editing *Combat.* He associated with French existentialists Jean-Paul Sartre and Simone de Beauvoir. While his writings have "existentialist" themes, he claimed that he did not subscribe to that philosophy. His novels include *The Stranger* (1942), *The Plague* (1947), and *The Fall* (1957). His most important essays are *The Myth of Sisyphus* (1942) and *The Rebel* (1951). He also wrote short stories and plays. He received the Nobel Prize for literature in 1957. During the war of independence, Camus proposed a French–Algerian federation that was rejected by both sides. He died in an automobile accident.

CANNING, STRATFORD

[1786–1880]

The most influential European diplomat in the Ottoman Empire during the first half of the nineteenth century.

While still an undergraduate at Cambridge, Stratford Canning (Viscount Stratford de Redcliffe) joined the British Foreign Office then headed by his cousin, George Canning. His first posting to Constantinople (now Istanbul) as secretary to the British mission occurred in 1808 in the midst of the Napoleonic wars. Upon his superior's departure, Stratford Canning became the acting chief. Despite his inexperience and with even less than the usual guidance from home, he secured the Treaty of Bucharest in 1812. By ending the war between the Russian and the Ottoman Empires, this treaty freed the Russians to repel the invasion of Napoléon Bonaparte. He then left for other assignments, but from 1825 to 1827, Canning returned to Constantinople to confront two problems: the Greek revolt and the deprivatization of the British consular service in the Levant (countries of the eastern Mediterranean).

Despite Canning's best efforts, he failed to mediate an end to the Greek conflict. As for the second, until the beginning of the nineteenth century, British affairs in the Ottoman Empire—commercial, consular, and diplomatic—had been managed by the Levant Company, which had been granted a monopoly to trade with the eastern Mediterranean by British royal charter in 1581. The transformation of

British interests in the East, particularly the growth of political and military concerns as a result of the Napoleonic wars, undermined the old arrangement. The British government took over direct responsibility for the embassy in 1804 and the consular posts in 1825; Canning's skill in overseeing this transition helped established Britain's diplomatic preeminence.

After his Ottoman tour had ended, Canning embarked upon an unremarkable parliamentary career, which quickly revealed that his skills were far greater as a diplomat than as a politician. Consequently, in 1831 and 1832 he returned to Constantinople on a successful mission to fix a more favorable frontier for the Kingdom of Greece, which was newly independent of Ottoman rule.

His last period of service in Constantinople was the most important and the longest, from 1842 to 1858, occasionally interrupted by efforts to resign. Canning played a key role in the major events of the era: Russian intervention in the region culminating in the Crimean War and the Tanzimat reforms—most notably the Islahat Fermani (Reform Decree) of 1856. He also succeeded in removing from the Ottoman realm to the British Museum such archaeological discoveries as the Bodrum frieze and the winged lions of Nineveh.

Although Canning began his career by promoting peace with Russia, he spent much of it as the Romanov Empire's implacable foe. Ottoman weakness in the face of the Russian threat forced ever greater dependence on Britain's diplomatic and military support, which Canning offered at a price—a program of internal reform that insisted upon the equality of the empire's Muslim and non-Muslim subjects. Canning's experience and personality backed by Britain's dominant position enabled him to secure Ottoman assent, at least on paper, to the effective annulment of Islamic law on this question.

Although he maintained close personal ties with the then-reigning sultan, Abdülmecit I, his deepest sympathies were reserved for the Christian subjects of the empire, whose improved status, he hoped, would maintain Ottoman integrity in the face of Russian ambition. Later in his life, when that hope proved false, he welcomed the end of Ottoman control in the Balkans.

CANTONNEMENT/REFOULEMENT

French colonial policies.

These French policies were meant—first in the mid-nineteenth century and then in the years just before independence—to confine sections of the Algerian population to areas that could be supervised by the colonial army. This was to prevent access to agricultural land by the local population or to areas judged strategically important by the French. By the independence of Algeria in 1962, an estimated 3 million rural Algerians had been displaced, thus adding considerably to the extremely high urbanization rates the new government faced as a result of these earlier cantonnement and refoulement policies.

CAPITULATIONS

Term derived from capitula *(chapter or paragraph, in Italian) that refers to the clauses of an international treaty, particularly between a Muslim state and a European state.*

The term *capitulation* was originally a "privilege" given by a powerful Middle East government, such as the Ottoman Empire, to a weaker government in Europe. An early Ottoman treaty of this type was negotiated between Sultan Selim I and Venice in 1517. Formerly, Venice had enjoyed exclusive trade privileges with Mamluk Egypt in order to expedite the

profitable spice trade. There is a similarity between this type of privilege (and the accompanying attitude) and the type of privileges the Chinese emperors accorded to lesser lands of Asia that wished to trade with China. The traditional attitude might be stated as follows: "Our realm is self-sufficient and superior; thus we have no need to trade with you. But because we are a civilized people, we show our beneficence in this manner."

Next consider the types of privileges accorded by such treaties. The most important clause dealt with mutual trade relations. Both governments agreed to provide, in their respective countries, a place for warehousing items to be traded; protection for those goods from theft or damage; and on the amount of tariff to be charged *ad valorem* for each item. Protection was also accorded to the vessels delivering the merchandise, and the flag under which these vessels could enter territorial waters was carefully controlled. For example, France obtained an *imtiyaz* (capitulation) early in the sixteenth century; thereafter, until Britain received its own *imtiyaz* about 1580, British ships entering Ottoman waters had to fly the flag of France (and doubtless pay for the privilege). In case of shipwreck, the capitulation provided for protection, docking, and repair.

To these general commercial clauses were gradually added legal clauses dealing with the right of extraterritoriality, protection of foreign personnel working in the trade facility, and specification of the court that held primary jurisdiction in case of a dispute. Generally speaking, if the trading company was established in a country where a diplomatic representative of its home country was in residence, the primary jurisdiction over, say, a foreign merchant committing a crime in the host country would be the merchant's own consular court. Often, however, in the case of a capital crime, such as the rape or murder of a Muslim subject, the primary jurisdiction would be the Muslim court.

These were provisions of what might be called the ordinary capitulation-type treaty. This arrangement underwent important changes in the eighteenth and nineteenth centuries as certain European countries, and the United States, grew much more powerful than their counterparts in the Middle East. First, foreign businesses selling their goods in the Middle East, as a means to save costs, often sought out local Muslims, Christians, or Jews to assist in their transactions: interpreters and expediters to speed wares through customs, longshoremen, workers, secretaries, managers, agents, and sales personnel. Gradually these persons were placed officially under the protection of the company or the foreign government consular service by a device known as a *berat* (minor government decree). A bearer of such protection was known as *beratli* (bearer of a privilege). At first these *berats* were issued under the auspices of the grand vizier or his subordinates. Later, some embassies issued *berats* from their own chanceries.

Because the Muslim populations often were more interested in learning Arabic, Persian, or Turkish, it fell to the Christian and Jewish minorities to learn the languages of western Europe. Hence, many minority families came to be closely associated with Western firms and their governments. Often this relationship proved very advantageous financially. These subject people's *beratli* status extended to them, and often to their relatives and family, the privileges of extraterritoriality and the protection of a powerful foreign country; thus, in the nineteenth century, Muslim government officials began to harbor doubts about their loyalty. The *beratli* held a kind of dual citizenship. Thus, capitulations, originally straightforward trade agreements, became intertwined with issues of national sovereignty for Muslim governments, and for powerful governments of Europe, with the protection of their property, trade agreements, missionaries, and "*beratli* agents" for powerful governments of Europe. For some members of minority communities, the *berat* had become a cover for illegal activities. In the case of outright disagreement, the governments of Europe and the United States often resorted to gunboat diplomacy or "showing the flag" to coerce states of the Middle East. If this did not have the desired effect, such states as imperial Russia often resorted to open warfare. Thus, the Ottoman government and other states of the Middle East in the nineteenth century could not protect locally made crafts or manufactures from cheap imports because foreign powers blocked the raising of tariffs, nor could they directly punish violations of law within their own borders.

Various states of the Middle East, in the twentieth century, sought to abolish these trade treaties

that had been turned into major tools of imperialist intervention and control by foreign powers. Ottoman Turkey, upon entering World War I on the side of Germany in 1914, announced the abolition of the capitulation agreements, a move that was not fully approved by Germany. The capitulations had become so burdensome that they constituted grounds for nations of the Middle East to join with a friendly power such as Germany against the exploiting states of Europe. True to their own attitudes toward weaker states, when the Allied powers of Europe won the war, they quickly declared the capitulations once again in full force. Only after Turkey's war of independence (1919–1922) were they forced to accept the end of these lopsided trade treaties under the terms of the Lausanne Treaty of 1923. At the Cairo Conference in 1921, establishing the semi-independence of Egypt from Britain, the powers of Europe agreed to lift most clauses of the capitulations, but the mixed courts, where foreign litigation had taken place, were left in place.

C. MAX KORTEPETER

CARPETS, PERSIAN

Heavy woven floor coverings with traditional patterns; considered works of art today.

The twentieth century witnessed unparalleled expansion of Persian pile carpet weaving *(qalibafi)* in Iran. Gone were court manufactories and extensive weaving by nomadic tribal peoples. In their place came commercialization of the craft, the gradual introduction of quality controls and standards, and an unprecedented availability of a wide variety of Persian carpets of tribal, village, town, and city provenance for sale in the bazaars and abroad. Throughout the Iranian plateau, Persian carpets generally appear on the floor of all rooms except for the kitchen and bathroom. Often they constitute a room's main or only art, taking the place of a mural or large painting on the wall in Western homes.

Thus, Persian carpets achieved quite a high point in the twentieth century, although Persian pile carpet weaving is generally thought to have experienced its golden age with the curvilinear "city" designs of the Safavid period (1501–1736 C.E.) and with the rectilinear "tribal" carpets of the Qajar dynasty (1796–1925). Art historians, oriental carpet experts, and scholars generally think twentieth-century Persian carpets inferior because of their commercial production circumstances and less intricately designed patterns.

Early in the century, Isfahan and then Qom and other new production centers joined such famous traditional weaving centers as Kerman and Tabriz in producing carpets, almost all with traditional designs, but with synthetic dyes, mechanically spun yarn, and often the help of trained designers. Earlier Caucasus design traditions were continued in Ardabil and surrounding towns. Throughout Iran, classical medallion, garden, hunting, and prayer carpet designs continue to be produced, along with hybrid designs exhibiting the mutual influence of cartoon-prepared city patterns of the medallion sorts and the memory-produced repeat patterns typical of tribal weaving—Afshar, Bakhtiari, Qashqaʾi, and Turkmen.

All the major twentieth-century Persian carpet design types appear to pay tribute in a decorative or symbolic way to springtime or paradise gardens, important culture-specific images in Persian art since Persepolis (begun in 518 B.C.E.); they feature columns, representing a sacred, or paradisial, grove of trees. The existence of the Pazyryk Carpet (at the Hermitage Museum in St. Petersburg) is evidence that pile carpet weaving existed in Central Asia and on the Iranian plateau from at least the Achaemenid period (559–330 B.C.E.), although few Persian carpets or even fragments have survived from before the sixteenth century C.E.

In the 1960s and after, Iranian scholars began paying attention to Persian carpets from technical, sociological, and cultural perspectives, which resulted in the shifting of predominant scholarship in this field from Europe to Iran. In particular, as nomadic and seminomadic communities have dwindled in size, Iranian scholars have provided records of their textile traditions, especially for Turkmen, Qashqaʾi, Shahsavan, and Kurdish carpets.

In the Islamic republican era, beginning in 1979, carpet production continued unabated, although the U.S. embargo on Iranian goods in the 1980s changed the export market for Persian carpets. The same decade also witnessed a dramatic in-

crease in the production of flat-weave products called *gelim* (Turkish, *kilim*) with their mostly uncomplicated geometric patterns. The Carpet Museum of Iran, inaugurated in 1979, the last year of the Pahlavi dynasty (1925–1979), remained the world's best showcase for carpets in the 1990s.

MICHAEL C. HILLMANN

CARTER, JIMMY

[1924–]

U.S. president who mediated the Camp David Accords.

James Earl Carter, Jr., was born on 1 October 1924, in Plains, Georgia. After serving as governor of Georgia for one term (1971–1975) he rose from relative obscurity to win the Democratic nomination and defeat incumbent president Gerald Ford in 1976.

Carter came into office stressing the role of human rights in U.S. foreign policy and rejecting the Cold War perspective of previous administrations, particularly as embodied in the policies of former secretary of state Henry Kissinger. Carter argued that constructive engagement with the Soviet Union, rather than a hostile policy of containment, would advance U.S. interests by reducing Soviet inclinations to play the spoiler role in U.S. policy initiatives. Ironically, it was an early cooperative effort with the Soviets—a plan to cosponsor an Arab–Israeli peace conference in Geneva, announced in a joint communiqué on 1 October 1977—that contributed to Egyptian president Anwar al-Sadat's surprise decision to travel to Jerusalem in November 1977 for direct peace negotiations with Israel. Neither Sadat nor Israeli prime minister Menachem Begin wanted to harness the relatively straightforward Egyptian–Israeli issues (Israel's return of the Sinai to Egypt in exchange for a peace treaty) to the more difficult Palestinian and Syrian conflicts with Israel, and they effectively derailed Carter's Geneva idea by inaugurating bilateral Egyptian–Israeli talks.

When those negotiations threatened to break down, however, Carter invited Sadat and Begin to the presidential retreat at Camp David, Maryland. After thirteen days of intense discussions personally mediated by Carter, on 27 September 1978 the three heads of state signed the Camp David Accords, which in turn led to the Egypt–Israel Peace Treaty, signed on 26 March 1979 in Washington, D.C. The Egyptian–Israeli agreements constituted Carter's greatest foreign-policy triumph, though he later expressed regret that some aspects of the agreements went unfulfilled. The Egyptian–Israeli breakthrough made Israel and Egypt, respectively, the number one and two recipients of U.S. aid.

The Middle East brought success to Carter with Egypt and Israel, but it proved to be his undoing, with Iran. In January 1979 Islamic radicals inspired by the Ayatollah Ruhollah Khomeini overthrew the shah of Iran, a long-time ally of the United States. On 4 November 1979 militant Islamic students seized the U.S. embassy in Tehran, taking fifty-two Americans hostage. Carter's attempts to negotiate their release failed, and on 8 April 1980 the United States broke diplomatic relations with Iran and focused on a series of international legal and economic maneuvers designed to pressure Iran into letting the hostages go. On 24 April 1980 a commando attempt to free the hostages failed when U.S. helicopters crashed in a desert staging area 200 miles outside Tehran. The Iranian hostage crisis dominated the U.S. media and Carter's agenda throughout his failed reelection campaign against the Republican challenger, Ronald Reagan. Carter continued to work for the hostages' release until the very last day of his presidency, when Algerian mediation finally secured their freedom in exchange for the unfreezing of Iranian assets in the United States and a U.S. pledge of nonintervention in Iranian affairs. Carter received word that the hostages had been freed on 20 January 1981, several hours after Reagan took the presidential oath of office.

Despite losing the 1980 presidential election, Carter continued his career of public service. He published widely—memoirs, political observation and

analysis, poetry, and fiction—and established the Carter Presidential Library at Emory University in Atlanta, Georgia. He has remained an active statesman, working through the Carter Center to help resolve international crises around the globe.

CASABLANCA

Largest city in Morocco.

As of 2002, Casablanca (al-Dar al-Bayda, in Arabic) had a population of 3,334,300. The *wilaya* (province) of Greater Casablanca, which covers 646 square miles (1,615 sq km), is composed of twenty-three urban districts and six prefectures. Situated on the Atlantic coast, the city is the principal maritime and air transport hub and the major industrial center of the country.

The site of modern Casablanca was occupied by Anfa, a commercial center in the thirteenth century. After being held briefly by the Portuguese, who called it Casa Branca (White House), it was abandoned in ruins about 1468. The village was rebuilt in 1770 by Sultan Muhammad III (1757–1790), who translated the name into Arabic as *al-Dar al-Bayda.* It was later retranslated into Spanish as Casablanca.

Muhammad III hoped to encourage trade with Europe through the port of Essaouira (Mogador); thus Casablanca remained small and inactive. When the tribes of the Shawiya district around Casablanca revolted in the 1790s, Sultan Sulayman (1792–1822) closed Casablanca and several other ports to European commerce. It began to revive under Sultan Abd al-Rahman (1822–1859), who reopened it to commerce in 1831. Trade slowly grew from 3 percent of Moroccan maritime trade in 1836 to 10 percent in 1843. The port handled mainly agricultural produce: hides, wool, and grain. The population was estimated at 1,500 in the late 1850s and perhaps 4,000 a decade later as European merchants set up agencies, and steamship services started to call. By the late 1880s the population had increased to around 9,000. Although the port still had no proper wharves, it was important enough for French agents to take control of the customhouse following the Act of Algeciras (1906). European attempts to construct a modern port in 1907 led to an attack on

The Hassan II Mosque in Casablanca, Morocco. Completed in 1984, the mosque features a 22-acre prayer hall and the world's highest minaret, measuring 200 meters. © Chinch Gryniewicz; Ecoscene/Corbis. Reproduced by permisison.

the worksite by people from the surrounding countryside. A French warship bombarded the port, local people looted the town, and French and Spanish troops then occupied it.

The population grew quickly after the imposition of the French protectorate in 1912. It rose from perhaps 40,000 in 1914 to around 250,000 in 1930. The first French resident general, Louis-Hubert Gonzalve Lyautey, decided to make Casablanca the main port and the commercial center of Morocco; Rabat became the political capital. The port relied in particular on the export of phosphates, which became Morocco's largest and most valuable export.

European speculators quickly bought up land, and the city began to grow haphazardly. In 1914 Lyautey gave the French architect Henri Prost the task of designing the city. Prost developed an overall master plan for a European city surrounding the old Muslim *madina* and Jewish *mellah.* Public buildings were required to harmonize with traditional Moroccan styles; the post office, the city hall, and the Palais de Justice made particular use of Islamic architectural elements within a European-style structure. The commercial district was dominated by the kilometer-long Boulevard de la Gare (now Boulevard Muhammad V). The European suburbs spread quickly with little control. To the rapidly growing European population was added an explosive growth in the Moroccan population. This led to the emergence of shantytowns (bidonvilles) in the early 1930s. By the mid-1930s, some 70,000 to 80,000 Moroccans lived in bidonvilles.

European working-class immigrants brought French socialist politics with them, and Moroccan workers were soon involved. In June 1936 a series of strikes began in state enterprises and spread to commercial enterprises in Casablanca; both European and Moroccan workers took part.

After the Allied landings in North Africa in November 1942, Sultan Muhammad V had two meetings with U.S. President Franklin Roosevelt. This assured the sultan of American interest and support for Moroccan independence and raised his reputation in the eyes of the Moroccans. After the war, the political movements in Casablanca became increasingly militant for independence. This was reinforced by an incident on 7 April 1947, when

Two men walk along the stone pavers in the Casbah, the Old Medina section in Casablanca, Morocco. One man wears a business suit, while the other wears the jellaba, a long, loose hooded garment with full sleeves, commonly worn in Muslim countries, along with a fez, a box-shaped hat. **© Roger Wood/Corbis. Reproduced by permission.**

Senegalese troops in France's colonial army fired on a crowd in Casablanca, apparently after an argument over the molestation of a Moroccan woman. French officials did little to stop the massacre, in which several hundred people were reported killed.

Following Morocco's independence in 1956, Casablanca's population continued to grow and to become predominantly Moroccan as the Europeans left. By 1960 the population was nearly 1 million, and by 1970, 1.8 million. Although some attempt was made to house the new residents, most of whom moved in from the countryside, the apartment blocks that were built were woefully insufficient. This led to continued political radicalization in Casablanca, and there were riots in the poorer districts in 1965, in which large numbers of people were killed. A state of emergency was declared and remained in force for five years. Tension continued throughout the 1970s, and there were more, and very serious, riots in June 1981. In the 1980s and 1990s Ali Yata, the leader of the Party of Progress and Socialism (Parti du Progrés et Socialisme, the renamed Communist Party) repeatedly

won election for a Casablanca constituency. There has been some Islamist activity as well. The importance of Casablanca politically was graphically shown when King Hassan II chose it as the site of the world's biggest mosque (the Hassan II Mosque), which was opened in 1993.

CATROUX, GEORGES

[1877–1969]

French general, governor-general, minister, and ambassador.

A graduate of the military college at Saint-Cyr, Georges Catroux served in Algeria, Indochina, and Morocco before he was wounded and imprisoned during World War I; after the war he was a political delegate of the high commissioner in Damascus and subsequently a military attaché in Turkey. He returned to Morocco in 1925 and held several commands there and then in Algeria. In 1940 he joined Charles de Gaulle in London and was dispatched to rally Syria and Lebanon to the Free French cause. He negotiated an agreement between Henri Giraud and de Gaulle concerning the leadership of the Free French.

Catroux was governor-general of Algeria in 1943 and minister of North Africa in 1944. Catroux understood that France must ultimately heed the rising expectations of the colonized. He demonstrated this view in the delicate negotiations that returned Muhammad V to Morocco in 1955. His appointment as resident minister of Algeria in 1956 provoked the outrage of European settlers, forcing Catroux's resignation and his replacement with Robert Lacoste.

Phillip C. Naylor

CATTAN, HENRY

[1906–1992]

Palestinian lawyer and writer.

Henry Cattan was born in Jerusalem and educated at the University of Paris and the University of London. After becoming a licensed barrister, he was a lecturer at the Jerusalem Law School from 1932 to 1942, a practicing lawyer in Palestine and Syria, and a member of the Palestine Law Council until 1948. Cattan testified before the Anglo-American Committee of Inquiry on Palestine in 1946. On behalf of the Arab Higher Committee, he presented the Palestinian case to the UN General Assembly in 1947 and 1948. Cattan later negotiated with Count Folke Bernadotte, the UN mediator for Palestine. Cattan's best-known publications include *The Palestine Question* (1988); *The Jerusalem Question* (1981); *Palestine, the Arabs, and Israel* (1969); *Palestine: The Road to Peace*; and *Palestine and International Law.*

CAYLAK

[1843–1893]

Turkish Ottoman writer and journalist.

Born Mehmet Tevfik in Istanbul, Caylak was the son of an Ottoman official. After working as a civil ser-

vant and attempting poetry, Tevfik found fame as a journalist and folklorist; he was called Caylak after the newspaper in which he wrote humorous pieces. He also wrote for the newspapers *Geveze* and *Letaif-i Asar.* Worried that Turkish customs and traditions were vanishing, he devoted himself to gathering folk stories. Among his publications is a three-volume collection of the stories of Nasruddin Hoca.

CEMAL PAŞA

[1872–1922]

Ottoman general, statesman, and influential leader of the Committee for Union and Progress (CUP).

Ahmet Cemal Paşa was born on 6 May 1872 in Mytilene, Greece, the son of a military pharmacist. He graduated from the War Academy (Mekteb-I Harbiye) in 1895 as staff officer and was appointed to the General Staff in Constantinople (now Istanbul). He transferred to the Second Army unit of construction works stationed in Edirne and in 1898 to the Third Army in Salonika. As military inspector for railways, and later as staff officer in the Third Army headquarters, he contributed to the regional organization of the underground resistance movement to Abdülhamit II. He joined the Committee for Union and Progress (CUP), and during the Young Turk Revolution in July 1908 he emerged as a prominent committee leader. Cemal took part in the first delegation that the Salonika CUP dispatched to Constantinople and received promotion to lieutenant colonel.

After July 1908 Cemal went to Anatolia with a reform commission. When a counterrevolutionary uprising broke out in Constantinople in April 1909, he rejoined the Third Army units (the Army of Deliverance) that suppressed the uprising. Subsequently, he accepted the district governorship of Üsküdar, Istanbul-in-Asia (May 1909). The threat of foreign intervention in response to widespread massacres of Armenians in Adana Province led to his appointment as governor of Adana (August 1909). In 1911 he became governor of Baghdad. Upon the outbreak of the Balkan War in 1912 he went to Thrace as commander of reserve units and was promoted to colonel. Following the CUP's coup against the Kamil government (January 1913), which Cemal helped to engineer, he was made general and commander of the First Army in Constantinople as well as military governor of the capital. He consolidated the CUP's position in the capital by suppressing the Ottoman Liberty and Entente party's opposition and sending its leaders to the gallows. In the CUP-dominated cabinets of 1913 to 1914 he served first as minister of public works and later as minister of the navy. He is credited with the modernization of the Ottoman fleet.

As a senior and most versatile member of the Central Committee, Cemal had a strong following in the CUP. He was implicated in conspiring against the other two members of the Young Turk trio, Enver Pasa and Mehmet Talat, and even accused of attempting to establish a state in Syria as a base to supplant the leadership in Constantinople. His disagreements with other influential members notwithstanding, Cemal's political ambitions remained consistent with the broader goals of the CUP as a political organization.

Known for his pro-French proclivities, Cemal went to Paris in June 1914 to seek a wartime alliance with France. He returned empty-handed, except for the Legion of Honor. During World War I he served as the commander of the Fourth Army and governor of Syria while maintaining his portfolio as minister. He led the ill-fated expeditions against British military positions along the Suez Canal in February 1915 and August 1916. By virtue of the fact that he controlled Syria, Cemal had oversight of the last phase of the Armenian genocide. By mid-1915 Syria was dotted with concentration camps where the weakened population was starved to death while the still able-bodied were employed as slave laborers on construction projects including the Baghdad railroad. The infamous killing sites such as Raqqa, Raʾs al-Ayn, and Dayr al-Zawr, at the end of the deportations routes where Armenians were exterminated en masse, were located in Cemal's jurisdiction.

As wartime governor in Syria Cemal gained notoriety for executing Arab leaders for their foreign sympathies and alleged nationalist aims and also

for his draconian measures in the management of grain supplies. He also undertook construction and preservation projects designed to improve material conditions in Syria. He resigned in December 1917 and returned to Constantinople.

Together with other CUP leaders, Cemal fled abroad at the end of the war (November 1918). Along with Talat, Young Turk minister of the interior, and Enver, minister of war, Cemal was tried in absentia by a military tribunal convened in postwar Istanbul, was found guilty of war crimes, and was sentenced to death. Cemal went first to Berlin via Odessa, then to Switzerland. He also went to Russia and had contacts with the Bolshevik leaders. He entered the services of the Afghan king, Afdal Barakzai, to reorganize his army against the British. In 1922 he returned to Moscow and went to Tbilisi, where he hoped to monitor the independence movement led by Mustafa Kemal, possibly with an eye on returning to Anatolia. He was assassinated in Tbilisi on 21 July 1922 by two Armenians. He is buried in Erzurum, Turkey.

Cemal authored a tract to justify his stern policies in Syria, which was published in Turkish, Arabic, and French (*La vérité sur la question syrienne*; The truth about the Syrian question). His memoirs were published posthumously. He also commissioned a study of old monuments in greater Syria, *Alte Denkmäler aus Syrien, Palästina und West-Arabien* (Ancient Monuments of Syria, Palestine, and West Arabia).

CENTRAL INTELLIGENCE AGENCY (CIA)

Principal U.S. agency responsible for collection and assessment of worldwide intelligence data.

The Central Intelligence Agency (CIA) was established in 1947. It is responsible directly to the president of the United States and carries out functions ordered by the president and the president's staff. The agency and its director (called the director of central intelligence, or DCI) are charged not only with collecting and analyzing intelligence data but also with coordinating the activities of other U.S. intelligence agencies, including those attached to the military services and those of the state and defense departments. The agency is divided into three principal directorates: for clandestine collection of foreign intelligence and the conduct of covert actions; for analysis of political, military, and economic developments outside the United States; and for collection and analysis of technical and scientific intelligence. It also maintains the DCI Counterterrorist Center. The CIA is headquartered just outside Washington, D.C., in Langley, Virginia.

In the Middle East, the CIA is best known for having organized the 1953 overthrow of Iranian prime minister Mohammad Mossadegh and having returned Reza Shah Pahlavi to Iran's Peacock Throne in a covert operation. Mossadegh, although widely seen in the Middle East as a nationalist, was viewed by the Eisenhower administration as a tool of the Soviet Union who threatened U.S. interests. The CIA has also been implicated in General Husni al-Zaʿim's 1949 coup in Syria, and the Free Officers' 1952 coup in Egypt. Other CIA covert actions in the Middle East have included providing arms and covert support to rebel groups, including the Iraqi Kurds in the early 1970s; the Afghan guerrillas following the Soviet invasion of Afghanistan in 1979; and Chad's forces opposing a Libyan invasion in 1980.

Lebanon was for some time the center of much CIA activity. According to newspaper accounts, during the 1970s and the early 1980s, the CIA and the Palestine Liberation Organization (PLO) had a cooperative arrangement, centered in Beirut, to ensure security against terrorist attacks to Americans. This occurred despite the U.S. government's official, public refusal to deal with the PLO. Apparently in the hope of gaining diplomatic advantage, the PLO warned of any impending attack on U.S. citi-

zens and provided physical protection to U.S. diplomats and installations. The principal PLO contact person in this arrangement, Ali Hasan al-Salama (1940–1979), was killed in a 1979 car bombing believed to have been engineered by Israel, but the security cooperation continued until the PLO left Beirut in the aftermath of Israel's 1982 invasion of Lebanon. The following year saw a marked upsurge in attacks on U.S. installations and large numbers of American deaths. According to one account, following bombings of the American embassy and a U.S. Marine barracks in Beirut in 1983 and 1984—all believed to be the work of the Shiʿite group Hizbullah, whose spiritual leader was Shaykh Husayn Fadlallah—the CIA arranged to have Fadlallah stopped. A car bomb was detonated in March 1985 at his apartment building; Fadlallah, however, was not harmed. The CIA denied involvement, and the House Permanent Select Committee on Intelligence, following an investigation, concluded that no direct or indirect CIA involvement could be shown.

Although not responsible for maintaining diplomatic relationships with other countries, the CIA often provides a vehicle by which the U.S. government can solidify a relationship through unofficial contacts or cooperate with another country covertly on operations of joint interest. This often occurs through regular meetings between a CIA official and a foreign leader. Liaison between the CIA and the intelligence services of friendly nations provides another means of cooperation. This type of liaison—involving cooperation on counterterrorist operations, coordination on other specific operations, and the exchange of intelligence data—has been conducted with many Middle East countries, most particularly Israel. The CIA has also been involved as a diplomatic intermediary between nations, as was the case when senior CIA officials Kermit Roosevelt, James Jesus Angleton, and Miles Copeland provided a secret channel of communication between Egypt and Israel in 1954 and 1955. The CIA helped coordinate security arrangements made by Israel and the Palestinian Authority in the late 1990s, and DCI George Tenet even offered his own plan for resolving the Israel–Palestinian conflict in June 2001.

The CIA was actively involved in stepped-up counterterrorist activities in the wake of the 11 September 2001 attacks on New York and Washington that were engineered by the al-Qaʿida network. CIA operatives were active in Afghanistan during the American invasion of that country beginning in October 2001, and one became the first American to die there as a result of hostile activity. They were also present in Iraq during and after the U.S. invasion in the spring of 2003. The inability of the American forces to find the chemical and biological weapons the United States had claimed the Iraqi regime was stockpiling led to criticism of the CIA's and other U.S. intelligence agencies' prewar intelligence. In February 2004, President George W. Bush called for an investigation into U.S. intelligence failures prior to the invasion.

CENTRAL TREATY ORGANIZATION (CENTO)

Mutual-defense group of Middle Eastern countries and Britain, 1959–1979.

After the Iraqi revolution of July 1958, Iraq withdrew from the Baghdad Pact in March 1959. With its patronymic city now in a hostile country, the pact was renamed the Central Treaty Organization (CENTO). Its membership included Iran, Turkey, Pakistan, and Great Britain, with the United States as an associate member. CENTO, like its predecessor, was initially conceived as a defense organization on the lines of the North Atlantic Treaty

Organization (NATO); the northern tier of Middle Eastern countries that formed the southern boundary of the USSR were strategically important to the cold warriors of the West. While not officially part of CENTO, the United States was an active supporter, and it obtained the use of military bases and intelligence outposts in each of the northern-tier countries. By the late 1960s, CENTO had become more important as an economic bloc, though it remained a crux of American military planning. CENTO became defunct after the 1979 Iranian revolution.

ZACHARY KARABELL

CENTRE DE RECHERCHES, D'ÉTUDES, DE DOCUMENTATION ET D'INFORMATION SUR LA FEMME (CREDIF)

Tunisian research center on matters concerning women, also known as CREDIF.

CREDIF, a public agency instituted on 7 August 1990 that performs research for the government, is now the scientific branch of the Tunisian Ministry of Women's, Children's, and Family Affairs, which was established in 1992. Its mission is to carry out research on women's rights and the status of women, to gather information, organize and maintain databases concerning gender, and produce reports on the evolution of women's condition in Tunisia. CREDIF has created a number of ways of intervening in the production of knowledge about women: by hosting forums for national and international exchange on women's issues; by creating an Observatory on Women's Condition, which allows for permanent, ongoing oversight and evaluation of women's condition through cross-disciplinary research, annual reports, and national and regional seminars on the changing condition of women; by establishing statistical databases disaggregated by gender; by disseminating information concerning bibliographic research, women's information networks, and nongovernmental development projects whose stakeholders are women; by extending outreach to women to increase their legal literacy concerning rights and obligations; by studying the representation of women in the mass media; by holding training seminars on gender analysis; and by publishing a bilingual (Arabic/French) magazine, *Info-CREDIF.*

LAURA RICE

CERAMICS

A durable material with a history spanning 10,500 years that is significant to the study of archaeology and history.

Ceramic figurines and pottery vessels in Anatolia and the Iranian Plateau date to 8500 B.C.E.. The archaeological, ethnographic, and historic evidence for ceramic production in the Middle East and North Africa is complex and has a voluminous literature. The earliest Islamic potters (Umayyad dynasty, 661–750 C.E.) inherited extant traditions: Blue- and green-glazed wares had been produced in Egypt since Roman times; the alkaline-glazed ceramics of Syria, Iraq, and Iran had been made since Achaemenid times (seventh to fourth centuries B.C.E.); and the Roman lead-glazed ceramic tradition had been continued by the Byzantines. Chinese influences (Tang stoneware, ninth to eleventh centuries; Song whitewares, twelfth to fourteenth centuries, and Ming blue- and whiteware, fifteenth

to nineteenth centuries) were significant. The spread of Islam correlates with the distribution of hybrid production methods (molds, tin glazes, underglazes, polychromy, and metallic pigments) and products (architectural tiles). Early Islamic wares included Umayyad (Mediterranean/Middle Eastern influence), Abbasid (Tang influence), Central Asian Samanid, Egyptian Fatimid, and Mesopotamian/Persian wares (twelfth to fifteenth centuries) from Rayy, Raqqah, and Kashan. Later Persian ceramics (fifteenth to nineteenth centuries) were made at Kubachi, Tabriz, and Kerman; Syrian artisans produced work at al-Fustat, Raqqa, and Damascus; Seljuk Turks fabricated wares at Iznik and Kütahya. Lusterware, Mina'i, Iznik, Gombroon, and Zillij are notable Islamic contributions to ceramic history.

The Museum of Islamic Ceramics in Cairo, the Ashmolean Museum in Oxford, and the Metropolitan Museum of Art in New York house specimens from different Islamic eras that span the region from Morocco in the west through Iran, Afghanistan, and Indonesia in the east. Although Iznik ceramics were prized by the Ottoman court into the early twentieth century, ceramic vessels and tiles produced from the earliest times to the present in Islamic lands, including Central Asia, are esteemed by museums, art historians, and collectors. With the availability of metal and plastic replacements, utilitarian production has diminished, but ceramic art and tile production remains strong.

ÇERKES HASAN INCIDENT

Assassination of Hüseyin Avni and Raşit Paşa.

Çerkes Hasan was a Circassian infantry captain, a brother-in-law of Ottoman Sultan Abdülaziz, and a member of the personal staff of Prince Yusuf Izzeddin. On 15 June 1876, he entered a meeting of cabinet ministers being held in the house of Midhat Paşa and assassinated Chief of Staff Hüseyin Avni and Foreign Minister Raşit Paşa, while wounding several others. Çerkes Hasan was swiftly tried and convicted, and on 18 June he was executed. Though Çerkes Hasan claimed that he was taking revenge against Hüseyin Avni for a personal affront and against Raşit Paşa for his supposed role in the death of Abdülaziz on 4 June 1876, conservative politicians viewed the incident as a plot manipulated by Midhat Paşa to remove the only rival minister in the cabinet, paving the way for cabinet approval of the new constitution. Sultan Murat V, who was already showing signs of mental unhealth, was so disturbed by the incident that he was unable to continue in his position.

CEUTA

Spanish enclave and port city on the Moroccan shore of the strait of Gibraltar.

Ceuta is a Spanish possession with a population in 2002 of 69,000 and an area of 7 square miles (18 sq km). It commands the strait of Gibraltar and was settled by Carthaginians, Romans, Vandals, and Byzantines. Taken by the Arabs in 711, it was the base for the invasion of the Iberian Peninsula. Under Muslim rule, Ceuta (Arabic, Sibta) was disputed by the various Spanish and Moroccan dynasties, interspersed with periods of autonomy. During the thirteenth century, Ceuta was a rich port, linking the trans-Saharan trade with the Mediterranean. In 1415, it was taken by Portuguese King John and abandoned by its Muslim inhabitants. After the union of the Spanish and Portuguese crowns in 1580, Ceuta became Spanish, which it has remained.

Until the mid-nineteenth century, it was frequently besieged by Moroccan government and tribal forces, and in 1860 this led to war between Spain and Morocco, following which the boundaries were expanded in favor of Spain. The independent Moroccan government has repeatedly demanded that Ceuta be handed over by Spain. Fishing and food processing are important economic activities.

C. R. PENNELL

CEVDET, ABDULLAH

[1869–1932]

Ottoman Kurdish writer, political activist, poet, and doctor.

Abdullah Cevdet was born in Arapkir, in eastern Ottoman Turkey, the son of an Islamic religious official and physician. After attending a provincial military school, he went to Istanbul at the age of fifteen to study at the army medical school. While at the medical school, Cevdet participated in a growing movement calling for liberal reform of the Ottoman Empire. In 1890 he and three colleagues, all non-Turks, formed a political society that, after a succession of name changes, became known as the Committee for Union and Progress (CUP).

Along with other members of the CUP, Cevdet was arrested in 1892. In 1896, he was sent into exile in Tripoli, where he served as the eye doctor for the military hospital. Continuing his political activities, he was forced to flee to Tunisia and from there to Europe. In 1900, Cevdet agreed to become the medical officer of the Ottoman Embassy in Geneva, Switzerland, in exchange for the release of political prisoners in Tripoli. For this compromise with Abdülhamit II, the sultan, Cevdet was branded a traitor and never attained high office once the CUP came to power.

Cevdet, however, never ceased his agitation for reform and, in 1905, was sentenced in absentia to life imprisonment. Between 1905 and 1911, he lived in Cairo, where he joined the Young Turks group that became the Decentralization Party. In 1911, following the abdication of Sultan Abdülhamit, he returned to Istanbul. There his freethinking ideas, especially his atheism, led to frequent clashes with the new government. Cevdet's opposition to the empire's entry into World War I also aggravated his relationship with the regime. Although after the war he was appointed director of public health, his writings on religion led to charges of heresy. His trial started during the empire and continued into the early period of the new Republic of Turkey. The case was finally dismissed in December 1926, but he was prohibited from publishing political works.

While in Geneva, Cevdet had founded the journal *Osmanli,* in which he published articles in French and Turkish opposing the absolute rule of Sultan Abdülhamit. After this journal was closed, the principal vehicle for Cevdet's political writings was the monthly newspaper he published and edited, *Ijtihad* (also known as *Içtihat*; The struggle). *Ijtihad* was founded in 1904 and continued until his death in 1932, although it was shut down several times, particularly during World War I. Alongside attacks on despotism, *Ijtihad* published articles attacking theocracy, tradition, and religion but advocating secular modernism.

In 1885, while a medical student, he met the poet Abdülhak Hamit Tarhan and began writing poetry. His four volumes of poetry, published in the 1890s, were influenced by Hamit and two other Ottoman Turkish poets, Namik Kemal and Mahmut Ekrem, as well as by French poets.

Two books strongly influenced Cevdet's intellectual orientation: Felix Isnards's *Spiritualisme et Matérialisme* (Paris, 1879), which presented a skeptical outlook toward religion, and Ludwig Buchner's *Force et Matière,* which provided the intellectual basis for a radical critique of religion. This orientation informed his political writings as well as his writings on sociology, psychology, science, and philosophy. Two important collections of his essays are *Science and Philosophy* (1906) and *An Examination of the World of Islam from a Historical and Philosophical Viewpoint* (1922). In addition, he translated into Turkish and wrote the preface to the mid-nineteenth-century book *Histoire des Musselmans* (History of the Muslims) by Reinhart Dozy—which created a furor on its publication.

DAVID WALDNER

CEVDET, AHMED

[1822–1895]

Ottoman Turkish scholar-statesman.

Born at Lofça (Lovech, Bulgaria) to an Ottoman Turkish family, Ahmed Cevdet, at the age of seventeen, went to Istanbul, capital of the Ottoman Empire. During seven or eight years of study in *medrese* (higher schools of religious studies), he also found ways to learn other subjects—Persian, astronomy, mathematics—that were not taught in these schools. Mixing with learned company in dervish (Sufi religious fraternity) halls and literary men's homes, he formed important contacts. He began writing verse, and one of his literary benefactors, the poet Süleyman Fehim Efendi, gave him the pen name Cevdet. In the 1840s, he took the examination required to become a *qadi,* thus beginning his career as a member of the *ulama* (Islamic religious scholars).

Cevdet's work in administration began with Mustafa Reşid Paş's first appointment as grand vizier in 1846. Seeking an expert on the *shariʿa* (law of Islam) to consult about laws and regulations he planned to issue, Reşid Paşa asked the Şeyh ül-Islam to send him a broadminded *alim* (singular of *ulama*), and Cevdet was assigned. He remained close to Reşid Paşa for the rest of the latter's life, settling into his household and tutoring his children. There, Cevdet came under the influence of Reşid Paşa's efforts to simplify the Ottoman Turkish language and make it an effective means of mass communication; he also began to study French. In 1850, Cevdet collaborated with the future grand vizier Keçecizade Fuʾat Paşa in writing an Ottoman grammar. In the same year, he became a member of the council on education (Meclis-i Maarif) and director of the teachers' college Dar ül-Maarif, founded in 1848, playing a major role in organizing the college. Serving the education council as its first secretary, he had an important role in founding the Encümen-i Daniş (Academy of Sciences, 1851), which published his coauthored grammar, the *Kavaid-i Osmaniye,* as its first publication. When the Academy of Sciences decided to produce a history of the Ottoman Empire, Cevdet was asked in 1852 to write on the period from 1774 to 1826. So began the *Tarih-i Cevdet* (Cevdet's history).

Writing the first three volumes during the Crimean War, Cevdet was named official historian *(vakʿanevis)* in 1855. Over the next few years, he continued his *History* and studied the medieval Arab historian Ibn Khaldun, finishing the Ottoman translation of Ibn Khaldun's *Muqaddima* in 1860 (begun by Pirizade Sahib, 1674–1749). Based on European as well as Ottoman sources and emphasizing the importance for the empire of developments in Europe, Cevdet's twelve-volume *History* was completed over thirty years. The work distinguished Cevdet not as an old-style chronicler but as a standard-setter for later historians.

In the 1850s, Cevdet also began to work in legal reform. Following his appointment to the Meclis-i Ali-i Tanzimat (High Council of Reforms) in 1857, Cevdet presided over the commission that drew up the land law *(arazi kanunnamesi)* of 1858. He inaugurated the publishing of laws in a volume, subsequently a series, which continues still—the *Düstur.*

When Mustafa Reşid Paşa died in 1858, and Ali Paşa became grand vizier, Cevdet was offered the governorship of Vidin province. He was not yet ready to change from the religious to the civil service, a move he deferred until 1866. The incident indicates, however, Cevdet's emergence, following Mustafa Reşid's death, into the top bureaucratic echelons—where statesmen rotated among ministerial positions and provincial governorships. This Cevdet did for the rest of his career.

Although he held many high offices, the emphasis of Cevdet Paşa's career thereafter was on law and justice. He served as minister of justice five times. He had a critical part in developing the empire's civil *(nizamiye)* courts, especially in introducing—with the Divan-i Ahkam-i Adliye—an appeals instance in 1868. The Hukuk Mektebi (Ottoman Law School) opened in 1880, while he was minister, and he gave its first lecture. His greatest legal contribution, however, emerged from a controversy over whether the Ottoman Empire should adopt the French civil code. Cevdet Paşa successfully championed the opposing view that a compendium of *hanafi* jurisprudence should be adopted. In 1869, he

chaired a committee of Islamic legal scholars that produced the *Mecelle-i Ahkam-i Adliye,* a pioneering attempt to codify Islamic law. He had a hand in preparing all the *Mecelle*'s sixteen books, placed in effect by imperial decree between 1870 and 1876 as the civil code for both Islamic and secular courts. The *Mecelle* remained in force until the Turkish republic adopted the Swiss civil code in 1926; in some successor states of the Ottoman Empire, it served much longer. The *Mecelle* constitutes a unique case of successful resistance to the Ottoman tendency toward adopting European law.

Close to the palace and reluctant about the constitutional movement, Cevdet Paşa was politically very conservative. As his transfer from the *ulama* to the civil hierarchy and his close association with reformist statesmen suggest, however, he was intellectually broadminded. He also founded an extraordinary family. He took part personally, to an unusual degree, in educating his children, in addition to hiring private tutors. His son Ali Sedad (1859–1900) wrote several books on logic. His daughter Fatma Aliye (1862–1936) became the first Turkish woman novelist and a leading figure in the women's movement. His younger daughter, Emine Semiye (1864–1944), was allowed to study psychology and sociology in France and Switzerland, before returning to Turkey as an educator, writer, and political activist.

Cevdet Paşa's writings contributed to several fields. In history, he wrote not only his *History* (*Tarih-i Cevdet,* revised edition, Istanbul, 1891–1892) but two sets of historical "memoranda" *(tezakir, maʿruzat)* that historians value as sources; he also completed the Ottoman Turkish translation of Ibn Khaldun's *Muqaddima.* In law, the *Mecelle* is largely his monument. He wrote, too, various pedagogical works, especially his multivolume *Kisas-i Enbiya ve Tevarih-i Hülefa,* presenting accounts of the prophets and Islamic rulers, down to Sultan Murad II.

CHALABI, AHMAD

[1945–]

Iraqi politician.

Ahmad Chalabi, a member of an oligarchic Shiʿite family with close ties to the Hashimite kingdom installed by the British imperial authorities in Baghdad after World War I, was born in 1945. He is a leading but controversial opponent of Saddam Hussein who in 1992 founded the Iraqi National Congress in London. His family, including his father, a member of the monarchy's Council of Ministers, fled Iraq during the 1958 coup d'état. Until Chalabi's Pentagon-staged return during the U.S. invasion of Iraq in 2003, he had lived in exile for forty-five years. He studied at the Massachusetts Institute of Technology and the University of Chicago, where he developed connections that would later serve his ambitions. He taught math at the American University of Beirut, and founded Petra Bank in Jordan in 1977. He turned to Iraqi politics after his bank collapsed in 1989. He had relative success lobbying the U.S. halls of power for "regime change" in Iraq. He claimed credit for the 1998 Iraqi Liberation Act passed by the U.S. Congress. His critics allege that he promised to privatize Iraqi oil and privilege U.S. companies in return for U.S. assistance in grabbing power in Baghdad. He continues to be dogged by accusations of fraud, including a 1992 conviction in absentia for embezzlement in Jordan, as well as by allegations of spying for the Mossad and the U.S. Central Intelligence Agency. After the 2003 U.S. invasion of Iraq, the U.S. appointed him to the Iraqi Governing Council that they formed. His support among the U.S. State Department and intelligence professionals waned after the invasion, when the Pentagon's predictions about Iraq, based mostly on intelligence provided by the Iraqi National Congress, turned out to be inaccurate. However, he continued to have the support of the Pentagon in early 2004.

Karim Hamdy

CHALLE, MAURICE

[1905–1979]

French air force general and commander in chief of French forces in Algeria, 1958–1960.

Born in Le Pontet, Vaucluse, France, Maurice Challe was a Saint-Cyr graduate and, in 1953, was commandant of the École de Guerre Aérienne (School of Air War). In 1956, he assisted in the planning of France's operation to retake the Suez Canal after Egypt's nationalization of it. France's President Charles de Gaulle appointed Challe as commander in chief of the French forces in Algeria in December 1958. Challe responded by initiating highly effective aerial tactics (Challe Plan) against the nationalist Armée de Libération Nationale (National Liberation Army, ALN).

Although reassigned in 1960 to the North Atlantic Treaty Organization (NATO), Challe was deeply affected by his Algerian experience and had become disaffected with de Gaulle's policy of decolonization—especially with the plight of Algerian loyalists (Harkis). In February 1961, he resigned; in April, he and three other generals staged a revolt in Algiers against Paris, which failed to mobilize the anticipated support. Challe gave himself up and was interned until 1966 and then was granted amnesty in 1968. He wrote *Notre Révolte* (1968), which recollected his Algerian experiences and especially the April 1961 insurrection.

See also Armée de Libération Nationale (ALN); Harkis; North Atlantic Treaty Organization (NATO).

CHAMCHIAN, MIKAYEL

[1738–1823]

Armenian intellectual, regarded as the first modern Armenian historian.

Mikayel Chamchian was born in Istanbul to an Armenian family of the Roman Catholic faith. He was trained as a jeweler in the employ of the Armenian *amira* Mikayel Chelebi Diuzian, the imperial jeweler. Abandoning secular life, Chamchian joined his brother in Venice at the monastery of the Armenian Mekhitarian order in 1762. Upon completion of his education and training, he was sent as a preacher among the Armenians of Aleppo and Basra. In 1774 he was appointed instructor of Armenian language and grammar at the monastery, and in 1795 he was assigned to Istanbul as the resident Mekhitarian representative. He died there, after a long and productive life.

Chamchian was more than a missionary and educator. As grammarian, theologian, and historian, he was the intellectual giant of his age. His *Kerakanutiun Haykazian Lezvi* (Grammar of the Armenian language, 1779) is a landmark in Armenian linguistic studies. It was the first descriptive grammar of the Armenian language, though still of classical Armenian. His theological studies were defenses of Roman Catholicism, which, however, did not pass the censor at Rome for their attempt to reconcile Roman Catholic theology with Armenian Orthodoxy.

He made his most important contribution, however, as a historian. He wrote *Patmutiun Hayots i Skzbane Ashkharhi Minchev tsam diarn 1784* (Armenian history from the beginning of the world to the year 1784). Writing a universal history, in these volumes Chamchian developed a continuous narrative depiction of the Armenian people from the Creation to his own time. Though grounded in the biblical framework of the origin of humankind and of nations, Chamchian nevertheless crossed a number of important thresholds from a medieval worldview. His interpretation of events suggests more modern practices of historiographic methodology: He familiarized himself with current scholarship; he contextualized Armenian history by studying the classical historians; he examined all the extant Armenian historical works; and he constructed a comprehensive history of the Armenians. As a result, Chamchian's *Patmutiun Hayots* is regarded as the first work in modern Armenian historical scholarship.

CHAMOUN, CAMILLE

[1900–1987]

President of Lebanon, 1952–1958; one of the most charismatic and influential Maronite politicians of the post–World War II period.

Born in Dayr al-Qamar, a predominantly Christian village located in the mixed Druze-Maronite district of the Shuf, in southern Mount Lebanon, Camille Chamoun (also Shamʿun) was graduated from the Faculty of Law of Saint Joseph University in Beirut in 1925 and elected to Lebanon's parliament in 1934. A member of Bishara al-Khuri's Constitutional Bloc, he rapidly rose to political prominence and became minister of finance in 1938.

In the late 1930s and early 1940s, he developed a close connection with the British and American governments and repeatedly headed Lebanese missions overseas. It was then that he began to acquire the reputation of being one of Lebanon's most cosmopolitan and most sophisticated politicians. After playing an important role in the events that led up to the gaining of independence by Lebanon (1943), he was a minister in several of President al-Khuri's governments. He nevertheless broke with al-Khuri in May 1948, when the latter sought to have the constitution amended to allow for his reelection. In 1951, Chamoun created the so-called Socialist Front with Druze leader Kamal Jumblatt and Maronite leaders Pierre Jumayyil and Raymond Eddé. The members of the Socialist Front accused President al-Khuri of corruption, nepotism, and violations of the law, and they sought to obtain his resignation. In the summer of 1952, they organized a successful countrywide general strike that forced al-Khuri to step down, and soon afterward, on 23 September 1952, Chamoun was elected president.

President Camille Chamoun (right) converses with King Hussein of Jordan in 1995. © BETTMANN/CORBIS. REPRODUCED BY PERMISSION.

His presidency can be credited with several achievements. He increased the independence of the judiciary, induced Parliament to grant women the right to vote, and took measures to liberalize trade and industry that greatly contributed to the subsequent period of economic expansion and prosperity in Lebanon. He was criticized, however, for many of the very same practices he had accused his predecessor of fostering, particularly corruption and abuses of his authority. The political establishment distrusted his authoritarian leanings and his attempt to undercut the influence of traditional leaders. The Sunni Islam community especially felt alienated by his effort to undermine the authority of the premiership, which by convention was reserved for a Sunni, and by his unabashedly pro-Western foreign policy. During the 1956 crisis, for instance, he had refused to heed Muslim pressures to break off relations with France and Britain. As the pan-Arab rhetoric of Egyptian President Gamal Abdel Nasser became increasingly popular among the Sunni masses of Lebanon, he defiantly intensified the alignment of Lebanon with the United States, and, in 1957, he was the only Arab leader to publicly endorse the Eisenhower doctrine. Such open hostility to the rising tide of Arab nationalism in Lebanon made him very unpopular among Sunni Muslims. More generally, his heavy-handed, provocative style alienated many, including those within the Christian community. As a result, during his last two years in office, the people of Lebanon became increasingly polarized and discontented with his administration.

In 1957, Chamoun rigged the parliamentary elections to weaken his rivals and permit parliament to approve a constitutional amendment that would have enabled him to be reelected for a second term. Several of the country's most prominent political bosses thus failed to regain their seats in the Chamber of Deputies, which was then dominated by Chamoun loyalists. Such a blatantly illegal but effective maneuver to undermine their power led Chamoun's rivals to rise up against him during what came to be known as the 1958 Lebanese civil war.

Although Chamoun was allowed to remain in office until the end of his term, September 1958, he had to abandon any ambition of being reelected.

He never again exerted as much power as he had between 1952 and 1958, but he remained active in public life and continued to display his skills as a populist, pragmatic politician. In 1959, he founded the National Liberal Party (NLP), which, of all parties, became the most consistent advocate of free enterprise and close ties with Western countries. He also rapidly emerged as a determined opponent of President Chehab and his policies, and in 1967 he formed the so-called Tripartite Alliance with the other chief opponents of Chehab, Raymond Eddé of the National Bloc and Pierre Jumayyil of the Phalange Party. He thus was instrumental in electing Sulayman Franjiyya to the presidency in 1970 and remained a behind-the-scenes power broker in the years that followed.

As Lebanon slowly drifted toward civil war in the early 1970s, Chamoun proved himself to be one of the most hawkish voices within the Christian community. He was determined to maintain Christian domination over state institutions and to resist calls to end the confessionalism. During the first phase of the civil war, from 1975 to 1976, he was minister of the interior. In the course of the hostilities, he and his followers were rapidly overshadowed by Bashir Jumayyil and his Lebanese Forces. In July 1980, the Lebanese Forces destroyed the military infrastructure of the Tigers, NLP's small militia. Although Chamoun joined the Government of National Unity formed in 1984, he was then no longer in a position to influence the course of national politics. He died of a heart attack in August 1987.

CHAMOUN, DANY

[1934–1990]

Leader of Lebanon's National Liberal Party.

Son of former President Camille Chamoun, Dany Chamoun became active in Lebanese politics during the 1975 civil war, when he assumed the leadership of the Tigers, the small militia of his father's National Liberal Party (NLP). After the Tigers were thoroughly defeated by the Lebanese Forces in July 1980, Dany Chamoun was forced into exile in Paris. When his father died, in August 1987, he inherited the leadership of the NLP and returned to Beirut. From 1989 to 1990, he backed General Michel Aoun and opposed Syrian influence in Lebanon. He was assassinated in his Beirut apartment on 21 October 1990, together with his wife and two of their young children.

CHAMPOLLION, JEAN-FRANÇOIS

[1790–1832]

French linguist and historian whose breakthrough in 1822 in deciphering hieroglyphics made him the founder of modern Egyptology.

The availability of the Rosetta Stone (uncovered in 1799) and other inscriptions, together with his mastery of Coptic, were the prerequisites to Jean-François Champollion's success. The Rosetta Stone's text was inscribed in two languages (Egyptian and Greek) and three writing systems—Greek, hieroglyphics, and demotic (a form of ancient Egyptian cursive writing). Having started studying Eastern languages as a child, Champollion recognized that the scriptural language of the Coptic Christian church was the latest form of ancient Egyptian.

As conservator of Egyptian antiquities at the Louvre museum in Paris, Champollion arranged the impressive Egyptian galleries, which opened in 1827. In 1828 and 1829, he and Ippolito Rosellini led a French–Tuscan expedition to Egypt to copy inscriptions from the ancient monuments. Champollion died at forty-two, leaving his elder brother Jacques-Joseph Champollion-Figeac to publish many of his manuscript works.

DONALD MALCOLM REID

CHAMRAN, MOSTAFA

[1931–1981]

Iranian political activist.

Born in Tehran, Mostafa Chamran was an engineer by training, having earned a Ph.D. in electromechanics from the University of California at Berkeley in 1962. While studying in the United States, he cofounded, with Sadeq Qotbzadeh and Ibrahim Yazdi, the Muslim Students Association, which opposed the shah. He entered political life during the days of the nationalization of the Iranian oil industry and the premiership of Mohammad Mossadegh (1951–1953) as a member of the National Resistance Movement, the more religiously inclined branch of Mossadegh's National Front. In the 1970s he moved to Lebanon and joined the AMAL group led by the Shiʿite cleric Imam Musa Sadr. After the Iranian Revolution of 1979, Chamran was assistant to the prime minister and a member of parliament, until his mysterious death on the frontline during the war between Iran and Iraq. In addition to being a political activist, Chamran was also the author of several collections of mystical poetry.

NEGUIN YAVARI

CHAZAN, NAOMI

[1946–]

Member of the Knesset, political scientist, and prominent advocate of peace, dialogue, religious pluralism, and civil and women's rights.

Born in Jerusalem, Naomi Chazan received her B.A. at Columbia University and earned a Ph.D. at Hebrew University (1975). Director of the Truman Institute for Peace Studies at Hebrew University (1990–1992), then professor of political science and African studies (1994), Chazan has published widely on comparative politics, women's rights, and Israeli-Arab relations, and has occupied leading positions in the Israeli branches of the Society for International Development and the International Association of Political Science. She is better known, however, as an activist and politician.

As cofounder of a series of feminist organizations—the Israel Women's Network (1984), the Israel Women's Peace Net (1989), the Jerusalem Link/Engendering the Peace Process (1996–1998, with Hanan Ashrawi), and the Center for Women in Politics in Israel—Chazan has frequently focused public attention on the link between militarism and obstacles to women's rights, and on the unique contributions made by women peace activists. A member of the left-wing Zionist Meretz party executive, Chazan entered the Knesset in 1992, became deputy speaker in 1996, and has been one of the most active legislators, focusing on social issues, women's rights, and foreign affairs. She has been prominent in Peace Now, an active supporter of the unofficial Geneva Accord of 2003, and a leading campaigner for the rights of non-Orthodox Jews in Israel.

GEORGE R. WILKES

CHÉDID, ANDRÉE

[1920–]

One of the most prominent and prolific authors writing in French from the Middle East.

Andrée Chédid was born in Cairo, Egypt, in 1920 to a Lebanese family. After receiving her B.A. from the American University in Cairo and marrying, at twenty-one, Louis Chédid, she moved with her hus-

band to Paris, where she has been living since 1946. Although her first collection of poems was written in English (*On the Trails of My Fancy,* 1943), most of Chédid's work is in French, and includes novels, short stories, plays, essays, and poetry, as well as children's books.

Like other francophone writers from the Middle East such as Amin Maalouf, Andrée Chédid is a product of both the Orient and the West. This hybrid aspect is reflected in her entire work, whose universality and humanity appeal to readers throughout the world. In most of her early novels, such as *Le sommeil délivré* (1952; *Sleep Unbound*), *Le sixième jour* (1960; *The Sixth Day*), *L'autre* (1969; *The Other*), and *Nefertiti et le rêve d'Akhnaton* (1974; *Nefertiti and Akhnaton's Dream*), Chédid used her native Middle East as the setting for her stories. Her poetry deals with nature, love and brotherhood, but is also an outcry against the violence and wars that constantly devastate not only the Middle East, but the entire world. Her plays, such as *The Goddess Lar* (1977), *Les nombres* (1965; *The Numbers*), and *Le montreur* (1967, *The Showman*), deal with the disenfranchisement of women in traditional societies. More recent works include the poems *Guerres* (1999; *Wars*); *Territoires du souffle* (1999; *Territories of Breath*), and *Le souffle des choses* (2000; *The Breath of Things*), and the novel *Le message* (2000; *The Message*).

Most of Chédid's writings have been translated into more than fifteen languages, and two of her novels, *L'autre (The Other)* and *Le sixième jour (The Sixth Day)* were made into films by, respectively, Bernard Giraudeau (1990) and Youssef Chahine (1996).

NABIL BOUDRAA

CHEHAB, BASHIR

[1767–1850]

Early nineteenth-century ruler in Lebanon.

After consolidating his power in Lebanon, Bashir Cheheb built a lavish palace at Bayt al-Din. © ROGER WOOD/CORBIS. REPRODUCED BY PERMISSION.

Bashir Chehab (sometimes Shihab) born in Ghazir, was converted to Christianity with the rest of his family. Growing up in poverty, he may have received some elementary education at home. He subsequently went to Bayt al-Din, where land had been left to him by his father. Chehab's rise to power was not accidental. He first became wealthy by marrying the widow of a relative, and he cultivated good relations with al-Jazzar in Acre. When the rule of his relative Prince Yusuf became intolerable, Ahmad al-Jazzar chose him as his replacement in 1789 with the support of the Jumblatts. When Yusuf went to Acre to regain his throne, he was briefly reappointed ruler of Lebanon. Chehab, however, was able to persuade al-Jazzar to reverse his decision, and Yusuf was arrested and executed.

But Chehab's rule remained precarious, depending on the whims of al-Jazzar. In 1793, 1794, and 1798, al-Jazzar appointed Yusuf's sons as princes of Lebanon. The occupation of Egypt by Napoléon and his advance toward Palestine secured Chehab's position for a while. When the French besieged Acre, al-Jazzar asked for Chehab's help; Chehab declined, citing the instability of the situation. He also refused to aid the French, fearing the wrath of the Druzes if he did so, because the French were supported by the Maronites. When the French withdrew, al-Jazzar, intent on punishing Chehab, appointed five different people to challenge his authority. Chehab fled Lebanon and sought support

from the Ottoman Empire. He remained in fear of al-Jazzar until the latter died in 1804.

Beginning in 1804, Chehab focused on consolidating his rule. Al-Jazzar had turned the Druze landlords against him, and he punished the latter by curtailing their economic and political power. Even members of his own family were not spared—many were killed and their holdings confiscated. By 1806, Chehab was promoting himself as the undisputed amir, and he built an opulent palace at Bayt al-Din that is now a tourist attraction. Chehab was secure in his position until 1819, when Abdullah Pasha took over as *wali* of Acre and demanded additional taxes from Chehab. The resulting protests and turmoil forced Chehab to abandon his emirate in 1820 and flee to Hawran. The resulting chaos alarmed Abdullah, who allowed Chehab to return in 1821. Chehab quickly reestablished order, for which he was rewarded with Abdullah's support of his claims against the *vilaye* of Damascus. When Abdullah was removed by the sultan, Chehab went to Egypt. There he befriended Muhammad Ali, who secured his reappointment.

Chehab's return to Lebanon marked the beginning of the disintegration of the emirate. Intoxicated with the backing of Muhammad Ali, Chehab assumed that a crackdown against Jumblatti Druzes would be safe; he had Bashir Jumblatt, the leader of the Druze community, killed. The Druzes never forgave him. The advance of Ibrahim Pasha to Acre in 1831 forced Chehab to provide help—against the wishes of the Druzes and to the delight of the Maronites. Fighting broke out between Druzes and Maronites. When Ottoman and European forces landed in Lebanon to expel Ibrahim Pasha from Syria, Chehab was evacuated on a British ship. He died in Istanbul.

As'ad AbuKhalil

CHEHAB FAMILY

A politically influential family in Lebanon.

The Chehab (also Shihab) family can be traced to Arab tribes from Hawran, Syria, who settled in southern Lebanon. The power of the family was established in 1697, when it inherited the leadership of the Mount Lebanon area from the last Maʿnid prince, who had no heirs. Originally a Sunni Muslim, Bashir II converted to Maronite Christianity, which displeased the Druze population in the mountains. Family members continued to occupy important positions in government and administration in the twentieth century. Its best-known member is General Fuʾad Chehab, one of the most powerful and popular presidents in twentieth-century Lebanon.

See also Chehab, Bashir; Chehab, Fuʾad; Lebanon, Mount.

As'ad AbuKhalil

CHEHAB, FU'AD

[1902–1975]

The most important Lebanese statesman of the twentieth century.

Fuʾad Chehab (sometimes Shihab) was born to a Maronite family. During the French Mandate, he served in the Special Forces of the Levant, established by the French government to legitimize their presence in Lebanon, and rose to the rank of lieutenant colonel. In 1946, with the official withdrawal of all French troops from Lebanon, Chehab was appointed the first commander in chief of the Lebanese army. He transformed the French-created force into a small national army, modernized the forces, and introduced Western-style military academies.

Chehab's name first appeared in a political context in 1952, when he refused to obey the orders of President Bishara al-Khuri to suppress demonstrators expressing their outrage at the corruption of Khuri's regime. Chehab strongly believed that the army should be kept out of internal political disputes. He also feared that any attempt to politicize the army would encourage a coup d'état. When al-Khuri resigned, Chehab was appointed prime minister (in effect, interim president) because the

Maronite establishment did not want to leave the country in the hands of a Sunni prime minister. Chehab led a smooth transition of power and oversaw the democratic election of Camille Chamoun as president.

When a civil war broke out in 1958, amid signs that Chamoun desired a second term (contrary to the provisions of the constitution and the wishes of the Lebanese) and wanted to use the army to crush the rebels, Chehab again refused to commit troops to support the president. His stance won him the backing of Lebanese Muslims. He feared that the deployment of troops would aggravate the social tensions in the country. His neutral position in those critical times made him the logical choice for the presidency, and with the support of Egypt (Nasserist) and the United States, Chehab was elected president in July 1958.

As president, Chehab initiated reforms to create an efficient and noncorrupt bureaucracy. He wanted to promote representatives of the professional middle class in order to end the monopolization of political power by traditional *zuʿama* (landholding elites). He also furthered social concord at home by transcending the sectarian interests of most politicians. Unlike other presidents of Lebanon, he was aware that political radicalism among Muslims was deeply rooted in socioeconomic dissatisfaction. He initiated a program of development in poor Muslim areas, although it did not, according to critics, go far enough. His presidency was not without problems. So disgusted was Chehab with the petty considerations and interests of the traditional political class that he tried to undermine their power by consolidating the security apparatus, which was accountable only to him. The rule of the Deuxième Bureau instilled fear and intimidation among civilians (especially Palestinians) and politicians.

The term *Chehabism* came to denote the political movement that pledged allegiance to the president. Unlike other political movements of the twentieth century, his power base cut across sectarian lines. Uninterested in power and politics, Chehab tried to resign before the end of his term, but was not allowed to do so by the deputies in parliament. He was succeeded in the presidency by his protégé Charles Hilu. Chehab shunned the limelight and rarely gave interviews. He died in seclusion.

AS'AD ABUKHALIL

CHEHAB, KHALID

[1892–1978]

Lebanese prime minister (1937, 1952–1953), minister of finance (1927–1928), deputy, and speaker of parliament (1936–1937).

Born in Hasbeya, Lebanon, Khalid Chehab was first elected to the Lebanese parliament in 1922. A member of Bishara al-Khuri's Constitutional Bloc, he was minister of finance from 1927 to 1928. Following a short tenure as speaker of Parliament, he was appointed prime minister in 1937. Although he was one of the most influential Lebanese politicians under the French mandate, he is best remembered for the seven months during which he served as President Camille Chamoun's first prime minister (30 September 1952 to 30 April 1953). Chamoun, who had been elected with a mandate to modernize the administration, entrusted him with this important task. As head of a four-man cabinet, Chehab wielded emergency powers and issued several dozen decrees that consolidated the administration by defining much more clearly than before the responsibilities of civil servants and of the administrative departments. Other significant accomplishments of his cabinet included giving women the right to vote, changing the electoral system in a way that weakened the power of traditional patrons, substantially reforming the judiciary, and liberalizing the press law. Well-established persons who had been hurt by his policies acted in coordination with radical critics to force his resignation.

CHENIK, MUHAMMAD
[1889–1976]

Tunisian businessman and political figure.

During World War II, as a member of Tunisia's Grand Council, Muhammad Chenik was chosen in 1942 by the bey, Muhammad al-Munsif, to lead a pro-nationalist government. The effort was suppressed by the Free French the following year. In 1950, with the campaign for the independence of Tunisia in full swing, Chenik was picked to head a new government that featured a Tunisian majority. In 1952, during a French repression of the nationalist movement, Chenik and his cabinet, along with Habib Bourguiba and other leading activists for nationalism, were arrested.

CHINA AND THE MIDDLE EAST

Since the late 1980s, China's Middle East policy primarily revolves around its desire to maximize its economic interests without becoming entangled in political controversies.

Since the establishment of the People's Republic of China on 1 October 1949, China has had a roller-coaster relationship with the region. Periodic domestic upheavals and its long exclusion from the United Nations (UN) resulted in China oscillating from isolation and disengagement to active involvement with groups and movements hostile to Middle Eastern regimes. Even though the Bandung Conference (1955) opened the doors to the Middle East, Chinese diplomatic progress was slow and painful. Conservative Middle Eastern regimes that were apprehensive of atheist communist ideology were further threatened by China's identification with revolutionary regimes such as Egypt and Iraq and its support of radical movements. Likewise, some Middle Eastern countries maintained diplomatic relations with the breakaway Taiwanese republic, and this in turn raised concerns in Beijing.

China's admission to the UN in 1971 resulted in a nuanced foreign policy, and confident of its international recognition and acceptance, China toned down its criticism of the conservative monarchies and began adopting a friendlier posture with all the major countries. The emergence of pragmatic leadership of Deng Xiaoping in 1978 brought about significant shifts in China's Middle East policy.

As part of its four modernization processes, China commercialized its arms supplies and looked to the Middle East as a prime customer. The prolonged Iran–Iraq War in the 1980s and the U.S.–U.S.S.R. arms embargo upon the warring nations proved advantageous to China. As Iran and Iraq looked to Beijing for arms supplies, Chinese weapons were in action on both sides of the Shatt al-Arab waterway. Military modernization also compelled China to look to Israel as a possible ally, and military ties were established between the two long before the establishment of political relations.

In the 1980s China actively promoted proliferation of nonconventional weapons and helped countries such as Iran, Iraq, and Syria to acquire missile capabilities. The Saudi apprehension over the intensification of missile attacks during the Iran–Iraq War enabled China to conclude a multibillion-dollar deal for the supply of CSS-2 intermediate-range ballistic missiles to Riyadh, with whom China had not yet established normal relations.

Israel occupies an important position in China's Middle East policy. Even though the Jewish state was

the first Middle Eastern country to recognize the People's Republic of China (in January 1950), it was the last country in the region to be recognized by China (in January 1992). Initial Israeli reluctance, owing to perceived pressure from the United States, was followed by Chinese recognition of the political value of and ideological affinity to the Palestinian cause. The Suez Crisis of 1956 alienated China further. Political rivalry with Moscow and ideological competition with Washington influenced China to become the staunchest supporter of the Palestinian cause, and in January 1965 it became the first non-Arab power to recognize the Palestine Liberation Organization (PLO). Besides political support, Beijing also provided military support and training to various Palestinian groups.

The 1990 Iraq invasion of Kuwait tested China's diplomatic skills and threatened its delicate relations with countries such as Saudi Arabia. Unwilling to join the U.S.-led coalition and unprepared to abandon Iraq, its political ally and economic market, during the critical UN Security Council vote authorizing the use of force to expel Iraqi forces from Kuwait (Resolution 678) China abstained. This tacit support endorsed the liberation of Kuwait without unduly damaging the Sino-Iraqi relations.

The resolution of the Kuwait crisis, coupled with the disintegration of the Soviet Union, the end of the Cold War, and the emergence of the United States as the preeminent global power, posed new challenges to China. Eager to participate in the Madrid peace process, in January 1992 China recognized and established diplomatic ties with Israel. Greater Chinese emphasis on economic relations is strengthened by increasing Chinese dependence upon Middle East for its hydrocarbon requirements. As China's economic growth continues, its energy needs shape its Middle East policy, especially towards countries such as Iraq and Iran, which were identified by U.S. president George W. Bush as part of an "Axis of Evil." During the Iraq war of 2003, China vehemently demanded Iraq to comply with the UN Security Council Resolution 1441 but opposed the use of force to secure Iraqi compliance. However, when the war broke out, China's Middle East policy reflected the traditional policy of seeking to maximize its economic interests without becoming entangled in political controversies.

CHOLERA

See DISEASES

CHRAIBI, DRISS

[1926–]

Moroccan novelist.

Born in al-Jadida to a Muslim Berber family, Driss Chraibi studied at the French lycée Lyautey in Casablanca. He received a college degree in chemistry in 1950 and went on to study neurology and psychiatry. Two months before qualifying for his doctorate in science, he gave up his studies and decided to travel in Europe while working at various jobs.

In his early novels, *Le passé simple* (1954; The simple past) and its sequel *Succession ouverte* (1962; Heirs to the past), Chraibi drew on his own experiences to depict the generational conflict and culture shock experienced by Moroccan youth. *Les Boucs* (1955; The Butts) describes the harsh living conditions of the Maghribi workers in France. In his next novels, *L'ane* (1956; The donkey) and *La foule* (1961), Chraibi conveys his views as a Muslim Maghribi vis-à-vis the West, whose civilization and philosophy he had acquired through education. A biting tone was set through the author's sense of cynical amusement in *La foule,* but much lighter humor was evident in *La civilisation, ma mère* (1971; Mother comes of age). In *De tous les horizons* (1958; From all horizons), a book described as narration *(récits),* Chraibi again tapped into his personal experiences, with his parents and as a Maghribi in France.

The novel *Une enquête au pays* (1981; Flutes of death) marked a turning point for Chraibi: He embarked on a quest for his Berber identity, exploring pre-Islamic times and emphasizing the ties of Berbers with the land of the Maghrib and on the relatively recent Arabization and Islamization of North Africa. He continued the quest in *La mère du printemps (L'oum-er-Bia)* (1982; Mother spring). As a consequence, Chraibi found himself trying to dissociate himself from Arabic and the Arabs without rejecting the Islam brought to the Maghrib by the Arabs. A few of Chraibi's novels focus on more general topics—for example, the condition of the emancipated woman in *Un ami viendra vous voir* (1967; A friend will come to see you) and the story of a man and woman's struggle to establish a relationship in *Mort au Canada* (1975; Death in Canada). More recent works include the novels *Naissance à l'aube* (1986; Birth at dawn) and *L'Inspecteur Ali* (1991; Inspector Ali), and the nonfiction work *Une place au soleil* (1993; A place in the sun).

In 1994 Chraibi published a fictionalized biography of the prophet Muhammad, *L'homme du livre* (1998; Muhammad), an account of the two days that preceded the Revelation. His latest work is an autobiography, *Vu, lu, entendu* (1998; Seen, read, heard).

AIDA A. BAMIA

CHRAKIAN, ARTIN

[1804–1859]

An Armenian, minister of commerce and foreign affairs in Egypt, 1844–1850.

Artin Chrakian was born in Istanbul. His father, Sukias Chrakian, managed the commercial affairs of Tosun Pasha, one of the older sons of Muhammad Ali, the *vali* of Egypt. Sukias emigrated to Egypt in 1812, and two years later, his family followed him there. Artin Chrakian, his brother Khosrov, and a third Armenian, Aristakes Altunian, were allowed to attend school in the palace, where the young prince Abbas, later to inherit the governorship of Egypt, was one of their classmates. Sent to Paris, Artin Chrakian studied civil administration. His education completed, he returned to Egypt and began working at the war ministry at the mundane chore of translating French military manuals into Turkish. In succeeding years, however, Chrakian, along with other Armenian colleagues, was entrusted with the responsibility of reorganizing the educational system in the country. In May 1834, he opened the School of Engineering at Bulak, and in September of the same year, in conjunction with another Armenian, Stepan Demirjian, he opened

the School of Translation in the citadel of Cairo. In 1836, he was appointed a member of the school council, which subsequently became the ministry of education.

By this time, Chrakian was a full-fledged member of the administrative machinery governing Egypt. His appointment as a member of the *majlis al-ali,* the council for civil affairs, brought him in direct contact with the viceroy. From then on, his promotion was rapid. Muhammad Ali chose him as his first secretary in 1839 and sent him as an envoy to Paris and London in 1841. Upon the death of Boghos Bey in 1844, Chrakian succeeded as minister of commerce and foreign affairs. He remained in that post during the regency of Ibrahim ibn Muhammad Ali. Along with many other Armenians in the employ of the Egyptian government, he fell out of favor after Abbas assumed the post of viceroy. He was removed from office in 1850 and went into exile in Europe. He returned after Saʿid, the succeeding viceroy, invited him back to Egypt. Chrakian may have been the first Armenian in Egypt to receive the hereditary title of pasha.

ROUBEN P. ADALIAN

CHRISTIANS IN THE MIDDLE EAST

Originally a Jewish offshoot, Christianity has been present in the Middle East since the first century C.E.

Christianity is based on the spiritual and ethical teachings of Jesus of Nazareth, who lived and preached in Judea during the first century C.E. and was crucified by the Roman authorities; adherents of the faith believe he rose from the dead. To Christians, Jesus was the awaited Messiah of the Jewish people (*christos,* "the anointed one," is a Greek translation of "Messiah"). His teachings were compiled in the Gospels, which, together with the teachings of his earliest followers, the Apostles, form the corpus of the New Testament. These twenty-seven books, along with the Jewish Bible and the books of the Apocrypha, make up the Christian Bible.

History of Christians in the Middle East

Although the earliest Christians were all Jews, some time around 45 C.E. some of the Apostles—especially Paul and Barnabas—began to preach to the Gentiles throughout the Near East. Antioch, Edessa, and Alexandria emerged as early centers of Christianity. By the fourth century the spread and influence of Christianity were such that it had become the official religion of the Roman Empire, whose capital had been moved by the emperor Constantine from Rome to Constantinople. At that time, too, the religion underwent a series of theological disputes centered primarily on the relationship of the divine and human nature of Christ. At the Council of Chalcedon (451), those that stressed the unitary nature of Christ (the Monophysites) were deemed heretical. (They constituted the Oriental Orthodox family of churches.) The Eastern Orthodox (Greek) Church, centered at Constantinople, remained the official imperial church of the Byzantine Empire. With the expansion of the Latin-based, Western-rite church centered at Rome and looking west to Europe, the theologies, languages, and rituals of the two centers of Christianity—Constantinople and Rome—developed in their distinctive fashions, leading ultimately to the formal split of 1054. Throughout the formative period of Christianity, the Middle Eastern churches—Coptic, Armenian, Chaldean (centered in Iraq), Assyrian, and Syrian Orthodox (Jacobite)—drew their followers from the indigenous population, most of whom eventually converted to Islam after the invasions of the seventh century. The Western, Roman Catholic Church became interested in the region once again after the period of the Crusades (eleventh to fourteenth centuries). The churches of the Protestant Reformation (sixteenth century) were not yet in existence.

European economic and political penetration of the Ottoman Empire began in the sixteenth century with the issuance of capitulations to France; missionary work was initiated, as were attempts to reconcile the Eastern churches with Rome. The Catholic and Uniate churches in the Middle East (Syrian Catholic, Armenian Catholic, Chaldean Catholic, and Greek Catholic churches) that looked to Rome for authority date from the seventeenth and

eighteenth century, except for the Maronite Church, whose union with Rome was initiated in the twelfth century. The Uniate churches, Eastern-rite churches that acknowledged the pope's authority, retained only a minority of Christianity's adherents. Protestantism came into the region through the efforts of, primarily, U.S. and British missionaries in the nineteenth century.

European strategic interests and the "Eastern Question" dovetailed with renewed religious interest in the Holy Land. Protection of Christian minorities by the European powers and the installation of Anglican and Roman Catholic institutions in Jerusalem were part of a growing European agenda to represent the interests of the various Christian minorities. Altercations over Christian holy sites led to the outbreak of the Crimean War. The fact that there are only four historical patriarchates and many contenders for their leadership has led to intercommunal acrimony. For example, Monophysite Copts, Catholic Copts, and Greek Orthodox Copts claimed the patriarchate of Alexandria; and Maronite, Greek, and Syrian Catholics, as well as the Greek Orthodox and the Jacobites, claimed the patriarchate of Antioch.

Christian communities were a part of the Millet system of the Ottoman Empire, which in turn was an elaboration of the *dhimmi* status given to Christians and Jews in early Islamic times. This system provided a measure of toleration, freedom of worship, and self-governance for the Christian communities, but always under the Islamic umbrella. Under this system Christians were barred from certain public offices and suffered certain legal disabilities vis-à-vis their Muslim neighbors. Proselytism was prohibited, as was conversion to Christianity from Islam.

Secular Nationalism and Christianity

It is therefore not surprising that Christians were among the more enthusiastic advocates of secular nationalist ideas at the turn of the twentieth century. They were also influenced by foreign mission schools, where such ideas were taught and discussed. Christians thus became prominent among the secular Palestinian and Lebanese leadership, and a Christian, Michel Aflaq, was one of the theorists of the Baʿth movement that provided the ideology for modern Iraq and Syria. An important exception to this tendency has been a sector of Lebanon's Maronite population, which has favored the creation in Lebanon of a Christian enclave.

The challenge posed to secular nationalism by Islamist movements has led some Christians to reexamine their advocacy of secularism, but it remains the most attractive option for the majority of Christians in the region. Census figures for Middle Eastern countries, particularly as they reflect religious affiliation, are notoriously unreliable or, in some instances, nonexistent. An educated estimate, however, would put the number of Christians in the region at 8 to 12 million. Emigration, however, has been a growing trend in recent decades. The Christian population of Jerusalem, for example, has shrunk from 26,000 in 1948 to an estimated 6,000. The number of Syrian Orthodox people in southeast Turkey dwindled from about 30,000 in 1980 to 7,500 in 1992. There are no reliable figures for Christian emigration from Lebanon, but anecdotal evidence suggests that the proportion of Christians there has dropped from roughly 50 percent to 30 or 35 percent during the course of Lebanon's sixteen-year civil war. In 2001, out of a total population of 3,500,000 Lebanese, the number of Christians hovered between 1,300,000 and 1,500,000. There are a large number of Lebanese Christians who live in the diaspora. Reasons frequently cited for emigration are war, including the Gulf War (1991), poor economic prospects, and anxieties about the future. Despite the deteriorating situation of Christians in the Middle East—or perhaps in response to it—Christian churches in the region have reached a historically unparalleled degree of unity in recent years. In 1974 the Middle East Council of Churches, based in Beirut, brought together the two Orthodox families and the Protestants for common witness and service. In 1987 the Catholic family joined this council.

The Eastern (Greek) Orthodox Church

The Eastern Orthodox Church in the Middle East developed around the four patriarchates of the early church: Jerusalem, Antioch, Alexandria, and Constantinople. During the Ottoman period the Eastern Orthodox millet (community) was represented

Greek Orthodox Christians take part in a Christmas procession in Manger Square, Bethlehem. before the sultan by the patriarch of Constantinople, the ecumenical patriarch, who was considered *primus inter pares* among the patriarchs. Of the other patriarchates, which serve predominantly Arab parishioners, only one—that of Antioch—has an Arab serving as patriarch. The patriarchs of Alexandria and Jerusalem are Greeks who preside over Greek hierarchies. Particularly in the see of Jerusalem, this has created a gulf between Palestinian and Jordanian parishioners and their leadership. Of the four patriarchates the largest, both geographically and numerically (about 760,000), is Antioch. This patriarchate includes Syria, Israel, Iraq, Iran, and Kuwait, with a few parishes in southern Turkey. The smallest is Constantinople—the Greek Orthodox population in Turkey has dwindled to about 3,000. The ecumenical patriarchate, however, continues to exercise leadership for the Greek Orthodox diaspora outside the Middle East.

The Oriental Orthodox Churches

The Oriental Orthodox family in the Middle East includes three other churches: Coptic Orthodox, Armenian Apostolic Orthodox, and Syrian Orthodox (Jacobite). The largest of the three—indeed, the largest denomination in the Middle East—is the Coptic Orthodox, numbering perhaps 5.5 to 6 million. The Armenian Apostolic Orthodox Church includes four jurisdictions in the Middle East: the patriarchates of Jerusalem and Constantinople and the catholicates of Cilicia (based in Beirut) and Etchmiadzin, Armenia. The Syrian Orthodox Church—whose patriarch presides from Damascus, just a few buildings away from the Greek Orthodox patriarchate of Antioch—had its heartland in what is now southeastern Turkey, northern Iraq, and northern Syria. In recent years disturbances in Turkey (related both to the Kurdish question and to the Gulf War) have contributed to the emigration of many

Iraqi Christians gathered in the Chaldean Church of Saint Ephraim, in the northern city of Mosul, and in other churches on 20 April 2003 to celebrate the first Easter mass since the fall of Saddam Hussein. About 250,000 Christians in Iraq, or 75 percent of the total Christian population there, are Chaldean Catholics, whose head is the patriarch of Babylon. © AFP/CORBIS. REPRODUCED BY PERMISSION.

members of this community to Syria and Lebanon or to Europe and North America. The Syrian Orthodox people, locally called Suryanis, continue to speak their ancient Syriac dialect and use it in their liturgy.

Eastern Rite and Latin Catholics

The Eastern-rite Catholic churches owe their origins to Roman Catholic missionary activity in the sixteenth through the nineteenth centuries. These churches follow in general the rites of the orthodox churches from which their membership was drawn, but they acknowledge the primacy of the pope.

The Greek Catholic (or Melkite) church drew from Greek Orthodox membership. The patriarch of this church—the largest of the Middle East eastern-rite Catholic churches, at about 450,000 members—presides in Damascus. The largest concentrations of Greek Catholics are found in Lebanon, Syria, Israel and the West Bank, and Jordan.

The Coptic Catholic, Armenian Catholic, and Syrian Catholic churches are related historically to the three corresponding Oriental Orthodox churches. The largest is the Coptic Catholic, with about 100,000 members. The patriarch of this church resides in Cairo. The Syrian Catholic Church was reorganized by the Ottoman authorities in the nineteenth century. The Syrian Catholics, unlike their Orthodox brethren, use the Latin liturgy instead of the Syriac. Today, Syrian Catholics number about 80,000. The patriarchal sees of both the Syrian and Armenian Catholic churches are located in Beirut.

The Chaldaean Catholic Church, whose head is the patriarch of Babylon, historically drew its membership primarily from the Assyrian church of the

East. Chaldaean Catholics constitute roughly 75 percent (250,000) of the Iraqi Christian population. In 2003 Patriarch Bidawid passed away in the midst of the U.S.-led war against the Iraqi regime.

The two other Middle Eastern Catholic churches are the Maronite and Latin Catholic churches. The early history of the Maronites is clouded in legend, but it is generally agreed that their origin had to do with the fifth-century dispute over the human and divine natures of Christ. The forerunners of the Maronites, seeking to find a compromise between the contending parties, proposed a "monothelite," or "one will," position. By the thirteenth century the Maronites, who four centuries earlier had sought refuge in the mountains of Lebanon, had concluded an agreement with the Church of Rome, whereby the primacy of the Pope was acknowledged. Like the Eastern Orthodox patriarch in Antioch and the Greek Catholic and Syrian Catholic primates, the Maronite patriarch bears the title Patriarch of Antioch and All the East. The Maronites remain the largest of Lebanon's recognized Christian sects. Given the vacuum in political leadership, the Maronite patriarch Nasrallah Sfeir has in recent years become both the spiritual and political leader of his community.

The Latin Catholic patriarchate was first established in Jerusalem in 1099 and subsequently moved to Acre. Effectively terminated in the latter part of the thirteenth century, it was reestablished in Jerusalem in 1847. The Latin Catholics in the Middle East are, for the most part, expatriates from Europe and North America—with the important exceptions of those in Israel and the occupied territories and Jordan, where the approximately 50,000 Latin Catholics are predominantly Palestinian. The election of Michel Sabbah, a Palestinian from Nazareth, as Latin patriarch in 1987 represented the first such election of an indigenous Middle Easterner. Since his election Patriarch Sabbah played a prominent role in supporting the Palestinians' right to self-determination as well as the Israeli people's need for security, reflecting the pope's often-stated policies regarding the Israeli–Palestinian conflict. During the two Palestinian intifadas Sabbah issued statements that were thought to be controversial by other Christian groups and by the Israeli government.

Protestants

Protestants make up a tiny minority within the overall Christian minority in the Middle East. Their influence has been substantial, however, both in the fostering of the ecumenical movement in the region and in the areas of education (secondary schools, colleges, and seminaries), medicine, and publishing.

CHUBAK, SADEQ
[1916–1998]

Iranian novelist, short-story writer, playwright.

Sadeq Chubak was born in Bushehr, the son of a wealthy merchant. Chubak published his first collection of short stories, *Khaymah shab bazi* (The puppet show) in 1945. His novel *Tangsir* (A man from Tangestan) was first published in 1963 and translated into English as *One Man with His Gun* together with four short stories and a play in *Sadeq Chubak: An Anthology.* This novel was later turned into a popular movie by Amir Naderi in 1974. Chubak's other major novel, *Sang-e sabur,* was also translated into English, as *The Patient Stone.* One of the most prominent "Southern" writers, Chubak resided in California at the time of his death in 1998.

CHURCHILL WHITE PAPER (1922)

A 1922 British statement of policy regarding Palestine.

Drafted by the first high commissioner of Palestine, Sir Herbert Samuel, the white paper (also called the Churchill memorandum) was issued in the name of Colonial Secretary Winston Churchill in June 1922. A year earlier the Palestinians participated in political violence against the Jews, which a British commission found to have been caused by Arab hostility "connected with Jewish immigration and with their conception of Zionist policy." Samuel therefore urged Churchill to clarify to both communities the meaning of the Balfour Declaration of November 1917 and to reassure the Palestinians.

The Churchill statement reaffirmed British commitment to the Jewish national home. It declared that the Jews were in Palestine "as a right and not on sufferance" and defined the Jewish national home as "the further development of the existing Jewish community [Yishuv], with the assistance of Jews in other parts of the world, in order that it may become a centre in which the Jewish people as a whole may take, on grounds of religion and race *[sic],* an interest and a pride." In order to fulfill the Balfour policy, "it is necessary that the Jewish community in Palestine should be able to increase its numbers by immigration."

At the same time, the memorandum rejected Zionist statements "to the effect that the purpose in view is to create a wholly Jewish Palestine," which would become " 'as Jewish as England is English.' His Majesty's Government regard any such expectations as impracticable and have no such aim in view." It assured the indigenous Palestinians that the British never considered "the disappearance or the subordination of the Arabic [*sic*] population, language, or culture in Palestine" or even "the imposition of Jewish nationality upon the inhabitants of Palestine as a whole." In addition, the allowable number of Jewish immigrants would be limited to the "economic capacity of the country."

The Zionist leaders regarded the memorandum as a whittling down of the Balfour Declaration but acquiesced, partly because of a veiled threat from the British government and partly because, off the record, the Zionists knew that there was nothing in the paper to preclude a Jewish state. (Churchill himself testified to the Peel Commission in 1936 that no such prohibition had been intended in his 1922 memorandum.) The Palestinians rejected the paper because it reaffirmed the Balfour policy. They were convinced that continued Jewish immigration would lead to a Jewish majority that would eventually dominate or dispossess them. Both Zionist and Palestinian interpretations of the memorandum were largely valid: The British did pare down their support for the Zionist program, but the Balfour policy remained intact long enough to allow extensive Jewish immigration and the establishment of semiautonomous Jewish governmental and military institutions.

CHURCHILL, WILLIAM

[?–1864]

Newspaper publisher.

An Englishman affiliated with the Tory Party, William Churchill went to Constantinople (now Istanbul) in 1832, where he worked for the British embassy as a merchant and as a newspaper correspondent, particularly for the *Morning Herald.* In

1840, he founded the first private Turkish-language newspaper in the Ottoman Empire, *Ceride-i Havadis* (Journal of events). This broke the monopoly of the Ottoman state's official paper, *Takvim-i Vekayi,* published since 1831. Churchill's lively coverage of the Crimean War (1854–1856) attracted a new audience to newspaper reading. *Ceride-i Havadis* was published irregularly, roughly every one or two weeks, until 1860, when it began daily publication. The paper closed when Churchill died in 1864, although his son Alfred revived it for one year.

CHURCHILL, WINSTON S.

[1874–1965]

British statesman; prime minister, 1940–1945 and 1951–1955.

Winston S. Churchill's connections with the Middle East were based on two concepts—the national interest of Great Britain and what he called "the harmonious disposition of the world among its peoples." These concepts were not necessarily contradictory. Thus, in advocating British support for the establishment and maintenance of independent Arab states in Transjordan, Iraq, Saudi Arabia, and Syria after World War I and the breakup of the Ottoman Empire, his objective was to produce a satisfactory harmony of local Arab needs, in the hope of creating states that would be well-disposed toward Britain and its defense and petroleum needs.

As a young soldier serving in India at the turn of the twentieth century, Churchill had seen the importance of Egypt and the Suez Canal for the maintenance of Britain's sea link with India and Asia. He had participated in the reconquest of the Sudan, where he had been repelled by the cruel attitude of the British commander in chief toward wounded Sudanese soldiers, and he had expressed his disgust in a book published in 1900. While British control of Egypt was something he took for granted (although nationalist movements were already a problem for Britain), at the same time, he was insistent that the British connection should be beneficial for the well-being and advancement of the Egyptian people.

First Direct Interaction with the Middle East

At the time of the Young Turk revolution in 1909, Churchill not only supported the modernization efforts of the Young Turks for the Ottoman Empire, but met several of their leaders during a visit to Constantinople (now Istanbul) that same year and remained in contact with them. In August 1914 when World War I began, he appealed directly to the Turkish minister of war, Enver Paşa, to keep Turkey neutral and thereby preserve the integrity of the Ottoman Empire. Two months later, when Turkey committed itself to the Central Powers (against the Allies) and began the bombardment of Russia's Black Sea ports, it fell to Britain's First Lord of the Admiralty, Churchill, to direct naval operations against Turkey. These culminated in the attack on the Dardanelles (Turkish Straits), the failure of which led to Churchill's own temporary eclipse from politics.

In 1915, Churchill suggested that once the Ottoman Empire had been defeated, Palestine should be given in trust to Belgium, since Germany had violated Belgian neutrality and overrun most of the country. As compensation for this, Churchill wanted Belgium to be made the European overseer of the establishment of a Jewish national home.

Once the war ended in 1918, Churchill became secretary for war and air (1919–1921). In 1919, at a time when Britain herself had assumed the responsibility for Palestine, Churchill encouraged the Zionist leader Dr. Chaim Weizmann to consider the southern desert region of the Negev as an area of potential Jewish settlement (in 1949, David Ben-Gurion, Israel's first prime minister, was to urge this same policy on his fellow citizens). Churchill's own instinct was, at first, to keep Britain clear of all Palestine responsibilities and even to reject the League of Nations mandate for Palestine—on the grounds, he warned the cabinet in 1920, that "the Zionist movement will cause continued friction with the Arabs." Nor were his feelings entirely supportive of Zionism: Writing in a cabinet memorandum

British prime minister Winston Churchill joins his commander in chief of Middle East forces, General Sir Claude J(ohn) E(yre) Auchinleck, in Egypt, on 23 August 1942. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

in 1919 of those who stood to gain from the collapse of the Ottoman Empire, he declared: "Lastly there are the Jews, whom we are pledged to introduce into Palestine, and who take it for granted that the local population will be cleared out to suit their convenience."

Views on the Formation of a Jewish State

As colonial secretary in 1921 and 1922, it then fell to Churchill to fix the terms of the Palestine mandate. His attitude on Zionism had changed. In a public article in 1920, he stated: "If, as may well happen, there should be created in our own lifetime by the banks of the Jordan a Jewish State under the protection of the British Crown which might comprise three or four millions of Jews, an event will have occurred in the history of the world which would from every point of view be beneficial, and would be especially in harmony with the truest interests of the British Empire."

Having made the link of Jewish national aspirations and British interests, Churchill was also impressed by the ideological convictions of the Zionists and by their determination to create a flourishing world for themselves in a region that had been their home many centuries earlier. During a visit to Palestine in 1921, he was impressed by the Jews' success at cultivation and by the labor Zionist work ethic—the redemption of the land through toil. Henceforth, he encouraged the Jews to enter the region, stating in the terms of the mandate, as presented to the League of Nations in 1922, that the Jews were in Palestine "of right, and not on sufferance." He also gave the Zionists monopoly rights over the development of the hydroelectric power of the country.

During this same visit to Palestine, Churchill encouraged the development of a Jewish Agency for Palestine, through which the Jews would acquire virtual autonomy over health, education, and communal life, as well as participation in the political and diplomatic discussions concerning their future. At the same time, he urged the Palestinian Arabs to accept the fact of Jewish immigration and settlement and to recognize the economic benefits that the Jews would bring to the country.

When a Palestinian Arab delegation asked Churchill to suspend all future Jewish immigration, he replied (on 28 March 1921): "It is manifestly right that the Jews, who are scattered all over the world, should have a national centre and a National Home where some of them may be reunited. And where else could that be but in this land of Palestine, with which for more than 3,000 years they have been intimately and profoundly associated? We think it will be good for the world, good for the Jews and good for the British Empire. But we also think it will be good for the Arabs who dwell in Palestine, and we intend that it shall be good for them, and that they shall not be sufferers or supplanted in the country in which they dwell or denied their share in all that makes for its progress and prosperity."

At the Cairo Conference in 1921, Churchill agreed to the establishment of Arab self-government in Iraq and Transjordan and to the exclusion of Jewish settlement in Transjordan (now Jordan). He also argued in favor of a national home for Kurds in northern Iraq but was overruled by his officials.

During the 1930s, Churchill resented the pressure of the Arab states of the Middle East to curtail Jewish immigration into Palestine. He was an opponent of the white papers on Palestine (1939), by which the British government gave the Palestinian Arabs an effective veto over any eventual Jewish majority in Palestine. He also opposed the restrictions on Jewish land purchase in Palestine. These restrictions were introduced in 1940, shortly after Churchill had reentered the government as first lord of the admiralty, and as such he opposed the use of Royal Navy warships to intercept illegal Jewish immigrant ships heading for Palestine. As prime minister in 1940, he rejected Arab calls for the deportation of illegal Jewish immigrants.

During World War II, while he was prime minister (1940–1945), Churchill had to take steps to defend the Middle East from German encroachment. Although in 1942 he failed to persuade Turkey to enter the war on the side of the Allies, he did encourage Turkish neutrality. He also secured the basing of British military experts on Turkish soil, to immobilize oil pipelines and facilities crossing Turkey from Iraq, should German troops try to cross Asia Minor in any attack through Palestine to the Suez Canal. During the war, the pro-German revolt of Rashid Ali in Iraq was thwarted and the pro-German Vichy French government in Syria was ended by British initiatives. Throughout 1940, 1941, and the first half of 1942, Egypt and the Suez Canal were defended by Allied troops against continuous Italian and German military threats. Later in the war, Palestinian Jews were encouraged to volunteer not only for British military tasks, but for clandestine parachute missions behind German lines in Europe.

As wartime prime minister, Churchill watched sympathetically over Zionist aspirations. In 1942, he warned a personal friend "against drifting into the usual anti-Zionist and antisemitic channel which it is customary for British officers to follow." A year later, he told his cabinet that he would not accept any partition plan for Palestine between Jews and Arabs "which the Jews do not accept." Even the murder of his close friend Lord Moyne by Jewish terrorists did not deflect Churchill from his belief that a Jewish state should emerge after World War II, and he called upon the Jewish Agency for Palestine to take action against the terrorist minority in their midst.

In 1945, during a meeting in Egypt, Churchill tried to persuade King Ibn Saʿud of Saudi Arabia to become the leader of a Middle East federation of independent states, in which a Jewish state would form an integral part. Only Churchill's defeat in the general election five months later prevented him from setting up a Middle East peace conference and presiding over it, with a view to establishing such a federation. In 1946, as leader of the opposition, he told the House of Commons, after a Jewish-extremist bomb in Jerusalem had killed ninety people, including many Jews, at the King David Hotel: "Had I the opportunity of guiding the course of events after the war was won a year ago, I should have faithfully pursued the Zionist cause, and I have not abandoned it today, although this is not a very popular moment to espouse it." In 1948, Churchill pressed the Labour government to recognize the State of Israel. As prime minister for the second time, from 1951 to 1955, he argued in favor of allowing merchant ships bound for Israeli ports to be allowed to use the Suez Canal—which had been taken from British control by Egypt's military in 1952 during the revolt that ended in Farouk's abdication and the establishment of the republic.

Churchill's sympathies for Zionism were public and pronounced, alienating many Arabs. Yet he was not without understanding of Arab aspirations and of the vast potential of the Middle East. "The wonderful exertions which Israel is making in these times of difficulty are cheering for an old Zionist like me," he wrote to Weizmann, the first president of the State of Israel, in 1951, and he added: "I trust you may work with Jordan and the rest of the Moslem world. With true comradeship there will be enough for all."

CILICIA

Valley in southern Turkey situated between the Taurus Mountains and the Mediterranean Sea, bordering Syria.

Cilicia is an important agricultural region. Adana is its largest city, and Alexandretta and Mersin are its major ports. In the late nineteenth century, Cilicia's growing cotton industry attracted large numbers of Muslim refugees from the Balkans and Russia. Cilicia's centuries-old Armenian population, descended from the eleventh century Kingdom of Little Armenia in Cilicia, was largely exiled or killed in the revolts and wars of the early twentieth century. The French occupied Cilicia from 1918 to 1921, when it was incorporated by the Franklin–Bouillon Agreement into the Turkish Republic.

See also Adana; Alexandretta.

ÇILLER, TANSU

[1944–]

Turkey's first female prime minister, 1993–1996.

Tansu Çiller was born in Istanbul. After getting her B.A. in economics from Boğaziçi (Bosporus) University in 1967, she went to the United States for graduate studies. She received her M.A. from the University of New Hampshire and her Ph.D. from the University of Connecticut. Having taught for a year at Franklin and Marshall College, she returned to work at Boğaziçi University. During her academic career, she also worked as a consultant to the Istanbul Chamber of Commerce, the Istanbul Chamber of Industry, and the Turkish Industry and Business Association.

Çiller became an economic adviser to Süleyman Demirel before joining his True Path Party (DYP). In 1991, she was elected vice president of the DYP and served as minister of economy in the coalition between the DYP and the Social Democratic Populist Party. When Demirel was elected Turkey's ninth president in 1993, Çiller became the chairperson of the party. Having opted to continue the DYP-SHP coalition, she announced her government's program, which focused on fighting the Kurdistan Workers Party (PKK), combating inflation and unemployment, and promoting democracy and human rights. It was with this program that she came to be known as Turkey's "iron lady."

After the 1995 elections, Çiller stepped down from the government and formed a coalition with Mesut Yilmaz's Motherland (Anavatan) Party. In 1996, however, the cabinet resigned due to insurmountable disagreements between the two leaders, and Çiller formed another coalition with Necmeddin Erbakan's pro-Islamist Refah Partisi (Welfare Party). She served as minister of foreign affairs in the new government until the military forced Erbakan to resign in 1997. Çiller continued her political career as the minority leader of the parliamentary opposition. After the DYP's electoral defeat in 2002, she resigned as chairperson and withdrew from active politics.

Çiller became a significant role model for many Turkish women, but her political failures and the scandals about her family's finances contributed to a widespread mistrust about female politicians as well. In July of 2003, there was a pending parliamentary investigation proposal about her misdeeds during the prime ministry.

CIRCASSIANS

A term that includes several groups linked by language and culture.

Circassian refers to indigenous peoples of the northwestern Caucasus who are found today as minority communities in Turkey, Syria, Jordan, Israel, and Egypt. The term encompasses several groups linked by language and culture who refer to themselves in their own languages by different ethnonyms; primary among them are the Adyge, Abaza, and Ubykh. The terms *Circassian* (English), *Çerkes* (Turkish), *Cherkess* (Russian), and *Sharkass* (Arabic) are used by outsiders loosely to include various north Caucasian peoples. In addition to the Russian Federation and the Middle Eastern countries mentioned above, migrations since the 1960s have led to a Circassian presence in Western Europe and the United States. One can thus speak of a widely dispersed Circassian diaspora that is linked through kinship, intermarriage, transnational social and political organizations, and cultural flows.

Russian and Ottoman Empires

The territories in which the Circassians lived were zones of contention between the Russian and Ottoman empires. After the Russian Empire consolidated its control over the region during the 1850s, Circassians and many other north Caucasian peoples began to migrate into the Ottoman Empire, and a mass migration ensued in 1864. At first they were settled by imperial agencies in the Balkans, although later most were settled in Anatolia and the Syrian Province.

Although this migration led to the current configuration of the Circassian population in the Middle East, there is a long history of linkages across the Black Sea and the Transcaucasus. A slave trade in men, women, and children was an important part of this and Circassians, like many others, fed imperial appetites for warriors, administrators, concubines, and servants. The presence of Circassians in Eygpt as well as some of the major cities of the former Ottoman empire is the complex result of this long history. Thus in Egypt, the Circassian presence goes back to the Circassian Mamluk dynasties of the thirteenth through sixteenth centuries, and Circassian identity persisted after the overthrow of the Mamluks and was augmented in the Ottoman period by a continuing inflow of administrators and slaves of Circassian origin.

In contrast, the mass migration during the second half of the nineteenth century led to the formation of farming communities in areas of Anatolia and along what is commonly referred to in the literature on pastoralism as the interface of the "desert and the sown" in the Syrian province. The new Circassian communities often came into conflict with indigenous inhabitants over resources, water, and government services but eventually arrived at various accommodations, as evidenced by intermarriage and mixed settlement.

The Circassian migration also led to a peak in the Circassian female (and to some extent, child) slave trade. Under pressure from the British Empire, black slavery via North Africa had ceased and the Balkans were no longer under Ottoman control, leaving the Caucasus as the main source of slaves for the Ottoman state. This trade was not without its contradictions and contestations, with the state attempting to close slave markets and limit or even sometimes forbid the slave trade while still maintaining the imperial privilege of purchasing women for the harem. Circassian slave and harem women became an integral part of Orientalist literature and arts.

Circassian Communities as Minorities

The breakup of the Ottoman Empire in the early twentieth century meant that the various Circassian communities became minorities within new nation states rather than part of a multiethnic empire. Colonial powers in Syria, Jordan, and Palestine had varying policies towards Circassians and other ethnic groups. Cultural, social, and political organization and patterns thus differ across countries, types of settlement, class, and other factors. However, Circassian identity does persist across time and space. The Circassian language, which is indigenous to the northwest Caucasus and unrelated to Semitic, Turkic, or Indo-European, continues to be spoken across these communities. In addition, Circassians speak the languages of the countries where they live and participate fully in economic, social, and political life. In none of the Middle Eastern countries are the Circassians legally designated as a minority, although some forms of recognition may exist. For

example, in the Jordanian parliament a certain number of seats are designated for Circassian as well as for Chechen representatives (the Chechens are also a Caucasian group with a history and presence in Jordan similar to that of the Circassians).

No accurate count exists of the Circassians in the Middle East, as the censuses do not differentiate by ethnicity. Turkey has the largest Circassians' presence—well over 1 million, spread over rural and urban settlements all across the country. The wide variety of lifestyles and life conditions make it difficult to generalize, but Circassians in Turkey have been active in organizational and associational life and have been affected by the legal and political measures to limit ethnic self-expression that stem from the conflict between the state and the Kurdish population.

Syria is the next in terms of numbers, with possibly as many as 100,000. Although pan-Arab ideology is the basis of the Syrian state, Circassians have not suffered from assimilationist policies. However, almost half the Circassian settlements in Syria were originally in the Golan Heights around the city of al-Qunaytra, which was destroyed and captured by the Israelis during the Arab–Israel War of 1973. Almost all the Circassians of this region moved to Damascus and a good percentage then migrated to the United States, forming the core of a community in New Jersey.

In Jordan, the community of around 35,000 was historically influential in government, military, and the security apparatus, and was well represented in the cabinet and parliament. The community grew wealthy with the choice of Amman as the capital during the 1920s, since they were settled mainly in Amman and neighboring villages. Several ethnic associations and clubs, some established as early as the 1930s, form a focus of community activities and there is also a school (kindergarten through twelfth grade) that teaches Circassian language and history in addition to the regular government curriculum.

In Israel, there are two Circassian villages in the Galilee, Kufr Kama and Rihaniyya, with a population of around 3,400. Like the Druze, they serve in the Israeli military and are somewhat privileged over the Arab population. Circassian is taught in schools and folklore groups exist. Until the 1990s and the Oslo Accords, there was little interaction between the Circassians in Israel and those in Arab countries, but it is now increasing.

The most definitive recent change in terms of identity and self-perception has come about with the collapse of the Soviet Union. This has enabled Circassians to travel to their homeland for the first time in 150 years and has led many to question their history and identity. Some have chosen to settle in the Russian Federation and others have reaffirmed their ties to their Middle Eastern settlements and citizenship. For all, it has led to the formation of diasporic cultural, social, and economic networks, which may play transformative roles in the future.

CIRCUMCISION

For males, circumcision involves removal of the foreskin of the penis. For females, it is the excision of all or part of the external genitalia, and is commonly referred to as clitoridectomy or female genital mutilation.

When done as part of tradition, male circumcision often signifies a rite of passage—admission into

group membership, or the achievement of a particular status. Jewish boys are circumcised on their eighth day of life (unless the procedure will complicate their health) in accordance with the biblical commandment symbolizing the covenant *(brit)* with God. The ritual, called *brit milah* in Hebrew, is also required of male proselytes. Male proselytes who were previously circumcised are required to have a drop of blood, called *tipat dam* in Hebrew, removed from the penis. Both rituals are to be performed by a *mohel,* a Jewish person trained in the ritual. Male circumcision is also widely prevalent in Muslim society. Deviation from this practice in both societies is related to an attenuated degree of observance of religious observance in general.

The practice of circumcising females may be attributable to an attempt to depress sexual desire and preserve the virginity of young girls, but the original motivation is unclear. (Major religions neither support the practice nor refer to it explicitly.) Female circumcision is often performed between five and twelve years of age, or after childbirth. It is widely criticized for medical and sexual reasons, and because of the pain, disfigurement, and mental anguish it may cause. The World Medical Association condemned the act in 1993, calling it "female genital mutilation." The practice is more widespread in African countries than it is in Western countries, despite criticism by African leaders.

Male circumcision has its medical proponents. About 60 percent of U.S. male infants undergo circumcision, but the practice is being increasingly challenged. Medical associations now render a more cautious appraisal of the medical benefits of male circumcision, and raise new questions about possible physiological, sexual, and psychological consequences.

EPHRAIM TABORY

CIVIL CODE OF 1926

Civil laws of the Republic of Turkey, a secular body of laws that covers all citizens—Muslims and non-Muslims.

Turkey's civil law was enacted in 1926; unlike the gradual evolution of European civil codes, the transition from the Ottoman Empire to the Republic of Turkey brought a new code that has undergone relatively few changes.

Prior to the foundation of the Turkish republic, from 1869 to 1926, Ottoman legislators promulgated private (civil) law—rules derived from the *shariʿa* (Islamic law), comprising 1,851 articles and called *Mecelle-i Ahkam-i Adliye* (Compilation of legal rules). It had no laws concerning family and inheritance matters. Near the end of World War I, in 1917, a decree on family law, *Hukuku Aile Kararnamesi,* was promulgated by the sultan. In 1919, the pressure of organized religious forces abrogated this decree.

The Ottomans had been allied with the losing Central Powers in World War I. With the dissolution of the Ottoman Empire, the founders of the Turkish republic committed themselves to Western institutions; and they decided to undertake, in the shortest possible time, radical changes in Turkey's legal system. For Mustafa Kemal (Atatürk) and his colleagues, the major tools of social change were education and legal reform. An additional factor forced them to act swiftly: According to the peace of Lausanne (of 24 July 1923), the Kemalist government was pledged to adopt—under the supervision of the League of Nations—a legal statute protecting their non-Muslim minorities. Turkey obliged by introducing a general code and juridical system that would be acceptable to all citizens—Muslim and non-Muslim. The secularization of the legal system became one of Mustafa Kemal's major goals.

Kemalism used a number of Swiss and other European codes with relatively few amendments as models. In 1926, the Kemalists produced the new civil code, the code of obligation, and the trade

code; in 1927, the code of civil procedure; in 1929, the sea trade code. With these steps they realized very quickly two of Mustafa Kemal's goals while depriving the conservative Islamic clergy and others of time to organize resistance: (1) the domestic scene was free of all remnants of the Ottoman-Islamic legal system, and (2) their international relations had been freed from the obligations of the treaty of Lausanne.

The Swiss civil code was used as a model because it is based on twenty-five-year community studies of existing norms and mores in Swiss cantons where French, German, Italian, and Romansh were spoken. The Swiss code seemed best to accommodate the needs of a country with diverse cultural and linguistic groups. Turkey's Minister of Justice Mahmut Esat Bozkurt had studied law in Switzerland, and Swiss law professor G. Sausser-Hall was engaged to act as legal counsel to the government of Turkey. On 17 February 1926 the modified version was adopted in a single session of the Turkish Grand National Assembly; it entered into force on 4 October 1926. Some attempts to modify the code began in 1951—concerning human rights, family law, adoption, and divorce. Although the acceptance of the code has not been universal, and Islamic law is used in some remote rural regions, the civil code has served Turkey well.

CIVIL SERVICE SCHOOL (OTTOMAN)

Established to train civil servants to administer the Ottoman state of the mid-nineteenth century.

Established on 12 February 1859, the Civil Service School (Turkish, Mektebi-i Mülkiye) of the Ottoman Empire trained administrators in accordance with the new Tanzimat reforms. (The term *mülkiye* refers to the civilian—the nonmilitary and nonreligious—branches of government.)

The school offered courses in humanities, social sciences, and foreign languages, as well as special courses on public administration. In 1877, the curriculum was expanded and modernized. The first graduating class had 33 members; by 1885, there were 393. Graduates often filled the provincial posts of *qaʾimmaqam* (district governor). In 1935, the name was changed to School of Political Science; as the Faculty of Political Science, it is now located in Turkey's capital, Ankara.

DAVID WALDNER

CLARK–DARLAN AGREEMENT (1942)

Armistice agreement ending Vichy French resistance to Allied invasion of French North Africa.

During World War II, after the Allies invaded North Africa in November 1942, the Vichy French commander in chief, Admiral Jean François Darlan, signed this agreement on 22 November with General Mark Clark of the United States in Algiers, capital of Algeria, then under French control. Darlan ordered an end to French resistance, was made high commissioner of French North Africa, and severed ties with Vichy France. Because of Darlan's reputation as a Fascist, the deal aroused intense criticism.

ZACHARY KARABELL

CLAYTON, GILBERT

[1875–1929]

British officer and administrator in Egypt, Palestine, and Iraq.

After serving under Lord Kitchener in the Sudan, Gilbert Clayton received a commission in the Royal Artillery (1895); he was subsequently private secretary (1908–1913) to Sir Francis Reginald Wingate, commander of Egypt's army and governor-general of the Sudan. He was the Sudan agent in Cairo and director of intelligence of Egypt's army from 1913 to October 1914, when he was promoted to head of all intelligence services in Egypt, a post in which he remained until 1917. Clayton rose to the rank of brigadier general in the General Staff, Hijaz Operations, in 1916, and became chief political officer to General Edmund Allenby of the Egyptian Expeditionary Force in 1917. He was adviser to the Ministry of the Interior in Egypt (1919–1922), replaced Wyndham Deedes as chief secretary in Palestine (April 1923–1925), and was high commissioner and commander in chief in Iraq (1929).

In September 1914, Clayton wrote a secret memorandum to Lord Kitchener suggesting that Arabs could be of service to Britain during World War I and that an Arab leader friendly to Britain should be made caliph in place of the Ottoman sultan. This sparked the Abdullah–Storrs correspondence, which led to the Husayn–McMahon correspondence. Clayton and his fellow officers convinced Sir Mark Sykes that the Arabs in the Ottoman Empire might split from the Turks and join the Allies.

Clayton, who had reservations about the Balfour Declaration, supported Zionism within a limited definition whereby the Yishuv would serve merely as a cultural center for Jews in a multinational Palestine under Britain's administration. He argued against giving Syria to France under the Sykes–Picot Agreement and wanted Britain to take control of both Syria and Palestine. Although he believed Britain ought to continue to govern the Arabs, he attempted to reconcile Britain's interests and Arab nationalist aspirations while chief secretary in Palestine. He allowed his political secretary, Ernest T. Richmond, to expand the authority of the Supreme Muslim Council and increased Palestinian Arab appointments to government positions. Clayton helped negotiate the borders between Transjordan, Najd, and Iraq in the Hadda Agreement, signed in November 1925.

JENAB TUTUNJI

CLEMENCEAU, GEORGES
[1841–1929]

French socialist journalist and statesman; French premier, 1906–1909 and 1917–1920.

In foreign policy, Georges Clemenceau pressed for military preparedness against German expansionism through closer strategic alliance with Great Britain and the expansion of military conscription among France's colonial populations. This brought Clemenceau into contact with the leaders of the Young Algeria movement: gallicized Muslims who were formed in the colonial educational system but found limited opportunities in the local administration or economy. Their proposals for military service in exchange for full civil rights found favor with Clemenceau and other liberal policymakers, especially after the armistice, when he led the effort to compensate Algerians for their payment of the "blood tax." The resulting Jonnart Law of 1919 was nevertheless greatly diluted by settler *(colon)* opposition to colonial reforms, and its failure to satisfy native demands may be considered a defining moment in the development of Algerian nationalism. Clemenceau headed the French delegation at the Paris Peace Conference, where he united with British prime minister Lloyd George to undermine the initiatives of U.S. president Woodrow Wilson and to realize the territorial provisions of the Sykes–Picot Agreement that pertained to the Arab provinces of the former Ottoman Empire. After his electoral defeat in 1920 Clemenceau retired from public life and devoted his remaining days to writing his memoirs.

ZACHARY KARABELL
UPDATED BY O. W. ABI-MERSHED

CLIMATE

Middle Eastern climatic conditions vary greatly, depending on the season and the geography.

The Middle East and North Africa are perceived as both homogeneous and intensely arid, but the region is best characterized by its climatic variation. Although the hot arid, or desert, climate predominates in the region, the well-watered highlands of Turkey and the mountains of Iran and Ethiopia are important as sources of the region's major rivers. Climatic variation finds further expression in the temperature regimes of the northern and southern parts of the area. Average July maxima for inland locations near 30° north latitude are as high as 108°F (42°C), while summer maximum temperatures in northern locations such as Ankara, Turkey, do not exceed 86°F (30°C). Black Sea coastal stations' (e.g., Trabzon, Turkey) average summer maxima may be as low as 79°F (26°C). January average minimum temperatures fall to 50°F (10°C) in Aswan, but reach 10°F (−12.5°C) in Erzurum on the Anatolian plateau.

North African Taghit Oasis sand dunes, located in the Sahara Desert—Grand Erg Occidental, Algeria. © JOSE FUSTE RAGA/CORBIS. REPRODUCED BY PERMISSION.

Desert conditions are primarily the result of the subtropical zone of high pressure that coincides with 30° north latitude. In this area, cold, subsiding air warms as it approaches the earth, thus increasing its ability to hold moisture. This results in extreme evaporation from all surfaces, and under such conditions, very little rain falls. During the summer solstice, the sun is directly overhead at 23° 30′ at north latitude (e.g., at Aswan, Egypt). Annual periods of high sun in combination with clear skies through much of the year allow intense solar radiation with subsequent extreme evapotranspiration demands.

Evapotranspiration refers to the water needed by vegetation to withstand the energy of incoming solar radiation. This is accomplished through the mechanism of heat transfer by means of evaporation from inert surfaces and transpiration from stomata (pores) on leaf surfaces. Total demands made upon an individual plant are termed potential evapotranspiration (PE). Actual evapotranspiration (AE) is the amount of water actually available and used by the plant and reflects climatic conditions rather than optimal plant requirements. The difference between PE and AE defines the degree of aridity or drought and also the amount of irrigation water that would have to be applied for such vegetation to survive.

In the deserts of North Africa and Southwest Africa, total annual precipitation is between 2 inches (50 mm) and 14 inches (350 mm). The area from Aden to Baghdad receives from less than 2 inches (50 mm) annually to about 6 inches (150 mm). More than 39 inches (1 m) of water would be required in those places to sustain rain-fed agriculture. Under such conditions, sparse natural vegetation allows animals some seasonal grazing at best. Hyperarid areas, which seldom if ever receive rain,

have no vegetation at all. Rainfall variability within the area of desert climate exceeds 40 percent, reducing to 20 percent on the moist margins of the semiarid zone, which forms a transition between the true desert to the south and the more humid areas farther north.

Precipitation on the semiarid margins of Middle Eastern deserts ranges from 14 inches (350 mm) to 30 inches (750 mm) annually. Dry farming of grains employing alternate years of fallow can be carried out with 16 inches (400 mm) or more of rain. It should be remembered that, while rainfall variability is greatest in the desert, this also means that aridity there has high predictability. Thus, the semiarid transition between regions of predictable aridity and predictable rainfall is one where rainfed agriculture is possible but has a high chance of failure. This is biblical country—years of plenty followed by years of famine—and one to which pastoral nomadism was a practical adaptation.

The Black Sea coast of Turkey receives from 78 inches (2,000 mm) to 101 inches (2,600 mm) per year, although the transition from the windward, watered side of the Pontic range to the leeward, dry side can be very abrupt due to the topography. The Mediterranean climate, which is limited to a narrow coastal strip reaching from Gaza to Istanbul and from Tunis in the west to the Atlantic, is marked by mild winters with ample rain and long, hot summers when Sahara-like conditions prevail.

Precipitation results from three different processes. Orographic precipitation occurs on the Pontic and Taurus mountains of Turkey; the Elburz and Zagros mountains of Iran; the peaks of Lebanon and the hills of Israel, the West Bank, and Jordan; the highlands of Ethiopia; and the Atlas and Anti-Atlas mountains of northwest Africa. Such precipitation occurs as warm, moisture-bearing winds are forced to higher elevations over the mountains. When the air cools, it loses its ability to hold moisture, and rain or snow falls on the windward sides of those ranges.

The Anatolian plateau and the steppes of northern Syria experience small quantities of rain in the form of convectional summer showers from thunderstorms. Equatorial convectional rains provide the waters of the White Nile.

Overhead view of *feluccas* (sailboats) navigating near the Nile Delta's Elephantine Island and Aswan, Egypt. © JONATHAN BLAIR/CORBIS. REPRODUCED BY PERMISSION.

A third cause of precipitation, particularly in the wintertime, is the passage of frontal systems from west to east across the region bringing alternating high and low pressure cells with associated cold, clear, or moist warm air masses. Frontal systems are propelled eastward by the subtropical jet stream, the position of which varies latitudinally by as much as 15° from a winter position in the north to its summer position in the south. Summer months find the path of the jet stream located from central Turkey northeastward to central Asia. Six months later the jet stream is at its maximum along a path traced across the Gulf of Suez to the head of the Gulf of Aqaba and beyond. This shift accounts for the changes in temperature and precipitation noted above.

Surface winds in the Middle East have distinctive qualities and have received local names famous throughout the region. The cold northern wind blowing from the Anatolian plateau to the southern Turkish shore in the winter is the *Poyraz* (derived from the Greek: *bora,* i.e., north); the warm onshore wind in the same location is known as the *meltem.* Searing desert winds are infamous: The Egyptian *khamsin,* which blows in from the desert, is matched by the *ghibli* in Libya and the *simoon* in Iran.

JOHN F. KOLARS

CLINTON, WILLIAM JEFFERSON

[1946–]

U.S. president (1993–2001); closely involved in the Israeli–Palestinian peace process.

Bill Clinton received a B.A. from Georgetown University and a law degree from Yale University. Although he assumed the presidency of the United States in 1993 without a significant foreign policy background, Clinton almost immediately found himself thrust into Middle Eastern and South Asian issues. Attacks by Islamic militants against the World Trade Center in New York in 1993, and later against U.S. embassies in Africa in 1998, prompted Clinton to order bombing attacks against targets in Sudan and Afghanistan to disrupt the activities of Osama bin Ladin and his al-Qaʿida network. Clinton also focused considerable attention on Iraqi refusal to cooperate with United Nations (UN) weapons inspections and ordered that country bombed on several occasions.

Yet it was the Arab–Israeli peace process to which he devoted more personal attention and prestige than any other U.S. president. Clinton's administration was taken by surprise by the revelations in August 1993 that Israel and the Palestine Liberation Organization (PLO) had agreed to a framework on peace through secret talks in Norway. Although the United States had not been involved in the talks, the subsequent Oslo Accord was signed by Israel and the PLO in Washington on the White House lawn. Clinton signed the accord as well, as a witness. When PLO chairman Yasir Arafat then reached out his hand to a hesitant Israeli prime minister Yitzhak Rabin, Clinton, known for his people skills, nudged the two men together for a handshake—the first public greeting ever between such high-level Israeli and Palestinian leaders. Given the long-standing U.S. refusal to deal with the PLO publicly, Clinton became the first sitting president ever to meet Arafat and to allow him to enter the country since he delivered a speech at the UN in 1974. In 1994, Clinton played host to Rabin and Jordan's King Hussein, who agreed to the second-ever peace treaty between Israel and an Arab state. Clinton later traveled to the Jordanian-Israeli border in October 1994 to witness the signing ceremony. In general, however, his administration allowed the various parties to the Arab–Israeli conflict to continue the pace of talks and negotiations themselves, removing the U.S. to a role of "honest broker."

Clinton's desire to keep the Israeli–Palestinian peace process alive was severely tried by the resumption of violence and the mutual recriminations between the two sides under Rabin's successor, Benjamin Netanyahu. In October 1998, Clinton invited Netanyahu and Arafat to Wye River, Maryland, where he persuaded them to negotiate a further set of Israeli redeployments from the West Bank. Two months later, he became the first U.S. president to visit the Palestinian Authority, addressing the Palestine National Council meeting in Gaza. In October 2000, Clinton traveled to Egypt for the Sharm al-Shaykh summit. His most significant effort to conclude a final Israeli–Palestinian peace treaty occurred in July 2001, when he hosted lengthy talks between Arafat and Israeli prime minister Ehud Barak at his presidential retreat at Camp David, Maryland. The talks ultimately failed and Clinton left the presidency having failed to see either a final peace settlement between Israel and the PLO or a resolution of the weapons inspections issue in Iraq.

MICHAEL R. FISCHBACH

CLOT, ANTOINE BARTHÉLÉMY

[?–1860]

French doctor who started first medical school in Egypt in 1827.

Known as Clot Bey, Dr. Antoine Barthélémy Clot was one of a group of European experts recruited by Muhammad Ali Pasha, viceroy of Egypt, to introduce European technology into Egypt. Clot Bey established the first medical school in Egypt in 1827, as well as Qasr al-Ayni hospital. The aim of the school was to train doctors and medical aides for the Egyptian army. Abbas I, who ruled from 1848 to 1854, dismissed Clot Bey along with most of Muhammad Ali's European advisers. Clot Bey returned to Egypt in 1856 and retired in 1857.

CLOTHING

Overview of traditional and modern clothes in the Middle East.

Most contemporary Muslim societies reflect both old and the new realities. Resurgence of religion and nationalist attitudes of the postcolonial (twentieth-century) era are reflected in the modes of clothing. The traditional modes remain strongly defended and sometimes enforced by the governments of some Islamic nations. The great shift in political, social, and religious participation of women in many Muslim nations has affected clothing styles as well. In the twentieth century, there were two opposing models for Muslim women: the Westernized

A Bedouin man in Petra, Jordan, combines some modern clothing with traditional headgear. Headscarves and other coverings are among the most important items of clothing for men, and their size, colors, patterns, and other attributes can signify social or religious status, age, and tribal affiliation, among other things. © LINDSAY HEBBERD/CORBIS. lifestyle prominent among minor upperclass and elites, and the more restrictive, traditional "Islamic" way of life for the majority of women. A third, alternative lifestyle that has attracted a large number of Muslim women is both Islamic and modern, the result of more education and an understanding of the difference between the patriarchal interpretation of Islam and the text of the Qurʾan by the religious *ulama.*

Historical Background

Very little has been written regarding the dress of Arabs in classical historical literature. In terms of the Near Eastern people, more visual evidence survived

Israeli boys wearing decorated skullcaps called kippah, or yarmulke, study in a yeshiva, or Jewish day school, in the Galilee. The styles sometimes indicate political or religious affiliation. © Annie Griffiths Belt/Corbis. Reproduced by permission.

in forms of stone carvings. The earliest evidence of Arab clothing from the first and second millennia B.C.E. shows that scant clothing was worn with a variety of headdresses. Men and women wore almost identical clothing in the early Islamic era of the seventh century and the time of *jahiliyya* (pre-Islamic era), as is still the case today among non-urban inhabitants of the Middle Eastern regions.

Arab material culture was influenced by contact with other great empires. Arab Muslim rulers influenced the clothing styles of the countries they ruled, while the fashion styles of the countries ruled influenced the rulers. Many customs regarding clothes have roots in ancient Near Eastern (Iranian plateau, Iraq) superstition found also in the Talmud, and still are practiced as they were during the *jahiliyya.* From the time of the Prophet (seventh century forward), early Islamic clothes fashions were an extension of the preceding period, with some modifications for new Islamic moral codes after the prophet Muhammad. The clothes of the villagers and bedouins of the Middle East are simpler, more functional, and more suitable to the climate and geography of the regions than those of urban dwellers, who are far more conscious of conservative modes of behavior.

In the urban Middle Eastern regions, Western styles of dress for the most part have replaced traditional clothing. Westernization of the Middle Eastern clothes styles is in itself unique and innovative at times and, importantly, accepted by the indigenous population. Traditional items of clothing mix with Western styles. For example, it is common to see Arab men of the Gulf region wearing the traditional long, ankle-length *jillaba,* or *dishdasha, kaffiya,* and *agal* along with a Western-style man's suit jacket and dress shoes.

Headgear

Among the most important items of clothing for men is the headgear, and the most common form of head dress for men is the *imama,* or turban. Historically, turbans were used for purposes other than merely covering the head—for example, for hiding objects, tying down a person, or using as a prayer rug. Turbans were wrapped in a variety of styles, as well. It was customary to leave a corner of the *imama* free to serve as a veil to protect the wearer against heat, dust, and the evil eye, and to conceal the wearer's identity. The locus of a man's honor and reputation was his head; therefore, to cover the head was proper and dignified and to leave it uncovered was considered shameful. In the book *Palestinian Costumes* Shelagh Weir notes: "Men swore oaths on their turbans, and the removal of a man's turban in anger was a slur and provocation and could necessitate material compensation."

The turban has long been worn by both Muslims and non-Muslims. The English word *turban* derives from the Persian *dulband* via the Turkish *turban* or *tulbent.* In Persian, the most common word for turban is *amama,* from the Arabic form of the word *imama.* Other less commonly known Persian terms for *imama* are *mandil* and *dastar-e-sar.*

The *imama* is usually wrapped around a small cap, which is placed at the crown of the head. This small cap is called *aragh chin* (Persian sweat collector), *tubior araqiyya* in Arabic. The early turban did not have the symbolic significance that it gained later, when it became associated with Islam and came to be referred to as "the badge of Islam" *(sima al-Islam),* "divider between unbelievers and believers" *(hadiza bayn al-kufr wa al-iman),* and "crowns of the Arabs" *(tidjan al-arab).*

According to an old Arab tradition, removal of a man's *imama* signified losing his manhood and abandoning his morals. Exceptions to this rule included removing the turban for prayer, to show before God, and for punishment, to show the public that the punished man is not respected. There are contradictory *hadiths* (Islamic traditions) regarding wearing or not wearing *imama.* In early Islamic times, the turban was forbidden to a person in a state of *ihram* (during the *Hajj* rituals).Turbans had to be removed before entering Mecca as a sign of humility and respect before God. The prophet Muhammad's turban was named *al-sihab,* "the cloud," and the prophet Muhammad was known as *sahib al-imama,* meaning "Master of the state turban," which is significant in terms of religious and community leadership. Numerous terms found in Arabic literature refer to different manners of wearing the turban: *al-saʿb, al-masaba, al-mikbar, al-mashwad,* and *al-khamar.*

In some Middle Eastern cultures, turbans were associated with sexual and social maturity. For example, in Palestinian culture, different types of headgear marked stages of maturity, and usually young boys were not allowed to wear a turban. The turban remained important even after the death of its wearer, and a traditional Muslim stone grave may have a mark with a turban. Non-Muslims who were ruled by Muslim Arab rulers were required to follow certain sumptuary laws regarding their garments. Among such obligations were the caliphs' orders to wear "the interchange," which referred to headgear, outerwear, shoes, and belts that would differentiate believers from nonbelievers in public. Non-Muslims were required to use special marks on their turbans to segregate them visually from Muslims.

In addition to marked turbans, the size and color of the turban was a badge of identification for certain classes and ages of people. The color associations have changed over time and place with various Muslim Arab rulers. For example, black turbans were associated with officials during the Abbasid period (ca. 750–950), and red was a sign of high rank. The Safavid court of Iran during the sixteenth and seventeenth centuries adopted a particular form of turban that contained a tall, red stick at its center. This red stick became a religious and political divider between the official Shiʿite court of

Iran and its rival, the Ottoman Turks. Safavid soldiers wearing red-stick turbans were known as *qizel baş* ("red heads"), by the Turks. Religious and learned scholars wore smoothly wrapped flat, white turbans. Yellow was reserved for Jews, blue for Christians. Apparently, at various times the colors red and purple were also reserved mostly for Jews and Christians.

Men in the prime of life wore turbans in bright, warm colors; men of fifty exchanged their colored turbans for plain white ones. Until the early part of the twentieth century green turbans were worn by *hajjis* (men who have made the pilgrimage to Mecca) and by *sada* (men who claim descent from the house of the prophet Muhammad) to indicate a religious status with high social value. The extensive use of green turbans by illegitimate users led to the re-

A girl in Bahrain wears traditional clothing comprising an ornamental headdress and a chador extensively embellished with gold embroidery and sequins. © ADAM WOOLFITT/CORBIS. REPRODUCED BY PERMISSION.

placement of the green turban with the black turban, to distinguish the legitimate *sada.* In Iran after the Islamic Revolution of 1978, where separation of mosque and state is nonexistent, identification as a cleric denotes access to power, so it is significant that white turbans are associated with theologians and scholars, and black turbans indicate an association of the wearer to the house of the prophet Muhammad. There is no way to guarantee the legitimacy of the turban color vis à vis its intended meaning by its wearer. In general, the public trusts the wearer on this issue.

Because the turban originally was considered a part of a man's attire, traditionally, Arab men objected to women wearing this symbol of manhood. However, some literary references indicate that women at times in various parts of the Arab world wore turbans for certain occasions, perhaps in the privacy of the home. Young women sometimes wore turbans to appear more attractive, and when a woman gave birth to her first baby, she wore a turban comprised of six yards of material. After the second baby, she wore a turban with six additional yards. Northern Iraqi women wore turbans made of printed material and decorated with Ottoman Turkish gold coins. The practice of women wearing turbans is not unusual. and it is present even in the modern history of fashion, where there is an affinity for "exotic" headgear.

Another popular form of Arab headgear is the *agal,* which is a ringed cord or rope that goes over the headscarf worn by men in the Arabian Peninsula, Iraq, Syria, and Palestine. The head rope was originally a camel hobble (the word *agal* means "to hobble") that was carried on the head when not in use. Later, this rope came to distinguish the bedouins of north and central Arabia (and the ruling families descended from them) from other bedouins. The earliest reliable report on the *agal* dates back to the early eighteenth century, from a picture depicting the imam Abdullah Ibn Saʿud wearing an elaborate and highly decorative type of *agal* that is sometimes called *mugassab.*

Along with the *agal,* men wear the Arabic *kaffiya* (or *pocu,* pronounced *poshu* in Turkish and the dialect of the Turkish Kurds). The *kaffiya* (also *shamagh* or *hatta*) is a head cloth folded diagonally and secured on the head by the *agal.* Men from the Arabian Peninsula, Syria, Iraq, and Palestine wear the *kaffiya.* It comes in a variety of designs and colors that denote tribal affiliation. In modern history it has acquired another layer of meaning as a symbol of solidarity among Palestinians and their supporters in their quest for political and geographical autonomy. It is sometimes worn in defiance, as if a substitute for the long outlawed Palestinian flag. Like the black-and-white *kaffiya* of Yasir Arafat, chairman of the Palestinian Liberation Organization, which is worn by both Palestinian men and women as a sign of unity, the *pocu* has the same symbolic meaning for independence of the Kurds under the autonomy of the Turkish government. The *pocu* is also black and white, which are the colors associated with urban Kurdish intellectual men and women. It signifies political leftism, cultural freedom, and rights

to an independent state. Both the *pocu* and *kaffiya* are draped over the shoulders by men and women, worn like a scarf on the head by women, or worn in the traditional manner with the *agal* by men only.

Another popular headdress for men is the fez, a word derived from Fez, a city in Morocco where it traditionally is manufactured. It is a brimless, cone-shaped, flat-crowned hat that usually has a tassel made of silk. The fez is made of red felt and is worn in Syria, Egypt, North Africa, and Palestine. Another name for the fez is *tarbush* or *tarboosh.* It was banned during the Tanzimat period in Turkey (beginning in 1839), when dress regulation took place. However, the *tarbush* also played a significant political role after the Young Turk Revolution of July 1908.

Also common among men in the Middle East region is the *sidara,* an Iraqi cap commonly made of black velvet, black lamb's wool, or black felt. The *sidara* is brimless, has a crown at the center, and folds like a pocket around the crown of the cap. It resembles the hat worn by the cadets in the U.S. military. This cap at one time was very popular with middle-class, upper-middle-class, and elite members of Iraqi society. The *sidara* lost its popularity after the 1958 deposition of the last king and the establishment of the Republic of Iraq. Muslim men of the subcontinent of India wear a similar hat in black as a sign of Muslim identity.

The *kippah,* commonly worn by Jewish men in the Middle East, is a skullcap that is also known in Yiddish as the yarmulke. Ashkenazic Jews wear the yarmulke at all times, and Sephardic Jewish men generally do not. In Israel, wearing a yarmulke also has social significance: Not wearing a yarmulke is like stating, "I'm not religious." The style of yarmulke in Israel can also indicate political and religious affiliation.

The most common headdress for Muslim women is some form of a veil. The generic term for veil, known by Muslims regardless of their cultural and linguistic heritage, is *hijab.* The *hijab* refers to a physical veil, a tangible item covering the hair and face of a woman. The word is of Arabic origin, from the verb *hajaba,* "to hide from the view, to conceal." *Hijab* also refers to the Muslim woman's dress code in accordance with interpretation of Islamic law. Muslim women around the world wear various forms of veils, each community according to its own cultural and religious interpretations, so there is no universal form of veiling among Muslim women. Other common interchangeable words for veil are *yashmek, purda, chador, paranja, burqa, bushia, niqab, pece* (pronounced *peeche* in Turkish), and *khimar.* Each represents some specific form of head or face veil commonly used by Muslims of various nationalities. The chador, which in Persian literally means "tent," is a form of *hijab* (head veil), consisting of a full-length semicircular piece of material. It is placed on top of the head and covers the entire body. It is held in place with one hand at all times. Sometimes a corner of it is pulled over the face to cover part of the mouth.

Other Clothing

Other important clothing for men and women are forms of long dress, wrap, outerwear gown, or caftan. The most common outerwear garment is the *aba* or *abaʿa,* also known as *rida,* which is an ankle-length loose mantle or coat worn by Arab men over the shoulders. The *aba* opens at the front with no fastening device and has two openings for the arms to be pulled through. Piping sewn on the *aba* goes around the entire edge of the garment and around the sleeves. Customarily the *aba* is draped over the shoulders rather than worn as a coat. The fabric used for making the *aba* or *rida* identifies its region of origin, and a clear distinction is not made between fabric and garment. Traditional wraps or mantles are worn in most traditional Islamic societies, yet there is a considerable variety of draping styles from one region to another. Wearing an *aba* has religious associations in some regions of the Islamic world such as Iran or Egypt. In Iran, a man wearing an *aba* and turban is identified as a non-secular person associated with the mosque and theological schools.

Another form of wrap or cloak is the burnoose, which is a large, one-piece, hooded cloak worn by men throughout the Maghrib (Northern Africa). The burnoose is also used in religious ceremony as the chasuble of the Coptic priests in Egypt. Yet another common form of cloak or wrap is the *haik,* which is a large, voluminous outer wrap, usually white, worn by both sexes throughout the Maghrib. The *dishdasha* is a long, A-line, ankle-length, long-sleeved, light-colored shirt worn by Arab men in

the Gulf region. A similar style of man's garment commonly worn by men in Egypt is the *jillaba.*

FAEGHEH SHIRAZI

CLUB NATIONAL ISRAÉLITE

A Zionist association.

The Club National Israélite (Arabic, al-Nadi al-Qawmi al-Isra'ili) was founded in Syria in June 1924 by Tawfiq Mizrahi, a Jewish journalist and director of the Bureau de Presse et Publicité advertising agency in Damascus, and Dr. Sulayman Tagger, the chief rabbi of Beirut, together with seven other provisionary committee members. The group's name was chosen in obvious imitation of the Arab Club, which was the focal point of Syrian and pan-Arab nationalism.

The Club National Israélite set out a nine-point program that, in addition to moderate Zionist goals, included working for friendly ties with other religious and ethnic communities in Syria. The club shifted its headquarters to Beirut in the late 1920s when the atmosphere in Damascus became increasingly hostile to any form of Zionism. It did not continue to be active for long, and most of its members joined other Jewish organizations with Zionist orientations.

CODE DE L'INDIGÉNAT

Law code in French colonial Algeria.

Imposed by France on the native Muslim population of Algeria in 1881, the Code de l'Indigénat (Code of the Indigenous People) was exercised summarily, covering a vast array of offenses. Its arbitrary application was tempered in 1914 and 1919 by the Clemenceau and Jonnart reforms. Nevertheless, the colonial lobby in France kept the intimidating code in effect until General Charles de Gaulle issued the ordinance of 7 March 1944 that gave Muslims French rights. Discrimination and prejudice, however, continued to prevent the full enjoyment of these new privileges. Summary rule resumed during the Algerian war of independence (1954–1962).

COFFEE

See FOOD: COFFEE

COHEN, GE'ULA

[1925–]

LEHI radio announcer and politician.

Geʾula Cohen was one of nineteen members of the Lohamei Herut Yisrael (LEHI) who were arrested when the British seized LEHI's radio transmitter on 19 February 1946 as part of a crackdown on Jewish terrorist groups. Cohen was a leading figure in the radio broadcasts of the LEHI underground led by Yitzhak Shamir. She was sentenced to nineteen years in prison but escaped and resumed the illegal broadcasts. As a journalist in Israel, she was an active participant in the militant struggle on behalf of Soviet Jewry.

In 1970 she joined the Likud party. She was first elected to the Knesset in 1973, and served through 1992, the Eighth through the Twelfth Knesset. She

served first as a member of the Likud and then as a member of the Tehiya, a party she helped found that was to the right of the Likud. In the Twelfth Knesset she served as deputy minister of science and technology. After the defeat of the Tehiya party in the 1992 elections, she rejoined the Likud party. One of her most visible public roles was as a leading opponent of Israel's peace agreement with Egypt and its withdrawal from the Sinai; she is associated with the ideology of the hard-liners who espouse the vision of a Greater Israel, and she has consistently opposed concessions to any of Israel's Arab neighbors.

She was awarded the Israel Prize in 2001; the award cited her accomplishments as a LEHI fighter, writer, journalist, and member of Knesset, as well as her efforts to absorb immigrants from the former Soviet Union and Ethiopia. She has published her autobiography, *A Story of a Warrior* (Tel Aviv, 1962; in Hebrew), and she regularly writes articles for daily newspapers.

YAAKOV SHAVIT
UPDATED BY GREGORY S. MAHLER

COLE, USS

American destroyer attacked in 2000 while refueling in Yemen, focusing international attention on the developing conflict between the United States and terrorists in the region.

On 12 October 2000 two men exploded a small boat in the port of Aden alongside USS *Cole,* killing themselves and seventeen U.S. sailors and wounding thirty-nine. Despite suspicion that the bombing was sponsored by the al-Qaʿida network, initially no links were found and the U.S. administration decided against a retaliatory strike on al-Qaʿida camps in Afghanistan. In a videotaped speech in January 2001, Osama bin Ladin praised the attack as a blow against American "injustice" but denied his own involvement, in an interview with the Kuwaiti newspaper *al-Raʾy al-Amm.* In June an al-Qaʿida recruitment tape that claimed responsibility for the bombing was brought to public attention by the newspaper; and in December, a letter was discovered ordering attacks on American ships in Yemen, purportedly written by bin Ladin in late 1997, before U.S. ships began to refuel in Aden. In the months following the attack, Yemen captured a number of mostly local suspects; in 2003 it revealed confessions had been made alleging that the attack was ordered by the prominent cleric Shaykh Zindani, a leader of the Islah Party. In 2002 U.S. forces killed one fugitive suspect and in 2003 indicted two of ten further suspects when they escaped from jail in Yemen.

GEORGE R. WILKES

COLONIALISM IN THE MIDDLE EAST

European control of Middle East areas beginning during the nineteenth century and continuing until World War II.

Between the mid-nineteenth century and World War I, most of the Middle East and North Africa either already was, or later came, under different forms of colonial rule. In North Africa, France began to conquer Algeria in 1830, conquered Tunisia in 1881, and (together with Spain) imposed a protectorate upon Morocco in 1912. All three were "colonial settler states" in that a substantial proportion of the population (12 percent in the case of Algeria in 1854) were Europeans, mostly French families, who came to live and work in North Africa, both on the land and in the cities. Some of their descendants remained there until forced out by the independence struggles of the 1950s and early 1960s. On a somewhat smaller scale, Libya was annexed by Italy in 1911 and attracted some 110,000 Italian settlers during the inter-war period.

Britain and France Take Leading Roles

In Egypt, following the rise of a nationalist movement that threatened to challenge the British and French administration of the public debt (put in place in 1876), British troops invaded in 1882 and occupied the country informally until the declaration of

a British protectorate on the outbreak of World War I. Although large numbers of foreigners resided in Egypt, they were generally neither "settlers" nor *colons* in the French North African sense (since they lived mostly in the cities and engaged in commerce or in other service occupations) and a majority of them were not citizens of the occupying power.

On the coasts of the Arabian Peninsula, Britain's concern to keep the route to India safe and open led to the signing of a series of treaties with the rulers of Bahrain and of what are now the United Arab Emirates. In 1853 the rulers signed a Perpetual Maritime Truce; in 1892 Bahrain and the lower Gulf emirates, including Muscat and Oman, signed further agreements with Britain under which they agreed not to dispose of any part of their territories except to Britain, and to conduct their foreign relations exclusively through the British government. Britain concluded similar agreements with Kuwait in 1899 and Qatar in 1916. In 1839 Britain annexed Aden and turned it into a naval base; later, "exclusive" treaties were signed with the tribal rulers of the interior, and in 1937 the area was divided into the port and its immediate hinterland (Aden Colony) and the more remote rural/tribal areas (Aden Protectorate).

In the Levant, a form of colonialism of a rather different kind came into being after the defeat of the Ottoman Empire by Britain and France in 1918. The Ottoman Arab provinces were assigned to Britain and France as mandates from the newly created League of Nations, Britain taking responsibility for Iraq, Palestine, and Transjordan, and France taking responsibility for Lebanon and Syria. The guiding principle of the mandate system was that the states concerned should remain under the tutelage of the mandatory power, until such time as they were able to "stand alone," a period that, although unspecified, was viewed as not being of indefinite length.

Of the five states, Palestine was unique among its neighbors in that it was a settler state, since the text of the Palestine mandate included the terms of the Balfour Declaration (1917), in which Britain undertook to facilitate the setting up of a "national home for the Jewish people." European Jewish migration to Palestine had begun during the last decades of the nineteenth century with the rise of Zionism, whose objective was the creation of a Jewish state, although the specific details were not to be formulated until the early 1900s. By World War I there were some 65,000 Jews in Palestine, some 8 to 10 percent of the total population. In 1922 there were 93,000 Jews and about 700,000 Arabs; in 1936, three years after the Nazis had come to power in Germany, there were 380,000 Jews and 983,000 Arabs; and in 1946, about 600,000 Jews and 1.3 million Arabs. Thus the Jewish population had increased from 13 percent to 31 percent over a period of twenty-four years. Arab opposition to Jewish immigration was focused at least as much on the Jews' perceived character as European settlers (as in, say, Algeria) as on their religious affiliation.

The rest of the Middle East never experienced direct colonial control, although the Ottoman Empire's borrowings from European sources, and its mounting trade deficit, led it to declare bankruptcy in 1875 and then to the imposition of financial controls by the Ottoman Public Debt Administration, a committee representing the interests of the European bondholders. After the collapse of the empire at the end of World War I, Anatolia was occupied by the French, Greek, and Italian armies, but a national resistance movement formed around the Ottoman general Mustafa Kemal Atatürk, and an independent Turkish republic was declared in 1923. Iran had also been the object of external economic and political interest from the last decade of the eighteenth century; Britain wanted to control Iran because of its proximity to India, while Russia was expanding its empire in Central Asia and was also, or so Britain claimed, intent on gaining access to ports on the Persian Gulf. Iran achieved a certain degree of independence with the rise to power of Reza Khan, subsequently Reza Shah Pahlavi, who set up his own dynasty in 1925. Principally because of their remoteness and lack of major strategic importance, central Arabia and northern Yemen were never colonized. However, Ibn Saʿud, the ruler of central Arabia, gradually extended his rule over most of the rest of the Arabian Peninsula with substantial assistance from Britain, eventually establishing the Kingdom of Saudi Arabia in 1932.

Independence Movements

The states of North Africa were generally fairly quiescent until after 1945, although the colonial regimes,

with their policies of widespread confiscation of tribal land for the benefit of the settler population, were deeply unpopular. In Morocco, the French generally were able to contain the movement for national independence, but they precipitated a major crisis by exiling the sultan, Muhammad V, to Madagascar in 1953. As a result, the rallying cry of the national movement became the return of the sultan from exile, which led to the sultan/king retaining his position as ruler after independence in October 1956. In Tunisia, Habib Bourguiba took over the leadership of the national movement after his release from prison in 1936; his Neo-Destour party had about 110,000 members in 1954 and was closely linked with the labor movement. After the war a guerrilla movement formed and attacked French farms and settlers. Probably because France could not take on anticolonial wars in both Tunisia and Algeria at the same time, Tunisian independence was negotiated fairly smoothly in April 1955.

Algeria's road to independence was far rockier than that of any other state in the region, largely because of the large numbers of French settlers in Algeria and of Algerian workers in France. Postwar French governments attempted to incorporate Algeria into France, a step that appealed to the settlers but was vigorously opposed by the great majority of the Arab population. In 1954 the Algerian resistance formed the Front de Libération Nationale under the leadership of Ahmed Ben Bella; after his capture in 1957, some of his colleagues set up an Algerian government in exile in Tunis. The "war of national liberation" lasted from 1954 until 1962; between a million and a million and a half Algerians were killed, and 27,000 French.

In Libya, Italian conquest and pacification between 1911 and 1932 had faced bitter resistance, involving major losses of life, but because of the country's sparse population, this general hostility did not produce a nationalist movement. The country's liberation in 1942 came about as part of the North Africa campaign; the British entered into a tentative alliance with the Amir Idris al-Sanusi, head of the Sanusi order, who was brought back from exile in 1944. After several years of negotiations, Libya became independent under United Nations auspices in 1952, and Idris became the new state's hereditary ruler.

Fearful of Jewish domination in their country, Palestinians rioted against unrestricted Jewish immigration in the 1920s and 1930s. British policy toward Jewish immigration into Palestine vacillated in the pre–World War II years, and by 1939 Britain again was restricting Jewish immigration to the area. © HULTON-DEUTSCH COLLECTION/CORBIS. REPRODUCED BY PERMISSION.

In Egypt, Iraq, Transjordan, Lebanon, and Syria—the situation in Palestine was of course unique—the British and French set up monarchies and constitutional republics, respectively. This new political order was widely contested, and the mandate regimes were generally unpopular, especially in Syria and Palestine. After having set up a compliant government in Iraq, the British felt able to make a formal withdrawal in 1932, although real independence was not obtained until 1958. In Lebanon the French were welcomed by the Maronites and the other Catholic Christians but by few others. In Syria there was a major national rising between 1925 and 1927, which the French had considerable difficulty in controlling, although a notable-dominated group, al-Kutla al-Wataniyya, emerged as the voice of moderate nationalism, with whom, it seemed, the French

might be persuaded to work. Expectations were raised in 1936 with the victory of Léon Blum's Popular Front government in France in 1936, but negotiations for independence ceased when it fell a year later, and Syria remained under French control until 1945.

Egypt, already under British tutelage since the declaration of the protectorate in 1914, escaped the formal structures of the mandate system. Late in 1918, some Egyptian politicians asked the British authorities for permission to send a delegation *(wafd)* to the Paris peace conference. When permission was refused, a widespread national uprising broke out in March 1919. Eventually, Britain conceded limited Egyptian independence in 1922; further agitation during the 1920s and 1930s led to the signature of an Anglo-Egyptian treaty in 1936 that enabled Egypt to enter the League of Nations as an independent state. Nevertheless, a substantial British military presence remained in the country until Gamal Abdel Nasser's seizure of power in 1952.

Palestine and Zionism

In Palestine, the special situation created by Zionist settlement led to increasing hostility and resentment on the part of the Arab population. The British attempted to act in an even-handed fashion toward the two communities, but in general the Arab political leadership was disinclined, for example, to participate in any British constitutional proposals that would imply recognition of the Zionist presence. The Jewish National Fund gradually bought up land in Palestine from (mostly absentee) Arab landlords. It amassed about a quarter of the cultivable area between 1920 and 1948 and settled Jewish immigrants on it in farming cooperatives. Jewish immigrants also settled in the cities: Between 1911 and 1929 the population of Tel Aviv grew from 550 to 38,500. For this and other reasons, there were serious outbreaks of rioting in 1921 and 1929, and a more sustained Palestinian rebellion between 1936 and 1939.

During World War II there was a considerable amount of illegal immigration to Palestine, but in spite of their obvious discontent with Britain, many Zionists fought in, or in units attached to, the British army. After the war Britain decided that it could not solve the problems of Palestine on its own and referred the problem to the United Nations. In November 1947 the United Nations voted that Palestine should be divided into an Arab state and a Jewish state; the British began to evacuate and had left by May 1948. In January 1948 volunteer units from some of the surrounding Arab countries began to infiltrate into Palestine from Syria. The volunteers and the armies of the other Arab states proved no match for the Zionist forces, which outnumbered them about two to one. On 14 May 1948 the state of Israel was declared. Throughout 1948 large numbers of Arabs left Palestine, unaware that they would not be allowed to come back. By January 1949, there were some 730,000 Palestinian refugees, 280,000 in the West Bank (which became incorporated into Jordan in 1951), 200,000 in the Gaza Strip, and the rest in Lebanon, Syria, and Transjordan.

COLONIAL OFFICE, GREAT BRITAIN

British government department responsible for administration of dependencies, including most of those in the Middle East.

Until 1854 the colonies of the British Empire were managed by the secretary of state for war and the colonies. As colonial affairs grew in importance, a separate Colonial Office with its own secretary was established, which was responsible for administration of Britain's colonies and for the recruitment of colonial civil servants (who comprised the Colonial Service). The lines of Colonial Office authority often overlapped and conflicted with those of the India Office and the Foreign Office. The India Office administered British territories around the Persian Gulf (including the Trucial Coast emirates Bahrain, Qatar, and those that later formed the United Arab Emirates) and the Indian Ocean (including Muscat, part of present-day Oman). The Foreign Office oversaw certain areas of informal British rule, such as Egypt. At the end of World War I, Palestine and Mesopotamia came under British military administration and were therefore the responsibility of the War Office. When civil administrations were established in 1920, the Foreign Office took over responsibility for these territories, designated mandated territories by the League of Nations. Under Winston Churchill, colonial secretary in 1921 to 1922, the Colonial Office took over responsibility for the mandates. At the Cairo Conference in March 1921 Churchill established the basic structure of British overlordship of the Middle East for the next generation. The Colonial Office remained responsible for the administration of Iraq until 1932, for Transjordan until 1946, for Palestine until 1948, and for Aden and its hinterland until 1967. After World War II the Colonial Office became the administrative organ for decolonization. In 1966 it merged with the Commonwealth Relations Office, which itself was later absorbed into the Foreign and Commonwealth Office.

COLONS

European settlers (mostly French) who lived in Algeria during France's colonial rule.

When the Algerian war of independence broke out in 1954, the country's colon population stood at 984,000. Only 11 percent of the population, the colons dominated economic life, held a monopoly of political power, and comprised the majority of the professionals, managers, and technicians who kept the country functioning. Their per capita income was roughly seven times that of Muslim Algerians.

The first colons came to Algeria directly on the heels of the French invasion of 1830, mainly because the collapse of the Turkish power structure left large amounts of property available on attractive terms. By the 1840s, it became official French policy to encourage settlement on the land to ensure the permanence of French conquests and to provide a tax base that could put the colony on a self-supporting basis. Demographic pressures inside France, where population was growing more quickly than the economy, added momentum to the colonization movement. Similar pressures in Italy and particularly in Spain led to large immigration from these two countries as well.

Starting in the 1850s and the 1860s, Algeria also attracted significant amounts of French capital because large amounts of state land became available

to corporate interests, and opportunities for investment in rails and other infrastructure were lucrative. The earliest colonial vision saw an Algeria peopled by thousands of small European freeholders. The outcome by the mid-twentieth century, however, was that most agricultural land was held by large landholders who mainly employed cheap native labor, while 80 percent of Europeans lived in cities and towns, employed in industry and, particularly, in services.

From the 1840s onward, colons realized that their ability to maintain and improve their economic status depended upon access to political power. In 1848 they won for the first time the right to elect municipal councils, and in these they were assured two-thirds majorities. Until the last years of colonial rule, the settlers were guaranteed two-thirds or three-fourths majorities in all municipal and departmental bodies. Legislation under the Second Empire in 1865 provided that Europeans were citizens of France, while Muslims were subjects. On numerous occasions during the nineteenth century, the Algerian government attempted to intervene in defense of indigenous rights, which were regularly threatened by expanding settler hegemony. Colons were usually able to foil such attempts by invoking republican principles and condemning what they called government authoritarianism. By the twentieth century, however, republican rhetoric quieted; most colons were increasingly out of tune with the more liberal political discourse of the *métropole.* In each decade of the century, they mounted vigorous movements to block native attempts at improving their status and sharing meaningfully in the political process.

When, during the Algerian war of independence, colons began to fear that the government might make unacceptable concessions to the revolutionaries, they allied increasingly with disillusioned elements of the military to challenge civil authority. While the Evian Agreement of 18 March 1962, which provided the framework for Algerian independence, also included specific guarantees of colon rights, many of them, in the last months of French rule, joined with the Organisation Armée Secrète (OAS; Secret Army Organization) in attacks upon Muslims and in systematic destruction of the country's infrastructure. At the same time, unable to countenance minority status, they packed bags and trunks and headed for the ports and airports. By the end of 1962, not more than 30,000 colons remained in Algeria, mostly elderly, or among the minority who had favored the Algerian cause. Their numbers progressively declined in the years that followed.

COMITÉ D'ACTION MAROCAINE (CAM)

The first Moroccan nationalist party, established in 1933 and 1934, also known as the Bloc d'Action National, or simply kutla *(bloc).*

The Comité d'Action Marocaine (CAM) was the largest of three organizations created during the early 1930s by young urban nationalists to advance their aims; the two smaller bodies, the *zawiya* and the *taifa,* were clandestine. The most important of the initial cells of the *zawiya,* based in Fez, was led by Allal al-Fasi and Muhammad Hassan al-Wazzani (Ouezzani). Along with five others from the Fez cell, and Ahmed Balafrej and Ahmad Muhammad Lyazidi of the Rabat cell, they constituted the core leadership of the budding nationalist movement. Fasi was *primus inter pares* owing to his capabilities as a thinker and organizer, and to his personal charisma.

Their platform was disseminated through the Paris-based magazine *Maghrib,* and various Moroccan-based French and Arabic periodicals. Formally compiled and published in 1934 as the *Plan des réformes,* the CAM's program argued for comprehensive reform of the French protectorate—politically, administratively, judicially (mixing Western and Islamic legal codes), economically, and educationally—so as to achieve the protectorate's stated goal: the moral and material revival of Morocco with the aid of France. The plan was explicitly reformist. It did not contain any demand for discontinuing the protectorate or achieving independence.

The CAM made little headway from 1934 to 1935 in persuading the French authorities to respond to their demands. The ascent of Popular

Front governments in France and Spain in the first portion of 1936 temporarily gave them new hope; the subsequent lack of progress led the CAM leadership to convene a series of mass meetings in order to mobilize wider public support. In response, in November 1936, the French authorities arrested al-Fasi, al-Wazzani, Lyazidi, and others but released them a month later. The CAM then adopted a more vigorous strategy of broadening its ranks. By early 1937, it had expanded its official membership to about 6,500 (excluding the Spanish zone), had established thirty-two sections throughout the country, and was demonstrating mass appeal among urban workers, artisans, and unemployed rural migrants to the cities.

Alarmed by its success, the French authorities dissolved the CAM on 18 March 1937. The CAM leadership, however, quickly managed to reconstitute itself a month later as the Parti National (National Party for the Realization of the Plan of Reforms). Concurrently, a rupture occurred between a majority of the leadership, led by al-Fasi, and al-Wazzani, who formed the Parti Démocratique Constitutionnel.

COMITÉ DE COORDINATION ET D'EXÉCUTION

The executive cabinet of Algeria's FLN, 1956–1958.

The Comité de Coordination et d'Exécution (CCE; Committee of Coordination and Implementation) was created by the Soummam Valley Congress of the Front de Libération Nationale (FLN; National Liberation Front) in September 1956. It was composed of five leaders of the spreading guerrilla movement in colonial Algeria. Revamped and enlarged in 1957, it lasted until September 1958, when it gave way to the new Gouvernement Provisional de la République Algérienne (GPRA; Provisional Government of the Algerian Republic).

COMITÉ JUIF ALGÉRIEN D'ÉTUDES SOCIALES

A Jewish antidefamation organization.

