In the early twentieth century, many leading Arab women activists and intellectuals displayed their modernity by removing the veil, as did Huda al-Shaʿrawi upon her return to Egypt from a women's conference in Europe. Yet the veil is also a potent symbol of resistance to the West and its political and economic agenda in the Middle East and North Africa. From the late 1970s until today, many young women throughout the Arab and Islamic world have voluntarily adopted *hijab* and conservative dress in general in order to make a political as much as a religious statement of identity and ideological commitment. Many women assert that the veil guarantees them freedom, dignity, and greater scope for movement in a world that sexualizes women. According to this argument, the *hijab* deflects and neutralizes the objectifying male gaze, enabling women to emerge as autonomous subjects in the public realm. In Iran, the *hijab* became obligatory for all adolescent girls and women shortly after the Islamic revolution (1979). The changing balance of forces between conservatives and reformists in Iran is often read in the degree to which women comply with *hijab* and how much hair they reveal.

HIJAZ

An arid, mountainous region in western Saudi Arabia, and site of Mecca and Medina.

The Hijaz region is the cradle of Islam and home to the faith's two Holy Cities. Hijaz reached the peak of its political importance after the rise of Islam, when Mecca was the seat of the first four caliphs (rulers) of the Muslim community. Since that time, the ebb and flow of the annual Muslim pilgrimage *(hajj)* has dictated the region's economic viability. Lack of water and arable land severely limited human settlement before the oil era. Dates were cultivated in several oases, such as al-Ula and Tayma, and other crops were grown where conditions permitted, most notably in the elevated regions around al-Ta'if. Nomadism was also important, but declined after the creation of the Saudi state. Fishing and trade permitted the growth of settlement on the Red Sea coast, with the port city of Jidda serving as way station for pilgrims to the Holy Cities as well as for commercial traffic. Hijaz regained a degree of political prominence after it became an Ottoman province in 1517, ruled by sharifs, descendents of the prophet Muhammad. After World War I the region attained brief independence, but was conquered by the forces of the Al Saʿud in 1926 and subsequently incorporated into Saudi Arabia.

UPDATED BY ANTHONY B. TOTH

HIJAZ RAILROAD

Railroad connecting Damascus and Medina.

Built during the reign of Sultan Abdülhamit II, the Hijaz Railroad is 811 miles (1,308 km) long. It is so named because Medina, its eastern terminus, is located in a western region of the Arabian Peninsula called the Hijaz. Abdülhamit built the railroad to facilitate the movement of the Ottoman army, thus allowing for closer Ottoman control of southern Syria and the Hijaz. In addition, easier movement of religious pilgrims to Mecca would buttress his claim to be caliph of the Muslims. Additional branches were built connecting the main line to

The Hijaz Railway was built in the early 1900s to transport pilgrims from Damascus to Medina and Mecca, a trip that had previously been undertaken by camel. The railway was heavily damaged during World War I and, despite sporadic attempts at revival, remains abandoned. © JAMES SPARSHATT/CORBIS.

Haifa, Basra, Lydda, and Ajwa, bringing total trackage to 1,023 miles (1,650 km) in 1918.

The railroad, which cost 4 million Turkish liras (equivalent to about 15 percent of the Ottoman budget), was financed without foreign loans. Arguing that the railroad was essential to the protection of Mecca and Medina, and that it should be financed and operated by Muslims, the Ottoman government raised between one-third and one-fourth of the total cost through contributions from its subjects and donations from Muslims around the world. The remainder was financed by the state.

As the Ottomans began to design and construct the railroad in 1900, they wanted to build the railroad without foreign assistance. Yet because all previous railroads and public utilities had been built and managed by foreigners, their experience was limited. Thus, the goals of speeding construction and limiting costs dictated the use of foreign assistance. Ottoman military officers, led by Mehmet Ali Paşa, supervised the initial engineering and construction, assisted by an Italian engineer, La Bella. But incompetent surveying, maltreatment of workers, and financial problems limited progress in the first six months of construction to the preparation of 12.5 miles (20 km) of earthwork for tracks. As pressure from Constantinople (now Istanbul) to

speed up construction increased, Mehmet Ali Paşa was removed and court-martialed.

His successor, Kazim Paşa, de facto ceded Ottoman control over the technical aspects of construction to a German engineer, Heinrich Meissner. Meissner supplemented his largely foreign staff with Ottoman engineers trained in Europe. Ottoman soldiers pressed into service provided most of the labor force, though foreign workmen also were employed. The railroad reached Medina in August 1908. Over the next six years, facilities including storehouses, switching yards, and repair facilities were constructed.

Passenger service for the pilgrimage began in 1908. In 1914, operations included three weekly passenger trains from Damascus to Medina, and seven weekly trips from Damascus to Haifa. The run to Medina was scheduled to take fifty-six hours, although three days was average; the shorter run to Haifa was scheduled for eleven and a half hours.

During World War I, the Hijaz Railroad was central to the strategy of both the Ottoman army and the Arab army of Sharif Husayn ibn Ali that launched the Arab Revolt in 1916. For the Ottomans, a planned invasion of Egypt, defense of the Hijaz, and defense of southern Syria depended on control and extension of the railroad. Unable to confront 25,000 Ottoman troops directly, the Arab army directed raids against the railroad, disrupting service and wresting control of sections from the Ottomans. On 1 October 1918 the Ottoman Hijaz Railroad administration was replaced by an Arab general directorate.

HIKMA UNIVERSITY, AL-

University founded by American Jesuits in Iraq in 1956.

Al-Hikma University was built in Zaʿfraniyya, on the southern edge of Baghdad, by American Jesuits. They have been engaged in education in that city since 1932, when they were invited by the Christian hierarchy to open a secondary school—Baghdad College.

Al-Hikma offered degrees in business administration, civil engineering, and literature; instruction was mainly in English. The student body was coeducational, with 95 percent Iraqis; the faculty was about 50 percent Iraqi. Enrollment grew slowly and was approaching 1,000 when the Baʿthist government seized the university and expelled the Jesuits in 1968. The students enrolled at the time of nationalization continued their studies until graduation, then the university ceased to exist. The site was transformed into a technical institute.

In 1969, the Jesuits were also expelled from Baghdad College, which continued in existence as a secondary school attached to the Iraqi ministry of education.

John J. Donohue

HILAL, AL-

Monthly magazine founded in 1892 in Cairo by Jurji Zaydan.

Probably the oldest magazine in Arabic, until World War I *al-Hilal* was the most important journalistic forum of the Arab Nahda (Renaissance) in all its aspects. Later it became a platform for progressive Egyptian literature; after nationalization under Gamal Abdel Nasser, it adapted, increasingly, the *Reader's Digest* model in format and content.

THOMAS PHILIPP

HILLEL, SHLOMO

[1923–]

Israeli politician.

Born in Baghdad, Shlomo Hillel immigrated to Palestine in 1930 and graduated from the prestigious Herzliyya High School in Tel Aviv. A member of the Haganah underground from his teens, he was a founder of Kibbutz Maʿagan Mikhaʾel in 1945 and managed the Ayalon Institute, a clandestine Haganah munitions factory. In 1947 he was recruited by Mossad le-Aliyah Bet (the clandestine Haganah immigration arm) and brought a planeload of Iraqi Jews to Palestine. From 1948 to 1951 he ran immigration operations in Lebanon, Syria, Egypt, and Iran and masterminded Operation Ezra and Nehemia, which airlifted 124,000 Iraqi Jews to Israel in 1950 and 1951. His best-selling book *Operation Babylon,* which appeared in 1987, recounts his experiences in immigration operations.

Elected to the Knesset on the Labor Party ticket in 1951, Hillel resigned in 1959 to join the foreign service. He was Israel's first ambassador to the Ivory Coast and Guinea. Later he headed the Africa Department of the Foreign Ministry and until 1967 served on the Israel Delegation to the United Nations. From 1967 to 1969 he was assistant director general of the Foreign Ministry, dealing with contacts with Palestinian Arab leadership in the occupied territories. Hillel was minister of police in the Golda Meir cabinet (1969–1974) and in the first Yitzhak Rabin cabinet (1974–1977). He also served briefly as minister of the interior. Re-elected to the Knesset in 1977, he served as its speaker from 1984 to 1988.

From 1989 to 1998 Hillel served as world chairman of Keren ha-Yesod–United Israel Appeal, responsible for fund-raising worldwide, with the exception of the United States. He was awarded the Israel prize in 1998 for lifetime achievement. He heads the Shazar Center for the Study of History and the Association for the Preservation of Historic Sites in Israel.

MERON MEDZINI

HILMI, AHMAD

[1882–1963]

Palestinian politician during British mandate.

Born Ahmad Hilmi Abd al-Baqi in Palestine, Hilmi was active in banking and used his financial leverage for nationalist ends, founding the Arab National Bank in 1930 and later purchasing the newspaper *Filastin.* He used wartime profits from deposits held in the Arab National Bank to invest in Palestine's industry and commerce. Ownership of *Filastin* provided him with a platform from which to air his anti-Zionist, Palestinian nationalist views.

Throughout his life, Hilmi was associated with the Istiqlal (Independence) Party. This strongly nationalist party was ideologically rooted in Arab nationalism of the World War I era. In April 1936, the general strike in Palestine led to the formation of the Arab Higher Committee (AHC), of which Hilmi became an independent member. In October 1938, the AHC was outlawed, and Hilmi was arrested and deported to the Seychelles. In 1939, he and Awni Abd al-Hadi urged the AHC to accept the British white paper, which signaled a change in British policy by restricting the levels of Jewish immigration to Palestine. This display of moderation caused the mandate authorities to allow Hilmi to return to Palestine.

In July 1948, the Administrative Council for Palestine was founded in Gaza under the auspices of the Arab League. It was replaced by the All-Palestine government claiming authority over the newly founded state of Israel, the Gaza Strip, and the Jordanian-held West Bank. Hilmi was appointed to head the all-Palestine government, which included Jamal al-Husayni as foreign minister. Although this government was recognized by all the Arab states except Jordan, Hilmi had no authority, and the government was weak and powerless. It was officially laid to rest with Hilmi's death.

LAWRENCE TAL

HILU, CHARLES

[1911–2001]

President of Lebanon, 1964–1969.

Charles Hilu was born in Beirut to a Maronite (Christian) family. He received a French education, earning law degrees from the Jesuit St. Joseph University and the French School of Law in Beirut. He founded the newspaper *L'eclair du nord* in Aleppo (1932) and *Le jour* in Beirut (1934). In the 1930s, Hilu was sympathetic to the ideology of the Phalange party and was one of its founding members. He later realized that despite his reluctance to cooperate with the Arab world, the narrow sectarian base of the party would thwart his political ambitions. He later presented himself as a moderate Maronite politician who did not oppose good ties with the Arab world.

Hilu was Lebanese minister to the Vatican in 1947 and headed Catholic Action of Lebanon. He held several ministerial positions in the 1950s and 1960s, and he was serving as minister of education in 1964 when he was elected president. His election was made possible because of his close association with Chehabism; when Fuʾad Chehab could not be persuaded to run for another term, Hilu emerged as a candidate who could carry forward the legacy of Chehabism. Chehab later said that his selection of Hilu was one of his biggest mistakes.

Hilu's administration is remembered for allowing the military-intelligence apparatus to control the affairs of the state. Some army officers in the military intelligence bureau had more power than some elected representatives. Hilu is blamed for the increasingly dangerous situation in Lebanon caused by the unwillingness of the state to respond to Israel's attacks and to Palestine Liberation Organization (PLO) activities. Many Lebanese, particularly those living in south Lebanon, thought that he forfeited the sovereignty of southern Lebanese territory. To protect himself against Maronite critics, he solidified his alliance with such conservative Maronite organizations as the Phalange party and the National Liberal Party of Camille Chamoun.

The worst crisis of Hilu's administration occurred in 1969, when Lebanese army troops fought with the PLO and its Lebanese allies (in the wake of attacks on them by Israel within Lebanon). Hilu wanted to use heavy-handed methods in dealing with the PLO, but his Sunni prime minister, Rashid Karame, refused to deal with the PLO, which at the time was the best hope for the restoration of Palestinian rights after the Arabs' humiliating defeat in the Arab–Israel War of 1967. The failures of Hilu's administration discredited Chehabism, thereby causing the Chehabi candidate, Ilyas Sarkis, to lose the presidential election of 1970.

After his retirement, Hilu lived a quiet life. He continued to make political statements but refrained from taking provocative or extremist stands. He was respected within the Maronite community.

ASʿAD ABUKHALIL

HILU, PIERRE

[1928–2003]

Maronite politician in Lebanon.

Pierre Hilu, a wealthy industrialist born in Beirut, was a deputy representing the district of Alay. He was first elected in 1972, and became a cabinet minister for the first time in 1973. He was mentioned as a possible presidential candidate in 1988, but he refused to succeed Amin Jumayyil without Muslim support. Hilu was still considered a potential pres-

idential candidate, especially because his ties with Syria were good over the years, although he was not seen as a pawn. He was one of the few credible Maronite deputies to seek reelection in 1992 when many right-wing Christians boycotted the election. He was also again elected in the election in 2000, and had served as head of the Maronite League. In 2003, Hilu suffered a heart attack while participating in a television talk show, and was succeeded in his parliamentary seat by his eldest son Henri in the same year.

AS'AD ABUKHALIL

HINDU KUSH MOUNTAINS

Main mountain chain in Afghanistan, extending to China; part of the great chain of central Asian mountains.

Beginning west of Kabul, the capital of Afghanistan, the Hindu Kush Mountains stretch some 600 miles (965 km) east across the northern tip of Pakistan and Jammu and Kashmir to the Pamir and Karakoram Mountains on the border of China. The highest peak is Tirich Mir at 25,260 feet (7,700 m). Both the Indus and Amu Darya Rivers spring from the Hindu Kush. It is the main mountain chain in Afghanistan, and during the nineteenth century, it marked the limits of British expansion north of India and the unofficial and often-contested boundary between Russia and Britain in their struggle for hegemony in Central Asia. After World War II, the Hindu Kush divided American from Russian influence in Afghanistan, with the bulk of U.S. aid flowing south and the bulk of Russian aid going to the north. After the 1979 Soviet intervention and invasion of Afghanistan, the Hindu Kush became one of the main refuges of Afghan guerrillas in their struggle to force the Soviets out of the country. The mountains were a major battle area during the United States's 2001 campaign to oust the Taliban government and break the al-Qaʿida terrorist network.

ZACHARY KARABELL

HINNAWI, SAMI AL-

[1898–1950]

A Syrian colonel who, on 14 August 1949, overthrew his predecessor, Husni al-Zaʿim, as military dictator of Syria and had him shot.

Sami al-Hinnawi's coup came barely four and a half months after Zaʿim had staged his military coup, the first in Syria's modern history. Hinnawi collaborated with the People's Party, which was disposed toward Iraq. He invited Hashim al-Atasi to form a government. A constituent assembly to draw a new constitution was elected, women voted for the first time, and all the political parties were legalized, with the exception of the Communist Party and the rightist Socialist Cooperative Party. Atasi then became president of the republic. Discussions with Iraqi officials to bring about a union between Syria and royalist Iraq were then in full sway. But Syrian republicanists and the army were not happy with the proposed union. On 19 December 1949, Colonel Adib Shishakli overthrew Hinnawi, whom he charged with treason and conspiracy with a foreign power, a reference to the proposed union with Iraq.

ABDUL-KARIM RAFEQ

HIRAWI, ILYAS AL-

[1926–]

President of Lebanon, 1989–1998.

Born in Hawsh al-Umara near Zahla, al-Hirawi was born to a politically active Maronite family and attended Saint Joseph University. He was in charge of the family's agricultural estates while his broth-

ers served in government. Ilyas was elected to parliament in 1972, and he established a reputation of moderation and blunt talk. He was not part of the right-wing Maronite militia establishment during the war; he was a founding member of the Independent Maronite Bloc in the Lebanese parliament, which tried to promote moderation but became famous for comprising presidential candidates among its members. Al-Hirawi maintained good relations with the Syrian government and with the right-wing Phalange militia of Bashir Jumayyil during the war, which allowed him to play a mediating role between the two sides, especially during the Zahla crisis of 1981. He served as minister in the administration of Ilyas Sarkis (1976–1982) and was elected president in 1989, after the assassination of president-elect René Muʿawwad. Al-Hirawi's administration witnessed the rise of billionaire prime minister Rafiq Hariri, who first became prime minister in 1992. His relationship with Hariri was close, although al-Hirawi and his sons were accused of corruption during his administration. Al-Hirawi established the juridically based "distinctive relations" with the Syrian government, and he was one of the closest allies of Syria in Lebanon. After leaving office, al-Hirawi published his memoirs, in which he attacked most of his political rivals and former political allies. During his administration, he promoted civil marriage, but clerics on all sides objected. Al-Hirawi retired from politics after leaving the presidency.

HISTADRUT

Israeli federation of labor.

The Histadrut—full name in Hebrew, ha-Histadrut ha-Kelalit shel ha-Oevdim ha-Ivriʾim be-Eretz-Yisrael (The General Organization of the Jewish Workers in Eretz-Yisrael)—was founded in 1920, with a membership of 5,000. In 1930 it had 28,000 members; in 1940, 112,000; in 1950, 352,000; in 1960, 689,000; in 1970, 1,038,000; and in 1980, 1,417,000. By 1992 it had approximately 1.6 million members.

Politician Golda Meir (1898–1978) (center standing) speaks at the Histradrut headquarters. Founded in 1920 at the Haifa Technion, the Histradrut was started as a trade union to organize economic activities of Jewish workers. © Photograph by Zoltan Kluger. Government Press Office (GPO) of Israel. Reproduced by permission.

The Histadrut, which has often been called a state within the state, acts as an umbrella organization for trade unions. It has also played an important role in the development of agriculture, wholesale and retail marketing of food and other products, rural settlement, industry, construction and housing, industry, banking, insurance, transportation, water, health, and social services.

Following the creation of the State of Israel in 1948, the Histadrut handed some of its educational functions as well as its employment exchanges to the government. In recent years, it has sold a number of commercial concerns to the private sector.

In the 1920s, under the British mandate, the Histadrut's role was to help develop the Jewish economy in Palestine. To this end, in 1921 it set up Bank Hapoalim (The Workers' Bank), and in 1923, Hevrat Ovdim (The Workers' Company or Cooperative Federation) was founded. This was to be-

come a holding company for most of the Histadrut's wide range of economic enterprises.

By 1927, when the Solel Boneh construction and industrial group first went bankrupt, the importance of reinvesting profits and maintaining an independent capital base was understood. From the late 1920s onward, economic enterprises were directed toward capital accumulation so as to avoid reliance on outside sources of finance. Solel Boneh, as well as being the largest construction company in the pre-independence period, had investments in industry. Its subsidiary, Koor, owned the Phoenicia glass works, the Vulcan foundry, and other industrial companies. The policy of financial independence was successful until the 1980s, when a number of Histadrut bodies got into serious financial difficulties.

By 1930 the retail cooperative, Hamashbir; the insurance company, Hasneh; and other groups were incorporated into Hevrat Ovdim. The Histadrut had become both a large employer as well as a trade union body. The basic structure has remained unchanged since the 1920s, but attitudes toward profits and dismissing workers have become more pragmatic and less socialist since the late 1980s.

Although about three-quarters of all wage earners in Israel are members of the Histadrut, this includes many who do no more than pay dues to its health fund, Kupat Holim Kelalit, the largest fund in the country. A share of the membership fee is passed on to the Histadrut by the health fund. Members of kibbutzim and other cooperatives are also automatically enrolled, as are those working in Histadrut enterprises. Although far fewer are, therefore, voluntary members, about 85 percent of the labor force is covered by collective labor agreements negotiated by the Histadrut. About forty trade unions, representing a wide range of blue- and white-collar workers in the public and private sectors, are affiliated. While the Histadrut is highly centralized, professional workers' unions have a high degree of autonomy.

Elections are held every four years on a political party base, and the Labor Party and its allies have had a majority since the Histadrut's foundation. Each party, in proportion to its share of the votes cast, nominates delegates to a forum that elects the central committee. The latter consists of members of the ruling coalition alone. Workers' committees at plant level are elected annually or biannually.

The Histadrut and its affiliated organizations (such as the kibbutzim) in 1991 were responsible for about 16 percent of industrial output, and 14 percent of industrial investment in Israel. Exports of these industries came to US$1.4 billion.

In that year, it was also responsible for 80 percent of agricultural output and exports, about 38 percent of the assets of the banking system (through Bank Hapoalim), 9 percent of insurance companies' assets (through Hasneh), the construction of 8 percent of homes being built, as well as large shares of retailing and wholesaling through its producer cooperatives and marketing organizations. It operated most of the country's buses through two large cooperatives and, both directly and through the kibbutzim, had a range of hotels and guest houses. About 70 percent of the population were members of Kupat Holim Kelalit, which provides medical insurance and services through clinics and hospitals. The Histadrut owns the *Davar* daily newspaper and a publishing company and has interests in the shipping and airline industries. Finally through Bank Hapoalim, it has large shareholdings in joint ventures with private sector industry.

During the 1980s, many of the Histadrut's companies and affiliates ran into serious financial difficulties. These included Koor, the kibbutzim, Kupat Holim Kelalit, and Bank Hapoalim. In all these cases, the government provided financial assistance and forced management changes. It remains to be seen if the Histadrut can regain control of these groups by buying shares back from the government or by other means.

The Histadrut's position in Israel has weakened both politically and economically. It has been weakened by grassroots alienation, by the dominance of right-wing parties in the Knesset between 1977 and 1992, and by its own lack of a clear socioeconomic message. It has faced serious financial difficulties in many of its economic enterprises and has had to be bailed out by Likud and Labor governments. The Labor Party has distanced itself from the bureaucracy of the Histadrut, which it considers an electoral hindrance. This would have been inconceivable in the first half of the twentieth century.

HISTORIOGRAPHY

Trends in historical writing about the Middle East.

Academic history-writing about the Middle East took shape during the first half of the twentieth century. European-style universities were founded in the early 1900s in Istanbul and Cairo, and state education, museums, historical associations, and journals expanded between the wars, alongside state-building. History-writing became a profession. Long-established forms—dynastic chronicles, political biographies, and historical topographies—were slowly displaced. History (ta'rikh) took on its ambivalent, modern meaning, referring not just to a form of knowledge, but also to the actual course of past events. In Europe, scholars working in Oriental Studies and trained in language, philology, and the study of Islam increasingly produced work recognizable as modern historiography. The amateur histories of colonial officials and travelers became much-trawled primary source material to complement chronicles and literary texts.

Civilization and Nationalism

Before 1945, historians from Europe and the Middle East formulated the past in terms of the flowering of an Islamic civilization that achieved its zenith at some point during the Middle Ages and subsequently entered a lengthy decline. The last centuries of Ottoman rule in particular were depicted as years of decay and oppression. Exemplary historians in this period were the prolific and popular Ottoman-Syrian Christian Jurji Zaydan (1861–1914), who wrote *Ta'rikh al-Tamaddun al-Islami* (1902–1906; History of Islamic civilization), and the British Orientalists Hamilton Gibb and Harold Bowen, who did more than anyone else in English to set afoot the historical study of the modern Middle East, particularly in *Islamic Society and the West* (1950). Such work measured civilization by great men and their battles, politics, and high cultural production. Nationalist historians such as the Egyptian Abd al-Rahman al-Rafi'i (1889–1966) and Palestinian George Antonius, author of *The Arab Awakening* (1938), chronicled the recent past in terms of the triumphant rise of the new nation, led by a new elite, who disseminated enlightened ideas in a backward land, and thus drew their fellow citizens toward freedom.

Modernization

With the beginning of the Cold War, national independence in the region, and the emergence of Area Studies, academics trained as historians started to multiply in and outside the region. They added to the older sources colonial reports, state correspondence and statistics, and the tracts of modernizing elites. Borrowing from conventional currents in Europe, the field divided into political, intellectual, economic, and social history. Bernard Lewis, Stanford Shaw, and others wrote political histories of the Ottoman Empire, European colonial rule, and the high politics of nationalism. Albert Hourani wrote a seminal work of intellectual history, *Arabic Thought in the Liberal Age,* 1798–1939 (1962). Charles Issawi did most to chart what he saw as the decline and rise of Middle Eastern economies. Influenced by the Annales School, Ömer Lutfi Barkan and Halil Inalcik pioneered Ottoman socioeconomic history, which was taken up also at Cairo University by students of Muhammad Anis. Gabriel Baer studied guilds, town and country, and André Raymond transformed historians' understanding of socioeconomic change in eighteenth-century Egypt.

The achievements of these decades were very real, but assumptions left over from Oriental Studies, entrenched by bourgeois-nationalism and introduced by modernization theory, were pervasive. The object of study was often Islamic society, which

was still often assumed to be in long-term decay. Many judged the region according to a linear and idealized notion of European modernization, seeing the Middle East as laggard mainly as a result of local failings that were often linked to psychology. Europe's impact, typically marked off as commencing with Napoléon Bonaparte's brief occupation of Egypt (1798–1801), still signified the beginnings of progress in the region.

The drastically limited success of state-led projects of modernization and development, underlined by the Arab defeat in the Arab–Israel War of 1967 and the rise of more radical currents in Third World socialism and nationalism, gave increasing currency—inside and outside the region—to more critical scholarship. Rigid boundaries dividing politics, economics, and society started to blur, and history drew increasingly on other disciplines.

Marxism

Particularly influential during the 1970s was the broad current of Marxism: dependencia, world systems theory, and analysis based on social class. These ideas gave rise to numerous groundbreaking studies. Samir Amin, Resat Kasaba, and Roger Owen situated the Ottoman Empire and the Middle East within the world economy. Hanna Batatu's monumental study, *The Old Social Classes and the Revolutionary Movements of Iraq,* remains without peer. Ervand Abrahamian's seminal history of twentieth-century Iran, *Iran Between Two Revolutions,* owed much to notions of uneven development and social class. Anwar Abd al-Malik, Mahmud Hussein, and Eric Davis understood Egyptian history in terms of different fractions within the bourgeoisie in interaction with the state. Amin Izz al-Din, Ra'uf Abbas, Joel Beinin, and Zachary Lockman chronicled the rise of the working class in Egypt from the late nineteenth century until the 1960s.

Instead of depicting an Islamic society in decline, these scholars detailed the incorporation of a part of the periphery into a world economy with its core in Europe. Instead of seeing backwardness as the result of local cultural and political failings, backwardness was seen as the systemic result of a process of world capitalist development. Instead of viewing transformation as a process of elite-driven, ideas-based modernization that remained laggard, society and change were freshly understood as internally structured by state and class.

Social History

Critiques of Marxist determinism, not least from Edward Said, who depicted Karl Marx as an Orientalist in *Orientalism* (1978), formed the background to increased interest in more grounded social history, which took a critical distance from grand metanarratives of modernity. Social history particularly benefited from increasingly accessible national archives, especially the use of Islamic court records. Kenneth Cuno, Beshara Doumani, Suraiya Faroqhi, André Raymond, and others transformed understandings of the period 1600 to 1800, showing dynamism, market forms, urban change, social stratification, and changing patterns of social reproduction instead of backwardness and decline. Their work, along with that of Juan Cole, Zachary Lockman, Donald Quataert, and others has greatly diversified understandings of socioeconomic change and popular protest in the nineteenth and twentieth centuries: The deindustrialization thesis has been challenged; the end of the guilds appears to be far more complicated than it did; and the rise of the working class is no longer seen econometrically, and workers outside the factory, from artisans to migrants, are also seen as playing active roles in popular politics and world economic incorporation. F. Robert Hunter, Eugene Rogan, and others have given a far more embedded sense of state formation in Egypt and Jordan, respectively. Edmund Burke's *Struggle and Survival in the Middle East* (1993) made groundbreaking use of popular social biography.

Such work has opened the door to new forms of cultural history, in which culture is no longer an elite preserve, and constitutes (rather than simply reflects) the social process. Exemplary here are Abbas Amanat on the beginnings of the Baha'i movement in Iran, Ussama Makdisi on the modernity of sectarianism in Lebanon, and Ella Shohat on Israeli cinema. Work by historically minded anthropologists such as Michael Gilsenan, who studies violence and narrative in rural Lebanon, is highly suggestive for new directions.

Nationalism

Another important body of work has challenged the verities of idealist, elite-centered, and teleological

nationalism. Rashid Khalidi, C. Ernest Dawn, James Gelvin, and others have given more heterogeneous and less emancipatory histories of the rise of Arab and regional nationalism, and have pointed to the agency of previously ignored social groups. Avi Shlaim, Ilan Pappé, Benny Morris, and others, working with newly released archival material, have presented a dramatic and far-reaching challenge to the conventional Zionist account of the events of 1948.

Women and Gender

Feminist historiographical influence, and growing criticism of male-centered history, gave impetus from the 1970s onward to research on women and gender. Leila Ahmed, Lila Abu-Lughod, Judith Tucker, and others have paid systematic attention to the place of women in society and to constructions of gender, and they write the social, cultural, and political histories of women. Patriarchy, seclusion, and veiling are no longer understood as simply vestigial backwardness or as the expression of some essential Islamic essence, but as cultural practices grounded in processes of political and cultural contestation. The hypocrisy of colonial feminism has been exposed, as well as the pitfalls of simple nationalist assertion as an unwitting defense of patriarchy. After 1990 scholars successfully made the social construction of gender—masculinity as well as femininity—an integral part of larger accounts of social change. Elizabeth Thompson's work on Mandate Syria, for example, has argued that forms of colonial citizenship were forged in part from an interwar crisis of paternity, which had much to do with changing gender practices and norms.

Foucault

A number of historians have been inspired by the work of the French philosopher Michel Foucault, whose oeuvre suggests a radically critical genealogy of modernity. Timothy Mitchell's groundbreaking work sees Egypt's nineteenth-century history in terms of the inscription of modern disciplinary practices, which gave rise to and were ordered by a new metaphysics of modern representation—the "world-as-exhibition." Khaled Fahmy on nineteenth-century Egyptian state-building and Joseph Massad on Jordanian national identity have undertaken rich archival research to pursue such insights in productive ways.

Overall, the historiography of the region has become less vulnerable to the charge of being outmoded. It presents a diversity of approaches, a more developed theoretical awareness than before, and an increasingly rich resource for those trying to understand the past, present, and future of the region.

HIZBULLAH

Shiʿite political party in Lebanon.

Hizbullah (also known as Party of God) was established in 1982 at the initiative of a group of Shiʿite clerics and former AMAL movement supporters, some of whom were adherents of Shaykh Husayn Fadlallah. By 1987 the party was the second most important Shiʿite organization in Lebanon, after AMAL. It was a reaction to the perceived moderation of the AMAL movement under the leadership of Nabi Berri, and partly a reaction to the Israeli invasion of Lebanon in 1982. It has consistently followed the political and theological lines of the government of Iran and called

Iranian president Mohammad Khatami (left) with Secretary General Shaykh Hasan Nasrallah of Hizbullah. Born in Beirut, Nasrallah joined Hizbullah shortly after its conception in 1982 and was chosen to be its secretary general by the Consultative Council in 1992 after Abbas al-Musawi was killed by Israeli troops. © AFP/Corbis. Reproduced by permission.

(with various degrees of explicitness) for the creation of an Islamic republic in Lebanon. In pursuit of this goal, Hizbullah has coordinated its activities closely with the government of Iran and its representatives in the region. For years the party rejected any compromise with the Christians of Lebanon, Israel, and the United States. This hard-line approach appealed to many Shiʿa, who abandoned the AMAL movement to join the Party of God. Those who left AMAL tended to be young, radical, and poor.

Hizbullah is headed by the Consultative Council (Majles al-Shura), which consists of the highest-ranking party officials, some of whom are clerics. Its members' responsibilities include financial, military, judicial, social, and political affairs. The party's operations were geographically organized, with branches in the Biqa Valley, the South, and the southern suburbs of Beirut. In the late 1980s the Politburo was created to handle day-to-day operations.

Hizbullah gained international attention in 1983 when press reports linked it to attacks against U.S., French, and Israeli targets in Lebanon, and to the abduction of Western hostages in Lebanon. The party continues to deny responsibility for some of those acts. Syria let Hizbullah keep its arms because it considered the party to be pursuing a legitimate struggle against Israel's occupation of South Lebanon. The party's armed opposition to Israel's presence resulted in significant confrontations, and Israel's forces killed the party's leader, Abbas al-Musawi, in 1992. In the 1992 election, Hizbullah won eight seats in the parliament; it now participates in the legitimate political arena after years of underground existence. The party has been trying to change its image since 1992 and has entered into dialogue with many of its former enemies, both leftists and Christians. It is now headed by Shaykh Hasan Nasrallah, who has become one of the most popular leaders in Lebanon and in the larger Arab world. The party's standing was dramatically boosted after the withdrawal of Israeli troops from most of South Lebanon in 2000, for the party had led the resistance movement against the Israeli occupation. The party has been identified as "the A-team of terrorism" by the deputy secretary of state in the administration of U.S. president George W. Bush. The party insists that although it supports armed struggle against Israeli occupation, it opposes the terrorism of Osama bin Ladin.

HOBEIKA, ELIE

[1956–2002]

A leader of the Lebanese Forces.

Elie Hobeika (also Hubayqa) was a close aide to Bashir Jumayyil, leader of the Maronite Catholic-dominated militias the Lebanese Forces. Hobeika became prominent following Israel's siege of West Beirut in 1982. On 16 September 1982, with other

militiamen, Hobeika is known to have entered the Sabra and Shatila refugee camps, where he participated in the massacre of at least one thousand Palestinians. In 1984, internecine battles erupted between the followers of President Amin Jumayyil, who was also head of the Phalange party, and the Lebanese Forces led by Hobeika. In December 1985, Hobeika and the heads of two other militias, Walid Jumblatt of the Druze-dominated Progressive Socialist party and Nabi Berri of the Shiʿite militia AMAL, signed the Damascus Tripartite Agreement. The agreement, engineered by Syria, established strategic, educational, economic, and political cooperation between Lebanon and Syria. This accord placed Lebanon virtually under a Syrian protectorate.

Heavy opposition faced the Damascus agreement, especially in the Maronite and Sunni Muslim communities of Lebanon. President Jumayyil called for the support of Samir Geagea, who had replaced Hobeika as head of the Lebanese Forces in the course of their internal conflicts. Early in January 1986, Hobeika and his followers were defeated and Hobeika escaped to Paris. He then went to Damascus. Hobeika became a favored ally of Damascus and was elected to parliament in the 1992, 1996, and 2000 elections. He formed the Promise Party but failed to attract a popular following beyond a small band of followers from his militia days. He served as minister in the 1990s; accusations of rampant corruption accompanied his service. He was killed in a massive car bomb in January 2002. It was widely believed that Israel was behind his assassination, since he was about to travel to Belgium to testify in a case against Ariel Sharon for his role in the Sabra and Shatila massacres. Hobeika's wife succeeded him as leader of the Promise Party.

HOCA

See GLOSSARY

HODEIDA

The major Red Sea port of Yemen since about 1849.

In 1849, the Ottoman Empire, during its second occupation of Yemen, selected Hodeida (also Hudayda) as its major base and point of entry from the Red Sea. In fact, Hodeida is not a natural deep-water port, and years of ballast dumping have made it incapable of accepting anything but small local ships. The major port activity now takes place at Raʾs Khatib, a short distance north of Hodeida; this is a modern facility with wharves, unloading equipment, warehouses, and a transportation infrastructure that can accommodate modern freighters.

Raʾs Khatib was constructed by the Soviet Union as part of its foreign aid program during the 1960s. It remained the key access point to Yemen until 1990, when the Yemen Arab Republic merged with the People's Democratic Republic of Yemen. Then, Aden, one of the world's best natural harbors, became the primary port and economic capital of the new republic.

MANFRED W. WENNER

HOFFMAN, YOEL

[1937–]

Israeli writer and scholar.

Yoel Hoffman was brought to Palestine as an infant by his Austro-Hungarian Jewish parents. His mother died a couple of years later and his father entrusted him to a day-care home, whose owner became Hoffman's beloved stepmother when he was seven.

As a college student, Hoffman studied Hebrew literature and Western philosophy but wrote his thesis on Far Eastern philosophy. He had lived in a Japanese Buddhist temple where he studied Chinese and Japanese texts with Zen monks. His academic work ranged from comparative philosophy to interpretations of haiku and Zen koans. A professor at

Haifa University, Hoffman began to write fiction in his late forties. Although chronologically a member of the sixties "generation of the State," his writing is in the forefront of the Israeli avant-garde of the nineties.

With his first collection of stories, *The Book of Joseph* (1988), Hoffman began his lyrical, experimental literary journey. But only with *Bernhardt* (1989) and *Christ of Fishes* (1991) did his mature creative voice emerge. In atomistic texts of unusual typography and poetic rhythms, Hoffman blended Far Eastern with Western philosophy, minimalist aesthetics with unbridled imagination, murmuring of the heart with rationalism, and educated awareness with Nirvana-like trance. Hoffmann's personae—middle-aged widowers, orphaned children, lonely aunts—often speak or remember in their German mother tongue, transliterated phonetically into Hebrew and glossed in the margins. Reconstructing a culturally and psychologically complex metabolism of loss, Hoffman's work negates boundaries between life and death, self and other, man and woman, human and animal.

UPDATED BY ADINA FRIEDMAN

HOLOCAUST

Term commonly used in English (Hebrew, Shoah*) to denote anti-Jewish policies conducted by the Third Reich (Nazi Germany, 1933–1945), resulting in the systematic and bureaucratically organized genocide of approximately 6 million Jews.*

Exploiting anti-Jewish themes present in Christian theology and culture, but going far beyond them by incorporating them onto a racist worldview, Nazi ideology presented the Jews as a satanic and corrupting element and demanded their "total removal" (the formulation of Germany's dictator, Adolf Hitler: *"Entfernung der Juden überhaupt"*) from human society. They held a special place among a variety of undesirable elements (Gypsies, homosexuals, people deemed genetically defective or incurable) that had to be eliminated.

History

During the 1930s, Nazi policies gradually crystallized: German Jews were legally defined, humiliated through propaganda and education, and disenfranchised. Many were deprived of their livelihoods and property and openly encouraged to emigrate. These policies became harsher and more brutal after Nazi Germany's annexations and conquests of 1938 and 1939. After September 1939, the more than 2 million Jews living in Nazi-occupied Poland were herded into ghettos, where they were exposed to death by hunger and disease on a massive scale. The occupation of western, central, and southern Europe resulted in the legal, political, economic, and social disempowerment of the Jews, causing harsh living conditions, followed by their deportation to camps in eastern Europe beginning in 1942.

In January 1939, Hitler foreshadowed a more radical policy when announcing that, if the nations would be plunged "once more into a world war, then the result will not be the bolshevization of the earth, and thus the victory of Jewry, but the annihilation *(Vernichtung)* of the Jewish race in Europe." It took, however, more than two years for this vision to begin to be implemented. Germany's mass murder of Jews began in mid-1941 with mass executions, led by special death squads (Einsatzgruppen) accompanying the advancing troops that invaded the Soviet Union; it was supported and aided by other German units, including the German army; by local collaborators; as well as by Germany's ally, Romania. During the summer and fall of 1941, the shape of a Europe-wide "Final Solution" crystallized both in theory and practice, and in November and December Hitler's final decision became known to his entourage. On 20 January 1942, a meeting of senior Nazi bureaucrats in Berlin (the Wannsee Conference) coordinated plans for the systematic murder of the rest of European Jewry, stage by stage. The method of choice was gassing, administered in specially designed or adapted annihilation camps in Poland: Chelmno, Belzec, Majdanek, Sobibor, and Treblinka. By far the greatest number of Jews and Gypsies perished at a

sixth location: the Auschwitz-Birkenau complex, to which Jews from all over Europe were shipped aboard freight trains for immediate death in gas chambers. Many Jews also died while on the way to the annihilation camps or as a result of being worked to death in forced labor camps.

The Holocaust cast its shadow over the Middle East and North Africa as well as over Europe. For several months during 1942, the Jews of Palestine feared the prospect of annihilation at the hands of the German armies under the command of General Field Marshal Erwin Rommel, which threatened to overrun Palestine. The threat was lifted following the Allied victory at the battle of al-Alamayn (23 October–2 November 1942) in Egypt. Jews in German-occupied Tunisia and Libya were not so fortunate. They suffered humiliation and persecution—some were deported to Italy and others were brought to the Bergen-Belsen camp—but they were spared the full force of the Final Solution.

From the end of 1944, when the Allied advance moved toward Germany and Poland, hundreds of thousands of Jewish and non-Jewish inmates of concentration camps were marched away from the front lines; more than half of the evacuated inmates died in these death marches. Some 200,000 European Jews probably survived the camps; a smaller number survived in hiding or as partisan fighters against the Germans.

The Jews of Europe received little help from the Allied powers or from the local population of the countries where they lived. Yet a small number of non-Jews, subsequently honored as "righteous Gentiles," endangered their lives to hide or help rescue Jews. The most significant example of Jewish armed resistance, lasting several weeks, took place in the Warsaw Ghetto in 1943. Elsewhere, there were instances of Jewish escape, rebellion, and participation in underground and partisan resistance, but with little tangible result against overwhelming odds and in inauspicious conditions. Prominent among the resisters were Jewish youth who had been members of various Zionist and non-Zionist youth movements.

Repercussions for the Middle East

The impact of the Holocaust on the Middle East has been felt in several ways. German-Jewish emigration to Palestine increased shortly after the Nazi rise to power, aided by the August 1933 ha-Avara (property transfer) agreement between the Jewish Agency for Palestine and the German government. The desperation of European Jews also contributed to illegal immigration to Palestine (Aliyah Bet) in the late 1930s, during World War II, and in the wake of the Holocaust (1945–1948).

Holocaust survivors and refugees arrive at Haifa Port. Haifa is one of the deepest and best-protected ports in the Mediterranean. © PHOTOGRAPH BY ZOLTAN KLUGER. GOVERNMENT PRESS OFFICE (GPO) OF ISRAEL. REPRODUCED BY PERMISSION.

The responses of the Yishuv (the organized Jewish community in Palestine) and Zionist leadership toward Nazi policies were the cause of much controversy within Jewish circles. Did the leadership emphasize the building up of a Jewish national home in Palestine at the expense of wider international efforts to rescue European Jewry? After the outbreak of World War II, the plight of the European Jews was used, unsuccessfully, as a major argument against the 1939 White Paper's limitations on Jewish immigration. Arab and Palestinian spokesmen countered that the two issues should not be linked. Later on, the Holocaust served as a motive for establishing the Jewish Brigade within, and the recruitment of Jews from Palestine into, the British army.

The real extent of the mass murder campaign in Europe penetrated only in November 1942. Af-

terwards, Zionist and Yishuv organizations contributed moral and financial aid to European Jews, some of it via a delegation based in Istanbul. In a few cases, missions were sent out (e.g., the dropping of some Palestine Jewish paratroopers into Slovakia and Hungary in 1944, in cooperation with the Royal Air Force) in attempts to rescue and support European Jews.

On the Palestinian side, the mufti of Jerusalem, Amin al-Husayni, tried to establish contacts with the Italians and the Germans in the mid-1930s, viewing them as potential allies for his goal of removing British and Zionist influence from Palestine. Cooperation on several issues lasted until the downfall of Nazi Germany. The peak was on 28 November 1941, when the mufti met with Adolf Hitler; Hitler alluded to the Nazi Final Solution, while al-Husayni emphasized common German-Arab interests. There is no evidence to support claims that it was the mufti who inspired Hitler to initiate the Final Solution.

The extent to which the Holocaust was a factor in the establishment of the state of Israel remains a question in both historiography and nonacademic polemics. One stream of Zionist historiographers and religious Zionist thinkers, along with many Arab and post-Zionist commentators, view the Holocaust as the single decisive factor in the creation of Israel. Careful historical research, however, undermines such a simple causal connection.

On the other hand, it is undeniable that the Holocaust helped Zionism become the dominant political stream within world Jewry. The immediate post-Holocaust trauma and disillusion of Jews everywhere were so extreme that many Jews in the United States and Western Europe became committed to promoting a Jewish state. Yet the Holocaust had decimated European Jewry so drastically that the very foundations of the Zionist solution for the so-called Jewish problem in Europe were undermined.

From 1944 onwards, many Holocaust survivors made their way to Palestine on their own initiative, even before Yishuv emissaries came to convince them to do so. The Zionist movement became active in directing people to Palestine, and the struggle of the ha Apala (overcrowded illegal immigration boats crossing the Mediterranean Sea) served as a major tool in Zionist propaganda for open immigration and an end to British restrictions. The link between the plight of the Holocaust survivors in the Displaced Persons (DP) camps in Germany and the creation of a Jewish state was accepted by the United Nations Special Committee on Palestine (1947), thereby strengthening the Zionist case.

Recent research suggests that guilt about the Holocaust had little effect on the UN decision to partition Palestine. Britain wanted the Jews to stay in Europe, and the United States considered the direction of DPs to Palestine a humanitarian issue and did not at first see it leading to adverse political consequences. Latin American states supported the 1947 partition plan because of Christian pro-Zionist feelings, while communist states cast their vote with the intention of weakening Britain and advancing the decolonization process.

After the establishment of Israel, the Holocaust became a central issue in the building of national identity. An annual Holocaust Remembrance Day, memorials, the trial of Rudolph Kasztner (1954) and its repercussions, the kidnapping and trial of Adolf Eichmann (1960–1961), literature and theater, and more recently journeys of youngsters to extermination sites in Europe all contributed to keeping this topic center stage. Holocaust imagery also deeply penetrates Israeli discourse. On several occasions, it has been politically linked to the Israeli–Arab conflict. For example, Prime Minister Menachem Begin justified the Israeli bombing of Iraq's Osirak nuclear facility in 1981 by vowing that Israel would not allow anyone to prepare a "second Holocaust" in his lifetime.

The Arab world has done little or nothing to deal directly with the issue of the Holocaust dissociated from the conflict with Israel. Arabs often claim that the establishment of Israel would not have occurred without the Holocaust to justify it; they accuse Jews and Israelis of manipulating the Holocaust to bolster Zionist claims to Palestine. Since the mid-1990s a few Arab and Palestinian intellectuals have displayed greater awareness of the gravity of the Holocaust, partially disconnecting it from the polemics of the Arab–Israel conflict. Reconciliation groups among Israeli Arabs (and Jews) have created courses and activities to sensitize Arab educators to

the impact of the Holocaust on Jewish and Israeli thinking; one such activity was a joint Arab–Jewish pilgrimage to Auschwitz in summer 2003, led by a Palestinian priest from Nazareth. Yet, hardened by their own feelings of victimization and defeat at the hands of Israel's army, many Arabs find it difficult to empathize with Jewish suffering. A number of Arab authors and politicians have gone so far as to openly associate themselves with Holocaust deniers, while others downplay the extent of the Nazi genocide.

HOLY LAND

An overall characterization of the area in the Middle East connected with biblical and New Testament narratives.

References to the Holy Land are found in Jewish biblical and rabbinic literature and later in Christian tradition. The area is centered at Jerusalem, and it extends from modern Israel to Egypt, which is associated with Jesus' family in the Gospels, and to Asia Minor, which is associated with the Virgin Mary and Saint John. As the dwelling place of the divine presence, the Holy Land has been the location of pilgrimage sites since the era of the Roman emperor Constantine in the fourth century. It began to take on distinct borders with the resurgence of Christian interest in the holy sites and the development of archaeology during the nineteenth century. The area is also holy to Muslims because it is home to important shrines associated with the prophet Muhammad and the early days of Islam, including Islam's third holiest mosque, in Jerusalem.

HOLY SEPULCHRE, CHURCH OF THE

Christian church in Jerusalem said to contain the tomb of Jesus.

The Church of the Holy Sepulchre is in the Old City of Jerusalem. Originally a group of separate churches in a single enclosure, in the fourth century (starting in 325 C.E.), Emperor Constantine sought to turn it into an architectural monument. The Crusaders gave it its present form in 1149, combining its structures into one Romanesque church with a two-story facade. The interior has two principal sections: the rotunda—modeled on the Pantheon—which contains a shrine covering the tomb of Christ, and an Orthodox cathedral. Several Christian sects have appointed chapels and zealously guard their rights within the structure ac-

cording to the Ottoman-era "Status Quo" agreement of 1852. The keys to the church have been kept by the Muslim Nusayba family for generations, so that no one Christian sect might control it.

HOMS

Syrian city and religious center.

Homs, strategically situated on the Orontes River at the eastern gateway of a pass connecting Syria's central plains to the Mediterranean coast, traces its history back to at least Greco–Roman times. Along with Baʿalbak, it was a center of sun worship from the first to the third century C.E. Arab Muslim armies led by Khalid ibn al-Walid captured the city in 637 and converted its massive church of St. John into a mosque. Homs was designated headquarters of one of five Syrian military districts under Muʿawiya. Its inhabitants repeatedly rebelled against the Abbasids before falling under the control of the Tulunids of Egypt (878–944) and Hamdanids of Aleppo (944–1016). Byzantine commanders raided the city throughout the tenth and eleventh centuries, but by the late eleventh century rivalry among competing Saljuq client states shaped politics in the region. Duqaq ibn Tutush turned Homs into a major base of operations against the Crusaders at the beginning of the twelfth century, bringing the city under the direct control of Damascus for the first time. It suffered a series of ferocious attacks from the Zangids of Aleppo in the early twelfth century and provided the linchpin for Nur al-Din Mahmud's defense of Damascus against the Second Crusade.

Salah al-Din ibn Ayyubi captured Homs in 1175, retaining the local Asadi dynasty to block incursions into central Syria from the Crusader strongholds of Tripoli and Krak de Chevaliers (Qalʿat al-Husn). After siding with the Mongols at Ayn Jalut, the Asadi ruler al-Ashraf Musa was pardoned by Qutuz, the Mamluk sultan whose successor, Baybars, rebuilt the city's citadel. In 1260, al-Ashraf Musa joined the rulers of Aleppo and Hama to defeat a second Mongol invasion force on the outskirts of the city. With the death of al-Ashraf Musa two years later, Homs vanished under the shadow of the rulers of Hamah and Damascus and continued to be dominated by the Mamluks of Egypt, by Timur, and by a succession of bedouin chieftains before becoming a subdivision *(pashalik)* of the Ottoman governorate of Damascus. The city's inhabitants revolted against the 1831 Egyptian occupation of Syria, prompting Ibrahim Pasha to raze the citadel.

Contemporary Homs is known for being the site of Syria's main oil refinery, as well as of the country's military academy. Several important public sector industrial enterprises, including a massive sugar factory, are located in and around the city. Syria's newest university, al-Baʿth, opened in the southern suburbs in 1979.

FRED H. LAWSON

HOPE-SIMPSON COMMISSION (1930)

British commission of inquiry into economic conditions in Palestine.

The Hope-Simpson Commission was established in the wake of the August 1929 Western (Wailing) Wall disturbances. A previous commission, the Shaw Commission, had concluded in March 1930 that the causes for the 1929 disturbances were Palestinian fear of Jewish immigration and land purchases. Because the commission recommended the curtailment of both, the Labor government of Prime Minister Ramsay MacDonald appointed a commission of inquiry under Sir John Hope-Simpson to investigate land settlement, immigration, and development. The Hope-Simpson Report (Command 3686), issued on 30 August 1930, found that almost 30 percent of Palestinians were landless, presumably because of Jewish land purchases, and that Palestinian unemployment was exacerbated by a Jewish boycott of Arab labor.

The assumptions and recommendations of Hope-Simpson were incorporated in a policy paper called the Passfield White Paper of 1930 (Command 3692),

which recommended restrictions on Jewish immigration and land purchases consistent with the economic absorptive capacity of Palestine. The recommendations caused a political furor in Great Britain. Under pressure from the Zionists and their supporters, MacDonald issued a February 1931 letter, known as the MacDonald Letter, or to Arabs as the Black Letter, which in effect reversed the policy of the White Paper of 1930. Consequently, the Hope-Simpson Commission resulted in no permanent change in British policy toward Palestine.

See also MacDonald, Ramsay; Shaw Commission; Western Wall Disturbances; White Papers on Palestine.

HOSAYNIYEH

See Glossary

HOSS, SALIM AL-

[1929–]

The most important Sunni politician in Lebanon.

Salim al-Hoss was born in Beirut. He attended the International College and the American University of Beirut, where he excelled in economics. He earned a Ph.D. in economics from Indiana University. Hoss taught at the American University of Beirut for years and did consulting work for the government of Kuwait during the 1960s. Although he was aloof from the political scene in Lebanon, in 1967 he was appointed chair of the state council that monitors banking activities. As a result he became a friend of Ilyas Sarkis, then governor of the Central Bank.

When Sarkis was elected president in 1976, he appointed Hoss prime minister. Hoss held that position in the next two administrations, under Amin Jumayyil and briefly under Ilyas al-Hirawi. Although he was considered a political moderate, he was criticized by some Maronite leaders for opposing the president of the republic. In general, however, Hoss remains one of the most widely respected figures in Lebanon; he is seen as one of the few politicians who resisted the temptations of corruption and unprincipled compromises. His views tend to conform to the moderate views of the Sunni political establishment, although he is far less prone to sectarian agitation and mobilization. Hoss ran for parliament in the 1992 election on a platform of "salvation and reform." He was critical of Israel's occupation of Lebanon and maintained close ties with Syria, although he is regarded as less deferential to the latter's wishes than most political leaders in Lebanon.

Hoss has published two books on his experience in government and remains active on the political scene. His integrity and relative independence allow him a degree of political power that other politicians can only envy. Although his power base has been centered in Beirut, he has been popular in most parts of Lebanon. Although committed to a free economic system, in the early years of the twenty-first century Hoss was critical of Western governmental policies toward the Arab-Israel conflict and the situation in Lebanon. In 1988, Hoss served as de facto president in a large part of Lebanon when Jumayyil decided to name the commander in chief of Lebanon's army as president. Hoss, supported by many Lebanese and by Syria, served as acting president until the election of René Muʿawwad. In 1998, after the election of President Emile Lahhud, Hoss served as prime minister for two years, and he was seen as the key rival to powerful Sunni billionaire Rafiq Bahaʾuddin al-Hariri. To the surprise of many, and thanks to lavish campaign spending and sectarian mobilization by Hariri, Hoss lost his parliamentary seat in 2000. He remains active in politics, although as an outside critic of the Hariri government. Hoss is known for his independent views, and in 2003, despite his staunch support for the Palestinian cause, spoke out against Palestinian suicide bombings and urged a struggle of civil disobedience.

HOSTAGE CRISES

International crises intertwined with domestic politics in Iran and Lebanon.

In Tehran on 4 November 1979, a mob led by radical college students overran the U.S. embassy and took its personnel hostage. They announced that they would not free the diplomats until the United States agreed to extradite the country's former ruler, Mohammad Reza Shah Pahlavi (1941–1979). The shah, overthrown nine months earlier, had been admitted to the United States for cancer treatment two weeks before seizure of the embassy. Within days of the incident, Iran's revolutionary leaders endorsed the demands of the students and supported their claim that the U.S. embassy was a "den of espionage." U.S. efforts to exert pressure on Iran through diplomatic means (UN resolutions), economic sanctions (freezing Iran's assets in U.S. banks), and military actions (an abortive helicopter rescue attempt) proved unsuccessful in getting the hostages freed. Even the death of the shah, in July 1980, had no apparent effect. Only after Iraq invaded Iran in the fall of 1980 did Tehran indicate a serious interest in resolving the hostage issue. Iran and the United States subsequently accepted Algerian mediation, an accord that freed the hostages and established a tribunal to settle outstanding claims was signed in January 1981.

The kidnapping of Europeans and Americans in Lebanon that began in 1984 created a new, albeit less dramatic, hostage crisis. The militias that carried out the kidnappings wanted the governments of the hostages to pressure Israel to release Lebanese nationals that were detained in a special prison for those suspected of organizing resistance to Israel's occupation of south Lebanon. Because Iran supported these same militias, the United States was convinced that Iran could exert influence to get the hostages released. Some U.S. officials undertook secret negotiations with Iran that included covert arrangements to sell Iran weapons in exchange for the release of hostages in Lebanon. The weapons sales led to the freeing of only two hostages over the course of a year during which more Westerners in Lebanon were abducted. In October 1986, revelations of the arms-for-hostages deals caused grave embarrassment to the administration of U.S. president Ronald Reagan and resulted in the resignation of several senior aides. The scandal was compounded by revelations that profits from the secret arms sales to Iran had been diverted to secret accounts used to buy weapons for U.S.-backed forces (contras) trying to overthrow the government of Nicaragua. The fallout from the scandal put hostage negotiations on hold for several months. The last U.S. and other Western hostages in Lebanon were not released until 1991.

ERIC HOOGLUND

HOURANI, ALBERT

[1915–1993]

Leading twentieth-century historian of the modern Middle East.

Albert Habib Hourani was born in Manchester of Lebanese parents. From 1933 to 1936 he studied politics, philosophy, and economics at Magdalen College, Oxford. He then taught for two years at the American University of Beirut, and then held a position at the Royal Institute of International Affairs (RIIA) in London until 1943. From 1943 to 1945 he was attached to the office of the British minister of state in Cairo. From 1945 to 1947 he was a researcher for the Arab Office in Jerusalem and London, during which time he gave evidence to the Anglo-American committee of inquiry on Palestine. In 1946 the RIIA published his *Syria and Lebanon: A Political Essay* and in 1947 *Minorities in the Arab World,* two works that have stood the test of time.

In 1948 Hourani returned permanently to Oxford, where he became the first director of the Middle East Centre at St. Antony's College in 1953. In 1962 he published *Arabic Thought in the Liberal Age, 1798–1939,* which deals with the reception of European political philosophy, particularly the ideas of the Enlightenment and of liberalism, in the Arab world during the nineteenth and twentieth centuries, and the various intellectual movements (the

Arab literary revival, national self-consciousness, Islamic modernism, Arab nationalism) of the period. Hourani published three volumes of collected essays, *Europe and the Middle East* (1980), *The Emergence of the Modern Middle East* (1981), and *Islam in European Thought* (1991). In 1991 he published his last and best-known work, *A History of the Arab Peoples,* which became a runaway success. The book emphasizes the variety and heterogeneity at the heart of Arab and Islamic civilization; it is beautifully written, with a finely modulated appreciation and mastery of an enormous range of subject matter. It is especially notable for its nuanced and intuitive understanding both of historical processes and of the intricate and complex relationships within Arab society.

PETER SLUGLETT

HOVEYDA, AMIR ABBAS

Iranian politician, and prime minister continuously from 1965 to 1977.

Amir Abbas Hoveyda was born in Tehran in 1919 and attended high school in Beirut. With a bachelor's degree in political science from Brussels, he returned to Iran in 1942 and was hired at the ministry of foreign affairs. In the 1950s he became a high administrator in the National Iranian Oil Company. In the early 1960s Hoveyda joined Hasan-Ali Mansur's Iran-e Novin Party, a new political grouping charged with implementing the shah's reform program known as the White Revolution. When Mansur was assassinated in 1965, Hoveyda replaced him as prime minister. As Iran's second most powerful man during the two prerevolutionary decades, he presided over a crucial period marked by rising oil income and various development projects, as well as widespread corruption and repression. In 1977, facing mounting economic and political problems, the shah demoted Hoveyda to court minister and later placed him under house arrest, as a scapegoat, when revolution loomed on the horizon in 1978. Left behind after the shah's January 1979 departure from Iran, Hoveyda was captured by Ayatollah Khomeini's provisional revolutionary government and executed quickly following a show trial in April 1979.

NEGUIN YAVARI
UPDATED BY AFSHIN MATIN-ASGARI

HULA SWAMPS

Valley and former lake in the upper eastern Galilee region of Israel, known for its marshlands.

The Hula swamps, once a breeding ground for malaria mosquitoes, became the site for displaying Zionism's determination to transform marshes into fertile soil by marshaling economic resources and deploying technological forces. Earlier attempts to drain the swamps and develop the land, initiated by the Ottoman Empire, were never implemented. In 1934 the Palestine Land Development Company acquired the Hula concession and began to drain the land, a project completed in the 1950s by the state of Israel. As the number of Jewish settlements in the reclaimed region increased, the new fertile lands were stripped of their natural foliage, compromising the quality of the water in Lake Kinneret (Sea of Galilee), the country's only natural reservoir, and disrupting the flow of water in the Jordan River. To restore water quality and currents, the Jewish National Fund reintroduced the wetlands by constructing an artificial lake and digging a network of canals, creating a new and important nature reserve and tourist site in Israel.

DONNA ROBINSON DIVINE

HUMAN RIGHTS

Middle East states and international human rights conventions.

Special envoy of the President of the Palestinian National Authority, Hanan Ashrawi speaks to the 58th session of the Commission on Human rights in 2002. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

The term *human rights* refers herein to the human rights norms established in the international system in and following from the Universal Declaration of Human Rights 1948 (UDHR). The poor (indeed, often critical) state of the protection of these rights is one of the major features of the human rights debate in the region, which continues to challenge the regional human rights movement, despite recent progress toward reform in certain states; the contestation of the universality of certain of these rights is another feature.

All states in the region are party to two or more of the United Nations human rights treaties. A number are not yet parties (as of 2004) to either the International Covenant on Civil and Political Rights or the International Covenant on Economic, Social, and Cultural Rights which, together with the Universal Declaration of Human Rights (UDHR), make up the International Bill of Human Rights; these include Bahrain, Oman, Qatar, Saudi Arabia, and the United Arab Emirates (U.A.E.). All are parties to the Convention on the Rights of the Child (CRC), but Iran, Iraq, Oman, Syria, and the U.A.E. have yet to sign the Convention Against Torture. A similar number of states (Iran, Oman, Qatar, Somalia, Sudan, and the U.A.E.) have not yet become parties to the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW). Many Middle Eastern states that have signed CEDAW, along with many states elsewhere in the world, have attached reservations to their ratification of this treaty. Certain of these reservations have attracted attention because of their broad nature; they purport to subject compliance with the Convention to the principles of Islamic *shariʿa;*. Arguments continue at the UN over the compatibility of such reservations with the intentions of CEDAW, and arguments continue in the region as to the universality of the norms provided in this particular treaty. There have been a few ratifications of the Optional Protocols to the ICCPR, CEDAW, and the CRC, enabling the appropriate monitoring committee to hear complaints from individual citizens against the state party.

Domestically, it is rare that individuals realize human rights protections through directly invoking international human rights instruments in the national courts, even though there may be constitutional provision for the incorporation in national legislation of international instruments to which the state is party. Furthermore, in many states in the region, weak and unempowered national judiciaries are unable to assert their independent will against the executive to secure effective judicial protection of human rights, even though the rights enshrined in the international instruments are also guaranteed in the texts of most of the constitutions of the region.

A number of states in the region are also party to the African Charter on Human and Peoples' Rights, and Turkey has ratified the European Convention on Human Rights. There is also the Arab Charter on Human Rights, which was adopted in 1994 by the members of the League of Arab States. The original text has been criticized by the Geneva-based International Commission of Jurists as "a fatally flawed instrument, containing significant gaps and elements which run contrary to fundamental human rights principles." In the years following its adoption, no member state ratified the charter, and in 2003 a process of review for the "modernization" of its contents was initiated.

Another set of standards proclaimed by all states in the region (except for Israel) is contained in the

Cairo Declaration of Human Rights in Islam. The declaration was adopted in 1990 by member states of the Organization of the Islamic Conference (OIC) to serve "as a general guidance for member states in the field of human rights." The rights elucidated in the declaration differ in certain significant respects from those set out in the international human rights treaties to which many of the states in the region are parties, and resolutions from OIC summits have consistently asserted the significance of cultural relativity in response to the demands of the international human rights norm of universality. Thus, a 2003 resolution from the OIC foreign ministers recognizes "the obligations and endeavours of the member states to promote and protect the internationally recognized human rights while taking into account the significance of their religious, national, and regional specificities and various historical and cultural backgrounds, and with due regard to the 'Cairo Declaration on Human Rights in Islam.'" The arguments over universality versus cultural relativity of human rights norms revolve particularly around the rights of women and minorities, and freedom of religion.

Concern is articulated by many states and citizens in the region over the exploitation of the international human rights discourse for political ends. There are evocations of a larger context of colonial and neocolonial agendas, cultural imperialism, and hostility to Islam. Although these states have political interests in seeking to divert and undermine criticism of their human rights records in international forums (as, in a different discourse, does Israel), among civil society these evocations have a popular resonance, and there is widespread criticism of selectivity in the application of human rights discourse and principles by powerful Western states. This criticism has traditionally centered on the question of Palestine in light of the absence of enforcement action against Israel for its violations of the human rights of Palestinians. It has expanded to include a perception of a lack of attention to the human rights of all Muslims by the major Western powers. These issues have been heightened in the aftermath of the attacks in the United States on 11 September 2001.

These real political issues have immediate impact on the work of nongovernmental domestic, regional, and diasporic human rights organizations (NGOs) established since the late 1970s to challenge widespread, egregious, and systemic human rights violations. These organizations have had critical influence in establishing and maintaining the human rights debate and discourse in the region. Regional networking has increased significantly over the last ten years, with a number of formal regional programs and less formal networks established. The NGO human rights movement in the region is also critical of selectivity in the approach of powerful Western states (and in some cases, international human rights organizations), and of Western influence over the agenda of the international human rights movement. Activists may find themselves caught between hostility at home and indifference to regional concerns in the international arena. Regionally, there is general consensus on the need to increase the popular resonance of universal human rights norms and discourse, as well as focusing on national and international state law and policy in order to increase the prospects for implementation of international human rights.

HUMPHREYS, FRANCIS

[1879–1971]

British diplomat.

Francis Humphreys was the last British high commissioner in Iraq (1929–1932) before Iraqi independence in 1932. In that capacity, he played a central role in negotiating the Anglo–Iraqi Treaty of 1930, which paved the way for independence. Humphreys then served as the first British ambassador to Iraq (1932–1935).

ZACHARY KARABELL

HUNCHAK PARTY

Armenian-oriented Lebanese political party.