The Comité Juif Algérien d'Études Sociales (CESA; Algerian Jewish Committee for Social Studies) was founded in 1917 by Dr. Henri Aboulker to function as a kind of antidefamation league in the face of continued, virulent *pied noir* antisemitism in Algeria. CESA's expressed goal was "to be on the alert that the free exercise of the Jews' rights as citizens not be violated or ignored."

The group lobbied through French political channels to achieve fuller social and civil rights for Algerian Jews, not as Jews, but as Frenchmen. One of its first campaigns was to remove the barrier preventing Jews from being accepted into the Algerian General Association of Students. As part of its public relations, CESA published and distributed to French military and public figures the *Gold Book of Algerian Jewry,* which listed all Algerian Jews who were killed in action during World War I and all who received military decorations and citations.

Having achieved most of its goals, the group became inactive after several years but revived as the leading voice of Algerian Jewry during the late 1930s.

COMITÉ RÉVOLUTIONNAIRE D'UNITÉ ET D'ACTION (CRUA)

The body that planned the 1954 Algerian insurrection and gave birth to the FLN.

The Comité Révolutionnaire d'Unité et d'Action (CRUA; Revolutionary Committee of Unity and

Action) was a clandestine organization that kept few formal records. The details of its origins and development have been the subject of dispute among several participants and scholars.

During the early 1950s, frustration grew within the nationalist Mouvement pour le Triomphe des Libertés Démocratiques (MTLD; Movement for the Triumph of Democratic Liberties). That frustration resulted from the failure of political participation to produce tangible results for the Algerian people and also from the political infighting within the party leadership, particularly that which pitted the Central Committee against followers of Messali al-Hadj. In March 1954, Mohamed Boudiaf, an activist from M'Sila, called together a group of young militants, many of whom, like himself, had been members of the revolutionary Organisation Spéciale. Other founders identified with the MTLD Central Committee. It appears that the initial goal of the CRUA was to mediate between the Messalists and the centralists and bring about the reunification of the party. By the summer, when it became clear that the MTLD was irretrievably split, a Committee of Twenty-two decided that direct action was the only solution to Algeria's predicament and named an executive committee to take concrete steps toward armed action.

Boudiaf was to be the coordinator. The committee also included a leader for each of the *wilayas,* or military districts into which the national territory was divided. These were Moustafa Ben Boulaid of the Aurès and Nemencha, Mourad Didouche of the northern Constantine, Rabah Bitat of the Algiers region, and Larbi Ben M'hidi of the Oran. Later a Kabylia *wilaya* was recognized, and its leader, Belkacem Krim, became the sixth member of the executive committee. In October, three exiled militants, Hocine Ait Ahmed, Mohamed Khider, and Ahmed Ben Bella were also named part of the executive committee. These nine men were considered the historic chiefs *(chefs historiques)* of the Algerian revolution. But it was the six militants inside Algeria who made the critical decisions.

At an October meeting or meetings, the exact date or dates of which are debated by the participants, the internal CRUA leadership decided to create the Front de Libération Nationale (FLN; National Liberation Front) and drew up a proclamation calling Algerians of all classes and political persuasions to join them in a war of national liberation. The insurrection broke out in the early morning hours of 1 November 1954.

COMMERCIAL AND NAVIGATION TREATIES

Allowed European merchants special privileges in trading with the Ottoman Empire; regulated passage of ships through the Dardanelles.

Beginning in 1352, the Ottoman Empire granted special privileges to the merchants of Genoa, Venice, and Florence. These privileges, known as the capitulations, placed European merchants under the direct jurisdiction of their own consular representatives—who judged the civil and criminal cases that involved their own citizens. In addition, the capitulations granted Europeans the right to travel and trade freely within the empire and to pay low customs duties on imports and exports. The capitulations allowed European merchants to organize almost all trade between the empire and Europe.

The first commercial treaty with a maritime state of western Europe, the Draft Treaty of Amity and Commerce, was negotiated with France in 1535. Based on the model of the earlier capitulations, this treaty, which was never confirmed by Sultan Süleyman (reigned 1520–1566), stated that French merchants would be permitted to move and trade freely within the empire and to pay only the taxes and duties paid by Turkish merchants. These privileges were eventually granted in 1569. In 1580, a similar

treaty was concluded, granting these privileges to Britain, to English merchants who until this point had been required to conduct business with the empire under the French flag. In 1581, the English Levant company was chartered: All English consular and diplomatic officials became employees of the company, which supervised the execution of the capitulations.

These treaties governed commerce between the empire and western Europe until 1809, when the Treaty of Peace, Commerce, and Secret Alliance (the Dardanelles treaty) was signed between the empire and Great Britain. This treaty, which followed a brief period of British–Ottoman enmity, reaffirmed the capitulations while granting limited reciprocal privileges to Ottoman merchants. More importantly, the treaty granted the empire the right to close passage through the Bosporous and Dardanelles straits (the Turkish Straits) to foreign warships during times of war. The issue of free passage through the Straits would be a subject of diplomacy for the next 150 years. On 7 May 1830 the United States signed its first commercial and navigation treaty with the Ottoman Empire. This treaty extended to the United States the same privileges granted to European merchants.

Following British assistance to the sultan in defeating the army of Ibrahim ibn Muhammad Ali of Egypt, the Commercial Convention of Balta Liman was signed on 16 August 1838. This treaty, a renewal of the Commercial Convention of 1820, was a decisive defeat for the Ottoman government, which had sought to ease its fiscal constraints by raising the duties paid by British merchants. The negotiated increase from 3 to 5 percent *ad valorem* on imports was offset by a large reduction of duties paid on the internal movement of goods. The benefits accruing to Britain were strengthened by the 1861–1862 convention, which raised the external tariff to 8 percent in exchange for the gradual reduction of duties on exports to 1 percent; this convention transformed the empire into a virtually free-trading country. The 1838 and 1861 conventions expressed the political incapacity of the Ottoman government to substitute for the capitulations a new mode of organizing trade, and it signaled the continuing economic subordination of the empire to Western states.

After the dissolution of the Ottoman Empire in the aftermath of World War I, the Lausanne Treaty of Peace with Turkey and the accompanying Straits Convention was signed at the conclusion of the Turkish war of independence, dated 24 July 1923. It reestablished the principle of freedom of navigation through the Straits by demilitarizing the shores; it also established an international supervisory commission, under the permanent presidency of Turkey, to execute this agreement. In addition, the treaty bound the Republic of Turkey to maintain the prewar level of tariffs at their low rates.

Angered by the restrictive clauses of the treaty's Straits Convention, Turkey pushed for revisions, resulting in the Montreux Convention on the Turkish Straits, dated 20 July 1936. This conferred on Turkey all the duties and powers previously granted to an international commission, while permitting the remilitarization of the Straits. The passage through the Straits of warships that threatened Turkey was left to the discretion of the Turkish government, subject to ratification by the League of Nations.

In 1945, after World War II, the USSR demanded that unilateral Turkish control over the Straits granted by the Montreux Convention be replaced by joint Turkish–Soviet responsibility; the Soviets also demanded the right to establish military bases in Turkey for the defense of the Straits. These veiled threats were countered by the admission of Turkey into the North Atlantic Treaty Organization (NATO).

COMMITTEE FOR DEFENSE OF FREEDOM AND HUMAN RIGHTS

The first independent human rights organization in Iran's history.

The Iranian Committee for the Defense of Freedom and Human Rights was established in Tehran in fall 1977. It was founded by twenty-nine members of the opposition to the government of Mohammad Reza Pahlavi, including Shahpur Bakhtiar and Mehdi Bazargan, both future prime ministers of Iran. Their first act was to draft a letter of protest to the secretary general of the United Nations, decrying human rights abuses in Iran. The committee's various activities contributed to the onset of the Iranian Revolution of 1979.

COMMITTEE FOR THE DEFENSE OF LEGITIMATE RIGHTS

Saudi dissident group established in 1993.

Founded in Riyadh by six Saudi scholars, the Committee for the Defense of Legitimate Rights (CDLR) had an agenda of political protest that was couched in a Sunni Islamic idiom that used the Qurʾan and hadith (sayings of the prophet Muhammad) to buttress its claims. The group's founding letter called for an end to injustice and the establishment of individual rights based on the precepts of *shariʿa,* or Islamic jurisprudence. The Saudi government banned the organization, forcing its members to go underground or leave the country. In 1994 the CDLR established its headquarters in London under the leadership of Muhammad al-Mas'ari, a former physics professor who had been imprisoned briefly in Saudi Arabia for his role in the committee. From London the group established a web site and used other forms of modern technology to promote a more strident program of opposition to the Saudi regime. Al-Mas'ari criticized the profligacy and absolutism of the Al Saʿud ruling family and called for a government that was more open and a more equitable distribution of the country's vast wealth. He criticized religious authorities *(ulama)* who provided Islamic justifications for the Al Saʿud's policies, and he supported those who called for reform of the system.

ANTHONY B. TOTH

COMMITTEE FOR UNION AND PROGRESS

The principal Young Turk organization that left its mark on the politics of the Ottoman state from the 1890s to 1918.

The Turkish name translates literally as the "Society for Union and Progress," although reference to it as *komite* is common in its conspiratorial phases. Its members are referred to as unionists. Its precursor was the Ottoman Union Society, a secret circle of liberal-minded students in the imperial military medical school in Constantinople (now Istanbul) who aspired to overthrow the autocratic regime of Sultan Abdülhamit II. The founders were Ibrahim Temo (Albanian); İshak Sükuti and Abdullah Cevdet (both Kurds); and Mehmet Reşid (Circassian). Despite its clandestine organization modeled along the Italian Carbonari, Abdülhamit's police discovered and suppressed the society as its cell spread among higher schools in Constantinople.

After 1895, the society established contact with Ottoman liberals in European exile. Its name changed to Committee for Union and Progress (CUP) under the influence of positivist Ahmet Riza, who became the president of the first European branch of the committee and represented the centralist camp in the Young Turk movement abroad. The first issue of Riza's *Meşveret* on 3 December 1895 publicized the CUP's program. The internal and external branches of the CUP differed on the appropriateness of use of force against the regime. Over this issue, the gradualist Ahmet Riza forfeited his leadership temporarily to Murat Bey (Mehmet Murat), a revolutionist exile from the Constantinople organization. After two unsuccessful coup attempts in 1896 and 1897, the domestic leadership, which now included high officials and officers, was imprisoned. In Europe, rivalries between Young Turk groups and within the branches weakened the committee.

After 1906, underground revolutionary activity intensified in the empire, particularly in Macedonia. Two groups, Patrie and Liberty and the Ottoman Liberty Society, merged in Salonika and contacted Ahmet Riza, who had reorganized with Bahattin Şakir the exile community under the name Progress and Union. The Macedonian and the external branches agreed to cooperate under the more familiar name of Committee for Union and Progress around the revised program of forcing Abdülhamit to submit to constitutionalist demands. The leadership of the domestic branch used the organizational tactics of Macedonian nationalist committees, masonic lodges, and Sufi brotherhoods to expand membership. Committee army officers had ready access to arms and disaffected men, whom they led in July 1908 to rebellious acts that triggered the revolutionary wave.

The 1908 revolution brought an end to the secrecy of the CUP. Its central committee, however, dominated by ethnic Turks and still in Salonika, remained exclusive and its proceedings clandestine. The administrative inexperience and social insecurity of its leaders (among them civilians Mehmet Talat, Bahattin Şakir, Midhat Şükrü; and officers Cemal Paça and Enver Paşa) kept the committee from taking charge of the government. After securing a decisive majority of approved candidates in parliament, the CUP established a parliamentary group. It redefined itself as a political party only in 1913. The headquarters of the committee moved to Constantinople at this juncture, and decision making was broadened with the institution of a general assembly next to the central committee.

The society exercised more direct control over government after the counterrevolutionary attempt of April 1909 by placing its men in key cabinet positions. Its main objective was to unify all ethnic and religious groups around an Ottomanist allegiance. The CUP cultivated friendly relations with the great powers, while seeking the abolition of the capitulations. The centralist policies it imposed in the name of preserving the territorial integrity of the empire at a time when large territories were breaking away, strengthened the CUP's decentralist rivals. Its manipulation of the 1912 elections through its control over the state machinery gave the society a Pyrrhic victory. It was forced to give up power to the leaders of the old regime in 1912.

Alarmed by losses in the Balkan War and fearful of the government's suppression of their clubs, the unionists carried out a coup on 23 January 1913, to topple Kamil Paşa and replace him with Mahmut Şevket Paşa. The assassination of Mahmut Şevket later in 1913 gave the excuse to the society to crush its opposition and come to uncontested power. Wartime emergency after 1914 facilitated the establishment of single-party rule. The disastrous outcome of World War I discredited the unionist leadership. In November 1918, as the three strongmen—Talat, Enver, and Cemal—fled abroad, the Committee for Union and Progress dissolved itself.

Both as society and party, the Union and Progress had a diverse membership and grassroots political organization. Its clubs sponsored cultural and educational activities. It coopted the notables in the countryside, even though the latter did not always favor its policies. Its constituency included the officialdom, army officers, workers, and younger professionals and small merchants (especially in the Turkish provinces).

HASAN KAYALI

COMMUNICATION

Because of the Middle East's central location and the relatively high percentage of its people who engage in commerce, ease and speed of information transmission have long been major concerns.

Early Muslim dynasties, including the Abbasids, the Zengids, and the Mamluks, used carrier pigeons to convey military intelligence or vital state information. Messengers mounted on camels or mules carried official information throughout the Umayyad and Abbasid realms. Although this service *(barid)* was unavailable for private or commercial use, unofficial couriers *(fuyuj)* carried mail on land and sea, and some merchants used private messengers. The Ottoman and Safavid states had postal and courier services. Modern postal service began in the Ottoman Empire as early as 1823 and was extended to most cities by 1856. Private courier services existed in Egypt by the 1830s; the government post office, founded in 1865, carried mail from the outset and money orders from 1868.

France's occupation of Egypt in 1798 and the spread of European commerce in the Middle East in the early nineteenth century led to the introduction of new courier services and communication devices, including semaphores and heliographs. The electric telegraph first came to Constantinople (now Istanbul) in 1839; Sultan Abdülmecit I authorized a telegraph line from the capital to Edirne in 1847 (it was not completed until 1855); and the first cable was laid under the Black Sea, from Varna to the Crimea, in 1854. Companies based in Britain vied to extend telegraph lines across the empire to Egypt and the Persian Gulf, but the Ottoman government undertook the task; the lines reached Baghdad by 1861. A telegraph line was built between Alexandria and Cairo in 1854, at the same time that Egypt's first railway was built. Under Saʿid Pasha (1854–1863) and Khedive Ismaʿil (1863–1879), telegraph lines were extended to all inhabited parts of Egypt.

The Sepoy Mutiny (1857), news of which took forty days to reach London, made Britain aware of its need for telegraphic communication with India. After an abortive attempt to lay an underwater cable from Aden to Bombay, Britain's government negotiated with the Ottomans and the government of Iran for the right to extend lines across their territories. The Indo-European Telegraph Department of the government of India began to string lines across Iran in 1863; two years later the telegraph was operational from Baghdad to Baluchistan, although problems arose, both from attacks by nomads and from official obstructionism. The Indo-European Telegraph Company, which was formed in 1867, built a more efficient line across Iran and Russia to Germany that began service in 1870. Telegraph operators, whether French-speaking Turks and Armenians in the Ottoman Empire or English-speaking Indian officers in Iran, soon became potent agents of Westernization and of tighter state control over provincial and local government.

The telephone was introduced to Constantinople and Alexandria in 1881. Used at first by European merchants, this new medium of communication was soon adopted by Egypt's government and later by businesses and households. The telephone's spread in the Ottoman Empire was upheld by Sultan Abdülhamit II (1876–1909), who was fearful of electricity, then accelerated by the Young Turks (1909–1914). Wireless telegraphy was introduced into the Ottoman Empire and Egypt in 1913.

World War I accelerated public familiarity with modern means of communication. After 1918, the governments of the states in the Middle East, new and old, set up ministries to manage the postal, telegraph, and telephone services for both official and private uses. Radio broadcasting began in Egypt in 1932 and soon spread to most other countries in the area, which established transmission facilities and radio stations under government auspices. During World War II and later, during regional conflicts such as the Arab–Israel War of 1948, extensive state censorship was imposed on all communications; this has been maintained in some

Palestine Telecommunications, developer of an intricate computerized network, helps rebuild part of the infrastructure of the Palestinian state, damaged by recent violent conflict with Israel. countries in the area. Television broadcasting began in Iraq in 1958 and soon spread to all other countries of the Middle East, generally under state control. In the last three decades of the twentieth century, governments expended large sums in updating their communications systems, replacing telegraphs with telex facilities and, later, augmenting telephones with fax machines.

The 1990s saw the region further revolutionized by the introduction of satellite dishes, mobile telephones, and the internet. Although some countries tried to regulate new technology—Iran and Iraq, for example, were among those banning satellite dishes, and Saudi Arabia and Syria tried to control internet access—such media allowed an unprecedented exchange of ideas, news and information, and entertainment to wide audiences in a region where censorship has reigned and the free exchange of ideas has been tightly controlled.

COMMUNISM IN THE MIDDLE EAST

Origins of Middle Eastern Communism.

Communism reached the Middle East shortly after the 1917 Bolshevik revolution. Armenians, Azeris, Greeks, Jews, and Kurds were among the first to form trade unions and organize communist parties. But the transmission of Marxism was not purely an intellectual project of minorities, nor did minorities ultimately comprise the majority of communists in any country.

Formation of the Communist Parties in the Middle East

Turkish workers and students in Germany participated in the uprising of the Spartakusbund in January 1919. Some of them subsequently established the Workers' and Peasants' Party of Turkey. The first Iraqi Marxist, Husayn al-Rahhal, was a student in Berlin at the time and discussed the events with children of the participants. Iranian migrant workers became familiar with socialist ideas in Russia. The first communist parties in the Middle East were in Egypt, Palestine, Lebanon, and Iran.

Joseph Rosenthal, a Palestinian-born Jew, emigrated to Egypt around 1898 and became active in

the trade union and socialist movement in Alexandria. Rosenthal, Mahmud Husni al-Urabi, and Anton Marun founded the Egyptian Socialist Party in 1921. Al-Urabi then traveled to Moscow for a course in Marxism. After returning he transformed the Socialist Party into the Communist Party of Egypt (CPE) in 1923 and expelled Rosenthal for "right-wing deviationism" in the first of many struggles between Jews and Muslims and Copts in the Egyptian communist movement. After leading an adventurous series of strikes in Alexandria in 1924, the CPE was destroyed by the newly installed nationalist government.

Communism in Palestine was born of the disaffection of a small number of Jewish immigrants from socialist Zionism. The Communist Party of Palestine (PCP) was officially recognized in 1924. Despite their anti-Zionist stand, the party's new-immigrant Jewish members were isolated from the country's Arab majority. Arabs began to join the PCP in the late 1920s. Radwan al-Hilu spent three years training in Moscow and upon his return in 1934 became party secretary general. As a result Al-Hilu's rise to the party leadership was due to the directive of the leadership of the Comintern, the international organization of communist parties, to Arabize the PCP. During the Arab Revolt of 1936 to 1939 the party suffered the first of several splits along ethnic lines. Another split in 1943 resulted in the establishment of the National Liberation League (NLL) in 1944 by young Arab intellectuals led by Bulus Farah and trade unionists of the Federation of Arab Trade Unions and Labor Societies. Jewish party members claiming to uphold internationalism reorganized the PCP in 1944 under the leadership of Shmu'el Mikunis. However, the post-1944 PCP was mostly a Jewish national communist group parallel to the NLL.

Palestinian Jewish communists encouraged the formation of the Communist Party of Syria and Lebanon. Fu'ad al-Shamali, a Maronite tobacco worker, led a Lebanese Workers' Party in Alexandria that was affiliated with the Egyptian Socialist Party from 1920 to 1922. He was deported in 1922 to Lebanon, where he joined forces with Yusuf Yazbak. In 1924 the Comintern dispatched PCP member Joseph Berger to meet with Shamali and Yazbak. The next year Elie Teper, a PCP member and Comintern emissary, connected the Shamali-Yazbak circle with a circle of Armenians. The two groups formed a Provisional Central Committee for the Communist Party of Syria and Lebanon.

The Communist Party of Iran was established in 1920. The next year the communists and the Jangalis—a guerrilla movement of small landowners led by a Muslim cleric—briefly established a Soviet Socialist Republic of Iran in Gilan. After their insurrection collapsed, the communists extended their activities to the interior of the country. Together with the Socialist Party they established a Central Council of Federated Trade Unions. Reza Shah Pahlavi destroyed the trade union federation and the Communist Party between 1927 and 1932. Party leaders in exile in Moscow were liquidated in the Stalinist purges.

The Growth of Middle Eastern Communism, 1930s to 1960s

From the mid-1930s on, continuing Anglo-French colonial and semicolonial rule, the Arab revolt in Palestine, the global challenge of communism and fascism to a capitalist world mired in protracted depression, and—after June 1941—the prominent role of the Soviet Union in the antifascist struggle enhanced the appeal of communism. The young intelligentsia and urban working classes—the principal social base of communism—grew substantially, while their standards of living declined. Unlike socially conservative nationalist leaders, the communists embraced the economic, social, and cultural changes in the region. In several countries they became the leading force for modern political organization and action, demanding both national independence and social justice. In the 1930s the Egyptian communist movement was revived and the Algerian communists became independent from the Communist Party of France, which equivocated on the question of Algerian independence. New parties were established in Tunisia (1934), Iraq (1938), and Morocco (1943). Communism became legal in Palestine in 1944, allowing both the NLL and the PCP to achieve some modest successes. In the same year the Communist Party of Syria separated from its Lebanese base. Its leader, the Kurdish figure Khalid Bakdash, became the most prominent orthodox Arab communist.

By the late 1930s, Iranian Marxism spread beyond its initial base among Armenians and Azeris

to the Persian-speaking intelligentsia. They were the principal founders of the Tudeh (Masses) Party in 1941. The Tudeh became a mass movement after the deposition of Reza Shah Pahlavi, with some 100,000 members by 1946 and regional allies in the Democratic Parties of Kurdistan and Azerbaijan. It led a trade union federation of 355,000 members. The party was repressed between 1946 and 1950 but rose to prominence again during the oil nationalization movement of 1951 to 1953. It was all but destroyed after the CIA-sponsored coup in August 1953.

The Communist Party of Iraq (CPI) grew out of the Association against Imperialism established in 1935. Led by Salman Yusuf Salman (known by the *nom de guerre* Fahd), the CPI became a mass movement and the only truly national political force in Iraq from 1941 to 1949. Many Jews joined the party in the 1940s and three served briefly as secretary general in 1948 and 1949. The fortunes of the party declined sharply with the arrest of Fahd in 1948 and his execution the next year. It recovered and became a substantial force in the 1952 popular uprising and the 1958 coup that overthrew the pro-British monarchy.

The revival of Egyptian communism was fraught with factionalism and contention over the Jewish leadership of several of the organizations. Three Jews—Ahmad Sadiq Saʿd, Raymond Douek, and Yusuf Darwish—emerged from a circle of minorities and resident foreigners in Cairo to establish the New Dawn group (after the magazine they published in 1945 and 1946). In the 1950s their organization became the Workers' and Peasants' Communist Party. Darwish's work as legal counsel for many trade unions gave his comrades a foothold among textile workers and others in Cairo's northern suburbs.

Between 1940 and 1943 three other Jews established rival communist organizations: Marcel Israel (People's Liberation); Hillel Schwartz (Iskra); and Henri Curiel (the Egyptian Movement for National Liberation). From 1947 to 1948 the three factions united briefly under Curiel's leadership as the Democratic Movement for National Liberation (HADETU).

Curiel's unorthodox political style and his opposition to the open ideological confrontation with Zionism favored by Iskra and the New Dawn group made him suspect even before HADETU endorsed the UN partition plan for Palestine. The rebellion against Curiel's leadership in 1948 expressed both the desire of young Muslim and Coptic intellectuals to Egyptianize the movement and the tensions over Zionism that affected every Arab communist party. The Communist Party of Egypt was established in 1949 in opposition to the existing communist organizations and it excluded Jews from membership.

The nucleus of the future Communist Party of Sudan was formed in 1946 by Sudanese in Cairo under Curiel's patronage. In the 1950s and 1960s the party established a strong base among the intelligentsia, railway workers, and farmers in the Jazira—sectors of society that grew rapidly with capitalist development. Unlike in several other countries, foreigners and minorities were insignificant in the party. Hence, its national character was unassailable. It was nonetheless banned in 1965.

The Decline of Middle Eastern Communism, 1960s to the Present

Many assert that communist prospects in the Arab world were fatally undermined by support for the establishment of the state of Israel. Far more damaging in the long run was the ascendancy of authoritarian populist nationalist regimes favored by the Soviet Union. The Communist Party of Algeria dissolved itself in 1956 and directed its members to join the National Liberation Front, which became an ally of the Soviet Union after it came to power in 1962. The Egyptian communists enthusiastically supported Gamal Abdel Nasser's Arab Nationalism and Arab Socialism, even as they languished in jail. In 1964 the two principal Egyptian communist parties disbanded. The Soviet Union courted Iraq's Abd al-Karim Qasim even after he turned on his erstwhile communist allies. The CPI was decimated by a CIA-facilitated massacre during the Baʿth's brief rule in 1963. By the 1970s the Iraqi and Syrian communists became appendages of regimes allied to the Soviet Union. The failure of the 1971 coup led by the Communist Party of Sudan and supported by the Soviet Union marked the last serious possibility for communists to achieve significant power anywhere in the Middle East and North Africa.

The Communist Party of Israel split largely along national lines in 1965. The emergence of the New Communist List (RAKAH) ultimately allowed the Arab communists to establish an electoral front (HADASH) that became the leading force among Arab citizens of Israel in the 1970s and 1980s, in sharp contrast to the downward trajectory of communists elsewhere in the Arab world.

COMPAGNIE FRANÇAISE DES PÉTROLES (CFP)

A company, usually called CFP, formed to handle French share of Mesopotamian oil.

Formed in 1923–1924, the Compagnie Française des Pétroles (CFP) was organized to handle the 25 percent French share of the Turkish Petroleum Company. This percentage of oil from Mesopotamia (now Iraq) was stipulated by the Long–Berenger Agreement of 1919 and confirmed by the British–French Oil Agreement of 1920. Owned in part by the government of France, CFP cosponsored the 1928 Red Line Agreement, and after World War II, it was part of the Iranian oil consortium.

CONDOMINIUM AGREEMENT (1899)

The 1899 pact that conferred and described joint British–Egyptian dominion over the Sudan.

The concept of condominium in international law refers to a joint dominion over a certain territory by two or more states, which jointly exercise their sovereignty over it. A unique feature of the condominium is that the territory in question belongs simultaneously to two or more states and is in this sense a part of the territory of each of them. Hence, each state is entitled to implement its authority in accordance with the condominium agreement.

In the context of Egyptian–Sudanese relations, the Condominium Agreement refers to the Anglo–Egyptian agreement on the Sudan signed 19 January 1899, by Lord Cromer, the British counsel-general in Egypt, and Boutros Ghali Pasha, the Egyptian minister of foreign affairs. Since Egypt itself was occupied by the British, the agreement legalized British control of the Sudan and framed it as an Anglo–Egyptian rule and administration. The Condominium Agreement was meant to offset potential Ottoman and European opposition to British expansionism.

The Condominium Agreement referred to "certain provinces in the Soudan [*sic*] which were in rebellion against the authority of the Khedive, but which had now been reconquered by the joint military and financial efforts of Britain and Egypt." The first two articles defined the Sudan by reference to territories south of the 22d parallel that had previously been administered by Egypt and had now been reconquered or that might in future be reconquered by Anglo–Egyptian forces or that had never been evacuated by Egyptian troops. Therefore, according to the agreement, the territories of the Sudan included both Wadi Halfa, a town in northern Sudan, and Suakin, a city on the Red Sea.

The third and fourth articles dealt with executive and legislative matters in the new joint administration. The supreme military and civil command of the Sudan was to be vested in one officer, termed the governor-general, who was appointed by a khedival decree on the recommendation of the British government and could be removed only by a khedival decree with the consent of the British government. The Condominium Agreement also dealt with judicial matters in the Sudan and stressed the independence of the Sudanese judicial system and the prohibition of slave trade. With the new arrangements, Lord Kitchener, who was the commander of the Anglo–Egyptian forces, was appointed as the first governor-general of the Sudan.

The Condominium Agreement lasted until 1954 when Sudan gained its independence.

CONFÉDÉRATION DÉMOCRATIQUE DU TRAVAIL (CDT)

Moroccan trade union confederation usually referred to as the CDT.

Affiliated with the Union Socialiste des Forces Populaires (USFP), the Confédération Démocratique du Travail (CDT) was organized in 1978 in opposition to the largest labor confederation, the Union Marocaine du Travail, whose leadership it accused of corruption and stagnation. Its membership in the mid-1990s was about 300,000, making it the smallest of the three trade unions (the third is the Istiqlal-affiliated Union Générale des Travailleurs Marocains [UGTM]). Following widespread riots and student unrest in 1981, the CDT was accused of helping to foment the troubles; all offices were closed, and many of its activists were imprisoned. It was allowed to reopen in April 1987.

During the early 1990s, the CDT and the other labor federations pressed the authorities for improved wages and working conditions. With the UGTM, the CDT led a one-day general strike in late December 1990 that resulted in a number of

fatalities. The CDT's secretary-general, Noubir Amaoui, was sentenced to two years' imprisonment, in the spring of 1992, for "libel and insult" in his criticism of the government published in a Spanish newspaper. He was released in July 1993. The CDT received four seats in the 1993 indirect elections for parliament, an increase of one from the 1984 elections.

CONFEDERATION OF IRANIAN STUDENTS

The most active organized opposition to the shah's regime during the two decades prior to the 1978–79 revolution.

Following the August 1953 coup, all activities against the Iranian government were brought to a halt. When opposition reemerged in the early 1960s, students in Iran and abroad were its leading force. Linking activists in France, Germany, and England, the Confederation of Iranian Students (CIS) was formed in April 1960. In the same year, the Iranian Students' Association in the United States (ISAUS), originally set up as a pro-government organization, was taken over by the opposition. The leaders of this new student movement were young National Front and Tudeh Party members and sympathizers.

Between 1960 and 1962, the National Front became the leading force in Iran and in the student movement abroad. In January 1962, the CIS and the ISAUS joined together and founded the Confederation of Iranian Students, National Union (CISNU), opposing Premier Ali Amini and Mohammad Reza Shah Pahlavi. The latter tried to combine unconstitutional rule with a reform project, the White Revolution, which included female enfranchisement and the formation of a literacy corps, demands previously articulated by the CISNU.

When legal opposition in Iran was once again crushed in 1963, the CISNU survived and intensified its activities abroad. Its young National Front leaders moved leftward in cooperation with a splinter faction of the Tudeh Party. During the second half of the 1960s, while Marxist and Islamist revolutionaries in Iran clandestinely prepared for guerrilla armed struggle, the CISNU remained the country's only aboveground opposition organization. In 1965, some former CISNU leaders were arrested and tried in response to a failed attempt on the shah's life. This led to a direct confrontation with the government, pushing the CISNU toward further radicalization.

The CISNU also played an important role in the international youth and student protests of the 1960s and 1970s. The June 1967 demonstrations by Iranian and German students against the shah's visit to West Germany triggered militant student upheavals across that country and were in the forefront of the European-wide student protests of 1968 and 1969. The CISNU's U.S. branch became an active participant in the U.S. antiwar and radical student movement of the 1960s and 1970s. About half of Iran's university population was studying abroad, which made possible the CISNU's extraordinary growth and impact.

The second decade of CISNU activities saw its further radicalization and support for urban guerrilla operations in Iran. Already in 1971, the Iranian government had declared the CISNU illegal. By 1975, the CISNU had split into a number of independent, mainly Maoist and pro-guerrilla student organizations. However, both the effectiveness and numerical strength of the student opposition abroad continued to grow as these rival groups cooperated in a united front.

During the 1970s, in addition to being active in France, England, Germany, and the United States, the CISNU had spread its activities to Austria, Italy, Sweden, Holland, Turkey, Canada, and India. International attention to the shah's dictatorship and repression in Iran had increased considerably. Two decades of relentless activities by the CISNU may have been the most important factor in bringing

about criticism of the shah's regime by international human rights groups, news media, political circles, and governments.

During the late 1970s, as a pre-revolutionary situation emerged in Iran, splinter CISNU factions gained even more publicity via events such as militant protests during the shah's 1977 official visit to the United States. By 1978, most student leaders and activists were returning home to join the revolution directly. A key chapter in the history of twentieth-century Iranian opposition had come to an end.

CONFEDERATION OF TURKISH TRADE UNIONS

The largest labor confederation in Turkey.

The Confederation of Turkish Trade Unions, known as Türk Iş, was founded in 1952. Its history has reflected the increasing importance of industrial labor in a developing economy in which political regimes have been uneasy about voluntary associations whose appeal is bound to involve class interests. During the 1950s, the confederation played cat and mouse with the government, which sought to extend control over the organization, which, in turn, appealed to the opposition for support. The right to strike was finally legalized in 1963, opening the way for genuine trade unionism. The confederation's efforts to solidify its dominant position, however, were resisted by rival organizations. In 1966, the Revolutionary Confederation of Labor Unions (DISK) broke away and aligned itself with the socialist Turkish Workers Party. This split strengthened Türk Iş's relations with the ruling conservative Justice Party, which tried to solidify the confederation's dominance of labor through new legislation. The proliferation of often politically motivated strikes and lockouts, increasingly accompanied by violence, was a factor in bringing on the military intervention of 1980. Ironically, the coup finally made possible the achievement of the confederation's goal of obtaining a monopoly in labor organization, since all other labor unions were simply banned by the military regime. This drastic measure was followed by a series of restrictive conditions written into the constitution that was adopted by popular referendum in November 1982.

CONGRESS OF OTTOMAN LIBERALS (1902)

Forum for opposition groups.

Organized by Prince Sabahettin to reconcile differences among various groups opposed to the unconstitutional rule of Sultan Abdülhamit II, the first Congress of Ottoman Liberals was held in Paris between 4 and 9 February 1902. Participants included Young Turk liberals living in exile in Europe and representatives of minority national groups. A renewed attempt to coordinate opposition movements resulted in a second congress, held in Paris 27–29 December 1907, chaired by Sabahettin, Ahmet Riza, and K. Maloumian of the Armenian Revolutionary Federation (Dashnaks).

CONSEIL NATIONAL DE LA RÉVOLUTION ALGÉRIENNE (CNRA)

The parliament of the Algerian revolution, September 1956 to July 1962.

The Conseil National de la Révolution Algérienne (CNRA; National Council of the Algerian Revolution) was created by the Soummam Valley Congress of the Front de Libération Nationale (National Liberation Front) to accommodate the broadening of the revolutionary movement that occurred during 1955 and 1956. The first CNRA, which for logistical reasons never formally met, included seventeen members of the founding Comité Révolutionnaire d'Unité et d'Action, members of the former Union Démocratique du Manifeste Algérien, the Mouvement pour le Triomphe des Libertés Démocratiques, and the Association of Algerian Muslim Ulama.

The first formal meeting of the CNRA took place in Cairo in July 1957 and formalized the growing authority of the external militants over the internal. The second and third meetings, held at Tripoli from December 1959 to January 1960 and during August 1961, reshuffled the membership of the Provisional Government, dealing with internal power struggles between civilian and military leaderships. The final session, held in Tripoli in May and June 1962, adopted the Tripoli Program, a statement of leftist ideological orientation. But, as Algeria faced independence, the CNRA was unable to agree on fundamental political arrangements.

CONSTANTINE

One of Algeria's major cities.

Constantine is located about 330 miles (530 km) east of the capital, Algiers, near the coast, with a population of 909,700 (2002). While known as a trading center, Constantine is best known for its association with the so-called Constantine plan, an attempt announced by the French in 1958 to tie Algeria economically to the *métropole* (the French nation) through a number of rural and industrial development plans. After independence in 1964, Constantine became an important educational center with the country's only Islamic university.

Dirk Vandewalle

CONSTANTINOPLE

Ancient Roman and Byzantine capital, now the city of Istanbul in modern Turkey.

The construction of the Roman city of Constantinople was begun in 324, after the final victory of the Roman emperor Constantine the Great (r. 306–337 C.E.) over his rivals for power. It was intended as a new, central capital, which would straddle the eastern and western portions of the Roman Empire. Originally known as New Rome, it came to be known as Konstantinoupolis, the City of Constantine.

The city was completed in May 330 on the site of the existing Greek settlement of Byzantium. It was set on a promontory extending eastward into the Sea of Marmara at the mouth of the Bosporus and was bordered on the north by a sheltered inlet known as the Golden Horn, which served as its harbor. In homage to the city of Rome, it was laid out on seven hills, with its own royal palace and square, senate, forum, and hippodrome. Lying at the crossroads of land routes through Europe and Asia and guarding the strategic and lucrative sea routes connecting the Mediterranean and Black Seas, it quickly assumed prominence as one of the wealthiest cities in the empire and benefited from both imperial patronage and intercontinental trade. The city's growth led it to extend toward the west and construct a new set of walls under Theodosius in 439.

A fire in the time of Justinian (r. 527–565) during the Nika Rebellion of 532 destroyed half the city. In its wake, Justinian embarked on an ambitious program of new building. This included a new

hippodrome, which held up to 60,000 spectators, a new palace, and a massive church, the Cathedral of Hagia Sophia, dedicated to the wisdom of Christ. The latter stood on the site of the original church, which was built by Emperor Constantius in 360 and replaced after a fire in 404. Completed in 537 and rebuilt in 558 after an earthquake damaged it, the church is noted for its impressive, 110-foot-diameter domed vault, which dominates the city skyline to this day.

With the decline of Rome, Constantinople remained the capital of the Eastern (Byzantine) Roman Empire and the center of Eastern Christianity. A period of decline occurred during the eighth century, when losses to the early Muslim conquests threatened the empire. Yet Constantinople went on to become the wealthiest and largest city in medieval Europe, home of various nationalities and a transshipment center linking Europe with southwest and central Asia. It was venerated as the home of libraries and countless sacred relics. Its wealth and prestige made it the target of several invading armies. It was attacked and besieged variously by the Slavs (in 540, 559, and 581), the Persians and Avars (in 626), the Arabs (in 669–679 and 717–718), the Bulgarians (in 813, 913, and 924), and the Russians, who assaulted it four times in the period from 860 to 1043.

Following the schism of 1054, which divided Christianity between the Eastern and Western churches, Constantinople became a commercial rival to the Roman Catholic kingdoms in the western Mediterranean, especially Venice. The bishop of Constantinople came to be the ecumenical patriarch of the Eastern Orthodox Church, and the religious power of the city continued to be strengthened into the late Byzantine and Ottoman periods. The crusades of the late eleventh and twelfth centuries passed through Constantinople relatively peacefully. However, the common perception among the Crusaders that the Byzantine Empire sympathized with the Seljuk Turks allowed Venice to persuade the leaders of the fourth crusade to sack Constantinople. This established a Latin kingdom, centered on the city, that lasted until 1261, when the Byzantines restored their ancient capital. The city was greatly weakened and depopulated as a result and never reclaimed its earlier splendor. The weakness of Constantinople led the Byzantines to ally with Genoa, which came to eclipse the Byzantine state.

In 1453, the Ottoman Turks under Mehmet II defeated the last Byzantine emperor of Constantinople, Constantine XI, who was killed in battle over the city. Turks resettled the city under the Ottomans, changing its cultural makeup over time, although Greeks remained an important part of the population until the early twentieth century. Ottoman building activity ushered in a new age of Islamic architecture, and the church of Hagia Sophia became a mosque, surrounded by four towering minarets. Over time, the Turkish corruption of the Greek phrase *eis teen polin* (into the city) led to the popular renaming of the city as Istanbul. The city became the administrative capital of the Ottoman Empire, and continued as the capital until it was moved to Ankara under the modern state of Turkey in 1923. It remains the largest city in Turkey, and that nation's most important commercial center. In the early twenty-first century it had a population of more than 12 million.

CONSTITUTIONAL BLOC

Twentieth-century parliamentary bloc in Lebanon.

The Constitutional Bloc was formed in 1936 to call for the restoration of the constitution in Lebanon after its suspension by French mandate authorities. It was headed by Bishara al-Khuri, who championed the cause of Lebanon's independence. Although the bloc cannot be considered a political party, it did not differ from other political organizations in Lebanon in terms of its personality-oriented structure. Its members were drawn from the commercial and political elite, who did not agree with the views

of Emile Eddé, a supporter of French policies in Lebanon. It was most active in Mount Lebanon and Beirut, among Maronites and Druze. After 1941, the bloc became identified with British policy in the Middle East. The cohesiveness of the bloc, which was based on the shared goal of independence, quickly splintered after al-Khuri was elected president in 1943. He continued to use the bloc as a tool against his well-organized enemies. It continued to operate as a political force, with limited influence and appeal, into the 1960s. After al-Khuri retired, his son Khalil al-Khuri assumed leadership of the bloc. With the outbreak of the Lebanese civil war in 1975, the bloc ceased to exist, and Khalil retired to France.

CONSTITUTIONAL DEMOCRATIC RALLY

Tunisian government political party, formerly the Neo-Destour Party.

Tunisian nationalists formed the Destour Party in 1920. In 1934, the Ksar Hellal Congress consecrated the rupture between the Néo and Archéo sectors of the Destour under the leadership of Habib Bourguiba and Shaykh Abd al-Aziz Thaalbi respectively. Bourguiba and other younger members of the party formed the Neo-Destour Party, which would successfully lead the national struggle for independence. The French authorities made the party illegal in 1938. In 1964, the party changed its name to Parti Socialiste Destourien (Destourian Socialist Party, PSD). Between 1963 and 1981, the PSD was the only legal political formation in Tunisia. The presidency was held by Mahmoud Materi (1934–1938); Habib Thameur (1939–1948); and Bourguiba (1949–1987).

The structure of the PSD reflected a highly hierarchical division: The National Congress, comprising around a thousand members, met every five years. Below were the party's political bureau (the executive organ of the party), a central committee composed of eighty members, the regional coordinating committees, local circumscriptions, and cells. Bourguiba, heading the party in a highly personal fashion, transformed the Neo-Destour into a grassroots populist party grounded in the Sahel middle class. Prior to independence, Neo-Destourians worked closely with Moroccan and Algerian nationalists. Following independence, the Neo-Destour won the first elections in 1956. A year later, the party won the first local elections in which Tunisian women were allowed to vote, with more than 90 percent of the vote.

The Neo-Destour worked closely with the Confédération Générale des Travailleurs Tunisiens (General Confederation of Tunisian Workers; later the Union Générale des Travailleurs Tunisiens, UGTT), staging numerous demonstrations, riots, and strikes. Salah Ben Yusuf, the Neo-Destour's secretary-general, fled to Egypt in 1952. Under the influence of Jamal Abd alNasir's pan-Arab nationalism, he opposed Bourguiba's gradualist, pragmatic approach toward independence. Ben Yusuf opposed the Paris agreements that had abrogated the Al Marsa Convention of 1883, and upon his return to Tunisia broke with Bourguiba and contested his authority within the Neo-Destour Party. He would eventually return to Cairo to lead a leftist opposition movement from exile until his assassination in 1961.

The introduction of Destourian socialism in 1961 consecrated the party's central role in the state policy of economic interventionism. Following independence, economic reforms led to a decline in the party's influence as a mass movement. Bourguiba's reorganization of the party in 1963 followed the proscription of the Parti Communiste Tunisien (Tunisian Communist Party, PCT; later known as Movement of Renewal). The 1964 congress endorsed centralized state planning, and the party was renamed the Parti Socialiste Destourien (Destourian Socialist Party, PSD). Single-party rule effectively consecrated the fusion of party and state in Tunisia. During the late 1960s and the 1970s, popular discontent with land collectivization and internal divisions within the party led to the expulsion of Ahmed Ben Salah, architect of the centralized state planning strategy and the decolonialization of the Tunisian economy.

The 1971 party congress signaled a new rift between the supporters of economic liberalization and the supporters political liberalization, headed by Ahmad Mestiri, while social unrest kept growing. In

1981, Islamist dissidents formed the Mouvement de Tendance Islamique (Islamic Tendency Movement), and student organizations in combination with workers' movements weakened the influence of the PSD. Other political organizations such as the Mouvement de l'Unité Populaire (Movement of Popular Unity) and the PCT remained very critical of PSD policies. During the extraordinary congress of 1981, the PSD approved a shift toward limited political pluralism while firmly excluding the Islamists from the political process.

On 7 November 1987, Zayn al-Abidine Ben Alı, then prime minister and secretary-general of the PSD, deposed President Bourguiba. In February 1988, the PSD was renamed Rassemblement Constitutionnel Démocratique (Constitutional Democratic Rally, RCD), and Ben Ali was elected president of the RCD during the party's first congress on July 1988. The second congress (1993) confirmed the shift toward complete economic liberalization. In the 1994 presidential elections, Ben Ali ran for office unopposed. In 1999, he was reelected for a third term with 99.4 percent of the vote, running against Mohamed Belhadj Amour and Abderrahmane Tlılı. In accordance with changes made to the electoral code, the RCD currently holds 148 seats in the Tunisian parliament; the opposition parties hold 34 seats. The RCD maintains a strong grip on the political system, amidst increasing popular discontent. Hailed as a model of economic development and liberalization in the United States and the European Union, the government's continuous and often unreported human rights violations, its curtailment of freedom of the press, and its arbitrary imprisonment of members of leftist and Islamist organizations remain the source of harsh criticism.

VANESA CASANOVA-FERNANDEZ

CONSTITUTIONAL REVOLUTION

Movement in opposition to the shah's rule that led to the convening of the majles.

Iran's Constitutional Revolution began in April 1905 when a group of merchants from Tehran sought sanctuary in the Abd al-Azim shrine south of the capital to protest against foreign control of the country's customs administration, the government's economic policies, and the repressive political regulations of the Qajar monarch Mozaffar al-Din Qajar (ruled 1896–1906). The merchants who led this demonstration belonged to a secret society that had formed several weeks earlier to oppose oppression and seek the establishment of a house of justice. Their protest—effectively a business strike—attracted the support of other secret societies with similar grievances. The demonstration was defused after two weeks when the shah agreed to discuss the complaints of the protesters, but he soon left for a prescheduled private tour of Europe and forgot about his promises. The secret society of merchants, as well as other clandestine political groups in Tehran and in Tabriz, the capital of Azerbaijan province and the official residence of the crown prince, circulated pamphlets calling for fulfillment of the shah's promises and the implementation of other reforms. By December 1905, when the shah had returned to the country and it seemed obvious that he would not honor his commitments, a much larger group of two thousand merchants, joined by two of the city's leading clergy and their theology students, again took sanctuary in the Abd al-Azim shrine and demanded, in addition to action on their earlier requests, that the government create a house of justice.

The second protest had been sparked by the arbitrary arrest and beating of two respected sugar merchants, whom the government tried to blame for

the inflationary rise in sugar prices. Popular indignation over this incident was widespread. In addition to the merchants who sought sanctuary, artisans and laborers in the capital went on strike to register their sympathy with the merchants demanding justice. Unable to force an end to the general strike in Tehran, the shah agreed in January 1906 to dismiss the Belgian national who was director of customs and to establish a house of justice. In subsequent months, however, Mozaffar al-Din Qajar again failed to fulfill his promises, thus prompting a third round of demonstrations during the summer of 1906.

The demonstrations of 1906 were ignited by the arrest of a fiery Shiʿite preacher who had denounced the shah's government during religious ceremonies and the arrest of several other critics of the regime. A crowd gathered outside the police station to demand their release; in the ensuing confrontation, the police killed a protester. A huge crowd attended the funeral the next day, and demonstrators clashed with the Russian-officered Cossack Brigade; twenty-two persons were killed and more than one hundred injured. The incident transformed the antigovernment protests into a mass movement. In July 1906, most of Tehran's Shiʿite clergy demonstrated its disapproval of the government by departing in a group for Qom, a shrine city about 90 miles (145 km) south of the capital, thereby leaving Tehran without spiritual direction. In addition, more than ten thousand merchants took sanctuary in the British embassy's summer property in the mountains a few miles north of the city.

By mid-July 1906, most of the capital was on strike; even women organized demonstrations in front of the shah's palace. The growing opposition movement spread to several provincial centers, including Iran's second most important city, Tabriz; committees sent telegrams from all over the country to express sympathy with the protesters and their demands. The main intellectual ferment and negotiations took place among the ten thousand protesters who had camped out for three weeks in the British legation. Their most important decision was to change the former request for a house of justice to a new demand for an elected, constitutional assembly, or *majles.* The crisis forced the shah to accede to the popular demands, and on 5 August 1906 he signed a decree convening a constituent assembly.

The constituent assembly met immediately, drew up an electoral law, divided the country into electoral districts, and scheduled elections. The country's first elected *majles* met in October 1906. It drafted a fundamental law, based on the Belgian constitution, which provided for a parliamentary form of government. Special features that were incorporated into the constitution included articles authorizing the establishment of provincial assemblies and the creation of a body of senior Shiʿite clergymen to judge the conformity of legislation with Islamic law; these two provisions, however, were never implemented. Since the constitution limited the powers of the monarch, Mozaffar al-Din Shah indicated his opposition to the document by denouncing its main architects as religious heretics. His ploy not only failed, but, instead, incited mass demonstrations in favor of the constitution in the capital and several other cities, including Isfahan, Kermanshah, Mashhad, Rasht, Shiraz, and Tabriz. The disturbances climaxed with the assassination of the shah's prime minister, the public suicide of the assassin in front of the *majles* building, and a mass funeral procession for the assassin. Deeply distressed by these developments, the shah reluctantly signed the fundamental law in December 1906, a few days before his death. A supplementary fundamental law was signed by his son and successor, Mohammad Ali Qajar, in 1907. These two documents made up the Iranian constitution, which remained in force until 1979, when it was replaced by a new constitution.

To some historians, the Constitutional Revolution refers only to the events of 1905 to 1907, but other historians also view the struggles over the constitution during 1907 to 1909 as part of the Constitutional Revolution. Although Mohammad Ali (ruled 1906–1909) disliked the limits the constitution placed on his authority, the united opposition to the court within the *majles* initially forced him to abide by the new constraints. Factions of conservatives, moderates, liberals, and radicals soon emerged in the *majles,* however, and their differences over policies throughout 1907 provided the opportunity for the shah and his supporters to make political alliances with the conservatives and some moderates. By June 1908, the shah, feeling strong enough to mount a coup against the *majles,* ordered the Russian colonel of the Cossack Brigade to attack

the volunteer militia defending the *majles* building and to arrest the deputies who had not escaped. After the bombardment, in which more than 250 persons lost their lives, the shah dissolved the *majles* and suspended the constitution.

Mohammad Ali's coup effectively put the capital under his control, but not the rest of the country. In Isfahan, Rasht, Tabriz, and other cities, volunteers took up arms to defend the constitution. For a year, constitutionalists and royalists waged a civil war for control of Iran's provincial centers, with the constitutionalists gradually gaining the upper hand. Constitutional forces finally advanced on Tehran from Rasht in the north and from Isfahan in the south. A mass uprising against the government opened the city to the constitutionalists in July 1909. Mohammad Ali, who had fled to the Russian embassy, was deposed; his twelve-year-old son, Ahmad (ruled 1909–1925), was installed as the new shah; the constitution was reinstated; and elections for a new *majles* were scheduled.

CONSTITUTIONAL REVOLUTION, IMPACT ON WOMEN

The effect of Iran's Constitutional Revolution of the nineteenth century on the status of women in that country.

During the early stages of the revolution and during the entire period of the first *majles* (councils; 1906–1908), women's roles were minimal and their participation kept under control, restricted to staging street demonstrations in support of the constitutionalist religious and social welfare causes. But they also demanded the right for a public, and not just private, education, and many began to attend what were then the only available institutions, the American and the French girls' schools. Here they won the intelligentsia's full support. Since the late nineteenth century, poets and journalists had championed this cause, arguing that it would benefit the fatherland to have educated women raise future generations of Iranians and, by the same token, pleading for the abolition of polygamy. Neither the *hijab* (wearing of the veil) nor the right to vote was addressed. Nonetheless, the *ulama* (community of learned men), led by Ayatollah Fazlollah Nuri, proclaimed their demands to be part of a Babi conspiracy to eradicate Islam in the country.

Following the royalist coup of June 1908, in the period of national resistance to the restored autocracy and throughout the second *majles* (1909–1912), small organizations of women, the close relatives of prominent secular constitutionalist leaders, began to express publicly their aspirations for the right to vote. A few even dared to manifest their revolt against the *hijab* in public. Fearful of the *ulama*'s onslaught, constitutionalist politicians and journalists dismissed these "extremists" as unrepresentative of women's constitutional interests. The Fundamental Law then guaranteed women's right to education, but nothing else. Nonetheless, women's organizations continued to play a role in support of the constitution, increasing pressure on court officials and *majles* deputies in their resistance to the Russian ultimatum that threatened the very existence of the constitutional government. By January 1912, the battle was lost, the *majles* suspended, and women gained no public recognition for their political participation.

CONSTITUTIONAL UNION PARTY

See MOROCCO: POLITICAL PARTIES IN

COORDINATION DES ARCHS (ALGERIA)

A political grouping that grew out of disorders in the Kabylia region of Algeria during the spring of 2001.

On 18 April 2001, a high school student named Massinissa Guermah was killed in a police station in Beni Douala, a small town near Tizi Ouzou, the capital of the Berber region of Kabylia. Over the next several weeks, numerous protest demonstrations took place and violent riots broke out in several localities. Some fifty people were killed in the ensuing disorder.

Bypassing established political parties such as the Socialist Forces Front and the Rally for Culture and Democracy, local activists created a new organization, which was referred to as the Coordination des Archs, Dairas, et Communes (CADC; *archs* refers to the traditional Kabyle clans or tribes, *dairas* to the administrative subprefectures, and *communes* to the local village councils). The CADC organized a series of marches and boycotts while articulating a set of demands that expressed the long-simmering anger of Kabyle youth toward the military-dominated regime in Algiers. Among the grievances summed up in the El-Kseur Platform of June 2001, the new association called for criminal proceedings against the policemen guilty of armed violence, total withdrawal of the National Gendarmerie from Kabylia, and recognition of the Berber language, Tamazight, as a national language.

Initially organized at the departmental *(wilaya)* level of Tizi Ouzou, the CADC quickly expanded into the Interwilaya des Archs, bringing together delegates from seven of the country's forty-eight *wilayas*: Tizi Ouzou, Bejaia, Boumerdés, Bouira, Bordj Bouéridj, Setif, and Algiers. The most prominent figure in the movement was an economist and professor at the University of Tizi Ouzou, Belaid Abrika, a long-standing Berber cultural activist. The group led boycotts of the 2002 parliamentary and local elections, but by 2003 the organization was increasingly viewed as obstructionist and, despite a hunger strike by Abrika, was losing influence.

ROBERT MORTIMER

COPTIC MUSEUM

Cairo museum of antiquities from the Roman and Byzantine eras.

Founded in 1908 by Marcus Simaika, the Coptic Museum in Cairo has the world's greatest collection of antiquities reflecting the culture that flourished in Egypt after the introduction of Christianity in the first or second century. Many of the objects reflect the influence of pharaonic and Greco-Roman artistic styles on early Coptic art. Among the categories of approximately 14,000 antiquities are textiles, sculpture, relief, icons, woodwork, metalwork, glass, ceramics, ivories, and manuscripts. Perhaps the most famous works in the collection are the Coptic gnostic texts known as the Nag Hammadi Gospels, named after the town in southern Egypt near their site of discovery between 1945 and 1948.

UPDATED BY DONALD MALCOLM REID

COPTS

Adherents of the Egyptian Orthodox Church

The Copts are the largest Christian community in the Middle East. Yet determining an exact number is extremely difficult. Population counts of the Copts made by the Egyptian government and by the Coptic Church are vastly divergent. In 1975 the Egyptian government placed the number of Copts at 2.3 million, but the Coptic Church suggested a figure of

6.6 million. A United Nations population estimate for Egypt in the year 2000 reckons the total inhabitants at 64,588,000; of this number, 3,128,000 persons are estimated to be Copts who openly acknowledge their faith. However, in addition to active members of the church, many more Copts are registered in church records (baptisms, marriages, deaths, etc.). Thus, a fair estimate of the actual number of all Copts as of 2000 is 9,817,000.

The term *Copt* comes directly from the Arabic *qbt,* which appears to derive from the Greek *aigyptos* (Egypt) and *aigyptioi* (Egyptians), a phonetic corruption of the ancient Egyptian word *Hikaptah,* one of the names of Memphis. The Greeks used the native name for the ancient metropolis Memphis as a term to describe the whole country. When the Arabs conquered Egypt between 641 and 643 C.E., they used a similar word to name the country's inhabitants *(qibt),* the vast majority of whom were Christian. Thus the word *Copt* began as a geographical and ethnic designation. Later the term *qibt* came to distinguish the native Christian inhabitants from the Arabs, who were Muslims. When the majority of Egyptians gradually converted to Islam, they naturally ceased to be Christians *(qibt).* In that sense, *Copt* and the adjective *Coptic* are relatively elastic in a historical, ethnic, religious, cultural, and social sense.

In theological terms, *Copt* describes an adherent of the Egyptian Orthodox church, which had become a national church after the Council of Chalcedon (451 C.E.). The patriarchs and bishops of several Eastern churches, particularly those of Alexandria in Egypt and Antioch in Syria, refused to accept what has been called the Chalcedonian Definition of Faith. By this exposition, Christ had two natures, human and divine, which coexisted but were not confused with each other. The Western church, with its two seats at Rome and Constantinople, favored this declaration of belief. The patriarchs of Alexandria and Antioch believed that this would divide the person of Christ and destroy his essential unity. Both the content of and the differences between Eastern and Western Christology are often exceedingly difficult to understand. The theology that slowly developed among the Eastern churches has been called *Monophysite,* from the Greek words for "single" and "nature." Notably, Anba Shenouda III, Pope of Alexandria and Patriarch of the See of St. Mark the Evangelist (1971–), and other ecclesiastical officials of the Eastern churches rejected the term *Monophysite.*

Shenouda III, the current Coptic pope, joined the Coptic Orthodox Seminary after graduating from Cairo University. In the 1950s he devoted himself to monastic seclusion and lived for six years as a hermit in a cave he excavated himself. After serving as Bishop of Christian Education and president of the Coptic Orthodox Theological Seminary in the 1960s, Shenouda was proclaimed the 117th pope of Alexandria on 14 November 1971. **© AP/Wide World Photos. Reproduced by permission.**

Perceiving themselves as upholders of the true faith, Copts have always referred to themselves as "orthodox," as the name of their denomination—Coptic Orthodox—indicates. Because several other churches that are in communion with Rome also have "orthodox" as a part of their names, scholars use the phrase "Oriental Orthodox Churches" to designate the churches from Egypt, Armenia, Ethiopia, Syria, and India, which refused to acknowledge the Council of Chalcedon. The Ethiopic Orthodox Church is commonly called Coptic with some justification. Historically, it has shared close ties with the Coptic Orthodox Church of Egypt, especially in its recognition of the Coptic patriarch, but in modern times it came to exist as a separate entity. The liturgy of the Ethiopic Orthodox Church derives much from its Coptic counterpart, although significant differences give it a distinct identity. Nevertheless, many adherents of the Ethiopic Orthodox Church refer to themselves as Copts. Of the other Christian denominations in Egypt, at least two have

the word Coptic in their names: the Coptic Catholic Church and the Coptic Evangelical Church. The former came into being during the late nineteenth century. The Coptic Evangelical Church was established in 1854 by U.S. Presbyterian missionaries. Communicants of both churches represent small minorities that had been drawn from Coptic parishes.

The word Coptic retains its original geographical and ethnic value as descriptive of the art and written language of Egypt in past centuries. The Coptic language is the last phase of the ancient Egyptian language. It is written in Greek letters except for six letters that were taken from Demotic writing. Coptic continued to be the spoken daily language among a considerable segment of the Egyptian population, perhaps as late as the eleventh century C.E., before its gradual replacement by Arabic. Today, Coptic is still used in the liturgy of the Coptic Church.

Coptic art is among the richest and most continuous of the Christian arts in the Middle East. As an independent form, it appeared toward the end of the third century C.E. and survived as late as the fourteenth century. Although Christian themes prevail in Coptic art, both pharaonic and especially classical themes and motifs are also prominent. Coptic art often reflects styles and fashions of the Byzantine world, adapted with originality and local individuality. In the absence of court patronage, it can perhaps be best characterized as folk art. Contemporary Coptic art reflects the deep roots of ancient Egyptian and Coptic theology, art, and culture, and uses several media, including icons, frescos, mosaics, and stained glass windows; icons are produced in the greatest number.

Historians speak of a Coptic Period of Egyptian history from the second century C.E.—the beginning of the formation of the Coptic language—or from 451 C.E.—the Council of Chalcedon—to the Arab conquest of Egypt in 643 C.E. However, although the Copts never ruled Egypt, they contributed and still contribute to all aspects of Egypt's culture, with their most important contribution to world civilization being monasticism.

The French expedition of 1798–1801 under Napoléon is considered a turning point toward Egypt's modernization. Muhammad Ali (1805–1849) as well as most of his descendants, whose rule of Egypt dominated for decades following the French expedition, were relatively tolerant of the Copts. During the nineteenth century, the Coptic population began to flourish, as they became exempt in 1855 from the traditional poll tax imposed on Christians and Jews living under Muslim rule (the *jizya*). This revival was visible in the cultural movement within the Coptic Church sponsored by Patriarch Cyril IV the Reformer (1854–1861), who established many schools and patronized a revival of the Coptic language.

During the first half of the twentieth century a Coptic elite, educated in the West and in Egypt, came to play a crucial role in the economic and cultural development of the country and strove to establish a more democratic system in Coptic community affairs and in the management of church properties. Meanwhile, the Egyptian nationalist movement was gaining ground among the populace, characterized by its vocal opposition to British rule, which had begun in 1882. Mustafa Kamil (1874–1908) struggled to make the Egyptian question an international one and formed the Nationalist Party in 1907. Although some leading Copts joined his political movement, most Copts rejected the movement's religious aspect of pan-Islamism and Kamil's support of the Ottoman Empire. In 1910 a Muslim partisan of the National Party assassinated Prime Minister Boutros Ghali, who was a Copt. His assassination sparked serious quarrels between Copts and Muslims; concord and national unity were reached only in the revolution of 1919. In fact, the forced exile of the Egyptian leader Saʿd Zaghlul to Malta by the British government fueled the popular uprising and resulted in the formation of the largest political party, al-Wafd.

One of the most significant achievements of this revolution was national unity among all Egyptians. It was arguably the highest expression of harmony and understanding between Muslims and Copts in the modern history of Egypt. The emblem of this revolution was a crescent enclosing a cross. Zaghlul succeeded in unifying Muslims and Copts in the Wafd party. Muslims as well as Copts were exiled and put in jail in their struggle for independence. The establishment of a secular and liberal trend in Egyptian nationalism paved the way for the integra-

A Coptic monk studies in a monastery in Wadi al-Natrum in Egypt. Several monasteries were built in this area by monks fleeing persecution in their homelands of Iraq and Syria during the eighth century. One of the more famous is the Monastery of St. Macarius, from which many Coptic popes have been selected. © JOHANNES ARMINEH/CORBIS-SYGMA. REPRODUCED BY PERMISSION.

tion of the Copts into the national movement. The promulgation of a constitution in 1923 allowed the formation of a parliament by general election. Zaghlul and most Copts refused a proportional representation of the Copts in the parliament. Thus the number of elected Coptic representatives in the parliament was much higher than a special status would have allowed. In 1923 Copts comprised nearly 44 percent of the Wafd executive committee. In that sense, the "liberal period" between 1923 and 1952 is unique and is indeed a kind of honeymoon in the relationship between Muslims and Copts.

The second half of the twentieth century brought difficulties for the Copts. Although the Egyptian army did not lack Copts, none of the Free Officers of the military coup of 1952 was a Copt. Because of the wide popular support, this military coup is known as the 1952 Revolution. President Gamal Abdel Nasser's land reform in 1952 and his introduction of social measures during the 1960s fell heavily on wealthy Coptic families, the Coptic patriarchate, and land-holding Coptic monasteries. The number of Copts in high government posts decreased dramatically. Nasser's interest in Arab nationalism led to a departure from Egyptian nationalism. During his tenure (1952–1970), a few Copts had been nominated to the parliament, often in consultation with the Coptic patriarch, so as to keep a formal Coptic representation in the political structure. This led to the gradual abolition of the influence of the Copts in political life and enhanced the role of religious institutions and church hierarchy.

Under President Anwar al-Sadat (1970–1981) the parliament adopted an amendment to the constitution stating that the *Shariʿa* (Islamic law) would be the principal source of legislation in Egypt. Sadat furthered the Islamization of national life and, at the expense of political leftists, favored extreme Islamists, whose influence increased dramatically in Egypt, particularly at universities. Muslim militants

plundered and burned Coptic shops, especially jewelers and pharmacies at al-Minya and Asyut; some churches were attacked in villages throughout Upper Egypt. In 1981 bloody riots resulted in the burning of three churches at al-Zawiya al-Hamra in Cairo; these incidents affected the community to the extent that Pope Shenouda III canceled Easter celebrations. In September 1981 Sadat arrested eight bishops and four priests, and various Muslim clergy including Muslim Brothers were banned. About 2,500 individuals representing all political leanings were detained. Shenouda was forced to stay in the Monastery of St. Pschoi at Wadi al-Natrun under what was effectively house arrest. Ironically, a few weeks later, militant Muslims assassinated Sadat. In the years to follow, political prisoners were gradually released. Shenouda was not allowed to return to his patriarchate in Cairo until January 1985. However, Muslim militants reorganized themselves and targeted unarmed Christians, plundered shops, and burned churches. During the 1980s and the 1990s, those militants attempted to assassinate a number of ministers and slaughtered scores of foreign tourists in their insurgency against the Egyptian government under President Husni Mubarak. Most Muslim politicians and intellectuals strongly condemned the criminal activities of these militants.

Despite the guarantee of religious equality before the law contained in article 40 of the Egyptian constitution, Copts suffer discrimination, particularly concerning the appointment to governmental leadership positions such as provincial governors, city managers, police commissioners, university presidents, and directors of educational districts. Scarcely any Copts are appointed to posts in the judicial system, police ranks, or army. Copts are not proportionally represented in the People's Assembly: only 2 out of 444 are Copts. Restrictions on the building of churches often means that building projects take years or even decades. Still, the Coptic community, because of its relatively pacifist attitude, its economic success, and its members' profound attachment to their Christian faith and church, has sustained itself throughout 1,350 years under Islamic rule.

CORCOS FAMILY

A Jewish family of Morocco.

The Corcos family was one of the premier families of Morocco's Sephardim from the sixteenth through the twentieth centuries. They produced many rabbinical scholars.

Members of the Corcos family also held posts as court advisers, bankers, and *tujjar al-Sultan* (commercial agents of the ruler). Several acted as British and American consular representatives. Straddling the traditional and modern worlds, the Corcoses were a classic example of the Jewish comprador class.

NORMAN STILLMAN

CORSAIRS

Naval freebooters (often mistakenly called pirates) of many nations.

The corsairs sailed under the colors of the so-called Barbary states of North Africa from the early sixteenth century until the European naval powers suppressed their activity after the end of the Napoleonic wars. The North African corsairs attacked commercial ships sailing the Atlantic Ocean and Mediterranean Sea of those Christian powers that did not have treaty relations with their political masters, seized the vessels, cargoes, and crews, and sold them in their home ports—Algiers, Tunis, Tripoli, Rabat-Salé, and other smaller coastal towns. In Algiers, and to a lesser extent in Tunis and Tripoli, the corsairs came to control the (nominally) Ottoman Empire's political systems in the latter part of the sixteenth century, while in Morocco the Alawi (of the Alawite dynasty) sultans used them as a tool of their foreign policy after their rise to power in the 1660s. The corsairs were chief participants in the Barbary wars that ended in 1821.

COSSACK BRIGADE

Iranian cavalry unit that became the basis for the Iranian national army under Reza Shah.

Naser al-Din Shah established the Iranian Cossack Brigade in 1879. Hoping to emulate the ruthless reputation of Russia's Cossacks, he solicited the czar's assistance in contracting for a few Russian instructors to create a similar six-hundred-man mounted force. Reduced in its early years to two hundred, the so-called brigade (normally a 5,000-troop unit) was almost disbanded. In 1896, it helped maintain order in the streets after the shah's assassination; notoriety came when the shah used the unit to shell and intimidate the *majles* (parliament) in 1908.

With only Russians in command until 1920, the unit, which was reorganized as a division in 1916, served as a visible manifestation of Russian influence in northern Iran. The departure of all czarist officers in 1920 permitted Reza Khan, who had risen through the ranks, to take command of the division. In February 1921, his Cossacks supported the coup that led to the overthrow of the Qajar dynasty and transformed Reza Khan into Reza Shah Pahlavi by 1925. Under his control, the Cossack division became the nucleus of the forty-thousand-man national army he demanded as his first priority.

COTTON

A valued fiber crop.

An important fiber crop in the Middle East from the early Islamic period onward, cotton acquired new significance in the nineteenth century as the region's paramount export crop and most important raw material link to the world of European industrial capitalism. Egypt took pride of place in the development of the cotton industry as the earliest and long the largest producer of cotton for export. Traditionally, Egyptians had grown several different short-fiber varieties for domestic use, but under Muhammad Ali the government experimented with a locally discovered long-fiber variety of the sort preferred by European textile manufacturers. The first large harvest, overseen at every stage by experts from Syria and Anatolia, was realized in 1822. It brought a good price in Europe, where specialists appraised it as second in quality only to American Sea Island cotton from Georgia.

Poor agricultural practices and quality control, stemming partly from the Egyptian government monopoly's reluctance to reward peasant farmers

Young girls from poor villages in the Nile Delta pick cotton during the early fall harvest. Tens of thousands of children work the fields during Egypt's annual cotton harvest, which begins in September. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

for following the advice of the experts, led to a decline after initial success. After the mid-1830s, the frustration of Muhammad Ali's ambitious industrialization efforts, which had included textile factories for producing military uniforms, contributed to the decline. Recovery was unexpectedly prompted by the American Civil War, which made it difficult for European mill owners to acquire high-quality raw materials. Exports soared from 25,000 tons, the plateau reached in the 1850s, to 125,000 tons in 1865. After a postwar readjustment, exports resumed their increase, hitting a record 374,000 tons in 1910. By that time, cotton, to which almost a quarter of all cropped land was dedicated, accounted for 80.1 percent of Egypt's total exports, up from 66.6 percent in 1884. Later, nationalist critics charged the British, in control of Egypt since 1882, with turning the country into a giant cotton farm for the benefit of British manufacturers.

The American Civil War stimulated cotton exports from Syria and Anatolia, as well, but the postwar slump in prices drove production back down. Iran, too, shared in the wartime boom; but there the postwar fall in prices was eventually countered by a twelvefold expansion in general trade with Russia, particularly from the 1880s on. By World War I, Russia received 70 percent of Iranian exports, with cotton the most important product. Volume was 25,000 metric tons in 1913, amounting to some 95 percent of all cotton exports. In the 1930s, the Iranian government entered on an industrialization drive that increasingly exploited cotton for domestic manufacturing. By the end of the decade, production had grown to 38,000 metric tons, of which only one-seventh was being exported; and Iranian mills were supplying half the domestic market for cotton cloth.

Cotton developed as the major cash crop of the Sudan from 1925 onward with the development of new irrigation projects. Turkish production expanded after World War I and boomed in the 1950s when the Korean War raised world commodity prices. The same circumstances turned cotton into Syria's biggest cash crop. Israeli and Afghan production expanded in the 1960s, much of the latter country's cotton being destined for export to the Soviet Union. By the late 1970s, 11.6 percent of the world's cotton production came from the Middle East, and the region encompassed 7 percent of the total world acreage devoted to cotton. The largest outputs, in thousands of metric tons, were those of Turkey (522), Iran (490), Egypt (413), Sudan (166), Syria (150), Israel (65), and Afghanistan (50). Much smaller amounts were produced in Morocco, Iraq, Jordan, and Yemen.

Cotton is the fabric of choice for clothing in much of the Middle East. Its lightness and absorbency particularly suit it to hot climates. Terms of Middle Eastern origin pertaining to types of cotton cloth—damask from Damascus, gauze from Gaza—testify to the long history of cotton textiles and are a reminder of a time when many cities of the area were known for their distinctive weaves and patterns. The transition from handwoven cotton fabrics to factory-made products initially favored the export of raw fiber and the import of inexpensive finished goods. This led, in turn, to disarray in the domestic textile industry, largely based on small workshops. Though tens of thousands of workers were still using handlooms at the end of World War I, and such distinctive local fabrics as the block-printed cottons of Iran and the embroidered tablecloths of Damascus survive to this day as choice products of national handicraft industries, most cotton textile production now takes place in modern spinning and weaving mills.

In 1977 the region produced 500,000 metric tons of cotton yarn, with the highest output from

Egypt, Turkey, and Syria. It also produced 2,640 million square meters of cotton fabric, with production concentrated most heavily in Egypt, Iran, and Syria. These figures represent approximately 5 percent of total world production from a region then comprising roughly the same proportion of the world's population.

COUNCIL FOR DEVELOPMENT AND RECONSTRUCTION (CDR)

Council founded to design and supervise the reconstruction of Lebanon in 1977.

The Council for Development and Reconstruction (CDR) was founded to design and supervise the reconstruction of Lebanon in 1977 when the government falsely assumed that the civil war had ended. The CDR was supposed to receive and disburse foreign aid money to rebuild Lebanon, to assess the extent of damages resulting from Lebanon's civil war, and allocate international and Lebanese financial aid for reconstruction purposes.

The CDR enjoyed wide powers, often superior to those of the cabinet, and was directly accountable to the office of the prime minister. In 1978, $454 million was committed by the CDR for road repairs, housing, transportation, and the rebuilding of Beirut International Airport. In 1983, following Israel's invasion of southern Lebanon, which resulted in massive destruction and thousands of deaths, the CDR could raise only $571 million of the $15 billion necessary for the rebuilding of Lebanon's infrastructure. International and Arab pledges of financial support were never totally forthcoming; some countries did not make good on their pledges. Between 1985 and 1988, the activities of the CDR were undermined by government paralysis, rampant inflation, financial crisis, and the growing violence inside Lebanon.

In 1990, following the Taʾif Accord and the formation of a new government in Lebanon, the CDR was reinstated, and it became an arm of the political and economic apparatus of powerful prime minister Rafiq Bahaʾuddin al-Hariri.

COX, PERCY

[1864–1937]

British diplomat and colonial administrator.

After six years (1884–1890) in the British and Indian armies, Sir Percy Cox entered the Indian Political Department, where he was to spend most of the rest of his professional life. At this time, the government of India controlled British diplomatic relations with much of the coast of East Africa and with the shaykhdoms of the Persian (Arabian) Gulf. After postings at Zailaand and Berbera (Somalia), Cox was appointed British consul and political agent at Muscat (now a part of Oman), his first major post, in 1899. His knowledge of Arabic was crucial in enabling him to restore the relationship between the sultan, Faysal ibn Turki al Bu Saʿid, and the British and Indian governments, which had become strained as France attempted to replace British influence. By 1903 Faysal's subsidy had been restored, Faysal's son Taymur had attended the Delhi Durbar, and Lord Curzon, the viceroy of India, had

visited Muscat and invested Faysal as Grand Commander of the Order of the Indian Empire (GCIE).

Cox spent most of the rest of the period before World War I in the Gulf, first as acting political resident and political resident, then as consul general (under the British minister in Tehran) for southwestern Persia (now Iran) including the Gulf islands, at a time when British trade with the area was rapidly increasing. In 1914 Cox, who had been knighted in 1911, was appointed secretary to the Foreign Department of the government of India. But a few months later, at the outbreak of World War I, he became chief political officer to Indian Expeditionary Force "D" that landed at Iraq's Fao Peninsula at the end of 1914. Apart from two years as acting British minister to Tehran (1918–1920), the rest of Cox's career was spent in Mesopotamia/Iraq. In the early part of the war, he also played a crucial role (although at a distance) in ensuring the neutrality of the Saudi ruler of Najd, Abd al-Aziz ibn Saʿud al Saʿud (Ibn Saʿud), and postponing, if not ultimately preventing the differences between the former and Britain's other protégé, Husayn ibn Ali, Sharif of Mecca, from breaking out into open conflict.

Southern Mesopotamia was invaded in the last few weeks of 1914; British imperial troops reached Baghdad in March 1917 and Mosul a few days after the 1918 armistice that ended the war. One of the consequences of the fact that British authorities conducted the Mesopotamia campaign from India and the campaign in Egypt and Palestine from London and Cairo was that Cox, head of Iraq's civil administration, was not informed of the details of the Sykes-Picot Agreement until May 1917. As neither Cox nor his subordinates (notably Arnold Wilson) were kept abreast of London's thinking on possible future developments in the Middle East, they proceeded to set up an administration on the lines of the British Indian provinces with which they were familiar. When it became clear, toward the end of the war, that this kind of old-style colonialism was no longer acceptable (in the new international atmosphere that engendered the League of Nations), the result was a period of great uncertainty for British officials in the field.

Lord Curzon had asked Cox to go to Tehran to negotiate a new Anglo–Persian Agreement, but the turbulent political circumstances in Persia made this impossible. By June 1920, when he was appointed British high commissioner in Iraq, after spending nearly two years in Tehran, the situation had become extremely volatile, especially since the award of the Iraqi mandate to Britain at the San Remo Conference in April. During the summer, a rebellion broke out that threatened the whole future of the British connection with the country; Cox advised firmly against the lively "Quit Mesopotamia" campaign in the British press. He went to Iraq in the autumn and managed to secure the candidature of Faisal I ibn Hussein (whom the French had ousted from Syria) for the throne of Iraq. In October 1922, Cox forced through the signature of the Anglo–Iraqi Treaties (which replaced the mandate in form while maintaining its substance) and fixed the borders between Kuwait, Saudi Arabia, and Iraq over the next two months. After his retirement from Iraq in May 1923, he acted as British plenipotentiary in the negotiations over the Anglo–Iraqi frontier with Turkey in 1924.

CRANE, CHARLES R.

[1858–1939]

U.S. philanthropist, internationalist, and advocate for Arab independence.

Heir to a fortune from his father's plumbing-fixture business, Charles R. Crane was a major contributor to Woodrow Wilson's U.S. presidential campaigns. His experience as a member of the King-Crane Commission of 1919 turned him against Zionism and made him a passionate spokesman for the independence of the Arab states. Following a term as a U.S. minister to China (1921–1922),

Crane founded the New York–based Institute for Current World Affairs (ICWA) in 1925. The institute employed field representatives in Mexico, Jerusalem, and occasionally Moscow. The representatives compiled regular reports on developments in their regions and shared their expertise during ICWA-sponsored lecture tours to major U.S. universities. The reports were also made available to the U.S. State Department. From 1930 to 1941, the institute's Middle East representative was George Antonius, who researched and wrote his groundbreaking study *The Arab Awakening*; while in the employ of the ICWA. In the late 1920s Crane became so enamored of the rugged beauty of Yemen that he sponsored a team of engineers to develop that country's communications infrastructure.

CREECH JONES, ARTHUR

[1891–1965]

British colonial secretary.

A member of the Labour Party and an expert on imperial issues, Arthur Creech Jones served as colonial secretary in Clement Attlee's government from 1946 to 1950. In this capacity, he was formally responsible for the British administration of Palestine, although the primary determinant of government policy there was the Foreign Office, headed by Ernest Bevin. Creech Jones was involved in discussions and negotiations over the report of the Anglo-American Committee of Inquiry into the Problems of European Jewry and Palestine (1946), the termination of the British mandate over Palestine, the transfer of responsibility to the United Nations, the partition of Palestine between Jews and Arabs, and the resettlement of European Jewish refugees in Palestine. Although mildly pro-Zionist, he presided over a British policy that incurred the violent opposition of the Zionist movement.

Bernard Wasserstein

CRÉMIEUX DECREE

French legislation that granted full French citizenship to the Jews of French colonial Algeria.

Named for Adolphe Crémieux, France's minister of justice, the Crémieux Decree was one of a series of acts affecting the political organization of Algeria that were issued by the French republic on 24 October 1870, shortly after it had come to power. Since the French occupation in 1830, Algerians had been French subjects but not French citizens. Only a handful had applied for naturalization, primarily because doing so necessitated acknowledging the primacy of French law and renouncing the right to be judged in accordance with religious statutes—a step almost no Muslims and very few Jews were prepared to take.

Because the Crémieux Decree accorded Jews—a religious minority in Algeria—a right denied to the country's religious majority, it angered Algerian Muslims. Further alienating Muslims was the decree's automatic application to the entire Jewish community, without conditions concerning their acceptance of the French legal system. Moreover, many of the European settlers in Algeria were opposed to the decree, because it permitted Algerian Jews to vote with them for local officials as well as for Algeria's seats in the French parliament.

Shortly after the passage of the Crémieux Decree, revolts erupted in the Algerian countryside, which threatened French settlers rendered especially vulnerable by the withdrawal of significant portions of the French army for service in the Franco–Prussian War. Asserting that Muslim anger over the Crémieux Decree had directly inspired these challenges to French authority, many settlers demanded its abrogation before it caused further troubles.

The settler reaction against the naturalization of the Jews was so vehement that the government did consider withdrawing the decree, but refrained from doing so to avoid antagonizing European Jewish financiers whose support it badly needed. It became clear in the light of subsequent evidence that the decree had played little, if any, role in sparking the rebellions. Rather, the rural Algerian Muslims involved in them had seized the opportunity presented by the decrease of French military power to challenge the newly constituted republican government—which, they were convinced, would sacrifice their interests while promoting those of the French settlers.

Settler opposition to the decree—and the deliberately deceptive attempt to tie it to the revolts—revealed a pervasive strain of antisemitism that continued to recur among lower-class Europeans in Algeria throughout the late nineteenth and early twentieth centuries. In 1940, during World War II, the German-sponsored French Vichy government abolished the Crémieux Decree when it took control of Algeria, but the provisions were reinstated after the war and remained in effect until the end of French rule in Algeria, in 1962.

CRIME

See LAW, MODERN

CRIMEAN WAR

The Crimean War developed out of a basic misunderstanding between Great Britain and imperial Russia over fundamental aims regarding the disposition of the territories of the greatly weakened Ottoman Empire.

About 1830, a Russian war against the Ottoman Empire had assured the independence of Greece. Until that time, the British, a close trade partner of Russia, had largely acquiesced to Russian acquisition of protector status over certain of the Ottoman Empire's Orthodox Christian territories, such as Serbia and the Romanian principalities.

There had always been Russophobes among British leaders, including William Pitt, the Younger, and George Canning. But it was only when Lord Palmerston was appointed secretary of state for external affairs that a clear British policy concerning the Middle East was conceived. The Treaty of Hunkar-Iskelesi, following Egypt's invasion of Asia Minor in 1833, appears to have been the catalyst. Apart from awarding to Muhammad Ali Pasha control of Syria and the island of Crete, a secret clause recognized Russia's right to intervene in Turkish affairs to "protect" the interests of Orthodox subjects. Palmerston made it clear to Parliament that this arrangement must be undone. He proposed that, to protect Britain's lifeline to India, Britain must either station soldiers in the Middle East at strategic points or energetically assist the Ottoman leadership to reform its armed forces and liberalize its system of government.

Britain chose the less expensive route of assisting such pro-British viziers as Mustafa Reşid Paşa and their protégés to reform the Ottoman system. Upon the accession of Sultan Abdülmecit I in 1839, the Ottoman government launched the so-called Tanzimat reform, which would culminate in the first Ottoman constitution of 1876. Also in 1839, the combined European powers forced Muhammad Ali, who was on the verge of usurping further powers from the Ottoman sultan, to withdraw his forces from Syria and the Sudan in exchange for the conciliatory gesture of receiving Egypt as his hereditary kingdom.

Despite this heightened British interest in the Mediterranean region, apparently Russia missed the message. When Czar Nicholas I (1825–1855) paid a state visit to Britain in 1842, he queried the British about the disposition of "the Sick Man of Europe." In typical British fashion, officials in London failed to give the czar a direct answer; consequently, he and his delegation concluded that if Russia strengthened its hold over Ottoman Turkey, Britain would not be upset.

A clash of interest and a cause célèbre was not long in developing. Sultan Abdülmecit, after consulting the powerful and popular British resident

Attendants during the Crimean War flank Ismail Pasha, mounted on horse. The photograph was taken in 1855 by the world's first war photojournalist, Roger Fenton. © HULTON-DEUTSCH COLLECTION/CORBIS. REPRODUCED BY PERMISSION.

ambassador, Stratford Canning, decided to award to France the traditional function and title of Protector of the Holy Sepulchre in Jerusalem. Imperial Russia, which annually sent thousands of pilgrims to the Holy Land and had recently invested sizable funds in Jerusalem for churches and pilgrim hostels, took grave offense at not receiving the honored designation. After long drawn-out bickering over the issue, Russia issued an ultimatum. With the Ottomans supported by the British ambassador, who now ordered the British fleet into the Black Sea, Russia declared war and marched on the Balkans, where the Turks put up a stiff resistance. Meanwhile, the British and French landed troops in the Crimea in 1853 and 1854 and besieged Russian fortifications at Inkerman and Sebastapol. Ill-equipped and ravaged by cholera, the Russians capitulated in 1855, and Czar Nicholas abdicated to be replaced by Czar Alexander II.

In the Peace of Paris (1856), Ottoman Turkey, France, Britain, and Austria—the latter not having been an active participant—forced upon Russia a humiliating settlement. Russia was to cease its meddling in Ottoman affairs, including Romania, and it was not permitted to fortify any point on the Black Sea. Her naval vessels also were placed under strict control of the allies.

This embarrassing result was an important factor in forcing Czar Alexander to declare the liberation of the serfs in 1861. Moreover, the heavy commitment by Britain in the war and the great loss of life, in spite of heroic medical assistance by Florence Nightingale's field hospital in Istanbul, played a major role in Britain's decision twenty-five years later to occupy Cyprus and then Egypt to assure its lifeline to India without recourse to Ottoman Turkey.

CRIMES OF HONOR

Crimes, usually by men against women, committed in the name of honor.

The terms *crimes of honor* and *crimes committed in the name of honor* are commonly used to refer to violence with a claimed or imputed motivation related to honor. Recent regional and international attention to crimes of honor pays most attention to honor killings, which are documented across communities in different parts of the Middle East, including Jordan, Palestine, Israel, Lebanon, Egypt, Turkey, and Iraqi Kurdistan, as well as elsewhere in the world. The honor that is claimed or assumed to be behind the murder is family honor rather than the fidelity of a woman to her husband. The majority of victims are female and the majority of perpetrators are male. Family honor may be held to be impugned by sexual "misconduct" on the part of a woman—that is, intimate relationships with a man to whom she is not married. Honor killings thus typically involve the murder of a woman by a male blood relative who claims as motivation or defense her actual or suspected sexual activities outside marriage.

A number of civil organizations in the Middle East, particularly women's groups, conduct research, support, and advocacy activities related to crimes of honor. One target of their efforts is legislative and judicial policy. In some Arab states, there remains a partial defense in law (in Jordan, it is an absolute defense) in the event that a man surprises his wife or one of his close female relatives in the act of adultery and kills her and/or her partner in the act. Such

provisions have antecedents in both French and Ottoman penal codes of the nineteenth century. Recent research shows that, in defending their actions, perpetrators rely on other partial defenses available in the law, notably that they acted in a "fit of fury" and in defense of their honor. Sentences may be substantially reduced in such cases. Research also shows that husbands as well as natal family members have recourse to arguments of honor in seeking reduced sentences for murder.

Among activists seeking to eliminate crimes of honor, there is deep discomfort over the apparent meaning of *honor* in the construction *crimes of honor,* since it implies that women embody the honor of males and seems to endorse violence against women. Using the term *honor killing* risks endorsing the description articulated by the perpetrator and obscuring (as may be the intention on the part of the perpetrator) the real motivation for the crime, which may be related to property disputes or other family or nonfamily matters.

Attention to crimes o f honor has increased in recent years across the region, enhanced by regional networking among women's organizations, and has been matched by growing attention among international organizations and at the United Nations.

CROMER, LORD

See Baring, Evelyn

CROSSMAN, RICHARD
[1907–1974]

British statesman and journalist.

The son of a judge, Richard Howard Stafford Crossman was an Oxford don, a journalist (long associated with the *New Statesman* and *Nation*), and a leading figure in the British Labour Party. During World War II he served in the Psychological Warfare Division of the British Army and in the spring of 1945 was one of the first British officers to enter the concentration camp at Dachau. A few weeks later he was elected to Parliament. Later that year the foreign secretary, Ernest Bevin, appointed Crossman to the Anglo-American Committee of Inquiry into the Problems of European Jewry and Palestine. The committee's report, submitted in April 1946, included a recommendation that 100,000 Jewish "displaced persons" be permitted to enter Palestine. The recommendation was rejected by the British government, deepening the Anglo-American rift over Palestine. Thereafter, Crossman strongly opposed British policy in Palestine, incurring the enmity of Bevin. Probably as a result, Crossman failed to secure a ministerial appointment before the fall of the Labour government in 1951. In 1955 to 1956 he served unproductively as a liaison in unofficial talks between Israel and President Gamal Abdel Nasser of Egypt. He held senior positions in Harold Wilson's government between 1964 and 1970. Toward the end of his life, Crossman was appointed official biographer of the Zionist leader Chaim Weizmann, whom he had known and greatly admired, but he completed only a fragment of the work before his death in 1974.

CURIEL FAMILY

Family of European Sephardim and Marranos who became active in Jewish life in Egypt in the nineteenth century. Most were Italian nationals who entered the banking profession.

The most noted family member was Henry Curiel (1914–1978), who joined Marxist groups during the years between the two world wars. In 1941, he opened a bookshop in Cairo, where Marxist and antifascist elements engaged in political discussions. As a fervent proponent of Egyptianization despite his communist leaning, Curiel was instrumental in creating the Egyptian Movement for National Liberation (al-Haraka al-Misriyya lil-Taharrur al-Watani; MELN) during World War II to promote the idea among Marxists. In 1946, Curiel's MELN and Hillel Schwartz's pro-communist ISKRA merged to become the Democratic Movement for National Liberation (al-Haraka al-Dimuqratiya lil-Taharrur al-Watani; HADITU), and membership quickly rose to several thousand.

HADITU enjoyed an ephemeral existence, for in May 1948, in the wake of the Palestine war, many of its activists were arrested along with the Zionists. HADITU was organized into sections of students, workers, women, and even army officers. Pursuing the Soviet line, HADITU advocated the creation of a secular democratic state in Palestine integrating Jews and Arabs. Subsequently, however, it advocated the two-separate-states solution—Arab and Jewish. In 1950, following the emergence of Egypt's Wafdist government, noted communists, either interned or under surveillance, were expelled from Egypt. Henry Curiel spent the rest of his life in Europe, promoting revolutionary movements. In 1978, he was assassinated in France.

CURZON, GEORGE NATHANIEL
[1859–1925]

English statesman who stressed Iran's strategic importance to Britain.

Born in Britain, George Nathaniel Curzon, the Viscount of Keddelston, was emerging as a British authority on the Middle East when he traveled to Iran in 1889 as a newspaper correspondent. During the six months he spent traveling throughout the country on horseback, he became impressed with Iran's importance to the strategic defense of British India. Russia had become Britain's principal imperial rival in central Asia, and Curzon perceived Russian interests in the region as being inimical to those of Britain. In his monumental work, *Persia and the Persian Question,* he argued that Britain should protect Iran, the gateway to India, from European (and especially Russian) encroachments. The book also contained insightful descriptions of Iran's politics and society at the end of the nineteenth century.

Following his tour of Iran, Curzon was appointed foreign office undersecretary for India and subsequently viceroy of India. As the de facto British ruler of India from 1899 to 1905, he played a major role in shaping policy toward Iran, which fell under the purview of the India office. In 1903, Curzon made a ceremonial naval visit to the Persian Gulf that he viewed as intended to convey to Russia the extent of British power in the area.

Curzon was appointed to the House of Lords after he returned home in 1905. He distrusted efforts by the government to establish an understanding with Russia and opposed the Anglo–Russian Agreement (1907), which he criticized for abandoning

British interests in Iran to Russia. After World War I, he was appointed foreign secretary. He was the architect of the Anglo–Iranian Agreement (1919), which would have made Iran a virtual British protectorate; much to his disappointment, the Iranian parliament failed to approve the controversial treaty.

CYPRUS

The largest island in the eastern Mediterranean.

The Cyprus Republic was established as a sovereign independent state in 1960. It is a presidential republic in which the president is elected by popular vote to a five-year term and the legislature consists of the unicameral House of Representatives. Covering 3,700 square miles (9,251 sq km), Cyprus lies south of the Turkish mainland and east of Syria. Prior to 1960, Britain ruled Cyprus, after having annexed it from the Ottoman Empire in 1878.

Cyprus has been divided since 1974 when Turkey invaded and occupied the northern part of the island. Turkey's troops control this territory, which makes up about a third of the island. The Turkish occupation of 1974 caused 200,000 Greek Cypriots to move southward and 50,000 Turkish Cypriots to relocate to the occupied territories. In 1983, a Turkish Republic of Northern Cyprus was established, but has not been recognized by any country besides Turkey.

Population and Major Cities

The last census to survey the entire island, in 1973, recorded a population of 631,788, of whom about 80 percent were Greek-speaking Orthodox, 18 percent Turkish-speaking Muslims, and the remaining 2 percent Maronites and Armenians. A 1986 census found the population in nonoccupied Cyprus to be 677,200, whereas that in the north was estimated to be about 160,000 (not including about 65,000 people from mainland Turkey who had settled in northern Cyprus). An official estimate for the population of the entire island in 1991 came to 708,000.

The capital of Cyprus, Nicosia, was divided by a "green line" that separated the northern occupied part from the rest of the city and effectively closed the city's international airport. The other major cities are Larnaca (where the international airport was relocated), Limassol, and Paphos; in occupied Cyprus, the largest towns are Kerynia, virtually deserted since the invasion in 1974, and Famagusta. With the exception of Nicosia, all the major towns are seaports. Two mountain ranges on the island run east to west, one in the north and the higher Troödos range in the south.

Economy

After Cyprus gained independence in 1960, its economy changed dramatically. Within the next three decades, the formerly agrarian character of the island was transformed as domestic manufacturing and international trade were developed vigorously, in the process raising the per capita income from $350 in 1960 to $7,500 in 1986. The development of tourism was also a significant factor in this period.

The millet system, which operated in Cyprus during the period of Ottoman rule (1570–1878), allowed the Greek Orthodox church of Cyprus to play an important role in the affairs of the majority Greek-speaking population of the island. The leader of the church, Archbishop Kyprianos, and a group of notables who supported the Greek war of independence (1821) were executed by the authorities. The Tanzimat reforms of 1839 and especially the Hatt-i Hümayun reforms introduced in Cyprus in 1856 improved living conditions for the Greek Orthodox inhabitants and enhanced their commercial and educational opportunities.

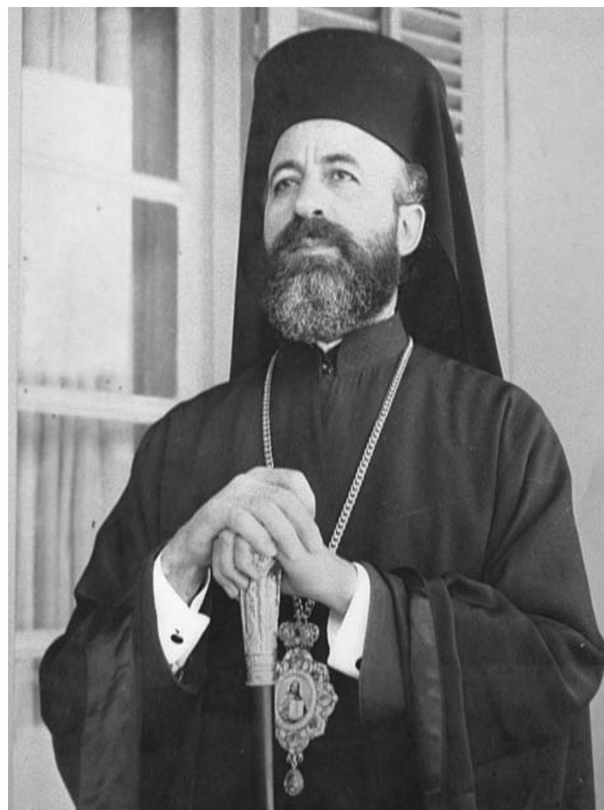
British Rule

Cyprus was awarded to Britain at the Berlin Congress (1878), and Britain took over its administra-

tion. The island, however, remained formally part of the Ottoman Empire until 1914, when it was annexed by Britain as a consequence of the Ottoman Empire's siding with the Central Powers in World War I. British rule brought a greater degree of self-government for the population and a Western-based judicial system but also much higher taxation, imposed to finance the compensation Britain had undertaken to pay the Ottomans after 1878.

The disaffection of the local Greek Orthodox population with British rule served to encourage sentiment in favor of union with Greece. During an uprising in support of *enosis* (union with Greece) in Nicosia (1931), the British Government House was burned down. The authorities retaliated by suspending the island's legislative council. The pro-enosis movement grew again in the late 1940s after the referendum—organized by the all-party Ethnarchic Council under the new Greek Orthodox Archbishop Makarios III—that decided overwhelmingly in favor of union with Greece.

The Greek Cypriots took their case to the United Nations (UN) and Archbishop Makarios traveled to the United States to publicize the movement, but the UN assembly declined to take up the issue and more anti-British demonstrations occurred on Cyprus. On 1 April 1955 attacks on British installations signaled a new phase in the island's anticolonial struggle. The campaign was led by the Ethniki Organosis Kipriakou Agonos (EOKA; National Organization of Cypriot Fighters), a Greek Cypriot guerrilla organization headed by Georgios Theodoros Grivas, a colonel of the Greek army who used the nom de guerre Dighenis. In retaliation, Britain exiled Archbishop Makarios and his close collaborators to the Seychelles (1956). While diplomatic initiatives began to resolve the Cyprus crisis at the UN and in London (1957), the minority group of Turkish Cypriots on the island, fearing the consequences of enosis, declared themselves to be for either a federation or partition.



Makarios III (1913–1977), statesman and Orthodox Eastern archbishop (1950–1977). He supported the enosis movement, the political unification of Cyprus and Greece, and was the first president of independent Cyprus (1959–1977). **© Library of Congress. Reproduced by permission.**

Independence and Internal Conflict

Diplomatic negotiations between the British, Greek, and Turkish governments led to the Zurich Agreement between Greece and Turkey and the London Agreement between Britain, Greece, Turkey, and the Greek and Turkish Cypriot leaderships. The series of arrangements brought about the establishment of an independent state, the Cyprus Republic, whose sovereignty was to be guaranteed by Britain, Greece, and Turkey. Small garrisons of Greek and Turkish forces were to be stationed on Cyprus, and the rights of the Turkish Cypriot minority were enshrined in the constitution, which provided for the office of a Turkish Cypriot vice president of the republic with extensive veto powers. In December 1959, Makarios was elected president and Fazil Kuçuk vice president. Elections for the legislative assembly were held in 1960, and in August of the same year the last British governor, Sir Hugh Foote, announced the end of British rule on the island (Britain retained two military bases under its sovereignty), thereby paving the way for the formal proclamation of the Cyprus Republic.

After a breakdown in Greek Cypriot and Turkish Cypriot relations led to intercommunal fighting

in 1963, the areas populated by Turkish Cypriots were separated administratively by a so-called green line. When the situation continued to be tense in 1964, the Greek Cypriots began fearing a military invasion from mainland Turkey. Through a series of negotiations held under the aegis of the UN, diplomats sought a more practical resolution of the intercommunal conflict. Their proposals ranged from a reaffirmation of the original constitutional structure to either union with Greece or division of the island, but none of these measures was acceptable to both sides. The arrival of a UN peacekeeping force (1964), however, helped to reestablish peace. By remaining committed to preserving the Cyprus Republic, Makarios incurred the opposition of the Greek Cypriot nationalists and their leader, Colonel Grivas. Aided by the Greek dictatorship established in 1967, Grivas, working through an organization named EOKA-B, led a renewed struggle for enosis from 1971 till his death in 1974.

Growing conflict between Makarios and the Greek dictatorship culminated in the latter's support of Makarios's overthrow and the imposition of a dictatorship headed by Greek Cypriot nationalist Nikos Sampson (July 1974). Makarios survived an assassination attempt and left the island. Claiming to be exercising its rights as a guarantor of the sovereignty of Cyprus, Turkey launched a military invasion and eventually placed the northern third of the island under its control. The Greek dictatorship and the Sampson regime collapsed, and Glafkos Clerides was made acting president, pending the return of Makarios in December 1974.

After 1974, the two sides undertook numerous negotiations and held many meetings under the auspices of the UN, whose General Assembly called for the withdrawal of the Turkish occupying forces and the return of all the refugees to their homes. Several plans designed to resolve the crisis were submitted and although the Greek Cypriots agreed to a number of successive concessions, no overall arrangement has been acceptable to both sides.

Makarios died in 1977. His successor, Spyros Kyprianou, was president until 1988. As the candidate of the Democratic Party, he then lost the presidential elections to George Vasileiou, who was supported by, among others, the large Communist Party (AKEL). Vasileiou's tenure ended in 1993, when Glafkos Clerides won the presidential elections. In the meanwhile, Turkish Cypriot leader Rauf Denktash had declared the establishment of the Turkish Republic of Northern Cyprus (TRNC) in 1983. He was elected president of TRNC in 1985 and reelected in 1990.

ALEXANDER KITROEFF

CYPRUS CONVENTION (1878)

Agreement to let the British occupy Ottoman-held Cyprus in return for promise of military aid.

The Russian–Ottoman War of 1877 to 1878 ended with the Treaty of San Stefano, forced on the defeated Ottoman Empire by Russia's czar and his minister Nikolas Ignatiev. San Stefano, however, was not to the liking of Britain's prime minister, Benjamin Disraeli. He offered to support the Ottomans and seek a revision of the treaty. In return, he demanded the island of Cyprus. The British had been looking for a naval base in the eastern Mediterranean, and Cyprus was ideally situated. By the Cyprus Convention of June 1878, the Ottoman sultan allowed the British to occupy Cyprus in return for a British guarantee of military aid if Russia refused to withdraw from the eastern Anatolian provinces occupied during the war. It took some time for the details to be arranged to the satisfaction of both parties, and the final terms of the convention were not settled until 3 February 1879. With the tentative agreement in hand by 4 June 1878, however, Britain engineered a drastic revision of the San Stefano treaty in favor of the Ottoman Empire at the Congress of Berlin in July 1878.

CYRENAICA

Traditional region of Libya.

The three historic North African regions of Cyrenaica, Tripolitania, and the Fezzan combine to make up the modern state of Libya, officially known as the Great Socialist People's Libyan Arab Jamahiriya (Al Jumahiriyah al Arabiyah al Libiyah ash Shabiyah al Ishtirakiyah al Uzma). With an area of approximately 305,000 square miles (790,000 sq km), the boundaries of Cyrenaica stretch east from the Gulf of Sidra to the Egyptian border, west to Tripolitania, and south from the Mediterranean Sea to Chad and the Sudan. Geographically, Cyrenaica is divided into three distinct areas, consisting of the coastal plan, a mountainous area in the east, and the southern desert.

The city of Benghazi, the second-largest population center in Libya and the commercial center for the eastern half of the country, is located in Cyrenaica on the eastern side of the Gulf of Sidra. Five ancient Greek cities, known collectively as the *pentapolis,* are also located in Cyrenaica. Thought to have been founded around 631 B.C.E., the city of Cyrene is the best preserved of the five. After it became part of the Roman Empire, Cyrene was severely damaged during a Jewish revolt in 115 C.E. By the fourth century C.E., all five of the *pentapolis* cities lay virtually deserted.

Throughout history, Cyrenaica has looked eastward to the Mashriq, or eastern Islamic world, maintaining especially close ties with Egypt. When defeated in tribal wars, Cyrenaican Bedouins sometimes migrated to Egypt, often eventually settling there. Other tribal members retained their nomadic way of life, crossing back and forth into Egypt with little concern for vague, unmarked borders. During the period of Italian occupation, which began in 1911, Cyrenaicans received arms and other supplies from Egypt in support of their struggle against the European invaders. Eventually, the Italian army built a barbed-wire fence the length of the Libya–Egypt border in an effort to stop the passage of military supplies to the insurgents.

The Sanusi Order, a Sufi religious movement dedicated to spreading religious enlightenment in areas where Islam was only lightly observed, was established in Cyrenaica in 1842 by Sayyid Muhammad ibn Ali al-Sanusi. Eighty years later, his successor, Sayyid Muhammad Idris al-Mahdi al-Sanusi, was forced by the Italians to seek refuge in Egypt, where he remained for almost three decades. He later returned to Libya as King Idris I to head the newly created United Kingdom of Libya in 1951.

With approximately 1 million people as of 2003, or almost 20 percent of the Libyan population, Cyrenaica is a vibrant economic and commercial center. The Jabal al-Akhdar, a high plateau in eastern Cyrenaica known as the Green Mountain, together with Kufrah and other irrigated areas in the south, are important centers of agricultural production. However, it is the petroleum sector that drives both the Cyrenaican and Libyan economies. Oil and gas from Cyrenaica, first discovered in commercial quantities in 1959, account for almost all of Libya's exports and approximately one-third of the national gross domestic product. The continued expansion of the petroleum industry into the twenty-first century led to the modernization of the port of Benghazi and the construction of many oil-exporting facilities along the coast of Cyrenaica.

JOHN L. WRIGHT
UPDATED BY RONALD BRUCE ST JOHN

CYRIL IV

[1816–1861]

110th Coptic patriarch of Egypt, 1854–1861.

Despite his short tenure, Cyril IV was the father of reform in the Egyptian Coptic church, both in the laity and the clergy; he remains one of the greatest modern Coptic patriarchs. Concerned for education in its broadest sense, Cyril established many schools throughout Egypt, promoted basic literacy, advanced theological training, and published new editions of important Coptic documents. The most famous institutions founded by the patriarch were the Coptic Orthodox College for clerics and Egypt's first women's college, both in Cairo. Empowered by the tuition received at these new schools, Copts attained important governmental positions in unprecedented numbers. Cyril's aggressive reform of church administration, particularly in land management, made him unusually popular among the laity, which had long sought a more equitable balance of power with the clergy. Unfortunately, Cyril's successors had no interest in continuing the enfranchisement of the laity and thus created a tension that has been played out even in recent times. Cyril fostered Coptic nationalism through an aggressive campaign of restoring ancient churches and building new ones, his greatest achievements being the construction of Saint Mark's Basilica in Azbakiya. A skillful negotiator, Cyril successfully mediated a dispute between Egypt and Ethiopia from 1856 to 1858. His dream of closer ties with the Russian Orthodox Church and the Church of England led to a conflict with Saʿid Pasha, who feared foreign interference. Cyril's assassination (by poison) was rumored to have been ordered by the pasha.

DONALD SPANEL

CYRIL V

[1824–1927]

112th Coptic patriarch of Egypt, 1874–1927.

Cyril V enjoyed the longest tenure of any Coptic patriarch but had a relatively insipid career. Even his admirers commented upon his simple-minded disinterest in matters foreign to his conservative, clerical background. Like his predecessor, Demetrius II, Cyril supported education. In 1894, he established the Coptic Clerical College in Cairo. Nonetheless, Cyril lacked Demetrius's zeal, and he even closed some schools. To his credit, Cyril fostered Coptic nationalism by restoring ancient churches and building new ones, although he was unconcerned for the most crucial issue confronting his church, the sharing of power with the laity, which had enjoyed a promising but abortive start under Cyril IV.

The neglect by Cyril V further widened the gap between the progressive populace and the more conservative clergy. As a former monk, Cyril was solidly entrenched in that tradition. He especially infuriated the populace by reneging on his promise of cooperation in the administration of the *waqfs* (religious endowments). Worse still, he refused to attend the sessions of the Community Religious Council (Majlis Milli), which had come into existence shortly before his patriarchate, to empower the Coptic laity in the areas of church property, personal rights, and social welfare. Cyril's nonparticipation led to the suspension of the council and had serious consequences for the equitable adjudication of marriage, divorce, and inheritance, thus worsening the rift between ecclesiastical and secular factions within the church. Despite parliamentary restoration of the council in 1883 and 1891, Cyril's continued noncompliance left both assemblies powerless. The khedive acquiesced reluctantly to the council's petition for Cyril's banishment because he had enjoyed good relations with the patriarch. The action proved highly controversial; even many of Cyril's foes found his punishment unfair. Nevertheless, Cyril was exiled in 1892 and 1893 for his

stubborn opposition to the council. Ironically, when restored, he enjoyed widespread support from friend and foe alike.

CYRIL VI

[1902–1971]

116th Coptic patriarch of Egypt, 1959–1971.

Cyril became pope of the Coptic church amid a long and bitter controversy between the Holy Synod of bishops and the Coptic Community Council, which consisted of laypersons. At issue was the appropriate field of candidates for the office. Until the twentieth century, the patriarch had been chosen from the monks. Beginning with the tenure (1927–1942) of John XIX, however, the selection had shifted to provincial bishops. Yusab (Joseph) II, bishop of Girga in southern Egypt, served as acting patriarch from 1942 to 1944. After the brief tenure of another bishop, Makarius III, as pope (1944–1945), Yusab II was elected to the office and served from 1946 to 1956. Following his death, Athanasius, bishop of Buni Suwayf, became acting pope from 1956 to 1957. Because all four pontiffs had undistinguished and even disastrous (in the case of Yusab II) terms of office, both the government of Gamal Abdel Nasser and the populace generally favored a monk. In a confusing inversion of preference, however, the assembly of bishops favored a monk and the community council sought a monk. So divided was the church over the selection of a new pontiff that the government temporarily suspended the papal election in 1957. The choice of Cyril, a monk from Baramus in the Nile delta, represented a victory for the Nasser regime and the laity.

Cyril's name, adopted at the time of the papal election, honored several illustrious predecessors, particularly Cyril I (patriarch 412–444), a preeminent early Alexandrian theologian widely regarded as one of the fathers of the Coptic church. The true first name of Cyril VI was Mina. As a monk, he had enjoyed wide renown as an ascetic and a mystic. For many years he had sought unsuccessfully to rebuild the ancient monastery of his namesake, St. Menas (Mina), near Alexandria and lost no time as patriarch in realizing this project. At his behest, more than forty other churches and monasteries were excavated, restored, or built anew. These endeavors attracted criticism as well as praise. To many, Cyril was aloof, more interested in antiquarian and monastic concerns than with either the country's or the church's pressing needs. This complaint was repeated throughout Cyril's administration. Nonetheless, even Cyril's detractors admired his piety, which had been honed through his years as a monk.

Cyril's efforts at reform met with some success. He sought closer relations with the other Christian churches of the Near East. Coptic missionary activity flourished in many parts of Africa, and numerous African divinity students received scholarships to study at the Coptic Theological College and the Institute of Coptic Studies in Cairo. Of all African countries outside Egypt, Cyril was especially interested in Ethiopia because its primary Christian church had for centuries been under the jurisdiction of the Coptic patriarch and, in more recent years, had demanded autonomy. One of Cyril's first acts as patriarch was to convene a council that addressed the Ethiopians' demands. The historic accord of 1959 remains the foundation upon which the relations between the Coptic and Ethiopic orthodox churches are grounded. Although the Coptic pontiff retained his position as head of the Ethiopic church, the Ethiopians could henceforth participate in papal elections. Furthermore, the Ethiopians could now elect their own leader. Heretofore, the Ethiopians had had a metropolitan or archbishop but no patriarch. The new patriarch or *abuna* of the Ethiopian church was to be an Ethiopian, not an Egyptian. The *abuna* could consecrate his own clergy. Ethiopians could participate in all synods convened by the Coptic pope. Several other important privileges were granted to the Ethiopians.

In other areas, Cyril's achievements were more limited. In 1960, the government placed the handling of waqf property (endowments given to the church) under a special committee composed of

Copts. This move was hailed by some as an efficient administrative reform because the high clergy and the Coptic Community Council had clashed for decades over the handling of the waqfs, and it was condemned by others because the action took away much responsibility from both the clergy and the community council. The latter was left with responsibility for little more than administration of the Coptic centers for theological education and for building various projects.

Cyril's struggle to alleviate the discrimination toward and persecution of Copts tolerated by the Islamic regime was similarly inspired but fruitless. Believing that close cooperation with the Islamic government would foster better relations between Muslims and Copts, Cyril joined with Muslim leaders in denouncing Israel on several occasions. Furthermore, through wider participation in international religious conferences and meeting with leaders of other churches, Cyril reckoned that oppression of the Copts would abate if the rest of the world were watching. Although the plight of the Copts is now more widely recognized, unfortunately it has not improved.

D

DABBAGH, MARZIEH

[c. 1942–]

Islamist activist in Iran.

Marzieh Dabbagh was born in Hamadan, Iran, in the early 1940s. She was married at the age of thirteen, gave birth to eight children, and moved to Tehran. There she joined the circle of Ayatollah Saidi, a protégé of Ayatollah Ruhollah Khomeini, and became a dedicated Islamist. In 1972, she was arrested by the SAVAK and severely tortured. After a second arrest, when her health began to fail, she was released. Dabbagh left Iran for Europe. In England and France, she participated in hunger strikes on behalf of Iranian prisoners. In Saudi Arabia, she distributed Khomeini's clandestine fliers among Muslim pilgrims to Mecca. In Syria, she helped set up a military camp where anti-Shah combatants were trained. With the help of the dissident Shiʿite cleric Imam Musa Sadr, an Iranian who was mobilizing the Shiʿa of Lebanon, Dabbagh trained a new generation of young Iranian combatants in paramilitary tactics. She was a confidant and bodyguard of Khomeini in Paris in 1978. After the Iranian Revolution, she participated in the Iran–Iraq War (1980–1988) and served as a military commander. She joined the Pasdaran paramilitary group and took an active role in destroying all rival organizations, from the Kurdish Komeleh and Democrat parties to the secret cells of the Fedaʾiyan and Mojahedin organizations. In the late 1980s, she went to Moscow as part of a delegation to negotiate with Mikhail Gorbachev. In the 1980s and 1990s, she headed the Islamist Women's Society. She served four terms in the Iranian parliament (the First, the Second, and the Fifth Majles) until 2000, when she was not elected to the more reformist Sixth Majles.

DABBAS, CHARLES

[1885–1935]

President of Lebanon.

Charles Dabbas (also Debbas), born to a Greek Orthodox family, earned a law degree. His close association with French interests in the Middle East led France to select him to be the first "elected" president of Lebanon before independence. He assumed the presidency in 1926, during the French mandate. The selection of a Greek Orthodox as president was intended to appease the Muslims, who were displeased with the idea of Lebanon's separation from Syria.

Dabbas's judicial and administrative background and his French wife made him extremely acceptable to the French mandate authorities. His rule was facilitated by his strong alliance with the Sunni Muslim speaker of the Senate, Shaykh Muhammad al-Jisr. Dabbas worked to extend the authority of the government to areas outside of Beirut. He made trips to the Shuf and to the south, and he criticized the low standard of state services—or their absence in some cases. Ultimately disillusioned, he resigned in 1933 and moved to Paris, where he died two years later.

AS'AD ABUKHALIL

DADDAH, MOKHTAR OULD

[1924–2003]

First president of Mauritania, 1960–1978.

Mokhtar Ould Daddah was born 25 December 1924 in Boutilimit in the Trarza district, southwestern Mauritania, 60 miles southeast of Nouakchott. A member of a prestigious Marabout tribe, he became Mauritania's first university graduate, earning a law degree in Paris. During the late 1950s he assumed a leadership role in organizing Mauritania's independence. In 1961 Daddah officially became head of state as well as head of government under a newly established presidential regime. Central to his efforts at nation building was the idea of a unique desert civilization, encompassing Spanish Sahara (now Western Sahara), southern Morocco, and Mauritania, to the banks of the Senegal River.

In the mid-1970s Daddah drew Mauritania closer to both France and Morocco, against the background of the Western Sahara conflict. In 1976 Mauritania and Morocco agreed on the partition of Western Sahara following its evacuation by Spain. But the ensuing war there with Algerian-backed Polisario forces placed inordinate stress on Mauritania, and Daddah lost the support of key sectors of the society. He was overthrown by a military committee in a bloodless coup on 10 July 1978 and placed under arrest.

In 1980 Daddah was allowed to leave, going briefly to Tunisia and then to Nice, France, where he kept a low profile for many years. As Mauritanian political life slowly opened up during the mid-1990s, Daddah began to speak out against the regime. His brother Ahmed headed the leading opposition group. Daddah returned to Mauritania on 17 July 2001.

BRUCE MADDY-WEITZMAN

DAFTARI, AHMAD MATIN

[1896–1971]

Iranian politician.

The son-in-law of Mohammad Mossadegh and father of the cleric Hedayatollah Matin Daftari (a leading member of Mojahedin-e Khalq, the Baghdad-based opposition group), Ahmad Matin Daftari was born to an Iranian vizierial family. In 1929, he was sent to Europe by the Iranian government to study law. He was Reza Shah Pahlavi's minister of justice in 1936 and prime minister in 1939. Throughout his political career, Daftari also taught at Tehran University, as a member of the faculty of law, and wrote several books on the subject of law. His participation in politics was stalled in 1962 because of his opposition to the price hikes imposed by Mohammad Reza Shah Pahlavi's government and the political activism of his two sons, who opposed the shah's regime. Daftari died in Tehran.

NEGUIN YAVARI

DAĞLARCA, FAZIL HÜSNÜ

[1914–]

Prolific Turkish poet.

The son and grandson of army officers, Fazil Hüsnü Dağlarca was educated at the Küleli Military Lycée in Istanbul. He won his first poetry prize at age thirteen. From 1933 his poems appeared in leading journals and newspapers, and his first collection was published the day of his graduation from Mekteb-i Harbiye (the war academy) in Ankara (1935). He continued publishing during fifteen years as an army officer and seven as a Ministry of Labor inspector. In 1959 he became a bookstore owner and publisher in Istanbul and edited a monthly literary journal between 1960 and 1964. His shop was a gathering place for leading literary figures until he closed it to devote himself fully to literature (1970). He has won numerous Turkish and foreign awards. In 1967 a five-man jury of Turkish writers named him Turkey's leading poet, and he received the International Poetry Forum's Turkish Award in 1968.

In general, critics connect him to no literary school (Turkish or foreign), noting his highly developed individuality and originality, even in the formative years. Some liken his method to that of free association. His profound influence led to a new Turkish surrealism. He has written in diverse forms, from epic to quatrain, and his verses range from lyric and inspirational to satire and social criticism.

Among the themes in the poetry that built his reputation are the individual's relationship to God, the cosmos, nature, and fellow human beings; the beginnings of the Ottoman Empire; Turkish heroism at the Turkish Straits and in the war of independence; and praise of Mustafa Kemal Atatürk. In the 1950s, Dağlarca turned to social and political criticism, protesting the plight of the Turkish villager over the centuries and denouncing the West for colonialism and exploitation, taking up, for example, events in Algeria, the atom bomb, and in *Vietnam Savaşimiz* (Our Vietnam war, 1966), expressing the strong anti-American feelings of the day.

Some have taken him to task for sacrificing his art to politics, arguing that his social and political poetry lacks the significance of his earlier work. In all, Dağlarca has published some fifty books, including a number for children.

KATHLEEN R. F. BURRILL

DAHLAN, MUHAMMAD

[1961–]

Palestinian activist and security official in the Palestinian Authority.

Born in Khan Yunis refugee camp in Gaza, Muhammad Dahlan later headed Shabiba, the youth movement of al-Fatah, in the West Bank during the 1980s. He was imprisoned by Israel on numerous occasions between 1981 and 1986, was active in the first Intifada, and was eventually deported in 1988. In exile in Tunis, Dahlan helped the Palestine Liberation Organization (PLO) coordinate the Intifada.

Upon the establishment of the Palestinian Authority (PA) in 1994, Dahlan returned from exile and headed the Gaza branch of the Preventative Security Forces. A frequent participant in Israeli-Palestinian negotiations during the 1990s, he became one of the most powerful figures in the PA. With the breakdown of the peace process, he ran into political difficulties. His crackdown on groups such as HAMAS that were opposed to the peace process, and his good working relationship with Israel and the United States, angered some Palestinians. His call for PA political reform angered Arafat. Dahlan resigned in June 2002 but was appointed minister of state for security affairs in the spring of 2003 by PA prime minister Mahmud Abbas. During the power struggle between Abbas and Arafat in the summer of 2003, Dahlan found himself pitted against Jibril Rajub, former West Bank head of the Preventative Security Forces, whom Arafat had appointed his national security adviser.

DAMANHUR

City of the Nile delta.

Damanhur is the capital of Buhayra (Beheira) governorate; it is southeast of Alexandria, Egypt. Its original name was Timinhur (city of Horus), and it was called Hermopolis Parva in Byzantine times. It has been the seat of a Coptic bishop since the fourth century C.E. It became a commercial center during the early spread of Islam and was made the residence of a senior Mamluk officer because it commanded the entire Nile delta region and was a major stage on the post road from Alexandria on the Mediterranean Sea to Cairo on the Nile River. In April 1799, its inhabitants destroyed a company of Napoléon's troops.

Now a major station on the railroad and the center of a network of secondary rail routes within the delta, it is an important market center for cotton and rice. Its population was estimated at about 222,000 in 1992.

ARTHUR GOLDSCHMIDT

DAMASCUS

Syria's capital and largest city.

Damascus is situated on the edge of an ancient oasis, al-Ghuta, where the Barada River runs along the eastern base of the Anti-Lebanon mountains. The city is mentioned by name as early as the fifteenth century B.C.E., when it was captured by the Egyptian pharaoh Thutmoses III. It was subsequently occupied by the Israelites, Assyrians, Babylonians, Greeks, and Nabataeans before being conquered by Rome, whose governors constructed the network of streets, plazas, walls, and gates that continues to define the contours of the Old City. When the Byzantines took charge of Damascus around 395 C.E., they consecrated the massive temple to Jupiter in the center of the city as the Church of Saint John the Baptist. The largely Monophysite population remained hostile to the Melkite rulers of Byzantium and welcomed the Sassanid army that occupied the city in 612.

Byzantine forces retook Damascus around 627, but after a brief siege the city opened its gates to the Arab Muslims led by Khalid ibn al-Walid in September 635. Byzantium's counterattack was crushed on the banks of the Yarmuk River the following summer, and in December 636 an Arab/Muslim army commanded by Abu Ubayda ibn al-Jarra marched into the city once again. Upon the death of the governor Yazid ibn Abi Sufyan three years later, Yazid's brother Muʿawiya assumed command of the Arab Muslim forces based in Damascus. Muʿawiya succeeded Ali as caliph, or leader, of the Muslims after a series of confrontations in 658–661 and designated the city as the capital of the new Umayyad dynasty.

During the Umayyad era from 661 to 750, Damascus constituted the center of a political and economic domain stretching from Spain in the west to Khorasan in the east. The third Umayyad ruler, al-Walid, transformed the comparatively modest mosque that had been built on the grounds of the Church of Saint John into a much grander structure, known as the Umayyad Mosque. This building and other monuments constructed by the Umayyads were ransacked when an Abbasid army occupied the city in the spring of 750. Damascus fell into relative obscurity after the Abbasid dynasty transferred the Muslim capital to Iraq; its inhabitants repeatedly rose in revolt, but Abbasid forces crushed each of these insurrections. The powerful governor of Egypt, Ahmad ibn Tulun, incorporated Damascus into his domain in 878, as did a powerful Turkic confederation, the Ikhshidids, sixty years later.

By the late tenth century, Damascus stood at the intersection of conflicts involving the Fatimid rulers of Egypt, the Hamdanids of Aleppo, the Byzantines to the west, various Turkoman tribes from the north, and the collapsing Abbasid Empire in the

east. Continual raids and occupations severely disrupted the city's trade and destroyed whole commercial and residential districts. A series of Seljuk governors struggled to gain control of the city during the last quarter of the eleventh century, but it was only when the military commander *(atabeg)* Zahir al-Din Tughtaqin seized power in 1104 that a modicum of order returned. Tughtaqin's successors, the Burids, oversaw a marked recovery of the Damascene economy and the establishment of several new suburbs, although the dynasty faced a combination of internal challenges from the Batiniyya and external threats from the Crusaders and the Zangids of Aleppo until the last Burid ruler was supplanted by Nur al-Din Mahmud in 1154.

Nur al-Din reestablished Damascus as the capital of Syria. New fortifications were constructed; religious schools and foundations proliferated. The city fell into the hands of Nur al-Din's former lieutenant, Salah al-Din ibn al-Ayyubi, in 1176 and remained an important Ayyubid center for the next half century. During these decades, European merchants turned the silk brocade, copper wares, and leather goods manufactured in the city into lucrative items of international commerce. Profits generated by the burgeoning trade with Europe enabled the court to patronize large numbers of prominent scholars and artisans. This illustrious era ended only when the Mongols overran the city in the spring of 1260. In the wake of the Mongol defeat at Ayn Jalut, Damascus became subordinated to the Mamluk rulers of Egypt, for whom it served first as a forward base of operations against Mongol incursions and later as a provincial capital.

Damascus put up little resistance to the Ottomans, who occupied the city in September 1516. When Sultan Selim I died five years later, however, the long-standing governor Janbirdi al-Ghazali declared the city independent. Janissaries quickly suppressed the revolt, pillaging and burning whole neighborhoods. Thereafter, Damascus lost much of its political and economic importance and became the seat of one of three Ottoman governorates *(vilayets)* in Syria. The city's fortunes rose whenever local families captured the office of governor, most notably during the period of al-Azm rule in the early eighteenth century, but fell when such families relinquished power to outsiders. Throughout the Ottoman era, Damascus served as a key way station along the pilgrimage route between Anatolia and Mecca. The governor of the city assumed the office of commander of the pilgrimage (amir al-hajj) for the arduous trip south across the Syrian desert, a position from which both his administration and his fellow Damascenes derived considerable revenue. The link to the Hijaz was reinforced with the opening of a railway line between Damascus and Medina in 1908.

Umayyed Mosque, originally a pagan temple, then a church, now a mosque representing the fourth holiest Islamic site, overlooks nearby structures in Damascus, the capital of Syria. © Charles & Josette Lenars/Corbis. Reproduced by permission.

By the first years of the twentieth century, Damascus had become a major center of agitation against the Ottoman regime. The reformist governor Midhat Paşa not only tolerated the growth of Arab nationalist sentiment, but also inaugurated improvements in the city's roads and commercial districts that strengthened the local bourgeoisie. The liberal atmosphere encouraged Damascenes to demonstrate in support of the 1908 revolution in Istanbul, but the outbreak of World War I brought a reassertion of Ottoman authority. The wartime governor Cemal Paşa cracked down on Arab nationalists, most famously by hanging twenty-one prominent leaders in the main squares of Damascus and Beirut on 6 May 1916. The Ottoman troops did not withdraw from Damascus until the end of September 1918, and on 1 October Arab forces led by Amir Faisal I ibn Hussein of the Hijaz marched into the city alongside British imperial units.

Faisal immediately set up a military government in Damascus then supervised the formation of a general Syrian congress, which on 7 March 1920

declared Syria a sovereign state with Faisal as king. When the establishment of the new civilian administration went unacknowledged by the European powers meeting in San Remo the following month, and France was given charge of the country's affairs by way of a mandate from the League of Nations to prepare the country for eventual independence, Damascus exploded in rioting; the general congress declared a state of emergency and ordered the formation of a militia to assist in restoring order. Despite the efforts of the Syrian authorities, popular unrest persisted, prompting the French army to occupy the city at the end of July 1920 and exile King Faisal. Strikes and demonstrations continued throughout the mandate period; the rebel Druze leader Sultan al-Atrash managed to gain a foothold in the southern suburbs during the revolt of 1925. French commanders responded by bombarding Damascus twice, in October 1925 and April 1926. Nineteen years later, on the eve of France's final evacuation and Syria's independence, the city was bombarded yet again.

With a population (2002) of 1,368,300, contemporary Damascus is not only the largest city and capital of the Syrian Arab Republic but also a major industrial and commercial center. Damascus University, founded in 1923, remains the country's most prestigious institution of higher education, and al-Asad Library houses Syria's largest collection of printed materials. An annual international trade fair, initiated in 1954, promotes a wide range of Syrian-made goods, while encouraging the city's influential business community to establish closer connections with the outside world.

DAMASCUS AFFAIR (1840)

Blood libel accusation leveled by Christians at the Jews of Damascus.

On 5 February 1840 a Capuchin friar named Thomas disappeared from Damascus with his Muslim servant, Ibrahim. Their whereabouts were never discovered. The friar was under the jurisdiction of the recently appointed French consul, Count Ratti-Menton, who supported the accusation of local Christians that the Jews were responsible for the alleged murders in order to obtain blood to make their matzot for Passover. Several prominent Jews of Damascus were thereupon rounded up and subjected to torture; several died, one converted to Islam, and a confession of guilt was extracted.

In March, the Jews of Istanbul, alarmed at the libel of Damascus and a simultaneous libel in Rhodes, alerted western Jewish leaders to the events. An international campaign to rescue the Jews of Damascus and to pressure the Egyptian governor of Damascus, Sharif Pasha, was organized in England. The defense efforts were spearheaded by Moses Montefiore of England and Albert Crémieux of France. Press coverage and parliamentary condemnations of injustices in the East heightened public interest in the Jewish plight in general and Ottoman judicial malpractice in particular. Interventions by Queen Victoria, Lord Henry Palmerston, U.S. Secretary of State John Forsyth, and Klemens von Metternich of Austria to obtain a release of the victims were of no avail.

In the summer of 1840, Montefiore and Crémieux set off for Egypt and Syria to win the freedom of the Jews of Damascus. The fate of the delegation was monitored by the European press as the Damascus affair became a cause célèbre. Newly emancipated European Jewry was haunted by the specter of a return to medieval anti-Jewish prejudice. British

parliamentary liberals were also concerned about the continued use of torture and the need for Ottoman judicial reform. Great Britain, additionally, expressed an interest in protecting the Jews of the East as a counterbalance to French and Russian protection of Roman Catholics and Orthodox Christians in the Muslim world. In August, Montefiore and Crémieux won the release of the tortured Jews of Damascus, but Muhammad Ali refused to exonerate them. Montefiore then proceeded to Istanbul to obtain the sultan's condemnation of the libel and future protection for Ottoman Jewry. The Ferman of Abdülmecit I of 6 November 1840 denounced the blood libel and stressed "that the charges made against them and their religion are nothing but pure calumny." The sultan further specified that Jews were to be specifically included in the reforms embodied in the Hatt-i Serif of Gülhane and that "the Jewish nation shall possess the same advantages and enjoy the same privileges as are granted to the numerous other nations who submit to our authority. The Jewish nation shall be protected and defended."

Despite Montefiore's success and the imperial rescript, blood libels recurred throughout the Middle East. Libels in Damascus (nine occurred there between 1840 and 1900), Aleppo, Beirut, Chios, Safad, the Dardanelles, Gallipoli, Cairo, Alexandria, Dayr al-Qamar, Hamadan in Iran, Salonika, Smyrna, and elsewhere were instigated by Armenians and Greeks as well as Muslims. The havoc wrought by these repeated accusations was partially responsible for the decline and emigration of Ottoman Jewry beginning in the late nineteenth century. The vulnerability of Ottoman Jewry led as well to the formation of the Alliance Israélite Universelle in 1860.

JANE GERBER
UPDATED BY MICHAEL R. FISCHBACH

DAMASCUS UNIVERSITY

Oldest of the present four universities in Syria.

Damascus University is one of four universities currently operating in Syria; the other three are the University of Aleppo, the University of Tishrin (at Latakia), and the University of the Baʿth (at Homs). The earliest institutions of higher learning in Ottoman Syria were the Institute of Medicine (Maʿhad al-Tibb) established in Damascus in 1903 and the School of Law (Madrasa al-Huquq) established in Beirut in 1913. After the end of Ottoman rule in Syria in 1918 and the establishment of the Arab government of King Faisal in Damascus (1918–1920), the Institute of Medicine and the School of Law, which had experienced difficulties and closures during World War I, were newly opened in Damascus in 1919. The Institute of Medicine was then renamed the Arab Institute of Medicine (al-Maʿhad al-Tibbi al-Arabi) and was headed by Dr. Rida Saʿid, who became president of the newly established Syrian University from 1923 to 1936.

On 15 June 1923, the head of the Union of Syrian States, created by the mandatory authorities of France, issued a decree establishing the Syrian University (al-Jamiʿa al-Suriyya) which was to include medicine and law in addition to the Arab Scientific Academy (al-Majma al-Ilmi al-Arabi), and the Arab Directorate of Antiquities (Dar al-Athar al-Arabiyya). On 15 March 1926, the academy and the Directorate of Antiquities were removed from the Syrian University. A School of Higher Literary Studies (Madrasat al-Durus al-Adabiyya al-Ulya) was established in 1928 and attached to the university. The school taught Arabic language and literature and Arabic philosophy and sociology over a period of three years. In 1929, it was renamed the School of Higher Letters (Madrasat al-Adab al-Ulya); between 1935 and 1956, it was closed.

The number of students in medicine and law rose from 180 (1919–1920) to 1,094 (1944–1945). Women first enrolled in medicine and law from

1922 to 1923. Their numbers in 1945 were 72 in medicine and 12 in law.

After Syria became independent in 1945, faculties of sciences and arts and a Higher Institute for Teachers were established the following year in the Syrian University. A Faculty of Engineering was opened in Aleppo the same year as part of the Syrian University. This faculty later became the nucleus of the University of Aleppo, established in 1958. In 1954, a Faculty of Islamic Law (*shariʿa*) was established in the Syrian University. In 1956, the Institute of Commerce was established and attached to the Faculty of Law, becoming the Faculty of Commerce (1959–1960).

On 19 October 1958, during the union between Syria and Egypt, a new law was issued regulating the affairs of the universities. The Syrian University changed its name to Damascus University. Two new faculties for engineering and dentistry were added to it from 1959 to 1960.

Under the Baʿth party, which has been ruling Syria since 1963, and especially after the Correctionist Movement of President Hafiz al-Asad in 1970, university education expanded tremendously and the number of both students and faculty increased. The University of Tishrin was established in 1971 and the University of the Baʿth in 1979. In 2002 Damascus University included fourteen faculties plus the Institute for Administrative Development, as well as several teaching hospitals, a nursing school, and language centers. The university offers M.A. and Ph.D. programs in various disciplines. Enrollment for the 1998–1999 academic year was more than 23,000.

ABDUL-KARIM RAFEQ

DAMMAM, AL-

Saudi Arabian port on the Persian Gulf.

Al-Damman is a city on Saudi Arabia's gulf coast and capital of the Eastern Province since 1952. Transformed by the discovery of oil at nearby Dhahran, al-Dammam boasts a major port (built in 1950) and the terminus of the Riyadh railroad. An Anglo-Saudi conference in al-Dammam in 1952 failed to produce agreement on Saudi-Qatar and Saudi-Abu Dhabi frontiers. Al-Dammam's population has surged as a result of the steady economic growth in the Eastern Province, although no reliable figures are available. The city, in combination with the Saudi Arabian American Oil Company (ARAMCO) headquarters at Dhahran and the residential town of al-Khubar, lies at the center of a commercial, industrial, and petroleum hub. King Faisal University is located in al-Dammam. The nearby King Fahd Causeway provides the only land link with Bahrain, and the King Fahd Airport, the newest of the kingdom's three international airports, was opened in 1999, replacing an older facility at Dhahran.

DANCE

A social activity that takes on a multitude of forms within sacred and everyday contexts in Middle Eastern societies.

The Middle East abounds in forms of dance and stylized movement ranging from those associated with ritualized religious ceremonies, such as the Semaʾa of the mystical Sufi Whirling Dervishes, to more spontaneous dancing, such as belly dancing, that occurs in informal everyday contexts. One of the earliest documents of Middle Eastern expressive arts is the multivolume tome written by Abu Faraj al-Isfahan in the tenth century, *Kitab al-Aghrani* (The book of songs), which indicates that the realm of the arts has always been highly cosmopolitan. Various courts had ethnically and religiously diverse dance troupes that regularly accompanied musicians. Their participation was considered a necessary element in creating *tarab*—the joy that is felt by performers and audience members during musical events.

Far from being merely a pastime, dance in the Middle East carries heavy symbolic meaning. Although some Middle Eastern communities adhere

closely to interpretations of religious texts that warn against the carnal aspects of music and dance, other communities cannot conceive of celebrating life's important moments without music and its by-product, dance. In the Middle East, one's ability to dance can signify a number of things. In some countries such as Morocco, for example, a woman's dance style is read as a text from which spectators make assumptions about her personality: If she shows little interest in dancing at a wedding, others may conclude that she is not sincere in her happiness for the union of the couple, or that she is not fun-loving. Small flourishes taken from international pop stars and included in one's own locally based repertoire speak volumes about taste and the cultural influences absorbed through media. And although male dancers in the Middle East have been able to reach a sort of professional *(maʿalim)* status, the same has not always been true for women. Sources such as Isfahan's indicate that women have been performers as long as there has been music and dance, but female performers have often been stigmatized. Although displaying a talent for dance among family and friends is desirable and in some cases required, dancing as a profession is often discouraged, and paid performers are not always accorded high social status.

Most mainstream communities in the Middle East attach a great deal of importance to dance as a necessary component to any significant celebration. Although traditions vary from region to region, dance may be present at engagement ceremonies, weddings, births and naming ceremonies, seasonal harvests, holidays (both national and religious), festivals, and circumcisions, not to mention the day-to-day visits among close friends and family that are common among women. Some religious scholars very deliberately delineate the boundaries between sacred and profane contexts, but patterned bodily movement may occur as well during Sufi *dhikr* ceremonies, visits to saints' shrines, and local religious ceremonies that may blend Islamic and pre-Islamic syncretic elements. In many instances there is an overlap between Christian, Jewish, and Muslim celebratory practices, as these communities have lived side by side for many centuries and have imparted their individual artistic expression to other faith groups. The Fez Festival of World Sacred Music is a case in point. Created after the first Gulf War (1991), the festival featured music and arts from around the world in order to underscore the common features of shared traditions. Such world music festivals are sites of great innovation and provide impetus for the cultural preservation and reinvention of traditions.

A crowd gathers to dance the *freylekhs*, a traditional Jewish dance of celebration. © Hulton-Deutsch Collection/Corbis. Reproduced by permission.

Among the better-known forms of dance in the Middle East are the hora, the debka, and Israeli dance, which blend the cultural traditions of the various ethnic groups living in Israel. These dance traditions are done in groups and reinforce familial and community bonds rather than showcase an individual dancer's skill. The debka (also, dabka), is performed on joyous occasions in Greater Syria. Dancers (traditionally, young men) join hands in an open circle and move slowly in step to drumbeats. The steps become faster at specific intervals, with intermittent bounces. The dancers are usually accompanied by a single dancer waving a cloth or a stick. A modified version may be performed by a new husband and wife at their wedding celebration. Similar styles of dance occur in Turkey as well. The debka is originally an Arab dance, but Israelis have created many versions of it that are performed at Israeli national festivals.

Exotic belly dancers provide nighttime entertainment in an Istanbul hotel. © David Lees/Corbis. Reproduced by permission.

Emigrants from the Middle East take their dance traditions with them, and many Middle Eastern dance groups exist outside the region. The origins of the Hora can be traced back to the Balkans, but it was brought to Palestine after World War I by Baruch Agadati, an actor of Romanian origin. Many Israeli composers have written music using the rhythm of the Hora. Because the Balkans were once Ottoman territories, similar forms of dance exist in many regions of Turkey. In Turkey, high-school students practice various folk-dance forms and perform in traditional costumes on a Youth Day, which was created by Mustafa Kemal Atatürk in the early days of the Turkish Republic. Turkey's preservation of pre-Ottoman Turkish culture spawned a national interest in folkloric dance genres that still thrives today. Jews moving to Palestine during the twentieth century brought with them a variety of folk dances of national and local origin, including the dances of Yemenite Jews and Hasidim, and the hora, which became Israel's national dance. Dancing, with a strong folk emphasis, is a popular recreation on kibbutzim in Israel.

Raqs Sharqi, or belly dancing, was made famous in the Middle East and beyond primarily through Egyptian television. There are many variations of belly dancing throughout the Middle East, but all share an emphasis on rythmically moving the stomach, pelvis, and hips. The range of movement depends on the individual dancer's ability, and can be done casually among friends or in entertainment settings with elaborate costumes and acrobatic flourishes.

DANESHVAR, SIMIN

[1921–]

Prominent Iranian fiction writer.

Simin Daneshvar was born in Shiraz. In the late 1930s she moved to Tehran to study at the then new Tehran University, from which she received a Ph.D. in Persian literature in 1949. Her collection of short stories, *Atash-e Khamush* (Quenched fire; 1948), was the first such publication by a woman in Iran. In 1950, she married Jalal Al-e Ahmad (1923–1969). She spent two academic years (1952–1954) as a Fulbright scholar at Stanford University in the United States. Upon returning to Iran, she was hired as a lecturer by the Archaeology Department of Tehran University and taught there for twenty-five years. However, she never received tenure because the gov-

ernment considered both her and her husband too critical of conditions under the rule of Mohammad Reza Shah Pahlavi.

Daneshvar's most famous work is *Savushun* (Mourners of Siyavosh), which was published in 1969, the first novel by an Iranian woman; it subsequently was translated into English. Throughout the 1970s, 1980s, and 1990s, she continued to write short stories and novels. In addition, her Persian translations of major American and European novelists have contributed to the corpus of works available in Persian literature.

DAR AL-DAʿWA WA AL-IRSHAD

Shaykh Rashid Rida opened this Institute of Propaganda and Guidance in Cairo, Egypt, in 1912 as a reformist Islamic school.

As a youth in Tripoli (now in Lebanon), Rashid Rida had seen American missionaries use a bookshop to proselytize, and his master, Muhammad Abduh, had commented similarly on a Capuchin monastery-school in Sicily. Egypt's higher state schools ignored Islam, and Abduh was unable to reform the mosque-university of al-Azhar. When he died in 1905, Abduh was trying to found his own reformist Islamic school.

Rida's efforts to found such a school in Constantinople (now Istanbul) in 1909 fell through. The Cairo Dar al-Daʿwa offered free room, board, and tuition to Muslims aged twenty to twenty-five, with preference to students from distant lands. Three years of study were to qualify one as a guide *(murshid)* fit to preach and teach among Muslims; six years were to qualify one as a missionary *(daʿi)* to non-Muslims. Although World War I closed the school, its example was presumably not lost on Rida's later admirers among the Muslim Brotherhood.

DAR AL-FONUN

One of the first secular institutions of higher education, established on the European model, in Iran.

The Dar al-Fonun (Abode of Arts) was founded in 1851 in Tehran, Iran, by Mirza Taqi Khan Amir Kabir, one of the chief reform-minded ministers of the long-ruling Qajar dynasty king Naser al-Din Shah.

As elsewhere in the Middle East, the establishment of the school was stimulated by the desire to import European science and technology, especially military technology, and to train army officers and civil servants. Dar al-Fonun's teachers were usually Europeans. Its first cadre included seven Austrians who were hired to give military training in the cavalry, infantry, and artillery divisions, and courses in engineering, medicine, pharmaceuticals, agriculture, and mineralogy, as well as foreign languages. The first efforts at translation of Western books into Persian as well as the publication of the first Persian textbooks is also associated with the Dar al-Fonun. The students of the Dar al-Fonun were usually sons of the aristocracy, some of whom, upon graduation, were sent to Europe to pursue further education, and who came to assume important positions later in their careers.

DAR AL-ISLAM

An abode, country, territory, or land where Islamic sovereignty prevails.

In Dar al-Islam, the citizenry abide by the ordinances, rules, edicts, and assembly of Islam. The Muslim state guarantees the safety of life, property, and religious status (only if the religion is not idolatrous) of minorities *(ahl al-dhimma)* provided they have submitted to Muslim control.

Dar al-Harb (the abode of war) provides the contrast to Dar al-Islam. *Shariʿa* (Islamic) law divides the world into these two abodes. Dar al-Harb denotes territory that is not governed by the assembly of Islam, and is directly contiguous to the abode of Islam. Warfare (jihad) can be invoked in order to convert the abode of war into the abode of Islam, or to rescue the bordering abode. Theoretically, an abode of war can extend ad infinitum. Muslim states, in order to avoid conditions requiring constant jihad, yield to the decision of legal experts *(ulama),* who, based on certain criteria, accept or reject the notion that an area has converted from, or needs to be reconfigured into, Dar al-Islam. These are as follows: (1) the edicts of unbelievers have gained ascendancy; (2) unprotected Muslims and peoples of the book must be rescued; (3) territorial proximity to unbelievers has become repugnant.

Of the above conditions, the first is probably the most important since even if a single edict of Islam is observed, a territory cannot be deemed Dar al-Harb. Further, jihad can be invoked for the sole purpose of turning Dar al-Harb into Dar al-Islam—in other words, to allow for the prevalence of Islamic edicts and the protection of Muslims.

CYRUS MOSHAVER

DAR AL-KUTUB AL-MISRIYYA

The Egyptian national library.

The Dar al-Kutub al-Misriyya library was founded in 1870 in Cairo as the Khedivial Library by Ali Mubarak, Khedive Ismaʿil's minister of education. German orientalists directed the library until World War I, when Egyptians took over. In 1904, along with the Museum of Arab Art, "the Dar" was installed in a neo-Islamic-style building. The Dar was moved again in the 1970s to new quarters on the Nile in Bulaq. President Husni Mubarak's wife Suzanne made a personal commitment to expanding literacy and reading, promoting the opening of numerous additional libraries throughout the country.

DAR AL-MOʿALLAMIN

Teacher-training school in Afghanistan.

The first Dar al-Moʿallamin (House of teachers) teacher-training school was established in Kabul in 1914 by Amir Habibollah (1901–1909), who sought to bring the secular European pedagogy and curriculum to Afghanistan. Initially, students received three years of instruction after having had six years of primary-school education, but the system was changed during the reign of King Amanollah (1919–1929) so that students enter the Dar al-Moʿallamin after nine years of primary school.

Dar al-Moʿallamins were established in other major provincial centers of Afghanistan and by 1970 there were fourteen institutions teaching more than 5,000 students annually. Because most of the Dar al-Moʿallamins were boarding schools, they have played an important part in educating rural youth sent to provincial centers to be educated. They have also served a political function in Afghanistan because public-school teachers form an important segment of the Afghan intelligentsia and have been an influential political force. Dar al-Moʿallamin students participated in the student demonstrations during the late 1970s. As a result, the Dar al-Moʿallamins were closed for some time. During the chaos of the fighting of 1980s and the Taliban rule of the 1990s the students and the teachers of the Dar al-Moʿallamins fled or were unable to teach, and the Dar al-Moʿallamins ceased to function, as did all of Afghanistan's educational system. Although teacher training is again a high priority for the Afghan government, the old Dar al-Moʿallamin system has been largely abandoned and teacher training has

been taken over by the University of Kabul School of Education.

D'ARCY CONCESSION (1901)

Oil concession granted by the Iran to British national D'Arcy in 1901.

William Knox D'Arcy (1849–1917) was a successful British entrepreneur who in 1901 obtained from the government of Iran a sixty-year concession to search for and produce petroleum in an area of central and southern Iran covering 480,000 square miles. In return, the Iranian government received 20,000 British pounds in cash, paid-up shares of an equal value, and a promise of 16 percent of the annual net profits. In 1905, after failing to find oil and having spent most of his capital, D'Arcy assigned his concession rights to Burma Oil, in return for 170,000 barrels of petroleum. Oil was discovered in commercial quantity at Masjed-e Soleyman in 1908, and Burma was reincorporated the following year as the Anglo-Persian Oil Company (APOC, later, the Anglo-Iranian Oil Company, then British Petroleum). In 1914, the British navy decided to convert its ships from the use of coal to oil as fuel, and in tandem the British government became a majority shareholder in APOC. The concession subsequently proved highly profitable for Great Britain. Up to Iran's nationalization of the concession in 1951, APOC paid nearly $600 million in profits and $700 million in corporate taxes to the British government; the Iranian government received a total of $310 million in royalties.

UPDATED BY ERIC HOOGLUND

DARDANELLES, TREATY OF THE (1809)

Officially known as "The Treaty of Peace, Commerce, and Secret Alliance: Great Britain and the Ottoman Empire, 5 January 1809," with ratifications exchanged in Istanbul on 27 July 1809.

The Treaty of the Dardanelles grew out of the international rivalries surrounding the Napoleonic wars. The one constant rivalry during this period was that between Great Britain and France. The other European powers sided with one or the other as their military fortunes ebbed and flowed. Until 1805, Russia and France were allies. After Russia joined the Third Coalition against Napoléon, France endeavored to involve the Ottoman Empire in a war with Russia as a distraction. This war began in 1806 and lasted until 1812. Now allied with Russia, Britain sent a naval expedition against Istanbul in 1807; although Britain was able to force its way through the Dardanelles, the Ottomans pushed them back with a loss of two ships. Britain also occupied Alexandria but was forced to withdraw. Except for Britain, France was able to defeat the Third Coalition powers, and in 1807 Russia once more allied with France while continuing its war against the Ottomans. This set the stage for a change in British relations with the Ottomans, now fighting an ally of their perpetual enemy, France.

Sir Robert Adair led the British negotiations with the Sublime Porte that led to the 1809 treaty. The treaty contained eleven articles to which were appended four "separate and secret articles" and one "additional and secret article." The basic articles addressed the recent war between the two powers. They provided for an end to hostilities between Great Britain and the Ottomans with the exchange of prisoners; restoration of any Ottoman fortresses in British possession; mutual restoration of the property of British and Ottoman citizens seized by either side during the war; continuation of the 1675 Treaty of Capitulations; mutual good treatment of the merchants of both countries; an Ottoman tariff set at 3 percent; customary honors to the ambassadors of each nation on the same basis as all other ambassadors; appointment of consuls to facilitate trade; British agreement not to appoint Ottoman subjects as consuls nor to grant patents of protection to Ottoman subjects; and recognition of Ottoman authority to prohibit ships of war passing through the straits in time of peace. This latter was of special significance as it marked Britain as the first European power to recognize this Ottoman prerogative. General recognition of this did not, however, occur until 1841.

The "separate and secret articles" dealt primarily with France and Russia. Britain pledged to support the Ottomans should France declare war on them, including sending a fleet to the Mediterranean for that purpose. Britain also agreed to provide military supplies if France threatened the Ottomans short of declaring war. Regarding Russia, Britain offered to help secure a peace with Russia should this be possible before the Ottomans were able to end their war. This part of the treaty also included a provision for adjudication of the claims of both parties surrounding the British invasion and retreat from Alexandria.

The "additional and secret article" promised 300,000 pounds sterling to the Ottomans as a confirmation of friendship. Although Britain ratified this article, it was not to be presented for exchange unless France began a war with the Ottomans, which never took place.

In addition to ending the war between Britain and the Ottomans, recognizing the right of the Ottomans to close the straits, creating an alliance against France, and reconfirming the capitulations, the treaty is of particular interest because of its language. Normally, treaties are drawn in the language of the parties negotiating them. Because the Ottomans had a limited knowledge of English, however, they insisted that the treaty be drawn in Turkish and French, with which they were much more comfortable. This was a matter of some discussion in the foreign office, but the Ottoman position prevailed.

DARÜLFÜNÜN

The Darülfünün (Imperial Ottoman University) was the first institution of higher learning in the Middle East modeled along Western lines.

As a prominent symbol of the Tanzimat reforms, the Darülfünün the was the frequent victim of the Ottoman Empire's domestic politics in early years and suffered repeated closures. Its creation was first proposed in 1846 by Mustafa Reşid Paşa, but the school did not actually open until 1870, and then only for one year. On the impetus of the minister of education, Ahmet Cevdet Paşa, it was open again between 1874 and 1881. Then it remained closed until opening permanently in the fall of 1900, largely because of the efforts of a leading Ottoman politician, Mehmet Küçük Sait Paşa. Its curriculum included law, mathematics, chemistry, biology, philosophy, and the humanities, as well as courses on the Qurʾan, the *hadith* (traditions of Muhammad), and other aspects of Islam. In 1933, the Darülfünün was renamed Istanbul University, and it remains one of the preeminent universities in the Middle East.

ZACHARY KARABELL

DARWAZA, MUHAMMAD IZZAT

[1889–1975]

Palestinian politician and historian.

Muhammad Izzat Darwaza, born in Nablus, was an Ottoman bureaucrat in Palestine and Lebanon. He was a major figure in several Arab nationalist organizations, including al-Fatat, during the waning years of the Ottoman Empire, and helped organize the first Arab Congress (Paris, 1913). A pan-Arab nationalist who believed in the unity of Greater Syria after the Ottoman defeat and the establishment of the British and French mandates, Darwaza was also concerned with resisting Zionism.

During the British Mandate in Palestine, Darwaza became a leading figure in the Istiqlal (Independence) Party, a pan-Arab nationalist party reestablished in Palestine in 1932. When the Palestine Arab Revolt that began in 1936 flared up in 1937, Darwaza coordinated guerrilla activities from Damascus for the Arab Higher Committee.

He was a member of the reconstituted Arab Higher Committee for one year in 1947, then retired from active politics to write on Arab, Islamic, and Palestinian history.

MICHAEL R. FISCHBACH

DARWISH, ISHAQ

[1896–1974]

Palestinian politician.

The nephew of Jerusalem mufti Amin al-Husayni, Muhammad Ishaq Darwish was born in Jerusalem. He went to Beirut for his higher education, and was a soldier in the Ottoman army during World War I. Darwish's long career in politics began after the war, when he joined the Arab Club and supported pan-Arabism and the regime of King Faisal I in Damascus, Syria. With Faisal's fall, however, Darwish turned toward Palestine-centered nationalism and in the early 1920s became the first secretary of the Palestine-wide Muslim–Christian Association, headquartered in Jerusalem. He joined the Palestine Arab party after it was founded in 1923, and was one of the founders of the Istiqlal Party in 1932. Through most of these years, Darwish was an aide to his uncle, the mufti. In 1947, he was elected to the Fourth Arab Higher Committee, which that year staged a protest strike and boycotted UNSCOP, the UN committee researching plans for the partition for Palestine. Darwish lived with his uncle in Lebanon and London, England, briefly in the 1960s and returned to Jerusalem before his death.

ELIZABETH THOMPSON

DARWISH, MAHMUD

[1942–]

Palestinian poet.

Mahmud Darwish, recognized since the mid-1960s as the leading national poet of the Palestinian people, was born to a peasant family in al-Birwa, east of

Mahmud Darwish, one of the most acclaimed poets of the Arab world, wrote of the lives of his fellow Palestinians under Israeli rule. In the 1960s, as Darwish's popularity began to spread, the Israeli military placed him under house arrest on several occasions. © ROBERT H. TAYLOR, UNIVERSITY OF OKLAHOMA. REPRODUCED BY PERMISSION.

Acre. The village was destroyed by Israeli troops in 1948, causing Darwish's family to flee to Lebanon, the first of the poet's many displacements. Darwish returned to his homeland two years later, under the care of an uncle, but it was too late to be included in the census of Palestinians who had stayed through the war.

Darwish became a refugee, a "present-absent alien," and the peculiar status of Palestinians under Israeli dominion became the subject of many of his early poems, including "Identity Card," perhaps his most famous. Darwish began to recite his poetry at festivals and rallies, exciting the interest of the Israeli military. Between 1961 and 1969, Darwish was imprisoned several times, but he continued to write, publishing his first collection of poems, *Leaves of Olive,* in 1964. He also published articles for *al-Ittihad* and *al-Jadid,* periodicals of the Arab faction of the Israeli Communist Party (RAKAH).

In 1967 four of Darwish's poems were published in Yusuf al-Khal's prestigious literary magazine, *al-Sh'ir,* marking the first time many critics in the Arab world had read poetry written by Palestinians living under Israeli rule. This new genre of writing—which borrowed its strident, self-affirmative tone from Palestinian poets such as Ibrahim Tuqan and Abd al-Rahim Mahmud—was dubbed "resistance poetry," and Darwish became its best-known practitioner. By the end of the decade, translations of his poetry were reaching international audiences, and in 1969 the Afro-Asian Writer's Union awarded him its Lotus Prize.

After a year in Moscow, where he studied political economy, Darwish moved to Cairo and wrote for *al-Ahram.* Two years later, in 1973, Darwish settled in Beirut and became editor of *Shuʾun Filistiniyya,* a journal of the Palestine Research Center. In 1981 he founded the internationalist literary journal *al-Karmil,* which he continues to edit. After Israel's siege of Beirut in 1982, Darwish was evacuated with the Palestinian forces. From a new exile, in Paris, he wrote weekly columns for *al-Yawm al-Sabi* as well as several new volumes of poems. In 1986 he published his prose memoir of the days of siege in *al-Karmil,* and the text was later published as a book, *Memory for Forgetfulness.* Darwish's memoir is a modernist blend of diary, literary criticism, political commentary, and visionary narrative; it is one of the most singular and ambitious works of modern Arabic prose.

Darwish joined the Palestine Liberation Organization (PLO) in 1973 and became a member of its executive committee in 1987. In 1993, after the government of Israel and the PLO signed the Declaration of Principles, Darwish resigned from his position and distanced himself from the newly created Palestinian Authority. In 1996 he moved to Ramallah.

Darwish's early poetry is characterized by its uncompromising postures, political directness, and, at times, a sloganlike simplicity. His later work shows much greater range. In poems like "Intensive Care Unit," a personal intimacy balances the heroism; and Darwish has become more adept in his handling of history and myth, especially in the poems of *Mural*

(2000), his twentieth volume. Throughout his oeuvre, the trope of writing has a privileged place in Darwish's thinking about the existential situation of the Palestinian people. Writing is at once an insufficient weapon in the battle for national self-determination, as well as a necessary tool for recording the history of that battle; it is a concrete mark, and an erasable trace. As Darwish promises in "We Date Our Days with the Butterflies": "We will write our names to reveal their roots east of our bodies. / We will write what the bird writes in the open spaces, and forget the signatures of our feet."

DARWISH, SAYYID

[1892–1923]

Egyptian composer and singer.

During his short life, Sayyid Darwish composed thirty musical plays and dozens of other songs, including light strophic tunes, virtuosic love songs, and religious songs. His work drew upon the language, songs, and images of working-class Egypt. He took Arabic song in a new direction by laying the foundation for Egyptian populist musical expression that endured throughout the twentieth century and has been heard echoing in the compositions of Zakariyya Ahmad and Sayyid Makkawi. As a consequence, he remains a dominating figure in Egyptian cultural life.

He was born in Alexandria and around 1917 moved to Cairo, where he composed for the theatrical troupes of George Abyad, Ali al-Kassar, Munira al-Mahdiyya, the Ukkasha Brothers, and Najib al-Rihani, often in collaboration with his friend, the poet Badi Khayri. Together they helped develop a colloquial comic theater based on indigenous language, music, and characters. Sayyid Darwish infused his compositions with the anti-imperialist political sentiments of his day and with pride in an Egyptian heritage. He and his music expressed sentiments widely shared by the Egyptian people at the time of the Revolution of 1919, and they remain identified with attitudes of popular resistance to the present day.

Among Sayyid Darwish's best-known works are "al-Ashara al-Tayyiba," a play mocking Turkish governance written by Muhammad Taymur, and songs such as "Zuruni Kull Sana Marra" (Visit me once every year). His "Biladi, Biladi" (My country), with a text derived from a speech by nationalist leader Mustafa Kamil and an arrangement by lyricist Yunis al-Qadi, was adopted as the Egyptian national anthem in 1977.

DASHNAK PARTY

Translated as the Armenian Revolutionary Federation (ARF), the Dashnak Party sought to improve the lives of Armenians in the Ottoman Empire, eventually embracing Armenian nationalism.

The Dashnak Party was founded in 1890 by Armenians in Tbilisi, Georgia, then part of the Russian empire. The initial focus of its attention was western Armenia or so-called Turkish Armenia, the sector of historic Armenia in the Ottoman Empire. In the early twentieth century, it also began to organize seriously in eastern Armenia in the Russian empire, as well as in Armenian communities across Russia, Turkey, and Iran. Between 1918 and 1920, during the period of the independent Republic of Armenia, its activities were centered in the new

country. After Sovietization, the ARF moved abroad, first fleeing to Iran and eventually settling in Beirut, Lebanon, from where it guided Armenian political life in the Middle East until the Lebanese civil war began in 1975.

The ARF was organized to gather and coordinate the efforts of numerous small groups of Armenians in the Caucasus region involved in revolutionary activity. Bringing together a literate elite, local activists, and peasant guerrillas into a single party was probably its principal ideological achievement. With its leadership schooled in the Russian educational system and its revolutionary, nationalist, populist, and socialist ideas, the ARF articulated the goals of these numerous strands of Armenian society into coherent collective national objectives.

Relieving the plight of the Armenians in the Ottoman provinces as its primary objective, the ARF concentrated on organizing, educating, and arming the population in the countryside to resist the arbitrary rule of Ottoman administrators. Eventually it resolved to assassinate Sultan Abdülhamit II, who was held responsible for a series of brutal massacres in the 1890s. The overthrow of the sultan by the Young Turks and the restoration of the Ottoman constitution in 1908 seemed to affirm that the struggle against the sultan's regime, despite the increased brutalization of the Armenian population by the army, police, and the Hamidiye corps, had been worth the price. The 1909 massacres of Armenians in Adana province soon reversed expectations and revived tensions.

Reluctant to divide its energy and its attention, initially the ARF had chosen to sidestep the problem of autocracy in the Russian Empire. Events leading up to the 1905 revolution, however, precipitated the decision to oppose the tsar also as a despotic ruler devising and implementing policies oppressive to the Armenians. Crossing that threshold proved decisive because the consequences of World War I compelled the ARF to reconsider its objectives. With the decimation of the Armenian population in the Ottoman Empire, the ARF goal of seeing a national home secured in the Armenian-inhabited eastern provinces of the Ottoman Empire was voided. The breakup of the tsarist empire in 1918 instead provided an opportunity to develop the former Russian province of Yerevan, which was declared an independent republic, into the nucleus of an Armenian state. ARF members virtually ran the entire government of the Armenian republic. This close association had its drawbacks for the Armenian state in that Western powers were unsympathetic to a government run by a party whose platform advocated socialism. Conversely, its nationalist program made it a foe of Bolshevism and hence subjected it to the enmity of the Soviet regime. Banished from Soviet Armenia in 1920, the ARF assumed the mantle of a nationalist government-in-exile. When it reorganized in the diaspora, the ARF completely lost its Russian-Armenian character as it found a new basis for its existence among the exile communities in the Middle East, mostly composed of the survivors of the former Armenian population of the Ottoman state.

Part of the success of the ARF is explained by the fact that from 1890 to 1920 it attracted a sizable contingent of the Armenian intellectual elite. Whether as party members, advocates, or supporters, they created a huge body of nationalist literature. The practice was started by its founders, Kristapor Mikayelian (1859–1905); Stepan Zorian (1867–1919), known as Rostom; and Simon Zavarian (1866–1913). The party organ, *Droshak* (Banner), was the leading journal of Armenian political thought. During the independent republic, many distinguished figures from Russian-Armenian society became associated with the ARF. Avetis Aharonian, famed as a writer, became president and traveled to Paris to negotiate with the Allies. Alexander Khatisian, one-time mayor of Tbilisi, became prime minister. Others who rose to prominence during this period, such as Simon Vratsian, Nigol Aghbalian, and Levon Shant, remained central figures in the Armenian diaspora and its endeavors to educate a new generation of Armenians in exile. The ARF also attracted numerous guerrilla leaders and frontline revolutionaries into its ranks. Papken Siuni led the capture of the Ottoman Bank in 1896 in Constantinople. Men like Andranik, Aram Manoogian, and Drastamard Kanayan, called Dro, led organized armed defense of Armenian communities and of the Armenian republic. In diaspora, the ARF has been less successful in finding the kind of charismatic leadership that once distinguished it as the leading Armenian political organization. From this standpoint, the evocation of past leader-

ship has become an important feature sustaining the organization in diaspora communities.