The Hunchak Party, organized in Geneva, Switzerland, in 1887, has promoted the dual objective of liberating Turkish Armenia and establishing a socialist regime in a unified Armenian homeland. In Lebanon, the party has advocated a planned economy and a just distribution of national income. In 1972, for the first time in its history, the party fielded a joint slate of candidates for parliament with the Dashnak Party. In the world of Armenian politics in Lebanon, ties of Armenian national solidarity supersede ideological considerations that might divide Armenians. During the Lebanese Civil War, the differences between the Hunchak and the Dashnak became insignificant.

The Hunchak Party achieved a victory in the 1992 election when Yeghya Djerijian, an Armenian (Greek Orthodox, born in 1957) was elected to parliament. He chairs the executive committee of the party.

HUNKAR-ISKELESI, TREATY OF (1833)

Mutual defense agreement between Russia and the Ottoman Empire.

In February 1833, the Egyptian army of Ibrahim Pasha reached Kutahya in Ottoman Turkey, less than 200 miles (322 km) from Constantinople (now Istanbul), seat of the Ottoman Empire. With few options short of capitulation, the Ottoman sultan Mahmud II sought help from his former enemy, Czar Nicholas I of Russia. Nicholas complied, and Russian troops and ships were dispatched to the Bosporus (Turkish straits). Though the Russian presence did not save the sultan from severe concessions to Ibrahim and his father Muhammad Ali, viceroy of Egypt, it did force Ibrahim to temper his demands and depart from Kutahya. Having helped the sultan, Nicholas demanded payment in the form of a defensive alliance. The Treaty of Hunkar-Iskelesi, named after the Russian camp, was concluded on 8 July 1833. Concluded for eight years, it bound the sultan to close the Turkish straits to warships in times of war, and it provided for Russian aid if the Ottoman Empire was attacked. Though defensive, the treaty greatly alarmed the other European powers, who believed that it gave the Russians preponderant influence in Constantinople. Britain protested against the treaty and over the next years worked assiduously to reverse this setback to British interests in the Ottoman Empire.

HÜRRIYET

Daily newspaper in Turkey.

Hürriyet (Freedom) is a politically centrist newspaper known for its ardent antifundamentalist stand. In 1990, its managing editor, Cetin Emeç, was allegedly assassinated by Muslim fundamentalist terrorists.

Hürriyet has a circulation of 600,000, with 150,000 copies distributed in Western Europe, making it the most widely read Turkish newspaper outside the country. In Turkey, *Hürriyet*'s readers are typically middle class and high school educated.

Hürriyet was founded in 1948 by journalist and publisher Sedat Simavi, in the early years of Turkey's multiparty politics. It quickly became the top-selling daily in Turkey and remained in that position for about forty years, making it the country's most influential newspaper. Once a gossip paper, it gradually improved its serious news coverage. By the end of the 1970s, the paper maintained an extensive network of domestic bureaus and about a dozen international ones. For three years, until 1991, *Hürriyet* copublished with Bağimsiz Basin Ajansi an English-language weekly, *Dateline Turkey.*

Hürriyet remained in the Simavi family following the death of the founder in 1953, with his son, Erol, eventually taking sole control. In 1994, the Dogan Group, owner of *Milliyet,* took a controlling share of the newspaper with the purchase of 70 percent of Hürriyet Holding. Of the remaining stake, 15 percent stayed in the Simavi family and another 15 percent was held by various investors.

Stephanie Capparell

HUSARI, SATI AL-

[1880–1968]

Social philosopher, political activist, and pioneer theorist of Arab nationalism.

Sati al-Husari (also spelled Sate al-Husri) was born in Aleppo, Syria, in 1880 and moved to the Balkans in his early youth. He joined the Committee for Union and Progress formed by Young Turks and Young Ottomans in 1907. After the collapse of the Ottoman Empire, Husari left Istanbul and joined the movement for Arab nationalism. He assumed the position of minister of education in the reign of King Faisal I Ibn Hussein. When Faisal was ousted from Syria by the French in 1920, Husari followed him to Iraq, where he became the most important theoretician of modern Arab nationalism.

Al-Husari was fluent in many languages and had learned nationalist conceptions from nineteenth-century European thinkers such as Ernst Moritz Arndt, Johann Gottfried Herder, Georg W. F. Hegel, and Johann Gottlieb Fichte. He developed a theory of nationalism that identified the nation not as a voluntary association but as a living organism that develops through common language and history. He pinned all his hopes on the educated youth, to whom he hoped to teach the proper nationalist values by establishing schools, training teachers, and delivering lectures. He considered every person who spoke Arabic or who was affiliated with those who did to be an Arab. Hence, his conception of pan-Arabism was founded on secular values like language and history, but nonetheless integrated Islam as an important component of Arab cultural identity. He believed in Ibn Khaldun's concept of *asabiyya* (solidarity based on blood ties) as well as the notions of *le lien social* (social bonds) and *esprit de corps* (common feeling of purpose). To him, unity had spiritual and physical depths.

For al-Husari, freedom did not mean democracy or constitutionalism; it meant national unity. A nation *(umma)* denoted a secular group of people bound together by mutually recognized ties of language and history. This was distinct in his mind from state *(dawla),* a sovereign and independent people living on common land within fixed borders. He identified several challenges to nationalism, including imperialism, regionalism, communist internationalism, and the pursuit of Islamic political unity. He argued that the Muslim nations possessed many linguistic and cultural differences, which prevented their unity. Instead, he campaigned for an Arab unity based on the Arabic language, because Arabic preceded Islam and possessed many cultural traits that Islam did not have.

Even though al-Husari was willing to borrow from Western civilizations, he distinguished between civilization and culture. The former included sciences, technologies, and the means of production, and by its very nature it was internationalist. The latter included literatures and languages, and by nature it was nationalist. Thus, al-Husari instituted "the rule of separation" in the nationalist reasoning. His writings include: *Abhath Mukhtara fi al-Qawmiyya al-Arabiyya* (Selected studies in Arabic nationalism), *Thawrat 14 Tammuz* (The July 14 revolution), *Ara wa*

Ahadith fi al-Wataniyya wa al-Qawmiyya (Opinions and conversations in Arab nationalism), and *al-Amal al-Qawmiyya* (National aspirations).

HUSAYNI, ABD AL-QADIR AL-

[1908–1948]

Palestinian nationalist and military leader.

Abd al-Qadir al-Husayni was born in Jerusalem to a notable family. He was the son of Musa Kazim, a major leader of the Palestinian struggle against Zionism. Abd al-Qadir saw military service during the Palestinian rebellion between 1936 and 1939. During World War II, he took part in the Iraqi revolt of Rashid Ali al-Kaylani, a pro-Axis Iraqi politician who replaced Nuri al-Saʿid as prime minister of Iraq in March 1940. After the British crushed al-Kaylani's revolt in 1941, Abd al-Qadir was imprisoned; following his release he went to Egypt.

In 1947, Abd al-Qadir managed to return to Palestine where he commanded, together with Fawzi al-Qawuqji, the Arab Liberation Army, a poorly equipped force of some 2,000 volunteers who crossed the Israeli border from Syria in January 1948, under the sponsorship of the Arab League. At the battle of Jabal al-Qastl (April 1948) on the Jaffa–Jerusalem highway, the better-trained and better-armed Haganah forces dealt the Arab forces a decisive blow, reopening the Jerusalem highway, killing Abd al-Qadir, and routing al-Qawuqji's troops. Soon thereafter, the Jewish forces took possession of most of the important Palestinian towns, including the major part of Jerusalem. For the Palestinians, their resistance at al-Qastil remains one of the proudest moments in their modern history, and Abd al-Qadir one of their most honored national heroes.

Muhammad Muslih

HUSAYN IBN ALI

[1852–1931]

Arab leader from the Hashimite family.

Descended from the Hashimite family of Mecca, Husayn was the amir of Mecca (1908–1916), king of the Hijaz (1916–1924), and the father of Ali, Zayd, and of King Faisal I ibn Hussein of Iraq and Amir Abdullah I ibn Hussein of Transjordan, later king of Jordan.

In 1893, Husayn moved to Constantinople (Istanbul), seat of the Ottoman Empire, at the bidding of Sultan Abdülhamit II, and remained there for the next fifteen years. During these years of "gilded captivity," Husayn established himself as the leading candidate for the Meccan emirate, and in 1908, the sultan appointed him to that position. Once in Mecca, Husayn found himself at odds with the Young Turk government in Istanbul. While he sought autonomy for himself and the hereditary office of amir for his sons, the Young Turks and the Committee for Union and Progress attempted to extend their control over the Hijaz through the construction of the Hijaz Railroad.

Husayn's attitude toward Arab nationalism before World War I has been the subject of some dispute. In 1911, he was approached by Arab deputies in the Ottoman parliament as a possible leader of a

pan-Arab independence movement. He declined to take active part in their movement. Yet, by 1914, his sons Faisal and Abdullah were actively involved in various secret societies, and in the spring and summer of 1914, Abdullah met with British officials in Cairo. After the outbreak of World War I, Husayn entered into discussions with Britain about the possibility of an Arab revolt led by him against the Ottomans, but he continued to assure the Young Turks of his loyalty. In 1915, he began a correspondence with Sir Henry McMahon, the British high commissioner in Cairo. The Husayn–McMahon Correspondence established the terms for a British-sponsored Arab revolt, with several critical ambiguities surrounding the status of Palestine.

In June 1916, Husayn launched the Arab Revolt, during which active military leadership passed to his four sons and the British. After the war, he refused to endorse the Versailles Treaty on the grounds that the British had reneged on the Husayn–McMahon correspondence and other wartime promises. At the same time, he came under increasing pressure from Abd al-Aziz ibn Saʿud Al Saʿud of the Najd in central Arabia. Estranged from the British, who terminated aid to Husayn after 1920, and bitter about the mandate system, Husayn declared himself caliph (head of Islam) after Turkey abolished the caliphate in 1924. This ill-advised move alienated Husayn from many of his remaining supporters, and in August 1924, Abd al-Aziz ibn Saʿud Al Saʿud launched a major assault on the Hijaz. Husayn abdicated, went into exile on Cyprus, and died in 1931 in Amman. He was buried in the al-Haram al-Sharif in Jerusalem.

UPDATED BY MICHAEL R. FISCHBACH

HUSAYNI FAMILY, AL-

Prominent Palestinian Arab family in Jerusalem.

By the late nineteenth century, the Husayni family had become extremely wealthy. They owned vast tracts of land amounting to about 50,000 *dunums,* including extensive areas and plantations in Jericho district. The social and political influence of members of the Husayni family was rooted in their ancient status as descendants of the prophet Muhammad, landowners, delegates to the Ottoman parliament, mayors and district governors, religious leaders, jurists, and educators. The family's influence also grew from a style of politics based on a delicate balance between the central authority of the Ottoman state and dominance in local Palestinian society. This balancing created a partnership between the central government in Constantinople (now Istanbul) and the urban upper class of the Arab provinces from the mid-nineteenth century until the demise of the Ottoman state in 1917 and 1918. Such partnership contributed to the further ascendance of the Husayni family since it enabled senior members of the family to act as intermediaries between the Ottoman government and local Palestinian society. The British, like the Ottomans before them, had to depend on the Husaynis and other locally influential notables to administer the local affairs of Palestine.

The senior members of the family include the following: Musa Kazim al-Husayni (1853–1934) was president of the Arab Executive from 1920 to 1934. Muhammad Amin al-Husayni (1895–1974) was a founder of Palestinian nationalism and the leader of the Palestine national movement until the *nakba* of 1948. Munif al-Husayni (1899–1983) was a close associate of al-Hajj Amin and editor of the Husayni camp's newspaper, *al-Jamiʿa al-Arabiyya.* Jamal al-Husayni (1892–1982), born in Jerusalem, served as secretary of the Arab Executive and the Supreme Muslim Council, as well as foreign minister for the All-Palestine government. Rajaʾi al-Husayni (1902–?) was active from 1945 in the Arab Information Offices, which were organized by Musa al-Alami under the auspices of the League of Arab States, served as minister in the All-Palestine government, and later went to Saudi Arabia to work as a senior official in the government. Ishaq Musa al-Husayni (1904–1990), a writer who at-

A portrait taken in 1938 of the mufti of Jerusalem and president of the Supreme Muslim Council of Palestine (1921–1936), Al-Haji Amin al-Husayni (1893–1974). Husayni opposed British rule and the establishment of a Jewish state in Palestine. **© Bettmann/Corbis. Reproduced by permission.**

tained literary prominence on a pan-Arab level, studied Arabic language and literature at the American University in Cairo (1923–1926), Cairo University (1927–1930), and the University of London (1930–1934) where he received a doctoral degree in Semitic languages and literature under the guidance of H. A. R. Gibb, an English expert on Arab culture and literature. Ishaq taught Arabic literature at the American University of Beirut, McGill University in Canada, the American University in Cairo, and the Arab League's Institute for Arab Studies in Cairo. He wrote numerous articles and books, the most widely acclaimed being *Memoirs of a Hen* (1943), which won the prize of Dar al-Maʿarif, one of Egypt's most prestigious publishing houses.

Dr. Daʾud al-Husayni (1903–1994), political activist, played an active role in the Palestine Arab Revolt, 1936–1939. He was captured by the British in Iraq in 1941 and detained in Rhodesia. Allegedly a coconspirator in the assassination of King Abdullah ibn Hussein (July 1951) he then served as a member of the Jordanian Parliament (1956, 1962), reportedly as a member of the Executive Committee of the Palestine Liberation Organization (PLO). He stayed in East Jerusalem after the Arab–Israel War of 1967 but was expelled to Jordan by the Israeli authorities in 1968 on charges of hostile political activities. Abd al-Qadir al-Husayni (1908–1948) was a son of Musa Kazim. Unlike most politicians who hailed from notable families, he actually joined the Palestinian commando groups both in the revolt of 1936–1939 and in the Arab–Israel War of 1948. He died in action (April 1948) at al-Qastal, a mountain along the Jerusalem–Jaffa highway. His son Faysal (1940–2001) established the Arab Studies Center in East Jerusalem in the 1980s. A senior figure in Fatah, he emerged as a local leader of the Palestinian Arabs in the territories occupied by Israel in 1967 and served on the advisory committee of the Palestinian delegation to the Middle East Peace Conference. Faysal was a pragmatist who advocated coexistence between Israel and a Palestinian state in the West Bank and Gaza.

After 1948, the Husayni family was no longer able to retain its dominance over the field of Palestinian politics. This was due to a combination of changes: the dispersal of the Palestinians, the loosening of family ties, the spread of new ideologies, the emergence of new political elites in many parts of the Arab world, as well as the orientation of Palestinian politics and the general weakening of the landowning, scholarly, and mercantile families that constituted a fairly cohesive social class from the second half of the nineteenth century until the end of the British mandate in 1948.

HUSAYNI, HIND AL-

[1916–1994]

Palestinian philanthropist.

Hind al-Husayni was the daughter of Tahir Shuqri al-Husayni, a member of the prominent Jerusalem family that has dominated the city's politics and society for centuries. He died in 1918, leaving a family of six. Hind attended the Jerusalem Girls College (JGC) in the 1930s and was a member of a private girls' school strike committee during the 1936–1939 Strike and Revolt. Husayni became interested in social work through her studies with Victoria and Elizabeth Nasir, aunts of Palestinian academic Hanna Nasir. After finishing her training at the JGC, she taught at the Islamic Girls School in Jerusalem until 1946. During the 1940s Husayni was president of the Women's Solidarity Society, whose work focused on child care for the children of working mothers. On 14 April 1948, after the massacre of Palestinians by the Irgun in the village of Dayr Yasin, many orphaned children were deposited in Jerusalem, where Husseini found them. In order to care for them, she founded an orphanage named Dar al-Tifl al-Arabi (House of the Arab Child), which was located in her family home in Jerusalem. From then until the present, the institution developed and expanded its philanthropic activities, which included a nursery, kindergarten, and school; vocational and computer training; and a farm. Hind al-Husayni died in 1994.

ELLEN L. FLEISCHMANN

HUSAYNI, HUSAYN AL-

[1937–]

Shiʿite politician in Lebanon.

Husayn al-Husayni was born to a prominent family in Shmistar, near Baʿalbak. He first ran for public office in 1964 and was elected to parliament in 1972, when his close association with Imam Musa al-Sadr paid off. His political role in the political life of Lebanon was minimal until 1978, when Musa al-Sadr "disappeared" and Husayni assumed the leadership of the AMAL movement. His conflict with other militant factions within the movement began in 1980, when Nabih Berri (his archrival) took control of AMAL.

With strong backing from Syria, Husayni was elected speaker of parliament in 1984, and he held the position until 1992, when Berri succeeded him. Husayni's showing in the 1992 election was poor, and the candidates of the Hizbullah (Party of God) in his district of Baʿalbak achieved great success. The election results weakened his ties with the government of Lebanon, and he became one of the most bitter opposition figures. He directs his attacks against Prime Minister Rafiq Bahaʾuddin al-Hariri, whom he accuses of corrupting Lebanon and of profiting from his high office. Husayni has been marginalized in the Shiʿite community by Berri and by Hizbullah. In 2003 Husayni joined deputies Naʾila Muʿawwad and Umar Karami to form an opposition front. He has been criticized for refusing to release the minutes of the parliamentary deliberations in Taʾif that produced the Taʾif Accord.

ASʿAD ABUKHALIL

HUSAYNI, JAMAL AL-

[1892–1982]

Palestinian nationalist leader.

Jerusalem-born Jamal al-Husayni was secretary of the Arab Executive and the Supreme Muslim Council. In 1935 he was elected president of the Palestine Arab Party, and one year later he became a member of the Arab Higher Committee (AHC). A firm believer in public relations and political lobbying as well as a relative and close aide to al-Hajj Muhammad Amin al-Husayni, the *mufti* of Jerusalem, he participated as member (1930) and as president (1939) of the Palestinian delegations dispatched to London to discuss Palestinian demands with the British government. He also served on the AHC's delegations to the League of Arab States and the United Nations. He was briefly detained by the British authorities in Palestine for his role in the Jerusalem and Jaffa demonstrations of October

1933. Following the *mufti*'s escape to Beirut in 1937, Jamal secretly joined him and from there he fled to Iraq, then to Iran where he was arrested by the British in 1942 and deported to Rhodesia, now Zimbabwe. Four years later, he returned to Palestine and, after 1947, he served as foreign minister for the All-Palestine Government and later settled in Saudi Arabia where he was adviser to King Saʿud (1953–1964). Jamal died in Beirut and was buried there.

On behalf of the political bodies on which he served during the mandate period, Jamal submitted compromise ideas to the Palestine government and to Jewish representatives concerning a new basis for relations between the government and the Jewish community on the one hand and the Palestinian Arabs on the other hand. The unpublished autobiography of Jamal reveals a feeling of apathy toward the *mufti*, partly because of the rift between the *mufti* and Musa al-Alami, whose sister Jamal had married.

Muhammad Muslih

HUSAYNI, MUHAMMAD AMIN AL-

[1895–1974]

Palestinian leader during the British mandate.

Born in Jerusalem, Amin al-Husayni (later often referred to as Hajj Amin) was the scion of a prominent Palestinian Muslim family, which included landed notables and religious officeholders such as the mufti (Islamic legal expert). He studied in Cairo briefly at al-Azhar University and at the Dar al-Daʿwa wa al-Irshad of Rashid Rida, the Muslim reformer and precursor of Arab nationalism, and at the military academy in Istanbul. He served in the Ottoman army in 1916, but his loyalty to the Ottoman Empire was shaken by Turkish attempts to impose their language and culture on their Arab subjects. Upon returning to Palestine in 1916, he participated in the British-supported Arab Revolt of 1916 against the Turks and worked for the establishment of an independent Arab nation. In 1918, he was elected president of al-Nadi al-Arabi (the Arab Club), a literary and nationalist organization opposed to Zionist claims on Palestine. After participating in a violent anti-Zionist demonstration in 1920, he escaped to Damascus, Syria, where he worked for the short-lived Arab nationalist government of Amir (later King) Faisal. The first high commissioner of Palestine, Sir Herbert Samuel, pardoned him from a ten-year sentence in absentia for his role in the 1920 demonstration, and appointed him to succeed his brother as mufti of Jerusalem in 1921.

Al-Husayni's political career can be divided into two distinct phases: the Palestine years of 1917 to 1936, when he cooperated with the British while opposing Zionism, and the exile period after 1936, when he became intransigent and cooperated with Nazi Germany.

Palestinian Phase

The fundamental explanation for al-Husayni's cooperation with the British can be traced to the politics of the class from which he emerged. The notables were defenders of the status quo and worked with the imperial government to guarantee or enforce stability while representing their society's interests and demands to the ruling power—first the Ottomans, then after 1917 the British. Before being appointed mufti, al-Husayni assured Samuel that he and his family would maintain tranquility in Jerusalem. In early 1922, he was appointed president of the Supreme Muslim Council, which gave him control over Muslim courts, schools, and mosques, and an annual budget. During the 1920s al-Husayni used his office to extend his influence in religious and political affairs within and beyond Palestine. His rise to power coincided with the decline of the Palestine Arab Executive, which led the Palestinian national struggle from 1920 to 1934, and with the perception that he had stood up to the Zionists during the 1928 through 1929 Western (Wailing)Wall controversy and riots. In fact, he neither organized nor led the riots, according to the

British Shaw Commission, which investigated the disturbances.

From 1929 to 1936, al-Husayni cooperated with the British while attempting to change British policy. He opposed militant activities against British rule and sent his secretary to London to propose a representative government. For their part, the British proposed, in the Passfield White Papers of 1931, restrictions on Jewish immigration and land purchase but withdrew the proposal because of Zionist pressure. The mufti convened a general Islamic Congress in December 1931 to galvanize Arab and Muslim opposition to Zionism and to caution Britain that support for Zionism would jeopardize her interests in the Arab and Muslim world.

British policy did not change, however. Jewish immigration rose in 1935 to a record annual high of 61,854, which helped radicalize the Palestinian community. The British killing of an insurgent, Izz al-Din al-Qassam, further embittered Palestinians, who began to challenge the mufti's ineffective methods. Until 1936, al-Husayni was able to serve two masters: his British employers and his people. But in April 1936, a general strike was declared and violence spread. The public urged him to assume the leadership of the strike, which protested Jewish immigration and land purchase and demanded a national government. His acceptance put him on a collision course with the British.

Exile Phase

Over the next few years, several events radicalized al-Husayni. When the British proposed, in the 1937 Peel Commission Report, to partition Palestine, he rejected the proposal because the Jews, who owned 5.6 percent of the land, would receive many times that area and in the most fertile region, from which most Palestinians would be expelled; the British would remain in control of the third holiest city of Islam, Jerusalem; and the rest would be attached to Amir Abdullah's Transjordan. Faced with the mufti's refusal to cooperate, the British stripped him of his offices and sought to arrest him.

He escaped to Lebanon in 1937, continued to lead the revolt, and most likely acquiesced in the assassination of his Palestinian opponents. The revolt was finally suppressed in 1939, after more than three thousand Palestinians had been killed, their leaders exiled, and the Palestinian economy shattered. Al-Husayni became bitter and uncompromising, rejecting the 1939 White Paper even though its terms were favorable to the Palestinians: It proposed a limitation on Jewish immigration and land purchases and a Palestine state with a representative government based on ratio of two Arabs to one Jew. He again escaped, this time from Lebanon to Iraq, where he encouraged a pan-Arab revolt against British rule in 1941. British prime minister Winston Churchill approved his assassination, but a British and Zionist mission to assassinate him in Baghdad failed.

Al-Husayni fled to the Axis countries, where he conferred with Mussolini and Hitler. He cooperated with the Nazis in exchange for German promises that the Arab nations would be liberated and given their independence after the war, and he assisted in anti-British and antisemitic propaganda campaigns and in recruiting Muslims for the war effort. The mufti, fearing that Jewish immigration to Palestine would lead to the domination or dispossession of his people, tried unsuccessfully to persuade Nazi officials not to allow Jews to leave Axis countries for Palestine. By doing so, he endangered the lives of thousands of Jews, mostly children, who probably would have been sent to concentration camps. Israeli writers and their supporters were so eager to indict him as a war criminal who participated in the Holocaust that they exaggerated his activities, whereas Arab writers, especially Palestinians, were so intent on justifying his actions in Axis countries that they ignored his cooperation with a barbaric regime. What is certain is that his association with the Nazis tainted his career and his cause and limited his effectiveness during the critical period from 1946 to 1948.

In 1946, al-Husayni returned to the Arab world with the aim of continuing his struggle against the Zionists and establishing an Arab Palestine. But he misjudged the balance of forces. He rejected the UN General Assembly's partition resolution (181) of November 1947 largely because it gave the Jews 55 percent of Palestine when they owned only 7 percent of the land. In the civil strife and war that followed, about 725,000 Palestinians fled or were expelled by Israel forces. After the Arab–Israel War of 1948, al-Husayni gradually lost political influence and became a religious leader, settling first in Cairo and then in Beirut.

Assessment

Although astute, incorruptible, and dedicated to the welfare of his people, al-Husayni's policies during both phases of his career were a failure. From 1917 to 1936, despite his rhetoric about the ominous threat of Zionism to Palestinian national existence, he cooperated with the British and rejected an overt struggle, preferring petitions, delegations, and personal appeals. In the meantime, the Zionists' numbers increased from 50,000 in 1917 to 384,000 in 1936. It was only after 1936 that al-Husayni participated in active measures to stop Jewish immigration, which if unchecked, the Palestinians felt, would result in their expulsion or domination. But by then it was too late: The Zionists had become too powerful, and the British had lost their discretionary authority in the country. Conversely, the Palestinians, especially after the suppression of the Arab Revolt, were too weak.

Al-Husayni did not adjust his demands to the realities and made little effort to reach an accommodation with the British and the Zionists. His rejection of the 1947 UN resolution was a missed opportunity that contributed to Palestinian dispossession. However, even had he accepted the resolution, it is uncertain that a Palestinian state would have been established because of a 1946 and 1947 agreement, supported by the British, between Amir Abdullah ibn Hussein and the Jewish Agency to divide Palestine between them.

The overriding factors that frustrated Palestinian nationalists have as much to do with al-Husayni's intransigence as with the balance of forces. The 1897 Basel Zionist program and the 1917 Balfour Declaration policy, backed by the British military and by Western support, gave Palestine's Jewish community time to grow through immigration and land purchases and to establish modern quasigovernmental and military institutions. The Palestinians were a weak, divided, and traditional society and never a match for the British and the Zionists.

HUSAYNI, MUSA KAZIM AL-

[1853–1934]

Palestinian nationalist leader.

Musa Kazim al-Husayni played a major role in the early phase of the Palestinian national movement. Born in Jerusalem to a socially and politically prominent family, he acquired senior positions in the Ottoman imperial bureaucracy in Palestine, Transjordan, Syria, Yemen, and Iraq. After the British occupied Palestine, he was appointed mayor of Jerusalem in March 1918, succeeding his deceased predecessor and brother, Husayn al-Husayni. Throughout his political career, Musa Kazim followed a policy of cautious engagement in politics and discreet opposition to the British, who sponsored and supported the Zionist movement. In 1918 he refrained from demonstrating against Zionism after the Jerusalem governor, Ronald Storrs, told him that he must make a choice between political activism and the mayoralty. His circumspect behavior, which was typical of a generation of Palestinian politicians whose political style was shaped by their

experience in the Ottoman system of government, did not stop him from fighting for Palestinian nationalism. In 1920 he was removed from his post as mayor of Jerusalem by the British for participating in a demonstration against the Jewish National Home policy of the British government.

Husayni was elected president of the third Palestinian Arab Congress (held in Haifa in December 1920) and the Arab Executive, a loosely-structured political body formed in 1920 to coordinate the Palestinian national struggle. Husayni led the Palestinian Arab delegations that were dispatched to London to present the Palestinian point of view to the British authorities. During the 1929 Western (Wailing) Wall Disturbances, Husayni signed a manifesto urging his fellow Palestinians not to engage in violence and to arm themselves instead with mercy, wisdom, and patience.

Partly as a result of his disappointment with the British pro-Zionist policy, and partly because of the pressure of the action-oriented Palestinian groups that emerged during the late 1920s, he led the October 1933 Palestinian demonstrations against Zionist immigration in Jerusalem. A product of Ottoman times with a penchant for discretion and a love for senior political posts, Husayni was unable to devise a strategy that would alter the British pro-Zionist policy. The balance of power, which was overwhelmingly in favor of the Zionists and their British supporters, together with internal Palestinian bickering—epitomized by the Husayni-Nashashibi rivalry—put Husayni and his generation of Palestinian nationalists at a decisive disadvantage.

Beaten by British security forces during the October 1933 demonstration, he never fully recovered. He died the "venerable father" *(al-ab al-jalil)* of the Palestine national movement.

HUSAYN–MCMAHON CORRESPONDENCE (1915–1916)

Correspondence between Sharif Husayn ibn Ali of Mecca and the British high commissioner in Egypt, who promised independence to Arab countries.

Ten letters, written between 14 July 1915 and 30 March 1916 but unpublished until 1939, constitute an understanding of the terms by which the sharif would ally himself to Britain and revolt against the Ottoman Turks in return for Britain's support of Arab independence. Sharif Husayn ibn Ali of Mecca asked Sir Henry McMahon, the British high commissioner in Egypt, to support independence of the Arab countries in an area that included the Arabian Peninsula (except Aden), and all of Iraq, Palestine, Transjordan, and Syria up to Turkey in the north and Persia in the east. He also asked Britain to support the restoration of the caliphate.

McMahon's reply on 24 October 1915 accepted these principles but excluded certain areas in the sharif's proposed boundaries: coastal regions along the Perisan Gulf area of Arabia; the Iraqi province of Baghdad, which would be placed under British supervision; areas "where Britain is free to act without detriment to the interests of her ally France"; and, in Syria, "the districts of Mersina and Alexandretta and portions of Syria lying to the west of the districts of Damascus, Homs, Hama, and Aleppo." The Arabs assumed that at least Arabia, northern Iraq, central Syria, and Palestine—which was regarded as southern, not western, Syria—were part of the area that was to be independent. They started the Arab Revolt of 1916, which helped the British to defeat the Turks and to occupy the region. After the war, Arabs felt betrayed because Britain conceded Syria to France and promised to help in the establishment of the Jewish national home in Palestine. The British claimed that they intended to exclude Palestine from McMahon's pledges.

The interpretations of the letters have been disputed ever since, in part because of official oversight, and because of deliberate vagueness by the British who—to obtain French, Arab, and Jewish support during the war—made conflicting promises they could not keep. Contributing to the confusion are partisan scholars who read into the correspondence interpretations that fit their ideological positions.

HUSAYN, TAHA

[1889–1973]

Egyptian critic and writer of fiction; Egypt's minister of education, 1950–1952.

Taha Husayn was born in an Egyptian village in the Nile delta. His life was transformed at the age of two, when he was blinded by the village barber's attempt to treat ophthalmia. The course of his early education, with its many frustrations and occasional triumphs, is recorded in one of the major monuments of modern Arabic literature, *Al-Ayyam* (1925; published in English as *An Egyptian Childhood,* 1932). In two later volumes under the same title, Taha Husayn traces his transition from the village Qurʾan school to the Azhar mosque-university in Cairo (*Al-Ayyam,* 1939; *The Stream of Days,* 1948) and his sense of acute frustration at the kind of education being offered there. The third volume (*Al-Ayyam,* 1967; *A Passage to France,* 1976) describes his transfer to the new secular Egyptian University (now the University of Cairo) from which he obtained the first Ph.D., with a dissertation on the renowned classical Arabic poet, Abu al-Ala al-Maʿarri, whose blindness clearly led to feelings of close affinity between author and subject. In 1915, Taha Husayn traveled to France. Arriving at the University of Montpelier, he hired a young French woman to read to him. The two fell in love and were married in 1917. Husayn moved to Paris in 1915 where he became a student at the Sorbonne and, in 1918, completed a second doctoral dissertation, this one on the famous historian Ibn Khaldun (1332–1406).

Upon his return home, Husayn set himself, both as author and teacher, the task of introducing to his fellow countrymen and, by extension, to the Arab world as a whole, many of the ideas and ideals he had encountered in Europe. Appointed professor of ancient history immediately following his return from France, he assumed the chair of Arabic literature in 1925. It was at this time that he contributed to the newspaper *al-Siyasa* a series of articles on early Arabic poetry, which were to be published later in three volumes as *Hadith al-Arbaʿa* (1954, n.d., 1957). His lecture references on the debt of Islam to Hellenistic ideas were already controversial, but when in 1926 he published in book form *Fi al-Shiʿr al-Jahili,* his views on the authenticity of pre-Islamic poetry, and suggested that certain stories recorded in the text of the Qurʾan might be fables, he was accused of heresy. He offered to resign but was vigorously defended by the president of the university, Ahmad Lutfi al-Sayyid (1872–1963). Eventually a compromise was reached whereby the work was withdrawn. A revised version, *Fi al-Adab al-Jahili,* was published in 1927, with the offending passages removed but the remainder of his argument expanded.