From an organizational standpoint, the ARF bridged two major gulfs in late nineteenth- and early twentieth-century Armenian society: It created an alliance between Turkish Armenians and Russian Armenians, who had become divided by a boundary, and between the rural population and the urban population, who inhabited completely separate spaces as the Armenian bourgeoisie lived outside the Armenian heartland. To maintain a network that spanned so widely both socially and geographically, the ARF developed a highly decentralized organization that empowered regional bureaus with the privilege of devising policy.

Throughout its existence, the ARF has relied on direct financial support from Armenian society. With a large following and popular base, the organization has maintained a substantial infrastructure. Despite the destruction of innumerable Armenian communities, the ARF continuously maintained its operations and reorganized its network as Armenians migrated across the Middle East. Though based in urban Armenian communities and deriving support from the lower and middle classes, the ARF program addressed principally the condition of the Armenians in the Turkish provinces and of the agrarian population in general. Beyond equal treatment before the law and structural reform in the Ottoman government, the ARF placed great emphasis on improving the lot of Armenian farmers. An economic program therefore always formed a vital part of its doctrine. With many socialists among its ranks, the party as a whole was still slow to adopt socialism as the party platform despite its ideological currency in Russia. Ideas of the kind seemed remote from Armenian reality in the distant provinces of the Ottoman and Russian Empires. Consequently, despite its urban base, the ARF did not agitate as strongly among industrial workers, who tended to be drawn to social democratic groups, but rather concentrated on the program of national liberation.

Because Armenians constituted a subject minority unequipped to resolve its own problems, in the judgment of the ARF Armenian emancipation depended on the attention of the European powers. Their sympathetic influence was required to compel the reluctant Ottomans to introduce reforms. This policy remained controversial throughout the period as outside powers involved themselves with the Armenian question on their own timetable of interests and as the Ottoman government in its state of weakness looked upon the strategy with enormous suspicion. The persecution of Armenians in the Ottoman Empire during World War I, resulting in the Armenian Genocide, finally aligned the Western powers on the side of the Armenian republic. The Western failure to extend sufficient assistance to make a difference in preserving Armenian statehood, however, raised the question of whether the ARF had not misplaced its trust.

The ARF regards itself as a vanguard organization. In its early decades, its membership consisted of professional revolutionaries who published its papers, organized its cells, manufactured weapons, led guerrilla operations, and briefly ran a government. Its constituency has not been restricted to any class because it derived its strength from its popular nationalist program. The ARF constituency remains the larger segment of the Armenian diaspora though it no longer draws the same level of critical support from the professional class as it once did.

With its main political mission defused by 1920, the ARF devoted considerable attention to resurrecting Armenian communal life among the exile communities. The emergence of a new independent Republic of Armenia has posed special challenges to the organization, which for long sustained itself with the myth of national leadership. The rise in the 1980s of a major nationalist movement in Armenia independent of the ARF left the party somewhat stranded. These problems combined with earlier difficulties when its principal base was destroyed by the civil war in Lebanon. The largest and most dynamic diaspora community in the Middle East had provided the ARF a secure home in the post–World War II decades. Even so, with the independence of Armenia in 1991 and the conflict over Nagorno Karabagh, the ARF redirected its attention toward supporting domestic change in Armenia and enlisting international support for the Armenian struggle for sovereignty and self-government.

ROUBEN P. ADALIAN

DASHTI, ALI

[1896–1981]

An Iranian writer, member of parliament, and ambassador.

Born near Bushehr and trained in Muslim religious studies at Karbala, Iraq, Ali Dashti became a journalist upon his return to Iran in 1918. He established the paper *Shafaq-e Sorkh* (Red twilight) in 1922, and for several years the paper supported the policies of Reza Shah Pahlavi. After Dashti became disillusioned with and his paper critical of the shah in the late 1920s, he was taken to prison on several occasions. His first book, a collection of articles titled *Prison Days,* described his incarcerations. From 1928 to 1978 he spent many terms in the parliament, first as an elected deputy and from the mid-1950s as a senator appointed by the shah. During the 1940s, he was the leader of the Justice Party, a political group that opposed the Tudeh Party and supported a constitutional monarchy. In 1948, the shah named him Iranian ambassador to Egypt and Lebanon. In the 1950s, Dashti published several novels treating the plight of upper-class Iranian women. His book on Hāfez's poetry, the first of a series of important impressionistic critiques of major classical poets of Persian literature, appeared in 1957. *In Search of Omar Khayyam* (1971) typifies his literary, critical, and scholarly work. Dashti's Pahlavi-era political career led to his harassment and incarceration after the Iranian Revolution (1979). *Twenty-Three Years: A Study of the Prophetic Career of Mohammad,* published posthumously in 1985, illustrates his secular concerns about Islam in the modern world.

UPDATED BY ERIC HOOGLUND

DATES

Throughout history, the date palm has satisfied the needs—from food to fuel to construction materials—of those who live in desert and tropical regions. Now, the importance of its cultivation is waning.

Since the dawn of recorded history, the date palm has been associated with the Middle East. It has featured prominently in the rituals of the religions of antiquity, Judaism, Christianity, and Islam. Perfectly suited to the climate of the region, the date palm can endure desert heat, withstand long periods of flooding, and tolerate high levels of salinity. In general, a plentiful supply of water together with prolonged periods of high temperatures are ideal for the growth of the tree and for the ripening of its fruit. An average tree will produce approximately fifty pounds of fruit each year. The date palm has been for the settled Arabs what the camel has been for the nomads, providing a commercial crop to exchange for imported necessities, material for construction, bedding, and an important source of fuel. Beneath its shade they can grow other fruit trees, vines, and aromatic plants, and beneath these cultivate vegetables, melons, and fodder crops. For many it provides a staple food, rich in calories and with appreciable amounts of vitamins. The fruit can be easily packed and transported, while the seeds are ground up and used as camel food.

Date-palm cultivation is labor intensive. Trees may be grown from seed but are usually grown from shoots, suckers, or buds. Soil preparation for date-palm cultivation involves a multistage process, and an elaborate system of irrigation requiring regular maintenance is essential. Because half of all trees grown from seeds are male and unproductive, sophisticated means of growing plants, relying most especially on artificial pollination, have been practiced from ancient times. Each tree requires special care and pruning for optimum yields. Harvesting of dates usually occurs in September and October but may begin as early as mid-August and continue until December, depending on the variety. In Iraq, the

unique art of date cultivation has, since antiquity, been acknowledged legally by awarding to tenant cultivators hereditary property rights to the tree independent of the rights attached to the land on which it is grown. Contractual arrangements between cultivators and landowners vary according to differences in the inputs of skill and capital. Tenure practices and juristic ramifications associated with date cultivation are therefore complex.

Dates are most prolific in Iraq where there are 627 varieties. The groves along the Shatt al-Arab make up the largest single area of date cultivation, at one time covering over 100 square miles (260 sq km). Their harvest season long determined trade patterns in the Persian (Arabian) Gulf and much of the Indian Ocean. Until World War II, Iraq provided some 80 percent of the world's date crop, and dates constituted its largest export earnings. With the growth of the oil industry, the importance of dates in Iraq and elsewhere in the Middle East has declined. Greater oil earnings have reduced dependence on date palms for necessities, the attraction of other more remunerative and less arduous employments has depleted the pool of skilled cultivators, while the pollution associated with oil and modernization generally has had a detrimental effect on date palms.

ALBERTINE JWAIDEH

DAUD, MUHAMMAD

[1909–1978]

President of Afghanistan, 1973–1978.

Muhammad Daud, who earned the nickname of Sardar-i Diwana (the crazy prince) because of his hot temper and ruthlessness, was born in Kabul. His father, Sardar (Prince) Mohammad Aziz Khan, was a half brother of King Mohammad Nadir Barakzai (1929–1933), the founder of the Musahiban ruling dynasty of the Mohammadzai clan, of the Barakzai family of the Pashtuns (or Pakhtun) who dominated national politics in Afghanistan since the early 1800s. Daud attended Habibia and Amania schools in Kabul before continuing his education in France from 1921 to 1930. He returned to Kabul and after a one-year course at the Infantry Officers School, was appointed a major general and commanding officer of the armed forces in Mashriqi province, eastern Afghanistan (1932–1935). In 1933, Daud's uncle, King Nadir Shah, and his father, the Afghan envoy in Berlin, were assassinated separately as a result of political and family feuds. Nadir Shah's son, Mohammad Zahir, assumed the Afghan throne, and in 1934 Daud married the sister of Zahir Shah. Between 1935 and 1953, Daud rose from governor and general commanding officer in the western provinces to minister of defense and interior.

Daud was prime minister from 1953 to 1963. An ardent secular nationalist, Daud made strong military and economic progress his top priority. Initially denied assistance by the United States and the West, he turned to the Soviets. With their help he created a mechanized military force and adopted an *etatist* (state socialist) economic policy that concentrated on transportation and communication infrastructures and the expansion of education. Exploiting Pushtun nationalism, Daud pursued an aggressive territorial claim (for Pushtunistan) against Pakistan, which resulted in greater trade and with economic and military dependence on the Soviet Union. An alleged rift within the royal household over this issue culminated in Daud's resignation as prime minister in March 1963. He spent the next decade in retirement, unhappy with the constitutional developments in 1964 that curtailed participation of royal family members in government and political processes. Assisted by a group of junior military officers active in the pro-Soviet Parcham (Banner) Communist party, Daud returned to power on 17 July 1973 and proclaimed himself president of the Republic of Afghanistan, thus ending the monarchy.

Shortly thereafter, Daud consolidated power by relying on his old networks and persecuting his perceived enemies, among whom were members of the Islamist political movements. Toward the end of his rule, he appeared to distance himself from his old ally, the Soviet Union, in favor of closer ties with Iran and the Gulf States, while striving to improve

relations with Pakistan. In spite of these attempts, his presidency proved to be a period of confusion, contradictions, and indecision. In the end, Daud met his death at the hands of pro-Soviet Afghan communists, whom he had protected and nurtured during the previous decades.

In retrospect, some remember him as a patriot who single-handedly sought, but failed, to bring about progress and economic development in Afghanistan. Although intelligent, he was also a stubborn dictator and was ill informed about Soviet thinking and long-term goals in the region. Thus, he allowed himself to be used as a conduit for communism and Soviet influence, which led to ongoing strife.

DA'UD PASHA

[1812–1872]

Ottoman official in Lebanon.

Da'ud Pasha was born in Constantinople (now Istanbul; some sources say in 1816 and others say in 1818) to an Armenian Catholic family. He received his education at a French school and then attended a French college in Vienna, where he earned a law degree. He then entered the foreign service, and his first post was in Berlin. He wrote a book on Western jurisprudence and was known as a doctor of law. Da'ud Pasha also served as consul general in Vienna and later was director of publications and then director of post and telegraphic services in Constantinople. His French education brought him close to French circles in Constantinople. He was the first *mutasarrif* in Lebanon after the 1861 *mutasarrifiyya* order was designed for Lebanon by the Great Powers and the Ottoman Empire.

Before he began his mission in Lebanon, Da'ud Pasha was promoted to the rank of minister, thus becoming the highest-ranking Christian working for the Ottoman government. He improved tax collection in Lebanon and established public schools. He also founded a school for the Druze, in an attempt to appease that community after the end of the Druze–Maronite armed conflict. His mission was abruptly ended in 1868 after he became embroiled in the politics of Lebanon and tried to expand the area of "Lebanon." He then held various administrative positions in Constantinople. He died in Switzerland.

As'ad AbuKhalil

DAVAR

See Newspapers and Print Media: Israel

DAʿWA AL-ISLAMIYYA, AL-

Iraqi Shiʿite political party, whose name means Call to Islam.

Al-Daʿwa al-Islamiyya was formed by Shiʿite clerical figures in the 1960s to combat secularist tendencies among the Iraqi elites. It operated underground, since religious expression was suppressed by the secular socialist Baʿth Party, which came to power in 1968, attempted to control the national religious life and internal structure of the Shiʿite clergy. Members of the clergy, including Ayatullah Muhammad Baqir al-Sadr and Ayatullah Muhsin Hakim, backed or helped in the creation of the party, which organized antigovernment demonstrations on behalf of the deprived Shiʿite population of southern Iraq in the early 1970s. With the Shiʿite clergy in power in Iran after the revolution of 1979, the party became more politically active and received funding and backing from Iran. This led to heavy persecution and mass imprisonment and executions by Saddam Hussein's government. In turn, the Daʿwa Party launched attempts to assassinate government officials. In 1985, various Shiʿite parties, including the Daʿwa Party, formed in Tehran the Supreme Assembly for the Islamic Revolution in Iraq. But the Daʿwa Party was weakened by the counter-efforts of the Iraqi government to court the Shiʿite masses with economic and religious concessions, and by the Iraqi Shiʿa's lack of identification with their Iranian coreligionists.

After the 1991 Gulf War, the Daʿwa Party led a rebellion against the government of Saddam Hussein, but it was ruthlessly crushed. Party members established a London branch, which joined the coalition of Iraqi opposition groups aligning themselves with the United States. After the U.S. invasion of Iraq in 2003, the Daʿwa Party was revived within Iraq, but political differences seem to have surfaced between the London branch and the Iraqi branch regarding the U.S. occupation of Iraq. The party cooperated with the U.S. forces and its leader, Abd al-Zahra Uthman Muhammad (editor of several newspapers and magazines), joined the Iraqi Governing Council appointed in July 2003 by Paul Bremer, the official leader of the U.S. civil administration of Iraq.

Although the party is supported by Ayatullah Kazim al-Haʾiri, many within it look to the guidance of other ayatollahs as well, including the powerful Grand Ayatullah Ali al-Sistani. Despite their differences, the various branches seem to be united in their desire to swiftly end the U.S. occupation, and in creating an Islamic state in Iraq, though not necessarily along the Iranian lines of clergy domination.

DAYAN, MOSHE

[1915–1981]

Israeli military leader and politician.

Moshe Dayan was born at Kibbutz Degania in the Jordan valley. His family left in 1920 to join the founders of Nahalal, the first *moshav* (cooperative settlement) in the Jezreel valley, where Dayan was educated at an agricultural school. During the Arab revolt, Dayan served in a Jewish patrol unit *(notrim)* of Britain's mandatory police in Palestine under the command of Captain Orde Wingate. As a member of Haganah—the defense force of the Jewish national institutions in Palestine—and a student of its officers' school, he was arrested in 1940 by the British. Released after fifteen months in jail, Dayan commanded an advance unit of the Haganah that was sent by the Allies into Syria, then controlled by Vichy France. It was here that he lost an eye in battle, and the black patch that he subsequently wore became his trademark. The injury put a temporary halt to Dayan's military career. In 1946, he received his first political assignment, representing the MAPAI (Labor) at the World Zionist Congress in Basel.

At the beginning of the Arab–Israel War of 1948, Dayan served as an officer for Arab affairs at Haganah headquarters. In May he was given his first combat position—organizing the defense of the kibbutzim on the Kinneret (Sea of Galilee) front. He next led a mobile commando regiment that captured the city of Lydda. In July 1948, Dayan was named commander of Jerusalem. In this position, he negotiated a cease-fire in the Jerusalem area and an armistice with Jordan. He and Reuven Shiloah drew up a draft of principles for a territorial agreement with King Abdullah of Jordan; it was not negotiated, however, because the king refused to be the only Arab ruler to sign a peace treaty with Israel.

Between 1949 and 1953, Dayan held several senior positions in Israel's army. Appointed chief of staff in December 1953, he reshaped Israel's army as a fighting force. The greatest achievement of the army under Dayan's direct command was the Sinai campaign of 1956, in which it took over the entire Sinai peninsula in a week. Dayan objected to Prime Minister David Ben-Gurion's decision to withdraw Israel's forces from all positions in Sinai in response to U.S. pressure and Soviet threats, and in return for Western guarantees of free passage in the Strait of Tiran and the placement of UN observers in Sharm al-Shaykh and Gaza. Dayan resigned from the army in January 1958. Following two years of study at the Hebrew University of Jerusalem, he was elected a MAPAI member of the Knesset and named minister of agriculture in Ben-Gurion's government

Moshe Dayan (1915–1981) had a distinctive military career, culminating in his election as chief of staff of the armed forces. In 1958, Dayan left the military to take up a career in politics. He played a role in negotiating the landmark Israeli-Egyptian peace treaty of 1979. © David Rubinger/Corbis. Reproduced by permission.

(1959). With Shimon Peres, Dayan became prominent in MAPAI's young leadership club, which aspired to democratize the party and take over its leadership. Although Ben-Gurion had encouraged their entry into politics and the government, his veteran associates, including Levi Eshkol and Golda Meir, felt threatened by the younger group and were alienated by its criticism of the party. Eshkol succeeded Ben-Gurion as prime minister in June 1963. In November 1964, Dayan resigned from the Eshkol government to protest what he described as the prime minister's lack of confidence in him.

Prior to the 1965 elections, Dayan joined Ben-Gurion's Rafi Party. His greatest political hour came in the Arab–Israel War of 1967. Criticism of Eshkol's hesitancy to react forcefully to Egypt's blocking the Strait of Tiran to Israel's shipping and its rapid military buildup in Sinai created pressure for Dayan's appointment as defense minister and the formation of a national unity government. Dayan led the army as a civilian. He was reluctant to occupy the Golan Heights but succumbed to pressure from the government. He also did not want Israel's forces to reach the Suez Canal but did not prevent it. After the war, Dayan was put in charge of the territories occupied by Israel—the Golan Heights, the West Bank, and the Gaza Strip. He promulgated the economic integration of the territories, Israeli settlement there, and the maintenance of open bridges over the Jordan River.

The 1967 war and its aftermath made Dayan a leading, though controversial, national political contender. In 1968, Rafi joined MAPAI to form the Labor Party. Dayan supported the merger but kept alive his option to run as an independent until the Arab–Israel War of 1973, which severely undermined his public support. The coordinated attack by Egypt and Syria, which caught Israel unprepared, shattered Dayan's leadership credibility and produced demands for his and Prime Minister Meir's resignations. The Labor party managed to win the next election (31 December 1973), though with decreased representation. Although a state commission of inquiry (the Agranat commission) found no personal negligence in the conduct of the war, criticism did not wane. A large segment of the public was not prepared to put all the blame for the army's lack of preparedness on military officers. Israel's advantageous military position at the end of the war, and the beginning of diplomatic negotiations, did not put an end to criticism.

Prime Minister Meir resigned on 18 January 1974, and Dayan refused to serve in the Labor government headed by Yitzhak Rabin. In the 1977 elections, Dayan ran on the Labor party's Knesset list; he had first negotiated with the Likud and had contemplated an independent run. Following Likud's electoral victory, its leader, Menachem Begin, invited Dayan to serve as foreign minister in his government. In this position, Dayan launched the secret talks with Egypt that eventually led to President Anwar al-Sadat's visit to Jerusalem, and he is largely credited with playing a major role in the

Camp David Accords between Israel and Egypt (1978), and the subsequent peace treaty with Egypt (1979). Nevertheless, he resigned from the Begin government on 23 October 1979, criticizing its handling of the talks with Egypt on the implementation of the Camp David autonomy plan for the Palestinians in the occupied territories. He believed that Israel should have negotiated more vigorously, unencumbered by internal political restraints. Subsequently, Dayan advocated unilateral implementation of the autonomy plan. Under this banner he ran as an independent in the 1981 elections, but his list (Telem) received meager support. He died soon afterward. An accomplished amateur archaeologist, Dayan also was a prolific writer.

Nathan Yanai

DAYAN, YAEL

[1939–]

Israeli writer and civil rights activist.

Yael (also Yaʿel) Dayan was born in Afula to Moshe Dayan, who later became chief of staff of the Israel Defense Force (IDF) and defense and foreign minister, and Rahel (also Rachel) Dayan, a well-known social activist specializing in immigrant absorption. Yael studied international relations at the Hebrew University and biology at the Open University. She served as an officer in the IDF Spokesman Unit and covered the June War of 1967 in that capacity. There she met her husband, General Dov Sion (1924–2003). In the 1980s, already a well-established author and commentator on public issues, she entered politics and was elected to the Knesset in 1992 as a Labor Party member. Her three terms in the Knesset were marked by intensive and outspoken attempts to promote the rights of minority groups, chief among them Israeli Arabs, gays, and lesbians. She was also active in Arab-Israeli peace causes and was involved in various efforts to intensify rapprochement between the two peoples after the signing of the September 1993 Oslo Accord. In the 2003 elections she was not included on the Labor party list and joined the Meretz Party list of candidates but was not reelected.

A prolific writer, she has written several novels and memoirs, some of which have been translated into English, including *New Face in the Mirror,* 1959, *Death Has Two Sons,* 1967, *Dust,* 1963, and *Envy the Frightened,* 1960 (fiction); and *A Soldier's Diary: Sinai 1967,* 1968, *Three Weeks in October,* 1979, and *My Father, His Daughter,* 1983 (nonfiction), as well as many articles and film scripts dealing with women's issues, peace, and social criticism.

Meron Medzini

DAYR AL-ZAWR PROVINCE

Province in eastern Syria on the Euphrates River named after its major town, Dayr al-Zawr.

The name Dayr al-Zawr means literally the convent of the grove where clusters of tamarisks grow alongside the river. Apparently, a convent was originally established there. The town of Dayr al-Zawr is located on the right bank of the Euphrates River 640 feet (195 m) above sea level. The river is crossed by a suspension bridge 1,476 feet (450 m) long, completed in 1931.

The province of Dayr al-Zawr (or al-Furat), according to official data, in 1982 included 29 villages

and 261 farms spreading over 3 *qadas* (subprovinces) currently referred to as *mintaqas*: Dayr al-Zawr, Abu Kamal, and al-Mayadin. They are divided into 14 *nahiyas* (smaller administrative units).

The total population of the province in 2002 was 1,311,700, and of the town of Dayr al-Zawr, 216,200.

ABDUL-KARIM RAFEQ

DAYR YASIN

Palestinian village.

Dayr Yasin (Deir Yasin), 3 miles (5 km) on the outskirts of Jerusalem, was attacked by Jewish paramilitary units during the civil war between Palestinians and Jews in the period between announcement of the United Nations partition plan in November 1947 and proclamation of the state of Israel in May 1948. Although only one of a number of incidents in which Jewish forces attacked Palestinian civilians, the Dayr Yasin massacre became the most notorious and the longest remembered because of the unusually large number of deaths, Palestinian loss of the village, and the extent to which the reports of the massive loss of lives that circulated through the Palestinian community exacerbated fears that led to mass flight of Palestinians.

The attack on Dayr Yasin occurred on 9 April 1948, and was initiated by the Irgun Zvaʾi Leʾumi, or Etzel (National Military Organization), and Lohamei Herut Yisrael, or Lehi (Fighters for the Freedom of Israel), which was also known as the Stern Gang. Etzel, which was headed by Menachem Begin (who would later become Israel's prime minister), was a dissident faction of the Haganah, the quasi-official defense organization of the Palestinian Jewish community, or Yishuv. Although Dayr Yasin's residents had not been involved in any significant incident against the Yishuv, and had signed a nonaggression pact with the Haganah, the leaders of Etzel and Lehi justified their surprise attack by charging that the village had been a base for Palestinian guerrillas, an accusation that was not substantiated by the Haganah. During the attack about 105 men, women, and children were murdered, although a figure of 250 is often cited; many bodies were mutilated and thrown into a well. There was some armed resistance to the attack.

The leaders of the Yishuv, including David Ben-Gurion (who would later become Israel's first prime minister), strenuously denounced the attack and disclaimed any responsibility for it. However, there is credible evidence that the Haganah had been informed of the impending attack in advance and that a Haganah unit had provided covering fire for Etzel and Lehi. During the incident, residents of Dayr Yasin who were not slain were driven from the village, and most of it was destroyed. Later, the remains of the village were taken over and occupied by the Haganah.

Dayr Yasin symbolized the extent to which the struggle between Palestinian and Jewish communities in Palestine was becoming an all-out civil war with civilian casualties. It thus contributed to the panic that led to the collapse and mass flight of the Palestinian community.

DON PERETZ

DEAD SEA

Salt-water lake situated between Jordan, the West Bank, and Israel.

The Dead Sea (Arabic, Bahr al-Lut; ancient Greco-Romano, Lacus Asphaltites), the lowest surface point on the planet (the actual lowest point is under the ocean), is situated in the 350-mile-long (560 km) Jordan–Dead Sea rift valley, bordered by the Hashimite Kingdom of Jordan to its east, the

MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

State of Israel to its southwest, and the West Bank to its northwest. The surface of the Dead Sea is 1,302 feet (397 m) below Mediterranean sea level, with an area of about 395 square miles (1,020 sq km). It is 51 miles (82 km) long.

This inland lake is the world's saltiest; its water contains about 25 percent solid concentrates, as compared to ocean concentrates of some 4 to 6 percent. The lake has no outlet and is fed from the north by waters of the Jordan River and *wadis* (streams that are usually dry but fill during the rainy season). In its middle, it is divided by the Lisan (tongue), which stretches across some 75 percent of the lake's width from Jordan toward Israel. Economically, the Dead Sea is important to the bordering regions, since each uses it for tourism—many visitors seek its purported medicinal properties and spas exist to allow such visits, especially in Israel. The land near its shores is also cultivated, with sweet irrigation water brought to those fields. From the Dead Sea's brine, both Jordan and Israel extract potash, an important component of agricultural fertilizer.

DEAD SEA SCROLLS

Ancient religious documents.

The Dead Sea Scrolls are ancient manuscripts found at Khirbat Qumran, in caves in the Judean desert near the Dead Sea, 7.5 miles (12 km) from Jericho. The scrolls were uncovered in 1947. Archaeologists later discovered a cemetery of over one thousand graves, a central building, and central caves containing fragments of old documents. The area was apparently destroyed by an earthquake in 31 B.C.E. and then rebuilt. The authors of the scrolls lived there until 68 C.E. The contents of the scrolls and other evidence show that the authors belonged to a Jewish sect. The scrolls or fragments include two complete copies of Isaiah and fragments of nearly every other book of the Bible. Their discovery advanced the study of the Hebrew Bible, since the earliest versions before the scrolls were discovered dated to the Middle Ages. Fragments of the Apocrypha and the Pseudepigrapha and other unknown books were also found, including the Book of Tobit, the Hebrew version of Jubilees, and the Aramaic version of the Book of Enoch. The scrolls include sectarian books as well, including a commentary on Habakkuk, parts of a commentary on Micah and Nahum, and others. These commentaries explain the prophetic writings in relation to the history of the sect. Other scrolls deal with the sect's organization and theological doctrines. They also contain fragments of the Zadokite documents

that were found in Cairo. The Temple scroll minutely details the Temple. The sect responsible for the scrolls was assumed to have been the Essenes, but recent scholarship has placed this thesis in doubt. They beheld the power of good ruling in a world in opposition to the power of evil, and they saw themselves as the chosen "sons of light."

Their apocalyptic circles, among whom Enoch was composed, probably influenced the beginnings of Christianity, especially those close to Paul and John the Evangelist.

Some of the scrolls came into the possession of Hebrew University through E. L. Sukenik, who was responsible for the first publication of selections. Others went to the United States where they were published by Burrows, Brownlee and were subsequently purchased for the government of Israel through the agency of Sukenik's son, Yigael Yadin. They are housed in the Shrine of the Book in the Israel Museum. The publication of the many fragments was entrusted to a group of scholars whose slow progress generated international controversy. In 1991, the system was overhauled to ensure speedy publication. The Huntington Library in San Marino, California, in the interim, published photographs of the collection and made them available without restrictions.

DE BUNSEN, MAURICE

[1852–1932]

British diplomat.

Maurice De Bunsen entered the diplomatic service in 1877 and helped settle the dispute between France and Spain over Morocco in 1911 and 1912. In 1915, Prime Minister H. H. Asquith appointed him head of a committee to determine British wartime policy toward the Ottoman Empire in Asia. The resulting report of the De Bunsen committee established the foundation for British policy in the Middle East.

ZACHARY KARABELL

DECENTRALIZATION PARTY

Political party of the Ottoman Empire from 1912 to 1916.

The Ottoman Administrative Decentralization Party was founded in Egypt in December 1912 by Muslim and non-Muslim Syrian émigré intellectuals. Party leaders included Rafiq al-Azm (president), Iskandar Ammun (vice-president), Rashid Rida, and Muhibb al-Din al-Khatib. The party espoused a program of decentralization for the multiethnic and multireligious empire. But it formed branches only in Arab areas and lacked official status. Along with the empirewide Ottoman Liberty and Entente Party, it sought wider powers for provincial councils in education, financial affairs, religious foundations, and public works. It advocated local military service and two official languages in each region, Turkish and the local language. The party maintained close links with the reform societies that emerged in Arab cities in 1912 and 1913. Despite dissension in its ranks after the Arab Congress (June 1913), the party survived until World War I as the coordinator of Arab autonomist movements. The dominant Committee for Union and Progress implied that party members advocated separatism and pro-Western treason. Cemal Paşa sentenced prominent members to death in 1915 and 1916.

DECLARATION OF LA CELLE ST. CLOUD

Agreement by France to allow Morocco independence.

In August 1953, France deposed the Moroccan sultan, Sidi Muhammad bin Yusuf. Until then, the Moroccan opposition had been divided, but the exile of the monarch united the country. A wave of strikes, violence, and disturbances swept the country, accompanied by demands for the sultan's return and the immediate independence of Morocco. The French government of Prime Minister Pierre Mendès-France finally recognized that Morocco would not be pacified, except at a cost far greater than the French were willing to pay. In October 1955, the exiled sultan went to France, and the Declaration of La Celle St. Cloud was issued by the French foreign minister, Antoine Pinay, on November 6. Under its terms, France agreed to grant Morocco independence in accord with the principle of Franco–Moroccan interdependence. This concept raised some concern in Morocco about the sincerity of the French, but in March 1956, the promise enshrined in the declaration became fact, with the former sultan becoming King Muhammad V, ruler of the new state.

ZACHARY KARABELL

DEDE ZEKAI
[1825–1899]

Ottoman Turkish composer.

Dede Zekai, also known as Hoca Zekai Dede Efendi and Mehmet Zekai Dede, was born in the Eyub district of Istanbul. His father was a teacher and imam of the local mosque. As a child, he was schooled in singing, calligraphy, and memorization of the Qurʾan; his music teachers included Hammamzade Ismail Dede and Dellalzade İsmail. At the age of thirteen, he went to Egypt where he was a court musician in Cairo. He acquired the title "dede" after studying Sufism, and the title "hoca" for teaching music at the Darüşşafaka. Among his students were Subhi Ezgi, Rauf Yekta Bey, and Ahmet Rasim. Over 260 of his compositions survive today. Half of these are religious compositions; the other half were composed in the *beste, ağir semai, yürük semai,* and *şarki* genres. Fifty-five of his pieces are melodies, and 182 of his compositions were published in a four-volume collection.

DAVID WALDNER

DEEDES, WYNDHAM
[1883–1956]

British colonial official in the Middle East.

After serving in World War I, the British Brigadier General Sir Wyndham Henry Deedes was posted to Istanbul as a military attaché and to Cairo, then a British protectorate, as public security director. From 1920 to 1922 he served as chief secretary to British High Commissioner Sir Herbert Samuel in Palestine, then under British mandate. Although known for his pro-Zionist sympathies, Deedes played a role in promoting the Supreme Muslim Council as an Arab counterweight to the Jewish Agency.

ELIZABETH THOMPSON

DE GAULLE, CHARLES

[1890–1970]

President of France, 1958 to 1969; instrumental in ending French colonialism in the Middle East and North Africa.

Charles de Gaulle, one of republican France's great statesmen, earned his place in French history by the spirited exercise of leadership in the face of national adversity—first when he placed himself at the head of the Free French movement in 1940 to meet the challenges of the German occupation in World War II, and again when he took the lead in reshaping French political institutions in 1958 to meet the challenges of the Algerian war of independence, European integration, and the cold war. Faced, in both periods, with the contradiction of ensuring France's well-being in Europe and sustaining a precarious hold on remnants of the French Empire, de Gaulle did not deviate from his primary objective for long. The relative ease, therefore, with which he could divest France of claims to empire helped pave the way for full independence in the Middle Eastern mandates of Lebanon and Syria by 1945 and for the decolonization of Algeria by 1962.

De Gaulle established this priority early in his military career when he reluctantly deferred his passionate interest in French defense strategies to complete a tour of duty in the Middle East from 1929 to 1931. While there, he hinted at the charismatic didacticism that was to become the hallmark of his speeches. This was when, overriding the contradictions that separated colonial administrators from the political aspirations of their subjects, he urged Lebanon's youth to build a progressive state with the help of France. Returning to the Middle East during World War II, after its liberation in 1941 by British and Free French forces, General de Gaulle was incensed when he saw how Britain, with tacit American backing, was exploiting French weaknesses to support the Lebanese and Syrian nationalist movements. Ultimately, however, he refrained from exerting what would have been a corrosive resistance to Allied demands for France's retreat from empire in the area.

When de Gaulle returned to power in 1958, he had to deal with the French army's repression of Algeria's nationalist struggle against a colonial social order. This morally and materially debilitating war also affected France's relations with neighboring Arab states as well as with the United States, Britain, and the international community. De Gaulle initially mapped out a progressive future for what was to be a felicitously integrated Franco–Algerian society. He concentrated, however, on turning the sometimes dangerously rebellious military around to building France up as a nuclear power independent of its erstwhile allies and able to lead with Germany in the development of the European community. With these priorities uppermost in his mind, de Gaulle agreed in 1962 to the nationalist demand for a fully independent Algeria, and France subsequently closed this chapter in the history of empire with the absorption of a massive flight of colonists from across the Mediterranean.

In the aftermath of the Algerian peace, de Gaulle favored a resolution with the Arab world to complement French links with Israel. In the last years before he resigned his presidency in 1969, he assumed France's heightened stature would justify the role of arbiter in the Arab–Israel conflict, but he failed to make allowances for the complexity of the problem and the greater involvement of the superpowers.

JOHN P. SPAGNOLO

DE HAAN, YAʿAKOV YISRAEL

[1881–1924]

Dutch-born poet and journalist who was assassinated because of his anti-Zionist activities.

Yaʿakov Yisrael de Haan was assassinated on 30 June 1924 near the Shaʿare Tzedek Hospital in Jerusalem by two members of the Haganah. He joined the Mizrahi Zionist movement early in his career, but after moving to Palestine he eschewed Zionism, joined the Agudat Israel, and became the spokesman for the Ashkenazi Council. He wrote increasingly

anti-Zionist articles and sent pro-Arab reports to the League of Nations and the British mandatory authorities. These activities made de Haan an enemy of the Yishuv leadership and led to his assassination.

See also AGUDAT ISRAEL; ASHKENAZIM; YISHUV; ZIONISM.

BRYAN DAVES

DEHKHODA, ALI AKBAR

[1880–1956]

A leading reformist voice during Iran's Constitutional Revolution, 1905–1911; lexicographer.

Ali Akbar Dehkhoda's journalistic and satirical prose—for example, in *Charand Parand* (Balderdash) and in *engagé* (politically concerned) verse (collected in his Divan)—influenced later writers of Persian literature.

During the Pahlavi era (1925–1941), like some other literary intellectuals, Dehkhoda left politics to work on academic projects. In the early 1940s, he returned as an administrator to his old secondary school, which had become the Faculty of Law at Tehran University. With the approval and support of Iran's parliament, in 1945 he began work on his Persian encyclopedic dictionary called *Loghatʾnameh* (Book of words). Some twenty thousand pages later and years after his death, the work reached completion in 1980.

MICHAEL C. HILLMANN

DELLALZADE İSMAIL

[1797–1869]

Ottoman Turkish singer and composer.

Dellalzade İsmail, the son of a palace official, was born in the Fath district of Istanbul. Upon finishing primary school, his musical talents were noticed, and he became a student of the great Dede Zekai Efendi. At the age of nineteen, he joined the palace orchestra as a singer; later, he became the companion and chief prayer caller of Sultan Mahmud II. In 1846, Sultan Abdülmecit appointed him singing instructor in the newly established Academy of Music. Dellalzade is considered one of the musical geniuses of a period in which the flowering of Turkish classical music was met by the increasing popularity of Western music. He composed more than seventy pieces, including solemn folk tunes *(semai)* and ballads *(şarki)*. Among his most well-known compositions are *Yegah Ağir Semai, Suznak Beste,* and *Şehnaz Şarki.*

DAVID WALDNER

DELOUVRIER, PAUL

[1914–1995]

Delegate general of the French government in Algeria in the 1950s technocrat.

Born in Remiremont, Vosges, in France, Paul Delouvrier was a financial specialist, a member of the French Underground in World War II, and an associate of Jean Monnet, who pioneered European economic integration. While serving in the European Coal and Steel Union, President Charles de Gaulle appointed Delouvrier delegate general to Algeria, a difficult position because of the ongoing Algerian War of Independence and France's complex internal politics. Delouvrier's chief task—where he had considerable success—was to supervise social and economic projects of the Constantine Plan (outlined by de Gaulle in in a speech in October 1958), which aimed to accelerate Algeria's development. Nevertheless, Delouvrier's authority disintegrated during this fitful period of decolonization, and he resigned in 1960. After his return to France, de Gaulle tapped him in 1961 as delegate general to rejuvenate Paris and its environs—a responsibility covering three departments. This was one of the great urban projects in modern French history. Delouvrier succeeded in creating satellite cities and in linking suburban rail systems with Paris's métro. He was prefect of the Paris region from 1966 to 1969. He headed France's electricity board from 1969 to 1979 and promoted its nuclearization. He served on the Conseil Economique et Social until he retired in 1984.

PHILLIP C. NAYLOR

DELTA

Often called Lower Egypt, the land between the mouths of the Nile.

The delta is a triangular area (shaped like the Greek letter Δ) that has been built up by the silt carried within the waters of the Nile River. When the Nile approaches the Mediterranean, much of the solid wastes and organic matter picked up during its long trip to the sea is screened out at the marshy estuaries and left behind to build more delta land. Although in ancient Egypt the Nile delta had seven mouths, today it has two—the Damietta on the east and Rosetta on the west—and many small channels. The broad coastal rim of the delta measures about 150 miles (240 km) from Alexandria in the west to Port Saʿid in the east. It is about 100 miles (160 km) from the Mediterranean coast south to Cairo, Egypt's capital.

The delta landscape is flat and mostly fertile, but the area nearest the coast is marshy, dominated by brackish inlets and lagoons. Since the construction of the Delta Barrages in the early nineteenth century, most of the farmland has been converted from basin to perennial irrigation, which supports two or three crops per year instead of one. Almost half the inhabitants are small landowners, sharecroppers, or peasants working for wages who live in villages surrounded by the lands they till. The others live in towns or cities. Fruits, vegetables, and cotton are the important delta crops. Delta Egyptians have generally had more contact with the outside world than have Upper Egyptians and are therefore more Westernized.

ARTHUR GOLDSCHMIDT

DELTA BARRAGES

A special type of dam on the Nile.

Delta Barrages are designed to regulate the upstream level but not the flow of water in the two distributary branches of the Nile, so that when the river is low, water can still flow into irrigation canals.

Construction of the original Rosetta and Damietta Barrages, 70 miles north of Cairo, Egypt, proposed by Linant de Bellefonds Pasha, a Belgian engineer in the employ of Muhammad Ali Pasha, viceroy of Egypt, was started in 1833 and completed in 1843. This ultimately permitted conversion of over 754,000 acres of the Nile delta from basin irrigation to perennial irrigation, lengthening the growing season and dramatically increasing agricultural output. Muhammad Ali originally proposed using stones from the nearby Giza pyramids as building material for the barrages, but was dissuaded by Linant, who argued that it would be too costly. Poorly constructed, the barrages were rebuilt during the British occupation. Additional barrages were subsequently constructed at Idfina (1915) and Zifta (1943) in the delta. Three major barrages were later built on the main Nile between Cairo and Aswan.

DAVID WALDNER
UPDATED BY GREGORY B. BAECHER

DE MENASCE FAMILY

Sephardic family who arrived in Egypt during the eighteenth century, via Palestine and Morocco.

The leading member of the family in the nineteenth century was Jacob De Menasce (1807–1887), who began his career in Cairo as a money changer *(sarraf)* and banker and gradually emerged as the private banker of the Khedive Ismaʿil. He was one of the earliest entrepreneurs in Egypt to recognize the opportunities offered by European trade and, with

Jacob Cattaoui, opened the banking and trading establishment of J. L. Menasce et Fils with branches in England, France, and Turkey. In 1872 and 1873, De Menasce was granted Austro-Hungarian protection and subsequently was given the title of baron by the Austro-Hungarian Empire, along with Hungarian citizenship. In 1871, he moved to Alexandria, the new and permanent seat of the family. His son, Béhor Levi, continued in the family's financial enterprises, but his grandson, Baron Jacques Béhor De Menasce (1850–1916), deserted the banking profession in favor of the cotton and sugar businesses. In 1890, Jacques served as the president of Alexandria's Jewish community and remained in that capacity for about twenty-five years. His younger brother Félix Béhor (1865–1943) became concerned with Zionism and was a personal friend of Dr. Chaim Weizmann, then president of the World Zionist Organization. In September 1921, Félix represented the Egyptian Zionist organization in Carlsbad at the twelfth World Zionist Congress; in later years he served as Alexandria's Jewish community president. The De Menasce family was not merely wealthy. It was European-educated and Western-oriented and led the Alexandria community from the early 1870s into the 1930s.

MICHAEL M. LASKIER

DEMETRIUS II

[?–1870]

111th Coptic patriarch of Egypt, 1862–1870.

Because Khedive Saʿid Pasha had likely ordered the murder of Demetrius II's predecessor, Cyril IV (for his pursuit of closer associations with foreign churches without the viceroy's approval), Demetrius adopted a modest domestic agenda. His sometimes obsequious loyalty to the khedive guaranteed that his tenure was trouble-free but undistinguished. He continued Cyril's support of education for the clergy but had little of his interest in church reform, which was eagerly sought by the progressive laity, specifically in matters of finance and land management. As a result, the Coptic populace's long-held mistrust of the conservative clergy, having been suspended during Cyril's enlightened tenure, was renewed in intensity and has flared intermittently to the present. After Demetrius's death, the patriarchate went empty for almost five years.

DONALD SPANEL

DEMIREL, SÜLEYMAN

[1924–]

The Republic of Turkey's ninth president.

Born in Islamköy, Isparta, Süleyman Demirel graduated from the Department of Civil Engineering of Istanbul Technical University in 1949, after which he was employed at the Istanbul Administration of Electricity. In 1954, he went to the United States as an Eisenhower Fellow to conduct research on dam construction, irrigation, and electrification. Upon his return, he was appointed general director of the State Irrigation Administration, where he supervised the construction a series of dams. From 1962 through 1964, he taught hydro-engineering at Middle East Technical University.

Demirel joined the Justice Party (JP) in 1962 and was elected chairperson upon the sudden death of its founder in 1964. In the general elections of October 1965, the JP won 248 seats in the National Assembly and Demirel became Turkey's twenty-ninth prime minister. In the next general elections, in October 1969, the JP gained 46.53 percent of the vote and 256 seats, retaining its predominant position in the parliament. Nevertheless, Demirel's new cabinet failed to resolve the problems posed by the radical student movements, and he was forced by the military to resign in March 1971.

Turkish president Süleyman Demirel votes in the 1999 local and general elections. Two nationalist parties received the most votes, guaranteeing a continuance of a three-party government, but afterwards there were many reports of irregularities and abuses in the election process. © AFP/CORBIS. REPRODUCED BY PERMISSION.

In 1974, Demirel formed the first National Front government with several rightist parties. In 1977, hyperinflation and escalating civil strife resulted in an early general election. Having won 213 parliamentary seats, the Republican People's Party formed a minority government under the leadership of Bülent Ecevit. When Ecevit's cabinet resigned after ten months, Demirel once again became prime minister of a coalition government with the National Salvation Party and the National Action Party. The new cabinet remained in power for only six months and resigned after failing to obtain a vote of confidence in December 1978. Two years later, Demirel formed his third National Front government with the National Salvation Party and the National Action Party. However, growing domestic violence, ethnic clashes, economic bottlenecks, and the parliament's inability to elect a president paved the way for another military intervention on 12 September 1980. Demirel was taken for his "personal safety" to Hamzaköy and was deprived of his political rights for the following ten years.

In the early 1980s, Demirel was placed under house arrest by the ruling military junta and sent to Zincirbozan for four months. During the 1986 general elections he supported the True Path Party (DYP) and after his political ban was lifted in 1987 he became its chairperson. In the elections of 1991, the DYP won a parliamentary plurality (178 out of 450 seats) and Demirel formed Turkey's first rightist/leftist coalition government with the Social Democratic Populist Party. Upon the sudden death of President Turgut Ozal on 17 April 1993, Demirel was elected ninth president of the Republic and resigned from his post in the DYP.

Demirel served the full seven-year presidential term. He believed that the head of state should foster effective coordination among the public institutions, including the military, state organizations, the government, and the parliament, and therefore achieve "the smooth functioning of the state" with minimum interference on his/her part. Demirel never hesitated to use his presidential powers toward this objective. For instance, on the occasion of his meeting with the members of the opposition within the DYP, he asserted that he was trying to establish the stability of the political system. The stability of political parties, including the DYP, would, for him, contribute to the stability of the system as a whole.

Demirel left the office on 16 May 2000, when the National Assembly rejected a constitutional amendment that would have allowed him to serve a second term. He later joined the international Mitchell Committee on the Middle Eastern peace process and did not return to active involvement in Turkish politics.

NERMIN ABADAN-UNAT
UPDATED BY BURÇAK KESKIN-KOZAT

DEMOCRATIC ORGANIZATION OF AFGHAN WOMEN (1965)

A Marxist-oriented political group active between 1965 and 1992.

The Democratic Organization of Afghan Women (DOAW) was founded in 1965 as a component of the People's Democratic Party of Afghanistan (PDPA) by Anahita Ratebzad, who served as its first president. After the PDPA seized power in the military coup of April 1978, DOAW became an important organization in the Democratic Republic of Afghanistan (DRA). Ratebzad announced that the DOAW's primary objective was to fight against feudalism and Western imperialism in defense of the objectives of the "Saur (April 1978) Revolution." In 1979 President Taraki (1978–1979) changed the name of the organization to the Khalq (People's) Organization of Afghan Women (KOAW). In 1980 the organization retook its original name and started a monthly journal, *Zanan-i-Afghanistan* (Women of Afghanistan), to publicize its objectives. It also expanded its activities in the provinces and launched a literacy campaign to make education available to women of all ages and to inform them of the objectives of the Saur Revolution. In 1981 the DOAW claimed nineteen district and seven municipal committees and 209 primary organizations whose main function was to attract women to the organization in support of revolution. When Najibullah came to power in 1986 he eliminated all Marxist rhetoric in an effort to lessen growing opposition to the PDPA regime. In line with this policy, the organization's name was changed from *Sazman-i-Democratic-i-Zanan-i-Afghanistan* (Democratic Organization of Afghan Women) to *Shura-i-Sarasari-Zanan-i-Afghanistan* (All Afghanistan Women's Council), and Ratebzad was replaced by Firuza Wardak as president of the organization.

SENZIL NAWID

DEMOCRATIC PARTY OF AZERBAIJAN

Political party that supported autonomy for Iranian Azerbaijan.

The Democratic Party of Azerbaijan (DPA) was created in September 1945 in Tabriz (Iranian Azerbaijan) under the leadership of Jaʿfar Pishevari. He and other DPA leaders were Azerbaijani Turks of middle-class or landowning origin. Earlier, many had been involved in communist movements (Gilan or Khiyabani revolts, 1920); some had lived or been educated in Soviet Azerbaijan or Moscow. DPA, however, was an independent organization established to secure autonomy for Azerbaijan within Iran. The local branch of the communist Tudeh Party dissolved itself and joined DPA.

Reacting against the brutal policies of economic neglect and Persianization by Reza Shah Pahlavi's dynasty, a DPA-led All Peoples Grand National Assembly (in Tabriz, November 1945, just after World War II) declared rights to national self-determination within sovereign Iran, to retain a just share of their tax revenues, and to use Azerbaijani Turkish (called Türki) as the official language of an autonomous province of Azerbaijan. Elections in December produced an all-DPA *majles* (parliament); Pishevari formed a government that enfranchised women, began land reform, and established Azerbaijani Turkish as the official language.

The autonomy movement had the support of the occupying Soviet troops, which prevented the forces of Mohammad Reza Shah Pahlavi from entering the province to suppress it. Western observers interpreted the DPA, therefore, as a Soviet puppet. In June 1946, after Soviet forces were withdrawn, Tabriz and Iran signed an agreement that fulfilled

most DPA demands. In December 1946, however, Iranian forces entered Azerbaijan and suppressed the DPA government and autonomy movement, so the June agreement was abrogated. Pishevari fled to Baku and died there the following year after mysterious complications from an automobile accident.

DEMOCRATIC PARTY OF KURDISTAN (IRAN; KDP)

Political party that organized 1945–1946 revolt to form an autonomous republic for Kurds in Iran.

The Democratic Party of Kurdistan, Iran (KDP), was formed in 1945 by Kurdish nationalists in Mahabad, a predominently Kurdish town in West Azerbaijan province, a region that came under Soviet military occupation following the joint Anglo-Soviet invasion of Iran in 1941. While declaring its desire to remain within Iran, the party demanded the use of the Kurdish language in state schools and government offices in Kurdish areas; the retention of tax revenues for the benefit of the region; and the establishment of provincial assemblies as upheld by the constitution. The party claimed for Kurds a "distinct national identity" based on language, history, and culture. Finding the government unresponsive to its demands, the party, with the help of local tribes, launched a revolt and declared the formation of the independent Republic of Kurdistan in December 1945. The Soviet army did not oppose the move, nor a similar effort by Azerbaijan Turks in the provincial capital at Tabriz. In fact, Soviet occupation forces prevented the central government in Tehran from suppressing the revolts during the first half of 1946. Nevertheless, under the central government's Royal Army attack, the Mahabad government fell in December 1946.

During the revolutionary upheavals of 1979 Kurdish intellectuals from the Kurdish Democratic Party formed councils *(shuras)* that held local power in conjunction with the leading cleric in Mahabad, Shaykh Ezz al-Din Hosseini, and his followers. They also boycotted the referendum on the country's new constitution. The party and its activities have been suppressed since 1980. On 13 July 1989 Abdul Rahman Ghassemlou, secretary-general of KDP, and two other high-ranking party members were assassinated in Vienna, Austria. Ghassemlou's successor, Sadegh Sharafkandi, met with a similar fate on 17 September 1992 in Berlin.

PARVANEH POURSHARIATI

DEMOCRATIC PARTY OF KURDISTAN (IRAQ)

Political party advocating the autonomy of the Iraqi Kurds.

The Kurdistan Democratic Party (KDP) was founded on 16 August 1946 at the suggestion of Mullah Mustafa Barzani, who was then in the Kurdish republic of Mahabad. Its creation sanctioned the split of the national movement of the Kurds into different, sometimes opposing, Iranian and Iraqi organizations.

In the absence of Barzani, who went into exile in the Soviet Union, KDP became a progressive party, led by Kurdish intellectuals quite close to the Iraqi Communist Party. After he returned in 1958, the party was shaken by a severe crisis, opposing Barzani's acceptance to the political bureau, along

with Ibrahim Ahmad and his son-in-law Jalal Talabani. KDP never fully recovered from these events of 1964 and became a mere instrument of Barzani.

After the collapse of the Kurdish movement in 1975 and discredited by Barzani's decision to stop the resistance, KDP lost the monopoly it had enjoyed for thirty years. Today, the KDP led by Masʿud al-Barzani must share leadership of the movement in Iraq with its rival, Talabani's Patriotic Union of Kurdistan, and several smaller organizations.

Chris Kutschera

DEMOCRATIC WOMEN'S ASSOCIATION (TUNISIA)

Tunisian organization promoting women's rights.

Formally created in 1989, the Association Tunisienne des Femmes Démocrates (ATFD) is an autonomous activist women's organization dedicated to the elimination of all forms of discrimination against women, the transformation of patriarchal attitudes, the defense of women's acquired rights, and the participation of women in all aspects of political and civil rights. Based in Tunis, the ATFD is comprised of approximately 200 volunteer members, the majority of whom are educated and professional women in their thirties and forties. Like those involved in the broader human rights movement, both the organization and individual activists continue to face significant opposition to their activities.

On International Women's Day 1993, the ATFD opened the first domestic violence center in Tunisia, staffing both a listening center and a hotline. To provide women with a safe environment to discuss their situations, the ATFD center is dedicated to validation, confidentiality, resource referral, and empowerment. The ATFD also works with other Tunisian and international organizations, both governmental and nongovernmental, to increase awareness of domestic violence and provide services to a larger sector of the population. Finally, the ATFD works on improving the legal status of women and sponsoring educational campaigns dedicated to women's rights in Tunisia.

Angel M. Foster

DEMOCRAT PARTY

Turkish political party.

Four members of the Republican People's Party (RPP)—Celal Bayar, Adnan Menderes, Mehmet Fuat Koprülü, and Refik Koraltan—founded the Democrat Party (DP; Demokrat Parti) on 7 January 1946. The immediate impetus for the establishment of the party was to oppose an RPP-sponsored land reform bill. More generally, the DP founders criticized the government for being authoritarian and arbitrary, and for its extensive control of the economy. The DP campaigned on a platform of economic, political, and cultural liberalism.

The DP participated in the elections of 1946, which were held before the party had a chance to build a national organization or make known its candidates. The party gained only 64 out of 465 seats. Over the next four years, party leaders built a strong organization and attracted the support of many groups that had become alienated from the RPP over the previous decade and a half. In the 1950 elections, the DP received 53.3 percent of the popular vote and 86.2 percent of the seats in the Grand National Assembly. On 29 May 1950 the DP formed its first government as the new assembly elected Bayar as president, Menderes prime minister, and Koprülü foreign minister. In the 1954 elections, the DP increased its share of the vote to 56.6 percent, capturing 408 out of 503 assembly seats. In the 1957 general elections, held in the context of growing economic crisis, the DP still managed to garner 325 seats.

Despite encouraging the private sector, DP policies maintained wide latitude for state control over the economy, particularly through investments in the state manufacturing sector. Between 1950 and 1953, inflows of foreign aid and high prices for agricultural goods induced the DP government to encourage agricultural production and exports. A diverse array of policies increased peasant incomes, helping to cement DP popularity in the countryside. After 1953, a combination of declining world

prices and a growing shortage of foreign exchange led the DP to implement trade policies that encouraged import-substituting industrialization. Despite growing investment and manufacturing output, large government deficits and the lack of coherent policy led to severe economic problems, and by 1958, the government was forced to impose austerity measures.

The DP pursued a staunchly pro-West foreign policy, joining the North Atlantic Treaty Organization in February 1952 and, on several occasions, siding with the West, even at the expense of creating tensions with its neighbors. Turkey's support for the Baghdad Pact, for example, prompted the Egyptian government to label Turkey a Western surrogate in the region.

As economic conditions deteriorated, the DP became increasingly authoritarian. A series of antidemocratic laws, designed to cripple the RPP while muzzling dissent in the press and in universities, alienated the liberal intelligentsia and the liberal wing within the party. In early 1960, to stifle growing opposition, the government passed some unconstitutional measures. When these measures only catalyzed further opposition, the government declared martial law. At this point, the DP paid the price for never having established harmonious relations with the military: The combination of economic crisis and increasing authoritarianism triggered a military coup that deposed the DP government on 27 May 1960. The leading members of the DP were subsequently placed on trial for treason. On 15 September 1961, fifteen of them were sentenced to death. Twelve of these sentences were commuted, but Menderes and two of his top ministers were executed.

DENKTASH, RAUF
[1924–]

Turkish Cypriot statesman.

Rauf Denktash (also Denktaş) was born in Paphos, Cyprus, in 1924. His father was a judge. After graduating from the English school in Nicosia, he worked briefly as a columnist for *Halkin Sesi* (The people's voice), a Turkish Cypriot newspaper founded in 1940 by Dr. Fazil Küçük, the veteran leader of the Turkish Cypriot community. In 1944, Denktash went to study law in England, and in 1947, he was called to the bar.

Upon his return to Cyprus, which was then a British crown colony, Denktash became a barrister, serving from 1949 to 1957 as junior crown counsel, crown counsel, and acting solicitor general. During this time, he also embarked on a political career. He became Küçük's chief aide and served his community as a member of the Consultative Assembly (1948–1960) and as a member of the assembly's Turkish Affairs Committee. He was also elected president of the Federation of Turkish Cypriot Associations, a voluntary organization for the purpose of coordinating the social and economic life of the Turkish Cypriots and organizing their resistance to Greek Cypriot agitation for enosis (union of Cyprus with Greece).

In 1954, the efforts of the Greek Cypriot leaders, Archbishop Makarios III and Georgios Grivas, to achieve enosis and hellenize Cyprus culminated in a full-fledged guerrilla war against the British colonial administration and all those who opposed the Greek Cypriot aims. Denktash helped organize the Turkish resistance movement (TMT) to protect his community.

Küçük and Denktash represented the Turkish Cypriot community at the London Conference of 1959, which resulted in an agreement to establish an independent partnership state in Cyprus. Shortly thereafter, Denktash represented his community on

the Constitutional Committee, which drafted a constitution for the new state, and at the Athens Conference, which specified how the Treaty of Alliance and the Treaty of Guarantee (which were to provide security for the new state) were to be implemented. Denktash, therefore, was one of the chief architects of the bicommunal Republic of Cyprus, which came into being in 1960. That year, Denktash was elected president of the Turkish Cypriot Communal Chamber.

In December 1963, Küçük (who had been elected vice president of Cyprus) and Denktash both opposed the proposal by Archbishop Makarios (who had been elected president of Cyprus) to amend the Constitution of 1960 on the grounds that the projected changes would pave the way for enosis. As a consequence, all Turkish Cypriot officials and parliamentary deputies were dismissed, attacks were carried out against Turkish Cypriot enclaves, and the Turkish Cypriots were forced to evacuate 103 villages.

Early in 1964, Denktash flew to New York to present his community's case before the United Nations (UN) Security Council, but he was not allowed to return to Cyprus and remained in what he termed "de facto banishment" for several years. In October 1967, when he returned to Cyprus secretly, he was arrested but then freed as a result of international pressure. After his release, he resumed his position as president of the Turkish Cypriot Communal Chamber (April 1968). Since the Turkish Cypriot community was no longer being represented in the national government, the Communal Chamber had become the backbone of what was gradually becoming an autonomous Turkish Cypriot administration.

Denktash was one of the founders of the provisional Turkish Federated State of Cyprus, which was established in northern Cyprus in February 1975, following the overthrow of the Makarios regime by the Greek junta and the military intervention of Turkey, which the overthrow precipitated (July–August 1974). In June 1976, Denktash was elected as the federated state's first president. In June 1981, he was reelected.

Denktash was also one of the founders of the secessionist Turkish Republic of Northern Cyprus, which was established in November 1983, following the collapse of negotiations with the head of the Greek Cypriot government, Spyros Kyprianou. In June 1985, Denktash was elected as the republic's first president; he was reelected to that position in June 1990.

Denktash has been a strong advocate of a federal solution to the Cyprus problem, championing the establishment of a bizonal, bicommunal partnership state on the island. He has also been one of the chief promoters of the UN-sponsored intercommunal talks, which have taken place at various intervals since 1975.

Denktash is the author of numerous articles and several books. His best-known work is *The Cyprus Triangle* (London, 1982).

DENTZ, HENRI-FERNAND

[1881–1945]

Vichy French high commissioner and commander in Syria and Lebanon.

Appointed an officer in 1927, Dentz climbed the upper echelons of the French Army in the 1930s, and was appointed high commissioner and commander-in-chief in the Levant in December 1940 by the Vichy government. In May 1941 the premier of Vichy France, Philippe Pétain, ordered Dentz to arm the Iraqi leader Rashid Ali al-Kaylani and to support the Luftwaffe; latest research suggests that Dentz refused the latter order because he was concerned about keeping his troops loyal. On 8 June 1941 the British and the Free French—provoked by Pétain's decision—invaded. Dentz counterattacked, but surrendered to the British in July after receiving guarantees that soldiers would be repatriated to France

rather than compelled to join Charles de Gaulle. Condemned to death in 1945, he died in prison the same year.

DERAKHSHANDEH, PURAN

[1949–]

Iranian film director.

Puran Derakhshandeh is credited as being the first woman prior to the Iranian Revolution (1979) to direct a feature-length film. Her most daring film, *Love Across Frontiers* (2000), about an American woman married to an Iranian man, was the first post-revolution film to show a woman without Islamic veiling as well as physical contact between a man and a woman (in this case, a hug)—both of which are forbidden by the codes of morality enforced in Iranian filmmaking after the revolution. Derakhshandeh began her career in television and has continued to make socially aware, women-centered films since the 1980s.

DESALINIZATION

A solution to hydrate the arid Middle East.

Desalinization, also referred to as desalination, is the removal of salts and dissolved solids from brackish water or seawater. In the past three decades, due to increasing water demand and increasing resource scarcity, desalinization has become a critical, relatively drought-proof, resource of potable, irrigation, and industrial water in arid regions of the globe. In the Arab countries, which have 5 percent of the world population but only 0.9 percent of the water resources, water shortages are a constant challenge, and desalinization is playing an increasing role. Once so prohibitively expensive and technologically troublesome as to be totally impractical, it is now often the solution of choice in conditions of unreliable water resources. Capital investments and costs of production are going down as innovations improve the technologies involved.

The desalinization plant at Jubail, Saudi Arabia, was the largest such facility in the world when it was photographed for the first time by foreign news media, in 1991. One of several plants along the Persian (Arabian) Gulf, between Kuwait and Qatar, it was then capable of processing 230 million imperial gallons of seawater into drinking water per day. **© Bettmann/Corbis. Reproduced by permission.**

MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

Of the more than 12,500 desalinization plants in operation or in construction worldwide, 60 percent are located in the Middle East and North Africa (MENA). The Shuʿayba Plant Phase II in Jeddah, Saudi Arabia, for a time the world's largest plant, supplies the daily water needs of 1.5 million people. Saudi Arabia, whose desalinization output exceeded one billion cubic meters in 2002 to provide 70 percent of its water needs, is the largest desalinated water producer in the world, contributing to 30 percent of global output. Desalinized seawater currently constitutes Saudi Arabia's main source for potable water. This water is transported in a network of 1,550-mile pipelines, 21 pumping stations, 131 depots, and 10 stations for mixing the desalinated water with underground water. Around 1972, the MENA region "ran out of water" as the consumption surpassed the rate of resource renewal. Since then, MENA has relied heavily on desalinization, and is poised to remain for the foreseeable future the largest desalinization market in the world.

Desalinization systems can be membrane-based, such as Reverse Osmosis (RO) and Electro-Dialysis Reversal (EDR), or thermal, such as multi-stage flash (MSF) and multiple-effect distillation (MED). Boiling, leading to desalinization through evaporation, a process of thermal distillation, was known and practiced from ancient times. However, now most desalinization plants use membrane-based reverse osmosis, a process that allows the separation of 99 percent of dissolved salts and impurities from water, by means of pressure exerted on a semipermeable membrane. Between 15 and 50 percent

of seawater intake into a plant is purified; the rest becomes brine, or high-salt water, in need of dilution, then dumping. Environmental regulations dealing with the impact of desalinization on the environment vary from country to country. In addition to brine, other effluents include discharged process chemicals used for defouling, and toxic metals, as well as small amounts of solid waste (spent pretreatment filters, filtered solid particles, etc.).

Energy requirements for desalinization are high, mostly to power machinery and to heat feed-water. RO and distillation plants are often located with energy generation plants to improve efficiency. In such cases, additional environmental impacts have to be taken into account on a case-by-case basis. Fortunately, many of the water-starved countries such as Saudi Arabia, Kuwait, the United Arab Emirates, and Libya are major oil and gas producers and have significant reserves. They have invested heavily in desalinization from early on. The first plant in Saudi Arabia was inaugurated in 1954. The Saline Water Corporation in Saudi Arabia is the largest investor in, and operator of, desalinization plants in the world.

Cost reduction is the single most important factor necessary to increase the implementation of desalination. Capital investment unit costs range from $1,000 to $2,000 per cubic meter of capacity, and can be amortized over 20 to 30 years. Unit production costs per cubic meter range from $0.50 for large plants to over $1.50 for small plants, or about one-half the cost of desalinated water in the recent past. It is not economical to operate a plant part time. Economies of scale play an important role in investment decision-making but are more easily achieved in distillation than in RO process. The Middle East Desalination Research Center (MEDRC), established in 1996 in Muscat, Oman, has been conducting basic and applied research to reduce the cost of water desalinization.

Bahrain, Jordan, and Kuwait were the only water-scarce countries in the region in 1950s. In 2003, twelve countries have water scarcity, and by 2023, six more countries will suffer the same vulnerability, including Israel and Palestine. If the participants in the Palestine–Israel conflict do not exploit water as a unilateral security issue and insist upon retaining control over water resources in the Occupied Territories, the desalinization option may contribute to a solution.

DESERTS

Predominant landscape of the Middle East and North Africa.

Stretching from the Atlantic coast in the west to Pakistan in the east, a band of arid land (15° and 30° north latitude) dominates this region. The North African expanse is generally known as the Sahara, although subdivisions within it have individual names indicating the nature of the surface. The terms *erg* (as in the Great Eastern Erg of Algeria) and *serir* (as the Serir of Kalanshu in Libya) indicate a region of sand dunes. Where the surface is rocky underfoot the terms used are *reg* or *hamada* (for example, the Hamada of Dra south of the Anti-Atlas mountains). Individual areas may also be given the name desert, the Western Desert and the Eastern Desert in Egypt, although they are smaller parts of

the whole. On the peninsula of the same name, the Arabian Desert is an extension of the Sahara and is divided into the Rub al-Khali (Empty Quarter, a region of vast sand dunes) and the Nafud and Najd. To the north is the Syrian Desert, and to the east the two deserts of the Iranian plateau are known as the Dasht-e Kavir and the Dasht-e Lut.

The term *desert* is one in common usage and therefore difficult to define. Most experts prefer to speak of "drylands" or "arid lands" and to define such places through various measures of the availability of water for plant growth (implying that not all deserts are hot.) A common definition of desert, however, is those regions of Earth's surface having fewer than 10 inches (250 mm) of precipitation annually and extreme high temperatures. This classical approach relates such measures to areas with types of vegetation adapted to hot, arid conditions. In areas with much sunshine and small amounts of precipitation and/or natural moisture from the soil, only plants called *xerophytes* survive—those adapted to such conditions. In certain hyperarid locations, precipitation may be even less and no vegetation of any kind is found.

Desert rainfall is not only sparse but is also extremely variable in time and space as well as in quantity. Such variance means that human occupancy of the desert must depend for survival on reliable springs and rivers for irrigation rather than on precipitation. Traditional pastoral nomadism, located on the desert margins, was adapted to this environment by moving its productive units (i.e., herds and flocks) to where grass and water seasonally occurred. But even nomads ventured into the true desert only for travel as transporters and raiders. The few permanent inhabitants of the deserts were those oasis dwellers dependent upon perennial springs for intensive agriculture and the growing of date palms.

Desert soils are usually of poor quality except for those in the valleys of rivers where alluvial deposits have accumulated. True desert soils—called *aridisols*—have low biomass, very sparse or no organic acids and gases, few or no bacteria, and are essentially mineral in character. Any rain or sheet flooding and runoff that percolate beneath the surface rapidly evaporate. As a result, soluble salts are precipitated and redeposited, forming a crusty layer on the surface or just beneath it. Repeated leaching and

Women in veils approach the town of Shibam, filled with skyscrapers and known as the "Manhattan of the Desert." Shibam is located in the desert Valley of Hadhramout, and is one of the most fertile areas of Yemen. **© Wolfgang Kaehler/Corbis. Reproduced by permission.**

deposition can result in concentrations of sodium chloride (NaCl), white alkali (salt), or similar deposits of sodium carbonate (Na_2CO_3), black alkali, which poison the soil and make agriculture impossible. Under desert conditions agriculture is extremely difficult, and even the use of irrigation water can cause salinity, through evaporation and the precipitation of the dissolved salts it may carry, which leads to the abandonment of such farmland.

The natural xerophytic vegetation found in deserts has adapted to conditions of high temperatures and scant and irregular amounts of precipitation. Xerophytes often occur as drought-resisting plants with heavy cuticles, which reduce transpiration, or with stomata, which can be closed for the same purpose. Other xerophytes reduce water use by shedding their leaves and remaining leafless during the dry season. Among these plants are the euphorbia and the cacti, the latter originally found only in the Western Hemisphere.

Phreatphytes constitute another class of desert vegetation, which includes palms. These plants have developed long taproots, which reach the water table, allowing them to survive the driest of surface conditions. Other plants evade drought by flowering and seeding only during brief rainy periods.

During the intervening months and years of drought, the seeds remain dormant.

Desert vegetation under such conditions is sparse, and soil-forming conditions (including the creation of humus) are poor. Rainstorms can be intense, although of short duration, and often soil particles are carried away from desert surfaces by sheet flooding. The result of these conditions is erosion—which results in hills lacking deep layers of soil. Their profiles are characteristically steep sided with thick strata forming cliff faces rising vertically from the surrounding plains. Flat-topped mesas and steep buttes dominate the landscape, while valleys are flat bottomed with vertical side slopes. Wind erosion and deposition are also significant factors in desert landscape formation. Crescent-shaped barchan dunes are found where sands are insufficient to completely mantle the underlying surface. Copious sands form "seas," with longitudinal sief dunes and star-shaped rhourd dunes. Such seas, however, are the exceptions and rocky desert surfaces are common.

In desert areas, underground supplies of water assume great importance. Porous and permeable strata deep beneath the surface sometimes contain large quantities of water. Such aquifers may have impervious layers (aquicludes) above and below them that confine the water and keep it from escaping except in limited amounts at oases. Other aquifers occur in unconsolidated alluvial materials in river valleys (Arabic, *wadis*). This water is recharged from river seepage and/or rainfall. In the Middle East, most of the major aquifers are nonrenewable and contain fossil water, which once used—extracted or mined—will not be replaced. Desert countries, such as Libya and Saudi Arabia, with few or no surface streams have in the last two decades turned to the exploitation of such aquifers as part of their economic development plans. An ambitious agricultural program in Saudi Arabia has used tube wells and central pivot irrigation to produce bumper wheat crops in an otherwise hostile desert environment. Libya is engaged in constructing a "Great Manmade River"—actually a gigantic system of pumps and pipelines—with which to bring water from aquifers beneath the central Sahara to coastal locations, for municipal and agricultural use. In both these cases and others, the critical element is the quantity of water available and whether it will last long enough to justify such expensive projects. Many experts counsel caution in undertaking such attempts to remake, or "green," the desert.

DEVRIM, IZZET MELIH

[1887–1966]

Turkish novelist.

Born in Jerusalem, the son of an Ottoman administrator, Izzet Melih Devrim was graduated from the prestigious Galatasaray School in Istanbul and worked at various commercial jobs. His first literary effort was a volume of prose poetry, titled *Çocuklara Mahsus Gazete* (The children's newspaper), published in 1898, but he did not receive public recognition until 1905 when he was the runner-up in a competition sponsored by a French literary journal. Many of his subsequent works were published in French, and in 1938, he was awarded a doctorate from the Faculty of Letters in Paris. Among Devrim's principal works are *Leyla* (1912), *Sermed* (1918), and *Hüzün ve Tebessüm* (Sadness and a smile, 1922).

DHAHRAN

Town that is the center of Saudi Arabian oil production.

Dhahran (al-Zahran) is a town of the Eastern Province of Saudi Arabia of perhaps 100,000, not far from al-Dammam and the gulf coast. There was no settlement at Dhahran before Saudi Arabia's first oil strike was made there in 1935. Since then, Dhahran has grown to incorporate the headquarters of the Saudi Arabian American Oil Company (Saudi ARAMCO) and hosts the King Fahd University of Petroleum and Minerals. From 1946 to 1962, the United States operated an air force base at Dhahran that subsequently became a major base for the Royal Saudi Air Force. An international airport at Dhahran was closed after completion of a new airport at al-Dammam.

DHIMMA

The legal status of monotheistic non-Muslims and Zoroastrians under Islamic rule which they, collectively or individually, expressly accept.

Dhimma is based on verse 9:29 of the Qurʾan and finds precedent in the conquest of Mecca. Caliph Umar's pact with non-Muslims, granting them life and property protection, constitutes the detailed provisions of the institution. Under this status, minorities enjoyed exemption from military service, freedom of religion, freedom to practice their religious duties, and the right to renovate, although not to erect, houses of worship.

In return, a poll tax *(jizya)* was levied; in addition, *dhimmis* were prohibited from criticizing the Qurʾan, expressing disrespect to the Prophet or to Islam, conducting missionary activity, or having sexual relations with or marrying Muslim women. They were not allowed to make their crosses, wine, and pork conspicuous, or to conduct their funerals in public. Riding horses was prohibited, as was erecting houses taller than those of the Muslims. *Dhimmis* were required to wear clothes that made them recognizable and were barred from holding certain public positions.

Modernity has posed for Muslims problems of equality, freedom of religion, and human rights, which seem to originate in an ever-increasing contact with the West, free communication, and multiculturalism. Historically speaking, *dhimma* was conceived during the Islamic conquest but diminished when foreign powers gained the upper hand, especially during the reign of the later Ottoman period and the rise of nationalism. Since the late second half of the twentieth century, the "clash of civilizations," and the increase of Muslims in foreign countries, it has become a symbol for the relationship between Islam and the rest of the world.

The institution of the *dhimma* remains controversial, and there is an extensive debate over whether to abolish it altogether, amend it, or maintain it. The more traditional thinkers reject any thought of changing the institution. Their views range from denying the principle of equality to religions other than Islam, through blocking certain positions of influence in the state to non-Muslims, to reiterating their rights and Islam's traditional liberal attitude according to the *sunna,* especially by comparison to European historical record. Some even go as far as to offer "Islamic citizenship" to non-Muslims. Others claim that the distinction between Muslim and non-Muslim is one of political administration, not of human rights, according *dhimma* to all religionists. The debate over *dhimma* includes political issues: Some of the minorities are accused of having abused it internally, and the West has been accused of having created and exacerbated the entire problem of "minorities."

ILIA ALON

DHOW

A term, probably of Swahili origin, referring to several types of sailing vessels (many now outfitted with motors) common to the Gulf Arab states.

Arabs refer to dhows by names specific to each type, determined principally by size and hull design. Four kinds of dhows account for most of these vessels. The *sambuk* (or *sambook*), perhaps the most widely represented, is a graceful craft with a tapered bow and a high, squared stern; it was often used for pearling, and today is used for fishing and commerce. A larger vessel, the *boom,* is still common in the Gulf. It ranges from 50 to 120 feet (15–35 m) in length, 15 to 30 (5–9 m) feet in width, and up to 400 tons (363 metric tons) displacement. Like early Arab ships it is double-ended (pointed at both ends) with a straight stem post. It is important in Gulf commerce. Now rare is another large ship, the *baggala,* formerly an important deep-sea vessel. Sometimes over 300 tons (272 metric tons) and with a crew of 150, it was built with a high, squared poop, reflecting the influence of sixteenth- and seventeenth-century Portuguese vessels. Like the *sambuk* and *baggala,* it has two masts. The *jalboot,* a single-masted vessel and much smaller (20–50 tons [18–45 metric tons]), formerly was widely used on the pearling banks of the Gulf. Its name and its features, notably an upright bow stem and transom stern, indicate its probable derivation from the British jolly boat. Other smaller craft, all single masted, occasionally found in Gulf or adjacent waters include the *bedan, shuʿi,* and *zarook.*

Dhows were well adapted to Gulf waters because of their shallow draft and maneuverability. Their lateen sails, long stems, and sharp bows equipped them well for running before the monsoon winds of the Indian Ocean, toward India in summer and toward Africa in winter. Wood for planking and masts was imported from the Malabar Coast of India or from East Africa. Traditionally no nails were used; cord made from coconut husks was used to lash together the planks of the decks and gunwales. By the eighth century Arab fleets of such ships were part of a commercial maritime network not matched or superseded until the European circumnavigation of the globe. In the latter part of the eighteenth century, the Qawasim Emirate of the lower Gulf created a maritime empire that displaced earlier Omani dominance. Their power rested on the large fleets of dhows and the skill and ferocity of their crews. The attacks of these "pirates" on Anglo–Indian shipping brought Britain's naval intervention in the early nineteenth century and the eventual establishment of a trucial system under Britain's oversight. Until the 1930s hundreds of dhows made up the fleets that sailed over the pearling banks from June to September. Today a considerable number of commercial cargoes are carried in motorized dhows between Dubai, especially as a transshipment point, and Iran. Some dhows are used for recreational purposes. Traditionally the Gulf's most important manufacturing industry was the construction and outfitting of dhows. In the early twentieth century

there were some 2,000 dhows in Bahrain alone, and 130 were built there yearly. Small numbers continue to be built in Bahrain and elsewhere in the Gulf, still with the planks of the hull formed into a shell and the ribs then fitted to them.

MALCOLM C. PECK

DHUFAR

Southern geographic region and governate of Oman.

Dhufar comprises about one-third of the total area of Oman and is environmentally and ethnically distinct from the rest of the sultanate. Its mountainous interior receives monsoon winds, resulting in a wet, temperate climate suited to cattle grazing. Dhufar also produces frankincense and possesses several oil fields. Many of the 125,600 (1993 census) residents speak ancient South Arabian dialects that predate, but are similar to, Arabic.

After a period of nominal control beginning in the 1820s, the Al Bu Saʿid dynasty of Oman began to assert more permanent authority over Dhufar in the 1890s. The province remained administratively distinct, even having its own coinage. An uprising erupted in the late 1960s due to Dhufari dissatisfaction with Al Bu Saʿid rule. The more enlightened reign of Sultan Qabus ibn Saʿid after 1970 removed much of that dissatisfaction, and by 1976 the separatists were defeated. The province, along with Muscat and Masandam, remains under a governor who reports directly to the sultan, but it has been integrated more fully into Oman through economic and social development. Salala serves as a secondary capital and Raysut is now the second largest port in Oman.

See also DHUFAR REBELLION.

MALCOLM C. PECK
UPDATED BY CALVIN H. ALLEN, JR.

DHUFAR REBELLION

Armed insurrection against the ruler of Oman in the southern province of Dhufar (1965–1975).

In 1965, the Dhufar Liberation Front (DFL) initiated an uprising against the rule of Sultan Saʿid bin Taymur Al Bu Saʿid of Oman, whose neglect of social and economic development in the Dhufar region was especially pronounced. At first the uprising was primarily a tribal separatist movement, organized by the DFL in a part of Oman never meaningfully integrated with the rest of the sultanate, and it received encouragement from Egypt and Saudi Arabia.

The course of the rebellion changed dramatically in 1968 after a Marxist state had emerged in neighboring and newly independent South Yemen (People's Democratic Republic of Yemen; PDRY). The uprising then had a secure PDRY base and a steady flow of money and weapons from the Soviet Union, China, and other Communist states that also offered training to the rebels. The movement's goals were reflected in its new name, Popular Front for the Liberation of the Occupied Arabian Gulf (PFLOAG). By the end of 1969, PFLOAG controlled all of Dhufar except for a coastal enclave around the capital, Salala. When another rebel movement, the National Democratic Front for the Liberation of Oman and the Arab Gulf (NDFLOAG), emerged in northern Oman in 1970, disaffected Omanis, including the sultan's exiled uncle, conspired with military advisers from Britain and with Qabus ibn Saʿid Al Bu Saʿid, the sultan's son, to depose Saʿid. Qabus, who came to power in July 1970, made defeating the Dhufar rebellion his first priority.

Support from Britain, especially in the form of seconded and contract military officers, was crucial, and Iran's supplies of material and manpower were important in countering a determined insurgency in mountainous terrain where, for half the year, monsoon weather severely reduced visibility. Also significant were Jordan's loan of military officers

and large financial infusions from the United Arab Emirates, Kuwait, and Saudi Arabia, all of which feared the radical leftist threat.

In 1971 PFLOAG and NDFLOAG merged, becoming the Popular Front for the Liberation of Oman and the Arab Gulf. The insurgency, however, succumbed over the next four years to Qabus's combined military, political, and economic initiatives, including, importantly, amnesty for rebels who laid down their arms. The success of the government's counteroffensive was reflected in the rebel movement's assumption of the more modest title Popular Front for the Liberation of Oman (PFLO) in 1974. By the end of the following year, only isolated pockets of resistance remained in the rugged interior, and the rebellion essentially ended.

DIASPORA

The dispersal of ethnonational groups.

The term *diaspora* is derived from the Greek verb *speiro* (to sow) and the Greek preposition *dia* (over). All diasporas have in common significant characteristics: They result from both voluntary and imposed migration; their members wish to and are able to maintain their ethnonational identity, which is the basis for continued solidarity; core members establish in their host countries intricate organizations that are intended to protect the rights of their members and to encourage participation in the cultural, political, social, and economic spheres; and members maintain continuous contacts with their homelands and other dispersed segments of the same nation.

Ethnonational diasporism is a widespread perennial phenomenon not confined to the Jews, although in many contexts the term is presumed to refer specifically to the Jewish diaspora. Some ethnonational diasporas are dwindling or disappearing, but other historical, modern, and incipient diasporas are multiplying and flourishing all over the world, including in the Middle East.

Middle Easterners of various ethnic backgrounds permanently reside in foreign host countries within or outside the region; simultaneuosly, Middle Eastern states host diasporas. The larger diaspora communities in the Middle East include Palestinians, Egyptians, Yemenis, and guest workers from elsewhere (Chinese, Pakistanis, Koreans, Vietnamese, and Filipinos) who reside in the Gulf states and in Saudi Arabia; Armenians, Druze, and guest workers from Romania, Turkey, the former Soviet Union, Thailand, the Philippines, and African countries residing in Israel; Palestinians, Druze, and Armenians in Lebanon; Palestinians, Druze, and Armenians in Syria; and Sudanese, Palestinians, and a small number of Greeks in Egypt. Some of these diapsoras, such as the Armenians, come from established states, while others, such as the Kurds, Druze, Gypsies, and the Palestinians, are stateless.

Age, dispersal in and outside the region, group size, status, organization, and connection (or lack thereof) to their homelands influence each of these diasporas' positions in and strategies toward host countries an d homelands. Because of globalization and growth in worldwide migration, their economic and political roles have become increasingly significant.

DIBA, FARAH

[1938–]

Queen of Iran, 1959–1979.

Farah Diba, born on 14 October 1938, was the only daughter of Sohrab Diba from Azerbaijan and his

wife, Farideh Ghotbi, from Gilan on the Caspian coast. Diba's mother supervised her schooling at Tehran's Jeanne d'Arc and Razi schools, and then at the Ecole d'Architecture in Paris, where she was studying when she met Shah Mohammad Reza Pahlavi. Diba became his third wife on 20 December 1959, after he had divorced successively queens Fawzia and Soraya, neither of whom had borne him an heir. As queen, Diba had four children: Cyrus Reza in 1960, Yamina Farahnaz in 1963, Alireza in 1966, and Leila in 1970. Crowned *shahbanou* in 1967, she and the shah hosted a celebration of 2,500 years of monarchy at Persepolis in 1971. Although the event showcased Iran's history to world leaders, detractors criticized its excesses, given the country's underdevelopment. Queen Farah supported her husband's modernization of Iran, championing the arts, education, and women's issues. The revolution of 1978 to 1979 sent her and the shah into exile; he died in Cairo in 1980. Diba since has lived in the United States and France. Although she rarely seeks the spotlight, she remains a patron of the arts and an advocate for children in Iran and around the world.

Haleh Vaziri

DIB, MOHAMMED

[1920–2003]

Algerian novelist and poet.

Mohammed Dib was born into a middle-class family in Tlemcen. He was educated there and in Oujda. Before devoting his time to a literary career, Dib was a teacher and journalist. He was forced to leave Algeria in 1959 and subsequently settled in France. Dib's works chronicle Algeria's decolonization and postcolonial periods. A theme in his writings is the search for authentic self or identity. Dib's body of work illustrates the common pursuit of human dignity.

Dib earned his literary reputation as a result of a remarkable series of novels: *La grande maison* (1952; The great house); *L'incendie* (1954; The fire); *Le métier à tisser* (1957; The weaving loom); Un été Africain (1959; An African summer); Qui se souvient de la mer (1962; Who remembers the sea), *Cours sur la rive sauvage (1964; Run on the wild shore); La danse du roi* (1968; The dance of the king); *Dieu en Barbarie* (1970; God in Barbary); *Le maître de chasse* (1973; The master of hunting); *Habel* (1979; Habel); *Les terrasses d'Orsol* (1985; The terraces of Orsol); *Le sommeil d'Eve* (1989; The sleep of Eve); *Neiges de marbre* (1990; Snows of marble); *Le désert sans détour* (1992; The straightaway desert); *L'infante maure* (1994; The Moorish infanta); *L'arbre à dires* (1989; The tree with statements); *Si diable veut* (1998; IF the devil wants); *Comme un bruit d'abeilles* (2001; Like a sound of bees); *L.A. Trip* (2003), and *Simorgh* (2003; Simorch). Dib also crafted short stories, including the collections *Au café* (1955; At the cafe); *Le talisman* (1966; The talisman); and *La nuit sauvage* (1995; The savage night).

Dib primarily perceived himself as a poet. His poetry collections include *L'ombre gardienne* (1961; The shade guardian); *Formulaires* (1970; Forms); *Omneros* (1975; Omneros); *Feu beau feu* (1979; Fire, beautiful fire); *O vive* (1987; Oh, live); *L'enfant-jazz* (1998; The jazz child, which received the Prix Mallarmé); and *Coeur insulaire: Poèmes* (2000; Insular heart). He also wrote several children's books. Dib is distinguished as a leading member of the Generation of 1954, which also included Kateb Yacine, Mouloud Mammeri, Malek Haddad, and Mouloud Feraoun.

DIDOUCHE, MOURAD

[1922–1955]

A historic chief of the Algerian revolution.

Mourad Didouche was born into a relatively prosperous family in Algiers. He was a member of Messali Hadj's Parti du Peuple Algérien (PPA; Algerian People's Party) and Mouvement pour le Triomphe des Libertés Démocratiques (MTLD; Movement for

the Triumph of Democratic Liberties). He became a leader in the north Constantine region of the Organisation Spéciale (OS; Special Organization). After the OS's suppression, he fled Algeria and collaborated with Mohamed Boudiaf in Paris. He was a prominent member of the Committee of 22 and the Comité Révolutionnaire d'Unité et d'Action (CRUA; Revolutionary Committee for Unity and Action), earning his inclusion among the nine historic chiefs *(chefs historiques)* of the Algerian revolution. Didouche also edited the Front de Libération Nationale's (FLN; National Liberation Front) Proclamation of 1 November 1954, inaugurating the war of liberation. He died in combat. After the war, the Algerian government renamed rue Michelet in downtown Algiers as Didouche Mourad.

DILMUN

Prehistoric society of about 2000 B.C.E. that existed in the Persian/Arabian Gulf region, especially on the island of Bahrain.

The search for Dilmun was undertaken by Dr. Geoffrey Bibby and his 1953 Danish archaeological expedition to Bahrain. His excavation of 100,000 burial mounds yielded dates and documents about Dilmun as a rich seafaring civilization. It extended from Kuwait in the north to Oman at the south end of the Persian/Arabian Gulf. Bahrain is believed to have been the center of that civilization.

DIMONA

Israeli frontier city.

Located 22 miles southeast of Beersheba and about 7 miles east of Yeruham, in Israel's southern region, the city is named after the biblical Dimona, a Judean city in the Negev. Initially a residential area serving the Dead Sea Industries workforce in Sodom and the operators of the potash works at Oron, Dimona was originally settled by thirty-six Moroccan immigrant families, joined later by additional newcomers. During the period between 1978 and 1988 it registered a negative immigration balance. Subsequently, however, additional immigrants were brought in (in 1991 Dimona absorbed 1,500 families from Russia and Ethiopia).

Dimona is also home to the Hebrew Israelites, a group of some 2,000 African Americans who initially settled in Dimona in 1969 and who consider their immigration to Israel the final destination of their journey home. Their leader, Ben Ami Ben Israel Carter, supervises the group's communal life. Because, in their view, religions constitute a rift among people, the Hebrew Israelites do not consider themselves disciples of any religion.

Dimona is neither particularly large nor strategically located. Its population in 2002 was 33,700. It is, however, immensely important to Israel because it is home to scientists stationed at the nearby nuclear reactor. The Dimona reactor was built with the aid of the French; during the mid-1960s, it became a source of concern to both the Arabs and the United States, who feared that the reactor would be used to produce nuclear-weapons-grade plutonium. The Israelis gave assurances that the Dimona reactor was for peaceful use, but suspicions remained. In 1980 the International Atomic Energy Agency confirmed that the Dimona reactor was capable of producing weapons-grade ore. Though it has never been publicly acknowledged, it is likely that the Israelis have used the Dimona reactor to help develop nuclear weapons.

In September 1986 Mordechai Vanunu, a former technician at the Dimona nuclear reactor, disclosed to the world that Israel had secretly produced 100 to 200 nuclear warheads. Before the publication of this information in the *New York Times,* Vanunu was kidnapped by the Israeli secret service. At a trial held in camera in Israel he was convicted of treason and espionage and was sentenced to eighteen years in prison; the first eleven and a half years were spent in solitary confinement. His petition for an early release was denied.

DINKA

A people of Sudan.

The Dinka are a Nilotic people in the Republic of Sudan. Numbering over two million, they are the most numerous ethnic group, inhabiting about a tenth of its 1 million square miles (2.6 million sq km). The land of the Dinka is rich savanna broken by the Nile River, its tributaries, and the Sudd, the great swamps of the Nile that flood the grasslands during the rainy season (May to October) and fall during the dry season (November to April). The Dinka are separated by these rivers and swamps into some twenty-five independent groups. In the past they were governed by lineages rather than any single authority.

Their physical characteristics, ethnic pride, and striking cultural uniformity bind the Dinka together as one people, despite their widespread geographical dispersion. They call themselves not Dinka but Monyjang, which means "the man," or "the husband of men." They are convinced of their superiority to all others, whom they call "foreigners" (*juur;* singular, *jur*).

The Dinka are devoted to their cattle, which provide them with many of their worldly and spiritual needs, from dairy products (supplemented by fish and grain) to protection against illness or death. Cattle are the social cement for "bride wealth" (for marriage) and "blood wealth" (to resolve disputes). The Dinka are a proud people who, despite the ravages of civil war in Sudan, will nevertheless continue to survive.

ROBERT O. COLLINS

DINSHAWAY INCIDENT (1906)

British atrocity committed in June 1906 against Egyptian peasants accused of assaulting British officers.

Some British officers were hunting pigeons near Dinshaway village in Minufiyya province. One officer died, most probably of sunstroke, but the villagers were accused of assaulting him. As the news spread, the British assumed that a national insurrection might occur, so they called for exemplary punishment of the villagers. The accused assailants were arrested and hastily tried by a special tribunal; some were sentenced to death, some to public flogging or imprisonment.

Their sentences led to widespread protests in Europe and in Egypt. The summary public execution of the convicted peasants caused the rise of Egypt's National Party and the retirement of Britain's consul general, Lord Cromer (born Evelyn Baring). For Egyptians, it remains a black mark against Britain's rule.

DISEASES

Major diseases in the Middle East since 1800.

Endemic and epidemic diseases spread in the modern Middle East and North Africa in the wake of expanding European political and economic power. Political and medical responses to diseases changed over time according to the interests of the imperial and local powers and influenced the allocation of

resources to research and policies governing medical intervention. Plague, syphilis, malaria, schistosomiasis, and cholera led to the establishment of new forms of government control and modern medical and public health infrastructures.

Plague epidemics decimated the Middle East and North Africa from the sixth through the nineteenth centuries. In Egypt, famine usually followed plague outbreaks because without intense maintenance normally undertaken by the fellahin (peasantry), the irrigation canals became overgrown with reeds and silted up. Plague and famine were largely responsible for a population decline from perhaps 8 million in 1347 at the onset of plague to 3 million in 1805 when Muhammad Ali became viceroy. Bedouin, however, were able to outrun the disease by fleeing into the desert and their numbers remained constant at about several hundred thousand. Outbreaks continued to decimate urban and rural populations in the Middle East until the nineteenth century when Ottoman and Egyptian authorities took steps to introduce quarantines and other public health controls. In then underpopulated Egypt, when Muhammad Ali, the Ottoman viceroy, learned in 1812 that plague had broken out in Istanbul, he promptly imposed strict quarantine on Ottoman ships. The plague did not arrive. When plague again broke out in the eastern Mediterranean Muhammad Ali established a quarantine station at the port city of Damietta. The time the travelers evaded the quarantine and plague broke out in other port cities. Muhammad Ali imposed a cordon sanitaire around Alexandria and ordered his police and troops to imprison plague victims and burn their possessions. Battling widespread resistance, the authorities rounded up poor families and imprisoned them in quarantine stations on the edge of town, shot heads of households who refused to report sick members, and isolated the wealthy in their homes. Families went to great lengths to bury their dead in secret to evade the draconian measures and plague soon spread up the Nile. About a seventh of the Egyptian population and many European residents of Egypt perished. In a secondary outbreak in 1841 Muhammad Ali stiffened the quarantines and soldiers had orders to shoot to kill villagers who attempted to evade them. Fallahin were rounded up, men and women separated and forced to bathe under the supervision of male and female medical personnel, and given clean clothing. Egypt was plague free for three generations.

Between 1894 and 1898 Drs. Shibasaburo Kitasato, Alexander Yersin, and Paul Lewis Simond discovered the plague bacillus and the role of the rat flea in transmitting the disease. Quarantines, rat control, and antibiotics now control plague in most regions of the Middle East and North Africa, but it remains a threat in remote regions of Algeria, Egypt, Iran, Iraq, Libya, Morocco, Tunisia, and Turkey.

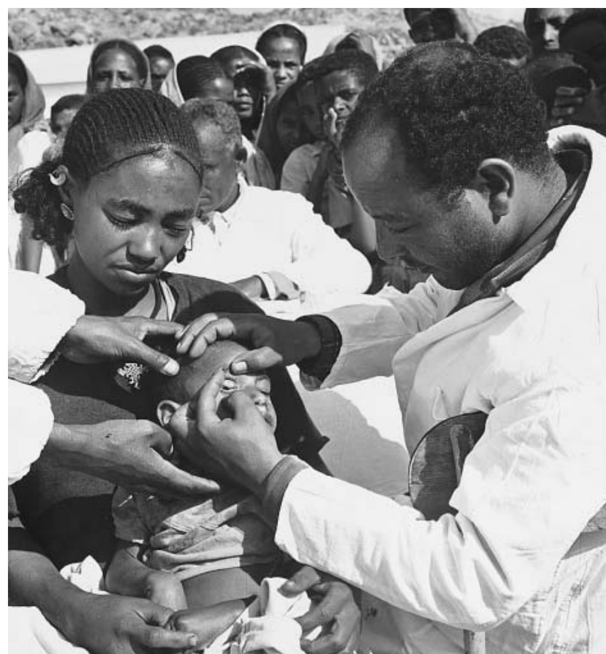
Muhammad Ali was equally concerned with syphilis, which also afflicted his troops and impaired the efficacy of his army. Muhammad Ali recruited Antoine-Barthelme Clot (Bey) to organize a Western-style teaching hospital, which opened in 1827. In an attempt to control the disease, he had Clot Bey organize a school to train women medical practitioners *(hakimat).* The *hakimat* vaccinated people against smallpox, reported on and treated the prostitute population for syphilis, registered midwives, and performed postmortem exams.

The British occupied Egypt in 1882 and proceeded to further develop Egyptian agriculture. British engineers completed a dam at Aswan in 1902 and in subsequent years raised it and built and expanded a series of barrages to better control the Nile river flow. The Nile Delta was converted from basin to perennial irrigation enabling fellahin to produce three crops a year but at the same time allowing schistosomiasis (bilharzia), hookworm, and other waterborne diseases to spread to formerly uninfected areas.

In 1913 a Rockefeller Foundation survey of Egypt found that about 60 percent of the population was infected with hookworm, bilharzia, nonfalciparum malaria, and other parasitic diseases. World War I and the Great Depression exacerbated the disease load in Egypt and many suffered from typhus, typhoid fever, and plague. In 1936 the now independent Egyptian authorities upgraded the Department of Public Health to the Ministry of Health but funding remained limited. In 1940 a leading medical researcher estimated that 75 percent of the Egyptian people had bilharzia, 50 percent ancylostomiasis, 50 percent other parasitic diseases, 90 percent trachoma, 25 percent malaria, 7 percent pellagra, and nearly all had severe childhood dis-

eases. Life expectancy was thirty-one years for men and thirty-six years for women.

In 1942 a severe malaria epidemic broke out in Egypt. Malaria, caused by the *Plasmodium falciparum* parasite, is transmitted to human beings by the anopheles mosquito. The mosquitoes can breed in standing water in irrigation channels, rainfall pools, streams, marshes, and oases, and malaria has been reported in all regions of the Middle East and North Africa, including oases in the Arabian Peninsula and the Sahara. In 1942 nationalist Egyptians insisted that British military aircraft had imported malaria from Sudan, where malaria was endemic. Others connected the disease with the expansion of irrigation. Subsequent research suggested that the mosquito vector might have traveled downriver by boat. Because hundreds of thousands of British troops were in Egypt the British asked the Rockefeller Foundation to launch a malaria control project. Working closely with the Egyptian Ministry of Health the foundation eradicated the disease.



A doctor examines an Ethiopian boy for symptoms of trachoma, a highly contagious eye infection. Outbreaks of malaria are common in North Africa, and the region's medical personnel are also inundated with cases of AIDS, tuberculosis, and various parasitic diseases such as the fly-borne kala azar. © BETTMANN/CORBIS. REPRODUCED BY PERMISSION.

In 1950 and 1951 malaria appeared in Jidda and Mecca, with the increased pilgrim traffic apparently facilitating the spread of the anopheles mosquito. The World Health Organization, the Rockefeller Foundation, and other assistance programs in coordination with national ministries of health, utilized DDT and other pesticides to eradicate the disease almost completely. In recent years, however, newly resistant strains of malaria have reappeared in the Arabian Peninsula, Egypt, Lebanon, Libya, Morocco, and southern Sudan, where it is the leading killer.

Schistosomiasis is endemic in the Nile Valley of Egypt and Sudan and in irrigated regions of Iraq. Schistosomes (blood flukes or parasitic worms) grow in freshwater snails which, when adult, leave the snail and survive in the water for forty-eight hours. The schistosomes may enter the skin of persons wading, washing, or swimming in contaminated water or through the lining of the mouth or intestinal tract of persons who drink contaminated water. The schistosomes grow inside the blood vessels of the body and produces eggs. The eggs travel to the bladder or intestine and are excreted. The infected person must urinate into water infected with freshwater snails for the lifecycle of the schistosomes to be continued. The body's reaction to the parasite's eggs may cause rash, fever, cough, muscle aches, or general debilitation and can damage the liver, intestines, lungs, and bladder. The opening of the Aswan High Dam in 1970 increased land under irrigation by more than 30 percent but also spread schistosomiasis into new regions. A study done in al-Ayaysha, a village on open water in the Nile Delta, found that children swimming in the Nile acquired the disease through repeated contact with contaminated water. They were treated with chemotherapy (Praziquantel), educated about the disease, taught appropriate sanitation procedures, and retested annually. Reinfection rates dropped markedly, but similar intervention throughout the infected region is prohibitively expensive.

Six pandemics of cholera spread between 1817 and 1923 with increased trade, travel, and troop movements from south Asia where the disease is endemic. Cholera is transmitted by contaminated water or food and causes massive diarrhea, dehydration, anuria, acidosis and shock. The fact that the disease was new led Muslim physicians to con-

sult European medical sources. Ottoman physicians began translating medical works from European languages in the early nineteenth century. In 1819 the Ottoman physician Sanizade Atallah studied medicine in the Muslim medical school and then in Padua. He wrote a medical book based on a Viennese source and added sections from other European works. In 1831 Mustafa Behcet, head of the medical college in Istanbul, published a treatise on cholera based on an Austrian source, which Ottoman authorities distributed free throughout the empire. Ottoman authorities established a quarantine service in about 1832 and had religious leaders publish treatises showing that quarantines were not contrary to Islamic law.

In the early nineteenth century European physicians were no better at treating cholera and other diseases than were traditionally trained Muslim physicians. Westernizing Muslim rulers had deducted from the demonstrably superior European weaponry and other scientific and technological advances that European medicine ought to be superior as well. In addition, European physicians were useful for political purposes and by the mid-nineteenth century had largely displaced their Muslim counterparts.

Cholera again spread in 1883, 1896, and 1902. In each of the epidemics, pilgrims returning from Mecca apparently carried the disease with them. In 1883 while working in Cairo, Robert Koch discovered the causative agent, *vibrio cholerae.* Following the cholera epidemics and outbreaks of plague from 1898 to 1905 the British authorities upgraded the al-Tawr quarantine station, which the Egyptian government had established in 1855 and used for the first time in 1862.The discovery of the cholera vibrio and the means of transmission led to improved public health and quarantine procedures in Mecca and throughout the region, which nearly ended the pandemics. The last major epidemic occurred in Egypt in 1947. The outbreak occurred near a British base where troops returning from India were quartered and Egyptians accused the British of having introduced the disease, creating a major and unresolved political controversy. Cholera is treated effectively with oral rehydration solutions to replace lost fluid and rarely is seen in epidemic form. In recent years the al-Tawr cholera vibrio has appeared in sporadic outbreaks.

Tuberculosis was widespread throughout the region but since the 1950s WHO and UNICEF helped ministries of health to vaccinate their populations and the rate of infection dropped significantly. The Egyptian Organization for Human Rights (EOHR) and the Human Rights Center for the Assistance of Prisoners (HRCAP) recently has reported that severe overcrowding, poor ventilation and sanitation, and inadequate nutrition in Egyptian prisons has led to the rapid spread of tuberculosis and other diseases among the prison population.

Eye diseases leading to impaired vision and blindness are common throughout the Middle East and North Africa. Trachoma, the most serious of them, is caused by the bacterium Chlamydia trachomatis. The Chlamydia bacterium infects the conjunctiva and inflammation may result in scarring and even blindness. The disease is spread through secretions from the infected eye spread directly or through common use of towels or bed clothing. Trachoma is prevalent in hot, dry climates with poor sanitary conditions and water shortages. The disease can be treated with tetracycline, but surgery is often necessary to repair damage to the eye. Improved public health and personal hygiene has reduced the incidence of trachoma, but it remains a threat in many parts of the Middle East and North Africa.

Pellagra, caused by inadequate niacin in the diet, is often seen in impoverished regions where corn is a staple and intake of varied plant and animal foods limited. Pellagra causes a distinctive reddish rash and lesions on the neck and is easily prevented by dietary supplements or vitamins. Other debilitating conditions resulting from nutritional deficiencies, such as anemia, are widespread and result directly from poverty.

Hepatitis A, a viral infection of the liver transmitted by the fecal oral route, is endemic throughout the region but can be avoided by consuming only well-cooked food and potable water. Hepatitis B, a viral infection of the liver, is transmitted primarily through behaviors that result in the exchange of blood or body fluids containing blood. Vaccinations are available for Hepatitis A and B. Hepatitis C, also a viral infection of the liver, is endemic in many regions. Recent research suggests that efforts to prevent schistosomiasis may have contributed to its

Blind children in Iraq. The major cause of blindness in developing countries is xerophthalmia, a disease associated with a lack of vitamin A in the diet. If untreated, xerophthalmia leads to keratomalacia, a deterioration and ulceration of the cornea. © J.B. Russell/Corbis Sygma. Reproduced by permission.

spread. Improperly sterilized needles often were used to administer medications for schistosomiasis and apparently transmitted Hepatitis C, which is now a major health problem.

Changes in lifestyle resulting in part from urbanization, increased smoking, a high-fat diet, lack of exercise, and increased obesity have resulted in exceptionally high rates of diabetes. Diabetes is a major public health challenge in Egypt and much of the Eastern Mediterranean region.

AIDS/HIV infection rates in the Middle East and North Africa are relatively low compared with Asia, Europe, and sub-Saharan Africa, but the incidence is rising rapidly and deaths from AIDS have increased since the early 1990s. The disease is most often spread through heterosexual intercourse and to a lesser extent through the transfer of blood and other bodily fluids from an infected person to an uninfected person. Early intervention is crucial because the disease spreads widely once a threshold is reached. Safe sex education, public information programs, greater use of condoms, convenient voluntary testing services, and treatment of sexually transmitted diseases can avert much suffering and crippling medical expenses. Yet the vast majority of infected persons live in the developing world where poverty, malnutrition, and limited education complicate preventive efforts. In addition, some Muslim authorities believe that safe sex education encourages or implies promiscuity and view the disease as a punishment for immoral behavior. In an effort to encourage preventive action, the World Bank, WHO/EMRO and UNAIDS, recently prepared a report titled "Overview of the HIV/AIDS Situation in the Middle East and North Africa and Eastern Mediterranean Region." The report encourages governments to establish national plans for prevention and management of the disease. The government of Morocco is one of the first to prepare

a National AIDS action plan and has received funds from the Global Fund to Fight AIDS, TB and Malaria to launch its program. Islamic reformers are advancing the concept of *darar* (the sin of harming others) to argue that men and women are each other's protectors and that spouses are obliged to protect their partners and in turn are entitled to self-protection from exposure to the disease. Recognizing the limits of law enforcement programs, Indonesia and Iran have introduced needle exchange programs to curtail transmission of HIV and hepatitis. Lebanese and other women in the region have argued that women's status must be raised through education, training, and economic independence to enable women to avoid contracting and transmitting the disease by gaining control over their sex lives.

In recent years, the most serious recurrence of disease was in Iraq where the eight-year war with Iran, the 1991 Gulf War, the twelve years of sanctions, and the 2003 U.S. and British occupation resulted in deteriorating conditions, especially for children and the elderly. During the 1990s about 5,000 children died every month from acute diarrheal diseases caused by bacteria, viruses, helminths, or protozoa. In most regions of the world, oral rehydration solution, a mixture of water, glucose, sodium, potassium, and electrolytes, greatly reduced infant mortality rates. The solution, distributed throughout the region by ministries of health, the World Health Organization, the United Nations Children's Fund (UNICEF), and nongovernmental organizations, helps children retain vital fluids and nutrients leading to full recovery. In Iraq, however, potable water and oral rehydration therapy were unobtainable and one in eight children died before his or her fifth birthday. Cholera, easily treated with oral rehydration, also appeared in parts of Iraq and chronic diseases went untreated. The percentage of underweight children increased by over 400 percent, and one in four children under age five was chronically malnourished. After the war UNICEF shipped thousands of tons of emergency medical and water supplies for the prevention and cure of waterborne diseases and high-protein food to fight malnutrition, but unstable conditions greatly impeded distribution.

In the Occupied Territories of Palestine nearly 10 percent of Palestinian children suffer from acute and 13 percent from chronic malnutrition. Malnutrition impairs physical and mental development and when combined with the trauma that Palestinian children have suffered from being exposed to gunfire, tank and helicopter attacks, tear gas, and house demolitions, will have serious long-term consequences. The Israeli reoccupation of Palestinian territories undermined the Palestinian health system and economy; severe overcrowding, poor sanitary conditions, shortage of health facilities, and political unrest have resulted in a massive public health crisis.

Despite setbacks, most regions of the Middle East and North Africa have in recent years experienced substantially decreased infant mortality and increased life expectancy. The current life expectancy now exceeds 65 years of age and is increasing. Noncommunicable diseases are more prevalent than communicable diseases and public health policy makers must adapt their priorities and strategies to the new disease patterns.

DIWAN

Pronounced "divan" in Persian and Turkish; a term that has been used in a variety of senses.

The term *diwan* has been used to mean all of the following:

- A collection of poetry or prose written by one author.
- A register of census, from the Arabic *awwana,* to collect. The first diwan was the *diwan al-jund,* the register that covered the people of Medina, Medina's military forces, émigrés and their families during the time of Muhammad.
- Ministries from the Umayyad period onward in the Arab world and in India and Iran. Three basic *diwans* corresponded to the three essential needs of the state: chancellery and state secretariat *(diwan al-rasa'il),* finance *(diwan al-amal),* and the army *(diwan al-jaysh).*
- The imperial privy council of the Ottoman Empire.
- Place of meeting, understood as a separate apartment or sitting room.
- A council chamber or a smoking room.
- A large couch or sofa without a back or arms, often used as a bed.

Mia Bloom

DIYARBAKIR

City and province in southeastern Turkey.

Diyarbakir province is bounded on the north by the Bitlis Mountains and on the west by the Euphrates River. The province comprises thirteen districts with a total area of 15,355 square kilometers. Its total population is 1,282,628 (2000 census).

The city of Diyarbakir, known in former times as Amida and Kara-Amid, is the principal urban center and capital of the province, which is populated mostly by Kurds. Located on the Tigris River, the city is renowned for its distinctive black basalt fortification walls that date from the fourth century C.E. The walls, with a circumference of 5.5 kilometers, are 12 meters high and 3.5 meters thick.

Diyarbakir has grown rapidly since 1950, when its population was 45,495. After 1984 the city's population multiplied as a result of the army's forcible relocation of Kurdish villagers in an effort to suppress an armed insurrection by the Kurdistan Workers Party. According to the 2000 census, the population had reached 818,396.

During the nineteenth century, Diyarbakir had strong economic links with cities that now are in Iraq and Iran, but these were severed after 1918. Contemporary Diyarbakir is an agricultural market center known also for its cotton textiles, leather products, and trade in grain, mohair, and wool. It has long been known for its goldsmith and silversmith work. The city is linked to western Turkey by railroad and is also the site of an air base.

DJAOUT, TAHER

[1954–1993]

Algerian poet, novelist, and journalist.

Taher Djaout was born on 11 January 1954 in Azzefoun, Great Kabylia. After he studied political science and journalism, he worked at the weekly *Algérie-actualité* until his assassination in 1993.

Djaout, who wrote in French, was deeply anchored in his country's history. Algeria is always in the background of his writings, whether they evoke the growing pains of a poor boy during the colonial period in *Les rets de l'oiseleur* (1983; The hunter's net),

or tackle the more complex situations of the post-independence years. Many of these themes are central to his first novel, *L'exproprié* (1981; The expropriated).

Djaout began his literary activity as a poet. His collection of poems, *Solstice barbelé* (1975; Thorny solstice), revealed a solid poet who believed in creative freedom. He achieved fame, however, through his fiction, particularly *Les chercheurs d'os* (1984; The bones seekers), which won the Duca Foundation Prize. Like other Algerian writers, in this work Djaout deplores the abuse of the martyrs' memory in postindependence Algeria. His next novel, *L'invention du désert* (1987; Inventing the desert), contracts history with present-day ordinary activities, particularly the problems of a journalist like himself. The novel raises questions dealing with the search for identity and the ordeal of exile.

It is in his last novel, *Les vigiles* (1991; The vigils), that Djaout steps into present-day Algeria, revealing the early signs of religious fervor as an escape and a solution to insurmountable daily problems on the administrative, political, and economic levels. There are also memories of the Algerian war of independence, which continue to haunt Algerian writers.

See also LITERATURE: ARABIC, NORTH AFRICAN.

AIDA A. BAMIA

DJEBAR, ASSIA

[1936–]

Algerian francophone novelist and filmmaker.

Assia Djebar (Fatima Zohra Imaleyene) received her earliest education in Blida and Algiers and went on to study at the L'École Normale Supérieure de Sèvres, the first Algerian woman to be admitted there. She participated in the Algerian War of Independence by interviewing Algerian refugees in neighboring countries for the National Liberation Front newspaper *al-Moudjahid,* work that structures her most famous novel, *L'amour, la fantasie* (1985; published in English as *Fantasia: An Algerian Cavalcade,* 1993). Her first novel, *La soif* (1957), was written during the 1956 student uprising; it was followed by *Les impatients* (1958), *L'enfants du nouveau monde* (1962), *Les alouettes naïves* (1968), and a trilogy composed of *Fantasia, Ombre sultane* (1987; published in English as *A Sister to Scheherazade,* 1988), and *Femmes d'Alger dans leur appartement* (1980; published in English as *Women of Algiers in Their Apartment,* 1992). Her novel *Loin de Medine* (1991; published in English as *Far from Medina,* 1994) imaginatively renders the earliest Muslim society, putting its women at the center and lyrically evoking pre-Muslim Arab heroines. Most of the other novels focus on the experience of the civil war, offering a view of women's participation that counters the portrayal given by Franz Fanon and others. A novel, *So Vast Is the Prisona* (*Vaste est la prison: Roman,* 1995), appeared in English in 1999. The memoiristic *Algerian White (Le blanc de l'Algérie: récit)* appeared in English in 2002.

Djebar has worked extensively in cinema; her best-known film was her first, *La nouba des femmes du Mont Chenoua,* winner of the 1979 Venice Bienniale Critics' Prize. Another is *La Zerda et les chants de l'oubli* (1982). She uses Algerian dialect in these films, making a nationalist as well as feminist statement in her focus on women's conditions and agency. She has taught at the University of Rabat, the University of Algiers, Louisiana State University, and New York University, having chosen self-exile since the outbreak of civil war in Algeria. She has won several literary prizes, including the Neustadt International Prize for Literature (1996) and the Fonlon-Nichols Prize of the African Literary Association (1997).

MARILYN BOOTH

DJEMAʿA

Constituent assembly, usually regulating the village or clan but occasionally tribe or confederation; also the place where its members gather, usually daily.

The traditional form of governance in rural communities in North Africa, the djemaʿa (jamaʿa)con-

sists of the heads of landholding families or lineages. Its head (*amghar* in most Berber-speaking areas) is chosen, usually annually, on a rotating basis by the members. Decisions are made by consensus, typically after considerable consultation. Its responsibilities include maintaining roads and paths, water and irrigation systems, and the local mosque and its school; hiring the school's teacher; ensuring hospitality for visitors; organizing community support for families needing manpower (especially in plowing and harvesting); organizing community festivities; assigning communal land to families for cereal production; and setting times and rules for wood collection, grazing, and beginning the harvest. In the past, the djemaʿa had greater judicial functions: In accordance with the local *qanun*—essentially a list of fines and punishments for a wide variety of misdeeds—it regulated community life and ensured equal justice, responsibility, and benefit.

See also QANUN.

THOMAS G. PENCHOEN

DJERBA

An island off the southeast coast of Tunisia, near the Libyan border.

The island of Djerba (Jarba) is 198 square miles (514 sq km), shaped like a molar tooth, and connected to the mainland of Tunisia on the southeast by a ferry at Adjim and on the southwest by a bridge that dates from the Roman Empire. Between Djerba and the mainland is the shallow inland sea of Bou Grara. The island's elevation is low—barely 188 feet (54 m) above sea level at its highest point—and is surrounded by shallow beaches of fine sand and palm trees, especially in the northeast. The principal population center is Houmt-Souk, a market and fishing port on the north coast. Since Tunisian independence in 1956, dozens of tourist hotels and an airport have been built on Djerba.

Djerba is reputed to be the island of the lotus eaters in Homer's *Odyssey.* Djerba's early history is one of contact with many peoples—Berbers, Carthaginians, Greeks, Romans, Vandals, Byzantines, and others. Companions of the prophet Muhammad brought the Arabic language and religion of Islam to Djerba in 665 C.E. Berber Kharijites, considered heretics by many orthodox Muslims, took refuge in southern Djerba after the Almohads expelled them from western Algeria. Since then the southern part of the island has tended to be Berber and Kharijite, the northeast Arab and Malekite, and the center mixed in population.

During the Middle Ages, Djerba was the scene of continuous persecutions, conquests, revolts, reconquests, civil wars, and plagues. Spaniards, Sicilians, Hafsids, Corsairs, and Ottoman Turks controlled the island at various times. In the eighteenth century, Tunis eventually won the contest with Tripoli for jurisdiction under the Ottoman Empire over Djerba. During the French protectorate, Djerba was under military administration from 1881 to 1890, then French civil administration until independence in 1956. The island is today part of the Tunisian Governorship of Medenine, and its population is a mix of Arab and Berber, plus elements of black African, Turkish, and Maltese origin.

The center and southeast of Djerba and portions of the nearby mainland are among the rare areas of Tunisia where a Berber language is spoken, although it is highly mixed with Arabic vocabulary.

An inside view of the *Griba* (wonderful) synagogue, located on the Isle of Djerba off the coast of southern Tunisia. Built in the time of Ezra (fifth century B.C.E.), it is believed that Ezra visited the island and that relics from the Temple of Jerusalem are within the synagogue's walls. Pilgrimages are still made in honor of Rabbi Simeon bar Yohai, the Talmudic sage attributed with writing the Zohar, a mystical book. The synagogue was the target of a terrorist attack on 11 April 2002 that took the lives of several German tourists. © FULVIO ROITER/CORBIS. REPRODUCED BY PERMISSION.

Midoun Jerba (or Djerba) passersby fill this Tunisian street on a sunny day. Djerba is an island in the central Mediterranean Sea, off the southeast coast of Tunisia. The island contains the remains of an ancient Roman civilization and is a popular tourist destination. © Nik Wheeler/Corbis. Reproduced by permission.

According to Arab historian Ibn Khaldun (1332–1406) "Djerba" originally referred to a branch of the Lemata Berbers.

Djerba is home to one of the few remaining Jewish communities in North Africa, the towns of Hara Sghira and Hara Kebira. According to local tradition, the Jewish community of Djerba dates from after the Babylonian captivity in 586 B.C.E.; others claim that Judeo-Berbers migrated to the island in the late eighth century C.E., following the Arab conquest of North Africa. The town of Hara Sghira is the site of the Ghriba—a Jewish synagogue, shrine, and site of a popular annual pilgrimage.

Djerba has low and irregular rainfall—averaging 8 inches (21 cm) per year—and high humidity. The only freshwater sources on the island are a few wells in the northeast and rainwater captured by cisterns. This limits local agriculture to date palms of mediocre quality, olive trees, fruit trees, and some grains and legumes.

In the twentieth and twenty-first centuries, the pressures of increasing population on this ecologically marginal island have gradually forced people out of the traditional occupations of agriculture, fishing, weaving, and pottery-marking. As the island's population increased from 31,800 in 1906 to 62,445 in 1956 to more than 82,000 in 1991, Djerbians began to rotate between the island and the mainland as shopkeepers. In reaction to anti-commercial policies of the Ben Salah government of the 1960s, Djerbians increasingly turned to international migration, and many of them have become successful shopkeepers and businessmen in the Paris area. The 2002 population of Djerba was estimated to have decreased to 60,300.

DLIMI, AHMED

[1931–1983]

Moroccan military officer.

Ahmed Dlimi achieved dubious prominence during the Ben Barka affair of 1965 and 1966, when he was acquitted in a Paris trial. By the mid-1970s, he was King Hassan II's closest military adviser; as a colonel, he was given command of the military seizure of the contested former Spanish colony of Western Sahara in 1974 and 1975. Promoted to general and given full control over theater operations, from 1979 to 1980 Dlimi oversaw the building of the "wall" in Western Sahara—a fortified sand barrier stretching across nearly 25 percent of the northern border. In early 1983, with relations souring between the military and the throne, Dlimi died in a mysterious auto accident.

DOHA

Capital and largest city of Qatar.

Situated almost midway down the east coast of the Qatari peninsula, Doha is the country's center of administration, finance, culture, transportation, and social services. The modern city grew from the fishing and pearling port of al-Bida, which at the end of the nineteenth century had around 12,000 inhabitants. The town's economy depended to a large extent on pearling, and the busy port had some 300 pearling ships in 1939, just before the industry collapsed. After oil revenues began enriching the emirate in the 1960s, the city grew rapidly. Its simple one- and two-story stone, mud, coral block, and timber dwellings were replaced by high-rise apartments and offices, palatial villas, and tree-lined subdivisions supported by modern infrastructure. The city's waterfront is lined by a gracefully curving roadway and landscaped walkway, or corniche. Although the oil and gas industry dominate the local economy, fishing and trade also bring activity to the port town. According to the 1997 census the city had 264,009 inhabitants. Because most of the city's residents are non-Qataris, the character of the city resembles others in the Persian Gulf such as Abu Dhabi, Dubai, and Dhahran, where there are large numbers of Iranians, Indians, Pakistanis, Filipinos, and Bangladeshis who influence the types of restaurants and the items sold in the markets.

DOLMABAHÇE PALACE

Ottoman sultan's palace.

Built in 1853 by Sultan Abdülmecit I, Dolmabahçe is located on the banks of the Bosporus in Beşiktaş, north of the centuries-old sultanic residence Topkapi. The new palace, built in a mixture of European styles, replaced an older one on the site, where Sultan Mahmud II had moved in 1815. While it was used for official functions through most of the nineteenth century, Dolmabahçe was the sultan's official residence for only a few years, as Abdülmecit soon moved to Çağiran Palace and Abdülaziz moved to a newer palace on the hill above it at Yildiz. Mustafa Kemal Atatürk died at Dolmabahçe on 8 November 1938.

DÖNME

A group in Turkey descended from followers of the mystical messiah Shabbetai Tzevi (1626–1676) who converted from Judaism to Islam.

By the mid-seventeenth century the apocalyptic events of the early modern era (expulsions, persecutions, the rise and fall of empires) inspired many to expect the messiah soon. Shabbetai Tzevi, a descendant of Iberian (Sephardic) exiles, was steeped in Kabbalistic beliefs that sought to hasten messianic redemption. In 1665 his followers proclaimed him the messiah. He eventually acquired a following greater than any other Jewish messianic movement since Christianity. In 1666 Shabbetai Tzevi tried to overthrow the sultan. Thwarted, to avoid execution, he converted. At this point most abandoned him,

but a minority did not. His loyalists remained, at least outwardly, Jews, but a few converted. Those who converted still maintained contact with a larger support system of secret allies within the Jewish community. They also were close to an important Sufi order, the Bektashis, who promoted doctrines, notably *taqiya* (religious dissimulation), that provided an Islamic rationale for contradictory beliefs.

After Shabbetai's death, his followers flocked to the major Jewish center in the Ottoman Empire, Salonika. Outwardly good Muslims, with great secrecy they conducted Sabbatean prayers, initially in Hebrew and later in Ladino (Judeo-Spanish), until late the nineteenth century, when they adopted Turkish. The Dönme became a significant element in Salonika. They may have accounted for as much as half of its Muslim population.

During the twilight of the Ottoman Empire, Salonika was the birthplace of the Committee for Union and Progress (CUP) and of Mustafa Kemal (Atatürk). Cavit Bey, a direct descendant of an early disciple and a leader in his own right, was an important minister in the CUP government. Atatürk had studied in a progressive school founded by a Dönme educator. Although the claim that Atatürk was a Dönme is untrue, their complex and sophisticated values shaped the environment of his youth.

In 1924, following the Treaty of Lausanne, the entire Muslim population of Salonika—including the Dönme—was deported to Turkey. In 1925 all Sufi orders were abolished. Shorn of the Dönme support system, intermarriage and assimilation eroded the community. In 1924 Ahmed Emin Yalman, a prominent journalist, had publicly renounced all ties to the sect and called for its complete integration into Turkish national life. Although some are still identified as Salonikli (often a code for Dönme), there is no evidence that their distinctive beliefs and practices survive today.

BENJAMIN BRAUDE

DOR DEʿA

Jewish educational reform movement.

The Dor Deʿa (Hebrew; Generation of Knowledge) was a Jewish enlightenment movement founded by Hayyim Habshush (?–1899) and Rabbi Yihye ben Solomon Qafih (1850–1932) in Sanʿa, Yemen, in the late nineteenth century. The two men were inspired in part by their personal contacts with the European Jewish scholars, Joseph Halévy and later Edouard Glaser, who explored Yemen.

Dor Deʿa aimed at reforming Jewish education by purging it of Cabalistic elements (a mystical interpretation of Scriptures) and by introducing a small amount of modern secular subjects and vocational training. From 1910 to 1915, Rabbi Qafih operated a modern school that included the Turkish language as well as Hebrew and Arabic. He was encouraged by the Alliance Israélite Universelle, whose support he had sought. The movement faced strong opposition from conservative elements led by Rabbi Isaac Yiyha (?–1932), supported by the imam of Yemen. The community remained split into opposing factions, which called each other derisively the Daradeʿa (a mocking Arabic plural derived from Dor Deʿa) and the Iggeshim (the crooked ones) until their mass emigration to Israel.

NORMAN STILLMAN

DORNER, DALIA

[1934–]

Israeli jurist, member of Israel's Supreme Court.

Born in Turkey, Dalia Dorner came to Israel in 1944 and studied in a Youth Immigration institution. In 1951, she graduated from the exclusive Reali High School in Haifa. As a teenager, she was active in a leftwing youth movement and fought for egalitarian causes. She enrolled in the Faculty of Law of the Hebrew University of Jerusalem and was awarded an M.J. degree in 1956. Between 1960 and

1973, she served in the Judge Advocate General Corps of the Israel Defense Force (IDF), specializing in defending soldiers. She also served as command defense attorney, deputy judge advocate general, and chief defense attorney of the IDF. Between 1973 and 1979, she was president of the Central Command District Military Court and was later appointed judge in the Military Appeals Court.

Discharged with the rank of colonel, she served for five years as a judge on the Beersheba District Court (1979–1984) and for ten years on the Jerusalem District Court (1984–1994). Appointed to the Supreme Court in 1994, she earned a reputation for being on the liberal wing of the court. She wrote a pioneering decision recognizing the rights of a same sex-mate and she opposed discrimination based on sex. She based her ruling in part on the basic law: human freedom and dignity. She was in the minority in a case dealing with the continued detention of Hizbullah leaders such as Shaykh Abd al-Karim Ubayd seized by Israel as hostages for the return of Israeli prisoners and those missing in action. She argued that this act contradicted the laws of war in the framework of international law and that no one should lose his or her freedom except as punishment or to prevent clear and evident danger. But she supported moderate use of force by the General Security Services to extract confessions. She retired from the court in 2004.

MERON MEDZINI

DOST MOHAMMAD BARAKZAI

[1792–1863]

Amir of Afghanistan, 1826–1838, 1842–1863.

Dost Mohammad Barazkai, also called the Great Amir (Amir Kabir), was born in Kandahar in the Mohammadzai branch of the Durrani Pushtun subtribe. Considered the founder of the Mohammadzai dynasty that ruled Afghanistan until 1973, Dost Mohammad first became ruler of Afghanistan in 1826 after a period of civil war. After battling even his own brothers for control, he gradually united the country. He also attempted to regain Afghan territory lost to the Sikhs, who ruled Peshawar at that time. Having defeated the Sikhs at the Battle of Jumrud (1837), he assumed the title Amir al-Muʾminin (Commander of the Faithful).

In the 1830s, Dost Mohammad began to turn away from the British and to make overtures to Persia and Russia. As a result the British invaded Afghanistan (1839) in the first Anglo–Afghan war. Once they had defeated Dost Mohammad and taken him as a hostage to India (1840), the British placed Dost Mohammad's rival Shah Shuja on the throne. The occupation of Afghanistan soon turned into a disaster for the British, however, and they were forced to retreat from Kabul in the winter of 1842, losing almost all of their troops in the process. In 1842, Dost Mohammad returned to the throne and ruled for another twenty years. Three of his twenty-seven sons became rulers of Afghanistan, although only Sher Ali ruled for a prolonged period.

GRANT FARR

DOUʿAJI, ALI AL-

[1909–1949]

Tunisian short story writer, dramatist, and painter.

Ali al-Douʿaji, born in Tunis, worked for literary journals, contributing articles mainly to *al-Alam al-Adabi.* He joined the group of bohemian writers known as Jamaʿat Taht al-Sur (Group under the wall), which was active between the two world wars. Many of them indulged in drinking and drugs to escape the harsh realities of their lives.

Al-Douʿaji's short stories and essays deal with the problems of the poor and struggling classes. The pessimism of the subjects is tempered by the subtle humor of the writer. He often used dialect in the dialogue of his short stories for a more truthful portrayal of life. His collection of short stories *Sahirtu minhu al-Layali* (1969; Sleepless nights) concerns Tunisia's society and its social ills. His sketches *Jawlatun bayna Hanat al-Bahr al-Abyad al-Mutawassit* (1973; A Tour around the bars of the Mediterranean)

reveal his humor, his powers of observation, and his capacity to portray human ridicule.

DOUGHTY, CHARLES

[1843–1926]

English author and traveler in Arabia.

Born in Suffolk to an Anglican cleric, Charles Montagu Doughty studied geology at Cambridge University. Motivated by a desire to examine ancient inscriptions and to explore the origins of humanity in what he considered its primitive setting, from 1876 to 1878 he traveled among the bedouin, whom he considered the original people. Though dressed and living as a simple wanderer in central and western Arabia, he never disguised himself as a native. He was the first literary traveler openly to proclaim his Englishness and never to deny his Christianity, to the point of imagining himself a Christlike figure.

In undertaking his voyage, Doughty benefited from Europe's economic and political penetration of the Middle East. But as he approached what he believed was the beginning of time, that very world of wealth, industry, and capital was interfering with his quest. Remote Anaizah in Central Arabia was by now the home to merchants who discussed Otto von Bismarck and Czar Alexander and life under English rule in Bombay. Hundreds of Najdis had gone down to Egypt "to dig for wages in the work of the Suez Canal," which Doughty called "this moral quagmire."

The result of his labor, *Travels in Arabia Deserta,* published in 1888, did not gain popular success until after World War I. T. E. Lawrence, whose *Seven Pillars of Wisdom* had made him an international literary star, rescued Doughty's book from neglect by arranging for a handsome second edition, which he endorsed with a ten-page introduction. Doughty also wrote patriotic poetry but, unlike his champion, he played little role in public affairs.

DOWLATABADI, MAHMOUD

[1940–]

An Iranian writer and actor.

Mahmoud Dowlatabadi was born in Dowlatabad, a village in northwestern Khorasan province. His parents were peasants, and as a child Dowlatabadi learned the various tasks associated with farming and tending livestock. There was no secondary school in his village and after finishing primary school Dowlatabadi went to Sabzevar to continue his education. By the time he was in his late teens, he had to work full-time and thus could not finish high school. He held various jobs in Sabzevar before moving to Mashhad for work, and eventually to Tehran. While in Sabzevar, he developed a great love for reading, especially American and European fiction that had been translated into Persian. By the mid-1960s, he had begun to write short stories. Rural Khorasan—and the social problems intertwined with its relative poverty—is the background for his fiction. By the early 1970s, he was acquiring a reputation as a serious writer who used social realism. He was arrested in 1974, apparently because the SAVAK believed his fiction represented implicit criticism of Mohammad Reza Shah Pahlavi's government. He began writing his epic 3,000-page novel, *Klidar,* in 1978 and did not complete the fifth and final volume until 1983.

Klidar established Dowlatabadi as one of Iran's most significant literary figures in the second half of the twentieth century. Yet his background set him apart from the country's other famous writers, the majority of whom came from middle- or upper-class urban families, had attended college—often outside Iran—and had began their careers by translating foreign works into Persian. Dowlatabadi's contributions to Persian literature since the completion of *Klidar* include essays, novels, short stories, and screenplays. In 1994, he was one of the 133 writers who signed a declaration calling for freedom of expression in Iran. In 2000, he was among twenty-nine intellectuals arrested and charged with anti-state activities for participating in a conference in

Berlin on the reform movement in Iran; he was acquitted in January 2001.

ERIC HOOGLUND

DRAGOMANS

Translators of Turkish, Persian, and Arabic into European languages.

When the Ottoman Empire began commercial dealings with the Europeans, translators were employed by European agents and diplomats in the capital, Istanbul. As no business could be conducted without these translators, they fulfilled a vital intermediary role in European–Ottoman relations, both political and commercial. Known as dragomans, these translators were usually Christians and often Greeks from the Phanar district of Istanbul. By the nineteenth century, they occupied a position of power and influence in Istanbul.

The Ottoman ministry for foreign affairs employed an official dragoman, and many European diplomats dealt with him or his deputies rather than directly with Ottoman administrators. Ottoman embassies in Europe also employed dragomans. After the Greek revolt in 1821, part of the Greek War of Independence, Muslims and Turks began to act as dragomans, and some became important figures during the Tanzimat reform period of the mid-1800s. One of the many Tanzimat reforms was the creation of a bureau of translation in the Ottoman Ministry of Foreign Affairs, which centralized and incorporated the dragomans.

ZACHARY KARABELL

DREYFUS AFFAIR

Famous turn-of-the-century case of French antisemitism.

In 1894 Alfred Dreyfus, a Jewish captain in the French army, was convicted in a secret military court-martial of espionage on behalf of Germany and was sentenced to life imprisonment on Devil's Island in French Guyana, off the coast of South America. His alleged espionage prompted virulent antisemitism and was cited by some French editorialists as but one manifestation of widespread Jewish perfidy. Two years later, an army intelligence investigator concluded that Dreyfus was innocent and the guilty party was Major Walsin Esterhazy. The army at first resisted reopening the case; when it did, it acquitted Esterhazy despite the blatant evidence against him. Later that year the new head of army intelligence confessed he had forged documents implicating Dreyfus and subsequently committed suicide in his jail cell.

A number of prominent liberals and leaders on the Left united in support of Dreyfus, whose conviction they viewed as an unholy antisemitic alliance of France's political Right and the church leadership. The novelist Emile Zola published his famous letter, "J'accuse," in which he vociferously denounced both the military and civil authorities, forcing the investigation into Dreyfus's conviction. A second court martial reiterated Dreyfus's guilt, but shortly thereafter he was pardoned. A number of years later he was declared innocent and returned to his former military rank.

The brazen corruption and antisemitism led to the end of the rightist government in France and, later, the firm separation of church and state there. The antisemitism that manifested itself in many liberal as well as rightist quarters deepened the ties of some Jewish intellectuals to the nascent Zionist Organization. The Viennese journalist Theodor Herzl, who had previously taken some interest in the organization, reported on the trial and, along with his colleague Max Nordau, became totally committed to Zionism.

DRUGS AND NARCOTICS

Drugs have long played a prominent role in the affairs of the Middle East.

The Middle East is ideally suited to profit from all phases of the drug trade. Climate, geography, and, more recently, politics have combined to make the region an important source and transit point of drugs destined for Europe, the United States, and many of the countries of the Middle East itself. Traditionally, the most important drugs in the Middle East have been opium and marijuana, which provide the raw material for the heroin and hashish that form the staple of the illicit drug trade in the region. Both the opium poppy (*Papaver somniferum*) and marijuana (*Cannabis sativa*) grow easily in many parts of the Middle East and North Africa, and the centuries-old trade routes that crisscross the region give illicit drug producers ready access to the major international drug markets. Although the drug trade is driven largely by the profits inherent in any lucrative criminal activity, in the Middle East it has taken on an important political dimension as rival groups have used enormous drug revenues to pay for the arms necessary to pursue their political ambitions. With a metric ton of heroin worth between $100 million and $600 million, retail, on the streets of the United States, drug sales are an appealing source of immediate, vast revenues for clandestine or criminal activities.

Two dealers of opium, an illegal drug produced from the poppy flower, openly weigh the drug in the marketplace.
© BETTMANN/CORBIS. REPRODUCED BY PERMISSION.

The importance of the Middle East in the international drug trade has varied according to the demand for certain illicit drugs. The taste for drugs is cyclical, alternating between periods of demand for stimulants such as cocaine and amphetamines, and times when the drug-abusing public seeks depressants such as opiates (e.g., morphine, heroin, and other opium derivatives) and hashish. Because the Middle East primarily produces depressants, its importance as a drug source increases when opiates are in demand, as in the 1930s, 1970s, and 1990s.

Opiates

Because *Papaver somniferum* grows best at higher altitudes, Turkey, Afghanistan, Iran, and more recently Lebanon, have at different times been major sources of heroin and other opiates. In the late 1960s and early 1970s, Turkey gained international notoriety as the principal source of the heroin that fed an epidemic of drug abuse in the United States and Europe. In 1973, as part of an agreement with the United States, Turkey first banned, then allowed only very restricted cultivation of opium poppies for medicinal purposes. This is still the only successful drug crop-control program of its kind, with virtually no leakage into illicit channels.

With Turkey effectively eliminated as a source in the mid-1970s, the center of illicit opiate production shifted eastward to Afghanistan, Lebanon, and, to a lesser extent, Iran. In both Afghanistan and Lebanon, the chaos created by civil war, coupled with the absence of a strong central government and rival combatants' desire for a source of revenue for arms purchases, led to an explosion of opium cultivation. By 1992, Afghanistan had become second only to Myanmar (Burma) in the production of illicit opium. The U.S. government estimated that at the end of 1992, Afghanistan had over 48,000 acres (nearly 19,500 ha) of opium poppy under cultivation, capable of producing 705 tons (640 metric tons) of opium or 70 tons (64 metric tons) of heroin. This would be enough to satisfy estimated heroin needs in the United States six times over and to pump between $6.4 billion and $38.4 billion into the underworld economy. While a large percentage of these opiates is probably consumed by addicts in Afghanistan, Iran, and Pakistan, the remainder flows into the international drug trade through Iran for transshipment to heroin refineries in Turkey and Lebanon. There is also evidence that Afghan opium is flowing northward into new routes opened in central Asia following the collapse of the Soviet Union in 1991.

An Afghan poppy farmer carries an assault rifle while combing through his crop. Poppy growers have been encouraged to cultivate wheat instead of the illicit poppies, the flower used for making opium and heroin. Some farmers are angry because the profit margin for wheat is considerably lower than that for the opium poppy crop. **© Reza/Webistan/Corbis. Reproduced by permission.**

Although not an opium producer on the scale of Afghanistan, Lebanon is an important country in the international heroin trade. Following Syria's occupation of the Biqa valley in 1976, eastern Lebanon became a center of opium cultivation and heroin refining. The Lebanese government has blamed the Syrian military for the Biqa valley drug trade, which in 1991 had the capacity to produce an estimated 37 tons (34 metric tons) of opium (or 3.7 tons [3.4 metric tons] of heroin) from an estimated nearly 8,400 acres (3,400 ha). Subsequently, a combination of harsh weather and joint Syrian–Lebanese eradication efforts have reduced cultivation to an estimated nearly 1,100 acres (440 ha) in late 1993, though clandestine laboratories may be refining more than 5.5 tons (5 metric tons) a year of heroin from Afghan opium.

Despite Iranian government efforts to ban the opium poppy in 1980, Iran in 1992 was still an important potential source of opium. The U.S. government estimated that nearly 8,650 acres (3,500 ha) of *Papaver somniferum* were under cultivation at the end of the year. There are indications, however, that Iran's addicts consume most domestic opium production. Iran continues to be a conduit for Afghan and Pakistani opiates moving to Turkey and onward along the Balkan route into Europe.

Hashish

Although there is cannabis cultivation in nearly every country of the Middle East, only Morocco and Lebanon are significant hashish producers and exporters. Hashish is simple to manufacture, requiring little of the intensive labor and none of the chemicals needed to refine opiates. And while it does not generate profits on the same scale as opiates,

hashish production is a multimillion-dollar criminal enterprise. In 1992, Morocco's nearly 74,000 acres (30,000 ha) of cannabis potentially yielded nearly 9,918 tons (9,000 metric tons) of hashish, most of which was destined for Europe. Lebanon, with an estimated nearly 38,800 acres (15,700 ha) of cannabis under cultivation in 1993, potentially had 623 tons (565 metric tons) of hashish available for export. Cannabis may be sold and used legally in many countries so most governments accord cannabis control a relatively low priority. The hashish trade is likely to remain steady therefore, even as the governments of the Middle East intensify efforts to suppress illicit opiates and stimulants.

W. KENNETH THOMPSON

DRUMMOND–WOLFF CONVENTION

Abortive pact (1885) between Britain and the Ottoman Empire.

Sir Henry Drummond-Wolff negotiated an agreement with Sultan Abdülhamit II at the behest of British Foreign Secretary Lord Robert Salisbury; the pact was to terminate Britain's occupation of Egypt after a three-year period. Because the agreement would have empowered Britain to reenter Egypt under certain conditions, the French and Russian ambassadors in Istanbul persuaded the sultan to withdraw his approval. Consequently, the British occupation of Egypt was greatly prolonged.

ARTHUR GOLDSCHMIDT

DRUZE

A small religious community that emerged in eleventh-century Cairo and spread to what is today Lebanon, Syria, and Israel.

The name *Druze* (in Arabic *Duruz,* meaning Druzes) was given to the community by outsiders based on the name of al-Darazi, an early convert who came to Cairo in the year 1015, joined the missionary ranks, and was eventually killed or executed in 1019. The Druze manuscripts consider him an apostate and refer to members of the community as Unitarians *(Muwwahhidun)* or People of Unitarianism *(Ahl al-Tawhid).* The Druzes are also known as Sons of Mercy or Sons of Beneficence *(Banu Maʿruf).* In addition, the word *Maʿruf* is derived from the Arabic words *arafa* (to know); thus, Druzes are often mentioned in their manuscripts as *Aʿraf* (those who possess knowledge).

Druze Communities

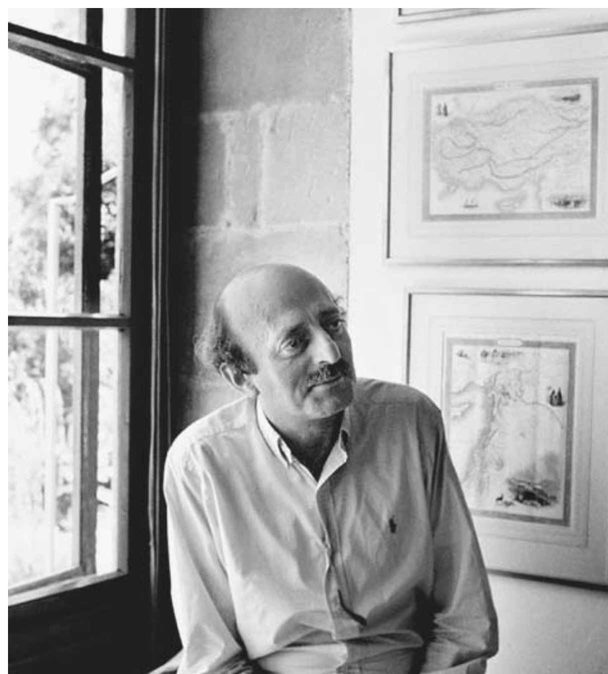
There are approximately one million Druzes in the world today with 85 to 90 percent of them living in the Middle East. Smaller communities can be found in Australia, Canada, Europe, the Philippines, South America, West Africa, and the United States. Within Druze villages and small towns in the Middle East, the predominant occupation has always been farming, and two classes of landowners and peasants have dominated the Druze economic landscape for centuries. Although most Druzes remain predominantly rural, rapid urbanization and modernization have not only transformed Druze village economics but also facilitated increases in educational levels and professional training.

Despite these recent transformations, social and religious authority among the Druzes remains persistent and comes from a religious elite that has an extraordinary influence on Druze communities. Thus, it may be said that Druzism both unites Druzes into socially cohesive communities and divides them into two main classes: the initiated or wise *(uqqal)* and the uninitiated or, literally, "ignorant" *(juhhal).* Only those believers who demonstrate piety and devotion and who have withstood the lengthy process of candidacy are initiated into the esoteric teachings and oral traditions of the faith. Women initiates undergo a less rigorous training because the Druze doctrine considers women to be more spiritually prepared and therefore not in need of the arduous initiation process that men are required to undertake.

The initiated persons are further subdivided based on their spiritual level of advancement. Only a small group of the most devout of the initiated members are called *ajawid,* meaning the selected, or, literally, "the good." In the eyes of the rest of the community, the *ajawid* serve as models for righteous behavior, truthfulness, and wisdom; they reinforce the cultural attributes of the entire community. Uninitiated persons comprise the majority of Druze society. They may seek initiation at any age, but their acceptance is based on their character, which is assessed by the initiated ones. Although the uninitiated are indeed "ignorant" of the Druze doctrine, their behavior is expected to conform to certain prescriptions both spiritual (e.g., fealty to God, His prophets, and His luminaries) and moral (e.g., respect for elders, honor for women, and care for children).

Emergence of Druzism (996–1043)

Druzism is traced to Fatimid-Ismaʿili-Shiʿite Egypt, and more specifically to the sixth Fatimid caliph al-Hakim bi-Amr Allah (r. 996–1021). Druze history may be divided into three main phases: the emergence of Druzism (996–1043), the era of emirates (1040s–1840s), and recent times (since the 1840s). Although almost all sources date the beginning of Druzism to 1017, the year 996 was not only the beginning of al-Hakim's rule but also, and more importantly, there is evidence of covert preparatory activity between 996 and 1017. The nearly fifty-year period of the emergence of Druzism revolves around three main leaders, al-Hakim bi-Amr Allah, Hamza ibn Ali al-Zawzani, and Baha al-Din al-Samuqi. In the eyes of many historians, al-Hakim was the most controversial among Fatimi caliphs due to a claim for divinity, which apparently he never made but others attributed to him, and because of his early rigid or unacceptable resolutions against the social and religious practices of Sunnis, Christians, and Jews. Although al-Hakim's attitude toward the Druze faith is not fully discernible from the available sources, it can be concluded that al-Hakim did not prevent Druze missionaries from propagating their doctrine; on the contrary, he appears to have allowed their proselytizing activities, approved their writings, and protected their followers.



During the Lebanese Civil War, Walid Jumblatt took over leadership of the Druze after the assassination of his father, Kamal, in 1977. Walid's forces fared well during the confrontation, which lasted fifteen years and resulted in an estimated 140,000 deaths. © AP/Wide World Photos. Reproduced by permission.

Hamza ibn Ali is the central authority behind Druze teachings and as such is considered by some writers to be the actual founder of Druzism. He came to Cairo in December 1016, met the Druze missionaries in the Ridan Mosque, and then proclaimed the new movement in 1017. Four years later, in 1021, al-Hakim left on one of his routine

Druze rebels in Lebanon during the 1958 revolts when the Progressive Socialist Party, led by Kamal Jumblatt, demanded social and political reforms for all sects in Lebanon. Today, the Druze are one of seventeen recognized sects in the country, which requires all citizens to carry a government-issued identification card encoded with his or her religion. © Hulton-Deutsch Collection/Corbis. Reproduced by permission.

trips to the hills of al-Muqattam east of Cairo but never returned. In the same year, Hamza and his close associates went into retreat, announcing that a period of persecution by al-Hakim's successor, the seventh Fatimid caliph al-Zahir, had begun, and that the affairs of the community were delegated to Baha al-Din. After the hardship years of 1021 to 1026, Baha al-Din resumed missionary activity and wrote epistles until the closing of Druzism in 1043, when he departed to an undisclosed location. Since then, no one has been permitted to join the Druze movement.

Era of Emirates (1040s–1840s)

The second phase of Druze history is represented in three emirates—the Buhturis, Maʿnis, and Shihabis—that played important roles in providing leadership to the Druze masses. The Buhturis (1040s–1507) are a branch of the Tanukhis, who had origins in Arabia but migrated to northern Syria and then settled in Mount Lebanon beginning in the middle of the eighth century. In the first half of the eleventh century some of the Tanukhi princes joined the Druze faith. The relationship of the Buhturi amirs with the Islamic central governments was at times affected by the Islamic power struggles. For example, the Mamluks and Ayyubids fought not only each other, but also the Mongols. Nevertheless, the Buhturis remained in power until the takeover of the Arab lands in 1516 by the Ottoman Sultan Selim I (r. 1512–1520), who is said to have been encouraged by the Druze Maʿni Prince Fakhr al-Din I.

With the help of the Buhturis, the forefather of the Maʿnis, Prince Maʿn, moved with his supporters to the Shuf in 1120. This Maʿni clan remained relatively insignificant until the emergence of their prince Fakhr al-Din I (r. 1507–1544). Although he was asked to support the Mamluks, Fakhr al-Din instead joined the Ottoman forces of Sultan Selim, whose army defeated the Mamluks in 1516 in the decisive battle of Marj Dabiq. Subsequently, the Ottomans allowed the Maʿnis to have independent political control within the region, as long as taxes reached Istanbul promptly. With the continued support of the Ottomans, another Druze prince, Fakhr al-Din II (r. 1585/1590–1635), extended the Maʿni principality north to the Syrian city of Palmyra and south to the Sinai Peninsula. Although he initially re-established good relations with the Ottoman Empire, he also signed treaties with the Grand Duke of Tuscany (1606–1608). As a result, the Ottomans became gradually suspicious of Fakhr al-Din II's overt ambition; they mobilized against him and defeated his army at Hasbayya in 1635. He was then executed with his two sons in Istanbul, but the Maʿni amirs were allowed to rule until 1697, when the emirate was transferred to the Shihabi house.

With the transfer of power from the Maʿnis to the Shihabis, the Druzes as a whole continued to enjoy a relatively high degree of autonomy. But within a decade, Druzes became divided and eventually turned against each other. At the battle of Ain Dara in 1711 two Druze factions fought—the Qaysis of northern Arabian origin and the Yamanis of southern origin. The decisive victory of the Qaysis caused many of the Yamanis to flee to the Hawran region, reducing Druze influence in Mount Lebanon. The Shihabi principality slowly fell under the political and military control of external rulers. Sectarianism began to take root and religious consciousness was on the rise. Moreover, in the late

eighteenth century the Shihabis converted to Christianity, which further reduced the Druze influence in Mount Lebanon.

Modern History (1840s to the Present)

The reign of the last of the Shihabi amirs, Bashir II (1788–1840), reinforced a strong central authority exercised over Mount Lebanon and the areas adjacent to it. However, Bashir II was constrained by the Egyptian rulers and a decade of Egyptian occupation; this led to his fall and, subsequently, to the end of the Shihabi emirate and the beginning of internal civil strife in the early 1840s. In 1843 European foreign powers convinced the Ottoman sultan to pacify the area, and to relinquish affairs in the north to the French-supported Maronites and in the south to the British-backed Druzes. The uneasiness in Mount Lebanon grew and finally exploded into open confrontation, beginning with the Maronite peasants rising against their Maronite landlords in 1858 and then against their Druze landlords in 1860. The bloody events of that year ended in the special autonomous administration of Mount Lebanon within the Ottoman Empire. This arrangement quickly failed and was replaced by a political regime known as *Mutasarrifiyya,* headed by a *mutasarrif* (governor) that imposed a ruler from outside Lebanon who was a subject of the Ottoman sultan. The French mandate replaced the *Mutasarrifiyya* in 1918, and the Druzes in Syria and Lebanon came under the French rule; the Druzes in Palestine and Jordan came under the British mandate. The 1920s and 1930s marked a period of revolts and unrest in the entire region, leading to the independence of Lebanon (1943), Syria (1944), and Israel (1948), and the separation of Druze communities by new national boundaries.

The Syrian Druzes have participated in politics largely through the Atrash family and its recent prominent figure Sultan Pasha al-Atrash. An Arab nationalist symbol of the 1925 to 1927 Jabal Druze revolt against the French forces, Sultan al-Atrash continued to influence local and national politics amongst Druzes until his death in 1982. In the 1967 war between Israel and the Arab states, Israel conquered vast lands, including the Syrian Golan Heights, where four Druze villages have resisted Israeli attempts for annexation; they continue to reassert their Syrian identity, and wish to reunite one day with their relatives in Syria.

The Druzes in Palestine in the 1930s and 1940s were a part of the Arab Legion forces despite their feuds with the surrounding Muslim populations. But in 1947 to 1948 a split took place in the Druze community, and some Druzes voluntarily enlisted in the Israeli army, while others resisted any form of cooperation with the Israeli forces. Subsequently, the first faction prevailed, and in 1956 Israel passed a law requiring three years of military service for all Druze males. Since the 1970s the social and political standings of Druzes in Israel have been gradually improving.

The Druzes in Lebanon have participated in the politics of the country through the two major factions of Jumblattis and Arslanis. In 1958 Kamal Jumblatt and his Progressive Socialist Party, which he founded in 1949, demanded political and social reforms for all Lebanese sects. This crisis led to the deployment of U.S. Marines in Lebanon for seven months to help the national government to restore the peace. Two decades later, however, Lebanon faced a military confrontation that erupted into a full-scale civil war in the spring of 1975. At the beginning of the war the Druzes were a part of a loose coalition of Sunnis, Shiʿa, and Greek Orthodox that fought the Maronite Christian militias, but while the war was still raging, Kamal Jumblatt was assassinated in 1977 and his son Walid took his place. Walid Jumblatt's forces regained previously lost towns, established control over the Shuf Mountain, and emerged victorious in the eyes of the community. In the war many Christians were displaced and it was only in the 1990s that arrangements were made for their return.

Finally, the Lebanese civil war of 1975 to 1990 forced Druzes in Lebanon and elsewhere to put aside their factional politics and to focus on their community's welfare. Furthermore, the civil war also promoted interactions between the Lebanese, Syrian, Israeli, and Jordanian Druze communities. Druzes are likely to continue being loyal to the countries in which they live while doing what is necessary to protect their local and regional communities.

DRUZE REVOLTS

Druze uprisings in Syria and Lebanon in the 1830s.

These large-scale revolts erupted among the Druze (particularly in Hawran) beginning in 1837, when Ibrahim Pasha ibn Muhammad Ali sought to force conscription in the region to support his adventures and those of his father. The Egyptian force sent from Damascus to suppress the rebels was defeated. The Druze of Hawran were soon aided by those from Shuf and Wadi al-Taym, and by Muslims from Mount Nablus in Palestine, who also were subject to conscription. During the revolt, a Druze warrior named Shibli al-Aryan became a national hero. Ibrahim Pasha's frustration in dealing with Druze rebels led him to request Bashir II to send Christian fighters to quell the rebellion. The Christian soldiers were under the command of Bashir's son Khalil, which reinforced Druze suspicions about Bashir's sectarian biases. The revolt failed, but it resulted in intensified sectarian animosities in the mountain regions for years to come.

DUAL CONTAINMENT

U.S. policy toward Iran and Iraq from 1993 to 1997.

In May 1993, the U.S. administration of President William Clinton announced a new policy to contain two countries—Iran and Iraq—that it claimed were threats to U.S. interests in the Middle East. Since Iraq effectively was contained by United Nations sanctions and daily aerial patrols of two no-fly zones in the north and south of the country, the real focus of dual containment was Iran. The stated objective was to apply sufficient international diplomatic and economic pressure on Iran to induce its government to modify its behavior in five areas alleged by the United States: its acquisition of weapons of mass destruction; its repression of domestic political dissent; its support for international terrorism; its efforts to destabilize governments in the Middle East; and its opposition to the Middle East peace process. Although key U.S. allies supported efforts to contain Iraq, they criticized the confrontational approach toward Iran and generally declined to cooperate with the U.S. efforts to isolate it. After 1997, U.S. officials stopped using the term *dual containment,* and the de facto policy became one of finding ways to engage in dialogue with Iran to discuss U.S. concerns. In 2001, the new administration of George W. Bush reverted to viewing Iran as a threat to U.S. interests, although it did not revive the term *dual containment.*

UPDATED BY ERIC HOOGLUND

DUAL CONTROL

Joint British–French supervision of Egyptian government revenues and disbursements from 1878 to 1882,

supplementing the supervision provided by the Caisse de la Dette Publique set up in 1876.

The first controllers were members of the so-called European cabinet, in which a British subject was finance minister and a Frenchman held the portfolio for public works. This cabinet, appointed by Egypt's Khedive Ismaʿil in August 1878, under pressure from his European creditors, lasted only six months because of its fiscal stringencies, which included placing many Egyptian army officers on half pay. Four months later Khedive Ismaʿil was deposed in favor of his son, Tawfiq.

The British and French governments appointed their controllers: Sir Evelyn Baring (later Lord Cromer), who had served on the Caisse, and de Blignières, the former Egyptian works minister. They drew up what would become the 1880 liquidation law, which reduced Egyptian government indebtedness by strictly limiting government expenditure. This caused either antiforeign sentiment or feelings of nationalism among Egyptian officers and officials, leading to the 1881 and 1882 Urabi revolution.

Once the cabinet headed by Mahmud Sami al-Barudi took control in February 1882, the controllers could no longer direct the budget. Dual Control was formally terminated when the British occupied Egypt in September 1882. Without access to military force, which Britain and France refused to apply until the Urabi revolution, Dual Control could not impose its program on Egypt's economy and body politic.

DUBAI

The second largest and second wealthiest of the seven emirates in the United Arab Emirates; also, the city of the same name.

The story of the emirate of Dubai revolves around that of Dubai City. The emirate was established by the Al Maktum ruling family around 1833 when the family's clan, the Al Bu Falasa, broke away from the Bani Yas tribal confederation that dominated the region of Abu Dhabi. In its early years Dubai was a small fishing village on the best natural harbor (called Dubai Creek) in the region. Under the Al Maktum rulers it became an important pearling port, and by the early years of the twentieth century it was second only to Kuwait among the commercial ports on the Arab side of the Persian Gulf.

Dubai's rulers historically have encouraged commercial development, attracting merchants from around the region to the city. Consequently, large and visible expatriate communities from Iran, South Asia, and around the world give the city a vibrant, colorful, and cosmopolitan character. The largest city in the United Arab Emirates and its commercial capital, Dubai had an estimated population in 2000 of 886,000. In addition to its port and massive dry dock facilities, the city has one of the region's busiest airports. In 1999 the city boasted the world's tallest hotel, the Burj al-Arab, or Tower of the Arabs.

DUBS, ADOLPH

[1920–1979]

U.S. ambassador to Afghanistan, 1977–1979; assassinated in Kabul.

Ambassador Adolph ("Spike") Dubs was the American ambassador to Afghanistan at the time of the Saur Revolution in April 1978. On 14 February 1979, Dubs was kidnapped in Kabul and held hostage by unidentified people claiming to be opponents of the Afghan Marxist government. He was shot to death after a few hours by police allegedly trying to free him. His death had a deleterious effect

on relations between Afghanistan and the United States.

GRANT FARR

DUFFERIN REPORT (1883)

Report commending reorganization of Egyptian government under British occupation.

Lord Dufferin, the British ambassador to the Ottoman Empire in Constantinople (now Istanbul), was sent to Egypt following the defeat of the Urabi revolt to recommend policies for the administration of Britain's occupation. His report on the reorganization of the Egyptian government was issued on 6 February 1883. Recognizing the importance of the rising tide of Egyptian nationalism, Lord Dufferin sought middle ground between the restoration of Egyptian sovereignty and full annexation by England. British officials were to take advisory positions in key offices within the Egyptian administration, including the ministries of finance, interior, public works and irrigation, justice, police, and the army. Other specific measures and reforms discussed in the report were the establishment of an elected government under the khedive (ruler of Egypt, viceroy of the sultan of the Ottoman Empire), the promulgation of civil and criminal codes for the Native Tribunals, the abolishment of forced labor, and putting an end to the use of whippings to collect taxes and obtain evidence of crimes. As a result of Dufferin's report, a Legislative Council and a General Assembly were established, changing the contours of Egyptian politics. Contrary to Dufferin's intention of minimizing British control over the Egyptian government, the reforms discussed in his report increased British presence in Egypt and enhanced Egyptian opposition to the occupation.

DUKAN DAM

The dam was built on Iraq's Little Zab River to control flooding and to provide irrigation and hydroelectric power.

Severe, recurrent flooding of the Little Zab River to northeastern Iraq was formerly commonplace. The rate of flow in this river as it passes through the Dukan gorge is about 34 cubic yards (26 cu m) per minute during the dry season, rising to more than 4,000 cubic yards (3,000 cu m) per minutes at flood time. Iraq's Development Board was already considering major flood control, drainage, and irrigation schemes throughout the country when the Little Zab gave rise to a series of major floods in 1941, 1946, 1949, 1953, and 1954. The highest flood levels were recorded in this latest year when the river's rate of flow reached 4,800 cubic yards (3,660 cu m) per minute despite a normal average daily rainfall.

In 1954, to control further flooding of the Little Zab and to provide water for irrigation in northeastern Iraq, the Development Board awarded a contract to a French consortium for the construction of an arch dam at Dukan gorge on the Little Zab, some 37 miles (60 km) northwest of Sulaymaniya and 60 miles (100 km) northeast of Kirkuk. Between 1,000 and 1,200 families, representing the population of some fifty villages in the adjacent region, were moved and settled to the northwest at Sanga Sir. The Dukan dam and reservoir were completed in 1959 although structural problems necessitated ongoing repairs and further expense. As part of the Dukan project, a series of regulators and dams were built on the Little Zab and adjacent Udayn River, while a spillway conveying water from the Little Zab to the Udayn provided irrigation to the Ghurfa lands and the lands on the right bank of the Udayn River.

The project was tested almost immediately when the Little Zab flooded in 1959, depositing over 2.6

billion cubic yards (2 billion cu m) of water into the reservoir. This allowed a constant runoff for irrigation during the dry season from August to November. Over 20 billion cubic yards (15 billion cu m) of water were processed through the reservoir during the first six years of its operation.

The dam itself is an enormous structure, 382 feet (116.5 m) high and 1,180 feet (360 m) long. It is 20 feet (6.2 m) wide at the top and 107 feet (32.5 m) wide at its base. The reservoir behind it, covering an area of some 104 square miles (270 sq km) or more, has an estimated usual capacity of 8.9 billion cubic yards (6.8 billion cu m), but a maximum capacity of 10.9 billion cubic yards (8.3 billion cu m). The complex serves multiple purposes including flood control, the provision of hydroelectric power (originally rated at 200,000 kilowatts), and the storage of water for lean periods when the Tigris is low. Indeed, the water contained in the reservoir is intended chiefly for the Kirkuk irrigation project whereby over 890,000 acres (360,000 ha) of land around Irbil, Kirkuk, and Diyala districts are to be brought under cultivation, almost 494,000 acres (200,000 ha) around Kirkuk alone.

ALBERTINE JWAIDEH

DULLES, JOHN FOSTER

[1888–1959]

U.S. secretary of state, 1953–1959.

John Foster Dulles came to public service after a long and successful legal career that afforded him valuable experience in international affairs. He was a senior adviser to the U.S. delegation to the 1945 founding conference of the United Nations Organization in San Francisco, and a member of the U.S. delegation to the first UN General Assembly in 1948. In 1950 and 1951 he earned the praises of U.S. secretary of state Dean Acheson for negotiating a "peace of reconciliation" with Japan.

As President Dwight D. Eisenhower's secretary of state from 1953 to 1959, Dulles directed U.S. foreign policy in tandem with the president. The USSR was their focus because communism was considered an immoral and dangerous system. Concerned with the strategic northern tier of Middle Eastern countries bordering on the USSR, Dulles supported conservative pro-American rulers such as Reza Shah Pahlavi in Iran, the Hashimites and Nuri al-Saʿid in Iraq, and Adnan Menderes in Turkey. Although he supported the British-sponsored Baghdad Pact of 1955, Dulles held back from fully committing the United States to membership in the alliance. When Iran's Prime Minister Mohammad Mossadegh threatened to supplant the shah in 1953, Dulles advocated the removal of the prime minister. Together with his brother, CIA director Allen W. Dulles, he organized Operation AJAX, which contributed significantly to Mossadegh's fall in August 1953. In August 1955, in accordance with a secret Anglo-American plot to encourage Israeli-Egyptian talks (Operation ALPHA), Dulles proposed a solution to the Arab–Israel conflict based on resettlement of the Palestinian refugees, treaties to establish permanent frontiers, and guarantees of security for both sides.

Dulles distrusted the attempts of various Middle Eastern states, particularly Egypt, to remain neutral in the Cold War between the superpowers. In 1955 he responded favorably to Egypt's request for funding of the Aswan High Dam, but was disconcerted when Egypt's president Gamal Abdel Nasser made an arms deal with the USSR, via its client Czechoslovakia, in September 1955. Nasser's aspirations to lead the bloc of nonaligned nations, his failure to respond positively to Operation ALPHA, and his recognition of Communist China in May 1956 further alienated Dulles's sympathies.

In July 1956 Dulles decided, with Eisenhower's approval, to revoke the funding offer for the dam project. The withdrawal of funds led to Nasser's nationalization of the Suez Canal, which in turn precipitated an international crisis that culminated in the Arab–Israel War of October 1956. Dulles refused to support the actions of Israel, France, and

Great Britain in their joint attack on Egypt aimed at seizing the canal and toppling Nasser. In early 1957 Dulles participated in the formulation of the Eisenhower Doctrine, which offered U.S. military aid to any Middle East state threatened by the USSR. Invoking the doctrine, Dulles and Eisenhower sent U.S. troops into Lebanon in July 1958 in the wake of the revolution in Iraq.

Struggling against the onset of cancer, Dulles resigned his government position in April 1959 and died in May.

DURAND LINE

Afghanistan-Pakistan border.

The present border of approximately 1,500 miles between Afghanistan and Pakistan was agreed upon in a treaty signed on 12 November 1893, in Kabul by Sir Mortimer Durand, representing British India, and Abd al-Rahman, amir of Afghanistan.

Durand, the Indian foreign secretary, had been sent by Lord Landsdowne, the viceroy of British India, to pursue Britain's "Forward Policy" designed to control tribal activity along the northwest border of British India. Afghanistan has never accepted the legitimacy of this border, however, arguing that it was intended to demarcate spheres of influence rather than international frontiers. In addition, the Afghans contend that this border bisects the Pushtun tribal area, leaving more than half the Pushtun tribes in Pakistan. Afghans believe that Pushtuns are true Afghans and therefore the Pushtun area, sometimes called Pushtunistan, should be part of Afghanistan. The "Pushtunistan question" has remained an obstacle to good relations between Pakistan and Afghanistan.

After the communist takeover of Afghanistan in 1978, the government of Nur Mohammed Taraki and Hafizullah Amin actively challenged the legitimacy of the Durand line, largely because of their strong Pushtun sentiments. For this reason, the Afghan government formally repudiated the Durand Agreement in 1979. In 1993, 100 years since the signing of the agreement, the Durand Agreement formally lapsed. Afghanistan refused to renew the treaty, leaving Afghanistan and Pakistan with no official border.

DURRANI DYNASTY

Rulers of Afghanistan.

The Durrani dynasty (1747–1842) was founded in Kandahar, Afghanistan, in 1747, when a group of Pakhtun (Pushtun) elders elected Ahmad Durrani to lead them. Members of the house of Ahmad Shah ruled over the empire he created until its collapse in 1818. A branch of the family maintained control over Herat and the northwestern region until 1842. A grandson of Ahmad Shah regained the Afghan

throne in 1838 but was overthrown in 1842, in the course of a popular uprising against British forces.

The province of Kandahar had changed hands repeatedly between the Moghul and Safavid empires when, in 1708, a coalition of Pakhtun and non-Pakhtun elements under the leadership of Mir Wais Hotak freed the province from the Safavids. In 1722, the Pakhtuns conquered Isfahan, establishing a short-lived Ghilzai empire. By 1737, their capital in Kandahar was taken over by the Persian conqueror, Nadir Shah Afshar, whose death in 1747 provided Ahmad Shah with the opportunity to establish the Durrani empire.

Ahmad Shah belonged to the Saddozai lineage, which had provided the Abdali clan with its leaders for several centuries. On assuming power, Ahmad Shah changed the name of the clan from Abdali to Durrani (Pearl of Pearls). He be stowed special privileges on the Saddozai lineage but confined the kingship to his own house. The crown was hereditary in the house of Ahmad Shah. But in the absence of clear rules, every succession gave rise to an intense struggle for the throne. When Ahmad Shah died, two of his four sons emerged as contenders, but their conflict was quickly resolved in favor of the eldest, Timur Shah (ruled 1772–1793). When he died, the continuous struggle among his numerous sons became a permanent feature of the politics of the dynasty, ultimately leading to its collapse. Three of his sons became rulers, Shah Zaman (ruled 1793–1800), Shah Mahmud (ruled 1800–1803; 1809–1818), and Shah Shuja (ruled 1803–1809; 1838–1842).

Under Ahmad Shah, foreign conquest was the main goal of the dynasty. To build himself a base of support at home and provide a force for conquest abroad, Ahmad Shah showered the Durrani clans with privileges, investing their leaders with the main offices of the empire. Most of the ministers and generals belonged to various branches of the Durrani clan, though rarely to the Saddozai lineage to which Ahmad Shah's house belonged. But near the end of his rule, changed regional conditions had rendered further conquests unprofitable. Timur Shah, who fought only defensive wars, rarely called the Durrani clans to action. To reduce the power of his ministers, he moved the capital from Kandahar, the heartland of Pakhtuns, to Kabul, a predominantly Persian- (Farsi-) speaking city. He also created new offices, to which he appointed non-Durranis owing loyalty to his person.

The warring princes, however, not only had to reconfirm Durrani nobles in their privileges but had to concede to them new powers as well. The cumulative effect of these concessions resulted in the weakening of the crown to the point that ministers were in a position to depose rulers at will. Most of the rulers, however, managed to prevent members of a single lineage from monopolizing all official positions. But under Shah Mahmud, members of the Barakzai clan managed to gain control of the most important offices. When, in 1818, the crown prince blinded the powerful Barakzai chief minister, the latter's brothers, seeking revenge, overthrew the house of Ahmad Shah and brought about the collapse of the Durrani empire.

A civil war ensued. The Indian provinces of the Durrani empire gained their independence, and Afghanistan was divided into a number of independent principalities. A great-grandson of Ahmad Shah, Prince Kamran, gained control of the province of Herat, which he ruled until 1842. Shah Shuja, a grandson of Ahmad Shah and former ruler, mounted a number of expeditions from his exile in India to regain power but without success. Fearing the rising influence of Russia in Persia and Central Asia, British officials in India decided to extend their support to Shah Shuja. To help restore him to power, they sent forces simultaneously against the rulers of Kabul and Kandahar in 1838, thereby initiating the first Anglo–Afghan War. The house of Ahmad Shah still retained enough legitimacy, and Shah Shuja was welcomed by the people. Soon, however, he revealed himself to be no more than a stooge of British power. In 1841, anxious about their own loss of influence, Afghan notables led a popular revolt against the British forces. The British army was destroyed, and Shah Shuja was assassinated in 1842. His descendants fled to India, and from then on, no member of the house of Ahmad Shah ever played a prominent role in the politics of Afghanistan.

The advent of the Durrani dynasty transformed the Pakhtuns in general, and the Durrani clans in particular, into the dominant political force in Afghanistan. The dynasty, however, derived its model of power from the ancient Persian and Islamic theories of government. Persian was the language of

bureaucracy, and it gradually became the language of the court.

EASTERN DESERT

Also called the Arabian Desert; it makes up almost a quarter of Egypt's land surface, covering an area of 85,690 square miles (221,937 sq km).

The northern sector, from the Mediterranean coast to the latitude of Qena, is a limestone plateau marked by rolling hills. At Qena the Eastern Desert is marked by cliffs, some as high as 6,500 feet (2,000 m), and scored by deep *wadis* (dry streambeds or valleys) that are difficult to cross. Farther south the desert becomes a sandstone plateau broken by ravines, but some can be traversed easily, such as the ancient trade route from the Nile River to al-Qusayr. In the eastern section of the desert, a chain of hills, more like a series of interlocking systems than a continuous range, runs from near Suez south to the border of the Sudan. At the foot of these hills lies the Red Sea coastal plain, which gradually widens as one moves south.

The sedentary population lives in towns and villages on the Red Sea coast; their main occupations are fishing, transport, and serving the growing Red Sea tourist trade. Nomadic pastoralists make up about 10 percent of the Eastern Desert's population. Pasturelands and water suffice to support small herds of sheep, goats, and camels. Arab tribes include the Huwaytat, Maʿaza, and Ababda. In the south are the Bisharin, part of the Beja, a Hamitic ethnic group.

ARTHUR GOLDSCHMIDT

EASTERN ORTHODOX CHURCH

Direct descendant of the Byzantine State Church; also includes a group of independent national Christian churches.

The Eastern Orthodox Church comprises a group of autonomous Christian churches united by doctrine, liturgy, and internal hierarchical organizations. The heads are patriarchs or metropolitans, with the patriarch of Constantinople only the first among equals. Orthodox churches represented in the Middle East include the Russian, the Balkan, the Greek; the churches of Antioch (now based in Damascus), Alexandria, Jerusalem, and the See of Constantinople (now Istanbul); and the old churches that date to the fifth century C.E., which emancipated themselves from the Byzantine State Church—the Nestorian Church in the Middle East and India (with a half million members) and the Monophysite churches (with some 17 million, including the Coptic of Egypt, the Ethiopian, the Syrian, the Armenian, and the Mar Thoma of India). There are also the Uniate churches, which, properly speaking, are not Orthodox churches because, though they retain traditional eastern liturgies, they acknowledge the primacy and authority of the pope in Rome. Orthodox Christians today number some 150 million or more worldwide—with 125 million in Europe, 25 million in Africa, 3.5 million in Asia, and about 1 million in North America.

Eastern Christianity, with its decentralized organization, diverged from the Western hierarchically organized Roman (Catholic) Church after the fourth century C.E., when Constantinople became the capital of the Roman Empire. The theological split between the Western and Eastern churches was formalized in the Schism of 1054. Rivalry between Rome and Constantinople, aided by longstanding differences and misunderstandings, led to the schism: The Eastern Orthodox churches recognize only the canons of the seven ecumenical councils (325–787 C.E.) as binding for faith, and they reject doctrines that have subsequently been added in the West.

After the fall of the Byzantine Empire in 1453 to the Ottoman Turks, the Orthodox patriarch was entrusted with full civil administration over all Orthodox Christians in the Ottoman Empire. This centralized administration contrasted with the Eastern church's traditional localist organization. Although the Ottomans granted Christians freedom of worship, the restrictions they imposed on the public profile of the church bred resentment and stagnation in theological scholarship.

In the nineteenth and twentieth centuries, the Ottoman Empire's Orthodox community once again splintered under the impact of European Catholics and Protestants and of emerging nationalism. The Russian Empire assumed a pan-Slavic stance in its attempts to expand south and east into warm-water ports during the nineteenth and early twentieth centuries; the affinity of Russian Orthodoxy with other Eastern Orthodox communities was stressed. World War I, the Russian Revolution, and the breakup of the Ottoman Empire ended that gambit, although Russian and Soviet interests in the Middle East never diminished.

Today in the Arab East, the Antioch (Melkite) church represents the largest Arab Christian group, with dioceses in Syria, Lebanon, and Iraq. The Alexandria church has become the center of emerging African Orthodox communities.

EASTERN QUESTION

A concept coined in the initial stage of the Greek War of Independence (1821–1829) to describe the territorial effect of the political decline of the Ottoman Empire on great-power diplomacy in Europe.

In the seventeenth century the Ottoman Empire, at its greatest extent, sprawled across southeast Europe (Hungary included), southwest Asia, and northern Africa (Morocco excluded). The weakening of the sultan's power began in the last decade of the reign of Sultan Süleyman (1520–1566). Europe, however, remained paralyzed by religious wars until the Peace of Westphalia (1648), and the Sublime Porte (the Ottoman imperial government) did not admit its growing frailty vis-à-vis Europe until the end of the seventeenth century. Only then did it negotiate

treaties and other international acts, chiefly with the great powers of Europe. In the Treaty of Karlowitz (1699), for the first time, the sultan ceded large tracts in Christian Europe—in this instance to Austria and Poland—which were never recovered.

For a century longer, Ottoman military might was still respected on the Continent. Tsar Peter I (1682–1725), the first European monarch to send troops into Ottoman Asia, occupied the Sea of Azov and its Crimean rim in 1696, only to lose the short-lived conquest along with a claim to power over the Black Sea after a disastrous defeat (1711) at the Prut River (later in Romania). The Ottoman recapture of the Crimea's Tatar khanates was ratified in 1713, in the Treaty of Edirne (Adrianople). That delayed for six decades—until Catherine II (1762–1796), after a six-year war with Turkey—Russia's taking the first solid step toward establishing itself as a Black Sea power through the treaty of Kuçuk Kaynarca (1774), which detached the khanates from the sultan's realm by declaring them independent. Russia did not annex them until nine years later. Finally in 1792, after four more years of war, the Sublime Porte, in the treaty of peace at Jassy, the capital of the Ottoman province of Moldavia (later part of Romania), at last acknowledged this segment of the Black Sea coast as Russian. The victories set in motion Ottoman territorial attrition in southwest Asia; it spread to North Africa in 1830, when France began its conquest of Algeria.

Europe's expansion into the Ottoman Empire at times appeared to consist of predators rushing as far and as fast as they could, paying no heed to the risks of collision. Such a judgment, however, belies the realities. Contenders for the same or overlapping districts were sensitive to one another's interests. Avoidance of conflict became the name of the game as early as the Congress of Vienna (1814–1815). At the end of the Congress the conveners—Austria, Great Britain, Prussia, and Russia—styled themselves the Concert of Europe to act as a permanent executive for settling all their disputes by conference or consensual diplomacy.

In 1818, at Aachen, the four powers admitted France to their ranks and promptly instructed the restored Bourbon monarchy to join Britain, as the Concert's sole maritime powers, in suppressing the institutionalized piracy in the western Mediterranean, carried out by the sultan's autonomous *ocaklar* (garrisons) or provinces of Tripoli (Libya), Tunis, and Algiers. A dozen years elapsed before the Barbary garrisons of the Ottoman Maghrib were finally put out of the piracy business.

Only once between 1815 and 1914 did the great powers resort to war over a dispute arising from the Eastern Question. In that case Britain, France, and Russia were the Concert's belligerents in the Crimean War (1854–1856); Austria served as mediator, and Prussia stayed aloof. The entry of the Kingdom of Sardinia, alongside Britain and France, as allies of the Sublime Porte against Russia served, in effect, as its application for membership in the Concert. Having led the Risorgimento for the political unification of the city-states in the Italian peninsula after 1848, Sardinia provided the monarchs following the emergence in 1861 of the kingdom of Italy, which was promptly made a member of the Concert.

The great-power contest for ownership or denial of the sultan's strategic realm reflects the pace and the modes of Europe's expansion into Asia and Africa. The Ottoman Empire spanned the heart of the eastern hemisphere by joining its three continents. The desire to control the Turkish Straits, which separate Asia and Europe while linking the Black and Mediterranean Seas, became a fixed, if also thwarted, aim of Russia after 1774. The Black Sea remained closed to Russia's naval power while the tsardom was exposed to possible attack by hostile maritime powers, as occurred in the Crimean War.

Similarly, on occupying Egypt in 1798, Napoléon declared, in the name of France, his intention to construct and own a manmade waterway from the Mediterranean's landlocked southeast corner to the Red Sea. By cutting across Asia and Africa, such a canal would reduce the distance (and the time) of uninterrupted travel from western Europe, notably from Britain and France, to India by two-thirds, and by lesser amounts to all points along the African and Asian shores of the Indian Ocean.

Given the challenge of two rivals, the cautious shaping by Britain, as the world's foremost maritime and naval power, of its own strategy to deny Russia and France a naval presence on the Mediterranean's eastern littorals was remarkable.

A portrait of Ismet Pasha, chief Turkish negotiator at the Lausanne Conference, which began in November 1922. The present-day territory of Turkey was essentially recognized by the Treaty of Lausanne. © BETTMANN/CORBIS. REPRODUCED BY PERMISSION.

As the decades passed, Saint Petersburg's aspiration became an obsession. In preparation for the expected takeover of the Turkish Straits, Russia continued swallowing Ottoman property that circled the Black Sea in both Europe and Asia, in the latter from the Crimea through the Caucasus; the last bit was the adjacent corner of Anatolia in 1878. To support the quest for the Turkish Straits even before the Crimean War, Russia established precedents to assert its right to protect the sultan's Orthodox subjects in Anatolia and Syria (including Lebanon and Palestine). In 1856, the Islahat Fermani (Reform Edict) of Sultan Abdülmecit I (1839–1861), reinforced by Article 9 of the Treaty of Paris ending the Crimean War, briefly interrupted, but did not end, the Russian practice.

Meanwhile, over Britain's resolute opposition, French investors in the late 1850s launched the Suez Canal Company, which in 1869 completed the waterway. Backed by the government of France, these entrepreneurs also preempted Britain's moves to take control of the company's policy-framing executive before and after Britain's occupation of Ottoman Egypt in 1882. By 1914 Algeria and Tunisia were part of France's empire, although the Sublime Porte withheld formal recognition of the protectorate in Tunisia. Of the surviving Ottoman provinces in Asia, France's interest centered on Lebanon and Syria from 1860 on. After a lapse of about a century, France in the 1840s had revived earlier treaty rights to custody of papal institutions and their members, covering affiliated eastern Uniate churches as well as Roman Catholicism. Finally, the financial community of France bankrolled railway, harbor, and other concessions in Syria, Lebanon, and Palestine and became the dominant shareholder in the Ottoman Imperial Bank, the Ottoman Empire's official agent.

But above all, the overseers of Britain's empire saw the shrinking Islamic state as both a continuing barrier and an unfolding passage to India. In both functions, the Ottoman Empire had grown into a major asset for Britain. Little wonder that, under Britain's persistent lead, the Concert of Europe in 1840 began nearly four decades as guarantor of the integrity of Ottoman Asia and Africa. The chosen formula was that of a self-denying protocol, first used in the Concert's convention of 1840 for "the Pacification of the Levant," which stated that "in the execution of the engagements resulting to the Contracting Powers from the . . . Convention, those Powers will seek no augmentation of territory, no exclusive influence, no commercial advantage for their subjects, which those of every other nation may not equally obtain." Even France, which had upheld Egypt in the crisis, rejoined the Concert in 1841.

Foreign Secretary Lord Palmerston, the strategy's author, saw in Egypt's threats to the Osmanli dynasty's survival (1831–1833, 1839) a threat to the British Empire. With the appearance of the steamship in the 1820s, Britain belatedly discovered what the East India Company had begun learning under sail more than half a century earlier: that through the sultan's realm there ran developing routes of communication and transportation between the métropole and the empire in India. In the regional contest of the 1830s, Russia backed the sultan, and France, the viceroy. The main problem,

in Palmerston's diagnosis, was to keep Russia and France apart, for if they joined forces, Britain would suffer along with the Osmanli dynasty. Palmerston preferred a weak Ottoman Empire to a powerful Egypt. He thus responded favorably in 1839 and 1840 to the tsar's proposal for joint military intervention, with the cooperation of the Sublime Porte, to contain an ominous threat to the survival of the Ottoman Empire posed by Muhammad Ali, the viceroy of Egypt, backed by France. Austria and Prussia adhered to this plan of action.

France returned to the fold in 1841, as part of the settlement of the regional crisis. It reduced Muhammad Ali from quasi independence to Ottoman vassalage, but only upon his being recognized as the founder of a hereditary provincial dynasty with full domestic autonomy (though subject to Ottoman control of Egypt's foreign policy). "[A]ll the Treaties concluded and to be concluded between my Sublime Porte and the friendly Powers," read the Sultan's *ferman,* "shall be completely executed in the Province of Egypt likewise." This clause immediately imposed on Egypt the Porte's obligations to Britain, France, and the Netherlands to change the basis of Ottoman foreign commerce from protection to free trade. That deprived Muhammad Ali of the assured revenues from his commercial and industrial monopolies and put an early end to his integrated program of economic and military modernization. Those steps reduced the innovative, self-made, ambitious governor to manageable size. Later they enabled Palmerston, as foreign minister and prime minister, to delay for a dozen years execution of Egypt's grant of a ninety-nine year concession to a national of France to build and operate the Suez Canal.

In 1840 and 1841 the Concert had thus created a subsidiary system expressly to defuse crises in Europe arising from the rivalry over the Middle East (and North Africa) portions of the sultan's realm. For nearly forty years the great powers, with the Sublime Porte taking part and Britain playing the balancer in alternating alliances with Russia against France or the reverse, met five times—in London (1840–1841, 1871), Paris (1856, 1860–1861), and Berlin (1878)—and framed obligatory guidelines on policies toward the Ottoman Empire. Military occupation without time limit, commonly unilateral, was denied legitimacy; formal protectorates were legitimated by the powers, not by the Sublime Porte (in the end by the Turkish Republic); direct annexation was invariably solemnized by formal agreement with Constantinople. All three practices rested on general usage under (Western) international law.

Ismet Pasha of Turkey, his assistants, and detective Colonel Tafik at the Allied Conference with the Turks at Lausanne. The Treaty of Lausanne was signed in 1922–1923. © Hulton/Archive by Getty Images. Reproduced by permission.

Other styles of Europe's imperialism were particular to the Eastern Question. In the economic sphere the practices derived from the capitulations (nonreciprocal commercial treaties that the Porte had concluded with Europe's governments from the fifteenth to the mid-nineteenth centuries), assured Western residents unilateral extraterritorial privileges. They and their enterprises—banks, railroads, harbors, the Suez Canal—were immune from sultanic and provincial laws and taxes, and subject only to those of home governments. To such built-in dominance by Europe over key developmental aspects of the Ottoman economy was added guardianship of selected religious communities, with Russia and France the leading practitioners. The prevalence in the same districts of resident missionaries and their many charitable, medical, and educational, as well as religious, institutions attested to this.

Strategy apart, Britain's most valuable interest was commerce. As the sole industrializing nation from the last third of the eighteenth century through the Napoleonic wars, Britain speedily moved into first place in the foreign trade of the Ottoman Empire. By 1850, the Porte had become Britain's third-best customer. Britain clung to its commercial lead up to the outbreak of World War I. Financial investment by British nationals lagged far behind. The quest for oil in Ottoman Arab Asia quickened only when the Anglo–Persian Oil Company discovered commercial quantities in Persia in 1908, too late for the find to become practicable before the outbreak of war six years later. Still, the oil potential of the *vilayet* (province) of Mosul riveted the attention, during World War I and afterward, of Britain's companies and their bureaucratic supporters on the Sublime Porte's promise of a concession, in June 1914, to the Turkish Petroleum Company, a non-operating international consortium of British, Dutch, and German interests registered in London.

Meanwhile, Italy, upon its unification in 1861, promptly entered the fray. After losing a bid for Tunisia in Berlin in 1878, Italy finally occupied Libya and the Dodecanese Islands in a lackluster war with the Ottoman Empire (1911–1912). One of Italy's primary aims in entering the war in 1915 was to legalize the titles to both and, if possible, enlarge its imperial holdings.

Upon replacing Continent-centered Prussia in 1871, unified Germany was the final entrant into the competition. Otto von Bismarck moved into the role vacated by Benjamin Disraeli. Germany centered its regional activity after 1882 on serving as military and naval adviser and supplier to Sultan Abdülhamit II (1876–1909). And from 1903, German entrepreneurs, with their government's encouragement and protection, sponsored the building of the Baghdad Railroad to link Europe, across Anatolia through the *vilayets* of Mosul, Baghdad, and Basra, to the head of the Persian Gulf, with Ottoman assurances of privileged investment rights along the way.

Britain's occupation of Egypt in 1882 helped draw Russia and France together, binding them twelve years later in a formal alliance. In all this time and for a decade longer, France kept urging Britain to fix a date for leaving Egypt, while Britain refused to ratify the 1888 Suez Canal Convention until France accepted, for the duration of the occupation, Britain's exercise of the supervisory powers of the projected international commission. Finally the two quarrelers signed an entente cordiale in 1904 that rested on a trade: Britain's responsibility for the canal's security by occupation in return for France's creating a protectorate in Morocco. Before the year's end, the Concert ratified the amended convention that implied approval of Britain's military presence in Egypt. Finally, Britain and Russia reduced irritants in their relations in the Ottoman Empire by reaching an accord on Iran, Afghanistan, and Tibet in 1907.

The three bilateral instruments underlay the formation of the Triple Entente (Britain, France, and Russia) on the outbreak of war in 1914 against the Central Powers (Germany and Austria). For the first time, the Sublime Porte, which entered World War I in November 1914 as an ally of the Central Powers, placed itself simultaneously at war with the three countries that had territorial scores to settle with the sultan—Britain in Egypt (and Sudan), France in Tunisia, and Russia at the Turkish Straits. The secret accords of the Entente powers (the Constantinople Agreement of 1915 and the Sykes–Picot Agreement of 1916) proposed assigning the Turkish Straits and eastern Anatolia to Russia, parceling the Fertile Crescent (later Iraq, Lebanon, Palestine, Syria, and Transjordan) under variable terms among the three allies, and declaring the Arabian Peninsula a British sphere of influence.

In April 1915, Italy associated itself with the Entente for the express aim of legitimizing its occupation of Libya and the Dodecanese Islands. Two years later, after the overthrow of the tsarist regime, Italy concluded a separate agreement (treaty of Saint-Jean de Maurienne) with Britain and France, to become a party to the Entente plans for sharing in the Ottoman spoils; to the Sykes–Picot arrangement were added zones for Italy's administration and influence in southern and western Anatolia. But the instrument never won the requisite assent from the Bolshevik regime, which seized power in the fall of 1917. After the war the unratified draft did not deter Italy from trying—but failing—to anchor itself in Anatolia.

Meanwhile, the secret correspondence of Sir Henry McMahon (Britain's high commissioner for

Egypt) with Sharif Husayn ibn Ali of Mecca (the Ottoman governor of the province of Hijaz) served as the basis for mounting an Arab rebellion against the sultan. Clearly, Britain perceived McMahon's exchanges with Husayn, which were started and finished (July 1915–March 1916) before the Sykes–Picot negotiations (December 1915–April 1916), as a solidifying step in the Arabian Peninsula. They agreed on mutual military commitments but left unsettled their political differences that gave rise to bitter Anglo–Arab quarrels. The later conflicting Anglo–French–Arab claims in the Fertile Crescent were compounded by the Balfour Declaration: Britain's secret understanding with the Zionists and public declaration of sympathy for the formation in Palestine of a Jewish national home. This was the price that Britain's government had to pay for finally acquiring an exclusive mandatory presence in Palestine in defense of the Suez Canal.

The Eastern Question thus was not resolved until the defeat of the Ottoman Empire in World War I, the empire's formal dissolution in 1922, and the peace treaty of Lausanne—the only such settlement negotiated but not imposed after that war—that the Entente and associated powers signed with the Republic of Turkey in 1923 and ratified a year later. Even then, Turkey's nationalist regime at Ankara contested the proposed transfer of two territorial slivers, losing one (the *vilayet* of Mosul to Iraq) in 1926 but winning the other (the return to Turkey by France, as mandatory of Syria, of the *sanjak* [provincial district] of Alexandretta) in 1939. In between, at Turkey's insistence, in the Montreux Convention of 1936, the naval signatories of the Treaty of Lausanne restored to the Republic of Turkey full sovereignty over the Turkish Straits by dissolving the International Straits Commission.

EAST INDIA COMPANY

British trading firm doing business in the Middle East during the nineteenth and early twentieth centuries.

The East India Company was active on behalf of Britain in the Persian Gulf, from 1820 until World War I, to ensure the security of Britain's merchant vessels heading toward ports in southern Iraq and Iran. This was achieved by signing peace treaties with the shaykhs of the lower Gulf, the first in 1820 and two more in 1835 and 1853. The main objectives of these treaties were to put an end to piracy, to prevent traffic in slaves, to curb widespread smuggling of arms and other goods, and to promote peaceful trade. By 1869, Britain was able to conclude a treaty in which the Gulf rulers pledged to refrain from conducting foreign relations with powers other than Britain, in effect providing Britain with protectorate powers over those territories.

Britain's interests were represented in the Gulf by the government of India through the local political resident, headquartered in the coastal township of Bushehr in Iran (moved after World War II to Bahrain). The political resident had representatives, called political agents, posted in Kuwait, Qatar, and Bahrain, and political officers in the Trucial Coast.

Jenab Tutunji

EBADI, SHIRIN

[1947–]

Iranian attorney and human rights advocate.

Shirin Ebadi was born in 1947 and graduated in 1969 from the Law Faculty, Tehran University. Ebadi

became one of the first female judges in Iran. After the 1979 Iranian Revolution, when women judges were dismissed, she lost her position but remained an employee of the Ministry of Justice until 1984, when she took early retirement. In 1992 Ebadi obtained a license to practice as an attorney, and she soon emerged as the leading figure in the Iranian human rights movement. In 1994, along with other women, Ebadi founded the Society for Protecting the Rights of the Child, which has lobbied parliament to introduce legal reforms in line with the United Nations Convention on the Rights of the Child. She has defended many victims of human rights violations. In 1998 she was defense lawyer for the families of the victims of the political assassinations of writers and intellectuals by rogue elements of the Ministry of Intelligence. Ebadi's vocal defense of human rights has antagonized the Iranian judiciary, who arrested her in June 2000. She was accused of producing and distributing a videocassette that allegedly "disturbs public opinion" and implicates certain senior officials in atrocities against reformist personalities and organizations. She was tried in closed court, sentenced to a suspended sentence, and banned from practicing law, but this sentence was overturned in a court of appeal. Ebadi has published many books in Persian and has received many awards, including the 1996 Human Rights Watch Award and the Rafto Prize for Human Rights 2001, in recognition of her sustained fight for human rights and democracy in Iran. In October 2003 the Norwegian Nobel Committee awarded Ebadi the Nobel Peace Prize for 2003, citing her efforts for democracy, human rights, and the rights of women and children.

ZIBA MIR-HOSSEINI

EBAN, ABBA (AUBREY)

[1915–2002]

Israeli politician; foreign minister, 1966–1974.

Born in Capetown, South Africa, Aubrey Eban was educated at Queens' College, Cambridge, where he specialized in Middle Eastern languages and literature. He received a master's degree in this field in 1938 and stayed on at Cambridge as a lecturer in Arabic, Persian, and Hebrew literature. After Cambridge, Eban joined the British army, and in 1941 he served as a British army major in Cairo. In the British army, he helped train Jewish volunteers to fight against a German invasion of Palestine.

Eban worked for the Jewish Agency in 1946, and in 1947 he was made a liaison officer to the United Nations Special Committee on Palestine. He also served as a member of the Jewish Agency's delegation to the General Assembly of the United Nations (UN). After the creation of the State of Israel in 1948, Eban was appointed Israel's representative at the UN; he held that position from 1950 to 1959, during which time he also was Israel's ambassador to the United States.

In 1959, Eban was elected to the Knesset for the first time. From 1960 to 1963, he served in David Ben-Gurion's cabinet as minister of education and culture, and, from 1964 to 1965, he was deputy prime minister in the government of Levi Eshkol. During this time, from 1959 to 1966, Eban also was president of Israel's prestigious Weizmann Institute of Science. He was foreign minister from 1966 to 1974, and it was during this period in 1967 that he achieved his greatest international visibility, when he presented the case for Israel's war policy before the UN Security Council.

While a member of the Israeli cabinet, Eban argued against the idea of Arab migrant labor, which Moshe Dayan and other cabinet members supported. Eban thought that Israel should not become dependent upon Arab labor, both for economic reasons and for more philosophical reasons relating to the pioneering character of Israel. He was in the minority on this question, however, and Arab day labor increased over time.

In 1974, when Golda Meir resigned, primarily because of political criticism of her government's handling of the Arab–Israel War (1973), Eban was mentioned by some as a possible successor to the prime minister, but his candidacy did not generate much excitement or support from either the public or from members of the MAPAI Party. In many

respects, Eban subsequently had a bigger following overseas than in Israel. To the surprise of many, he failed to win reelection to the Labor Party's list of nominees for the Knesset. He thereafter retired from politics and devoted himself to educational pursuits and to writing. He died on 17 November 2002 in Israel.

EBTEKAR, MAʿSUMEH

[1960–]

Iranian feminist and politician.

Maʿsumeh Ebtekar was born in 1960 in Tehran. She spent part of her childhood, from age three to nine, in the United States, but received most of her education in Iran: a B.S. in medical technology from Shahid Beheshti University, in Tehran, in 1985; an M.S. in 1989; and a Ph.D. in immunology from Tarbiat Modarres University, in Tehran, in 1995.

As one of the students who participated in the takeover of the U.S. embassy in Tehran in 1979, Ebtekar came to be known as Mary, the spokesperson for the student militants to the U.S. media. She appeared on almost every U.S. television program that was aired during the 444 days of the hostage crisis. Twenty-one years later, she wrote a book, *Takeover in Tehran: The Inside Story of the 1979 U.S. Embassy Capture,* in order "to set the record straight."

Aside from a few articles on immunology, most of Ebtekar's writings and professional activities have been in the area of women's studies, particularly on issues related to the integration of women into the processes of socioeconomic development. She was a member of the official Iranian delegation to the 1985 Third World Conference on Women, in Nairobi, and vice chair of the national committee for the 1995 Fourth World Conference on Women, in Beijing. She was a founding member and has been a member of the board of directors of the Center for Women's Studies and Research since 1986; a faculty member of the Tarbiat Modarres University School of Medical Science from 1989 to 1995; editorial director and license holder of *Farzaneh: Journal of Women's Studies* since 1994; and director of the Women's NGOs (nongovernmental organizations) Coordination Office since 1994. Appointed by President Mohammad Khatami in 1997 as vice president and head of the Department of Environment, Ebtekar became the first woman in the cabinet since the Iranian Revolution and the first female vice president in Iran's history.

Nareyeh Tohidi

ECEVIT, BÜLENT

[1925–]

Turkish politician and prime minister.

Born in Istanbul, Bülent Ecevit graduated from Robert College, in Istanbul, in 1944 and then studied English literature at Ankara University. Following his appointment to the Press General Directorate, he was sent as an assistant to the press attaché at the Turkish Embassy in London. After his return to Turkey, he worked for the daily *Ulus.* In 1957, he received a Rockefeller scholarship and spent a year at Harvard University. In the same year, he was elected to parliament on a ticket of the Republican People's Party (CHP). After the 1960 military coup, Ecevit

Prime Minister Bülent Ecevit at a polling station during the 2002 national elections. Dogged by ill health and fresh political crises throughout the year, Ecevit lost the election, and his government was supplanted by members of the Justice and Development Party. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

served as the minister of labor until 1965 and was elected secretary general of the CHP in 1966. During this period, he also wrote a daily commentary in *Milliyet,* where he developed his political philosophy, which he called "left of center." His ideas found a large audience within the CHP, which elected him chairman in 1972.

In the general elections of 1973, the CHP gained the highest number of seats, and after long negotiations Ecevit established a coalition government with the pro-religious National Salvation Party. His government intervened in Cyprus in 1974 to protect the ethnic Turkish minority. Nevertheless, insurmountable conflicts between Ecevit and his coalition partner, Necmeddin Erbakan, led to the resignation of the government on 17 September 1974.

Ecevit became prime minister again in 1978, but he had to resign after the CHP's defeat in the 1979 by-elections. Following the 1980 military coup, Ecevit was detained, together with other party leaders, at Hamzaköy for "safety" reasons and was deprived of his political rights for ten years.

Ecevit was arrested twice in 1982 for declaring, in statements to the foreign press, that the new constitution was undemocratic. During this period, his wife, Rahşan Ecevit, founded the Democratic Left Party (DSP) and became its first chairperson. In 1987, after his political ban was lifted, Ecevit assumed leadership of the DSP. When the DSP failed to receive 10 percent of the national vote in the 1987 elections, he resigned from his party post with the intention of withdrawing from politics. Two years later, however, he resumed his party duties and in the general elections of 1991 his party gained seven seats in the National Assembly.

In the 1995 elections, the DSP gained 14.64 percent of the votes and won 76 parliamentary seats. In 1997, Ecevit joined a coalition with Mesut Yılmaz's Anavatan (Motherland) Party and became deputy prime minister. The government, however, stepped down in 1998 after allowing a parliamentary investigation into Yılmaz's financial affairs. Ecevit formed and led a minority government until the 1999 general elections, in which his party won the highest percentage of votes and 136 parliamentary seats. In 1999, he formed a coalition with the Motherland Party and the ultranationalist National Action Party.

This coalition lived through two economic crises and two devastating earthquakes, but the most serious challenges to its survival came from the insurmountable differences among the coalition partners, primarily between the DSP and the National Action Party, and from Ecevit's deteriorating health. Ecevit remained prime minister until the 2002 general elections, when his party received only 1.22 percent of the votes and no parliamentary seats.

NERMIN ABADAN-UNAT
UPDATED BY BURÇAK KESKIN-KOZAT

ECEVIT, RAHŞAN

[1923–]

Founder of Turkey's Democratic Left Party and wife of the former prime minister, Bülent Ecevit.

Rahşan Ecevit was born into a middle-class family in Bursa. She graduated from Robert College in Istanbul, where she met her husband, Bülent Ecevit. Although she was interested in the arts, she did not pursue a career in the field.

Ecevit always supported her husband's political activities. When he was banned from politics after the 1980 military intervention, she founded the Democratic Left Party (DSP) in 1985 and served as its chairperson. When the ban was lifted in 1987, she left her post to Bülent Ecevit and became the party's general secretary. Although she retained that position, she never participated in general or local elections.

Ecevit is widely believed to advise her husband on political matters, especially his pardoning of prisoners during his two separate terms as prime minister. The Ecevits frequently have been criticized for imposing absolute authority and eliminating any opposition within the DSP. Rahşan Ecevit particularly has been accused of isolating the upper cadres so that they would resign rather than challenge her husband. During her husband's last term in government, especially from 2000 to 2002, she was strongly criticized for failing to care for his deteriorating health.

ECONOMIC AND MILITARY AID

Countries of the Middle East are prominent both as recipients and donors of foreign assistance.

Israel, Egypt, Jordan, Syria, and Turkey are major long-term recipients of economic aid, but nearly every country in the region has, at one time or another, received economic and development aid as well as military assistance. These transfers have come in the form of grants and concessional loans for goods and services, for projects and programs, and for direct budgetary support. From the mid-1950s until 1991 the United States and the Soviet Union divided and sometimes shared the region's aid clients, providing most of the assistance to the region. France and Britain, along with other countries in the European community, have also been major benefactors, and in recent years Japan has provided direct assistance. Bilateral aid aside, many Middle East states have looked to regional and international lending institutions for financing.

In spite of suspicions about foreign interference, most governments in the region actively seek foreign aid in order to strengthen economies, improve technologies, and bolster military capabilities. The loans and grants are intended to overcome the constraints of insufficient capital investment resulting from limited savings and foreign exchange. Chronic domestic budget deficits—often traceable to generous consumer subsidies and heavy outlays for arms—help to create and perpetuate a dependence on foreign aid. Some governments in the region have become chronically dependent on these and other rental incomes.

Politics of Bilateral Aid

In the 1980s and 1990s major donors, especially the International Monetary Fund (IMF), the World Bank, and the United States government, pushed for liberal economic reforms in recipient countries, stressing export-led growth and expansion of the private sector at the expense of state-owned enterprises. Support for market-oriented economies is thought to enhance political pluralism and strengthen civil societies in the region. Increasingly, the United States and others have said that the promotion of democratic institutions and human rights is an objective in giving aid. Environmental and population concerns are also reflected in programs, and humanitarian assistance remains available in times of acute need. But strategic political objectives overshadow other motives. Donors seek to reward political friends or woo others by improving the ability of governments to realize the demands and fulfill the expectations of their elites and wider publics. Political expediency can lead to minimizing developmental objectives, waiving economic reforms,

On 18 January 1957, Arab leaders met in Cairo, Egypt, to sign an agreement providing aid to Jordan, giving that country the capability of cutting its final ties to Great Britain. Jordan continues to receive economic and military aid from oil-rich nations in the region. © Bettmann/Corbis. Reproduced by permission.

and ignoring democratic-rights violations. Emphasis on political criteria by the more important donors has, moreover, resulted in the lion's share of foreign aid going to middle-income countries rather than to the poorest, most needy ones.

U.S. economic aid obligated through the Economic Support Fund (ESF) is deemed specifically to be in the foreign-policy interests of the United States. Over the history of the program, aid to Israel and Egypt has dominated expenditures. With strategic concerns uppermost, regimes in Turkey, Jordan, and Morocco have also been amply rewarded. Proponents argue that U.S. economic and military aid to the Middle East contributes to cooperation and stability, and that it helped to thwart communist penetration into the region. Thus, U.S. policymakers have at various times actively discouraged direct or indirect assistance to Libya, South Yemen, Syria, Afghanistan, and Iraq, all of which have been at one time beholden for aid to the Soviet Union. More recently, efforts to prevent technological assistance to Iran have figured strongly in U.S. policy.

U.S. assistance to the Middle East advanced dramatically with the Arab–Israel War of 1973 and its aftermath. Israel was first resupplied militarily, and then helped to recover economically from the war. Egypt, which had been heavily dependent on the Soviet Union for aid, was supported in its decision to join the Western camp with promises of development, commodity, and military assistance. U.S. aid subsequently provided critical incentives for signing the Camp David Accords and a peace treaty. Since 1977, Israel and Egypt have received

nearly 40 percent of all U.S. aid—more than $75 billion in total.

Egypt, with annual aid at roughly $2.1 billion, had by 2000 received more than $40 billion from the United States—in the last decade, mainly in the form of grants rather than repayable loans. As a reward for Egypt's helpful role in the 1991 Gulf War, the United States agreed to the cancellation of $7 billion of military debts. Jordan, after concluding a peace agreement with Israel in October 1994, also came in line for debt relief and a major increase in weapons aid from the United States.

Creditors to the region also include the wealthier, oil-exporting states of the Persian Gulf, most notably Saudi Arabia, Kuwait, and the United Arab Emirates. They have assisted the Yemen Arab Republic, Jordan, Sudan, Egypt, and Syria, among others, in filling their investment-resource gap and relieving budgetary pressures. Arab aid has also been designed to buy off potential enemies.

Israel in May 2000 unconditionally withdrew most of its forces from the southernmost part of Lebanon, which it had invaded and occupied in June 1982. Days later, Martin Indyk, the U.S. ambassador to Israel, visited the northern Israeli village of Metulla and announced the release of $50 million in U.S. military aid for improvements to Israeli security along its border with Lebanon. © AP/Wide World Photos. Reproduced by permission.

Economic Reform and Multilateral Aid

Politically motivated bilateral aid is less bound by stringent economic requirements than that set by the IMF and the World Bank. Middle East countries receiving aid from these multilateral-aid sources have been obliged to agree to comprehensive structural reforms of their economies in order to attain loans and to reschedule previous debts. These reforms may include the elimination of state subsidies and removal of other price distortions, reform of tax collection, reduction in imports, devaluation of currency, and unification of exchange rates—essentially deflationary policies aimed at greater adherence to free-market principles.

Demands for fiscal and monetary changes and revised development strategies have been widely resented and often resisted. Under pressure from the IMF and World Bank, governments that have accepted the conditions for aid have been forced to introduce economic reforms that bear down hardest on the least well-off in their societies. As a consequence, several countries in the region have had to contend with popular demonstrations against mandated changes. IMF austerity programs over the years have led to street violence in Egypt, Jordan, Tunisia, and Morocco, and contributed to antigovernment activities in Algeria and Sudan.

Among the regional multilateral-aid givers, the Arab Monetary Fund, the Islamic Development Bank, and the OPEC Fund for International Development are the most prominent. The Arab Monetary Fund assists members in balance-of-payments difficulties. Between 1978 and 2002 it lent $4.3 billion to Arab countries. The Islamic Development Bank offers interest-free loans (with a service fee), mainly for infrastructural financing, agricultural projects, and technical assistance, all of which are expected to have an impact on long-term social and economic development. Priority is given to the import of goods from other member countries of the bank. Major contributors to the bank are Saudi Arabia, Kuwait, and Libya. Loans have been made to several countries outside the region in Africa and Asia. The OPEC fund is a multilateral agency that seeks to reinforce financial cooperation between OPEC member countries and other developing countries. It provides concessional loans for balance-of-payments support, the implementation of development projects and programs, and technical assistance and research financing through grants. The OPEC fund, which has had recipients

General Hugh Shelton of the U.S. Joint Chiefs of Staff, followed by Israeli Chief of Staff Shaul Mofaz, passes an honor guard in Tel Aviv after arriving in Israel in August 1999 to discuss military cooperation between Israel and the United States. in Africa, Asia, and Latin America, gives priority to countries with the lowest income. Yet, with heavy debts of their own owing to the Gulf War and low oil prices, the bilateral and multilateral generosity of the once-cash-rich Arab states declined in the 1990s.

Foreign Military Aid

Foreign military credits and grants have greatly eased the burden of defense spending for many Middle East countries. The region is the largest arms market in developing countries, accounting for 56 percent of all agreements from 1990 to 1993. With an average of some 30 percent of government expenditures for the military, the Middle East ranked ahead of any other region. In terms of the percentage of gross domestic product devoted to arms expenditures over the last two decades, nine of the top twelve countries—Iraq, Israel, Jordan, Oman, Syria, Egypt, Libya, the Yemen Arab Republic, and the Yemen People's Democratic Republic—have been in the Middle East. Among the leading recipients of major conventional weapons in the last decade are Saudi Arabia, Turkey, Afghanistan, Syria, Israel, and Iran. The major suppliers of arms to the region were the United States, the Soviet Union, France, Britain, and China.

U.S. military sales have been based in large part on a loan program set up in 1975 under which the U.S. Treasury, bypassing the U.S. Congress, provides credits from a special fund at prevailing commercial interest rates. Since most commercial lenders are reluctant to finance weapons purchases, these credits represent a form of foreign assistance. Several countries in the Middle East also received some or all of their arms from the United States on concessionary-loan terms or as outright grants. Beneficiaries include Turkey, Morocco, and Jordan, but Egypt and Israel virtually monopolize the most favorable military-assistance programs. From 2001 to 2003 the United States extended to Middle East countries foreign military assistance worth $10.2 billion, nearly all of which went to Egypt and Israel. The annual value of Russian arms to the Middle East, having fallen to only $400 to $500 million in 1997 to 2001, had been running at more than $15 billion annually during the 1980s.

Effects of Foreign Aid

It is difficult to assess whether foreign aid has improved the lives and increased the security of most people in the Middle East. Bilateral- and multilateral-aid programs have brought visible infrastructural improvements throughout the region. They have also addressed humanitarian needs, especially in areas of armed conflict, and induced estimable health and social gains. In recent years, foreign advisers have succeeded in forcing national planners to rationalize strategies of economic growth and have promoted integration within the global economy. But foreign aid also has disappointed both recipient countries and their donors. Aid-giving countries and agencies have complained about the inefficiencies and domestic corruption that often accompany sponsored programs, and they doubt the will of national leaders to implement reforms fully. Critics point out that much foreign assistance never actually reaches those it was intended to help. The region has lagged behind most of the world in economic liberalization. Recipient-country industries and trade continue to be highly protected, and although

donors applaud evidence of growing democratization in several Arab states, they are concerned about the likely political beneficiaries of free elections. Bilateral donors are also frequently left unsatisfied with the diplomatic cooperation they have extracted from policymakers in Middle East countries.

Aside from the political resentments it provokes, foreign aid is criticized by recipients for its failure to put development on a self-sustaining basis and for possible disincentive effects on domestic production. Although donors have made industrial growth and higher agricultural output high priorities, unemployment remains a serious problem, and appropriate technologies and training are sometimes withheld. Considerable foreign assistance for agriculture that began in the 1980s has neither paid off in terms of impressive export earnings nor greatly improved the capacity for food self-sufficiency in the region's less well-off countries. With the mandating of difficult economic reforms, foreign assistance is also seen as increasing inequities and exacerbating domestic class conflicts.

Most controversial is whether, by selling arms to the Middle East, the United States and other suppliers are reducing conflict by allowing countries to better protect themselves, or stimulating defense spending and a regional arms race. Investment of borrowed money and domestic savings in weapons programs may also come at the expense of efforts to deal with severe economic problems and address the welfare of citizens. Accumulated loans have created considerable national debt and a long-term drain on national treasuries. Even so, although the end of the Cold War and the outcomes of recent regional wars have changed some of the sources and character of military and economic assistance, the quest for and dependence on foreign aid is unlikely to diminish any time soon.

Some of the poorer states in the region have received large flows of finance from abroad that have been essential for their survival. These have come from oil-rich countries in the region and from outside the region. The classic "rentier state" state is Jordan; other significant recipients have been Egypt and Syria. Aid has been bilateral and multilateral, civilian and military. It has taken the form of loans, grants, and debt write-offs. Between 1973 and 1989, poorer states in the Arab world received $55 billion of interregional aid. This was made possible by the huge rise in oil income in the region. Political rents have been paid to help maintain the state and the regime. Often the two were the same, but with the rise of fundamentalism within Arab states, aid has been provided to governments in order to maintain them in power.

Foreign aid has fallen in value since the 1980s for several reasons. First, Arab oil wealth has declined, and so there was less to give. Second, it did not result in economic improvements in the recipient countries (or at least not on a scale that satisfied the donors) and was thus considered as wasted. Third, the decline of pan-Arabism led countries to go their own ways and be less interested in inter-Arab relations. Fourth, Western countries and multilateral bodies have tied aid to economic reforms, the success of which reduced the need for external assistance.

The share of aid given on a concessional basis to countries in the Middle East and North Africa was higher than anywhere else in the developing world. In 1999, 38 percent of long-term debt in the region was concessional, compared to 19 percent on average for developing countries. In Egypt it came to 86 percent; in Jordan, 54 percent; in Syria, 93 percent; and in Yemen, 92 percent. This was an indication of political favor.

ECONOMICS

The economics of the Middle East can be divided into oil producers and nonproducers.

The main oil producers in the Middle East include Saudi Arabia, Iran, Kuwait, Iraq, Qatar, the United Arab Emirates (U.A.E.), Oman, Algeria, and Libya. There are three marginal producers: Bahrain, Yemen, and Syria. The nonproducers or minimal producers are Egypt, Turkey, Jordan, Sudan, Tunisia, and Morocco.

Oil is a major resource commodity of the Middle East, with its top producing countries containing over 65 percent of the world's oil reserves. Additionally, the total number of oil reserves in the world has doubled in the last two decades, almost entirely due to exploration in the Middle East. © GEORGINA BOWATER/CORBIS. REPRODUCED BY PERMISSION.

Another taxonomic variable is population. The Middle East has countries with large populations—Iran, Egypt, Turkey, Morocco, and Algeria. Others, such as Qatar and the U.A.E., have minimal indigenous populations.

The production of oil per capita tends to define the type of economy to which each Middle Eastern country belongs. Countries with oil production of more than 0.25 barrels per day per capita tend to emphasize the development of low-labor, high-capital industries. Saudi Arabia, U.A.E., and Qatar have sought to develop alternatives to their dependence on crude oil by investing heavily in industry, mainly in petrochemicals, which require large amounts of natural gas or crude oil, energy, and capital, but minimum labor. Until 1995 most of the development in oil and petrochemicals was spearheaded by the governments, with some support from the private sector. Due to lessening income streams from lower oil prices, efforts are being made to include private industry more fully.

The non-oil economy in the countries with high per capita oil output tends to be liberal, except in Libya. None of the countries in this group has any foreign-exchange controls, restriction on import or export of capital by nationals, or limits on imports and exports of products (except pork products and alcohol). Most prices are set by supply and demand, although some food staples are subsidized by the governments.

The countries with production between zero and 0.10 barrels per day per capita mostly have large populations. Some are minor oil producers, but major producers like Iran, Iraq, and Algeria have a low production per capita. These low per capita producers tend to emphasize centrally planned industrial growth with more labor content. They have very stringent regulations on investments and on foreign-exchange and capital export by residents. Large segments of their economy tend to be nationalized, including banks, mining, and large manufacturing plants. Their economic growth has been minimal, and most are attempting to deregulate their economies.

The final group (Turkey, Egypt, Morocco, Jordan, etc.), with very limited earnings from oil,

Agricultural products are a primary export for some Middle Eastern countries, including Israel, Egypt, and Morocco. However, due to limited water supplies, poor land quality, and a reluctance to adopt newer, more mechanized farming techniques, the majority of Arab countries produce less than half of their food requirements and must import heavily from other regions. **© Attal Serge/Corbis Sygma. Table by GGS Information Services, The Gale Group.

relies on private local and foreign investment as well as foreign aid to fund their development.

A large segment of the population in the Middle East is active in agriculture (35.35%). However, this average is skewed by the large numbers of people employed in that sector in Egypt (43%) and Morocco (50%). Mining, manufacturing, and construction employs about 20.57 percent; public administration and services employs 23.54 percent; and trade, transport, and communication employs 9.27 percent.

Oil producers tend to have a much larger percentage of their population in public administration and services, suggesting that oil resources are downstreamed to the population through the creation of jobs in the civil service (34% in Saudi Arabia, 40% in Qatar, 39% in Iraq, 53% in Kuwait).

JEAN-FRANÇOIS SEZNEC

EDDÉ, EMILE

[1884–1949]

Prime minister (1929–1930) and president (1936–1941) of Lebanon.

Emile Eddé, a Lebanese lawyer and politician, was a strong supporter of French policies in Lebanon and the Middle East. He was a devoted Francophile who came from a family that was well connected to French interests. Eddé was prime minister in 1929 and 1930 and president from 1936 to 1941 under the French mandate over Lebanon (1920–1943). He also initiated and headed during the mandate the Parliamentary National Bloc, which became a party in 1946 after independence. Eddé was highly controversial due to his conservative views, anti-Arab sentiments, and zealous adherence to French colonialism. Raymond Eddé, Emile's son, headed the party in 1949 and directed it toward more liberalism and less dependency on France.

SAMI A. OFEISH

EDDÉ, RAYMOND

[1913–2000]

Lebanese politician and leader of the National Bloc party since 1949; minister of the interior, social affairs, and communications (1958–1959); minister of public works, hydraulic and electric resources, agriculture, and planning (1968–1969).

The eldest son of former president of Lebanon Emile Eddé, Raymond Eddé was trained as a lawyer at St. Joseph University in Beirut. Following his father's death in 1949, he took over the leadership of the National Bloc party. A leader of the opposition to President Bishara al-Khuri, he was elected to parliament in 1953 from the Jubayl district. He was reelected in 1960, 1968, and 1972. Appointed minister following the 1958 civil war, Eddé soon broke with President Fuʾad Chehab over the latter's reliance on the Deuxième Bureau (military intelligence) to implement his policies. In 1967, arguing that the growing influence of the military posed a threat to the open and democratic nature of Lebanon's society, he joined the Tripartite Alliance (with Pierre Jumayyil and Camille Chamoun), thus ensuring the defeat of the Chehabist candidate Ilyas Sarkis in the 1970 presidential elections.

By the time civil hostilities broke out in 1975, Eddé had become the most outspoken and prominent Christian opponent of the Phalange, which he described as a fascist organization. A representative of the more moderate Maronites, he warned about the potentially disastrous consequences of the growth of paramilitary organizations in Lebanon and strove to prevent the growing polarization in the country by reaching out to like-minded Muslim leaders. However, because he never was a grassroots organizer, lacked mass support within the Maronite community, and refused to organize a militia of his own, he was rapidly marginalized. In January 1977, after three attempts on his life, he went into exile in Paris. In 1989 he opposed the Taʾif Accord on the grounds that it institutionalized Syria's power in Lebanon, and expressed support for General Michel Aoun. Following the 1992 legislative elec-

tions, he refused to recognize the legitimacy of the new Parliament. Although he was widely respected as a man of principle and was often described as "the moral conscience of Lebanon," his long exile cut him off from the realities in Lebanon, and his influence over politics there became very limited. He died in Paris in May 2000.

GUILAIN P. DENOEUX
UPDATED BY MICHAEL R. FISCHBACH

EDEN, ANTHONY

[1897–1977]

British statesman; prime minister, 1955–1957.

Richard Anthony Eden, first earl of Avon, was elected a Tory member of Parliament between 1923 and 1957. As minister without portfolio for League of Nations affairs (1935) and as secretary of state for foreign affairs (1935–1938), he concluded the "gentlemen's agreement" with Italy's Count Ciano in 1937 concerning the Mediterranean, after negotiating the 1936 Anglo–Egyptian treaty and the Montreux Convention with Turkey. He resigned in disagreement with the policy of Sir Neville Chamberlain concerning Hitler's ambitions for Nazi Germany and the Munich conference but returned as foreign secretary in the World War II governments of Prime Minister Winston S. Churchill.

After the war, he objected to the Labour Party's conciliatory policy toward Iran's Prime Minister Mohammad Mossadegh. When he resumed office in 1951, he opposed Mossadegh's nationalization of the Anglo–Iranian Oil Company and worked with the United States to bring him down. In 1954, he negotiated an agreement with Egypt for the withdrawal of Britain's troops from the Suez Canal zone and, in the years following, hardened against Egypt's President Gamal Abdel Nasser.

As prime minister from 1955 to 1957, Eden was determined to maintain Britain's prestige in the Middle East. Convinced that Nasser was dangerous, Eden reacted quickly after Nasser nationalized the Suez Canal on 26 July 1956. With France and Israel as allies, Eden orchestrated the October attack on Suez—the Arab–Israel War of 1956—without informing his main ally, the United States. Furious, President Dwight D. Eisenhower and U.S. Secretary of State John Foster Dulles refused to support Eden in the United Nations, insisting on a withdrawal. Humiliated and ill, Eden resigned in January 1957 and was replaced by Harold Macmillan. Eden was made first earl of Avon and Viscount Eden in 1961. He is the author of *Full Circle* (1960), *Facing the Dictators* (1972), and *The Reckoning* (1965).

ZACHARY KARABELL

EDIRNE

Turkish province in Europe and city on the Bulgarian border, 209 kilometers (130 miles) northwest of Istanbul.

The city of Edirne (in English, Adrianople) was founded by the Roman emperor Hadrian in 125 C.E.. It was conquered by the Ottoman Turks in the fourteenth century and served as their capital between 1361 and 1453. Between 1829 and 1923, the city was occupied by foreign forces several times: by Russia in 1829 and 1879; by Bulgarian forces in 1913; and by Greece from 1919 to 1922. The modern city is a manufacturing center and a commercial center for western Thrace (European Turkey). It has notable tourist sites, including ruins of its ancient and medieval walls, and three mosques and a covered bazaar that date from the fifteenth century. According to the 2000 census, the population of

Edirne city was 230,908; that of Edirne province was 402,606.

EDUCATION

Education and social transformation in the Middle East.

Institutions of formal education have undergone marked transformations in societies of the Middle East since 1800. Education refers to processes in which knowledge, skills, moral behavior, values, tastes, loyalties, and a range of cultural competencies and dispositions get transmitted, learned, and negotiated in various settings. Schooling, on the other hand, refers to a set of practices and behaviors that occur in the bounded institutional universe of the school and is referred to as "formal education."

Institutions of learning in the Middle East once held a position of global preeminence. During the height of the Islamic civilization from the ninth to possibly as late as the sixteenth century, they contributed to staggering advances in fields as diverse as optics, mathematics, medicine, physics, astronomy, philosophy, geometry, translation, architecture, and music. Similarly, the *madrasa* (plural, *madaris*), the Islamic college of law, produced the dual intellectual movements of humanism and scholasticism which, as George Makdisi methodically documents, were borrowed in the medieval period by the Christian West and incorporated into their institutions of higher learning (Makdisi 1981, 1990). Despite the primacy of formal learning in the Muslim Middle East for many centuries, by the eighteenth century the region began looking elsewhere for educational models. In the wake of the European Renaissance, Industrial Revolution, and rise of Europe as a global economic and imperial force, and also within the context of Russian imperial expansion, there rose an urgency among the leaders of Ottoman, Egyptian, and Iranian states to modernize their armies and supporting institutions, including scientific and humanistic educational institutions. The educational model from Europe and to some extent Russia was considered to contain the formula for achieving power, economic success, and scientific advancement in the new world order.

The type of schooling that became increasingly important for projects of military, social, political economic, scientific, and cultural reform throughout the last two centuries has been variously termed "modern," "Western," "civil," "foreign," "secular," "new order," "new method," or simply "new"; what is clear is that this new schooling was intended to transform the organization of knowledge transmission by utilizing new disciplining techniques of power, as Timothy Mitchell and Brinkley Messick elaborate in their discussions of new schooling in Egypt and Yemen respectively (Mitchell; Messick). In their ideal configurations the new schools differed in content, organization, and culture in certain fundamental ways from the existent Islamic indigenous *madaris* and schools for elementary learning, the *kuttab* (plural, *katatib*) or *maktab* (plural, *makatib*), in which students learned the Qurʾan by rote and might acquire basic writing and reading skills. Among the more distinguishing features of the new schooling were that students were separated into classes by age groups; knowledge—including religious knowledge—was codified and fixed into textbooks and curricula, thus contributing to secularization; the school day was organized according to a regimented timetable; school grounds, classrooms, and equipment were spatially arranged to instill discipline and order in students; a new professional class of teachers competent in new pedagogies and located to a large degree outside the Muslim scholarly class *(ulama)* was trained to staff the new schools; and the planning and administration of formal schooling over time became more centralized in state bureaucratic apparatuses.

In actuality, however, the new schools often overlapped with and contained elements of the preexisting indigenous schools in areas such as staff, disciplinary codes, and texts, testifying to their syncretic nature. As Benjamin Fortna demonstrates in his outstanding social history of new schooling in

the late Ottoman period, members of the *ulama* often served as teachers in the new schools, in which (Islamic) morality played a central role. Furthermore, even with the rise of new schooling as a dominant educational paradigm, Islamic institutions of learning in countries such as Iran and Morocco maintained a position of eminence, as Roy Mottahedeh and Dale Eickelman show in their portrayals of religious education in the contemporary period in the two countries respectively (Mottahedeh; Eickelman).

Although the appearance of "Western"-looking and -organized schools in the Middle East from the nineteenth century has sometimes been interpreted as reflecting a kind of cultural Westernization of those societies, or at least of their institutions, the reality has been much more complex. The new schools have embodied the tensions, aspirations, and negotiations inherent in processes of institutional and cultural adaptation.

Pre-1800 to 1877: The Incipient New School Movement between the State and Private Sphere

As early as the 1720s official state delegations from the Ottoman Empire traveled to Europe to visit and study their institutions of learning. As Ekmeleddin Ihsanoğlu notes, one of the first attempts to "set up an Ottoman intellectual institution without an organic structure" occurred during the reign of Ottoman Sultan Ahmet III when scholars were assembled in 1720 for the purpose of translating works of history and philosophy from European languages into Turkish and Arabic (Ihsanoğlu, p. 165). By the first decades of the nineteenth century, states more systematically supported the use of nonorganic education for modernizing reforms.

The figure most often credited with utilizing new schooling for military and accompanying scientific and technological reform was the viceroy of Egypt, Muhammed Ali Pasha (r. 1805–1849). In 1809 he sent the first group of students on an educational mission to Europe, and over the next decades he established numerous schools in Egypt—roughly equivalent to vocational high schools and technical colleges—that specialized in military sciences, medicine, agriculture, veterinarian medicine, midwifery, pharmaceutics, chemistry, engineering, and translation (Heyworth-Dunne). With the exception of the School of Midwives, all schools were exclusively for male students. In 1825 the first state preparatory (postprimary) school for boys, Qasr al-Ayni, was established to supply students for the new specialized schools. The new schools, many of which did not endure beyond his reign, were administered by the Ministry of War *(Diwan al-Jihadiyya)* and depended largely on foreign staff. The education policies under his grandson Khedive Ismael (1864–1879), in which the famous teacher-education college, Dar al-Ulum (est. 1872), and the first state school for girls, al-Saniyya School (est. 1873), were established, had more lasting impact.

Parallel developments occurred throughout the Ottoman Empire under the reigns of Sultan Selim III (r. 1789–1807) with his "New Order" *(Nizam al-Jadid)* program; Mahmud II (1808–1839); Abdülmecit (r. 1839–1861), the Tanzimat sultan; and Abdülhamit II (1876–1909). Similar to Egypt, students were sent on educational missions abroad, state schools for higher technical and vocational training were established, and primary *(rüşdiye)* and preparatory *(idadi)* schools were developed. Among the more famous Ottoman state schools for secondary and higher learning were the School of Military Medicine (est. 1827), the War College (*Mekteb-i Harbiye,* est. 1846), Mülkiye School (est. 1859), and Galatasaray Lycée (*Mekteb-I Sultanî,* est. 1868). The *ulama* in Iran, who were politically stronger than *ulama* in Egypt and the Ottoman Empire, maintained a near monopoly on formal education, and very few new schools were founded. During the reign of Qajar Shah Nasir al-Din (r. 1848–1896), however, Crown Prince Abbas Mirza initiated a New Order reform program and established the renowned *Dar al-Funun* (est. 1851), an elite military institution in which French was the language of instruction.

As it became increasingly evident in the early decades of the nineteenth century that the new education was to become an enduring part of state apparatuses of power and reform, legislation was issued and new administrative bodies formed to manage it. Among the early landmark education legislation from Istanbul was an 1824 decree mandating compulsory elementary education for boys. In Egypt the Primary School Regulation of 1836 led to the establishment of the first education ministry, the Department of Schools *(Diwan al-Madaris).*

Tanzimat era (1839–1876) reforms included the Education Regulation of 1869 *(Maarif Nizamnamesi),* which was the blueprint for the empire's first centrally organized and controlled network of schools, and the 1876 Iranian Constitution stipulated that elementary education was to be compulsory and provided by the state free of charge. Such ambitious far-reaching plans would not begin to be effectively implemented until the middle of the twentieth century, but they indicated the hopes the Muslim majority government placed on new schooling for societal change.

States also pursued policies of school expansion with the aim of cultivating a Muslim middle class that would be able to compete with the prosperous segments of foreign and minority communities in matters of trade and other commercial endeavors. The economic success of non-Muslim groups in Egypt and the Ottoman territories was attributed in part to the legal privileges afforded them by the capitulations, but also to the skills, languages, and other competencies they acquired through their participation in the new schooling.

New education had been spreading among minority *millet* and foreign communities since the eighteenth century. By the 1860s, a period of precarious European economic investment and colonial encroachment in the region, there arose a vast proliferation of schools established by religious missions, foreign governments, local communities, and private associations from France, Britain, Austria, Greece, England, Germany, the United States, and Italy. They served ethnic minority and religious communities such as the Armenians, Jews, and Christians, and also progressively higher numbers of elite Muslim children who were attracted to the prestigious foreign schools. Among the organizations with notable quantitative and qualitative educational impact were the Church Missionary Society of Great Britain (CMS) (est. 1799), the American Board of Commissioners for Foreign Missions (est. 1810), and the French-based *Alliance Israélite Universelle* (est. 1860). Collectively these organizations founded hundreds of schools throughout the region, serving tens of thousands of students. Foreign schools played pioneering roles in, among other areas, girls' and women's education, and higher education (Thompson). The institutions of higher education founded by foreign missions and organizations included the Syrian Protestant College, later named the American University of Beirut (est. 1866); Saint Joseph University, also located in Beirut and founded by French jesuits (est. 1874); Robert College, Istanbul, which became the location for Bogazici University in 1971 (est. 1863); the Istanbul-based American College for Girls (est. 1890); and the American University in Cairo (est. 1920).

The proliferation of foreign educational institutions in the region did not occur without a great deal of tension, and schooling became an ever more hotly debated issue as the century progressed.

1878 to 1913: Colonialism, Nascent Nationalist Movements, and Fragmented Schooling

The new schooling was involved in forging a different kind of society, and its role in societal transformation was widely debated by government officials, foreign missionaries, social reformers, public intellectuals, ordinary citizens, Muslim clerics, and colonial government representatives. They raised pressing questions relating to what populations should participate in the new schooling, who should fund and regulate it, and what its content, methods, and objectives should be. Whereas the British Mandate government in Egypt (1882–1922), for example, advocated limited educational development to maintain the local population in a subordinate position, the French considered the spread of schooling as part of their *mission civilatrice.* Members of emerging reform and nationalist movements, engaged citizens, local notables, and officials, on the other hand, perceived new schooling as a requisite for much-needed social reform; however, they largely frowned upon foreign control over it. Foreign schooling was criticized for contributing to a climate of intensified sectarianism and for threatening local religious, cultural, and national sovereignty. Local groups and individuals spearheaded educational alternatives for the moral, scientific, and political socialization of their youth.

A notable experiment that took place in the Levant and Egypt was the Benevolent Society school movement. Benevolent societies were locally funded Muslim, Christian, and intersectarian associations that provided social services by way of support for widows and the poor, hospitals, libraries, student hostels, and, most prominently, schools for boys

and girls. These schools were modeled on the government and foreign schools but placed more emphasis on Arabic studies, regional history, vocational training, religion, and morals. The first school of this type was the Maqasid School of the Maqasid Benevolent Society *(Jam ͑iyat al-Maqasid al-Khayriyya),* established in Beirut in 1878 by Abd al-Qadir al-Qabbani. The following year the Benevolent Society School of Alexandria, which later added the word *Islamic* to its name *(Madrasat al-Jam ͑iyya al-Khayriyya al-Islamiyya bi al-Iskandariyya),* was opened in Egypt by Abdullah al-Nadim. Within two decades a growing network of benevolent-society schools spread in the region, the most famous among them the *al-Maqasid* schools of Egypt started by Muhammad Abduh in 1892. Similar examples of local alternative schooling in later periods include the Moroccan Free Schools, which proliferated in the 1920s as an alternative to French colonial schools, and the extensive network of Muslim Brotherhood schools in Egypt from the 1920s until the organization was outlawed in the 1940s.

It is no coincidence that the founders and advocates of benevolent-society schools were in many instances prominent figures in the emerging press, which constituted, with the schools, a powerful component of the new education. With the growth of the press (including a vibrant women's press), an active and engaged public sphere was in the making. As with schools, governments increasingly regarded with trepidation the press because it could be a means of fomenting popular unrest and political opposition. The new education ministries in Egypt and the Ottoman Empire, for example, took on the task of not only supervising schools, but also of censoring the press. School texts, journals, pamphlets, plays, and books of all sorts were subject to censorship. Education ministries have also been closely linked with state security apparatuses. During the Hamidian period, for example, the secret police monitored classes in the Ottoman University (est. 1890), where potentially subversive subjects such as politics, sociology, history, and philosophy were excluded from the curriculum. Censorship and surveillance policies were ultimately unsuccessful, for the secret revolutionary society that eventually aided in the overthrow of the Ottoman sultan, the Committee of Union and Progress or "Young Turks," was begun by four cadets in the Military Medical College in 1889, and their literature spread largely through the growing networks of schools and school inspectors.

Throughout the period leading up to World War I, schooling, including religious schooling, was gradually taken out of the jurisdiction of the ministries of religious endowments *(awqaf)* and put under the legal authority of new state education ministries. The process of centralization of formal schooling would continue with a vengeance in the period following World War I.

1913 to 1960s: Nationalization and Centralization of Mass Education

In the post–World War I era the Ottoman Empire was dismantled and the political configuration of the region altered substantially. Turkey became an independent republic, and the Arab territories of the Gulf, Maghreb, Levant, Transjordan, and Egypt were carved up and divided between England and France. In 1948 the Jewish State of Israel was established by British mandate. The age of direct European colonialism came to an end as sovereign nation states were born. The new governments, influenced by modernist ideologies that advocated mass education as the panacea for economic, social, and political development, pursued policies of vigorous educational expansion. Education also figured prominently in the new and revised constitutions, which, with the exception of Saudi Arabia's and Bahrain's, made stipulations for compulsory schooling for boys and girls. This period also witnessed the development of national universities, to which women eventually gained full access.

Two major features characterized national education at the preuniversity level in the Arab states and Iran: Education was centrally administered, one consequence being that foreign schools to a large degree were incorporated into national systems; and education was organically linked to upbringing (*tarbiya* in Arabic, and *parvaresh* in Persian). Schools are socializing institutions par excellence, but in Muslim majority states the upbringing aspect of schooling is expressed in explicit terms. As Gregory Starrett notes, "Muslim states have followed a different course to modernity, insisting explicitly that progress requires a centrally administered emphasis upon moral as well as economic development" (Starrett, p. 10). Most of the education ministries in the region contain the word *upbringing* in their official

designations, as in the Ministry of Upbringing and Education *(Wizarat al-Tarbiya wa al-Taʿlim)* in Egypt, Jordan, and the United Arab Emirates; the Ministry of National Upbringing *(Wizarat al-Tarbiya al-Wataniyya)* in Algeria and Morocco; and the Ministry of Education and Upbringing *(Vezarat-e Amuzesh va Parvaresh)* in Iran.

The upbringing component of state-monitored formal schooling serves as a way of ensuring that indigenous, usually Islamic cultural tenets get incorporated into national, and tacitly "secular," education programs. Through school policies that include mandatory religion classes and a host of formal and informal cultural policies such as sex segregation, dress and grooming codes, and supervision of youth behavior in and outside school grounds, educators attempt to guide youth toward socially acceptable conduct. Yet the contours of what is "acceptable" shift and differ according to the historic moment and individual interpretation, social class, region, life stage, and gender. Similar to the Muslim majority states, in the Jewish state of Israel religion is a required subject in state schools from the first grade through high school. The state also supports Jewish religious state schools in which moral conduct and behavior based on Jewish principles play a central role.

Education has long been regarded as a means of national-identity building. Schools are infused with ideological and nationalist content that gets transmitted through curricula, rituals, celebrations, and symbols. In the Arab states, particularly in the post-1950s when pan-Arabism was at its peak, education was seen as a means of solidifying the "Arab nation." In Israel, schools and kibbutzim were intended to generate allegiance to the Jewish state, a process that the non-Jewish Arab minority remained outside of. In secular republican Turkey, education was a means of forging a secular citizenry, and in Iran under the Pahlavi Dynasty, education was geared toward cultural secularization. However, national-identity building does not always evolve according to state policy. The decline of Arab nationalism, the onset of the Iranian revolution, the rise of Islamism throughout much of the region (including "secular" Turkey), and the appearance of an increasingly fragmented polity in Israel have all posed challenges to national education systems. National educational policies would undergo further challenges and changes in the succeeding period characterized by a new globalization.

1970s to the Present: Education between the Local and the Global

The Middle East has undergone dramatic economic, political, and ideological changes since 1970, all of which have had a major impact on development and practice of formal education. The 1970s oil boom in Persian Gulf countries and subsequent massive interregional labor migrations; the 1979 Iranian Revolution, which gave way to the establishment of the Islamic Republic of Iran; the Iran–Iraq War; the 1967 Arab–Israeli War and ensuing Israeli occupation of Arab lands; the first and second (al-Aqsa) Palestinian intifadas; the ongoing civil war in Sudan; the 1990 Gulf War; the U.S. war on and occupation of Iraq; the rise of Islamism as a political and sociocultural movement; and the rise of Middle Eastern states as major debtor nations are all some of the major factors that have contributed to profound changes in the realm of education.

Education has long developed as a result of transnational, regional, and global exchanges, borrowings, and adaptations, but certain unique characteristics underpin education in the current period of globalization. To a growing extent supranational, nonlocally accountable organizations such as the World Bank, International Monetary Fund (I.M.F.), and United Nations (UN) determine policies and measurements of education as Robert Arnove and Carlos Torres put forward in their tome on comparative education (2003). The "success" or "failure" of national education sectors tend to be measured in quantitative terms and based on factors such as enrollments rates and test scores, with scant attention to "quality." The Arab world has not fared well in these global assessments with illiteracy rates in the mid-1990s as high as roughly 55 percent for females and 30 percent for males. Debtor states of the Middle East and elsewhere have also been compelled to follow certain austerity measures that have included increased privatization and decentralization of national education. Studies on the Middle East region and other regions of the south have repeatedly shown that such policies unequivocally disadvantage the poor, rural populations, and women, and accentuate social inequality. Indeed, these "global" policies are often in direct contra-

vention of national and community interests, indicating a lack of real autonomy and sovereignty among postcolonial states and in educational policy design.

Yet, with growing homogenization of education policies a host of local responses have emerged. In the Middle East there has been an unmistakable revitalization of religious-oriented education. In "secular" Turkey, for example, there was a prodigious growth of the Islamic-oriented *Imam Hatip* schools until they were curbed by legislative intervention from the end of the 1990s. There has also been a rise in religious Jewish schools in Israel. Various types of Islamic schools, including *katatib* and new hybrid private Islamic schools, have been on the rise in Egypt, Jordan, Yemen, and Palestine. With the growing privatization and subsequent commercialization of education (with its lucrative financial possibilities), new manifestations of religious schooling have appeared, such as the "five-star" Islamic school, which incorporates up-to-date computer labs, swimming pools, and other signs of prestige and desires being produced in a globalized world in their programs (Herrera, p. 185). In keeping with the privatization pattern, the decade of the 1990s also witnessed prodigious growth in the private university sector, with the opening of twelve new private universities and higher education institutions in Jordan, fifteen in Turkey, seven in Lebanon, and six in Egypt, with plans in all countries for more. Much of the privatized higher education discourse has focused on issues of accreditation, competitiveness, professional degrees, financing, profit, and the needs of the global economic markets, largely removing the new private universities from humanistic endeavors.

The record of national regional universities in social science, humanities, and sciences, however, has been mixed at best. The scientific quality of universities and individual faculties varies substantially. In the Arab countries and Iran, national universities have reflected authoritarian political systems and been characterized by especially cumbersome bureaucratic structures and severe restrictions on academic freedom, both of which have contributed to the problem of "brain drain." In the Persian Gulf countries, for example, scholarly research is allowed except where the "general social system . . . religious precepts, social traditions, cultural and ethical considerations are concerned" (Morsi, p. 44). National universities in Egypt, Jordan, and Syria are heavily monitored and censored by state security apparatuses that interfere in aspects of research, student conduct, travel of faculty, and topics of conferences. In Iran during the "cultural revolution" under Ayatollah Ruhollah Khomeini (r. 1979–1989), faculty and students were purged from universities on ideological grounds and materials censored. Under the previous regime of Mohammed Reza Pahlavi, censorship and surveillance were also widespread. Lack of freedom in academia, however, is not necessarily indicative of the absolute power of political regimes, for state policies have often been subverted and resisted at the sites of schools and universities. Students movements, as Ahmad Abdallah documents in the case of Egypt from the 1920s to the 1970s, have been a powerful social and political force.

Early in the twentieth century women struggled for the right to join universities as full participating members. In the 2000s the participation of women in universities throughout the region is proportionally high. In Persian Gulf states such as Saudi Arabia, Qatar, and Kuwait, women make up more than half of the undergraduate population. In 2001 Iranian women overtook men in university entrance. In Egypt women make up more than half of the students in some of the prestigious medical faculties. Although women have made tremendous strides in higher education, at present the attainment of university degrees does not translate into comparable participation in the political arena and the labor force. However, as history has repeatedly demonstrated, the outcomes of mass education are unpredictable at best, and the trend toward increased female attainment of higher education could very well translate into far-reaching social changes.

Conclusion

The "new" education of the past two centuries has developed alongside movements of modernism, nationalism, pan-Arabism, Islamism, and globalism. As with other forms of institutional borrowing and adaptation, education has been characterized by "intertwined and overlapping histories" (Said, p. 18). It has served as a force in cultural and political reproduction and in social transformation, with often unintended and unpredictable consequences.

EFFENDI

See Glossary

EFFLATOUN, INJI

[1924–1989]

A painter, activist, and pioneer of modern Egyptian art.

Inji Efflatoun was an instrumental part of the women's movement in Egypt. She is known for her leftist activities, including her involvement in forming a student group dedicated to women's rights, and for her writing on the relationships among class difference, women's oppression, and colonial imperialism. These activities eventually resulted in her imprisonment under Gamal Abdel Nasser in the postindependence period. Noted for her Van Gogh-esque paintings, filled with lively brushstrokes of intense color, Efflatoun's art explored political and social subjects throughout her lifetime. Much of her work was in the nationalist vein, including early spirited depictions of nationalist activities and icons such as peasant women.

Although like many Egyptian artists she continued to turn to the countryside and peasant life to express her cultural identity, her paintings during and after her imprisonment took on a significantly more emotional and tragic character. Important works from this period include dark portrayals of the women's prison and the violent struggles on the battlefield in the Egyptian/Arab wars with Israel. A significant portion of her paintings deal with women's and feminist issues, and much of her work reflects her Marxist politics. Efflatoun also wrote a number of books dealing with social issues, including *We Egyptian Women* and *Eighty Million Women with Us.*

EGE UNIVERSITY

Public university in İzmir, Turkey.

Ege (Aegean) University was founded in 1955. In 1982, its academic body was divided into two separate universities, Ege and Dokuz Eylül, for administrative reasons. Ege University has eleven faculties (administrative and social sciences; agriculture; communication; dentistry; education; engineering; letters; medicine; natural sciences; pharmacology; and water products), a conservatory of Turkish music, eight vocational schools, and seven research institutes. Some of its establishments are located in the neighboring provinces: Manisa, Aydın, and Uşak. Instruction is in both English and Turkish. During the 2001–2002 academic year, the university had more than 2,800 faculty members and 30, 887 students, 2,807 of whom were graduate students. Its budget in 2003 amounted to 128,029 billion Turkish liras, 99 percent of which came directly from state funds.

Turkey's third-oldest university, Ege was established in response to a growing demand for higher education in the region around İzmir, whose traditional agricultural and commercial potential led to rapid industrial development during the early 1950s. As befits its name, the university has tried to establish programs emphasizing its relationship with the Aegean Sea and the rest of the Mediterranean area as a cultural and ecological region.

UPDATED BY BURÇAK KESKIN-KOZAT

EGYPT

Arab country controlling northeastern Africa and the Sinai Peninsula.

Egypt is bordered by the Mediterranean Sea on the north, Sudan on the south, the Red Sea on the east, and Libya on the west. It consists of three regions: (1) the Nile Valley and Delta (less than 4% of the total area), extending from Sudan north to the Mediterranean; (2) the Eastern Desert–Sinai Peninsula (28%), extending from the Nile Valley to the Gulf of Aqaba and the border with Israel; and (3) the Western Desert (68%), stretching from the Nile Valley west to Libya.

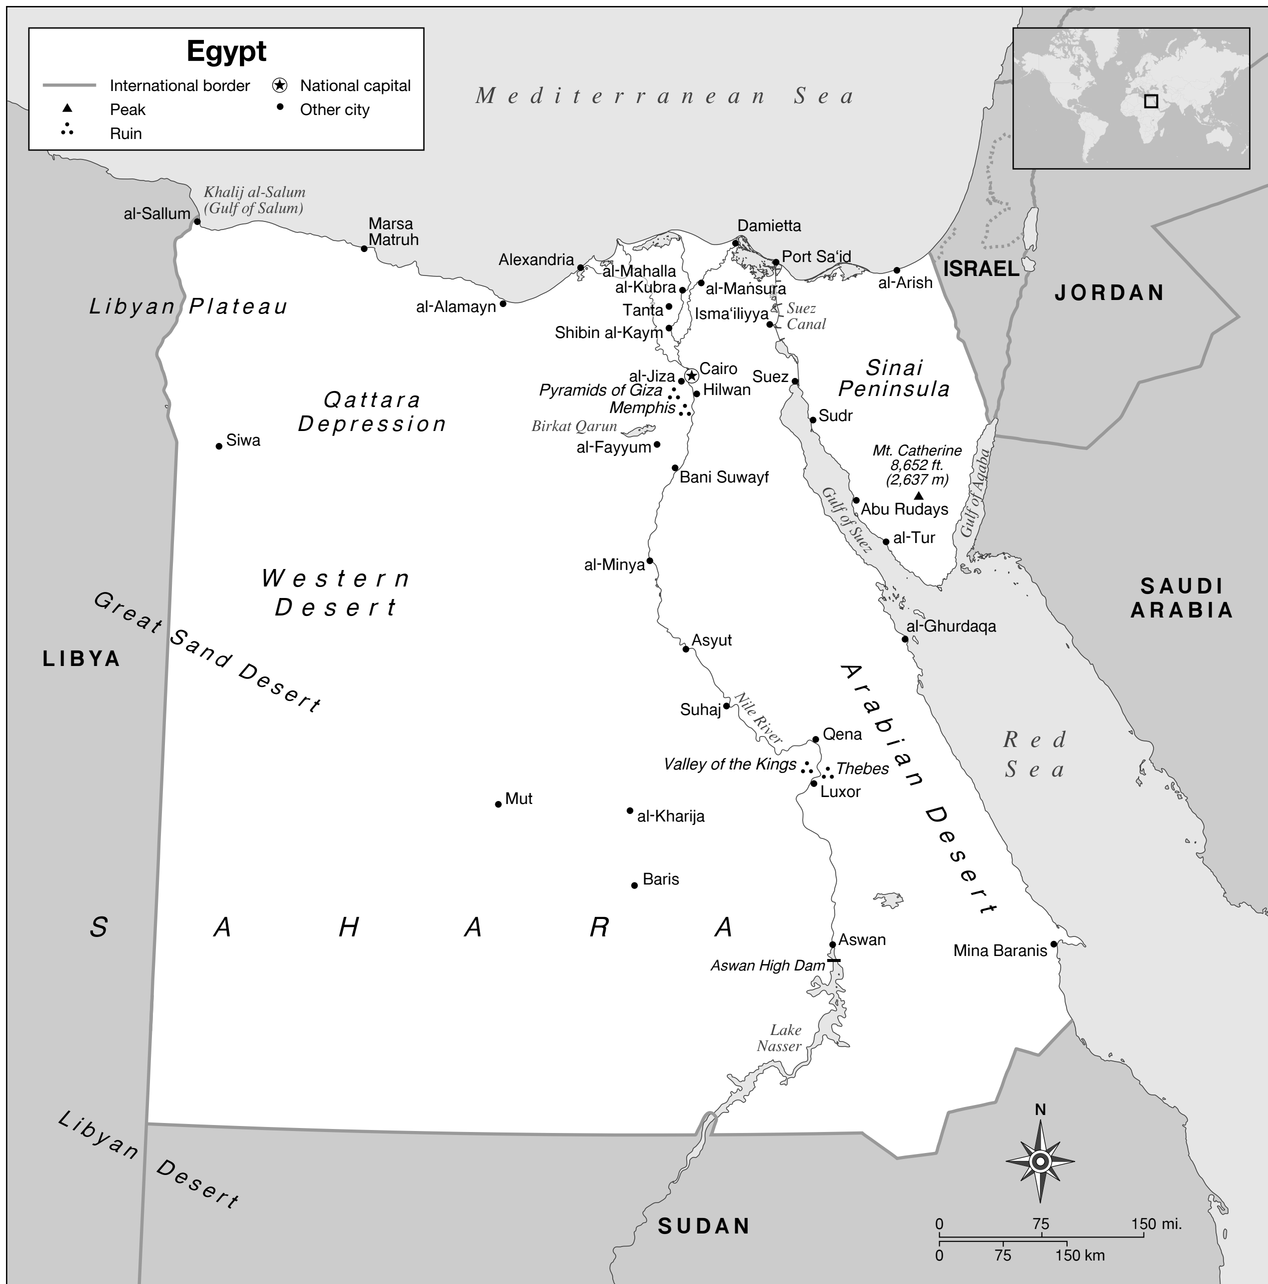
Egypt's geographic position makes the country easy to control and rule. Its society and polity are characterized by central rule and the absence of long-standing regional allegiances. Dependence on the Nile River for irrigation has called for central administration and enabled the government to extend its authority to the distant parts of the land. Because most of the territory is desert, 96 percent of the Egyptian people live on less than 5 percent of the country's total land area, despite a massive land reclamation project that is starting to irrigate parts of the Western Desert.

Population and Social Structure

Egypt is one of the oldest continuously settled lands in the world. Egyptians, except for a few Nubians, speak Arabic. About 90 percent of the people are Muslim, and Islam is the state religion. The Copts are the largest non-Muslim religious group. Estimates of their numbers vary between six million and nine million. In 2003, the total population of Egypt was seventy million and was increasing by one million every ten months. The birth rate in 2002 was 24.4 per thousand and the death rate was 7.6 per thousand; the natural rate of population increase was 16.8 (the world average for the period in question was 13.5).

Half of the Egyptian people are under twenty years of age; two-thirds are under thirty. The number of dependent children supported by working adults is high, a situation that severely strains the economy. Egypt's government and economy are increasingly unable to meet the demands for food, shelter, education, and jobs. Some three million Egyptians have migrated to other Arab countries, particularly the oil-producing states, in search of work. Their remittances to their families constitute a major source of Egypt's hard currency and help to offset the difference between the country's imports and exports.

In contrast to many developing countries, Egypt has a high degree of social and national integration. Presidents Gamal Abdel Nasser (1954–1970), Anwar al-Sadat (1970–1981), and Husni Mubarak (1981–) have all spoken proudly about Egypt's national unity, by which they mean the peaceful coexistence



Map by XNR Productions, Inc. The Gale Group.

between the country's Muslims and Copts. This unity has been tested when Muslim extremists attacked, robbed, and occasionally murdered Copts. The Copts also began to fear growing pressure to apply Islamic law in Egypt, which could weaken their position relative to the Muslim majority.

Population growth has limited Egypt's development efforts by aggravating unemployment, increasing the ratio of mouths eating to hands working, spurring rural migration to urban centers, and diverting resources from investment to consumption. Population rises by almost 2 percent annually, a rate that exceeds the increase of arable land and is far beyond Egypt's educational and industrial development. Although the cropped area almost doubled between 1882 and 1970, the population growth absorbed and exceeded the increase. Once the bread-

In Egypt, school enrollment is compulsory for children between the ages of six and fourteen, and primary and intermediate education is free. Despite the irregular attendance of children who must work to support their families, classrooms tend to be overcrowded, and many Egyptian schools lack up-to-date equipment and texts. © Thomas Hartwell/Corbis Saba. basket of the ancient world, modern Egypt has had to import cereal grains, making it more dependent on the outside world and vulnerable to the fluctuations of food prices.

Economy

Economic factors have played a crucial role in Egypt's politics. In 1991, inflation was nearly 21.3 percent a year, the national debt was US$25 billion, the gross national product (GNP) per capita was US$600, and the country agreed to a major restructuring program. Indeed, since World War II, Egypt has had a balance-of-payments deficit that has had to be made up from other sources. From 1945 to 1958 it simply drew down existing reserves, which had accumulated during World War II. From 1958 to 1964, Egypt received foreign aid from Eastern and Western sources; from 1965 to 1971, the former Soviet Union paid for most of the deficit; from 1971 to 1977, the aid was primarily from Arab states; and since 1978, support has come from the United States and other Western nations. The rate of inflation in 2001 was 2.3 percent, the national debt was US$29 billion, and the GNP per capita reached US$3,600. The economy declined slightly during the period from 2001 to 2003 and the Egyptian pound has been allowed to float against the U.S. dollar; it lost half its value between 1997 and 2003.

In 1974 Sadat inaugurated his *Infitah,* or open-door economic policy, to attract foreign investment. He justified it on the following grounds: (1) the failure of Nasser's socialist policies; (2) the availability of capital from Arab oil-producing countries; and (3) the superpowers' détente. From an economic standpoint, the *Infitah*'s main purposes were twofold: to attract export-oriented foreign enterprises by setting up duty-free zones and to attract foreign capital through a liberal investment policy. Its ultimate goal was to develop Egypt's economy through joint ventures and projects, combining Egyptian

labor, Arab capital, and Western technology and entrepreneurship.

Egypt's policy of liberal reform led to a restructuring of its economy. In 1991 the government implemented financial stabilization (unifying the rate of exchange, reducing subsidies) and started a program of structural adjustment (privatization and trade liberalization). The economy grew rapidly during the 1990s but stagnated in the early twenty-first century. Per capita GDP skyrocketed, and imports exceeded exports in value by a factor of three to one, but the deficit was made up by remittances, Suez Canal tolls, pipeline fees, and tourism. After the terrorist attack on New York's World Trade Center in September 2001, most of these sources diminished. The trade deficit in the first quarter of 2002 was US$1.6 billion. In addition, the gap between rich and poor Egyptians widened perceptibly as a result of both Sadat's *Infitah* policy and the economic restructuring. In 2000 it was estimated that the top tenth of Egyptians enjoyed 25 percent of the national income, while the bottom tenth earned only 4.4 percent.

History and Politics

On 1 July 1798 the people of Alexandria watched some 400 French ships in the Mediterranean bring 34,000 soldiers and 16,000 sailors to Egypt. Led by Napoléon Bonaparte, this expedition subjected Egypt, then a part of the Ottoman Empire, to direct confrontation with European expansionism. The occupation was harsh and stirred up popular resistance in Cairo, but it took a joint Anglo-Ottoman expeditionary force to expel the French in 1801. Following France's withdrawal, a popular uprising in Cairo forced the Ottoman government to name Muhammad Ali as governor of Egypt. Ruling from 1805 to 1848, Muhammad Ali modernized Egypt's administrative, economic, and military structures by introducing Western methods and technologies on a large scale.

In 1854, during the reign of his son, Saʿid Pasha, a French diplomat secured permission to build a maritime canal across the Isthmus of Suez. The opening of the Suez Canal in 1869 greatly increased Egypt's strategic importance to the European powers and helped attract large numbers of Europeans to settle in Egypt's main cities. The Egyptian government also borrowed large sums of money from European banks at ruinous rates of interest, resulting in a state debt of 100 million Egyptian pounds by the end of the reign of Muhammad Ali's grandson, Ismaʿil ibn Ibrahim, in 1879. Egypt's European creditors established the Caisse de la Dette Publique (Fund for the Public Debt) to supervise the collection and disbursement of government revenues in 1876, followed later in that same year by the Office of Dual Financial Control. By 1881, the government was frantically cutting its expenditures to avert bankruptcy, contributing to the rise of a reformist movement led by Ahmad Urabi. The British intervened to suppress the revolt, bombarding Alexandria on 11 July 1882 and occupying Cairo nine weeks later, marking the start of an occupation that would last for seventy-four years. Initially British rule took the form of a veiled protectorate, honoring Ottoman suzerainty and the authority of the khedive (Egyptian ruler) and his ministers, although in reality Egypt was governed by Sir Evelyn Baring (later Lord Cromer) and his successors. In December 1914, following the Ottoman entry into World War I on the German side, the British government proclaimed a formal protectorate over Egypt.

Following the war, a nationwide revolution, led by Saʿd Zaghlul, broke out. His movement, known as the Wafd, achieved success on 28 February 1922, when Britain formally terminated the protectorate, proclaimed Egypt a sovereign, independent kingdom, and reserved four issues for future negotiations: (1) imperial communications, (2) defense, (3) minorities, and (4) the Sudan. On 15 March 1922 Ahmad Fuʾad was proclaimed king, and a constitution was issued on 9 April 1923. Free elections were held in two stages, resulting in a large parliamentary majority for the Wafd, which reconstituted itself as a political party.

From 1923 to 1936, negotiations took place on the four reserved points. The 1936 Anglo-Egyptian Treaty settled most of the issues between the two countries. Britain's troops remained in Alexandria, Cairo, and the Suez Canal Zone. The treaty was opposed, however, by a number of political forces, including the popular Muslim Brotherhood. On 15 October 1951, Egypt's government unilaterally abrogated the treaty and Egyptian commandos attacked British soldiers and installations in the Canal Zone. Egypt's military defeat in the Arab-Israel War of 1948 coincided with social and political instability

that had begun in the early 1940s as a result of increasing class disparities, uncontrolled urbanization, and labor unrest.

Egypt's government failed to respond to these conditions, nor did it respect the will of the people. The monarchy violated or suspended the 1923 constitution and dissolved parliaments whenever its power was threatened. The Wafd, the political party that won every election that was not rigged, held power less than eight years altogether and was dismissed from office on four separate occasions. Between 1923 and 1952, no popularly elected Egyptian parliament ever completed its term, and the average life of a cabinet was less than eighteen months.

These tensions led to frequent demonstrations, widespread political alienation, and the growth of revolutionary movements, such as the Muslim Brotherhood, the Young Egypt Party, Communist organizations, and the Free Officers. The insistence of the palace on absolute rule, the opposition of the ruling class to reform, and Britain's rigid refusal to withdraw from the Suez Canal Zone led the Egyptians to believe that only revolution could bring about reform. On 23 July 1952, the army seized control; three days later King Farouk abdicated in favor of his infant son. In June 1953, the monarchy was terminated and a republic was declared. All political parties, including the Wafd and the Muslim Brotherhood, were abolished.

From 1952 to 1970, the basic characteristics of Egypt's government under Muhammad Naguib and Gamal Abdel Nasser were military dictatorship, concentration of power, emphasis on mobilization rather than participation, and the supremacy of the executive branch. In the absence of political parties, three successive organizations became vehicles for political mobilization: the Liberation Rally (1953–1956), the National Union (1956–1962), and the Arab Socialist Union (1962–1977). An imbalance clearly existed between politics and administration. The bureaucracy, police, and army far eclipsed interest groups and political organizations. Whenever possible, the government attempted to penetrate and dominate groups such as trade unions, professional societies, and religious institutions. During the same period, the state took control of the economy in order to achieve rapid development and social justice, a policy known as Arab Socialism.

Gamal Abdel Nasser (left) took power in 1954 and in 1956 declared Egypt a socialist state with a single-party system. Nasser ruled Egypt for eighteen years, garnering a reputation for being a champion of Arab interests, but turning the country into a veritable police state in the process. © Hulton-Deutsch Collection/Corbis. Reproduced by permission.

After Nasser's death in 1970, Egypt's political system began to change. The ruling elite became increasingly civilianized, and a pluralistic political culture began to emerge. Anwar al-Sadat professionalized the army, disengaged it from politics, and appointed more civilians to high posts. For the first time since 1952, civilians held the posts of vice president and prime minister. The gradual democratization of the political structure led in 1977 to the formation of a controlled multiparty system. Domestically, Sadat was eager to establish his legitimacy apart from Nasser's. Most Egyptians acknowledged that the Arab Socialist Union had failed as an instrument of popular mobilization, and intellectuals and professional associations came to advocate political pluralism. Sadat often called for popular plebiscites to ratify his policies, such as the peace treaty with Israel. Externally, Sadat's rapprochement with the United States and his desire to make Egypt seem more democratic reinforced these

Husni Mubarak, a former military pilot, became president of Egypt following the assassination of Anwar al-Sadat in 1981. Mubarak is a skilled mediator who has worked hard to nurture and strengthen diplomatic relations with the United States and Russia, as well as with the other Arab countries. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

trends. Although Sadat was assassinated by Islamist militants in 1981, his successor, Husni Mubarak, has cautiously allowed the democratization process to continue by holding multiparty parliamentary elections at regular intervals.

The judiciary, an independent and respected institution, referees many issues, including the formation of new political parties. Applications for new parties must be submitted to a government committee whose decisions are subject to judicial review. Since the committee was established in 1977, it has never approved any applications, but its rejections have been reversed by court verdicts, thus allowing new parties to form.

In 2002, Egypt had fourteen political parties. The most important were the ruling National Democratic Party (NDP), headed by President Husni Mubarak and claiming 85 percent of all parliamentary seats; the Socialist Labor Party, led by Ibrahim Shukri, which adheres to Islamist ideology and formerly had a coalition with the Muslim Brotherhood; and the leftist National Progressive Unionist Party, also called Tajammu, led by Khalid Muhyi al-Din. The other parties are the New Wafd, Socialist Labor, Umma, Socialists, Greens, Social Justice, Democratic Union, Nasserist Arab Democrats, Misr al-Fatat (Young Egypt), Democratic Peoples, and Takaful (Solidarity). Few of these parties play any meaningful role in parliament, and only the NDP actually takes part in Egypt's government. Islamist movements, no matter how many Egyptians support them, are not recognized as political parties.

Since 1977, Egypt's political life has been dominated by the NDP, which has not become a credible political force. All of Egypt's political parties suffer from lack of a strong organization and a coherent ideology. Opposition parties have been reluctant to compromise and have failed to master coalition politics. Ideological cleavages, historical legacies, and leadership rivalries have kept them from working together to challenge the NDP. In the 2000 elections, the ruling party won 388 of the 444 seats in Egypt's parliament.

Egypt has not succeeded in integrating Islamist groups into the political process. The Muslim Brotherhood, which wants to make the *shariʿa* the law for the country, had approximately fifty members in parliament in 1987–1990. Their boycott of the 1990 parliamentary elections and their opposition to the government during the Gulf War weakened their position, yet they remain the most influential Islamist group. Members of the parliament elected in 2000 who were listed as independent were mainly Muslim Brothers. Smaller but more militant Islamist groups, such as al-Jihad and al-Jamiʿa al-Islamiyya, have resorted to violence against government officials, foreign tourists, and Copts, especially between 1992 and 1997. By 1992, Islamist groups controlled most university student unions and professors' associations, as well as a number of professional societies (e.g., of engineers, physicians, pharmacists, and lawyers), and the state passed laws in 1995 to limit their influence. The Egyptian

government's efforts to weaken the militant groups have curbed terrorism, but at grave cost to human rights and its own legitimacy. Thousands of Islamists languish in Egyptian prisons, often without having been tried and convicted of any crime. The Islamist newspapers and magazines were closed after Sadat's assassination and have not been allowed to reopen. Mosque sermons are monitored, and any expression of Islamist militancy is suppressed. It is noteworthy that four of the nineteen men implicated in the 11 September 2001 attack against the United States were Egyptians.

Both Islamists and the Egyptian government have stifled the growth of a civil society. For publishing scholarly articles critiquing early Arabic literature, Nasr Abu Zayd, a Cairo University professor, was obliged to leave Egypt after a secular court, inspired by Islamists, asked his wife to divorce him for allegedly renouncing Islam. Saʿd al-Din Ibrahim, a respected sociologist, was tried and condemned to hard labor by a military court for defaming Egypt, accepting foreign money for his research center without government authorization, embezzlement, and bribing public officials. After a widespread public outcry, he was released, retried by a civilian court, and set free. Neither case speaks well for the independence of Egypt's judiciary.

What is the balance sheet for the democratization process in Egypt? On the positive side are a liberal tradition, a strong sense of national identity, and a complex civil society. Another positive element is a middle class that has organized itself into a growing network of business associations, trade unions, and professional syndicates, thus helping to form a civil society outside the political process. On the negative side, Egypt has a tradition of authoritarianism. The ruling elite has grown up with and worked within a single-party system. The ruling and opposition parties have little internal democracy. Many parties espouse ideologies that are incompatible with democratic institutions. The government uses the armed forces and the police to stifle dissent, creating an atmosphere of fear and leading to either apathy or conspiracies against public order. Ultimately, Egypt's democracy and political stability will rest on its ability to increase economic production and to narrow the yawning gap between the few rich and the many poor.

EGYPTIAN FEMINIST UNION

The first formal, self-consciously feminist organization in Egypt, al-Ittihad al-nisaʾi al-misri *(in English, the Egyptian Feminist Union, or EFU).*

The Egyptian Feminist Union was founded in Cairo on 16 March 1923 by a small group of women from elite families who had been active in the struggle for independence from British occupation. The group

originally had aligned itself with the Wafd movement and was called the Wafdist Women's Central Committee (founded 1919). Bringing together a larger group of women, the EFU worked for Egyptian nationalist aims while opposing women's subordinate status in the Wafd Party and focusing on women's objectives for their own lives. From the start, its leader, Huda al-Shaʿrawi, made connections with international feminist organizations, notably the International Woman Suffrage Alliance (IWSA); in May 1923, the EFU sent a delegation to the IWSA's Rome meeting, and the presence of Egyptian feminists received notice in Egypt's press—as did a public act of unveiling by Shaʿrawi and fellow delegate Sayza Nabarawi in the Cairo train station upon their return from Rome.

The EFU's agenda ranged from demands for political rights—the EFU picketed the opening session of the Egyptian parliament in 1924 after the new constitution had failed to grant women the right to vote—to social activism, carrying on the philanthropic work of earlier generations of women. In its second year of existence, the EFU started a dispensary for women and a program to train girls in handicraft production; when new headquarters on Cairo's Qasr al-Ayni street were ready in 1932, these became part of a professional and domestic school, and throughout the decade other dispensaries and training programs were founded outside the capital. The EFU founded two journals, the French-language *L'Egyptienne* (1925–1940) and the Arabic-language *Al-Misriyya* (1937–1940), through which it outlined its demands for legal reform in personal status law, equal education for girls, and the right for women to enter university and have access to professional training and positions. Careful to emphasize Egypt's Islamic character and pharaonic past, Shaʿrawi, the EFU's leader until her death in 1947, steered a careful path between her European contacts and the nationalists, both liberal and conservative, at home, while increasingly turning to regional Arab concerns. Although the EFU encompassed a range of feminist perspectives, it was not the only Egyptian organization of the time working to advance women's rights.

EGYPTIAN GEOGRAPHICAL SOCIETY

Group of geographers in Egypt.

Khedive Ismaʿil founded the Khedivial (later Royal, now Egyptian) Geographical Society in 1875 to promote and legitimize his empire in the Sudan and the Horn of Africa. The society later shifted its concentration to Egypt itself and evolved from a foreign-dominated layman's society into the professional society of Egyptian geographers.

DONALD MALCOLM REID

EGYPTIAN–ISRAELI PEACE TREATY (1979)

Treaty signed by Egypt and Israel on 26 March 1979.

The Egyptian–Israeli Peace Treaty derives from the Camp David Accords signed by Egypt, Israel, and the United States on 17 September 1978. The 1978 agreements included two documents, "A Framework for Peace in the Middle East" and "A Framework for the Conclusion of a Peace Treaty between Egypt and Israel." The other Arab states and the Palestinians rejected the Camp David Accords and declined to pursue talks with Israel toward a comprehensive peace. Although they required many more rounds of negotiations, U.S. mediation, and a Middle East visit by U.S. president Jimmy Carter, Egypt and Israel successfully brought the framework for a bilateral peace to fruition.

The Egyptian–Israeli Peace Treaty signed by Egyptian president Anwar al-Sadat and Israeli

prime minister Menachem Begin and witnessed by Carter is a relatively short document: nine articles, three annexes, and a series of side letters among and between the three signatories. In a classic land-for-peace swap, the treaty explicitly terminates the state of war between Egypt and Israel and establishes a full and formal peace, including an exchange of ambassadors; in return, the parties accept the international boundary between Egypt and the former Palestine Mandate as the permanent border between them, allowing for the phased return of the entire Sinai Peninsula, captured by Israel in the 1967 war, to Egypt. The treaty called for demilitarized zones and United Nations' forces to monitor the border and, clearly bearing in mind the catalysts which led to war in 1956 and 1967, both sides agreed that neither could unilaterally request the withdrawal of UN personnel. The treaty also affirmed Israel's right of free passage through the Suez Canal, the Strait of Tiran, and the Gulfs of Aqaba and Suez. The normalization of Egyptian–Israeli relations included full recognition; diplomatic, economic, and cultural relations; and the termination of economic boycotts and barriers to the free movement of goods and people.

Although the preamble to the treaty references UN Security Council Resolutions 242 and 338 and calls repeatedly for Israel's other Arab neighbors to join this peace process, the Arab world reacted angrily to Sadat's separate peace with Israel and refused to endorse or participate in it. The Arab League moved its headquarters from Cairo and most of its members broke ties with Egypt, ushering in nearly a decade of Egyptian isolation. Within Egypt, opposition elements protested the peace with Israel, and Islamic radicals, already at odds with Sadat over his economic and social programs, assassinated him on 6 October 1981. Israelis generally welcomed the treaty, although some on the right opposed establishing the precedent of Israeli territorial concessions and Israeli soldiers had to bodily remove protestors from homes in the Sinai town of Yamit.

Husni Mubarak succeeded Sadat and managed to reap the benefits of the treaty, especially massive U.S. foreign aid, without the stigma of having negotiated it. Under his stewardship, Egypt regained its leadership role in the Arab world while preserving the peace with Israel. Despite Israel's initial enthusiasm, Egyptian wariness has made it a cold peace, however, with low-level trade exchanges, few cross-border visitors, and correct but frosty relations at the top. The treaty has withstood numerous regional crises, but genuinely warm relations would seem to hinge on the resolution of the Palestinian-Israeli conflict.

EGYPTIAN MUSEUM

Museum containing the world's finest collection of pharaonic antiquities.

In 1858 the Ottoman Empire's viceroy of Egypt, Saʿid Pasha, commissioned French Egyptologist Auguste Mariette to create an antiquities service and a museum. In 1863 Saʿid's successor, Ismaʿil Pasha, inaugurated the Egyptian Museum in the Bulaq district of Cairo. The museum was moved to Giza in 1891, then to its present building in Tahrir Square in Cairo in 1902. Gaston Maspéro succeeded Mariette as director of the museum and the antiquities service in 1881. For ninety-four years, until the 1952 revolution, all

directors of the service were French. In 1954 Mustafa Amir took over as the first Egyptian director. The museum gradually relegated subsidiary collections to the Greco-Roman, Arab (later called Islamic), and Coptic museums. Since the 1920s, the Tutankhamen collection has been the museum's greatest treasure. The present building has been overcrowded almost since it opened. A 1925 proposal by U.S. Egyptologist James Henry Breasted and John D. Rockefeller, Jr. to fund a more spacious new museum foundered on political grounds. In 2001 an international competition was announced for the design of a UNESCO-sponsored Grand Egyptian Museum on a site just north of the Giza pyramids plateau.

EGYPTIAN WOMEN'S UNION

Women's rights organization.

Often called the Egyptian Feminist Union, the Egyptian Women's Union was founded by Huda al-Shaʿrawi in 1923 to demand voting rights for women in Egypt. It also spearheaded the rejection of the veil by Egyptian women as a step toward their emancipation. After opening a women's clubhouse in Cairo, the group published monthly journals in both French and Arabic, ran a clinic and a dispensary for poor women and children, and established child-care centers for working mothers. As a result of their actions, the government set a minimum marriage age and opened its first secondary school for girls. As the Palestine conflict intensified, the Egyptian Women's Union convened an Arab women's conference in 1938 and another in 1944; it thus laid the groundwork for the Arab Feminist Union, which elected Huda al-Shaʿrawi as its first president. Following her death in 1947, the Egyptian Women's Union was eclipsed by other feminist groups that attracted younger women. After the 1952 revolution, the union's functions were taken over by government ministries, and it faded away.

8 MARS NEWSPAPER

Newspaper of the grassroots Moroccan women's organization Union de l'Action Féminin (Feminist Action Union).

8 Mars (8 March) was launched in the mid-1980s. Its title is the date of International Women's Day. Published in Arabic by women, for women, *8 Mars* has a monthly circulation of over 20,000. Featuring articles on and analyses of legal and political issues that affect women's lives, as well as reports on educational and cultural issues, the publication's proceeds fund the activities of the Union de l'Action Féminin, which was founded in 1983 and as of 2003 had twenty-five branch offices in Morocco and one in Cairo. *8 Mars* advocates women's full exercise of all citizenship rights and features articles and editorials on gender equality in law, everyday life, and culture; it encourages women's integration into decision-making positions at all levels and in all sectors of Moroccan society. Union de l'Action Féminin undertakes projects such as literacy classes, income-generating projects, and public advocacy on women's rights, as well as projects involving women in the political process and all levels of government and advocacy on legal issues, particularly a campaign to change Morocco's *mudawwana* (family law) to give women more legal and economic rights and en-

hanced personal independence. Partly through grassroots networking and partly through *8 Mars,* the Union de l'Action Féminin gathered over 1 million signatures for a petition to change the *mudawwana* laws in the mid 1990s.

LAURIE KING-IRANI

EISENHOWER, DWIGHT DAVID

[1890–1969]

U.S. Army officer; president of the United States, 1953–1961.

Born in Denison, Texas, Dwight David Eisenhower was graduated from the U.S. Military Academy at West Point, New York, in 1915. During World War II, he was chief of the war plans division, U.S. general staff, before becoming commander in chief of U.S. forces, European theater, and commander of allied forces in Northwest Africa. In 1943, he was appointed general, supreme commander in North Africa and the western Mediterranean, and he planned the invasions of North Africa, Sicily, and Italy. He was made general of the army in 1944 and planned and commanded the European invasion at Normandy, France, called D-Day (6 June 1944). After conquering Nazi Germany, Eisenhower remained in Europe as the U.S. member of the Allied Control Commission for Germany and chief of staff of the U.S. Army (1945–1948).

In 1948, Eisenhower returned to the United States and became the president of Columbia University (1948–1953) while remaining supreme commander of the North Atlantic Treaty Organization (NATO) forces in Europe (1951–1952). He was then persuaded to run for president of the United States on the Republican ticket, won, and served two terms (1953–1961). Along with his secretary of state, John Foster Dulles, he was concerned about preventing Soviet incursions in the Middle East, whether economic, political, or ideological. Careful to maintain good relations with the Arab states, he showed no undue favoritism to the new State of Israel. At first he was interested in funding the Aswan High Dam in Egypt, but President Gamal Abdel Nasser's 1955 arms deal with Czechoslovakia, a Soviet satellite country, led Eisenhower, on the advice of Dulles, to deny the loan. In the 1956 Arab–Israel War, when France, Britain, and Israel attempted to take back the Suez Canal from Nasser's nationalization of it, Eisenhower angrily brought the matter to the United Nations, calling for a cease-fire and a withdrawal. This stance won him few friends in the Middle East—only Hashimite-ruled Iraq and Reza Pahlavi's Iran.

On 5 January 1957, Eisenhower proposed the policy that became known as the Eisenhower Doctrine, calling on Congress to provide military and economic aid to any Middle Eastern nation that believed itself under risk from "armed aggression from any country controlled by international communism." In July 1958, in the wake of the revolution in Iraq, President Camille Chamoun of Lebanon appealed to the United States for help. Believing that the security of Lebanon was endangered by Nasser and by communism, Eisenhower dispatched a contingent of U.S. Marines from the Sixth Fleet; they landed on 15 July to be greeted by astonished sunbathers but stayed for almost four months. Order was restored to Lebanon, and power passed from Chamoun to General Fu'ad Chehab.

ZACHARY KARABELL

EITAN, RAFAEL

[1929–]

Chief of staff of the Israeli military; member of Israel's Knesset.

Rafael ("Raful") Eitan was born in Mandatory Palestine, at Moshav Tel Adashim. He attended Tel Aviv University and Israel's National Security College. He joined the Palmah in 1946 and fought in the Arab–Israel War of 1948. After serving in a number of high posts in the Israeli military, he became chief of staff in 1978, serving until 1983. As chief of staff, he worked with Defense Minister Ariel Sharon to plan and execute the invasion of Lebanon in the Arab–Israel War of 1982. In the aftermath of that war, he was criticized by the Kahan Commission, which investigated Israel's conduct in the war, for failing to prevent the mass killing of Palestinian civilians by Lebanese militiamen in the Sabra and Shatila refugee camps.

In 1983, Eitan entered politics, founding the right-wing nationalist Tzomet Party, which united with the Tehiya Party before the 1984 elections. Eitan has been a member of the Knesset (Israel's parliament) representing the Tzomet and Tehiya parties since 1984 and advocating annexation of the West Bank and Gaza Strip. He served as minister of agriculture and the environment and deputy prime minister from 1996 to 1999.

ELDEM, SEDAD HAKKI

[1908–1988]

Turkish architect.

Sedad Hakki Eldem was born into an artistic Istanbul family. His uncle was Osman Hamdi Bey, founder of the Istanbul Fine Arts Academy. Eldem went to school in Switzerland and Germany before studying architecture at his uncle's academy from 1924 to 1928; he remained a teacher at the academy until 1962. By age thirty-one, he had designed some of the major buildings in the new Republic of Turkey: the Yalova Termal Hotel (1937), the office building for the prime ministry (1938), and the Turkish pavilion at the New York World's Fair (1939). He became the most influential architect in mid-twentieth-century Turkey.

Eldem wrote articles defending local architectural styles over international styles and, in a nationalist vein, argued that foreign architects should never be allowed to build in Turkey. Nonetheless, because of German influence and a shortage of materials in the 1940s, Eldem built the faculties of arts at Ankara and Istanbul universities in a modern, monumental, streamlined style. His only gesture toward Turkish roots was ornamental detail. In 1954, he built the modern-style Istanbul Hilton Hotel. Eldem also served as president of Turkey's antiquities committee and wrote a book on Turkish domestic architecture.

ELITES

Small but powerful minorities with a disproportionate influence in human affairs.

Both tribal society and Islam have a strong egalitarian component, but early Islamic writers assumed a distinction between the few *(khassa)* and the many *(amma)* not unlike that in modern Western elite theory between the elite and the masses. Like the term *elite, khassa* had vague and various meanings. It was applied on occasion to the following: the early (661–750) Arab aristocracy under the Umayyads; the whole ruling class; the inner entourage of a ruler; educated people generally; and philosophers who pursued a rational (and sometimes a mystical) road to truth.

In the 1960s and 1970s, elite analysis—pioneered by V. Pareto and G. Mosca early in the twentieth century, partly as an alternative to Marxist class

analysis—attracted many Western scholars of the Middle East. National political elites received much of the attention, although anthropologists continued their special interest in local elites. Economic, social, and cultural elites attracted notice particularly when they overlapped with political elites. Elite studies examine the background, recruitment, socialization, values, and cohesiveness of elites. They probe elite-mass linkages, circulation into and out of the elite, the effects of elite leadership on society, and the evolution of all these factors over time.

The Ottoman Empire, which ruled loosely over most of the Middle East in the late eighteenth century, conceived of society as divided into a ruling class of *askaris* (literally, "soldiers" but also including "men of the pen"—*ulama* [Islamic scholars] and scribal bureaucrats) and a ruled class of *reʿaya* (subjects). "Ottomans" were the core elite among the *askaris,* presumed to be Muslim, available for high state service, and familiar with the manners and language (Ottoman Turkish, which also entailed a knowledge of Arabic and Persian) of court. The recruitment of slaves into the elite was one mechanism that made for extreme upward social mobility.

Ever shifting social realities rarely match prescriptive theories. Although theoretically excluded from the *askari* elite, merchants, Coptic scribes, Jewish financiers, and Greek Orthodox patriarchs wielded considerable power in some times and places. Women attained such great informal power during one seventeenth-century period that the Ottomans called it "the sultanate of women." When central control weakened—as in the Fertile Crescent provinces in the eighteenth and early nineteenth centuries, a "politics of notables" mediated between the center and the provincial masses. Notable status often ran in families; the notables could include *ulama,* tribal shaykhs, merchants, large landowners, and local military forces.

Since 1800, the Middle East and its elites have greatly changed under the impact of the Industrial Revolution, European conquest and rule, the breakup of the Ottoman Empire, nationalism and independence struggles, the Arab–Israel conflict, the petroleum and oil bonanza, secularist and Islamic ideologies, and the frustrations of continuing military, cultural, and economic dependency. Yet there has been continuity too.

Sunni *ulama,* or Islamic scholars at such sites as Yildiz Mosque, were among the elites of the Ottoman Empire at the height of its power in the Middle East. In the past two centuries, however, the influence of *ulama* declined in what eventually became Turkey and much of the rest of the Sunni-dominated countries of the region, even as the military elite generally remained powerful.
© Corbis. Reproduced by permission.

In the countries where colonialism prevailed, foreign elites forced the partially displaced indigenous elites to make the painful choice of collaboration or resistance. Collaboration was particularly tempting to some religious and ethnic minorities. In the Fertile Crescent, tribal shaykhs and large landowners functioned as notables mediating between the colonial power and the people, as they had once done with the Ottomans. Whether one collaborated or not, knowledge of the West and Western language became a career asset for officials and the emerging professional class. In the milieu of mandates and of party and parliamentary politics between the two world wars, lawyers flourished in both government and opposition. After World War II, as most Middle Eastern countries regained control of their affairs, landed elites and reactionary politicians in many cases still frustrated serious social reform. Pressure built, and army officers of lower-middle-class origin overthrew one regime after another. Was it a return to the praetorian politics of the Ottoman Janissaries and the Mamluks—the

The shah of Iran and Empress Farah used oil wealth and authoritarian rule to withstand the socialist challenge that spread elsewhere in and around the Middle East. However, the monarchs and their elite associates in Iran eventually fell before determined opposition by a revolutionary counterelite under the leadership of Islamic clerics. © BETTMANN/CORBIS. REPRODUCED BY PERMISSION.

armed forces that early nineteenth-century rulers had destroyed to clear the way for Western-style armies? The new armies remained on the political sidelines for most of the nineteenth century, reemerging briefly in Egypt during Ahmad Urabi's vain attempt to resist colonial control.

After 1900, armies reentered politics first in countries that had escaped colonial rule—Turkey with the Young Turks and Mustafa Kemal Atatürk and Iran with Reza Shah Pahlavi. Military coups in the Arab countries began later, following independence from colonial rule: Iraq in the 1930s and again in 1958, Syria in 1949, and Egypt in 1952. The regime of Gamal Abdel Nasser—with its Soviet alliance, single-party authoritarianism, and Arab socialism—became a prototype for many others. Hopes that the new military elites and their civilian technocratic allies—economists, engineers, scientists—represented the progressive vanguard of a new middle class soon proved to be overblown.

Patrilineal monarchies in Morocco, Jordan, Saudi Arabia, and elsewhere in the Arabian Peninsula weathered the revolutionary Arab socialist challenge. Oil wealth helped rulers purchase political acquiescence, but it did not save the monarchs of Iraq, Libya, or Iran. In both the monarchies and their revolutionary challengers, patterns of authoritarian rule persisted. Family connections, old-boy networks, and patron-client relations still figure prominently in elite recruitment and perpetuation despite the widespread longing for a fair and open system.

Unlike the military, the *ulama* have lost much of the influence they had in 1800. During the nineteenth century, reforming rulers appropriated revenues from religious endowments, tried to turn the *ulama* into bureaucrats, and bypassed them with Western-style courts and state-school systems. In the *ulama*'s willingness to provide legitimization for almost any regime in power, they have jeopardized their moral authority. Engineers and others associated with the state schools, not the *ulama,* have been in the forefront of Islamic and Islamist protest since the late 1960s. Yet in contrast to the turbulent 1950s and 1960s, most Middle Eastern regimes proved remarkably durable in the 1970s and 1980s. In Iran, however, the distinctive tradition of Shiʿism enabled a counterelite of *ulama* to lead a revolution against the shah and to consolidate its power as the core of a new ruling elite. Attempts to export the revolution to Sunni-dominated countries have met little success.

DONALD MALCOLM REID

EMERGENCY REGULATIONS

During the British mandate of Palestine and as adopted by Israel, rules allowing the restriction of civil rights in emergencies.

On 22 September 1945, Britain's high commissioner in Palestine issued Defense Emergency Regulations that in turn were based on the 1937 Palestine (Defense) Order in Council. That order gave the commissioner broad powers to adopt measures needed in defense of "public safety" and to suppress mutiny. The regulations were originally enacted to subdue the Palestine Arab Revolt of 1936–1939. They were later used against Zionism's guerrilla organizations fighting to remove British rule from Palestine.

The regulations were carried over after the State of Israel was established (15 May 1948), under the 1948 Law and Administration Ordinance. On 21 May 1948, the Provisional State Council proclaimed a state of emergency that has never been revoked, although various sections have been amended or adapted. The regulations, consisting of 170 articles divided into fifteen sections, allow the government and the military to introduce extreme measures and abolish the most elementary rights, such as freedom of movement, travel, and work. Thus, between 1948 and 1966, approximately 90 percent of Israeli Arabs were placed under military administration, with military governors appointed directly by the defense minister. The governors drew their virtually unlimited powers from the Emergency Regulations. The regulations have also been widely used to detain Israeli Arabs and Palestinian refugees without trial, without formal charges, and without judicial or legislative review.

BENJAMIN JOSEPH

ENTEBBE OPERATION

Israeli hostage rescue operation, code-named Kadur ha-Ra'am (Thunderbolt).

On 27 June 1976, two German nationals and two Palestinians boarded Air France Flight 139 en route from Tel Aviv to Paris during a stopover in Athens, and hijacked it first to Benghazi, Libya, then on to Entebbe Airport in Uganda. Following a plan masterminded by Dr. Wadi Haddad, renegade figure associated with the Popular Front for the Liberation of Palestine (PFLP), and Ilyich Sanchez Ramirez, which involved terrorists of varied affiliations (including the notorious "Carlos") the hijackers were there joined by a second team, the passengers divided into Jews and non-Jews, and the latter released. While feigning negotiation with the hijackers and with their host, President Idi Amin of Uganda, Israel made preparations for a military rescue mission. On the night of 3 July four Hercules transport jets carrying 150 Israeli commandos took off from Sharm al-Shaykh and flew 2,484 miles (4,000 km) to Entebbe, evading detection throughout. Accompanied by diversionary measures, the paratroopers stormed the terminal where the 101 hostages were kept, killing all eight captors and numerous Ugandan soldiers. The Israeli commander, Lieutenant Colonel Yonatan Netanyahu, and three hostages were killed during the operation, which lasted some forty-five minutes from landing to takeoff. (An elderly Jewish woman who had been hospitalized in Kampala and was not present during the rescue was later murdered.) The jets refueled at Nairobi and returned to a tumultuous welcome the following morning in Israel. Arab and African countries and the Communist bloc condemned the Israeli action, while in the West reaction was largely positive.

ZEV MAGHEN

ENTE NAZIONALE IDROCARBONI (ENI)

Italian oil company that sought access to Algeria's oil industry.

Ente Nazionale Idrocarboni, a multistate petroleum company, was headed by Enrico Mattei. Mattei promised both arms and money to Algeria's Front de Libération Nationale (FLN; National Liberation

Front) during the Algerian War of Independence (1954–1962) in return for unspecified future access to the oil and natural gas supplies discovered in Algeria's Saharan region. Mattei's private plane crashed under mysterious circumstances in October 1962, and Algeria nationalized its oil and gas industry after independence.

See also Algerian War of Independence; Front de Libération Nationale (FLN).

Dirk Vandewalle

ENVER PAŞA

[1881–1922]

Ottoman general and strongman of the Committee for Union and Progress.

Enver Paşa was born in Constantinople (now Istanbul) 23 November 1881. When his father, a railway employee, was transferred to Macedonia, Enver attended the Monastir military junior high school. He was graduated from the War Academy (Mekteb-i Harbiye) as staff corporal in 1902 and was posted to the Third Army in Macedonia.

In 1906 Enver joined the Ottoman Liberty Society in Salonika, a constituent group of the reorganized Committee for Union and Progress (CUP). He led one of a series of revolts in Macedonia in 1908 that triggered the Young Turk Revolution of 23 July 1908. In Constantinople he was hailed as a revolutionary hero. His appointment to Berlin as military attaché at the end of 1908 failed to remove him from the political changes taking place in the capital. During the counterrevolutionary uprising of April 1909, he joined the Army of Deliverance, which marched to Constantinople to restore order, then returned to his post in Berlin. In 1911, after a brief assignment in Scutari at the time of the Albanian uprising, he transferred to Libya, where he commanded Ottoman forces in Benghazi against the Italians. His betrothal to the granddaughter of Sultan Abdülmecit II, Naciye Sultan, was concluded in his absence, presaging a more prominent public role for him in Constantinople.

Enver led the armed CUP coup against the Kamil government in January 1913. He fought for the recapture of Edirne from the Bulgarians during the Balkan War. Enver received multiple promotions and became minister of war in January 1914 and proceeded to reorganize the army by purging the senior officers. He set up a paramilitary intelligence and propaganda organ.

Enver Paşa was a general and a leader of the Young Turks, a reformist movement in the last years of the Ottoman Empire. Although the group's revolution restored a liberal constitution in 1908, he soon assumed dictatorial power and made an alliance with Germany, leading the empire into World War I and its final defeat. © Hulton-Deutsch Collection/Corbis. Reproduced by permission.

Enver Paşa was responsible for authorizing the passage of German dreadnoughts into the Black Sea in November 1914, effectively committing the Ottoman Empire to war on the side of Germany. As deputy commander in chief of Ottoman forces, he personally led the Russian campaign in Eastern Anatolia that resulted in the earliest and most devastating setback of the entire war for the empire. After Russia withdrew from the war, however, Enver

delegated his uncle Halil and brother Nuri to lead the Ottoman armies into the Caucasus, seeking a pan-Turkish union. This strategy was aborted by Ottoman defeats on other fronts.

Following the Ottoman surrender at Mudros, Enver fled abroad with other prominent CUP leaders. In November 1918, he first went to Odessa and was arrested attempting to travel to the Caucasus, possibly to establish a resistance against Allied armies in occupation of Ottoman territories. He managed to flee to Germany. In August 1920, he returned to the Soviet Union. After an audience with the Bolshevik leaders in Moscow, Enver went to Baku and participated in the Congress of Eastern Nations. The Turkish nationalist government in Ankara prevented his entering Anatolia. The Bolsheviks allowed him to go to Turkistan to form an Islamic army to liberate India. Instead, in September 1921, Enver joined the Turkistan resistance movement in Bukhura, which he coordinated signing communiqués as "the son-in-law of the caliph." He was killed near Dushanbe, 4 August 1922, as he personally led attacks against the Bolshevik forces.

Enver's reputation as the "hero of liberty" and his notoriety as the dictator of the CUP, though both exaggerated, cast him in history as a controversial figure. A similar hyperbole is the occasional German reference to the Ottoman Empire as "Enverland." Enver personified the eclectic currents prevalent among the Ottoman political elite after 1908. He was sympathetic to the Turkish, and following the Ottoman loss of the Arab provinces, to pan-Turkish ideas. As a member of the royal household and a pious man, Enver was also deeply committed to Ottomanism and the Islamic principles that sustained the Ottomanist ideology.

EQBAL, MANOUCHEHR

[1908–1977]

Iranian politician and prime minister.

Born in Mashhad to a prominent Khorasani family, Manouchehr Eqbal pursued his medical studies in France and returned to Iran in 1933. In 1939, he joined the Faculty of Medicine at Tehran University and was promoted to full professor in 1941. He began his political career in 1942 as deputy minister of health in the cabinet of Ahmad Qavam, when the authority of Reza Shah Pahlavi was challenged by the *majles* (parliament). In 1949, after an attempt on the life of the shah, it was Eqbal who announced the government's decision to outlaw the Tudeh Party. In that same year, he was appointed minister of interior. In 1950, he was made governor of Azerbaijan and chancellor of Tabriz University but he was forced to resign in 1951, a few months after the nationalist government of Mohammad Mossadegh assumed power. After the Central Intelligence Agency-sponsored coup, which brought back the shah from exile, Eqbal's political career flourished. He was appointed a senator in 1954, chancellor of Tehran University in 1954, and minister of the royal court in 1956. In 1957, he was made prime minister.

In that same year, as part of the shah's plans to effect U.S.-supported reform of Iran's political system, a two-party system was implemented and Eqbal was charged with founding the government majority party, Hezb-e melliyun (Nationalist Party). Eqbal's long-time rival and another member of the shah's inner circle, Amir Asadollah Alam, established the loyal opposition party, Hezb-e mardom (People's Party). During Eqbal's tenure as prime minister, the SAVAK (the domestic intelligence service) was created in 1957, and an abortive land reform law promulgated in 1960. In 1961, under U.S. pressure and faced with increasing domestic criticism, the shah reluctantly removed Eqbal from the premiership. In 1961, he was made Iran's representative to United Nations Educational, Scientific, and Cultural Organization (UNESCO), and in 1963 chairman of the National Iranian Oil Company. With the rise to prominence of Alam during the 1960s and the 1970s, Eqbal gradually fell from favor. He was also a grand master of several Freemason lodges, including Homayun and Mowlavi, from the 1950s to the 1970s.

Neguin Yavari

ERBAKAN, NECMEDDIN

[1926–]

Turkey's most prominent Islamist politician, 1970–1998; prime minister, 1996–1997.

Necmeddin Erbakan was born in Sinop on the Black Sea. He graduated from Istanbul Technical University as a mechanical engineer in 1948 and then went to Germany for further study. Beginning in 1962 he taught in Istanbul Technical University, and he became full professor in 1965. With the support of Turkey's small merchants and artisans, he was elected chairman of the Union of Chambers of Commerce. His opposition to state-led economic policies, which favored large-scale industrialists, led to his removal from office. Thereafter he became the spokesman of the "little man" in Turkey, and in 1969 he was elected to parliament as an Independent from Konya. In 1970, with the support of Naqshbandi Shaykh Mehmet Zahid Kotku, Erbakan formed the National Order Party (Milli Nizam Partisi), which had an Islamic, anti-Western, anticapitalist agenda. The Turkish Constitutional Court closed down the party in 1971 because of its antisecularist activities. It re-merged as the National Salvation Party (Milli Selamet Partisi) in 1973. The party stressed "heavy industrialization" and "moral and spiritual development" as the two principles of its political agenda. Erbakan became the vice-premier and minister of state in 1973, when his party formed a coalition government with Bülent Ecevit's RPP. Erbakan also served in the National Front cabinets of Süleyman Demirel (1977). The leaders of the 1980 military coup banned all parties, including the National Salvation Party. Erbakan was arrested, and after a long trial in military court, he was acquitted. He returned to national politics in 1987 as head of the Refah Party, which won major mayoral offices in the 1994 municipal elections and dominated Turkish politics in the 1990s. Refah won the largest number of seats, but not a majority, in the 1995 parliamentary elections, and Erbakan became prime minister in a coalition government formed in 1996. He was forced out of office following the military's "soft coup" of 28 February 1997. Subsequently, the Constitutional Court banned Refah for antisecular activities (1998). Erbakan and other party leaders then organized the Virtue Party, which was banned in 2000. The younger and more reformist members challenged Erbakan's domination of the party beginning in 1998; they eventually split and formed the Justice and Development Party (AKP) under the leadership of Tayyip Erdoğan.

ERBIL, LEYLA

[1931–]

Turkish novelist and short-story writer.

Born in Istanbul, Turkey, Erbil studied at the Kadiköy Girls School and the Faculty of Literature. She began writing stories while working as a secretary and translator. Her first poetry was published in 1945, but she is known for her stories, which began to appear in various journals in the 1950s. Breaking away from the traditional techniques of Turkish literature and the syntax of the Turkish language, Erbil searched for a new narrative voice to depict the existential struggles of the modern individual who clashes with society. Erbil is noted for her ability to observe individuals using different societal perspectives, and her stories are characterized by efforts to depict the multiple dimensions of reality. Among her books are *The Wool Carder* (1960), *At Night* (1968), *A Strange Woman* (1971), *The Old Lover*

(1977), and *The Day of Darkness* (1985). She was a founding member of the Turkish Union of Writers in 1974.

DAVID WALDNER

ERDOĞAN, TAYYIP

[1954–]

Turkish politician and leader of the Justice and Development Party who became prime minister in 2003.

Tayyip Erdoğan was born in the Black Sea town of Rize. He moved to Istanbul in 1967 and subsequently graduated from the business school at Marmara University. As a candidate of the Refah Party (Refah Partisi), he was elected to a four-year term as mayor of Istanbul in 1994. During his tenure as mayor of Turkey's largest city, he achieved a reputation for improving public services and for making the city greener and cleaner. After the Constitutional Court banned the Refah Party in 1998, Erdoğan joined its successor, the Virtue Party. In that same year the State Security Court charged him with inciting religious hatred for reciting a poem by Ziya Gökalp at a public gathering; he was convicted and sentenced to ten months in prison, of which he served four months. In 2001, after the Constitutional Court, under military pressure, banned the Virtue Party, Erdoğan joined with a group of former Virtue parliamentarians to form the Justice and Development Party (AKP), and he led it to victory in the November 2002 elections. However, because of his previous conviction, he could not become prime minister until March 2003, after the Turkish Grand National Assembly had amended the constitution so that he could be a candidate in a by-election for Siirt. Erdoğan has disavowed some of the extreme Islamic views of his past and is trying to recast himself as a pro-Western conservative. For example, he does not insist on Turkey leaving the North Atlantic Treaty Organization (NATO) and he says that the country's membership in the European Union is a necessary and useful step. He has avoided the issue of Islamic dress for women by saying he will not bring his own wife—who wears a headscarf—to official functions.

ERETZ YISRAEL

The Hebrew phrase meaning Land of Israel.

The name *Eretz Yisrael* is biblical in origin, where it refers, variously, to parts of the region that were under Jewish sovereignty at different times. Since the dispersion of the Jews in 70 C.E., it has been used to designate Zion and "the Promised Land." Its actual borders are defined variously in the Talmud. It was also the Hebrew name for Palestine under the British Mandate. Indeed, when the first Palestine stamps were being issued, strong albeit unsuccessful pressures were exerted on the British authorities to have the designation be *Eretz Yisrael* rather than Palestine, the latter being a Roman designation.

After 1948, David Ben-Gurion insisted on the term *State of Israel (Medinat Yisrael),* because of his statist emphasis. By contrast, Menachem Begin frequently spoke of *"Eretz Yisrael,"* reflecting his allegiance to the historic Israel, the "Greater Israel." Likewise, *haredi* (ultra-Orthodox) Jews, whose attachments are much more religious than political—even if they accept the political legitimacy of the state—are apt to refer to *Eretz Yisrael* rather than *Medinat Yisrael.*

After the 1967 war, the Greater Land of Israel movement *(Eretz Yisrael ha-Shelema)* developed. Sparked by an enhanced attachment to the biblical Promised Land, its adherents—predominantly religious but comprising secular nationalists as well—opposed ceding sovereignty over the newly conquered territories and embarked on a settlement campaign.

CHAIM I. WAXMAN

ERSOY, MEHMET AKIF

[c. 1870–1936]

Turkish poet and Islamist.

Mehmet Akif Ersoy was born in Istanbul to a religious Muslim family; his father was a teacher at Fatih Medrese, and his mother's ancestors were from the Uzbek city of Bukhara. He learned Arabic, Persian, and French privately and studied veterinary medicine at the Halkali Baytar high school, which he finished in 1893. He held various posts as a veterinarian and teacher. In 1908, he began writing and became editor of the monthly Islamist journal *The Straight Path* (which proclaimed the cause of Islam), later called *Fountain of Orthodoxy,* to which he contributed poetry and essays. During the Turkish war of independence, he preached the cause of nationalism in the mosques and local newspapers of the Anatolian provinces.

Later in life, Ersoy would become known as one of the greatest poets in modern Turkish and the leader of the most intellectual of the Islamist movements in Turkey. He opposed nationalist reformers who argued that Turkey must import the West's civilization as well as its technology. He contended that the two were not necessarily linked and that importing the ethics and institutions of another culture would widen the cultural gap between elites and common people. Ersoy advocated an Islamic (not a secular) democracy, with a parliament based on consultative councils, as used by the prophet Muhammad's followers.

ELIZABETH THOMPSON

ERTUĞRUL, MUHSIN

[1892–1979]

Turkish actor and director in cinema and theater.

Muhsin Ertuğrul was born in Istanbul, where he attended state-run schools. He began acting in 1909, and in 1911 and 1913 he went to Paris to study theater. Known as the pioneer in all areas of modern Turkish drama, Ertuğrul was the principal man of the stage in Turkey between 1908 and 1923 and the sole movie director in the country until 1939. He received personal support from Atatürk in the development of the theater arts.

Ertuğrul turned the Istanbul Municipal Theater into an influential institution when he was appointed its director in 1927, substituting for the usual vaudeville shows and melodramas foreign classics and innovative new scripts in the Turkish language. When he was appointed director of the state theater and opera in Ankara in 1947, he produced *Kerem,* the first opera composed by a Turk. As director from 1947 to 1958, he opened local theaters in other cities, such as İzmir, Adana, and Bursa.

Meanwhile, Ertuğrul began making films in 1922; his 1935 *Aysel, Daughter of the Marshy Village* is now considered his masterpiece.

ERZURUM

The most important city in eastern Turkey and the capital of Erzurum province.

Erzurum is an ancient frontier town that historically was a site of contestation between Byzantium and Persia, Byzantium and the Arabs, and the Ottoman and Safavi empires. Erzurum is located in a high valley 2078 yards (1,900 meters) of the Kara

Su and Aras rivers. During the Ottoman period, the town had a large Armenian population, but the community was forcibly deported during the Armenian genocide of 1915. Later, Erzurum was the site of the first nationalist congress in 1919, which was attended by Mustafa Kemal (Atatürk) and issued the declaration of the Turkish war of independence from Allied occupation. Modern Erzurum has grown into the major urban center of eastern Turkey, with a population of 565,516 (census of 2000). It is the site of a large military base and Atatürk University, and is a trade center, especially for local products such as iron, copper, sugar, grain, cattle, and leather.

ERZURUM CONGRESS (1919)

Congress called to assert the integrity of the Ottoman state, 1919.

Named for the city in which it was held, the congress was called immediately after the Ottoman Empire had been on the losing side of World War I; the empire was to be dismembered. It was feared that the local area around Erzurum would become part of an Armenian state. The congress declared the nationalists' intention of defending the sultanate/caliphate against foreign occupiers and appealed to U.S. President Woodrow Wilson's principles of national self-determination. Mustafa Kemal (Atatürk) was elected chairman of the congress, and although the Istanbul government declared the congress illegal, ordering his arrest, he escaped. It was here that he made his first declaration of principles that would guide his war to unite Turkey as an independent nation.

ERZURUM, TREATY OF (1823)

Two treaties, 1823 and 1847, that settled boundary disputes between the Ottoman Empire and Iran.

Although the Treaty of Zuhab in 1639 had established the boundary between Ottoman Turkey and Iran, the border in the mountainous Zuhab region remained a site of intermittent conflict in the subsequent two centuries. Attacks from Iran into Ottoman territory prompted Sultan Mahmud II in 1821 to declare war on Iran. Fath Ali Shah Qajar's army had initial success and marched east as far as Diyarbekir in the south and Erzurum in the north. The first Treaty of Erzurum was signed in July 1823, but it essentially confirmed the 1639 border and thus failed to resolve the disputes that had led to conflict. A series of border incidents in the 1830s again brought Iran and Turkey to the brink of war. Britain and Russia offered to mediate, and a second Treaty of Erzurum was signed in May 1847. This treaty divided the disputed region between Iran and Turkey and provided for a boundary commission to delimit the entire border. The boundary commission's work encountered several political setbacks but finally completed its task in 1914.

ZACHARY KARABELL
UPDATED BY ERIC HOOGLUND

ESENDAL, MEMDUH ŞEVKET
[1883–1952]

Turkish novelist, short story writer, and politician.

Memduh Şevket Esendal was born in Çorlu to the Karakahyaoğullari family, which had migrated there from Rumelia. After attending elementary school in Istanbul and high school in Edirne, he returned to Çorlu to tend the family farm. He joined the Committee for Union and Progress party in 1906, and during the Balkan War fled to Istanbul, where he held several government jobs. He was Turkey's representative to Azerbaijan in 1920, ambassador to Iran from 1925 to 1930, and ambassador to Afghanistan

and the Soviet Union in the early 1930s. Esendal was in the Turkish Grand National Assembly from 1939 to 1950 and was general secretary of the Republican People's Party from 1941 to 1945.

Esendal is perhaps best known for his many short stories, which he wrote in a distinctively direct and realistic style, with careful depictions of daily life. He evoked daily life in Turkey often in a humorous way and with kindliness. With Sait Faik Abasiyanik, he is associated with the emergence of the modern Turkish short story form. Esendal also wrote several novels, which resembled his short stories in style.

See also Committee for Union and Progress; Republican People's Party; Turkish Grand National Assembly.

ESFANDIARY, FEREYDUN

[1930–2000]

An Iranian essayist and novelist.

Fereydun Esfandiary was born in Belgium to Iranian parents. His father was a diplomat, and as a child Fereydun Esfandiary lived in several foreign countries, including Afghanistan, India, and Lebanon, although he also spent long periods with family in Iran. In 1948 he was a member of Iran's national team at the Olympics in London. He then studied at the University of California, first in Berkeley and later in Los Angeles. In the early 1950s, he worked at the United Nations on the Conciliation Commission for Palestine and subsequently taught at the New School for Social Research in New York. In the 1960s, he moved to Los Angeles, where he lectured at the University of California.

In the late 1950s, Esfandiary turned to writing. Three of his novels dealt with his perception of Iran's ills: *Day of Sacrifice* (1959), *The Beggar* (1965), and *Identity Card* (1966). By the early 1970s, he was writing mostly essays. He embraced futurist ideas and legally changed his name to FM2030. His better-known futurist books include *Optimism One, Up-Wingers, Telespheres,* and *Are You a Transhumanist?* In these books he depicted modern technology as dehumanizing and school as obsolete. Esfandiary died of pancreatic cancer in July 2000; in accordance with his wishes, his body was frozen and stored in a special vault where it can be retrieved and revived once science has perfected a way to increase human longevity.

ESHKOL, LEVI

[1895–1969]

Israel's Labor Party leader; prime minister, 1963–1969.

Born in Kiev, Ukraine, as Levi Shkolnik Eshkol immigrated to Palestine in 1914, where he was a founder of Kibbutz Degania Bet and served in the Jewish Legion from 1918 to 1920. He was active in labor politics and Zionism throughout the period of British mandate (1922–1948). For three years, Eshkol headed the settlement department of the Palestine office in Berlin during the period of Nazi rule. He organized immigration and transfers of funds from Germany to Palestine, using the money to establish new settlement projects and the Mekorot Water Company, of which he was both the founder and the first president. In the same period, he was active in the High Command of the Haganah as the chief financial administrator, organizing arms procurement for the defense organization.

After the establishment of the State of Israel in 1948, Eshkol served in numerous government, Jewish Agency, and cabinet positions including director general of the ministry of defense (1948), where he was instrumental in establishing the Israeli weapons industry; head of the land settlement department of the Jewish Agency (1949), where he coordinated the settlement of the masses of new immigrants arriving in Israel; treasurer for the Jewish Agency (1950–1952); minister of agriculture (1951); and minister of finance (1952), where he was responsible for the implementation of the reparations agreement with Germany from World War II.

In 1963, upon the retirement of David Ben-Gurion as prime minister, Eshkol took his post and

that of defense minister (with Ben-Gurion's recommendation)—Ben-Gurion, however, soon accused him of mishandling state business, especially the government scandal called the Lavon Affair (in which Israeli spies were caught in Egypt but no one in the Israeli cabinet admitted to knowing about the mission). Consequently, Ben-Gurion left the MAPAI Party and formed Rafi.

Eshkol continued as prime minister during the period leading to the Arab–Israel War of 1967 and was faced with a divided cabinet over the question of war with Egypt. Because of public pressure, he ceded the defense portfolio to Moshe Dayan. Eshkol also enlarged the cabinet and brought in members of the right-wing Gahal bloc, establishing a National Unity government, which was retained in the 1969 elections to the sixth Knesset but ended when Gahal broke away in 1970.

See also Arab–Israel War (1967); Ben-Gurion, David; Dayan, Moshe; Haganah; Israel: Political Parties in; Jewish Agency for Palestine; Lavon Affair.

ESKINAZI, ROZA

[c. 1895–1980]

Popular Greek singer.

Roza Eskinazi was the most celebrated Greek café singer of the twentieth century. Born Sarah Skinazi in Constantinople to Sephardic Jewish parents, Avram and Flora Skinazis, Eskinazi dominated Greek popular music during the late 1920s and 1930s, just as sound recording technology was enabling the dissemination of Levantine musical forms to a large and growing diaspora. Possessing a sweet and lilting soprano, Eskinazi sang in Greek, Turkish, Arabic, Ladino (Djudezmo), Italian, and Armenian. Her recordings in Athens for both Columbia and Orthophonic Records assured Eskinazi's international popularity. Her recordings were marketed to a worldwide network of Greek, Armenian, and Sephardic Jewish diaspora communities uprooted by the fall of the Ottoman Empire and the population transfers of the early 1920s. Several notable records, such as *To Neo Hanoumaki,* included multilingual songs of the Greek and Balkan café scene. By the 1920s, vibrant Greek emigrant communities were found not only in North America but in the Congo, Abyssinia, and especially in the Egyptian cities of Alexandria and Suez. As a consequence of the targeted marketing of Eskinazi's recordings, several ethnic groups claim her as a part of their musical heritage.

Although Eskinazi's popularity waned after World War II, she toured in Turkey and the United States during the 1950s. In 1952, she recorded some forty songs for the Balkan Record Company of New York City. During the 1960s and 1970s, she still commanded considerable interest in Greece and continued to appear in limited public performances. Throughout the 1980s, a growing resurgence in Greek café music placed the genre firmly in the world music scene. At the same time, scholars of ethnomusicology and social history argued for a conflation of various Balkan and Middle Eastern musical genres into one: *rebetika.* Eskinazi was soon recognized as one of the most prominent *rebetika* performers of all time. The enduring power and beauty of her performances is evidenced by the fact that, even when removed from her original cultural setting and musical traditions, her work continues to attract new listeners with every passing year.

Roza Eskinazi died on 2 December 1980 and is buried in an unmarked grave at Stomio, near the Gulf of Corinth.

ESMATI-WARDAK, MASUMA

[1930–]

Afghan woman writer and politician.

Masuma Esmati-Wardak was born in 1930 in Kabul. She graduated from Malalai High School in 1949 and from Kabul Women's College in 1953. In 1958 she received a degree in business administration in the United States. Upon her return to Afghanistan, she became principal of Zarghuna High School in Kabul, and then in 1959, the director-general of secondary education. She was a member of the Constitutional Advisory Commission and a participant in the *Loya-Jirga* (National Assembly) that endorsed the 1964 Afghan Constitution. In 1965 she was elected from Kandahar to the *Wulosi Jirga* (the lower house of parliament) and became a voice for women's rights. In 1976 she was recognized by the Women's Coordination Committee of India for her contribution to the cause of women. She served as president of *Shura-i-Zanan-i-Afghanistan* (Afghanistan's Women's Council) and then as minister of education during the government of Najibullah (1986–1992). She has written extensively on issues pertaining to women, including a book in Dari (the Persian dialect of Afghanistan) on the history of Afghan women, and a book in Pashtu titled *Women's Contributions to Pashtu Oral Tradition* that was translated into English.

SENZIL NAWID

ETEMADI, SALEHA FARUQ

[1928–]

Afghan activist for women's rights, 1962–1974.

Saleha Faruq Etemadi, an important public figure in Afghanistan in the 1960s and early 1970s, was born in 1928 in Kabul. She was among the first graduates of Malalai High School, a French lycée for girls in Kabul. After graduation from the college of literature for women in 1951, she became a teacher and then was appointed vice principal and later principal of Malalai High School. In 1962 she became president of the government-sponsored Women's Association *(De Mirmono Tolena).* She was also editor of the association's monthly magazine, *Mirmon* (Woman). Under her leadership, the Women's Association became an important force for the promotion of women's rights in Afghanistan in the 1960s and the early 1970s. Etemadi was out of office during the presidency of Muhammad Daud (1974–1978) and the Marxist regimes of the Khalqis and Parchamis, the two divisions of the People's Democratic Party of Afghanistan. However, during the government of Najibullah (1987–1992), she once again gained prominence as a public figure when she was appointed minister of social security *(Amniyyat-i-Ijtemaʿi)* in 1990. After the fall of Najibullah in 1992, Etemadi left Afghanistan to live in exile in Switzerland.

SENZIL NAWID

ETHIOPIAN JEWS

Jews of Ethiopia, many of whom have emigrated to Israel.

In Ethiopia, the Jews referred to themselves as Beta Israel (the House of Israel) but were most commonly known as Falashas (wanderers, outsiders). In Israel, these same people call themselves Ethiopian Jews, symbolically expressing their equality with other Jews and rejecting the stigma they once held in Ethiopia.

There were 85,000 Ethiopian Jews living in Israel in 2002, 23,000 of whom were Israeli born. Their mass emigration from Ethiopia began during the early 1970s, encouraged by a decree issued by Israel's chief rabbis that the Jews from Ethiopia were "full" Jews (although they still required symbolic conversion to Judaism). In Operation Moses (which took place during 1984–1985), 7,700 Jews were airlifted to Israel from refugee camps in Sudan. A second large-scale airlift known as Operation Solomon took place in 1991. As the Mengistu Haile Mariam regime was collapsing in Addis Ababa, 14,400 Ethiopian Jews were transferred to Israel.

The majority of the early immigrants to Israel from Ethiopia hailed from the northern province of Tigre and are Tigranian speaking. More than 80 percent of Ethiopian Jewry in Israel originate from Gonder, Semien (or Simyen), Woggera, and other areas. They speak Ethiopia's official language, Amharic, which is a Semitic language. The younger immigrants in Israel speak Hebrew. Beta Israel holy books, including the Bible, are written in Geez, the script of Ethiopian scholarship.

In Ethiopia, the Beta Israel community observed a unique form of Judaism that was based on biblical commandments and was influenced by Ethiopian Orthodox Christianity (which in turn displays remarkable similarities to aspects of Judaism). The Beta Israel did not know the Oral Law; nor were they aware of rabbinic interpretations. They strictly observed rules of purity and pollution. The cornerstone of their religion until this century was monasticism, with the monks passing down liturgy, literature, and religious edicts.

During the twentieth century, urged on by visiting Jews such as Dr. Jacques Faitlovitch from Paris, some Beta Israel were exposed to mainstream Judaism. Faitlovitch's pupils, who studied in Europe and other countries, included Taamrat Emmanuel (1888–1962), aide to the Emperor Haile Selassie; Tadesse Yacob (1913–), deputy minister of finance in Ethiopia; and Yona Bogale (1908–1987), who acted as teacher and intermediary between Jews in Ethiopia and Israel.

The Ethiopian Jews are in the process of coming in line with Israeli Judaism, although some *kessoth* (priests) and members of the community do not wish to accept the authority of Israel's chief rabbinate. In 1985 the Ethiopian Jews demonstrated in front of the rabbinate's offices, objecting to the ritual immersion they had to undergo for acceptance as "full" Jews. To date, Ethiopian Jews are referred to one particular rabbi for marriage purposes.

In 1992 some Ethiopian Jews organized demonstrations to demand that the Feresmura, Jews who had converted to Christianity in Ethiopia from the nineteenth century on, should be allowed to immigrate to Israel under the Law of Return (1950). In 2003 the Ariel Sharon government gave 19,000 Feresmura the right to immigrate to Israel.

A group of Ethiopian Jews from the Quara region arrive in Israel in 1999. Ariel Sharon, at the time Israel's outgoing foreign minister, led the effort to implement the relocation. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

In Ethiopia, the Beta Israel were primarily agriculturists and tenant farmers. They also engaged in petty trading and seasonal occupations, such as metalwork and sewing. In Israel, they have been settled almost exclusively in seven concentrations in a few localities (Netanya, Rehovot, Haifa, Hadera, Ashdod, Ashkelon, Beersheba) where they are largely employed in manufacturing and public services. In 1999 53 percent were in the labor force. Most Ethiopian Israelis own their homes. There is still a difficult situation regarding the housing of singles who live in mobile-home sites.

All Ethiopian Jewish children study in regular Israeli schools. Teens attend residential schools. Large numbers of young people have undergone occupational retraining courses. Several hundred Ethiopian Jews study in institutes for higher learning in Israel; many more have graduated from colleges and universities, majoring in technological and social sciences and in paramedical fields.

EUPHRATES DAM

The Keban, Tabaqa, and Atatürk dams on the Euphrates river.

Since 1970, Turkey and Syria have built three major dams on the Euphrates, which as a group will severely limit the river's flow into Iraq. The Keban dam, near Elaziğ, was the first to be completed. It supplies electricity to large cities in western Turkey. The Tabaqa Dam in Syria is both a major power and irrigation project. The Atatürk (Karababa) Dam, near Urfa, is the most ambitious of the three. It is intended to spur development in the Turkish southeast (something the Keban project failed to do) by irrigating nearly 4.5 million acres (1.7 ha), almost three times the area to be irrigated by the Tabaqa.

When all dams are in operation, of the 30 billion cubic meters of water that once reached Iraq, only 11 billion cubic meters will remain. Since Iraq claims that its minimum requirement is 13 billion cubic meters, there will be a shortfall. Since no treaty exists to allocate the water, Iraq has no recourse; in its weakened political position (since the Gulf Crisis of 1990/91) it will be in a poor position to bargain.

EVIAN ACCORDS (1962)

March 1962 agreements between the French government and the Gouvernement Provisoire de la République Algérienne.

The Evian Accords—reached between the French government and the Algerian Front de Libération Nationale's (FLN) Gouvernement Provisoire de la République Algérienne (GPRA)—were very difficult to conclude. Their negotiation took place in a climate roiling with rebellion and revolution. Belkacem Krim presided over the Algerian delegation, ably assisted by Saad Dahlab. Louis Joxe headed the French team.

Negotiations began in May 1961 in Evian, France, one month after President Charles de Gaulle suppressed a military rebellion by recalcitrant generals who opposed Algerian decolonization. The talks soon broke down over the future status of the Sahara (with Joxe suggesting the possibility of its partition) and the option of double citizenship in a future Algerian state for the *pieds-noirs,* or European settlers. Secret discussions in late 1961 resulted in a resumption of full negotiations in February 1962 at Les Rousses, a hideaway in the Jura Mountains. By that time, the Organisation de l'Armée Secrète (OAS) was wreaking havoc in an increasingly anarchic, uncontrollable Algeria. Furthermore, ideological fissures in the FLN widened. There were intense pressures on both sides to arrive at a settlement. De Gaulle had already ruled out partitioning the Sahara. The FLN, in turn, allowed France to preserve its petroleum and natural gas concessions and its military and nuclear testing bases. The *pieds-noirs* also received numerous guarantees on the assumption that most of them would remain in Algeria. After settling these arduous issues, negotiations adjourned briefly. Krim and Dahlab successfully defended their actions and compromises before the GPRA and the increasingly hostile general staff of the Armée de Libération Nationale (ALN). The negotiators returned to Evian to complete the accords, which were signed on 19 March 1962.

A joint cease-fire introduced the accords. This was followed by five "chapters." Chapter I addressed the formation of an interim, provisional government whose chief task was to prepare a self-determination referendum. Chapter II stipulated the *pieds-noirs'* future role in independent Algeria, and it framed the future French-Algerian relationship of "cooperation." Chapter III considered "military questions." Chapter IV stated that disputes would be negotiated with "recourse" to the international

court of justice. Chapter V asserted that if self-determination (i.e., Algerian independence with cooperation) was affirmed by the referendum, France pledged to recognize immediately the new nation. The meticulous guarantees to protect the settler minority ensued, followed by detailed "declarations of principles" particularly regarding post-colonial cooperation.

Given the neocolonial implications of the accords, alienated FLN members and the general staff officers condemned the loss of sovereignty symbolized by the perpetuated French economic and military presence. The Tripoli Program of June 1962 displayed the nationalists' discontent. Differences over the accords contributed to an intra-FLN fratricide in the summer of 1962 that overthrew the GPRA. Succeeding Algerian governments subsequently aimed to revise the accords and pursue "postcolonial decolonization" in moves such as the nationalization of French Saharan concessions in February 1971. In addition, changing historical realities vitiated the guarantees meant to secure the *pieds-noirs.* The violent nihilism of the OAS and the general insecurity forced hundreds of thousands of settlers—almost the entire community—to flee Algeria for France, thereby making the protective stipulations anachronistic. Despite their controversial shortcomings, the accords liberated Algeria and freed France from a destructive colonial relationship.

EVREN, KENAN

[1918–]

Seventh president of the Republic of Turkey; architect of 1982 constitution.

Kenan Evren graduated from military college in 1938 and the military academy in 1948. He rose to the rank of general in 1964. He served as Turkey's commander of land forces from 1977 to 1978 and the chief of the general staff from 1978 to 1980. He was the leader of the September 1980 military coup against the government of Süleyman Demirel, and afterwards he ruled the country as the head of the National Security Council, which had full powers of the legislature and executive. In 1981 Evren and the National Security Council formed a Constitutional Assembly to prepare a new constitution, which was approved in a national referendum in November 1982. The constitution included a temporary article that automatically conferred on the head of the National Security Council the office of president for a seven-year term; subsequently the president would be elected by the parliament. Thus, with the ratification of the constitution, Evren became the seventh president since the establishment of the republic in 1923. Upon becoming president, he gave up his military duties and served as a civilian president until November 1989.

EXODUS (1947)

An illegal immigration ship carrying Holocaust survivors to British-ruled Palestine in 1947, which became a symbol of the Zionist struggle for a Jewish state.

The *Exodus* was purchased in the United States by the Mossad le-Aliyah Bet, a Zionist agency that organized the illegal immigration of Jews to Palestine. It set sail from France in July 1947 carrying 4,500 refugees from the displaced persons (DP) camps in occupied Germany. When the ship approached Palestine, the British attacked it. In the ensuing bat-

tle, three were killed and dozens were wounded. The damaged vessel, escorted by British warships, sailed to Haifa, Israel (then Palestine), where the passengers were transferred to three ships that deported them to France. Following their resistance to landing in France, culminating in a hunger strike, the British expelled them to Germany. From Germany they emigrated to Palestine within a year.

The "Exodus Affair" played a part in the propaganda war against the British. The arrival of the ship at Haifa during the widely publicized visit of the United Nations Special Committee on Palestine (UNSCOP) spread the story worldwide, and the ship's symbolic name drew attention, too: Originally named *President Warfield,* the ship was renamed after the second book of the Bible, which tells the story of the ancient exodus of the Jews from Egypt.

Since the 1990s, a post-Zionist trend in Israel has elicited a debate as to whether the Zionist leadership exploited the illegal immigrants in order to win points in the struggle for the foundation of a Jewish state or whether they acted in true partnership in the interests of the refugees and in pursuit of a common national goal.

RACHEL WEISSBROD

EYÜBOĞLU, BEDRI RAHMI

[1911–1974]

Turkish painter and poet.

Bedri Rahmi Eyüboğlu was born in Giresun-Görele, the son of a *kaimmakam* (local ruler). He attended the Istanbul Fine Arts Academy in 1927 and studied in Paris in 1931 and 1932. From 1937 to his death, he was a teacher at the Fine Arts Academy, while producing paintings, drawings, mosaics, and three books of poetry. His works are most notable for their motifs drawn from Anatolian popular culture.

Eyüboğlu was associated with two important art movements of the mid-twentieth century. While painting in a fauvist style in the 1930s he joined the D-Group, which eschewed academicism in art and promoted the latest Western trends. In the 1940s, he and his students formed the Group of Ten, which sought a synthesis between Western technique and Eastern decorative motifs.

ELIZABETH THOMPSON

EZRA AND NEHEMIAH OPERATIONS

Massive airborne transfer in 1950–1951 of the overwhelming majority of the Jews of Iraq to Israel.

The mass emigration, invoking names of the two organizers of the return of Jews from the Babylonian Exile to the Holy Land some 2,500 years earlier, was made possible by a draft law introduced into Iraq's Parliament on 2 March 1950, permitting Jews to leave the country provided they surrendered their Iraqi nationality. The measure came in the wake of a massive wave of illegal emigration of Jews via Iran, organized by the Zionist underground. Prime Minister Salih Jabr told Parliament, "It is not in the public interest to force people to stay in the country if they have no desire to do so."

The number of emigrants far exceeded original estimates. Whereas immigration authorities in Israel had planned to receive about 300 persons a day—and this with difficulty—the daily influx at its peak reached an average of 1,400. By the end of 1951, Iraqi Jews airlifted to Israel totaled 107,603; some 16,000 others had departed the country by other means—some illegally to Palestine, some legally to countries in the West. By the beginning of 1952, it was estimated that no more than 6,000 (out of a total of some 130,000) Jews remained in Iraq.

FADLALLAH, SHAYKH HUSAYN

[1935–]

Shiʿite scholar and teacher in Lebanon.