Taha Husayn was not afraid to provoke and confront controversy during the remainder of his career. Appointed dean of the faculty of arts in 1929, he soon clashed with governmental authorities and was dismissed from that position in 1932 amid strikes and resignations. He now became more active in both journalism and politics while continuing his career as a university teacher, administrator, and writer. In 1938 he published another controversial work, *Mustaqbal al-Thaqafa fi Misr,* laying out a broad and ambitious program of educational reform that involved a process of modernization on the model of Europe. During the 1940s he was accorded increasing recognition as a scholar and writer both in Egypt and abroad; in 1950 he was appointed minister of education in the Wafd government. He was in the process of implementing his

reforms when a series of events began that were to culminate in the Egyptian revolution of July 1952.

During the final decades of his life, as the pace of development in the literary tradition that he loved began to accelerate, he became a more conservative figure, bent on preserving the great heritage from what he came to regard as the wilder excesses of some of its contemporary inheritors—not least in the call for literature of commitment that so predominated in the critical environment of the 1950s.

Taha Husayn made several contributions to modern Arabic fiction, of which the novels *Duʿa al-Karawan* (1932) and *Shajarat al-Buʾs* (1944) and the short-story collection *Al-Muʿadhdhibun fi al-Ard* (1949) are the most notable. It is, however, in the realm of literary criticism that his contribution to modern Arabic cultural life is most significant. He played a major role in the formulation of a modern approach to the issues of Arabic literary history; he applied critical methods to the canon of both poetry and artistic prose through a series of studies on genres and various writers. From his early study of al-Maʿarri, mentioned above, via his work on Abu al-Tayyib al-Mutanabbi (died 965), generally acknowledged as the greatest of the classical poets, to contemporary poets such as Ahmad Shawqi (1868–1932) and Hafiz Ibrahim (1871–1932), it is possible to detect a determined effort to introduce into the world of Arabic literature a critical approach based on a recognizable methodology. In so doing, he laid the groundwork for subsequent generations of critics, most notably his own student, Muhammad Mandur (1907–1965).

Taha Husayn was known during his lifetime as the dean of Arabic literature—the title is appropriate. Not only did he write creative works and critical studies, but his sense of mission led him to play a major role in the difficult process of cultural adjustment and change that the Arab world had to face during the course of the twentieth century.

HUSSEIN IBN TALAL

[1935–1999]

King of Jordan, 1952–1999.

Hussein's rule indelibly stamped the fabric of socio-economic and political life in Jordan, to the point that in some people's eyes Hussein and Jordan were inseparable and almost synonymous for over four decades. Hussein ibn Talal was born in Amman on 14 November 1935, to Prince Talal ibn Abdullah and his wife, Zayn al-Sharaf. Talal was the son of Amir (Prince) Abdullah I ibn Hussein of Transjordan, and grandson of Husayn ibn Ali (Sharif) of the Hashimite family of Mecca. Hussein was a direct descendant of the Prophet Muhammad, representing the forty-second generation after the Prophet. His grandfather Abdullah started instructing the young prince in statecraft at an early age. Following then-King Abdullah's assassination in July 1951, Talal, who suffered from schizophrenia, reigned only thirteen months before being replaced by seventeen-year-old Hussein in August 1952. Only after reaching his eighteenth year (according to the Islamic calendar) in 1953 did Hussein formally begin his rule.

Despite the family's lack of worldly goods—they could not even buy him a bicycle—Hussein enjoyed a broad but abbreviated education. In Amman, he successively attended a religious school and Kulliyat al-Matran (the Bishop's School); this instruction was supplemented by special tutorials in Arabic and Islam. For his middle preparatory years, he was enrolled in the prestigious Victoria College in Alexandria, Egypt, where he broadened his world view. During this period, the Middle East and Jordan were experiencing momentous events. In 1948, when Prince Hussein was thirteen, Israel was created, and the Arab armies attacked, fighting until 1949. They were defeated, but Transjordan gained possession of the West Bank and absorbed a major

wave of Palestinian refugees. In 1950, when Prince Hussein was fifteen, the West Bank was formally joined to the Hashimite Kingdom of Jordan.

In 1951, this succession of events began to directly affect the young prince; on 20 July, King Abdullah was assassinated by a disgruntled Palestinian. While his father, Talal, temporarily ascended the throne, Prince Hussein was moved to England to join his cousin, Crown Prince Faisal II ibn Ghazi of Iraq, at Harrow, an elite school for future leaders of Britain and the British Empire. On 11 August 1952, King Talal was constitutionally removed from the Jordanian throne due to illness, and the crown was passed to his eldest son, Prince Hussein. Since he had not yet reached his majority, the young King Hussein was transferred to Sandhurst, the British military academy, while a regent ruled in Amman. In May 1953, King Hussein returned to Jordan and assumed the throne. Despite dire predictions for his political survival—the young king ruled a small country in the midst of a turbulent Middle East—he ended up ruling far longer than any other king of Jordan. By the time of his death in 1999, he had come to symbolize modern Jordan.

Hussein was married four times during his long reign. His first wife was Dina bint Abd al-Hamid (1929–), a distant and older cousin from Cairo. They married in April 1955 but divorced eighteen months later. In May 1961, Hussein married the daughter of a British military attachè, Antoinette Avril Gardiner (1943–), who assumed the name Princess Muna. This union too ended in divorce in 1972. In the following year, the king married a third time, this time to a Palestinian named Alia Baha

al-Din Tuqan (1948–1977), from the prominent Tuqan family of Nablus. In February 1977, Queen Alia (also Aliya) died in a helicopter crash. In June 1978, the king married Elizabeth Najeeb Halaby (1951–), an Arab-American who became Queen Noor (also Nur). He had a number of children by his marriages. His marriage to Dina produced a daughter, Aliya (1956–). His two sons by Princess Muna are Abdullah (1962–) and Faysal (1963–), along with two girls, Ayisha (1968–) and Zayn (1968–). Hussein and Queen Alia produced a girl, Haya (1974–), and a son, Ali (1975–). Finally, his children with Queen Noor were two boys, Hamza (1980–) and Hashim (1981–), and two girls, Iman (1983–) and Rayya (1986–). In 1976 he also adopted a daughter with Queen Alia, Abir (1972–).

Hussein's rule may be divided into three major historical periods. The first twenty years were marked by crises and threats to the throne originating from inside and outside the country: street riots stimulated by radical Arab nationalism; challenges from his own prime minister in 1956 and 1957; destabilization by larger and stronger Arab states; and the devastating loss of the West Bank to Israel in the Arab–Israel War of June 1967. Soon after, in 1970, the Palestinian guerrilla organizations challenged Jordan in a bloody civil war known as Black September. Nonetheless, while relying on his loyal military to survive, the king helped put in place the bases for development.

The second phase, starting after the Arab–Israel War of October 1973, is distinguished by quieter internal political conditions, more rapid development fueled by funds (direct grants, loans, individual remittances) derived from the petroleum boom in neighboring states, and improved relations with most of Jordan's Arab neighbors. It was a relatively less radical, regional atmosphere. Despite his problems with the Palestinians and his frequently strained relations with the Palestine Liberation Organization (PLO) and its leader, Yasir Arafat, the king came to be a respected leader in most Arab capitals. Indeed, he hosted two Arab summits—1980 and 1987—in Jordan.

The third phase is dominated by the end of the Cold War and the alteration of regional relationships. In a sense, Hussein's historical July 1988 decision to disengage Jordan politically and administratively from the West Bank, in response to the pressures from the first Palestinian Intifada (uprising) that started in 1987 and the clear lack of Palestinian support for continued Jordanian rule, was a precursor to these changes. More important was the withdrawal of the Soviet Union as an active player in the region (1989–1990), and the United States's dominance in areas of its perceived interests. The resulting polarization of the Arab world and the Gulf Crisis of 1990 and 1991 and ensuing war left Jordan (at the time allied politically with Saddam Hussein's Iraq) and a few other poor Arab states politically, economically, and regionally isolated. Finally, following significant anti-government protests in April 1989 in areas that comprised the "Hashimite heartland" that were so important to his rule, Hussein initiated a significant democratization process and called for the first general parliamentary elections in the country since 1967. Political parties were legalized, political exiles allowed to return, and press freedoms were expanded. Leaders from all political streams wrote a national charter, which defined the general principles for the country's political life. A special general congress made up of 2,000 representatives ratified the document on 9 June 1991.

Israeli prime minister Yitzak Rabin (left) with King Hussein of Jordan. The two men signed a peace treaty in 1994 that ended forty-six years of hostile relations between their countries. Major points of the agreement included the resolution of disputes over land and water rights and a pledge of cooperation regarding trade and tourism. © Photograph by Sa'ar Ya'acov. A long-term trend in the king's rule was his moderation and centrism. After times of internal threat

to the regime, he did not execute the challengers. Some were sent to prison or exiled, but in time many were brought back and given positions of some authority. Nor did Hussein follow radical or overly conservative social, economic, or cultural policies. His relations with the Arab world follow a similar pattern. As the leader of a small state, Hussein followed a strategic policy for the survival of his country by consistently trying to maintain acceptable ties with some of the strong Arab states; this policy has not always met with success as, for example, during the post–Gulf War period, when his Iraq policy was considered ill advised. Throughout his rule, Hussein was resolutely pro-Western, even when that stance cost him dearly. Finally, he was long convinced of the need to reach a diplomatic resolution of the conflict with Israel. Drawing upon a history of good Hashimite relations with Zionist and Israeli leaders, and as a result of the disastrous loss of the West Bank in the 1967 Arab–Israeli war, Hussein tried to keep Jordan out of the ongoing Arab struggle against Israel. Jordan became the second Arab country to sign a peace treaty with Israel, in October 1994. Throughout the mid and late 1990s, Hussein remained involved in the faltering yet ongoing peace process between Israel and the PLO. He even left his cancer treatment in the United States (see below) in October 1998 to participate in the Wye River conference convened by U.S. president Bill Clinton.

Hussein took one of the most dramatic political moves in his long reign literally just two weeks before he died. A heavy smoker, Hussein was diagnosed with renal cell cancer (of the kidney) in August 1992. After successful surgery, he returned to Jordan the following month to a tumultuous hero's welcome. In July 1998, Hussein was again diagnosed with cancer, this time non-Hodgkins lymphoma, a cancer of the lymph glands. After seeking treatment in the United States on 14 July, he returned to Jordan on 19 January 1999, announcing that he had been cured. He then made a decision that stunned his country: He replaced his brother, Prince Hassan (also Hasan), with his eldest son, Abdullah II ibn Hussein, for the post as crown prince and heir apparent. Hassan (1947–) had been the crown prince and close confidant of the king since April 1965, yet he and Hussein eventually disagreed over who Hassan's successor should be: one of his sons, as the constitution states, or one of Hussein's own sons. This and other problems caused a rift between the two brothers, something magnified (so reports stated) by the political maneuverings of some of the royal wives. Hussein's sudden and dramatic decision was also surprising given that Abdullah was not one of the king's sons who openly had been groomed for leadership. In the early 1990s, Hussein's choice seemed to be Prince Ali, eldest son of the late Queen Alia, whereas by the late 1990s the king's attentions seemed focused on Prince Hamza, the first son born to him and the reigning Queen Noor. The move also carried significant political import both domestically and internationally, given that Abdullah had no practical political or diplomatic experience, whereas Hassan's resumè was extensive.

Hussein suffered a relapse and returned to the United States on 26 January, the day after the dramatic announcement that Abdullah was the new crown prince. When treatment failed, he flew back to Jordan in a critical state, and died on 7 February. Jordanians were devastated. His funeral was a huge diplomatic gathering attended by a host of world leaders and fellow monarchs, including U.S. president Bill Clinton, former presidents Gerald Ford, Jimmy Carter, and George H.W. Bush, Russian president Boris Yeltsin, French president Jacques Chirac, and Prince Charles and Prime Minister Tony Blair of the United Kingdom, among others. The funeral also brought together a host of Middle Eastern leaders, including those from countries not having diplomatic relations with one another. Among these were Israel's Prime Minister Benjamin Netanyahu and President Ezer Weizman of Israel, President Hafiz al-Asad of Syria, President Husni Mubarak of Egypt, and Palestinian leader Yasir Arafat. Hussein was buried at the royal palace cemetery in Amman, next to the tombs of his father and grandfather.

UPDATED BY MICHAEL R. FISCHBACH

HUSSEINI, RANA

[1967–]

Jordanian journalist and women's rights activist.

Rana Husseini (also Husayni) was born in Jordan, and she received a bachelor's degree in 1990 in communications and a master's degree in 1993 in liberal arts from Oklahoma City University. She has been working since 1993 as a reporter and photographer for the *Jordan Times.* Her coverage focuses on crime, women's and children's issues, and the role of the media in advancing women's rights. Throughout her pioneering and persistent reporting on "honor crimes" in Jordan, Husseini drew national, regional, and international attention to the issue. She was a founding member of the Jordanian Campaign Committee to Eliminate So-Called Crimes of Honor in Jordan in 1999. Within a period of four months, the committee collected over 15,000 signatures demanding the cancellation of laws that provide leniency for perpetrators of such crimes. The committee was granted the Human Rights Watch Award in 2000. Husseini served in 1998 as a regional coordinator for the United Nation's Development Fund for Women (UNIFEM) campaign to eliminate violence against women. She received the Ida B. Wells Award for Bravery in Journalism in 2003. She also received the Reebok Human Rights Award for reporting on violence against women in Jordan in 1998, and the MEDNEWS (Med-Media Program, European Union) award in 1995 for best article, "Murder in the Name of Honor."

ISIS NUSAIR

HUSSEIN, SADDAM

[1937–]

President of Iraq from 1979 to 2003.

Saddam Hussein (also Husayn, Hussain) al-Tikriti was born on 28 April 1937 to a Sunni Arab family in Tikrit, Iraq, on the northern bank of the Tigris River. His family was from the village of al-Awja, near Tikrit, and was of poor peasant stock; his father reportedly died before his birth. His stepfather denied him permission to go to school, so Saddam ran away, seeking refuge in Tikrit, in his mother's brother's home.

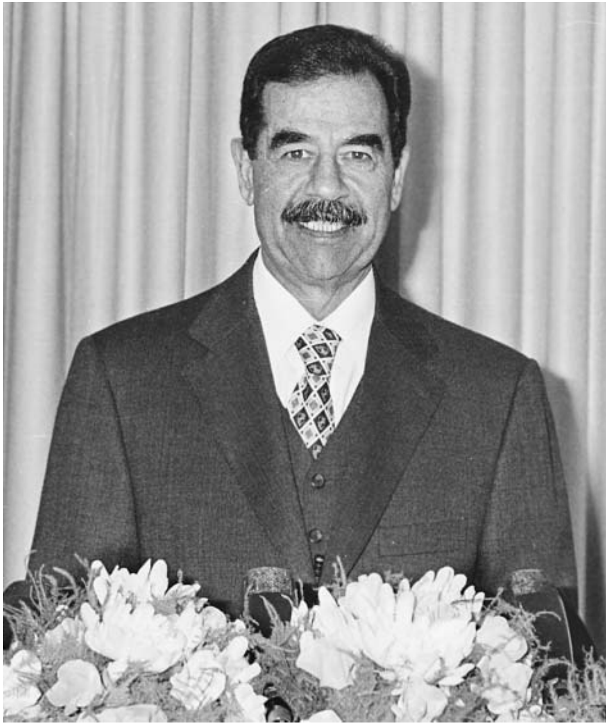
Early History

Saddam Hussein's maternal uncle, Adnan Khayr Allah Talfa, raised him through adolescence; he was a retired army officer and an advocate of Arab nationalism—a sentiment he imparted to Saddam—and he had participated in the short-lived anti-British revolt in 1941, known as the Rashid Ali Coup.

In 1956, Saddam moved to Baghdad, where he was impressed by the nationalism that swept Iraq in the wake of Egypt's nationalization of the Suez Canal and the British-French-Israeli attack on Egypt. In 1957, he joined the Baʿth Arab socialist party, which had been founded in Syria in 1947. Dedicated to Arab unity, the party had been popular among students in Jordan, Syria, Iraq, and Lebanon since the early 1950s. From 1957 on, his life was inextricably bound up with Baʿth.

In 1959, during the presidency of the Iraqi dictator General Abd al-Karim Qasim, Saddam was a member of a Baʿth team assigned to assassinate Qasim. The attempt failed, and Saddam was wounded in the leg during an exchange of gunfire. He fled Baghdad and later staged a daring escape to Syria, and from there to Egypt, where he joined a number of other exiled Iraqis. He is believed to have become a full member of Baʿth while he was in Egypt.

Qasim's regime ended in February 1963, when a group of Iraqi nationalists and Baʿthist officers brought it down in a violent coup. Qasim was killed, and Saddam returned to Iraq with other exiled Iraqis, although he played only a minor role in the



Baʿathist president Saddam Hussein ruled Iraq from 1979 until the U.S.-led invasion into the country unseated him in 2003. Hussein came to power when President Hasan al-Bakr was forced to resign, and he quickly moved to eliminate any possible challengers to his authority. © AP/Wide World Photos. Reproduced by permission.

Baʿth government that took power. The new regime did not last.

In November 1963, General Abd al-Salam Arif staged a successful anti-Baʿthist coup and Saddam went underground again. From 1963 to 1968, he worked in clandestine party activities, and he was captured and jailed, although he managed to escape. In 1966, while still underground, he became a member of the regional command of the Iraqi branch of the Baʿth Party and played a major role in reorganizing the party to prepare for a second attempt at seizing power. He worked closely with General Ahmad Hasan al-Bakr, a fellow Tikriti and a distant relative, who had been prime minister under the Baʿth and was respected by the military. In this period, Saddam was known as a tough partisan and a political enforcer, willing to liquidate enemies of the party.

In July 1968, the Baʿth Party returned to power after two successful coups that took place in rapid succession. Saddam played an important part in both. Ahmad Hasan al-Bakr became president of the republic; Saddam became vice president of the Revolutionary Command Council after some maneuvers to eliminate competitors for the position.

Al-Bakr and Saddam

From 1969 through 1979, Iraq was ruled by al-Bakr, the respected army officer, and Saddam, the young, dynamic manipulator and survivor. No major decisions were made without Saddam's consent, and he gradually built the organs of a police state that spread an aura of fear over the country and of invincibility around himself.

In the 1970s, Saddam had helped shepherd Iraq through major social and economic development, made possible by an increase in petroleum revenues. The changes brought by this expansion of social programs included compulsory primary education, a noticeable increase in women's participation in the workforce, the founding of new universities, and the availability of medical services. An ambitious industrial program in petrochemicals, steel, and other heavy industry began. The Baʿth Party also implemented policies that brought all the social and economic sectors under its control, including the foreign-owned Iraq Petroleum Company, which was nationalized in 1972.

Saddam and the Baʿth Party distanced themselves from the West in the 1970s, instead building strong ties with the Soviet Union and the Eastern bloc. In 1972, an important treaty of friendship was signed between Iraq and the Soviet Union. France was the only Western European country with which Iraq maintained good political and economic relations. Iraq took a hard stand against Israel, attempting to isolate Egypt after the 1978 Camp David Accords.

The Baʿth Party inherited a problem with the Iraqi Kurds, who were struggling for self-determination. After a major revolt that lasted two years, the Kurds had been given special status in 1970, allowing self-rule in Kurdish areas. The Kurds revolted again in 1974 and 1975. Unable to put an end to their revolt, mainly because the Kurds had help from Iran, Saddam demonstrated his daring style by signing the 1975 Algiers Agreement with the shah of Iran, putting an end to Iranian support for the Kurds in return for

some modifications of the Iran–Iraq border along the Shatt al-Arab in the south.

Saddam married his cousin Sajida Khayr Allah Tulfa and had five children. His two sons, Uday and Qusay, held high security positions in the mid-1990s.

War with Iran

The health of President al-Bakr had been deteriorating, reportedly due to cancer. Saddam felt that the moment had come for him to assume total power. On 16 July 1979, al-Bakr was forced to resign and Saddam was elected president of the Iraqi republic. Followed a ruthless purge of suspected challengers, he executed five members of the Revolutionary Command Council and some twenty Baʿth Party members. This cleared the way for him to establish personal rule and a total monopoly of power.

Also in 1979, the Iranian Revolution established a Shiʿite Islamic republic. Iran's new government soon became a political threat to Iraq, calling for an uprising among Iraq's Shiʿite population and the establishment of a regime similar to Iran's. Soon border clashes and claims of border violations by troops from both sides were weekly events. Some pro-Iranian Shiʿite elements in opposition to Saddam, mainly the al-Daʿwa al-Islamiyya (Religious Call) Party, aggravated this situation with internal violence, including two assassination attempts on top Iraqi government members.

Saddam took advantage of Iran's weakness to settle previous scores. In September 1980, he declared that the 1975 Algiers Accord with Iran was null and void. The Iraqi army then crossed the Iranian border and seized Iranian territories, which were evacuated later in the war. The result was a bitter and costly war that lasted eight years.

Islamic, Arab, and international mediation efforts to end the war were unsuccessful. Both countries used long-range missiles against cities, and Iraq used chemical weapons to ward off Iran's human-wave attacks. Casualties—both military and civilian—mounted on both sides. As the war continued, Saddam adopted a pragmatic stance in international affairs, and the oil-rich Gulf states provided funds to finance the Iraqi military effort. Diplomatic relations with the United States—severed since 1967—were reestablished in November 1984.

In July 1988, Iran unexpectedly announced that it had agreed to a cease-fire after repeated attempts to defeat the Iraqi army near Basra. Peace negotiations continued for months; in the fall of 1990 (after Iraq's August invasion of Kuwait), in a dramatic action, Iraq accepted the reinstitution of the 1975 Algiers Accord and a rectification of borders between the two countries, as demanded by Iran. However, no peace treaty was signed.

Kuwait

On 2 August 1990, Iraq invaded Kuwait. The invasion was swift and met little resistance, and the Kuwaiti ruling family fled to Saudi Arabia. Iraq had longstanding claims to Kuwait, which went back to the days of the Ottoman Empire, but Kuwait's independence had been recognized by Iraq's Baʿthist regime, which had come to power in 1963.

Just before the invasion, relations between Iraq and Kuwait had been tense. Differences existed over loan repayments, oil pricing, and the border. Iraq accused Kuwait of stealing oil by slant drilling under the border into Iraqi oil fields, and of economic warfare because of Kuwait's oil policy. Saddam annexed Kuwait a few days after the invasion, declaring that country a province of Iraq. The Kuwaiti government called for help to force Iraq's withdrawal. The UN Security Council repeatedly convened to debate several resolutions asking Iraq to withdraw and restore Kuwait's legitimate government. The United Nations agreed to impose an economic blockade on Iraq and, if that did not succeed, to use military force. The role of the United States, Britain, France, and the Soviet Union was pivotal in passing these measures.

Mediation efforts and economic pressures proved unsuccessful, but an international coalition of military forces, led by the United States (in accord with the newly cooperative Soviet Union), was deployed to eastern Saudia Arabia. After several months of troop buildup in Saudi Arabia and Saddam's failure to accede to a deadline for withdrawal, the attack began, on 16 and 17 January 1991, with a five-week campaign of air strikes on Iraq, followed by a four-day land campaign. Saddam ordered a retreat from Kuwait when coalition forces entered

southern Iraq. A cease-fire was declared on 27 February 1991, and anti-Saddam uprisings began in some southern Iraqi cities—mainly Basra, Amara, al-Najaf, and Karbala, spreading throughout the south. Separatist uprisings took place soon after in Iraq's northern Kurdish cities. The United States had called for Saddam's overthrow but did not aid the rebellion.

Saddam used the army to crush these revolts, and he was successful, but only after fierce fighting with insurgents in southern Iraq, which resulted in major destruction in the Shiʿite cities of the south. The Kurds in the north, faced with Saddam's tanks, left the cities they had occupied and retreated to more secure positions in the mountains. Many retreated to Turkey and Iran.

The plight of the Kurds was dramatized by the international media, especially in the United States and Europe. As a result, public opinion allowed Western leaders to order military penetration of northern Iraq to establish secure zones guarded by coalition forces. Safe havens were established to entice Kurdish refugees back. Saddam invited a top-level Kurdish delegation to negotiate with his government in April 1991, but it failed and Saddam pulled his forces back from Kurdish areas and established a trade embargo on the north. Inside the Kurdish zone, under the protection of UN forces (mainly U.S., British, and French), the Kurds began to establish genuine self-rule and in 1992 elected a Kurdish government.

During his presidency, Saddam established an extreme cult of personality. Photos of him were everywhere; his speeches were printed and widely distributed; schools, towns, and the Baghdad airport were named for him. Any criticism of him as head of state was severely punished. Despite a military defeat, destruction of large parts of the Iraqi economy, and the most widespread rebellion Iraq had experienced since 1920, he remained in control. By the end of 1991, although weakened by these events, his presence was ubiquitous in Baghdad.

Sanctions

Between 1991 and 2003, Saddam Hussein adopted a siege mentality, making rare public appearances, and his whereabouts were a state secret. He received few foreign visitors and never left the country.

Under continuing UN sanctions, the population of Iraq suffered enormously. A rationing system provided basic food items and enabled the population to purchase necessities at nominal prices. However, the health and education systems rapidly deteriorated. Many students dropped out of school to work at menial jobs in order to help their needy families. Malnutrition created a dramatic rise in the number of deaths among children under five. Faced not only faced with economic difficulties but also the pressures of a police state, hundreds of thousands of Iraqis fled the country. The number of Iraqis living abroad was estimated to be at least 3 million. As inflation soared, the value of the national currency, the dinar, dropped sharply without any concomitant increase in salaries.

Since Iraq was unable to sell its oil, its economic situation worsened. By the mid-1990s, the deterioration of social and economic conditions had helped generate a religious revival, which received the regime's blessings. The new Islamic movement did not adhere to any internal or external political group or party.

Saddam's complex and difficult relationship with his family affected the political situation. His three half-brothers, Barzan, Watban, and Sabawi, served in key security posts, but their status deteriorated and by the mid-1990s they had disappeared from public view. Both the regime and Saddam's personal prestige suffered a serious shock in August 1995 when two key relatives and aides defected with their wives, who were Saddam's daughters. They went to Jordan, where they received the protection of King Hussein. The two men, however, were convinced by Saddam's emissaries to return to Baghdad and receive a pardon. When they arrived, they were divorced from their wives and three days later it was announced that they had died in a shootout with members of the extended family. The family declared that they were avenging the dishonor brought on their clan by these defectors.

On 12 December 1996, Saddam's elder son, Uday, was wounded in an assassination attempt in Baghdad. His wound left him partially paralyzed, which excluded him from becoming the eventual successor to his father. This position was taken by his younger brother, Qusay (born in 1968), who slowly assumed all the important security responsibilities in the state.

As part of the 1991 cease-fire accord with the UN coalition forces, Iraq accepted the elimination of its chemical, biological, and nuclear weapons programs. The United Nations charged two bodies with overseeing Iraq's disarmament operations, the United Nations Special Commission (UNSCOM) and the International Atomic Energy Agency. When these two agencies started inspections in Iraq, they were expected to disarm Iraq within a few weeks. Instead, the regime challenged the inspectors constantly, refusing to submit documents and materials and withholding information; the inspections dragged on for over a decade.

In the aftermath of the Kurdish revolt against the regime and the flight of Kurds toward neighboring Turkey and Iran, the United States led the coalition countries in imposing a no-fly zone over northern Iraq. This allowed the Kurds to return home. A similar no-fly zone was imposed in 1992 in southern Iraq in order to protect the Shiʿa. It was also used as a punitive measure against a possible attempt to mass Iraqi armed forces on or near the Kuwaiti border. In 1996, this zone was extended to the outskirts of Baghdad.

The imposition of these no-fly zones curtailed the sovereignty of the Iraqi state over its territory. This was particularly true in northern Iraq, where the two main Kurdish parties, the Democratic Party of Kurdistan (Iraq) and the Patriotic Union of Kurdistan, started to build state institutions and rule over northern Iraq.

In April 1995, responding to the deterioration of the economic situation in Iraq, the UN Security Council passed the Oil-for-Food resolution (Resolution 986), which allowed Iraq to sell some of its oil to buy food and medicine for its population. Iraq initially rejected the resolution, but accepted it in December 1996 due to the worsening economic situation.

U.S. and British war planes continued to patrol the no-fly zones, firing missiles on Iraqi military targets when they were challenged. Tensions increased over weapons inspections. On more than one occasion, Iraq threatened to expel the UN inspectors.

The deterioration of relations between UNSCOM and the Iraqis reached its climax in December 1998, when Richard Butler, head of UNSCOM, presented a negative report to the UN Security Council and withdrew his inspectors. Three days later, U.S. and British airplanes staged air raids on Iraq military installations in Operation Desert Fox. The Iraqis responded by declaring that they would never allow UN inspectors to return.

Military Intervention

Since 1997, faced with the difficulties of disarming Iraq, the U.S. government had considered overthrowing the Saddam regime. The U.S. began to openly encourage Iraqi opposition groups abroad (mainly in London) to cooperate and organize their efforts to topple the Iraqi ruler. The war of words between Iraq and the United States rose in tone. When the terrorist attacks of 11 September 2001 occurred in New York and Washington D.C., Saddam's regime was one of the very few to declare its public satisfaction over what had happened.

Internally, Saddam became more oppressive toward his opponents, putting a brutal end to unrest, especially among the Shiʿa, and assassinating well-known Shiʿite clerics. In a State of the Union address delivered after the 11 September attacks, President George W. Bush labeled Iraq a member of the "axis of evil" and called for "regime change." In 2002, after months of UN discussions and U.S. threats, Saddam finally allowed the UN inspectors to return to Iraq. A new inspection agency, the UN Monitoring, Verification, and Inspection Commission, headed by Hans Blix, was created to oversee this operation. On 27 January 2003, after inspecting suspected sites for several weeks, the team handed in a report that was inconclusive on the question of whether illegal arms or arms programs existed. Meanwhile, the United States and Britain continued to demand regime change in Baghdad and undertook a massive military buildup around Iraq, preparing for military intervention, preferably with the blessing of the UN Security Council. Objections to intervention, however, came from countries such as France, Germany, and Russia, which called for continued inspections, and from individual citizens in many countries. The Security Council did not back intervention.

On 17 March 2003, the United States issued an ultimatum demanding that President Saddam Hus-

sein leave the country within twenty-four hours. He rejected it, and UN inspectors left Iraq. On 20 March, the first air attacks on Baghdad began, followed by U.S. and British troops entering Iraq from Kuwait. Despite some resistance, U.S. troops pushed north toward Baghdad and occupied it on 9 April. Saddam Hussein and his top aides went underground. By 18 April, most of the country was under the control of U.S. and British forces.

The United States issued a list of fifty-five of the most wanted persons in the old regime, including Saddam, his two sons, and his half-brothers. Uday and Qusay were killed in Mosul on July 22 during a firefight with U.S. forces. Two of his half-brothers, Barzan and Watban, were captured but the third, Sabawi, was still at large in 2004. Saddam Hussein himself was captured on 13 December 2003, hiding underground in Dur, a small town south of Tikrit.

After Saddam's capture, the United States declared him a prisoner of war. Several suggestions were made by Iraq's transitional authority (put in place by the Americans) and others on how to bring Saddam to justice. Iraqis insisted that he be held in Iraq and tried by an Iraqi court.

After the fall of Saddam Hussein, Iraq became a theater of violence, with widespread looting, attacks on American troops and the newly installed Iraqi police, and suicide bombings of key targets, including UN personnel and Shiʿite leaders and mosques. These acts were blamed on Iraqi groups resisting foreign occupation. The perpetrators were believed to consist of remnants of the old Baʿthist regime in addition to Muslim fundamentalists, some of whom were believed to have ties to al-Qaʿida. Saddam himself was believed to have directed some of the resistance before his capture. Despite efforts by the Americans to discover them, no hidden weapons of mass destructions were found. David Kay, a former weapons inspector appointed by President Bush to investigate the situation, reported in 2004 that none were likely to be found.

HUT, SHAFIQ AL-

[1932–]

Palestinian leader, journalist, and intellectual.

The son of a wealthy Sunni landowner and citrus merchant in the Manshiyya quarter of Jaffa in British Mandate Palestine, Shafiq al-Hut graduated from Jaffa's elite al-Amiriyya School in 1948. When war broke out, he fled with his family to Beirut, where his paternal grandfather had emigrated from.

Al-Hut cut his political teeth in the radical pan-Arabist environment of the American University of Beirut, graduating in 1953 with a bachelor's degree in biology. Initially a schoolmaster, he subsequently worked as a correspondent and as editor of the weeklies *al-Hawadith* (Events) and *al-Muharrir* (The editor).

Al-Hut was a leading figure in the Palestinian Liberation Front–Path of Return (PLF–PR), which was established in 1961, and he took part in the 1964 Palestine National Council, which founded the Pales-

tine Liberation Organization (PLO). Appointed PLO representative to Lebanon in 1964 (a position he held until 1993), from 1965 to 1967 al-Hut led the internal opposition to PLO president Ahmad Shuqayri, who attempted to exile al-Hut to New Delhi in May 1967. Al-Hut was also linked to the Heroes of the Return guerrilla group established in 1966.

In 1968, al-Hut renounced the PLF–PR leadership and the group disbanded. He was increasingly associated with the PLO's al-Fatah mainstream, served on the PLO's executive committee, and survived various attempted assassinations by other Palestinian factions, notably by the Syrian-backed al-Saʿiqa force in 1976 in Lebanon, after the outbreak of armed conflict among Palestinian, Christian, and Muslim communities there. In 1978, he supported Arafat's decision to offer a guarantee of Israeli security in return for Palestinian statehood, but in August 1993, mindful of the interests of Palestinians in Lebanon, he left the PLO in protest against the Oslo Accord. He has since been prominent in the Palestinian opposition to the direction taken by Palestinian, American, and Israeli diplomats and negotiators. A secularist inspired by Gamal Abdel Nasser's pan-Arabism, al-Hut is the author of several books on Palestinian and Arab politics and has written an autobiography. He married the Palestinian writer Bayan Nuwayhid in 1962 and has three children.

I

IBADIYYA

The only surviving branch today of the Kharijite schismatic rebels of the seventh century.

The Kharijite movement broke with the fourth caliph Ali in 657 after he agreed to submit his conflict with the governor of Syria, Muʿawiya ibn Abi Sufyan, to arbitration. This action, the Kharijites argued, undermined both the religious and political leadership of Ali. Equally hostile to Umayyad rule by hereditary succession, the Kharijites espoused an ideology of absolute egalitarianism, social austerity, and militant puritanism. The two major Kharijite factions were the Azariqa, who waged a relentless war to overthrow the existing social and political order, and the Ibadiyya, who took a politically quiescent position *(kitman)* during the civil wars of the seventh century.

The Ibadiyya, who derive their name from their founder Abdallah ibn Ibad al-Murri al-Tamimi (died c. 720), were originally based in Basra. Under the early Abbasids in the eighth and ninth centuries, the Ibadiyya took an activist missionary approach *(zuhur)* and spread in the desert frontier regions of north Africa (Tahert), and eastern and southern Arabia (Hadramawt) among tribal social segments. The Ibadiyya developed an elaborate political theory that emphasizes the primacy of religious leadership (imamate), but allows the coexistence of various imams (unlike in Shiʿism). Notwithstanding their acceptance of the Muʿtazilite doctrine of the createdness of the Qurʾan, the Ibadiyya largely concur with Sunni Islam, particularly the Maliki school on matters of law. The sect survives today in Oman, eastern Africa (Zanzibar), Libya (Jabal Nafusa and Zuagha), the island of Djerba (Tunisia), and southern Algeria (Wargla and Mzab).

IBN

See Glossary

IBN MUSA, AHMAD

Regent of Morocco, 1894–1900.

Sultan Mulai Hassan I was succeeded by his youngest son, Abd al-Aziz ibn al-Hassan, aged fourteen. As regent, Ibn Musa (known as Ba Ahmad) maintained stability through the control of dissident tribes and counseled cautious diplomacy toward the European powers. Some scholars believe that this caution undermined the sultanate's legitimacy in the eyes of many Moroccans. Ba Ahmad died during a cholera epidemic, leaving the sultanate ruled by a young, untried sultan.

IBN TULUN MOSQUE

Ancient mosque in Cairo.

Constructed from 876 to 879 C.E. by Ahmad ibn Tulun, semiautonomous governor of Egypt for the Abbasid caliphs, this is not only one of Cairo's best-known monuments but is also the best surviving example of religious architecture from that period of Islam. The mosque was erected along with a palace and a government house in a new district known as al-Qataʿi (the Allotments), to the northeast of the oldest parts of the city.

Built of brick and rendered with a fine and hard layer of plaster, the mosque comprises a courtyard about 300 feet (92 m) square, with a fountain-house in the center. The court is surrounded by hypostyle halls covered with a flat wooden roof supported by arcades resting on piers. The prayer hall, on the southeast, is five aisles deep; those on the other three sides are two aisles deep. The mosque, 400 by 460 feet (122 by 140 m) is enclosed in an outer wall 33 feet (10 m) high, with an elaborate cresting adding some 10 feet (3 m) to its height. Beyond the wall on three sides is an outer court *(ziyada),* approximately 62 feet (19 m) broad, enclosed in a somewhat lower wall. In this outer court, opposite the prayer hall, stands the minaret (tower), the mosque's most distinctive feature. In its present state this tower consists of a square stone base supporting a cylindrical shaft and an elaborate finial; an external staircase winds around the tower. The interior of the mosque is relatively plain, although the arcades are decorated with nook-shafts at the corners of the piers, carved capitals, and bands of geometricized vegetal ornament around and on the underside of the arches and at the top of the walls. Beneath the roof are long wooden planks carved with verses from the Qurʾan written in an angular script.

Most of the architectural and decorative features of the mosque are foreign to Egyptian architecture in the ninth century, although they were common in the religious architecture of Iraq, the Abbasid heartland, and can be seen there in such buildings as the congregational mosques at Samarra, the Abbasid capital where Ahmad ibn Tulun received his training. It is therefore believed that workmen trained in these techniques came to Egypt in the retinue of Ibn Tulun.

The mosque was repeatedly restored and its functions changed. In 1077, the Fatimid vizier Badr al-Jamali restored the mosque and, in 1094, his son al-Afdal added a beautiful stucco mihrab (a niche indicating the direction of Mecca) to one of the piers. Under the Ayyubids, who believed that Cairo needed only one congregational mosque, the building fell into disrepair and served as a shelter for North African pilgrims to Mecca and also as a bakery. In 1296, the Mamluk sultan Lagin, who had taken refuge in the mosque during one of the struggles that eventually brought him to power, restored it extensively; he added a new mihrab, replaced the fountain-house that had stood in the court with the present domed edifice, and reconstructed the minaret, which had also fallen into disrepair.

By the early nineteenth century, the mosque was again deteriorated and, by the middle of that century, it was used as an insane asylum and poorhouse. In 1884, the newly formed Comité de Conservation des Monuments de l'Art Arabe recommended the restoration of the building, and work was soon begun.

JONATHAN M. BLOOM

IBRAHIM, ABDULLAH

[1918–]

Moroccan socialist political leader.

Ibrahim was educated at the Université Ben Youssef in Marrakech and the Sorbonne in Paris. He was a founding member of the Istiqlal party (1944–1959) and served on the editorial committee of *Al-Alam,* the party newspaper, (1950–1952). He was imprisoned for nationalist activities (1952–1954).

After independence from France, Ibrahim served as secretary of state for information (1955–1956); minister of labor and social affairs (1956–1958); and prime minister and minister of foreign affairs (1958–1960). In 1959 he helped form Union Nationale des Forces Populaires (National Union of Popular Forces; UNFP) from the left wing of the Istiqlal and became leader of the UNFP in July 1972 when its Rabat section became the Union Socialiste des Forces Populaires (Socialist Union of Popular Forces; USFP). Since then, the UNFP has reportedly become increasingly subordinated to the Moroccan Labor Union (UMT) and has waned in influence.

IBRAHIM, FATIMA AHMED

[early 1930s–]

Sudan's best-known woman politician.

Fatima Ahmed (also Ahmad) Ibrahim was born into a liberal middle-class family in Omdurman in the early 1930s. Upon graduating from Omdurman Girls Secondary School, where she was a student leader and activist, she became a teacher. In the course of her nationalist activities in the 1940s and 1950s in opposition to British rule, she was influenced by Communism and by Abd al-Khaliq Mahjub, secretary-general of the Sudanese Communist Party (SCP), which she joined. She became one of the early leaders of the Sudanese Women's Union (SWU), formed in 1952 under the wing of the SCP, and soon after the editor of the SWU organ, *The Woman's Voice.* In the decades that followed she was arrested and imprisoned many times for her activism. In 1964 she helped to organize the civilian overthrow of the Ibrahim Abbud military regime (1957–1964). In 1965, as the first woman ever elected to parliament, she headed the SWU as it fought for a number of rights for women. Among these were suffrage, equal pay for equal work, and maternity leave. She was active again in the 1985 civilian overthrow of the military regime of Muhammad Ja῾far Numeiri (1969–1985). Following the Islamist military coup d'état in 1989, the SWU was banned and Ibrahim was again imprisoned. She went into exile in England in the early 1990s, where she continued her SWU activism. Although her increasing conservatism and stress on religion has alienated some younger feminist and leftist activists, Ibrahim remains a member of the Central Committee of the SCP, president of the SWU, and editor of *The Woman's Voice,* as well as being active in the National Democratic Alliance (an umbrella opposition coalition in exile). In the 1990s, on behalf of the SWU, she accepted human-rights awards from Amnesty International and the United Nations.

SONDRA HALE

IBRAHIMI, AHMED TALEB

[1932–]

Algerian minister; political party leader.

A medical doctor and son of Bashir Ibrahimi, Ahmed Taleb Ibrahimi was imprisoned during the Algerian War of Independence after serving in the Fédération de France du Front de Libératon Nationale (FFFLN). After being released in 1961, he joined the FLN's Gouvernement Provisoire de la République Algérienne (GPRA) diplomatic team at the United Nations (UN). He opposed the Ahmed Ben Bella government and was detained from June 1964 to January 1965. After Colonel Houari Boumédienne deposed Ben Bella in June 1965, he appointed Taleb Ibrahimi minister of national education. In July 1970 Taleb Ibrahimi became minister of information and culture; in that capacity he supervised the inauguration of Algeria's cultural revolution.

After Boumédienne's death in December 1978, Taleb Ibrahimi served his successor, President Chadli Bendjedid, as a counselor minister and then, after the death of Mohamed Benyahia, as foreign minister from May 1982 until the formation of the Kasdi Merbah cabinet in November 1988. Taleb Ibrahimi became disaffected and associated with the anti-Bendjedid "Islamist" faction within the FLN. After the establishment of the Haut Comité d'Etat (HCE) in January 1992, the Pouvoir—the ruling military and civilian elite—considered Taleb Ibrahimi for the prime ministership before selecting Belaid Abdesselam in July 1992. As the civil war raged, Taleb Ibrahimi became more alienated from the Pouvoir and its attitude toward Islamism. He ran for president in April 1999 but withdrew with the six other candidates because of electoral irregularities. Nevertheless, he still came in second to the expected winner, Abdelaziz Bouteflika. Taleb Ibrahimi organized the Wafa (Trust/Loyalty) Party, but the government refused to recognize it because it had in its ranks former members of the Front Islamique du Salut (FIS). Nevertheless, he is expected to run for president again in 2004. Taleb Ibrahimi is the author of *Lettres de prison* (1966; Letters from prison), *De la décolonisation à la révolution culturelle* (1973; From decolonization to the cultural revolution), and *Le drame algérien: La voie de la réconciliation* (1996; The Algerian drama: The way to reconciliation).

PHILLIP C. NAYLOR

IBRAHIMI, BASHIR

[1889–1965]

Islamic religious leader in Algeria.

Born in Béjaïa in northeastern Algeria, Bashir Ibrahimi became a leading companion to Shaykh Abd al-Hamid Ben Badis. Ibrahimi was renowned as an orator for the Association of Algerian Muslim Ulama (Reformist Ulama) and served as its vice president and then its president after the death of Ben Badis. Through his studies in Damascus, he also achieved a great reputation as a scholar of Arabic and Islam while contributing numerous articles to the association's various journals. Ibrahimi was an opponent of French colonialism, as symbolized by the association's support of the Front de Libération Nationale (FLN; National Liberation Front). After the Algerian War of Independence, 1954–1962, he questioned the political leadership's use of foreign ideologies and called for the new nation to identify instead with its Arab Islamic traditions. His son Ahmed Taleb Ibrahimi became a government official under presidents Houari Boumédienne and Chadli Bendjedid.

IBRAHIM IBN MUHAMMAD ALI

[1789–1848]

Nineteenth-century Egyptian general; son of Muhammad Ali Pasha.

Ibrahim ibn Muhammad Ali was the elder son of Muhammad Ali Pasha, the founder of modern Egypt. Born in Kavala, Anatolia, Ibrahim Pasha and his brother Tusun accompanied their father when he assumed power as Egypt's viceroy for the Ottoman Empire in 1805. Ibrahim was assigned various responsibilities that ranged from national finance to the governing of Upper Egypt. Starting his military career in 1816, Ibrahim commanded the expedition sent by Muhammad Ali, at the request of the Ottoman sultan, to Arabia to crush the Wahhabi rebellion. In 1818, Ibrahim Pasha succeeded in what came to be known as the Wahhabi war, destroying their capital (al-Darʾiya, now Riyadh) capturing their leaders, and restoring Ottoman control over Islam's holy cities of Mecca and Medina. Gratified by this success, the Ottoman government (Sublime Porte) named Ibrahim to be *wali* (provincial governor) of the provinces of Hijaz and Abyssinia (today Ethiopia).

In 1822, Ibrahim assisted his brother Ismaʿil in the invasion of the Sudan and then, in 1824, led the Egyptian army in the name of the Ottoman Empire against a revolt in Greece. By 1826, Ibrahim Pasha was able to capture the Morea (Peloponnesus) and Athens. The European powers, however, despite Muhammad Ali's attempts to reach an agreement with Great Britain, decided to intervene and enforced a blockade on the Morea by the joint naval forces of France, Russia, and Great Britain. In October 1827, the European forces destroyed the whole Egyptian and Ottoman fleet in the battle of Navarino, and Ibrahim Pasha was forced to withdraw.

After the Greek war, Muhammad Ali demanded the governorship of Morea and Syria. Denied by the sultan, he declared war on the Porte in 1831 and sent an Egyptian force to Syria under Ibrahim's command. The troops progressed victoriously through Syria, entered Anatolia, and defeated the Ottoman army in the Battle of Konya in 1832. The Egyptian victory forced the sultan to sign the treaty of Kütahya in which the Porte granted Muhammad Ali the government of Syria and Adana, in what is today southern Turkey. Ibrahim was appointed governor of Syria. During his rule, he attempted to develop the irrigation system and introduced modern industry to the region. His enforcement of military service on the Syrians, however, and his strict discipline, led to the emergence of anti-Egyptian feelings among the population.

In 1839, the war between the Porte and Egypt was renewed and for the second time Ibrahim Pasha achieved a victory over the Ottomans at the battle of Nisib, and the road to Constantinople (now Istanbul) became virtually open. The European powers intervened, however, demanding the withdrawal of Egyptian troops. Muhammad Ali was forced to ask his son to turn back. The European intervention, headed by Britain, was followed by the London Convention of 1840 in which the European powers forced Muhammad Ali to return Syria and Adana to the Porte.

In 1845, Ibrahim Pasha visited France and England. In April 1848, due to the illness of Muhammad Ali and his inability to rule, Ibrahim Pasha proclaimed himself ruler of Egypt and informed the sultan of this change. In October of that year, the Porte conferred on him the government of Egypt. A few weeks later in November, however, Ibrahim Pasha died—even before the death of his father.

ALI E. HILLAL DESSOUKI

IBRAHIMI, LAKHDAR AL-

[1934–]

Algerian diplomat.

Lakhdar al-Ibrahimi studied law and political science in Algiers and in Paris. He was independent

Algeria's first minister of external affairs in 1962 and 1963. He then served as Algeria's ambassador to Egypt, Sudan, and the United Kingdom. From 1963 to 1970 Ibrahimi was Algeria's permanent representative to the Arab League, where he has also acted as assistant secretary-general. In the 1980s Ibrahimi headed the league's efforts to end the Lebanese civil war (1975–1991). From 1991 to 1993 he was Algeria's foreign minister. Between 1994 and 1996, Ibrahimi served as United Nations special representative to countries such as Haiti, South Africa (leading the United Nations observer mission until the 1994 democratic elections of post-apartheid South Africa), Zaire (now the Democratic Republic of the Congo), Yemen, and Liberia. As of 2003, he is the special representative of the United Nations secretary general for Afghanistan (1997–1999; 2001–).

IBRAHIM, IZZAT

[1942–]

Baʿthist politician in Iraq.

Izzat Ibrahim was born into an Arab Sunni family, rumored to be of Sabean origin, in al-Dur district of Samarra. His father was an ice vendor. Ibrahim joined the Baʿth party in the late 1950s and was in prison during the 1960s for his political activities. He held several important positions following the Baʿth coup of 1968, including: minister of land reform (1969–1974) and minister of the interior (1974–1979). In 1979 he became deputy chairman of the Revolutionary Command Council (RCC). Ibrahim was the constitutional successor to the president of Iraq, Saddam Hussein. His daughter is married to the president's oldest son, Uday.

In 1973, he headed a special court trying the conspirators who were behind an unsuccessful coup. As deputy chair of the RCC, he was put in charge of several task forces and special commissions in the Baʿth government. Prior to Iraq's invasion of Kuwait, Ibrahim headed the delegation to negotiate the problems between the two countries. Following the 2003 American invasion of Iraq, he went underground, and was rumored to be organizing anti-American resistance activities.

Ayad al-Qazzaz

IBRAHIM, MUHAMMAD HAFIZ

[1871–1932]

Egyptian poet and writer; one of the best-known Arab neoclassicists.

Whereas Ahmad Shawqi was known as a poet of the court, the "prince of poets," Muhammad Hafiz Ibrahim was the "people's poet." He was also known as the "poet of the Nile"—an appropriate epithet, since he was born on a houseboat on the Nile River near the town of Dayrut.

Hafiz Ibrahim had a somewhat lonely childhood followed by a long struggle to find a vocation. He went to a modern secular school in Cairo, then to a more traditional Qurʾanic school in Tanta. Hafiz also served as an apprentice to several lawyers and later was graduated from the Military Academy in Cairo. His military service in the Sudan ended abruptly with a court-martial because of his involvement in an army rebellion. Returning to Cairo, he was unable to find work. This was the beginning of his most difficult years of poverty and unemployment, which lasted until 1911, when he was nominated to head the literary section of the National Library. During these years, Hafiz came into contact with prominent Egyptian nationalists and was popular among them because of his winning balance of earnestness and conversational wit.

Hafiz Ibrahim employed a generally simple, direct, yet fluent poetic diction, adapting traditional forms to speak to new audiences living in a changing world. He reached his audience in two ways:

First, he was a master of "platform poetry," reciting his poetry publicly to large groups of listeners; second, he actively contributed poetry to prominent Egyptian newspapers and periodicals. Hafiz Ibrahim was able to address social and political events in verse, giving voice to common Egyptian opinions. His most successful works were his elegies and his occasional poems.

KENNETH S. MAYERS

IBRAHIM, SAʿAD AL-DIN

[1938–]

Renowned human rights activist and professor of sociology at the American University of Cairo.

Saʿd al-Din (also Saʿad Eddih) Ibrahim is an Egyptian American born in Mansura, Egypt, in 1938. He received his bachelor's degree with honors from Cairo University in 1960 and his doctorate in sociology from the University of Washington in 1968. Ibrahim founded in 1988 the Ibn Khaldun Center for Development Studies in Cairo, as an independent research institute for advancing democratization and development. Ibrahim has directed the center's activities in monitoring elections, conducting voter education projects, and training students in social science research methods.

Ibrahim has served as secretary-general of the Independent Commission for Electoral Review, which had monitored the 1990 and 1995 elections in Egypt. He was preparing to monitor the 2000 elections and was producing a documentary film about Egyptian election irregularities when he was arrested. The center's activities came under surveillance; in January 2000 authorities banned its publication *Civil Society* and the center was closed in June. Meanwhile, Ibrahim and twenty-seven of his colleagues were tried and found guilty on charges such as "collecting funds without a permit from the official authorities, misappropriation of funds in a fraudulent manner to prepare forged voting lists and cards, preparing public media containing false phrases and rumors and disseminating provocative propaganda damaging to the public interest, and accepting funds from a foreign country with the purpose of carrying out work harmful to the national interest by producing a film that damages Egypt's reputation abroad." Though Ibrahim was sentenced to seven years of imprisonment with hard labor, three years later, on 18 March 2003, Egypt's highest court acquitted him of all charges brought against him by the Egyptian government in response to international pressure.

Ibrahim teaches at American University of Cairo (AUC) and has taught at several universities in the United States and Egypt. He has published over thirty books in English and Arabic, including *Sociology of the Arab–Israel Conflict, American Presidential Elections and the Middle East, The New Arab Social Order,* and *Society and State in the Arab World.* He has served as the president of Cairo's Union of Social Professions, a board member and head of Arab Affairs of al-Ahram Centre for Political and Strategic Studies, secretary-general of the Arab Organization for Human Rights, the founder and a core member of the Initiative for Peace and Cooperation in the Middle East, the chairman of the Board of Egyptian Enlightenment Association, and the president of the Egyptian Sociologists Association. A champion of democracy and human rights, Ibrahim is considered a leading proponent of democratic reforms and an advocate of minority rights. He has received several awards since his imprisonment, including a nomination for the Nobel Peace Prize for 2002.

İDADI SCHOOLS

Ottoman middle or secondary schools.

In the late nineteenth century, İdadi schools provided three years of intermediate and low secondary-level education. Instruction was in Turkish and French. The curriculum included logic, economics, geogra-

phy, world and Ottoman history, algebra and arithmetic, the physical sciences, and engineering.

In the 1850s the military opened the first provincial Idadi schools in Baghdad, Erzurum, and Sarajevo. The first nonmilitary, state-run İdadi school opened in Constantinople (now Istanbul) in the 1870s. Under the 1869 Regulation for Public Instruction, towns and cities were required to provide one İdadi school for every thousand households. By 1895, about one-third of a total of thirty thousand students attending intermediate school in the Ottoman Empire were enrolled in the fifty-five state and military İdadi schools, the latter being found in every province. The other two-thirds of students attended the seventy millet system–run İdadi schools or the sixty-three foreign ones, such as American-run Robert College in Constantinople. State-run İdadi schools were financed by taxes. The term *İdadi schools* was changed in 1908 to *sultani schools,* and in 1925 in Turkey, to *orta* or middle schools.

ELIZABETH THOMPSON

IDLIBI, ULFAT AL-

[b. 1912 or 1913]

Syrian novelist and short-story writer.

A native of Damascus, Ulfat Idlibi is known for fiction that realistically portrays middle-class urban Syrian women—her own social milieu—during a period of transition when women were becoming visibly active in nationalist politics, were moving into the public workforce, and were earning higher degrees in greater numbers. Idlibi herself, married at 17, participated in nationalist demonstrations and has worked in various areas of national culture. She began writing short stories in 1947; some were published in a Damascus women's cultural journal, and her first collection, *Qisas shamiyya* (Syrian stories, 1954), received the recognition of an introduction by eminent Egyptian writer Mahmoud Taymur. In addition to four further volumes of stories (the latest published in 1993), three collections of lectures and essays, and a study on Arabic popular literature (*Nazra fi adabina al-shaʿbi,* 1974), Idlibi has published two novels, both translated into English by Peter Clark: *Dimashq ya basmat al-huzn* (1980; in English, Sabriya: Damascus Bittersweet, 1995) and *Hikayat jaddi: riwaya* (1991; in English, Grandfather's Tales). Her fictions experiment with techniques of embedded narrative, and while gently portraying Damascene society, they also satirize social usage and constraining expectations. Although the focus is on the domestic site where women's daily lives unfold, she blends coming-of-age narratives *(bildungsroman)* with national stories of liberation from European imperial rule.

MARILYN BOOTH

IDLIB PROVINCE

Province in northwest Syria, named after its principal town, Idlib, where the governor resides.

Idlib is north of the mountain Jabal al-Zawiya and east of the al-Ruj plain. There were two Idlib's in the past: Lesser Idlib and Greater Idlib. The last was the most ancient, superseded by Lesser Idlib, the present-day town. The region of Idlib is famed for its olive groves and vineyards. Pistachio and cherry trees have recently proven very productive in its hilly countryside. Cotton of high quality and grains are also among the major crops there. Soap making using olive oil and alkaline burnt herb was the most prosperous industry in Idlib in the past, as evidenced by the presence of three hills in the town made up of accumulating ash from soap furnaces. The soap industry moved to Aleppo, and the hills have been removed.

In the 1952 administrative divisions in Syria, Idlib was part of Aleppo province. Later it became the center of a separate province because of its vast countryside and also because the Aleppo province had become too large. In the administrative divisions of 1982, the province of Idlib had 5 *mintaqas*

or *qadas* (sections), 15 *nahiyas* (administrative subdivisions), 6 towns, 16 smaller towns, 411 villages, and 481 farms. The total population of the province, according to the 1980 census, was 352,619 inhabitants, including 51,682 in the town. The province has a number of so-called dead cities dating back to Byzantine times. It also has the well-preserved church of Qalb Lawza and the famous church of Saint Simeon Stylite. The site of historical Ebla has been discovered a few miles from Idlib.

ABDUL-KARIM RAFEQ

IDRIS AL-SAYYID MUHAMMAD AL-SANUSI

[1890–1983]

Head of the Sanusi order; king of Libya, 1951–1969.

Born in Jaghbub, Cyrenaica, the eastern province of Libya, Idris al-Sayyid Muhammad al-Sanusi was the grandson of Muhammad ibn Ali al-Sanusi, founder of the Sanusi order of Islam, and the son of al-Sayyid al-Mahdi al-Sanusi, the leader of the Sanusis in 1890.

During World War I, while the Sanusis were on the Ottoman side fighting the Italians, Idris was training a Sanusi force to fight with the British. In 1916, the British recognized Idris as the leader of the Sanusi order, and in 1920, Italy recognized him as the amir of Cyrenaica. Despite Italy's wishes, Idris also accepted the title of amir of Tripolitania, offered to him by the people of the province. That same year, however, a Sanusi rebellion forced Idris into exile. He fled to Cairo and remained there for twenty years.

When World War II broke out, Idris called all Libyans to fight on the side of the Allies in order to drive out the Italians. He began a Sanusi unit to fight alongside the Allies in their desert campaign. The British recognized Idris's claim to be the head of an independent Cyrenaica, and later he proclaimed himself the region's amir. When Libya became fully independent in 1951, Idris was offered the crown of a united Libya, and he ascended to the throne on 24 December 1951.

The conservative nature of Idris's rule caused a great deal of friction between him and those in Tripolitania, who were more nationalist. In 1963, when the province system was abolished, a unitary regime was established. In 1969, while Idris was abroad, the nationalists, led by Muammar al-Qaddafi, took over the country in a military coup. Idris did not challenge their power and lived out the rest of his days in Greece and Egypt.

IDRISIDS

Descendants of Sayyid Muhammad ibn Ali al-Idrisi living in southwestern Arabia.

The principality of Asir has been important in the politics of southwestern Arabia. It was incorporated into the new state of Saudi Arabia in 1926 when Abd al-Aziz ibn Saʿud Al Saʿud established a protectorate over the realms of the Idrisi sultanate, as it was known at the time.

In the past, the two major towns of Asir, Abu Arish and Abha, have been the capitals of different families, or clans, accurately reflecting the fact that Asir is really two distinct areas. Geographically, economically, and culturally, much of Asir is a continuation of Yemen and, for most of its history, has been considered a part of Yemen. Nevertheless, when the imams of Sanʿa or of other towns, such as Saʿda, were weak and ineffectual, local Asiri notables declared their independence and carried on their own domestic and foreign policies. The most recent of these independent notables was Sayyid Muhammad ibn Ali al-Idrisi, a grandson of Sayyid Ahmad al-Idrisi, the native of Fez who founded the religious sect to which the founder of the Sanusi belonged. Idrisi immigrated to Arabia and made his base at Abha; he wrested control of most of Asir from the Ottoman authorities in the early years of the twentieth century. He was able to obtain the support of the Italians in their campaigns for influence in the Red Sea region precisely because of his connection to the Sanusi, then established in the Italian areas in North Africa.

Idrisi attempted to expand his influence and territory at the expense of the imams of Sanʿa in

the period before World War I. Specifically, he attempted to take Shaykh Saʿid, Luhayya, and Hodeida—Tihama port cities that would have enabled him to add the Yemeni Tihama to his realm. In this effort, he was at times assisted by Italian naval contingents in the Red Sea. During World War I, the British signed an agreement with him in an effort to limit the influence of Yemen, which refused to ally itself against the Ottomans. In return, the British gave him the Yemeni Tihama and other areas, which had to be wrested from Idrisi control by Imam Yahya in the 1920s. After his death, at Sabya, his descendants expanded the influence of the family by taking control of Abu Arish, which had been in the hands of a separate family of sharifs since the eighteenth century. The gradual takeover of Asir by Abd al-Aziz ibn Saʿud, however, ended the separate existence of the Idrisi state, which was reconfirmed in 1930.

Imam Yahya, however, continued to maintain that Asir, and especially its Zaydi and Ismaʿili populations, had been illegitimately removed from Yemeni sovereignty; this led, eventually, to a brief war between Yemen and Saudi Arabia, in which the latter emerged the victor. In the treaty of Taʾif (1934) the Yemenis recognized, albeit grudgingly, Saudi sovereignty over Asir, as well as over the Najran oasis. The treaty was renewed every twenty years until the United Republic of Yemen handed Asir over permanently to Saudi Arabia in 1995.

IDRIS, YUSUF

[1927–1991]

Egyptian author of short stories, plays, and novels.

After a childhood spent in the Nile delta region, Yusuf Idris moved to Cairo in 1945 to study medicine at Cairo University. He began writing short stories while a student and published several in newspapers before his graduation in 1951. He began to practice medicine but continued his involvement in both political causes and fiction; his first collection of short stories, *Arkhas Layali* (The cheapest nights), was published to great acclaim in 1954. In the same year he was imprisoned for his involvement in political activities. Following his release in September 1955, he began writing articles for the newspaper *al-Jumhuriyya.* The late 1950s and the 1960s, until the 1967 Arab–Israel War, became Idris's most productive period—in an amazing outpouring of creativity, he published several short-story collections as well as a number of plays and novels. He gave up medical practice in 1967 and assumed an administrative post in the ministry of culture. As was the case with many Arab authors, the Arab–Israel War had a profound effect on his literary career. Until his death in 1991, poor health, depression, and the demands and distractions of a weekly column in the Cairo daily *al-Ahram* combined to reduce his creative output.

Of the literary genres to which Idris made contributions, it is undoubtedly in the development of the Arabic short story that his key role is most obvious. His mastery of the genre was instinctive, and the brilliance of his contributions was recognized by critics from the outset. From the realistic vignettes of provincial and urban life to be found in the earliest collections, such as *Arkhas Layali* and *Hadithat Sharaf* (An affair of honor, 1958), he gradually shifted to more symbolic and surrealistic narratives in such collections as *Akhir al-Dunya* (The world's end, 1961) and *Lughat al-Ay-Ay* (Language of screams, 1965)—many of the stories essentially parables about the alienation of human beings in contemporary society. In these later collections, we still encounter scenes from country life, but the focus has shifted from realistic detail to the symbolic portrait of the inner workings of the mind. Several also show his virtuoso ability to manipulate narrative point-of-view and to incorporate us into the storytelling process. Above all, his command of narrative structure and his use of allusive language has given his contributions to this genre a stature unmatched by any other Egyptian writer—and by very few other Arab litterateurs.

Idris often admitted to writing on impulse, something that may well contribute to his great success in the realm of the short story. This same impulsiveness may explain why his essays in other

genres have, for the most part, not met with similar success. While many of Idris's plays have been performed to great popular acclaim, even his most popular and accomplished play, *Al-Farafir* (The Farfoors, 1964), loses cohesion in its lengthy second act. Of his novels, only *Al-Haram* (The taboo, 1959), with its realistic portrayal of migrant communities in the provinces, manages to sustain a narrative focus through the longer fictional mode.

Idris's craft shows the greatest development and made the greatest contribution in the much-discussed area of language. Coupled to a great storyteller's ability in creating scenes and moods with an allusiveness and economy akin to that of poetry, Idris's narrative style co-opted the riches of the colloquial dialect to create a multitextured descriptive instrument of tremendous subtlety and variety. This colloquial level was his natural choice for dialogue in both plays and fiction, but aspects of the colloquial's lexicon and syntax are also to be found in narrative passages of his fiction. This stylistic feature has not endeared him to conservative critics, but it lent his stories an element of spontaneity and authenticity that contributed in no small part to their popularity. Idris's storytelling style, his lively imagination, sardonic sense of humor, and tremendous concern for the plight of modern life, are at their best in his short stories—many of which rival the very best in that most elusive and self-conscious of literary genres.

IFNI

Area on Morocco's coast ceded to Morocco by Spain.

Formerly Santa Cruz de Mar Pequena, Ifni was a 675-square-mile Spanish enclave on the coast of southern Morocco. The population of the area was about 40,000, made up mainly of seven predominantly sedentary Berber-speaking tribes. The Spanish held a trading post in the area from 1476 to 1524. Under the 1860 treaty of Tetuan, the area was designated as Spanish, and permission was given to build a fishing harbor. However, an exploratory expedition to the area in 1879 ended in failure. The Spanish–French treaty of 1912 recognized Spain's sovereign right to the Ifni enclave, distinct from the protectorate zones, and similar to Spain's rights over Ceuta and Melilla. Spanish general Osvaldo Capaz finally occupied the area in March 1934. In 1946 the coastal town of Sidi Ifni, the capital of the enclave, was made the seat of a single centralized administration for Spanish West Africa. The 1956 Spanish–Moroccan treaty restored to Morocco 15,000 square miles of Spanish Sahara, now known as the province of Tarfaya. But the Ifni enclave remained in Spanish hands, with Spain insisting that Ifni had been ceded in perpetuity by the 1860 treaty. In November 1957 fighting broke out between Morocco's irregular Army for the Liberation of the Sahara and Spanish forces. In December 6,000 Spanish troops took up positions around Sidi Ifni and held on for twelve years. The area was made a Spanish province under the authority of the military commander of the Canary Islands. Morocco first raised the issue of Spain's control of Ifni at the UN General Assembly session in 1957. In 1965 the General Assembly resolved that Ifni should be liberated from colonial domination. On 4 January 1969 Spain and Morocco signed an agreement to turn the area over to Morocco. The actual transfer was made on 30 June. In return, Spain was awarded fishing rights off Morocco's Atlantic coast. Today, Sidi Ifni has a population of 17,000.