Shaykh Husayn Fadlallah was born in 1935 in al-Najaf, Iraq, where his father Abd al-Raʾuf served as religious scholar and teacher in the famed Shiʿite religious seminaries. Fadlallah attend religious schools very early, and studied under some of the most famous Shiʿite Grand Ayatullahs of the twentieth century such as Muhsin al-Hakim, Abu al-Qasim al-Khuʾi, Husayn al-Hilli, and Mahmud Al-Sharawadi. Fadlallah started teaching in al-Najaf, entering into the polemical debates between the Marxists and their rivals, which were common in Iraqi politics at the time. He returned to Beirut in 1966 and settled in the Eastern suburbs of Nabʿa, where he founded the society of Usrat at-Taʾakhi, a cultural Islamic organization. He also founded a religious seminary, which he continues to head, and teaches weekly seminars in the Shiʿite religious seminary in Damascus. He believes that Islamic jurisprudence should be freed from its abstract formulations and expressed in a language that can be understood by lay people. His literary taste is also evident in his poetic language.

Fadlallah came to international prominence after 1982 and the rise of Hizbullah. He was blamed by the United States for serving as its "spiritual guide" and for religiously sanctioning the suicide attacks against Israeli, French, and U.S. targets in Lebanon in 1980s. Fadlallah had close ties to the Iraqi al-Daʿwa Party and to Hizbullah, but he has denied occupying an official position in the partys' hierarches. In 1985 Fadlallah miraculously survived a car bomb that reportedly was planted by the CIA in the neighborhood of Bir al-Abd, where he had settled after the eviction of Shiʿa from the eastern suburbs of Beirut after 1975. Fadlallah was an advocate of Ayatollah Ruhollah Khomeini's doctrine of *Wilayat al-Faqih* (Persian: *velayat-e faqih*) in the 1980s, but seems to have moved away from it in the

1990s. His views have moderated in recent years—he now stands for multiculturalism and does not call for an Islamic republic in Lebanon. His relations with Iran and Hizbullah have been strained in recent years. Fadlallah is now referred to as *Ayatullah,* a sign of his emergence as a Shiʿite senior *marji.*

As'ad AbuKhalil

FAHD IBN ABD AL-AZIZ AL SAʿUD

[1921–]

King of Saudi Arabia, in power since 1982 but unable to rule since the late 1990s because of failing health.

King Fahd of the Al Saʿud dynasty took power in Saudi Arabia after his brother, Khalid, died of a heart attack in 1982. Until he was sidelined by failing health in the mid-1990s, Fahd played a significant role in mediating inter-Arab conflicts and attempted to strengthen his country's ties with the United States. © AP/Wide World Photos. Reproduced by permission.

Fahd ibn Abd al-Aziz Al Saʿud was born in 1921 in Riyadh, the eleventh son of Abd al-Aziz ibn Abd al-Rahman Al Saʿud, the founder of Saudi Arabia. Like other Saudi princes, he received an education in the royal court, where the emphasis was on Islam, but also included a grounding in history and political affairs. As the eldest of seven sons of Abd al-Aziz's favorite wife, Hassa bint Ahmad al Sudayri, Fahd and his full brothers form the largest and most cohesive grouping within the Al Saʿud (House of Saʿud), the Al Fahd or, in popular Western (not Saudi) usage, the Sudayri Seven. They are thus the dominant faction in a system of government in which political power is held mainly by the Al Saʿud ruling family. Fahd is the first Saudi king to attain power after rising through the bureaucracy. In 1953 he became the country's first minister of education, and he has been instrumental since then in developing the country's education system. In 1958 he helped lead the attempt to force the abdication of his half brother, King Saʿud. When the older half-brother Faisal assumed executive powers as prime minister in 1962, he named Fahd interior minister, confirming a close partnership that would continue until King Faisal's death. Fahd was effective in implementing Faisal's reforms and by the early 1970s had emerged as the most influential prince, already a key voice in foreign-policy issues.

In 1965 the royal family had agreed on Fahd's designation as second deputy prime minister, shortly after it had prevailed on the reluctant Prince Khalid ibn Abd al-Aziz to become crown prince. (Thus a smooth succession was assured when an unbalanced nephew assassinated King Faisal on 25 March 1975.) Khalid and Fahd had formed an effective partnership, with contrasting personalities and qualities. Fahd was, in the Saudi context, a progressive and had made his mark as an able administrator. He enjoyed the exercise of power and worked effectively with bureaucrats and technocrats.

Though King Khalid suffered from heart disease, undergoing open-heart surgery both before and after his accession, he played an active role in all major decisions, and Fahd was always careful to defer to the king in his presence. Together they guided the kingdom through a period of great perils—the U.S.-brokered Camp David Accords between Egypt and Israel, which estranged Saudi Arabia from its principal Arab ally; the Iranian

King Fahd of Saudi Arabia (right) with Egyptian president Husni Mubarak. Relations between the two countries became strained after Egypt signed a peace treaty with Israel in 1979, but Fahd reestablished diplomatic relations with Mubarak in 1987, ushering in Egypt's return to the Arab fold. © Reuters NewMedia Inc./Corbis. Reproduced by permission.

Revolution of 1979 that fomented Shiʿite unrest in Saudi Arabia's Eastern Province (al-Hasa) and helped to trigger a profoundly unsettling attempt at a neoconservative Islamic uprising when militants seized the Great Mosque at Mecca; and the outbreak of the Iran–Iraq War, which threatened to spill over into Saudi Arabia. In 1981 he put forward a proposal for settling the Arab–Israeli dispute, which came to be known as the Fahd Plan.

When Khalid succumbed to a heart attack on 13 June 1982, Fahd's accession was smooth, with his next eldest half-brother Abdullah immediately confirmed as crown prince and Sultan ibn Abd al-Aziz Al Saʿud, his next eldest full brother, designated as second deputy prime minister and effectively the next in succession.

Serious challenges have marked Fahd's rule. He became king just as petroleum prices were beginning a downward plunge that reduced the kingdom's oil revenues more than fivefold. This forced the king to cut back on implementing development plans and increased pressure to wean the country from its overreliance on foreign labor. The country's economic woes made it easier for voices of dissent to gain credibility among segments of the population. Fahd responded to some expressions of dissent with arrests and suppression. However, by the early 1990s he had put together a series of government reforms meant to signal his willingness to open up new channels of consultation. On the regional stage, Fahd was successful in asserting the kingdom's role as an important actor, mediating political conflict in Lebanon, nurturing Egypt's

return to the Arab League, and laying the groundwork for greater cooperation among the Arab states of the Persian Gulf, in the form of the Gulf Cooperation Council. Fahd's attempts to expand his country's good relations with the United States in the area of military cooperation ran into difficulties when a planned sale of advanced warning and air control aircraft (AWACS) ran afoul of congressional opposition in 1986, and the revelation of the purchase of Chinese missiles brought similar criticism from some U.S. quarters two years later. Finally, the Iran–Iraq War presented Saudi Arabia with a constant menace.

In 1986, in order to make a statement about his importance in the Islamic world, he adopted the title custodian of the two holy mosques. He personally supervised an aggressive Saudi oil policy to protect the kingdom's long-term interests. In the Gulf Crisis, his decision to invite U.S. and other non-Muslim forces to enter Saudi Arabia in August 1990, over Crown Prince Abdullah's objections, to defend the kingdom against possible invasion by Iraq and then to liberate Kuwait from Iraqi occupation fatally upset the calculations of Iraq's President Saddam Hussein that Fahd would remain passive. The decision also has been one of the principal points of contention between the ruler and segments of the Islamist opposition, some of whom sent petitions, others engaged in protests, and still others carried out violent attacks against Saudi and U.S. targets. On 1 March 1992 Fahd issued a new basic law that included provision for a long-discussed consultative council (Majlis al-Shura) but going beyond what had been anticipated in the scope of proposed governmental changes, including the opening of the royal succession to the grandsons of Ibn Saʿud. Reforms of this period also included a restructuring of the regional government system. One of the last significant accomplishments of Fahd was a reshuffling of the Council of Ministers, the most extensive in twenty years. In 1995 Fahd suffered a stroke, and his deteriorating medical condition prevented him from carrying out his responsibilities as ruler. As a result, during the late 1990s and early 2000s, Abdullah gradually has taken over leadership of the country, acting as de facto ruler.

FAHD PLAN (1981)

Arab–Israel peace plan proposed by Crown Prince Fahd in 1981.

Because the Camp David Accords had failed to address several central issues of the Arab–Israel conflict, Crown Prince Fahd of Saudi Arabia unveiled an eight-point peace proposal on 7 August 1981. The plan called for Israel's withdrawal from Arab territories occupied in 1967, including East Jerusalem, and the dismantling of Israel's settlements in those territories; guarantees of freedom of worship for all in the holy places; the Palestinian people's right to self-determination; indemnity for Palestinian refugees not exercising the right of return; West Bank and Gaza placed under UN control for a transitional period (a few months), leading to an independent Palestinian state with East Jerusalem as its capital; subsequent Security Council guarantee of peace among all states in the area, including the new Palestinian state; and the Security Council guarantee of the above principles. The plan was adopted in a modified form, at the Arab summit in Fez, Morocco, on 9 September 1982, and remained the Arab position until the Madrid conference in 1991.

Jenab Tutunji

FAHMI, MAHMUD PASHA

[1839–]

Egyptian officer and politician associated with the Urabi revolution.

Born in the small village of Shantur to a poor family, Mahmud Pasha Fahmi benefited from a governmental decree requiring villages to send one of their children to the new schools set up by Muhammad Ali Pasha. He later studied at the engineering college at Bulaq and after graduation joined the Engineers corps of the Egyptian army. He was assigned to teach at the new military academy created by Muhammad Saʿid Pasha and later was given the task of overseeing the building of military fortifications in the northern districts. He participated in the Ottoman war against Serbia and returned after it ended to public service. As one of the few Arab officers in an army dominated by Circassians, he was called to serve in 1881 in the ministry of war under Mahmud Sami, who had replaced Circassian Uthman Rifqi Pasha after the army's revolt at the latter's arrest of Colonel Ahmad Urabi. Urabi was reinstated but the Khedive's policies of containing the army led to a new revolt with demands for parliamentary representation and new army regulations.

The attempts by France and Britain to limit constitutionalism caused the new cabinet to fall and Mahmud Sami was called to form a new cabinet in which Urabi and his friends dominated, and Mahmud Fahmi was given the ministry for public works. But the 1882 riots of Alexandria, caused in part by the increased impoverishment of Egyptians as a result of the Capitulations, and the threats to European economic interests and lives, led England to send in its navy and to order the Egyptian army out of the city. The Khedive initially ordered the army to fight back, but later cooperated with the British and fled to Alexandria. In Cairo, a hastily convened council with broad popular support declared the Khedive a traitor and directed Urabi to fight back. The resistance was organized by Urabi, Mahmud Fahmi, and fellow officers at Kafr al Duwwar. The Egyptian army was not able to resist the British who invaded Egypt in due form and restored the Khedive to power. However, Britain prevailed over the latter's attempts at having his former officers executed. Instead, Urabi, Fahmi, and five other officers were exiled to Ceylon. Embittered by the way he was treated by his fellow officers and by what he saw as a defeat caused by their mistakes and arrogant demands, Mahmud Fahmi distanced himself from them and refused to return to Egypt. He died in exile in Ceylon.

MAYSAM J. AL-FARUQI

FAISAL IBN ABD AL-AZIZ AL SAʿUD

[c. 1904–1975]

King of Saudi Arabia, 1964–1975.

Faisal ibn Abd al-Aziz Al Saʿud was the third son of Abd al-Aziz ibn Saʿud Al Saʿud (known in the West as Ibn Saʿud), born in Riyadh, Saudi Arabia, probably in 1904 or 1905, though some accounts place his birth on 9 April 1906, to coincide with one of his father's important early victories. With no full brothers and no half brothers close to him in age, Faisal grew up in relative isolation. He left the royal court at an early age to study under his maternal grandfather, a prominent religious scholar, which served to reinforce that isolation.

Faisal assumed military, political, and diplomatic responsibilities at a young age. He led Saudi forces in the Asir campaign of 1920 and by 1926 was his father's viceroy in charge of the recently conquered province of Hijaz. This included responsibility for the Muslim holy cities of Mecca and Medina and the annual *hajj* (pilgrimage). He early developed a special, broadly informed expertise in the area of foreign affairs; this began in 1919 when he represented his father on a diplomatic mission to Europe, the first of the Al Saʿud family to do so. In 1930, Faisal officially became foreign minister, retaining that position until his death in 1975, with only a brief interruption, thus making him the longest serving foreign minister in the twentieth century.

Faisal's natural intelligence and his success on important state assignments, such as representing Saudi Arabia at the creation of the United Nations in San Francisco in 1945, clearly marked him as the ablest of the sons of Ibn Saʿud. Yet in 1933, Ibn Saʿud had the family recognize Faisal's elder brother Saʿud, the crown prince, as successor despite Saʿud's obvious lack of intellectual gifts or meaningful preparation for rule. Faisal had doubtless hoped, perhaps expected, that his demonstrated abilities would have secured him the succession, consistent

with the well-established Arabian custom of choosing the ablest near relative of the deceased as the new shaykh or amir. Ibn Saʿud evidently sought to avoid intrafamily rivalries that had fatally weakened the Al Saʿud during his own father's generation. Though Faisal came to feel contempt for his incompetent elder brother, he insisted in family councils on a scrupulous adherence to the oath of allegiance *(bayʿa)* to Saʿud that he had led the family in swearing. To do otherwise would, in his view, have established a dangerous precedent in undermining the family's rule.

King Saʿud's reign, 1953–1964, brought nearly constant crisis, with a pattern of events in which the Al Saʿud called Faisal to assume responsibility for the government, although Saʿud subsequently reasserted his claim to power. In early 1958, the kingdom was financially bankrupt from Saʿud's profligacy and at risk because of his ill-conceived challenge to Egypt's President Gamal Abdel Nasser and radical Arab nationalism. Faisal then assumed executive powers, imposing for the first time fiscal austerity with real limits on princes' pensions and a true budget. He came to a *modus vivendi* with Nasser, with whom he had earlier been careful to cultivate tolerable relations, though ideologically they were poles apart. By 1959, Saʿud had forced Faisal out of the government and allied himself with a group of reformist half brothers, the Free Princes, whose embarrassing public split with the rest of the Al Saʿud and declaration of solidarity with Nasser helped to place the kingdom in real peril.

In 1962, Faisal once again assumed executive powers as prime minister, doing so as a republican coup was about to overthrow the traditional imamate in Yemen and Saudi Air Force officers were preparing to defect to Cairo (Egypt). Faisal revamped the Council of Ministers and established the team of princes that continues to lead Saudi Arabia in the early 1990s. This included the progressive and ambitious Fahd and Sultan ibn Abd al-Aziz Al Saʿud. They comprise part of the largest and most powerful grouping of full brothers in the family, those born to the favorite wife of Ibn Saʿud, Hassa bint Ahmad Al Sudayri. Fahd at forty-one was both interior minister and, in a new departure, was designated second deputy prime minister behind Prince Khalid, while thirty-eight-year-old Sultan ibn Abd al-Aziz Al Saʿud became defense minister, the position he holds today. To counterbalance them, Faisal selected the traditionalist Abdullah who, in contrast both to the king and the Al Sudayri family enjoyed close ties with the Arab tribes, a constituency whose support was critical to the monarchy. Faisal himself, with his genuine piety and austere morality well established (after sowing a few youthful wild oats), secured the support of the crucial religious establishment. Faisal's care in creating and maintaining balance in the government was key to preserving stability. Thus, when Saʿud's final attempt to recover his powers led the senior princes, backed by a *fatwa* (ruling) from the *ulama* (religious establishment), to force his abdication in 1964, the government had been put in place that would endure with few changes through King Faisal's own eleven-year rule and then Khalid's seven years as king, with its core still intact in the early 1990s.

The creation of an efficient, stable government in place of the circle of cronies or inexperienced sons on which Saʿud had heavily relied was typical of the reforms that Faisal enacted. They were meant not to open up the political system in a modern, democratic sense but to enable it to confront the challenges of the twentieth century, so as to preserve the kingdom's traditional values. Thus, Sultan, Fahd, and King Faisal's brother-in-law Kamal Adham, head of the state intelligence service, were given full rein to build up the military and internal security establishments. Bright young technocrat commoners—such as Ahmad Zaki Yamani, who long served as petroleum minister, and Ghazi al-Qusaybi, for many years minister of industry and electricity—began to play significant roles, though without political power, as the bureaucracy began a rapid expansion. Modern public instruction at all levels underwent massive expansion, with girls admitted for the first time, reflecting the king's realization of the necessity of an educated population. The press and radio broadcasting experienced rapid expansion and, against strong conservative opposition, Faisal introduced television—he saw the need to diffuse information rapidly in a modern state and viewed the print and broadcast media as means of promoting national unification.

Faisal met external dangers to the kingdom with reliance on restored prestige and stability at home and on bold initiatives when required. Financial assistance to Yemeni royalists helped to checkmate the

radical threat in that quarter, and Nasser's defeat in the Arab–Israel War of 1967 greatly strengthened Faisal's hand in dealing with the Arab nationalist challenge. As oil revenues mounted toward the end of his reign, "riyal diplomacy" helped to moderate the behavior of radical recipients of largesse and to strengthen conservative regimes. The new wealth gave substance to Faisal's attempt to promote an international policy based on the conservative values of Islam. In 1970, he took the lead in establishing the Organization of the Islamic Conference as an intended alternative to the Arab League (the League of Arab States). Ultimately, however, Faisal knew that Saudi Arabia's security against external threats—principally the Soviet Union, its regional allies, and proxies—could come only from the United States. This dependence placed Saudi Arabia in the painful dilemma of being intimately linked to the principal supporter of Israel. The dilemma became an acute crisis in U.S.–Saudi relations when Faisal led the imposition of the 1973–1974 Organization of Petroleum Exporting Countries (OPEC) embargo after President Richard M. Nixon's decision to resupply massively Israel's armed forces during the Arab–Israel War of 1973. It was typical of Faisal's pragmatic realism that, within months of that crisis, the U.S. and Saudi governments had signed agreements, especially the Joint Commission on Economic Cooperation, that created unprecedented links between the two countries.

In his statecraft, Faisal balanced a fundamental commitment to traditional values with an informed acceptance of the means of creating a strong modern state. He combined a rigorous Islamic view of the world with a sophisticated realpolitik, and he devoted himself unswervingly to the survival of Saudi Arabia. It is likely that, next to his father, Faisal will be remembered as the greatest of the twentieth-century Saudi rulers.

FAISAL I IBN HUSSEIN

[1889–1933]

King of Iraq, 1921–1933; also known as Amir Faisal, leader of the Arab Revolt against the Ottoman Turks, 1916; king of Syria for a brief period in 1920.

The third son of Sharif Husayn of the Hijaz, Faisal was from a prestigious, wealthy family (Hashimite) that traced its lineage back to the Prophet Muhammad. He spent his early boyhood among the bedouin in Arabia, educated by private tutors, and, at age six, moved to Istanbul, capital of the Ottoman Empire, where he lived during his father's exile until 1908. Faisal completed his education in Istanbul, becoming multilingual and well versed in court etiquette and politics. Life in cosmopolitan Istanbul and his later service as representative from Jidda in the Ottoman parliament, where he was an early spokesman for Arab interests, provided valuable political experience that served Faisal well in his later negotiations with the European powers.

In January 1915, Faisal was sent by his father to Istanbul to determine the political situation of the Hijaz and to contact secret Arab societies in Damascus, Syria, to ascertain if there was support for an Arab uprising against the Ottoman Turks. At first, signs were positive; but at a second meeting in Damascus in January 1916, after these groups had been disbanded by Cemal Paşa, the few remaining nationalists indicated via the Damascus Protocol that Hussein should initiate a revolt for Arab independence. Hussein incorporated these ideas in his correspondence with the British. Faisal was less sanguine about British support than was his brother,

A portrait of Faisal I ibn Hussein (1889–1933), king of Iraq from 1921 to 1933. Faisal died of a heart attack in Geneva, Switzerland, on 7 September 1933. He was succeeded by his son, Ghazi ibn Faisal. © HULTON-DEUTSCH COLLECTION/ CORBIS. REPRODUCED BY PERMISSION.

Abdullah I ibn Hussein, but Ottoman Turkish moves to strengthen their hold on Medina made action more imminent. (The Turks were fighting on the side of the Central powers—Austria-Hungary and Germany—and against the Allies, including Britain and France, in World War I.)

Faisal's note to Cemal Paşa advocated an Arab *umma* (community). His statement and the cutting of the railroad lines between Damascus and Medina launched the Arab Revolt on 10 June 1916. Concern in Cairo that the Arab troops in Arabia needed military training led to the dispatch of the British Colonel T. E. Lawrence, who by December 1916 had joined Faisal and suggested to the British that the amir become the field commander of the Hijaz. The suggestion was taken, and, though unable to take Medina, Faisal's troops later occupied Aqaba on 6 July 1917, a victory that provided the Arabs credibility with the British. Faisal was deputized a British general under the command of General Edmund Allenby, commander in chief of the Egyptian Expeditionary Force. Faisal's troops, some 1,000 bedouin supplemented by approximately 2,500 Ottoman ex-prisoners of war, proceeded to harass the Ottoman Turkish army as the British moved to take Gaza, Beersheba, and Jerusalem.

On 25 September 1918, Allenby ordered the advance on Damascus. As party to the Sykes–Picot Agreement, Britain attempted to assign organized administration of the city both to the French and to the Arabs, but in the confusion of the British advance and the Ottoman retreat, the Damascus Arabs hoisted their own flag before Faisal and his army had time to reach Damascus. With the aid of Faisal's supporter, Nuri al-Saʿid, pro-Faisal officials controlled the city and were later confirmed by the French. Lawrence asserted that Faisal's men had slipped into the city on 30 September to 1 October and had liberated it in advance of the British and Australian troops.

At the Versailles conference in 1919, Faisal was caught between British–French international diplomacy and events in the Middle East that were taking their own course. As the Arab representative to Versailles, Faisal pressed claims for Syrian independence, but under British sponsorship. Discussions with American proponents of Zionism and with Zionist leader Chaim Weizmann elicited Faisal's support for Jewish immigration to Palestine, culminating in the Faisal–Weizmann Agreements signed on 3 January 1919. To the published document, Faisal added a handwritten addendum that Arab support for Jewish aspirations would be conditional upon the achievement of Arab independence. Faisal continued to support Jewish immigration within the context of his later pan-Arab federation programs.

In May, Faisal called for a general congress to be held in Damascus to endorse his position at Versailles. Convened in June, the meeting was dominated by the prewar Arab nationalist clubs—the primarily Iraqi al-Ahd, the Palestinian Arab Club

(al-Nadi al-Arabi), which tried to persuade Faisal to relinquish his support for Zionism, and the al-Fatat (youth) dominated Istiqlal Party. The congress called for an independent Syria that also would include Lebanon, Jordan, and Palestine. Backed by the British, who wished to exclude the French from the Middle East, Faisal received a grudging acquiescence for an Arab regime from the politically weakened French president, Georges Clemenceau.

Still in session in March 1920, the congress declared Syria (including Lebanon and Palestine) an independent kingdom ruled by Faisal as constitutional monarch. Some Arabs in Palestine proclaimed Palestine a part of Syria, and Basra and Baghdad were declared independent by a group of Arabs in Iraq who wished to be ruled by Faisal's brother, Abdullah. In spite of the international repercussions, Faisal accepted the Syrian draft and allowed Arab nationalists to harass French troops in Syria while he began to negotiate with the forces of Kemalism in Anatolia who had proclaimed an independent Turkey. As the British withdrew their support from the Arabs in Syria, and a new government in Paris followed a more vigorous policy in Syria, the French ordered their high commissioner in Syria, General Henri-Joseph-Eugène Gouraud, to confront Faisal. Occupying Damascus on 26 July 1920, the French forced Faisal into exile the following day and proclaimed Syria to be under French rule.

A shift in British priorities affected policy after 1920, influenced by an Arab revolt in Iraq against the British occupation and the policies of Winston Churchill, newly appointed colonial secretary, which included leaving Syria to the French and installing Hashimites elsewhere as local rulers who would "reign but not govern" in order to save the expense of full-scale occupation. At the Cairo Conference in March 1921, Churchill and his aides proceeded to redraw the map of the Middle East and to plan the installation of Faisal as king of a newly created Iraq.

The British looked to Faisal as a malleable vehicle for their Mesopotamian/Iraqi policy, which was to secure the area and its oil for themselves. He was deemed suitable to both the Sunni and Shiʿite Iraqis because of his Hashimite lineage and his Arab nationalist credentials as leader of the Arab Revolt. Any local candidates, such as Sayyid Talib of Basra, were duly eliminated. The British contrived a plebiscite in July 1921 to authorize Faisal's candidacy. In August 1921, Faisal arrived in Iraq to a lukewarm reception and was proclaimed king.

The leader of the Arab Revolt brought with him to Iraq a coterie of Iraqi (former Ottoman) Arab nationalist army officers who had supported him in Syria and who now took top positions in the new Iraqi administration. Jaʿfar al-Askari became minister of defense; perennial cabinet minister Nuri al-Saʿid became chief of staff of the new Iraqi army; and Ottoman educator Sati al-Husari instituted an Arab nationalist curriculum in Iraqi schools. Faisal's tenure in Iraq was a tightrope walk between nationalism and cordial relations with Britain, without whose financial and military support and advisers he could not rule. Always maintaining his own goals, while remembering the bitter Syrian experience, Faisal worked from 1921 until his death in 1933 to create a modernized, unified country with a centralized infrastructure, to achieve immediate political independence from Britain, and to continue his dream of uniting Arab areas of the Middle East into a pan-Arab union under Hashimite aegis. From the beginning, the British regretted their choice, as Faisal proved to be less docile than they had anticipated.

Throughout the 1920s, Faisal was preoccupied with the fact that Iraq was a British mandate and not an independent state. Faced with local nationalist opposition to himself and to the British presence in the country, he used his considerable personal charisma to garner the support of urban nationalists and tribal leaders in Shiʿite areas. Comfortable both in traditional dress meeting with bedouin and in Western-style clothes playing bridge with British officials in Baghdad, Faisal negotiated for independence. He also understood the necessity for British political and military support to ensure the territorial integrity of the new state until Iraq was able to build up its own army and defend its interests against the Persians, Saudis, and Turks, from whom Britain managed to secure Mosul for Iraq.

During treaty negotiations in 1922, delayed by his appendicitis attack, and again in 1927, the king encouraged the anti-British nationalist opposition,

all the while advocating moderation by both sides. The result was an agreement signed in 1930 that gave Britain control of Iraqi foreign policy and finances but also resulted, in 1932, in Iraq's nominal independence and admission to the League of Nations.

The Iraqi constitution gave Faisal the power to suspend parliament, call for new elections, and confirm all laws. During his tenure, the king attempted to forge a united Iraq with a nationalist focus instead of the patchwork of disparate religious and ethnic groups. Once independence was assured, Faisal used his prestige and his position as king of an independent Arab state to engage in foreign policy.

Faisal never abandoned his interest in Syria. In contact with the French in Syria over the possibility that a Hashimite such as Abdullah or Ali (especially after the latter lost his throne in Arabia to the Saudis) might be installed there as he was in Iraq, Faisal was also active in local Syrian politics. In 1928 he organized a monarchist party aimed at making him ruler both in Iraq and in Syria. To Faisal, Iraqi independence in 1932 would be but the first step toward an Arab union to include not only Syria and Palestine, but possibly Arabia as well. From 1929 until Syrian elections in 1932, Faisal sent emissaries to lobby Syrian politicians, conducted an intense propaganda campaign to promote his interests, and used the Islamic Congress that met in Jerusalem in 1931 to advance his cause. Plans were made for another congress to meet in Baghdad in 1933, despite British opposition to Faisal's pan-Arab plans. The defeat of his cause in the Syrian elections, anti-Saudi revolts in the Hijaz, and his untimely death put Hashimite unity attempts on hold.

In June 1933, Faisal left for London on a prearranged state visit, leaving an anti-British government in power in Baghdad. He then spent the summer in Switzerland for reasons of health. When word reached him of the crisis with the Assyrian minority in Iraq, Faisal pleaded for moderation. But the exploits of the new Iraqi army that resulted in hundreds of Assyrian civilian deaths were popular in Baghdad, where there were demands for Faisal's resignation. On 7 September 1933, Faisal died of a heart attack in Geneva. He was succeeded by his son, Ghazi ibn Faisal.

FAISAL II IBN GHAZI
[1935–1958]

King of Iraq, 1953–1958.

Born in May 1935, Faisal II ibn Ghazi was killed, along with his uncle Abd al-Ilah ibn Ali and other members of the royal family, on 14 July 1958, in the course of the Iraqi revolution. Faisal's father Ghazi ibn Faisal had died in an accident in April 1939 when Faisal himself was only three years old. For most of his life, he was overshadowed by his uncle, who acted as regent until he came of age in 1953.

Faisal was educated in the palace in Baghdad and then at Harrow School near London between 1949 and 1952. Although personally popular, he could not escape the stigma that attached to his uncle and the other *éminence grise* of Iraqi politics, Nuri al-Saʿid—both of whom were stout defenders and major beneficiaries of the close connection with Britain that characterized Iraqi politics in the 1940s and 1950s.

FAISAL–WEIZMANN AGREEMENTS

Signed in London, 3 January 1919, between Amir Faisal I ibn Hussein ("representing and acting on behalf of the Arab Kingdom of Hedjaz") and Dr. Chaim Weizmann ("representing and acting on behalf of the Zionist Organisation").

The agreement between Faisal ibn Hussein and Chaim Weizmann was worked out with Colonel T. E. Lawrence, who acted as both midwife and translator in an arrangement whose immediate purpose was to harmonize the positions of all three parties before the Paris Peace Conference that followed World War I. Its preamble contained remarks about "the racial kinship and ancient bonds existing between the Arabs and the Jewish people," and called for "the closest possible collaboration" between the signatories as "the surest means of working out the consummation of their national aspirations." In its nine articles, the agreement spelled out methods and areas of cooperation between two mutually recognized entities: "the Arab State" and Palestine. The latter was to be governed in a way that would "afford the fullest guarantee for carrying into effect" Britain's Balfour Declaration. This meant the promotion of large-scale immigration and settlement of Jews and the protection of the rights of "the Arab peasant and tenant farmers," who would also be "assisted in forwarding their economic development." Separate articles assured the free exercise of religion and the keeping of "Mohammedan Holy Places . . . under Mohammedan control." The World Zionist Organization promised to "use its best efforts to assist the Arab State [i.e., the independent Greater Syria to which Faisal was aspiring] in providing the means for developing the natural resources and economic possibilities thereof." In an important proviso, Faisal linked his signature on this agreement to the complete fulfillment of Arab demands as submitted in a memorandum to the British Foreign Office.

The agreement, which remained secret for several years, quickly became inoperative, as neither signatory proved to be in a position to "deliver the goods" to the other. The authenticity of the agreement was challenged by some Arabs during the 1930s when Zionist leaders sought to gain propaganda advantage by publishing the text. Recent historical research has established that the document is genuine enough; thus, only Faisal's motives remain the subject of some debate.

FALCONRY

The art of training falcons, hawks, and other game birds to hunt.

Rooted in pre-Islamic Arabia, falconry became a fashionable courtly pastime from the time of Caliph Yazid ibn Muʿawiya (680–683 C.E.) to that of the Ottoman Empire sultans. Also practiced by commoners, falconry's popularity spread from Persia to Morocco. Most prized were the gyrfalcons of Siberia. These Siberian birds were often exchanged as ceremonial gifts among ambassadors. Many treatises were written on the art of training, and the hawk became a common motif in the Islamic arts. Hunting with falcons remains a popular pastime of the wealthy today on the Arabian Peninsula.

FANON, FRANTZ

[1925–1961]

French West Indian psychiatrist, author, and ideologue of the Algerian Revolution.

A black man born in 1925 on the French Antilles island of Martinique, Frantz Fanon became the best-known theoretician of the Algerian revolution and, through it, one of the best-known theoreticians of African liberation in general. The child of middle-class parents, Fanon spent the early years of his life attempting to be French. During World War II, however, humiliating experiences of racism in the Antilles and in North Africa and Europe, where he served in the French armed forces, made him increasingly aware of the anomalies confronted by a black man in a world dominated by whites.

After the war Fanon went home to Martinique, but in 1947 he returned to France and entered medical school. He received a degree from the University of Lyons in 1951. In July 1953 he passed his *Médicat de hôpitaux psychiatrique* and, in November 1953, he accepted a position as chief of staff *(chef de service)* in the Blida-Joinville Hospital, the largest psychiatric hospital in Algeria.

While serving at Blida, Fanon treated many patients suffering from the pressures of their colonized status and from the trauma of the revolutionary situation. He came to the conclusion that the resentment that had brought about the Algerian revolution was of the same order as the resentment he had come to feel as a black man in a white world. In 1956, Fanon resigned his medical post and secretly joined the Front de Libération Nationale (FLN; National Liberation Front). Receiving in January 1957 a "letter of expulsion" from the colonial authorities, he fled to Tunis, where the FLN was beginning to establish its headquarters. There he became an editor of *al Moudjahid,* the official organ of the FLN, served in FLN medical centers, and became a roving ambassador to solicit support for Algeria in African countries. In December 1960, Fanon was diagnosed with leukemia. He died of that illness a year later in Bethesda, Maryland.

Fanon wrote three books. The earliest, *Peau Noire, Masques Blancs* (Black skin, white masks), appeared in 1952. It diagnoses the psychologically dependent status of Caribbean blacks and suggests ways for them to transcend that dependency and discover self-possession and authenticity. The second, *L'an V de la Révolution Algérienne* (Year 5 of the Algerian revolution), was written in great haste in 1959 and is essentially a sociology of the revolution. In it, Fanon describes the transformation of Algerian society brought about by individuals' decisions to revolt. In revolting against colonial oppression, militants also revolt against patriarchal and other oppressions. Out of these individual decisions, a nation of free men and women is born, a process that cannot be reversed. Fanon's last book, *Les Damnés de la Terre* (Wretched of the Earth), was published in 1961. It takes up many of the themes of the preceding works, but with greater urgency. Fanon insists that it is only through violence that colonialism can be defeated and the native overcome his dependency complex. Native bourgeoisies must also be overturned, because they are in a state of permanent dependence upon the West. The Algerian revolution is the model for global revolution, because it represents a peasant revolution led by a genuinely popular party. A fourth book, *Pour la Révolution Africaine* (For the African revolution), a collection of articles written during Fanon's *Moudjahid* period, was published after his death.

ALBERTINE JWAIDEH

FAQIR, FADIA

[1956–]

A Jordanian novelist.

Fadia (also Fadiya) Faqir was born in Amman, Jordan. She earned her Ph.D. in England and teaches Middle Eastern politics, Arabic literature, and women's studies at Durham University. She is one of a number of Arab novelists writing in English. Her first novel, *Nisanit* (1990), is a grim account of Palestinian life under Israeli occupation. Torture, hate, love, and sacrifice are intertwined in this bleak and powerful text. Her second novel, *Pillars of Salt* (1996), is the story of two women confined to a mental hospital in Jordan during and after the British Mandate. The novel contains a strong homoerotic subtext. Her narrative techniques undermine the centrality of Islamic religious texts. Faqir has been recognized as a new kind of storyteller and one who, because of the accessibility of her English texts, is being discovered in the West.

Faqir also gained visibility as a critic with the collection she edited, *In the House of Silence: Autobiographical Essays by Arab Women Writers* (1999), and because of her leadership in the Arab Women Writers series, published by Garnet in London. To date, five novels by Arab women have been published in the series.

Elise Salem

FARAJ, MAYSALOUN

[1955–]

Iraqi artist and curator.

Maysaloun Faraj was born in the United States to an Iraqi family. After a childhood there, she moved to Iraq, where she received a degree in architecture from Baghdad University. She later received training in England, where she has lived and worked since 1982. She is a noted ceramicist and mixed media painter, as well as the curator of a major exhibition, *Strokes of Genius: Contemporary Iraqi Art,* which traveled through England and the United States between 2000 and 2002. Faraj also edited a volume of the same title to accompany the show. The exhibition was the first major presentation of contemporary Iraqi art in the West and reflects Faraj's concern with challenging stereotypes that perpetuate political conflicts involving her native country. Many of her paintings and ceramics make innovative use of Arabic calligraphy in a manner that links her contemporary, often political, concerns with her heritage. Some of her work also contains symbols reminiscent of Iraqi folk art and ancient Assyrian art. Faraj has described her work as an attempt to recover all that is being destroyed in her homeland, from its ancient civilization to its people and their spirit. She is inspired by her Muslim faith. Her work is included in the public collections of the British Museum as well as in Washington, D.C.'s National Museum for Women in the Arts.

FARAJ, MURAD

[1866–1956]

Egyptian Jewish-Karaite author and theologian; Egyptian nationalist and Zionist.

Murad Faraj was born in Cairo and trained as a lawyer; he became a government official during the reign of Khedive Abbas Hilmi I (1892–1914) and wrote articles and poems for the two epoch-making newspapers of the pre-1914 era, *al-Jarida* and *al-Muʾayyad.* He wrote books on Jewish-Karaite topics, theology and law, biblical exegeses, Hebrew and Arabic philology, medieval Jewish poets who wrote in Arabic, and current legal issues. He also translated Hebrew works into Arabic.

By the mid-1920s, as a noted author in the field of modern Arabic culture, he advocated Egyptian national unity and interreligious dialogue. His essays, notably *Harb al-Watan* (The national battle), appealed to Muslim Egyptians to treat their Christian and Jewish compatriots as equals. By the mid-to-late 1920s, Faraj advocated Jewish nationalism, hoping that Zionism would be seen as similar to Egypt's national aspiration. His poetry, the *Diwan Faraj,* collected in four volumes (1912–1935), stresses Zionist themes.

FAR'A, WAHIBA

[1954–]

First Yemeni minister for human rights.

Wahiba Far'a, born in 1954 in Ta'iz, Yemen, was the first woman as full cabinet member in the Yemeni government. She acted as the minister of state for human rights during 2001–2003. She was the first minister in this new ministry, which was established in 2001. She is a prominent women's rights activist and scholar. Far'a received her B.A. in English literature from San'a University, continued her studies at Cairo University with a specialization in women's education, and earned her Ph.D. in Cairo (philosophy). She worked as a lecturer at San'a University while conducting research on women and development, women in higher education, child labor, and polygamy in migration. Far'a is the founder and rector of Queen Arwa University in San'a (established in 1996) and dean of Yemen International Language Institute (established in 1989, and now a department of the university). She is a member of the Supreme National Committee for Human Rights and the ruling People's General Congress Party. As a minister, Far'a made women's rights, prison reform, and the rights of children and people with disabilities key priorities. The minister was confronted with challenges: a record of human rights abuses, an independent judiciary that limits freedom of the press, and a civil society proposing a large number of human rights initiatives.

FARÈS, NABILE

[1940–]

Algerian novelist and poet.

A key figure in post-colonial Maghrebi literature and literary experimentation, Nabile Farès is known for a unique, dreamlike style of writing that blurs the boundaries between the novel and poetry, the two genres in which he works.

Often identified primarily as a Berber writer, Farès has sought a new language to make sense of new, post-colonial, transnational experiences; likewise, he has attempted to find a voice and a place for indigenous people in contemporary literature. Like most of his contemporaries, he writes in French, and very few of his works have been translated into English. His key themes are displacement, migration, exile, and the cultural, psychological, and historical ruptures implied by these phenomena, so familiar to North Africans.

Born on 25 September 1940 in Collo, Algeria, Nabile Farès was influenced by his grandfather, a well-read and contemplative man, and his father, a well-known politician who later became president of the provisional executive committee during the transition to independence. Farès was educated at the college of Ben Aknoun of Algiers, where he developed an interest in philosophy, anthropology, and literature. In France, he received a *doctor d'état* in literature, and he taught literature in Paris and in Algiers.

His first novel, published in 1970, was *Yahia, pas de chance* (Yahia, No Chance). In it, he introduced themes that have preoccupied him ever since: ruptures on all levels—linguistic, psychological, physical, and cultural. His novels also reveal the important role Berber women have played in sustaining and enlivening cultural and literary oral traditions, whether in post-independence Algeria or in France. Much of his work is autobiographical and is conveyed in a semi-confessional tone, exploring the impact of dramatic sociopolitical change on Berber and Algerian subjectivity. Farès is currently a professor of literature at the University of Grenoble.

FARHAD, GHULAM MUHAMMAD

[1917–1984]

Mayor of Kabul, 1948–1954.

Born in Kabul in 1917, Ghulam Muhammad Farhad was educated in Kabul and Germany and trained as an engineer. Twenty years after being elected mayor of Kabul, he was elected to the Afghan parliament (1968). He was an active member of the Afghan socialist party Afghan Nation and was the publisher of a newspaper of the same name (1966–1967).

FARHAT AL-ZAWI

Muslim judge and politician from Tripolitania.

Farhat al-Zawi studied in Tripoli, Tunis, and Paris and was a judge in Zawiya, Tripolitania, as well as a member of the Ottoman parliament from 1908 to 1912. A leader of the Tripolitanian resistance to Italian rule in Libya (1911–1912), he negotiated with the Italians for the region's future (December 1912) and became their adviser, helping to consolidate Italian rule.

FARHI FAMILY

Dynasty of Jewish financiers in Ottoman-controlled Damascus during the eighteenth and nineteenth centuries.

The Farhis were granted the status of *sarrafs* (bankers) by the authorities in the Ottoman provinces of Damascus and Sidon; they subsequently emerged as the chief financial administrators of these provinces' treasuries.

The most illustrious member of this family was Hayyim Farhi, who in the 1790s entered the service of Ahmad al-Jazzar Pasha, the governor of Sidon. There he became responsible for al-Jazzar's financial affairs until the latter's death in 1804. The following year Farhi was involved in the political succession struggle that led to Sulayman Pasha's ascendance to the governorship of Sidon. Given Farhi's assistance to this development, Suleiman allowed him to manage Sidon's financial administration as al-Jazzar had done previously. It was only during the second decade of the nineteenth century under Abdullah Pasha, Suleiman's successor, that Farhi's position declined, eventually resulting in his execution.

Their financial power in Sidon eliminated, the Farhis nonetheless continued to exercise considerable financial influence in Damascus until the early 1830s. In the wake of the Egyptian occupation of Syria and Palestine (1831–1840), the family's status declined temporarily in Damascus. Yet once the Ottomans regained authority in the province, the Farhis once again were partially responsible for running its financial affairs.

FARHUD

Persian word, commonly used in Iraq to refer to the anti-Jewish rioting of June 1941.

After the defeat of Rashid Ali al-Kaylani's pro-Nazi coup and his flight from Baghdad on 1 and 2 June

1941, Jewish life and property were attacked in what came to be called in Baghdad the Farhud. The looting was started by Iraqi soldiers who had been allowed to roam the streets of Baghdad carrying their weapons. On the second day, when bedouin started pouring into the city across the unguarded bridges, authorities began to worry that the attacks would spread beyond the Jewish community; order, however, was finally restored.

The looting and killing had continued for two days while the British army sat on the outskirts of the city, prevented from intervening by order of the British ambassador, Sir Kinahan Cornwallis. Hundreds of houses and businesses were looted. Accounts vary from 120 Jews killed to more than 600; 2,118 injured; and more than 12,000 who lost part or all of their property. An official committee of inquiry reported the lowest figure; but the text of the secret report was published by the chronicler Abd al-Razzaq al-Hasani, who said that a member of the committee reported the largest figures, and orders were given to reduce this figure.

No attempt was made by Iraq to seek out and punish the perpetrators, but some token compensation to the victims was promised.

FARID, NAGWA KAMAL

[c. 1950–]

The first woman appointed to the shariʿa *court system in Sudan and perhaps, in the modern era, in Islamic Africa.*

Nagwa Kamal Farid's appointment was a rare step in the Muslim world, since some religious scholars believe that women should be precluded from positions where they exert power and authority over men. The Qurʾanic verse "men are in charge of women, because they spend of their property" (Sura 4:34) has been interpreted by some as precluding women from holding public office ranging from judge to president or prime minister in predominantly Muslim states. For example, a female judge was not appointed in Egypt until 2003; however women judges have been appointed in Tunisia, Iraq, and Indonesia, and women have been heads of state in Pakistan, Bangladesh, Turkey, and Indonesia. In Islamic Africa, women judges in the Islamic *(shariʿa)* courts are virtually nonexistent. In Sudan, *shariʿa* female judges did not act as sitting judges in public courts—where their personal honor and dignity might be compromised—but they worked in offices in the judiciary, protected from public view.

Nagwa Kamal Farid was appointed in 1970 by the last grand *qadi al-quda* (chief justice) of the *shariʿa* courts, Shaykh Muhammad al-Gizuli. A liberal in his interpretations and in practice, Chief Justice al-Gizouli had been Sayeda Nagwa's *shariʿa* law professor at the University of Khartoum. (*Sayyida* is the respectful term of address for a married woman, and is the customary honorific used when referring to a female jurist.) She was appointed shortly after her graduation in 1970 and was quickly promoted to first-class judge assigned to the High Court, where she heard cases on appeal from the lower district and provincial courts. After her appointment, other women were appointed in 1974 and 1975, including justices Amal Muhammad Hassan, Rabab Muhammad Mustafa Abu Gusaysa, and Fatima Makki al-Sayyid Ali.

Avoiding political activism, Justice Farid survived the political turmoil of the Muhammad Ja'far Numeiri presidency (1969–1985). When Islamic law was made state law in 1983, the *shariʿa* and civil courts were combined into a single system of judges, courts, and appeals. When the National Islamic Front (NIF) seized power in 1989, many judges were purged for their politics, not necessarily their gender. The NIF saw itself as an Islamic modernist movement and therefore did not oppose women holding positions of power and influence; however some non-NIF women were removed. Justice Farid survived this purge and retains her position within the High Court of the Sudan Judiciary.

CAROLYN FLUEHR-LOBBAN

FARMANFARMA, ABD AL-HOSEYN MIRZA

[1857–1939]

Persian prince and prominent politician. His other titles were Nosrat al-Dowleh and Salar Lashkar.

Abd al-Hoseyn Mirza Farmanfarma was the son of Firuz Mirza and the grandson of Abbas Mirza, who had been heir to the throne of Fath Ali Shah, the second monarch of the Qajar dynasty. His mother was Homa Khanum, daughter of Bahman Mirza Baha al-Dowleh, another son of Abbas Mirza.

Abd al-Hoseyn Mirza was educated in the military school in Tehran, run by Austrian officers. He married the daughter of the crown prince and, by his proximity to the throne, gained great influence and wealth. He was an astute and ambitious politician of great resilience in the face of adversity, which was not lacking, as Persia underwent revolution, civil war, foreign invasion, and a change of dynasty in his lifetime.

Farmanfarma first served at the court of the crown prince until he became shah in 1896. He was then made governor of Tehran and minister of war in that year. He was exiled to Iraq when the shah was said to fear him, but he was recalled in 1906 and appointed governor of Kerman, just as the first stirrings of the Constitutional Revolution were beginning. He became minister of justice, then governor of Azerbaijan. In 1909, he became minister of the interior, then of war, and, later, governor of Kermanshah.

During World War I, his sympathies were with the British in the complicated relations that developed between the government and the belligerents on the one hand and, on the other, between the government and the nationalists. In 1915, he was made minister of the interior, then prime minister. He remained in this post only a few months, then was appointed governor of Fars, which was under British control. This was his last government post. His son, Nosrat al-Dowleh, however, served the new shah, Reza Shah Pahlavi, and was executed in 1937 by a monarch grown suspicious and tyrannical. Abd al-Hoseyn Mirza died in 1939.

MANSOUREH ETTEHADIEH

FARMANFARMIAN, SETTAREH

Advocate for social services in Iran.

Settareh Farmanfarmian, the daughter of a wealthy *shahzade* (prince), spent her childhood during the 1920s and 1930s in a Persian harem compound in Tehran. She began her education at home, and as a young woman she traveled across Iran, India, and the Pacific to attend the University of Southern California in the United States, where she earned an advanced degree in social work.

Farmanfarmanian returned to Iran in the 1950s and in 1958 founded the Tehran School of Social Work, which she directed until 1979. It was the only independent, private school of social work in Iran. As director, she was responsible for creating social welfare agencies for fieldwork placement of the school's graduates and for supervising their work in private clinics, schools, and health centers throughout Iran. From 1954 to 1958 she served as a United Nations expert for the Middle East, in Baghdad, Iraq. She also founded the Family Planning Association of Iran.

Farmanfarmanian introduced the concept of the community welfare center and provided motivation for various laws, including juvenile court laws and the legislation on the status of women. From 1980 to 1992 she worked for the County of Los

Angeles Department of Social Services, Children's Services. She published her autobiography in 1992.

FAROUK

[1920–1965]

Egypt's last king, 1936–1952.

Farouk, the son of King Fuʾad (reigned 1922–1936) and Queen Nazli, and the grandson of Khedive Ismaʿil ibn Ibrahim (reigned 1863–1879), was born in Cairo, on 11 February 1920. Privately tutored until the age of fifteen, Farouk intended to enter a British public school. He was, however, unable to gain admission to Eton and the Royal Military College at Woolwich, but he went to England anyway to pursue his studies. At the Royal Military College he took afternoon classes as an unenrolled student. His formal education was cut short by the death of his father, King Fuʾad, on 28 April 1936. Returning to Egypt, he ascended the throne as a minor and ruled with the assistance of a Regency Council until July 1937.

Upon first coming to power, he enjoyed much local popularity. Young, handsome, and seemingly progressive, he was thought to be an ideal person to foster parliamentary democracy in Egypt. In truth, however, he engaged in the same anticonstitutional practices that had so marked his father's tenure of power. During his reign he constantly plotted against the Wafd, Egypt's majority political party, contended with Britain over monarchical privilege, and intrigued to enhance the sway of the monarchy over the Egyptian parliament. In 1937, shortly after coming to the throne, he removed the Wafd from office. The Wafd had just concluded the Anglo–Egyptian Treaty of 1936, which increased Egypt's autonomy but fell far short of realizing the long-cherished goal of complete independence.

With the onset of World War II, Farouk's clashes with the British intensified. The monarch supported a series of minority ministries, many of which were, in British eyes, insufficiently committed to the Allied war cause. Political tensions came to a head in early 1942 while Germany military forces under the command of General Erwin Rommel were advancing in the western desert toward Alexandria. The British demanded a pro-British Wafdist ministry. When Farouk delayed, the British ambassador, Miles Lampson, on 4 February 1942 surrounded Abdin Palace with tanks and compelled the monarch, under threat of forced abdication, to install the Wafd in office. That day was a defining moment in Egypt's twentieth-century history. It undermined the legitimacy of parliamentary democracy and prepared the way for the military coup of 1952.

The immediate postwar years in Egypt were full of political violence and official corruption. In 1948 the Egyptian army suffered a humiliating defeat in the Arab–Israel War as the state of Israel came into being. During this period, groups opposed to parliamentary government increased their following throughout the country, most notably the Muslim Brotherhood, the Communists, and the Socialists. Within the army an elite of idealistic, young officers organized themselves in the Free Officers movement. Increasingly, King Farouk came to symbolize all that was wrong with the old order. Outrageously wealthy, he flaunted his wealth in a country wracked by poverty. His penchant for gambling and carousing with women offended many. Learning of the growing opposition to his rule inside the military, he tried to move on his enemies before they turned on him. He did not succeed. On 23 July 1952 the Free Officers, led by Gamal Abdel Nasser, seized power. Three days later, on 26 July 1952, the new rulers exiled the king. Sailing from Alexandria harbor on the royal yacht *Mahrussa,* he was accompanied into exile by his family, gold ingots, and more than two hundred pieces of luggage. His deposition in 1952 effectively brought an end to the rule over Egypt of the family of Muhammad Ali, who had come to Egypt as a military leader in the midst of Napoléon Bonaparte's invasion and had installed himself as Egypt's ruler in 1805. Farouk's infant son, Ahmad Fuʾad, succeeded briefly to the throne, but in June 1953 Egypt abolished the monarchy and

became a republic. Farouk continued to lead a dissolute life while residing in Rome. On 18 March 1965 he succumbed to a heart attack in a nightclub.

ROBERT L. TIGNOR

FARROKHZAD, FORUGH

[c. 1934–1967]

A leading modernist female Iranian poet.

Forugh Farrokhzad was the first woman poet in over a thousand years of Persian literature to present feminine perspectives with recognizably female speakers in lyric verse. In her 150 or so mostly short poems, composed from the mid-1950s onward, she established the female gender and voice in the Persian language.

Farrokhzad is controversial and the most translated twentieth-century Iranian poet. Frank and personal representations of feelings and views in everyday situations, both palpably Iranian and emotionally universal, characterize her verse, for which faith in art and love constitute the spiritual underpinnings.

MICHAEL C. HILLMANN

FASHODA INCIDENT (1898)

Crisis in which both France and Britain, vying for territory in Africa, claimed control over a Sudanese outpost.

At the end of the nineteenth century, the European powers were competing for control of Africa. As the French extended eastward from the Congo, the British expanded south from Egypt. In July 1898, a French expedition commanded by Captain Jean-Baptiste Marchand arrived at the Sudanese outpost of Fashoda on the Nile, some 400 miles (644 km) south of Khartoum. After British General Herbert Kitchener's victory at Omdurman on 2 September, he proceeded to Fashoda on orders from the British prime minister, Lord Salisbury. He arrived on 19 September and met with Marchand. Kitchener claimed the entire Nile valley for Great Britain, and, after several days, both parties withdrew peacefully. The solution to the conflicting claims was later worked out by diplomats in Britain and France, and it reflected the fact that Britain had an army in Khartoum while France had no appreciable forces in the vicinity. France renounced all rights to the Nile basin and the Sudan in return for a guarantee of its position in West Africa. The Fashoda incident is seen as the high point of Anglo–French tension in Africa.

ZACHARY KARABELL

FASI, ALLAL AL-

[1906–1973]

Moroccan nationalist politician and writer.

From a prominent Fez family of scholars of Andalusian (Spanish) origin, Allal al-Fasi was an early Moroccan nationalist, involved with the Salafiyya Movement during his education at the Qarawiyyin University. In the 1920s he helped organize the Free School Movement, which established schools to educate Moroccan youths in a modernist Islam tradition rather than according to French colonial ideas,

and in 1930 he led protests against the Berber Dahir. In 1934 he helped draw up the "Plan of Reforms," a manifesto that demanded radical reforms of the administration and economy of the French protectorate so that Moroccans might benefit from French rule. After his 1937 exile to Gabon, he maintained contact with the founders of the Istiqlal Party and at independence in 1956 returned to lead the party, remaining its leader after the split with the Union Nationale des Forces Populaires (UNFP; National Union of Popular Forces) in 1959. The party adopted a strongly nationalist program but was committed to a constitutional monarchical system.

After being minister of state for Islamic affairs (1961–1963), al-Fasi resigned and led the Istiqlal Party into opposition, while remaining loyal to the monarchy. He was secretary-general of the party until his death in May 1973. Al-Fasi wrote *al-Haraka al-Wataniyya fi al-Maghrib al-Arabi,* translated by Ahuzen Zaki Nuseibeh as *Independence Movements in Arab North Africa* (1954), and *al-Naqd al-Dhati* (Self criticism; 1966).

FASI, MUHAMMAD AL-

[1908–1991]

Moroccan academic and political leader.

Muhammad al-Fasi was educated at Qarawiyyin University in Fez and at the Sorbonne and École des Langues Orientales (School of Oriental Languages) in Paris. He taught at the Institut des Hautes Études Marocaines (Moroccan Institute of Higher Studies; 1935–1940); tutored the crown prince, later King Hassan II; and modernized the Qarawiyyin when he served as its president (1942–1944, 1947–1952). A founding member (1944) of the nationalist Hizb al-Istiqlal Party, he was held under restriction by the French authorities (1944–1947, 1952–1954). Fasi was minister of national education during the transition to independence (1955–1958). He wrote *Contes Fassis* (Tales of Fasi; 1926), *L'evolution politique et culturelle au Maroc* (The political and cultural evolution of Morocco; 1958), and *Chants anciens des femmes au Maroc* (Ancient songs of Moroccan women; 1967).

FASSIH, ISMAIL

[1935–]

Persian novelist and translator.

Ismail Fassih was born in Tehran and left Iran in 1956 to study English literature in the United States. Upon his return, he became an employee at the National Iranian Oil Company and taught at the Abadan Institute of Technology. His first novel, *Sharab-e kham* (The unripe wine; 1968), treats the life of an employee of the National Iranian Oil Company, Jalal Aryan, who is unwittingly involved in a crime mystery. Fassih's later novels continue the life of this fictitious character and his family in Tehran. In addition to his popular novels, Fassih has published a collection of short stories titled *Namadha-ye dasht-e moshavvash* (Symbols of the shimmering desert; 1990). Fassih is now retired and lives in Tehran.

FATAH, AL-

Palestinian nationalist movement headed by Yasir Arafat.

The name *Fatah* has a double meaning: It is both the Arabic word for *conquest* (literally, "opening up"), used to denote the seventh-century Muslim Arab conquests of the Middle East and North Africa, and

a reversed acronym of *Harakat al-Tahrir al-Filastini* (Palestinian Liberation Movement). The full name of the group is Harakat al-Tahrir al-Watani al-Filastini (Palestinian National Liberation Movement). Although it was identified for nearly three decades with the leadership of the Palestine Liberation Organization (PLO), al-Fatah (also al-Fateh, al-Fath) existed separately and before the foundation of the PLO. It was established by a group of Palestinian exiles working in the Persian (Arabian) Gulf countries, many of whom would be its principal leaders for many years. Most important were the engineer Yasir Arafat; his friend and colleague Salah Khalaf; Khalil al-Wazir; Khalid al-Hasan, an employee of the Kuwaiti government, and his brother Hani al-Hasan; and others working in Kuwait, Qatar, Saudi Arabia, and Europe. The founders sometimes date al-Fatah's beginning to 1959, when the Kuwait group was working together and took over a magazine, *Filastinuna* (Our Palestine).

The movement has been led from the beginning by a central committee, and occasionally holds general conferences. A revolutionary council was formed early on, but gradually its power was overshadowed by the central committee. (It should not be confused with al-Fath—Revolutionary Council, the name adopted by the dissident organization of Sabri al-Banna.) It also created a military wing that operated under the name *al-Asifa* (the storm), which began military action against Israel at the end of 1964. During 1965 it continued to claim guerrilla operations, though these had little effect upon Israel. Meanwhile, in 1964, the League of Arab States, with Egyptian prodding, had created the PLO under Ahmad Shuqayri, to some extent preempting al-Fatah's constituency. After the June 1967 Arab–Israel War, Arafat and other al-Fatah leaders slipped into the West Bank (from which al-Fatah had previously launched operations) to organize resistance. Failing to successfully pull together a revolt in the newly occupied territories, Arafat and other al-Fatah leaders withdrew and established new training camps in Jordan and Syria. Al-Fatah and other Palestinian guerrilla groups were able to increase their military capabilities and training in the camps.

Al-Fatah's ideology was ill defined and not highly theoretical. Its main principles were armed struggle, "Palestine first," and noninterference in the affairs of the Arab states. Al-Fatah cadres insisted upon liberating Palestine themselves rather than waiting for the Arab states to do it, and through armed struggle rather than negotiation. This "people's war" would also give the Palestinian people an identity and a sense of empowerment. Instead of viewing the liberation of Palestine as a derivative of pan-Arab unity, al-Fatah stressed "Palestine first": The Palestinian cause could not wait any longer for Arab unity. Finally, al-Fatah sought to avoid the radical sociopolitical agendas advocated by some leftist Arab parties that sought to bring about revolution in the Arab world. Al-Fatah pledged to cooperate with both radical and conservative Arab states. All considered, this vague bourgeois nationalist agenda reflects the conservative background of al-Fatah's founders: Most were middle-class Muslims whose vision of national liberation did not

Yasir Arafat (left), seen here with Palestine Liberation Organization (PLO) spokesman Kamal Nasser in Cairo, Egypt, in 1971, has led al-Fatah ever since about 1959, when he and other Palestinian exiles founded the movement for armed struggle against Israel. A decade later, Arafat and his al-Fatah colleagues won control of the PLO, an interconnected but distinct coalition of resistance groups. **© AP/Wide World Photos. Reproduced by permission.**

include sweeping socioeconomic change in Palestinian society.

Meanwhile, al-Fatah began to undermine Shuqayri's leadership of the PLO. In December 1967 Shuqayri, who had close ties to Egypt's Gamal Abdel Nasser and therefore to Egypt's massive defeat in June 1967, resigned. In January 1968 al-Fatah convened a meeting in Cairo of most of the guerrilla groups and set up a coordinating bureau among them. On 21 March 1968, Israeli forces raided al-Fatah base at Karama in Jordan. Forewarned, the guerrillas were able to inflict relatively heavy losses on the Israeli attackers with considerable support from Jordanian troops, and Karama became a rallying cry for the Palestinian resistance. Al-Fatah's numbers and reputation swelled. During the fourth and fifth Palestine National Council (PNC) sessions in 1968 and 1969, the various guerrilla groups, including al-Fatah, won larger and roles in addition to an amendment to the Palestine National Charter to support armed struggle. At the fifth PNC in February 1969 in Cairo, al-Fatah elected Yasir Arafat the new chairman of the Executive Committee of the PLO. The following year, he was given the title commander in chief as well. Thereafter, al-Fatah gained greater control of senior PLO positions, with Arafat's close aides Salah Khalaf (known by the nom de guerre Abu Iyad), Khalil al-Wazir (Abu Jihad), Faruq Qaddumi (Abu Lutf), Khalid al-Hasan, and others taking key posts.

Since 1969 the history of al-Fatah has been intertwined with that of the PLO, though the other guerrilla movements have often been able to limit al-Fatah's freedom of action. Until after the PLO's withdrawal from Beirut in 1982, al-Fatah's positions were sometimes hard to distinguish from the PLO's, but with each successive split within the PLO (or withdrawal of various rejectionist groups from the PLO leadership), al-Fatah's role as the main pro-negotiation faction became more pronounced. Starting in the late 1970s, al-Fatah merged its al-Asifa forces within the PLO's Palestine Liberation Army.

With the outbreak of the Palestinian Intifada in Gaza and the West Bank in 1987, al-Fatah leaders inside the occupied territories became prominent in the Unified National Leadership of the Intifada. At the same time, Arafat and his al-Fatah colleagues in exile were the main force in pushing the PLO toward recognition of Israel's right to exist. Despite many predictions over the years that al-Fatah would lose control of the PLO or that Arafat, at least, would be replaced as its head, and despite the assassinations of Khalaf and al-Wazir, Arafat and the al-Fatah leadership moved the PLO toward a negotiated peace with Israel in the September 1993 Oslo Accord.

The Oslo Accord led to the emergence of the Palestinian Authority (PA), an autonomous government under the PLO's leadership. Al-Fatah-dominated leadership cadre became the leaders of the PA, as factions opposing the Oslo Accord either broke from the PLO or were unable to reverse the new course. Yet the former al-Fatah exiles, some of whom built luxurious homes in the West Bank and were involved in cronyism and corruption, were resented by West Bank al-Fatah veterans who had lived through years of Israeli occupation. The outbreak of the al-Aqsa Intifada in October 2000 led to the emergence of armed al-Fatah groups in the West Bank, the Tanzim militia and the al-Aqsa Martyrs Brigade. The latter was involved in suicide bombings and other attacks on Israelis. The divisions within al-Fatah were most acrimonious during the summer of 2003, when Arafat was locked in a bitter power struggle with his former colleague and PA prime minister, Mahmud Abbas, which he eventually won. Abbas was replaced by another veteran al-Fatah member, Ahmad Qurai (Abu Ala), who also faced a power struggle with Arafat. In February 2004, the revolutionary council met for the first time in three years to deal with al-Fatah's mounting internal strife, which included mass resignations over alleged misrule by the group's veteran leadership.

FATAT, AL-

A clandestine Arab organization that made a significant impact on the development of Arab nationalism.

Al-Fatat was founded in 1911 by a small group of Arabs from Syria, Lebanon, and Palestine in the course of their higher studies in Paris. Initially called Jamʿiyyat al-Natiqin bi al-Dhad (literally, the "society of those who speak the letter Dad," i.e., Arabic), its name was later changed to al-Jamiʿa al-Arabiyya al-Fatat (The Young Arab Society). The original aim of al-Fatat was the administrative independence of the Arab lands from Ottoman rule. This meant that the Arab and Turkish nationalities should remain united within the Ottoman framework, but that each should have equal rights and obligations and administer its own educational institutions. Al-Fatat moved its offices from Paris to Beirut late in 1913 and set up a branch in Damascus.

The new environment created by World War I, particularly the Turkish government's execution of prominent Arab nationalists in 1915 and 1916, made al-Fatat amend its political program and opt for the complete independence and unity of Arab lands. By enlisting Amir Faisal (Faisal I ibn Hussein) in 1915, al-Fatat put itself in direct contact with the family of Sharif Husayn ibn Ali and, through them, with the British. In 1915, al-Fatat and the Iraqi-dominated al-Ahd drew up the Damascus protocol, which expressed the Arab nationalists' readiness to join the British war effort against the Ottoman state if Britain pledged to support complete Arab independence and unity. After the war, al-Fatat shifted its attention to the principle of pan-Syrian unity. It reached the height of its political influence during Faisal's short-lived Arab government in Damascus (1918–1920). Although al-Fatat was the backbone of Faisal's government, its founding members preferred to operate clandestinely. They used Hizb al-Istiqlal al-Arabi (Arab Independence party) as a public front for their organization. Differences over Faisal's controversial dealings with the Zionists and the French, as well as the different political priorities of the Iraqi, Palestinian, and Syrian elements that constituted al-Fatat, created serious schisms within the organization. The collapse of Faisal's government in Damascus in the summer of 1920 sealed al-Fatat's fate as a structured political organization. Many of its members, however, continued to be active in the politics of Arab nationalism in the generation after World War I.

MUHAMMAD MUSLIH

FATH ALI SHAH QAJAR

[1771–1834]

Second monarch of Persia's Qajar dynasty, 1797–1834.

Born Baba Khan, Fath Ali Shah Qajar took the name Fath Ali Shah upon his accession to the throne. He was the nephew of the first shah, Agha Mohammad Qajar, and had been designated heir apparent. In 1796, when Agha Mohammad was on his second military campaign to Georgia, Baba Khan was governor of Isfahan; news reached him that his uncle had been assassinated. His right to the throne was immediately challenged by several pretenders who had to be eliminated before he could be crowned in 1797. Fath Ali Shah's reign was marked by wars with Russia—attacks on the Caucasus principalities that had passed out of Persian suzerainty during the several years of turmoil and civil war.

The war with Russia began in 1804 and drew Persia into the European rivalries that are called the Napoleonic Wars. On one side was Britain, nervous of Russian and French designs on India; on the other was France's Napoléon Bonaparte, who was at war with Britain and Russia. The Persian forces were led by Crown Prince Abbas Mirza, who was then also governor of Azerbaijan.

Fath Ali Shah needed European aid in his war against Russia, so first he allied himself with the French, then with the British—but each time was abandoned when they changed their policies. Persia suffered a disastrous defeat in 1813 and signed the Treaty of Golestan. This treaty did not prove final, since the borders between Persia and Russia were not well defined and neither country was satisfied. War resumed in 1824, despite the unwillingness of the shah—who would not send sufficient financial help. Persia was defeated and signed the Treaty of Turkmanchai in 1828. According to this treaty, Persia ceded to Russia all the areas north of the Aras River, paid an indemnity of 5 million *tuman,* accepted other indemnity and capitulatory conditions that weakened the economy, and gave to Russian consuls judicial powers in disputes involving Russian subjects. The Treaty of Turkmanchai, in spirit if not in actuality, became the model for all the future treaties Persia (or Iran) was to conclude with other European nations.

The first premier *(sadr-e azam)* of Fath Ali Shah was Mirza Ebrahim Khan Eʿtemad al-Dowleh, who had helped Agha Mohammad Shah gain the throne; he subsequently grew so powerful that he was feared by the shah, who put him and his family to death. The next premier was Mirza Shafi, a man of modest background. During his ministry, the bureaucracy of the Qajar dynasty and the administration of the country were developed. Iran, disrupted after the fall of the Safavids, was once again strongly centralized and expanded. The capital, Tehran, was developed and endowed with new palaces, mosques, and pleasure gardens.

During the reign of Fath Ali Shah, some attempts at modernizing the army were made to meet any foreign challenge, but none was successful. Modernization was attached to European rivalries and lost ground each time policy shifted. Because of the interest of the European nations, the shah's court was visited by many envoys who have left their accounts of its splendor and extravagance. Nevertheless, the reign of Fath Ali Shah left Persia impoverished and with less territory than he had inherited.

FATWA

Technical term for the legal judgment or learned interpretation that a qualified jurist (mufti) can give on issues pertaining to the shariʿa *(Islamic law).*

Originally only a *mujtahid,* that is, a jurist satisfying a number of qualifications and trained in the techniques of *ijtihad* ("personal reasoning," the fourth source of Islamic law after the Qurʾan, the Prophet Muhammad's *sunna,* and *ijma,* or consensus), was allowed to issue a legal opinion or interpretation of an established law. Later, all trained jurists were allowed to be muftis. Fatwas are nonbinding, contrary to the laws deriving from the first three sources, and the Muslim may seek another legal opinion. The fatwas of famous jurists are usually collected in books and can be used as precedents in courts of law.

Because most Muslim countries stopped following the *shariʿa* during the twentieth century and adopted secular legal systems, fatwas are issued mostly on a personal basis or for political reasons. The practice of having a government-appointed mufti issue fatwas justifying government policy has been a major criticism by reformist contemporary Muslim movements. However, many of the latter often allow individuals without the requisite legal training to issue fatwas. Such edicts may be considered by their followers as binding but they are not

recognized by the jurists or the rest of the Muslim community as legitimate juristic opinions.

UPDATED BY MAYSAM J. AL FARUQI

FAWWAZ, ZAYNAB

[c. 1850–1914]

Lebanese essayist, novelist, poet, and dramatist.

Zaynab Fawwaz immigrated from south Lebanon to Egypt as a young woman and became a prominent writer on gender issues in the nationalist press. Much remains mysterious about her early life: She was the daughter of a Shiʿite family of modest means from Tibnin, Jabal Amil, and as a young girl she apparently was employed or taken into the local ruling household of Ali Bey al-Asʿad. She caught the attention of Ali Bey's consort, Fatima bint Asʿad al-Khalil, a literate woman who taught her the rudiments of reading and writing, and perhaps more. Sources provide divergent narratives on Fawwaz's first marriage(s) and her move to Egypt. She became the protégée of newspaper publisher and litterateur Hasan Husni Pasha al-Tuwayrani, in whose newspaper, *al-Nil,* she published essays in the early 1890s while also publishing in women's journals and other periodicals. Her essays and poetry were published in *al-Rasaʾil al-Zaynabiyya* (The Zaynab epistles, c. 1906); like other intellectuals of her time, she wrote across genres, publishing a massive biographical dictionary of famous women, *al-Durr al-manthur fi tabaqat rabbat al-khudur* (Scattered pearls on the generations of the mistresses of seclusion, 1894), as well as two novels, *Husn al-awaqib aw Ghada al-zahira* (Good consequences, or Ghada the radiant, 1899) and *al-Malik Kurush awwal muluk al-Fars* (King Kurush, first sovereign of the Persians, 1905), and one play, *al-Hawa wa al-wafa* (Passion and fidelity, 1893). She is considered an Arab feminist pioneer; her work is notable for emphasizing the importance of women's access to income-generating employment.

MARILYN BOOTH

FAYRUZ

[c. 1933 –]

One of the Arab world's most popular modern singers.

Fayruz (also Fairouz) was born Nuhad Haddad in Lebanon in approximately 1933. In the early 1950s, after several years of singing in Radio Lebanon's choir, she began to collaborate artistically with the brothers Asi (1923–1986) and Mansur al-Rahbani (1925–). She married the latter in 1954. The vast majority of the hundreds of songs that she sang during the first thirty years of her career were written and composed by the al-Rahbani brothers. Most of them were written for her, and the al-Rahbani brothers' folkloric musical theater extravaganzas—works such as *Jisr al-Qamar* (The moon's bridge, 1962) and *Bayya al-Khawatim* (The ring seller, 1964)—were staged at the Baʿalbak Festival beginning in 1959 and eventually at a variety of venues throughout Lebanon and the Arab world.

The annual Baʿalbak Festival evolved into a mixture of local and international avant-garde and folkloric acts. The al-Rahbanis' plays, which became more extravagant and operatic as the 1960s progressed, were in large part vehicles for Fayruz's talent. In light of the civil violence of 1958, these works, performed in the site's spectacular ancient Roman ruins, contributed to the effort by the country's Christian political elite to unify a diverse population cobbled together after the breakup of the Ottoman Empire at the end of World War I.

All of Fayruz and the al-Rahbani Brothers' plays were broadcast repeatedly on local television and radio. Three were made into feature films, including

one by the Egyptian director Yusuf Shahin. In addition to songs from the plays, Fayruz's numerous recordings also contain tunes from her pre-theater career on radio and from her live concerts, as well as Christmas carols and liturgical hymns. In addition to songs by the al-Rahbani brothers, she also sang songs written or composed by Muhammad Abd al-Wahhab, Saʿid Aql, Tawfiq al-Basha, al-Sayyid Darwish, Juzif Harb, Jubran Khalil Jubran (also Kahlil Gibran), Zaki Nasif, Nizar Qabbani, al-Akhtal al-Saghir, and Filmun Wahba.

In an age when songs in the Egyptian dialect dominated regional markets, Fayruz and the al-Rahbani brothers were credited with popularizing a distinctly Lebanese idiom. However, at the beginning of their collaboration they often performed Latin-style dance tunes and waltzes, and much of their music depended on nonindigenous instruments, such as the piano, and non-Eastern techniques, such as harmonization.

Due to radio and to recording technologies, increased emigration, and her and her composers' use of diverse musical styles, Fayruz's fan base rapidly transcended Lebanon's borders. In addition to working for Radio Lebanon, Fayruz and the al-Rahbani brothers sang and recorded for the British Near East Radio, Radio Damascus, and Gamal Abdel Nasser's influential Voice of the Arabs. It was at the latter organization's behest in 1955 that the al-Rahbanis and Fayruz recorded the Palestinian resistance song "Rajiʿun" (We shall return).

After the Arab defeat in the war of June 1967, Fayruz and the al-Rahbanis's songs and musical theater works became more urban in theme and setting. What remained consistent, however, was the contrast between their theatrical representations of a unified Lebanon—usually embodied in miraculous solutions to conflict offered by Fayruz's character—and the increasing sectarian tension, which culminated in the outbreak of a protracted Lebanese civil and regional war in 1975.

Shortly after the outbreak of war, the artistic trinity fell apart with the divorce of Asi and Fayruz. During the war and since its end, Fayruz has worked extensively, albeit not exclusively, with her son Ziyad al-Rahbani (1956–). Although this collaborative effort resists simple categorization, it has been characterized—for example, on records such as *Kifak inta?* (How are you? 1991)—by jazzy orchestration and relatively sensual lyrics. This shift has not prevented Fayruz from continuing to sing old al-Rahbani standards, many of which have been re-orchestrated, sometimes ironically, by Ziyad, such as those on the record *Ila Asi* (To Asi, 1995). Whatever the style, period, or medium, Fayruz and her voice have consistently been considered symbols of freedom and unity, not just for the Lebanese, but for all Arabs.

FAYSAL IBN TURKI AL SAʿUD

[c. 1785–1865]

Ruler of central Arabia for more than a quarter century (1834–1838, 1843–1865).

Faysal ibn Turki Al Saʿud was the eldest son of Turki ibn Abdullah, who was murdered in 1834. Faysal succeeded his father and soon consolidated his rule over most of the original Al Saʿud domain. He acknowledged Abdullah ibn Rashid as overlord of the dependent emirate of Jabal Shammar in northern Najd, thus laying the foundation for the Al Rashid dynasty that would briefly eclipse the Al Saʿud. In 1837, Egypt, which had crushed the Saudi state in 1811–1818 while acting in the name of the Ottoman sultan, again invaded central Arabia, this time to further Muhammad Ali's ambition of a Middle East empire. The next year the defeated Faysal was imprisoned in Cairo, and Khalid, son of "Saʿud the Great" (1803–1814), ruled as an Egyptian puppet. Faysal's dramatic escape from Egypt in 1843 (prob-

ably with the connivance of Muhammad Ali's son, Abbas) led to the rapid reassertion of his rule. He overthrew Abdullah Thunayyan, who had supplanted Khalid in 1841. Faysal soon took control of Najd, the Saudi state's core, and of al-Hasa on the Persian/Arabian Gulf. To the southeast he once again asserted Saudi authority in the Buraymi Oasis area and other parts of northern Oman, but the Hijaz and its holy cities of Mecca and Medina remained beyond his reach. Throughout the second phase of his rule, Faysal was preoccupied with the rebellious Qasim area of north-central Najd and with recalcitrant tribes, especially the Ajman.

A follower of the puritanical Wahhabi Islamic reform movement, Faysal ruled in accordance with its austere dictates. His regime, however, lacked the proselytizing thrust of both the eighteenth-century creation and the twentieth-century re-creation of the Saudi realm. In a state with only a rudimentary administrative apparatus he served as imam, leader of the community of the faithful, as well as chief executive of the state and commander in chief of its military forces. At the same time, he allotted considerable power to his three eldest sons. Abdullah was administrator for the capital of Riyadh and central Najd, Saʿud and Muhammad governed the southern and northern districts, respectively. In the rebellious Qasim district, Faysal installed his brother, Jiluwi.

Agricultural produce and livestock were taxed, as were Muslim pilgrims crossing Saudi territory. Tribute from Musqat and other territories supplemented tax revenues. Towns and tribes throughout the realm were obligated to provide quotas of men and animals when military emergencies required them. Soldiers were paid largely in the form of booty. Faysal's external relations established patterns for the future, especially in the three-way diplomatic game played with the Sublime Porte and Great Britain. Britain thwarted Faysal's designs on Muscat and Bahrain, but he and they generally cooperated on maritime issues, roughly prefiguring relations between Britain and Saudi Arabia on the Gulf littoral in the twentieth century.

At his death Faysal had regained and consolidated authority over the principal part of the Al Saʿud patrimony. Although his sons squandered their patrimony, Faysal's long reign reestablished the rule of the Al Saʿud in central Arabia and thus made possible the restoration under his grandson, Abd al-Aziz ibn Abd al-Rahman (Ibn Saʿud), in the next century.

FAYSAL, TUJAN

[1948–]

Jordanian feminist, democracy activist, and former member of parliament.

In 1993, Tujan Faysal became the first woman ever elected to the Jordanian parliament. Born in Amman, Jordan, in 1948, Faysal grew up in the capital, attended the University of Jordan, and earned bachelor's and master's degrees in English. Although Jordanian society features a relatively small gender gap in terms of education levels and literacy, this has not translated into a similar degree of equality in political representation. Women in Jordan received the right to vote and to run for office in 1974, but no new national elections were held until the kingdom's liberalization program began in 1989.

Faysal, by then a well-known television commentator and talk-show host, registered her candidacy, running for one of the three seats reserved for the kingdom's minority Circassian community. She became the victim of a smear campaign engineered by Islamists opposed to any participation of women in Jordanian public life. These activists were especially hostile to Faysal, who was an outspoken feminist and had published a newspaper article refuting Islamist interpretations of women's rights in Islam. A mufti of the Jordanian army declared Faysal apostate, despite her devout Muslim beliefs, and Islamist activists tried to have her marriage rescinded. She was forced to stand trial, but the case was ultimately dismissed just before election day. However, the

character assassination had been effective and Faysal lost the election. When she again ran for parliament in 1993, similar levels of Islamist opposition emerged, but this time Faysal was successful. From 1993 to 1997, she was the only female deputy in the lower house of parliament, the Majlis al-Nuwwab. Faysal served on the parliamentary committees on education, health, and environmental protection—important but nonetheless gendered assignments familiar to female parliamentarians and cabinet ministers in many parts of the world. She promoted the rights and opportunities of women, regardless of religion, ethnicity, or social class.

Faysal narrowly lost her reelection bid, and the 1997–2001 parliament included no women. With the exceptions of Layla Sharaf and Rima Khalaf, few women have been included in the royally appointed upper house, or in roles as cabinet ministers. But in 2003 King Abdullah II ibn Hussein issued a decree reserving a minimum of 6 seats (out of 110) in the lower house for women.

In 1997 Faysal had intended to run for office, but instead found herself on trial again. She had been arrested for sending an e-mail to the king accusing the prime minister, Ali Abu al-Raghib, of having personally benefited from a new government policy that doubled the costs of car insurance. She was sentenced to eighteen months in prison but was pardoned and released by the king after serving one month. She was banned from running in the 2003 elections for having been sentenced to prison. Nonetheless, from outside the walls of parliament, Faysal continued to campaign for women's rights and democracy in Jordan.

FEDAʾIYAN-E ISLAM

A small religious terrorist group active in Iran between 1945 and 1955.

Fedaʾiyan-e Islam (Devotees of Islam) was founded by Sayyed Mujtaba Mirlavhi, a theology student, who adopted the name Navab Safavi. His followers were mostly youngsters employed in the lower levels of the Tehran bazaar. The group interpreted the Qurʾan literally, demanded a strict application of the *shariʿa* (Islamic law), and called for the physical elimination of the "enemies of Islam." Despite ideological affinity with the Muslim Brotherhood in Egypt, the two groups had no organizational links. The Fedaʾiyan-e Islam's victims included Ahmad Kasravi, the iconoclastic writer, and General Ali Razmara, Iran's prime minister in 1951. It also tried to assassinate Husayn Fatemi, Mohammad Mossadegh's foreign minister, and Hoseyn Ala, the prime minister in 1955. After the last attempt, the government destroyed the organization by executing Safavi and his three closest colleagues. Immediately after the Iranian Revolution of 1979, some members tried to revive the Fedaʾiyan-e Islam, but others sabotaged the attempt, arguing that there was no need to resurrect the organization. Other members, however, channeled their activities into an influential right-wing group named the Coalition of Islamic Societies. Consequently, some surviving members of the Fedaʾiyan can now be found in the majles, in the cabinet, in the Council of Guardians, and, most noticeably, in the Tehran Chamber of Commerce.

FEDAʾIYAN-E KHALQ

The main Marxist guerrilla movement in contemporary Iran.

Fedaʾiyan-e Khalq (The People's Devotees) was created during the early 1970s by young dissidents from both the Tudeh Party and Mohammad Mossadegh's National Front who felt that their parent organizations, with their conventional political strategies, would never succeed in overthrowing the Pahlavi regime. These young activists were inspired by Mao Zedong, Ho Chi Minh, and, most important of all, Che Guevara. A few of them received guerrilla training from the Palestinians in Lebanon. Their first military exploit was to assault a gendarmerie station in the Caspian village of Siyahkal in February 1971. This attack, famous later as the Siyahkal incident, acted as a catalyst for the whole revolutionary movement in Iran. It prompted others, especially religious radicals such as the Mojahedin-e Khalq, to follow their example. Even Ayatollah Ruhollah Khomeini's disciples have admitted that Siyahkal left a "deep impression" on the Iranian population.

In the years following Siyahkal, the Fedaʾiyan lost all its original leaders and most of its rank and file—either in shoot-outs, under torture, or by firing squads. Most of these martyrs came from the ranks of the intelligentsia—they were teachers, engineers, and university students. By the time of the Iranian revolution, the Fedaʾiyan enjoyed a widespread mystique of revolutionary heroism and martyrdom, but little remained of its armed organization. This little, however, did play a part in delivering the old regime its coup de grace in the dramatic days of February 1979.

After the revolution, the Fedaʾiyan grew quickly to become the main Marxist organization in Iran, far outshadowing the older Tudeh Party. By early 1981, it had a nationwide structure, its Tehran rallies attracted over 100,000 participants and, with the Mojahedin, its armed cells posed a serious threat to the clerical Islamic Republic. After 1981, however, the Fedaʾiyan went into sharp decline in part because of a massive government repression and in part because of constant internal fragmentation. Government repression took more than 600 Fedaʾiyan lives. The backgrounds of these martyrs were similar to those before the revolution, with one minor variation—the new ones included many more high school students.

The main split came over how to deal with the clerical state. One faction, known as the Aksariyat (Majority), viewed the Khomeini regime as intrinsically anti-imperialist and, therefore, potentially progressive. In this respect, it followed a policy similar to the Tudeh. But the other faction, labeled the Aqalliyat (Minority), saw the regime as the executive committee of the petty bourgeoisie, and, therefore, inherently conservative and even reactionary. The two factions published newspapers with the same title of *Kar* (Work). Both, however, soon experienced their own splits over such issues as the Tudeh Party, the Mojahedin, the Iraqi war, the Kurdish revolt, and the fall of the Soviet Union. By the early 1990s, there were at least six groups in exile, each with its own newspaper, each tracing its origins to Siyahkal, and each incorporating into its formal name a variation of the term *Fedaʾyi.* By the early 2000s, these had withered down to two—both based in Germany.

FEMALE GENITAL MUTILATION

Surgical operation performed on girls in the Nile Valley, northeast Africa, and parts of West Africa

Female circumcision has been the subject of fascination, horror, and feminist agitation in the West. There is little doubt that circumcising women is linked to control of female sexuality. In the feminist literature, the term *female genital mutilation* (FGM) has tended to replace *female circumcision* as a more accurate description of the operation performed upon young African girls in the Nile Valley, northeast Africa, and parts of West Africa.

There is no reference to female circumcision in the Qurʾan, and it is only mentioned in the *hadith* where Muhammad is said to have advised the use of the *sunna* (customary) method, not to destroy or mutilate, for this is better for the man and would make the woman's face glow. The right of a woman to sexual satisfaction in marriage is upheld in Muslim interpretations. There is general agreement that female circumcision was already customary in societies where Islam spread, and that since it was not prohibited by Islam its continued practice was permitted.

The greatest prevalence of female circumcision is in the African continent—especially in northeast and eastern Africa and across the Sahel to West Africa—where it is also practiced by some Christian groups in Ethiopia and Egypt. The Islamic faith enjoins modesty and proper sexual conduct for both males and females, but as is true for other faiths originating in the Middle East, the sexual double standard demands more protection and greater monitoring of women to guard their chastity. Female circumcision is a powerful ally, but it is neither the only approach nor is it commanded by Islam. The religious scholars *(ulama)* in different Muslim countries have at different times interpreted the *shariʿa* as either being neutral to the practice (Sudan during colonial times) or in favor of female circumcision (Egypt under recent Islamist pressure). The grand shaykh of Al-Azhar University, Gad al-Haq Ali Gad al-Haq, ruled in a 1995 *fatwa* that "female circumcision is a noble practice that does honor to a woman," and that medieval scholars had ruled that both male and female circumcision is mandated by Islamic law. However, Egypt's grand mufti Sayyid Tantawi argued that circumcising women is not part of Islamic teaching and is a matter best evaluated by medical professionals.

Three different forms of circumcision are recognized: (1) clitoridectomy, or the excision of the tip of the clitoris only; (2) modified excision, or the removal of the clitoris and parts of the *labia majora* and *minora;* (3) infibulation, or excision of the clitoris and all of the *labia majora* and *minora,* leaving a smooth vulva and a small opening for the common flow of urine and menses. The latter (called Pharaonic circumcision in Sudan) is most widely practiced in Somalia and parts of East Africa. The less severe forms of the operation are more commonly found in West Africa. Female circumcision is not practiced in some of the most patriarchal of Muslim countries, such as Saudi Arabia or Afghanistan, or in Jordan, where killings of allegedly unchaste women are believed to protect family honor.

The global women's rights movement has asserted that female circumcision is in a category with other human rights violations, such as domestic abuse and honor killings. An international human rights campaign against FGM has advocated banning it, or at least some amelioration of the practice, as a violation of girls' and women's rights. The Vienna Human Rights Conference in 1993 and the Beijing International Women's Conference in 1995 passed resolutions against FGM and called for state-supported and international educational and public health campaigns to end or ameliorate the various practices associated with it.

FERAOUN, MOULOUD

[1913–1962]

Algerian writer.

Mouloud Feraoun was born to an impoverished Kabyle family. He received a French education and

a teaching degree. Feraoun's publications dealt with Kabyle life as viewed in the novels *Le fils du pauvre* (1950); *La terre et le sang* (1953); *Les chemins qui montent* (1957); and the essays, *Jours de Kabyle* (1954). Feraoun also translated the poetry of the renown Kabyle, Si Mohand. Feraoun's posthumous *Journal, 1955–1962* (1962) chronicled the Algerian war of independence. He was murdered by the colonialist Secret Army Organization (Organisation de l'Armée Secrète; OAS). Feraoun belonged to the famous "Generation of 1954" literary figures (composed also of Mohammed Dib, Yacine Kateb, Moulaoud Mammeri, and Malek Haddad).

See also ALGERIAN WAR OF INDEPENDENCE; DIB, MOHAMMED; HADDAD, MALEK; KATEB, YACINE; ORGANISATION ARMÉE SECRÈTE (OAS).

FERIT, DAMAT MEHMET

[1853–1923]

Ottoman politician and grand vizier.

Damat Mehmet Ferit Paşa rose to prominence first by marrying the sister of future sultan Vahideddin and then by founding the Freedom and Accord Party in November 1911. As a revival of the Liberal Union Party, the Freedom and Accord Party opposed the Committee for Union and Progress government and demanded an investigation of the Ottoman defeat at Tripoli the same year.

In two terms as grand vizier in 1919 and 1920, Damat Ferit Paşa allied with Sultan Vahideddin and Allied occupiers against the emerging Kemalist national movement, obtaining *fatwas* condemning nationalist leaders to death and inciting the Kurds against Kemalist forces in eastern Anatolia. On 17 October 1920, he resigned under Allied pressure and fled to Yugoslavia. In 1921, the Ankara national assembly condemned him to death in absentia for treason. He died of natural causes on 6 October 1923, the same day the Allies evacuated Istanbul under the Treaty of Lausanne.

ELIZABETH THOMPSON

FERMAN

An imperial edict carrying the Ottoman sultan's tughra, *or signature.*

Fermans were regulations or communiqués issued on a wide variety of topics in response to appeals from government officials and subjects throughout the empire. They were issued after discussion by top officials at the sultan's palace, or Sublime Porte, often but not necessarily including the sultan himself. The grand vizier handled appeals of a general administrative nature, while the *defterdar* considered fiscal matters and the *kadi-asker* matters of *shariʿa*, or religious law. The sultan's *tughra* would be affixed near the top of the document, which would then be placed in a small bag and sent by courier to the appellant.

With the expansion of government and the increasingly autonomous responsibility of the grand vizier in the nineteenth century, *fermans* were replaced by *irade,* which means "the sultan's will." The *irade* was an inscription expressing the sultan's approval that was affixed at the bottom of a document drawn up by the grand vizier. Documents originating personally with the sultan were then called *hatt-i hümayun,* literally "imperial documents."

FERTILE CRESCENT

Term used by historians and prehistorians to describe the ancient Near East's agricultural heartland, which produced the Neolithic revolution and the rise of the world's first civilizations.

The Fertile Crescent stretches from the Mediterranean coast north across the Syrian Desert to Mesopotamia and then south to the Persian/Arabian Gulf. Parts of Egypt, Israel, Lebanon, Syria, Iraq, and Iran are within it.

The first civilization of Sumer and the civilizations of the Bible—Assyria, Akkad, Persia, and ancient Egypt, as well as the Jewish kingdoms of Judah and Israel—all developed in the Fertile Crescent, with cities, agricultural towns and villages, and herders of domesticated sheep and goats. Both ancient Greece and Rome invaded to control the richness of the region, and the Roman Empire continued through the Islamic conquests of the 700s, its Byzantine emperors ruling from Constantinople until the Ottoman Turks conquered the capital in 1453, making it their own capital of Istanbul.

Under the Ottoman Empire, the crescent had districts or provinces *(vilayets)* and subdistricts *(sanjaks)*. After World War I, with the defeat of the Ottomans, Britain and France administered most of it under League of Nations mandates. Beginning in the 1920s, Arab leaders developed various plans for unifying it, and the Hashimites were especially eager to see it ruled by one of their amirs. After World War II, the concept of pan-Arabism was championed by Egypt's President Gamal Abdel Nasser and by the Baʿthist political parties of Iraq, Syria, and elsewhere. Today, Fertile Crescent unity is little talked about, but the Islamist political resurgence and the Organization of Petroleum Exporting Countries (OPEC) remind many that common interests and common heritage may yet serve to unite the Arab world, much of which now exists in the Fertile Crescent.

FERTILE CRESCENT UNITY PLANS

Post–World War I plans to unify the Arab lands in Asia of the former Ottoman Empire.

After World War I, various plans, differing in source and motivation, were advanced for the unification of that area of Arab Asia known as the Fertile Crescent. This followed the dismemberment of the Ottoman Empire and the sanctioning by the League of Nations of mandates for France and Britain in 1922, to become effective in 1923, covering Mesopotamia and geohistorical or Greater Syria (which included Lebanon, Palestine, and Transjordan). The Fertile Crescent was a conceptual broad arc from Basra to Beersheba, embracing all the mandated territory; it was moderately fertile and, in addition to Arabs, included Kurds, the Druze people, Alawites, and other ethnic minorities.

Well before the collapse of the Ottoman Empire, its Arab provinces in Asia had been edging toward regional autonomy. Such separatist aspirations were submerged in the expectation of a single independent Arab state, ostensibly promised during the World War I undertakings of Britain and France. By 1919, however, the Syrian national congress urged upon the investigating U.S. King–Crane Commission the reunification of geohistorical Syria as a separate entity. (In March 1920, Faisal, eldest son of Sharif Husayn of Hijaz—who had cooperated with T. E. Lawrence [of Arabia] and British General E. H. Allenby in uniting Arab forces to take Jerusalem and Damascus—was proclaimed king of Syria by the Syrian national congress; he was deposed by the French in July 1920.) The Anglo–French repudiation of the congress's resolution and Britain's granting of the throne of Iraq to Faisal after his brief rule in Syria set in motion the first major effort—promoted by Faisal—for the unification of the crescent. Faisal recognized, however, that the sanction of Britain and France was essential. From neither was it forthcoming. France suspected the project of being inspired by Britain to undermine French influence; for Britain, main-

taining the Entente Cordiale outweighed other considerations. Later, the French were to give Faisal momentary encouragement on his visit to Paris in 1931, since, following the signing of the Anglo–Iraqi Treaty of 1930, which looked forward to the termination of Britain's mandate, the French saw possible advantage in Fertile Crescent unity. The project also drew support from the Aleppine People's Party and the Syrian monarchists; but the dominant National Bloc in Damascus favored the unification of Greater Syria on its own as a republic. One permanent obstacle to Northern Arab unification, whether under Hashimite auspices or not, was the rooted objection of Ibn Saʿud, king of Saudi Arabia (1932–1953).

Faisal's final plea for British support in 1933 had received no answer before he died three months later; Nuri al-Saʿid, his prime minister, pursued the cause, but in Iraq and elsewhere, Arab nationalism, which sought the union of all Arabs, exerted a more potent appeal for political theorists, such as the Iraqi Sati al-Husari. Amir Abdullah of Transjordan, Faisal's brother, was meanwhile brooding on his grand design for the unification of Greater Syria with himself as king, while in Syria itself a quite different movement for the cohesion of the "Syrian" people, on a wider interpretation, was being canvassed by the charismatic Antun Saʿada, a Lebanese-born Christian convinced that "natural" Syria, embracing in his view the whole crescent (if not more), enjoyed a particularism owed neither to Islam nor to the Arabs but to the ethnic mix within the region's distinctive environment. The aim of the Syrian Social Nationalist Party (SSNP), which he founded, was to unify this Syrian people and defend its separatism. His appeal expectedly attracted non-Muslims; more remarkable was the number of influential Syrian Muslims who gravitated into his orbit. In 1938, after arrests by the French for inciting disorder, he fled to South America, returning to the fray in 1947. Before his departure, membership of the SSNP was alleged (improbably) to have reached 50,000. All these movements for Arab Federation, as the British authorities called it, were regarded in 1939 by London as subject to insurmountable obstacles—internal rivalries as well as French, Saudi, and Zionist opposition. London's conclusion was to let natural forces take their course.

In July 1940, Amir Abdullah formally launched his Greater Syria plan, finding some support from Syrian ethnic minorities and even from Arab tribal and army factions; but the response of the British government, preoccupied with World War II, was unfavorable. In 1941, the emergence in Iraq of the anti-British Rashid Ali al-Kayani, with the exiled mufti of Jerusalem at his side, and the encouragement of the Axis powers, led to a new call for Fertile Crescent unity; but his briefly successful coup d'état in April was suppressed by British army intervention with Jordanian support. The expected military backing of the Axis had failed to materialize.

Britain's search for a posture that might strengthen its wartime position in the Middle East led in May 1941 to British Foreign Secretary Anthony Eden declaring his nation's "full support for any scheme of [Arab] unity which commanded general approval." Britain's high commissioner in Jerusalem, Lord Samuel, prompted by his Arab adviser, George Antonius, urged active support for Fertile Crescent unity and the abolition of the artificial frontiers imposed on Greater Syria after World War I. The authorities in London remained unmoved.

In December 1942, Amir Abdullah presented a new version of his Greater Syria scheme, in which "cultural union" with Iraq would lead to confederation of the two. The response of the rival Hashimite court in Baghdad was the launching by Prime Minister Nuri al-Saʿid of his so-called Blue Book, an elaborate scheme for solving all Middle East problems, in which a reunified historic Syria would join with Iraq to form the core of an Arab league open to all—the whole scheme resting on an international guarantee. Opposition from Ibn Saʿud and Amir Abdullah was instant; and Nuri's bid for wider Arab unity was trumped in Cairo where Prime Minister Mustafa al-Nahhas announced in March 1943 his intention of consulting all Arab governments with the object of reconciling ideas on Arab unity—a ploy that gathered strength and led eighteen months later to the foundation of the Arab League on Egyptian terms. This was to forebode an end to all Fertile Crescent models, although their proponents by no means yet admitted defeat. Both Amir Abdullah and Nuri continued to propagate their respective schemes, Nuri now

toying with a plan for Iraq's merger with Syria, where a number of old-guard politicians and transient strongmen gave him encouragement. Antun Saʿada, too, returning from exile in 1947, relaunched his own Fertile Crescent vision by organizing from Syria, with undercover support from its President Husni al-Zaʿim, a coup in Lebanon as a starting point. Zaʿim betrayed him, and Saʿada was executed in Lebanon. The zealotry of his SSNP partisans was to survive unabated and lead to a final futile coup attempt in Lebanon in 1963.

Further efforts by Iraq to revive its Fertile Crescent project in other modes were made in 1954 by Fadhil al-Jamali, the then prime minister, and again the following year by Nuri al-Saʿid on the basis of the ill-fated Baghdad Pact of 1955. Both were resisted by Syria; and the emergence of Gamal Abdel Nasser as the potent manipulator of Arab resistance to what he saw as continuing British imperialism ended any general Arab acceptance of Iraqi aspirations in the crescent. In response to Nasser's unification of Egypt and Syria in February 1958, the two Hashimite monarchies laid their jealousies aside and declared the Federal Union of Iraq and Jordan, seeking at the same time to revive the Fertile Crescent concept by detaching Syria from Nasser's embrace. Both initiatives failed, Hashimite rule in Iraq being violently overthrown in the July revolution.

Whether there was ever serious popular enthusiasm anywhere for the Fertile Crescent maneuvers of political leaders is questionable. What mostly animated vocal commoners was independence from the West; political configuration took second place. By the time independence was finally vouchsafed, national particularisms had begun to entrench themselves, as the provisions of the Arab League wisely recognized. Nonetheless, and despite the self-seeking ambitions of rival leaders, Fertile Crescent unity may be seen as a genuine cause, even if the facts made it a lost one. Its revival in the 1990s cannot be excluded in the light of such possible developments as a reconciliation between Syria and Iraq, the disintegration of Lebanon, the weakening of Hashimite control in Jordan, and the ending of superpower confrontation with its divisive effects. Nevertheless, many of the original obstacles remain.

FES, TREATY OF (1912)

Document providing for the establishment of the French protectorate over Morocco, initialed in Fez, 30 March 1912.

The signers to the Treaty of Fes (also known as the Treaty of Fez) met in Morocco—Eugene Regnault, France's representative in Tangier had negotiated the treaty with the sultan, Mulay Abd al-Hafid. In addition to clauses that accorded Spain control over

the Atlantic coastal zone plus the enclaves of Melilla, Ceuta, and Ifni and that established Tangier as an international city, the treaty spoke of "a new regime" in Morocco based on those "administrative, judicial, educational, financial and military reforms which the French Government judged were necessary to introduce into the territory of Morocco." The treaty also provided for the safeguarding of the "traditional prestige of the sultan [and] the exercise of the Muslim faith."

Only a few weeks later, Abd al-Hafid was forced to abdicate by the new French colonial governor Louis-Hubert Gonzalve Lyautey—in favor of his more malleable brother Mulay Yusuf.

The signing of the treaty was the culmination of at least a half century of diplomatic maneuvering to take over Morocco by France, Britain, Spain, and Germany, with other nations including the United States standing by. Since the eighteenth century, systematic piracy and kidnapping had occurred in the Mediterranean, sponsored by corsairs and rulers of the so-called Barbary coast; European and American ships and cargoes were taken and Christian sailors and passengers sold into slavery in the Ottoman Empire and Africa. In the early nineteenth century, the almost unassailable Barbary States were subdued and opened to European concessions. The lure in Morocco became important mineral resources (mainly phosphates). Within Morocco, decades of political fragmentation had left the Alawi sultanate all the more vulnerable to European pressures. By the late nineteenth century, in fact, the rivalry between the Western nations was probably all that allowed Morocco to remain independent.

The first of several crises leading to the Treaty of Fes erupted with the signing of the Franco–British agreement of 1904 in which, in effect, France was given free rein in Morocco in exchange for its support of British imperialism in Egypt. The agreement met with opposition from Germany, which had important commercial interests in Morocco. Tensions between the three nations led to the convening of the Algeciras Conference in January 1906 and the Act of Algeciras in April of that year. The act provided for international supervision over Morocco and, specifically, for French and Spanish control over Moroccan ports, police, and commercial affairs; it sparked off acts of protest and

violence against Europeans and European interests within Morocco. French and Spanish troops were sent in on the pretext of preserving order, and through 1907 the French gradually extended their military presence. The reigning Moroccan ruler Abd al-Aziz was forced out of office by his brother Abd al-Hafid, who was recognized in 1909 by the French after his acceptance of the Act of Algeciras.

From 1909 to 1911, French forces in the center and west of Morocco and the Spanish in the north expanded their areas of control. In protest, Moroccan tribal forces marched on the city of Fez against Abd al-Hafid, giving the French an excuse to seize both Meknes and Fez following their defeat of the tribes. German opposition, which peaked in a symbolic show of force off the Moroccan Atlantic coast in 1911, was defused with an agreement to cede portions of French-controlled Congo to German authority. The signing of the Treaty of Fes followed shortly thereafter. Insofar as French control over Morocco was concerned, however, the treaty was only the first step in a long and difficult campaign for consolidation and colonialism. Moroccan nationalism

eventually prevailed, however, when independence was declared in 1956.

FEZ, MOROCCO

Historical capital of Morocco.

Fez (Arabic, *Fas*), one of four Moroccan imperial cities, was a historical capital and the economic and cultural center. It declined under the French protectorate of 1912, when Rabat became the administrative capital; after World War II, French economic interests were shifted to Casablanca. Fez's prominence is partially due to its location at the juncture of two geographical axes—an East–West route from the Atlantic coast toward Algeria and points east; and the North–South route from the Mediterranean to the Sahara. The plenitude of water from the Fez River as well as numerous nearby springs, rich resources, and productive surrounding plains has encouraged settlement.

Fez was founded in 789 (172 A.H.) on the right bank of the Fez River by Idris ibn Abdallah, who died before his town could be developed. Twenty years later, Idris's son, Idris II, founded another town, al-Aliya, on the left bank of the river. The Berber and Arab population of Fez received a vital population infusion in the early ninth century when refugees from Andalusia (now Spain) arrived in 818 and settled the right bank. Families from Kairouan (Tunisia) settled the left bank around 825. The two rival sides of the city were united under the Almoravid dynasty, which, however, made Marrakech its capital. When the Marinids (c. 1258–1465) took power, Fez became their capital and remained the center of Moroccan political life even when Mulay Isma^cil made Meknes his capital and then under the French protectorate. The post–World War II shift from traditional products, leather, textiles, and handicrafts to the mining of phosphates and the export of agricultural produce lessened Fez's economic importance. It must be noted that the transshipment and trade city of Casablanca was developed by Fassi entrepreneurs who moved there with the shift of economic emphasis.

The modern city of Fez had two predecessors: Fas al-Bali, the old Arab city *(madina)* in the river valley; and Fas al-Jadid, the administrative complex built by the Marinids, which encompassed the royal palace, a military complex, the Jewish quarter *(mellah),* and a commercial district located on hills outside the ramparts to the west. The third city, modern Fez (Nouvelle Ville), was built in European style to the southwest of Fas al-Jadid, and its suburbs stretch out into the surrounding farmland. Fez traditionally housed an array of social and ethnic forces—Berbers, Arabs, Jews, *shurafa, murabits,* artisans, merchants, notables, and the poor. These groups often disputed among themselves and with the governments in power, which often made the city of Fez an independent political entity.

The historical monuments of Fez include the shrine of Idris I, the tomb complex of Idris II, the Qarawiyyin mosque, the Andalusian mosque, the Madrasa of the Attarin, Bou Inaniya Madrasa, and the monumental gates and city ramparts. The Qarawiyyin mosque and university, established in the tenth century by the Fatimids and enlarged by the Alamoravid Sultan Ali ibn Yusuf, became a center of Islamic science and one of the earliest universities ever established. Fez also houses the Sidi Muhammad ibn Abdullah University, established in 1974. Fez's narrow streets forced builders to accent vertical facades of public structures and private dwellings. The result in Fas al-Bali is a unique pub-

The Green Mosque sits centered in the city of Fez (Fes), in North Morocco. An important center for business and industry, Fez is located on the commercial roads, which join the Atlantic Ocean and the Mediterranean Sea with the South of Sahara. Fez, the famous felt hat, is named after this native city. © Karen Huntt Mason/Corbis. Reproduced by permission.

lic architecture. Time and neglect have, however, taken a predictable toll. UNESCO has developed a project to renovate the rapidly decaying Fas al-Bali as an international historic site, but the project has, to date, been halted through lack of funds. Morocco's rapid population growth and the rural migration to urban centers has forced Fez's expansion into suburban residential areas and bidonvilles. According to 2002 figures, the province of Fez had a population of 1.5 million people.

FEZZAN

Former province of southwest Libya, with an area of about 213,000 square miles (340,800 sq km).

Fezzan was located south of the former province of Tripolitania, which bordered it approximately along the 30th parallel. The southern part of the former province of Cyrenaica lay to the east. Fezzan had international frontiers with Algeria to the west and with Chad and Niger to the south. The region's chief town and administrative center is Sebha, largely a twentieth-century creation; most other settlements have developed around small but long-established

Neolithic cave paintings of giraffes found on walls in Fezzan, Libya. Paintings resembling animal life that once lived in the Sahara can still be found in this area. © ARCHIVO ICONOGRAFICO, S.A./CORBIS. REPRODUCED BY PERMISSION.

oasis villages. Fezzan is now divided into Sebha, al-Shati, Awbari, Murzuq, Ghat, and al-Jufrah; combined population (1984 census) is some 214,000.

Fezzan is characterized by a series of east-west depressions over artesian waters and oases, some extensive. Widely scattered in the surrounding desert, these oases are the only settled areas. Along the southern and southwestern borders, the land rises toward the Ahaggar and Tibesti massifs of the central Sahara.

Fezzan is approximately one-third the distance from Tripoli to Lake Chad and, historically, has been a main artery for caravans between the Mediterranean Sea and central Africa. It has always had a certain Sudanic ethnic and cultural character. Its oases have traditionally provided shade, water, camels, and dates for caravans and, in the past—despite intermittent domination by Tripoli—derived modest prosperity as transshipment centers of the northbound slave trade and the southbound traffic in manufactured goods. In the mid-nineteenth century, the Ottoman Empire imposed direct rule from Tripoli, and the Saharan trade prospered intermittently until its terminal decline at the century's end. In the second half of the nineteenth century, Fezzan became one of several centers of the Sanusi order.

Italy invaded Libya in 1911 and in 1914 briefly occupied Fezzan's main oases. The province was reconquered by Italy in 1929 and 1930 and was designated Territorio Militare del Sud (Southern Military Territory), administered from Hon. It had by then become a social and economic backwater, cut off from most traditional trade contacts. During World War II, Free French forces advancing from Chad in 1942 and 1943 expelled the Italians and set up a military administration closely linked with Algeria and Tunisia. Fezzan became one of the three constituent provinces of the United Kingdom of Libya declared independent in December 1951.

Although the poorest and least populous of Libya's three regions, Fezzan gained a certain cachet after the 1969 revolution, because the Libyan leader, Colonel Muammar al-Qaddafi, had been educated and conceived his revolution there. Since 1969, the infrastructure has been developed and attempts made to promote agriculture with abundant newly discovered water reserves, which are also being piped to northwest Libya. Crude oil has been found in the Murzuq Basin and large quantities of iron ore in the Wadi Shati, but commercial exploitation has been slow. The region still relies on northern Libya for most of its economic and social needs.

FIDA'IYYUN

Guerrillas or commandos.

Although the Arabic term *fidaʾiyyun* or *fidaʾiyyin* ("those who sacrifice themselves") is usually associated with modern military operations, it has its roots in me-

dieval Islamic concepts. The Hashashiyyun (Assassin) sects of Ismaʿili Shiʿism, a branch of Islam, were early fighters who conducted guerrilla warfare and developed a clandestine organizational structure. More recently, various groups have referred to themselves as *fidaʾiyyun.* Examples include the Young Turk revolutionaries of the early twentieth century and Iranian groups such as the Feda'iyan-e Islam.

Since the 1960s, the term has come to refer to Palestinian guerrillas conducting sabotage, terrorism, and other military operations against Israeli, and sometimes Arab, targets. After the Arabs' defeat in the Arab–Israel War of 1967, the Palestinian commando groups took charge of the movement to liberate Palestine. The fidaʾiyyun first came to prominence after their participation in the defeat of Israel's troops at the battle of Karama in Jordan in 1968, despite the fact that they were vastly outnumbered. Other events, such as Jordan's civil war (1970–1971), dubbed Black September by the Palestinians, along with a series of Palestinian attacks in Israel, the Arab world, and Europe, established the fidaʾiyyun as actors on the international political stage.

Although most factions in the Palestine Liberation Organization (PLO) have moved away from commando activities, the term fidaʾiyyun is still used. Radical followers of Islamic groups such as the Islamic Resistance Movement, HAMAS, and Islamic Jihad, operating in the West Bank and the Gaza Strip, consider themselves fidaʾiyyun. HAMAS's military components are called the Sheikh Izz al-Din al-Qassam brigades, named after the man whom many Palestinians consider the first Palestinian guerrilla. Qassam was killed in 1935, during a battle with British forces in Palestine. In the 1990s and early 2000s, both groups conducted guerrilla operations and terrorism (including suicide bombings) against Israeli military targets and civilians in the West Bank, Gaza, and Israel, killing hundreds of Israelis.

FILM

Film industry of the Middle East.

The film industry of the Middle East has flourished and prospered over the past century, producing a number of world-renowned auteurs despite internal opposition, political strife, strong government control of the industry in various Middle Eastern countries, and often a lack of decent equipment. Middle Eastern films have become some of the leading artistic influences in world cinema.

The ruling classes in Iran and Turkey early on were curious about the moving image. Moving pictures were viewed in the Turkish sultan's court soon

after the Lumière brothers' first public showing of a film in France, in 1895, followed by a public screening in 1897. Iran followed suit in 1900 when Mirza Ebrahim Akkas-Bashi, a photographer in the court of Mozaffar al-Din Qajar, the fifth Qajar ruler, purchased film equipment in France, shot footage, and projected it for the Iranian royal court. Film was introduced to the public shortly after with the opening of the first public cinema, only to be met with disfavor by the religious clergy. In 1931 the first Iranian feature film, *Abi o Rabi* (Abi and Rabi), was shot. In 1933 the first Persian talkie, *Dokhtar-e Lor* (The Lor girl), was also the first non-Western commercial success.

Meanwhile, in Turkey, film production was introduced during World War I and was the near-exclusive domain of the Turkish army from that period until just before the founding of the Turkish republic in 1923. The country's first features, *Pene* (The claw) and *Casus* (The spy), were made under the aegis of the Association for National Defense. In 1932 the government sought some control over the medium with the issuance of "Instructions Concerning the Control of Cinema." Censorship was thus institutionalized and has survived in various degrees since.

The first Arab film, *Gazelle Eye,* was shot in Tunis by a Tunisian, Shemama Chicly. In 1927 the stage actress Aziza Amir and the writer Wadad Orfy set up the first Arab Film Company in Cairo. Their first film, *Layla* (1927), made with an Egyptian producer, director, and cast, is the first Egyptian film. By the 1950s the Egyptian film industry was the most prolific in the region. The director Yusef Chahine, an innovator working in Cairo, began making films as early as 1953 and continues to this day.

By the 1950s the Middle East had many well-established film centers creating both entertainment films—especially musicals, such as Chahine's popular *Cairo Station* and others produced by Film Farsi in Iran—and more artistic, sociopolitical films highly influenced by the work of the Italian Neo-realists (such as Vittorio DeSica). The first real foray into social realism in Turkey was signaled by *Strike the Whore* (1949). In 1969 the Iranian director Daryush Mehrjui's *The Cow* critiqued the shah's modernization project through the tale of a villager and his only cow. The film was banned and not released in Iran until it won international recognition in foreign film festivals. Despite increased political censorship in Iran during the 1970s, a number of highly critical documentaries like Furugh Farokhzad's *The House Is Black,* and the works of Kamran Shirdel, Bahram Bayzai, Sohrab Shahid Saless, Parviz Kimiavi, Parviz Sayyad, Abbas Kiarostami, Amir Naderi, and Bahman Farmanara arrived on the scene.

In Turkey the military coup of May 1960 resulted in a new constitution and an era of free political and artistic expression that revitalized the film industry. Directors began to tackle the issues of women's rights, labor rights, and social injustice, and respected writers began to be drawn to scriptwriting. In 1974 Turkey entered the international award circuit with *The Bus.* Most recently Turkish directors, both those living in Turkey and in other countries, have been pioneers in the exploration of gender and sexuality with films like Ferzan Ozpetek's *Steam: The Turkish Bath* and Kutlug Ataman's film *Lola and Billy the Kid.*

The post-Revolutionary Iranian government placed a strong emphasis on film, initially to promote Islamic values and lifestyle. Today Iran has become one of the leading world cinemas. Despite censorship, Iran's most famous directors—Mohsen Makhmalbaf, Abbas Kiarostami, Rakshan Bani-Etemad, and Jafr Panahi—have created artistically beautiful and intellectually challenging films. They work mainly in a social realist vein, adapting elements of the French New Wave (as in the films of François Truffaut and Jean-Luc Godard) and Italian Neorealism. Collectively, they have created a genre known as the Iranian New Wave.

Arab cinema continues to gain international success. In the 1990s many Arab films reached world audiences, such as Moufida Tlatli's *Silences of the Palace,* Mohamed Khan's *The Dreams of Hind and Camilla* and *Supermarket,* Ziad Dowaitir's *West Beirut,* and Yusef Chahine's *Destiny.*

The first Israeli feature films were made in 1932–1933. After statehood in 1948, Israeli directors worked mainly in the genre of documentary films, dealing with the challenges faced by the new state. Baruch Dienar's *Tent City* dealt with the absorption of the massive number of immigrants from Europe and the Arab countries. Others examined the establishment of an army, reclamation of the desert, and kibbutz life; they depended on financing by the government, public institutions, and organizations. The earliest Israeli feature films accentuated the values of Zionism. Since the 1980s, many Israeli films have penetratingly faced the dilemmas raised by the Arab–Israel conflict.

Since the 1990s the work of a number of Palestinian directors has become internationally known. These films include Hany Abu-Assad's *Rana's Wedding,* Elia Suleiman's *Chronicle of a Disappearance* and *Divine Intervention,* and Michel Khleifi's *Wedding in Galilee.*

See GLOSSARY

FIQH

Islamic jurisprudence.

Literally, *fiqh* means understanding; it refers to the study of the law in Islam and is usually defined in jurisprudence textbooks as the knowledge of the rights and duties whereby human beings are enabled to observe right conduct in this life and to prepare themselves for the world to come. Whereas *shariʿa* refers to the divine law itself, *fiqh* denotes the human interpretation of the divine commands; it constitutes the discipline of deriving and formulating positive law in a number of branches *(furu),* including worship *(ibadat),* contractual law *(muʿamalat),* criminal law *(taʿzir* and *hudud),* and family and personal law *(ahwal shakhsiyya).*

The discipline of *fiqh* relies on the process of interpreting positive law within a systematic body of rules and principles elaborated by the discipline of *usul al-fiqh* (principles of *fiqh*), which constitutes as such the methodology of the law. *Usul al-fiqh* identifies the legal indicators or sources from which the

law can be derived: the *nass* (textual sources; the Qurʾan and Sunna); *aql* or reason (expressed in *ijtihad,* individual reasoning); and *ijma,* (consensus.) The hierarchy and rules governing each of these are developed by *usul al-fiqh* along with the linguistic principles applicable in the legal criticism of the textual sources. *Usul al-fiqh* also categorizes the applicable legal norms (obligatory, recommended, permissible, reprehensible, and prohibited) and the declarative rules, as well as the principles regulating these. It defines the general legal principles that govern the goals and intent of the law *(maqasid al-shariʿa),* globally referred to as *maslaha* and defined as the promotion of public interest and exclusion of harm.

Although there is general agreement among the schools of law on the main principles of *usul al-fiqh,* differences exist on the legitimacy of some legal methods or sources, as for instance *istislah,* or *maslaha mursala,* in which law can be derived without reference to textual sources. Eventually, however, restrictions were introduced to reduce the possibility of arbitrariness and to legitimize these legal procedures.

The reform movements of the eighteenth century emphasized textual sources and turned away from consensus, which was considered to be the cause for the eventual lack of development in the law. The call by some contemporary jurists for the use of unrestricted *ijtihad* to resolve modern issues has caused tension and stalled attempts at reforming Islamic law. With the adoption of secular constitutions, most Muslim countries have stopped using *fiqh* except in the matter of family law.

FISH AND FISHING

Fishing and fish consumption is found throughout the Middle East.

Fish is consumed locally throughout the Middle East in those areas that border bodies of water. The primary fishing sources are the Aegean Sea, the Atlantic Ocean, the Black Sea, the Caspian Sea, the Indian Ocean and the Arabian Sea, the Mediterranean Sea, the Persian Gulf and Gulf of Oman, and the Red Sea, as well as the Nile and other major rivers. Most fishing is done near the coasts or shore using small boats, although several governments have supported programs since the late 1980s to upgrade local fisheries. The only Middle East country with a major commercial fishing industry is Morocco, whose fishermen landed an average of 400,000 to 500,000 metric tons of fish annually during the 1990s. At least one-half of this catch is sardines, a fish that is canned, mainly for export. In fact, canned sardines constitute 50 percent of Morocco's food exports (primarily to the European Union) and up to 11 percent of its total overall exports in years when fish stocks are good and the annual catch high. But overfishing is a problem, as well as competition from foreign fishing vessels, especially those of Spain.

Iran and Tunisia also export small quantities of fish. Iran's main fish product export is the roe of the Caspian sturgeon, or caviar. Throughout the 1990s, the sturgeon catch annually declined due to overfishing by poachers in the Republic of Azerbaijan and Russia who were taking advantage of the lax enforcement of quotas in the aftermath of the collapse of the Soviet Union. Better sea patrols since 2000 have halted much of the poaching and helped fish stocks recover. In countries such as Oman, Turkey, and the United Arab Emirates, marine fishing contributes significantly to the local diet. In Egypt, the Nile River, rather than the nearby Mediterranean, is the major source of fish, providing two-thirds of the average annual 300,000 metric tons of fish caught in that country.

ERIC HOOGLUND

FLAPAN, SIMHA

[1911–1987]

Israeli writer and peace activist.

Simha Flapan was a writer and peace activist who emigrated from Poland during the 1930s and be-

came national secretary of the leftist MAPAM Party and the director of its Arab Affairs department. MAPAM was the second largest party in the Knesset after the 1949 election. Flapan was one of a few Israeli writers who challenged the accepted interpretation of Israel's past. In books such as *Zionism and the Palestinians* (1979) and *The Birth of Israel: Myths and Realities* (1987), Flapan sought to challenge what he perceived to be historical myths, including that the Palestinian Arabs left their homes in 1948 on the urging of Arab leaders. In *The Birth of Israel,* Flapan wrote: "like most Israelis, I had always been under the influence of certain myths that had become accepted as historical truth" (p. 8). He concluded that it was Israeli policy in 1948 to force the Palestinians to flee. Israel saw itself as a victim of inhumane enemies, justifying unacceptable policies as policies of self-defense. Flapan was a critic of Israel's treatment of the Palestinians in the West Bank and Gaza, and he served as editor of *New Outlook,* an Israeli publication that explored paths to peace in the Middle East.

FLY WHISK INCIDENT (1827)

Diplomatic cause célèbre of 1827 in which the Algerian ruler, Husayn Dey, struck the French consul, Pierre Deval, with a fly whisk.

The Fly Whisk Incident was caused by friction over Franco–Algerian business transactions dating from the late eighteenth century. In the 1790s, the French government customarily purchased Algerian wheat, most of it through two Jewish commercial families by the names of Busnach and Baqri. By the turn of the century, France owed these Algerian suppliers several million francs.

This debt remained outstanding at the time of Husayn's accession in 1818. It attracted his attention because both the Busnachs and the Baqris owed money to the Algerian government but insisted they could not afford to pay until they had recovered what was owed to them by France. When the French government arranged a financial settlement in 1820 that ignored the claims put forward by successive deys since 1802, Husayn concluded that France and his Jewish debtors had colluded to keep the money from him. In a further irritant to Franco–Algerian relations, the vice-consul at Bône fortified several French trading posts in eastern Algeria in 1825, in direct contravention of existing treaties. Despite Husayn's complaints, the French government took no steps to reprimand its officials.

These tensions exploded in a meeting between Deval and Husayn on 29 April 1827. In the consul's version of the event, the session rapidly degenerated into an exchange of insults culminating with the dey striking Deval three times with his fly whisk and ordering him from the room—an accusation Husayn did not refute but justified on the basis of crude comments made by the consul about Islam and Muslims. Enraged by Deval's behavior, the dey rejected the French government's demand for an apology.

In retaliation, French warships instituted a blockade of Algiers, which Husayn countered by ordering the destruction of French trading posts in the country. The confrontation dragged on for more than two years, but the dey, backed by the Ottoman sultan and encouraged by Great Britain's consul in Algiers, refused to yield. His own corsair captains proved adept at running the blockade, which proved far more damaging to the Marseilles merchants engaged in trans-Mediterranean commerce than to Algerians. By 1828, businessmen from the south of France had begun urging the government to undertake a campaign against Algiers that would restore trade to its previous level. When the dey responded to a French invitation to send a negotiating delegation to Paris in the summer of 1829 by firing on a French vessel, the pressures on the French government to mount an expedition to Algiers peaked. With liberal deputies challenging his power, King Charles X viewed such an undertaking as a means of reasserting royal prerogatives and providing a distraction from domestic issues. The decision to invade Algeria was announced in March; the fleet sailed in May; and Algiers fell in July.

Although the need to avenge the dey's insult gave the monarchy a dramatic issue upon which it seized

to rally popular support for an attack against Algeria, this contretemps was not as crucial a cause of the French invasion of Algeria as it has sometimes been portrayed. French commercial interests in North Africa and a last-ditch effort to shore up the monarchy by diverting public attention to an overseas adventure suggest that the encounter between Deval and Husayn was an excuse for, rather than the cause of, the events that followed.

ASH

Term for a traditional Persian stew.

Ash (thick soup) is made from different combinations of noodles, rice, vegetables, meat, and fruits, as well as yogurt and vinegar. Usually served hot, each specific ash derives its name from its main ingredient. Persian tradition has ascribed a specific ash for different occasions; for example, ash-e posht-e pa, which marks farewell ceremonies, is cooked to shorten the duration of the sojourn. According to Islamic ritual, acts of charity alleviate illness, and these acts are also accompanied by the preparation of some type of ash for distribution among the needy.

NEGUIN YAVARI

BAKLAVA

A sweet pastry found throughout the Middle East.

Baklava is made with a filling of ground almond, pistachio, or walnut mixture bound with an egg white and sugar. The nut stuffing is layered with butter and wrapped in phyllo pastry. It is soaked in sugar syrup or honey flavored with rose water. Baklava is baked in several rows on large baking trays, then cut into triangles, quadrangles, or rhomboids. Baklava comes from the Turkish word for lozenge, originally a diamond shape.

CLIFFORD A. WRIGHT

BOREK

The name of a specialty pastry of Turkish or Balkan origin, served fried or baked.

The paper-thin pastry is rolled, then filled with savory flavored meat or cheese. The most popular boreks are usually thin and long, shaped like a cigarette, or square, resembling a cushion. Boreks are best taken with cocktails or as an appetizer.

CYRUS MOSHAVER

BULGUR

Cracked hard-wheat.

Bulgur is a parched and cracked hard-wheat (Triticum durum) food product, high in nutritional

value. The wheat kernels are boiled until soft and about to crack, then drained, sun-dried, and finally ground into fine or coarse particles. This process dissolves some of the vitamins and minerals in the bran; the water soaks into the endosperm, bringing the dissolved nutrients with it to the inside of the grain. Coarse bulgur is used in stews and pilaf, while fine bulgur is used in kibbeh and tabbouleh.

CLIFFORD A. WRIGHT

CHELOW

Chelow is a Persian-style steamed rice preparation.

Long-grain rice is soaked in cold water and drained. The rice is poured into boiling water and cooked for a few minutes, drained, and rinsed. The rice is then sauteed in butter and steamed in small amounts of water until done. Some cooks add saffron and yogurt.

CLIFFORD A. WRIGHT

COFFEE

A drink popular in the Middle East and worldwide.

The first mention of coffee appears to be from a tenth-century pharmacological work by the Persian physician Rhazes (Muhammad ibn Zakariyya al-Razi). The coffee bean (the seed from pods of the Coffea arabica tree) is believed to have originated in Ethiopia, traveling to Yemen by way of Arab trade routes. The Yemeni town of Maqha gave its name to a type of coffee, mocha. It had arrived in Mecca by 1511 when it was forbidden by the authorities, and by 1615 it had reached Venice. The popularity of coffee spread throughout the Islamic world, where it gave rise to the coffee houses that have enduring popularity in the Middle East and elsewhere.

Arabic or Turkish-style coffee is always prepared to order. The coffee beans are roasted in large frying pans and ground very fine. The ground coffee and water are brought to a gentle boil in small long-handled pots called rakweh. The coffee is poured into demitasse cups without handles. After the grounds have settled, the coffee is drunk without being stirred. Sugar, cardamom, orange-blossom water, rose water, or saffron may be added to the coffee during the brewing process. Coffee is always served as part of social interactions in the Middle East.

CLIFFORD A. WRIGHT

A young boy sells olives and canned goods in the market. Green and black olives are present in many Middle Eastern dishes, and olive oil is most frequently used in food preparation. **© OWEN FRANKEN/CORBIS. REPRODUCED BY PERMISSION.**

COUSCOUS

A staple food of North Africa.

Couscous is the husked and crushed, but unground, semolina of hard wheat (Triticum durum), although the preparation of the same name can be made with barley, millet, sorghum, or corn. Semolina is the hard part of the grain of hard-wheat, which resists the grinding of the millstone. The word "couscous" derives from the Arabic word kaskasa, to pound small, but the word is also thought to derive from the Arabic name for the perforated earthenware steamer pot used in steaming the couscous, called a keskes in Arabic (couscousière in French). Another theory is based on onomatopoeia—from the sound of the steam rising in the couscousière. In any case, the Arabic word derives from a non-Arabic, probably Berber, word. Couscous is also the general name for all prepared dishes made from hard-wheat

Middle Eastern women prepare rice for their families. Some form of wheat or rice usually accompanies each meal. © DAVID TURNLEY/CORBIS. REPRODUCED BY PERMISSION.

or other cereals. In fact, it would not be incorrect to call couscous a kind of pasta.

Couscous is a staple food in the Maghrib (North Africa). Hard-wheat couscous was probably invented by Arabs or Berbers in the twelfth century based on techniques possibly learned from Saharan Africans. This is suggested by Ibn Battuta's description of a millet couscous he ate in Mali in 1352. One of the first written references to couscous is in an anonymous thirteenth-century Hispano-Muslim cookery book, *Kitab al-Tabikh fi al-Maghrib wa al-Andalus*.

The Berbers call this food sekrou (or seksou), while it is known as maftul or mughrabiyya in the countries of the eastern Mediterranean and suksukaniyya in the Sudan. In Algeria it is called tha'am or kesksou. In Tunisia it is called keskesi. Very large couscous grains are called m'hammas, and very fine grains, usually used for sweet couscous dishes, are called mesfouf.

Couscous is processed from a fine and coarse grade of semolina. The fine grain affixes to the coarse grain by sprinkling water and salt by hand (although mechanization is used for mass production). The grains are rolled and rubbed with the palms and fingers until the desired size is formed. The couscous may be dried and stored, or it may be steamed over water or broth in a couscousière. Couscous is served in a pile on a large platter with meat, chicken, or fish and vegetables and spices. It is also served in bowls as a loose stew with similar ingredients included.

CLIFFORD A. WRIGHT

DOLMA

Stuffed vegetables.

Dolma are rice, meat, herb, and spice-stuffed vegetables found especially in Turkish cuisine but common to many Middle Eastern cuisines. The most popular vegetables for stuffing are zucchini, eggplant, peppers, tomatoes, and grape leaves.

CLIFFORD A. WRIGHT

FELAFEL

Ground beans with spices, fried.

Originally an Egyptian dish, felafel is today popular in Syria, Lebanon, and Israel as well. Traditionally, it is prepared with chickpeas ground into a paste and fried in oil, which is then served in pita bread with salad. Local variations include the use of other beans. In Egypt, felafel is also known as tamiyya.

Bibliography

Der Haroutunian, Arto. *Middle Eastern Cookery.* London: 1983.

ZACHARY KARABELL

FUL

Fava-bean mash.

Ful mudammis, a mash of fava beans (the broad bean, a vetch, Vicia faba) is considered the Egypt-

ian national dish. There, it is often eaten with bread for breakfast. The peeled fava beans are soaked in water for a day, then covered with fresh water and simmered overnight with onion, some tomatoes, and red lentils, to control the color. Once the ful is cooked, it is salted and eaten plain or accompanied by olive oil, corn oil, butter, smen (clarified butter), buffalo milk, béchamel sauce, basturma (dried beef), fried eggs, tomato sauce, tahini (sesame-seed paste), or other ingredients.

CLIFFORD A. WRIGHT

HUMMUS

Middle Eastern dish of chickpeas, sesame seeds, and spices.

A staple food of Syria, hummus has become popular in Jordan and Israel as well as throughout America and Europe. It is a pureé of tahini, chickpeas, garlic, cumin, and lemon, often garnished with parsley and paprika. It is served with pita bread as an appetizer or a course unto itself.

Bibliography

Der Haroutunian, Arto. *Vegetarian Dishes from the Middle East.* London: 1983.

ZACHARY KARABELL

KUFTA

A meatball.

Kufta (also Kifta) is a ground meat, onion, parsley, and spice mixture popular in Turkey, Syria, Lebanon, Jordan, and among Palestinians. The meat is molded around a skewer and then grilled. Kufta can also be baked or braised.

CLIFFORD A. WRIGHT

MANSAF

Popular Middle Eastern lamb dish.

A bedouin dish particularly popular in Jordan and Saudi Arabia. It is a combination of lamb and yogurt served with rice. Mansaf is often prepared at festivals or in honor of guests.

Spices, dried fruits, nuts, and seeds fill the bowls in Misir Carsisi (Egyptian, or Spice Market) in Istanbul. **© ROYALTY-FREE/CORBIS. REPRODUCED BY PERMISSION.**

Bibliography

Der Haroutunian, Arto. *Middle Eastern Cookery.* London: 1983.

ZACHARY KARABELL

MAZZA

An assortment of foods served as appetizers, accompaniments to main dishes, or a complete meal.

A feature of Middle Eastern cuisine from Morocco to Persia, mazza is usually served with a beverage, and may be simple or elaborate. Typically, it consists of nuts, fresh vegetables and herbs, cheeses, salads and dips, savory pastries, and "miniature foods" (smaller versions of main dishes, including grilled meats, vegetable dishes, and beans).

JENAB TUTUNJI

MUHAMMARA

A Middle Eastern dip.

Made with walnuts and concentrated pomegranate juice, muhammara is seasoned with hot red pepper and cumin. It is a Syrian specialty commonly associated with the cuisine of Aleppo. It is served as an

appetizer, as part of a mazza, or as a condiment with a meat dish.

JENAB TUTUNJI

MUJADDARA

A lentil and rice dish.

Mujaddara, which traces its origins to medieval times, is considered the food of the poor because the ingredients are cheap and plentiful, and it does not contain meat. It is nevertheless a great favorite and occurs in many variations throughout the Middle East.

JENAB TUTUNJI

MULUKHIYYA

Arabic name for the plant called jew's mallow, the main ingredient of a popular Arab dish by the same name.

Mulukhiyya is prepared in two ways: the Lebanese, where the leaves are left whole and are cooked with stew meat, garlic, and dried coriander; and the Egyptian style, in which the finely chopped leaves are cooked with chicken, rice, vinegar, and finely chopped onion. Eating mulukhiyya is prohibited within the Druze community.

TAYEB EL-HIBRI

OLIVES

A staple of Middle Eastern cuisine.

Olives have been cultivated since ancient times, and both olives and olive oil constitute an important part of the diet in the Middle East. Olive trees grow in nonirrigated, rain-fed areas and bear fruit for generations. Green olives are cured in brine to extract the bitter taste, whereas black olives are cured by packing them in sea salt. Olive oil, pressed from green olives, is a staple in the Mediterranean area. In Arab cuisines, it is favored for frying vegetables and fish.

JENAB TUTUNJI

PILAF

A seasoned rice preparation.

Pilaf is a Persian and Turkish word denoting a rice dish boiled with meat and vegetables, seasoned with spices. But pilaf also means a way of cooking rice—knowing exactly the water-absorption capacity of the rice. In Turkish cuisine, pilaf is usually a side dish. In Persian cuisine, pilaf (pilow) is a main dish with other ingredients added to it. Pilaf is also made with bulgur in Turkey.

CLIFFORD A. WRIGHT

SHASHLIK

Grilled lamb on a skewer.

Shashlik is a Turkish dish of marinated lamb. The marinade usually consists of onions, olive oil, and paprika. The lamb is skewered and grilled and served with scallions.

CLIFFORD A. WRIGHT

SHAWARMA

A lamb-based meatloaf sold by street vendors and in restaurants.

Shawarma is a popular Levantine Arab specialty. A combination of lean and fatty sliced or ground lamb is seasoned with onion, garlic, allspice, cinnamon, coriander, or other ingredients and molded in conical form around a large skewer that is adjusted to a vertical rotisserie. The outside becomes crusty brown as it cooks, is sliced off and wrapped in flat bread and served with chopped onions, tomatoes, and cucumber-yogurt sauce. Shawarma is also popular in Greece and Turkey where it is called gyro and döner kebab, respectively. Shawarma is sold by street vendors and restaurants but rarely made at home.

CLIFFORD A. WRIGHT

SHISH KEBAB

Meat roasted over open fires on skewers.

The origin of shish kebab is lost in antiquity, but given the swordlike skewers so common in the Middle East, it probably originated with Turkish horsemen cooking wild game over open fires. In Turkish, shish kebab means "gobbets of meat roasted on a

spit or skewer"; the Arabs call it lahm mishwi, grilled lamb.

The threading of vegetables—onions, mushrooms, tomatoes, and peppers—onto the skewer, interspersed with meat, appears to be a modern restaurant introduction.

CLIFFORD A. WRIGHT

TABBULA

Salad made with bulgur (cracked wheat), chopped fresh parsley, scallions, mint, and tomatoes, and dressed with salt, pepper, olive oil, and lemon.

Since tabbula is always made with fresh, in-season vegetables, it is commonly served as part of mazza during the summer or is eaten with fresh lettuce, cabbage, or vine leaves. Although the Lebanese are credited with perfecting the most popular version of tabbula, the idea for incorporating bulgur in a salad may have originated with the Turks.

JENAB TUTUNJI

TAHINA

Sesame seed paste.

One of the basic ingredients of Middle Eastern food, tahina is an oily paste made from crushed sesame seeds. It is used in a variety of foods such as hummus and babaghanush as well as on its own as a condiment. Tahina is also popular in Israel.

Bibliography

Der Haroutunian, Arto. *Vegetarian Dishes from the Middle East.* London, 1983.

ZACHARY KARABELL

TAJIN

Moroccan earthenware casserole pot; Tunisian stuffed omelette.

Tajin is the name of an earthenware casserole with a conical top lid used in Morocco to make a variety of stews known by the same name. Meat and vegetables are simmered for a long time until the meat is soft and the stew aromatic. Touajen (plural of

A young boy balances a tray of simit bread on his head. This delicious bagel-like bread is coated with sesame seeds. **© OWEN FRANKEN/CORBIS. REPRODUCED BY PERMISSION.**

tajin) are flavored with cumin, harissa, coriander, caraway, paprika, and other spices.

In Tunisia, a tajin is an entirely different dish, a variety of stuffed omelette similar to the Spanish (but not the Mexican) tortilla.

CLIFFORD A. WRIGHT

FOREIGN OFFICE, GREAT BRITAIN

The Foreign Office leads the conduct of British international relations.

Occupying a palatial building in London since the mid-nineteenth century, the Foreign Office is linked with the world by modern communications technologies. The Foreign Office is led by a British

politician whose power depends on the prime minister, cabinet, and party. The foreign secretary relies on the information and advice he receives from the permanent undersecretary and his staff. The foreign secretary must sell British policy to parliament and the media at home as well as to diverse regimes and public opinions abroad.

Foreign policy has pivoted less upon events and relations in the Middle East and North Africa than upon maintaining Britain's ties to the great powers of Europe and, since World War II, the United States. As foreign secretary and prime minister for over two decades, from the 1830s to the 1860s, Lord Palmerston (Henry John Temple) saw the Ottoman and Qajar Empires as buffers against the Asiatic expansion of Russia, while the defense of India concerned him less than maintaining the balance of power in Europe. Benjamin Disraeli backed the "good ol' Turk" but increased the British presence in the eastern Mediterranean, particularly at the Suez Canal. To counter Germany, Edward Grey's concessions to France in North Africa and Russia in Persia alienated the Young Turks, who joined Germany in World War I. A. J. Balfour's declaration to the Zionists late in 1917 put the Jews of America, Europe, and Russia before the Arabs of the Middle East. George Nathaniel Curzon limited his Middle Eastern ambitions because of diplomatic pressures and Turkish nationalism. Anthony Eden, the only foreign secretary trained as an Orientalist, relied on Arab collaborative regimes before and during World War II, after which Ernest Bevin tried to put people before pashas. Since the Suez Crisis in 1956, when Britain's secret alliance with France and Israel against Egypt's Gamal Abdel Nasser infuriated the United States, the British Foreign Office has mostly followed the U.S. lead in the Middle East and North Africa.

ROGER ADELSON

FORQAN

A secret religious group responsible for the deaths in early 1979 of a number of prominent figures in the Islamic Republic of Iran.

This group took its name from its journal *Forqan* (Sacred Book), published intermittently from 1977 until 1979. Describing itself as the "true followers" of the Qurʾan and Ali Shariʿati, Forqan called for an "Islam without mollahs" and denounced the regime of Ayatollah Ruhollah Khomeini as a reactionary and clerical dictatorship that had betrayed the principles of egalitarian Islam. The group's leaders, former seminary students, also denounced liberals, such as Premier Mahdi Bazargan, as "bazaar intellectuals." In addition to being a radical and anticlerical group, Forqan was also highly antileftist, denouncing Marxism as an international atheistic conspiracy that was engaged in scheming to dominate the Muslim world. A series of executions in mid-1979 decimated the group.

ERVAND ABRAHAMIAN

FORUGHI, MIRZA MOHAMMAD ALI KHAN ZAKA AL-MOLK

[1877–1942]

Iranian politician.

Mirza Mohammad Ali Khan Zaka al-Molk Foroughi was the son of Mirza Mohammad Hoseyn Khan Zaka al-Molk. Mirza Mohammad Ali Khan inherited the title Zaka al-Molk from his father upon the latter's death in 1908. Originally Iraqi Jews, his family had migrated to Iran and settled in the old quarter of Isfahan. He was elected to the parliament several times, and in 1911 was appointed minister of finance, then head of the supreme court. In 1915, he was named minister of justice and after that served four times as prime minister, finally resigning in 1935. His last appointment as minister of court came in 1942, the same year that he died.

FOUCAULD, CHARLES EUGÈNE DE

[1858–1916]

French soldier, explorer, and ascetic.

Born in Strasbourg, France, to a famous aristocratic family, Charles Eugène de Foucauld was a graduate of Saint-Cyr (1876) who led a frivolous life until his assignment to North Africa. Fascinated by the Maghrib (North Africa), Foucauld left his army career and explored Morocco and the Sahara disguised as the servant of a rabbi. This resulted in his book titled *Reconnaissance au Maroc, 1883–84.* Foucauld gained a deep appreciation of Islam, asceticism, and spirituality, which led to his entering a Trappist monastery (Christian) to begin a life of contemplation. He later left the Trappists but was ordained a priest in 1901.

Returning to North Africa, Foucauld set up a hermitage in Béni Abbès, Algeria, and in 1905 moved to what became his famous retreat at Assekrem in the desolate Ahaggar (Hoggar) mountains near Tamanrasset. While he failed to convert Twareg tribesmen to Christianity, he produced a significant ethnographic contribution—a dictionary of their language, Tamahak. Although respected by neighboring Twareg, marauders murdered the priest who had pursued an inspiring spiritual mission while symbolizing a French presence in the deep Sahara.

FOURTH SHORE, THE

Italy's Fourth Shore (Quarta Sponda) became a key element in the propaganda of Italy's colonialist opinion formers at the start of twentieth century.

The term *Fourth Shore* implied that Italy needed an overseas colonial extension along the North African Mediterranean that would partner its other three—the Adriatic, Tyrrhenian, and Sicilian. It also reflected the growing concern in Italy, in the wake of the Risorgimento of the 1860s, to re-create the splendor of the classical Roman Empire, with Libya as its jewel (after Italy was prevented from annexing Tunisia by France's occupation of that country in 1881).

Once Libya had been conquered—officially by January 1932—Mussolini's Fascist policy toward Libya put the concepts of the Fourth Shore into practice. Libya's supposed agricultural potential was to be realized by the immigration of Italy's excess peasant population from the *mezzogiorno* (the South). After an effective infrastructure would be created, Libya was to become an extension of the Italian mainland itself. This would guarantee Italy's strategic security and make it into a power in North Africa, alongside France and Spain.

Fascist ideology promoted individual family farm units through state-sponsored schemes. Libyans were to become economic collaborators and coparticipants in this process; they were to be transformed into Muslim Italians, as Italy, after 1937, sought to become "Protector of Islam," in Mussolini's words.

FRANCE AND THE MIDDLE EAST

The centuries-old relations between the French and the peoples of the Middle East have been replete with confrontations and contradictions.

Constituents of a Mediterranean world encompassing the Mashriq and the Maghrib, the geographic proximity of the French and the peoples of the Middle East has helped sustain both their affinities and their animosities. In war as in peace, they have had to deal with the problems, as well as the opportunities, of economic life. Some of the ambiguous features of their relationship have derived from their collective links to frequently discordant Greco-Roman, biblical, and Islamic traditions and to no less problematic modern ideologies of social change and nation building. In whatever combination of identities—whether religious, as, for example, Roman Catholic on the one hand, and Muslim, Eastern Christian, or Jewish on the other, or secular, as, for example, French on the one hand, and

French soldiers on a ship set for Gallipoli (ca. 1914) to participate in the Allies' disastrous military campaign—the battle between Allied and Turkish forces for access to the Sea of Marmora at the Gallipoli Peninsula. © HULTON-DEUTSCH COLLECTION/CORBIS. REPRODUCED BY PERMISSION.

Ottoman, Turkish, Arab, or Israeli on the other—their encounters have been marked by a bittersweet interaction of words and deeds. Negative images of the "other" have been more often in evidence, particularly on the part of the French, than mutual displays of consideration or acknowledgements of collective achievement.

France's contentious presence in the modern Middle East was shaped in part by distinctive percolations of change among the Western powers. The forces of modernity, which advantaged the West before other parts of the world, enabled the French, as one of Europe's great powers, to exercise an intrusive, frequently aggressive imperialist presence in various parts of the Middle East from Syria to Morocco. France itself, however, suffered from constraining imbalances in the modern reconfigurations of power that left it at a disadvantage when confronting rival intrusive presences in the region—Britain's for much of the period, Germany's before and during the two world wars, and that of the United States during and after World War II.

The history of France's involvement with the peoples of the Middle East was also determined by the different ways in which they responded to the challenges of modernization. In some cases, the peoples of the Middle East sought to remove the intrusive features of French influence, as was the case with the Ottoman Empire and Turkey by 1923 and with Egypt by 1956; in others, they sought to secure their independence from French occupation, as in Syria and Lebanon by 1945–1946, in the North African states of Tunisia and Morocco by 1956, and in Algeria by 1962. Their national movements and modernizing administrative polities were shaped by internally developed and externally induced changes. The character of French relations with the relatively unconstrained nineteenth-century Ottoman reformers and their twentieth-century Turkish successors thus differed significantly from their relations with the more dependent mid-nineteenth-century viceroys of Egypt. These, in turn, differed from France's relations with the disfranchised Arab politicians of French-mandated Syria during the 1920s and 1930s and with Algeria's revolutionary leaders struggling for independence in the 1950s and early 1960s.

French Entry into the Middle East

Antithetical undercurrents were never far below the surface in the modern history of Franco–Middle Eastern relations. While the Franks of the Middle Ages had vigorously embraced Europe's Roman Catholic Crusades against the Muslims, sixteenth-century France recognized the strategic usefulness of friendly relations with the Ottomans as a counterweight to the Hapsburgs. The French subsequently developed a commercial preeminence in the Mediterranean over much of the seventeenth and eighteenth centuries as the Ottomans were increasingly drawn into the European-dominated world economy. Expatriate French merchant communities in the Mashriq, the region they called the Levant, traded under the umbrella of the capitulations, France having been among the first to enjoy this Ottoman assignment of extraterritorial juridical status to resident foreigners. Yet, the French offset the Muslim policy that had brought them closer to former enemies with a preclusive Roman Catholic policy that harnessed their good relations with the Ottomans to the development of a religious protectorate in the empire, favoring the work of proselytizing Roman Catholic missionaries. By the nineteenth century, the most important corollary to this policy

A French military convoy moves through a street in Algiers, the capital of Algeria. © MARC GARANGER/CORBIS. REPRODUCED BY PERMISSION.

had become their informal, but nevertheless real, support for the political autonomy of the Roman Catholic community of Maronites in Ottoman Lebanon.

The Ottomans, for their part, had assigned less importance to these contacts with France until the eighteenth century when modernizing changes began to attract the interest of reformers concerned with the fate of the receding empire. Sultan Selim III, the beginning of whose reign in 1789 coincided with the outbreak of the French Revolution, did not allow the problem of regicide in Europe to distract him unduly from applying, with the help of French advisers, the lessons of the French military sciences to some of the reforms he attempted to introduce. The sultan's friendship with the French, however, failed to prevent Napoléon Bonaparte from trying in 1798 to gain an advantage in Europe's revolutionary wars by means of a grandiose and abortive scheme pegged to the occupation of the Ottoman province of Egypt, which came to be considered a strategic key to hegemony in the East. In the same vein, by the time the occupation ended in 1802, France had alienated the Egyptians. Their experience was such that French administration, development projects, and scientific advances did not outweigh the adverse effects of the military invasion, or of the political opportunism, cultural arrogance, and colonial aims underlying the occupation. This proved to be an early example of the kind of power relationship that undermined French claims to the exercise of a civilizing mission.

The antithetical features of French interaction with the peoples of the Middle East remained generally pervasive. On the one hand, the history of France's contribution to the betterment of the human condition ensured that accounts of its progressive ideas and sociopolitical experiences received frequent and attentive hearings in the debates on reform that engaged the leading Middle Eastern ad-

vocates of change, to many of whom French became a second language. On the other hand, France's imperial interests frequently ran counter to reforms based on the very principles to which the French so eloquently laid claim. The French were not above combining sound investments in Middle Eastern economies with political support for speculative cupidity. As self-interested players in the so-called nineteenth-century Eastern Question, they not only helped to petrify the extraterritorial privileges they enjoyed, and to encourage continued foreign administration of the public debts in which they had invested, but they also participated in the consolidation of imperial spheres of influence in the Middle East.

British Influence on French Policy

The history of French influence in the Middle East was further complicated by unrelenting Anglo–French rivalries. Britain's industrial advantages, combined with the naval superiority it had acquired in the Mediterranean during the Revolutionary and Napoleonic wars, limited France's strategic options and commercial opportunities. Overtaken by Britain at the Sublime Porte, the French tried to refocus their interest during the 1820s and 1830s on links with Muhammad Ali Pasha, the independent-minded and expansionist Ottoman governor of Egypt. They were unwilling, however, to risk a European conflagration by coming to the pasha's assistance in 1840, when Britain and the concert of Europe curtailed his power during the second Syrian war. They reconciled themselves instead to falling back for influence in the Levant on their links with the Maronites of Mount Lebanon, who continued to respond best, though to a narrowly focused Roman Catholic policy. During the nearly two decades of Napoléon III's second empire, and in the aftermath of France's participation in the Crimean War on the side of the Ottomans, French influence among the Maronites equaled that of Britain. During this period the two powers cooperated in an imaginative resolution to the civil strife that had broken out in Lebanon in 1860. In Egypt, France even won an advantage at this time by working for the construction of the Suez Canal. Thereafter, however, three debilitating wars with Germany between 1870 and 1945 left the French at a lasting disadvantage. They had their eyes firmly fixed across the Rhine in 1882 when they failed to act with the British in Egypt, thereby forfeiting to Britain the base from which it was better able to develop its lead.

The French, having once more returned to reinforcing their links with the Maronites after 1870, were subsequently able to use Mount Lebanon as a stepping-stone to a sphere of influence in the Ottoman Empire's Syrian regions. Nevertheless, they secured only a Pyrrhic victory there in the aftermath of World War I and the defeat of the Ottoman Empire. For one thing, partitioning the empire ran counter to the not inconsiderable capital investments they had made during the later part of the nineteenth century in its overall development. For another, their Roman Catholic policy limited the influence they were able to exercise in Syria and Lebanon over Muslim and non-Roman Catholic Christian constituencies upon whose acquiescence they were dependent. Franco–British alliances in the two world wars did not substantially affect this unfavorable equation. After World War I, Britain limited the imperial expansion of the French to the Lebanese and Syrian mandates, denying them the role in Palestine and the Mosul region that they had been led to expect from the Sykes–Picot Agreement of 1916. By the end of World War II, Britain, backed by the United States, which was even less tolerant of French imperial claims, helped the Lebanese and the Syrians to exclude France altogether from the Levant.

Waning French Influence in the Twentieth Century

In the aftermath of the war, the French were peripherally involved in the question of Palestine and the Zionists as this problem developed into the Arab–Israel conflict that more directly affected Britain and the United States. Frequently criticized for their failings in the Middle East, the French rarely denied themselves the opportunity to embarrass their "allies" by taking the high ground in their assessments of the problem. French involvement with Zionism, however, reflected their ambiguous relationship to the Jew as "other." This relationship had traversed the spectrum from the offer of assimilation and French citizenship at the time of the French Revolution, to threats of rejection in the turn-of-the-century Dreyfus Affair, to denial of protection against Nazi Germany by Vichy France during World War II. French opportunism, how-

ever, was such that France secretly armed and courted Israel for assistance when, for the last time, it joined Britain as a principal actor in the Middle East in the ill-conceived Suez expedition of 1956, a century after the two had concluded the Crimean War as equal partners. Together they made a futile attempt not only to turn the clock back and humiliate Egypt's president Gamal Abdel Nasser, the symbol of changes in an Arab world they could no longer control, but also to belie the lesser roles assigned them in the new global superpower rivalries of the cold war.

The French had embraced the Suez adventure primarily in the hope of stemming the tide of Arab independence, which had surfaced with revolutionary ardor in 1954 in Algeria, their only remaining North African possession. Their occupation of that region of the Maghrib had begun in 1830 when an opportunist French government swept away the autonomous Ottoman administration of the city of Algiers, whose tradition of privateering had alienated what was then international opinion, and with whom commercial cupidity had brought the French in dispute. Sometime after they completed the conquest of Algeria, a combination of imperialist pressures and the nineteenth-century scramble for African territories encouraged the French to flank it with a protectorate over Tunisia in 1881 and another over Morocco in 1912.

Collapse of French Imperialism and Its Aftermath

France's more pervasive domination of North Africa, and the colonization that accompanied it, particularly in Algeria, meant that the French encounter

with the peoples of the Middle East was more deeply experienced in the Maghrib than in the Levant. The conquest of the Algerian interior spanned four decades of intermittent campaigning against the resistance of its Muslim Arab and Berber inhabitants. They underwent a more painful and less rewarding experience than that of the Egyptians earlier in the century. The extensive destabilization of their traditional societies eased the way for colonists who were as repressive of the rights of the indigenous majority as they were determined to safeguard their own exclusive rights as French citizens by attaching the most productive region of Algeria to metropolitan France. Always active in French politics, the colons resisted a number of imaginative projects that might have helped them build up a working relationship with their Arab and Berber neighbors. Not surprisingly, after Charles de Gaulle's Fifth Republic wound up the Algerian War in 1962, the whole colon community beat a headlong retreat to France.

The idea of carrying on a bilingual cultural dialogue to find ways of accommodating Islamic and French sociopolitical conduct was more welcome to Tunisian and Moroccan reformers, both before and after the French occupation. They were attracted to accommodation as a way of both assimilating modernizing changes on their own terms and equipping themselves to deal with the French in their midst. The antithetical features of French influence were such, though, that the latter, belittling the validity of compromises with the "other," were generally reluctant to make the necessary concessions in terms of either association or assimilation. The differences between what the French imperialists practiced and what France's social conscience preached did little to smooth the way for modernizing changes in the Maghrib and France; rather, they overburdened the process. In order to move forward and to overcome the impeding French presence, the North Africans pursued costly struggles for independence, while France only recognized their independence in the 1950s and early 1960s after suffering the consequences of its own failures, first in the Indo–Chinese War and then in the Algerian War.

French influence and the problems of working out an accommodation with the "other" did not disappear with the demise of the French empire in the Middle East and North Africa. France and the peoples of these regions continue as long-standing neighbors in the coalescing global village of the twenty-first century, where the management of changes has become an even greater challenge, and where socioeconomic and political developments have a more immediate ripple effect. France's cultural and socioeconomic experiences have been directed toward European union, while those of the Middle East and North Africa have been directed toward revolution, dictatorship, reexamination of fundamental beliefs, and, in the case of Lebanon, which has been overcome by the magnitude of the problems facing it, civil war. In a world of permeable frontiers, differences in the felicity of these two experiences have resulted in the reverse flow of a substantial number of Middle Eastern and North African immigrants to France. Their communal presence there—the result of France's encounter with the people of those regions—has brought home to French society, as never before, the problem of accommodating the "other," a challenge that has been carried over to twenty-first-century France, as much as the problem of reconciling French-inspired changes to their own traditions has been carried over to the twenty-first-century Middle East and North Africa.

FRANCO–TUNISIAN CONVENTIONS

Agreements in which France stipulated the nature of autonomy it was granting Tunisia.

Spurred by the Neo-Destour Party of Habib Bourguiba, the Tunisian independence movement gathered steam in the early 1950s. After initial resistance, the French finally conceded Tunisia's right to autonomy in July 1954 when Premier Pierre Mendès-France made a historic announcement to that effect in Carthage, Tunisia. Toward the end of that year, Bourguiba was released from prison and entered into negotiations with the French. On 3 June 1955 the Franco–Tunisian Conventions were signed between Bourguiba and the French, stipulating the nature of Tunisian autonomy. Bourguiba's opponents, however, most notably Salah Ben Yousouf, denounced the conventions for not granting independence to Tunisia. Though the Neo-Destour-controlled Congress endorsed the conventions, when France announced its intent to allow Morocco to become independent in the November 1955 Declaration of La Celle St. Cloud, the conventions came under renewed fire in Tunisia. After considerable pressure, France conceded, and Tunisia became independent in March 1956.

ZACHARY KARABELL

FRANJIYYA FAMILY

Prominent political family of Lebanon.

The Franjiyyas (also Frangiehs) are Maronite Christians from Zgharta, in northern Lebanon, who have dominated the region politically. Several of their members became important politicians in the twentieth century. Hamid (1907/1908?–1981), the elder brother of Sulayman Franjiyya, was the family's initial political leader who became a longtime parliamentarian and government minister, beginning in the late 1930s, until he suffered a stroke in 1957. Tony (Antoine; 1942–1978) was the only son and heir apparent of Sulayman. He headed the family's al-Marada militia and served as a government minister from 1973 to 1975. The Franjiyyas opposed the Phalange party's Bashir Jumayyil and his attempt to control all Christian militias in Lebanon. As a result, Jumayyil's forces attacked Tony's home in Ihdin in May 1978, killing him, his wife, his infant daughter, and over two dozen other people. Sulayman (1964–). Tony's son first expressed political ambitions as a youth in the mid-1980s. In 1990, he took control of the al-Marada from his uncle Robert. He became the family's political patriarch upon his grandfather's death in 1992. Sulayman first served in the parliament in 1991 and has served in several cabinet positions beginning in 1990.

MICHAEL R. FISCHBACH

FRANJIYYA, SULAYMAN

[1910–1992]

President of Lebanon, 1970–1976.

Sulayman Franjiyya (also Frangieh), born in 1910, was the political leader of to the Franjiyyas, an influential Maronite family of northern Lebanon. His presidential term is associated with the outbreak of the Lebanese civil war of 1975. He was not initially slated to represent the Franjiyya family in politics. His brother, Hamid Franjiyya, was the political leader of the family; after Hamid suffered a stroke in 1957, Sulayman was chosen as his successor. Unlike his brother, Sulayman was an uneducated

"tough guy" who resorted to violence when it served his family's political interests. He was associated with bloodshed in northern Lebanon that targeted supporters of rival families. To avoid arrest, he fled to Syria where he established contacts with the Asad family that he later utilized.

Franjiyya served in Parliament throughout the 1960s and was active in the centrist (Wasat) bloc, which comprised opponents of the Chehab era. He also held various ministerial positions. He was elected president in 1970 by a one-vote margin. During his administration the Middle East was radicalized, and the Palestine Liberation Organization (PLO) relocated from Jordan to Lebanon after the 1970 Black September clash between Jordanian troops and PLO forces. Franjiyya strongly opposed the presence of armed Palestinians in Lebanon and authorized Lebanon's army to train and give weapons to members of right-wing militias. He aligned himself with the government of Syria for the duration of the Lebanese civil war. He broke off his alliance with Maronite-oriented parties and groups in 1978, when his son, Tony Franjiyya, was killed by gunmen loyal to the Lebanese Forces.

FREEDOM MOVEMENT (NEZHAT-E AZADI IRAN)

Islamic nationalist party.

The Freedom Movement of Iran, a splinter group of the Second National Front, was formed in 1961 by Ayatollah Mahmud Taleqani, Mehdi Bazargan, and Yadollah Sahabi. The new group's primary appeal was to religious technocrats and modernists, and it had strong ties to the bazaar. The founders had been active in the National Front since the late 1940s, but they sought a plausible Islamic alternative to that movement's secular nationalism. After the June 1963 uprisings in Qom and other cities in response to the arrest of Ayatollah Ruhollah Khomeini, Freedom Movement leaders were imprisoned by the government of Mohammad Reza Shah Pahlavi. However, their cooperation with Khomeini continued even after the shah sent the ayatollah into foreign exile. This history of working together contributed to the effectiveness with which the Freedom Movement and Khomeini's network of former seminary students jointly organized mass anti-shah demonstrations during the Iranian Revolution of 1978 through 1979. Even before the final victory of the revolution, Khomeini used his authority as its leader to designate the Freedom Movement's head, Bazargan, to lead a provisional government, which assumed office when the shah's regime collapsed in February 1979.

The Freedom Movement espoused a philosophy that can be termed Islamic modernism. Members were pious Muslims who felt comfortable with modern education; they disliked political extremism and policies of economic and social engineering. Thus they soon fell out with the radical clerics with whom they had to share power. The November 1979 takeover of the American embassy by Students in the Line of the Imam was the last straw for Bazargan; he resigned with his entire cabinet after Khomeini endorsed the embassy seizure. Thereafter, the Freedom Movement became part of the loyal opposition to the government of the nascent Islamic Republic. However, the party's relations with officials became increasingly tense, and by 1981 its newspaper had been banned; subsequently, its members were disqualified from running in elections for the Majles al-Shura or for the presidency. Although the Freedom Movement continued to act as a conscience for the Islamic government, and throughout the 1980s and 1990s periodically circulated pamphlets and issued press statements critical of government policies, lack of access to the government-controlled media effectively silenced its voice. The greater tolerance for dissenting views that prevailed after Mohammad Khatami was elected president in 1997 provided the Freedom Movement an opportunity to publicize its views. However, its greater visibility proved a liability when the judiciary cracked down on reformers and dissidents beginning in April 2000. Subsequently, most Freedom Movement ac-

tivists were arrested and charged with attempting to overthrow the government. Trials in 2001 and 2002 resulted in prison sentences for many; the trial for Freedom Movement leader Ibrahim Yazdi (who became head of the party in 1995, after Bazargan's death) continued sporadically throughout 2003.

FREEDOM PARTY

Turkish political party, 1955–1958.

Established late in 1955 by a group of dissident members of the ruling Democrat Party, the Freedom Party signified rising opposition to the undisciplined economic policies and authoritarian tendencies of the regime of Adnan Menderes. Prime Minister Menderes reacted to intensifying criticism in the aftermath of destructive riots in Istanbul and other cities in September 1955 by forcing the resignation of the entire government while retaining office himself, thus violating the cardinal principle of collective cabinet responsibility. Composed of some of the most cosmopolitan and intellectual elements of the dominant party, the Freedom Party called for effective constitutional guarantees against arbitrary government and greater freedom of association and expression. Ironically, the departure of the dissidents from the Democrat Party strengthened Menderes and paved the way for even more dictatorial policies. The Freedom Party garnered only 4 out of a total of 610 seats in the election of 1957, while the main opposition Republican People's Party (RPP) polled 40 percent of the vote and gained 178 seats. Consequently, the Freedom Party merged with the RPP in November 1958.

FREE FRENCH MANDATE

Attempt by France to control Lebanon and Syria.

In June 1941, Free French troops joined British imperial forces in overthrowing the Vichy administration in Damascus. General Charles de Gaulle's envoy to Cairo, General Georges Catroux, initially offered Syria and Lebanon independence if they would accept Free French rule. But de Gaulle then made independence conditional upon the conclusion of treaties ensuring continued French predominance over the two countries' economic, military, and cultural affairs. Catroux became delegate-general for Syria and Lebanon, a post virtually identical to the earlier office of high commissioner.