IGNATIEV, NIKOLAS PAVLOVICH

[1832–1908]

Russian diplomat.

Born in St. Petersburg, Nikolas Pavlovich Ignatiev entered the diplomatic service in 1856 and served as ambassador to the Ottoman Empire in Constantinople (1864–1878). He was a zealous pan-Slavist,

described by one writer as "brilliant and none-too-scrupulous." In contrast to the Russian foreign minister, Aleksandr Gorchakov, Ignatiev worked for the downfall of the Ottoman Empire. He was active in inciting the 1877–1878 Russian–Ottoman War, and is credited with framing the Treaty of San Stefano (1878), which laid the foundation for "Big Bulgaria." In the interest of good relations with Britain and Austria, however, the treaty and Ignatiev's "Big Bulgaria" were jettisoned by Gorchakov at the Congress of Berlin (1878), and with them Ignatiev's career. At the height of his power, Ignatiev influenced the Ottoman government to such an extent that he was referred to as "Sultan Ignatiev."

ZACHARY KARABELL

IKHA AL-WATANI PARTY

Iraqi political party of the 1930s.

Ikha al-Watani (National Brotherhood) was formed to oppose the Anglo–Iraqi Treaty of 1930. Its principal members were Yasin al-Hashimi, Rashid Ali al-Kaylani, and Hikmat Sulayman. In 1933 some of its members accepted the 1930 treaty and participated in a government under Rashid Ali (March–October 1933). A second Ikha cabinet under Yasin al-Hashimi was formed in March 1935, but the group disbanded itself shortly afterward.

PETER SLUGLETT

IKHLASSI, WALID

[1935–]

Syrian novelist, short-story writer, and dramatist.

Walid Ikhlassi was born in Alexandretta. After the cession of Alexandretta to Turkey in 1939, his family moved to Aleppo. He received his education in agricultural engineering at the University of Alexandria in Egypt. He later became a lecturer at the College of Agriculture at the University of Aleppo.

Ikhlassi was raised in a family preoccupied with religious and national issues. Imbued with nationalistic aspirations during the French mandate, Ikhlassi's writings deal mainly with democracy, freedom, responsibility, alienation, the loss of the self, and the failure of human ideals. The Palestinian diaspora is also a significant theme in his work; he tackled it throughout an entire collection of short stories, *The Time of Short Migrations,* 1970. Although Ikhlassi's first short story, "The Cock," appeared in 1954, his first collection, *Stories,* had to wait until 1963. Since then, he has published eight more collections. Some stories have been translated into English, French, Russian, and Persian.

Ikhlassi was the first Syrian novelist to experiment with the nouveau roman. While his first novel, *A Winter of the Dry Sea,* published in 1965, divided the literary critics into conservatives and liberals, his second novel, *The Lap of the Beautiful Lady,* in 1969, pleased the conservative camp for it adhered to traditional rules and practices of fiction. Ikhlassi has published nine more novels. The latest to date is *The Minor Epic of Death* in 1993.

Ikhlassi not only feels comfortable manipulating narrative techniques but also alternating among narrative genres. He believes that the subject matter dictates both the form and the genre to be employed in a certain artistic work. Like his novels and short stories, Ikhlassi's plays show innovation in literary devices and a break with the then dominant realistic mode of expression in favor of a more symbolic, surrealistic, and allegorical mode.

SABAH GHANDOUR

IKHWAN

A militant religious movement drawn from Bedouin tribes in northern and central Arabia.

After Abd al-Aziz ibn Abd al-Rahman Al Saʿud reconquered Riyadh from the Al Rashid dynasty in 1901, religious authorities began to spread Wahhabism aggressively. One of the main intellectual forces behind the movement was Abdullah ibn Muhammad ibn Abd al-Latif, a scholar and religious leader in Riyadh. After about 1906, he oversaw the dispersion of his message among the Bedouin by activist-preachers called *mutawwaʿin.* The Bedouin converts and their religious mentors developed a variation on Wahhabism that incorporated the military tendencies of tribal society and the extreme literalist zeal sometimes characteristic of new religious converts. Those Bedouin who espoused this version of Wahhabism were known as *Ikhwan* (brethren, in Arabic). In addition to being called to accept the tenets of Wahhabism, they were encouraged to give up nomadism, obey the amir/imam (Abd al-Aziz), to help other Ikhwan, and to avoid contact with Europeans and other "nonbelievers." Because the movement developed in a society that attempted to retain its tribal prerogatives, the political agenda of its leaders often clashed with those of Abd al-Aziz and his town-oriented allies.

The first Ikhwan settlement, or *hijra* (plural, *hujjar*), was established around 1913 mainly by members of the Mutayr tribe led by Faysal al-Darwish in al-Artawiyya, north of Riyadh. The use of the term *hijra* was a conscious attempt to invoke the first Islamic community under the prophet Muhammad. The *hujar* were located in tribal lands near water sources, and numbered around 120 by 1929.

Abd-al Aziz saw the spread of religion and the sedentarizing imperatives of the Ikhwan movement as a way to "debedouinize" the nomads, to build stronger ties between them and the ruler, and to use their young men as a reliable fighting force. However, from the start, important segments of the Ikhwan movement chafed at the policies of Abd al-Aziz. For example, because by 1914 a *hijra*-versus-town mentality had developed, and victims of Ikhwan intolerance and violence had complained to the ruler of Najd, Abd al-Aziz was forced to issue an edict, backed by his *ulama* allies, that undercut Ikhwan pretensions as arbiters and enforcers of Islamic belief and practice.

Material incentives encouraged some to join the movement. Abd al-Aziz encouraged sedentarization by providing funds, agricultural supplies, and materials to build schools and mosques. In addition, although Abd al-Aziz discouraged intertribal raiding (a major activity of the Bedouin for centuries), he permitted Ikhwan leaders to carry out violent attacks against opponents, which provided a significant source of plunder: animals, tents, weapons, and household items. After World War I, several Ikhwan leaders became strong advocates of military expansion, and beginning around 1919, Ikhwan forces carried out numerous attacks on Muslim populations (some of them Shiʿite) not only in al-Hasa, Najd, and Jabal Shammar, but also in Kuwait, Iraq, and Transjordan.

Among the Ikhwan's most notorious conquests were those in Hijaz, beginning with the sack of al-Taʾif in 1924 and the massacre of hundreds of the town's men, women, and children. Despite repeated efforts by Abd al-Aziz to curb such excesses, the Ikhwan continued to perpetrate acts of untrammeled violence and destruction, including the "purification" of Mecca and Medina through the destruction of many historic religious monuments and shrines, and an attack in 1926 against an Egyptian pilgrimage procession, which resulted in the Ikhwan's banishment from Hijaz. These episodes, as well as the bitter disappointment of al-Darwish and other Ikhwan leaders that their military conquests had not been rewarded by expected political appointments over the newly conquered territories, precipitated a revolt against Abd al-Aziz in 1927. The revolt—and the movement itself—eventually was crushed by the forces of Abd al-Aziz in March 1929 at the battle of Sibila.

The ideology and aims of the Ikhwan movement persisted beneath the surface of official Saudi politics and resurfaced during the attack in November 1979 on the Grand Mosque in Mecca. The leader of the siege, Juhayman al-Utaybi, came from the *hijra* of Sajir, and his followers adopted the dress and violent and doctrinaire methods of the Ikhwan. Like their predecessors, these "neo-Ikhwan" were motivated by a sense that Islam was being perverted, that the Al Saʿud ruling family were corrupt, and that

they alone held the key to a pure and true renewal of the Muslim community.

MALCOLM C. PECK
UPDATED BY ANTHONY B. TOTH

ILAYSH, MUHAMMAD

[1802–1882]

Egyptian religious leader and writer.

Muhammad Ilaysh was an important conservative religious figure and a prolific writer of traditional religious texts. He was first a student at al-Azhar University, then a professor there, eventually rising to become the mufti and head shaykh of the Maliki Law School (1854–1882). Of a stern ascetic tendency, Ilaysh also was a shaykh in the sober Shadhili Sufi order, where he upheld the tradition of the earlier Maliki al-Amir al-Kabir (1742–1817). Ilaysh's asceticism extended to his dealings with the government, from which he became increasingly aloof, even though the khedive Ismaʿil provided him with 42 hectares of land as an emolument, apparently to placate him. Ilaysh opposed the introduction of examinations at al-Azhar in 1872, opposed the increasing European influence in the late 1870s, and participated in the Urabi movement of 1881 and 1882. During this time, he supported the removal of the khedive Tawfiq's supporter, Muhammad al-Abbasi al-Mahdi, as the shaykh of al-Azhar; was appointed to advise the new shaykh, Muhammad al-Imbabi; sought to declare a jihad (holy war) to fight the British invasion; and signed a *fatwa* (legal opinion) declaring the khedive an apostate from Islam—an act of open rebellion. As a result, when the British conquered Cairo for the khedive, Ilaysh was arrested and roughly handled, and died in detention.

Ilaysh's writings amount to over 12,000 pages, mostly dealing with fiqh, although some deal with grammar and *aqida.* Some remain unpublished, but others have had an abiding influence. One of the most influential is his enormous commentary on Khalil titled *Minah al-Jalil,* published in 1877, which may be the last work of fiqh composed in Egypt that is free of modern influence and thus represents a final summation of the Maliki school. Another work of lasting influence is his collection of fatwas, *Fath al-Ali al-Malik,* published in 1883, immediately after his death.

KHALID BLANKINSHIP

İLMIYYE

The Learned Institution, or hierarchy of religious officials in the Ottoman Empire.

From the early sixteenth century, the İlmiyye became a distinct hierarchy in the Ottoman government. It was headed by the grand *mufti,* called the Shaykh al-Islam, in Constantinople (now Istanbul) and extended to the lowest provincial *qadi* (judge) and religious schoolteacher. By the seventeenth and eighteenth centuries, the İlmiyye's top posts were dominated by elite families of Constantinople.

In the nineteenth century, Ottoman reforms undermined the İlmiyye's autonomy and influence by organizing the Ministry of Waqfs in 1834 and, in the Tanzimat period, introducing secular courts, law codes, and school systems that competed with religious institutions. While Abdülhamit II increased funding for the İlmiyye, he also furthered its bureaucratization and state control. During World War I, the Young Turks incorporated all re-

ligious courts into the secular Ministry of Justice and religious schools into the secular Ministry of Education. The Shaykh al-Islam was reduced to a consultant. The final blow to the İlmiyye institution was the abolition of the Ottoman caliphate in 1924 and the ensuing secularization of public institutions by Mustafa Kemal (Atatürk).

IMPERIALISM IN THE MIDDLE EAST AND NORTH AFRICA

Direct or indirect control exerted by one nation over the political life or economic life (or both) of other nations.

Imperialism is generally defined as a phenomenon that began with the overseas expansion of Europe in the fifteenth century. That expansion did not seri-

French troops in 1941. The French colonial empire reached its peak in the early 1900s, with its empire extending to 4.5 million square miles. After World War II, France saw widespread revolts in its North African colonies, and was forced to withdraw from them completely by the late 1960s. **© BETTMAN/CORBIS. REPRODUCED BY PERMISSION.**

ously affect the Maghreb or Egypt, however, until the nineteenth century, and, except economically, it did not affect the most populous areas of southwest Asia until the early twentieth century. The major reason for this delay was the power and durability of the Ottoman Empire.

Originating around 1300, the Ottoman Empire eventually expanded to include most of the Balkans and the Black Sea area, Anatolia, the Fertile Crescent, and northern Africa as far west as the borders of Morocco. It was for centuries the primary empire in the Middle East and North Africa. (An empire is a singular political unit—not necessarily based on territorial contiguity—that incorporates different peoples who were previously self-governing and who retain some institutional autonomy.) In taking over so many regions, the Turkish-speaking armies of the sultans created an empire that included many different linguistic, religious, and ethnic groups, in which Turks were always a minority. The Ottomans engaged in imperial rivalry to expand their territory. Their rivals were the Holy Roman Empire (later Austria-Hungary), the Russian Empire, and the Iranian state of the Safavids and their succes-

Colonial Secretary Winston Churchill (center) with British officials at the 1921 Cairo Conference to discuss the future of the Arab nations. The conference delegates sought to find a way to maintain political control over the areas mandated to Britain in the Sykes–Picot agreement while cutting costs and reducing British overseas military presence. **© Hulton-Deutsch Collection/Corbis. sors, which was sometimes called an empire despite its much smaller size because it was multilingual, multiethnic, and periodically expansive.

This description of the Ottoman Empire does not differ substantially from the description that could be applied to the Christian European empires established from the sixteenth century onward, except that the Europeans were normally less willing to admit non-Europeans into the ranks of officials. The sultans, like the Russian tsars, were primarily motivated by the desire to acquire land and wealth, whereas the overseas European empire builders sought raw materials and markets. Thus the Europeans had a greater impact on the international division of labor than did the Ottomans, although this analytical distinction was not necessarily reflected in the attitudes of the imperialists and their subjects.

Despite the substantial similarities between European and Middle Eastern empires, the term *imperialism* is rarely used to describe the underlying principles of the Ottoman Empire. More often, imperialism is defined as a peculiarly European phenomenon embodying military or political control of non-European peoples; unrestrained exploitation of their economies for the disproportionate benefit of the European home country; feelings of racial, religious, and cultural superiority over the dominated peoples; and, in some regions, the implantation of European colonies or importation of nonindigenous laborers, often as slaves.

Historians in the Marxist tradition have considered economic exploitation by such means as joint-stock companies, forced labor on plantations, and suppression of indigenous manufactures to be

the most important aspect of European imperialism. Imperialism, according to this view, is an inevitable stage of a capitalist system that needs to expand in order to survive. Immanuel Wallerstein, whose theories have been particularly influential, portrays imperialism as the imposition upon the entire world of a system through which capitalist Europe made the rest of the world economically dependent and imposed economic underdevelopment by monopolizing resources, reorienting self-sustaining regions toward extraction of primary goods for European manufacturers, and preventing the emergence of viable mixed economies in non-European areas.

Some clear distinctions between the way the Ottomans and the Europeans ran their empires may be noted. The Islamic religion provided a bond for most people under Ottoman rule, whereas European Christianity remained a culturally elitist, minority faith in the parts of the European empires that did not have large colonies of European settlers or where religions of comparable sophistication, such as Islam, impeded religious conversion. Ottoman lands remained comparatively open to trade by foreigners (though not to land acquisition), and the Ottoman government rarely took action to protect its own merchants, as the Europeans commonly did. Finally, the Ottomans generally administered their territories with a lighter hand than did the Europeans.

In 1800 most subjects of the Ottoman sultan considered it normal to be ruled from a distant capital by means of a rotation of officials and military forces sent from afar and often speaking a foreign language. Napoléon Bonaparte's propaganda effort in 1798 to convince the Egyptians that they were victims of imperial oppression by foreigners fell on deaf ears. Soon thereafter, however, the Christian peoples of the Balkans, stimulated in part by the exposure of community members to European ideas as a consequence of educational or personal contacts outside Ottoman territories, did begin to see themselves as victims of Ottoman domination. Through a series of wars and militant movements—often encouraged by European powers with strategic or ideological agendas—they endeavored to gain their freedom and establish independent states with comparative ethnic and religious homogeneity. The anti-imperialism of the Balkan secessionists eventually affected the Armenian Christians of Anatolia and more slowly gained headway in Arab nationalist circles after 1900.

European imperialism took three forms in the early nineteenth century: direct occupation and colonization of Algeria by France from 1830 onward, diplomatic pressure on the Ottoman sultans to grant economic and legal privileges to Europeans and non-Muslim minorities, and treaties with rulers and chiefs controlling seaports in the Persian Gulf and southern Arabia designed to ensure British military control of the sea route to India in return for maintaining the rulers and chiefs in power. In the second half of the century, new forms of European imperialism emerged. Rulers granted concessions to European entrepreneurs for the building of canals, railroads, and telegraph lines; operation of banks; and marketing of primary products. They also sought loans from private European bankers. When Egypt, the Ottoman Empire, Tunisia, and Iran were successively unable to repay these loans, Europeans assumed financial control over customs and other sources of state revenue. In Egypt, fear that Colonel Ahmad Urabi's military rebellion would interrupt these financial controls prompted Britain to suppress the rebellion militarily and commence

an occupation in 1882 that would last for seventy years. In 1881 France occupied Tunisia and subsequently imposed a protectorate upon its Husaynid beys. In 1900, primarily for strategic reasons, France began the occupation of the territory that subsequently became Mauritania, and in 1912, in partnership with Spain, it imposed a protectorate on the sultanate of Morocco. France had already recognized Spain's sovereignty over certain "presidios" in the Spanish Sahara.

Growing European imperialism gave rise to anti-imperialist sentiments that were vented in popular opposition to concessions, as in the Tobacco Revolt in Iran in 1891 and in the mobilization of political action around religious symbols and leaders (e.g., in Libya, where the Sanusi Sufi brotherhood spearheaded opposition to Italian occupation after 1911). Anti-imperialism also sparked political movements, most notably the Wafd in Egypt, whose members saw the end of World War I as a possible opportunity to escape British rule. Farther west, the Young Tunisian and Young Algerian movements began demanding reform and greater rights for natives. Armenians and Kurds looked to the peace negotiators to grant them independence from outside control, even if it meant accepting some measure of European protection.

The mandate system established at San Remo in 1920 to resolve the problems caused by the defeat of the Ottoman Empire extended European imperialism by giving France control of Lebanon and Syria and Britain control of Palestine and Iraq. Legally, the mandate from the League of Nations to France and Britain required them to nurture these territories toward total independence, but these countries' motivation to do so (strongest in Iraq and weakest in Lebanon and western Palestine) was often adversely affected by issues of national interest. In Palestine, in particular, Britain was committed in the terms of the Balfour Declaration (1917) to fostering the establishment of a Jewish national home. In the eyes of many Arabs and Muslims, the migration of tens of thousands of Jews from Europe to Palestine represented a form of settler colonialism similar to that in Algeria. Between the two world wars France and Great Britain had to deal with extremely determined and sometimes violent resistance by both Syrians and Palestinians, while nationalist movements in the Maghreb also mobilized increasing support.

Unlike parts of the world rich in raw materials or agricultural products that could not be grown in Europe, most parts of the Middle East and North Africa did not offer great rewards to their imperial masters. Egyptian cotton, Algerian wine, and Iranian oil flowed into international markets, and the Suez Canal was profitable, but the cost of military occupation in the face of rising nationalist hostility, and the cost of infrastructure investment, limited though it was in most areas, brought the economic value of imperialism into question. After World War II, the greatly depleted European powers were no longer able to bear the cost, either in money or manpower. One by one, the countries of the Middle East became free of direct imperial control. Only in the most profitable or politically contested countries was the withdrawal of empire accompanied by significant bloodshed. British withdrawal from Palestine in 1948 brought on Israel's declaration of independence and the first Arab–Israel War. The army coup that terminated British control of Egypt in 1952 was followed by the Suez War in 1956 in which Britain, in alliance with France and Israel, attempted to regain control of the Suez Canal. Through effective political activism that was largely but not totally peaceful, Tunisians and Moroccans were able to terminate the French protectorates by 1956. In 1960, as part of a broader de-colonization process, France's president Charles de Gaulle granted independence to Mauritania. In Algeria, colonists' refusal to permit meaningful reform led the Front de Libération Nationale to launch a revolution in 1954; France's attempt to repress it cost roughly 500,000 Algerian lives and ended in independence for Algeria in July 1962. Francisco Franco granted the Western (formerly Spanish) Sahara independence in 1975, but this led to conflict with Morocco that had not been resolved by the early twenty-first century.

As direct imperial control waned and overt indirect control in the form of military bases and foreign ownership of oil companies diminished in the 1950s and 1960s, cultural imperialism came to be looked upon as a pervasive remnant of the imperialist era. Cultural imperialism was considered to have several components: imposition of Euro-American cultural values and lifestyles through market domination by imported consumer goods, motion pictures, and television shows; ideological subversion in the form of secular nationalist political movements

philosophically rooted in Western thought; and intellectual domination through the distorted writings and pejorative imaginative constructions of European Orientalists and their successors in the American academic field of Middle East studies.

Direct imperial domination had evoked a fairly uniform nationalist reaction throughout the region, but the more nebulous concept of cultural imperialism led its proponents in different directions. In Iran, Jalal Al-e Ahmad's concept of *gharbzadegi* or "Westoxication" contributed to the explicitly anti-Western character of the 1979 revolution. Other Islamic activist movements have, to varying degrees, shared hostility or suspicion of the West as an imperialist force. The Islamist insurgency that erupted in Algeria in the 1990s was viewed as principally if not totally cultural in nature. The discourse of al-Qaʿida, which also emerged in the 1990s, is primarily cultural. Secular intellectuals, on the other hand, have refused to accept Islam as the only alternative to cultural domination by the West. Calls for a decolonization of history and exposure of Orientalist fantasies have come mainly from secularists such as Morocco's Abdallah Laroui and the Palestinian Edward Said.

Further stimulus for resistance to Western imperialism came in 1993 from Samuel Huntington's article "The Clash of Civilizations" in the influential journal *Foreign Affairs.* Huntington visualized a future in which an undefined Islamic civilization was destined to conflict with a similarly undefined Western civilization, and he called for the formulation of a strategy that would assure Western victory in such a confrontation. Middle Eastern religious and secular thinkers alike viewed this projection as a portent of continued Western imperial ambition in the post–Cold War era.

INCENSE

Aromatic gum resins.

Frankincense and myrrh are taken from trees that grow in Dhufar, Oman, and in Hadramawt, Yemen. Recent archaeological discoveries confirm their export from about 3000 B.C.E. through an extensive commercial network. The trade, reaching as far as Rome and India, helped create considerable prosperity and interstate rivalry in southwest Arabia. Exports and prosperity declined when Rome made Christianity its official religion and the use of incense at funerals largely ceased.

INDUSTRIALIZATION

Manufacturing in the Middle East, with a legacy of state-led industrialization, remains underdeveloped and ill prepared for the challenges of globalization.

The countries of the Middle East and North Africa have failed to develop viable manufacturing sectors and industrialize in a way comparable to more dynamic countries in Southeast Asia and Latin America. After decades of state-led industrialization efforts, most economies of the region remain dependent on primary produce exports, labor remittances, and foreign aid, while few manufacture

A cotton mill in Egypt. Cotton, Egypt's second largest export, became a major factor in the country's economy after the Alexandria–Cairo railway was completed in the mid-1800s, creating lines to important cotton manufacturing centers such as Samannud and Zaqaziq.

goods that are competitive in international markets. Indeed, without tariff and quota protection and subsidies, most of the existing industries that have been established would fail to compete successfully in their own domestic markets. As a result, the economies of the region remain unprepared to meet the challenges posed by economic globalization and will be hard-pressed to provide sufficient employment and wealth generation for the growing populations of the region.

Overview

From the perspective of global economic history, the Middle East would appear to have the necessary prerequisites for successful industrialization given its manufacturing inheritance, artisan skills, and availability of finance. In the early postwar period, expectations for industrial modernization were high, yet half a century later the region's industrial sectors appear to be mismanaged and technologically deficient. Although conditioned by the experience of colonialism, this fate was not predetermined by geography, religion, or culture. For most economies of the region, it has rather been the result of authoritarian regimes failing to overcome the legacies of inward-oriented, state-led industrialization efforts through market reform and technological innovation. Meanwhile, economies across the region have been sustained by oil incomes, labor remittances, and strategic aid flows while suffering the strains of regional insecurity, leading to high spending on imported military equipment and diverting investment away from the region.

The Middle East has a strong preindustrial manufacturing tradition, for the ancient cities of the region served not only as centers of commerce but also as bases for handicraft manufacturing. The skills of Arab and Jewish craftsmen from Andalusia to Bagh-

dad were renowned throughout the medieval world. Later in the sixteenth century, cities such as Isfahan in Iran had more skilled artisans than Paris, with more than half a million workers engaged in manufacturing.

In the eighteenth and nineteenth centuries, European capitalist penetration and various forms of direct and indirect colonialism led to the dislocation of indigenous economic patterns, while defensive modernization efforts, such as that of Muhammad Ali in Egypt, failed to sustain local industrialization. With the inability to protect local markets, European industrialization resulted in the relative deindustrialization of the Middle East. Small-scale artisan and domestic manufacturing for local consumption, however, continued and in some cases expanded in isolated markets. By the early twentieth century intense economic interaction with Europe did bring access to investment and technology, resulting in establishment of mechanized factories often owned by Europeans as well as ethnic and religious minorities.

These possible foundations for industrial development, however, were disrupted by the rise of nationalist movements that led to the evacuation and expropriation of the assets of much of the existing bourgeoisie. Postcolonial states led by a new class of reform-oriented elites took over the drive toward import substitution industrialization (ISI). With a heavy urban bias, these regimes viewed large-scale factory production as a marker of modernity and national independence. These projects, however, were often driven more by an interest in expanding state power and employment generation than long-range development goals. As a result, most industrial sectors remained dominated by state-owned enterprises and/or supported by tariff and quota protection and subsidies that have proved politically difficult to remove ever since.

Although state-led ISI efforts made impressive early gains, their inward-oriented development models soon faced crises. In the 1970s states such as Turkey, Egypt, and Tunisia adopted "open door" policies to attract investment, but only in the 1980s and 1990s did they implement substantial price liberalization and the privatization of state-owned assets. Economic liberalization spurred smaller scale, private sector investments in light manufacturing, textiles, and food processing.

Meanwhile, in the wake of the 1973 oil embargo the region witnessed a massive inflow of capital with the soaring price of oil. This income allowed the oil-rich states of the Persian Gulf to expand their modern infrastructure and oil-related sectors. Many would also later seek to diversify their economies.

Regional oil dependency, however, has resulted in "rentier" economies marked by excessive state expenditures, unproductive investments, and unsustainable import levels. At the same time, investment in turnkey projects rapidly increased industrial capacity but failed to sustain technological advancement or encourage local innovation. Moreover, oil incomes gave these states the ability to provide extensive educational and social welfare benefits for their populations while eliminating the need for taxation, reducing pressures for administrative accountability and political representation. The bulk of the excess capital generated by the oil boom was invested in the advanced industrial economies, and regional investment was mostly limited to tourism, real estate, and construction. The oil boom also produced rentier effects in the oil-poor states by generating flows of aid and private remittances.

Throughout the post-1945 era, some of the greatest negative factors inhibiting industrialization have been the successive wars, continuous political hostilities, and military authoritarian regimes in the region. In many states, more effort and finance has gone into building military might than into developing civilian industry. In fact, the Middle East devotes a greater share of income to arms purchases than any other region.

The wars and political tensions in the Middle East, caused by regional insecurity and external intervention, have also resulted in investors being put off by the risks and uncertainties. As investment flooded the "emerging markets" in the post–Cold War era, there has been little foreign direct investment in the Middle East, and major multinational companies are still reluctant to establish substantial production facilities in the region.

While economic fortunes vary considerably across the region, in general, Arab states have failed to encourage knowledge-intensive fields and make investments in research and development. And in the last two decades of the twentieth century, encom-

passing both the oil boom and the decline of oil prices in the late 1980s, per capita growth in the Arab states was on average 0.5 percent, which is well below the global average of 1.3 percent. As a result, most states remain ill prepared to face the challenges of economic globalization. In many states, large sections of the population view globalization as an externally driven threat to their well-being and way of life.

Country Experiences

Not surprisingly, Turkey has experienced the most success with industrialization in the region. The regional paradigm for state-led ISI was set by Turkey, which under Mustafa Kemal (Atatürk) established heavy industries in the 1920s and 1930s such as steelmaking and modern textile plants. These were planned on the Soviet model, primarily to serve a protected domestic market. These plants provided the inputs for more consumer-oriented industries such as clothing and household fabrics, and eventually consumer durable manufacturing was developed, including vehicle assembly using domestically produced sheet steel.

Despite the substantial size of the domestic market in Turkey, the import substitution process was running out of steam by the 1960s, and most of the state-owned industries were sustaining heavy losses. Change finally came in 1980, when economic liberalization measures were introduced, liberalizing prices, reducing subsidies, removing import restrictions, and, most importantly, letting the exchange rate find its own level in the market. An export boom resulted, encompassing a range of manufacturing sectors, and Turkey moved into balance of payments surplus as a result of flourishing trade with Europe and exports of manufactured goods to neighboring Middle Eastern countries.

Egypt's state-led industrialization drive under Gamal Abdel Nasser had also faltered by the 1970s, although it was the Arab–Israel War of 1967 that led to the end of development planning and economic policies based on Arab socialism. In the wake of the 1973 Arab–Israel War President Anwar al-Sadat initiated the *infitah* (open door policy) to attract foreign investment. Husni Mubarak followed up by introducing a partial liberalization of the economy, but it was much less sweeping than Turkey's changes. Egypt's subsidies have been reduced at the behest of the International Monetary Fund (IMF), some price controls removed, and the exchange rate floated.

There has been some privatization, but Egypt's industries are not yet internationally competitive, due as much to lack of quality control as to price. Although the large state-owned firms still provide substantial employment, the most dynamic firms are the privately owned export-oriented ones engaged in light manufacturing for international franchises. Much of Egypt's private capital, however, has been invested in real estate and service-sector businesses such as tourism.

Although oil was discovered in the Middle East before World War II, it was the development of the Organization of Petroleum Exporting Countries (OPEC) and the 1973 oil embargo that led to the rapid rise of oil prices, which in turn led to massive revenue increases in the oil-rich states such as Saudi Arabia, Kuwait, Iraq, and Iran.

In Saudi Arabia, the state-owned Saudi Basic Industries Corporation (SABIC) has become a major petrochemical producer working in collaboration with leading multinational oil and chemical companies. Jabal Ali has risen from the desert sands to become the leading industrial complex in the Persian Gulf and the largest in the Arab world. It produces not only a large variety of petroleum derivatives, but also fertilizers and steel. The petrochemicals are the feedstocks for plastics, and Saudi Arabia already has a range of downstream manufacturing, producing everything from transparent bags and other disposables to heavy durable plastic products.

Apart from Turkey, Saudi Arabia is the only Middle Eastern country to have experienced a considerable degree of industrial success. The Riyadh government took the lead because of the substantial scale of the financing involved, but Saudi Arabia, like Turkey, has a vigorous and growing private manufacturing sector. In Turkey, the comparative advantage lies in its modest labor costs and the adaptability and skills of its people. In Saudi Arabia, where much of the labor is foreign, the advantage is the abundance of energy and a tradition of trade and commerce.

With oil resources, abundant human capital, and an agricultural base, Iraq could have been expected

to develop into a regional economic powerhouse. After an emphasis on agricultural development and decentralized food-processing factories in the early republican (post-1958) era, during the oil boom Iraq came to focus on its oil and gas sector. By the late 1970s Iraq had shifted toward heavy industry and armament manufacturing. In the wake of two wars and a decade of sanctions, however, its oil sector and industrial base became dilapidated, and it will be difficult to rebuild it in the wake of the U.S.-led toppling of the Baʿathist regime.

Iran saw its industrial output in steel and petrochemical production decline throughout the 1980s following the disruption of the Islamic Revolution and the Iran–Iraq War. Many industrialists and managers left after the overthrow of the shah, and the war resulted in severe shortages that made it difficult for industries to obtain necessary raw materials and imported inputs. After the war the Tehran government engaged in a "construction jihad" to develop the country's infrastructure and educational system, but political isolation has continued to limit its industrial prospects.

Israel is the most industrialized country in the region and one of the few with a highly skilled workforce and a commitment to supporting research and development. Industrial development, however, has been hampered by isolation and continuing regional conflict. The Oslo peace process of the mid-1990s led to short period of exaggerated hopes in Israel and across the region for economic cooperation in inward investment, but these expectations fell with the decline of the peace process in the late 1990s. As a small state trying to diversify with a limited domestic market, Israel has suffered from its exclusion from regional markets, despite post-Oslo efforts towards regional normalization. Israel's trade with Egypt and Jordan has been minimal, though some low-skilled labor-intensive production has been outsourced to these states, which have peace treaties with Israel. Trade relations with the European Union have been difficult despite a cooperation agreement, and the United States is a somewhat distant market.

Cut diamonds remain a major industrial export for Israel, but earnings are static and the industry provides direct employment for only a few hundred skilled workers. Much of the country's industry is defense related and is dependent on the financial injections from the United States, which sustain the country's high level of military expenditure. Defense equipment, including aircraft, is exported to a number of countries.

In the 1990s Israel made considerable efforts to build up its civilian high technology industries, including electronics and software development. But Israel is a relatively high-cost producer and faces cutthroat international competition. Export growth in its high-technology sector came to a halt in 2000 with the high-tech bust in the United States and with the collapse of the peace process.

The peace treaty between Israel and Jordan failed to generate extensive economic cooperation, but Jordan has sought to diversify and liberalize its economy. With a small domestic market, Jordan had relied on mineral exports and trade with Iraq during its oil-boom phase, but since the mid-1990s has sought to promote tourism development, as well as export-oriented light manufacturing by granting incentives to firms located in qualified industrial zones (QIZ) and through its free trade agreement with the United States. Jordan has also developed a relatively successful pharmaceuticals sector, but its generic drug production might run into trouble with intellectual property rights.

In North Africa, Algeria's industrialization drive, supported by oil and gas revenues, was anchored by heavy-industry plans that failed to act as growth poles. Socialist planning has been disastrous, in particular, for truck and tractor assembly plants. Most consumer durables industries were established to serve the domestic market and have been protected from competition by tariffs and foreign exchange rationing. This also applies to Morocco, which never adopted socialist controls over its economy, as Algeria and Tunisia did. In fact, in Morocco, small-scale craft-based activities such as ceramics, woodcarving, metalworking, and clothing remain a source of strength, providing employment and output possibly equal to that of the country's industrial plants.

Tunisia and Morocco have pursued outward-oriented industrialization policies by promoting tourism development and building private-sector textile plants that carry out subcontracting work for

European garment producers. These firms expanded during the 1980s and early 1990s, but have suffered from lower-cost Asian producers. Despite investment incentives and liberal laws on foreign capital, they have failed to attract considerable industrial investment from overseas. Both states have signed association agreements with the European Union that will gradually reduce tariff barriers on industrial products. In the meantime, Tunisia and Morocco have benefited from preferential access and have sought to promote an innovative industrial modernization program (*mise à niveau*) for small- and medium-sized firms in order to meet the challenges of integration into European and global markets.

INFITAH

Anwar al-Sadat's program to encourage private investment in Egypt, often called the Open Door policy.

Officially launched with the 1974 "October Paper," which called for relaxing some of the government controls applied under the Arab Socialism of Gamal Abdel Nasser, this policy actually started in 1971 as an effort to attract investment by other Arab countries to rescue Egypt's faltering economy. This policy was accelerated after the Arab–Israel War of 1973 because Egypt needed foreign exchange to finance the importation of materials and parts that would bring its economy back to full production. Egypt hoped also to convert its short-term debt to longer indebtedness under less onerous terms and to attract private investments to increase future income, jobs, and foreign exchange.

Law 43 (1974) activated *infitah* by giving incentives, such as reduced taxes and import tariffs and guarantees against nationalization, to Arab and foreign investors in Egyptian industry, land reclamation, tourism, and banking. Some of the advisers to Anwar al-Sadat wanted to limit *infitah* to encouraging foreign investment in Egypt's economy; others hoped to apply capitalist norms to all domestic firms, whether owned by the government or by private investors. Sadat adopted the latter view, causing a deterioration of state planning and labor laws.

Corruption increased under a rising entrepreneurial class of *munfatihin* (those who operate the open door), whose profiteering and conspicuous consumption antagonized many poor and middle-class Egyptians. Their strikes and protest demonstrations erupted almost as soon as the policy was implemented. Sadat's attempt, under World Bank urging, to remove exchange controls and reduce government subsidies on basic foodstuffs led to the January 1977 food riots, but *infitah* continued. Under Husni Mubarak, the *munfatihin* have become a distinct interest group that has resisted his efforts to reduce their opportunities for enrichment or to trim their level of consumption. The *infitah* policy has made Egypt economically dependent on richer Arab countries, Europe, and the United States. It has also widened the economic and social gap between rich and poor, with potentially explosive implications for Egypt's future.

ARTHUR GOLDSCHMIDT

İNÖNÜ, ERDAL

[1926–]

Founder of Turkey's Social Democratic Party.

Erdal İnönü is the oldest son of İsmet İnönü, a hero of the Turkish War of Independence and the second president of the Turkish Republic. He graduated from the physics department of Ankara University in 1947 and received a Ph.D. from the University of California in 1951. He taught at Princeton University, the Oak Ridge Laboratory in Tennessee, and Middle East Technical University in Ankara. By 1983, when he founded the Social Democratic Party (SDP), İnönü was considered to be one of Turkey's leading scientists. In spite of İnönü's prominence, President Kenan Evren banned the SDP (as well as ten other newly formed political parties) from participating in parliamentary elections on the grounds that it was a front for the disbanded Republican People's Party. However, the SDP was allowed to participate in the 1984 local elections, and it won 23 percent of the vote. In the following year İnönü merged his SDP with Necdet Calp's left-of center Populist Party to form the Social Democratic Populist Party (SHP). In 1991 İnönü became deputy prime minister as leader of the junior partner in the coalition government formed by Süleyman Demirel. İnönü is credited with unifying the center-left, but his detractors contend that he lacks vision and is not adept at mass mobilization. After the SHP merged with the Republican People's Party in the early 2000s, İnönü retired from active politics.

UPDATED BY M. HAKAN YAVUZ

İNÖNÜ, İSMET

[1884–1974]

Turkish politician and statesman; several times prime minister and the second president of Turkey.

İsmet İnönü was born in İzmir, where his father was a judge, and educated in military schools, including the Artillery School in Istanbul and the General Staff College (where he finished first in the class two years behind that of Mustafa Kemal Atatürk). In 1912, he became chief of the Ottoman general staff in Yemen and later held the same position in Istanbul. During World War I, the Ottoman Empire joined the Central Powers to fight the Allies; İnönü was sent to fight the British in Palestine and then to the Russian front in eastern Turkey, as chief of staff to Atatürk. In the Turkish war of independence, he continued working with Atatürk. His most distinguished action was in twice defeating the Greeks near the village of İnönü (from which he later took his surname, in the Western style).

In 1922, Atatürk made İnönü foreign minister, so that he could head the Turkish delegation to the Lausanne peace conference. There he gained recognition for his intense and successful work in winning almost all Turkey's demands. He was then made prime minister, an office he held until 1937. He was one of President Atatürk's closest associates, although his views were generally more moderate with regard to the intensity of projected reforms. He fully supported their direction and their basic philosophy, however, and as head of government he vigorously enforced all the reform laws. For this he acquired a reputation as Atatürk's ruthless henchman, the ideal second man.

İnönü was replaced as prime minister in 1937 by Celal Bayar for reasons not fully clear; a personal rivalry then continued for many years. When Atatürk died in 1938, however, İnönü became his successor, Turkey's second president. After the strains of World War II, İnönü was faced with demands for multiparty politics; until that time

During his long political career, İsmet İnönü (1884–1973) did much to help Turkey establish itself as an independent republic. In 1938, he became the country's second president and in 1946 he helped put in place a pluralistic governmental system.
© HULTON-DEUTSCH COLLECTION/CORBIS. REPRODUCED BY PERMISSION.

Turkey had been a de facto one-party state under the aegis of the Republican People's Party (RPP). Based on implicit promises of eventual multiparty democracy, a second party was formed by four RPP rebels, the Democrat Party (DP), in 1946. An early election was called, which the RPP won, partly because the opposition had little time to prepare, but in İnönü's famous declaration of 12 July 1947, he took the statesmanlike position that both parties should have the same privileges. When the Democrats won the 1950 election, rumors surfaced that they would not be allowed to take power, but İnönü stayed true to his word and quietly assumed the role as leader of the opposition, an act for which he won worldwide acclaim. During the 1950s, İnönü led the RPP in the Turkish Grand National Assembly, strongly defending Atatürk's policies of secular Western-style government in the face of Democrat policies that many RPP militants saw as a betrayal of Kemalism.

İnönü's political history made him a target for many Democrats, particularly his rival Celal Bayar, who had become Turkey's third president. As a result of the Democrat government's repressive measures and political shortcomings, the Bayar–Menderes regime was ousted by the armed forces on 27 May 1960. The belief that the military coup was to enable the RPP to return to govern was confirmed for many people when President Cemal Gürsel invited İnönü to form a government despite the RPP having won only a small plurality in the assembly and having run a poor second to the moderate right-wing Justice Party (JP) in the Senate. He formed a coalition with the grudging participation of the Justice party, but it fell in May over the issue of amnesty for the ousted Democrats (which the RPP and the military opposed but which the JP supported on behalf of the former Democrats, to whom they considered themselves successors). In June, the commanders again called on İnönü, and his second coalition was formed, with the New Turkey and Republican Peasants Nation party plus some independents.

İnönü's party had little in common with them in terms of programs, and he was faced with strong dissatisfaction within the RPP as well, because of concessions made to his right-wing coalition partners. He also faced criticism because of the RPP's poor vote-getting record since the transition to multiparty politics; this was attributed to a combination of too moderate centrist policies plus his failure to rejuvenate the party with younger successors and those not as closely identified with Atatürk's militant methods. The RPP's poor performance in the 1963 election led to his resignation as prime minister once more, but when other parties could not form cabinets, he was called on a third time, in December 1963, and he formed his third coalition. In the 1964 Cyprus crisis, İnönü spoke out against the letter sent him by U.S. President Lyndon B. Johnson, which threatened not to defend Turkey from a Soviet attack should Turkey invade Cyprus. Even this did not strengthen his domestic position, and he resigned for the last time early in 1965. Nevertheless, he remained as RPP leader until mid-1972, when the party elected the younger and more leftist Bülent Ecevit as chairman.

One of İnönü's three children, Erdal, became a politician—the leader of the Social Democratic

Populist Party, starting in the late 1980s, and deputy prime minister in the coalition government in 1992.

INSTITUT D'ÉGYPTE

Institute in Cairo, Egypt, for study and promotion of Egyptian culture.

Napoléon Bonaparte founded the Institut d'Égypte (al-Majma al-Ilmi al-Misri) in Cairo in 1798. Its members were the elite of the French expedition's Commission des Sciences et Arts, whose massive *Déscription de l'Égypte* (1809–1826) surveyed all aspects of the Egyptian scene. The institute disappeared when the French evacuated Egypt in 1801.

Inspired by the original institute, Europeans founded the Institut Egyptien in Alexandria in 1859 with Saʿid Pasha's approval. Egyptologist Auguste Mariette was among the forty-odd European founders. The Egyptian scholar Rifaʿa al-Rafi al-Tahtawi and Egypt's future prime minister Nubar Pasha were among the seven Middle Eastern founders. The institute maintained a library, sponsored lectures, and published a bulletin and scholarly memoirs. The institute was moved to Cairo in 1880, and resumed the Napoleonic name *Institut d'Égypte* in 1918. When most European residents left Egypt during Gamal Abdel Nasser's tenure in office, the membership became mostly Egyptian. Neglected by the government since 1952 when Nasser's coup took place, the institute struggles to find funds to keep up its publications, its building just off Cairo's central square, and its once impressive library.

INSTITUTE FOR PALESTINE STUDIES

Palestinian research and publishing center.

The Institute for Palestine Studies was established in Beirut in December 1963 as the first nonprofit, independent research and publishing center focusing exclusively on the Palestinian problem and the Arab–Israeli conflict. Financed primarily by an endowment, the institute is independent of governments, parties, organizations, and political affiliations. It is not affiliated with the Palestine Liberation Organization in any way.

With branches currently in Beirut, Paris, Washington, D.C., and Jerusalem, the institute has striven to accomplish several academic goals over the decades. These have included collecting documents, manuscripts, maps, photographs, newspapers, and books for its library and archives in Beirut, the largest of its kind in the Arab world. The institute was also the first Arab institution to promote the study of the Hebrew language and to translate important Hebrew-language documents into Arabic. The institute continues to publish books and documents relating to the Palestinians and the Arab–Israeli conflict, as well as research journals such as *al-Dirasat al-Filastiniyya, Revue d'études palestiniennes,* and *Journal of Palestine Studies.*

Michael R. Fischbach

INSTITUTE FOR WOMEN'S STUDIES IN THE ARAB WORLD (LEBANON)

Institute in Lebanon that offers innovative activities and outreach programs pertaining to Arab women and children.

In 1973, the newly coeducational Beirut University College (BUC), which later became the Lebanese American University, founded the Institute for Women's Studies in the Arab World (IWSAW) through a grant from the Ford Foundation. The dean of BUC, Riyad Nassar, was one of the founding members of the institute. Julinda Abu Nasr, who was the first director of IWSAW and a faculty member at the university, was another founding member.

The main objectives of the institute are to "engage in academic research aimed at the study and support of women's issues and conditions in the Arab world, serve as a data bank and resource center on such subjects, serve as a catalyst for policy changes regarding the human rights of women in the region, and facilitate networking among individuals, groups, institutions and governments concerned with such topics." The institute has embarked on many projects, including research and publication about education, employment, the legal and social status of women, child rearing, literature, art, history, labor conditions, the environment, and the documentation of published and unpublished material about women's issues.

In addition to hosting an annual lecture series, conferences, and workshops, the institute publishes a quarterly journal, *al-Raʾida,* meaning 'the female pioneer.' Since 1976, *al-Raʾida* has focused on recording the social, economic, and legal conditions of women in the Arab world. The journal promotes educational outreach efforts to the community and facilitates dialogue on the issues. The institute also produces books, monographs, and studies in English and Arabic.

IWSAW has several outreach programs dealing with academic activities and advocacy. Academic activities offered by the institute include conferences, research, and targeted courses. The institute also houses a library, with a collection of over 6,000 documents, all in the process of being placed on the Internet. Advocacy and action programs include rural development and income-generating projects, basic living skills programs that target illiterate and semiliterate women, and educational lectures on such topics as family planning, child care, rights, nutrition, health, and civic education.

The Institute for Women's Studies in the Arab World entered the twenty-first century as an active educational center under the direction of Muna Khalaf, who teaches economics at the university. It has established strong relationships with the community, works with the Lebanese Ministry of Social Affairs, and initiates projects with nongovernmental agencies, local and international.

INSTITUTE OF WOMEN'S STUDIES OF BIR ZEIT UNIVERSITY

Palestinian research center on women and gender.

The Institute of Women's Studies (IWS) at Bir Zeit University was established in 1994 by a group of female academics. The principal researchers affailiated with the institute include: Lamis Abu Nahleh, Rema Hammami, Islah Jad, Penny Johnson, Eileen Kuttab, and Lisa Taraki. Founded initially as the Women's Studies Program in the university's faculty of arts, it became an institute in 1997 with a full-time staff and graduate studies program. Its overall goals are to develop women's studies as an academic discipline, to conduct scholarly research on women and gender relations in Palestinian society, and to facilitate more equitable policies and legislation.

The IWS is involved in teaching, research, training, and advocacy. It offers an undergraduate cur-

riculum of core courses leading to a minor in women's studies. In partnership with the Institute of Law at Bir Zeit, it offers an interdisciplinary master's program in gender, law, and development to increase awareness of the cultural and practical implications of gender divisions and inequalities.

Broad political and economic trends in the West Bank and Gaza Strip influence the institute's research priorities. Between 1994 and 1999 IWS research comprised a series of studies concerning health, education, law, the labor market, and other sectors during a period when institution and capacity-building of governmental and nongovernmental agencies dominated development activities in the West Bank and Gaza Strip. With the collapse of the Oslo Accord, the advent of the second Palestinian uprising of September 2000, and an economic downturn, IWS research began to center on poverty, political violence, and militarism.

IWS faculty members participate in regional research projects contributing to the discourse and scholarship on women and gender in Arab society. Members also engage in consulting and gender training in order to influence policy and increase the institute's sustainability.

INTELLIGENCE ORGANIZATIONS

Modern information-gathering techniques, as first effected by European colonial powers in the Middle East, and later, those implemented by the United States and the Soviet Union after World War II.

Intelligence services in the Middle East originated with European imperialism and colonialism during the nineteenth century. Spies and informers were not new to the region—the Ottoman Empire had monitored the activities of their officials—but the systematic collecting, organizing, and evaluating of political and strategic data for decision making from both open (overt) and confidential (covert) sources was an innovation.

By the late nineteenth century, European governments saw political and military intelligence as a more effective means of advancing colonial interests than military force alone. In Algeria, interest in political and ethnographic intelligence peaked during periods of resistance to French colonial rule, but when France perceived no further threat, interest in intelligence waned. In contrast, since 1904, Morocco's political and social institutions—including its tribal and religious leadership—had been systematically cataloged by the Mission Scientifique au Maroc (the Scientific Mission to Morocco), with the explicit goal of facilitating political intervention. After France established its Protectorate regime in Morocco in 1912, the head of the mission became the director of native affairs.

Most Western intelligence services compartmentalize their activities: the clandestine collection of data; the analysis of overt and covert sources; counterintelligence blocking an enemy's sources, deceiving an enemy, and reporting against hostile penetration; and covert action. In both the colonial bureaucracies and their postindependence successors in the region, the lines between these activities are blurred. The collection of intelligence data sometimes becomes confounded with the supervision, control, and intimidation of populations; and the analysis and reporting of domestic and external threats become subordinate to reassuring insecure rulers or manipulating the information they receive to further individual political careers or factional interests.

The framework of intelligence activities in the colonial era often continued into the initial years of independent Middle Eastern states, and former colonial powers established arrangements for the training of local intelligence specialists. Thus military and civilian intelligence personnel in Jordan and the Persian/Arabian Gulf area receive training in Britain, and the French have provided equivalent training for Morocco and Tunisia.

Military and intelligence organizations were profoundly shaped by foreign advice and training,

Career military officer Danny Yatom was appointed to the leadership of the Mossad in 1996 by Israel's prime minister Shimon Peres, marking the first time the identity of the intelligence agency's director was publicly announced. Yatom resigned his position in 1998 after his actions regarding a failed Mossad attempt to assassinate a top HAMAS leader were brought into question. © CORBIS SYGMA. REPRODUCED BY PERMISSION.

even in countries that did not experience colonialism. Iran's SAVAK was created in 1957 with advice from the U.S. Central Intelligence Agency (CIA), whose role was supplemented in the 1960s by Israel's counterpart, Mossad. Following Egypt's 1952 revolution, the CIA assisted in restructuring the intelligence apparatus; and Soviet-bloc technical assistance stepped in after 1956 during Gamal Abdel Nasser's socialist government. By the 1960s, Soviets and East Germans had begun to play important advisory and training roles in Iraq, Syria, the former People's Democratic Republic of Yemen, and Libya. The Cold War's players were right in the midst of the petroleum-rich Middle East.

Formal training from foreign services notwithstanding, subtle changes occur as intelligence methods and techniques are adapted to local circumstances. First, rival and overlapping services are created to check authority and autonomy, and the result is factionalism. Some rulers—those of Syria and Iraq provide examples—appoint close relatives to key intelligence posts. For instance, in Syria, Rifʿat al-Asad, brother of President Hafiz al-Asad, was head of the Syrian intelligence service and was linked to the Red Knights.

In contrast to U.S. intelligence, which has traditionally placed more emphasis on international rather than domestic threats, the principal task in the region is the surveillance, control, and frequently the intimidation of their own populations—both domestically and abroad. In some states, such as Iraq and Syria, such surveillance is pervasive and unchecked. Intelligence services in other Middle Eastern countries may be more restrained, although human-rights organizations report abuses in all states of the region, as is the case with Tunisia, whose president Zayn al-Abidine Ben Ali received military training in France and the United States. Governments do little to mitigate people's percep-

The head of Egyptian intelligence, Omar Sulayman (second from right), meets with Palestinian president Yasir Arafat (second from left) in Ramallah in July 2002. Sulayman held discussions with both Israeli and Palestinian officials in an attempt to improve relations between the two. © AFP/Corbis. Reproduced by permission.

tion of the power of intelligence organizations because such notions help to suppress public dissent. The secretiveness of such services provides formal (diplomatic) deniability for countries' actions against regional rivals—providing arms or refuge to opponents of a neighboring regime, for example—which, if publicly acknowledged, might lead to a major confrontation. Domestic factions can also receive discreet assistance in the same manner. Regional intelligence services opportunistically cooperate with foreign services; for example, during the Iran–Iraq War in the 1980s, the United States provided both sides with intelligence data from the database it was amassing for its own purposes.

The political intelligence activities of the superpowers in the Middle East have been primarily concerned with their own rivalries, protecting oil supplies, and—for the United States—guaranteeing the security of Israel. For Arab historians, the arch example of foreign intervention is the role of the British, including T. E. Lawrence (of Arabia) during World War I, in instigating the Arab Revolt against Ottoman rule. The British abandoned the Arab cause once their objectives were accomplished. Other examples include U.S.–British cooperation in overthrowing Iran's Prime Minister Mohammad Mossadegh in 1953; and covert U.S. operations against suspected leftist groups in Syria from the late 1940s through 1958. A converse example in 1978 is the Phalange Party and the South Lebanese Army's acceptance of help from Israel during the Lebanese civil war; later, after the head of the party, Bashir Jumayyil, became president of Lebanon, he refused to sign peace accords with Israel. Testimony during the 1987 Iran-Contra hearings in the United States demonstrates how covert intelligence activities can work against formal state control and declared public policy.

Understanding intelligence organizations and their activities is difficult, because information on them is uneven. The history of Israel's intelligence service is better known than those of other Middle

Eastern countries, since many agents have published memoirs and relevant political archives (subject to a thirty-year delay for state papers) are available to scholars. Thus historians can trace the development of Israeli intelligence operations from the early Zionist monitoring of Arab nationalist movements at the beginning of the British mandate in Palestine (1922), to professionalization in the mid-1930s as an element of Haganah (the Zionist military underground), to its bureaucratic separation into military, domestic, and foreign units following the 1948 establishment of the state of Israel. While Israel's security forces are well articulated, so too is its opposition, apparent in the many Palestinian liberation groups. The Palestine Liberation Organization (PLO), once considered little more than a terrorist organization although greatly hindered after the restriction of movement placed on Yasir Arafat during the Intifada in 2000, was viewed by many as the voice of the Palestinian people. One country's terrorists are another's security.

Other intelligence services of the region are known primarily through information provided by defectors (Iraq, Iran, Sudan, Egypt, Libya); deliberate leaks; the release of documents during major domestic crises (the trial in Egypt following Anwar al-Sadat's assassination in 1981) or changes of regime (the release of security files on the Iraqi Communist party following the monarchy's overthrow in 1958); and the capture of documents from foreign security services—such as Israel's publication of Jordanian documents seized during the Arab–Israel War of 1967 or the publication of U.S. intelligence documents and diplomatic reports taken from the U.S. Embassy in Tehran.

Much speculation has emerged after 11 September 2001 as to the changing nature of security in the Middle East. It is apparent that some Middle Eastern governments' security and overall governmental structures will be thoroughly reorganized in line with U.S. security demands. Afghanistan and Iraq are two cases in point. Some governments, like Tunisia, have managed to turn the 11 September attacks into an argument to defend their own internal struggles. Some countries, like Morocco, have adopted profiling techniques similar to those used in the United States after the creation of the Homeland Security Council. Others may argue, however, that there is now a cross-pollination of security strategies between the United States and other countries, and that in fact the United States is borrowing tactics—from the Middle East and elsewhere—that limit domestic civil liberties. Just as colonial intervention shaped intelligence in the Middle East at the time of the Ottoman Empire and after, so too will the United States and other powerful countries continue to influence the evolution of security measures in the region.

Middle Eastern states have historically been more concerned with their own domestic threats than with those involving their neighbors; this most probably will not change in the future, as their own national security is linked to wider international security priorities. These governments have traditionally placed strict limits on civil liberties and have focused surveillance in domains of the public sphere, such as the press. As domestic public spheres are projected into international spheres via satellite television and the Internet, internal security too will invariably evolve. More than ever, citizens in the Middle East are aware that what may be seen domestically as a legitimate action to defend national sovereignty by limiting civil liberties can very quickly become a case for defending human rights within international headlines.

All countries have intelligence services within either the domestic police at various levels, the armed forces, or in some cases private security companies. This list reflects national security institutions that stand on their own as semi-independent organizations working in collaboration with national governments.

Intelligence organizations:

D4 Israeli Navy Shayetet 13 (maritime countermeasures unit)

IAF Israeli Air Force

IDF Israeli Defense Force

ISI Inter-Services Intelligence (Pakistan)

MOIS Iranian intelligence service (post-Islamic revolution)

OAS Secret Army Organization (France/Algeria)

SANG Saudi Arabian National Guard

SAVAK Iranian secret police (during reign of Mohammad Reza Pahlavi)

SSF Special Security Force (Saudi Arabia)

SSG Special Service Group (Pakistan)

Unit 269 Counter-terrorist unit of Sayeret Matkal (Israel)

The following are some groups that have engaged in movements of reclaiming land, resources, and political sovereignty.

Armed/revolutionary/independence/antigovernment groups:

ALF Arab Liberation Front

ARGK Military wing of Kurdistan Worker's Party (Turkey)

ASALA Armenian Secret Army for the Liberation of Armenia

DFLP Democratic Front for the Liberation of Palestine

DRMLA Democratic Revolutionary Movement for the Liberation of Arabistan

FIS Islamic Salvation Front (Algeria)

GIA Islamic Armed Group (Algeria)

INTERNATIONAL, DANA

[1972–]

Israeli singer.

Born Yaron Cohen to a poor Jewish family of Yemenite descent in Tel Aviv, Dana International became one of Israel's most prominent singers in the late 1990s and the country's first renowned transsexual artist. Her career began in drag shows at Tel Aviv gay clubs, and between her first album in 1993 and the late 1990s, her dance music mixed styles, intermingled languages, and emphasized multiculturalism grounded in the Middle East. Jewish tradition, U.S. music, and Israeli and Arab cultures have inspired her songs. As Israel's representative, she won the 1998 Eurovision song contest. Her records were banned in Egypt, yet her popularity expanded to the Arab world. An advocate of gay and transsexual rights, International offered a positive model of transsexuality and posed in an Amnesty International advertisement captioned "Gay rights are human rights." In 2001 Israel's Foreign Ministry booked her performance at the San Francisco Gay Pride celebration to promote Israeli diversity in the face of increasing criticism of state policies. International's songs became more conventional as the demise of the Oslo peace process

and the rise of the second intifada altered the cultural landscape in which she had previously offered a multicultural model of transnational Middle Eastern art.

YAEL BEN-ZVI

INTERNATIONAL DEBT COMMISSION

Established in 1876 to defend the interests of European creditors when Khedive Ismaʿil's Egypt went bankrupt.

Britain, France, Austria–Hungary, Italy, and later Russia and Germany had seats on the International Debt Commission, which was usually called La Caisse de la Dette Publique. The Caisse's insistence on putting the interests of European creditors first was a major cause of the deposition of Ismaʿil ibn Ibrahim and of the Urabist resistance of 1881 and 1882. After the British occupied the country in 1882, their administrators came to see the Caisse as an impediment to necessary financial and agricultural reforms. Britain's entente cordiale with France in 1904, however, removed most of the friction. The weight of external debt on the Egyptian economy lightened between the two world wars, with the importance of the Caisse declining accordingly. During World War II, sterling balances accumulated from Allied expenditures in Egypt essentially eliminated the problem of external debt until the 1960s.

DONALD MALCOLM REID

INTERNATIONAL MONETARY FUND

An international institution charged with maintaining international monetary stability.

The International Monetary Fund (IMF) is an international organization that provides temporary financial assistance to any of its 184 member countries in order to correct their payment imbalances. The IMF was established during the conference at Bretton Woods, New Hampshire, in 1944 because the Allies wanted to avoid the competitive currency devaluations, exchange controls, and bilateral agreements that the world had witnessed prior to World War II. The IMF's main goal was to promote stable currencies in order to enhance international commerce.

Originally, the IMF's position was that restoring payments equilibrium could be achieved within a year by eliminating excess demand. It was not until 1974 that the IMF established the external fund facility to provide its members with up to three years of financial assistance and also introduced a long-term approach, termed the enhanced structural adjustment facility. In exchange for this financing, the IMF demands that borrowers make fundamental changes in their economies to prevent future balance of payments problems. These changes range from stabilization of the exchange rate and of government deficits to structural adjustment of the economy through privatization of state enterprises and liberalization of trade.

By article IV of its charter, the IMF was given the right to monitor on a yearly basis the exchange rate, monetary and fiscal policies, structural policies, and financial and banking policies of every member. It has been heavily involved in many Middle Eastern countries. It has been involved in Egypt and other North African countries since the 1970s. It became involved in Lebanon during the 1990s and finally in Sudan and Yemen through its Heavily Indebted Poor Countries Initiative (HIPC). One Middle Eastern country, Saudi Arabia, enjoys a permanent voting position on the IMF board of governors.

INTIFADA (1987–1991)

Palestinian uprising.

The Intifada erupted in Israeli-occupied Gaza and the West Bank in December 1987. In broad perspective, it was a continuation of the century-old Arab–Israel conflict. The immediate cause was opposition to Israel's twenty-year occupation and military rule of Gaza, the West Bank, and Arab East Jerusalem. Under Israeli military government, there was censorship of school texts and other publications; punitive demolition of Arab homes; and the institution of a permit system for travel outside the territories and for constructing new buildings, opening businesses, digging wells, and conducting other routine daily activities. Civilian courts were replaced by Israeli military tribunals without habeas corpus and the imprisonment of Palestinians for lengthy periods without trial. Often torture was used by Israeli security services.

Israeli plans for integration of the occupied territories included control and allocation of water resources in the West Bank and Gaza and integration of the electricity grid and road network with those in Israel. Approximately half the Palestinian workforce of the territories was employed at the bottom of the Israeli wage scale, in jobs such as construction and agriculture. Many highly educated and skilled Palestinians were forced to accept such employment bcause of deteriorating economic conditions.

Palestinian refugees in the Gaza Strip in 1989. The 1993 Oslo Accord returned a degree of Palestinian self rule to the Gaza territory, but a comprehensive peace agreement was never reached, and after the second Intifada began in 2000 the Israelis again established dominance in the region. © PETER TURNLEY/CORBIS. Israeli soldiers with a Palestinian POW during the first Intifada. When it began, the first Intifada was loosely organized and generally comprised of acts of civil disobedience. As it continued, however, the violence increased, and popular participation decreased. © PETER TURNLEY/CORBIS. REPRODUCED BY PERMISSION.

During the twenty years of occupation prior to the Intifada, about half the land in the West Bank was taken over by Israeli authorities and much of it allocated to Jewish settlers. The substantial increase in the number of Jewish settlers and settlements aroused growing apprehension among Palestinians who feared that Israel would absorb or annex the territories.

By December 1987 Palestinian dissatisfaction reached a crisis. The spark that ignited the Intifada was a road accident on 8 December, in which an Israeli-driven vehicle killed or seriously wounded several Palestinians returning to Gaza from work in Israel. Reports of the incident spread quickly, resulting in protest demonstrations, first throughout Gaza and, within a few days, throughout the West Bank. When Israeli troops arrived to quell the unrest, they were pelted with stones and iron bars by hundreds of demonstrators. Children throwing stones at Israeli soldiers soon became a global symbol of the Intifada.

A man in the West Bank gathers stones to throw at Israeli soldiers during the first Intifada. Not all of the resistance was violent, however, and many Palestinians instead showed their displeasure at Israeli occupation by demonstrating, organizing strikes, boycotting Israeli goods, and creating independent schools and political institutions. © Peter Turnley/Corbis. Reproduced by permission.

The extent and intensity of the uprising caught Israeli, Palestinian, and Arab leaders by surprise. Shortly after the first spontaneous demonstrations in December, the uprising began to be organized by young representatives of several Palestinian factions in the territories, many of them from the refugee camps and the working class. The Unified National Leadership of the Uprising (UNLU) was an underground organization with delegates representing al-Fatah, the Popular Front for the Liberation of Palestine (PFLP), Democratic Popular Front for the Liberation of Palestine (DPFLP), and the Palestine Communist Organization, all banned by Israeli authorities. Representatives of Islamic Jihad at times cooperated with the UNLU, although Islamic fundamentalist factions maintained their freedom of action. Membership in the UNLU frequently rotated, making it difficult for the occupation authorities to apprehend the leaders.

Because of the overwhelming power of the Israeli military, the Intifada avoided the use of firearms. Instead, tactics included strikes and demonstrations; extensive posting of illegal slogans, flags, and symbols; boycotting Israeli-made products; resigning from posts in the military government; withholding labor from Israel; and refusing to use Israeli official documents. The UNLU and the fundamentalist factions issued instructions and political pronouncements to the Palestinian population through posters and leaflets called *bayanat* and through broadcasts from underground radio stations that moved from place to place.

By 1990 more than 600 Palestinians had been killed by Israelis since the beginning of the Intifada, and over 1,000 injured. Arrests and imprisonments associated with the Intifada totaled about 50,000. During this period the uprising resulted in 20 Israeli deaths.

Initial objectives of the Intifada included releasing Palestinian prisoners, ending the policy of expulsion, ceasing Jewish settlement, and removing restrictions on Palestinian political activity and contacts between those in the territories and the leadership of the Palestine Liberation Organization (PLO) abroad. Later demands were the ending of Israeli occupation and Palestinian self-determination.