Free French officials could not block the integration of Syria and Lebanon into either the sterling area or the Anglo–American Middle East Supply Center. In addition, London pressured the Free French to meet local nationalists' demands, resulting in the restoration of the two countries' prewar constitutions. Elections in July 1943 gave the National Bloc control of Syria's national assembly; nationalists captured Lebanon's parliament two months later and immediately took steps to dismantle the mandate. Free French authorities responded by arresting the Lebanese leadership, but massive popular demonstrations forced the prisoners' release. When the government in Damascus adopted a similar program, the Free French first tried to suppress the Syrian nationalist movement but then agreed to a series of negotiations, which culminated in the dual evacuations of April and August 1946.

FREEMASONS

A secret fraternal order.

Drawing on guild practices of the masons and deriving its "oriental" origins from the period of Solomon's temple in Jerusalem, the order of Free and Accepted Masons recognizes some six million members worldwide. The order's first Grand Lodge was organized in London in 1717. Incorporating a complex system of secret rituals, rites, and decrees, the society admits members who profess a belief in God, but keep the particulars of their faith private. Members include Muslims, Christians, and Jews. There is no central authority. Freemasonry advocates religious toleration, fellowship, and political compromise, and members work for peace and harmony between peoples.

Freemasonry in the Middle East is traced initially to individuals, most notably Iranians who, serving as diplomats, were invited to join lodges by Europeans and upon their return disseminated the ideology. Masonic lodges in the region were established by Europeans in areas they influenced and were used by the French and the British to cultivate local individuals. Lodges in Calcutta (founded in 1730) attracted Hindus and Muslims, and the philosophy probably entered Iran at this time with Iranian merchants who lived in India.

The establishment in the Middle East of masonic lodges affiliated with the European movement, however, dates from Napoléon's invasion of Egypt, when French soldiers established chapters in Cairo (1798) and in Alexandria (1802). Italian émigrés, after their abortive revolution in Italy (1830), set up Italian lodges, and the British and the Germans became active in the 1860s. In Iran, the first lodge (a nonaffiliated one) was set up in 1858 by an Armenian convert to Islam, Mirza Malkom Khan, and was short lived. The French masonic lodge in Istanbul, L'Union d'Orient, dates from 1865. During the Ottoman period, there were lodges in Beirut and Jerusalem, and the society flourished under the Palestine mandate. Jewish, Christian, and Muslim members support a mutual insurance fund, an old-age home, a library, and masonic temples in Israel. There have been lodges in most Middle Eastern countries at one time or another, depending upon the regime in power.

Although it never attracted many members on the popular level, freemasonry in the Middle East was a significant component of Middle Eastern reform politics during the latter part of the nineteenth century until World War I. Because it incorporated unique rites, a clandestine apparatus, and a select membership—features familiar in Sufi, *futuwwa,* and other Islamic movements—and was a convenient vehicle for the dissemination of European ideas, it drew Islamic modernists and political activists such as the Egyptian Muhammad Abduh, the Iranian Jamal al-din al-Afghani, and the Algerian Abd al-Qadir.

Masonic lodges were convenient covers for clandestine activities. Because they were, by and large, Western institutions protected under the capitulations, governments could not penetrate them or monitor their activities. Members were also able to draw upon the support of European masons in defense of local members. During the 1870s, the movement was used as a tool by Prince Halim of Egypt who was denied succession and conspired to rule. Khedive Ismaʿil and his successor, Tawfiq, banished a number of prominent members who were also active in reformist political activities—Yaʿqub Sanu and Afghani, among others. Ottoman modernists of the Tanzimat period were responsible for Ottoman Sultan Murat V's brief rule in 1876. In Iran, lodges existed sporadically in the nineteenth century and were allowed under Mohammad Ali Shah until 1911 and the end of the constitutional movement. Iranians, Egyptians, and Ottomans met at lodges throughout the Middle East when they traveled, but there is no evidence that any unified political actions emerged.

For the Young Turks, exposed to freemasonry largely in the Balkans and Constantinople (now Istanbul), the lodges were convenient meeting places to bring together Christians and Muslims, and to plan the overthrow of the regime of Sultan Abdülhamit II. The existence of so many Freemasons in the large secular leadership of the Committee for Union and Progress generated polemical literature of a conspiratorial nature against the regime just before Turkey's entry into World War I on the side of Germany.

FREE OFFICERS, EGYPT

Clandestine military organization that engineered and executed the coup of 23 July 1952, which began a new chapter in the history of modern Egypt.

The genesis of the Free Officers is much disputed among historians and specialists. Some argue that the group was formed in 1942 after the British ultimatum to King Farouk. Others take the Arab–Israel War (1948) as the starting point. Notwithstanding these differences, general agreement exists on four major points. First, Gamal Abdel Nasser was the undisputed leader of the group from its inception, and his position was never challenged. This fact laid down the foundation of his prominence as the strongman and president of Egypt until his death in 1970. Second, the group did not have an organized file or registry of its membership. It was organized into cells and sections, each with a specific function. The overall command and supervision was provided by a revolutionary committee headed by Nasser.

The organization of the Free Officers reflected a high degree of flexibility that was demonstrated in the frequent movements of individuals into and outside the group. Actually, the first attempt to develop a form of registry was under President Anwar al-Sadat (1970–1981) when he decided to provide a special pension for the Free Officers. Third, the group did not represent an ideologically homogeneous group. Among its members were officers with Islamist inclinations, such as Kamal al-Din Husayn and Abd al-Munʿim Amin; others were more or less leftists, such as Khalid Muhyi al-Din and Yusuf Sadiq. Lacking a clear ideology, all that the group had was the "six principles," which were their guiding directives after assuming power. The existence of ideological differences within the group was one of the factors that explains the power struggle among the Free Officers after 1952. Fourth, the group, under Nasser, was conscious of retaining its organizational autonomy, resolving not to be absorbed in any other political movement.

As individuals, the Free Officers had contacts with the Young Egypt party, the Muslim Brotherhood, the Democratic Movement for National Liberation, and other communist groups; while, as a group, they maintained a high degree of independence. Nasser believed that they could succeed only if they established a firm independent base within the army. One of the distinct features of the Free Officers is that they were purely military; the group had no civilian members and this has come to affect the nature of the post-1952 political ruling elite.

In the mid-1940s, the voice of the Free Officers was heard for the first time. They began to distribute leaflets, the first of them in 1945 was titled "The Army Gives Warning." The first open clash with the king took place in the early summer of

Members of the Revolutionary Council on 4 January 1955 in Cairo, Egypt. **© Bettmann/Corbis. Reproduced by permission.**

1952, when the officers' club in Cairo elected as president General Muhammad Naguib, who was the Free Officers' nominee, turning down the king's own candidate.

Between 1949 and July 1952, the Free Officers worked to recruit other sympathetic officers and strengthened their ties with civilians and politicians opposed to the monarchy. During this period too, because most of them were in their early thirties, they looked for a senior officer who could be presented to the public as their leading figure. Finally, they chose Naguib, who was a well-known infantry division commander and had been popular, especially since the Arab–Israel War, among the troops and young officers.

The actual seizure of power took place in the early hours of 23 July 1952, when troops commanded by Free Officers and their supporters occupied and controlled army headquarters, airports, the broadcasting station, telecommunication center, and major roads and bridges in Cairo. The details of what happened on that day show that the plan for seizing power was neither well thought out nor were its parts tightly integrated. Indeed, a combination of coincidence and luck made the operation successful. Within three days, the king abdicated the throne to his infant son and left the country. From then on, the Free Officers became the new rulers of Egypt.

FREE OFFICERS, YEMEN

Junior officers who led North Yemen's 1962 revolution.

These fifteen or so junior officers were at the center of the planning and execution of the 1962 revolution that overthrew the Zaydi imamate in North Yemen. Inspired by the Egyptian revolution and the revolutionary Arab nationalism of Gamal Abdel Nasser, they recruited the more prominent senior officers who participated in the successful revolt, only to be upstaged or shunted aside by some of these older figures in the sharp political struggles that followed.

FREE REPUBLICAN PARTY

Turkish political party, 1930.

This short-lived party was founded in August 1930 by associates of Turkey's president, Mustafa Kemal Atatürk, at his behest, possibly to siphon off discontent spawned by economic problems and the government's radical reform program. Fethi Okyar, former prime minister and close associate of Kemal, returned from his post of ambassador to France to assume the leadership of the party. It opposed the government's *dirigiste* (paternalistic, state directed) economic policy and emphasized individual rights and freedoms, including freedom of (religious) conscience. It rapidly gained enthusiastic support, especially in the Aegean region. Among its adherents was Adnan Menderes, leader of the Democrat Party of the 1950s, indicating that the Free Republican Party was a harbinger of things to come. Contrary to Kemal's image of gentlemanly debates between parties, relations between the new party and the governing People's Party were bitter. The latter feared that it might in fact lose power in a free election and accused the Free Republican Party of stirring up reaction against Kemal's nationalist reform program. Consequently, the Free Republican Party voluntarily dissolved itself after only ninety-nine days, in November 1930.

FREE YEMENIS

Political party of North Yemen in the 1940s.

Founded in Aden in 1944 by such fathers of the modern Yemeni nation-state as Qaʾid Muhammad Mahmud al-Zubayri and Shaykh Ahmad Muhammad Nuʿman, the Free Yemeni party (al-Ahrar) was the first major modern expression of constitutional reform and political opposition to the Hamid al-Din imamate in North Yemen. Although their party existed only for a few years, the Free Yemenis led the way from reformism and a constitutional imamate to new, more advanced political ideas (republicanism and revolution), organization (such as the Yemeni Unionists), and action. It could be said that a Free Yemeni movement, more than the party itself, traces an unbroken line from 1944 to the 1962 revolution. The Free Yemenis, however, far from being radical political modernists, were initially the mid-twentieth-century equivalents of the Turkish reformers of the Ottoman Empire during the Tanzimat period in the nineteenth century. This did not prevent them from playing a major role in the failed 1948 revolution and in laying a big part of the foundation for the successful 1962 revolution.

FREIER, RECHA

[1892–1984]

Founder of Youth Aliyah, writer, musician.

Born in Norden, Ostfriesland (Germany), Recha Freier studied philology at Breslau and Munich universities, worked as a teacher and pianist, and began research on children's tales, moving with her rabbi-husband to Sofia (Bulgaria) and then Berlin. In 1932 Freier, disturbed by discrimination against Jewish jobseekers in Germany, conceived the idea of settling groups of young Jews on kibbutzim in Palestine. The head of the Jewish Agency's Social Welfare Department, Henrietta Szold, initially rejected the idea, so, in 1933, Freier raised funds to establish Youth Aliyah, sent a first group to Bet Shemen, and established an office in Berlin. That year she persuaded Szold, the Zionist Organization, and the main representative body of German Jews, to take on the program, and she spent the next eight years helping young Jews across Europe to emigrate. In 1941 she fled Germany and settled in Palestine, remaining active in children's welfare activities and founding an agricultural training school. After the establishment of the state of Israel, she founded the Israel Composers Fund (1958) and Testimonium (1966), a fund sponsoring accounts of events in Jewish history set to music. Freier published one such composition, a book of poetry (*On the Steps,* 1976), and a novel (*Shutters,* 1979). In 1954 Albert Einstein nominated her for a Nobel Peace Prize, and in 1981 she was awarded the Israel Prize. Freier saved more than 5,600 children—some say 10,000—and Youth Aliyah has to date given support to more than 300,000 impoverished refugee and Israeli children.

FRENCH FOREIGN LEGION

French military unit created by Louis Philippe in 1831 and made up of foreign volunteers.

Deployed only outside metropolitan France, the French foreign legion saw combat first in Algeria. It played a decisive role in the capture of Constantine in 1837 and fought in numerous engagements as the conquest proceeded. Although the legion served in the Crimea, Italy, and Mexico in the 1850s and 1860s, and throughout the French Empire later in the century, an encampment established in 1843 at Sidi-bel-Abbès, southwest of Oran, remained its headquarters.

The legion helped check the insurrection of the Walad Sidi Shaykh in western Algeria in 1881 and 1882, but much of its work in that country in the last quarter of the nineteenth century involved efforts to expand French influence into the Sahara as a prelude to linking North Africa with France's possessions south of the desert.

Legionnaires participated in many of the military operations that resulted in the establishment of a French protectorate over Morocco. They formed part of the forces that consolidated French power along the ill-defined southern Morocco–Algeria border during the first several years of the twentieth century and were involved in occupations of the Moroccan cities of Oujda and Casablanca in 1907. Thereafter, they helped maintain security in the areas around both cities. In 1911, a company of the legion was among the troops that lifted a rebel siege of Fez, the sultan's capital, thus paving the way for the inauguration of the protectorate the following year. During the pacification of Morocco's mountainous and desert regions in the 1920s and 1930s, French commanders relied heavily on the legion. Its men also took part in the fighting that ended the rebellion of Muhammad ibn Abd al-Karim al-Khattabi in 1925 and 1926.

During World War I, a battalion of legionnaires landed with other Allied soldiers at Gallipoli. After the war, legionnaires were dispatched to the French mandates of Syria and Lebanon. They saw action in the Druze uprising of 1925 and remained on garrison duty in the Levant in the 1930s.

In World War II, units of the legion made up part of the Free French contingent that seized Syria and Lebanon from the Vichy government in 1941. Subsequently attached to the British army in Egypt's Western Desert, they fought in the battle of Bir Hakeim in 1942 and advanced westward with the British following the battle of al-Alamayn. Other legionnaires from Sidi-bel-Abbès worked with American and British forces upon their arrival in Morocco and Algeria late in 1942 until the defeat of the Axis in Tunisia the following spring.

After 1954, the legion was heavily involved in French efforts to end the Algerian rebellion. Paratroopers, who had been added to the legion in the late 1940s, were instrumental in breaking up Front de Libération Nationale (FLN) cells during the 1957 Battle of Algiers. A legion paratroop battalion also formed part of the French expeditionary at Suez in 1956. When Algeria acquired independence in 1962, the headquarters of the legion were transferred from Sidi-bel-Abbès to France.

FRISCHMANN, DAVID

[1859–1922]

Pioneer of modern Hebrew literature.

David Frischmann was born in Poland and died in Berlin. As a writer he was versatile and created an enormous body of work—short stories, essays, literary criticism, poetry, translations, and news stories. He was also an editor and publisher. An innovative writer, he is credited with introducing Western standards of aesthetics into Hebrew literature—which he considered provincial at that time.

His stories manifest a sympathy for and portray European Jewish characters who are in conflict with tradition; they often abandon it. His poems express the futility of adapting Judaism to modern European life. He shunned public office and remained apolitical to retain artistic and literary integrity; as a result, he was accused of being against Zionism. Deeply affected by a visit to Palestine in 1911 and 1912, however, he recorded his impressions in a book, *Ba-Aretz* (1913). His collected works appear in the seventeen-volume *Kol Kitvei David Frischmann u-Mivhar Tirgumav* (Warsaw, 1922).

ANN KAHN

FRONT DE LIBÉRATION NATIONALE (FLN)

The organizing group behind the Algerian War of Independence; later became the dominant single party of independent Algeria.

The instigators of the Algerian revolution created the Front de Libération Nationale (FLN; National Liberation Front) in October 1954 as a vehicle for mobilizing Algerians behind the war of independence. As the war went on, the movement spun off various deliberative, executive, and military institutions, creating by September 1958 a Provisional Government of the Algerian Republic. By January 1960 the revolutionary parliament—Conseil National de la Revolution Algerienne (CNRA)—declared the FLN a single party responsible for carrying out a deeper social and economic revolution.

The Algerian constitutions of 1963 and 1976 confirmed this decision, declaring the FLN the people's monitor of government and the avant-garde of the revolution. By the late 1970s, however, it had grown into a bureaucratized organization of more than 300,000 members, whose principal function was the recruitment and indoctrination of members for support of the government it ostensibly monitored.

The constitution of February 1989 ended the FLN's single-party status, but before newer parties could unseat it, the army seized control of the government.

FRONT FOR THE LIBERATION OF SOUTH YEMEN

South Yemeni independence movement.

The Front for the Liberation of South Yemen (FLOSY) was a political party established in January 1966 in Britain's Aden Crown Colony and the Protectorate States. The party was forged under heavy Egyptian pressure from a combination of the National Liberation Front (NLF) and the Organization for the Liberation of the Occupied South (OLOS) in an effort by Egypt to sustain its influence over the course of the campaign against the continued British presence in southern Arabia. When the NLF quickly backed out, FLOSY became nothing more than a renamed OLOS and the political property of Abdullah Ali Asnaj and Abd al-Qawi Makawi. The NLF successfully fought FLOSY to succeed the British in an independent South Yemen in 1967. FLOSY then became a vehicle for opposition from abroad to the regime, and it remained so with decreasing relevance from the late 1960s through the 1970s.

FRONT ISLAMIQUE DU SALUT (FIS)

Algerian Islamic political party.

The Front Islamique du Salut (FIS, Islamic Salvation Front) is Algeria's largest Islamic political party. Founded in February 1989 by a large group of Algerian religious leaders, the FIS calls for the establishment of an Islamic state based on the Sunna and the Qurʾan. It is headed by Abassi al-Madani, a university professor, and Ali Belhadj, a radical imam. Since their imprisonment in June 1991, Abdelkader Hachani has served as the provisional leader. The principle structures of the party are the Majlis al-Shura, a consultative body of some forty religious leaders, and the National Executive Bureau.

The FIS has been Algeria's most highly mobilized party. It has gained substantial financing from

local businessmen and Saudi Arabian sources. With solid support from the young, urban unemployed, it won the most votes in Algeria's last two elections. In the June 1990 elections for regional and municipal assemblies, it garnered 55 percent of the vote and an absolute majority of the seats. In the first round of National Assembly elections in December 1991, the FIS won 188 of the 430 seats and was poised to win an absolute majority in the second round. The Algerian army staged a coup d'état in January 1992, arrested thousands of FIS members, and declared the party illegal. Since then, the party has been in a state of disarray, its entire leadership imprisoned, and its activities repressed.

FRONT POUR LA DÉFENSE DES INSTITUTIONS CONSTITUTIONELLES (FDIC)

Moroccan political group.

Founded in 1963 by Ahmad Rida Gudeira, a close confidant of King Hassan, the Front pour la Défense des Institutions Constitutionelles (FDIC) attempted to unite pro-monarchy groups in parliament against Istiqlal and the Union Nationale des Forces Populaires (UNFP) during a time of social and economic tensions. Having failed to win a majority in the 1963 parliamentary elections, it split in 1964 into Gudeira's Parti Socialiste Démocratique and the Mouvement Populaire (MP)—the latter had been part of the original FDIC. The failure of the FDIC led the king to assume emergency governing powers in June 1965.

FUʾAD

[1868–1936]

Sultan of Egypt, 1917–1922; king, 1922–1936.

Fuʾad was born in Giza, Egypt, on 26 March 1868, the youngest child of Khedive Ismaʿil Pasha, who ruled Egypt from 1863 until 1879. Fuʾad left Egypt for Constantinople (now Istanbul) in 1879 at the time of his father's exile. Subsequently, he studied at Geneva, Turin, and the Italian Military Academy, returning to Egypt in 1892. His eligibility for the Egyptian throne was enhanced when the British deposed Abbas Hilmi II as khedive of Egypt in 1914 at the beginning of World War I. At the time of Abbas's removal, Britain severed the juridical ties that bound Egypt to the Ottoman Empire, proclaimed a protectorate over the country, and named Fuʾad's elder brother, Husayn Kamil, as the first sultan of Egypt. When Husayn Kamil died on 9 October 1917, Fuʾad succeeded him to the throne.

Fuʾad reigned in Egypt from 1917 until his death in 1936. He aspired to be a powerful ruler and did much to enlarge the powers of the monarchy. Following the conclusion of the war, Egypt's elite, including Sultan Fuʾad, pressed the British to end the protectorate and to increase the political autonomy of their country. Britain's failure to respond to these overtures set off a powerful protest movement, led by Saʿd Zaghlul and his new political party, the Wafd. The political turmoil led to Britain's unilateral proclamation of Egypt's independence on 28 February 1922, subject to the exclusion of a wide range of powers reserved to the British. In the wake of the altered political status of the country, Fuʾad became king of Egypt on 15 March 1922. In 1923 an appointed committee drafted a new constitution for the country. Through the intervention of Fuʾad and the British, the constitution gave far-reaching authority to the monarch. Under its provisions, the crown had the power to designate the prime minister, dissolve the parliament, and postpone sessions of parliament. Additionally, the king controlled charitable and educational institutions and decided upon diplomatic appointments and military commissions.

Armed with its formal, albeit restricted, political independence and a new, sophisticated constitution, Egypt embarked upon an experiment in liberal democracy. Unfortunately, civilian parliamentary government, which lasted until the military ousted the politicians from office in 1952, tended to degenerate into a three-cornered struggle among Egypt's most popular party, the Wafd, the palace, and the British. During these years, the Wafd invariably won any fair electoral contest, but was kept from office through the political manipulations of the palace and the British. Monarchical power reached its apex between 1930 and 1935, after Fuʾad removed the Wafd from office and appointed Ismaʿil Sidqi as prime minister. Immediately upon assuming power, Sidqi replaced the 1923 constitution with a new one and enacted a new, more restrictive electoral law. Both changes enhanced royal authority. Jealous of the power that Sidqi wielded, Fuʾad removed him from office in 1933 and ruled Egypt through a set of palace appointees. In 1935, under pressure from the British and responding to fears of an impending world war, Fuʾad agreed to restore the 1923 constitution and to hold new elections. Predictably, the Wafd won the 1936 elections. Fuʾad died on 28 April 1936, just months before the signing of the Anglo–Egyptian Treaty, which gave greater political autonomy to Egypt.

Although he was an autocrat and did much to impede the development of parliamentary democracy, Fuʾad was a noteworthy patron of Egyptian education. He played a role in reviving the Egyptian University, which had been founded in 1908 but languished until Fuʾad and others gave it their support. It was named Fuʾad I University in 1940 and became today's Cairo University in 1954.

FUJAYRA

One of the seven emirates making up the United Arab Emirates; also the city of the same name.

Occupying a slender strip of land along the Gulf of Oman side of the Musandam Peninsula, Fujayra was under the sovereignty of the al-Qawasim rulers of Sharjah and Raʾs al-Khayma for most of the modern era. Lingering ill feelings between Fujayra and its former overlords have manifested themselves in minor border disputes. Fujayra was only recognized as a distinct emirate by the British in 1952. It is ruled by Hamad ibn Muhammad al-Sharqi, and because it has no oil reserves or other significant resources, it must rely financially on Abu Dhabi. Some extractive industries exploit materials from the Hajar Mountains, including cement and asbestos. Like Dubai, Fujayra has a port and free zone for industry and trade, but on a much smaller scale. However, the port's petrochemicals storage and loading facilities are among the region's most heavily used. In 1997 the emirate's population was estimated to be 83,000, on an area of 715 square miles.

FUJAYRA–SHARJAH CONFLICT

Clash over land ownership in the United Arab Emirates (1972).

A few months after establishment of the United Arab Emirates, these two members of the federation clashed over ownership of a tiny parcel of land with a well that had traditionally been used by tribesmen from both. Some twenty lives were lost before federal intervention ended the conflict. The incident underscored the disruptive potential of numerous

unresolved border disputes, and the federal government's response reflected its determination to keep them in check.

FUNDAMENTAL PACT

An 1857 Tunisian law that increased freedoms for non-Tunisians.

The law was issued by Muhammad Bey (1855–1859) of Tunisia on 10 September 1857. Entitled Ahd al-Aman (Pledge of Security), the Fundamental Pact resulted from an incident involving a Tunisian Jew, Batto (Samuel) Sfez, who was executed on orders of the bey for having blasphemed Islam. The French and British consuls saw in the episode an opportunity to intervene in Tunisian affairs. The two men—Richard Wood of Britain and Leon Roches of France—pressed for the promulgation of reforms that would ensure the security of both Tunisians and foreigners; that would establish mixed courts to handle matters concerning Europeans; and, importantly, that would allow non-Tunisians to conduct business and own property in Tunisia more easily. On the one hand, the law opened the way to greater European economic activity and, on the other, spurred a group of Tunisian notables, led by Khayr al-Din Pasha, to pressure the bey to enact structural reforms that would, in part, place limits upon the powers of the bey's office. The campaign of these notables, backed by the foreign consuls who continued to press for enforcement of the new laws, led Muhammad Bey and his successor Muhammad al-Sadiq Bey (1859–1882) to draw up a formal constitution.

FUTUWWA

Associations of young men who claimed to embody certain virtues and who tried to maintain the distinct identities of their quarters in Cairo. Also, paramilitary youth organizations in Iraq.

In medieval times, the term *futuwwa* (plural, *futuwwat*) referred to either a specific body of virtues—courage, manliness, chivalry, generosity, truth, honor, self-reliance, altruism—or to informal urban associations of young men who claimed to promote these values. By the early nineteenth century, the word was used in Cairo (Egypt) to refer to a few influential men who acted as informal leaders of their quarters. Their primary function was to protect their quarters against outside threats, other *futuwwat,* and the government. While they performed good deeds, they also quarreled and were violent among themselves and with police. Some were thugs who preyed on the local populace instead of furthering its welfare.

In Egypt, between Muhammad Ali Pasha's accession to power in 1805 and World War II, their influence declined, mainly as a result of government efforts to centralize authority. After the war, their number and role diminished further, under the combined effects of rapid urbanization, industrialization, expansion of the role of the bureaucracy in the daily life of the people, and the increasing religious and socioeconomic heterogeneity of neighborhoods. The few remaining *futuwwat* in the older, medieval quarters of Cairo now include a large proportion of toughs engaged in various semilegal and illegal activities.

In another context, the term has been used in Iraq, first in the 1930s and again since the Baʿth party takeover in 1968, to refer to paramilitary youth groups strongly reminiscent of the Hitler Youth of Nazi Germany. In Baʿthist Iraq, the *futuwwa* is one of three paramilitary youth organizations that be-

long to the state-run General Federation of Iraqi Youth. It brings together Iraqis aged fifteen to twenty, is strongly hierarchical, and is patterned after the Baʿth party itself. Its members wear uniforms, undergo military training, and participate in various activities and rituals aimed at strengthening the new generation's loyalty to the regime.

G

GAFSA INCIDENT (1980)

Confrontation between Tunisia and Libya.

In January 1980, during a period of heightened tension between Libya under Muammar al-Qaddafi and Tunisia under Habib Bourguiba, Tunisian guerrillas (trained by the Libyan military) crossed into Tunisia and attacked the south-central city of Gafsa. Tunisia responded by severing ties with Libya; in turn, Libya ordered some 10,000 Tunisian workers in Libya to return home.

GAILANI, AHMAD

[1932–]

Afghan resistance leader; Sufi pir *(spiritual leader).*

Ahmad Gailani played an important role in Afghan resistance politics of the 1980s and in the political events of the early 1990s. Gailani is the spiritual leader of the Qadiriyya Sufi order in Afghanistan and well connected to the former royal family through marriage. Gailani assumed the leadership of the Qadiriyya order upon the death of his older brother Sayyid Ali in 1964. He was educated at Abu Hanifa College.

A member of the Kabul elite before 1978, Gailani fled Kabul after the Marxist revolution in April 1978 and founded the resistance group Mahaz-e Milli-e Islami-e Afghanistan (National Islamic Front) in Peshawar, Pakistan, in 1979. This group had a strong following among Gilzai Pushtun tribes and among supporters of the ex-king Zahir Shah. After the collapse of the communist government in 1992 Gailani returned to Kabul and participated in the transitional government of Sabghatullah Mujaddidi. He was first offered the position of foreign minister, but refused to serve. Later he accepted the post of supreme justice.

When the Taliban captured Kabul in 1996 Gailani was forced from his leadership role and again fled to Pakistan. After the events of 11 September 2001 Gailani returned to Kabul to play a role in the formation of the government of Hamid Karzai and to support Zahir Shah, although he held no official position in the Afghan government.

GALATA

District of Istanbul on the north bank of the Golden Horn.

A Genoese settlement in the Byzantine era, Galata was officially incorporated into the city of Constantinople (now Istanbul) only in 1840. It continued through the nineteenth century to be the section of Constantinople where Europeans resided. Long the center of international trade and banking in the capital, the district's population and business activity boomed beginning in the Crimean War (1853–1856). Galata and its neighboring district Beyoğlu (formerly Pera) became the modernized center of the city, with many theaters and hotels and the city's first tramway and telephone lines. The famous Galatasaray Lycée, established in 1868, was actually located in Beyoğlu.

ELIZABETH THOMPSON

GALATASARAY LYCÉE

One of the oldest and most prestigious educational institutions in Turkey.

The Galatasaray Lycée opened in 1481 as a palace school to train young men for service in the Ottoman court or in cavalry regiments. The most accomplished students were selected to continue their education and service at the emperor's Topkapi Palace. As a result of educational reforms on a Western model during the nineteenth century, the Galatasaray buildings were first converted to a medical school, then to a military preparatory school. In 1868, the institution began its modern incarnation as the Imperial Lycée (Mekteb-i Sultani), with support from the French government. Modeled after the grand French *lycées* (schools), it was designed to offer a European-style secondary education using French as the primary language of instruction. While similar schools in the empire catered to non-Muslim subjects, Galatasaray was open to both Muslim and non-Muslim boys. The school continued to function after the Ottoman Empire became the Turkish Republic, and many of its graduates went on to study at the School of Government (Mekteb-i Mülkiye) and then took up positions in government.

During the 1960s, a primary school was opened on a separate campus to prepare students for the *lycée.* The admission of girls began in 1965, and by the late 1990s the student body was approximately 40 percent female. English language instruction was offered starting in 1990, bringing to three the number of languages used in the school. In 1992, during a visit by French president François Mitterrand to Turkey, it was announced that the school would be reorganized as the Galatasaray Educational Institution and that it would also become an institution of higher education. Accordingly, Galatasaray University was founded in 1994, with faculties of law, engineering and technology, administration, communication, and arts and sciences. Because the institution historically has attracted an ambitious and able body of students, the Galatasaray has been an important factor in the history of the Ottoman Empire, its successor states, and modern Turkey. Galatasaray graduates include many prominent political leaders, diplomats, government officials, artists, writers, and educators.

UPDATED BY ANTHONY B. TOTH

GALILEE

In Hebrew, ha-Galil, *probably meaning "the circle"; in Arabic,* al-Jalil; *mountainous and comparatively fertile region of northern Israel.*

The Galilee region is bounded by the Mediterranean Sea on the west, the river Jordan on the east, the Lebanese border in the north, and the Jezreel Valley to the south. A line running from Acre on the coast to the northwest shore of the Kinneret (Sea of Galilee or Lake Tiberias) divides Lower Galilee, reaching an elevation of 1,500 feet (458 m) above sea level, from Upper Galilee, which attains altitudes of 4,000 feet (1,220 m).

Joshua and Deborah conquered the entirety of this area, which in biblical times was allotted to four Israelite tribes and later to the northern kingdom of Israel. Controlled by a series of empires, Galilee became a preeminent Judaic stronghold for some five centuries after the destruction of the Second Temple, and a center of Christianity especially after the sixth century C.E. The region became part of the province of al-Urdunn (Jordan) following the Arab conquest (c. 640), then formed a crusader principality, and was later ruled successively by Ayyubids, Mamluks, Ottomans, and intermittently by local potentates such as Zahir al-Umar, Ahmad al-Jazzar, and Muhammad Ali of Egypt. Zionist settlement activity, both before and after Britain's General Edmund Allenby's conquest of the area from the Ottoman Turks in September 1918, was slow in penetrating Galilee itself, whose overwhelming Arab majority caused it to be apportioned to the Arab state under partition. Conquered in its entirety by Israel in the 1948 Arab–Israel War, Galilee witnessed a smaller scale Arab displacement than other parts of the country, most of those leaving being Muslim. Since the 1960s the area has been the target of many government settlement and development projects.

GALILEE, SEA OF

Freshwater lake located in northeast Israel.

Measuring 64 square miles (166 sq km) in area, the Sea of Galilee (also Lake Tiberias or Kinneret) is located 680 feet (207 m) below sea level and is formed by waters flowing down from the Jordan River. The lake was the source of a thriving fishing industry in the time of Christ, but today only small numbers of fish (called "St. Peter's fish") are caught for local consumption. Deganya, the first Israeli kibbutz, is located on the shore. From the beginning of the British mandate in 1920, the Sea of Galilee was located within the borders of Palestine

and, after 1948, the state of Israel. It acts as the principal freshwater source for Israel and supplies the National Water System.

GALLIPOLI

Peninsula between the Dardanelles and the Aegean Sea on the European side of the Turkish Straits.

Gallipoli was the site of an unsuccessful World War I Allied campaign (1915 and 1916) aimed at defeating the Ottoman Empire, opening up a second front against Austria–Hungary and Germany, and opening a supply route to Russia. Britain's First Lord of the Admiralty Winston Churchill proposed this plan, expecting secretary of war Lord Kitchener to supply the necessary land troops, but Kitchener did not fully support Churchill's plan.

An Anglo–French force (mostly ANZAC [Australia and New Zealand Army Corps]) landed at Gallipoli in April 1915, after four unsuccessful naval attacks; they met a stubborn land defense by the Ottoman Turks. Although suffering enormous losses, the Allies—including Italy by August—nearly succeeded in a breakthrough. Lack of Russian cooperation, faulty intelligence, and skillful tactics on the part of the Ottomans and Germans, however, led to a stalemate, then to Allied withdrawal in January 1916. Churchill became the scapegoat and lost his position.

GAMAL, SAMIYAH

[1924–1994]

Egyptian dancer and actress on stage and screen.

Born Zaynab Khalil Ibrahim Mahfuz, Samiyah Gamal (also Samiyya Jamal) changed her name to conceal her identity from her family after becoming a dancer at Badiʿa Masabni's famous Cairo casino. At her debut in the late 1930s, she was paralyzed by stage fright until she thought of kicking off her brand-new high-heeled shoes. She danced in comfort and earned the nickname "the barefoot dancer." Among her fellow dancers at the Casino was Tahiya Kariyuka, another accomplished dancer and actress. The two women remained rivals until Gamal's death.

Gamal's dancing and acting led to appearances in some fifty-five films. After bit parts in the early 1940s, her first starring role was with actor Najib al-Rihani, "the Molière of Egypt," in *Ahmar shafayif* in 1946. She is best known for a series of charming musical films she made with costar Farid al-Atrash between 1947 and 1952. Her hopes for marriage to al-Atrash were disappointed and their extremely successful artistic partnership came to an end; her husbands included Sheppard W. King, a Texas cotton and oil baron, and Rushdi Abaza, an Egyptian actor. Gamal retired in 1972 but returned to the stage briefly in the early 1990s.

GANIM, HALIL

Ottoman opposition politician and newspaper publisher.

A Lebanese Maronite by birth, Halil Ganim (also Khalil Ghanim) served in the Ottoman parliament in 1877 and 1878. When the parliament was closed, he took up exile in Paris, where his prominent opposition newsletter, *La jeune Turquie,* soon gave its name to the emerging Young Turk movement. In 1895, Ganim collaborated with Young Turk leader Ahmet Riza, also in Paris, in publishing the first major organ of the cause, *Meşveret.* In 1901, he published a book against despotism, *Les sultans ottomans* (The Ottoman sultans). Ganim was one of a very few Arabs prominent in the Young Turk movement. He lived in Paris for the remainder of his life.

GANJI, AKBAR

[1959–]

Iranian journalist, and writer.

Akbar Ganji was born and raised in Tehran, where he became a leading investigative journalist and the editor of the journal *Rah-e Now* (The new path), and newspaper *Sobhe Emruz* (Today's morning), and one of the most prominent and outspoken figures of the 23 May movement after the election of Mohammad Khatami in 1997. Ganji actively participated in the Iranian Revolution of 1979. After the revolution, he joined the Islamic Revolutionary Guard and from 1985 to 1989 he served as a cultural staff member of the Islamic Republic at the Iranian embassy in Turkey. In 1989 he was appointed to the media department of the publicity and press affairs of the Ministry of Culture and Islamic Guidance. He published a collection of newspaper articles in early 2000, *Dungeon of Ghosts,* in which he described a secret group affiliated with powerful, high-level officials whom he claimed had masterminded the serial killings of writers and political figures in 1998. He cited murders as part of a policy of state terror designed to subdue dissidents, and identified Ali Akbar Hashemi Rafsanjani as the chief architect of the serial assassinations. The book was sensational and made a major contribution to the defeat of conservative candidates in the parliamentary elections of February 2000. In April 2000 Ganji was arrested for his participation in an international conference in Berlin on the future of democracy in Iran. At the subsequent trial he was convicted of antistate activities and sentenced to ten years of imprisonment.

GARANG, JOHN

[1945–]

Sudanese advocate for the Bor Dinka people.

Born in Wagkulei, John Garang is from the Bor Dinka people in the southern Sudan and the most influential advocate on their behalf in the face of the Khartoum government. He was educated at Catholic mission schools in southern Sudan and graduated from high school in Tanzania. In 1970 he joined the southern resistance movement, Any-Nya, which was later incorporated into the Sudanese

Dr. John Garang (left), chairman of the Sudan People's Liberation Movement, shakes hands with Sudanese president Umar al-Bashir during April 2003 negotiations to end the Sudanese civil war. The negotiations continued throughout the year, and an agreement was hammered out that provided some degree of self-rule in Sudan's southern regions. © AP/Wide World Photos. Reproduced by permission.

armed forces (after the Addis Ababa negotiated peace in 1972). He rose to the rank of colonel in the Sudanese army.

Garang received his bachelor of science degree from Grinnell College in Iowa in 1971 and later returned to the United States for military training at Fort Benning, Georgia. In 1981 he earned a Ph.D. in economics from Iowa State University, focusing on economic development of the southern Sudan. Garang taught at the University of Khartoum and the Khartoum military academy.

The Addis Ababa peace accords broke down after Islamic law was made state law in Sudan. Garang was sent to the south in 1983 to put down the mutinies of southern officers led by Kerubino Kwanyin and William Bany. Instead he joined the revolt and he and a group of other officers and civilians founded the Sudan People's Liberation Movement (SPLM), of which he became chairman, and the Sudan People's Liberation Army (SPLA), of which he became commander. Garang was responding to attempts by the Sudanese government under Muhammad Jaʿfar Numeiri to eliminate local autonomy in southern Sudan, which had been agreed to in Addis Ababa in 1972. Garang favored a federal relationship between the southern regions and the government in Khartoum, and also objected to Khartoum's decision to divide the previously united southern region along ethnic lines. He opposed the imposition in September 1983 of *shariʿa,* or Islamic law, on the non-Muslim south. Garang wrote later that in founding the SPLM his aim was "to create a socialist system that affords democratic and human rights to all nationalities and guarantees freedom of religion, beliefs and outlooks." His movement was quickly categorized as being communist and secessionist, although he denied the validity of both labels.

At various times Garang received support from Libya (until 1985), from Ethiopia (until the fall of Mengistu Haile Mariam in 1991), and newly independent Eritrea on Sudan's eastern border, especially under the rule of Isaias Afwerki. Garang found it difficult to attain political unity among his followers because of their diverse ethnic loyalties; for example, he sought to divide the Nuer from the Dinka but in doing so intensified the war. He has also had personal conflicts with his commanders. In the protracted civil war against the Sudan government in Khartoum, neither side has been able to win in this war of attrition, nor has peace been successfully negotiated.

In 1989 an Islamist military regime backed by the National Islamic Front and its leader, Hasan al-Turabi, became intransigent on the issue of removing *shariʿa* as state law. Still not seeking secession, Garang tried to make southern Sudan a world political issue. In this effort he was helped by U.S. Congressperson Mickey Leland, who welcomed him to congressional hearings on Sudan in July 1989. But Leland died in a plane accident shortly afterward. During the 1990s southern Sudan was in the international limelight because of severe food shortages and famine; displacement of humans and loss of life estimated at one to two million persons; the "lost boys," young refugees resettled in the United States; and allegations about the revival of slavery. Since 1995 Garang has been military commander of the opposition National Democratic Alliance forces in Ethiopia and Eritrea, as well as remaining head of the SPLM.

PAUL MARTIN
UPDATED BY CAROLYN FLUEHR-LOBBAN

GARDANNE MISSION

French military mission to Persia, 1807–1808.

The Gardanne Mission's purpose was to train the Persian army along European lines. It consisted of seventy officers and sergeants, led by General Claude-Matthew Gardanne. The mission was a result of the Finkenstein Treaty of May 1807, in which Iran sought help from France against Russia—while France had visions of using Iran as a stepping stone to British India. The Treaty of Tilsit in July 1807 temporarily ended hostilities between France and Russia, so support of Persia against Russia was no longer a French priority. Persia then negotiated with Britain, agreed to dismiss Gardanne, and signed a preliminary treaty in March 1809 that provided British officers to train the Persian army.

GASPIRALI, ISMAIL BEY

[1851–1914]

Turkish journalist, educator, and reformer.

Born in the Crimea into a noble family (the Russian form of his name was Gasprinskii), Ismail Bey Gaspirali was a reformer who introduced a new educational method *(usul-i cedid).* He also advocated a single shared identity for all Muslim Turkic peoples of Imperial Russia, hoping to unite them with the motto "unity in language, thought, and action." In 1883, he founded the newspaper *Tercüman,* which was influential throughout the Turkic world; it ceased publication in 1918. Gaspirali intended the language of this newspaper, based on Ottoman Turkish, to serve as a common literary language for all Muslim Turkic speakers.

GAZA (CITY)

Principal city of the Gaza Strip.

Gaza City is located in the northern part of the Gaza Strip, on the coast of the Mediterranean Sea. Along with the rest of the Gaza Strip, it was inhabited by Philistines in ancient times and subsequently conquered by many peoples due to its strategic location As part of the British Mandate, it came under Egyptian administration after the 1948 Arab–Israel War. The city contains a small port that serves local fisherman. Gaza's population consists of 400,000 mostly Muslim Palestinians. After the 1948 war, Gaza experienced an influx of refugees (approximately 190,000) and was six times larger by 1967. Today, about half the city's population are refugees.

Since the 1967 Arab–Israeli War, Gaza has been occupied by Israel. At the beginning of the first Palestinian uprising (intifada) in 1987, Gaza became a center for political unrest. In May 1994 the city became the first provincial headquarters for the Palestinian National Authority, which administers Palestinian areas in the Gaza Strip and West Bank.

Gaza is the economic center for citrus fruits and other crops and contains small industries, such as textiles. Gaza's economy has been weakened due to closures by the Israeli military, implemented in the wake of the first intifada, and its dependency on wage labor in Israel. As a result of the al-Aqsa intifada (which began in 2000), more than half of the city's population are unemployed and living below the poverty line.

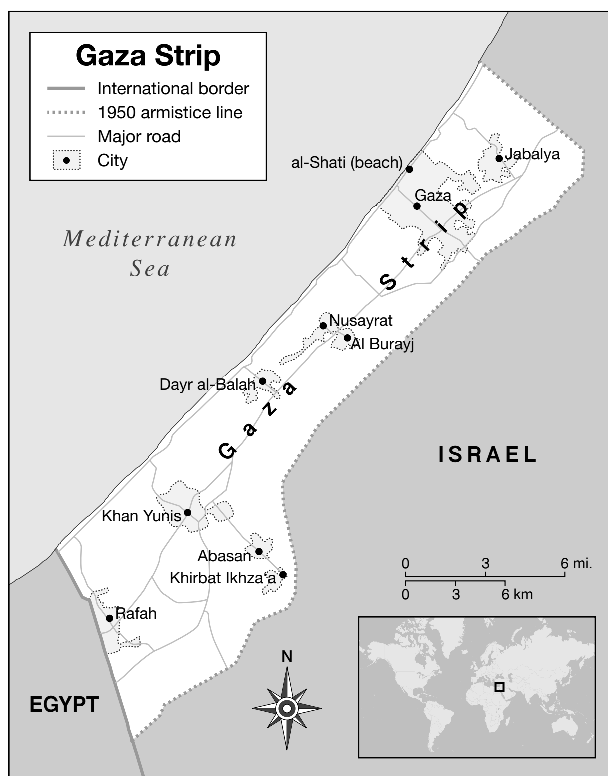
MALLIKA GOOD

GAZA STRIP

Region bordering Israel and Egypt on the Mediterranean Sea.

The inhabitants of the Gaza Strip are almost all Palestinians with a population estimated at 1,100,000 (2003). Some 65 percent of these are refugees, descendants of the 250,000 refugees who flooded into the territory in 1948 during the first Arab–Israel War. Few carry passports and everyone is stateless. Arabic is the primary language; Islam is the primary religion, but Christians are also in residence. Eight UN-sponsored Palestinian refugee camps are located in the Gaza Strip.

The boundaries of the Gaza Strip have not changed since 1948; with only one-fifteenth the area of the West Bank, it has one of the highest population densities in the world. The Strip is almost rectangular, bordered by Israel on the north and east and by Egypt on the south. It has no capital, but its largest cities are Gaza City, Khan Yunis, and Rafah. It measures some 28 miles (45 km) by about 5 miles (8 km).



MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

The northern third belongs to the red sands of the Philistian plain; the southern two-thirds (south of the main watercourse, the Wadi Gaza) belong to the more fertile sandy loess of the northern Negev Desert coast. It is hot and humid in the summer, cooler and humid in the winter, with limited rainfall.

Gaza's economy is small, underdeveloped, and weak, historically generating close to 50 percent of its national product from external sources. Under Israeli control, its economy became heavily dependent on wage labor in Israel, where over half of Gaza's labor force was traditionally employed. Israeli military law undermined local economic development, and the combined impact of the first (1987–1993) and second (2000–) Palestinian uprisings and the Israeli government's harsh response has seriously weakened the local economy. Natural resources, notably land and water, are very limited and diminishing, and no mineral resources exist. Agriculture historically played a large role in the local economy, with citrus the primary agricultural export. Industry is largely traditional and rudimentary. Small factories manufacture beverages, tobacco, textiles, clothing, wood products, and plastics.

In ancient times the area was inhabited by the Philistines. It is mentioned in the Bible as the place of Samson's death and as the burial place of one of the great-grandfathers of the Prophet Muhammad. The Gaza area was conquered by many peoples, including the Jews (Hebrews), Romans, and Arabs, before it became part of the Ottoman Empire. After World War I, when the Ottoman Empire was dismembered, the Gaza region became part of the British mandate over Palestine. In 1947 the mandate disintegrated and resulted in a call for the partition of Palestine into an Arab and a Jewish state. Following the Arab–Israel War of 1948, the Egypt–Israel General Armistice Agreement of February 1949 left Egypt ruling the Gaza Strip under a mil-

itary administration. During the Arab–Israel War of 1956, Israel controlled the Gaza Strip from November until March of 1957, when it reverted to Egypt.

Since the Arab–Israel War of 1967, Gaza has been under Israeli military rule. The Palestinian uprising (or intifada) started in Gaza in 1987. In 1993 the Oslo peace process began with an agreement between the Israeli government and the Palestine Liberation Organization (PLO) to implement limited autonomy in the Gaza Strip and in the West Bank town of Jericho. The failure of the Camp David Summit (July 2000) effectively ended this process. The second Palestinian uprising, known as the al-Aqsa Intifada, has created unprecedented hardship for Palestinians, especially those living in the more impoverished Gaza Strip.

GEAGEA, SAMIR

[1952–]

Lebanese politician and leader of the Lebanese Forces.

A Maronite from Bsharra in northern Lebanon, Samir Geagea studied medicine at the American University of Beirut, but did not complete his studies due to his early participation in the Lebanese Civil War. He fought during the 1975 to 1976 phase of the war in the militia of the Lebanese Phalange Party. By the late 1970s, he had become a senior commander of the Lebanese Forces (LF) and was committed to using force to restore Christian hegemony over Lebanon. He was very loyal to Bashir Jumayyil, who used him for the most vicious and brutal operations. Thus, he was dispatched by Bashir in 1978 to aid in the attack on the home of Tony Franjiyya that resulted in the deaths of Franjiyya and several members of his family. When LF leader Elie Hubeika signed the Tripartite Accord on behalf of the Christian community in December 1985, Geagea denounced it as a surrender to Syria. In January 1986, as chairman of the executive committee of the LF, he challenged President Amin Jumayyil and the Phalangist leadership and consolidated his ties with Israel.

After Jumayyil stepped down, Geagea clashed with General Michel Aoun when he attempted to curb the militias. Tensions between them culminated in devastating fighting for control of East Beirut's Christian enclave in the first half of 1990. In April 1990 Geagea endorsed the Ta'if Accord, largely to neutralize Aoun. After the defeat of Aoun in October 1990 and the normalization of political and security conditions in the country, Geagea became one of the most vocal critics of Syria's power in Lebanon.

By late 1993, Geagea had become a marginal figure in Lebanon's politics because of his past association with Israel, Syria's animosity toward him, and the de facto political neutralization of his militia. More fundamentally, he was the target of deep popular resentment against the warlords. Even among Christians, he was blamed for the loss of lives and property in East Beirut, and his reputation was tainted by his participation in the mass killing of Christian rivals, including Tony Franjiyya. Geagea was put on trial for the killing of Dany Chamoun and Rashid Karame, and was found guilty of dispatching a car bomb to a rival church. He has been in jail since 1994; right-wing forces continue to demand his release.

GEBEYLI, CLAIRE

[1935–]

Greek/Lebanese writer.

Of Greek origin, Claire Gebeyli was born and raised in Alexandria, Egypt, where she studied the humanities and social sciences. Steeped in ethics and philosophy, she is fluent in classical and modern Greek, French, English, and Arabic. She left Egypt under Gamal Abdel Nasser's rule and came to Lebanon, where she presently resides and which she has fully adopted as her own. Poet, novelist, journalist, professor of francophone literature at the Jesuit University of Beirut, national officer of the United Nation Program for Development throughout the Lebanese war (1975–1990), and member of the prestigious Academy of Science in New York, Gebeyli also has contributed articles in medicine, culture, fashion, literature, and women's profiles to the daily francophone newspaper *L'Orient–Le jour* since 1967. A pioneer in journalism, her *Billets* (Notes) on the dramatic events of the Lebanese war were collected in a volume of prose poems. She is the author of several other volumes of poetry in French and a novel titled *Cantate pour l'oiseau mort* (Cantata for a dead bird), which was awarded the Albert Camus Prize in 1996.

MONA TAKIEDDINE AMYUNI

GECEKONDU

Literally, homes "built up at night" without permits in slum areas of Turkish cities.

The low-income neighborhoods lacking many urban amenities that surround Turkey's large cities are known as *gecekondu*s because the houses are built during the night on vacant land and without construction permits. Once the exterior walls and roof are in place, owners of the land—often the government—are not permitted to tear the houses down without going through a lengthy court process. Thus, for the squatters who build these homes, their overnight construction work becomes a fait accompli. In this way, extensive *gecekondu*s have been established on the outskirts of Adana, Ankara, Bursa, Diyarbakir, Istanbul, and İzmir. Houses in *gecekondu* neighborhoods often make illegal connections to urban water and electricity lines. Long-established *gecekondu*s have been successful in pressuring municipalities to provide legal urban services such as piped water, sewers, electricity, and transportation.

ERIC HOOGLUND

GENCER, LEYLA

[1928–]

Turkish operatic soprano.

Leyla Gencer is revered by fans all over the world as the "regina" of the Donizetti operas. Her timing and perfection of theatrical gesture onstage, her deep chest tones, and perfectly pitched and executed coloratura are legendary.

Gencer was born in Istanbul on 10 October 1928. Her Polish Catholic mother, Alexandra Angela Minakovska—who later converted to Islam—was from Adampol, a village on the outskirts of Istanbul that was a colony for Polish refugees fleeing from the invading Russians during the mid-nineteenth century. Her father, Hasanzade Ibrahim Ceyrekgil, was from a prominent Safranbolu family with lucrative business interests in Istanbul. While attending the Italian High School in Istanbul, Leyla met and married a young banker, Ibrahim Gencer. She persuaded her husband and his family to allow her to attend the Istanbul Conservatory where she began pursuing voice lessons.

During the summer of 1949 she met Giannina Arangi Lombardi and followed her to Ankara, where Lombardi had an engagement as a voice coach at the Ankara State Opera. Lombardi died a year later, and Gencer continued her voice studies with Apollo Granforte; Italian repertoire with Di Ferdinando, Adolfo Camozzo, and Domenico Trizzio; and German opera with Georg Reinwald. She debuted at the Ankara State Opera in 1950 as Santuzza in

Mascagni's *Cavalleria rusticana,* followed by *Tosca* in 1952 and *Cosi fan tutte* in 1953. Her Italian debut was in 1954 at the Teatro San Carlo in Naples, where she performed *Madama Butterfly* and *Eugene Onegin.* In September 1956 she was invited to the San Francisco Opera to perform *Francesca da Rimini* by Zandonai, but her breakthrough came when Francis Poulenc chose her as his Madame Lidoine in his opera *Dialogues des Carmélites,* which was produced at the Teatro La Scala in Milan on 26 January 1957. Her career took flight from 1957 to 1980 with a great variety of roles. She had an immense repertoire which included all of Verdi, Puccini, Donizetti, and Bellini operas and a great variety of works by other major composers.

Gencer retired from the stage in 1987, but continued giving concerts. She is the director of La Scala Singing School in Milan and received the Puccini Honorary Award from the Licia Albanese Puccini Foundation at the New York City Lincoln Center on 2 November 2002.

GENÇ KALEMLER

A Turkish nationalist group and its journal.

Genç Kalemler was founded in 1910–1911 in Salonika, bringing together a group of writers and poets under the leadership of famous nationalists Ömer Sayfettin and Ziya Gökalp. Theirs was the first organized attempt at Turkish language reform, born of reaction to the ornate linguistic excesses of the Servet-i Fünun group of the 1890s. They sought to bring written Turkish closer to its spoken form, without the Arabic and Persian grammar and vocabulary of the elite of the Ottoman Empire.

The group also sought to bring realism to what they felt was artificial Ottoman literature—by producing numerous critical essays in its journal and by publishing new stories and poems. Genç Kalemler's pursuit of simple direct language also had a political aim, because it was felt that to rescue the empire, a language understandable to the common people was needed. Genç Kalemler had close ties to the Turkish nationalist Committee for Union and Progress. The journal was published until the Turkish war of independence after World War I.

Gender: Study of

Gender and the Economy

Women's economic participation in developing countries includes issues such as the invisibility of women's economic activities and their concentration mainly in low-wage and menial jobs in farming activities due to the lack of equal education and training, as well as limited access to productive assets, land and property, and credit.

Despite variations in woman's status in the Middle East and North Africa, gender bias in this region remains the highest in the world, thereby obstructing social and political development. Gender bias therefore limits the economic potential of half of the society. In contrast with other parts of the world, Middle Eastern women's economic participation in the labor force and in decision-making sectors is notably among the lowest in the world. Historically, a wide range of cultural, ideological, legislative, and political constraints have hindered women's economic roles and advancement. Moreover, political and economic instability caused by weak states, ongoing conflicts, and the repercussions of chronic war have had a negative impact on women's opportunities for economic advancement.

Restrictive Environment

Ideologically, the inferior status of women in Middle Eastern and North African societies stems from

patriarchal interpretations of the religious rulings of Islam, Christianity, and Judaism. Such interpretations have stressed women's family roles as wives, daughters, and mothers. Therefore, women remained "jural minors," economically, legally, and socially dependent on fathers, brothers, and, after marriage, husbands. Given this historical and ideological context, an autonomous public life for a woman was outside the norm and was often perceived as a threat to her family's honor and reputation.

Following the end of the colonial era, the attaining of independence, and the creation of national governments in the region, gender-biased regulations have been institutionalized in legislation, with the result that women are often deprived of basic rights and privileges enjoyed elsewhere. Personal status laws and other legal codes have limited women's full integration into society. For example, women in countries such as Saudi Arabia, Iran, and Egypt must obtain the permission of their fathers, brothers, or husbands to attain a passport or travel outside of their country. In certain cases this authorization is required to open a business, receive a bank loan, or get married. A Saudi newspaper reported in November 2002 that Saudi women's bank accounts contained more than $26 billion in unutilized funds because of the laws that prevent women from conducting business autonomously.

Furthermore, women who marry foreigners are denied the right to extend their citizenship to their husbands or any children they may bear, unlike men married to foreign wives. The combination of these new codes and regulations affects the economic rights of women negatively and systematically.

Low female participation in the work force is also the result of limited industrialization in the region. Middle Eastern and North African economies are mainly dependent on oil exports. Therefore, governments chose development strategies that relied on oil and finance. In return, this strategy minimized the use of labor and offered scant employment opportunities for women. In fact, the reliance of Gulf economies on oil and the associated economic boom has affected labor market trends throughout the region, not just women's participation. The oil boom has contributed to the preservation of a patriarchal family structure, according to which men act as breadwinners and women as homemakers, the former having a public role, the latter a private one. High income in oil-producing countries and associated increased remittance to labor-exporting countries in the region make it unnecessary for women to seek paid employment outside the home.

In non–oil exporting economies that adopted import-substitution industrial strategies, such as Egypt, both private and public sectors established industrial projects and opened work opportunities that favored male workers but also created new spaces for female workers. In other countries, such as Morocco and Tunisia, export-led development strategies and associated flows of foreign capital into both countries has enabled active female participation in the work force. Nevertheless, reports revealed that female workers in garment subcontracting workshops in Morocco are exploited, and owners will not hire married women.

Lagging female integration in the region's economy also has political dimensions. During the Cold War, Western countries, mainly the United States, supported the rise of political Islam, including Islamic armed groups, thus limiting women's chances for emancipation. Many of the oppressive governments in the region survived only because of Western military or economic support. In Afghanistan, Taliban rule, originally stemming from the *mojahedin* movements supported by the United States in its proxy war against the Soviet Union, confined Afghan women to their homes and banned them from education and work for years. Furthermore, the concept no less than the practice of gender equality is opposed by many groups in the region, who view the idea as a manifestation of colonization, since colonial authorities supported women's rights primarily to denigrate and thereby dominate the cultures of the region.

Gender and Socioeconomic Transformation

Until recently, rural women comprised the majority of women in the region. Thus women's traditional economic roles included household labor, farming, and livestock breeding. However, exposure to Western culture in the nineteenth century through increased integration of the region into the world economy, colonization, missionary activities,

and male students' scholarships to study in Europe generated forces within Middle Eastern and North African societies that favored changes in the conditions of women. Egpyt's Qasim Amin, considered the father of feminism in the region, published his influential book *The Liberation of Women* in 1889.

Unlike Egypt and Turkey, where elites and upper classes partook early in modernity, and where women's status improved notably, in Lebanon, the emigration of peasants to the United States engaged entire, far-reaching networks of Lebanese in modernization processes at home and abroad. According to Khater, this early contact with American society and economy created a new "mobile middle class" that put considerable pressures on the prevailing social and economic arrangements in communities of origin, resulting in changed patterns of marriage and other gender relations.

In the early twentieth century, modernization and urbanization further improved the conditions of women, including access to education and health care. Education has enabled women with skills to enter the non-agricultural work force and to practice extra-domestic income-generating activities. Thanks to accelerated modernization, combined with widespread gender advocacy led by women's organizations, many societies in the region have witnessed an unprecedented rise in woman's literacy rates. This has resulted in women's increasing engagement in public life. In countries such as Israel, Pakistan, Bangladesh, and Turkey, women have become heads of government. Furthermore, groups of highly educated and professional women have become significant agents of reform and change, such as Hanan Ashrawi of Palestine, Nawwal as-Saʿdawi of Egypt, and Shirin Ebadi of Iran.

Women in North Africa learn to weave rugs. The Arab world has one of the lowest proportions of women in the work force due to numerous factors, including cultural emphases stressing women's place in the home, lack of training and education for women in some professions, low levels of industrialization throughout the region, and economic instability, as well as the reliance on migrant laborers in wealthy states in the region. © Scheufler Collection/Corbis. Reproduced by permission.

Increased rates of urbanization, literacy, and employment have changed attitudes, practices, and perceptions. Women in the region are trying to move toward egalitarian ideas and the reconstruction of modern life, especially the family structure and its associated gender roles and relations. Growing access to the Internet and other communication technologies in recent years is expected to enhance such reforms.

Women's Economic Status

Official statistics for the region indicate that women's empowerment policies have effectively targeted female education and health services, which have improved significantly over the last few decades. These improvements are essentially due to increased public spending on education and health care and the spread of mass media. In the year 2000, average spending on education reached 5.3 percent of gross domestic product (GDP)—the highest in the world—and 2.9 percent on health care. As a result, the welfare of women has improved significantly. Female life expectancy has increased by ten years since 1980 and the female literacy rate increased from less than 17 percent in 1970 to more than 52 percent in 2000.

Yet, as the UN's Human Development Report for 2003 has noted, the region has the lowest gender empowerment ratings, which reflects the participation of women in economic, professional, and political activities using indicators of per capita income, women's percentage share for professional and technical positions, and women's percentage share of parliamentary seats. More specifically, Israel is rated highest at 61.2 percent, followed by the

United Arab Emirates (31.5%), Turkey (29%), and Egypt (25.3%). Yemen is the lowest on the list, with a rate of 12.7 percent. By contrast, the measure for countries in Latin America exceeded 50 percent and 75 percent of rates for specific European and North American countries. No data was available for Sub-Saharan Africa and other Middle Eastern and North African countries. The Arab Human Development Report (2002) explained that the lack of such data is an index of official disregard for women's empowerment in the region.

The report also reveals that women's economic participation remains lower than prevailing rates elsewhere. Similarly, female participation in the labor market remains among the lowest rates in the world, despite an evident increase over the last three decades from less than 23 percent in 1970 to 32 percent in 2000. Official statistics suggests that female participation in work force rates varies significantly among individual countries in the region. In Israel, female participation is around 41 percent compared with only 16 percent in Saudi Arabia (see table 1). International comparisons suggest that the highest recorded rate was in East Asia and the Pacific (76%), followed by Europe and Central Africa (67%), and sub-Saharan Africa (62%). Thus, the gender gap in labor force participation remains profound in the Middle East and North Africa.

In addition to the lower work force participation rate, the distribution of men and women workers among economic sectors presents a continuation of traditional trends. In countries such as Turkey and Yemen, the largest share of women is employed in agriculture as unpaid family workers. Women's employment in other countries has increased mainly in the traditionally accepted public services such as health and education, which channels traditional female skills into paid forms of care giving. In contrast, female employment remains low in manufacturing and minimal in communication, trade, and tourism activities. In Israel, the most dynamic and diversified economy in the region, women's work is also mostly concentrated in lower-paying jobs, services, education, health, welfare, and clerical positions. Israeli women are significantly less represented in prestigious occupations such as technology, management, government, the military, and engineering.

In 2002 a study conducted by the United Nation Development Fund on women's participation in the Information and Communication Technologies (ICT) in Jordan found that women make up only 28 percent of the ICT labor force. The larger proportion of Jordanian women is employed in the low-skilled jobs, such as data entry and support jobs. The findings also suggested that only 7 percent of the female ICT workers are decision

makers and only 2 percent are project mangers and team leaders. Equivalent estimates for other Arab countries in the region are expected to be much lower, since Jordan is considered one of the ICT hubs of the Arab *mashriq* region.

Clearly, the public sector is the preferred employment venue for female workers throughout the region. Government jobs assure women of more equal treatment and benefits. Conversely, women employed in private enterprises suffer gender discrimination, including lower wages and limited professional prospects. In the case of Egypt, an employed woman in the private sector receives only 50 percent of a male coworker's wage despite having equal qualifications. This phenomenon might be attributed to non-wage benefits, including shorter working hours, lengthy maternity leaves, and early access to pension.

However, ongoing economic restructuring strategies in the region have a significant impact on women and have reduced female job opportunities in public institutions. This trend has pushed women workers into the informal employment sector, with low remuneration and no social protection, as suggested by the Moroccan case.

Women's low participation in the labor market has serious economic implications. At the individual level, it is costly for women and their families. The welfare of the family—including consumption of food, housing, healthcare, and other goods and services—is determined by the available income for the entire family. Logically, two workers in the household earn more income. During the oil boom in the 1970s and early 1980s, higher real wages made it possible for the small number of workers to support large number of dependents within their families while still enjoying high standards of living. Since the mid-1980s, real wages stagnated or declined. Consequently, fewer workers were able to support their families and maintain the same living standards. Nationally, lower participation rates for women in Middle Eastern and North African economies mean that almost half of the available human resources remain unutilized. Research has revealed that lower female participation in the labor market in the region has negatively affected successful structural adjustment reforms and competitiveness in the context of the global economy.

No Access to Assets

In addition to the significant gap in the labor market, limited access to assets and opportunities further restrict overall female economic participation in the region. For example, women's entitlement to land is minimal. Traditionally, sons are entitled to inherit the father's properties while women are discouraged to claim inheritance rights. In Egypt, the overall share of female landholders is less than 6 percent of all holders, although female labor is concentrated in agriculture activities.

Women's access to credit services is also restricted because formal credit institutions offer loans to those who have collateral such as land. Hence, women are almost excluded from such services since they do not have the required collateral. Moreover, females' access to new information and communication technologies is minimal.

Despite the quantitative improvement in female education, a closer look at female enrollment rates by subject suggests significant difference relative to males. For example, in the academic year 1995/1996 around 64.4 percent of female students in Jordan were enrolled in humanities and only 17.7 percent in engineering and physical and technical sciences. The United Nations Economic and Social Commission for Western Asia (ESCWA) estimates this gap is more severe in other Arab countries. In the Arab world, the number of male students enrolled in fields of study such as engineering, commercial studies, and law is four times higher than that of female students. As a result, male students will have better career prospects and greater economic potential compared to that of their female colleagues.

Living in Poverty

The overall economic imbalance is also reflected in income and wages earned by female workers compared to those of their male counterparts. Wage discrimination against female workers is significant in the region compared to other countries. On average, a woman is paid only 73 percent of a man holding similar qualifications. According to the World Bank, if women in the region were paid for their qualifications in a manner equivalent to men, women's earnings would increase by an average of 32 percent, so they would earn 93 cents for every dollar earned by men, instead of 73 cents. Wage and

income discrimination have increased the vulnerability of women and of female-headed households.

Based on the patriarchal notions according to which the man is the income earner, family benefits and non-wage allowances are usually channeled only through men. This practice increases discrimination against female workers and hinders female participation in general. Women's vulnerability also increased in recent years because of rising unemployment and poverty rates in the region due to increased political instability and associated economic decline. At the same time, war and conflicts have increased the number of households headed by women in the region.

Addressing the Imbalance

In order to reduce gender imbalance and empower women in the region, various initiatives are currently being implemented in the region by civil organizations, governments, and international organizations, including the United Nations and the World Bank. In 2002 the first Arab Human Development Report urged enhancing women's roles in Arab society and economy.

This approach implies legal education as well as training and infrastructure components. The legal component requires the review of legislative regulations to amend legal provisions that fail to recognize gender equality and women's rights. The legal component also requires the reform of the labor market law to reflect the emerging development model based mainly on the private sector in job creation.

The report also calls for continued attention to education to provide women with better market skills through vocational and lifelong learning opportunities. Female supportive infrastructure is needed to allow women to combine work and family roles easily and with minimum sacrifice. Nevertheless, the successful implementation of this approach requires a profound change at all levels of society, from top-level government to local communities and individual households.

KHALED ISLAIH

GENDER AND EDUCATION

Formal schooling, informal education, and gender socialization have historically been strong factors in the development of women, societies, and states in the Middle East, reflecting social, political, and religious trends and tensions within the region.

The education of girls and women in the Middle East is a complex and contentious subject. What knowledge women should acquire, relative to that of men, and how they should use that knowledge are matters of great debate, both among educators and among the public throughout the region and beyond. Indeed, discussions of gender and education often serve as markers of political or religious dissent and have become a key factor in the debate around women's status in the region. These debates reveal the complexity of gender socialization for Middle Eastern women and men, and the ways in which formal and informal educational structures and opportunities have variously, and often simultaneously, served as sources of empowerment and control. This complexity is best understood through a historical analysis of the role of education in the

development of gender role identity among different populations in the modern Middle East.

Participation and Content

Formal schooling for women and girls in the Middle East is characterized by both progress and regression. The region's states have accepted education as a basic right and, when compared to developing countries generally, over the last fifty years have made significant quantitative gains in female schooling. The enrollment of girls has increased notably, particularly following the introduction of nondiscriminatory compulsory public education laws in most states, and in many Middle Eastern countries girls and boys now have equal access to schooling and similar levels of participation. In the Middle East as a whole, girls are more likely to be attending school than their counterparts in West Africa or South Asia, and academically they usually outperform their male peers, both on assessments and in terms of grade repetition.

However, there are indications that these gains may be slowing, if not reversing. Nearly one girl in four of primary school age in the Arab states is not in school, and the ratio is far higher in Afghanistan. In addition, enrollment rates for girls drop noticeably beginning in middle school and continue to decline through secondary and tertiary schooling. Although Turkey, Iran, and Israel all boast high levels of both primary and secondary enrollment for girls, in the Arab states slightly less than 47 percent of the 60 percent of all students in the secondary age group enrolled in school are girls. High dropout rates among girls and high numbers of girls who never enroll contribute to the high overall levels of female illiteracy in the region (an average of 50% for women in the Arab states).

Gender bias in curricula varies from country to country within the region, but instructional programs and texts generally reinforce subordinate or domestic roles for women. However, the effects of these messages on student choices and participation are unpredictable. Secondary schools across the region, which typically track students into arts and humanities or sciences, generally sort females into the arts and humanities tracks and, in vocational programs, into such fields as nursing, typing, home economics, and simple bookkeeping. Tertiary programs reflect similar imbalances of women in social sciences, humanities, and education, as opposed to more technical fields. However, an increasing proportion of Middle Eastern women (indeed, a larger proportion than their Western counterparts) are choosing science and mathematics as specializations, and (as noted above), their performance has outpaced that of male students in these fields, even in more traditional societies.

Social Context

Such contradictory data indicate a need to view education within a broader framework than that of simple formal schooling. Social forces affect academic performance and gendered life choices. For Middle Eastern girls and women, as for women elsewhere, informal training and upbringing, popular discourses, and media engagement are as important to their overall education as any formal schooling they receive. Gender roles are conveyed, modeled, and reinforced in these venues in ways that interact with schooling to shape students' expectations, desires, and performance, thus exerting a profound influence on the future of the region's women and girls.

Historically, this interaction has been part of a larger tension between Middle Eastern cultures and educational reforms largely developed in or modeled on those of Western Europe and North America. Although traditional forms of education, including the *kuttab* and *madrasa* (Islamic schools focusing on religious instruction), have remained important throughout the region, colonialism, modernization campaigns, and now globalization have layered external influences over indigenous institutions and concerns. State school systems in the contemporary Middle East are heavily dependent on funding from international sources to maintain their capacity, and thus typically reflect an understanding of education that is based on external models (although content and pedagogy are typically at least one step behind efforts in the countries on which they are based). This dependence on the West has resulted both in greater Middle Eastern interest in and acceptance of Western norms and in rejection of those norms in favor of local or regional efforts grounded in religion and culture.

Islamic Influence

Religion has played a central role in the education of Middle Eastern girls and boys, and in the shap-

ing of their gender identity. Islam, the dominant religion for most of the region's countries, strongly emphasizes learning as an obligation of faith, and has in most cases been used historically as a support for education, including that of girls and women. Muslim women across the region have studied and continue to study in traditional Islamic schools and colleges; in schools operated by Christian missionaries; in public, state-sponsored schools; and in overseas institutions of higher learning. Local custom and beliefs, however, have affected the enrollment of girls and women and have strongly influenced both men's and women's fields of study. Formal secular education for women, as opposed to religious instruction, is seen across the region on a continuum ranging from necessity to nuisance, and there are notable differences of opinion about where the line between benefit and drawback occurs. Some extreme interpretations, such as that of Afghanistan's Taliban, have opposed women's education altogether, but these represent the exception rather than the rule. Most stances value female schooling's contribution to family and social development.

The influence of Islam has not been limited only to the formal schools. Family norms, social and political projects, and economic activities in the Middle East are all shaped by understandings of religious text and practice (even aggressively secular Turkey's rejection of Islam in the public sphere indicates the importance of the faith's influence). Islamic understandings of appropriate roles and activities for girls and women, and the training required for them to achieve those roles, are important subjects for

debate across the region's states and are prominently argued in the media, in public discourse, and in law. Interpretations range from liberal to conservative extremes, but have in general favored domestic roles for women, or public service roles (such as teaching and nursing) that parallel and do not overwhelm their domestic responsibilities, with related limitations on the necessity of advanced formal training. Correspondingly, men are expected to provide income and support for families and to serve in public positions with parallel powers of provision and oversight that in theory benefit from more advanced education. Arguments in favor of extending women's service role to government and other forms of public leadership (with greater education as a prerequisite) are varyingly received: Highly educated women hold positions as government officials and are important religious figures in countries as varied as Palestine, Egypt, Iran, and Qatar but their formal participation in political life is much more limited in other states in the region.

Christian Influence

Islam is not the only religious tradition exerting influence on schooling and gendered identity in the Middle East, however. Christian missionaries have also contributed, largely through the establishment, beginning in the late nineteenth century, of formal schools for girls and of universities. Both in areas with larger indigenous Christian populations, such as Palestine, Lebanon, and Egypt, and in areas where Christian minority presence is nearly negligible, missionary schools provided an educational option for Middle Eastern students before the establishment of public education, and they continue to offer an alternative educational venue today. Some of these schools are indigenously governed and run and are closely connected to local Christian communities; others remain service arms of foreign missionary organizations. The latter, in particular, have tended to hold an outsider's perspective on the appropriate forms and functions of education for their students, and in many cases these closely paralleled the positions of the colonial regimes of Britain and France.

Many of the Christian schools and universities catered to an elite population (both Muslim and Christian) that has been at the center of political and cultural debates across the region, both in support of increased Westernization and in opposition to foreign influence. Together with institutions sponsored by colonial governments to train local administrators, these schools produced a new class of Middle Eastern intellectuals and political actors in the late nineteenth century and throughout the twentieth century. Their graduates, fluent in the languages and cultures of their educational hosts, were intended to serve as bridges between societies, or facilitators of external influence, but their exposure to Western norms often had unintended consequences. Although many have been key to the processes of internationalization that have occurred in Middle Eastern states through their roles in government, cultural institutions, and social leadership, others—well informed and critical of Western approaches to and interests in the developing world—have formed a base of intellectual and material support for nationalist and regionalist movements and opposition to globalization.

Women graduates of these institutions have often taken positions on women's roles and rights that lean toward the liberal end of the political and cultural continuum, although not all would welcome being classified as feminists. These women have contributed to debates about women's roles and identity locally and internationally and challenge

both internal and external stereotypes of Middle Eastern women as unquestioning, submissive, or oppressed. Some do this from positions of comparative Westernization, others from a nationalist or Islamist stance, but all argue the importance of women's active contributions to the health of their respective societies.

Women's Role in Society

Whether such contributions should be instrumental, strategic, or intrinsically valuable is, however, a matter of debate. In throwing off colonial regimes and pursuing development agendas, many Middle Eastern states have framed women as important but temporary contributors to efforts at liberation and nation-building, only to relegate them to subordinate status once the national struggle has been resolved. Others have viewed women only as economic drivers whose contributions as physical laborers, wage earners, or child-rearers are essential to modernization and development. Both perspectives necessitate a rethinking of gender roles, and both support the increased education of women across the region, but neither values women for themselves, viewing them instead as instruments for achieving national goals that are determined mostly by men.

Modernization and related human capital models of development, which draw on an understanding of individual and population-group contributions to the economy as a form of investment capital, have emerged as the dominant framework across the Middle East, largely through pressure from institutions such as the World Bank, the United Nations Development Program, and other Euro-American development agencies determined to bring the region into line with international market norms. Research in this tradition argues that higher levels of education increase women's direct and indirect contribution to the market by increasing their productive skills, delaying marriage, increasing their average number of years in the formal labor pool, and reducing their fertility rates, thus increasing the health and education (and therefore the future productivity) of those children that they do bear.

Adopting this approach has led to broad public campaigns for girls' education in the Middle East and corresponding efforts to increase the quality of schooling for girls, particularly in those fields believed to most directly support technical and scientific development. Arguments for educated women's participation in public economic roles have created opportunities for many, but these positions tend to add to rather than replace women's unpaid labor in reproduction, and they have not been paralleled by legal changes to reduce their generally subordinate status.

Linking education first and foremost to economic development relegates learning to an instrumental role in the lives of women (and men) across the region and implies that it has no meaning or value apart from its connection to marketable skills or services. The intrinsic benefits and less measurable outcomes of education are devalued in an approach to development that many in the Middle East argue impoverishes culture and community. Recent regional attempts to articulate strategies for education drawing on the rich culture and history of the Middle East focus on humanistic and critical strains in early Islam and on socio-cultural structures that support socially engaged educational practice. Both approaches offer opportunities for the exploration of gender roles and expectations in ways that do not simply mimic Western feminist or neoliberal arguments for the improvement of women's status. Rather, they challenge societies to reexamine the roots of the social and moral order governing their lives and to develop indigenous strategies through which all members are able to flourish without sacrificing cultural heritage and communal dignity.

GENDER AND LAW

The modern Middle East and North Africa contain diverse political structures and a variety of legal regimes, yet the way that law constructs and shapes gender roles, hierarchies, and relationships evidences more similarities than differences throughout the region.

Among the most significant transformations of modernity to have influenced Middle Eastern societies over the last 200 years were far-reaching reforms of administrative structures, processes, and practices. Institutions of governance changed dramatically throughout the region, especially after the mid-nineteenth century, eventually giving rise to the different political entities and the diversity of legal regimes embodied by the present-day states of the contemporary Middle East. The region today is home to monarchies, constitutional democracies, secular republics, religiously based states, and, in the case of Lebanon's eighteen different legally recognized ethnoconfessional sects, a living remnant of the Ottoman millet system. Yet despite the diversity of politicolegal institutions, gendered aspects of the law are more alike than different throughout the region today.

Factors and forces catalyzing the political and legal transformations in the Middle East were indigenous as well as external. From within the region, the Qajar and Ottoman states decided to introduce parliamentary systems while also improving and centralizing their administrative structures. From outside, particularly after the Ottoman defeat in 1918, European colonial powers and private institutions such as missionary aid societies and Western educational institutions left a profound mark on the legal regimes of the Middle East. Throughout the nineteenth and twentieth centuries, whether Ottoman, Qajar, colonial, or postcolonial, there were limited progressive transformations or advances in women's rights and duties under the law. Middle Eastern women's participation in the labor force as well as in decision-making bodies remains among the lowest in the world. Women cannot vote or stand for election in Kuwait; neither men nor women can vote or be elected in Saudi Arabia and the United Arab Emirates. In most of the Persian Gulf countries, women still cannot travel alone. Women in Saudi Arabia are forbidden by law to drive, and, until the early 1990s, Lebanese laws prevented women from owning their own businesses without obtaining permission from a male relative.

A leading issue of feminist legal activism in many countries is that of women's equal citizenship rights: Women who marry foreigners usually do not enjoy the legal right to extend their citizenship to their husbands or their children, unlike men, who can extend their citizenship to foreign wives and any children they bear. Lebanon and Israel have witnessed very similar public debates and political reactions concerning civil marriage between individuals of differing religions. Both states forbid secular marriage ceremonies but do recognize civil marriage certificates from other states. As a result, Israelis and Lebanese who wish to marry outside their faith traditions must either convert to the religion of their intended spouse or travel outside their countries (usually to Cyprus or Europe) to be married in a civil ceremony.

Despite legislation that in theory protects women and girls from harm and ensures respect for their

rights, customary practices continue in many countries of the modern Middle East that violate international laws and conventions safeguarding the rights of women, girls, and sexual minorities: female genital mutilation, early marriage, denial of schooling, crimes of "honor," domestic violence, and the arrest, imprisonment, and torture of lesbians, gays, and transgendered persons. Many of these problems are present in other regions of the world as well, but a particular combination of historical, ideological, and geopolitical factors has rendered issues related to gender and the law particularly sensitive in the contemporary Middle East. Legal and educational responses to violations of the rights of women, children, and sexual minorities in the Middle East are complicated by some Western attempts to demonize or pillory the peoples and cultures of the Middle East by highlighting these very practices as evidence of the inferiority or barbarity of the region in comparison with the West. A notable repercussion of the tense geopolitical confrontation between the Arab-Islamic world and the West over the last two centuries has been the depiction of Arab and Islamic woman either as icons of cultural purity, moral righteousness, authenticity, and inviolability, or as symbols of Middle Eastern backwardness and a general failure to modernize. Hence, issues related to gender, the law, and women's rights and duties in the region are among the most controversial topics of public discussion, media coverage, and academic inquiry.

Nineteenth-Century Reform: The Gendered Repercussions of State-Building and Colonialism

The Ottoman *Tanzimat* (reorganization or reordering) reforms of the mid-nineteenth century encompassed civil, legal, educational, economic, and political decrees. Though designed to stave off European influences in the region, attempts at reorganizing the Empire were also responses to growing internal pressures for legal reform and greater respect for human rights, particularly in large multiethnic cities. The Gühane Imperial Edict of 1839 guaranteed equal rights before the law for all persons regardless of ethnicity or religious confession (though not, however, gender). By establishing principles that enabled executive and legislative powers to pass from monarchs to representative bodies, the Gühane Edict echoed U.S. and French revolutionary political discourses and ideals, and revealed indigenous attempts to reconceptualize and modernize the theory and practice of citizenship in the Ottoman Empire.

One of the aims of the Tanzimat was to create a nondenominational, secular judicial system. The Hatt-i hümayun (Imperial Edict) of 1956, often referred to as the "Ottoman Bill of Rights," reiterated the Gühane Edict's legal designation and political embrace of non-Muslim groups as full citizens. With this declaration, Christians as well as Jews could serve on the Ottoman Council of State and act as judges in the Supreme Court. These and other reforms of the Tanzimat helped to lay the groundwork for the introduction into the region of the quintessentially Western political institution of modernity: the nation-state.

Some of the Tanzimat's economic reforms resulted, unintentionally, in the undermining of traditional communal support systems that had protected women, widows, orphans, the poor, and the disabled. Without the benefit of legally codified frameworks to safeguard their needs and interests during a period of rapid change, such vulnerable groups were among the hardest hit as the Ottoman Empire began to disintegrate. In particular, the Land Reform Law of 1858 attempted to secure and clarify land-tenure systems by reaffirming state ownership of land, and granted deeds of usufruct in the names of individuals to those in occupation and possession of productive tracts of land. The aim was to encourage settled and productive agriculture and thus to produce state revenues. Land reforms led, in effect, to an institution similar to private property, thereby transforming traditional tribal and village social structures into more formally institutionalized and legally codified landed feudal structures. Tribal shaykhs (leaders) and rural nobles became wealthy landlords, while their kinsmen and followers became tenant farmers. The prohibition on collective rights to land resulted in a new, profoundly hierarchical and asymmetrical social structure that created a new elite class of wealthy land-owners and a new—and much larger—class of impoverished farming families and landless individuals. Traditional moral structures emphasizing rights and responsibilities rooted in a pastoral nomadic or a rural agricultural lifestyle based on solidarity, honor, mutual assistance, and dignity began to break down as populations throughout the region

became increasingly integrated into legally codified relations with centralized administrative authorities (usually major cities such as Baghdad, Damascus, and Istanbul), as well as increasingly integrated into an international capitalist order.

Socioeconomic transformations of modernity generated new social roles and relationships, altered age-old solidarities, and created new hierarchies and inequities. The Ottoman legal system could not meet these rapidly emerging challenges by codifying new rights, duties, and requirements. It was left primarily to the European colonial powers to reconfigure Middle Eastern societies and to address pressing needs for legislation in fields as diverse as commercial, property, and criminal law. In so doing, they usually introduced versions of British or French legal systems, complete with their underlying frames of meaning and values. As a result, states throughout the contemporary Middle East have hybrid legal systems and constitutional structures that reflect the colonial era's legacy. Syria and Lebanon have French-influenced systems, whereas Jordanian and Iraqi laws were influenced by the British. Palestine, never having achieved sovereignty as a state, has a particularly hybrid legal legacy: Palestinians in the West Bank and Gaza Strip live under an overlapping mélange of Ottoman, British Mandatory, and Jordanian law, all of which are framed and affected by the current decisive legal system: Israeli military law.

Throughout the region, and regardless of the European power that had been in place in each country after the end of World War I, family law and laws related to "personal-status affairs" (i.e., laws related to birth, marriage, inheritance, burial, adoption, child custody, alimony, and divorce) remained largely beyond the reach of colonial powers. With the exception of Turkey, which under Atatürk had secularized its legal system, and Tunisia, which under Bourguiba had modernized personal-status laws, family law and laws related to gender issues throughout most of the remaining states of the Middle East remain conservative.

Gender and the Law in the Contemporary Middle East

Whereas the basic political unit in the Western liberal state was the individual citizen, the basic unit of society and politics throughout much of the Ottoman Empire remained the extended family, the faith community, or the confessional sect *(millet)*. Hence, the subject of legal rights and duties was not always or primarily the abstract, free-agent individual, but rather the individual as embedded in and tied to family, community, or sect. This relational conception of the subject of the law has had a profound impact on the interplay between gender and the law throughout the Middle East, because the family, community, and sect in the region are profoundly hierarchical and patriarchal structures in which males and seniors are accorded more privileges than females and juniors. Patriarchy, not Islam, Christianity, or Judaism, accounts for the differential legal status and political roles of women and men throughout the Middle East.

Regardless of laws ensuring equal treatment in theory, patriarchal roles, ideologies, and practices continue to hold sway not only in formal institutions of governance, but even more so through informal, daily structures of resource allocation, decision making and power brokering. One such structure is the informal social network, which can link neighborhoods, families, villages, and cities, and can even transcend state borders through the manipulation or invocation of kin and ethnic ties. Much of everyday life, public and private, is shaped by the dynamics of informal networks that operate according to custom, not codified laws. Given the challenges of administrative centralization and national integration that have confronted the largely artificial and externally imposed states of the region, monitoring, legislating, and policing gender-related practices in these informal social networks has been difficult.

Personal Status Laws

Given that the Middle East is comprised of new states founded on ancient informal civilizational structures, national identity in most countries of the region is fraught with competing tensions. In most cases citizenship, citizens' rights and their sense of national and supra-local identities, collective membership, and political belonging are not as clear or as compelling as are local kinship, religious or ethnic modes of identification, and political action. This has far-reaching implications for women's legal rights and their participation in national politics, given that the cultural construction of kinship and the social and political organization of local-level confessional communities in most countries of

the Middle East are profoundly patriarchal. Following the end of the colonial era, the attaining of independence, and the creation of national governments throughout the region, gender-biased customs and procedures attained a more formal status in legislation. As a result, women in many countries of the Middle East do not enjoy all of the basic rights and privileges enjoyed elsewhere. In theory, women in most countries in the region are allowed to vote and to run for any office in the land. The constitutions of most countries uphold the equality of women and men. However, actual practices do not reflect constitutional writ, largely because of the maintenance of personal status laws.

Personal-status laws not only give religious authorities and conservative political actors extensive powers over women's lives in situations of marriage, divorce, child custody, and inheritance, but they also emphasize women's roles as wives, mothers, and daughters at the expense of their roles as citizens. Personal-status laws can and do reduce women to the status of "legal minors" requiring the agency of male relatives or male religious specialists to maneuver in society outside the domains of family and home. This is a primary hindrance to women's ability to initiate legal or political action as agents on their own. Considerable grassroots political and legal activism has been focused on this problem for several years, particularly by transnational organizations such as Women Living Under Muslim Laws and Equality Now (neither of which is based in the Middle East). Personal status laws limit women's legal recourse in the event of divorce to the archaic rulings of religious authorities. In Lebanon, home to eighteen legally recognized confessional sects, this is a particularly complex and vexing issue. Orthodox Jewish women in Israel and Christian women in Arab countries have a much more difficult time obtaining a divorce than do their Muslim counterparts in the Arab world or in Iran.

Throughout the Arab-Islamic world, regardless of confessional membership, child custody in the event of divorce always favors the father. Patriarchal values and institutions dictate, in practice and in law, that the father's family has ultimate custody of all children because they are legally defined as members of his patriline under personal status laws. While they are young, children may stay with their mother following a divorce, but by adolescence, children of both genders are expected to live with their father's family. Inheritance presents a variety of legal rulings depending on one's confessional membership. Sunni religious courts grant daughters less than sons: In the event that a Sunni man has fathered only daughters, they usually will inherit less from their father than will their male paternal cousins and uncles. Shiʿite religious rulings on daughters' inheritance are much more equitable. In Lebanon more than a few Sunni men having only daughters, no sons, have become Shiʿite in order to pass their wealth and property directly to their daughters. Having a confessional membership is part and parcel of being a Lebanese citizen and profoundly shapes one's legal identity, status, and role. Atheism and secularism are not, legally and administratively speaking, options for anyone, male or female.

Although most countries in the region have signed the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW), most have also entered strong reservations concerning issues related to personal-status laws. For example, in Lebanon (having had a French colonial influence) and Jordan (which had a British colonial influence), women married to non-nationals cannot pass their citizenship on to their children. Soon after the cessation of the war in Lebanon in 1990, Lebanese women won the right to travel abroad without the permission of their male relatives. Jordanian women are still pressing for this same right more than a decade later. A primary demand of Jordanian feminists, the rescinding of Article 340 of the Penal Code, which effectively permits men to kill female relatives to avenge "crimes of honor," has yet to be realized. A Jordanian forensic doctor recently estimated that a quarter of all murders committed annually in Jordan are "honor killings" (U.S. Department of State Annual Human Rights Report—Jordan 2000). Yet, to appease a political opposition that utilizes the rhetorical discourses of Islamic authenticity and family inviolability, the Jordanian government has not been able to halt such killings.

Although "honor crimes" have yet to be criminalized in Lebanon either, avid public discussions and debates about these crimes (as well as other controversial issues such as domestic violence, homosexuality, mixed marriages, civil marriage, and abortion) are standard fare on Lebanese public tele-

vision and in Lebanese magazines. Though laws may be slow to change, public debate over legal and gender issues is hastening thanks to the mass media.

Gay, Lesbian, and Transgendered Rights

In recent years, public debates concerning sexuality, gender, and sexual preference have become more common in most major cities of the Middle East. Although calls for gay, lesbian, and transgendered rights are still more controversial in the Middle East than they are in Europe or North America, annual gay-pride events take place publicly in Tel Aviv and in semipublic clubs in Beirut. Films, magazines, and web sites that address the special concerns and interests of gay, lesbian, and transgendered communities in the Middle East also allow members of the Jewish, Arab, Iranian, and Turkish diasporas to share information and build alliances that transcend national as well as confessional dividing lines in the region. Key among the concerns of gays, lesbians, and transgendered persons in the Middle East have been the invocations of religious discourse and religious teachings to criminalize homosexual activities. Activism in opposition to such human-rights abuses has included efforts by Amnesty International and Human Rights Watch, whose spokespersons have decried the targeting of gay men in Egypt and lesbians in Lebanon as part of wider repressions of human-rights activists, religious minority groups, political opponents, journalists, and many others who question the legal and political status quo in the region. Defending the rights of gays, lesbians, and transgendered persons also affords opportunities to address wider human-rights abuses and legal deficiencies related to gender issues, enabling activists to reiterate and redefine the spaces and subjects of the law, as seen in this 26 August 2002 communiqué by the director of a Lebanese legal rights institute protesting the arrest, imprisonment, and mistreatment of two lesbians in Lebanon: "We are aware of the conservative social settings of Lebanon and the negative societal attitude toward the homosexual community. However, this does not entitle the Lebanese government to deprive the liberty of homosexuals, nor does it warrant the torture and abuse sanctioned by the Lebanese police. Through this system of human rights abuses, Lebanon is breaching many international covenants and human rights conventions of which it is a member, not to mention basic human integrity" (Mouhrab, Arz).

Gender and the Law in the Middle East: Regional and International Perspectives

Regional and international developments, particularly the 1995 Beijing International Woman's Conference, Jordan's participation in the Euro-Med partnership, and the Reform Movement in Iran, have already had a noticeable impact on the official framing and treatment of women's issues and concerns not only within, but also beyond, the Middle East. International laws, movements, discourses, and conventions have had a growing impact on the way gender and the law are perceived and discussed, and how they interact and develop in the region.

One example of Middle Eastern women coming together to voice concerns about laws and rights in order to build political alliances was the Women's Tribunal, first held in Beirut in 1995. The Women's Tribunal was an international event, not a strictly Lebanese affair, but its convening in Beirut caused a public stir and generated fruitful and lively discussions about the psychological dynamics, legal consequences, and ideological underpinnings of women's domination in patriarchal societies. The tribunal, the first event of its kind ever to be held in the Middle East, dramatically broke through the silences that isolate women behind walls of shame, fear, and despair. It provided a rare opportunity for Arab women from different countries and various backgrounds to join together, share experiences, and form networks to confront the issue of violence against women in all of its forms: domestic, political, economic, and military.

Throughout the region, the primary obstacles to the attainment of full legal and political rights by women and sexual minorities are: cultural and psychological obstacles that hinder the transformation of personal experiences, attitudes, and stances into political agenda; women's continuing pronounced economic dependence on men; and legal and political structures that do not respect the human rights of either men or women, as well as the continuing enforcement of personal-status laws. Regional and international activists cite a crucial need for broad social movements based on grassroots networks that transcend class, ethnic, confessional, ideological, and gender divisions to surmount these obstacles, which are interrelated and interlocking. The past decade has witnessed increasing attempts to link national, regional, and international human-rights

monitoring agencies in order to advance women's rights as well as the rights of gays and lesbians. Largely through the medium of the internet, groups and individuals have been able to join forces in new ways to expose violations of women's rights and to protest the draconian treatment of gays and lesbians.

Yet, given the overall poor socioeconomic and human-rights situation throughout the region, a focus solely on women's rights or gay rights strikes some as narrow. One of the best-known human-rights activists in the region, the late Laure Mughaizel, a Lebanese human-rights activist, feminist, and lawyer, noted shortly before her death: "What will it serve us to fight for women to have rights equal to those of men if men's rights are also deficient?" (Mughaizel, public speech in 1996 in Lebanon). Ultimately, any analysis of gender and law in the Middle East must take into consideration the political economy of the region, as well as ongoing debates over universal human rights and their definition in the evolving body of international laws and conventions.

LAURIE KING-IRANI

GENDER AND POLITICS

Gender consciousness, feminist goals, and gender itself have all affected citizenship politics throughout the history of the Middle East.

Formal, or institutional, politics in the Middle East has been dominated by men. An awareness of gender—the identification and comparison of continuously changing men's and women's roles and differences—is essential to an understanding of women's political experiences in the region. By focusing on women, one sees the struggles of the sex that is otherwise invisible in Middle Eastern politics and the challenges women face in attaining full citizenship.

Female voters cast their ballots in an Iranian election. Voting restrictions were lifted for Iranian women in 1980. **© WEBISTAN/CORBIS. REPRODUCED BY PERMISSION.**

While literature on the Middle East often tends to relate women as a broad category, women in fact belong to diverse groups and pursue various interests. Women have habitually formed alliances across the lines of class, ethnicity, race, religion, family, or nation in their struggles against the oppressions they faced. Moreover, women live in a context of national, religious, state-sponsored, and consciously feminist political struggles. The following sections will outline the roots of gender consciousness, forms of feminist goals typical to the Middle East, and challenges to gender imbalance in their historical context.

The Roots of Gender Consciousness

Around the 1900s, the figures who facilitated the participation of women in the public sphere were mainly male Islamic scholars in Egypt, Iran, and Turkey. In Egypt, reformist thought traces back to Rifaʿa al-Rafi al-Tahtawi (1801–1873), an Azhari scholar educated in France who became the first major figure to call for the liberation and education of Egyptian women.

Qasim Amin (1863–1908) is considered the father of women's reform in the Muslim Middle East. His book *Liberation of Women* (1899) initiated women's liberation literature in the Arab world. He raised the issues of patriarchal oppression, polygamy, and the *hijab,* calling for an end to veiling and arguing for the education of women. The sections of his book that were based on Islamic law are believed to have been authored anonymously by Muhammad Abduh (1849–1905), the *mufti* of Egypt at that time. Muhammad Abduh, a disciple of the father of the modern Islamic reform, Jamal al-Din al-Afghani (1838–1897), called for the elevation of women as a way to end foreign domination. Abdu's ideas significantly influenced the Muslim world.

Some Egyptian women had publicly challenged gender biases before these male figures appeared, including Maryam al-Nahhas (1856–1886), Zaynab Fawwaz (1860–1894), and Aʾisha al-Taymuriyya (1840–1902). Women feminists had campaigned for education, done charitable work, and challenged colonialism. Huda al-Shaʿrawi became the acknowledged leader of Egyptian feminism, playing an essential role against British occupation through the women's wing of the Wafd Party and forming the Egyptian Feminist Union in 1923. Doria Shafik led

the struggle for voting rights, which were granted in 1956.

Reformers emerged in Iran in the late nineteenth century, starting with Mirza Agha Khan Kirmani and Shaykh Ahmad Ruhi, who wrote about women's equality with men in pleasure, benefits, marriage rights, and education. Historically, however, women's education did not receive full attention in Iran until Amin's book was translated into Persian in 1900. Ahmad Kasravi, a historian, reformer, and jurist, argued for women's education in the 1940s but opposed women's involvement in politics. He emphasized, however, that women could participate for national causes.

Reza Shah Pahlavi and his son, Mohammad Reza Shah Pahlavi, combined enforced modernization with the crushing of any opposition. Acknowledging Mustafa Kemal Atatürk's influence, Reza Shah Pahlavi banned the veil *(chador)* in 1936, in an enforced program for emancipating women, and set about improving education. The veil was later chosen as a symbol of revolutionary protest by women who marched against the Pahlavi regime during the 1979 Islamic Revolution.

Several prominent women helped shape Iranian history. Writer, poet, teacher, and religious rebel Qurrat al-Ayn (born in 1814, executed in 1852) preached Babism (a religious sect founded in 1844 by the Bab out of Shiʿi Islam and which gave birth to the Bahaʾi faith) for women's emancipation. The doctrines forbid polygamy, concubinage, and trading in slaves, among many things. In the second half of the nineteenth century, Taj Saltaneh and Bibi Khanoum Astarabadi publicly criticized the status of women in Iran. Siddiqeh Dowlatabadi started the first girls' school, in Isfahan in 1917, and the first major woman's magazine, *Zaban-i Zanan* (Women's tongue), which was both feminist and nationalist, in 1919.

By the time of the Islamic Revolution, Iranian women had already experienced nearly a century of political success unparalleled in the Middle East, including participation in the Tobacco Revolt of 1890. Iranian women were active in the Constitutional Revolution in 1906 and by 1963 had gained the right to vote. Iranian women held high political positions and had gained laws that gave them priority in child custody and equal rights to divorce.

Princess Aʿisha Bint al-Hussein (center) on a visit to Israel to learn about the women's service in the army, 1 June 1997. **© AP/Wide World Photos. Reproduced by permission.**

In Turkey, after the collapse of the autocratic regime in 1908, women formed organizations, participated in political demonstrations, and wrote for the press. Atatürk abrogated *shariʿa* (Islamic law) and secularized personal status law, which he modeled on the Swiss legal code. Turkish new-wave feminists entered the political arena in the 1980s, waging campaigns against domestic violence and sexual harassment and petitioning the government to sign the 1985 UN Convention on the Elimination of All Forms of Discrimination against Women. Turkey is one of two Middle Eastern countries to have had a female head of state, Prime Minister Tansu Çiller, who took office in 1993 (Israel is the other; Golda Meir was prime minister from 1969 through 1974).

Islamic Feminism

Feminism is political action against the oppression of women. In the Middle East, both secular feminism (invoking the UN Declaration of Human Rights) and religious feminism (invoking Islamic or Jewish

A member of the women's army demonstrates the handling of a Sten gun on 15 June 1948 at the Hen women's corps camp near Tel Aviv. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

scripture) are active. Both categories include a wide range of ideas, beliefs, and actions.

Egypt is the epicenter of Islamist feminist activism, which has rested on the involvement of middle-class professional women. Nazira Zayn ad-Din in the 1930s and Aʾisha Abd al-Rahman (Bint al-Shatti) in the 1980s called for *ijtihad* (Islamic legal deliberation) to solve gender problems such as polygamy and the assumption of male superiority. In the 1930s, following the Institute for the Mothers of the Believers model established by Hasan al-Banna (founder of the Muslim Brotherhood), Zaynab al-Ghazali formed the Muslim Women's Association. In 1964, when Gamal Abdel Nasser banned the Brotherhood and al-Ghazali was arrested, it had over a hundred branches in Egypt. Heba Rauf Ezzat (also Hiba Raʿuf Izzat), a political science professor, invoked al-Ghazali's discourse on women and politics through alternative interpretations of the Islamic scripture. Similarly, beginning the 1990s, Iranian women began to press for equality using the argument that religious literature is tainted by misogynist interpretations.

Islamist groups have recognized women's potential to serve Islamist interests. In Algeria, for example, the Front Islamique du Salut (FIS) did not object to women voting but sought to limit their employment. These groups generally encourage women activists to undertake community work through which Islamist political ideologies may infiltrate into society. Most contemporary Islamic scholars view feminism as something that originated in the West and that is a form of cultural imperialism. Islamists seek to counter by preaching veiling as a symbol of morality, authenticity, and cultural independence. Some Middle Eastern feminists also assert that much of the feminist discourse originated with and mirrors the concerns of white, middle-class Western women.

Nationalism and State Feminism

Since the 1800s, the development of women's political and social movements was intertwined with broader movements for national independence and state-building. Many Middle Eastern regimes have practiced state feminism in order to secure their legitimacy, creating programs designed to raise the levels of education, literacy, or employment; revive imagined or real traditional practices; modify personal status laws; and establish state-sponsored women's organizations.

Under regimes as diverse as those of Atatürk, Reza Shah Pahlavi, the Iraqi Baʿthists, and Nasser, women were mobilized in order to achieve national consolidation and an appearance of modernization. Any call for women's rights outside those on the state's agenda was perceived as antinationalist and thus divisive. After the Islamic Revolution, Ayatollah Ruhollah Khomeini crushed all women's protests and nullified the Family Protection Law. In North Africa, many women lost their lives fighting for independence, but once independence was gained women were told to return to their proper place in the home. Tunisian and Moroccan women have experienced some state-directed expansion of their freedoms, but the freedom of Algerian women has been severely constrained, particularly since the early 1990s.

The Israeli women's organizations that formed in the 1950s, such as Naʿamat (the women's branch of the labor union and the women's division of the Labor Party), the Women's International Zionist Organization or WIZO (the women's division of the Likud Party), and Emunah (affiliated with the National Religious Party), did not have a feminist mission and still do not. The General Union of Palestinian Women (GUPW), formed in 1965, is the chief women's organization in Palestinian communities and legitimized by the Palestine Liberation Organization (PLO). However, it has never challenged the male-dominated leadership of the PLO or its attitudes toward women. Held up as symbols of cultural integrity, women in both Israel and the Palestinian Authority are often valorized as biological reproducers of the nation.

Women have taken advantage of their abilities as mobilizers to advance women's activism and increase their decision-making roles. Samiha al-Khalil (c. 1940–1999) was a member of the Palestine National Council starting in 1965; president of the Women's Federation Society, al-Bira, the Union for Voluntary Women's societies, and the GUPW; and the founder of the Inʿash al-Usra Society beginning in 1967. Hanan al-Ashrawi (1946–), a human rights activist and professor of literature, became a minister in the Palestinian Authority government and since the 1990s has served as an articulate, internationally renowned spokesperson for the Palestinians.

Nationalist issues have created openings for other shared interests. After the first intifada (Palestinian uprising), many Israeli and Palestinian women demanded peace. The international movement Women in Black began in Jerusalem in 1988 when Israeli women dressed in black spoke out publicly for peace. This organization and others have included Palestinians. Shulamit Aloni (1929–), a teacher and attorney, was a Knesset member for many years and headed the Meretz Party; she has spoken on behalf of peace and justice, particularly criticizing policies that endanger Israelis and Palestinians.

Governments in the rapidly developing Persian Gulf consider the integration of women into the labor force a necessity if they are to reduce their dependence on foreign labor, which they see as a security threat. This has led to the formation of state-sponsored organizations with state appointment of members. The Arab Women's Development Society, a feminist organization campaigning for the vote in Kuwait, was disbanded after members refused to cooperate with a government-imposed director. Unlike the Princess Basma Center for Women and Development in Jordan, which is also state sponsored, AWDS does not address violence against women, such as honor killings. Even though the Women's Union of Syria operates under a republic, it follows preset national strategies.

Hanan Ashrawi, Palestinian Legislative Council member, is removed by Israeli police from a site in Jerusalem, 27 May 1999. The police charged into the crowd of protesters, preventing them from entering the Jewish neighborhood of Ras al-Amud in east Jerusalem under construction. © AP/WIDE WORLD PHOTOS. In the Persian Gulf, women have been struggling for basic rights, as North African women were at the beginning of the twentieth century. Kuwaiti women are still fighting for their voting rights while Bahraini women won their voting rights in 2002 predominantly through informal Shiʿite *Maʾtam/Husayniyya* religious-social gatherings. Yet, Saudi women are demanding more civic freedoms. However, some Gulf leaders are supporting the participation of women within the framework of the development process, specifically Shaykh Zayid of United Arab Emirates and Sultan Qabus of Oman.

Challenges to the Gender Imbalance

Women have sought to improve their status through numerous campaigns. These include strategies to re-

spond to extremist Islamist movements. In 1990, when the FIS was gaining political clout, Algerian feminists led by Khalida Toumi (Messaoudi), a founding member of the Independent Association for the Triumph of Women's Rights, were notably outspoken. Sudanese writer and speaker Fatima Ahmed Ibrahim, president of the Sudanese Women's Union, has risked her life speaking out against National Islamic Front extremists in southern Sudan. Mehrangiz Kar, a former political prisoner and human rights lawyer, has published widely on the status of women in pre- and postrevolutionary Iran; her publications include a work coauthored with Shahla Lahiji, Iran's first woman publisher, who was also detained. In 2003, Shirin Ebadi received a Nobel Prize for her human rights activism. These women, along with Islamic feminist Shahla Sherkat, editor of *Zanan,* lead the debate on women's rights in Iran.

Tojan Faysal, the first woman to be elected to the Jordanian parliament (1993–1997), has been a staunch critic of human rights abuses and was detained in 2001. Asma Khader (also Khadir), a Jordanian lawyer, led the campaign to outlaw honor killings and received the 2003 Poverty Eradication Award from the UN Development Program. Laure Moghaizel, a founding member of numerous Lebanese women's organizations, worked locally, regionally, and internationally for the advancement of women's rights.

Nawwal al-Saʿdawi, an Egyptian doctor and writer and a particularly prominent feminist, formed and headed the Arab Women's Solidarity Association in 1985. Even though fervently secular, she attributes her awareness of women's rights to the teachings of Muhammad Abduh, who taught her father in al-Azhar. Moroccan sociologist Fatima Mernissi, another leading feminist in the Arab world, critiques and analyzes Islamic law from a secular perspective.

In Turkey, Women for Women's Human Rights has worked since 1993 to raise feminist consciousness and confront domestic violence, as have the Purple Roof Foundation and Altindag Women's Solidarity Foundation. In Afghanistan under the Taliban, women and girls were banished to seclusion in the home and thousands were raped, tortured, killed, or forced into prostitution. Since 1977, the Revolutionary Association of the Women of Afghanistan has struggled for women's human rights as an independent political and social organization, also undertaking social and relief work.

Numerous research centers have developed across the Middle East. These include the New Woman Research and Study Centre in Egypt, the Women's Library and Information Centre in Istanbul, the Lebanese American University's Institute for Women's Studies in the Arab World, and the Association des Femmes Tunisiennes pour la Recherche et le Développement. Although some are purely research oriented, some also engage in advocacy for gender equity.

Regional organizations include the Arab Women's Federation, the Women's Committee of the Arab League, the Center for Arab Women for Training and Research, and the Arab Women's Forum (AISHA), a regional nongovernmental organization made up of fourteen Arab women's organizations. International organizations include the World Federation for Women, Development Alternatives with Women for a New Era, and the United Nations Development Fund for Women (UNIFEM). Conferences, such as UN conferences on women, are important forms of global support for Middle Eastern women.

Conclusion

Middle Eastern women have proven resourceful and dynamic participants in the political processes that shaped recent Middle Eastern history. Feminism in the Middle East cannot be separated from nationalist and anticolonial movements, or from issues such as poverty and illiteracy that Middle Eastern women have faced. However, the interventionist measures of postindependence states have been primarily geared toward national development, treating women's rights as a secondary concern.

GENDER: STUDY OF

A theoretical approach to Middle Eastern issues that considers assumptions made about sex roles and the impact of those assumptions.

Contemporary scholars see gender as the social, cultural, politico-legal, and ideological construction of male and female roles, relations, and rights on the basis of perceived gender differences. Scholars also view gender as a system of social relations and ideologies that influences other social relations, institutions, and processes. The common, overarching frameworks within which gender has been studied, interpreted, and taught in the context of the modern Middle East are Islam, patriarchy, and the construction of the nation-state. Scholars often divide the evolution of women's struggles for social, economic, and political rights in the Middle East and North Africa into three historical periods: the period of anticolonial struggles from the mid-nineteenth century through the early twentieth century; the era of nationalist movements of the mid-twentieth century; and the era of globalization from the 1980s into the twenty-first century. Academic approaches to the study of gender shifted from the study of texts, interpretations, and structures to the analysis of social practices, identity construction, and the language and rules concerning gender in various fields. In the process, the binary divisions that defined gender studies in the earlier periods (male/female, public/private, state/civil society, global/local, East/West) became problematic. The understanding of gender turned away from such categories and descriptions and focused instead on the dynamics of the construction, change, and transformation of social roles. Gender studies became institutionalized through the creation of women's studies departments, institutes, and transnational organizations and Web sites. Simultaneously, international conferences and international conventions concerning women's civil and human rights made women's status a global issue. In these contexts, Western discourses concerning identity formation, citizenship, and human rights began to be challenged.

Development of Gender Studies

Although the global nature of ideas is now generally accepted, systematic attempts to analyze areas of dialogue and confrontation between approaches from

distinct socio-historical settings have been rare until recently. Scholarship on gender in the Middle East did not escape interpretations that tended to trap women between the grand narratives of the West and local narratives of resistance, be they modernist-nationalist or fundamentalist, in which real women are replaced by woman-as-symbol. In the West, feminists have often enough looked through the lens of a universalized Western concept in which citizen-subjects were seen as autonomous individuals who owned themselves and entered into social contracts with other autonomous individuals. Feminists grounded in this perspective strove to illuminate the ways in which these social contracts were not gender blind; they argued for equality based on gender-neutral categories. In the Middle East, the viewpoints generally envisioned subject-citizens as deeply embedded in communities, families, ethnic, racial, or other social groupings. Their members were seen as relational selves whose identities were developed interdependently rather than independently from one another. Men's and women's roles and identities were seen as complementary. As in the West, patriarchy has been universal, but the particular ways that gender is altered and affected by inequalities of power is site specific. In the Middle East and North Africa, both liberal modernist-nationalists and conservative fundamentalists put the defense of Islamic/Arab culture in the foreground, rendering women's rights secondary to women's symbolic value as the embodiment of the nation or the image of the moral community. Contemporary women's studies challenges this tendency to reduce the richness and complexities of women's actual lives to one-dimensional symbols or stereotypes.

Contemporary Debates

At least three common paradigms have obstructed more complex understandings of women's lives in the Middle East and North Africa. One is the religious paradigm, in which the existence of gender inequality is attributed to Islam's influence upon the lives of women and men in North Africa and the Middle East. The unstated assumption here is that religion is at once the cause of and the solution to gender inequality: If the religion is done away with, equality between men and women will ensue. The second is what Cooke calls the rescue paradigm—or, "white men saving brown women from brown men." This gendered logic of empire not only provides a pretext for global superpower interventions but may at times reveal the neocolonial underpinnings of international sisterhood. The third is the passivity paradigm, in which women are seen as objects rather than agents, living apolitically, in the private sphere. Recent scholarship has revealed how porous the boundary is between the public and private spheres in societies where kinship, family, and community have primacy over individuals. To understand women's roles in society, it helps to examine what counts as political in a given place and time, how individuals are encouraged to become agents (to act rather than merely be acted upon), and what forums and institutions give access to power. These questions are crucial to current academic and policy debates concerning civil society, political reform, and economic development.

Institutionalization of the Study of Gender

In recent decades, women's and gender studies have become institutionalized on a number of levels. Meetings such as the UN-sponsored International Women's Conferences, held periodically since 1975, and the signing of international conventions such as the Convention on the Elimination of All Forms of Discrimination against Women have brought women's status into the international arena, putting pressure on nation-states to safeguard women's human rights. On a national level, the spread of nongovernmental organizations focusing on women's status in countries across the Middle East and North Africa is linked to the fact that development projects which include grass-roots gender perspectives are more likely to succeed. On a local level, the spread of women's and gender studies centers, programs in academic institutions such as Birzeit University or the American University in Cairo, and women's social service centers in areas plagued by violence and war have made visible the gendered nature of social decision-making. On a virtual level, the creation of Web sites such as the Machreq/Maghreb Gender Linking and Information Project, sponsored by Oxfam GB and the European Union; the International Women's Tribune Center, associated with the UN-sponsored conferences; the Web site of the Women's Environment and Development Organization; and the newer H-Gender-Mideast have provided forums for ongoing international discussion of the centrality of gender to all areas of social life.

The discipline of gender studies is not merely an addition to the other disciplines that make up Middle Eastern area studies. Gender studies has reconstituted the field itself. Its perspective from the margin has revealed the ways in which power—gender privilege among males and Western constructions of the Middle East (orientalism)—shaped the approach to the object of study. Putting women in the center, valorizing their experiences and contributions as half the population in any society, meant reexamining areas of social practice that had previously been rendered secondary, misrepresented, or silenced. These include oral literature, domesticity, complex communication patterns based on indirection, informal work, the intersection of public and private worlds. As Lila Abu-Lughod has pointed out, the most important contribution of this theorizing has been the way it has revealed that analytical categories often conceal Western cultural notions. The study of gender in the Middle East, framed as it has been by the violence of colonization and of postcolonial wars, the struggle for women's rights as human rights, and the responsibility to address global injustice and inequality, has challenged scholarly inquiry to move beyond ethnocentric, binary categories that have reduced, objectified, and stereotyped the subjects in question.

LAURA RICE

GENERAL DIRECTORATE ON THE STATUS AND PROBLEMS OF WOMEN

An institution that serves as a liaison between the Turkish state and society on the issue of women's rights and problems.

The General Directorate on the Status and Problems of Women was founded in 1990 in line with the requirements of the United Nations Convention on Elimination of All Kinds of Discrimination against Women. Attached to the Turkish Prime Ministry, its activities are supervised by the State Ministry responsible for women and the family. The directorate is comprised of four main departments: Educational and Social Affairs; Economic Affairs; Documentation, Publications, and Statistics; and Foreign Affairs.

Its major objectives are to protect and to promote women's rights; to improve women's social, economic, cultural, and political status; and to ensure that women enjoy equal rights and opportunities in all walks of life. To these ends, it conducts and finances research projects with a policy orientation; collaborates with other public institutions,

local administrations, and women's associations; and raises consciousness through the mass media about women's issues.

During its first years, the directorate raised serious suspicions among nongovernmental women's organizations, most of which believed that its aim was to control and co-opt women's independent activism. These perceptions greatly diminished with the appointment of a former nongovernmental leader as its director and with the success of its collaborative projects and campaigns.

BURÇAK KESKIN-KOZAT

GENERAL FEDERATION OF IRAQI WOMEN

The strongest women's organization in Iraq during the Baʿthist regime, and an effective arm of the Baʿthist Party.

The General Federation of Iraqi Women was established in the early 1970s, after Saddam Hussein and the Baʿthist Party assumed political power. Its stated goals were to improve the situation of Iraqi women and to marshal their skills in the task of building an Arab socialist state. Campaigns were launched to promote literacy, better childcare, maternity leave, improve wages, and promote women within the economic sector and in politics. An arts committee was established later. By all accounts, the federation was responsible, at least in part, for the many gains made by Iraq's women in the last quarter of the twentieth century and for Iraq's record on women's rights, which, before the U.S. invasion in 2003, were often cited as the best in the Arab world. As of 2004, literacy rates for women are close to 50 percent but were much higher before the 1991 Gulf War. According to federation officials, before the Gulf War all women received one full year of maternity leave: six months with full pay and six months with half pay, plus six weeks at the time of the baby's birth. (This was independently confirmed by the author in 1996 interviews in Iraq.)

As of 1996, the federation had 1,500,000 members in twenty-two branches throughout the country. Each branch had a clubhouse, where women gathered freely. Women who were interviewed by the author in both city and countryside in Iraq stated that the federation's greatest contributions were its record in family law and its campaign for equal pay for women. Officials stated that secular law had replaced Islamic family law *(shariʿa)* The secular code guaranteed women their rights to inheritance and prohibited polygamy unless the first wife was ill and could not bear children; even then, the first wife had to agree. (These claims were confirmed in author interviews.) The federation was involved in the creation of a Women's Museum in Baghdad, financed by the Baʿthist Party, the only such museum in the Arab world.

Since the 2003 U.S. invasion, and the fall of Saddam Hussein, little or no mention has been made of the federation. As it was an official arm of the Baʿthist party, its future remains in doubt.

GENERAL PEOPLE'S COMMITTEES

Libya's ruling cabinet.

The General People's Committees were established in March 1978 in Libya when Muammar al-Qaddafi and the other members of the ruling Revolutionary Command Council formally renounced their government positions. Exercising executive powers,

the General People's Committees have a function equivalent to ministerial cabinets.

See also Qaddafi, Muammar al-; Revolutionary Command Council (Libya).

Lisa Anderson

GENERAL PEOPLE'S CONGRESS (GPC)

Ostensibly, Libya's governing body.

Formally the preeminent governing body of Libya, the General People's Congress (GPC) was formed after the March 1977 declaration of the era of the *jamahiriyya.* Delegates are selected from among district-level basic people's congresses, people's committees, and professional associations. Charged with debating reports from government agencies, the GPC meets infrequently and serves primarily as a sounding board for the head of state, Muammar al-Qaddafi.

GENERAL TUNISIAN UNION OF STUDENTS (UGTE)

Tunisian student union.

The Union Générale Tunisienne des Etudiants (UGTE) was Tunisia's major student group until the government banned it in early 1991 because of its association with the Islamist movement. Beginning in the 1980s, the Islamic Tendency Movement (Mouvement de Tendance Islamique; MTI) actively sought to take over the UGTE. It charged its University Bureau's Mokhtar Bedri with securing Islamist domination at the University of Tunis and provincial colleges through control of the UGTE.

The UGTE Islamist leadership was decimated by numerous arrests, trials, and imprisonments from 1991 to 1992. The government then infiltrated cadres of RCD (government party) candidates into leadership positions in the UGTE. As a result, the UGTE is more nonactivist and pro-government.

GENERAL UNION OF PALESTINIAN WOMEN'S COMMITTEES (GUPWC)

Organization that provides opportunities for women, undertakes family assistance, and organizes kindergartens.

The General Union of Palestinian Women's Committees (GUPWC) was established in 1965 under the framework of the Palestine Liberation Organization. As such, it is the official representative body for Palestinian women around the world and encompasses all Palestinian women's organizations. The main goal of the union is to mobilize women to participate in social, economic, and political processes that will contribute to their development. The union is also politically active, supporting women in all aspects of the struggle for a Palestinian state, and at the nationalistic and social levels by providing leadership programs.

The GUPWC maintains a number of activities for women in order to integrate them into the labor force and raise cultural and health standards. Branches of the union are active throughout the Middle East and also in the United States, the Netherlands, and England. It has established vocational training centers and educational institutions in Palestinian refugee camps and holds classes to eradicate illiteracy. It also maintains nurseries and kindergartens so that women are able to partake in the union's activities and programs. Local specialized committees handle various activities and programs sponsored by the union.

GENERAL WOMEN'S UNION OF SYRIA

Also called the GWU, the General Women's Union is the major women's political organization in Syria.

The GWU was founded in 1967 by a consortium of women's groups. The organization is funded by the government and has developed projects focusing on children and education. The union is divided into fourteen branches throughout Syria, which assist

associations and centers that deal with women's and children's issues and promote the active participation of women working in and outside the home.

The main focus of the GWU is to promote women's rights, to involve women effectively in the public sphere, and to end the exclusion of women and their marginalization in Syrian society. It has established child care centers, kindergartens, and vocational training and income-generating centers that train adult women in various skills and then sell the resulting products.

Internationally, the union has forged close ties with women's organizations throughout the Arab world. These groups meet, exchange ideas, share experiences, and prepare new strategies to improve women's lives in the region and allow them fuller participation. The union also works closely with the United Nations and international nongovernmental organizations. The GWU put together the National Syrian Women's Strategy, whose guidelines are based on the platform of the 1995 Beijing Conference for Women. The program is a plan of action, dealing with the implementation of various proposals from 1995 to 2005, when the next international conference on women is scheduled to convene.

Members of the union also participate in political debates about the Israeli occupation, the Palestinian situation, and the war in South Lebanon. Some of the GWU's strategies include: researching laws and legislation that deal with women, their citizenship rights and responsibilities, and any discrepancies between the ideals of equality and the current realities; working to ensure that laws are in place to protect and promote women and their human rights, and that they are enforced at all levels of government; helping women understand their rights and responsibilities and providing them with the knowledge and support they need to make the most of their opportunities; addressing social issues as poverty, health care, education, and family planning and their effect on women; enhancing women's ability to participate in decision-making at the national level and at home; and eradicating gender-related stereotypes that place women at a disadvantage.

GENEVA PEACE CONFERENCE (1973)

Conference called by the United Nations after the Arab–Israel War of 1973.

The 22 December 1973 conference was convened in Geneva, Switzerland, in accordance with United Nations Security Council resolution 338. Its purpose was to settle issues that led to or arose from the Arab–Israel War of 1973. Of the Arab states, Egypt and Jordan participated, but Syria did not. Palestinian representatives were not invited to the opening session. After the opening speeches and ceremony, the conference adjourned and never reconvened. Israel had been reluctant to participate in multiparty conferences where pressures might be exerted for withdrawal from occupied territories and other steps it opposes. Disengagement agreements were signed in 1974 ending the war between Israel and Egypt and between Israel and Syria.

GEOGRAPHY

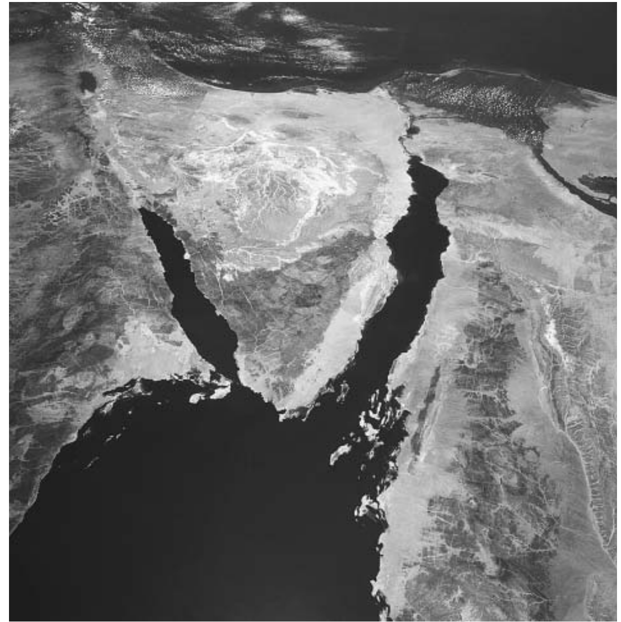
The topography and geography of the Middle East are closely related to the geology and climate of the region.

A zone of mountainous terrain in the north in combination with higher latitudes, lower temperatures, and increased precipitation gives a distinctive char-

acter to Turkey, Iran, and parts of the Levantine (eastern Mediterranean) coast. To the south, in North Africa and the Arabian Peninsula, tilted fault-block mountains and volcanoes provide intermittent physical relief to an area largely consisting of plateaus and plains. Unremitting aridity and high temperatures typify the desert that dominates this southern part of the region.

The geology of the Middle East is determined by the movement of continental plates in a northwesterly direction. This movement, in turn, deforms masses of sedimentary strata deposited in Paleozoic times in the ancient Tethyan Sea, which once separated Eurasia and Africa. The African plate is the largest and consists of ancient igneous materials overlain, in part, by a relatively thin layer of more recent sedimentary rocks. With the exception of the folded strata that make up the Atlas and Anti-Atlas Mountains in the west of the Maghrib (North Africa), the Ahaggar and Tibesti Mountains of Algeria and Libya, as well as the highlands of the Ethiopian plateau, are volcanic in nature. The Arabian plate to the east consists of tilted Mesozoic sedimentary strata dipping beneath the Persian/Arabian Gulf: These strata overlie pre-Cambrian igneous basement rock exposed by erosion in the Asir Mountains along the western shores of the peninsula. The Red Sea, which the uptilted edge of the Asir overlooks, is a continuation of the East African rift valley system and is formed by the moving apart of the African and Arabian blocks. This rift system continues north through the Gulf of Aqaba and forms the valley of the Dead Sea and the Jordan River. It eventually disappears in the down-folded strata of the Biqa (Bekaa) Valley of Lebanon.

The heavily folded Zagros Mountains bordering the Gulf on its eastern side result from the collision and subduction of the Arabian plate under the Iranian plate. The Persian/Arabian Gulf, which is an inlet of the Indian Ocean along the axis of the subduction zone, has accumulated huge quantities of sediments from the Tigris and Euphrates rivers, the Karun River, and numerous intermittent streams draining the lands on either side. Within these Tertiary sedimentary strata are found the largest petroleum fields in the world, with deposits in Saudi Arabia, Kuwait, Iran, Iraq, the United Arab Emirates, Qatar, and Oman, in descending order of importance. To the northwest, the Turkish plate is sliding westward along a transform fault and colliding with the Aegean plate. These areas of movement create major fault zones subject to severe earthquakes. In Turkey, the Erzincan earthquake of 1992 was typical. Faulting and recent volcanism terminate the northward extension of the rich petroleum fields of the Gulf beyond a few poor deposits near Batman, Turkey.



Aerial view of the Gulf of Aqaba (also known as the Gulf of Elat) on the Red Sea. It stretches 120 miles north from the Straits of Tiran, ending where the southern border of Israel meets the borders of Egypt and Jordan. **© Corbis. Reproduced by permission.**

The northern part of the Middle East is a mountainous extension of the Alpine orogeny. The Pontic Mountains paralleling Turkey's Black Sea coast merge with the eastern highlands notable for volcanic Mount Ararat of biblical fame. The Taurus Mountains along Turkey's south shore extend eastward as the Anti-Taurus Mountains, joining the Zagros Mountains running southeast between Iran and Iraq. Another extension forms the Elburz Mountains bordering the Caspian Sea in Iran. Mount Damavand (18,934 ft [5775 m]), the highest peak in the Middle East and North Africa, is part of this range. Still farther east, the Kopet Mountains merge with those in Afghanistan and the Hindu Kush.

Great rivers have played their part in the history and development of the Middle East. The White

Nile, which rises in equatorial Africa, is joined at Khartoum in Sudan by the Blue Nile, flowing from the highlands of Ethiopia. No precipitation sufficient for human survival occurs from that juncture north to the Mediterranean Sea, and all life in Egypt depends on the use of the combined waters of the two Niles. The Euphrates River and its companion the Tigris both rise in Turkey and join in southern Iraq to form the Shatt al-Arab, which empties into the Persian/Arabian Gulf. The area between the two streams, ancient Mesopotamia, was the site of the earliest civilization, Sumer (3500 B.C.E.), and other ancient civilizations based on irrigation farming.

The Mediterranean Sea also has influenced many of the cultural and geographical characteristics of the Middle East. It has served as a major link between Europe, Africa, and southwest Asia since ancient times. The Turkish Straits, composed from north to south of the Bosporus, the Sea of Marmara, and the Dardanelles, are an important waterway joining the Black Sea to the Aegean Sea and the Mediterranean. Bronze Age ships plied these straits and sailed along the coast of Turkey as well as among the Aegean Islands. Early Phoenician traders established sea routes leading to the Straits of Gibraltar and beyond. Ancient Greek ships traveled through the Bosporus to bring grain from the shores of the Black Sea, and Roman triremes linked Italy and Africa. During the Middle Ages, some Arab navigational skills were conveyed to Europeans as Islam was spread. In the nineteenth century, the Mediterranean route was enhanced when the French and Egyptians completed the Suez Canal, joining the Mediterranean Sea to the Red Sea and thus reducing the trip from Europe to India (originally by way of the Cape of Good Hope) by thousands of miles.

The Middle East is composed of four environments, expressed by climate, vegetation, and traditional lifestyle. Well-watered humid and subhumid lands border the Black Sea in Turkey and extend along the Caspian shore of Iran. In these well-populated places, maize (corn), tea, hazelnuts, and rice are important crops.

Mountainous terrain, with remnant forests of pine, cedar, and juniper, rims the Anatolian plateau of Turkey and extends southward into coastal Syria and Lebanon. Similar but drier environments are found in the Zagros and Elburz Mountains of Iran. These areas once supported dense growths of mature trees, but with the exception of more remote places in the Taurus Mountains, the logger's ax and the charcoal burners' ovens have depleted the forests while nomads' goats have prevented regrowth through overgrazing. The result is either disturbed and impoverished woodlands (French, *maquis*) or barren and rocky ground supporting low herbaceous shrubs (French, *garrigue*).

The interior plateau of Turkey, the foothills of the Anti-Taurus and Zagros Mountains, and the northern portions of Jordan and Israel are semiarid, with grazing or grain production depending on the amount of each year's precipitation. The variance of rainfall on the drier margins of these areas makes permanent rain-fed agriculture difficult. As a result, ancient peoples developed pastoral nomadism as a lifestyle that met this challenge. Herds and flocks were moved seasonally to new pastures to avoid overgrazing of sparse vegetation as well as to seek out water sources. Once an important means of livelihood, nomadism has largely been abandoned.

The semiarid steppes merge gradually into true deserts, which dominate southern Israel, Jordan, and Iraq as well as the Arabian Peninsula and North

Africa west to the Atlas Mountains. Saharan conditions extend to the Mediterranean shore of North Africa from Gaza to Sfax in Tunisia, the only exception being a small outlier of Mediterranean climate on the Jabal al-Akhdar (Green Mountain) of Libya. Under desert conditions, agriculture is possible only in scattered oases and along the banks of rivers like the Euphrates in Iraq and the Nile in Egypt.

The narrow rim of Mediterranean climate, which extends north from Gaza through Israel, along the coasts of Lebanon, Syria, and Turkey, is the fourth environment. This same climate is also found from Tunis west to the Atlantic shores of Morocco. The Mediterranean environment is typified by winter rains and hot dry summers, which allow for the production of irrigated vegetables and citrus fruits, as well as various winter grains.

GERMANY AND THE MIDDLE EAST

German involvement in the Middle East in the nineteenth and twentieth centuries.

Brief contacts between Prussia and the Ottoman Empire occurred before the 1880s. In 1760 Frederick the Great sought an alliance with the Ottomans during the Seven Years' War; and in the 1830s Helmuth von Moltke, later chief of the Prussian General Staff, served as adviser to the Ottoman military in Constantinople (now Istanbul).

Nineteenth Century

After 1870, the new Germany was not concerned with the Eastern Question. German prime minister Otto von Bismarck, acting as the "honest broker" at the Berlin Congress in 1878, wished to avoid conflict with Austria, Hungary, Britain, and Russia—countries that already had imperialist stakes in the area. German intellectual interest in Iranian culture, language, and poetry had led to a treaty of friendship and commerce between Prussia and Persia (Iran) that was renewed in 1873; the relationship was cautious, however, because Bismarck understood that the area was under the domination of Russia and Britain. He agreed to open a German legation at Tehran in 1885 but would not meet with Naser al-Din Shah when the Iranian ruler visited Berlin in 1889. Similarly, in 1882 Bismarck reluctantly agreed to send military officers to the Sublime Porte after Abdülhamit II decided to replace France's military advisers with military personnel from Germany.

In this case, Germany's military mission inaugurated a more active political and economic policy toward Turkey that was advocated by Kaiser Wilhelm II, who ascended the throne in 1888 and replaced Bismarck in 1890. Germany's "drive to the East" *(Drang nach Osten)* was the means by which it would achieve imperialist parity with France and Britain through cultural and economic penetration of the declining Ottoman Empire. Advocated by Baron Hatzfeld, Germany's ambassador to Turkey from 1879 to 1881, the policy took into account the possibilities for Germany that resulted from the vacuum created by Britain's loss of prestige in the area after they assumed control of Cyprus (1878), occupied Egypt (1882), and became involved in Ottoman affairs because of the Ottoman public debt. Wilhelm II's visit to the Middle East in 1898, during which he advocated friendship with Islamic peoples, solidified ties between Germany and Abdülhamit II (called by some the Bloody Sultan because of his treatment of the Armenians). Acquiesence to Ottoman sensibilities resulted in lack of official

support by Germany for Zionism, in spite of an initial favorable reaction to discussions with Theodor Herzl, and for the German Templars, Protestants from southern Germany who were seeking to establish ideal communities, began settling in Palestine in 1868.

From 1885, Germany's military mission, now under the command of Kolmar Freiherr von der Goltz, was responsible for instituting a network of military preparatory schools and reorganizing the Ottoman officer corps on the Prussian model. German advisers worked with Ottoman troops throughout the crises that beset the Sublime Porte before World War I. By that time, despite Germany's diplomatic failures in the Moroccan crises (1905–1906, 1911) and Ottoman defeats in the Balkan Wars (1912–1913), German officers were teaching and working in Turkey, and Turkish officers were sent to Berlin for advanced training.

Germany's ambassadors to Turkey, Marschall von Bieberstein (1897–1912) and Hans von Wangenheim (1912–1915), worked assiduously to open markets for their nation's products. Concessions were granted to a German bank (Deutsche Bank) and an arms merchant (Mauser) to build the Berlin-Baghdad Railway and the Hijaz Railroad; and in 1906 the Hamburg Amerika steamship line sailed the Persian Gulf in competition with ships from Britain. By 1914, Germany's share in the Ottoman public debt reached 22 percent (it had been 4.7% in 1888), and it had a 67.5 percent share in Ottoman railway investment. The Deutsche Bank played a major role in the Turkish economy, as did the Deutsche Palästina Bank in Palestine.

World War I

Despite Britain's presence in Turkey, Germany's influence, especially in the army, increased throughout the Young Turk period. Disunity in the approach of the Committee of Union and Progress to foreign policy led some to seek different allies as Europe headed toward war. The negotiations of Enver Paşa and Mehmet Talat with Germany resulted in a secret alliance on 1 August 1914. The Ottoman Empire entered World War I in November 1914.

Once the lines of communication between Germany and Turkey were secure, hundreds of German military officers were transferred to Turkey, some in command of Turkish troops, but not as decision-makers regarding policy and strategy. As head of the military mission since 1913, General Otto Liman von Sanders advised the Turks to invade the Ukraine from Odessa; Enver, however, insisted upon the ill-fated Caucasus campaign. Liman von Sanders commanded the defense of Gallipoli in 1915 and intervened successfully in the Armenian deportations at İzmir. Lieutenant Colonel (later Major General) Friedrich Kress von Kressenstein, a restraining influence on Cemal Paşa, served in Palestine. Field Marshal Kolmar Freiherr von der Goltz was called back to defend Baghdad in 1915; Lieutenant General Hans von Seeckt (chief of the Turkish General Staff in 1917), General Erich von Falkenhayn, and Franz von Papen (who was ambassador to Turkey during World War II) also fought with the Turkish army.

German Middle East academic specialists were utilized in the war effort. Influenced by predecessors who had been engaged in philological and archaeological research in the Middle East since the latter part of the nineteenth century, some claimed German-Turkish racial affinities. Orientalist Max

von Oppenheim directed an information service for the East that advocated fomenting Islamic uprisings in Persia, Afghanistan, and Egypt in order to dislodge the British.

In Iran, Germany had no coordinated policy, and as Russia's army moved toward Tehran in 1915, only Wilhelm Wassmuss fought against the British in the south. Germany's competition with Britain in support of Zionist aspirations in order to gain Jewish support became inactive after the United States entered the war.

The defeat of Germany in 1918 and the provisions of the Treaty of Versailles altered Germany's approach to the Middle East. From the Weimar Republic through the early 1930s, official German policy was inherently cautious, more concerned with revising the Treaty of Versailles and not alienating Britain than with taking an active role abroad. Although sympathetic to Zionism, once Germany became a member of the League of Nations (1926), it supported Britain's policy in Palestine and did not take a position on local Arab-Zionist issues. The low-key diplomatic approach, however, did not lessen Germany's economic interest in Turkey, Egypt, and Iran; Iran, due to Reza Shah Pahlavi's pro-German sympathies, was supplied by German companies with arms, machinery, and regular air service through the 1920s.

Third Reich and World War II

Germany's official policy toward the Middle East remained inconsistent through the Third Reich because it was predicated upon ideological, diplomatic, and economic factors that contradicted one another. The Nazi doctrine of racial purity and the search for markets in the Middle East lent themselves to support of the Zionist movement through the ha-Avarah (transfer) agreements as useful tools to rid Germany of Jews. When, after 1937, it was understood that Jewish sovereignty was possible, and that a large population of Jews (a circumstance noted after the war in eastern Europe began) might be a base for activity against Germany, Hitler opposed Jewish immigration to Palestine.

Also opposed to Jewish Palestinian immigration were German nationals, including archaeologists, scholars, members of the Palestine Templars, and diplomatic personnel who worked in the area. Both German nationalists looking back to imperial glory and Nazis became disseminators of German propaganda, finding allies in some pan-Arab groups and the military in Egypt, Syria, and Iraq. Max von Oppenheim and German Ambassador to Iraq Fritz Grobba advocated financial and military support for local anti-British pan-Arab movements as early as 1937. Meetings between pan-Arab nationalists such as Shakib Arslan, Muhammad Amin al-Husayni, and Aziz Ali al-Misri and German diplomatic officials took place, resulting in a declaration of support in December 1940 but no real aid.

Officially, Germany remained uninvolved in the Middle East, initially leaving the area to Britain. After 1939 and the outbreak of World War II, Germany left the area to Italy, which sought hegemony in North Africa and in the eastern Mediterranean. Italy's losses to the Allies in Greece and in Libya in 1941 sparked a belated interest by Germany, which had planned to turn to the Middle East only after anticipated successes in Russia (Operation Barbarossa).

Last-minute German arms deliveries to the pro-Axis Rashid Ali al-Kaylani government did not prevent Britain's victories in Iraq in June 1941 and in Vichy-ruled Syria in July. Fear that Iran was a potential fifth column because of its economic dependence on Germany—because of the large numbers of German nationals working there, and because it offered a haven for those fleeing the British in Iraq—resulted in Pahlavi's abdication and control of Iran by Russia and Britain. A planned pro-Axis Free Officers' revolt involving Aziz Ali al-Misri and Anwar al-Sadat, among others, together with Abwehr (German military intelligence) agents infiltrated into Cairo, failed to coordinate with Erwin Rommel's advance toward Egypt in the summer of 1942. Berlin provided sanctuary for some pro-Axis Arabs, among them the Jerusalem *mufti,* who left the Middle East during the war and worked for the German propaganda machine in return for Germany's promise to support Arab independence. After the war, a number of Nazis immigrated to the Arab world.

Two Germanys emerged from the war: East Germany, the German Democratic Republic (GDR); and West Germany, the Federal Republic of Germany (they united in 1991). The GDR followed the

policy of the Soviet Union and never established diplomatic relations with Israel.

1950 to the Present

From the early 1950s, the Cold War and political obligations to the United States dominated German foreign policy. While blocking international, especially developing nations', recognition of the GDR, the Federal Republic strove to balance its economic interests in the Arab world with a commitment to Israel and the Jewish people forged in reaction to Germany's Nazi past and the Holocaust. Restitution and reparations agreements were signed in 1952, clandestine arms deals were negotiated throughout the 1960s, and diplomatic relations were established in 1965. All Arab states except Morocco, Tunisia, and Libya severed diplomatic ties with Germany, but had restored them by 1974.

Germany's economic ties in the Persian Gulf grew dramatically in the 1970s through the export of manufactured goods, the recycling of petrodollars through German banks, and the import of almost 50 percent of its oil needs from the region. As the price of oil fell in the 1980s, so did German dependence on Gulf markets. Germany's share in the arms market during the Iran-Iraq War represented only 1 percent of the total market (by comparison, France's participation amounted to some 15 percent). German companies' significant but illegal involvement in technology transfers contributed to the development of weapons of mass destruction in Libya and Iraq.

West Germany expressed support for the Palestinians' right to self-determination and, although its relations with Israel remained intact, it increasingly became critical of the Israeli occupation of the West Bank and Gaza Strip. Working through the European Union, Germany supported the 2003 U.S.-led peace plan, Road Map, that called for an independent state in Palestine within three years.

After Iraq invaded Kuwait in 1990, Germany supported United Nations (UN) Security Council Resolution 660, which condemned the Iraqi occupation, and Resolution 678, which authorized military measures to expel Iraq from Kuwait. It joined the U.S.-led coalition of twenty-eight states by sending air units to Turkey, contributed mine sweepers, and pledged $5.5 billion to the war effort. But Germany offered no such support to the United States as it planned with Britain in 2003 to invade Iraq. The United States and Britain claimed that Iraq had weapons of mass destruction (WMD) and was an imminent danger to world security. Together with France and Russia, Germany—now a nonpermanent member of the UN Security Council—opposed a draft resolution supported by the United States, Britain, and Spain that authorized the use of force. Instead, it sought the return of UN weapons inspectors to Iraq to investigate whether Iraq had WMD. Although Germany helped defeat the resolution, it was unable to deter the invasion of Iraq by mainly the United States and Britain. The Gulf crises and war that followed damaged Germany's generally friendly relations with the United States and Britain.

GEZIRA SCHEME

A Sudanese agricultural project established by the British.

The Gezira Scheme, located in the plains between the Blue Nile and White Nile of the central Sudan, was the first large-scale irrigated agricultural project established by the British government under the Anglo–Egyptian condominium. When it opened in 1926, it covered 300,000 *feddans* (ca. 300,000 acres), of which a third grew cotton. In the 1950s, Sudanese managers replaced the British officials, and the Gezira Board invested a greater share of the profits for social development projects among the tenants. Later extensions quadrupled the area of the scheme, but costs escalated, cotton prices dropped in the world markets, and the tenants and Gezira Board became increasingly indebted. International loans have helped, but they have also increased the country's overall debt burden.

GEZIRA SPORTING CLUB

Country club in Cairo.

Long a symbol of British imperialism and insularity in Egypt, the Gezira, as it is usually called, was founded in 1882 and originally limited its membership to high-ranking British civil servants in the Egyptian government and officers of the army of occupation. Between the two world wars, the club's rosters also listed the names of titled European aristocrats wintering in Cairo, members of the diplomatic corps, prominent Levantine Jews and Christians, and Egyptian Muslims and Copts, many of whom were close to the palace. The flavor of the club during its British heyday has been admirably transmitted in memoirs written by former foreign residents of the city, in travel literature, and in such works of fiction as Olivia Manning's *Levant Trilogy,* which is set in Egypt's capital.

The exclusive and exclusionary character of the club was maintained until after World War II, when the tide of nationalism and a rising indigenous bourgeoisie forced its Egyptianization in January 1952. The ethos and structure of the club were further altered during the anti-Western years of the Nasser regime. In the early 1960s, the Gezira was both figuratively and literally truncated when the government, in a tactic calculated as a humiliation, forced it to permanently yield half of its grounds to a politicized athletic institution established to promote sports among the masses called the Ahli, or National Sports Club. Insult was added to injury when the Sadat regime built a suspended highway over the remaining nine-hole golf course and six-furlong racetrack to commemorate its performance in the 1973 Arab-Israel War.

Despite its contraction and urbanization, the Gezira still offers most of the sports and games practiced by its founders: golf, squash, bowls, croquet, riding, and even cricket. The last is played almost exclusively by Indian and Pakistani residents of Cairo. Horse racing, one of the club's original *raisons d'être*, takes place during the winter season. Polo, however, which led to the founding of the Gezira as

a gift from Egypt's viceroy to the officers of the British army of occupation, is no longer played for lack of grounds, players, and schooled ponies.

With the passing of Nasserism, the Gezira regained a small measure of its colonial grandeur, catering mostly to nouveau-riche Egyptians and a few foreign technocrats.

GHAB, AL-

In Syria, the largest plain of a large trough which also includes the low plains of al-Asharina, al-Ruj, and al-Amq.

Al-Ghab is located between the mountains Jabal al-Ansariyya (al-Alawiyyin) in the west and Jabal al-Zawiya in the east. Its length from south to north is about 56 miles (90 km), its width between 5 and 7.5 miles (8 to 12 km), and its elevation above sea level is between 558 and 656 feet (170 and 200 m). It slightly slopes toward the north like the Orontes River that traverses it to the northeast of Hama. Its yearly rainfall averages 19.5 to 27 inches (500 to 700 mm), but it receives other sources of water, notably from the Orontes River, which is rejected back into it by the basaltic bedrock of Qarqar in the north. Before 1954, al-Ghab was intersected by swampland, infested by malaria, and covered by reeds used for catching its celebrated catfish.

Within two decades after 1954, the landscape of al-Ghab changed dramatically as a result of the drainage of its swamps, the building of dams, such as the ones at al-Rastan, Maharda, and notably al-Asharina, to regulate its irrigation, and the creation by the Syrian government of a number of projects in it. Of its total area of 136,000 acres (55,000 ha), 42,000 acres (17,000 ha) are irrigated by river flooding and dam water, 74,000 acres (30,000 ha) depend on rainfall, and the remaining parts are turned into farms. In 1969, land in al-Ghab was distributed by the government to 11,000 beneficiaries according to the decrees of agricultural reform. To encourage the cultivation of land, fifty-two cooperatives were established there. Other projects include a cattle farm, fisheries, and a sugar factory at the village of Salhab.

ABDUL-KARIM RAFEQ

GHALI, BOUTROS

[1846–1910]

Egyptian diplomat and cabinet minister.

Born in a village near Bani Suwayf in Egypt, Boutros Ghali went to the reformist Coptic school at Harat al-Saqqayin and the princes' school of Mustafa Fadil. He later studied at the School of Languages, learning Arabic, French, English, Turkish, and Persian, but never earned a *license* or any other degree. He became a clerk for the Alexandria Chamber of Commerce and in 1873 was appointed by the sharif to the head clerkship of the justice ministry. At this time he also helped to organize the Coptic (Lay) Council. When the mixed courts were being established, Ghali helped the justice minister write an Arabic translation of their (mainly French) law code, even though he lacked any legal training.

His work brought him to the attention of Prime Minister Boghos Nubar Pasha, who made him Egypt's representative to the Caisse de la Dette Publique, thus mediating frequently between the Egyptian government and its European creditors. Named deputy justice minister in 1879, he held various responsible posts during the Urabi revolution. Afterward, he mediated between Khedive Tawfiq and the nationalists, saving many from execution.

Ghali received his first ministerial appointment in 1893 when Khedive Abbas Hilmi II challenged the British occupation by appointing his own cabinet under Husayn Fakhri (without consulting Lord Cromer). He remained finance minister under the compromise cabinet of Mustafa al-Riyad. He served as foreign minister from 1894 to 1910 and continued to mediate between power centers, signing the 1899 Sudan Convention that set up the Anglo–Egyptian Condominium Agreement. He represented the cabinet on the bench at the 1906 trial in the Dinshaway Incident, concurring in the death

sentences on four of the accused peasants and angering Egypt's nationalists.

Khedive Abbas and Sir Eldon Gorst concurred in naming him prime minister in 1908, despite misgivings about having a Copt as the head of Egypt's government. He further angered the nationalists by reviving the 1881 press law and publicly advocating the extension of the Suez Canal Company's concession, policies that he reportedly opposed privately. His assassination by Ibrahim Nasif al-Wardani, a nationalist, in February 1910, set off a wave of Coptic–Muslim confrontations and led to a more repressive government policy against the nationalists.

Arthur Goldschmidt

GHALLAB, ABD AL-KARIM

[1919–]

Moroccan novelist, short-story writer, and journalist.

Abd al-Karim Ghallab was born in Fez. He studied at the mosque college of al-Qarawiyyin in Fez, then obtained his B.A. in Arabic literature from Cairo University. He is editor in chief and director of the daily *Al-Alam.*

Ghallab is a prolific writer whose publications cover a wide range of topics and interests, some purely literary and others dealing with political and cultural issues. Through his writings he seeks to promote nationalist feelings and a deep attachment to Arabic-Islamic culture, counteracting the French education that was particularly threatening to Moroccans during the years of French colonialism.

Some of Ghallab's short stories in the collection *Wa Akhrajaha min al-Janna* (1977; He led her out of paradise) criticize the tendency of the upper middle class to communicate in French. Similar concerns are expressed in his novel *Sabahun wa Yazhafu al-Layl* (1984; Morning, then the night creeps in). Ghallab's fiction works illustrate and defend his beliefs and values. An active nationalist, he was often at odds with the French colonial power and was imprisoned, an experience depicted in his novel *Sabʿat Abwab* (1965; Seven gates). Some of his other fiction works, such as *Dafanna al-Madi* (1966; We buried the past), reveal his patriotic feelings. Ghallab fervently preaches attachment to the land and its safeguard by Moroccan farmers, as illustrated in his collection of short stories *Al-Ard Habibati* (1971; The land, my beloved), his novel *Al-Muʿallim Ali* (1971; Master Ali), and his essay "Fi al-Islah al-Qarawi" (1961; Of rural reform).

Ghallab's nationalist positions date back to his student years in Egypt, where he agitated for the independence of the three Maghribi countries, Algeria, Tunisia, and Morocco. Back in Morocco, he joined the Istiqlal Party and became deeply involved in politics. He was appointed a minister plenipotentiary for the Middle East (1956–1959) and a minister in the Moroccan government (1983–1985). His nonfiction writings also reflect his political views, ranging from his preoccupation with political governance to Arab unity. These works include *Hadha Huwa al-Dustur* (1962; This is the constitution), *Al-Tatawwur al-Dusturi wa al-Niyabi bi al-Maghrib min sanat 1908 ila sanat 1978* (1988; The Constitutional and the legal development in the Maghrib from 1908 to 1978, 2 vols.), *Maʿrakatuna al-Arabiyya fi Muwajahat al-Istiʿmar wa al-Sahyuniyya* (coauthor, 1967; Our Arab battle with colonialism and Zionism), *Nabadat Fikr* (1961; The beat of a thinking mind), *Thaqafa wa al-Fikr fi Muwajahat al-Tahaddi* (1976; Culture and thought in the face of challenge), and *Risalatu Fikr* (1968; The message of a thinking mind).

Religious feelings and a pious way of life are also of concern to Ghallab; they are implicit in his fiction and explicitly expressed in his book *Sira al-Madhhab wa al-Aqida fi al-Qurʾan* (1973; The struggle of ideology and faith in the Qurʾan). In his collection of short stories, *Hadha al-Wajh Aʿrafuhu!* (1997; I know this face) he sheds some of the didactic tone of his fiction writings.

AIDA A. BAMIA

GHANIM, AL-

Merchant family in Kuwait.

The al-Ghanim family, together with the Al Sabah, the Al Saqr, and the al-Qatami, were among the original Anaza settlers in Kuwait in the eighteenth century. The family made money first in shipping and trade, but a disaster at sea in 1925 encouraged them to diversify their interests. Ahmad al-Ghanim became an agent of the Anglo-Persian Oil Company (APOC) during its negotiations for the Kuwait oil concession and the family did business with both APOC and the concessionaire, the Kuwait Oil Company. During the 1930s, al-Ghanim family income provided the government of Kuwait with two-thirds of its revenues. Ahmad's son Yusuf, along with other family members, fled Kuwait after the failure of the 1938 Majlis movement, returning in 1944 under a general amnesty. By the end of World War II the al-Ghanim employed 7,000 men, about half the workforce of Kuwait. The family became the top labor and supply contractor for the Kuwait Oil Company and Faysal al-Ghanim served as one of its managing directors. The al-Ghanim also acquired agencies and distributorships, including a lucrative arrangement with General Motors. Thunayan Faysal al-Ghanim served with the small contingent of Kuwaiti troops among the forces liberating Kuwait from Iraqi occupation in 1991. The family owns al-Ghanim Industries, a holding company that ranks among the top companies in the world.

MARY ANN TÉTREAULT

GHANIM, FATHI

[1924–1999]

Egyptian novelist and political writer.

Born in Cairo to middle-class background, Fathi Ghanim studied law at the Cairo University. After serving until the early 1950s at the ministry of education, he devoted himself to political and fictional writing. He served as the editor for Rose al-Yusif and a number of Egyptian newspapers and other periodicals, including *Akhar Saʿa* (The last hour) and *Sabah al-Khayr* (Good morning). In 1966 the government made *al-Jumhuriyya* (The republic) the sole official organ of the Arab Socialist Union, and Ghanim was appointed editor in chief. A strong partisan of pan-Arab socialist and nationalist ideology, in "The Crisis between Islam and Politics" (1998) he denounced the political involvement of Muslim movements and blamed the Islamic regime of Iran for invading Iraq in the 1980s. He portrayed Islam as a religion of reason that in his view calls for secularism, and he saw the Islamic state as an expression of fanaticism and backwardness.

In 1959 he published *al-Jabal* (The mountain), a satirical portrayal of the Egyptian government's attempts to resettle peasants. His most famous literary work, *The Man Who Lost His Shadow* (1966), describes the social and political evolution of Egypt from the 1920s to the 1950s through the lives of four main characters. This theme was continued in *Zaynab and the Throne* (1976). Both novels were made into television series. He also wrote *The Story of Tou* in 1987, which described in fictional terms the political oppression and torture carried out by the government. His fluid style and dynamic plots allowed him to write engaging novels that served as realistic portrayals and criticisms of Egyptian society while exploring the wider themes of oppression, fanaticism, violence, and injustice. Ghanim received the State Merit Award for Literature in 1994.

MAYSAM J. AL-FARUQI

GHANMI, AZZA

Tunisian feminist activist.

In 1978–1979, Azza Ghanmi joined other feminist activists to found the Club d'Etude de la Condition de la Femme at the Club Tahar Haddad. Restricted to women only, the group debated the condition of women in Tunisian society. The institution of the Tunisian Code of Personal Status, promulgated in 1956 as part of Habib Bourguiba's modernization program, had granted women a number of rights making them equal citizens (for example, the stipulation of minimum marriage ages, requirement of personal consent to marriage, prohibition of polygamy, the right to vote, women's full legal capacity to enter contracts, and women's right to education and work). However, everyday social practices remained patriarchal.

In the early 1980s Ghanmi, along with other activists, participated in the group Femmes Démocrates, which emerged in response to political events such as the Israeli invasion of Lebanon and the massacres at Sabra and Shatila. She contributed to its feminist journal *Nissa,* and eventually became the secretary general of the Association Tunisienne des Femmes Démocrates (AFTD), instituted in1989. Ghanmi has been an outspoken advocate of the rights of the child and of women's human rights, especially in the context of compliance with the international Convention for the Elimination of Discrimination Against Women (CEDAW) to which Tunisia is a signatory.

Laura Rice

GHANNOUCHI, RACHED

[1941–]

Islamist politician; founding member and head of the Islamic Tendency Movement, an offshoot of the Islamic Revival Movement formed in Tunisia in 1979.

Rached Ghannouchi entered politics in the 1970s as a member of the Society for the Preservation of the Qurʾan. Along with other leaders of the Islamist movement in Tunisia, he argues for a reintegration of Islam and Islamic law *(shariʿa)* in all aspects of national life, including politics. He has been fiercely critical of Westernizing trends in Tunisia and of the secular character of the ruling party, the Destour Socialist Party (PSD). To him, the decline of Islamic values and the reliance on Western ideologies and economic-development models have led to social corruption and economic decline in Tunisia and throughout the Islamic world.

In June 1981, his Islamic Tendency Movement (Mouvement de Tendance Islamique; MTI) filed, without success, for formal recognition. Ghannouchi and his party, renamed al-Nahda (Reawakening) in 1989, attracted a growing number of, in particular, young followers during the 1980s. For his antigovernment activism, he was arrested in 1981 and remained in prison until 1984; he was rearrested in 1987. The issue of his trial and execution, sought by Tunisia's President Habib Bourguiba in the fall of 1987, precipitated Bourguiba's overthrow by Zayn al-Abidine Ben Ali. Pardoned by Ben Ali in May 1988, Ghannouchi left Tunisia in April 1989 to begin what he described as a self-imposed exile.

GHARB

Moroccan plain.

The Gharb, inhabited by Arab tribes (Banu Malik, Sufiyan, Khlut, and Tliq), is located between Wadi Lukkus, Wadi Sabu, and the Middle Atlas Mountains in Morocco. Before colonization, the tribes lived by limited agriculture and pastoralism. Under the French protectorate, the Gharb became a rich region where colons settled and developed different types of agriculture for export.

After independence, the Gharb was subject to intensive development through allocation of irrigated plots of land to peasants and the creation of small exploitation units of industrial agriculture. During this period, the Gharb witnessed an intensive intervention by state agencies, such as national offices of rural modernization and of irrigation and the division of water and forests.

The cities of the Gharb are Mechra Bel Ksiri, Sidi Sliman, Sidi Yahya, and Kenitra. Except for Kenitra, which is located on the margin of the region, the Gharb has not experienced the development of any major urban agglomeration because of its closeness to big cities such as Rabat, Casablanca, and Meknes.

See also COLONS.

RAHMA BOURQIA

GHARBZADEGI

Persian term meaning "Weststruck."

Coined in the late 1940s and made a household term in Iran's intellectual circles by writer and social critic Jalal Al-e Ahmad (1923–1969) in a clandestinely published book by the same name (1962, 1964), *gharbzadegi* signals a chief sociological notion and concern among many Iranians in the post–World War II era.

As Al-e Ahmad describes it, throughout the twentieth century Iran has resorted to "Weststruck" behavior—adopting and imitating Western models and using Western criteria in education, the arts, and culture in general—while serving passively as a market for Western goods and also as a pawn in Western geopolitics. Consequently threatened with loss of cultural, if not Iranian, identity, Al-e Ahmad argues that Iran must gain control over machines and become a producer rather than a consumer, even though once having overcome Weststruckness it will still face that desperate situation, he argues, that remains in the West—that of "machinestruckness."

MICHAEL C. HILLMANN

GHASHMI, AHMAD HUSAYN

[c. 1923–1978]

Yemeni president and soldier.

Ahmad Husayn Ghashmi was a career soldier of limited education and of deeply rooted tribal origins. Born in Dhula, an area just northwest of Sanʿa, he came from a family of tribal leaders, his brother being the paramount shaykh of the strategically located, but otherwise not very important or powerful, Hamdan tribe. As a commander of armored forces, he provided crucial support to President Ibrahim al-Hamdi in his struggle to consolidate his power against strong opposition in the Yemen Arab Republic (YAR) after the 1974 coup. Despite occupying the number-two post of armed forces chief-of-staff for three years, Ghashmi was directly involved in the assassination of al-Hamdi and his brother in 1977; he then became YAR president, only to be assassinated himself (blown up by a bomb carried in a briefcase of an emissary from South Yemen) in June 1978 after only eight months in office. The fears of his modernist critics notwithstanding, Ghashmi as president seemed inclined to protect the weak Yemeni state from its tribal challengers and Saudi Arabia. His assassination had less to do with North Yemeni politics than with a power struggle in South Yemen; he was succeeded by the much younger, much longer serving Ali Abdullah Salih.

ROBERT D. BURROWES

GHASSEMLOU, ABDUL RAHMAN
[1930–1989]

Leader of the Kurdish Democratic Party of Iran.

Abdul Rahman Ghassemlou was born in Urumia, West Azerbaijan province, Iran, and became engaged in Kurdish nationalist struggles in the mid-1940s. He left his native city in 1947 and continued his education and political activism in both the Kurdish Democratic Party of Iran (KDPI) and the Tudeh Party in Tehran. In 1948 he moved to Paris, and then went to Prague, Czechoslovakia, where he lived until his return to Iran in 1952. Forced into exile in Czechoslovakia in 1958, he earned a doctoral degree there in 1962 and taught at the Prague School of Economics. In 1973 he reorganized the KDPI in its third congress, held clandestinely in Baghdad, Iraq. He returned to Iran on the verge of the fall of Pahlavi monarchy in early 1979 and pursued a policy of negotiating Kurdish autonomy within the evolving Islamic regime. However, the government mobilized the army against the autonomist movement in August 1979. The KDPI and other opposition groups were forced out of Kurdistan in the mid-1980s. In July 1989 Islamic government officials assassinated Ghassemlou in Vienna, Austria, where he was negotiating with them a peaceful settlement of the Kurdish question.

AMIR HASSANPOUR

GHAZALI, MUHAMMAD AL-
[1917–1996]

Leading proponent of a centrist Islamism, renowned for opposition to secularism and anti-intellectual extremism.

Muhammad al-Ghazali graduated from al-Azhar in 1941 and became a leading political radical in the Egyptian Muslim Brotherhood before his dismissal from the Brotherhood's constituent body in December 1953, reportedly after involvement in an attempt to oust the movement's leader. His subsequent rise in the Egyptian Muslim jurisprudential system was accompanied by the publication of more than fifty books, ensuring popularity for his approaches to Qurʾanic exegesis and Islamic responses to modernity across the Muslim world. In 1989 he won the King Faisal International Prize for Islamic Studies, but his subsequent books, *The Sunna of the Prophet* and the influential *Journey through the Qurʾan,* drew fierce attacks from Saudis for his outspoken attack on the simplistic methods of antimodernist extremists. In the 1980s he headed Islamic university academies in Mecca, Qatar, and Constantine (Algeria), where President Chadli Bendjedid sought to use him as a mediator with more radical Islamists. After publicly debating leading secularists in Egypt, Ghazali drew fire for justifying the killing of Farag Foda as an apostate in 1992. In favor of taking ideas from the non-Muslim world, Ghazali was moderate in supporting women's rights and a gradualist approach to Islamic democracy.

GEORGE R. WILKES

GHAZALI, ZAYNAB AL-
[1917–]

Egyptian Islamist writer and activist.

Zaynab al-Ghazali al-Jabili was born in the Egyptian Delta and educated in religious schools. She is a Muslim activist associated with the Muslim Brotherhood and was the founding president of the Jamʿiyyat al-Sayyidat al-Muslimat (Muslim Women's Association, 1936), with which al-Ghazali sought to counter the secularist Egyptian Feminist Union. Al-Ghazali refused to subsume her association into the Muslim Brotherhood, as its leader Hasan al-Banna suggested, and she led the association in its charity and educational activities until the Nasser regime closed it down in 1964. In 1950, she founded the

Majallat al-Sayyidat al-Muslimat (Muslim women's journal) while also writing regular columns in the Muslim Brotherhood's journal. Active in Islamic politics and associated with the Brotherhood at least since 1949, she is famous for having put *al-daʿwa* (the call to propagate the faith) before conjugal demands in her own life while admonishing Muslim women that in an ideal Muslim society women's energies would center on home and family.

Al-Ghazali's best-known work is her prison memoir, *Ayyam min hayati* (Days of my life), first published in 1972 and republished many times. Incarcerated along with many other Islamist activists in 1965, she was transferred in 1967 to the women's prison and released in 1971. The memoir prefaces its account of solitary confinement, torture, and ultimate triumph with a narrative of her earlier work; the text operates not only as an individual memoir but also as a collective autobiography of Brotherhood activists and as a testimony to spiritual struggle under extreme conditions and thus serves as an exemplary text for other contemporary Muslims. Prison becomes a microcosm of society, exemplifying "the swamps, brackish with depravities" that Muslim activism is to tackle. Although the book shows the gender-specific treatment of imprisoned women and although al-Ghazali's biographies of early Muslim women, published in *al-Daʿwa* from 1979 until it was banned late in 1981, claim female exemplars for contemporary activism, to characterize her as a feminist, as some have done, is a debatable move.

GHAZEL

See Glossary

GHAZI IBN FAISAL

[1912–1939]

King of Iraq from 1933 to 1939.

The son of King Faisal I, Ghazi ibn Faisal inherited little of his father's sophistication and political understanding. As his father's popularity began to wane at the end of the 1920s, Ghazi began to court a following of his own by identifying himself more or less openly with the opposition politicians and associating with the leaders of the Iraqi army. This continued after his accession, and as the army high command began to exert an increasing influence on the country's political life (especially after the coup organized by Bakr Sidqi in 1936). Ghazi's relations with the British Embassy, and with Britain's protégé Nuri al-Saʿid, became increasingly strained. While there was no direct evidence linking Nuri to the car accident in which Ghazi was killed, the circumstances surrounding his death always remained obscure. Nuri, Ghazi's cousin Abd al-Ilah, and Ghazi's estranged wife, Abd al-Ilah's sister Aliya, were long suspected of some form of involvement in it.

Peter Sluglett

GHORBAL, ASHRAF

[1925–]

Egyptian diplomat.

Educated at universities in the United States, Ashraf Ghorbal (also Ghurbal) was the first secretary to the United Nations in Geneva from 1958 to 1962, and an adviser to the Egyptian delegation in New York from 1962 to 1964. When Egypt's embassy in Washington, D.C., was closed following the 1967 Arab–Israel War, Ghorbal became head of the Egyptian/United Arab Republic interests section of the Indian embassy, where he served until 1973.

During the October 1973 war—after having served nearly a year as assistant security adviser to President Anwar al-Sadat—he was placed in charge

of Egypt's information and public relations. In November 1973 Ghorbal was appointed ambassador to the reopened Egyptian embassy. He earned the gratitude of many Americans after playing a key role in negotiating the release of hostages held by a terrorist in the B'nai B'rith building in Washington, D.C., in 1977. Ghorbal took part in the Camp David meetings of 1978, and the subsequent isolation of Egypt from the Arab League in the years that followed meant that he was excluded from meetings of the Arab ambassadors in Washington. Nevertheless, he maintained relations with individual ambassadors privately, ultimately also working with key Arab states as dean of the African diplomatic corps. He reached compulsory retirement age in 1985.

See Glossary

GHOUSSOUB, MAI

[1952–]

A London-based multimedia artist, writer, and publisher of Lebanese descent.

Born in Lebanon, Mai Ghoussoub (also Ghussup) is a sculptor, installation and performance artist, writer, editor, and publisher who has lived in Britain since she moved there from Lebanon in 1979. She was educated at the American University of Beirut and at Morley College in London. Ghoussoub is the founder of the Saqi Books, a London publishing house known for its translations of contemporary Arabic writing. Like other artists of Arab descent living in exile, she has explored issues of the body in Orientalist images and paintings as well as in advertisements from the Arab world. She has also written extensively on diasporic identities, masculinity and politics, and feminism as it relates to the Arab world. Ghoussoub is the author of a short-story collection, *Leaving Beirut: Women and the Wars Within* (1998). She also co-edits *Abwab,* an Arabic cultural magazine.

In her visual art, Ghoussoub has worked in clay, metals, and resin. Her work from the late 1990s focuses on female divas, whom she finds inspiring because of their ability to connect with everyday people and the unreachability that comes from their iconic status. She has made metal sculptures that deconstruct divas to show this contradictory aspect of their presence in popular culture. For example, her sculptures based on the Egyptian singer Umm Kulthum and the African-American performer Josephine Baker both highlight the outline of their figures and their famous accoutrements (e.g., the handkerchief of Umm Kulthum) as iconic symbols of their work. This focus on musicians reflects her interest in remembering the vitality of her native Lebanon, in contrast to the overwhelming focus in much art and media on its destruction. Like other artists living in exile, her Arab background serves as a source for her art, but she resists strict categorization of her work as Middle Eastern.

GHOZALI, AHMED

[1937–]

Algerian prime minister; ambassador; technocrat.

Ahmed Ghozali studied at the prestigious Ecole des Ponts et Chausées, in Paris. From 1966 to 1977 he was the director-general of SONATRACH, Algeria's na-

tional hydrocarbons enterprise, and then minister of energy from 1977 to 1979. Charged with mismanagement, he quietly returned to prominence as ambassador to Belgium and to the European Community (EC) from 1984 to 1988. After the October 1988 riots, he served as finance minister in the Kasdi Merbah government and concluded Algeria's first agreement with the International Monetary Fund (IMF). Prime Minister Mouloud Hamrouche then selected Ghozali as foreign minister in 1989. President Chadli Bendjedid replaced Hamrouche with Ghozali in June 1991 as violent protests wracked the country as it prepared for parliamentary elections. Ghozali rescheduled the elections, which resulted in the stunning first-round success of the Front Islamique du Salut (FIS) in December. With the second round inevitably ensuring a new Islamist FIS government, alarmed civilian and military elites deposed President Bendjedid and set up the Haut Comité d'Etat (HCE). Ghozali kept his position, which strongly suggested his complicity with the coup. The assassination in June 1992 of Mohamed Boudiaf, the HCE president, was a severe blow to the country and to Ghozali personally. Belaid Abdesselam replaced Ghozali as prime minister in July. Ghozali then briefly served as ambassador to France. In 1999 he founded the Front Démocratique Algérien (FDA). He supported Khaled Nezzar and the army's reputation at the libel trial in Paris in 2002. Nevertheless, Ghozali is critical of the Pouvoir—the dominant governing power establishment—for its lack of attention to social affairs. Ghozali may run for the presidency in 2004.

GHURI, EMILE AL-

[1907–1984]

Greek Orthodox Palestinian activist.

Emile al-Ghuri was born in Jerusalem and studied at Saint George's School. He went to the United States in 1929 to study at the University of Cincinnati, where he received his M.A. in political science in 1933. Upon his return to Jerusalem, he published the *Arab Federation,* an English-language weekly which was later closed down by the British authorities in Palestine because of the political line it had adopted. In 1933, he was elected a member of the Arab Executive. Al-Ghuri published the weekly *al-Shabab* (Youth) in 1934 and was later on the staff of the pro-Hajj Amin al-Husayni, mufti of Jerusalem, English-language weekly *Palestine and Transjordan.* Between 1936 and 1939, he was sent on propaganda and fundraising missions to England, the United States, and the Balkans. He quickly joined the ranks of his country's political elite, becoming in 1935 the secretary-general of the Husayni-led Palestine Arab Party. He later joined al-Husayni in Iraq after the outbreak of World War II. As an active mufti supporter, al-Ghuri was pursued and captured by the British in Iran in September 1941 but was allowed to return to Palestine the next year. Until 1944, the British authorities in Palestine prohibited him from engaging in politics. In 1944, he reorganized the Palestine Arab Party, which was replaced two years later by a reconstituted Arab Higher Committee. He joined this body of Palestinian politicians and represented it at the London Conference on Palestine (1946–1947) and at several United Nations conferences between 1948 and 1950. Throughout his political career, al-Ghuri enjoyed the support of the mufti and some of his closest associates. He served for many years on the Arab Higher Committee and after 1948 represented it in various Arab and international forums. He also occupied a number of senior positions in the Jordanian government between 1966 and 1971 and wrote several books on the Palestinian cause, including *Filastin,* and on Arab nationalism, including *Harakat al-Qawmiyya al-Arabiyya.* He also wrote a memoir, *Filastin Ibr Sittin Aman.*

GIA (ARMED ISLAMIC GROUPS)

Algerian terrorist group.

Among the many terrorist groups in the Algerian civil war, the Armed Islamic Groups (Groupes islamiques armés, or GIA) were the most radical and

The Groupes Islamiques Armés, or GIA, is an Algerian terrorist organization formed in 1991 in response to the government's repression of a strike protesting electoral laws that favored the National Liberation Front. Although in the early 1990s the GIA contained as many as seventy groups, by 1997 its numbers had fallen considerably. © AFP/Corbis. Reproduced by permission.

destructive. According to a report of French secret services in 1993, the GIA was comprised of seventy groups leading noncoordinated actions in northern Algeria. The appearance of these autonomous groups goes back to the Algerian government's repression of the unlimited general strike announced by the FIS (Islamic Salvation Front) in May-June 1991 to protest against the enactment of an uninominal electoral law with two rounds and an electoral redistricting putatively designed to favor the FLN (National Liberation Front). The most active and publicized group of the GIA was led by Mohamed Allel; it became famous in the working-class districts of Algiers for attacking police and regime representatives.

After the cancellation of the 1991 elections and the arrest of at least 4,000 Islamist activists, the radicalization of the movement became irreversible. An important leader was Mansouri Miliani, former brother-in-arms of Mustapha Bouyali, the founder of the Armed Islamic Movement (Mouvement islamique armé, or MIA) in 1982 who was killed in 1987. According to the testimony of a former Algerian fighter in Afghanistan, Slimane Rahmani, the armed movement was launched in military training camps in Pishawar, Pakistan, by two Algerian mercenaries in the Afghanistan war against the Soviets, Nourredine Seddiki and Sid Ahmed Lahrani. Miliani, the head of this group of about 100 fighters, was assisted by Abdelhak Layada, Moh Leveilly, and Omar Chikhi.

Upon the arrest of Miliani in July 1992, Moh Leveilly became for a short time amir (leader) of the GIA, which by that time was composed of several cells of ten to twenty terrorists each. He was neutralized quickly by the Algerian army during a secret meet-

ing with Abdelkader Chabouti, chief of the Islamic State Movement (MEI), who wanted to federate all armed groups under the banner of a united Islamic army. Leveilly's first lieutenant, Abdelhak Layada, proclaimed himself national chief of the GIA in September 1992. He gave the movement greater structure and led it to spread its fighting beyond the Algiers region. According to the investigation led by the journalist Hassane Zerrouky, Layada divided the Algerian territory into nine military areas under the authority of a national amir who presided over a consultative assembly of lieutenants and regional chiefs. At the head of every area, he named a regional amir who commanded several operational units (katibate) and was assisted by an officer legislator (thabit char'i). To assist himself, Layada named two lieutenants, Mourad Sid Ahmed and Cherif Gousmi, and two spiritual guides (mounther) empowered to enact fatwas to legitimize their actions, Omar Eulmi and Ikhlef Cherati. According to the Algerian authorities, the Islamic Armed Groups remained in contact with one another by means of "links agents" living abroad, particularly in London, and by communicating via satellite telephones.

With this new organization in place, the GIA began broadcasting every Wednesday via clandestine radio (Wafa) information on their groups' activities. In addition to attacking regime representatives and the security forces, it formulated new aims: the elimination of the French-speaking elite by the murder of intellectuals and journalists; the destabilization of the economic potential of Algeria by attacks against infrastructure; and the diplomatic isolation of the country by the murder of foreign workers and attacks against foreign interests. In response, the Algerian army intensively targeted Islamist bases, killing many activists including Mourad Sid Ahmed, and struck hard blows against urban guerrilla warfare. Thereafter, the GIA chiefs announced the union of Islamic Armed Groups and published a bulletin in which they presented the new program of the unified GIA: institution of a caliphate in Algeria and the creation of a government which would include some influential members of the FIS. At the same time, the group intensified its campaign against civilians and foreigners, killing several Algerian intellectuals and attacking the residential neighborhoods of Aïn Allah, where five employees of the French consulate at Algiers were killed. In retaliation, the French government arrested and expelled twenty Islamist activists who had been living in France since 1992.

Jamel Zitouni, amir from October 1994 to July 1996, spread the Algerian civil war to France, where several bombings were perpetrated in August 1995 by his sleeping terrorists cells in Europe. He also organized an attempt on the life of Shaykh Sahraoui, a historic member of the FIS, the hijacking of an Air France plane on 24 December 1994, and, three days later, the murder of four Catholic clerics at Tizi Ouzou. From January 1995 the GIA multiplied their attacks against security forces and set up road blocks to kill car and bus passengers, and the number of their victims reached 200 per week. In March 1996 they killed seven monks at Tibéhirine. Djamel Zitouni, among the most bloodthirsty of the GIA chiefs, took credit for this action, but according to some sources he may have been a double agent controlled and manipulated by the Algerian security forces. He reigned as a king in the Islamist bases of Algiers, Sidi-Bel-Abbes, Bejaïa, and Djijel, and he commanded 4,000 men (600, according to the Algerian authorities). His brutal methods earned him the nickname "Green Pol Pot." When he died in July 1996, Antar Zouabri became head of the GIA. Zouabri, who was as violent as his predecessor, organized collective massacres in Mitidja villages that caused more than 1,500 civilian deaths. These crimes were denounced by most Islamist groups throughout the world and and damaged the cohesion of the GIA, which fell apart into small autonomous groups. Most of these groups rallied around the cease-fire initiated by the Islamic Salvation Army (AIS) in October 1997. After Zoubri's death in September 1997, Ouakali Rachid proclaimed himself amir of what remained of the GIA, but it progressively weakened. During their decline from 1998 onward, the Islamic Armed Groups, weakened greatly by the vigorous campaign of the Algerian army and deprived of their support network in Europe and in the Arab world, took refuge in mountain area, from which they launched raids and depredations against travelers and isolated villages.

GIADO CONCENTRATION CAMP

An internment camp for Libyan Jews.

During World War II, Giado was built by the Italian fascist authorities on the Tripolitanian plateau, about 150 miles (240 km) south of Tripoli. It was established after the second British occupation of Cyrenaica, which ended 27 January 1942. The Italians, who had colonized Libya, decided on a "cleaning out" *(sfollamento)* of all Jews from the province. Over 3,000 Jews were taken to internment and labor camps in Tripolitania between May and October. About 75 percent of these were sent to Giado. The camp was administered by Italian officers. The guards included both Italians and Arabs. Rations and sanitary conditions in Giado were very poor, and a typhus epidemic broke out in December 1942.

By the time the British liberated the camp during the North Africa campaign, in late January 1943, 526 of the inmates had died. Others had been shot trying to escape as the Axis forces retreated westward.

NORMAN STILLMAN

GIBRAN, KHALIL

[1883–1931]

Lebanese author of prose and poetry.

Gibran (Jubran Khalil Jubran) was born at Bshirri in northern Lebanon and in the late 1880s moved to the United States with his sisters. He is known in the West for his book *The Prophet,* and in the Arab world for his contributions to the reformation of the modern usage of the Arabic language. He wrote in prose and poetry, and excelled in both. He ignored the rigid, traditional forms and called for free artistic expressions. Gibran was nonconformist: He opposed the dominance of the clerical establishment and called for the modernization of the Middle East without copying Western models.

Gibran's works in Arabic and in English celebrate individual freedoms and warn against sectarianism and class oppression. His attacks on the religious establishment made him enemies among leaders of the Lebanese church. After his death, however, Lebanese revered his memory and treated him as a cultural icon. Gibran never viewed himself as a Lebanese nationalist, however, but wrote as a Syrian Arab. His experience in the United States led him and other Arab writers and poets to form a literary society, Al-Rabita al-Qalamiyya (Pen's League), which played an important role in the cultural revival in the Middle East in the first two decades of the twentieth century.

AS'AD ABUKHALIL

GILBOA, AMIR

[1917–1984]

Israeli poet.

Amir Gilboa was born in the Ukraine and arrived in Palestine in 1937 as an illegal immigrant. Until 1942, when he joined the Jewish brigade of the British army, he worked in agricultural settlements, stone quarries, and orange groves. As a member of the Eighth Army, he participated in its activities in Egypt, North Africa, Malta, and Italy. At the end of World War II he was active in the transfer of Jewish Holocaust survivors from Europe to Palestine. Gilboa fought in the Israeli War of Independence of 1948 and his experiences play a major role in his poetry. He served as the editor of Massada Publishing in Tel Aviv, published nine volumes of his own poetry and received numerous literary awards, including the Israel Prize for Poetry and the New York

University Newman Prize. A collection of his poetry in English translation, *The Light of Lost Suns,* was published in 1979.

Gilboa's early poetry is marked for its figurative expressionism, its prophetic voice, and intense tonality. Repetition, imagination, and colorful carnivalism are characteristic devices. His later poetry combines lyrical expression with nationalistic statements through references to biblical personae and events. The narrative voice often speaks from the excited and naive viewpoint of a child, creating poetic irony and ambiguity.

GIZA

A middle Egyptian province (governorate).

West of Cairo, Giza (also Jiza) has an area of 32,878 square miles (85,153 sq km) and a 1986 population estimated at 3.7 million. Famous for its three large pyramids and Sphinx, Giza lagged behind other parts of Egypt in converting to Christianity and then in embracing Islam. Its capital and main city, also called Giza, had some 1.9 million inhabitants, according to the 1986 census estimate. Several of the other towns and villages of Giza province—Duqqi and Imbaba—are suburbs of Cairo, and it has grown rapidly since World War II.

GLAWI FAMILY, AL-

Powerful Moroccan family of the late nineteenth century.

Originating from the Glawa tribe in the High Atlas mountains in Morocco, the al-Glawi family played an important role in the nineteenth century in linking the tribes of the High Atlas to the Makhzen. Two members of the family contributed to Morocco's recent history.

Madani Glawi (1863?–1918) inherited the chiefdom of Tlwat from his father Mohamed Ibabat, who was an *amghar* (tribal leader). He built a close relationship with the sultan Mulay Hassan, whom he received in Tlwat in 1893 in the High Atlas. After the sultan gave him the title of caliph (Islamic leader) of Tafilalt, he became a *qaʾid* (chief) of the Atlas. His power grew and his authority became widespread when he supported Mulay Hafid against his brother Mulay Abd al-Aziz and became the prime minister of the Cherifian government. Glawi ultimately built a powerful chiefdom in the High Atlas after 1913, when the sultan Mulay Youssef came to the throne under the French protectorate of Morocco.

Thami Glawi (?–1957), Madani's youngest brother, became pasha of Marrakech in 1909. With French intervention in Morocco, his authority grew even more. After the death of his brother, he inherited his power over the surrounding tribes of Marrakech. He stayed faithful to the French. When Sultan Sidi Muhammad Ben Yussef (later King Muhammad V) returned from exile in 1956, he gave him the *aman* (forgiveness). He died 23 January 1957.

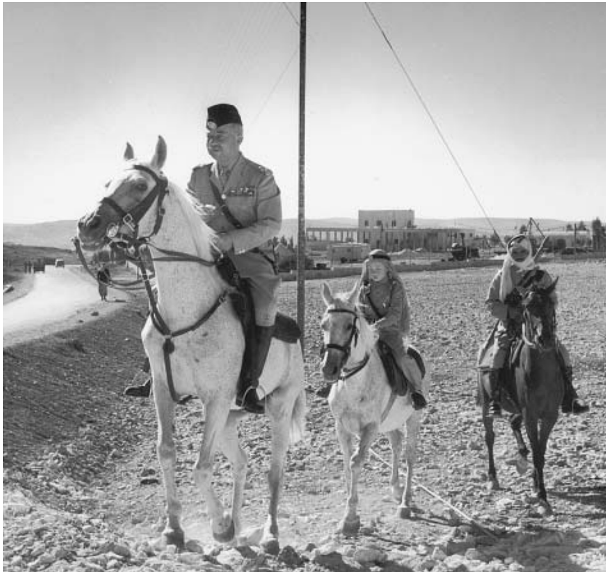
GLUBB, JOHN BAGOT

[1897–1986]

British officer who served the Arabs in Iraq and Transjordan during the British mandate, and later in Jordan.

Known as Glubb Pasha, chief of staff of the Arab Legion (1939–1956), John Bagot Glubb belonged to a West Country British family with a long tradition of service to the crown. He followed his father, Major General Sir Frederick Glubb, into the military. Educated at Cheltenham and the Royal Military Academy, Woolwich, Glubb served in France during World War I. He was sent to Iraq in 1920 and served there during Faisal's monarchy for ten years, first in the army and, after resigning his commission in 1926, as a member of the administration of the British mandated territory.

As administrative inspector in Iraq's southern desert, Glubb's main task was to organize the defenses of the bedouin tribes against raids by the Wahabi troops of King Ibn Saʿud of Saudi Arabia. During this assignment, Glubb acquired his excel-



Sir John Bagot Glubb (1897–1986), or Glubb Pasha, rides through the deserts of Jordan with his young son Godfrey Faris on 20 October 1951. © HULTON/ARCHIVE BY GETTY IMAGES. REPRODUCED BY PERMISSION.

lent command of Arabic, an intimate knowledge of the bedouin tribes, and a profound understanding of Arab history, culture, and traditions.

In 1930, as Captain Glubb, he was sent to Transjordan to pacify the bedouin tribes, who were also being attacked by the Wahhabi raiders from Saudi Arabia and here, too, he achieved remarkable success. When Glubb joined the Arab Legion—Transjordan's army—it was a tiny force with almost no bedouin in its ranks and was under the command of another Englishman, Frederick Peake, called Peake Pasha by the legion. As Peake's second-in-command and from 1939 as commander, Glubb developed the Arab Legion from little more than a gendarmerie into the best-trained, most disciplined, and most efficient of all the Arab armies. His most distinctive contribution, however, was the recruitment of bedouins and their transformation from unruly nomads into disciplined soldiers and loyal citizens. Although recruits from the settled areas of Transjordan continued to predominate, the bedouin became the hard core of the Arab Legion and infused it with the fighting spirit for which it became renowned.

A good soldier and organizer, Glubb was also a very subtle politician. As chief of staff of the Arab Legion he needed to be a good politician, because the legion was the mainstay of the Hashimite regime in Amman. Unlike the officers who were posted to the Arab Legion by the British army, Glubb served under contract to the Transjordan government and therefore owed his allegiance to Amir Abdullah. The British government, however, continued to finance the Arab Legion even after Transjordan became independent in 1946; so Glubb had to serve two very different masters; because of his skill as a politician, he managed to sustain this dual loyalty.

In 1948, Glubb commanded the Arab Legion against the new State of Israel, alongside the other regular and irregular Arab armies. Although the Arab Legion was the only Arab army to distinguish itself on the battlefield, Glubb was blamed for the fall of the cities of Lydda and Ramla and for the failure to capture West Jerusalem. Arab nationalists accused him of deliberately curtailing the operations of the Arab Legion in line with a British plan to partition Palestine between Transjordan and the Jews.

Sir John Bagot Glubb, British soldier and commander in chief of the Arab Legion (1939–1956) sits in a chair, feeling his *mesbah,* or Muslim prayer beads. © HULTON/ARCHIVE BY GETTY IMAGES. REPRODUCED BY PERMISSION.

After the Arab–Israel War of 1948 and the incorporation of the West Bank into the Hashimite Kingdom of Jordan, Glubb prepared the plans for the defense of the enlarged kingdom. He also played a key role in curbing Palestinian infiltration into Israel, because it generated perpetual tension along the border and provoked military reprisals from Israel. Glubb's aim was to keep the border quiet and avoid clashes with Israel's powerful army.

Arab nationalists, inside and outside Jordan, continued to view Glubb as both the symbol and instrument of British imperial domination over the Middle East. Therefore, having a British chief of staff became an increasing liability for the Hashimite rulers of Jordan as the tides of nationalism swept through the Middle East. In March 1956, Jordan's King Hussein abruptly dismissed Glubb and replaced him with a Jordanian chief of staff. Glubb's dismissal temporarily strained the relations between Britain and Jordan, but it also constituted a turning point on Jordan's path to real independence.

Upon his dismissal, Glubb returned to Britain and became a political writer. Of his many books, the most important is his 1957 autobiography, *A Soldier with the Arabs.* A British officer who had served under Glubb in the Arab Legion, James Lunt, wrote a biography of Glubb.

GÖKALP, ZIYA

[1876–1924]

Turkish social and political thinker.

Ziya Gökalp was born in the province of Diyarbekir. At the time of his birth, Diyarbekir contained ethnic groups of Kurdish origin, leading some of Gökalp's political opponents to assert that he was of Kurdish lineage. His father, Tevfik, was director of the provincial archives and editor of the official gazette. Gökalp's education incorporated both Western and Islamic values. Along with religious instruction by family elders, he received a secular education in a military junior high school and a state

senior high school in Diyarbekir. He then entered the veterinary college in Constantinople (now Istanbul), but was expelled in his second year for his membership in the secret Society for Union and Progress. After a brief imprisonment he was exiled to Diyarbekir, where he continued his avid reading in the natural sciences, philosophy, sociology, politics, and pedagogy, and resumed his study of Islamic philosophy, especially Sufism.

Gökalp became secretary of the Chamber of Commerce (1902) and the assistant secretary general of the Provincial Council (1904) of Diyarbekir. In 1908 the Committee for Union and Progress (CUP) appointed Gökalp inspector of its organizations in Diyarbekir, Van, and Bitlis while he continued to serve as inspector of elementary education for the provincial government. In 1910, he became a member of the Central Committee (CC) of the Union and Progress Party and went to Salonika, where he taught sociology at the party school, directed the party's youth department, and continued writing and lecturing. In 1912, after the removal of the CC headquarters to Constantinople, Gökalp was named the first professor of sociology at Darülfünün (now Istanbul University). He was exiled to Malta following dissolution of the last Ottoman parliament in 1919. There he conducted a "one-man university" for the distinguished exiles, many of whom joined the Kemalist nationalist resistance in Anatolia. Upon his release from Malta in 1921, Gökalp returned to Diyarbekir, taught at the secondary school and the teachers' seminary, and continued to publish. He was elected to the Second Grand National Assembly (1923–1927) as a deputy from Diyarbekir, served on the parliamentary committee on national education, and participated in the preparation of the 1924 constitution.

Gökalp did not participate in practical politics in the narrow sense. He was a thinker and writer with a profound sense of responsibility for the public good. He was foremost a social and political theoretician, a public educator, and a formulator of Unionist and Kemalist modernizing reforms. Gökalp was the intellectual leader of modern Turkish nationalism in the transition from the multiethnic Ottoman Empire to the nation-state of the Turkish republic, despite the distance between his thinking and that of the Ottomanist Unionists and the Republican Kemalists. He was the acknowledged mentor of these two movements, although both developed into authoritarian, one-party regimes.

Gökalp's "social idealism" was an attempt at a reconciliation of cultural Turkism, ethical Islam, and European corporatism. His nationalism was based on language, subjective self-identification, socialization, and acculturation in a distinct Turkish culture that was to interact peacefully with other Western cultures. Gökalp called for modernizing reforms in Islamic thought and institutions, the essence of which was a reduction of Islam—for centuries the state religion of the Ottoman Turkish society—into a body of moral norms and codes of social behavior based on the nonorthodox Sufi (mystic) form of Islam. As a follower of Auguste Comte and Emile Durkheim, Gökalp took a lay attitude toward Islam, both in the narrow sense of separation of state and religion and in the wider sense of primacy of rational, scientific thought over nonsecular thought.

Perhaps the more important influence of European corporatist thought on Gökalp's own thinking was the rejection of the individualism of liberal capitalism (without rejecting capitalism in general) and of the Marxist categories of class struggle and classless society. Gökalp followed Durkheim in believing that society is composed not of egoistic individuals or warring classes, but of interdependent occupational groups working harmoniously for the public good. This approach enabled him to take both a sociological view of society and an ideological stand against liberal and socialist politics. His form of "populism" viewed society as an organic whole and called for political representation of interests through occupational corporations, in which capital and labor were integrated and the social being of the individual was realized.

The racist-fascist Kemalist movement of the 1940s, the fascist Nationalist Action Party (1960s–1980), and the Nationalist Work Party tried to interpret Gökalp's thought in a fascist manner. Meanwhile, mainstream Kemalism remained within the confines of Gökalp's corporatism, and his thought continues to dominate Turkish social and political thinking via Kemalism, which remains the official ideology and hegemonic public philosophy of contemporary Turkey.

TAHA PARLA

GOLAN HEIGHTS

A mountainous plateau important militarily as well as for its water resources.

Situated between south Lebanon, south Syria, and northern Israel, the Golan Heights (in Arabic, *al Jawlan*) have an average altitude of 3,300 feet (1,000 m) and they cover an area of approximately 700 square miles (1,800 sq km). Their north-south length is 40 miles (65 km) and their east-west dimension varies between 7 to 15 miles (12 to 25 km). Elevations range from 6,500 feet (2,000 m) in the north, to below sea level along the Sea of Galilee (Lake Tiberias) and the Yarmuk River in the south.

The word *Golan* seems to be related to the Arabic verb *jala* (to circulate or wander about) and to the word *ajwal,* meaning an area that is exposed to dusty winds. After the death of Herod the Great in 4 B.C.E., the Golan must have been given to his son Herod Antipas (died after 39 C.E.), governor of Galilee and Peraea (land east of the Jordan River). The Golan flourished during this period. A large number of towns emerged, including Seleucia, Sogane, and Gamla.

After the defeat of the Byzantine Empire, at the Yarmuk River, all of Syria, including the Golan, ultimately fell into the hands of Muslim Arabs (633–640). After the Umayyads (661–750), the area fell to the Seljuk Turks, Saladin, the Mongols, the Mamluks, and the Crusaders. It was part of the Ottoman Empire from 1516 until the end of World War I, and, in 1920, France received a League of Nations mandate over modern Syria including the Golan.

Between 1948 and 1967, the struggle between Israel and Syria over their demilitarized border zone

MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

was a principal reason behind the Arab–Israel (Six-Day) War of 1967, which ended in Israel capturing the Golan Heights. At the end of the war, the Israeli army was stationed about 22 miles (35 km) from Damascus, while the Syrian army was stationed about 150 miles (250 km) from Tel Aviv. As a result of the Israel–Syria disengagement agreement of the following year, Israel returned to Syria about 40 square miles (100 sq km) of the Golan.

In December 1981, the Likud-led government of Israel's Prime Minister Menachem Begin extended Israeli law, jurisdiction, and administration to the Golan, an action criticized by the Reagan administration and considered "null and void" by resolution 497, unanimously adopted by the United Nations Security Council on 17 December 1981.

Prior to its seizure by Israel, the Golan had a population of approximately 130,000 Syrians living in 139 villages and on 61 farms. By 2003 about 16,000 people remained in five Arab villages. The

The Golan Heights region is a hilly plateau with a predominately rocky terrain located in southwestern Syria. It possesses elevations as high as 6,500 feet and commanding views of Lebanon and Syria to the south and Israel to the west, making it an area of great military importance. **© David Rubinger/Corbis. Reproduced by permission.**

Druze constitute the overwhelming majority of the remaining Syrian population. According to some observers, one reason that the Druze community was allowed to remain was the initial assumption by the Israeli government that the Syrian Druze would cooperate with Israel, along with their coreligionists in the Galilee. Efforts were made to encourage the Golanis to acquire Israeli-citizenship identification cards. By 2003 there were more than thirty-five Jewish settlements, with an estimated population of 15,000, in the Golan. Many of these settlements are on the southern approaches above the Sea of Galilee.

In terms of military significance, the Mount Hermon massif (7,300 ft; 2,224 m) in the north is of exceptional geostrategic value because it offers a commanding position overlooking southern Lebanon, the Golan plateau, and much of southern Syria and northern Israel. To the east, a range of volcanic hills offers downhill access to Galilee in the west and to Damascus in the east. To the west, the Golan plateau overlooks Israeli metropolitan centers.

The Golan is also important for its regional water sources. This is particularly true of the area of Mount Hermon, where the headwaters of the Jordan River lie. Additionally, the Baniyas spring, a major Jordan River source, is located on the lower slopes of the Golan, thus enhancing the latter's importance. To the south, the Sea of Galilee and the Yarmuk River constitute two more important regional water sources.

Peace-negotiations, in which the Golan Heights were a crucial component, have been ongoing intermittently between Israel and the regime of the late Syrian president Hafiz al-Asad beginning in 1991 (with representatives of the Likud government in Israel) and later, in 1992, when the late Yitzhak Rabin assumed the Israeli premiership. In 1994 negotiations were held between the Israeli ambassador to the United States, Itamar Rabinovitch, and Walid Mualem, his Syrian counterpart in Washington. In 1994 and in 1995 meetings took place in the United States between General Ehud Barak, the Israeli chief of staff and General Hikmat Shihabi, his Syrian counterpart. The assassination of Prime Minister Rabin created a vacuum, which interrupted any further discussions for some time. Subsequent attempts at renewing the negotiations remained futile.

MUHAMMAD MUSLIH
UPDATED BY YEHUDA GRADUS

GOLDBERG, LEAH

[1911–1970]

Hebrew poet, literary critic, translator, educator, and children's author.

Born in Kovno (now Kaunas, Lithuania), Leah Goldberg studied at the universities of Kovno, Berlin,

and Bonn. In 1933, she received a doctorate in philosophy and Semitic languages. In 1935, she arrived in Tel Aviv, in British-mandated Palestine, where she published her first volume of poetry, *Tabbe ot Ashan* (1935, Smokerings).

She served on the editorial boards of *Davar* and *ha-Mishmar* and, from 1952, taught literature at the Hebrew University of Jerusalem. In 1963, she became chair of its department of comparative literature, a position she held until her death.

Goldberg wrote numerous volumes of poetry—unpretentious, delicate, and lyric. Except for the Holocaust, her themes are universal rather than Jewish: childhood, love (especially unrequited), aging, and death. She excelled as a translator into Hebrew of classical European authors—Tolstoy, Gorky, Chekhov, Mann, and Ibsen. She was also a successful children's author of twenty books; in later years she took up art and illustrated her own works.

GOLDEN SQUARE

Name given to the four ex-sharifian, pan-Arab Iraqi army officers whose anti-British, pro-Axis politics led to the Rashid Ali coup of 1941 and the war with Britain that followed.

The original "Four" included the leader, Salah al-Din al-Sabbagh, and Kamil Shabib, Fahmi Saʿid, and Mahmud Salman. They organized after the 1936 Bakr Sidqi coup and then joined with three other officers, Aziz Yamulki, Husayn Fawzi, and Amin al-Umari, to form a military opposition bloc to the government. Jamil al-Midfaʿi's government in 1938 tried to transfer the officers out of Baghdad, but succeeded only in making them more politically active.

The officers supported the goals of the Jerusalem *mufti* (chief Muslim jurist), Hajj Amin al-Husayni, who arrived in Baghdad and solicited Germany's help to achieve total Iraqi independence from Britain and the pan-Arab goal of Arab unity of the Fertile Crescent. They opposed Prime Minister Nuri al-Saʿid's severance of relations with Germany in 1939. In 1940 and 1941, the officers and the mufti were in contact with the Japanese and the Italians through their missions in Baghdad and supported Rashid Ali al-Kaylani's government (31 March 1940 to 31 January 1941) as the British pressured Iraq to declare war on Germany. When Rashid Ali resigned, the pro-British regent, Abd al-Ilah, asked General Taha al-Hashimi, who had worked with the Four, to form a government, thinking that he could control the generals. But Taha's weakness and the attempt by the regent to transfer Kamil Shabib out of the capital led them, in collusion with the mufti, to take control of the government in April 1941, with Rashid Ali again as the prime minister.

At the end of the abortive war against Britain in May 1941, the Four fled but were later caught and executed.

GOLDMANN, NAHUM

[1895–1982]

Zionist leader.

Born in Lithuania, Nahum Goldmann spent most of his formative years in Germany, where he obtained a Ph.D. from Heidelberg University and was active in the Radical Zionist faction—a student group on campus at the time. During World War I, he worked at the propaganda division of the German Foreign Ministry and in the 1920s was one of the originators of the German-language *Encyclopedia Judaica,* and later of its English-language edition.

In 1934, Goldmann was appointed the Jewish Agency's representative to the League of Nations in

Geneva. He was a cofounder in 1936 of the World Jewish Congress, of which h e was president from 1949 to 1977. From 1956 to 1968, he was also president of the World Zionist Organization.

In 1940, he moved to New York. During 1947 and 1948, Goldmann was active in London and Washington, soliciting international support for the plan to partition Palestine. He was offered a seat in Israel's provisional government in 1948 but declined. During the early 1950s, he played a key role in negotiating the reparations agreement involving West German payments to Israel. In 1962, he became a citizen of Israel, living his remaining years alternately there and in Switzerland.

After the Arab–Israel War of 1967, Goldmann became increasingly critical of the Israeli government and advocated mutual recognition between Israel and the Palestine Liberation Organization, which most Jewish and Israeli leaders reviled at the time as a terrorist organization. In early 1970, he offered to visit Cairo on a mission of peace in response to an invitation from Egypt's President Gamal Abdel Nasser, but the Israeli government vetoed the idea.

Goldmann was instrumental in the planning of Bet ha-Tefutsot (Museum of the Jewish diaspora) in Tel Aviv, which bears his name in its official title.

GOLESTAN, EBRAHIM

[1922–]

Iranian writer, photographer, translator, publisher, and filmmaker.

Ebrahim Golestan was born in Shiraz. He went to Tehran to attend the University of Tehran, then the only secular college in Iran. He studied law at the university but was attracted to socialist ideas. In 1944 he joined the Tudeh, Iran's most important Marxist political party. In the ideological debates that splintered the party following the Azerbaijan Crisis, Golestan sided with the reformists led by Khalil Maleki and joined him and other dissidents in resigning from the Tudeh in early 1948. That same year his first collection of short stories, *Azar, mah-e akhar-e payiz* (Azar, the last month of autumn), was published. Although he continued to write stories, in the early 1950s his main occupation became filmmaking. During a twenty-year period, Golestan wrote the scripts for, directed, and produced several films. His movie *A Fire* was the first Iranian film to receive an international award, winning a bronze medal at the 1961 Venice Film Festival.

In 1958 Golestan met and hired for his film studio the poet Forugh Farrokhzad. Because he was married and a father, his eight-year relationship with her was controversial. In the mid-1970s Golestan moved to Britain, where he resettled permanently. He continued to write short stories in the 1980s and 1990s. In 2003 his son, photojournalist Kaveh Golestan, was killed by a land mine while covering the U.S. war in Iraq.

GOLESTAN PALACE

A museum built in Tehran, Iran, in 1894, for the Peacock Throne and other royal jewels.

Built in the last years of Naser al-Din Shah Qajar's reign (1831–1896), the Golestan palace, or Rose Garden palace, was a museum for the royal jewels, including the famous Peacock Throne brought by Nadir Shah Afshar (1688–1747) from his expeditions to In-

dia. The construction of the palace took five years, with the personal supervision of the shah. In the upheavals of the tobacco revolt (1891–1892) people resorted to the Golestan Palace demanding justice. Subsequently, fearing for the safety of the jewels, the shah moved them to the royal palace, donating, instead, other precious items to the Golestan. The Golestan Palace also includes other chambers, collectively known as Talar-i Berelian (or Diamond Chamber). The Golestan is still a museum.

Parvaneh Pourshariati

GOLPAYAGANI, MOHAMMAD REZA

[1899–1993]

Iranian religious scholar; the most senior in Qom.

Mohammad Reza Golpayagani began his religious studies in his birthplace of Golpayagan, in central Iran, where his father, Seyyed Mohammad Baqer, was a highly respected cleric of Islam. In 1917, he moved to Arak to join the circle of Shaykh Abd al-Karim Haʾeri, one of the most prominent legal authorities of his day within Shiʿism. When Haʾeri left for Qom in 1922, to reestablish the religious institution in that city, Golpayagani followed him at his invitation and was entrusted by him with the teaching of elementary courses. After the death of Haʾeri in 1937, he graduated to the teaching of jurisprudence, and his lectures, held in the Masjed-e Aʿzam, would often attract as many as 800 students. He attained still greater influence after the death in 1962 of Hosayn Borujerdi, Haʾeri's successor, and assumed the major responsibility for administering the complex of colleges and mosques that make up the religious institution in Qom. By then, he had also attained the position of *marja al-taqlid* (source of imitation), an authoritative guide in matters of religious law.

Unbending and rigorous in his understanding of Shiʿite law, he entered the political arena in 1962 with a denunciation of the redistribution of land by the state as contrary to Islam. Despite the conservatism that this implied, he was supportive of the movement inaugurated in 1963 by Ayatollah Ruhollah Khomeini, and in 1978, when the Iranian Revolution erupted, numerous proclamations condemning the regime of Mohammad Reza Shah Pahlavi were issued over his signature. He consistently refrained from taking a position on the controversies that plagued postrevolutionary Iran, both because of advancing years and because of a fundamentally apolitical disposition. He died on 2 December 1993 and was eulogized by all the leading figures of the Islamic republic.

Hamid Algar

GOLSHIRI, HOUSHANG

[1937–2000]

Iranian fiction writer, poet, essayist, and editor.

Houshang Golshiri was born in Isfahan to a working-class family. When he still was a child, the family moved to Abadan, where his father had found work in the oil industry. The family moved back to Isfahan when Golshiri was in high school, and he completed his secondary education in his native city. He attended college and earned B.A. and M.A. degrees while working to help support his family. His first essays, poems, and short stories were published in literary journals in the early 1960s. In 1965, he and two other Isfahan writers founded *Jong-e Isfahan* (Isfahan anthology), a semiannual short-story magazine that brought Golshiri national attention. In 1969, his novella *Shazdeh Ehtejab* (Prince Ehtejab) was published. It was made into a popular Iranian movie and was translated into English and other languages.

Golshiri wrote against political oppression and censorship, and his efforts on behalf of freedom of expression resulted in his arrest by the SAVAK on three occasions during the reign of Mohammad Reza Shah Pahlavi. After the Iranian Revolution, the government forbade the publication of many of his works. In 1989, one collection of short stories was published in Persian in Sweden. His novel about repression under the Islamic Republic, *Shah-e siyah pushan,* was published in 1990 in English translation as *King of the Benighted.* In 1999, Germany awarded him the prestigious Erich Maria Remarque Peace Prize.

PARDIS MINUCHEHR
UPDATED BY ERIC HOOGLUND

GOLSORKHI, KHOSROW

[1943–1972]

Leftist Iranian poet and advocate of revolutionary commitment in literature, who was executed after a political show trial.

Born in Rasht, Khosrow Golsorkhi became a journalist by profession. In 1972 he was arrested and accused of plotting against the royal family. In fact, the plot was concocted by SAVAK, which used agents provocateurs to string together a dozen leftist intellectuals, some of whom had discussed plans to kidnap members of the royal family and swap them for political prisoners.

Contrary to the usual procedure for closed political tribunals, highlights of the so-called Golsorkhi group's trial were broadcast on Iran's network television. The defendants were expected to recant publicly and appeal to the shah, who would then commute the court's harsh sentences. Tortured and facing the gallows, most recanted and received lesser punishments. However, Golsorkhi, along with the filmmaker Karamat Daneshian, denounced the regime. They were both executed and immediately became heroes to the opposition as well as to the general public. University and high school students went on strike and the defiant duo's names (especially Golsorkhi's, evoking the leftist symbol of the red flower) were commemorated in numerous literary references and popular songs.

AFSHIN MATIN-ASGARI

GORDON, AARON DAVID

[1856–1922]

Jewish pioneer in Palestine; philosopher of Labor Zionism.

A. D. Gordon was born in Tryano, Russia, and died in Palestine. He was educated in both Jewish studies and Russian secular subjects and spent his early adult life as financial manager of the Guenzburg estate. In 1904, when the estate was sold, he went to Palestine. He had been influenced by the secular Hebrew language and literary movement, particularly by the essays of Ahad Ha-Am. In Palestine he worked as a farm laborer, and then he and his family participated in a model cooperative agricultural community, Degania, forerunner of the kibbutz.

Although Gordon never affiliated with any of the political parties of Labor Zionism, he published essays that influenced their activities and ideologies. Extolling the virtues of working on the land, Gordon reflected on the distortions in Jewish society caused by the Diaspora. Jews had not simply been dispersed to many lands but had been denied the opportunities to work in all occupations, especially those that might sustain communal vitality. Gordon argued that only through the ideal of physical farm labor, cooperation, and mutual aid, in a return to the soil on their own land in their own country, would Jews individually and collectively be revitalized.

He was opposed to socialism in its Marxist form and was uninterested in politics, but he viewed humanity as part of the cosmos, with national communities forming and embodying a living cosmic relationship. He rejected urban culture as alienated from nature and from creativity. Just as the exile could be ended by bringing Jews to Palestine, so could the exile be banished from the Jewish soul through agricultural labor. The establishment of an agricultural base would provide the possibility for the creation of a just, humane Jewish society, especially with respect to the Arabs. He has said: "Their hostility is all the more reason for our humanity."

DONNA ROBINSON DIVINE

GORDON, CHARLES
[1833–1885]

British army engineer, explorer, and empire builder active in the Crimea, China, and Africa.

Born into a military family on 28 January 1833, Charles Gordon was commissioned in the Royal Engineers in 1852 and two years later fought in the Crimean War. In 1863 he became commander of the Ever Victorious Army, a Chinese ragtag mercenary outfit, which defeated the Taiping rebellion against the Manchu emperor. The popularity he subsequently won in the British press earned him the nickname Chinese Gordon.

It is, however, through his service in Africa that Gordon attained both lasting fame and martyrdom. In 1874 the viceroy of Egypt sent him to the Sudan and equatorial Africa to suppress the slave trade and extend, through exploration, the southern boundaries of Egypt's African dominions. In 1877 he continued his antislavery crusade as governor general of the Sudan; frustrated in his efforts, he resigned three years later.

When Muhammad Ahmad, claiming to be the Mahdi (the Muslim messiah), led a revolt in the Sudan that threatened Egypt's and Britain's African interests, Gordon was appointed to lead the evacuation of Khartoum's garrison. Disobeying his instructions, he tried to crush the rebellion but failed in the face of overwhelming odds. Besieged in Khartoum, he chose to make a suicidal stand. The Mahdi's troops stormed the city on 26 January 1885, killing Gordon and most of his soldiers.

JEAN-MARC R. OPPENHEIM

GORST, JOHN ELDON
[1861–1911]

Anglo–Egyptian and Foreign Office official, 1886–1907; British agent and consul-general in Egypt, 1907–1911.

The family of John Eldon Gorst was mainly from Lancashire, England; it had prospered under Queen Victoria's reign. Gorst (known as Jack to his friends) was born in New Zealand but was raised in London. His father and namesake, Sir John, returned to England from New Zealand after the last Maori War, where he embarked on an erratic career in Conservative Party politics. Gorst suffered a painful and unhappy childhood, because an abscess in his pelvis kept him bedridden or wearing a brace for almost seven years. Educated in day schools, at home by tutors, then at Eton and at Trinity College, Cambridge, he earned a degree in mathematics in 1882 and was called to the bar in 1885. Rather than face exclusion, like his father, from the largely aristocratic Tory Party inner circle, Gorst entered the diplomatic service in 1885; he was sent to Egypt.

Egypt was still formally under the sovereignty of the Ottoman Empire, but Muhammad Ali Pasha had managed to make it a virtually independent state from 1805 until 1842, when the Ottoman sultan recognized his right to pass the control of Egypt on to his descendants. Because of the building of the Suez Canal and European greed, Egypt became burdened with financial debts. Both France and Britain intervened and, in 1882, British troops occupied Egypt. By 1886, when Gorst arrived, Sir Evelyn Baring, later the Earl of Cromer, was consolidating his power as Egypt's de facto ruler. Gorst learned Arabic well enough to bypass an interpreter and cultivate friendships among the Egyptian Ottoman elite, including Khedive Abbas Hilmi II. Between 1890 and 1904, Gorst distinguished himself at Egypt's ministries of finance and interior. He helped organize and recruit Englishmen to extend British control in Egypt and the Sudan. In 1898 he succeeded Sir Elwin Palmer as financial adviser in Egypt—the most influential post after Cromer's. In 1904, Gorst, now Cromer's heir-apparent, returned to the Foreign Office, especially to act as Cromer's agent there.

In 1907, the Liberal cabinet sent Gorst back to Egypt to reduce Cromer's autocracy and to give selected Egyptians limited responsibility for their

internal affairs. This "new policy" of "conciliation" and "moderation" would, the cabinet hoped, diminish Egyptian nationalism and appease hostile critics in Britain and Egypt. By working with the Egyptian ministers and the khedive, Gorst quickly and successfully undermined the nationalists. Unlike Cromer, he did not usually bully the Egyptian Ottoman elite.

Gorst, however, made three major mistakes. First, he alienated the Anglo–Egyptian officials and influential circles in Britain by reducing their influence on the veiled protectorate over Egypt. Second, in 1908, he appointed Boutros Ghali, a Coptic Christian, as prime minister to replace the elderly time server, Mustafa Fahmi. Ghali was able but hated by the nationalists for his record and distrusted by many Muslims for his faith. Third, Gorst sought in 1909 and 1910 to extend the Suez Canal Company's concession, mainly to provide development funds for the Sudan. He lost Ghali and the experiment in limited self-rule to a nationalist assassin, and a defiant Egyptian General Assembly rejected the concession extension.

Gorst's last year as British agent had an element of anticlimax. Despite alarmists who predicted further trouble for the British in Egypt, little or nothing occurred. Although his health deteriorated rapidly, Gorst's control and British influence in Egypt did not. It was enough for the agency to warn, bribe, or deport certain nationalists, suppress so-called seditious periodicals, and indulge in a limited amount of counterpropaganda.

Gorst died of cancer in July 1911, in Castle Combe, England. The khedive, whom he had befriended, rushed to comfort him on his deathbed.

GOVERNMENT

Exercise of authority over and the performance of functions for a political unit; usually classified by the distribution of power within it.

The modern Middle East is a large and diverse region, the differences well illustrated by the structures and dynamics of governments in the area. There are nearly as many types of government as there are states, and many of the systems undergo almost constant change as the need to accommodate domestic and international pressures emerges. Since the terrorist attacks of 11 September 2001 some states are seen by the United States and other nations as failed or rogue states that pose an imminent threat to world security, and international forces have compelled "regime changes" in the region (Afghanistan, Iraq).

Constitutional government is not deeply rooted or widespread in the Middle East. Israel's democracy rests in part on a series of basic laws that provide a framework for governmental action rather than on a formal written constitution, but this does not affect its role as a parliamentary democracy. Syria has a constitution with the trappings of constitutional government, yet hardly qualifies as a democratic regime. Other states have written constitutions, but these rarely provide a clear guide to governmental action. The Republic of Turkey, however, is a significant exception.

The legislative institutions of Middle East states generally are limited in number and power. In much of the Middle East, the legislatures are rarely representative bodies, although when present they often perform useful functions. In some of the Persian Gulf states, such as Saudi Arabia, Oman, and the United Arab Emirates, there exist consultative bodies that generally serve at the pleasure of the ruler but also tend to legitimate the ruler's actions. This function has proven particularly critical in times of crisis and challenge to the regime. In some instances elected (although not in wholly unfettered processes) legislatures are involved in lawmaking and engage in criticism of the regime despite regime-imposing limitations. Such legislatures have existed in Egypt, Iran, Iraq, Jordan, Tunisia, Morocco, Algeria, Syria, and Yemen. Qatar, Bahrain, and Kuwait experiment with such systems, whereby the democratization process in Kuwait after the lib-

eration from Iraqi occupation was slow. The form of legislative dynamic most familiar to Western observers exists in Israel and Turkey (and did exist in Lebanon until the 1975 civil war). In Israel the parliament has antecedents in the British model. The Turkish government has been subjected to periodic military interference, but parliament has been empowered to bolster Turkey's membership plea for the European Union. In both countries legislatures are freely elected, real political opposition exists, and multiparty competition is the norm.

Throughout most countries of the Middle East, political opposition is still controlled, as are elections. Morocco is undergoing a constitutional reform since the coming into power of King Mohammed VI in 1999. The recent dramatic change in the foreign policy of Libya has not yet changed the autocratic regime within. Algeria is still in a process of reconstruction of civil society, and the reform process in Tunisia is still slow as of early 2004. As in Morocco the key to democratization in all these countries is an approach to give human rights (not at least the rights of women) a prominent place on the reform agenda.

The politics of the Middle East are dominated mostly by the individuals of the executive branches of government who control a country's system and its decisions. More often than not, this is a single authoritarian individual, whether his title is king, prince, general, or president. Most Middle Eastern governments can be classified as authoritarian; the autonomy of their political institutions is limited, and there are serious constraints on personal political freedoms. Individuals' political rights and personal freedoms are not accorded considerable attention in most of the region's systems, and are rarely guaranteed. Nevertheless, despite the range and extent of government control over the public sector and formal governmental activity, totalitarian regimes are not a conspicuous regional feature, as there is often a clear separation between the public and private sectors, with the private sector insulated from governmental interference.

Forms of Government

Authoritarian systems include several major forms of government, including monarchy (absolute or constitutional) with a king, prince, or sultan at its head. The monarchic principle is firmly rooted in Middle Eastern tradition and history. Such leaders—caliphs, sultans, shahs, khedives, shaykhs, and amirs—have held the reins of government in some areas for centuries, often sustaining control through hereditary succession. Monarchies have been seen as legitimate forms of government, even if individual monarchs were given to excesses in the assumption or exercise of power. Monarchies were established by the British, or at least with their acquiescence, in Iraq and in Transjordan during their respective mandates. The coup in Iran after World War I shifted dynasties, but monarchy was retained until the Islamic Revolution in 1979. Egypt retained its monarchy until 1952 and Libya until 1969; Morocco, Jordan, and the Persian Gulf states still maintain the tradition of monarchical rule. Turkey's caliphate-sultanate was terminated after World War I; the imamate of Yemen survived until the 1950s. The formal change from monarchy to republic does not, however, assure an end to personal control of the affairs of state. On the contrary, often the deposed monarch has been succeeded by a popular leader or dictator, such as Mustafa Kemal Atatürk in Turkey, Gamal Abdel Nasser in Egypt, or Saddam Hussein in Iraq.

A republican form of government was formally established during the French mandate over Syria and Lebanon, and these two states emerged from French control after World War II as republics. Nevertheless, they soon moved in very different directions, with Lebanon retaining at least the form of a republic and Syria establishing a single-person system, which has been dominated by the al-Asad family since the early 1970s.

Political pluralism is a rare feature in the Middle East, restricted to Israel and Turkey and, arguably, Lebanon and some minor Gulf states. In Israel, the tradition of proportional representation and coalition government, which originated in the British model for the prestate Zionist structures in Palestine, has helped to generate party pluralism. In Lebanon, the National Pact of 1943 divided elected and appointive government positions proportionately among the various religious denominational groups. Although it has survived since the French mandate and has been modified various times since, its premise of proportional ethnic and religious representation remains a central feature of Lebanese politics, albeit buffeted by civil war. Turkey is a

prominent example of a state that has moved from a one-party to a multiparty system since 1945.

Periodically, suggestions have been advanced for political change and reform as well as for further democratization of the states in the region, but these have rarely advanced beyond the stage of pronouncement, thereby allowing the retention of existing structures and types of government. As part of its "War on Terror," the administration of U.S. president George W. Bush has argued for a democratization of the region, whereby the use of foreign force for such regime changes is seen as a legitimate tool. The transitional constitution in Iraq may pave the way for such approaches, as it is a consensus of major ethnic and religious factions under U.S. guidance.

Islamic governments (theocracies) have been the exception, not the rule, in the Arab world—Israel is a Jewish state but not a theocracy, and Turkey abolished the caliphate in the 1920s and proclaimed itself a secular state. An Islamic government was installed in Iran only after the Iranian Revolution and the ouster of the shah in 1979. The role of Islam in government has varied. Most Islamic states are so described because the majority of their populations are Muslims and they utilize elements of Islam to guide their activities. Many of their constitutions include provisions that the state is Islamic, that Islam is the established religion, or that certain officials (generally, the head of state) must be Muslim, but in most states some of the elements of Islam coexist with extensive borrowings from Western and secular conceptions of government and political life. In some states, Islam has been used as a mechanism for achieving and sustaining the legitimacy of the regime; in others it has been a mobilizing force to generate popular opposition to government policies. The Iranian revolution (1979) established a regime in which Ayatollah Ruhollah Khomeini and the clerics who supported him dominated the executive, legislative, and judicial branches of government as well as the military, the media, and the Revolutionary Guards, and traditional Islamic law was enshrined as the law of the land. The structure of government was one peculiar to the Shiʿite system of Iran as molded and guided by Khomeini; it achieved its form only after significant internal discord among varying interpreters of the legacy of Shiʿism. The Iranian model has not been emulated in other states, and it is under pressure in Iran itself. No Arab country has yet formally established an Islamic government, although Saudi Arabia has many of the trappings, including a *shariʿa*-based legal system and the Custodian of the Two Holy Mosques (king) as head of state (king).

BERNARD REICH
UPDATED BY OLIVER BENJAMIN HEMMERLE

GOZANSKI, TAMAR

[1940–]

Knesset member; leading figure in the Israeli Communist Party.

Born in Petah Tikvah, Israel, Tamar Gozanski received her master of science in economics at the State University of Leningrad. She served in the twelfth through fifteenth Knessets (during most of the 1980s and 1990s) as a member of RAKAH (the Israeli Communist Party). While a member of the Knesset, she played key roles on the following committees: Labor and Welfare, Early Childhood, Advancement of the Status of Women, Foreign Workers, Special Committee for School Dropout Rates, and Parliamentary Inquiry Committee on Trafficking in Women.

Gozanski's public activities include membership on the Political Bureau of the Israeli Communist Party and serving as deputy chairperson of the Council of the Democratic Front for Peace and Equality, the membership of which is predominantly Arab. Her publications include *Economic Independence: How?* (1969) and *The Development of Capitalism in Palestine* (1988). She is a frequent contributor to the newspapers *Ha'aretz, Yediot Aharanot,* and *Zu Haderekh.*

Gozanski has been a consistent supporter of Arab civil liberties and has long advocated full Israeli withdrawal from all Palestinian territories. She sponsored numerous bills in the Knesset to assist workers, the poor, and those living below the poverty line—Jews and well as Arabs—in Israeli society. She is fluent in Hebrew, Russian, and English. Gozansky, a veteran member of RAKAH as well as HADASH/DFPE, the Jewish-Arab Democratic Front for Peace and Equality, was the last Communist to hold a Knesset seat.

GRAND MOSQUE

The most important mosque in Islam and destination for Muslim pilgrims from around the world.

The Grand Mosque is located in Mecca and known in Arabic as *al-Masjid al-Haram* (the Mosque of the Holy Sanctuary). Around the year 622 (the year 8 hijri in the Muslim calendar) the prophet Muhammad made into a mosque the sacred precinct around the Kaʿba, the well of Zamzam, and the Maqam of Abraham. In keeping with the needs of the growing community of worshipers, the mosque was enlarged and embellished with collonades and minarets. In its large courtyard with the Kaʿba in the center were constructed four shelters *(maqams),* to be used during prayer times by the prayer leader (imam) for each of the main schools in Sunni Islam (Hanbali, Maliki, Shafiʿi, and Hanafi). It was probably the first monumental mosque in Islam, constructed before the Al-Aqsa Mosque in Jerusalem.

Major modifications were made from 1572 to 1577, including the construction of a series of small domes to replace the flat roof covering the mosque's interior spaces. The most recent extensions and improvements were begun in 1991. The Grand Mosque is the devotional focal point for Muslims around the world, who face in its direction whenever they pray. Historically a center for intellectual life, the mosque is still used for teaching and research.

GRAZIANI, RODOLFO

[1882–1955]

Italian military officer.

Rodolfo Graziani first came to prominence as the conqueror of Tripolitania in 1925, during the second Italo–Sanusi War. In 1929, under the direction of the new governor of Tripolitania and Cyrenaica, Marshal Pietro Badoglio, he completed the conquest of the Fezzan. In 1930, General Graziani was made vice-governor of Libya and military governor of Cyrenaica, and during the next year, he completed its pacification using brutal and ruthless tactics. The nomadic population of northern Cyrenaica was herded into detention camps; a wire fence was constructed along the northern Cyrenaican–Egyptian border and the Sanusi *zawiyas* (Islamic religious centers) were destroyed. Graziani's tactics reached their peak with the public execution of the veteran resistance leader, Umar al-Mukhtar, at Soluk on 16 September 1930. Graziani went on to succeed Marshal Balbo as governor of Libya on the latter's death in action in Tobruk in June 1940.

GREATER SYRIA

Pre-1914 name for present-day Syria, Lebanon, Israel, and Jordan.

Until World War I the name Syria generally referred to Greater or geographical Syria, which extends from the Taurus Mountains in the north to the Sinai in the south, and between the Mediterranean in the west and the desert in the east. The name was first given by the Greeks to the city of Tyrus (now Tyre)—Sur in Arabic—and then applied by them to the whole of the province.

The early Arabs referred to Greater Syria as Bilad al-Sham; in Arabic *al-Sham* means left or north. Bilad al-Sham is so called because it lies to the left of the holy Kaʿba in Mecca, and also because those who journey thither from the Hijaz bear to the left or north. Another explanation is that Syria has many beauty spots—fields and gardens—held to resemble the moles *(shamat)* on a beauty's face.

The term *Syria,* referring to greater or geographical Syria, began to be used again in the political and administrative literature of the nineteenth century. The Ottoman Empire then established a province of Syria, and more than one newspaper using the term *Suriyya* in its name was published at the time. In 1920, Greater Syria was partitioned by the Allies of World War I into present-day Syria, Greater Lebanon, Palestine, and Transjordan.

GREATER SYRIA PLAN

Plan for unification of the central regions of the Middle East.

Championed by King Abdullah of Transjordan, the Greater Syria plan was the expression of an old dream to unify Syria, Lebanon, Palestine, and Jordan. After Faisal's kingdom in Syria collapsed in 1920, Abdullah tried to unite Transjordan and Syria under his rule, and throughout the 1930s, he kept the dream alive for the Hashimites. Although he received little encouragement from British officials, his ideas revived after World War II and met with the approval of Nuri al-Saʿid of Iraq; certain aspects of the program were incorporated into the Arab League charter in 1945. Most Syrian leaders, however, not to mention those of Lebanon and Palestine, were against a Hashimite-led Greater Syria and distrusted Abdullah accordingly. Although the Syrian Social Nationalist Party of Antun Saʿada supported the scheme, the rest of the Syrian leadership rejected it, including the first president of independent Syria, Shukri al-Quwatli, and his successor, Husni al-Zaʿim. With the assassination of Abdullah in 1951, the Greater Syria plan lay in ruins, though it was kept alive by Nuri al-Saʿid until his untimely death in 1958.

GREAT GAME, THE

Phrase coined at the beginning of the nineteenth century, referring to the imperial competition between Britain and Russia over control of southern central Asia.

Thanks in part to Rudyard Kipling, mention of "The Great Game" conjured up images of dashing heroism in the wilds of the Afghanistan mountains. While this romanticism was certainly a part of the game, it was more often played by politicians in London and St. Petersburg than by adventurers in the steppe.

GRECO–TURKISH WAR (1897)

Brief war won by Turkey but also benefiting Greece due to the intervention of major European powers.

The Greco–Turkish War of 1897 ended in an easy victory for Turkey. It began in April 1897 with clashes across the Greco–Turkish border, which at the time ran between Thessaly and Ottoman-held Macedonia. The hostilities ended in May 1897 when the Turkish army drove the Greeks back deep into Greek territory.

The war grew out of tension between Greece and Turkey that was fueled by a Greek uprising on the Ottoman-controlled island of Crete. Calling for a more dynamic stance by Greece toward Turkey, the Greek nationalist organization Ethniké Hetairia (National Association) orchestrated an incursion into Turkish territory by Greek irregular troops (March 1897), apparently with the knowledge of the Greek government. Although Turkish forces repulsed the irregulars, the incident led to a break in diplomatic relations between Greece and Turkey and a massing of their respective armies on the mountainous frontier between Greek Thessaly and Ottoman Epirus and Macedonia.

The Greek army, consisting of two divisions, was unable to capitalize on its early incursions across the Macedonia–Thessaly border and suffered defeats in several battles around the mountain passes between Macedonia and Thessaly south of Mount Olympus. The Greek front collapsed on 12 April 1897, and the Greek forces began to retreat into the Thessalian plain. Within two weeks and with little resistance, the Turkish army controlled all of Thessaly, including its major towns of Larissa and Volos. There was relatively little activity on the western front in Epirus, where the Turkish army successfully repulsed the Greek offensive.

The war came to an end when the advancing Turkish army scored another two victories in battles on the mountains that divide the Thessalian plain from the rest of Greece, thus consolidating its control over Thessaly. The danger that further Greek territories would fall to the Ottomans prompted Russia's Czar Nicholas II, with the support of other European governments, to intervene and persuade Sultan Abdülhamit to agree to a cease-fire; it was signed by the combatants on 7 May 1897, although the end of the war was not formally agreed upon by the Greek and Turkish governments until November 1897. Because of the involvement of Russia and the other European powers in the resolution of the conflict, the Ottoman Empire gained very little from its victory except monetary compensation and slight changes to its borderline that it considered strategically advantageous. In an important gesture that served to acknowledge Greece's original grievances, the European powers prevailed upon Abdühamit to accept previously Ottoman-ruled Crete as an autonomous region.

Greek troops in Thessaly. The inadequately prepared Greek combat forces numbered around 100,000 men, of which approximately 500 were lost. In comparison, Turkish forces numbered around 400,000, with 1,500 losses. **© CORBIS. REPRODUCED BY PERMISSION.**

UPDATED BY ERIC HOOGLUND

GREEKS IN THE MIDDLE EAST

Greek communities in the Middle East, especially in Egypt, once played a vital economic role.

Once significant, the Greek presence in the Middle East is currently limited to about 6,000 persons in Egypt (primarily in Cairo and Alexandria), and it is much smaller in the Sudan, the Arabian Peninsula, and elsewhere in the region. (No official statistics are available to provide reliable figures.)

The geographical proximity of the Middle East to the Greek islands and mainland, the development of Greek maritime trade in the seventeenth century, and the existence of Greek Orthodox patriarchates in Alexandria, Antioch, and Jerusalem ensured that there would be small numbers of Greek merchants and clerics in the Middle East around 1800. Their numbers began increasing substantially in the nineteenth century, after Muhammad Ali, Egypt's ruler, invited foreign entrepreneurs, including Greeks, to Alexandria to help modernize Egypt. The greatest number of resident Greeks in Egypt's history—99,793 persons, of whom 76,264 were Greek citizens—was recorded in Egypt's annual census of 1927. Constituting the largest of the numerous foreign communities inhabiting Egypt from the mid-nineteenth through the mid-twentieth century, the Greeks were a socially diverse group that ranged in occupation from wealthy bankers and exporters to employees in the service sector and even factory workers. Smaller Greek communities of a few thousand also could be found in Sudan, Palestine, and in cities along the North African coast. The end of the capitulations in Egypt (1937) signaled the onset of the decline in numbers of Greeks in Egypt, and the Egyptian Revolution of 1952 accelerated this decrease. The Suez Crisis of 1956 reinforced the trend, although a large part of the Greek community supported Egypt in its claim on the canal. The nationalization measures taken by the Egyptian government in 1963 caused the numbers of Greeks remaining in Egypt to fall to a few thousand.

Greek Orthodox clergy perform the annual Holy Week reenactment of Christ's "Washing of the Feet" of His apostles. A priest humbly washes the feet of twelve church members. **© Hanan Isachar/Corbis. Reproduced by permission.**

Spread out across the country, the Greeks in Egypt were formerly to be found even in small towns in the Nile delta and in upper Egypt, and they formed the largest foreign communities in Alexandria, Cairo, Port Saʿid, and Suez. In 1927, out of 99,605 foreign citizens residing in Alexandria, over a third (37,106) were Greek citizens, and the same proportion held for the other major cities. As they had been in Greece, the Greeks in Egypt were Greek Orthodox, and they continued to use their native tongue. With a number of important Greek journals and literary societies based there, Alexandria became a very important Greek literary center in the first three decades of the twentieth century. The Alexandrian Greek poet C. P. Cavafy (1863–1933) gained an international reputation and Alexandrian writer Stratis Tsirkas (d. 1979) enjoys a good reputation in Greece. Like most of the foreigners in Egypt, the Greeks were noted for their cosmopolitanism. Many Greeks were fluent in either French or English, and the wealthier strata of Greek society in Egypt had very close ties with Europe. Several Greeks sat on company boards whose members came from mixed European backgrounds. In the 1930s, more and more Greeks began to acquire a knowledge of Arabic.

As did all the foreign residents, the Greeks benefited from the broad-ranging privileges Egypt provided to the citizens of other countries. Capitulation rights were extended to the Greeks the year after Greece signed a capitulations treaty with the Ottoman Empire (1855); previously, some Greeks had been under the protection of European con-

suls. Greece agreed to participate in the mixed courts system in 1876. The Egyptian uprising and the British occupation of 1882 that followed it did not affect the status of the Greeks, nor did the outbreak signaling the beginning of the Egyptian nationalist movement (1919), with which many Greeks sympathized. The Greek government was unable to offer the Greeks in Egypt any help in the diplomatic negotiations preceding the end of the capitulations (1937) or the abolition of the mixed courts (1949); the Greeks had hoped that in regard to these arrangements their traditionally close relationship with the Egyptians would have earned them more favorable treatment than they received.

The Greeks made their greatest impact in Egypt via their role in the banking and cotton sectors. The first group of Greeks brought to Alexandria by Muhammad Ali in the early 1800s were merchants, shipbuilders, and sailors whose activities helped increase commerce and building of the merchant marine in Egypt. The Greek community in Alexandria was unaffected by Egypt's involvement on the side of the Ottomans during the Greek War of Independence (1821–1830), and the number of Greeks in Egypt gradually increased in the following decades, as did their economic strength. The boom in Egyptian cotton production and export in the 1860s, which catapulted the Egyptian economy to new levels and integrated it into the world economy, also further increased the role and economic power of the Greek merchants and financiers, who remained central to the financing, production, and exporting of cotton in Egypt until the eve of World War II. In the 1920s, Greek exporting houses were responsible for 25 percent of all Egyptian cotton exports. The largest of the Greek exporting companies of that period was Choremi, Benachi & Co.; in the banking sector, Greeks such as the Salvago family were well known and influential.

The Greeks in Egypt remained closely identified with issues of Greek nationalism and with Greek party politics. The early settlers had supported the Greek War of Independence and subsequent efforts to incorporate Greek-populated areas within the Greek state. With time, increasing numbers of Greeks returned to Greece to fight as volunteers in the Greek army, especially during the 1912–1913 Balkan War. The wealthiest financed the building of schools or philanthropical institutions in their hometowns or villages, and others made contributions that went toward developing the Greek state. For example, the donations of George Averoff helped complete the marble stadium in Athens where the first Olympic games were held in 1896 and made it possible to purchase the battleship *Averoff,* which proved a factor in Greece's victories in the Balkan War.

The Greeks in Egypt created a broad network of communal institutions: schools, hospitals, churches, orphanages, nursing homes, and a variety of leisure and athletic societies, most of them run by the city-based Greek community organizations, which were themselves administered by prominent Greeks in the community. A small and weak institution in the 1800s, the Greek Orthodox patriarchate of Alexandria gradually grew in stature and importance as the numbers of Greeks in Egypt increased.

GREEK WAR OF INDEPENDENCE

Aided by the great powers, Greece broke away from the Ottoman Empire to establish a modern state.

The Greek War of Independence began with two uprisings in March 1821. The first was led by Alexander Ipsilanti, a Greek officer in the Russian army, who led an ill-fated attack of Greek rebels into Moldavia from Russian territory. The second uprising took place in southern Greece, in the Peloponnese, and was to lead eventually to the establishment of the modern Greek state. The uprising in the Peloponnese, launched by Greek military chieftains, spread northward to parts of Rumelia and to the maritime islands off the eastern coast of the Peloponnese. In their clashes with the local Ottoman garrisons, the Greek rebels' object was to capture

the fortified towns of the region; Greek vessels proved important in assisting the rebels to lay siege to the coastal forts. By the end of 1821, the Greeks controlled enough territory to be able to convene a meeting of representatives that proclaimed Greece's independence.

The rebels could not, however, sustain the successes they had scored in the first year of the revolt and were soon facing serious military, financial, and political difficulties. Ottoman army units stationed farther north marched southward into Rumelia and the Peloponnese and eventually recaptured some of the forts the Greeks had taken. The presence of European philhellenes fighting for the Greek cause did not serve to make less urgent the Greeks' need for more funds and equipment. Although the Greek leaders were able to obtain two loans in London for the purpose of acquiring armaments and equipment, they did so under unfavorable terms. By late 1924, the Greeks had managed to contain the Ottoman counterattack and controlled about half the Peloponnese and parts of Rumelia, but they encountered political dissent within their own ranks. Longstanding regional and personal ties stood in the way of forming an effective, centralized leadership, and the vision of a liberal, democratic constitution was not shared by all the diverse elements who made up the Greek leadership—that is, the military chieftains, the notables, and the Greeks of the diaspora.

The landing of an Egyptian army in the Peloponnese (1925) in response to the sultan's request for help in suppressing the Greek uprising threatened to put an end to the Greek War of Independence. After two more years of hostilities, in which the Greeks had to deal with the Egyptian army's attempt to sweep the Peloponnese and with an Ottoman offensive on the Greek strongholds in Rumelia, the areas under Greek control were considerably contracted, especially after the fall of Athens to the Ottomans in May 1927. At the same time, Britain, France, and Russia had agreed upon a plan to end the war and to grant independence to Greece (i.e., the Peloponnese, Rumelia, and the islands involved in the war, which were to be ruled by a governor appointed by the great powers and acceptable to the Greek leadership). The agreement, formalized by the signing of the Treaty of London (1827), was rejected by the Sublime Porte and by Ibrahim ibn Muhammad Ali Pasha, the leader of the Egyptian army and navy. As diplomatic initiatives were being examined, a combined British, French, and Russian fleet that had sailed to the Peloponnese to blockade the Egyptian and Turkish navies engaged them in the Battle of Navarino (October 1927) and destroyed them completely. This development cleared the way for the implementation of the Treaty of London, and Count Ioannes Kapodistrias, a Greek in the Russian diplomatic service, became Greece's first governor.

Kapodistrias set about building a modern state and dealing with the devastation the war had inflicted. The formerly privileged class of military chieftains and notables resisted the centralization inherent in state building, however, and this resistance was to culminate in Kapodistrias's assassination by one of the military chieftains (1832). The work of establishing the modern Greek state had nevertheless progressed, both domestically and diplomatically. The Treaty of Adrianople (1829) ending the Russian–Ottoman War (1828–1829) included an article that proclaimed Greece to be an independent state, and the ambassadors of the great powers delineated the Greek state's boundaries in a document communicated to the Porte in the same year (1829). After the Porte had recognized both the Treaty of Adrianople and the Treaty of London as well as the Greek boundaries, the great powers formally proclaimed Greece to be an independent state in 1830.

GREENBERG, URI ZVI

[1894–1981]

Hebrew poet.

Born in Bialykamien in eastern Galicia, Poland, Uri Zvi Greenberg was a descendant of prominent Hasidic families both from his mother's and father's side. While he was still very young, his parents

moved to Lvov where he received a traditional Hasidic education.

Greenberg's earliest poems, written in Yiddish and Hebrew, were published in 1912. Drafted into the Austrian army in 1915, he served on the Serbian front, which he deserted in 1917. The Polish pogroms against the Jews in 1918 made a lasting impression on him. Following World War I, he continued to publish in the same two languages as before; upon his emigration to Eretz Yisrael (Palestine), however, in 1924, he wrote exclusively in Hebrew. For a number of years after his arrival, Greenberg was a dedicated Laborite and became a regular contributor to the Labor daily, *Davar,* when it was founded in 1925.

Subsequent to the Arab riots in 1929, he abandoned the Labor Party and joined the ultranationalist Zionist Revisionist Party, which he represented as a delegate to several Zionist Congresses. From 1931 to 1934 Greenberg served as emissary of the Revisionist movement in Warsaw where he edited its Yiddish weekly, *Di Velt.* He returned to Eretz Yisrael in 1936. In his poetry and articles of the period, he harshly criticized moderate Zionists and warned of the impending doom destined for European Jewry.

During Israel's struggle for independence, Greenberg was a sympathizer of the Irgun Zvaʾi Leʾumi, pre-Israel's underground resistance movement. Following the establishment of the State of Israel, he was elected to the Knesset as a representative of the Herut Party. He served from 1949 to 1951.

Unlike secularist writers, Greenberg viewed Zionism from a religio-mystical perspective. He saw Jewish existence as outside the pale of history and the Jews' return to Zion as nothing less than the fulfillment of their destiny. In his pre-Eretz Yisrael poetry, Greenberg manifests an inordinate preoccupation with what he correctly foresaw as the horrors of the Holocaust, which he interpreted as the culmination of the struggle between Christians and Jews. His poetry is strongly ideological and his sources are almost exclusively Jewish and rooted in the Jewish past.

Among Greenberg's works in Yiddish are: *In Malkhus fun Tselem* (In the kingdom of the cross, 1922) which deals with the Holocaust and *Krig oyf der Erd* (War in the land, 1921). His Hebrew works include *Eimah Gedolah ve-Yareʾah* (1925); *Sefer ha-Kitrug ve-ha-Emunah* (1937); *Min ha-Hakhlil ve-el ha-Kakhol* (1949); *Rehovot ha-Nahar—Sefer ha-Ilyot ve-ha-Koʾah* (1951); and *Be-Fisat ha-Ariq u-ve-Helkat ha-Hevel* (1965). Greenberg was awarded the Israel Prize for Hebrew Literature in 1957.

GREEN BOOK

The governing philosophy of Libya's ruler, Muammar al-Qaddafi.

The Green Book contains the brief, three-part statement of the Third International Theory, the governing philosophy of Muammar al-Qaddafi, ruler of Libya. Designed to be an alternative to both capitalism and communism, the Third International Theory is the theoretical basis for the institutions and policies of the Jamahiriyya. The first part, issued in 1976 and titled, "The Solution of the Problem of Democracy: The Authority of the People," discusses the dilemmas of just and wise government and declares the solution to be the rule of the people through popular congresses and committees. Part 2, "The Solution of the Economic Problem: Socialism," which appeared in 1978, calls for the end of exploitation implied by wages and rent, in favor of economic partnership and self-employment. Part 3, "The Social Basis of the Third International Theory," treats social issues, including the importance of family and tribe and the status of women and minorities.

GREEN LINE

The 1949 armistice lines between Israel and Egypt, Jordan, Syria, and Lebanon.

The Green Line designates Israel's borders as demarcated during the 1949 armistice negotiations following the establishment of the state of Israel and the first Arab–Israeli war. Among other things, the creation of this boundary brought into being the separate territory known as the West Bank. Following the Arab–Israeli war in June 1967, the Green Line boundary remained *in situ* as an administrative line of separation between the sovereign state of Israel and the Occupied Territories. The line was removed from all official Israeli maps in the post-1967 era and was opened up to movement of Palestinian workers who commuted into Israel for work. Following the onset of the first intifada in 1987, the Green Line was again closed, by road blocks and curfews, reverting to its former role as a boundary between the two peoples and their respective territories. In 2002 the Israeli government began to construct a wall along, or close to, parts of the Green Line, arguing that this was a necessary security measure. All negotiations aimed at bringing about the establishment of a Palestinian state have considered the Green Line to be the default boundary, to which only minor territorial changes could be made.

GREEN MARCH

March of 350,000 volunteers to demonstrate Morocco's claim on Western Sahara.

The background to the Green March was a twofold struggle in the mid-1970s: (1) the sophisticated POLISARIO Front movement for nationalism by the Sahrawi people in the former Spanish colony of Western Sahara, and (2) a series of challenges against King Hassan II of Morocco, which culminated in two attempted coups in 1971 and 1972. Seeking to claim Western Sahara's mineral resources (mainly phosphates) and spurred by the ideology of a "Greater Morocco," Hassan succeeded in signing the Madrid Accords of 14 November 1975, which ceded the territory from Spain to Mauritania and Morocco.

A month earlier, however, a United Nations report had rejected Morocco's claims. In response, Hassan announced that he would seek volunteers to march into Western Sahara, in what his state-run press described as a demonstration of the will of the Moroccan people to reclaim its territory. By early November, some 350,000 volunteers had signed up—mostly poor and unemployed, rural and urban, they were organized by regional quota. An enormous effort was launched to provide food and med-

ical care for them. Amid intense diplomatic efforts over Western Sahara's future, and just after initial clashes between Moroccan and POLISARIO troops, the marchers crossed the border at Tarfaya. Tens of thousands reached Umm Deboa, where they halted.

On 14 November the Madrid Accords were signed. The march was recalled on 18 November; it had been a successful gamble by Hassan to pressure Spain into reaching an accord with him—and to rally support within Morocco for his claim.

GRIBOYEDOV INCIDENT

One of the first major anti-Western incidents that was religiously inspired.

The Griboyedov Incident took place when a Russian mission led by the well-known author Aleksandr Sergeyevich Griboyedov was sent to Iran in 1829. The purpose of the mission was to force the Iranian government to pay the indemnity for its defeat in the recent Russian–Iranian war and abide by the humiliating provisions of the Treaty of Turkmanchai. The mission heard that two or more Georgian or Armenian women had been forcibly converted to Islam and brought to the harems of Iranian nobility. In flagrant opposition to Iranian norms, the mission forced its way into the harems and took all the women away, allegedly keeping some overnight. The Iranian *ulama* (religious leaders) reacted by issuing a *fatwa* (legal decree) allowing people to rescue the Muslim women from the unbelievers. The crowd of people then entered the mission and became uncontrollable. When the Russian Cossacks shot an Iranian boy, the crowd retaliated by killing the whole mission, including Griboyedov, with one exception.

See also Turkmanchai, Treaty of (1828).

GRIVAS, GEORGIOS THEODOROS

[1898–1974]

Greek Cypriot political and military leader.

Born in Greece, Georgios Theodoros Grivas served in the Greek army from 1920; he was the organizer of the Greek resistance to the Nazi occupation of Athens in 1944 and 1945. In 1951, he went to Cyprus at the invitation of Archbishop Makarios II to help in the fight for Cypriot independence from Britain.

In 1954, Grivas founded EOKA (Ethniki Organosis Kipriakou Agonos), a covert nationalist group that used political violence to combat the British. In 1959, he was the general, then commander (1964–1967) of the Greek Cypriot National Guard. After the independence of Cyprus in 1960, Grivas broke with Makarios and supported *enosis* (union) with Greece, founding EOKA B in 1971 toward that end.

GROBBA, FRITZ KONRAD FERDINAND

[1886–1973]

German diplomat, orientalist, and specialist in Middle Eastern affairs during the Weimar Republic and the Third Reich; one of the more important and most controversial European diplomats in the Middle East between the two world wars.

Fritz Konrad Ferdinand Grobba was born in Gartz/Oder, Germany, where he attended elementary and high school. He studied law, economics, and Oriental languages at the University of Berlin, from which he received his doctorate in law in 1913. Before World War I, he worked briefly as a dragoman trainee in the German consulate in Jerusalem; during the war, he served as a lieutenant in the German army in France and in Palestine.

Grobba joined the legal affairs department of the German foreign ministry in September 1922.

In January 1923, he was transferred to Abteilung III, the department responsible for the Middle East. When diplomatic relations were established between Germany and Afghanistan in October 1923, Grobba was named Germany's representative in Kabul with the rank of consul. In 1925, the Afghan government accused him of attempting to help a visiting German geographer escape from Afghanistan shortly after the geographer had shot and killed an Afghan citizen near Kabul. Grobba denied the charge. A diplomatic crisis between Germany and Afghanistan over Grobba's role ensued, and he was recalled to Berlin in April 1926. From 1926 to 1932, he served again in Abteilung III, where he was in charge of the section for Persia, Afghanistan, and India.

In February 1932, Grobba was named German ambassador to Iraq, a post he held until September 1939, when war caused the break in diplomatic relations between Germany and Iraq. He was also Germany's ambassador to Saudi Arabia from November 1938 until September 1939. From October 1939 until May 1941, Grobba served in the German foreign ministry in Berlin. In May 1941, the foreign ministry dispatched him to Baghdad as German special representative to the pro-Axis government of Rashid Ali al-Kaylani; but he left Baghdad later that month, since the Rashid Ali coup collapsed. In February 1942, Grobba was named foreign ministry plenipotentiary for the Arab States, a job that entailed liaison between the German government and Arab exiles in Berlin, such as Rashid Ali and the mufti of Jerusalem, Hajj Amin al-Husayni. In December 1942, Grobba was named to the Paris branch of the German archives commission, a post he held until his brief return to the foreign ministry in April 1944. He was officially retired from the foreign ministry in June 1944, although he continued to work there until the end of the year. In 1945, he worked briefly in the economics department of the government of Saxony, in Dresden.

Grobba published the following books: *Die Getreidewirtschaft Syriens und Palästinas seit Beginn des Weltkrieges* (Hanover, 1923); *Irak* (Berlin, 1941); and *Männer und Mächte im Orient: 25 Jahre diplomatischer Tätigkeit im Orient* (Göttingen, 1967). The latter constitutes his memoirs of his work and experience in Middle Eastern affairs.

Grobba was the most influential German diplomat in the Middle East after World War I. He worked for the restoration of Germany's pre–World War I economic and political position in the region, within the context of peaceful coexistence with England. The governments of the Weimar Republic and the Third Reich did not, however, entirely share his ambition for the region. Moreover, lingering wartime animosity coupled with bitter and violent Middle East opposition to Anglo–French imperialism, against the backdrop of Nazi expansionism during the 1930s, created Anglo–French distrust of Grobba. This made him one of the more controversial figures in Middle East diplomacy between the world wars.

GROSSMAN, HAIKA

[1919–1993]

Leading resistance fighter during the Holocaust; senior politician in the Israeli Knesset.

Born in Bialystok (Poland), Haika Grossman joined the Zionist youth movement ha-Shomer ha-Tzaʿir and became a member of its central committee. The Nazis invaded in 1941, and Grossman moved secretly between ghettos across Poland, smuggling weapons, organizing hiding places, and liaising with the Polish resistance groups and Soviet partisans. After the war, she was awarded the Gruenwald Cross for valor, and moved to Warsaw, where she was elected to the Central Committee of Polish Jews.

At the beginning of the Arab–Israeli War of 1948, Grossman emigrated to a kibbutz in Israel and became head of the Gaʾaton Regional Council, con-

centrating on refugee relief. Elected four times to the Knesset, she served first for the Maʿarach Party and later chaired the MAPAM faction. Grossman turned the Public Services Committee into one of the most important Knesset committees, introducing legislation across a spectrum of social issues, and was a forthright critic of Israeli government policy towards the Palestinians. She supported cooperation between Arabs and Jews in Israel throughout her career, and in the 1980s she founded the dialogue and education center Givʿat Haviva. Grossman was also a member of the unofficial international war crimes tribunal established in protest against the Vietnam War in 1967.

GRUENBAUM, YIZHAK

[1879–1970]

Polish Zionist.

Active in the early Zionism movement at the start of the twentieth century, Yizhak Gruenbaum participated in several Zionist congresses before World War I. He was elected to the Polish Sejm (parliament) from 1919 to 1932, when he immigrated to Palestine. He soon became a leader of the Jewish Agency, but he resigned after Lord Moyne's assassination in November 1944. He was Israel's minister of interior in the 1948–1949 provisional government, but he failed to win a Knesset (parliament) seat in the 1949 election. He was a MAPAI (labor party) supporter and an ardent champion of a secular Israeli state.

GUEST WORKERS

Term used in Germany and other European countries for migrant workers from Mediterranean countries, especially Turkey.

The migration of Turks to Europe in search of work started in the late 1950s and accelerated after the first bilateral agreement was signed between Turkey and West Germany in October 1961. A series of treaties widened the field of host countries—Austria (May 1964), France (April 1966), Sweden (March 1967), and Australia (October 1967). Between 1961 and 1973, almost a million workers went from Turkey to Western Europe. The program was phased out following the oil crisis and economic recession

In 1955, as its economy began booming, West Germany signed treaties with several countries suffering from underemployment and brought foreign workers under limited-term contracts to its cities. When the boom subsided in the 1970s, many of these workers chose to stay in the country instead of returning to their homelands, causing the population to swell. © Reuters NewMedia Inc./Corbis. Reproduced by permission.

A clothing shop in Berlin's "Little Istanbul" section. A flood of Turkish immigrants poured into West Germany in the 1960s as its expanding economy demanded a larger labor force. that hit Europe beginning in late 1973. The majority of guest workers, however, resisted repatriation programs and remained in Germany and other countries. By 2000, the guest workers and their dependents from Turkey constituted Germany's largest ethnic minority community, numbering about 2 million Turks, with about one-third under age 18. They owned over 30,000 small businesses, providing more than 100,000 jobs.

In France, the majority of foreign workers—the term *guest workers* is not used in France—are Arab migrants from Algeria, Morocco, and Tunisia. They constitute France's largest ethnic minority, numbering with dependents over 2 million in 2000. During the 1990s, several thousand people, mostly young men, began to enter the European Union countries illegally from Afghanistan, Iran, Iraq, and Lebanon in hopes to finding jobs; some "disappeared" in the wide community of foreign workers while others claimed political refugee status.

In the Middle East, the oil-producing monarchies of the Arabian Peninsula hosted more than four million foreign workers throughout the 1990s. Prior to 1990, the majority of these guest workers were Arabs from Egypt and Yemen and Palestinians. During the 1990s, the majority of foreign workers gradually became non-Arab Asians such as Afghans, Pakistanis, Indians, Filipinos, and Thais.

Through the years, migrant workers have sent substantial remittances home to their native countries, and for Egypt and Turkey in particular, these remittances have helped to ease balance of trade deficits. The foreign migrants, especially Turks in Germany and Arabs in France, generally are not well integrated into their host countries, a situation that has affected their children more keenly than the parents. By the early 2000s, a generation of migrant worker children had matured to adulthood in Europe; a majority of these young adults have cited their experiences with various subtle and overt forms of discrimination.

ERIC HOOGLUND

GUILDS

Organizations of skilled workers or artisans.

The earliest evidence for workers in Middle Eastern urban trades and crafts associating in guilds for their common economic and social benefit dates from the fourteenth century, though there are hints of looser groupings before that time. The Ottoman and Safavid Empires and the kingdom of Morocco developed extensive guild systems with each guild being self-governing through a hierarchy of ranks. Government approval or oversight, variously expressed, kept them from being totally independent, however. The goal of the guilds was to ensure a stable level of production and an equitable distribution of work among guild members. The guilds thus constituted a generally conservative force disinclined to change with evolving economic conditions. Nevertheless, they were often important foci of communal and religious life for their members, as in annual guild-organized commemorations of the

martyrdom of Imam Husayn by Shiʿites in Iran. The terms used for guilds include *sinf* (category), *taʾifa* (group), *jamaʿa* (society), and *hirfa* (craft). Guilds were commonly subjected to collective taxation administered by the market inspector *(muhtasib)* or other government official. Jews and Christians were members of guilds in some cities, but exclusively Christian or Jewish guilds, like that of the kosher butchers of Aleppo, were rare.

Records of the city of Aleppo mention 157 guilds in the middle of the eighteenth century. Cairo had 106 in 1814. The survival of guilds in the nineteenth and twentieth centuries varied according to country and rate of Westernization. In northern Egypt, for example, guilds had virtually disappeared by the end of the nineteenth century because of the influx of mass-produced European goods and the growing market for labor created by European investment. By contrast, the guilds of Fez in Morocco escaped severe crisis until the worldwide depression of the 1930s. Even so, municipal statistics of 1938 show the continued domination of small-scale craftwork. The largest guild, that of the slipper-makers, counted 7,100 members, 2,840 of them employers. There were also 800 tanners, 280 of them employers; and 1,700 weavers, of whom 520 were employers. Altogether the guilds numbered 11,000 members.

The potential for guild political activity had manifested itself from time to time over the centuries, as in occasional revolts by workers in the food trades in Cairo at the end of the eighteenth century. By the time modern political life focused on constitutions and participatory government developed, however, economic forces had diminished the importance of guilds in most areas. Iran, where guilds survive to the present day, provides an exception because of its comparatively late exposure to economic and political influences from Europe. The guilds formed the most cohesive group in the Constitutional Revolution of 1906. In Tehran, separate guilds formed seventy political societies *(anjoman).* The guild leaders lacked a sophisticated understanding of politics, however, so the guilds found themselves barred from political power by the electoral law of 1909. With the advent of the Pahlavi regime in 1926, 230 guilds lost government recognition as corporate entities in an effort to dissipate the coalescence of popular feeling around them; but because the new system of individual taxation proved unworkable, they regained their status in 1948. Many guild members were drawn to the communist Tudeh Party or to the movements led by Mohammad Mossadegh, Ayatollah Ruhollah Khomeini, and other critics of the monarchy. In 1969 the 110 guilds of Tehran had a membership of about 120,000. Guild members played an important role in the demonstrations that led to the Iranian Revolution of 1979.

RICHARD W. BULLIET

GUINNESS, WALTER EDWARD

[1880–1944]

British deputy minister of state for the Middle East (1942–1944) and minister resident in the Middle East (1944).

Walter Edward Guinness was known as Lord Moyne. In Cairo, while deputy minister of state, he argued

that a partition plan for Palestine would not succeed unless both the Jewish and Arab areas were made part of Greater Syria. He proposed creating four states: Greater Syria (comprising Syria, Muslim Lebanon, Transjordan, and the Arab part of Palestine after partition), Christian Lebanon, a Jewish state, and a "Jerusalem state" that would remain under British control. He urged postponement of plans for a Jewish army, favored by Chaim Weizmann and Winston Churchill, but agreed to enlarge Jewish settlement police and give them military training.

Lord Moyne presided over a conference of Britain's representatives in the Middle East in the fall of 1944 that did not favor his four-state plan, recommending instead that a southern Syria be created out of Transjordan and the Arab part of Palestine. He was assassinated at Cairo by Jewish terrorists, members of the Lohamei Herut Yisrael (Stern Gang), on 6 November 1944.

GÜLBENKIAN, CALOUSTE

[1869–1955]

Armenian businessman and philanthropist.

Born in Istanbul, Calouste Gülbenkian was educated in France and England. In 1902, he acquired British citizenship, to be eligible for the concession for petroleum fields in Mosul. Later, he transferred this concession to the Iraq Consortium established in 1920 by the United States, France, Britain, and the Netherlands. Because he retained a 5 percent stake in the property and profits of the consortium, he was given the nickname "Mr. Five Percent." Gülbenkian, an enthusiastic art collector, bequeathed his valuable collection to the Gülbenkian Foundation in Lisbon, Portugal, the city in which he died.

See also Red Line Agreement.

David Waldner

GÜLEN, FETULLAH

[1938–]

Founder of Turkey's largest Islamic movement and an important Muslim thinker.

Fetullah Gülen was born in the village of Korucuk near Erzurum in eastern Anatolia. He was educated in religious schools and in 1958 was appointed as a mosque preacher in Edirne. He moved to İzmir in 1966 to become an official preacher for the Directorate of Religious Affairs. During the next seventeen years, he developed study circles, or *dershanes,* and summer camps in which students were trained in Islam and encouraged to engage in purposeful civic action. The writings of Said Nursi, especially his ideas about the reconciliation of Islam and modern science, had a deep influence on Gülen. In 1983 Gülen moved to Istanbul, where he expanded his network of *dershanes* into a nationwide movement. His goal is the construction of a Turkified Islam, and he also stresses dialogue and knowledge as core Muslim precepts. His thinking is very much informed by his understanding of the classical period of the Ottoman state. His hundreds of thousands of followers constitute the Gülen movement, and its presence is organized in media, education, and finance. The educational goal of the Gülen movement is to raise up the "golden generation" imbued with the ethical values of Islam and capable of leading Turks to a restoration of "greater Turkey" (i.e., Turkey plus the Turkic-speaking republics of Central Asia). The Gülen movement consists of loosely organized horizontal networks for the realization of its goals. During the early 2000s it controlled more than two hundred educational institutions, both inside and outside Turkey.

GULF COOPERATION COUNCIL

An organization of six Arab states in the Persian Gulf region, formed to promote joint military, economic, and political endeavors.

The Iranian Revolution, the Soviet invasion of Afghanistan, and the outbreak of the Iran–Iraq War were among the major reasons that the leaders of Bahrain, Kuwait, Oman, Qatar, Saudi Arabia, and the United Arab Emirates decided to establish the Gulf Cooperation Council (GCC). Because the member countries had at the outset much in common regarding economic matters, these could be agreed upon and implemented more easily than matters of defense. Thus, six months after its founding in May 1981, the GCC announced a Unified Economic Agreement that provided for the free movement of people and capital among member states, abolished customs duties, made banking and financial systems more compatible, and improved technical cooperation among the states. During the 1980s and 1990s many of the provisions of the agreement were implemented, and the GCC moved slowly forward in dealing with security matters. In 1984 members agreed to establish a rapid deployment unit called the Peninsula Shield Force. In 2000 the member states formally committed to a policy of mutual defense against foreign attack, and expansion of the Peninsula Shield Force from 5,000 to 22,000. The GCC also has been involved in mediating territorial disputes between members (for example, Qatar and Saudi Arabia, Qatar, and Bahrain) and between member states and other countries (such as the United Arab Emirates and Iran).

EMILE A. NAKHLEH
UPDATED BY ANTHONY B. TOTH

GULF CRISIS (1990–1991)

A critical international situation that began on 2 August 1990, when Iraq invaded Kuwait, and that officially ended on 28 February 1991, after a U.S.-led military coalition defeated Iraq and liberated Kuwait.

The reasons for Iraq's invasion of Kuwait were primarily financial and geopolitical. Iraq emerged from the 1980–1988 Iran–Iraq War financially exhausted, with a debt of about $80 billion. Its president, Saddam Hussein, tried to service the debt—and fund Iraq's high-technology defense industry, reconstruction, and food imports—with oil revenue. But oil prices fell between January and June 1990 from $20 to $14 a barrel. Saddam Hussein charged, with merit, that Kuwait and the United Arab Emirates had exceeded their Organization of Petroleum Exporting Countries (OPEC) quotas, therefore keeping the price of oil low. He claimed that overproduction was encouraged by the United States in order to weaken Iraq, and he considered the Kuwaiti action an act of war. He demanded that the price of a barrel of oil be raised to US$25, that Kuwait "forgive" $10 billion in debt incurred during his war with Iran and pay $2.4 billion for Iraqi oil it "illegally" pumped from the Rumayla oil field (the southern tip of which is under Kuwait), and that the Gulf states give Iraq financial aid amounting to $30 billion. Saddam Hussein based these demands on the claim that Iraq's war with Iran and sacrifice of hundreds of thousands of lives protected the Gulf states from revolutionary Iran.

Saddam Hussein also wanted to lease two uninhabited islands, Warba and Bubiyan, to provide Iraq secure access to the Persian/Arabian Gulf and as possible bases for a blue-water navy. Kuwait was reluctant to negotiate with Iraq, a country of seventeen million with vast potential, because Bubiyan was very close to Kuwait City and because of concerns that the demand was a precursor to Iraqi claims to disputed border territories and, indeed, to all of Kuwait, which Iraq historically considered a part of itself. Kuwait's reluctance to negotiate and its continuing demand for loan repayment were seen as arrogant by Saddam Hussein and shortsighted by others in the region.

Paradoxically, the end of the Iran–Iraq War had left Iraq militarily strong, strong enough to aspire to leadership of the Arab world. Iraq had 1 million experienced soldiers, 500 planes and 5,500 tanks, and was developing chemical, biological, and nuclear weapons of mass destruction. Officials in the West and Israel voiced alarm, and Western media criticism of human rights violations, especially against the Kurds in Iraq, made Saddam Hussein suspicious. Fearing an action similar to Israel's destruction of Iraq's nuclear reactor in 1981, he issued a sensational threat on 2 April 1990 to burn half of Israel with chemical weapons if it should

U.S. warplanes hit targets in the Iraqi capital of Baghdad, early on the morning of 18 January 1991. The Gulf War (1990–1991), also known as Desert Storm, was fought to expel Iraq from Kuwait and restore Kuwait's independence. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

attack Iraq. The threat produced an outpouring of support throughout the Arab world, where he was viewed as a blood-and-guts Arab Bismarck ready to take on Israel, which had annexed Jerusalem and the Golan, had invaded Lebanon, had bombed the Palestine Liberation Organization (PLO) headquarters in Tunis, and since 1987, had been suppressing a civilian uprising in the West Bank and Gaza, all without an Arab response. By August Saddam Hussein had used a potent mixture of themes—Western imperialism, Arab impotence, the Palestinian cause, and Islam (later, the poor against the rich)—to tap Arab anger and alienation and to rally the Arab masses.

On the eve of the invasion, the United States gave Saddam Hussein mixed signals. On 25 July, U.S. Ambassador April Glaspie assured him that U.S. President George H. W. Bush wanted better relations with Iraq and that the United States had no opinion on "Arab–Arab conflicts, like your border disagreement with Kuwait," but she cautioned him against the use of force. There is no evidence that the United States deliberately misled him, but Saddam Hussein ignored a fundamental element of U.S. foreign policy: Oil is a vital U.S. interest, one for which it would go to war.

Saddam Hussein invaded Kuwait on 2 August 1990, to the surprise of most observers. His army occupied the country in a few hours with little resistance, killing hundreds of Kuwaitis and jailing and torturing hundreds more. Soldiers looted schools and hospitals of their equipment and banks of their deposits and bullion.

At the government level, Arab reaction split into two camps. The anti-Iraq group consisted of the Gulf countries (Saudi Arabia, Kuwait, Bahrain, Qatar, the United Arab Emirates, and Oman), as

well as Egypt, Syria, Morocco, Lebanon, Djibouti, and Somalia. The neutral or pro-Iraq group included Jordan, the PLO, Yemen, Sudan, Libya, Tunisia, Algeria, and Mauritania. The split was reflected in the first voting at a 3 August Arab League meeting of foreign ministers, the majority of whom voted to condemn both Iraqi aggression and foreign intervention. With each passing day, the crisis slipped from Arab League hands, becoming an international confrontation between Iraq and a U.S.-led coalition of twenty-eight countries.

President Bush moved swiftly to galvanize opposition to Iraq. The United Nations (UN) Security Council condemned the invasion on 2 August—the day it occurred—and demanded Iraq's immediate and unconditional withdrawal. During the following few days, the Soviet Union and the Islamic Conference Organization joined in the condemnation, and the UN placed economic sanctions on Iraq. Most significant was Saudi Arabia's agreement on 6 August to allow U.S. troops and aircraft on its soil, under the code name Operation Desert Shield, after being shown U.S. satellite photographs of Iraqi troops close to Saudi borders. On 8 August Saddam Hussein formally annexed Kuwait, and the UN reacted by declaring the annexation "null and void." On 10 August the Arab League summit passed resolutions authorizing the use of foreign troops to reverse the annexation. Thus, most nations, willingly or under U.S. pressure, condemned the invasion and demanded Iraq's withdrawal.

Saddam Hussein's response on 12 August was to link the withdrawal of Iraq from Kuwait to Israel's withdrawal from Gaza and the West Bank (including Jerusalem) and Syria's withdrawal from Lebanon. The linkage idea generated support in the Arab world, particularly among Palestinians and their organization, the PLO.

The United States rejected linkage, insisting on unconditional withdrawal and on denying Saddam Hussein any fruits of his invasion. Nevertheless, Bush declared on 1 October at the UN that an Iraqi withdrawal from Kuwait might provide an opportunity "to settle the conflicts that divide the Arabs from Israel." Despite numerous diplomatic missions by world leaders, Saddam Hussein remained intransigent. In November the United States declared that it would double its troop strength in the Gulf from about 200,000 to 400,000—an action that guaranteed an offensive military option—and the UN authorized the use of force to liberate Kuwait. Bush gave Saddam Hussein until 15 January 1991 to vacate Kuwait. When he did not, U.S. and allied forces began air attacks on 16 January on Iraq and on Iraqi positions in Kuwait under the code name Operation Desert Storm. Some of the air strikes were conducted from Turkey, which had supported the coalition, even though most Turks were against a military confrontation with Iraq. Iraq in turn fired Scud missiles at Tel Aviv, damaging hundreds of buildings and killing several people. Israel uncharacteristically did not retaliate, in deference to U.S. concerns that Israeli involvement in the war would risk the continued cooperation of the Arab partners in the coalition. Instead, the United States sent the Patriot antimissile system to Israel to intercept the Scuds, and a number of nations compensated Israel for the damage. Iraq also fired missiles at Saudi Arabia, and Iraqi troops crossed its borders in late January. In an attempt to break out of its isolation, Iraq offered Iran major concessions regarding the Shatt al-Arab waterway, but fearing Saddam Hussein's ambition, Iran stayed neutral throughout the crisis, even though it exchanged prisoners with Iraq and gave sanctuary to 122 Iraqi combat aircraft.

After another ultimatum from Bush and a number of unsuccessful diplomatic attempts, the coalition launched ground forces into Iraq on 23 February, led by U.S. General Norman Schwarzkopf. Kuwait was liberated four days later, and Iraq, after accepting the relevant UN Security Council resolutions, agreed to a cease-fire on 28 February, but not before setting fire to some 600 or 700 Kuwaiti oil wells.

The Gulf crisis, including the war, had enormous consequences for the region. Iraq's infrastructure was destroyed. Middle East Watch charged that the United States and its allies may have deliberately targeted the infrastructure, costing $200 billion according to an Iraqi estimate, and, in addition, may have bombed civilian residences to encourage Saddam's overthrow, even though such actions are in violation of international law. Neither the United States nor Iraq have been forthcoming about Iraq's casualties, which numbered in the tens of thousands.

Kuwait, of course, suffered the ravages of invasion, occupation, and war. Hundreds of Kuwaitis were killed and tortured. The looting, destruction, sabotage, and liberation cost $65 billion, with another $25 billion earmarked for reconstruction. Kuwaitis exacted revenge on the thriving community of about 350,000 Palestinians in Kuwait, some of whom had publicly supported the Iraq army. (Others, however, had fought with the Kuwaiti resistance, while most had gone about their daily life.) After liberation, hundreds of Palestinians were tortured and killed. The community lost $8 billion and was reduced to about 30,000, most of the remainder having resettled in Jordan.

The Gulf crisis produced political divisions—especially involving Kuwait and Saudi Arabia, on the one hand, and Iraq, Jordan, and the PLO, on the other—between not just the governments but also the peoples of the Arab world. These divisions will take a long time to heal.

GULF OF OMAN

The northwest arm of the Arabian Sea, measuring 350 miles (560 km) in length.

The Gulf of Oman forms the only entrance to the Persian Gulf from the Indian Ocean. It is bounded by Iran on the north, Oman on the south, and the United Arab Emirates on the west. The gulf is relatively shallow because of its origin as a fissure in the mountain spine now divided between Iran and Oman. Two hundred miles (320 km) wide at its outer limit, it narrows to 35 miles (56 km) at the Strait of Hormuz. Roughly one-third of the world's oil is exported via the Strait of Hormuz and the Gulf of Oman. Iran's Revolutionary Guards attacked oil tankers in the waterway during the Iran–Iraq War but were never able to disrupt shipping. Environmental concerns have grown in recent years because of an increase in oil spills and the emptying of ballast by oil tankers in the Gulf of Oman before entering the strait.

GULF OF SUEZ

Maritime inlet that connects the Isthmus of Suez to the Red Sea and, with the Suez Canal, separates the Sinai Peninsula from the rest of Egypt.

Almost 200 miles (320 km) long and 12 to 20 miles (20–32 km) wide, the Gulf of Suez is 210 feet (65 m) deep at its deepest point. It is an important passageway for shipping between Egypt and the lands of the Red Sea, the Arabian Sea, and the Indian Ocean, and for ships using the Suez Canal. It contains rich petroleum deposits, which have been used on a large scale since the 1960s.

See also Sinai Peninsula; Suez Canal.

GULF WAR (1991)

The military expulsion of Iraq from Kuwait after the August 1990 invasion.

The Iraqi invasion of Kuwait on 2 August 1990 evoked a quick response from the United States. Within hours, two U.S. Navy carrier groups were steaming towards the Persian Gulf. Military planners began reviewing U.S. Central Command plans for operations in the Persian Gulf, while other officials consulted with Saudi Arabia about defense of that nation. Thus began a two-phase operation to counter the Iraqi moves. The first phase was Operation Desert Shield, designed to shield Gulf states. The second was Operation Desert Storm, the United Nations–sanctioned action to drive Iraq from Kuwait.

Military actions for Desert Shield proceeded rapidly. By 7 August, elements of the Eighty-second Airborne Division and U.S. Air Force fighter planes were en route to the Gulf. Britain, France, Egypt, and Syria launched parallel actions, while other nations sent small forces to the area.

Original plans envisioned a force of 200,000 to defend Saudi Arabia. Within less than ninety days the U.S. had 184,000 troops in the Gulf, backed by thousands of armored vehicles, helicopters, heavy artillery, and aircraft, as well as a substantial naval force. The scope of the effort was demonstrated by the fact that it took a year to reach such numbers in the Vietnam War.

Although sufficient for the defense of Saudi Arabia, U.S. and allied forces were not sufficient to expel Iraq from Kuwait, which soon became the objective of the United Nations. The U.S. response was to order additional forces to the Gulf. In effect, the U.S. commitment was doubled in just over two months. The result was a U.S. force of over 500,000 in the theater, plus substantial allied forces, by the time Desert Shield gave way to Desert Storm. The U.S. commitment was two Army corps, two Marine divisions, six Navy carrier groups, two battleships (the last time World War II Iowa Class battleships were deployed), and over a thousand airplanes. Included were substantial numbers of National Guard and Reserve personnel.

The transition from Desert Shield to Desert Storm began with a spectacular air offensive on 17 January 1991, viewed worldwide on television. Air operations continued until 24 February, when a massive ground offensive succeeded in driving Iraqi forces out of Kuwait in one hundred hours. The temporary cease-fire on 28 February led to Iraqi acceptance of UN resolutions on April 7.

At the time, Iraq had one of the world's largest military forces—over one million, half of whom were in Kuwait—plus 4,300 tanks. Iraq, however, did not have much of a navy. Its air arm was 660 aircraft. Allied strength was 800,000, 1,800 combat aircraft, and 3,000-plus tanks, in addition to a formidable naval force. Moreover, Iraq had to defend the entire nation. The allies could focus on evicting Iraq from Kuwait.

The five-week air offensive destroyed the Iraqi ability to use its air forces, neutralized air defense and command and control capabilities, struck at transportation systems, and attacked war production facilities, especially those suspected of being related to weapons of mass destruction. The allies attacked Scud missile sites and effectively isolated Iraqi forces in Kuwait. The air offensive weakened Iraqi ground forces for a successful ground offensive.

The plan for the ground attack envisioned fixing Iraqi attention on an amphibious attack on the coast of Kuwait coupled with a direct assault across the Saudi-Kuwait border. The real attack, however, would be from the west, across the Saudi-Iraqi border. That attack would aim toward the Euphrates River to cut off the Iraqi forces in Kuwait.

The hundred-hour ground campaign was a total success. Iraqi forces retreated in disarray from Kuwait. The allies also gained control of 30,000 square miles of Iraq. Allied losses were about 240 killed and 775 wounded. Original estimates of Iraqi losses were as high as 100,000, but later estimates varied from 10,000 to 50,000. They were probably closer to the lower end. The media images of Iraqi soldiers surrendering to helicopters in the air and to reporters suggests the totality of the defeat.

It was the subject of considerable concern that Iraq might use chemical weapons, as it had in the war with Iran. The allies also feared that Iraq might have biological weapons as well. Neither fear was realized.

DANIEL E. SPECTOR

GÜLHANE IMPERIAL EDICT (1839)

Ottoman edict initiating an era of diplomacy and Western-inspired reforms.

The Gülhane Imperial Edict (Gülhane Hatt-ı Hümayunu) of 1839 declared a set of legal, administrative, and fiscal reforms in order to strengthen the Ottoman state and make it a member of the new European diplomatic order. The edict was proclaimed on the accession of the new sultan, Abdülmecit I (1839–1861), on 3 November 1839. It was read by Prime Minister Mustafa Reşid Paşa to an audience that included the sultan, ministers, top civilian and military administrators, religious leaders of the Greek, Armenian, and Jewish communities, and the ambassadors of foreign countries. After its proclamation, the edict was published in the official state newspaper and its French translation was sent to various European states and the embassies in Istanbul.

The ideas in the edict originated in the tradition of Ottoman reform during the second half of the eighteenth century, when Ottoman bureaucrats were already experiencing a paradigm shift in their vision of the ideal political order and their relations with the European states. Mahmud II implemented an intense series of reforms during the two decades before the Gülhane Imperial Edict, centralizing the government, restructuring the military and administration, establishing new educational institutions, and introducing European-style dress and head coverings. Thus there is a strong line of continuity of reform before and after the Gülhane Imperial Edict. The rupture, however, lies in the way the edict was designed to enhance the central government's control by empowering the bureaucracy while changing and reshaping the relationship between the sultan and his subjects. The promised new legal system of the edict was intended to gradually reduce the arbitrary powers of the sultan and assure full rights and equality to non-Muslims under the reinterpreted rule of *shariʿa* (Islamic law plus customary and useful law endorsed by *shariʿa*).

The content of the Gülhane Imperial Edict reflects the agenda of the reformist bureaucrats led by Sadik Rifat Paşa and Mustafa Reşit Paşa, both of whom had experience as ambassadors in European capitals. The bureaucrats wanted to institutionalize and rationalize the reforms, strengthening the scope and legality of their powers. They believed in the necessity of declaring a long-term commitment to "self-civilizing" reforms in harmony with the standards of Europe as a basis for peaceful relations with the European powers. Diplomatically, the image of the Ottoman state as a reformed and civilized polity would allow the Ottomans to receive the support of England and France against external and internal challenges exemplified by Russian pressures on behalf of Christian subjects of the Ottoman Empire and the Egyptian province's demands for autonomy.

In the Imperial Edict of Gülhane, the Abdülmecit I guaranteed the rule of law and an end to arbitrary decisions as well as safety of life, property, and honor for all of his subjects, regardless of religious affiliation. He also pledged himself to a just system of tax collection and military conscription. The edict's persistent reference to *shariʿa* is commonly interpreted as a tool for preventing negative reactions from conservative elements. It could, however, be read as an indication that, in the mind of the Ottoman reformist group, certain aspects of the European standard, such as the rule of law, equality of religious minorities, and protection of property, did not contradict the traditions of Islamic legal thinking. Although the edict's emphasis on *shariʿa* might imply a notion that the basic rights guaranteed in the edict were natural rights, an instrumen-

tal state-interest rationale is also provided in the edict, since if the people are happy and safe, they will work better for the welfare and the power of the state. Moreover, implicitly, if the Ottoman state carried out "civilizing" reforms, it would benefit from becoming a part of the European state system.

Although the Gülhane Imperial Edict gave full legitimacy to the reformist bureaucrats and inspired further acts of reform, its implementation involved a gradual process during which the old institutions and customs were allowed to reach extinction naturally rather than immediately being eradicated. Thus, though legal equality of all subjects was declared, different religious communities continued to have separate religious laws and privileges. Traditional Islamic courts or educational institutions were not abolished but left to become the weaker part of the dichotomous Ottoman legal and social structure. More importantly, interventions by the European powers to protect the privileges of the Christian minorities prevented the process of their full equality, since they became more privileged than the empire's Muslim subjects. Hence, the edict's implementation for the next three decades fell short of its intended goals. However, as a foundational text, the Gülhane Imperial Edict continued to provide inspiration and legitimacy to the Ottoman reforms throughout the rest of the nineteenth century.

CEMIL AYDIN

GÜNEY, YILMAZ

[1931–1984]

Turkish film actor, writer, and director.

Born the son of a peasant in Siverek, a village near Adana, Yilmaz Güney earned his keep as a boy toting water, caring for horses, and selling *simits* (pretzels) and soda. He attended law school at Ankara University and returned to Adana, where he got a job with Dar Film. He began scriptwriting and acting in 1958, and moved to Istanbul, becoming a popular star by the mid-1960s. Güney directed his first film in 1966, and went on to become the preeminent filmmaker of the era, with more than a dozen more films. His 1970 film *Hope,* about the mystical adventures of a poor carriage driver from Adana, was a turning point in Turkish film, marking the beginning of an era of neorealism. His 1982 *Yol* (The road) shared the Palme d'Or award at Cannes with Costa-Gavras's *Missing.*

Güney wrote the script for *Yol* while serving a nineteen-year prison sentence for killing a judge in 1974, over a question of honor. The film was directed by Şerif Gören, but Güney escaped from prison in time to finish editing it in France. The film, about five prisoners on hometown leaves, has never been shown publicly in Turkey. Since his death, numerous books have been written about him, and the scripts for all his important films have been published. His films, short stories, and novels reflect his own outspoken Marxism and his preference for outlawed figures on the fringes of society.

ELIZABETH THOMPSON

GURI, CHAIM

[1923–]

Israeli poet, writer, and journalist.

Guri was born in Tel Aviv and educated at the Hebrew University of Jerusalem and the Sorbonne in Paris. A principal representative of Dor ha-Palmah (the Palmah generation), he fought against the British in Mandatory Palestine and in the Arab–Israel Wars of 1948, 1967, and 1973. As a Haganah member sent to rescue survivors of the Holocaust, Guri had his first encounter with diaspora Jews, which profoundly affected him and his identity as a Jew. From that time on, the question of "who is a Jew" has significantly influenced his works.

Guri's songs and poems, written during the 1948 Arab–Israel War, portray the experiences of the Palmah fighters and the battlefield. From 1953 to 1970, Guri was a reporter and an essayist for the paper *la-Merhav,* for which he covered the trial of Nazi war criminal Adolph Eichmann (1961–1962). His notes of the trial were published in the book *Mul Ta ha-Zekhukhit* (Facing the glass booth). After the June 1967 Arab–Israel War, Guri, along with other members of Israel's literary elite such as Natan Alterman, Moshe Shamir, S. Y. Agnon, Yitzhak Tabenkin, and Naomi Shemer, was among the founders of the Movement for Greater Israel.

From 1970 to 1980, Guri was on the editorial staff of the *Davar.* From 1972 to 1984, he made several documentaries dealing with the Holocaust *(The 81st Blow),* Jewish resistance against the Nazis *(Flame in the Ashes),* and the illegal immigration to Palestine *(The Last Sea).* An anthology of his poems, *Heshbon Over* (1988), won him the Israel prize for literature. His novella, *Iskat ha-Shokolada* (1965; The chocolate deal, 1968), takes place in an anonymous European city with a flourishing black market and deals with the state of anarchy among the refugees of the Holocaust after World War II. In 2002 he published (in Hebrew) a compilation of poems entitled *Me'uharim* (Late poems). As of 2003, Guri has published nineteen books, nine of them poetry.

UPDATED BY ADINA FRIEDMAN

GUR, MORDECHAI

[1930–1995]

Israeli general and politician.

Mordechai (also Mordekhai) Gur completed his undergraduate education in political science and Middle East studies at Hebrew University of Jerusalem and went on to a more specialized program at the École Militaire–École de Guerre in Paris.

Gur served in the Haganah forces after 1943 and was a hero of the 1967 Arab–Israel War (commanding a division that took Jerusalem). He served with the Northern Command from 1970 to 1972 and then as the Israel Defense Force (IDF) chief of staff from 1974 to 1978. He coordinated the rescue at Entebbe (1976) and the Litani Operation in southern Lebanon (1978). During his tenure, he tried to reshape the general staff to be more responsive to field conditions. Following his discharge from the IDF in 1978, he attended Harvard Business School. From 1979 to 1984 he held a position with Koor Mechanics.

Gur was elected as a Labor member of Knesset in the Tenth Knesset in 1981; after being re-elected to the Eleventh Knesset he served as minister of health (1984–1986). In the Twelfth Knesset he served as minister without portfolio. In 1992 he was appointed acting defense minister by Prime Minister Yitzhak Rabin; he held that position until his death in 1995.

ZACHARY KARABELL
UPDATED BY GREGORY S. MAHLER

GÜRPINAR, HÜSEYIN RAHMI

[1864–1944]

Turkish novelist, journalist, and translator.

Born in Istanbul, Hüseyin Rahmi Gürpinar studied political science and worked as a freelance journalist and translator in a government office of the Ottoman Empire, until he turned to writing in his forties. During World War I, he became famous for his entertaining and realistic novels and short stories. After the war, he moved to an island near Istanbul, where he lived alone with his dog, Kahraman Findik (Hazelnut Hero). He emerged from seclusion to be elected to the Turkish Grand National Assembly, serving between 1936 and 1943.

Although Gürpinar was associated with Turkey's elitist Servet-i Fünun (Wealth of Knowledge) literary movement, he eschewed their ornate style and wrote popular novels influenced by French naturalism. He often wrote about the contradictions between tradition and modernity, modern sexuality, adventures, and current events, such as the 1910 panic at Halley's comet and the devastating 1918 worldwide influenza epidemic. Gürpinar often employed humor and caricature, portraying fanatics, charlatans, and gossiping women with wit and psychological insight.

ELIZABETH THOMPSON

GÜRSEL, CEMAL

[1895–1966]

Turkish military officer, fourth president of the Turkish republic.

Cemal Gürsel was born in Erzurum, the son of a police officer. World War I broke out while he was studying at the military college in Constantinople (now Istanbul), and he was sent to the front at Çanakkale. After the war, he joined the independence movement led by Mustafa Kemal Atatürk. In 1959 Gürsel was appointed commander of the Turkish land forces. In May 1960, he wrote a letter to the minister of defense protesting Prime Minister Adnan Menderes's use of the army to suppress dissent; in response, he was stripped of his command and placed under house arrest in İzmir. At this point, a group of junior officers invited Gürsel to lead their movement. Gürsel accepted, and on 27 May 1960 he headed a group of thirty-eight officers in a coup that overthrew the civilian government. Gürsel became head of the newly established National Unity Committee, as well as prime minister, president, and commander of the armed forces. An advocate of returning to civilian rule as quickly as possible, Gürsel expelled from the country fourteen younger officers, led by Colonel Alparslan Türkeş, who called for continued military rule. In 1961, following the promulgation of a new constitution and election of a new parliament, Gürsel was elected fourth president of the Turkish republic. In 1966, his failing health forced him to resign his office, and he died shortly thereafter.

DAVID WALDNER

GUSH EMUNIM

Movement dedicated to the establishment and strengthening of Jewish settlements throughout the West Bank (Judea and Samaria) and the Gaza Strip.

Gush Emunim (Bloc of the Faithful) has played a significant role in Israeli political life since its inception in the mid-1970s. The movement is concerned with establishing and strengthening Jewish settlement throughout the West Bank and Gaza Strip, which its members believe belong to the Jewish people and the State of Israel by divine promise. Gush members are opposed to any territorial compromise or Israeli withdrawal from these regions, even as part of a peace agreement between Israel and the Palestinians.

The movement was formed in 1974 by a group of national religious activists associated with the Young Guard of the National Religious Party (now Mafdal). They opposed the minimalist policies of the Allon settlement plan and, in the light of the limited withdrawal on the Golan Heights after the October 1973 war, set out to create the conditions that would prevent any similar withdrawals taking place in the West Bank and Gaza.

Opposed by the Labor Party governments of the time, Gush Emunim underwent a process of legitimization following the election of the right-wing Likud Party of Menachem Begin in 1977. It created a settlement movement, known as Amanah, that undertook the logistics of establishing settlements throughout the region. Its settlement blueprint envisaged no less than 2 million Jews throughout the West Bank and Gaza by the year 2000, but this translated into a more realistic policy aimed at creating twelve new settlements in the first year of the Begin administration, thus laying the foundations for future settlement activities.

Armed Jews clash with Palestinians in the West Bank in December 1993. The Gush Emunim movement advocates the Jewish settlement of the West Bank and the Gaza Strip, and its members react to any encroachment on what they consider their territory with sometimes violent opposition. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

The ideology of the movement stems from its belief that God promised Abraham the whole of the land of Israel (from the Mediterranean to the Jordan River and even further east) for the Jewish people as their exclusive territory, as stated in the Old Testament. Gush Emunim draws much of its support from the ranks of the Bnei Akiva youth movement, whose slogan is, "The land of Israel, for the people of Israel, according to the Torah of Israel." They view Eretz Yisrael (the land of Israel) as holy territory, parts of which were liberated (not occupied) by divine intervention in the June 1967 war and which is never to be relinquished by any human decision, not even by a democratically elected government of the state of Israel.

In the early 1980s, Gush activists were implicated in the Jewish underground movement Terror-Neged-Terror (Terror against Terror), which undertook attacks against Palestinians in revenge for Palestinian killings of Jewish settlers. Its targets included mayors Bassam Shakʿa (Nablus), Karim Khalif (Ramallah), and Ibrahim Tawil (al-Bira), and the Islamic College in Hebron. Plots to blow up Arab buses in Jerusalem and, more sensationally, the Dome of the Rock, were thwarted by Israeli intelligence.

During its first almost twenty-eight years of existence, Gush Emunim transformed itself from a grassroots extra-parliamentary movement to one that provided the ideological underpinnings for a number of political parties, municipal organizations, and settlements (villages and townships) throughout the West Bank and Gaza Strip. Its representatives have been active in right-wing political parties in successive Israeli governments since 1977, in some cases achieving cabinet positions. Two leading ministers in Ariel Sharon's government of January 2003, Infrastructure Minister Rafael Eitan (National Religious Party) and Tourism Minister Benny Elon (National Israel Party), were staunch supporters of the Gush and the West Bank settlements.

Gush Emunim does not have any formal membership; it is difficult to estimate its size or support, but it has become the most visible ideological force for active and, in some cases violent, opposition to all attempts to reach a peace agreement with the Palestinians involving any form of territorial withdrawal.

Leading Gush Emunim activists have also become administrators of the regional and local councils set up to administer the settlement network and provide a conduit for the transfer of public resources from the central government to the settlements. The major political lobby for the West Bank settlement network, the Yesha (an acronym for Yehuda ve-Shomron, Judaea, and Samaria) Council, is made up of leading Gush personalities. This organization also serves as an umbrella group for West Bank municipal councils in the face of political threats to remove any settlements.

The original leaders of the Gush Emunim movement, notably Rabbis Moshe Levinger of Hebron and Hanan Porat from Gush Etzion, have stepped aside to make way for a younger generation of leaders, although none of the new generation has achieved their prominence. Some of the younger activists have attempted to set up new settlement outposts not approved by the government and have been called "the hilltop youth." They are perceived by many as constituting the contemporary equivalent of the earlier Gush activists of the mid-1970s, who attempted to establish the first settlements despite government opposition of the time.

Gush Emunim's Greater Israel and prosettlement ideology has had a major impact on Israeli society in general and on the peace process in particular. Its opposition to any form of territorial withdrawal or settlement evacuation added to the obstacles that faced the post-Oslo negotiation process.

HA-AVARAH AGREEMENT

Agreement that allowed Jews to transfer limited assets from Nazi Germany to Palestine.

In August 1933 the German Ministry of the Economy concluded the so-called Ha-avarah (transfer) Agreement with Jewish officials in Palestine and representatives of the German Zionist Federation. Violently antisemitic and eager to rid Germany of its Jews, the new government of Adolf Hitler shared with Zionists the goal of facilitating Jewish departures to Palestine. The Ha-avarah Agreement permitted Jews whose assets were held in blocked accounts in Germany to transfer part of their savings to Palestine, where the money was to be used to purchase German products. For the new Nazi government, Ha-avarah had the advantage of promoting both Jewish emigration and German exports; for beleaguered German Jews, the agreement was a way of salvaging some Jewish assets and escaping persecution. Although pleased at the way in which Ha-avarah undercut those Jews championing a boycott of Germany, Nazi policymakers also came to oppose an independent Jewish state in Palestine, believing that this would strengthen the Jews' hand against Germany internationally. Nevertheless, Hitler himself refused to reject Ha-avarah, and so his subordinates maintained the policy until shortly after the outbreak of war in 1939. In the end, about 60,000 Jews may have benefited from its provisions, and some 100 million reichsmarks were transferred from Germany to Palestine.

MICHAEL R. MARRUS

HABASH, GEORGE

[1925–]

Leading Palestinian activist; former secretary-general of the Popular Front for the Liberation of Palestine.

George Habash (also known as al-Hakim, the sage) was born into a prosperous Greek Orthodox Palestinian family in Lydda in Mandate Palestine. After completing his education in Jerusalem, he worked as a teacher and then attended the Faculty of Medicine at the American University of Beirut (AUB), graduating with distinction in 1951.

Habash witnessed the expulsion of Lydda's population on 13 July 1948 and saw his sister die through lack of medical care. Although some sources indicate that he immediately volunteered with Arab forces active in Palestine, all agree that in 1949 he helped establish the Partisans of Arab Sacrifice (Kata'ib al-Fida al-Arabi), which attacked Western targets in Beirut and Damascus until it was dissolved by the Syrian authorities in mid-1950. Back at the AUB, Habash joined the Society of the Firm Tie (Jamʿiyyat al-Urwa al-Wuthqa), a student literary club inspired by Arab nationalist writers such as Constantine Zurayk and Sati al-Husari. An eloquent and forceful personality, in 1950 he was elected president of the group's executive committee. In 1951, this committee became the nucleus of a new, clandestine pan-Arab movement, the Arab Nationalist Movement (ANM; Harakat al-Qawmiyyin al-Arab). Habash emerged as ANM's leader.

In 1952, Habash left for Amman to develop ANM's Jordanian branch. He opened a clinic for the poor and established the Arab Club to combat illiteracy and serve as a discussion and recruitment center. He was forced underground in 1954, remained in Jordan until the nationalist Nabulsi government fell in 1958, then fled to Damascus, and again to Beirut when the Bʿath Party took over in Syria in 1961.

At this stage, the ANM viewed Egyptian president Gamal Abdel Nasser as the best hope for Arab unity and the restoration of Palestinian rights. When specifically Palestinian nationalist organizations began to emerge in the 1960s, Habash condemned them as regionalists who had abandoned general Arab interests and whose guerrilla activities would provide an excuse for Israel to attack the Arab states before they were ready for the challenge. However, in 1964, confronted with the establishment of the Palestine Liberation Organization (PLO), Habash established the National Front for the Liberation of Palestine within the ANM, and in 1967 Nasser's stunning defeat prompted him to dissolve the ANM and create the Popular Front for the Liberation of Palestine, of which he became secretary general. The Popular Front adopted a radical Marxist-Leninism, an approach Habash had fought against in the ANM when pressed by a Marxist-Leninist faction led by Nayif Hawatma and Muhsin Ibrahim.

The Popular Front nearly disintegrated in 1968 while Habash was imprisoned in Syria for sabotaging the Trans-Arabian Pipeline, although after his escape to Amman and later to Beirut it developed into the most important Palestinian rival to al-Fatah. Its uncompromising stance toward Israel, the West, and conservative Arab regimes was based on an insistence that the Palestinian revolution could succeed only as part of a regional and international struggle committed to radical social and political change. During the 1970s and 1980s, the Popular Front's willingness to pursue its agenda through military strikes—and until 1973 through the hijacking of civilian airliners—won it wide support among frustrated Palestinian refugees but unleashed harsh responses from Jordan (notably in Black September); from Lebanese opponents, provoking the civil war of 1975 through 1976; and from Israel until the 1980s, when Habash fled to Damascus.

Habash called a halt to many of the Popular Front's military and terrorist tactics at the behest of the Palestinian National Council in 1973, but he remained convinced that such actions were both legitimate and necessary. Believing Israel to be unprepared to reciprocate Palestinian concessions, the Popular Front has launched armed and terrorist attacks on Israelis during both intifadas.

Once the leading radical rival to PLO chairman Yasir Arafat, Habash appeared poised at several critical junctures to displace him. Habash has suffered from heart trouble since the 1970s and was increasingly marginalized by both the rise of Islamist movements and the Oslo peace process, of which he has been a consistent critic. In the late 1990s, he appeared prepared to consider flexibility toward the Western powers, but brief hopes of a reconciliation with Arafat in 1999, which were supported by the Popular Front majority, proved illusory, and he resigned from the declining organization to establish a research center.

MOUIN RABBANI
UPDATED BY GEORGE R. WILKES

HABIBI, EMILE

[1922–1996]

Noted Palestinian writer and politician.

Born in Haifa to a Protestant family, Emile Habibi worked in an oil refinery and later as a radio announcer. In 1940, he joined the Palestine Communist Party and helped form the Israeli Communist Party (ICP) in 1948. Habibi became one of leading Arab communists in Israel. He represented first the ICP in the Knesset (Israeli legislature) from 1952 to 1965 and later the New Communist List (also called RAKAH) from 1965 to 1972. He was also the longtime editor of the communist newspaper *al-Ittihad.* He left RAKAH in 1991 in the wake of disagreements about how the party should deal with the reforms of Soviet leader Mikhail Gorbachev. Throughout his career, he was one of most important leaders of the Arab community that remained in Israel in 1948, after the first Arab–Israeli war displaced over 725,000 Palestinians.

Habibi was also a leading Arabic-language writer whose works, which included plays, novels, and short stories, were read throughout the Arab world even though he was an Israeli citizen. His 1974 novel, translated as *The Secret Life of Saeed, the Ill-Fated Pessoptimist: A Palestinian Who Became a Citizen of Israel,* rose to become a classic work of modern Arabic fiction and provided political insight into the challenges of being a Palestinian Arab citizen of a Jewish state. He was awarded the Jerusalem Medal of the Palestine Liberation Organization in 1990 and the Israel Prize in 1992.

Habibi died in May 1996 and was buried in Haifa. He instructed that his epitaph simply read, "Emile Habibi—Remained in Haifa."

HABIBOLLAH KHAN

[1871–1919]

Amir of Afghanistan, 1901–1919.

Born in Samarkand, Habibollah Khan was the son of Amir Abd al-Rahman and an Uzbek woman. After being active in his father's administration (1880–1901), he succeeded him to the throne in 1901. He was a successful and well-liked monarch, especially in comparison to his autocratic father. He released prisoners, increased the pay of the army, and invited back political exiles his father had forced out of the country.

His reign has been credited with two accomplishments. A great modernizer who was attracted to Western ideas and technology, he traveled to Europe, brought the first automobiles into Afghanistan, and introduced Western secular education there. He also drew Afghanistan away from British control; for example, he kept Afghanistan neutral during World War I.

He was assassinated on 20 February 1919 while hunting at Kala Gosh in Laghman.

GRANT FARR

HABIB, PHILIP CHARLES

[1920–1994]

U.S. diplomat.

Philip Charles Habib was U.S. president Ronald Reagan's special envoy to the Middle East, 1981–1983. In the summer of 1981, he negotiated with Syria for the removal of ground-to-air missiles in Lebanon; in August, he brokered a cease-fire agreement between the Palestine Liberation Organization (PLO) and Israel that lasted until June 1982.

After Israel invaded Lebanon on 6 June (the 1982 Arab–Israel War), Habib negotiated another series of cease-fires but none lasted. In late 1982, Habib, ignoring Syria, supervised formal negotiations between Israel and the Lebanese government of President Amin Jumayyil, which resulted in the May 1983 agreement ending the war. Implementation of the agreement was contingent on Syrian withdrawal from Lebanon, however, and following Syrian President Hafiz al-Asad's refusal to withdraw, Habib lost favor with President Reagan and, in July 1983, was replaced by Robert McFarlane.

HABOUS

In North Africa, a family endowment whose usufruct is destined for charitable purposes.

According to Maliki jurisprudence, a family endowment, or *habous,* can be established over property "whose utilization will not result in its dissipation or consumption" (Powers, p. 382). The terms under which the endowment will work must be stipulated in an endowment deed. Public *habous* were created for the benefit of religious organizations or public institutions such as schools, mosques, hospitals, the shrines of *marabouts,* orphanages, or public foundations. Private or family *habous* were created for the benefit of the constituent's descendants. *Habous* properties—known as *waqf,* or *awqaf* outside the Maghrib—are inalienable. Traditionally, the *nadhir* (administrator) who controlled the collection and distribution of the revenues was under the supervision of the chief *qadi* (judge). The French colonial administration nationalized public *habous* during the mid-nineteenth century.

After independence, Morocco and Tunisia enacted legislation transforming the role of the *habous.* With the introduction of national welfare policies, the *habous* lost its importance as a guarantor of social services. During the nineteenth century, one-third of Tunisia's land was *habous.* Tunisian urban aristocrats (known as *baldi,* who were closely related to prominent religious families) administered most of the *habous* land and were severely affected by its nationalization after the Habib Bourguiba government instituted a sweeping agrarian reform. Public *habous* was abolished in 1956; family *habous* was abolished a year later. In 1971, a new program of economic liberalization scheduled the redistribution of 300,000 hectares of collectivized farmland, and *habous* land that had been appropriated by the state was returned to the original benefactors. The simultaneous dismemberment of the *habous* system

and collective land has partially contributed to an increase in the number of farmers. A law promulgated in 2000 reactivated the *habous* liquidation procedure, but auditing of *habous* lands remains incomplete.

In Morocco, the administration of *habous* land depends on the Islamic Affairs and *Habous* Ministry (Ministère des *Habous* et des Affaires Islamiques). Although technically inalienable, during the protectorate period *habous* land could be exchanged or sold. After independence, the state has consistently encouraged the registration of *habous* land. A royal edict *(dahir)* in 1977 allowed for the liquidation of family *habous* by the authorities in charge of its administration for reasons of public interest.

VANESA CASANOVA-FERNANDEZ

HACENE, FAROUK ZEHAR

[1939–]

Algerian novelist and short-story writer.

Farouk Zehar Hacene, born in Ksar el-Boukhari, Algeria, left for Europe in 1956 and studied in Switzerland while working at various odd jobs. He considers himself to be the one who ended the trend of committed literature among Algerian writers, freeing himself from the stronghold of tradition without denying his national identity. He published a collection of short stories, *Peloton de tête* (Paris, 1965; The winning regiment) and a novel, *Le miroir d'un fou* (Paris, 1979; The crazy man's mirror), that deal with subjects totally removed from the events of the Algerian war of independence. Hacene's short stories are preoccupied with the psychological condition of humans and the search for an aim and a meaning to life.

HACETTEPE UNIVERSITY

Public university in Ankara.

Hacettepe University was founded in 1954, when an academic unit on children's health was established under the supervision of Ankara University. In 1957, it was transformed into a research institute with an affiliated hospital dedicated to instruction and public service. The institute grew gradually in the following years, with the establishment of academic units on dentistry, medical technology, nursing, physiotherapy-rehabilitation, and home economics. It was eventually accredited as a university in 1967.

Hacettepe University comprises nine faculties (dentistry; economics and administrative sciences; education; engineering; fine arts; letters; natural sciences; medicine; and pharmacology), fourteen vocational schools, twelve institutes, and twenty-seven research centers. It also administers the Ankara State Conservatory of Turkish Music. It has five major campuses in Ankara (Sihhiye, Beytepe, Beşevler, Keçiören, Polatli, and Kaman), and one of its vocational schools is located in neighboring Zonguldak province. Turkish constitutes the main medium of instruction, but half of the medical school classes are conducted in English. Some of the vocational programs are conducted in German and French. In the 2002–2003 academic year, the university had about 3,148 faculty members and 24,415 students. Its budget for that year amounted to 187,332 billion Turkish liras, 99 percent of which came directly from state funds.

Hacettepe's origins as a medical school explain the variety of health-related programs that are administered by the university. Its founder, Prof. Ihsan Doğramaci, is a medical doctor. His innovative approach to medical education and research has been a major contributor to the prestige that Hacettepe currently enjoys among other Turkish universities with a medical concentration. With Ankara University, Hacettepe has promoted re-

search and development in nuclear physics, computer engineering, and electronics.

HA-COHEN, MORDECHAI

[1856–1929]

Zionist activist in Tripoli, Libya; teacher, author, educational reformer, and rabbinical court judge.

Although Mordechai Ha-Cohen was born in Tripoli, his family had come from Genoa, Italy. His father, Rabbi Yehuda Ha-Cohen, died in 1861. His mother worked as a seamstress, supported her children, and had Mordechai assist by giving instruction in Bible and Talmud. On his own, he studied arithmetic and the literature of the Hebrew Enlightenment (Haskalah). He married in 1883, worked as a Hebrew teacher, and when his income was insufficient, taught himself to repair clocks. As his family grew (four boys and nine girls), he studied rabbinic law and worked as a clerk in the court. His major work was a manuscript titled *Highid Mordechai,* in which he describes the history, customs, and institutions of Tripolitanian Jewry.

As a reformer, he advocated changes in the educational system that were eventually adopted against the will of the establishment. He supported young Zionists and joined the Zionist club, Circolo Sion, when the community leaders opposed it. He contributed news items to the Italian Jewish paper *Israel* and to Hebrew papers in Warsaw, London, and Palestine.

As a jurist in Tripoli, Ha-Cohen was in conflict with lay and religious leaders on matters of rabbinic law. In 1920, he was appointed magistrate in the rabbinic court of Benghazi, Libya, where he served until his death on 22 August 1929.

HADASSAH

Jewish women's philanthropic organization.

The largest Jewish women's organization in the United States, Hadassah was founded by Henrietta Szold and fifteen other women on 24 February 1912. Its stated purpose was to foster Zionist ideals through education in America and to begin public-health and nursing training in Palestine. In Hebrew, the word *hadassah* means myrtle, a hardy plant used to bind and enrich the soil.

In 1913, Hadassah sent two nurses to Jerusalem to set up a maternity and eye clinic. This was the beginning of its continuing involvement in the medical care of the people of Palestine. In 1939, the Rothschild–Hadassah University Hospital, the first teaching hospital in Palestine, opened atop Mount Scopus in Jerusalem. During the Arab–Israel War of 1948, Mount Scopus was designated a demilitarized zone. The hospital was evacuated, and a new center was built in Jewish Jerusalem. After the Arab–Israel War of 1967, the Mount Scopus center reverted to Jewish control.

Hadassah has more than 1,500 chapters, with over 385,000 members and 22,000 associates (male members). Its activities support the Hadassah medical center in Jerusalem and other philanthropic activities in Israel.

HADDAD, MALEK

[1927–1978]

Algerian novelist, poet, and journalist.

Malek Haddad was born in Constantine and later attended the University of Aix-en-Provence in France. After working as a journalist, he began a literary career that merited inclusion in the distinguished "Generation of 1954" (with Mohammed Dib, Yacine Kateb, Moulaoud Mammeri, and Mouloud Feraoun). Themes of exile and engagement characterized his works. He wrote four novels (*La dernière impression,* 1958; *Je t'offrirai une gazelle,* 1959; *L'elève et la leçon,* 1960; *Le quai aux fleurs ne répond plus,* 1961) and published two collections of poetry (*Le malheur en danger,* 1956; *Ecoute et je t'appelle,* 1961). He regretted his inability to compose in Arabic and reflected: "The French language is my exile." During the war of independence, he served on diplomatic missions for the Front de Libération Nationale (FLN; National Liberation Front). He edited the newspaper, *al-Nasr* in Constantine from 1965 to 1968 and became secretary of the reorganized Union of Algerian Writers in 1974.

See also Dib, Mohammed; Feraoun, Mouloud; Front de Libération Nationale (FLN); Kateb, Yacine.

Phillip C. Naylor

HADDAD, SAʿD

[1937–1984]

Lebanese military officer and militia leader.

Saʿd Haddad was born in the town of Marjʿayun to a Maronite Christian mother and a Greek Orthodox father. His father was a farmer and a corporal in the Troupes Speciales du Levant during the French mandate (1920–1941). Haddad was graduated from the Patriarchal College in Beirut in 1957, and the military academy at Fayadiyya. After the outbreak of the Lebanese civil war in 1975, Major Haddad assumed command of the southern sectors of Lebanon, ostensibly on the orders of the army command in Beirut, though in fact, Haddad's fifteen hundred–strong, predominantly Christian, militia was financed by and under the orders of Israel. In February 1979, Haddad openly broke with the Lebanese government and declared the land under his control "Free Lebanon."

David Waldner

HADDAD, WADI

[1927–1978]

Palestinian militant.

A member of a prosperous Greek Orthodox family from Safed, Wadi Haddad joined George Habash in establishing a medical clinic for Palestinian refugees in Jordan after completing medical studies at the American University of Beirut in 1952. He later worked in United Nations–administered refugee clinics in 1956.

Haddad and Habash also helped establish both the influential Arab National Movement in Beirut after 1948, as well as the Popular Front for the Liberation of Palestine (PFLP) later in 1967. Haddad became the main figure behind the airplane hijackings and other spectacular terrorist acts during the late 1960s and early 1970s that made the PFLP, and the Palestinian national movement generally, infamous. He planned the July 1968 hijacking of an Israeli passenger jet, the first instance of Palestinians seizing a plane. He was also involved in the September 1970 hijacking of four aircraft that were flown to Jordan and blown up after the passengers had been evacuated. That incident triggered the bloody Black September crisis (the Jordanian civil war) between Palestinian guerrillas and the Jordanian army. When the PFLP decided to cease such actions in 1971, Haddad split from the group to form the PFLP–External Operations and continued terrorist activities. That group was noted for the June 1976 hijacking of a French plane carrying Israeli passengers that was flown to Entebbe, Uganda, where Israeli forces staged a dramatic rescue operation.

Haddad died in East Germany in March 1978 and was buried in Baghdad.

HADITH

Reports (also known as khabar, *pl.* akhbar*) transmitting the sayings and actions of the prophet Muhammad.*

Hadith (sing. and pl.) consists of a body (the report) and the *isnad* (chain of reporters). It can be *qawli* (reporting the sayings of the Prophet), *fiʿli* (reporting his deeds), or *qudsi* (reporting divinely inspired sayings). Because the Qurʾan explicitly mandates Muslim obedience to the Prophet in legal and ritual matters, the *hadith* became in Islamic law *(shariʿa)* a source of legislation second only to the Qurʾan.

The classification and authentication of the *hadith* is then of crucial importance to the *shariʿa.* As most reports were collected about 150 years after the death of the Prophet, a number of disciplines collectively known as the sciences of the *hadith* were developed, specializing in external criticism (investigation of the *isnad,* biographical studies of the reporters and of their characters, historical context of each report and each subsequent transmission) and internal criticism (consistency with the Qurʾan, consistency with other *hadith,* historical consistency). Depending on the findings of these various studies, a *hadith* would be classified as *sahih* (authentic), *hasan* (good), *daʿif* (weak), and *mawdu* or *batil* (forged). Six main collections of the *hadith* gained wide acceptance, and of these the *Sahih* of Muhammad ibn Ismaʿil al-Bukhari (d. 869) and the *Sahih* of Abu al-Husayn Muslim (d. 875) are the most authoritative.

If the *hadith* is authentic or good, it is admissible as legal proof in the *shariʿa.* It will constitute a definite legal basis if it is *mutawatir* (one following after another). However, if *ahad* (solitary *hadith,* with only one transmission chain), it will not constitute, according to most jurists, legal proof without further qualification from other legal indicators. Most controversial issues and conflicts with the Qurʾanic text arise from *hadith ahad.*

Though much effort went into the collection of the *hadith,* the sheer volume of circulating reports (al-Bukhari is said to have accepted 7,275 out of more than 600,000 reports) and the fact that the Shiʿite and the Sufi schools have their own distinct collections indicate that the field could greatly benefit from the use of newly refined methods in textual and historical criticism as used for instance in biblical studies. But while the *shariʿa* admits of analytical methods to evaluate the *hadith,* the traditionally accepted collections are seen in popular religion and by some jurists and theologians almost as "sacred" sources that may not suffer any scrutiny. This defensive position is in part due to the controversial rejection by some Muslim reformers and modernists, such as Sayyid Ahmad Khan (d. 1898), of *hadith* as a source of law and has so far precluded new studies and evaluations of the historicity of the *hadith.*

HADJ, MESSALI AL-

[1898–1974]

Renowned Algerian nationalist.

Messali al-Hadj was born in Tlemcen and was the son of a cobbler. He received a religious education influenced by the Darqawa sect of Islam and later, in France, enrolled in Arabic language university courses. While serving in the French army from 1918 to 1921, Messali was disturbed by discrimination within the ranks and distressed by the demise

of the Ottoman Empire during the post–World War I years. He was attracted by labor politics, which drew him to a French Communist party–affiliated movement known as the Etoile Nord-Africaine (ENA; Star of North Africa). He became its leader in 1926, but the ENA disbanded in 1929. Messali reorganized it in 1933 and distanced it from the French Communists as a new Algerian nationalist organization called the Glorieuse Etoile (Glorious Star—then renamed the Union Nationale des Musulmans Nord-Africans [National Union of North African Muslims] in 1935). It was dedicated to achieving an Arab Muslim independent state of Algeria. After a sojourn in Geneva, Switzerland, in 1935 with the cultural and political nationalist Chekib Arslan (a Druze leader), Messali placed greater emphasis on Arabism within his movement.

Messali supported the Popular Front (France) but did not endorse its proposed assimilationist Blum–Viollette legislation (which, anyway, never passed in Parliament in 1936). His criticism of France's colonial policy and his agitation in Algeria led to the official dissolution of his movement in January 1937, although Messali responded quickly by forming the Parti du Peuple Algérien (PPA; Algerian People's Party) in March. He was arrested several months later, freed in August 1939, only to be incarcerated again in November. Messali was tried by a Vichy (pro-German French government during World War II) court in March 1941 and sentenced to sixteen years of hard labor. He remained under arrest after the Allied forces landed in North Africa during World War II (late 1942). Messali did not concur with Ferhat Abbas's "Manifesto of the Algerian People" of 1943 but in 1944 agreed to head the Amis du Manifeste et de la Liberté (AML; Friends of the Manifesto and Liberty), an organization that briefly (1944–1945) united nationalist movements and called for Algerian autonomy. The announcement in April 1945 of Messali's impending deportation to exile in France heightened tensions but, by that time, Messali's PPA had infiltrated the AML, directing it toward a confrontation with the French colonialists. This was dramatically disclosed in the Sétif Revolt in May when, during the parade celebrating victory in Europe, nationalist placards provoked violence that resulted in 103 European deaths and thousands of retributive Muslim fatalities. The AML disintegrated and the nationalists resumed their separate paths.

In 1946, Messali organized the Mouvement pour le Triomphe des Libertés Démocratiques (MTLD; Movement for the Triumph of Democratic Liberties). The younger elite, tempered by the Sétif riots, wanted direct action and formed the Organisation Spéciale (OS; Special Organization), which was still linked to the MTLD. The OS paramilitary operations (1947–1950) led to the arrest of its leaders and its demise. The MTLD concurrently faced a Berber crisis, as the Berbers (or Kabylia) believed that the organization was too Arabized, and they questioned Messali's authoritarianism. In 1953, the MTLD split between the centralists and the Messalists over the role of immediate and violent attacks against French colonialism. At first, Messali rejected the centralist position, which soon transmuted into the Front de Libération Nationale (FLN; National Liberation Front). The FLN's attacks, from 31 October to 1 November 1954, convinced Messali that he had to organize his own military group; it appeared in December as the Mouvement National Algérien (MNA; Algerian National Movement).

During the Algerian War of Independence, the MNA and the FLN's Armée de Libération Nationale (National Liberation Army) campaigned against each other. This fratricide was underscored by the MNA's highly publicized and grievous losses at Mélouza (south of Kabylia) in 1957. Messali's movement lost its credibility (i.e., the Bellounis affair) and its predominant influence over the emigrant community. France intimated a willingness to initiate discussions with the MNA before the Evian negotiations in 1961, but this was generally viewed as a stratagem challenging the FLN's legitimacy.

Even after the war of independence was won by Algeria, Messali remained in exile in France until his death in 1974. He was returned for burial in Tlemcen, the place of his birth. He and his ideas were always viewed as a threat—even after the October 1988 riots and the political liberalization they inspired, a regenerated PPA was denied legal status. Nevertheless, the extensive historical section of Algeria's revised National Charter (1986) could not ignore Messali's commitment and contribution to Algeria's independence.

HADRAMAWT

Region of the Arabian Peninsula bordered by the Rub al-Khali desert on the north and the Arabian Sea on the south.

The Hadramawt is a mountainous land traversed by a valley and a narrow coastal strip with a hot, arid climate. In 1986 there were 686,000 people living in an area of 62,150 square miles (155,376 sq km). Mukalla is the capital, and Shabwa, Hurayda, Shibam, Saywun, Tarim, Inat, and Kabr Hud are important towns.

Agriculture is largely confined to the upper valley, where there is alluvial soil and water from intermittent flooding; the lower valley that runs to the ocean on the east is largely uninhabited. Newly introduced irrigation and flood control methods are increasing agricultural production. Although dates have typically formed the main crop because of their hardiness, cotton has become an important commodity in recent times. Corn, wheat, and oats are the local grain crops, and tobacco is grown along the coast.

The inhabitants of the Hadramawt have sought their fortunes abroad for centuries. In the modern period, they have been economic middlemen in the European colonial domains spanning littoral East Africa, India, and Southeast Asia—so much so that the economy of the Hadramawt has been heavily dependent on foreign remittances. Indonesia had the most important Hadrami colony until World War II; now it is in the Hadramawt's oil-rich neighbors. The discovery of gold deposits in the 1980s was an important development.

The language of the Hadramawt is Arabic. Outside of literate circles, where modern standard or classical Arabic is the norm, a Hadrami dialect that is close to the former is in general usage. The languages and cultures of the Hadrami diaspora have influenced life in the Hadramawt. Besides its fame as a center for Islamic scholarship, the Hadramawt is noted for its social structure, in which descendants of the Prophet (known as *sayyids)* have occupied a position of politico-religious and economic paramountcy.

Although the Ottoman government historically claimed the Hadramawt as part of its empire, it did not maintain garrisons or levy taxes in the area. The imam of Yemen exerted some authority, but it is the Kuwaiti and Kathiri ruling houses that have competed for political control over the area in its modern history. The Hadramawt was a British protectorate from the late nineteenth century until 1967, when it became independent under the leadership of the National Liberation Front. It was one of the six governorates of the People's Democratic Republic of Yemen until 1991, when it became part of the Republic of Yemen.

HAFIZ, ABD AL-HALIM

[1929–1977]

Egyptian singer and film actor.

Abd al-Halim Hafiz was a singer known for his work in romantic films. He appeared in more than a dozen films, including *Lahn al-Wafa, Dalila, Banat al-Yawm* (which included Muhammad Abd al-Wahhab's famous song "Ahwak"), the autobiographical *Hikayat al-Hubb,* and *Maʿbudat al-Jamahir.*

He was born Abd al-Halim Ali Ismaʿil Shabana on 21 June 1929 to Ali Shabana and Zaynab Amasha

in a village near Zaqaziq in the Egyptian delta province of Sharqiyya. Upon the deaths of his parents shortly thereafter, his maternal uncle took him and his three siblings into his home in Zaqaziq, where Abd al-Halim attended *kuttab* (Qurʾan school) and later primary school.

At the age of eighteen, Abd al-Halim followed his brother Ismaʿil to Cairo and enrolled in the Institute of Arabic Music. He wanted to study voice and *ud* (oud; a short-necked lute); he soon moved, however, to the Higher Institute for Theater Music where he took up the oboe. Upon leaving the institute, he worked as a music teacher in several primary schools for girls and played oboe in the Egyptian Radio orchestra. The oboe, however, was considered a Western instrument and not part of Arabic tradition. Disenchanted, Abd al-Halim returned to his previous ambition of becoming a professional singer.

Among his colleagues at the institute were two young composers, Kamal al-Tawil and Muhammad al-Muji, and the conductor Ahmad Fuʾad Hasan who later established an accomplished and prestigious instrumental ensemble. All three became lifelong colleagues. In 1951, Abd al-Halim performed his first successful song, "Liqa" by Kamal al-Tawil; he also began singing for radio. Shortly thereafter, he signed a two-year contract with Muhammad Abd al-Wahhab to record Abd al-Wahhab's songs and appear in his films.

Along with works by numerous popular lyricists, Abd al-Halim sang the poetry of Abd al-Rahman al-Abnudi, beginning in the early 1960s. At this time, Abd al-Halim sought to change his style from that of ordinary love songs *(al-aghani al-atifiyya)* to one closer to that of popular folk song. He sought colloquial poetry more colorful and meaningful than the common romantic song lyric. Together, Abd al-Halim and al-Abnudi produced "al-Hawa Hawaya," "Ahdan al-Habayib," and other works that had significant impact on popular song.

Like many other commercial performers, Abd al-Halim was eager for artistic and financial control over his work. In 1959, he and cinematographer Wahid Farid formed their own film company, Aflam al-Alam al-Arabi, and produced, among other works, *Al-Banat wa al-Sayf,* based on three short stories by the well-known writer Ihsan Abd al-Quddus. In 1961, Abd al-Halim and Abd al-Wahhab formed the record company Sawt al-Fann and, in 1963, Aflam al-Alam al-Arabi became Aflam Sawt al-Fann, with Abd al-Wahhab as the third partner.

The beginning of Abd al-Halim's singing career coincided with Muhammad Abd al-Wahhab's shift away from singing to composition. Abd al-Halim's voice differed considerably from that of his famous predecessor: It was mellow and resonant, and his distinctive vocal style was characterized as subtle, with meticulous intonation. He left the impression of extended, almost endless musical phrases. He sang the songs of numerous composers, such as Abd al-Wahhab, Baligh Hamdi, Kamal al-Tawil, and Muhammad al-Muji, all in his own style, in his "confined and fertile vocal space" (al-Najmi, 142). Among his most famous songs are "Safini Marra" (by al-Muji), "Ala qadd al-Shuq" (by al-Tawil), "Ahwak" (by Abd al-Wahhab), and "Qariʾat al-Finjan" (by al-Muji, with poetry by Nizar Qabbani).

Abd al-Halim was diagnosed as having schistosomiasis (bilharzia, a parasitic disease of the tropics) in 1939. Debilitating attacks resulting from the disease began in 1955 and ended with his death in 1977.

VIRGINIA DANIELSON

HAFIZ, AMIN AL-

[1920–]

Syrian politician and veteran member of the Baʿth party.

When the Baʿth started to consolidate its hold on power in the coup of March 1963, al-Hafiz emerged as a prominent Syrian politician. After serving as deputy prime minister and minister of the interior in the government of Salah al-Din al-Bitar, al-Hafiz became chairman of the Revolutionary Command Council in July 1963, after which he served as prime minister from November 1963 to May 1964. He also held the post of president of Syria from 1963 to 1966. In the internal political fighting that became the hallmark of Syrian domestic politics in the 1960s, al-Hafiz took the side of the rural-based regionalist group led by General Salah

Jadid and Dr. Yusuf Zuʿayyin. As early as January 1965, the regionalists launched a sweeping nationalization program that attacked the entrenched interests of the urban bourgeoisie and put nearly all industry in the hands of the Syrian state. This left-wing group of regionalists was far from being united. In the summer and fall of 1965, internal party strife was brewing. The strife ended with the ouster of al-Hafiz's wing of the Baʿth Party in February 1966, and the ascendance of the neo-leftist Salah al-Jadid faction. Having lost out to al-Jadid, al-Hafiz went into exile in Lebanon in June 1967. From there he moved with Michel Aflaq and other Syrian politicians to Iraq and aligned himself with the orthodox Baʿthists who seized power in Baghdad in July 1968. His embrace of the pro-Iraqi Baʿth wing made his return to Syria a virtual impossibility. In August 1971, he was sentenced to death in absentia. The sentence was commuted to life imprisonment in November of the same year. Al-Hafiz and his Syrian associates formed a loose coalition of politicians who opposed Syrian president Hafiz al-Asad and who were involved in anti-Syrian activities on behalf of the rival Baʿth wing in Iraq.

HAGANAH

Underground military defense organization for Jewish community in Palestine, 1920–1948.

The Haganah ("defense") was founded in June 1920 by the Labor Zionist Party Ahdut ha-Avodah in response to Arab riots in April. Its military and organizational complexity increased as the conflict with the Palestinian Arabs intensified during the Mandate era. By the time full scale Arab–Jewish warfare erupted in Palestine following the November 1947 United Nations partition resolution, the Haganah was well positioned to serve as the Yishuv's main armed force and to become the core element of the Israel Defense Force (IDF).

In December 1920 the Haganah was placed under the direct control of the newly created Histadrut, headed by David Ben-Gurion. After the 1929 riots, the Haganah expanded into a Yishuv-wide defense force, and a six-member civilian National Command council was established, led by Eliyahu Golomb. The 1936–1939 Arab Revolt was a watershed event in the development of the Haganah. In the process of responding to the rebellion it developed new doctrines and structures and became an army capable of taking offensive military actions. The Haganah mobilized Jewish youth for military training, established officers' courses, and set up arms depots and underground small arms factories. Elite units were formed under the command of Yitzhak Sadeh, who would also become a major figure in the Palmah and the IDF.

The military doctrine of the Haganah during the 1920s and 1930s was based on self-restraint *(havlagah).* As the Arab Revolt intensified, those most opposed to *havlagah* split off and in 1937 formed the Irgun Zvaʾi Leʾumi, which committed retaliatory acts of terrorism against Arab civilians. In 1940 some Irgun members, led by Abraham Stern, rejected the Irgun's wartime truce with Britain and founded the "Stern Gang," also known as LEHI.

In 1938 the British created a Jewish military unit for counterinsurgency missions against the Arabs, the Special Night Squads. They were trained and commanded by Orde Wingate and drew volunteers from the Haganah, even though the Haganah was technically illegal according to the Mandatory government. Wingate's commando tactics greatly influenced the Haganah and later the IDF. Yigal Allon (Palmah commander) and Moshe Dayan were Wingate protégés.

In 1939 control over the Haganah was transferred to the MAPAI-dominated Jewish Agency, which was headed by Ben-Gurion. A professional Military General Staff was established and Yaʿakov Dori became the Haganah's first chief of staff. The Haganah ran illegal immigration operations (Aliyah Bet) during and after World War II to circumvent the 1939 White Paper restrictions. At the same time, Britain supported the creation of an elite strike force, the Palmah (Plugot Mahatz, or "shock companies") in May 1941, and Haganah members enlisted in the British Army's Jewish Brigade. When Britain refused to lift the White Paper restrictions

after the war, the Haganah and Palmah joined with the Irgun and LEHI to form the Hebrew Resistance Movement (1945–1946). The undergrounds coordinated military operations against British targets in Palestine. The harsh British crackdown on the Yishuv in June 1946 convinced Ben-Gurion to end the Haganah's participation.

By 1947 the Haganah had evolved into a cohesive military organization with British Army professionalism and combat experience. The original Palmah battalions had expanded to three full brigades, and the Haganah grew to twelve brigades. On the eve of the first Arab–Israel war, the Haganah had a nascent air force, medical and signal corps, and intelligence units, with membership totaling 60,000. The bulk of Jewish fighters during the Arab–Israel War of 1948 came from Haganah ranks.

On 28 May 1948 Order Number 4 of the Provisional Government declared the establishment of a single national army with a unified national command, to be called the Israel Defense Force (Zva Haganah le-Yisrael, or ZAHAL). All independent military organizations were to be dismantled and absorbed into the IDF. The Haganah's personnel and command structure became the main elements of the new Israeli army and Dori became the IDF's first chief of staff. Many Haganah veterans would later become generals in the IDF, including Dayan, Yigael Yadin, Mordechai Gur, and Ariel Sharon.

HAGGIAG FAMILY

Prominent North African Jewish family.

The Haggiag family name has several probable origins. According to Mordechai Ha-Cohen, the family originated in Oran, Algeria. In 1555, the family fled to Gharian in south Tripolitania. Others claim the family to be of Berber origin, cave dwellers who inhabited the area of Jabal Nafusa and Gharian. The name may have derived from their pilgrimage to Jerusalem, Safed, and Tiberias, hence the Arabic *haj,* plural *hujjaj,* related to *hajjaj* or *haggiag,* meaning pilgrims. Once the Haggiag settled on the coast of Tripoli, they maintained the name as it is but added surnames, such as Pagani and Liluf: One finds, for example, Isacco and David Haggiag Liluf and Abramo Haggiag Pagani.

Hmani (Rahmin) Haggiag was head of the Jewish community of Gharian in 1837 and was a physician. Better known was Rabbi Khalifa Haggiag (died c. 1915). He presided over the Jewish community of Gharian in 1880, served as its spiritual leader, and was a poet and physician-surgeon. He is known to have written poems that appeared in the books of Nahum Slouschz.

Another branch may have come from Tunisia, where they lived as subjects of the bey of Tunis and held French citizenship. Notable were Rabbi Nessim and his son Simeone (born 1882). After the Italian occupation, Simeone's life became intertwined with the destiny of the Jewish community and the economic development of Tripoli. He acquired his education at the Italian school of the Franciscans, in addition to his Jewish studies. He went to the Italian advanced business school and upon graduation joined the company Vadala, which specialized in import/export and banking. He remained until 1911, when the company liquidated assets in Libya.

Simeone assumed the presidency of the Jewish community of Tripoli in the by-elections of 1924, replacing Halfallah Nahum. He was by then a prominent private banker. His tenure lasted until 1926, when disagreements among the council members brought about his resignation. He was then appointed by Italian authorities as commissioner; when in 1929 elections were called and the Haggiags' faction was defeated amid irregularities

of voting procedure, the community grew tense and incidents erupted. This led the governor of Libya, Pietro Badoglio, to appoint a non-Jewish Italian, Dr. Alberto Monastero, as administrator of the community in 1929. Until 1938, the eve of World War II, the community was left leaderless.

HA-HALUTZ

Umbrella group for various Zionist youth movements throughout Europe and the United States.

Beginning in the 1880s in Eastern Europe, various groups of young Jews began to prepare themselves for eventual resettlement in Palestine to create a Jewish community. They stressed manual labor, agricultural proficiency, self-defense, and the speaking of modern Hebrew; they called themselves *halutzim* (pioneers). Branches differed over political issues, but all encouraged physical fitness and horticultural studies. Nurtured by Yosef Trumpeldor and Menahem Ussishkin, ha-Halutz became the organizational framework for preparing young men and women for pioneering work in Palestine, particularly on the land. The organization's many branches also emphasized the role of Jewish youth in transforming and secularizing Jewish society. The movement reached its high point in 1935 with some 90,000 members, but the Holocaust virtually annihilated it. During World War II the group assisted in the illegal settlement of Jews in Palestine.

DONNA ROBINSON DIVINE

HAIFA

Major city in northwestern historic Palestine and, after May 1948, Israel.

Established in the late Bronze Age on the edge of the Bay of Haifa on the Mediterranean coast, Haifa was part of the Ottoman Empire, which ruled Palestine from 1516 until the winter of 1917/18. Haifa's population was predominantly made up of Muslim and Christian Palestinians until Jews began to settle in the city in the late nineteenth century. A number of factors contributed to its economic revival: the Egyptian conquest and reforms of the mid-nineteenth century, which inaugurated modernization in Palestine; the arrival of European steamboats, which began to visit Haifa as their port of call; the immigration in 1868 of German Templars and, after 1880, of European Jews, both of whom introduced modern economic practices and machinery; and the extension of the Hejaz Railway to Haifa in 1905.

The British ruled Palestine from 1917 to 1948. During these thirty years, Haifa experienced expansion and population growth, especially after a deep-water port was opened in 1933. The 1922 census recorded 25,000 people, of whom 6,000 were Jews and 18,000 were Palestinians. As a result of growth and increased Jewish immigration, by 1944 Haifa had about 66,000 Jews and 62,000 Palestinians. It also had a small community of Bahais, who established their religious center at Mount Carmel. During the Arab–Israel War of 1948, Arab and Jewish forces fought for control of Haifa. Of the city's Palestinian population, only 3,000 remained after the war; the rest were expelled by Jewish forces or fled to Lebanon.

Haifa is now Israel's third largest city as well as its principal port and industrial and commercial center. The city's industries include oil refining, cement, chemicals, electronics, and steel. The city is composed of three sections: port facilities and ware-

houses at the bottom of Mount Carmel; the business district at the slopes of the mountain; and houses, apartment buildings, and parks on top of the mountain. It also has a maritime museum and two universities. Its 2001 population was over 270,000, of whom 10 percent were Palestinian.

PHILIP MATTAR

HAIFA UNIVERSITY

Public university in Haifa, Israel.

Opened in 1963, Haifa University did not become firmly established until the 1970s. With help from the Hebrew University in Jerusalem, Haifa University solidified its place as one of the top institutions of higher learning in Israel. It has nurtured a disproportionate number of original and often controversial figures, particularly in the humanities and the social sciences. In general, the faculty tends toward the left, and the university has been the seat of innovative studies on such topics as the attitudes of Arabs toward Israelis and of Israelis toward Arabs. A total of 13,000 students are enrolled in the university's undergraduate and graduate divisions.

ZACHARY KARABELL

HAIGAZIAN COLLEGE

Armenian academic institution established in Lebanon in 1955 by the Union of Evangelical Armenian Churches and the Armenian Mission Delegation.

Haigazian is a liberal arts college catering mostly to the needs of the Armenian community in Lebanon. Arabic, English, and Armenian literature are taught, as well as political science, economics, sociology, psychology, computer science, and business administration. There are also professors who teach chemistry, physics, and religious studies.

In 1975, Haigazian College had an enrollment of 650 students; by the mid-1990s there were 312 students and 50 faculty. All courses are taught in English and students are required to take a course on religion. Most of Haigazian's faculty also teach at the American University of Beirut and Beirut University College.

GEORGE E. IRANI

HAIK

Woman's draped, concealing garment.

A *haik* (pl. *hiyak*) is a simple, traditional outdoor costume of Moroccan townswomen, worn at the turn of the twentieth century, made of either fine white or coarse lumpy wool, a mixture of silk and wool, or simply cotton. *Hiyak* are white, with the exception of the black *haik* of Taroudant, and measure about 5 by 1.6 meters. The *haik* drapes the woman from head to foot with only the eyes showing.

HAJIR, ABD AL-HOSEYN

[1900–1949]

Iranian politician.

Abd al-Hoseyn Hajir began his political career in the ministry of foreign affairs and then became a clerk at the Russian embassy in Tehran. After holding several ministerial positions, he was appointed prime minister in 1947. In 1949, he was elected to the parliament and also acted as minister of court. Opposed by the popular National Front, his appointments caused mass demonstrations. Hajir was

assassinated in Tehran as he was praying in the Sepahsalar Mosque (1949). The murder was attributed to Sayyid Hoseyn Emami of the Feda'iyan-e Islam, a militant Islamic group that accused Hajir of being an Anglophile and having Baha'i affiliations.

NEGUIN YAVARI

HAJJI BABA OF ISPAHAN

Title of the first and most famous of four travel novels about Persia by an Englishman who had spent time there in the British diplomatic corps.

Hajji Baba of Ispahan (1824) by James Justinian Morier (c. 1780–1849) appealed to contemporary interest in things oriental and gave readers a satirical look into Persian society of the early Qajar period (the Qajar dynasty, ruled 1795–1925). Its title character and picaresque narrator is a barber whose desire to get ahead, and cleverness in so doing, leads him from his hometown of Ispahan (now Isfahan) to Mashhad, to life with a band of Torkamans (Turkmen), Tehran, Qom, Karbala, Baghdad, Constantinople (Istanbul), and finally back to Ispahan as a wealthy representative of the shah. In these places and situations—in the bazaar and the royal court and among dervishes and clerics—Hajji Baba satirically depicts Iranian ways and offers entertaining observations on human nature.

Hajji Baba of Ispahan has played a role in modern Persian literature insofar as its Persian translation in 1905 became a popular model for a type of narrative for which indigenous precedents did not exist. Readers in Iran have even given Morier the ultimate tribute, by alleging that the Persian version was the original and Morier's the translation. They thought the book was so accurate and detailed in its depiction of culture-specific situations and behavior that only an Iranian could have written it.

MICHAEL C. HILLMANN

HAJRI, ABDULLAH AL-
[?–1977]

Yemeni judge and government official.

A religious, traditional *qadi* or judge, Abdullah al-Hajri sided with the royalists in the Yemen civil war in the 1960s. He then helped pave the way for the republican-royalist reconciliation by switching sides and working to give the republican regime a more conservative cast. As prime minister in 1973, he both secured from his Saudi friends large amounts of state-to-state aid on a regular, annual basis and cracked down harshly on Yemeni leftists. Adviser to the younger, much less conservative President Ibrahim al-Hamdi in the mid-1970s, he was assassinated in 1977.

See also HAMDI, IBRAHIM AL-; YEMEN CIVIL WAR.

ROBERT D. BURROWES

HAKIM, ADNAN AL-
[?–1991]

Lebanese politician.

A Sunni Muslim from Beirut who played a leading role in the Lebanese Civil War of 1958, Adnan al-Hakim won a parliamentary seat from Beirut in 1960 and 1968. He is considered an extremist who mobilized the masses following sectarian lines and did not get along with other Sunni politicians, whom he accused of compromising Muslim demands in dealing with the Maronite (Christian) political establishment.

His political career is closely tied to that of the al-Najjada party, which was founded as a paramilitary organization in 1946. It emerged from the structure of the Muslim Scouts in Syria and Lebanon. Hakim served as the commander of the Beirut section and a vice-president. In the wake of the dissolution of paramilitary organizations in 1949, he revived the organization and became its head in 1951.

The party sought the "propagation of the Islamic heritage" and called for the union of the Arab

lands. It cooperated closely with Egypt's President Gamal Abdel Nasser in the 1960s and led a campaign against the pro-Western foreign policies of Lebanon's President Camille Chamoun. The motto of the party is "the Lands of the Arabs are for the Arabs," and it called for the elimination of Western influence and interests from the Middle East.

Al-Najjada's role in the Lebanese civil war of 1975–1976 was insignificant because most Muslims were attracted to parties with a more revolutionary agenda. The party was seen as belonging to the past, and Hakim was too old to energize party recruitment as he had done in the late 1950s. His political role in the 1970s and 1980s was limited to his ownership of the Beirut daily *Sawt al-Uruba.*

AS'AD ABUKHALIL

HAKIM FAMILY

Prominent Iraqi family of Shiʿite religious scholars.

The Najaf-based Hakim family of *ulama* call themselves Tabatabaʾi Sayyids, or "descendants of the Prophet." In the family were Ali ibn Abi Talib and his elder son, al-Husayn, the second imam of Shiʿism. In the twentieth century the most prominent scholar in the family was Ayatullah al-Uzma Muhsin ibn Mahdi (1889–1970). He was educated at the *hawza* of Najaf by some of the greatest *mujtahids* of his time—Akhund Khurasani, Muhammad Kazim Yazdi, Muhammad Husayn Naʾini, and others.

Following the death in 1962 of Marja al-Taqlid Husayn ibn Ali Tabatabaʾi Burujirdi in Iran, Muhsin al-Hakim became the most widely followed *marja* in the world, but he never managed to acquire sufficient influence in Qom and thus never became supreme *marja al-taqlid.* Under the monarchy Hakim was regarded as a political quietist, but under the revolutionary regime of general Abd al-Karim Qasim (1958–1963) he became very active against the rising influence of the Communist Party, which was felt in the Shiʿite south as well as in Baghdad. This brought about a number of clashes between the Iraqi Communist Party and Hakim's followers. He

Ayatollah Mohammad Bager al-Hakim, a Shiʿite leader, is shown praying with other Muslims. **© REUTERS NEWMEDIA INC./CORBIS. REPRODUCED BY PERMISSION.**

also openly criticized Qasim for introducing a secular law of personal status and called upon him to abolish it. At the same time, however, he maintained cordial personal relations with Qasim himself. This is also when he started to sponsor a young and ingenious activist mujtahid, Muhammad Baqir al-Sadr (1933–1980) who, in 1957, established the clandestine Daʿwa Party. Its purpose was to fight atheism and bring people, and in particular the Shiʿa masses, back to Islam. As a result of strong criticism leveled by conservative Shiʿite *ulama* against this Western innovation, however, in 1962 Hakim forced Sadr to distance himself from the Daʿwa, at least in appearance. But Hakim continued to sponsor similar activities performed through traditional channels. He sent some of his and Sadr's disciples as agents *(wukala)* to various parts of Iraq, as well as to Lebanon, to spread the message, and he dedicated great resources to the establishment of libraries, schools, mosques, and other educational activities in and outside of Iraq. Under the first Baʿth rule (1963) of the Arif brothers (1963–1968) relations with the regimes were frosty. The Arifs were regarded by the Shiʿites as extreme Sunni bigots, and Hakim considered their Arab Socialism a deviation from Islam's social teachings. Finally, he had strong reservations about their Nasserist pan-Arabism.

In June 1969, less than a year after it came to power for the second time in Baghdad, the Baʿth regime initiated an unprecedented confrontation

with the Shiʿite religious establishment. This came as reprisal for Hakim's reluctance to support the regime against the shah of Iran. The Baʿth decided to draft the students of religion, to eliminate the educational autonomy of the *hawzat* (the Shiʿite religious universities), and to control the huge funds donated to the Shiʿite holy shrines. They also accused Hakim's son Mahdi of espionage and forced him to flee the country. Hundreds of students and teachers had to escape to Iran, and the religious centers of Najaf, Karbala, and Kazimayn quickly deteriorated. Hakim led the doomed struggle and died brokenhearted in June 1970.

Mahdi al-Hakim eventually settled down in London, where he established a Shiʿite European political movement, Harakat al-Afwaj al-Islamiyya, and a cultural center, Markaz Ahl al-Bayt. In January 1988 he was assassinated by Saddam Hussein's agents at an Islamic conference in Sudan. His brother, Hujjat al-Islam (later Ayatullah) Muhammad Baqir, established in Iran in November 1981 the Supreme Assembly of the Islamic Revolution in Iraq (SAIRI), the largest Iraqi Shiʿite opposition movement to the Baʿth regime. Supported by Iran, his movement's 4,000-strong military wing, the Badr Forces, participated in operations against the Iraqi armed forces during the Iran–Iraq War. Following the August 1988 cease-fire SAIRI's position in Iran became more precarious, but as long as there is no Iranian–Iraqi peace Hakim can still rely on his hosts for some support. In May 1983 Saddam Hussein imprisoned many members of the al-Hakim family, threatening that unless Muhammad Baqir stopped his opposition activities from Tehran his relatives would be executed. Between 1983 and March 1985 at least eight *ulama* members of the family, including sons, grandsons, and nephews of the late *marja,* as well as many other Shiʿite *ulama,* were executed by Iraq.

HAKIM, TAWFIQ AL-

[1898–1987]

Egyptian dramatist, novelist, and man of letters.

Tawfiq al-Hakim was born in Alexandria, and his early life was shaped by his father's frequent moves from job to job and by his ambition that his son should become a lawyer. Al-Hakim's real interests, however, lay elsewhere; while still a student at the School of Law in Cairo, he wrote some plays (published under a pseudonym) for the Ukasha troupe. When he failed in his legal studies, his father sent him to France to study for a doctorate. Al-Hakim traveled to Paris in 1925, an event that was to be a turning point in his life. Instead of studying law, he immersed himself in European culture, particularly drama, and was strongly influenced by the works of Shaw, Pirandello, Ibsen, and Maeterlinck. Upon returning to Egypt in 1928, he prepared for publication a number of literary projects begun in Paris but also worked for a time as a deputy public prosecutor *(naʾib)* in the Nile delta area and, later, as an official in the ministry of social affairs. In 1943 he resigned his position as a civil servant to devote himself to his writing. Later in life, and particularly during the presidency of Anwar al-Sadat, he became somewhat controversial, partly because of his book *Awdat al-Waʿy* (1974; published in 1985 in English as *The Return of Consciousness*), in which the course of the Egyptian revolution and the status of Egypt's former president Gamal Abdel Nasser was critically reexamined. Only a short time before his death in 1987, he published a series of articles under the title "Hiwar maʿ Allah" (Conversation with God), which aroused the ire of the religious establishment.

The inspiration that al-Hakim had found in France bore fruit when two of his works were published in 1933 to immediate critical acclaim: the play *Ahl al-Kahf* (People of the cave) and the novel *Awdat al-Ruh* (Return of the spirit). The latter was to be the first of a series of partially autobiographical contributions to fiction to be published in the 1930s. While it deals with the life of an Egyptian family during the turbulent years surrounding the revolution of 1919, *Yawmiyyat Naʾib fi al-Aryaf* (Diary of a provincial public prosecutor, 1937; published in English as *The Maze of Justice,* 1989) is a most successful portrait of the dilemma faced by Egyptian rural society in its confrontation with the laws and imported values of Europe, and *Usfur min al-Sharq* (1938;

published in English as *A Bird from the East,* 1966) takes Muhsin, the main character in *Awdat al-Ruh,* to Paris.

Ahl al-Kahf was to mark the official beginning of the most notable career in Arabic drama to date. Along with several other plays written in the 1930s and 1940s (such as *Shahrazad* [1934; in English, 1981], *Pygmalion* [1942], and *Al-Malik Udib* [1949; in English, *King Oedipus,* 1981]), it dealt with historical and philosophical themes culled from a wide variety of sources and thus was seen as providing the dramatic genre with a cultural status that it had not enjoyed previously. Al-Hakim's dramatic output is vast and extends over five decades. It includes other plays with philosophical themes, two collections of shorter plays addressing social issues, and a number of works that experiment with dramatic technique (such as *Ya Tali al-Shajara* [Oh, tree climber, 1962; in English, *The Tree Climber,* 1966] and varying levels of language (such as *Al-Safqa* [The deal, 1956]).

Tawfiq al-Hakim is the major pioneer figure in the development of a dramatic tradition in modern Arabic literature, and he has attained the status of one of the greatest Arab litterateurs of the twentieth century.

HALAKHAH

The Jewish religious system indicating the "path" that Jews are to follow.

Biblically derived and elaborated upon by oral tradition (especially in the Mishna, from 50 C.E. and Talmud, from 220 C.E.), Halakhah regulates a wide range of personal and communal behavior, from dress codes, dietary rules, and daily religious prayers and rituals to requirements concerning life cycle events, such as marriage and divorce, and the determination of Jewish identity and procedures for conversion. An orderly, topical presentation of the rabbinic tradition appears in *Mishne Torah* (Repetition of the law) by Maimonides (also known as Rabbi Moshe ben Maimon, or Rambam, 1135–1204). The essential guide for the commandments to be followed in daily life is the *Shulkhan Arukh* (Prepared table) by Joseph Karo (1488–1575).

The attitude toward Halakhah is a major determinant affecting Jewish denominationalism. Orthodox Judaism basically accepts Halakhah as an unchanging corpus of law. Minor differences of interpretation are tolerated in accordance with the historical customs that have evolved in local communities. Noteworthy are Ashkenazic and Sephardic customs that inadvertently perpetuate Jewish ethnicity. Conservative Judaism is more flexible in introducing religious change, while the Reform and Reconstructionist movements reject Halakhah as a mandatory system dictating contemporary behavior.

Only a minority of world Jews adheres strictly to Halakhah, with Israel having the highest percentage—between 20 and 25 percent. But the institutionalization of some aspects of Halakhah in Israel's state rabbinate and in the political sphere (inter alia, defining who is Jewish according to Halakhic standards) affects the entire Israeli population. This has resulted, in Israel, in tension between religiously observant Jews, nonobservant Jews, and persons who are not considered Jews by Halakhah (for example, patrilineal descendants of Jews who are accepted as such by the North American Reform movement, or persons converted to Judaism by non-Orthodox rabbis).

The conflict over the acceptance of Halakhic Judaism as the sole legitimate manifestation of contemporary Judaism and the consequent implications for the acceptance of other denominations' rabbis and religious rulings carries over to world Jewry, in part because of the central role of Israel in world Jewish life.

HALAL

See GLOSSARY

HALUKKA

Financial support of Palestinian Jews by Jews living outside Palestine.

Halukka is the Hebrew term for "distribution." The system, which dates back to the Second Temple period (536 B.C.E.–70 C.E.), enabled those not living in the Holy Land, Eretz Yisrael, to assist those who were. Throughout the centuries, emissaries from Palestine travelled to diaspora nations to solicit donations. Periodically, Ashkenazi and Sephardic communities in Eretz Yisrael clashed over the proportion of funds to be distributed in their respective communities. The system became a source of contention between the traditional Orthodox, who wished to preserve it and their communal autonomy, and the Zionists, who viewed it as parasitical—claiming it hindered incentive—and a barrier to national regeneration and growth. As the "New Yishuv" grew, the segment of Palestine Jewry supported by halukka contributions steadily shrank and became a very small minority.

HAMA

Ancient town built on the banks of the Orontes River in central Syria (Sem., Hamath; Gk. Epiphania).

Hama, located on the main road between Damascus and Aleppo, is about 130 miles (210 km) north of Damascus, the capital of Syria, and about 94 miles (152 km) south of Aleppo. Like Homs, Hama lies close to the frontier of settlement facing the Syrian Desert, making it a flourishing market for the nomadic people and villagers in the countryside.

Agriculture in the Hama region profits from the water of the Orontes River. Water wheels *(nawriyas),* which raise the river water up into canals, help irrigate large stretches of land. Of the 100 water wheels in Hama province, only twenty are in use. Grains and fruits abound in the countryside.

The U.S. Department of State estimated the city's population in 2002 at 1.6 million. In the 1980 census, the inhabitants of the city of Hama numbered 177,208 out of a total of 475,582 inhabitants for the whole province. In the 1922 census, the inhabitants of Hama numbered 40,437 out of a total of 69,745 inhabitants for the whole province. The bedouin in the countryside of Hama are not accounted for.

The city of Hama prides itself on a number of ancient monuments. It has many mosques (the most important of which is the Umayyad Mosque), khans (caravansaries), and luxurious palaces belonging to the Azm family, which governed in Syria in the eighteenth century. Important archaeological sites in the countryside include Crusader castles and those built by Saladin, such as those of Shayzar, al-Madiq, and Misyaf.

Hama was a center of resistance to the French during the 1925–1927 Syrian rebellion and to Col. Adib Shishakli's government in 1954. After the Baʿth seizure of power in 1963, the city remained resistant to Damascus's edicts, driven largely by the popularity of the Islamist movement among the Sunni majority and by the merchant community's antagonism to the Baʿth's socialist strictures.

This opposition was first expressed in the spring 1964 rebellion in Hama, led by the Muslim Brotherhood (Ikhwan), but reached its peak during the

countrywide Ikhwan-led underground movement (1976–1982), sparked in part by the government's Alawi sectarian composition and by its intervention in the Lebanese civil war. In April 1981 government forces, responding to an Ikhwan-led ambush of an Alawi village on Hama's outskirts, entered the city, killing hundreds. The next year, a government attempt to suppress the Ikhwan led to a month-long rebellion in Hama (2 February–5 March 1982). In putting down the revolt the government massacred an estimated 5,000 to 10,000 civilians and destroyed large parts of the city.

HAMADAN

An ancient and important city in western Iran.

Hamadan, located at an elevation of 5,732 feet, occupies a fertile agricultural plain. It is associated with the ancient Median city of Ecbatana, built in the seventh century B.C.E., and it was an important capital of successive pre-Islamic dynasties, being situated on the trade route that linked Mesopotamia with the East. In the seventeenth and early eighteenth centuries, the city was occupied by the Ottoman Empire several times, but in 1732 it finally reverted to Iran.

Hamadan retained its role as a large commercial city in the modern period. In the nineteenth century it functioned as a transshipment center for the trade of southwestern Iran with the West. Goods destined for Tabriz, Trebizond (now Trabzon), and the Black Sea were brought to Hamadan. After the development of the Anglo-Indian trade, Hamadan prospered as a result of its location on the trade route via Basra and Baghdad to the east. During the twentieth century the city continued to serve as a regional transshipment center and also developed diverse manufacturing industries. A shrine popularly believed to contain the remains of the biblical Esther is a major Jewish pilgrimage site in the city. There is also a monument for Ibn Sina (Avicenna). The population of Hamadan in 1996 was 401,281.

HAMADI, SABRI

Lebanese politician.

Sabri Hamadi, a member of one of the most influential Shiʿite families in Lebanon, was born in Hirmil. He received no formal education beyond some elementary schooling in Juniya. He was first elected to parliament in 1925 and was its speaker for much of the 1960s. With Bishara al-Khuri, Hamadi was one of the founders of the Constitutional Bloc. He was a shrewd politician who knew how to exploit the differences among his enemies.

Under Hamadi, the parliament was chaotically structured; appointments within it were made on the basis of total loyalty to him. His cronies from Baʿlabak-Hirmil, including some who rarely came to Beirut, where the parliament is located, were on the payroll in key administrative positions. His rule was closely associated with the ascendancy of Chehabism in Lebanon; Hamadi believed that Fuʾad Chehab was the best leader in the Arab world.

As a speaker of parliament in the summer of 1970, Hamadi played a crucial role in the presidential election of that year. When Sulayman Franjiyya defeated the Chehabi candidate, Ilyas Sarkis, Hamadi initially refused to accept the results. He changed his mind after his advisers and Fuʾad Chehab personally warned him of the dire consequences if Franjiyya's

election was not ratified. Franjiyya's armed gunmen were waiting outside the parliamentary hall. Hamadi lost the speakership position that year but served as minister of agriculture under Franjiyya.

HAMAMA, FATEN

[1931–]

Egyptian film actress.

Born in Cairo in 1931, Faten (also Fatin) Hamama made her film debut as a young girl in *A Happy Day* (1940), directed by industry pioneer Muhammad Karim. By the 1950s, Hamama was considered to be the leading star of the Egyptian cinema. Her marriage to Omar Sharif in 1953 increased his popularity, and they made several films together. Best known for her melodramatic roles, she played in more than one hundred movies over five decades. Notable films featuring Hamama include some of director Henri Barakat's best work, such as *Call of the Curlew* (1959), *The Open Door* (1963), *The Sin* (1965), and *The Thin Thread* (1971).

HAMA MASSACRE

Islamist uprising against Syrian regime.

In February 1982, Syrian security forces entered the densely populated old city of Hama, situated on the Orontes River south of Aleppo, to search for weapons hidden by Islamist militants. Local residents, urged on by alarms from neighborhood mosques, attacked the troops and pushed them out of the central city. Armed militants then seized control of the provincial headquarters of the ruling Baʿth Party and other key government installations. Elite military and security units commanded by the president's brother, Colonel Rifʿat al-Asad, rushed to the area and, from the heights of the nearby citadel, rained artillery and tank fire into the town, leveling its major commercial and residential districts. Estimates of the dead range from 10,000 to 30,000.

Although Hama had long been a center of Islamist political activism and the location of frequent outbreaks of popular challenge to successive Baʿthist regimes after the 1963 revolution, the 1982 uprising was notable for its massive scale, the broad range of social forces that took part, the high degree of organization evidenced by its leaders, and the ruthlessness with which it was crushed. The most militant Islamist organization in north-central Syria, the Fighting Vanguard, led by Adnan Uqla, never recovered. Even more moderate Islamists scaled back their activities sharply, while some prominent figures, to avoid being harassed, tortured, and killed, initiated overtures to the authorities. For almost a decade the government refused to allocate funds to rebuild the city, whose ruins stood as a stark warning to other dissidents.

HAMAS

Palestinian Islamic resistance movement.

HAMAS was created in Israeli-occupied Gaza in December 1987 as the resistance wing of the Islamic revivalist organization, the Association of the Muslim Brotherhood. *HAMAS* (zeal, in Arabic) is an acronym for Harakat al-Muqawama al-Islamiyya (Islamic resistance movement).

Prior to the outbreak of the anti-Israeli uprising in the West Bank and Gaza known as the In-

tifada in December 1987, the Brotherhood's agenda focused on proselytizing and social purification as the basis for Palestinian socio-spiritual renewal. Hostile to secular nationalist groups within the Palestine Liberation Organization (PLO), the Brotherhood shunned overt acts of anti-Israeli resistance. Israeli authorities quietly assisted the Brotherhood in hopes that it might provide a quieter political alternative to the PLO. The leading figure in the Brotherhood was Shaykh Ahmad Yasin.

Massive popular participation in the intifada prompted the Brotherhood to change tactics and establish HAMAS; its August 1988 charter clearly noted the group's connection with the Brotherhood. Brotherhood leaders argued that the time for vigorous jihad (holy war) had arrived. The move was political as well as religious—secular groups and another militant religious group, Islamic Jihad, were already resisting the Israeli occupation.

The charter called for the total liberation of Palestine from Israeli rule, declaring that Palestine is Islamic *waqf* (religious trust) land that must never be surrendered to non-Muslim rule. HAMAS supported the establishment of an Islamic Palestinian state in all of Palestine, in contrast to the PLO's vision of a secular state in the occupied territories. Israeli authorities struck hard at the HAMAS leadership during the intifada. Shaykh Yasin was arrested in May 1989 and sentenced two years later to life imprisonment. Other important HAMAS figures, such as Shaykh Ibrahim Qawqa, were deported. In December 1992 Israel deported 418 members from HAMAS and Islamic Jihad to Lebanon, including HAMAS leader Abd al-Aziz Rantisi.

HAMAS has maintained a difficult relationship with the PLO. It refused to join the PLO-led Unified National Command of the Uprising (UNCU) that emerged to coordinate resistance activity during the intifada. According to an October 1988 agreement between HAMAS and the UNCU, HAMAS operated alongside of but separate from the UNCU. By 1991 HAMAS was pushing for elections to the Palestine National Council, the PLO's parliament-in-exile, which would be held both in exile and in the territories, where its own strength lay. HAMAS also resolutely opposed the Arab-Israeli peace talks that began in late 1991, and HAMAS activists from its armed wing, the Martyr Izz al-Din al-Qassam Brigades, increased the number of attacks against Israeli targets. HAMAS joined nine other Palestinian groups opposed to the talks in the National Democratic and Islamic Front and denounced the resulting Oslo Accord (September 1993).

HAMAS accelerated its resistance to the accords after establishment of the Palestinian Authority (PA) in 1994. In 1995, as serious intra-Palestinian disputes continued, the al-Qassam Brigades carried out a number of deadly suicide bombings against Jewish civilians in Israel proper, not against troops in the West Bank and Gaza; this prompted the PA to crack down on HAMAS. The following year, HAMAS bus bombings directly led to the election of hardliner Benjamin Netanyahu as Israeli prime minister and the virtual collapse of the peace process. King Hussein ibn Talal demanded Shaykh Yasin's release in October 1997 in return for the release of two Israeli intelligence operatives who had been captured after their failed attempt to assassinate HAMAS leader Khalid Mashʿal in Amman. HAMAS maintains offices in several countries, including Syria, the current home of exiled senior leader Musa Abu Marzuq.

The al-Aqsa Intifada, which started in 2000, saw the al-Qassam Brigades increase their suicide attacks against Israeli civilian targets. In addition, HAMAS and Islamic Jihad put aside their rivalry and began working in tandem. Israel, in return, assassinated more than 100 militants from the al-Qassam Brigades, Islamic Jihad, and al-Fatah's al-Aqsa Martyrs Brigade. Among them was senior HAMAS spokesman Ismaʿil Abu Shanab. Israel tried but failed to assassinate several other senior figures, such as Abd al-Aziz Rantisi (who returned to Gaza in 1993), in June 2003, and Shaykh Yasin, in September 2003. Israel repeated its assassination attempt on Shaykh Yasin on 22 March 2004, this time killing him.

Polls consistently show that Palestinians approve of HAMAS's suicide bombings, although that public support began to wane because of their deleterious effect on global support for the Palestinian cause. By late 2003 the future of the peace process seemed to depend upon the PA's ability to halt attacks by HAMAS.

HAMAS (MOVEMENT FOR A PEACEFUL SOCIETY)

A moderate Islamic party in Algeria.

Hamas is Algeria's second most popular Islamic party, after the Islamic Salvation Front. It was established in 1990 by Shaykh Mahfoud Nahnah (1942–2003), after constitutional amendments allowed for political pluralism, as the Movement of the Islamic Society, with the Arabic acronym HAMAS. To conform to a law requiring that the name make no reference to Islam, in 1991 the party changed its name to the Movement for a Peaceful Society. Influenced by the teachings and methods of the Egyptian Muslim Brotherhood, the party's origins go back to the 1970s, when Shaykh Nahnah was arrested for opposing the state's socialist orientation. In 1989, he formed a social and cultural society, Jam'iyyat al-Irshad wa al-Islah (Association of Guidance and Reform), which became Hamas in 1990 and drew its following from among students, teachers, and professionals. In the 1991 legislative elections, the party garnered over 450,000 votes. Since the cancellation of these elections, Hamas has maintained a moderate and nonviolent stance and advocated national reconciliation and the preservation of the republic and the institutions of the state. It has been criticized by some for taking a conciliatory position toward the military-backed regime. Others see its program as realistic and pragmatic. Shaykh Nahnah ran as a candidate during the presidential elections of 1995 and came in second, winning over three million votes. In the 1999 presidential elections, the party supported the candidacy of Abdelaziz Bouteflika. Since the 1997 legislative elections, Hamas has participated in several ministerial cabinets and placed representatives in the Algerian parliament. It has advocated a moderate Islamic position; adherence to the country's fundamental cultural components (Islamic, Arab, and Amazegh [the indigenous population]); the restoration of order and national peace; pluralism; the peaceful transfer of power; women's participation in society; and respect for human rights. In 2003 Shaykh Nahnah died of leukemia, leaving behind a movement that is expected to survive its founder.

HAMDI, IBRAHIM AL-

[1943–1977]

President of Yemen Arab Republic (1973–1977).

Ibrahim al-Hamdi was born to a *qadi* family in North Yemen. After the revolution that overthrew Imam Yahya in 1962, he entered the army of the newly formed Yemen Arab Republic. He rose rapidly through the ranks, and during the civil war, he became increasingly involved in politics. In the early 1970s al-Hamdi became commander of the Reserves, an elite army unit; in 1972 he was appointed deputy prime minister, and in 1973, deputy commander in chief of the armed forces.

In 1973, al-Hamdi led a military coup against the civilian government of Abd al-Rahman al-Iryani, which was widely perceived as ineffective. His first government included technocrats and was supported by some of the more conservative tribal elements, including leaders of the Hashid and Bakil confederations.

Upon assuming office, al-Hamdi consolidated his power by methodically reducing the independence of other forces in the country through his "Correction Movement," a nationwide effort to reform the administration, staffing, and operations of all government institutions.

Eventually, the tribal leaders and the more progressive elements (the latter organized into the National Democratic Front) began to oppose al-Hamdi's modernization programs. Political unrest increased in early 1977, amid signs that al-Hamdi desired closer relations with the People's Democratic Republic of Yemen. In October, despite signs that his political situation was improving, he was assassinated.

Al-Hamdi is regarded today as one of the most dynamic and progressive of Yemen's leaders after the civil war of the 1960s, and his role is compared, in meaning and importance, with that of John F. Kennedy in American political history.

HAMID AL-DIN FAMILY

A ruling dynasty of North Yemen.

This Sayyid family provided the last dynasty of Zaydi imams in North Yemen and produced a late, brilliant flowering of the traditional authoritarian political system that had been an important part of Yemeni politics for over one thousand years. Founded by Imam Muhammad ibn Yahya Hamid al-Din in 1891, the dynasty was consolidated and reached its zenith during the long reign of his son, Imam Yahya ibn Muhammad Hamid al-Din (1867–1948), a reign that began in 1904 and ended with his assassination in 1948. Imam Yahya's son, Imam Ahmad ibn Yahya, long the crown prince, quickly overturned the 1948 revolution and went on to restore and develop further the institutions and practices of his father until his death in 1962. Imam Ahmad, however, was less successful than his father in insulating traditional Yemen from the outside world and modernity. Imam Muhammad al-Badr succeeded his father, only to be overthrown a week later by the 1962 revolution that created the Yemen Arab Republic. More than a generation later, the Hamid al-Din family remains officially banned from Yemen.

HAMINA, MOHAMMED LAKHDAR

[1934–]

Algerian filmmaker.

Mohammed Lakhdar Hamina is one of the world's most distinguished directors. Three of his motion pictures have been honored at the Cannes Film Festival: *Le vent des Aurès* (The Wind from the Aurès, 1966); winner of the grand award, Palme d'Or, *Chronique des années de braise* (Chronicle of the years of embers, 1975); and *Vent de sable* (Desert wind, 1982). Like other postcolonial Algerian directors, Hamina's films explore the promise and paradox resulting from the revolution (1954–1962) and independence.

HAMMARSKJÖLD, DAG

[1905–1961]

United Nations secretary-general, 1953–1961.

Born in Uppsala, Sweden, Dag Hammarskjöld was successively a professor of economics, permanent under-secretary of the Finance Ministry and chairman of the board of the Swedish National Bank, Swedish representative in negotiations on the Mar-

shall Plan and on European institutions, and minister in the Swedish Foreign Office. Elected United Nations secretary-general in 1953, he revitalized the world organization.

Hammarskjöld's brilliant personal diplomacy was a new factor in international affairs. In 1955, in talks with Chou En-Lai, he secured the release of seventeen U.S. airmen imprisoned in China, resolving a serious potential threat to international peace. In 1956 he shored up the crumbling Arab–Israeli armistice agreements. In talks in New York he tried to resolve the crisis that followed Gamal Abdel Nasser's 1956 nationalization of the Suez Canal Company, an effort aborted by the Anglo-French-Israeli invasion of Egypt.

Hammarskjöld persuaded the invaders to accept a cease-fire on the condition that a UN force arrive in the area immediately. The first UN peacekeeping force (UNEF I) arrived in the Suez Canal area eight days later. Early in 1957 UNEF replaced the Israelis in Sinai and Gaza.

Hammarskjöld's friendship with both Israeli prime minister David Ben-Gurion and Mahmud Fawzi, Nasser's foreign minister, facilitated his efforts. He failed however, to get Egypt to agree to navigation for Israeli ships or Israel-bound cargoes in the Suez Canal. In 1958 Hammarskjöld played a crucial role in containing, negotiating, and finally resolving the Lebanese crisis, during which, under mistaken premises, U.S. Marines landed in Beirut and British troops in Jordan.

In 1960 Hammarskjöld organized the UN's largest and most difficult peacekeeping operation in the newly independent and chaotic Congo. In the absence of directives from a paralyzed Security Council, his independent actions led to his rejection by both Nikita S. Khrushchev and Charles de Gaulle, who also furiously resented Hammarskjöld's visit to Tunisia when French forces violently reoccupied Bizerte in the summer of 1961.

Hammarskjöld died on 17 September 1961 while on a mission to end fighting in Katanga, when his aircraft crashed at Ndola, Northern Rhodesia.

HAMMER, ZEVULUN

[1936–1998]

Member of Israel's Knesset and cabinet minister.

Zevulun Hammer was born in Haifa and was educated in the Israeli national religious school system, concentrating on biblical and Judaic studies at Bar-Ilan University. He did his military service working on a kibbutz. He was a leader of the National Religious Party and was instrumental in getting the party involved in security issues and foreign policy and supporting the Gush Emunim program to settle the Occupied Territories. During the 1980s Hammer moderated his views on the West Bank, arguing that domestic unity was more important than holding onto a vision of Greater Israel.

First elected to the Knesset in 1969, he served as minister of welfare in 1975 and 1976 and was minister of education and culture from 1977 to 1984. He served as minister of religious affairs from 1986 until 1990. In 1990 he again became minister of education, and served until 1992. From 1992 to 1996, he served on the Knesset Foreign Affairs and Defense Committee but did not hold ministerial position. In June of 1996 he was again appointed minister of education and culture as well as deputy prime minister. In August of 1997 he also became minister of religious affairs.

HAMRA RIOTS

Muslim–Christian riots in Egypt.

In June 1981 continuing intercommunal tensions between Muslims and Coptic Christians in Egypt

erupted into violence in Zawiyat al-Hamra, in the Shurabiyya district of Cairo. Seventeen people died and fifty-four were injured. The violence contributed to the government's September 1981 dismissal of the Coptic pope, Shenouda III, and banning of the Muslim Brotherhood movement.

See also Muslim Brotherhood; Shenouda III.

Michael R. Fischbach

HAMROUCHE, MOULOUD

[1943–]

Prime minister of Algeria, 1989–1992.

Mouloud Hamrouche was born into a family imbued with Algerian nationalism; his father was killed during the War of Independence. At the age of fifteen Hamrouche joined the the Armée de Libération Nationale (ALN). He rose within the Front de Libération Nationale (FLN) to serve in the protocol service under Colonel Houari Boumédienne, who encouraged him to return to his studies. Hamrouche holds a law degree and a master's degree obtained in the United Kingdom. He was appointed chief of protocol in President Chadli Bendjedid's government and served until 1984. He then served as secretary-general of the government and then of the presidency. He replaced Kasdi Merbah as prime minister in September 1989 and was charged with accelerarating political, economic, and social reforms. This required reimagining the FLN, but Hamrouche's efforts were stymied by party factions, and he also confronted emerging populist Islamism, exemplified by the Front Islamique du Salut (FIS). Although Hamrouche is credited with liberalizing Algeria and creating a more open society, regional and local elections in June 1990 resulted in the stunning success of the FIS. Hamrouche permitted gerrymandering by the FLN-controlled Assemblée Populaire Nationale (APN) before the scheduled June 1992 parliamentary elections, provoking FIS protests. Subsequent violence forced President Bendjedid to sack Hamrouche, whom he replaced with Sid Ahmed Ghozali. Hamrouche led the reformist bloc of the FLN until he was forced out of the party. He ran as an independent for president in 1999 but withdrew, along with six other candidates, because of irregularities. Hamrouche remains an independent appealing for political and economic transparency. He hopes to see the Pouvoir—the ruling civilian and military elite that has dominated Algerian politics since independence—replaced in order to have genuine democratic reform. Hamrouche appears poised for another presidential campaign in 2004.

HAMZAWI, RASHID AL-

[1934–]

Tunisian novelist, playwright, and linguist.

Rashid al-Hamzawi was born in Thala, Tunisia. He received his doctorate from the University of Paris and wrote his dissertation on the Arabic language academy in Cairo. He worked in the Office of Arabization and Translation in Rabat and is presently a professor at the University of Tunis. In addition to his novels, al-Hamzawi has published works on language and translation, particularly in relation to the efforts of the Arab academies to unify Arabic terminology.

Hamzawi's novel *Bududa mat* (Tunis, 1962; Boudouda died), which won the Ali al-Bahlawan Prize, relates the hardships experienced by Tunisians after World War II. Boudouda symbolizes the suffering Tunisian people. The novel also describes rural emigration and the resulting social changes in the cities. Whereas a feeling of optimism pervades the novel, Hamzawi's collection of short stories, *Tarnannu* (Tunis, 1975), is pessimistic; the poor and socially disadvantaged seem trapped by their problems. Hamzawi's plays deal with the corrupt world of politics. In *al-Shayatin fi al-qariya* and *al-Sarikhun fi al-sahra* (Tunis, 1976; The devils in the village; Those who shout in the desert) he searches for the most suitable ideology for developing countries but refrains from choosing one, preferring to leave the doors

open. A recent publication is a novel titled *Safar wa Hadhar* (1998; Travel and prattle), which is concerned with the issue of freedom of expression.

AIDA A. BAMIA

HANAFI, HASAN

[1935–]

Egyptian scholar of the Islamic left.

Hasan Hanafi, a prolific professor of philosophy at Cairo University, is identified with his project for the creation of an Islamic left within the context of the Islamic reform movement of al-Afghani and Abduh (although he faults that old movement for confining its message to the elite). Hanafi calls for the recognition of class differences, and believes that the Islamic left should always side with the poor against the rich, the powerless against the powerful, and the downtrodden against the elite. He has also called for the unity of Muslims, especially among Persians and Arabs. Although he is not a secular, the moderateness of his views has earned him the enmity of Islamic fundamentalists, and some militants called him an "apostate" in 1997, prompting him to ask for police protection. Hanafi has published widely in the field of Islamic philosophy and jurisprudence, and has a book on Western political philosophy.

AS'AD ABUKHALIL

HANAFI SCHOOL OF LAW

One of the four approaches to Sunni Muslim law, often called schools.

Though it bears the name of Abu Hanifa al-Nuʿman ibn Thabit (died 767), the Hanafi School of Law in fact owes its doctrine to his two disciples Abu Yusuf (died 798) and Muhammad ibn al-Hasan al-Shaybani (died 805). They laid down the systematic foundations for the work of later Hanafis. In the eighth and ninth centuries, the law school *(madhhab)* was associated with the rationalists *(ahl al-raʾy),* who advocated free legal reasoning not strictly bound by the revealed texts. Although by the eighth century *raʾy,* a form of free reasoning, was largely abandoned in favor of a more disciplined and text-bound reasoning, the Hanafis continued to resort to similar methods of legal argument, notably *istihsan* (juristic preference). After the ninth century, and certainly by the beginning of the eleventh, even *istihsan* was restructured so as to render it subsidiary to the imperatives of the religious texts.

Though the Hanafi school finally came to adopt the mainstream legal methodology and philosophy, it did maintain peculiar characteristics such as its emphasis on the practical aspects of the law. Particularly in the first three centuries of Islam, its followers, more than any other school, were the chief authors and experts on formularies *(shurut),* notarial documents, and the profession and conduct of judgeship *(adab al-qada).*

Among the most important Hanafi authors on positive law after Abu Yusuf and Shaybani are Abu al-Hasan al-Karkhi (died 951), Abu al-Layth al-Samarqandi (died 985), al-Quduri (died 1036), Shams al-Aʾimma al-Sarakhsi (died 1096), al-Kasani (died 1191), al-Marghinani (died 1196), Abu al-Barakat al-Nasafi (died 1310), and Ibn Nujaym (died 1563). For these authors, the works of Shaybani, known collectively as *zahir al-riwaya,* remained authoritative; they are *al-Mabsut, al-Jami al-Kabir, al-Jami al-Saghir, al-Siyar al-Kabir, al-Siyar al-Saghir,* and *al-Ziyadat.* The most prominent legal theorists *(usuliyyun)* of the school are Pazdawi (died 1089), Sarakhsi, Nasafi, Sadr al-Shariʿa al-Thani al-Mahbubi (died 1346), and Mulla Khusraw (died 1480).

In 1876, the Hanafi law of contracts, obligations, and procedure was codified in the Ottoman law code of Mecelle, in an effort to modernize the law and to achieve uniformity in its application. The primary source on which the Committee of the Mecelle based its work was Shaybani's collected works, *zahir al-riwaya,* with the commentary on it by Sarakhsi, an eleventh-century Hanafi. In the first few decades of the twentieth century, however, the Mecelle was superseded by civil codes in all the countries that fell previously under Ottoman jurisdiction, with the notable exception of Jordan.

In medieval times, the school had a large following in its birthplace, Iraq, as well as in Syria, Transoxania (now Uzbekistan, a former Soviet Republic), the Indian subcontinent, the Mediterranean island of Sicily, and to a lesser extent in North Africa. Later on, the Ottoman Empire declared Hanafism the official doctrine of the state, thus rendering it dominant in all areas that fell under its sway. In modern times, Hanafism still prevails in these regions as well as in Afghanistan, the Balkans, Pakistan, Turkistan, the Caucasus (between the Black and Caspian Seas), India, and China.

WAEL B. HALLAQ

HANANU, IBRAHIM

[1869–1935]

Syrian nationalist.

Ibrahim Hananu was born in Kafr Takharim, a fertile olive-growing area west of Aleppo, to a wealthy rural family of Kurdish extraction. He studied at the prestigious Mülkiye school of public administration in Istanbul. Later he joined the bureaucracy of the Ottoman Empire, only to retire and manage his estates. Having embraced nationalism when the Arab Revolt broke out in 1916, Hananu joined the Arab army of Faisal I ibn Hussein and entered Aleppo with the Allies in 1918. He also joined the secret nationalist society al-Fatat and, with the support of prominent merchants in Aleppo, he founded the League of National Defense and the Arab Club of Aleppo.

Under the influence of Hananu, the Muslim elite of Aleppo gradually assumed an Arab national identity, which was reinforced by the Hananu revolt. Breaking out in the autumn of 1919 in the countryside surrounding Aleppo, the months before French forces occupied the city, the Hananu revolt received aid from the Turkish nationalist movement of Mustafa Kemal Atatürk, which was battling the French army of the Levant for control of Cilicia and southern Anatolia. With the withdrawal of Turkish military assistance following the signing of the Franklin-Bouillon Agreement in October 1921, Hananu and his men could no longer sustain a revolt, and their struggle collapsed.

Hananu continued to play an active role in the Syrian national movement. He was one of the founding fathers of the National Bloc, which emerged from the Beirut conference of October 1927, and which steered the course of the independence struggle in Syria until its completion nineteen years later. After his death, Hananu's house in Aleppo was used by Syrian nationalists as a "house of the nation."

MUHAMMAD MUSLIH
UPDATED BY MICHAEL R. FISCHBACH

HANBALI SCHOOL OF LAW

One of the four approaches to Sunni Muslim law, called schools.

The Hanbali School of Law takes its name from Ahmad ibn Hanbal (died 854), a major theologian of the ninth century. He was a fierce opponent of the Muʿtazila, a school of religious thought that flourished under the Abbasids. Ibn Hanbal emerged victorious in the *mihna* (inquisition), led by the Abbasid caliph al-Maʾmun and the rationalist theologians against the traditionalists who upheld the doctrine that the Qurʾan is not the created but the eternal word of God. Ibn Hanbal's career as a dogmatic theologian, coupled with the fact that he did not elaborate a complete system of law, gave him and his immediate followers the reputation of being a theological rather than a legal school *(madhhab).* Indeed, the school's first complete work on positive law, *al-Mukhtasar,* appeared as late as the beginning of the tenth century, at the hands of Abu Qasim al-Khiraqi (died 946).

Being strict traditionalists, the Hanbalis of the ninth century rejected the rationalist elements of

what had by the end of the century become the mainstream legal theory *(usul al-fiqh).* Later Hanbalis, however, gradually adopted the main elements of this theory, and by the eleventh century, their legal theory finally came to accept *usul al-fiqh* as elaborated by the Shafiʿi School of Law and Hanafi School of Law. Thus, it took the Hanbali school nearly two centuries after ibn Hanbal's demise to develop into a full-fledged school of law.

Two centuries later, the celebrated Hanbali jurist and theologian Taqi al-Din ibn Taymiyya (died 1328) even subscribed to a theory of *istihsan* (juristic preference), advocated by later Hanafis and vehemently opposed by early traditionalist Shafiʿis and Hanbalis.

There were several figures who dominated the history of Hanbalism. Among the prominent names are al-Khiraqi, Ibn al-Farra, Ibn Aqil, Abd al-Qadir al-Jili (died 1166), Abu al-Faraj ibn al-Jawzi (died 1200), Ibn Taymiyya, and his disciple Ibn Qayyim al-Jawziyya (died 1351), to name only a few. Distinguished as a major figure in Islamic religious history, Ibn Taymiyya was involved in the study of law, theology, philosophy, and mysticism and was engaged in the politics of the Mamluk state. He wrote at length against the Shiʿa, the philosophers, the logicians, and the pantheistic Sufis, though he himself belonged to the mystical school of Abd al-Qadir al-Jili.

Ibn Taymiyya's thought exercised significant influence on Muhammad ibn Abd al-Wahhab (died 1792), who, with the assistance of Ibn Saʿud, founded Wahhabism, an ideology that has sustained the Saudi state during the last two centuries. Saudi Arabia remains the principal country that applies Hanbali law. Nevertheless, the writings of ibn Taymiyya and ibn Abd al-Wahhab still continue to influence the Muslim reform and religious movements in the Middle East, from Rashid Rida (died 1935) to the Muslim Brotherhood.

HAND OF FATIMA

A folk motif.

European name for the *khamsa* (from Arabic, "five"), the hand with five fingers extended. It can be found today throughout the Middle East in women's jewelry, flat-weaving, embroidery, door-knockers, automobile ornamentation, and so on. Precursors include the Punic "Hand of Baal" and the Roman V-shaped amulets (possibly representing the Roman numeral five), all for protection from the evil eye.

Laurence Michalak

HANOUNE, LOUISA

[1954–]

Leader of the radical Workers Party, deputy in the national assembly, and women's and human rights advocate in Algeria.

Born to a poor peasant family, Louisa Hanoune was the first girl in her family to go to school. Overcoming considerable hardship, she earned a law degree at the University of Annaba in 1979. She entered politics by joining the clandestine Socialist Workers Organization (Organisation Socialiste des Travailleurs; OST), a Trotskyist party. Arrested in December 1983 for her political activities, she was released in May 1984 and became the first secretary-general of the Association for Equality before the Law of Men and Women as well as a founding member of the Algerian Human Rights League.

Once a multiparty system was instituted, OST became the Workers Party (PT) with Hanoune serving as its spokesperson. She opposed the army's cancellation of the 1991 elections, and in 1995 signed the Platform of Rome, urging negotiations with the Islamist movement as a way to end the civil war. An outspoken advocate of democracy in Algeria, Hanoune won election to parliament in 1997, one of four PT deputies. In 2002, she led her party to a stronger showing, winning twenty-one seats while continuing her vehement criticism of the Bouteflika government. Her political ideas are spelled out in her book *Une autre voix pour l'Algérie* (1996). A feminist and social critic, she is the first woman to lead an Algerian political party.

Robert Mortimer

HAQ, AL-

A Palestinian human rights organization.

Al-Haq was established in 1979 in Ramallah, the West Bank, by two prominent lawyers, Raja Shehadeh and Jonathan Kuttab. Initially it was known as Law in the Service of Man. For at least a decade, it became the leading human rights and legal services organization in the Occupied Territories, on which many in the Western media and human rights organizations relied on for information—found in its numerous publications—on Israeli violations of international law and human rights during Israel's occupation of the West Bank and Gaza. In addition, through its staff and library, al-Haq is a legal resource center for the Palestinian community. It is affiliated with the International Commission of Jurists in Geneva, Switzerland.

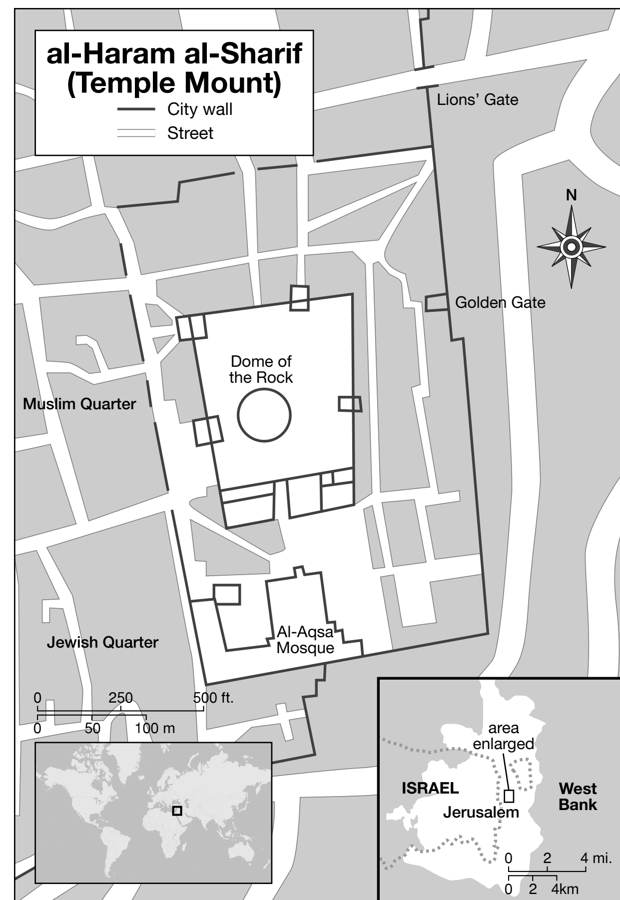
MICHAEL R. FISCHBACH

HARAM

See GLOSSARY

HARAM AL-SHARIF

Third holiest site in Islam.



MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

Al-Haram al-Sharif (the noble sanctuary), also known as the Temple Mount, is the third holiest site in Islam. It is located in the southeastern part of the Old City of Jerusalem. Built between 685 and 709 C.E., it is an enclosure on a raised platform that includes two renowned holy sites: the Qubbat al-Sakhra (the Dome of the Rock) and al-Aqsa mosque. The Dome of the Rock is where Jews believe that Abraham attempted to sacrifice his son, Isaac, to God, and where Muslims believe that the prophet Muhammad ascended to heaven. He is believed to have tethered his "fabulous steed," al-Buraq, in an area located in the interior portion of the Western Wall of the Temple Mount. Close by is al-Aqsa mosque, which is regarded as the place in the Qurʾan where Muhammad prayed following his "night journey," and it was the direction for prayer *(qibla)* for Muslims before it was changed to Mecca. The subterranean areas of the Haram include a large vault, known as Solomon's Stables, now a mosque. Although much repaired and restored by the Romans and in the Middle Ages, the vault is a Herodian creation and is thought to be part of the original Jewish Temple, built in 970 B.C.E. The exterior wall of the enclosure to the west, the Western or Wailing Wall (in Hebrew, *ha-Kotel ha-Maʿaravi*), is the holiest site in Judaism.

The Haram played a significant role in the history of Jerusalem. As a site of veneration it attracted pilgrims, scholars, and benefactors from all parts of the Islamic world. Much real estate and arable land was endowed for the upkeep of schools, orphanages, mosques, prayer-rooms, and hostels, either inside the enclosure itself or nearby, creating an Islamic center for learning, ritual devotions, and good works. During the early twentieth century, tensions in the city between the predominantly Muslim and growing Jewish populations erupted into rioting over access and use of these holy places; the most notorious were the Western Wall Disturbances in 1929. Since

the Israeli occupation of East Jerusalem in 1967, activities emanating from the Haram have played a pivotal role in preserving an Islamic and Palestinian presence in the Old City in the face of attempts by Israeli settler groups and government agencies to transfer ownership of the site to Israel. During the negotiations that followed the 1993 Oslo Accords, the future of the Haram was left unresolved. In September 2000 a visit to the Haram by the Likud Party leader, Ariel Sharon, provoked a violent clash that led to an uprising, since dubbed the al-Aqsa Intifada, that contributed to the collapse of negotiations.

MICHAEL DUMPER

HAREL, ISSER

[1912–2003]

"Little Isser," the second and most powerful head of Israeli Mossad, considered to be the founder of the country's intelligence community.

Born Isser Halperin in Russia, Harel emigrated in 1931 with his family to Palestine, where he was among the founders of Kibbutz Shefayim. He served in the Haganah and with the British coast guard during World War II. In 1944 Harel was appointed secretary of the "Jewish Department" of the Haganah's intelligence service (Shai), and was responsible for counterespionage and for operations against "dissident" Jewish underground groups, the Irgun Zvaʾi Leʾumi and LEHI. His ruthless successes endeared Harel to Prime Minister David Ben-Gurion, and he rose from Tel Aviv district commander of the Shai (1947) to head the newly formed General Security Service (Shin Bet, or Shabak, 1948–1952), replacing Reuven Shiloah as head of the Mossad and becoming *memuneh* ("the one in charge") of all Israeli intelligence agencies (1953–1963).

While maintaining extensive (and often criticized) internal surveillance, primarily of the pro-Soviet left, the fiercely anticommunist Harel also developed a powerful international intelligence operations network. He was credited with the exposure of several Soviet spies, including Yisrael Beer. He orchestrated the capture of Adolf Eichmann in Argentina in 1960, and he oversaw the beginnings of Israel's "periphery doctrine," forging ties with non-Arab Middle Eastern regimes such Turkey, Iran, and Ethiopia.

Harel left office in April 1963 following a bitter dispute with Ben-Gurion and the Israel Defense Force (IDF) and with military intelligence chief Meir Amit over operations against the German rocket scientists in Egypt and elsewhere. He briefly coordinated Levi Eshkol's intelligence apparatus in 1965 and 1966, when he was accused of working to undermine Amit, his successor as Mossad chief. He later won a seat in the eighth Knesset (parliament) on the Rafi Party list. He authored several books on episodes of his career and Israeli security.

ZEV MAGHEN
UPDATED BY IAN BLACK

HAREM

The women's section of a home.

In Arabic, the word *haram* refers to that which is forbidden, and *harim,* or *harem,* means the women's sec-

tion of a home, which is forbidden to males who are not unrelated to the household. This prohibition is maintained in order to protect female kin and family honor. Veiling and the seclusion of women are part of an ancient Middle Eastern social pattern that predates Islam and originated in antiquity with the rise of classes, cities, and states. The wives of the prophet Muhammad were secluded, yet played important public roles during and after his life. In Muslim societies where sexual segregation is practiced, women may form their closest bonds in the harem. Women who are relatives, friends, or neighbors visit in the secluded section of each other's homes. The streets in the traditional Arab-Muslim city are generally the province of men.

It is within the social setting of the harem where important family-related decisions are made informally. For example, marriages may be arranged first among women before they are negotiated by male kin. Within the harem, it would be determined whether a young woman is interested in and consents to a suggested marriage before any public announcement would occur.

HAREVEN, SHULAMIT

[c. 1931–]

Hebrew novelist, poet, essayist, journalist, and activist.

Shulamit Hareven was born in Warsaw, Poland. When World War II broke out, her family was smuggled through Europe and in 1940 settled in Jerusalem, where Hareven still lived in 2004. The memory of this escape was responsible for Hareven's belief in self-defense. She served in the Haganah underground and was a combat medic during the siege of Jerusalem in Israel's War of Independence; later she took part in founding the Israel Defense Force radio. In the fifties, she became an officer and worked in the Jewish refugee camps, especially those with Jews from Arab countries. She was a military correspondent before and during the Yom Kippur War. Hareven was the first woman member of the Academy of the Hebrew Language. She was also a longtime member of the spokesteam of the Peace Now movement, and during the first Palestinian Intifada entered Arab refugee camps and reported to the Israeli press. She worked as a columnist on current social, cultural, and political events.

Hareven published seventeen books of poetry, fiction, and essays, in addition to her latest autobiography, *Yamim Rabim* (Many days), published in Hebrew in 2002. Her first novel, *City of Many Days* (1972), depicts Jerusalem of the British mandate with great compassion, intimate understanding, and poetic richness. Hareven's Jerusalem is a detailed, colorful, and intricate tapestry woven of Arab, British, Sephardic, and European Jewish characters. The novel is also a "coming of age" story of a strong, autonomous woman. Its feminist sensibilities, although ambivalent, represent a first in Israeli literature. The novel, largely dismissed when it first appeared, was ahead of its time in terms of both its feminism and its implicit critique of Zionist ideology. Hareven wrote two novellas set in biblical times, *The Miracle Hater* (1983) and *Prophet* (1989), employing a concise, laconic, biblical style. An avid advocate of human rights, she writes in her essays and articles about Jews and Arabs, new immigrants and Israelis, and declares herself a "selective feminist." In 1995, the French magazine *L'express* elected Hareven as one of the one hundred women "who move the world."

Lebanon's wealthy prime minister, Rafiq Baha'uddin al Hariri, built his financial empire from scratch, founding a small construction company in the 1970s that frequently garnered work from the Saudi royal family. Hariri served as prime minister from 1989–1998 and was selected for the post again in the 2000 parliamentary elections. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

HARIRI, RAFIQ BAHA'UDDIN AL-

[1945–]

Saudi businessman, philanthropist, and prime minister of Lebanon from 1989 to 1998.

Rafiq Baha'uddin al-Hariri was born in Sidon, Lebanon. At an early age, he helped support his family by working in the orchards. He graduated from the Arab University of Beirut in 1965 and found work as a mathematics teacher in Jidda, Saudi Arabia. He soon joined a Saudi engineering firm as an accountant and in 1970 founded a small construction company.

His relationship with the Saudi royal family began in 1977, when he completed a palace project in al-Ta'if for King Khalid ibn Abd al-Aziz Al Saʿud within the low bid originally proposed and in record time. Henceforth, Hariri was sought for most of the Ministry of Finance's contracting bids. He became a naturalized Saudi citizen and expanded his global business to include ownership of Paris's Entreprise Oger and the Luxembourg-based Mediterranée Investors Group.

From the early days of his financial success, Hariri assisted his native Sidon by offering educational grants and building a hospital and university in nearby Kafr Falus, although his critics have always believed that his philanthropy was politically motivated as it helped propel him to the highest post occupied by Sunnis in the government. After the Israeli invasion of Lebanon in 1982, he provided some aid for reconstruction while also providing financial support for divergent militias in the country. He also enjoyed direct Saudi political backing and established a close relationship with the Syrian political and military elite. He played an active political role in Lebanon, helping to bring about the 1989 Ta'if Accord under Saudi auspices, after which he became prime minister. His foundation, which had supplied loans and grants to needy students, ceased to exist after his election. He continued as prime minister until 1998, when the new president, Emile Lahhud, selected Salim al-Hoss for the post. Hariri stayed out of office for two years but won a landslide election to the Lebanese parliament in 2000, after which he was again named prime minister. He is associated with Lebanon's burgeoning foreign debt, which reached $32 billion on his watch, and with the privatization efforts he championed.

UPDATED BY AS'AD ABUKHALIL

HARKABI, YEHOSHAFAT

[1921–1994]

Senior Israeli intelligence officer; professor.

Harkabi Yehoshafat was born in Haifa in 1921. He studied philosophy, history, and Arabic at the He-

brew University of Jerusalem, interrupting his studies to volunteer in the British Army. After demobilization in 1946, he attended a school to prepare future diplomats for the Jewish state. During the 1948 war, Harkabi fought in Jerusalem as commander of a students' company. In 1949, he participated in the negotiations that led to the signing of armistice agreements with Egypt and Jordan, and twice met personally with King Abdullah. After a short stint in the ministry of foreign affairs, he returned to military service and spent a year studying in Paris. In 1955, he was named chief of the intelligence division of the Israel Defense Force General Staff with the rank of major general. During this period, Fati, as he was nicknamed, enjoyed the confidence of important personalities like David Ben-Gurion, Moshe Sharett, and Moshe Dayan. He was instrumental in weaving secret relations with the French military and intelligence services during the 1956 Suez War. In 1959, he was forced to retire from active service in the wake of an ill-advised public reserve call-up exercise.

Harkabi then spent several years in the United States and earned a Ph.D. from Harvard University. As a professor at the Hebrew University in Jerusalem, he became a renowned expert in Middle Eastern studies, strategic studies, and international relations theory. His first book, written before the June 1967 Arab–Israel War and published shortly afterwards (in Hebrew and English), was titled *Arab Attitudes to Israel.* In it, he analyzed the growing hatred in the Arab world of Israel and of Jews, and presented a pessimistic view of the intractability of the conflict because of those hostile attitudes.

Soon after the June 1967 war, Harkabi changed his views and considered the situation created by the war as an opportunity for peace. In numerous publications, he advocated a dovish stance, recommending a full withdrawal from territories occupied in 1967. He became a sort of a guru for the Israeli peace movement but nevertheless remained on good terms with the Labor Party elite and especially with Yitzhak Rabin, who sought his advice on many occasions. Harkabi died of cancer on 26 August 1994.

HARKIS

Pro-French Algerians during the war of independence (1954–1962); also known as French Muslims.

Harkis is derived from the Arabic *harakat,* meaning "military movement" or "operation." Since the beginning of French colonialism in Algeria in July 1830, local people served as military auxiliaries. During the Algerian War of Independence (1954–1962), approximately 100,000 *harkis* served France in various capacities (e.g., regular French army, militia self-defense units, police, and paramilitary self-defense units). Their most prominent leader was the Benaïssa Boulam. After the war, many *harkis* left for France, but the majority remained in Algeria and faced brutal retributions.

Those in France found inadequate housing conditions (often in isolated relocation camps) and a lack of educational and economic opportunities. This provoked a variety of protests by these forgotten French citizens, ranging from hunger strikes and kidnappings in the 1970s to violence in the 1990s. The French government issued a stamp in 1990 to honor the *harkis*' contribution, which elicited official protest from Algeria. The population of the French–Muslim community is about 475,000. In France, they remain second-class citizens, are victims of discrimination, and are often confused with the emigrant worker community. It is still unsafe for *harki* veterans to visit Algeria, but their children and descendants are welcome.

See also Algerian War of Independence.

Phillip C. Naylor

HARRATIN

A group of people in northwest Africa generally of low social status.

In Arabic, *hartani* (singular); in Berber, *ahardan* (singular) and *ihardanan* (plural); in the Twareg dialect, *ashardan.* The *harratin* inhabit the oases of the Saharan regions. Ethnically, this population is a mixture of people originating from sub-Saharan Africa and North Africa; they were formerly slaves before being freed. Although they are no longer slaves, they constitute a sort of caste considered by other populations as inferior, below the status of *bidan* and *shorfa* groups in Mauritania. Because of their low status, the *harratin* seek protection among powerful families for which they work and show respect.

Since land and water are owned by white *shorfa* and because *harratin* occupy the lowest position on the social scale, the *harratin* do not witness any social mobility. They work in less prestigious occupations: When they are sedentaries, they work in agriculture; when they emigrate to the cities, they work as carriers of water, diggers of wells, and ironworkers; and among the nomads they work as shepherds.

In Morocco, the Sultan Mulay Isma^cil (eighteenth century) recruited his famous army of *bukhari* from the *harratin* population of Mauritania. This group had also provided the traditional Moroccan state (Makhzen) with secretaries and functionaries. Families in imperial cities in Morocco such as Fez, Marrakech, and Meknes used to have *hartani* women under their protection working as servants.

In vernacular language, after the progressive disappearance of slavery, the words *harratin* and *hartani* have replaced the word *abd* (slave) to mean "black" and have acquired a pejorative meaning.

See also SHORFA.

RAHMA BOURQIA

HARRIMAN, W. AVERELL

[1891–1986]

U.S. diplomat.

While ambassador in Moscow (1943–1946) during World War II (1939–1945), W. Averell Harriman became concerned with the USSR's involvement in Iran and advocated U.S. support for Iran's shah, Mohammad Reza Pahlavi. In July 1951, Harriman was U.S. President Harry S. Truman's special envoy to Iran's Prime Minister Mohammad Mossadegh, and Harriman tried unsuccessfully to persuade Mossadegh to compromise with Britain over nationalization of the Anglo–Iranian Oil Company. Harriman respected Mossadegh as a genuine nationalist and counseled against intervention by Britain or the United States to remove him.

Harriman was elected governor of New York (1955–1958) but returned to national politics in the Kennedy and Johnson administrations. In 1965, as undersecretary of state, he was sent to Jerusalem to inform the government of Israel that the United States intended to sell arms to Jordan. Harriman was later one of the chief negotiators in ending the Vietnam War.

ZACHARY KARABELL

HASA, AL-

An area in Saudi Arabia's Eastern Province noted for agriculture and oil resources.

Originally, al-Hasa was the name given to a series of oases about 40 miles inland from the Persian Gulf in eastern Arabia; its largest town and capital was al-Hufuf. It later denoted a province of Saudi Arabia stretching from Kuwait in the north to Qatar in the south, separated from Najd by the al-Dahna sand belt, and including the other important oasis region on the coast around Qatif. Today the region is called the Eastern Province.

As the largest groundwater-fed oasis in the world, al-Hasa historically has been an important agricultural region, noted for dates, grains, fruits,

vegetables, and its famous white donkeys. It also has been a center for administration and trade, with a population divided evenly between Sunnis and Shiʿa. One of the region's few strategic and economic prizes even before the oil era, al-Hasa has been controlled from al-Hufuf in the past two centuries by Ottomans, Egyptians, the Bani Khalid tribe, and the Al Saʿud family.

With the discovery of massive oil fields in the region, large-scale economic development and dislocations followed, sometimes resulting in labor unrest. Although agriculture suffered when field workers left to work in the oil industry, new revenues eventually were used to improve irrigation systems, prevent sand encroachment, and improve technology.

HASAN, FA'IQ

[1919–]

Iraqi artist.

One of Iraq's leading and most influential visual artists during the second half of the twentieth century, Faʾiq Hasan was born in Baghdad and educated in its Institute of Fine Art (which, after 1939, added painting and sculpture to music). He later spent a few years studying art in Paris. In 1950 he established Jamaʿat al-Ruwwad (the avant-garde group), also called Société Primitive. This was the first art circle in Iraq to be inspired by ancient Mesopotamian and Iraqi themes and that adopted modern styles. Hasan started off with impressionist landscapes but since the 1950s has changed both subject matter and style. While the subject matter of his paintings is local, describing bedouin and other country life, or still life, the style is cubist with strong French influences. Some of his paintings are in the primitive style. He and his group experimented with color planes, and many of his later works are abstract.

Amatzia Baram

HASAN, HANI AL-

[1937–2003]

Palestinian politician.

Born in Haifa like his brother Khalid, Hani al-Hasan was educated at the University of Darmstadt, West Germany, after the family fled as refugees in 1948. He graduated with a degree in construction engineering. While studying, he led the General Union of Palestine Students. He joined al-Fatah in 1963, became a member of its central committee, and rose to become one of its leading figures. By 1967 he was Fatah's leader in Europe, and he became the group's chief contact with China. Al-Hasan also was appointed deputy to Salah Khalaf (Abu Iyad) in Fatah's powerful intelligence service.

Although he became a senior advisor to Yasir Arafat, head of both Fatah and the Palestine Liberation Organization, al-Hasan criticized both Arafat's handling of the Gulf Crisis of 1990–1991 and the 1993 Oslo Accord. He moved to the Palestinian Authority (PA) in 1995 and continued his dissent, although he later served in the PA cabinet and became embroiled in the rivalry between Arafat and PA Prime Minister Mahmud Abbas during the spring and summer of 2003.

HASANI, TAJ AL-DIN AL-

[1890–1943]

President of Syria under French mandate.

Taj al-Din al-Hasani was born in Damascus to a North African family. In 1912, he was appointed instructor of religion at the Sultaniyya school in Damascus. Al-Hasani was a member of the Council for School Reform and the General Assembly for the *vilayet* of Syria. He was also an owner of the newspaper *al-Sharq,* which was first published in 1916 with support from the Fourth Ottoman Army. Under the rule of King Faisal I, he was appointed member of the council of state *(majlis shura),* the court of appeal, and then judge in Damascus. Al-Hasani taught principles of Islamic jurisprudence *(fiqh)* at the Institute of Arab Law in Damascus. Under the French mandate, al-Hasani was prime minister from 1928 to 1931 and from 1934 to 1936. He then resigned and traveled to France where he remained until the French appointed him head of the Syrian republic in 1941. He stayed in power until his death in 1943.

See also Faisal I ibn Hussein; Fiqh.

George E. Irani

HASAN, KHALID AL-

[1928–1994]

Palestinian politician.

The brother of Hani al-Hasan, Khalid al-Hasan was born in Haifa and fled with his family as refugees in 1948. Thereafter he was active in the Islamic political party Hizb al-Tahrir in Syria, but he moved to Kuwait in 1952 and remained there most of his life. He helped Yasir Arafat and others found al-Fatah during the late 1950s and served in the group's leadership bodies for the rest of his life. Al-Hasan also sat on the Palestine Liberation Organization (PLO) Executive Committee and its Political Department from 1969 to 1973. A noted diplomat, he later directed the Palestine National Council's foreign relations committee until 1994.

Al-Hasan was often at odds with Arafat during their long association and definitively parted company with him in 1990 in opposition to the PLO's support of Iraqi President Saddam Hussein. His opposition to Arafat, and to the latter's handling of the 1993 Oslo Accord, was cut short by his death in October 1994.

HASAN SALIM

See Salim Hasan

HASHEMI, FAEZEH

[1962–]

Iranian advocate for women's rights.

Faezeh Hashemi, the younger daughter of former Iranian president Ali Akbar Hashemi Rafsanjani, was born in 1962. She has a B.A. in political science and physical science and is the founder and president of the Islamic Countries' Solidarity Sport Council, vice president of Iran's National Olympic Committee, and a member of the Islamic Republic's High Council for Women's Sport. Because of her advocacy of women's sports, especially outdoor cycling, against condemnation by traditionalists, Hashemi became tremendously popular with women and young people, and she received the second highest number of votes in Tehran's 1996 legislative elections for the Fifth Majles (parliament). During the electoral campaign she criticized discriminatory laws, which she argued hinder women's progress, but did not advocate a quota system for women. In 1997 she played an important role in Mohammad Khatami's electoral campaign. In the summer of 1998 she launched a newspaper called *Zan* (Woman) that paid particular attention to women's and youths' issues and grievances. It was closed down in March 1999 by the Revolutionary Court for publishing a message from Iran's former empress, Farah Diba, on the occasion of the Iranian New Year, and for printing a cartoon that ridiculed the law on blood money. (The law on blood money permits one who has caused loss of life to avoid capital punishment by providing monetary compensation to the family of the victim. The blood money for women is half of that of men.) She was

a candidate for the 2000 legislative elections, but because she sided with her father against the reformers, she lost popular support and was not elected.

AZADEH KIAN-THIÉBAUT

HASHIM, IBRAHIM

[1888–1958]

Head of the Executive Council and prime minister of Jordan several times, starting in 1933.

Ibrahim Hashim accompanied Amir Abdullah I ibn Hussein to the 1946 negotiations in London to abolish the mandate and renegotiate the Anglo–Jordanian treaty. Thus he was the first prime minister of the newly independent kingdom when the Legislative Assembly (precursor to the parliament) proclaimed King Abdullah a constitutional monarch on 25 May 1946. Hashim was also a leading member of the three-man Crown Council, then the Regency Council, which ruled Jordan briefly between May and August 1952 following the abdication of King Talal. He was in Baghdad as the deputy prime minister of the joint Jordanian–Iraqi cabinet of the newly formed Arab Federation—a short-lived union between Jordan and Iraq that was formed on 14 February 1958 in response to rising pan-Arab sentiment and to forestall pressures on the conservative monarchies that were likely to result after the planned merger of Egypt and Syria. Hashim was killed during mob violence in Baghdad at the outbreak of the Iraqi revolution in May 1958.

See also ABDULLAH I IBN HUSSEIN; TALAL IBN ABDULLAH.

JENAB TUTUNJI

HASHIMI, TAHA AL-

[1888–1961]

Iraqi officer, politician, teacher, and author.

Taha al-Hashimi was born into a Sunni Arab Muslim family of limited means. He attended school in Baghdad and was graduated from military college in Constantinople (now Istanbul). He served in the Ottoman army in various capacities and reached the rank of lieutenant colonel. He joined the al-Ahd society, formed in 1913 by Aziz al-Misri. Although the members of Ahd were mostly Ottoman officers of Iraqi origin, Hashimi remained loyal to the Ottomans and did not undertake any activities against them during World War I. He worked with the Faisal government in Syria (1919–1920) as director of defense, then returned to Iraq at the urging of his brother, Yasin al-Hashimi, who played a leading role in Iraq's politics in the 1920s and 1930s. Hashimi held various civilian posts in the newly established government, including director of the Census Bureau, director of education, and tutor to Prince Ghazi ibn Faisal. In 1930, he returned to the army, was appointed commander in chief, and then promoted to the rank of general. In 1936 the acting chief of staff, General Bakr Sidqi, executed a military coup against Prime Minister Yasin al-Hashimi. This marked the first military interference in Iraq's modern history.

Hashimi returned to Iraq following a coup launched in 1937. As minister of defense in 1938 and 1939, he acted as an intermediary among the nationalist elements of the army, in particular among the four colonels known as the Golden Square, who played an important role in Iraq's army politics from 1937 to 1941. They espoused the ideas of Arab nationalism, objected to Britain's constant interference in Iraq's affairs, and wanted to expand and modernize the army. In February 1941, Hashimi became prime minister of Iraq, this time for two months. Having been a compromise candidate, he hoped to resolve the dispute between the regent, who wanted to implement the British government's desire for Iraq to break off diplomatic relations with Italy, and Rashid Ali and the nationalist Golden Square officers, who wanted to pursue a course of absolute neutrality toward the Axis powers and the Allies. On 1 April 1941, Hashimi was forced to resign under pressure from the Golden Square.

In 1941 Iraq experienced its seventh coup since 1936, which led to Rashid Ali's uprising against the British. The failed uprising led to what the Iraqis called the second British occupation of Iraq (the first was during World War I). Hashimi fled to Turkey af-

ter the failure of the coup and remained there until the end of World War II. He was permitted to return to Iraq in 1946. In 1951, with a group of politicians, he formed the Nationalist Bloc Party, which did not last long because of intense differences among its members. In 1953, Hashimi was appointed vice chair of the Board of Development. He held this position until the board was dissolved after the revolution of 14 July 1958. The board was responsible for preparing and executing general economic and financial plans for the development of Iraq's resources. Among its many accomplishments was the Tharthar Project, which was primarily designed as a flood control system. Hashimi died in London.

Hashimi is considered a centrist and nationalist in Iraq's politics. He was well liked by young military officers disgruntled with Britain's constant interference in Iraq's affairs; they saw him as defender and protector of their interests. Hashimi taught courses at the military college and at al-Bayt University in Baghdad. He wrote books on such subjects as ancient history, Muslim military leaders, Iraq's geography (including an atlas of Iraq), war in Iraq, and the rebirth of Japan. His two-volume memoirs, published posthumously, are filled with insight, opinions, and information about his role in Iraq's history, as well as the roles of other Iraqi politicians during the monarchy.

Ayad al-Qazzaz

HASHIMITE HOUSE (HOUSE OF HASHIM)

Notable family from Hijaz whose members are Sharifs (descendants of the prophet Muhammad through his grandson Hasan) and who have occupied leadership positions in the twentieth-century Arab world.

The Hashimites are a family whose origins lie in Quraysh family in the Hijaz. Husayn ibn Ali (1852–1931) was appointed Ottoman governor of Hijaz in 1908, later breaking with the Ottomans and leading the Arab Revolt in coordination with the British and with urban Arab nationalists in Syria. Members of the Hashimite family went on to establish three monarchical lines after World War I. The first was the short-lived Kingdom of Hijaz. Husayn was proclaimed king of Hijaz in 1924. He abdicated in favor of his eldest son, Ali (1879–1935), but Hashimite rule in their native Hijaz ended when Ali was defeated in 1925 by their archrival, Abd al-Aziz ibn Saʿud Al Saʿud.

The other two Hashimite dynasties were creations of British imperial policies. The British established Husayn's second son, Abdullah I ibn Hussein (1882–1951), as amir (prince) of Transjordan in 1920. He headed an autonomous government within the rubric of the Palestine Mandate. Transjordan was renamed the Hashimite Kingdom of Jordan in 1946. Abdullah was succeeded by his son, Talal ibn Abdullah (1909–1972), his grandson, Hussein ibn Talal (1935–1999), and his great-grandson, Abdullah II ibn Hussein (1962–).

Husayn ibn Ali's third son, Faisal I ibn Hussein (1889–1933), was proclaimed king of Syria by a gathering of Arab nationalists in 1920, but saw his rule end with a French occupation that same year. The British then installed him as king of Iraq in 1921. He was succeeded by his son, Ghazi ibn Faisal (1912–1939). Upon Ghazi's death, Abd al-Ilah (son of Ali ibn Husayn) served as regent until Ghazi's son Faisal II ibn Ghazi (1935–1958) was old enough to serve as king. The Hashimite monarchy in Iraq was violently overthrown in a military coup in July 1958. Husayn ibn Ali's fourth and youngest son, Zayd (1898–1970), occupied no leadership positions.

The family always has stressed its Arab nationalist credentials, as well as its sharifian lineage, attempting to turn these into important sources of legitimacy.

See also Abdullah I ibn Hussein; Abdullah II ibn Hussein; Faisal I ibn Hussein; Husayn ibn Ali; Hussein ibn Talal; Jordan.

Michael R. Fischbach

HASHIMI, YASIN AL-

[1884–1937]

Iraqi politician.

Born in Baghdad in the Barudiyya district, Yasin al-Hashimi began life with the name Yasin Hilmi Salman. His father was Sayyid Salman Mukhtar of the Barudiyya district. After graduating from the Military Academy of Istanbul and attaining the rank of major general, he joined the al-Ahd organization along with other young officers who sought to serve the interest of the Arabs with the Ottoman Empire. He acquired the name al-Hashimi to emphasize his relation with the royal Hashimite family and as an indication of his loyalty to King Faisal I ibn Hussein. He became chief of staff of Faisal's army in 1919. Profoundly influenced by Kemal Atatürk, he established the National Brotherhood party. He started his political career as minister of transportation and became a deputy of Baghdad in the Constitutional Assembly in 1924. He held numerous cabinet positions and was prime minister several times. During his tenure as prime minister in 1936, General Bakr Sidqi's militant activities caused the government to fall, and Yasin al-Hashimi was deported to Damascus, where he died in 1937.

HA-SHOMER

Early Jewish defense organization in Palestine.

Ha-Shomer ("the watchman") was established in 1909 in Jaffa, Palestine, by Russian immigrants including Yizhak Ben-Zvi to replace Arab guards hired by Jewish landowners. Imitating Arab dress and horsemanship, Ha-Shomer in 1914 grew to 40 official members employing up to 300 guards. During World War I, many joined the Jewish Legion. Ha-Shomer established the linkage of soldier and settler identities that has persisted in later Jewish defense forces and military organizations. It disbanded when the Haganah was formed in 1920.

HA-SHOMER HA-TZAʿIR

Socialist-Zionist youth movement.

This movement was founded in 1913, when Zionist youth organizations in Poland and Galicia united under the name ha-Shomer ha-Tzaʿir, meaning "Young Guardian" or "Young Watchman." "Ha-Shomer" was both the name of the largest of the youth organizations that made up the new group and the name of a Jewish self-defense militia organization in Palestine. Ha-Shomer ha-Tzaʿir was heavily influenced by both. It emphasized the values of nature, pioneering, and settlement on kibbutzim in Palestine, and in 1919 it sent its first group of settlers to Eretz Yisrael. Ha-Shomer ha-Tzaʿir did not have a very unique ideological stance; indeed, most, if not all of its ideology could be found in existing groups and was rooted in such philosophies as that of Aaron David Gordon (1856–1922) and Martin Buber (1878–1965). It apparently had an esprit-de-corps that enabled it to survive and grow even though it did not espouse anything altogether unique. The movement grew to more than 10,000 members by 1924, when it held its first international conference in Danzig. During the late 1920s and early 1930s ha-Shomer ha-Tzaʿir developed a strong Marxist-Zionist ideology and many of its leaders referred to the Soviet Union as their "second homeland." They envisioned a socialist Palestine working in conjunction with the Union of Soviet Socialist Republics to bring about a global workers' revolution. By the eve of World War II, ha-Shomer ha-Tzaʿir had more than 70,000 members worldwide and thirty-nine kibbutzim in Palestine.

Some of the members who were trapped in Europe when WWII erupted played prominent roles in Jewish armed rebellions against the Nazis, including the Warsaw Ghetto uprising. One of the most famous among these was Mordecai Anielewicz (c. 1919–1943), who commanded the Warsaw Ghetto uprising.

As a result of its stance in favor of the creation of a binational Arab-Jewish state in Palestine prior to 1948, ha-Shomer ha-Tzaʿir was somewhat marginalized and exercised little influence on the political decision-making of the yishuv and the Zionist movement. Early in 1948, when a group of socialist factions united to found MAPAM, a socialist-Zionist party to the left of the Labor Party, ha-Shomer ha-Tzaʿir became its youth movement. With the decline of the Labor alignment as well as the decline of the kibbutz movement, it remains active primarily as an educational movement.

HASIDIM

Followers of an ultra-Orthodox Jewish movement.

In the modern era, *Hasidim* (literally, "pious ones") has come to mean those who identify with a movement founded by Rabbi Israel ben Eliezer (c. 1700–1760), the "Baʿal Shem Tov" or "Besht" (the acronym). Originally, it was a mass movement that emphasized mysticism and personal piety rather than the legalistic learning of elite Judaism. Contemporary Hasidim are generally viewed as ultra-Orthodox, and are composed of hundreds of groups, the most widely known of which are the Lubavitcher (Habad) and Satmar Hasidim. The Lubavitcher is the largest group, and their organizational world center is in Brooklyn, New York, to which they immigrated from the Soviet Union after World War II. In Israel the movement's center is in Kfar Habad, a community of Lubavitcher Hasidim approximately eight miles southeast of Tel Aviv. Kfar Habad has several schools, including a higher yeshiva, and a replica of the red brick building that is the home of the world headquarters in Brooklyn. Although Habad-Lubavitch Hasidim officially reject secular Zionism, they are a highly nationalistic group and exert great effort in outreach to non-observant Jews. By contrast, Satmar Hasidim have traditionally been adamantly anti-Zionist and anti-nationalist, and they eschew all but purely formal contacts with outsiders.

In recent decades there have been significant shifts in the activities of both groups. The Satmar group has toned down its anti-Zionism and now avoids overt anti-Zionist activity. The Lubavitcher Hasidim, on the other hand, have become highly active in Israeli politics and were staunch supporters of Benjamin Netanyahu in his successful bid for the office of prime minister in 1996. Since the death of the movement's leader, Rabbi Menachem Mendel Schneersohn, in 1994, the movement has struggled, internally as well as with some other Orthodox groups, because of its increasing proclamations of Rabbi Schneersohn as the Messiah, a notion that others view as antithetical to Judaism.

Although there are no official figures on the number of Hasidim either in Israel or in the United States, a rough estimate suggests that there are approximately 125,000 Hasidim in Israel and a similar number in the United States.

HASKALAH

Hebrew term for enlightenment.

Haskalah is the name of the movement for the dissemination of modern European culture among the Jews. The movement began in the mid-1700s in Berlin with the work of the German Jewish philosopher Moses Mendelssohn (1729–1786). Advocates argued that to achieve emancipation, the Jews must adopt the modern values and social customs of the countries in which they lived. In the mid-1800s, modern European culture for the Jews generally meant German and French culture and secular ed-

ucation, although efforts were made in this period by groups of Jews throughout Europe.

One consequence of this process was the secular use of the Hebrew language to spread the new ideas, leading to an eventual revitalization of the language. Another effect was the creation of a stratum of Jews versed in both the intellectual traditions of modern Europe and traditional Judaism. It was from subsequent generations of these Jews that the ideas of modern Zionism originated. Finally, for many Jews, acquiring modern European culture meant the abandonment of traditional Jewish customs, resulting in assimilation.

MARTIN MALIN

HASS, AMIRA

[1956–]

Israeli Journalist.

Hass was born in 1956 in Jerusalem to European-Jewish parents who had survived the Holocaust. She studied history at the Hebrew and Tel Aviv universities. Hass joined Israel's most respected daily, *Haaretz,* as staff editor after the outbreak of the first uprising (Intifada) of 1987. In addition to her editing position, she started to write daily reports on and from Gaza in 1991.

Hass subsequently decided to move to Gaza Strip and lived there for four years, becoming the only Israeli journalist who lived in the occupied territories in order to cover Palestinian life under Israeli occupation. In Gaza, she wrote her book *Drinking the Sea at Gaza: Days and Nights in a Land under Siege.* The book contains a detailed description of Israeli occupation policies toward the Palestinians, and also includes a thorough analysis of the Israeli closure regime implemented since 1991 to restrict Palestinians' freedom of movement on the grounds of Israeli security concerns.

In January 1997, Hass moved to the West Bank to continue her coverage of occupation and the Oslo process from the city of Ramallah. In late 2002, she stopped writing daily news to focus on writing features and op-eds. In 2003, she published her second book, *Reporting from Ramallah: An Israeli Journalist in an Occupied Land.* The book is a collection of articles and features focused on Israel's repressive measure against Palestinians in the second intifada.

Hass's engaged and courageous reporting has won her numerous awards, including the UNESCO/Guillermo Cano World Press Freedom Prize in 2003.

HASSANA TRIBE

See TRIBES AND TRIBALISM: HASSANA TRIBE

HASSAN I

[?–1894]

Sultan of Morocco, 1873–1894.

The favorite son of Sultan Sidi Muhammad, Hassan I was regarded as the last great ruler of precolonial Morocco. As ruler, he resisted foreign influence through control of the local tribes, using both the permanent military units trained by British and French forces and his own status as a political leader of Islam. Through military interventions in the mountains and in the south, he was able to collect taxes and, above all, to prevent the establishment of any potential rival. To reinforce his military power, he created the first military equipment industry in Marrakech and Fez. He was interested in

the reforms (Tanzimat) launched by the Ottoman Empire as long as they were not forced on him.

In 1880, he sought to limit the rights of protection and jurisdiction exerted by foreigners on Moroccan nationals. With British support, he held out against both the French and the Spanish, although neither was pleased that he might remain outside their control. That year he convened the Madrid Conference, but the meeting failed to resolve diplomatic tensions. Throughout his reign, Hassan I resisted all external pressure, well aware that his forces were not equal to the European forces, and he gave no pretext for military intervention by limiting his contacts with foreigners. His military reforms and his strategy of defending Morocco by playing one tribe against the other while similarly using existing rivalries between the Europeans did not survive long after his death in 1894.

RÉMY LEVEAU

HASSAN II

[1929–2000]

King of Morocco, 1961–2000.

Hassan II was the son of Muhammad V, king of Morocco. As Crown Prince Mulay Hassan, he graduated from the University of Bordeaux in France. In 1961, when his father died unexpectedly, the thirty-two-year-old playboy prince came to power. The heir of the Alawite Dynasty, which has governed Morocco since the sixteenth century, Mulay Hassan had been well prepared by his father—as early as World War II—to assume the throne. He had also attended the 1942 meeting between Muhammad V and U.S. president Franklin D. Roosevelt.

When the French entered North Africa in the nineteenth century they established a policy of colonization and protectorates. Hassan had therefore been trained in both Arabic and French and had studied law and economics at the university; he was at ease in both cultures. He was also acutely aware of the ideas and changes that might come to Morocco from outside. Since his adolescence he was known to favor nationalism, as did many Moroccans of his age. He was said to have some influence on his father, who was more cautious and less brilliant than Hassan. When in 1948 there was a conflict with France's resident general that had to do with the signing of legal texts presented by French colonial authorities, Hassan was among those who favored a break with France. The consequence was Muhammad V's exile to the French-controlled island of Madagascar. Supporting his father, Hassan participated in the negotiations through intermediaries to reestablish links with the French government and effect Muhammad V's return, which was accomplished in 1955.

In contrast with Muhammad V, who was careful not to offend the parties who had joined the struggle for independence—especially the Istiqlal Party—Hassan wanted to preserve the autonomy of the monarchy. Designated chief of staff of the Royal Armed Forces, Hassan II appeared as the main guarantor of his peoples' destiny. He gathered around himself the former Moroccan officers who had served in the French army, and he ended rebellions in al-Rif, Tafilalt, and Beni-Mellal that had been provoked by various dissident movements. He also reduced the size of the Liberation Army, born of the Moroccan resistance, because it was almost autonomous in the south; it pretended to be fighting the French and Spanish colonial powers, but could easily have offered armed and organized support to any given opposition.

France and Spain recognized Morocco's independence in 1956; by 1958, Hassan II's forces prevailed throughout the country and dissidents were no longer a threat to the monarchy. Thus Muhammad V was able to incorporate the various splinter groups of the former nationalist movement within the government. Hassan was sometimes irritated by his father's caution and he tried to convince him to take back direct control. A change began in May 1960, when Hassan was appointed prime minister. When his father died in March 1961 Hassan II had both the experience and the means to put his theories into practice.

The independence of Algeria (5 July 1962) appeared to be a potential threat to Hassan II's monarchy. Algeria bordered Morocco to the east and south, and Algeria's National Liberation Front (Front de Libération Nationale) was known to support the Moroccan left (socialists) against the monarchy. Hassan sought a new legitimacy by mobilizing universal suffrage, which was largely supported by the

rural populace. The December 1962 referendum guaranteed Hassan's success with 80 percent approval of his new constitution.

The results of the March 1963 election did not give him similar support. The old Istiqlal had lost its governmental majority and the king's followers were not able to form a political coalition quickly enough. Most of the ministers were defeated, and it seemed that the parliament could not easily be governed despite a promonarchy majority. In the meantime, the danger posed by Algeria had faded. The October 1963 border war and rivalry related to Tindouf had revived in Morocco a strong nationalist feeling that produced support for the monarchy.

Hassan II dismissed the parliament in 1965 and relied mainly on his army for legitimacy. He protected those in the military who had served French and Spanish colonialism, although some of the young officers were not as loyal or as committed as he had expected. Tempted by populist idealism, some succeeded in convincing former officers of the French colonial army (who controlled the military organization) to join their project. In July 1971 and September 1972 General Medboh and General Muhammad Oufkir, among others, faced death after their rebellion failed.

Paradoxically, Hassan succeeded in restoring faith in his monarchy in 1975 when a dispute with Spain (at the time of Spanish dictator Francisco Franco's death) led to the defense of Morocco's position in the former Spanish colony of Western Sahara. A local nationalistic movement, POLISARIO, which was supported mainly by Algeria and Libya, emerged to challenge Morocco. Both Algeria and Libya saw opportunities in the situation; Algeria, especially, under President Houari Boumédienne, wanted to demonstrate its control over the Maghrib before the new European Community. Bolstered by petroleum revenues, the growing power of Algeria had the effect of reuniting Morocco under Hassan.

Although Hassan had plans for political pluralism (albeit pluralism controlled by the monarchy), his army had been reequipped for possible conflict with Algeria. Many officers disagreed with that policy, and they attempted another coup. General Ahmed Dlimi was to be their leader, but the plot was discovered by the home secretary and Dlimi disappeared in an accident. In the long run, Morocco benefited from its tactical building of the wall (fortified sand barriers in Western Sahara), and Algeria succeeded in having seventy-five countries recognize POLISARIO and make it a member of the Organization of African Unity (OAU).

Hassan managed Moroccan nationalism cautiously to establish national unity. He found external financial resources by getting Western countries as well as the Arab oil monarchies to support his military efforts and to launch economic development based on a private sector far larger than those of neighboring countries. For that reason, as the Pahlavi dynasty in Iran did before the Islamist Iranian Revolution of 1979, Hassan's monarchy became a major economic actor through the All North Africa association (Omnium Nord-Africain; ONA), not only to find resources, but also to prevent other entrepreneurs from obtaining power and becoming politically influential. Because Morocco had no oil, Hassan encouraged and often provided an example of an economic-development policy based on modern agriculture, launching a program to irrigate 2.47 million acres. He also encouraged small and medium-sized manufacturing industries.

In 1984 Hassan signed a treaty of unity with Libya after Libya withdrew its support for POLISARIO in the Western Sahara and Morocco agreed to refrain from sending troops to aid the French in Chad. In 1986, Libya abrogated the treaty when Hassan became the second North African leader to meet with an Israeli leader during Prime Minister Shimon Peres's visit to Morocco.

In 1988 international factors continued to prevail over those within Morocco. After Tunisian president Habib Bourguiba was replaced by General Zayn al-Abidine Ben Ali in November 1987, a process of realignment occurred among the North African countries. A consequence was the reintegration of Morocco, first at a meeting in Algiers (August 1988), then when the Union of the Maghrib (Union du Maghreb; UMA) treaty was signed in Marrakech, Morocco (March 1989). The treaty marked the end of the Algerian/Moroccan rivalry related to the Western Sahara, but at the same time, it deprived Morocco of a compelling reason for internal unity.

The UMA had another, hidden agenda: to constitute a united front against strengthening political movements in North Africa that aimed to establish Islamic religious regimes. Tunisia appeared to be the weak link at the time, and it needed support. Political changes in Algeria, too, had ramifications for Morocco. After the October 1988 riots in Algiers, President Chadli Bendjedid controlled the situation by creating a pluralistic political system open to Islamists; this led to competitive elections. Algerian pluralism looked attractive in comparison to the established Moroccan political system, where the same actors repeated their opposition to the existing power year after year. At a time when the annexation of Kuwait by Iraq (1990) became a military crisis and thus reduced the possibilities of action, Algeria was seen as a model rather than a threat by Moroccans.

In Morocco, the riots that took place in provincial cities by the end of 1990, the important demonstrations in the capital city at the beginning of 1991, and the reports of deserters leaving the Moroccan army to go to Iraq (by way of Algeria) indicated the public's disapproval of Hassan's cautious move in sending a limited contingent to help the United Nations coalition forces to defend the oil monarchy of Kuwait. Moroccan public opinion favored Iraq's President Saddam Hussein, and the Gulf War made visible the differing factions in Morocco.

In the last ten years of his reign Hassan's main preoccupation was to build a national consensus that would support the monarchy for the next century. He incorporated opposition parties into his government, but he was not ready to give up his power to rule directly public affairs without sharing decisions. In 1997 he compromised with socialist leader Alederrhamane Youssouf, dividing government departments into sovereign departments (Interior, Foreign Affairs, Army) that were under the control of the king and the members of the royal house, and ordinary ministries (Education, Finances, Social Affairs, Agriculture, etc.) that were under the direct control of the prime minister. But the minister of the interior, Driss Basri, appeared as a deputy prime minister exercising a global control of public activities on behalf of the king. More attention was given to human rights, and political prisoners were released, but sometimes they were expelled from the country for fallacious reasons. In spite of the limited scope of the changes, they helped to produce a political climate that progressively excluded violence from the functioning of Moroccan political life. The illness of the king and the presumed frailty of the heir apparent, Prince Mohamed, increased public desire for a broad national consensus that would include even moderate Islamist parties to build a more liberal political system after the king's death. Hassan II died in July 2000.

"HA-TIKVA"

The Zionist anthem, unofficial national anthem of the State of Israel.

"Ha-Tikva"—based on a poem written in Jassy, Romania, by Naphtali Herz Imber (1856–1909)—was formally declared the Zionist anthem at the Eighteenth Zionist Congress in 1933, and it was sung at the opening and closing of the ceremonial Declaration of the State of Israel in 1948. It is sung at communal events across the Jewish diaspora, generally alongside the local national anthem. By contrast, its status in Israel has been more debated, particularly with the increasing recognition that Arab citizens do not necessarily identify with the hope of "the Jewish soul" referred to in the words.

The original poem, entitled "Our Hope" (Tikvatenu), was inspired by the founding of the Petah Tikvah settlement in 1878. Closely echoing Psalm 126 (a feature of the Sabbath liturgy expressing the Jewish desire to return to Zion), the words were revised, set to music, and then adapted by the Zionist movement. In 1882 Samuel Cohen, a settler of Rishon le-Zion originally from Moldavia, composed the melody, based on a Moldavian-Romanian folk song—"Carul cu Boi" (Cart and oxen)—also used in Bedrich Smetana's opera *Moldau.*

HATIM SULTANS OF HAMDAN

Early tribal leaders of North Yemen.

The Hatim sultans were leaders of the Yam tribe, a section of the Hamdan tribal grouping. Control of Sanʿa and much of the north passed into their hands with the loosening of the grip of Queen Arwa and the Sulayhids on that area at the end of the eleventh century. The twelfth century witnessed much competition, from intrigue to warfare, as well as truces and alliances, between the Hatim sultans in Sanʿa and the relatively new Zaydi imams based to the north in Saʾda. Previously loyal to the Ismaʿili faith of the Sulayhids, the Hatim sultans and their followers gradually shifted from opposition to Zaydism to accepting the suzerainty of the Zaydi imams. Despite the ebb and flow of the power, and at times even the absence, of Zaydi imams over subsequent centuries, Zaydism from this time forward was firmly established in the Sanʿa region and the northern highlands of Yemen. However, the legacy of the Ismaʿili period explains how the family of President Ahmad Husayn Ghashmi could be and is Ismaʿili.

See Movement for Unity and Reform (MUR)

HATOUM, MONA

[1952–]

London-based Palestinian multimedia artist.

Mona Hatoum (also Muna Hatum) is arguably the best-known female artist of Arab descent living and working in the West. Born in Beirut to Palestinian parents, she left Lebanon in the 1970s, trained at the Byam Shaw and Slade schools of art in London, and has resided there ever since. Widely regarded for her conceptual art, which is primarily executed in performance, video, objects, and installation, Hatoum has worked primarily with the issue of power relationships—especially as they are manifested, manipulated, and subverted in class, gender, and race relationships, and in processes of cultural difference and displacement. Her early works were direct political statements about the body, feminism, and surveillance. Her performances challenged audiences to engage with issues of power and difference. Beginning in the 1990s, her work became more conceptual and subtle, containing implied, complex, and multilayered explorations of these same issues. Her work is increasingly mini-

malist, and Hatoum is keen to explore the sensuous properties of materials in eliciting contradictory responses—attraction and repulsion, for example, or welcoming and danger—thus creating works that are more complicated than her earlier, more direct, political statements. Although her experience of exile shapes some of her work and she has done pieces critical of Israel's treatment of the Palestinians, she resists interpretations of her art as stemming only from her Middle Eastern background. She insists that her works do not have fixed meanings that relate solely to her background but rather have multiple interpretations that are often paradoxical. Hatoum has exhibited widely in major venues around the world and is the recipient of numerous awards.

HAWATMA, NAYIF

[1935–]

Jordanian activist and leader in the Palestinian resistance movement.

Born into a Greek Catholic family in al-Salt, Jordan, Nayif Hawatma (also Nayef Hawatmeh, Hawatima) obtained degrees in both politics and economics from Zarqa College and Hussein College in Jordan, from Cairo University, and from the Beirut Arab University. He joined the pan-Arab Arab Nationalists Movement (ANM) while in Beirut in 1954, and he fled Jordan in 1957 following King Hussein ibn Talal's crackdown on leftist activism. His activities on behalf of the ANM in Iraq landed him in prison between 1959 and 1963. Back in Lebanon in the mid-1960s, Hawatma was one of several ANM activists who began pushing for a more rigidly Marxist-Leninist line within the movement. Hawatma also formed a group dedicated to armed action in the service of Palestinian liberation, the Vengeance Youth. Although this group was one of several that merged to form the Popular Front for the Liberation of Palestine under the leadership of George Habash in early 1968, ideological disputes between Habash and Hawatma's leftist faction led the latter to break away and form his own new group in February 1969. He named the new organization the Popular Democratic Front for the Liberation of Palestine (later shortened to the Democratic Front for the Liberation of Palestine [DFLP]) and brought the group within the rubric of the Palestine Liberation Organization (PLO).

Hawatma's historical imprint on the PLO has been strong despite the DFLP's small numbers. He has been one of the most ideologically sophisticated leaders in the Palestinian movement, carefully analyzing both the relationship between the Palestinian resistance movement and Israel (and Israeli Jews) and, given his Jordanian nationality and pan-Arab and Marxist internationalist background, the relationship between the resistance movement and the wider Arab world. Hawatma was one of the first leaders of the Palestinian resistance to call for dialogue with certain leftist elements in Israel and to deal ideologically with a Jewish presence in Palestine. He and the DFLP also advanced a series of precisely argued theories about the goals of the Palestinian resistance movement. Initially, Hawatma argued that when Palestine was liberated from Israeli control it should become not a separate state, but a part of a larger, federated socialist Arab state. In particular, Hawatma believed that the struggle of the Palestinian people against Israeli rule and that of the Jordanian people against the pro-Western regime of King Hussein were inseparable. The DFLP's provocative actions in Hawatma's homeland helped to precipitate a disastrous confrontation between the PLO and the Jordanian army in September 1970 that resulted in Hawatma becoming persona non grata in his homeland until 1990.

Always a champion of ideological flexibility, by 1973 Hawatma began was calling for a phased ap-

proach to Palestinian liberation. Although he was still opposed to a separate Palestinian state, he argued for establishing a "national authority" in the West Bank and Gaza in the event of an Israeli withdrawal. The PLO committed itself to this idea in 1974. Hawatma later spoke of the establishment of a Palestinian state in the occupied territories, once again before this became official PLO policy. Hawatma has also stood out because of his steadfast rejection of violence directed against targets outside of Israeli-controlled territory. Although committed to armed struggle against Israel, the DFLP eschewed the spectacular airline hijackings and similar acts of international violence carried out by other Palestinian groups. The DFLP did carry out actions, including terrorist attacks inside Israel, however. Among them was the terrorist attack at the Israeli town of Maʿalot in 1974, when DFLP fighters invaded a school and held the students hostage; twenty-two were killed and dozens injured during the incident, which ended when Israeli forces stormed the school.

Hawatma long served as a voice of loyal opposition to Yasir Arafat's leadership of the PLO. This has been particularly true since the early 1980s, when Arafat began to pursue diplomatic ventures that Hawatma and others felt compromised cherished Palestinian goals and subsumed them to U.S.-led imperialist domination of the region. Hawatma opposed the 1991 Madrid Conference and subsequent talks. This helped to precipitate a crisis with Yasir Abd Rabbo and others in the DFLP who supported the peace process, and Abd Rabbo left the organization in 1991. By 1993 the split was institutionalized when Abd Rabbo created the Palestinian Democratic Union (FIDA). Hawatma later played an important role in the "Damascus Ten," a group of Palestinian organizations formed in 1992 in opposition to the peace talks, which began calling itself the National Democratic and Islamic Front the following year. He also criticized the 1993 Israeli–PLO Oslo Accord. However, he always upheld the goal of PLO unity and, despite his opposition to the peace accords, never broke with the PLO. In the late 1990s he softened his stance and engaged in dialogue with Arafat in August 1999 about ways to involve the DFLP in the negotiations.

Hawatma made headlines in February 1999 when he shook the hand of Israeli president Ezer Weizman in Amman during the funeral of Jordan's King Hussein. Israel agreed to allow Hawatma to enter the territory of the Palestinian Authority later that year, but soon reneged on its decision. He operates from Damascus, where he has lived for years.

HAWI, GEORGE

[1938–]

Former general secretary of the Lebanese Communist Party, 1979–1992.

A Greek Orthodox, George Hawi has been a leading figure in the Lebanese Communist Party since the early 1970s. He became its general secretary in 1979 and retained that position until 1992. Calls for Hawi's resignation grew from the mid-1980s onward, as a result of personal rivalries, rising confessional tensions between Greek Orthodox and Shiʿa members of the party, and criticism of his pro-Syrian policies and lavish lifestyle. Strong Syrian support nevertheless enabled him to withstand several challenges to his leadership. His position became increasingly precarious following the collapse of communism in eastern Europe in 1989, when the party was split between reformers and backers of Hawi's traditional policies. In June 1992, during the Lebanese Communist Party's Seventh Party Congress, Hawi failed to win reelection as general secretary and was replaced by Faruq Dahruj.

HAWI, KHALIL

[1919–1982]

One of Lebanon's best-known twentieth-century poets.

Born in Huwaya, Syria, where his Greek Orthodox Lebanese father was working, Khalil Hawi grew up in Shwayr, Lebanon. He studied philosophy and Arabic at the American University of Beirut, where he received a bachelor of arts in 1951 and a master of arts in 1955. After teaching for a few years, he obtained a scholarship to enroll at Cambridge University, in England, where he was awarded his Ph.D. in 1959. He then became a professor of Arabic literature at the American University in Beirut. Within a few years, he established himself as one of the leading avant-garde poets in the Arab world. His poetry relies heavily on symbols and metaphors and images, and it frequently has political and social overtones.

An Arab nationalist at heart, he repeatedly expressed his sense of shame and rage at the loss of Palestine in 1948 and at subsequent Arab defeats at the hands of Israel. He was very critical of Arab regimes for their demonstrated lack of pan-Arab solidarity, and he denounced the hedonism, materialism, and corruption that prevailed in Beirut before the civil war broke out. More generally, he lamented what he saw as the Arab world's political and cultural decay, and he expressed deep pessimism about the possibility of a true Arab cultural and political revival. His deeply felt feelings of frustration and powerlessness at the decline of Arab society and culture and at the Arab world's impotence on the international scene are shared by an entire generation of Arab intellectuals confronted with political authoritarianism and the failure of attempts at Arab unity, as well as persistent and costly inter-Arab rivalries.

After 1975, Khalil Hawi experienced the desperation felt by all Lebanese who had to watch their country's slow descent into chaos, internal disintegration, and manipulation by outside powers. He was outraged by Lebanon's inability to stand up to the Israeli army when the latter invaded on 3 June 1982, and he deeply resented the other Arab governments' silence about the Israeli invasion. He committed suicide on 6 June 1982.

HAWRANI, AKRAM AL-

[1914–]

Syrian politician and political activist.

Akram al-Hawrani was born in Hama, an ancient city in the central plain of Syria and a citadel of landed power and rural oppression. In the 1930s, during the French mandate, he tried to mobilize the landless peasants against their feudal lords. When World War II broke out, he went to Iraq, where he joined Rashid Ali al-Kaylani's 1941 revolt against the British. Having established himself as a champion of agrarian reform, Hawrani was elected to the parliament in 1943, 1947, and 1949. In 1945 he and his *shabiba* (young men) group seized Hama's garrison from the French, and in early 1948 he fought in the Palestine war on the side of Fawzi al-Qawuqji's Army of Deliverance *(jaysh al-inqadh).* Hawrani held ministerial portfolios in the governments of Hashim al-Atasi and Adib Shishakli. In 1950 he mobilized his followers in the Arab Socialist party, with headquarters in Hama and branches in other centers. Three years later, Hawrani's party merged with Baʿth to form the Arab Socialist Baʿth party, a coalition of the urban middle class (mainly schoolteachers and government employees) and politicized peasants.

Shishakli's heavy-handedness sent Hawrani into exile in Lebanon. In 1954, after Shishakli's fall, Hawrani returned to Syria, and in 1957 he became president of the parliament. He was a strong advo-

cate of the United Arab Republic (1958–1961); in the central cabinet that Gamal Abdel Nasser created for the union government, Hawrani served as vice president and minister of justice. In 1959 he resigned his cabinet posts, disenchanted with the authoritarianism of Nasser and the unstable structure that he created in Syria. After Syria's secession from the union in 1961, Hawrani opposed subsequent Baʿth efforts to re-create the union and tried to reestablish his Arab Socialist party. The Baʿth officers who engineered the coup of March 1963 (Hafiz al-Asad, Salah Jadid, and others) ordered the arrest of Hawrani. When he was released, he went to Lebanon, where he tried to mobilize Syrians opposed to the Asad regime in the National Progressive Front. In many respects, Hawrani was an agent of social change, an energetic activist who roused the peasants, politicized the army, and shook the foundations of the old order.

HAYCRAFT COMMISSION (1921)

A British commission that investigated Palestinian anti-Zionist violence in May 1921.

Palestinians attacked the Jewish inhabitants of Jaffa and five Jewish colonies on 1 May 1921, resulting in 47 Jewish deaths and 146 injured, mostly by Palestinians, and 48 Palestinian deaths and 73 wounded, mostly by the military and police. The British high commissioner for Palestine, Sir Herbert Samuel, appointed a commission, headed by the chief justice of Palestine, Sir Thomas Haycraft, to determine the causes of the Arab violence. The commission reported in October 1921 that what triggered the violence was a May Day clash between rival Jewish Communists and Jewish Socialists in nearby Tel Aviv. The fundamental cause, however, was Palestinian "discontent with, and hostility to, the Jews, due to political and economic causes, and connected with Jewish immigration, and with their conception of Zionist policy as derived from Jewish exponents." The report stated that the Palestinians feared that Jewish immigration would lead to unemployment in the short run and to political and economic subjugation in the long run.

After the report was issued, the British took some steps to meet Palestinian demands. In December, Samuel established the Supreme Muslim Council to administer the *awqaf* (religious endowments) and to appoint and dismiss officials and judges of the *shariʿa* courts. In January 1922, he allowed the election of Muhammad Amin al-Husayni, a popular Palestinian nationalist, as president of the council. In June 1922, Sir Winston Churchill, secretary of state for the colonies, issued a white paper which, while reconfirming continued British support for the Zionists, reassured the Palestinians that they need not fear the "imposition of Jewish nationality" on them, rejected the idea that Palestine would become "as Jewish as England is English," limited Jewish immigration to the "economic capacity of the country," and proposed a legislative council with limited powers. The Palestinians rejected the new policy because it was based on the Balfour Declaration. The Zionists accepted it but criticized the British for backing away from the Balfour Declaration.

PHILIP MATTAR

HAYIM, YUSEF

[c. 1833–1909]

Rabbi of Baghdad.

Born in Baghdad during the Ottoman Empire, Yusef Hayim attended the Midrash Bet Zilkha from 1848 to 1853. He became the student of Hakham Abdullah Somikh and his most promising disciple; he married the daughter of Yehuda Somikh, Rahel, and they had children. Hayim belonged to a family of wealthy merchants, which came to be known as Bet al-Hakham. As he became well known to the world of Jewish scholars, especially those in the Middle East, his opinions on religious matters were routinely sought. He left a large number of writings *(responsa),* some of which have been published.

When Hayim's father died in 1859, he inherited the place of chief preacher *(darshan),* which he maintained throughout his life. He also wrote poems *(piyyutim)* and hymns *(pizmonim),* some of which are included in the Baghdad prayer book. His principal work, known as *Ben Ish Hai* (a name by which he came to be known) had the status for Baghdad Jewry as the *Shulhan Arukh* had for all Judaism. Philosophically and practically, he was a moderate traditionalist who assumed that modern Western teachings entering the Middle East by way of the Alliance Israélite Universelle might be adapted and accommodated.

SYLVIA G. HAIM

HAYKAL, MUHAMMAD HASANAYN

[1923–]

Egyptian journalist, author, and politician.

Born to a middle-class Cairo family, Muhammad Hasanayn Haykal (also Heikal) went to government schools and attended both Cairo University and the American University in Cairo. He began working as an unpaid reporter for the *Egyptian Gazette* and *Rose al-Yusuf,* covering the battle of al-Alamayn and the debates in Egypt's parliament. He then became a reporter for *Akhir Saʿa,* winning the King Farouk Prize for investigative journalism for his coverage of the 1947 cholera epidemic. Between 1946 and 1949 he covered the Palestine struggle, interviewing David Ben-Gurion (head of Israel's provisional government and then prime minister) and Jordan's King Abdullah, and also meeting Gamal Abdel Nasser, an Egyptian army major who later led a coup and became Egypt's leader. Haykal's assignments were wide-ranging; he also covered the civil war in Greece, the Mossaddegh crisis in Iran, and (supported by a U.S. State Department "Leader Grant") the 1952 U.S. presidential campaign.

Haykal claims to have been on intimate terms with Egypt's Free Officers before the 1952 revolution; certainly he became closer to Nasser while he was in power than did any other journalist. Editor of *Akhir Saʿa* in the early 1950s, he became editor in chief of *al-Akhbar* in 1956 and of the prestigious but fading *al-Ahram* in 1957, rebuilding it into the most influential newspaper in the Arab world. He became Nasser's adviser, confidant, and spokesman, and is widely credited with ghostwriting Nasser's *Falsafat al-thawra.* A strong believer in press freedom and scientific management, Haykal made *al-Ahram*'s facilities among the most modern in the world and founded periodicals ranging from the Marxist *al-Taliʿa* to the business-oriented *al-Ahram al-Iqtisadi.* He also founded a Center for Strategic Studies and a well-stocked research library. His weekly column, "Bi al-saraha" (Speaking frankly), was widely assumed to indicate the direction of Nasser's thinking.

After serving briefly as minister of culture and national guidance in 1970, Haykal broke with Anwar al-Sadat, who succeeded Nasser as Egypt's president, because of Sadat's willingness to seek peace with Israel. Dismissed as editor of *al-Ahram* in 1974, Haykal was barred from publishing articles in the Egyptian press. He went on writing for Lebanese Arabic newspapers and published books in English. Interrogated by the Egyptian police and state prosecutor in 1977 and 1978, he was forbidden to travel abroad, then imprisoned during Sadat's 1981 purge. Although under President Husni Mubarak Haykal has not regained his former influence on policy decisions, he is respected as an intellectual, writer, and possible mediator with other Arab states, such as Libya. He asked President Mubarak to launch a new project for the revival of Arab civilization based on

enlightenment, modernization, free expression, rule of law, and social justice. Haykal divides the achievements of Egypt during the twentieth century into four generations: the first generation, which ended in 1919, achieved intellectual enlightenment and cultural structure; the second generation, which ended in 1949, developed the constitutional and national movement, and its best symbol was the revolution of 1952; the third generation, which ended in 1979, achieved Arab nationalism and socialism; and the fourth generation, which will end in 2009, is achieving compromise, peace, capitalist companies, and pluralism.

Haykal's memoirs of events in which he took part should be read with caution. They include *Cairo Documents* (1973), *Road to Ramadan* (1975), *The Sphinx and the Commissar* (1978), *Autumn of Fury: The Assassination of Sadat* (1983), *Cutting the Lion's Tail: Suez through Egyptian Eyes* (1986), and *1967: The Explosion* (1990).

Haykal today is still a very controversial figure, especially since the 1990s, after the publication of numerous books on hot topics. Many books have attempted to analyze his life and to ascertain the claims he made about historical figures and events during the twentieth century. His latest books, which have focused mostly on historical events and biographies, include *The Spring of Anger* (1990), *The Gulf War* (1993), *October 73* (1993), *Power Game* (1995), *Egypt's Gate to the Twenty-First Century* (1995), *The Secret Negotiations between Arabs and Israel* (1996), *Arabs' Crisis and the Future* (1997), *Japanese Articles* (1998), *Crowns and Armies* (1998), and *The Arabian Gulf* (1998). His latest book is *From New York to Kabul* (2001). In 1995 the Egyptian government demanded that Haykal surrender the documents that he has been using in his writings about Nasser's period or face imprisonment. He has kept the secret documents at European banks. In the last three decades Haykal has refused any award to honor his work or life.

ARTHUR GOLDSCHMIDT
UPDATED BY AHMAD S. MOUSSALLI

HAYKAL, MUHAMMAD HUSAYN

[1888–1956]

Egyptian author, political leader, and lawyer.

Born to a landowning family in Daqahliyya, Muhammad Husayn Haykal was educated at the Cairo School of Law and at the University of Paris, where he wrote his doctoral thesis on the Egyptian public debt (1912). Homesick for his native village, he also wrote a bucolic fiction, called *Zaynab* (Cairo, 1914), which is usually described as the first modern Arabic novel.

Upon returning to Egypt, he practiced law, wrote for *al-Jarida* of Ahmad Lutfi al-Sayyid (with whom he remained close throughout his life), published a magazine called *al-Sufur* during World War I, and taught at the School of Law. Egypt had become a British protectorate in 1914, and when the nationwide revolution for independence broke out in 1919, he backed the Wafd and Saʿd Zaghlul, one of its leaders, but broke with them in 1921 over negotiations with Britain. At this time, Prime Minister Adli Yakan, Haykal, and other educated Egyptians formed the Constitutional Liberal Party (Hizb al-Ahrar al-Dusturiyyin), calling for parliamentary democracy. In 1922, Haykal became editor of its newspaper, *al-Siyasa,* and he later founded an influential weekly edition, *al-Siyasa al-Usbuʿiyya.* He continued his literary production with the books *Fi awqat al-faragh* (Cairo, 1925), *Tarajim misriyya wa gharbiyya* (Cairo, 1929), and a touching eulogy of his son who died in childhood, called *Waladi* (Cairo, 1931).

In 1934, when the Constitutional Liberals were competing for popular favor with the Wafd, the palace, and rising Muslim groups, he published *Hayat Muhammad* (Cairo, 1934), an attempt to apply modern scholarship to the biography of the prophet Muhammad and to reconcile the principles of personal freedom with the teachings of Islam. Increasingly pious, he made the pilgrimage to Mecca (hajj) in 1936, and published *Fi manzal al-wahy* (Cairo, 1937), relating his experience as a pilgrim. He served as Egypt's minister in seven cabinets in the late 1930s and the 1940s and as president of the Senate from 1945 to 1950. He published his last novel *Hakadha khuliqat* (Cairo, 1955) and also his memoirs, *Mudhakkirat fi al-siyasa al-misriyya* (Cairo, 1951–1978, 3 vols.), of which two volumes appeared in his lifetime and the third posthumously. An ambitious man with

many talents, he often felt a conflict between secularism and Islam and between the democratic principles of his party and his belief that Egypt should be governed by its most educated citizens.

HAZA, OFRA

[1957–2000]

Israeli singer who revitalized and popularized traditional Yemeni songs for a world audience.

Ofra Haza's singing style was characterized by powerful, artistically rendered emotionality, whether she was interpreting traditional or popular songs. She personified Israeli popular music from the early 1980s until the late 1990s. A nominee for a Grammy Award, she took second place in the 1983 Eurovision Song Contest with "Chai," launching a singing career that would earn her sixteen gold and platinum records.

The ninth and final child born to Yemenite immigrants in the impoverished ha-Tikva neighborhood of south Tel Aviv, Haza joined the ha-Tikva Theater group at the age of twelve and began a rags-to-riches ascent in the Israeli popular imagination. With the encouragement of ha-Tikva Theater founder Bezalel Aloni, who later became her manager, Haza took leading roles within the ha-Tikva group, and by the time she was nineteen, her solo career was launched.

In 1985, Haza released her first internationally acclaimed album, *Yemenite Songs,* a collection of interpretations of devotional poetry written by Shalom Shabazi, a seventeenth-century rabbi. Haza's music appealed to Ashkenazic as well as Mizrahi audiences, and her performances bridged ethnic, class, and generational dividing lines in Israeli society. She was chosen to sing in Oslo when Yitzhak Rabin, Yasir Arafat, and Shimon Peres received the Nobel Prize, and was chosen again to sing at the memorial concert following Rabin's assassination.

Shaday (1988) was Haza's second international album. It contained "Im Nin'alu," Haza's signature song, which was featured on MTV, a first for an Israeli singer. A striking beauty, she attempted, unsuccessfully, to pursue a film career in California before returning to Israel in the mid-1990s. Religiously devout and noted for remaining humble despite her fame, Haza married in 1998. She died in 2000 from complications resulting from AIDS, possibly contracted from her husband, who committed suicide a year later. The medical panel investigating Haza's death said in a published report that, had Haza admitted herself to hospital earlier, her life could have been saved. Fearful of the negative publicity that could result if her condition were to become known, Haza refused to seek proper medical care until it was too late. Former Prime Minister Shimon Peres delivered a eulogy at her graveside, and Israeli attitudes about AIDS came under critical discussion following her death.

HAZARA

Ethnolinguistic group in Afghanistan.

The Hazara live in the high central mountains of Afghanistan in a region called the Hazarajat, and they number between one and two million. The Hazara are racially distinct from the rest of the Afghans, with Mongoloid physical features, including the epicanthic fold of the upper eyelid commonly seen in the people of central Asia. Although Hazara legend has it that they are the descendants

of the army of the great Mongol conqueror Genghis Khan, scholars now believe them to be descendants of Chaghatai from Transoxiana, who entered the area as soldiers under Timur and his son Shah Rukh in the fifteenth century. Originally Sunni Moslems, the Hazara were converted to Shiʿism during the time of the Safavid King Abbas I (1588–1692), when this part of Afghanistan was controlled by Iran. The Hazara speak a dialect of Persian known as *Hazaragi,* which contains some Turkic and Mongol words.

The Hazara lived a relatively independent existence in Afghanistan until the 1890s, when they were brought under the control of Kabul in a series of wars during the reign of Abd al-Rahman (1880–1901). Looked down upon by other Afghans, the Hazara are the poorest of the Afghan ethnolinguistic groups. Some have migrated to Kabul and the other major cities, where they work in menial jobs. During the Afghan war of resistance, the Hazara were able to expel the government representatives from the Hazarajat, and in 1979 they established a quasi-independent government under a council led by Sayyid Ali Beheshti. By the mid-1980s, however, the Hazarajat came under the control of the Iranian-backed Shiʿite groups of Nasr and Pasdaran. In the early 1990s the Hazara political groups united in an organization called *Hezb-e Wahadat* (Unity Party), led by Mohammed Karim Khalili. This group played a major role in the formation of the Mojahedin government in 1992.

The Hazara, through Hezb-e Wahadat, fought against the Taliban movement, which captured Kabul in 1996, and joined the United Front in the fight against the Taliban government. As a result, the Taliban government carried out a number of massacres against Hazara civilians, both in the Hazarajat and in the northern city of Mazar-e Sharif, between 1998 and 2000. When the Taliban government was driven from Kabul in December of 2001 the Hazara played an active role in the formation of the interim government of Hamid Karzai, and held several important seats in the interim government.

HAZAZ, HAYYIM

[1898–1973]

Hebrew writer.

Hazaz was born in Sidorvichi, a province of Kiev. His secular and religious education included the study of Russian and Hebrew literature. Hazaz left home at sixteen, and for seven years traveled from one Russian city to another. While in Moscow, during and after the Russian Revolution, he worked at the Hebrew daily *Haʿam.* In 1921, Hazaz settled in Constantinople (now Istanbul) for a year and a half, and subsequently moved to Western Europe. He spent nine years in Paris and Berlin, which replaced pre-Revolutionary Russia as the capital of Hebrew literary activity.

In early 1931, Hazaz left for Palestine and settled in Jerusalem. A political activist, he was president of the Israel–Africa Friendship Association from 1965 to 1969. After the Six-Day War (1967), he became an advocate for the Land of Israel Movement, which called for settling the lands captured during the war and permanently incorporating them into the state of Israel.

Hazaz began his writing career while still in Russia publishing a sketch, *Ke-Vo ha-Shemesh* (1918), in *Ha-Shiloʾah* under a pseudonym. Thereafter he published under his own name. The dominant theme of his Russian-period stories is the fate of the shtetl in the aftermath of the Russian Revolution. The old world had been turned on its head and its generation became disoriented. Among these stories are *Mi-Zeh u-mi-Zeh* (From this and that, 1924) and *Pirke Mahpekhah* (Chapters of the revolution, 1924). Another Hazaz story of the revolution is *Shemuʾel Frankfurter* (1925), which has as its protagonist the title character, a revolutionary, whose idealism and integrity doom him. Hazaz's first novel, *Be-Yishuv Shel Yaʿar* (In a forest settlement, 1930), is set during the Russian–Japanese War and depicts a Jewish family

among gentiles. As the story evolves, it becomes clear that while the latter are firmly anchored in their land, the former are manifestly rootless.

His Eretz Yisrael (Hebrew: "The Land of Israel," i.e., Palestine) phase began with *Rehayim Shevurim* (Broken millstones, 1942). While some of his stories continue to recount shtetl life, others are located in Palestine. One of his major works, *Ha-Yoshevet ba-Gannim* (Thou that dwellest in the gardens, 1944), recounts the story of three generations of Yemenite Jews in Eretz Ysrael. *Harat Olam* and *Havit Akhurah* describe the life of German-Jewish immigrants. *Esh Boʿeret* and *Drabkin* are studies of immigrants from Eastern Europe. The first describes the idealism of the *halutzim* (pioneers) who fled Russia and suffered immeasurable hardships to reach Palestine; while the second narrative tells of its title hero's disillusionment with Zionism when it fails to fulfill his dreams. Several of Hazaz's protagonists struggle to narrow the gap between their ideals and reality. In *Ha-Derashah* (The lesson) Yudke, the story's hero, questions the commonly accepted premises of Zionism.

Yaʾish, Hazaz's most elaborate work (4 vols., 1947–1952), recounts the life of Yaʾish, a young Yemenite Jew who abandons his mystical beliefs upon arriving in Eretz Yisrael while experiencing external and internal conflicts. In this four-volume opus, Hazaz evinces intimate familiarity with Yemenite culture. *Be-Kolar Ehad* (In the one collar, 1963) deals with the struggle against the British in Palestine. The heroes, young resistance fighters condemned to death by the British, opt to commit suicide. The story is based on historical fact and raises issues of the Diaspora such as redemption and *Kiddush ha-Shem,* Sanctification of the name, i.e., sacrificing one's life for the sake of God.

Since Hazaz's linguistic style is rooted in ancient Jewish texts, reflecting a profound knowledge of the Talmud and Midrash, he is not easily understood by the modern Hebrew reader. To overcome this obstacle, a revised edition of all his works was published in 1968, in which Hazaz deleted many archaic words and allusions.

Hazaz was awarded the Israel Prize for Literature in 1953.

See also LITERATURE: HEBREW.

ANN KAHN

HAZZAN, ELIJAH BEKHOR

[1847–1908]

An important Sephardic scholar, intellectual, and communal leader.

Born in İzmir and raised in Jerusalem, Elijah Bekhor Hazzan traveled to Europe and French North Africa in the early 1870s. He published a philosophical dialogue, *Zikhron Yerushalayim* (Livorno, Italy, 1874), on questions of modernity and Jewish identity.

Appointed Hakham Bashi (chief rabbi) of Tripolitania in 1874, he was a leading, but controversial advocate of reforms. He was more successful as the modernizing chief rabbi of Alexandria, where he served from 1888 until his death. He published four volumes of *responsa* (interpretations), *Taʿalumot Lev* (Livorno/Alexandria, 1879–1902), and a work on Alexandrian Jewish customs, *Neveh Shalom* (Alexandria, 1894).

NORMAN STILLMAN

HEBREW

Major official language of the State of Israel.

Hebrew is the national language of the Jewish population of Israel (about 5 million) and the mother tongue of Jews born in the country. For world Jewry (about 14 million) it is the traditional liturgical language and a link to daily life in contemporary Israel.

Hebrew is the original language of the Bible. It has played a central role in the cultural history of the Jewish people for the past three millennia, and has had an important impact on Western culture. Ancient Hebrew names such as Jacob, Joseph, Sarah, and Mary, and old Hebrew words or concepts such as "amen," "hallelujah," "hosanna," "Sabbath," and "Messiah" have survived, resisting translation in many languages and cultures.

Hebrew belongs to the Canaanite group of the Northwestern Semitic or Afro–Asiatic family of lan-

guages. During its long history (which follows the historical course of the Jewish people), it has undergone diverse changes and has developed several different layers, from biblical Hebrew to modern Israeli Hebrew.

Biblical Hebrew (BH) is believed to have crystallized over 3,000 years ago, when the Israelite tribes coalesced into a homogeneous political unit under the monarchy in Jerusalem (eleventh–tenth centuries B.C.E.). It emerged as a fully formed literary language whose poetic grandeur is attested by the oldest portions of the Bible, written about that time.

In its early, classical form BH functioned as a living language until the end of the First Temple Period (586 B.C.E.). Due to its prestigious status as the language of the early books of the Bible, it survived as a literary language until the second century B.C.E., as seen in the late books of the Bible, in the Apocrypha, and in the Dead Sea Scrolls. BH was employed centuries later, mainly by the Hebrew poets of medieval Spain (eleventh to thirteenth centuries) and the writers of the Jewish Enlightenment movement in Eastern Europe (late eighteenth and nineteenth centuries). Most important, because praying and reciting the Bible in the original Hebrew have always been central to synagogue worship, contact with BH has never ceased. The preservation throughout the ages of the morphological structure of BH accounts for the relative uniformity in the various historical layers of the language.

The Second Temple Period (516 B.C.E.–70 C.E.) saw the beginning of Jewish bilingualism. Aramaic, another Northwestern Semitic language, closely akin to Hebrew and a lingua franca in the ancient Middle East, became the second language of the Jewish people. The contact between BH and Aramaic (and, to a certain degree, Greek and Latin) gradually resulted in an enriched and quite different kind of spoken Hebrew with a literary counterpart, known as Rabbinic Hebrew (RH). A change in script occurred at that time, the ancient Canaanite alphabet of BH being replaced by the Assyrian square script used in Aramaic.

Well adapted to deal with everyday practical matters, RH was employed in writing down the Mishna (the oral law, 220 C.E.), and for several hundred years it continued to be used together with Aramaic in the Rabbinic literature (the Talmud and the Midrash). Its role as a spoken language, however, declined at the end of the second century C.E., following the destruction of Jerusalem and the Judaean state by the Romans (70 C.E.).

TABLE BY GGS INFORMATION SERVICES, INC. THE GALE GROUP

For the following 1,700 years, Hebrew fell into disuse as a spoken language in daily use because the diaspora Jews used the vernaculars of their host countries for communication. Nevertheless, Hebrew was by no means a dead language. In their dispersed communities the Jewish people continued to use it as their written language in their liturgical, scholarly, literary, and even practical activities. Writing and copying were greatly aided in the Middle Ages by the introduction of the Rashi script (which survives among Middle Eastern Jews). In addition to the vast, multifaceted religious and secular literature written in Hebrew at that period, hundreds of books were translated into Hebrew, primarily from Arabic and Latin. Each of these literary activities contributed to the growth of the language by enriching its vocabulary and by introducing new syntactic patterns. At the same time, many He-

brew words and expressions were incorporated into the Jewish languages that developed alongside the vernaculars, such as Judeo–Arabic, Judeo–Spanish, and Yiddish.

The search for a new Hebrew idiom, suitable for a realistic literary expression in the modern era, followed the revival of Hebrew culture by the Jewish Enlightment Movement. Mendele Mokher Seforim (1835–1917) is considered the first modern writer who integrated in his style varied elements from all the periods of Hebrew as well as from Yiddish. His work contributed to the transformation of Hebrew into a flexible modern literary vehicle and helped pave the way for the rise of modern Hebrew literature.

The renaissance of Hebrew as a spoken language in the twentieth century was closely linked to the national revival of the Jewish people in their forefathers' land. Hebrew was revived thanks to the efforts of a small group of devoted people, led by Eliezer Ben-Yehuda (1857–1922), who in 1881 settled in Jerusalem and pioneered Hebrew usage at home and in school. He published a Hebrew periodical, promoted the coining of new words, and cofounded the Language Committee (1890–1953), which began dealing with language planning issues and set normative measures. Above all, Ben-Yehuda compiled several volumes of the first modern dictionary of ancient and modern Hebrew.

Ben-Yehuda's work gained increasing support from the waves of Jewish immigrants and refugees returning to Zion. When the state of Israel was proclaimed in 1948, Hebrew was a functioning modern language, fully established as the living language of the growing Jewish community in the country. Supervision of its continuous growth was assigned in 1953 to the Academy of the Hebrew Language in Jerusalem.

Since the first days of its rebirth, thousands of new words have been created in Hebrew from its own roots and many of its ancient words have been given new meanings. Influence from other languages on vocabulary and syntax may be discerned as well. Encompassing all areas of life and gaining ever greater flexibility, Hebrew has become the dynamic, vibrant language of modern Israel.

RUTH RAPHAELI

HEBREW UNIVERSITY OF JERUSALEM

Israeli university.

The creation of a Jewish university in Jerusalem that would teach subjects in Hebrew was a major cultural goal of Zionism. In 1914 land was purchased on Mount Scopus, and the cornerstone for the university was laid in 1918 by Chaim Weizmann. The Hebrew University of Jerusalem opened on 1 April 1925 in a ceremony attended by major Jewish figures and British officials. Chaim Weizmann is considered its founding father; the first chancellor was Judah Magnes. By 1947 the campus had more than 1,000 students and 200 faculty.

The 1948 Arab–Israel War left the Mount Scopus campus on the Jordanian side of divided Jerusalem. A new campus was established at Givʿat Ram in western Jerusalem. Additional campuses include the Hadassah medical school at Ein Kerem in southwest Jerusalem and an agricultural school in Rehovot. After the 1967 Arab–Israel War the Mount Scopus campus was rebuilt and expanded as the university's main campus. A full range of advanced degree programs is offered, and in 2003 nearly 23,000 students—including Jewish and Arab citizens of Israel as well as international students—attended the four campuses, taught by 1,200 tenured faculty. The multicultural makeup of the Mount Scopus campus was evidenced in the casualties from the bombing of the student cafeteria on 31 July 2002, which killed nine and wounded several dozen. Approximately 40 percent of all civilian scientific research in Israel is conducted at Hebrew University.

PIERRE M. ATLAS

HEBRON

West Bank city, south of Jerusalem.

Hebron (in Arabic, *al-Khalil;* in Hebrew, *Hevron*) is an ancient city, holy to both Judaism and Islam, because it is the site of the Machpelah burial cave of the Biblical and Qurʾanic figures Abraham, Isaac, and Jacob, and their respective wives Sarah, Rebekah, and Leah. Later, in the tenth century B.C.E., David was proclaimed king in Hebron when Saul died, and it became his first capital. Above the Machpelah cave is a mosque complex known as the al-Haram al-Ibrahimi.

Although predominantly a town inhabited by Palestinian Arab Muslims, a small Jewish community lived in Hebron throughout the centuries. During British rule, the Jews left after the Arab-Jewish disturbances of August 1929 when sixty-four Jews were massacred. Hebron was annexed by Jordan in 1950 in the aftermath of the Arab-Israel War of 1948, and it was occupied by Israel during the Arab–Israel War of 1967. As a result, Jews were allowed to pray in the al-Haram, something formerly forbidden to them. A civilian Jewish settlement called Kiryat Arba was established nearby in 1968, and militant nationalist settlers also began moving into the heart of Hebron itself. Formation of the Gush Emunim movement furthered this development. Long a flashpoint for Israeli-Palestinian violence, Hebron's worst violence in decades occurred in February 1994 when Baruch Goldstein, a U.S.-born Jewish settler, entered the al-Haram al-Ibrahimi mosque and massacred twenty-nine Palestinian worshippers before he himself was killed.

Because of the presence of approximately 400 Jewish settlers in Hebron, it was the only major West Bank town (besides Jerusalem) from which Israeli forces did not withdraw in 1994 as a result of the Oslo Accord. The troops later withdrew from 80 percent of Hebron in January 1997 in accordance with the Protocol Concerning the Redeployment in Hebron, leaving the 120,000 Palestinian residents under Palestinian rule. Yet, Israel retained control of the remaining 20 percent of the city, which included the downtown Palestinian market and the al-Haram al-Ibrahimi, to protect the remaining Jewish settlers.

BENJAMIN JOSEPH
UPDATED BY MICHAEL R. FISCHBACH

HEDAYAT, SADEGH
[1903–1951]

Iran's most famous and controversial writer.

Sadegh Hedayat was born into a prominent Tehran family. Having received a European-style education in Iran, he traveled to Europe in 1926 to begin his university studies. He returned to Tehran in 1930 without a degree and proceeded to write four collections of short stories and a novella, along with other books and essays on Persian culture and history, in a remarkably productive period that lasted until 1942. He became the most famous and controversial writer in Persian literature and the only Iranian writer of fiction with an appreciable audience outside Iran.

Hedayat wrote story after story about alienated, maladjusted protagonists, all with tragic endings. His writings exude nostalgia for an Indo-European Iranian past; they are filled with nationalism, strident anti-Arab sentiments, antipathy toward his fellow countrymen, disgust with the local social and political milieu, and familiarity with contemporary European literature. His masterwork is the novella *Buf-e Kur* (1937; The blind owl); it is Iran's most famous piece of fiction, a much translated, enigmatic, surrealistic narrative of a character out of tune with his times and perhaps deranged.

UPDATED BY ERIC HOOGLUND

HEKMATYAR, GOLBUDDIN
[1940–]

Afghan resistance leader; prime minister of Afghanistan from 1993–1994.

Born in 1940 in the city of Baghlan in northern Afghanistan to a Kharoti Gilzai Pushtun family, Hekmatyar attended college at Kabul University's faculty of engineering in the 1960s and became active in campus politics. In 1970 he joined the Muslim Youth movement and was imprisoned in Kabul (1972–1973) because of his political activities. He was released after the Daud coup (1973) and fled to Pakistan, where he began his antigovernment activities. In Pakistan, he became a leader in the Jami'at-e Islami (1975) but left this group to form his own party, Hezb-e Islami (1978). After gaining the support of Pakistan and other Islamic countries, he turned his party into an effective force in Afghanistan, and by the 1980s Hekmatyar's guerrilla fighters controlled large parts of Afghanistan.

In 1992, after the collapse of the Najibullah government, he returned to Afghanistan to take part in the Islamic government in Kabul. He attempted unsuccessfully to seize control of the government by forming a coalition with Dustom, an Uzbek warlord. The effort was eventually defeated by the troops of Ahmad Shah Masʿud. He later accepted the post of prime minister in the government of Burhanuddin Rabbani (1993), but never fully occupied that position; instead, he joined other leaders in the attempt to form an alternative government and continued to attack Masʿud's troops in Kabul. When the Taliban drove the Rabbani government from Kabul in 1996, Hekmatyar fled to Tehran, where he continued his activities in exile. In 2002, after the Taliban had been driven from Kabul, Hekmatyar was expelled by Iran and was thought to have returned to Jabal Saraj, his former stronghold. He has been strongly anti-American and hostile to the interim government of Hamid Karzai.

GRANT FARR

HELMAND RIVER

Major river system in Afghanistan.

The Helmand River originates in the high mountains of the Hindu Kush range in central Afghanistan and flows to the Hamun-e Helmand (Lake Helmand) in Iran. The longest river in Afghanistan (more than 2,000 miles), the Helmand River drains 40 percent of the Afghan watershed. In the 1940s and 1950s, the Helmand Valley Project was initiated as a cooperative venture between the United States and Afghanistan. A series of dams and canals was constructed to irrigate the arid Helmand valley. Despite problems of salination and poor drainage in some areas, as well as massive corruption, the project produced beneficial effects, since thousands of farmers were relocated from other areas of Afghanistan and given land in this area.

Since 1979, war and drought have had an impact on the Helmand River. The drought that lasted from 1997 through 2002 dramatically reduced stream flow and led to increased desertification in much of the Helmand basin. Twenty years of war diverted attention and manpower, so canals and equipment vital to maintaining the irrigation were not maintained. In addition, with no governmental control, the cultivation of opium poppies replaced many of the traditional crops and has led to warlordism and lawlessness.

HERAT

Province and city in western Afghanistan.

Herat is both a province in northwestern Afghanistan and the name of the provincial capital of that

province. In 2003 the population of the city of Herat was generally held to number about 180,000, although some estimates have the population much higher. Even using the lower figure, Herat is the third largest city in Afghanistan and the major city in the country's western region. Close to the Iranian border, the people in the province are largely Persian speakers, although some Turkomans live in the northern area.

Because of its strategic location, Herat has been a fortified town for several thousand years. Mention of it first appears in the Avesta, the holy book of the Zoroastrians (1500 B.C.E.), and scholars have conjectured that the name *Herat* may be a derivative of Aria, a province in the ancient Persian empire. Alexander the Great built Alexandria Ariorum on the site (330 B.C.E.). During the Afghan war of resistance (1978–1992), the city of Herat saw considerable fighting and suffered significant destruction. When the Najibullah government fell in 1992, Isma^cil Khan, a commander in the Jami^cat-e Islami, took control of the area.

The Taliban captured Herat in 1995, and Ismail Khan and his fighters fled to Iran. The Taliban installed an administration imposing strict Islamic rule. When the Taliban fell in 2001, Isma^cil Khan returned to Herat and was appointed governor of the province by the Hamid Karzai government. Herat now serves as a major smuggling route for foreign goods coming into Afghanistan, and for the export of Afghan opium.

HERUT PARTY

See ISRAEL: POLITICAL PARTIES IN

HERZL, THEODOR

[1860–1904]

Herzl is considered the founder of political Zionism.

A secular Jew, Theodor Herzl earned a doctorate in law in 1884, and worked in the courts of Vienna and Salzburg. After only a year he left the legal profession and began a successful career as a writer and journalist.

As Paris correspondent for the liberal Vienna newspaper *Neue Freie Presse,* Herzl observed and reported on emerging French antisemitism. He was court correspondent at the court-martial of Captain Alfred Dreyfus and witnessed the anti-Jewish disturbances by Parisian mobs during the ceremony expelling Dreyfus from the military. Herzl's interest in Jewish affairs was roused by these firsthand observations of French antisemitism. Herzl articulated his beliefs in his book, *Der Judenstaat* (The Jews' State), which was published in Vienna in 1896.

In order to translate his vision into reality, Herzl had to convince both the international Jewish community and leaders of the great powers. In June 1896, he submitted a proposal to the Grand Vizier whereby the Jews would manage the empire's deteriorating financial affairs. When this proposal was rejected, Herzl requested permission to establish a Jewish state in Palestine that would remain under the suzerainty of the sultan. This too was rejected.

Initial Jewish responses to *Der Judenstaat* were mixed. The Baron Edmond de Rothschild of London rejected Herzl's appeals for support because of his belief that the Jewish masses could not be organized to implement Herzl's scheme of mass resettlement. In 1897, Herzl established news a weekly, *Die Welt,* in which he lobbied for the convening of a congress of Jewish representatives from around the world. At the First Zionist Congress in Basle, Switzerland, on 29 to 31 August 1897, the Zionist program was adopted by the representatives of world Jewry. The Basle Program, as it came to be known, called for the establishment of "a home for the Jewish people in Palestine secured under public law." It proposed the promotion of Jewish settlement in Palestine, the organization of world Jewry by appropriate institutions, the strengthening and fostering of Jewish national sentiment, and preparatory steps toward gaining the consent of the relevant governments. The World Zionist Organization was established as the institutional framework for the

Zionist program, and Herzl served as its president until his death.

HERZOG, CHAIM

[1918–1997]

Israeli statesman and general.

Chaim Herzog was born in Dublin, the son of Izhak Halevi Herzog, who was chief rabbi of Ireland and, from 1936 to 1959, of Palestine and later Israel. Chaim studied in Hebron Yeshiva in Israel (1935), at Wesley College in Dublin, and at Cambridge University in England. In World War II he served with the British army, attaining the rank of major. From 1945 to 1947 he was with the British army of occupation in Germany. During the Arab–Israel War of 1948 he served as an intelligence officer in Jerusalem and was promoted to head the Israel Defense Force (IDF) Intelligence Corps (1948–1950). From 1950 to 1954 he was the defense attaché at the Israeli Embassy in Washington. Upon his return to Israel, he once again commanded the Intelligence Branch (1959–1962). After retiring from the IDF, he practiced law in Tel Aviv. On the eve of the Arab–Israel War of 1967, his reputation was enhanced when, in a series of broadcasts to an anxious Israeli populace, he lifted the national morale. He was the first military governor of Jerusalem and the West Bank after that war.

From 1968 to 1975 he practiced law, wrote books on history, and contributed many articles to publictions in Israel and abroad. From 1975 to 1978 he was Israel's ambassador to the United Nations. He will be remembered as the Israeli who on the podium of the General Assembly tore up UN Resolution 3379 (10 November 1975), which equated Zionism with racism. Elected to the Knesset on Labor's ticket in 1981, two years later he was chosen as Israel's sixth president and served two terms until 1993.

Meron Medzini

HERZOG, IZHAK HALEVI

[1888–1959]

First Ashkenazic chief rabbi of Israel.

Izhak Halevi Herzog was born in Lomza, Poland. His family moved to England, where his father served as a rabbi in Leeds. In addition to his religious learning, the younger Herzog studied at the University of Paris and University of London, where he completed his doctorate. After serving as a congregational rabbi in Belfast and Dublin for nine years, Herzog became chief rabbi of Ireland in 1925. He helped found the religious Zionist Mizrahi movement in England and testified before the Anglo–American Committee of Inquiry and the United Nations Special Committee on Palestine. Following the death of Rabbi Abraham Isaac Hacohen Kook, Herzog was elected Ashkenazic chief rabbi of Palestine in 1936. He continued as Ashkenazic chief rabbi after the establishment of the State of Israel until his death. As Israel's first Ashkenazic chief rabbi, he handled many new and delicate issues in Halakhah, Jewish religious law. He was the father of Chaim Herzog and Yaʿacov David Herzog.

HERZOG, YAʿACOV DAVID

[1921–1972]

Israeli scholar and diplomat.

Born in Dublin, Yaʿacov Herzog was the son of Rabbi Izhak Halevi Herzog, who was chief rabbi of Ireland and, from 1936 to 1959, of Palestine and later Israel. Herzog grew up in a home imbued with learning and tradition. From an early age he excelled in his studies in yeshivot in Jerusalem and fulfilled a number of official missions aiding his father. In 1949 his scholarship and erudition attracted the attention of both Foreign Minister Moshe Sharett and Premier David Ben-Gurion. Herzog joined the Foreign Ministry in 1949 and headed the Jerusalem and Christian Affairs Department, later heading the North America Division. During the 1956 Arab–Israel War he served as Ben-Gurion's principal political adviser. From 1957 to 1960 he was minister plenipotentiary at the Israeli Embassy in Washington and from 1960 to 1963 ambassador to Canada. His reputation was enhanced due to a much-publicized public debate with British scholar Arnold Toynbee, who had argued that Jews were fossils with no right to a national homeland. Herzog's soaring reputation brought an offer to serve as chief rabbi of Great Britain and the Commonwealth, which he declined. From 1965 until his premature death he was director general of the Prime Minister's Office under Premiers Levi Eshkol and Golda Meir. As their key political adviser, he was the first senior Israeli official to meet King Hussein ibn Talal of Jordan in 1963 and establish this diplomatic channel. Many other secret meetings, mainly in London, followed.

MERON MEDZINI

HESKAYL, SASSON

[1860–1932]

Iraqi Jewish statesman and economist.

Sasson Heskayl was born in Baghdad where his father, Hakam Heskayl, was the leading rabbinical authority. After graduating from the Alliance Israélite Universelle, he went to Vienna to study economics and law. His knowledge of foreign languages (French, German, English, Turkish, Persian, Arabic, and Hebrew) enabled him to become chief translator for the *vilayet* of Baghdad upon his return from Europe. In 1908, Heskayl was elected a representative of Baghdad to the Chamber of Deputies in Constantinople (now Istanbul). He spent several years there and was adviser to the ministry of commerce and agriculture. Upon returning to Baghdad in 1920, he was appointed minister of finance in the first government headed by Abd al-Rahman al-Naqib, retaining that post (with a short interruption) for the next five years. In 1925 he was elected to parliament and was chairman of its finance committee. He died in Paris while undergoing medical treatment.

At the 1921 Cairo Conference, which was convened by Winston Churchill, the British colonial secretary, and decided upon the election of Amir Faisal I as king of Iraq, Heskayl was one of two representatives of the government of Iraq, the other one being Jaʿfar al-Askari. Heskayl was knighted in 1923.

During negotiations with the British Petroleum Company, Heskayl demanded that oil revenue be calculated on the basis of gold. His demand was reluctantly accepted. This concession benefited Iraq's treasury during World War II, when the pound sterling plummeted. Some historians maintain that Heskayl's confrontation with the British eventually caused his removal as minister of finance.

SASSON SOMEKH

HESS, MOSES

[1812–1875]

German Zionist writer.

A committed German Jewish Socialist and a contemporary of Karl Marx and Friedrich Engels, Moses Hess spent much of his life in Paris and is sometimes thought of as the first Zionist Communist. He collaborated with Marx and Engels in 1830s and the 1840s, but he rejected their economic determinism and broke with them after 1848. In 1862 Hess wrote *Rome and Jerusalem,* in which he argued that the Jews, like the Italians, should establish their own state. This book later influenced such proponents of Zionism as Theodor Herzl. Hess believed that antisemitism and German nationalism went hand in hand and that with the growth of the latter, a Jewish state was imperative. A firm adherent of peaceful change rather than violent revolution, in *Rome and Jerusalem* Hess extolled the ethics of love, harmony, and cooperation. Once in their own country, Hess claimed, the duty of the Jews was to prepare themselves for a Socialist "Sabbath of History," which would mark the liberation not just of the Jews but of all mankind.

HEZB-E ISLAMI

Afghan Islamist political party.

The Hezb-e Islami, or Party of Islam, formed as an Afghan paramilitary resistance organization in Pakistan in 1977, splitting from the Islamist Jamiʿat-e Islami. The organization evolved into two branches, the larger led by Golbuddin Hekmatyar and the smaller by Maulawi Yunis Khalis. The party follows fundamentalist Islamic principles and is strongly anti-Western and anti-American.

Hezb-e Islami was one the best organized, most successful organizations in the Afghan war of resistance (1978–1992). In 1992 the Hezb-e Islami and its leader Hekmatyar returned to Kabul to participate in the government formed by the resistance groups after the fall of the Najibullah government. Hezb-e Islami soon turned against that government and was driven from Kabul when the Taliban came to power in 1996. Exiled to Iran, the party had little role in the formation in 2002 of the interim government of Hamid Karzai. Remnants of the party still exist in some parts of Afghanistan.

HEZBOLLAHI

See Glossary

HIBBAT ZION

First international Zionist organization to be founded; established in the aftermath of the Russian pogroms of 1881 and 1882.

Hibbat Zion was formed in 1884 by Dr. Leo Pinsker, a Russian physician who practiced in Odessa. Its membership combined European Jewish traditionalists—long committed to support the growing scholarly Jewish community in Palestine—with newly recruited secular nationalists from Eastern Europe. Dr. Pinsker had been appalled by the pogroms and realized that even assimilated Jews could not consider themselves safe in their adopted lands. In his pamphlet *Auto-Emancipation,* Pinsker argued that Jews in the diaspora could not afford to remain passive in the hopes of either divine redemption or some voluntary ending of antisemitism. Instead Jews had to liberate themselves by reconstituting themselves as a nation in a land of their own.

Orthodox rabbis joined Hibbat Zion assuming that secular nationalists could be won back to piety.

These assumptions were translated into policies: Those who wished to settle as farmers in Palestine and who received financial aid from Hibbat Zion had to observe Judaism and its traditions. For secular nationalists, like Dr. Pinsker, this was a troublesome policy. The enthusiasm initially engendered by the creation of Hibbat Zion waned as the uneasy alliance experienced financial crises and internal disputes. Nevertheless, a few colonies were established and aided in Palestine, such as Petah Tikvah (founded in 1878), and the educational aspect of the movement resulted in the Zionist thought and actions of other individuals and groups in Eastern Europe.

DONNA ROBINSON DIVINE

HIGH COMMISSIONERS (PALESTINE)

Heads of the Palestine government during British civilian rule (1 July 1920–14 May 1948).

Except for a short period (December 1917–June 1920) of British military government, Palestine under the British mandate was run by a civilian administration headed by a high commissioner, who reported directly to London. Though entrusted by the League of Nations to Great Britain as a mandate, which entailed the "development of self-governing institutions," Palestine was governed as a British crown colony; that is, full power and authority were vested in the high commissioner. His powers included censorship, deportation, detention without trial, demolition of the homes of suspects, and collective punishment—powers that were used against both Palestinian and Jewish communities.

The high commissioner was assisted by an executive council consisting of a chief secretary, attorney general, and treasurer and by an advisory council consisting, from 1920 to 1922, of British officials and prominent Arab and Jewish appointees; after 1922 its members were all British officials. In 1922 and 1923, the high commissioner proposed to the Arab and Jewish communities the establishment of self-governing institutions for Palestine, in particular a legislative council, but due to the conflicting political goals of the two communities and to Britain's Balfour Declaration, which favored a Jewish national home in Palestine, such institutions were never agreed to or established and the high commissioner continued to exercise sole authority over Palestine until the end of the mandate.

The Palestine government was headed by seven high commissioners, whose names and dates of appointments were as follows:

Sir Herbert Samuel, 1 July 1920

Lord Herbert Plumer, 14 August 1925

Sir John Chancellor, 1 November 1928

Sir Arthur Wauchope, 20 November 1931

Sir Harold MacMichael, March 3, 1938

Viscount John Gort, 31 October 1944

Sir Alan Gordan Cunningham, 21 November 1945

PHILIP MATTAR

HIGH STATE COUNCIL (ALGERIA)

Algerian interim executive, 1992–1994.

When the first round of parliamentary elections on 26 December 1991 made it clear that the Islamist

FIS (Front Islamique du Salut) would gain majority control of the Algerian parliament if the second round of elections were to proceed as scheduled on 16 January 1992, a bitter dispute broke out within the government of President Chadli Bendjedid. The president favored continuing the electoral process whereas the military and other ardent secularists wanted the process terminated. The military forced Chadli to dissolve the sitting parliament, where the speaker—his constitutional successor—sat, and then forced the president himself to resign on 11 January, leaving the Algerian state without an executive branch. Three days later a five-man Haut Comité d'État (High State Council; HCE) was appointed to serve as a collective transitional executive until the end of 1993 when Chadli's term would officially expire. The most powerful member of the council was Defense Minister Khaled Nezzar. Others included Ali Kafi, the influential head of the Moudjahidine organization, Tedjini Haddam, Mohamed Ali Haroun, and Mohamed Boudiaf. Boudiaf, one of the few surviving *chefs historiques* of the War of Independence, was invited to return from twenty-eight years of exile to chair the council.

From the outset the HCE moved aggressively to dismantle the FIS and other Islamist organizations, rounding up and imprisoning many of their leaders and members. The result was escalating violence against security forces and governmental institutions. Boudiaf, an ardent secularist, announced a program for authentic democratization, major economic reform, and thorough investigation of alleged corruption within the ruling establishment. On 29 June 1991, while giving a speech at Annaba, he was assassinated. Many assume the murder was orchestrated by the military because of its unease with Boudiaf's priorities, though some in the establishment blame Islamists offended by Boudiaf's secularism.

Ali Kafi was named chair of the HCE after Boudiaf's assassination. He appointed as prime minister Belaïd Abdessalam who, because of dissent over economic policies, was subsequently replaced by Redha Malek in August 1993. While Kafi in May 1993 announced a forthcoming constitutional referendum to determine what institution was to succeed the HCE when its mandate expired, security and political considerations prohibited such a solution. Ultimately the military, coming together in January 1994 as the High Security Commission, appointed Liamine Zeroual head of state. He had succeeded the ailing Nezzar as defense minister the preceding summer. The Haut Comité d'État was dissolved.

HIJAB

The practice of veiling, covering either the entire face and body or only the hair and neck.

Islam—a religion of balance, moderation, and modesty—places a strong emphasis on the maintenance of proper boundaries, whether social or moral. The practice of *hijab* among Muslim women is grounded in religious doctrine, yet the Qurʾan does not require it. Support for veiling is found in the *hadith* of Sahih Bukhari: "My Lord agreed with me (Umar) in three things. . . . (2) And as regards the veiling of women, I said 'O Allah's Apostle! I wish you ordered your wives to cover themselves from men because good and bad ones talk to them.' So the verse of the veiling of the women was revealed" (Bukhari, volume 1, book 8, *sunnah* 395).

Display of the self in public, for men as well as women, is a subject of considerable concern in Islamic teachings and practices. The care, treatment, and presentation of the human body are influenced by Qurʾanic teachings, as well as by *hadith,* and codified in the *shariʿa.* In examining Islamic teachings about bodily presentation, the issue of boundaries (*hudud,* in Arabic) is of primary importance, particularly gender boundaries and spatial boundaries, which usually overlap in daily practice. Islam draws a clear distinction between the public and the private. Men's and women's roles in these domains are complementary, not equal. Since Islam views the family as central to and crucial for the survival of society and the continuation of proper human life, boundaries that specify men's and women's roles, and boundaries that mark off the private realm of familial space from wider public spaces are elabo-

rated and crucial for the preservation of an Islamic social order. Concerns with literal and figurative boundaries are evident in everyday practices, including dress, bodily ornamentation, architecture, and contact between men and women.

The practice of veiling is a visible recognition of the maintenance of proper boundaries. It is a way of keeping proper distance and ensuring respect and moral behavior between men and women in public space. In private, women do not veil, and in public women may well be wearing attractive clothing and elaborate jewelry under their *abayas* or *chadors.* The Qurʾan and *hadith* stipulate that a woman should not display her personal adornments or physical charms to anyone but her husband (Sura 24:31 and Sura 33:59). There are, however, a wide variety of views on how much of a woman's body should be covered from public view. Islam is not an ascetic religion preaching the negation of the flesh. The veils and headscarves worn by observant Muslim women in public are often used to aesthetic effect to accentuate the eyes or the curve of the face, emphasizing, though modestly, a woman's best features. Scarves and veils are often embroidered and edged with subtle lace designs for added aesthetic impact within the bounds of Islamic propriety.

Veiling as a social practice predates Islam. Depending on the wider social and political contexts, *hijab*'s meanings, for Muslims as well as non-Muslims, have changed, sometimes dramatically. In the nineteenth century, upper-class urban women were more likely to veil than were working-class or peasant women. By the 1960s, the reverse was the case. The veil has been a charged political, cultural, and moral issue, as well as a site of misunderstanding and conflict between Muslims and non-Muslims, or even between observant and nonobservant Muslims. Turkey, an overwhelmingly Muslim country, has witnessed some of the fiercest debates on the meaning of *hijab*; veiling is perceived as a threat to the secular political order established by Atatürk in the 1920s.