Whereas the Intifada galvanized Palestinian society, overcoming divisions among regions, religious groups, political factions, sexes, and social classes, it polarized Israel between those who called for a political solution to the Palestine problem and those who demanded greater use of force to suppress the uprising. The Intifada had a detrimental impact on Israel's economy because it required a great increase in military manpower in the territories and entailed the loss of cheap Arab labor in important sectors of the economy.

The Intifada brought the Palestine question to the forefront of international attention, leading to renewed attempts by the United States and Western Europe to find a solution. As a result, the PLO gave greater consideration to the views of Palestinians resident in the territories, and declared in December 1988 that it would accept the coexistence of Israel and a Palestinian state within the West Bank and Gaza. The Intifada and the 1990 Gulf War were catalysts that led to the Middle East peace conference that opened in Madrid in 1991.

İPEKCI, ABDI

[1929–1979]

Turkish newspaper editor.

Born in Istanbul, Abdi İpekci attended Galatasaray High School and studied law at Istanbul University while beginning his journalism career as a sportswriter, cartoonist, and reporter. At twenty-one, he became editor of the daily *Express,* and four years later took the job that gained him nearly universal respect for the next twenty-five years, editor at *Milliyet,* one of Istanbul's leading dailies. İpekci was assassinated in 1979 by Mehmet Ali Ağa, who shot Pope John Paul II two years later.

In İpekci's hands, *Milliyet* became a popular paper that combined slick, attractive presentation with serious news coverage. He was known for maintaining a neutral, but perceptive and reasoned stance in his editorials, although the paper was known to be left-of-center politically. For example, in 1967 İpekci presciently warned against the myth of a communist menace, which he saw as a prelude to a military takeover. As president of the Istanbul Journalists Association (1958–1960) and later, he played a leading role in unionizing journalists and developing a professional code of ethics.

IQBAL, MUHAMMAD

[1877–1938]

Muslim Indian poet, philosopher, and political thinker.

Muhammad Iqbal contributed greatly to Islamic revivalism and to the establishment of Pakistan as an Islamic state. He may be considered the most important Muslim thinker of the twentieth century. His most influential work is *The Reconstruction of Religious Thought in Islam.*

Born in Sialkot, India, under British colonial rule, Iqbal studied literature, law, and philosophy at the Government College at Lahore, Cambridge University, and the University of Munich. He wrote originally in Urdu, then in Farsi in order to reach a wider Muslim audience, and was (and still is) celebrated for his poetry. Iqbal's conceptual goal was to analyze the reasons for the decay of Muslim culture and provide the tools by which Muslims may reclaim their faith. In his view, *taqlid* (imitation) on the part of the theologians and the spread of pantheistic and ascetic Sufism eventually led to the reification of Muslim thought and concealed the dynamism and activism of the Qurʾanic vision. He called for the renewal of Muslim thought and Muslim institutions through the exercise of *ijtihad* and the establishment of democratic societies through the process of *ijma* (consensus). The necessity for Muslims to live by Islamic law led him to call for a separate jurisdiction for Muslim Indians, a concept that the Muslim League in India adopted and that eventually led to the creation of Pakistan. Though Iqbal did not live to see the birth of Pakistan, he is considered by the Pakistanis as the father of their country. The purpose of the Islamic state was to allow the Muslims to create the social and political ideals that the true understanding of the Qurʾanic spirit would lead them to actualize.

In methodology and content, Iqbal draws in his writings on his encyclopedic knowledge of both Islamic and Western thought. A true humanist, he rebuts the claims of Orientalists on the backwardness of Islam without reverting to similar attacks on Christian and Western thought. As he criticizes the Muslims for failing to live up to the ideals of Islam, he also condemns various aspects of Western thought, especially the secularism of the West and its materialist and nationalist ideology that led to colonialism and racism. He rejects the culturally centered views of Western thinkers such as Georg Wilhelm Friedrich Hegel and Auguste Comte on the basis that they lead to a fatalistic and deterministic understanding of man's evolution, denying human freedom and creativity. Instead, he insists on the unity of a humanity derived from a single creator expressed in the diversity of human societies engaged in similar attempts at actualizing their divine gifts; thus, he regards all cultures as genuine and equal contributors to human civilization when they try to remain in touch with the divine inspiration that lies at their heart.

Although Iqbal strongly condemns the practices of Sufism, he retains a powerful spirituality that cannot be separated from action in his vision of the complete human being. His writings are a modern rendition of Muslim thought but stand in the same line as the great works of classical Muslim thinkers.

IRADEH-YE MELLI PARTY

Pro-British political party in Iran, formed in 1943 and dismantled in 1946.

Initially called the Fatherland Party, the Iradeh-ye Melli Party was formed in September 1943 in Iran by Sayyed Ziya Tabataba'i. He was a pro-British journalist who had helped Reza Khan's rise to power in his youth and was made premier in 1921 but was subsequently exiled by Reza Shah Pahlavi, the title assumed by Reza Khan as king of Iran. In 1943 Sayyed Ziya revived his old paper *Raʿd* (Thunder) and called on the *bazaaris* (merchants), *ulama* (clerics), and the tribes to revolt against the military dictatorship of the shah, the "atheistic communism" of Iran's communist-leaning party, the Tudeh, and the corruption of the landed aristocracy. Five months later, Sayyed Ziya renamed the party Iradeh-ye Melli (the National Will). The party had a strong reputation for being pro-British. Included in its program were designs for repeal of all anti-constitutional laws, convening of provincial assemblies, protection of handicraft industries, distribution of state land among peasantry, and formation of a volunteer army. In 1946, the party was dismantled and Sayyed Ziya was arrested by premier Ahmad Qavam as part of the premier's plan for dismantling British influence in the country.

IRAN

Country in southwestern Asia between the Caspian Sea and the Persian Gulf.

Iran has an area of 636,290 square miles and an estimated population of 67 million (2004). It is bounded on the north by the Caspian Sea and the republics of Armenia, Azerbaijan, and Turkmenistan; on the east by Afghanistan and Pakistan; on the south by the Persian Gulf and the Gulf of Oman; and on the west by Turkey and Iraq.

Land and Climate

Iran lies on a high plateau with an average altitude of around 4,000 feet, surrounded by the Zagros Mountains, running from the Armenian border to the shores of the Gulf of Oman, and in the north by the Elburz Mountains. An extensive salt desert in the interior is separated from a sand desert by two mountain ranges in the east. Temperatures reach a low of -15°F in the harsh winters of the northwest and a high of about 123°F in the south during the summer, with most of the country enjoying a temperate climate. Average rainfall ranges from 80

A mosque in Tehran, capital and largest city of Iran. The Tehran area was first settled as early as the fourth century B.C.E., but for centuries the major city was Ray, which was destroyed by the Mongols in the thirteenth century. Tehran developed after the destruction of Ray, initially as a village and small market town until Agha Muhammad Khan, the founder of the Qajar dynasty, chose it as his capital in 1788. Tehran now covers an area of 240 square miles and boasts a population of approximately 8 million, with over 3 million more in the suburbs. MOSQUE IN TEHRAN, IRAN, PHOTOGRAPH BY CORY LANGLEY. inches along the Caspian coast to less than 2 inches in the southeast.

Population

With an estimated population of 67 million in 2004, Iran is one of the most populous countries in the Middle East. It had grown at over 3 percent per annum from the mid-1950s to the mid-1980s. However, the successful family-planning campaign begun in the late 1980s has decreased the rate to about 1.6 percent. Iran's population is comparatively young; 45.5 percent of the population was under 15 years old in 1986, but that percentage fell to 40 percent in 1996 due to the sharp decline in population growth rate. Approximately two-thirds of Iran's people live in the cities: In 1996 the capital, Tehran, accounted for 7 million; Mashhad for more than 1.9 million; and Tabriz, Isfahan, and Shiraz for more than 1 million each.

About 80 percent of Iran's population is of Iranian origin, of whom the ethnic Persians are predominant. According to the 1986 census 82.7 percent of the population (90.9% in the urban areas and 73.1% in the rural areas) could both comprehend and speak Persian, and another 2.7 percent could understand it. Persians are overwhelmingly Shiʿite Muslims. Azeris, or Azerbaijanis, are Iran's largest linguistic minority. Estimated at 25 percent of the population, they are concentrated in the provinces of East and West Azerbaijan, Ardabil, and Zanjan, as well as in and around the cities of Qazvin, Saveh, Hamadan, and Tehran. Iran's second largest ethnolinguistic minority, the Kurds, make up an estimated 5 percent of the

Map by XNR Productions, Inc. The Gale Group.

country's population and reside in the provinces of Kerman and Kurdistan as well as in parts of West Azerbaijan and Ilam. Kurds in Iran are divided along religious lines as Sunni, Shiʿite, or Ahl-e Haqq. The predominantly Sunni Baluchis reside mainly in the Sistan/Baluchistan province and make up 2 percent of Iran's population. Other ethnic minorities include the Shiʿite Arabs (5%) and the Sunni Turkmen (2%). Also residing in Iran are nomadic and tribal groups, including the Qashqaʾis, Bakhtiaris, Shahsevans, Afshars, Boyer Ahmadis, and smaller tribes.

According to the 1996 census, 99.5 percent of the population was Muslim. Followers of the other three officially recognized religions included 279,000 Christians, 28,000 Zoroastrians, and 13,000 Jews. An additional 56,000 were listed as followers of other religions, and 90,000 did not state their religion. The majority of the latter two groups are presumed to be Bahaʾis, followers of a religion that has not been officially recognized by the government and has been subjected to persecution since the 1979 revolution.

Education

The modern national education system emerged in the 1920s and 1930s, when the influence of the religious establishment was repressed and the control

In November 1979 Iranian students stormed the U.S. embassy in Tehran and took sixty-six Americans hostage. Despite a rescue attempt by the military and the freezing of Iranian assets and oil imports, the majority of the hostages remained in captivity until Iran and the United States signed the Algiers Accord in January 1981. © AP/Wide World Photos. Reproduced by permission.

of the rising nation-state over the school system was established. The period from 1956 to 2002 saw the rapid expansion of modern education. The number of students at all levels rose from 1.1 million in 1956 to 7.5 million in 1976, 16 million in 1992, and 18.3 million in 2000 (nearly 30% of the total population). The percentage of girls in elementary schools rose from 21 percent of total enrollment in 1926 to 38 percent in 1976 and 47 percent in 1996; girls in secondary schools increased from 6 percent to 35 percent and then to 47 percent in the same years; and the number in universities leaped from almost none in 1926 to 28 percent in 1976, 57 percent in 1996, and more than 61 percent in 2001. As a result of the adult literacy campaign and the expansion of primary education, the literate population age six and over increased from about 15 percent in 1956 to approximately 62 percent in 1976 and 80 percent in 1996.

The educational reforms of 1966 to 1978 marked the transformation of Iran's school system from the French model to one similar to that of the United States. The structure and organization remained virtually intact after the 1979 Islamic Revolution, but the focus of educators became shaping pupils' behavior according to Islamic values through curriculum and textbooks. Other measures included converting all coeducational schools into single-sex institutions and imposing Islamic dress codes. In 1992 secondary education was reduced from four years to three years and divided into general education (including academic and technical-vocational divisions) and professional education (focusing on

Iranian schoolgirls. Education is compulsory in Iran for children of primary and middle school age. Since the Islamic Revolution in 1979, the number of girls attending public schools, incuding non-mandatory high schools, has incresed from less than 50 percent nationwide to more than 80 percent, and girls comprise over 60 percent of undergraduate college students. © PETER TURNLEY/CORBIS. REPRODUCED BY PERMISSION.

specific, practical work-related skills). The twelfth year of high school became a college preparatory program accepting only high school graduates who pass the entrance examination.

In May 1980 the government closed all universities and appointed a panel, the Cultural Revolution Headquarters, to provide a program of reform for higher education in accordance with Islamic values. When the universities were reopened in October 1981, the University Jihad and other militant groups took control and purged 8,000 faculty members (about half). Following disputes between these groups and the Ministry of Culture and Higher Education over reform issues, the Supreme Council of the Cultural Revolution was founded in 1984 to supervise the reconstruction of universities. In 2000 government-sponsored colleges and universities accredited by the Ministry of Culture and Higher Education and technical, vocational, and teacher training schools (primarily two-year junior colleges) administered by the Ministry of Education and other government agencies enrolled 413,000 students. In addition, the Open Islamic University (836,000 enrollment in 2000) is open to any student upon the payment of fairly steep tuition and fees.

The Economy

Iran's economy is a mixture of large state and semipublic enterprises, small-scale private manufacturing, trade and service ventures, and village agriculture. State enterprises have expanded substantially since the revolution, and market-reform plans set in motion in the 1990s have made little progress toward privatization of large public enterprises. As noted by the International Monetary Fund in 2003, the "Iranian economy continues to face important challenges: employment creation has not been sufficient

to meet the rapid increase in the labor force; inflation is high and rising again; and price subsidies and control continues to hinder economic efficiency; and structural impediments for private sector development remain" (International Monetary Fund, p. 1).

The Iranian economy is heavily dependent on oil, which accounted for 15 percent of the total value of gross domestic product (GDP), 50 percent of state revenue, and 75 percent of total exports from 1996 to 2001. It is estimated that Iran's oil reserves are about 93 billion barrels, or 10 percent of the world's total. Iran also possesses the second largest natural gas reserve in the world, estimated at about 20 trillion cubic meters, or 15 percent of the world's reserves. Hydropower, coal, and solar energy resources are also significant, and there are substantial deposits of copper, zinc, chromium, iron ore, and gemstones.

From 1963 to 1976, Iran's GDP grew by an average annual rate of around 10.5 percent in real terms, and per capita income leaped from some US$170 to over $2,060. The 1978–1980 period of revolutionary crisis saw the flight of skilled workers and entrepreneurs, the transfer of large sums of capital abroad, and the abandonment of many productive establishments. Under these circumstances, the GDP in constant 1974 prices fell from 3.7 trillion rials in 1977 to 2.5 trillion in 1980, and per capita GDP declined from 108,000 rials to 63,000 rials. Following a short period of increase in oil revenues and financial recovery, the period of 1985 to 1988 saw an annual GDP decline of 4 percent due to the fall in oil revenues, negative fixed capital formation, and the heightening of the "tanker war" in the Persian Gulf. In the postwar period and between 1988 and 1992 the rise of oil revenues led to an average annual growth rate of 8 percent in the GDP. The annual growth rate of the GDP fluctuated considerably for the next eight years, but averaged about 4 percent. In 2001 agriculture accounted for 19 percent of Iran's GDP, industry for 26 percent, and services for 55 percent. The state together with semipublic organizations created after the revolution own all heavy industries, many other large industrial establishments, and all major transportation networks and agroindustries. Nationalization of large enterprises and confiscation by the revolutionary government considerably expanded the public sector. As a result, all banks (and insurance companies) were owned by the state until 2000, when a more liberal interpretation of the revolutionary constitution led to the enactment of a new law permitting the establishment of privately owned banks and, later, insurance companies. Four newly established private banks compete with state-owned banks.

Modern industry made its appearance in Iran in the early twentieth century, but it was not until the late 1950s that the government adopted a clear industrialization policy. By the early 1970s the average annual growth rate of the industrial sector was more than 10 percent. From the early 2000s, Iran has had an industrial base consisting mainly of import-substituting industries that are subsidized and heavily protected, and dependent on imported materials. Steel, petrochemicals, and copper ore remain Iran's three basic industries.

Only about one-fourth of Iran is potentially suitable for agricultural production—the other three-fourths receives less than 10 inches of rainfall per year—and less than half of the crops grown are irrigated. In 2001 wheat production amounted to 9.5 million, sugar beets 4.6, potatoes 3.6, barley 2.4, rice 2, and onions 1.3 million tons. In 1998 livestock and dairy products included 763,000 tons of red meat, 5 million tons of milk, 720 tons of poultry, and 625 tons of eggs.

After the revolution, imports fell from $14.6 billion in 1977 to $10.8 billion in 1980 and $8.2 billion in 1988. In 1991 imports rose to $25 billion, then declined between 1993 and 1995 due to the fall of oil revenues, reaching an annual average of $14 billion in the late 1990s. Non-oil exports rose from $2.9 billion in 1992 to $4.2 billion in 2000. In 1999 Iran's total exports (including oil) amounted to $21 billion and its imports amounted to $14.3 billion. Iran's main export markets for both oil and non-oil goods are Japan and United Kingdom; together they accounted for nearly one-third of Iran's total exports in 1999. Germany, with an annual export of $1 to $2 billion goods in the postrevolution period, is the main exporter to Iran.

Government

Iran is a theocratic republic that combines the absolute authority of the ruling Shiʿite jurist combined with an elected president and parliament and an ap-

pointed chief of the judicial branch. The sovereignty of Shiʿite clerical authority (velayat-e faqih), the supreme spiritual guide, is the deputy of the twelfth Shiʿite imam, the Lord of the Age. He appoints the head of the judiciary branch and the theologians of the Council of Guardians of the Constitution, and as commander in chief of the armed forces, he appoints and dismisses all commanders of the armed forces, Revolutionary Guards Corps, and security forces and is empowered to declare war. The president, elected for four years, is the head of the cabinet and the civilian wing of the government's executive branch.

The legislature comprises two institutions: the parliament (Majles) and the Council of Guardians. Under the provisions of the constitution all bills must be approved by the Majles and then be ratified by the Council of Guardians before they are signed into law by the president. The Majles is a body of 290 legislators elected to four-year terms. The twelve members of the Council of Guardians, consisting of six clerics and six lay judges appointed by the supreme guide, review legislation passed by the Majles and are empowered by the constitution to veto laws considered to violate Islamic or constitutional principles. The appointed Expediency Council, created in February 1988 and formally recognized in an amendment to the constitution in July 1989, rules on legal and theological disputes between the Majles and the Council of Guardians. It is charged with ruling in the best interest of the community, even when such rulings go beyond a strict interpretation of the tenets of Islamic law. The elected Assembly of Experts determines succession to the supreme guide.

The judicial branch consists of regular civil and criminal courts, as well as a special clerical court and revolutionary tribunals that hear civil and criminal suits concerning counterrevolutionary offenses. The head of the judiciary is appointed by the supreme guide. The minister of justice functions as a liaison among the judicial, executive, and legislative branches. The Supreme Council of Cultural Revolution has legislative powers over educational matters.

Iran is divided into twenty-eight provinces *(ostans)* administered by governors *(ostandars)* who are nominated by the minister of the interior and appointed by the president. The second level of local government consists of 195 counties *(shahrestans)* under junior governors *(farmandars).* At the third level, 500 districts *(bakhshs)* are under executives *(bakhshdars),* and at the fourth level, 1,581 clusters of villages *(dehestans)* are under headmen *(dehdars).* Villages, the base level, are administered by elected councils. Towns and cities have municipal governments with mayors and councils.

The armed forces and Revolutionary Guards Corps are responsible for defending Iran against foreign aggression. The 300,000-man army is organized into ten divisions and six brigades. The air force consists of about 35,000 men, with more than 400 pilots on active duty and 100 combat aircraft. The 15,000-man navy operates in the Persian Gulf, the Indian Ocean, and the Caspian Sea. It includes two fleets, three marine battalions, and two Russian-made submarines. The 180,000-member Revolutionary Guard Corps is organized into eleven regional commands with four armored divisions and twenty-four infantry divisions, as well as air and naval capacities. Iran's police force incorporates revolutionary committees and the rural police force into the urban police force. The suppression of opposition to the regime is the responsibility of the Ministry of Information and a 100,000-man mobilization corps *(basij)* recruited from veterans of the Iran–Iraq War (1980–1988). Ideological-political bureaus have been established in government agencies and in the armed forces to ensure conformity to the regime's rules of conduct. The armed forces and security organizations are under the command of the supreme spiritual guide.

Since the 1979 revolution various groups, organizations, and factions within the ruling party have fallen into four main political camps. First, those who support the interests of the religious groups *(ulama)* and the bazaar merchants, and who advocate the traditional Islamic jurisprudence, are referred to as conservatives, traditionalists, or rightists. The conservatives fear the cultural penetration of Western lifestyles and are zealous on cultural issues such as women's rights, Islamic dress codes, music, and the media. In the early post-Khomeini era, a major political shift to the right occurred and the conservative camp prevailed. Second, those who support the cause of the economically deprived *(mostazʾafan)* and advocate a progressive Islamic jurisprudence, distributive justice, and tighter

state control of the private sector are called radicals, leftists, or followers of Imam Ruhollah Khomeini's line. Receptive to Western progressive ideas and more tolerant on cultural issues, the radicals are nevertheless highly suspicious of Western imperialism and Iran's dependency on the world capitalist system. The Bureau for Promotion of Unity (Daftar-e Tahkim-e Vahdat), major student unions, and the young Combatant Clerics (Ruhaniyun-e Mobarez) are among the radical organizations. In much of the 1980s the radicals dominated the regime. Third, those who advocate a pragmatic approach—the new middle-class professional and bureaucratic groups—and are concerned with peaceful coexistence in the modern world under a mixed economy are called pragmatists, centrists, or moderates. Former president Ali Akbar Hashemi Rafsanjani has led the centrist camp since its inception in the late 1980s. In the fourth Majles (1992–1996) conservatives controlled more than two-thirds of the seats, pragmatists around one-fifth, and radicals about one-tenth.

In the mid 1990s a popular, reformist movement emerged when there was a major shift in the ideological orientation of the leftist faction from a radical to a relatively moderate and liberal interpretation of Islam. The roots of this ideological shift can be traced to a series of political developments since the revolution, including various failures of the revolutionary regime to fulfill its populist and egalitarian promises; a considerable erosion in the legitimacy of the ruling clerics; the successful (though largely silent) resistance by youth and women to the culturally restrictive policies of the Islamic Republic; the rise of a distinctly antifundamentalist, liberal-reformist interpretation of Islam by a number of Iranian theologians and religious intellectuals; and the precipitous decline in the popularity of revolutionary ideas in the 1990s.

The main Islamic opposition to the regime inside the country includes the liberal Iran Freedom Movement (Nahzat-e Azadi-ye Iran), established in the early 1960s under the leadership of Mehdi Bazargan, who was prime minister in the provisional revolutionary government of 1979. Also organized by Bazargan to fight against frequent violations of human rights in Iran was the Society for the Defense of Liberty and National Sovereignty of the Iranian Nation. Another organization active in Iran is the nationalist Nation of Iran Party (Hezb-e Mellat-e Iran). These groups have been outlawed and systematically suppressed by the government. Absence of opportunities for genuine political participation, imposition of a strict Islamic code of conduct, and, above all, shrinking opportunities for employment have led to increasing alienation of young intellectuals and students.

There are several opposition groups among the one million Iranian political and cultural exiles in Europe and the United States, including liberal nationalists such as the National Front, whose origin can be traced to the period of Mohammad Mossadegh, and a number of small groups that advocate the establishment of a secular, Western-style parliamentary system in Iran. Also active are monarchists seeking to resurrect Pahlavi rule through the former Crown Prince Reza Pahlavi. A few small leftist groups conduct a propaganda campaign against the regime through newspapers and magazines. The most active, militant opposition force has been the People's Mojahedin of Iran (Mojahedin-e Khalq-e Iran). Between 1987 and 2003 it waged guerrilla operations and a military offensive against Iran from its camps across the border in Iraq.

History since 1800

Iran began the nineteenth century under the Qajar Dynasty (1796–1925) and the political and economic influence of Russia and Great Britain. Two wars with Russia were ended by the treaties of Golestan (1813) and Turkmanchai (1828), and Russia took over the area north of the Araks River. Following a futile attempt by Iran to reclaim Herat, its former territory in western Afghanistan, the British waged war in 1857 and forced Iran to give up all claims to British-controlled Afghanistan. To resist the European expansionist schemes, Crown Prince Abbas Mirza initiated a series of military reforms in the 1820s that were continued by more comprehensive reforms of the grand vizier Mirza Taqi Khan Amir Kabir in the mid-nineteenth century. Mirza Hosayn Khan Sepahsalar continued the reforms of his predecessor in the early 1870s.

In the latter half of the nineteenth century, Russia and Britain increased their economic and political domination over Iran. European companies were granted trade concessions that often were disadvantageous to nascent Iranian industries and local merchants. Meanwhile, new ideas of political

freedom were introduced by intellectuals and others who had come in contact with the West. The 1890 grant of a tobacco concession by Naser al-Din Shah to a British citizen provoked the local tobacco merchants and the *ulama* to instigate riots that eventually forced cancellation of the concession. Many intellectuals and popular religious leaders believed that by reforming the government they could improve the country's economic and social conditions and ensure its political independence. Antigovernment protests were led by a broad alliance of Islamic clergymen, intellectuals, and merchants. On 30 December 1906 the ailing monarch, Mozaffar al-Din Qajar, finally yielded to demands for a constitution. In 1907 Great Britain and Russia divided Iran into two spheres of influence and a neutral zone. With the outbreak of World War I in 1914, Iran declared its neutrality; nevertheless, Britain and Russia occupied the country, spying on each other and engaging in hostilities on Iran's territory.

In February 1921 a pro-British journalist, Sayyed Ziya al-Din Tabataba'i, and Brigadier Reza Pahlavi staged a bloodless coup and took control of the government in Tehran. With the army as his power base, Reza became the country's monarch in 1925 and founded the Pahlavi Dynasty. After establishing the authority of the central government throughout the country in the 1920s, he tried to Westernize Iran's economic and social institutions in the 1930s. He replaced the traditional religious schools and courts with a secular system of education and a judicial system based on European legal patterns. He created a modern army and national police force and established a number of state-owned industrial enterprises and a modern transport system. The period of his rule (1925–1941), however, was marked by suppression of individual freedoms and political activities.

In August 1941 troops from the Soviet Union and Britain invaded Iran and forced Pahlavi to abdicate his throne to his son, Mohammad Reza. After the conclusion of World War II, the Soviet Union refused to withdraw its forces from Iran. Through a combination of international pressure and internal maneuverings by Prime Minister Ahmad Qavam, Russia's forces finally left in late 1946, and the pro-Soviet autonomous government of Azerbaijan and the Republic of Kurdistan collapsed. For much of this period, the young shah and his cabinets were forced to conform to the will of the parliament, which was dominated by the old-guard politicians and propertied classes. Following an attempted assassination of the shah on 4 February 1949, the pro-Soviet Tudeh Party was outlawed. The Constitutional Assembly that convened on 21 April granted the shah the right to dissolve the Majles.

At the beginning of the 1950s the National Front, a loose coalition of liberal nationalists under the leadership of Mohammad Mossadegh, demanded greater control over the British-dominated Anglo-Iranian Oil Company. The oil industry was nationalized, and Mossadegh became prime minister in April 1951. The Soviet-backed Tudeh Party strongly opposed the nationalization and the Mossadegh government. In a struggle with the shah over control of the armed forces, Mossadegh resigned, and Ahmad Qavam was appointed premier on 18 July 1952. Three days later, riots broke out in Tehran and major cities; Qavam was forced to resign and Mossadegh was reinstated.

In August 1953 a coup conceived by the British MI6 and delivered by the U.S. CIA ousted Mossadegh; Fazlollah Zahedi became prime minister. The new regime ordered the arrest of supporters of the National Front and the Tudeh Party and placed severe restrictions on all forms of opposition to the government. Between 1953 and 1959 the shah's power gradually increased, and the government signed an agreement with a consortium of major Western oil companies in August 1954, joined the Baghdad Pact in October 1955, and with CIA assistance established an effective intelligence agency (SAVAK) in 1957.

In the early 1960s, under increasing pressure from the U.S. Kennedy administration, the shah appointed Ali Amini as prime minister and Hassan Arsanjani as minister of agriculture, and the government initiated a series of social and economic reforms later called the White Revolution. In January 1963 a national referendum supported six reform measures including land reform, women's suffrage, workers' sharing up to 20 percent of industrial profits, and the nationalization of the forests. Major urban uprisings protested the referendum and the government's arrest of Ayatollah Ruhollah Khomeini in June 1963. After cracking

down on rioters, the shah emerged as an autocratic ruler. He allocated oil revenues among state agencies and projects, and he directly supervised the armed forces and security organizations, foreign policy and oil negotiations, nuclear power plants, and huge development projects. The latter half of the 1960s was marked by relative political stability and economic development, and Iran emerged as the regional power in the Persian Gulf after the withdrawal of British forces in 1971. Following border clashes between Iran and Iraq in the early 1970s, an agreement between the two nations was signed in Algeria in 1975. By the mid-1970s Iran had established close ties not only with the United States and Western Europe but also with the Communist Bloc countries, South Africa, and Israel.

Meanwhile, land reform and the rise of a modern bureaucracy eliminated the traditional foundation of the regime—the *ulama,* the bazaar merchants, and the landowning classes. They were replaced by entrepreneurs, young Western-educated bureaucratic elites, and new middle classes discontented with the shah and his policies. The entrepreneurial and bureaucratic elites were unhappy with their lack of political power, the intelligentsia resented violations of human rights, and the *ulama* and the bazaar merchants resented the Western lifestyles, promoted by the state's modernization policies, that contravened Islamic traditions. Under these circumstances, the nucleus of a revolutionary coalition was formed by leaders with ready access to the extensive human, financial, and spatial resources of the bazaar, the mosque, and the school-university networks. They saw an opportunity to challenge the shah after the victory of human-rights champion Jimmy Carter in the U.S. presidential race of November 1976.

In the summer of 1977 a series of open letters written by intellectuals, liberal figures, and professional groups demanded observance of human rights. An article published in the daily *Ettelaʾat* on 7 January 1978 attacked Khomeini, and violent clashes between religious opposition groups and security forces took place in Qom on 9 January. This conflict marked the beginning of a series of religious commemorations of the fortieth day of mourning (a Shiʿite rite) for those who had been martyred in various cities. In July and August, riots erupted in Mashhad, Isfahan, and Shiraz. September 1978 began with the first mass demonstrations against the shah's regime. Striking government employees brought the oil industry to a standstill on 31 October. Mass strikes continued through early November, when a military government was installed by the shah, and in December hundreds of thousands of people demonstrated in Tehran. In all, approximately 2,500 persons were killed in clashes between demonstrators and the security forces from January 1978 to February 1979. The shah left Iran for Egypt on 16 January 1979, and Khomeini returned to Tehran on 1 February. Four days later, he appointed Mehdi Bazargan prime minister of a provisional government. On 11 February the army's Supreme Council ordered the troops back to their barracks. Military installations were occupied by the people, and major army commanders were arrested.

The April 1979 national referendum sanctioned the declaration of the Islamic Republic of Iran, the December 1979 national referendum approved the constitution, and in January 1980 Abolhasan Bani Sadr was elected the republic's first president. He was impeached by the Majles for opposing the ruling clerical establishment and dismissed from office by Khomeini in June 1981. In July Mohammad Ali Rajaʾi was elected president; in August a bomb exploded in the prime minister's office, killing the new president and Mohammad Javad Bahonar, the new prime minister. In October Ayatollah Sayyed Ali Khamenehi was elected the third president of the Islamic Republic, and the Majles endorsed the radical prime minister, Mir-Hosain Musavi.

On 4 November 1979 the U.S. embassy in Tehran was occupied by a group of militant students, and sixty-six Americans were taken hostage. The seizure was in response to alleged U.S. interference in Iran's internal affairs and to the U.S. decision in October to admit the shah for medical treatment. President Carter ordered the freezing of some $12 billion of Iran's assets in the United States on 14 November. After 444 days in captivity, the last of the hostages were released on 20 January 1981 as Ronald Reagan was inaugurated U.S. president. Five years later, in September 1986, it was reported that Iran had secretly received 508 U.S.-built missiles in a clandestine "arms-for-hostages" deal with the United States to intercede for the release of American hostages in Lebanon; this episode became known as the Iran–Contra Affair.

Frustrated by an imposed 1975 border agreement and heartened by Iran's military weakness after the 1979 revolution, Iraq invaded Iran on 22 September 1980. After rapidly occupying large areas of southwestern Iran and destroying the oil refinery at Abadan, Iraq's forces became bogged down in siege warfare. In an offensive in May 1982 Iran recaptured the strategic town of Khorramshahr, and its forces entered Iraq. Initiating the "war of the cities," Iraq's forces launched air attacks on Iran's cities in 1984. In May 1987 the United States began direct intervention in Persian Gulf affairs by escorting eleven Kuwaiti oil tankers under the U.S. flag. This action led to increased attacks against oil tankers and merchant ships. After a long pause, the war of the cities resumed in early 1988, when Iraq launched missile attacks against Tehran and other cities, and both Tehran and Baghdad came under fire from ground-to-ground missiles. On 3 July 1988 the U.S. warship *Vincennes,* stationed in the Strait of Hormuz near Bandar Abbas, shot down a civilian Iranian airliner over the Persian Gulf, killing all 290 people aboard. On 18 July Iran accepted UN Security Council cease-fire Resolution 598. The eight-year Iran–Iraq War left about one million casualties and cost several hundred billion dollars in damages and military expenditures.

On 3 June 1989 Ayatollah Khomeini died, and the Assembly of Experts elected President Ali Khamenehi as the supreme spiritual guide of the Islamic Republic; the change of leadership marked the beginning of a major shift of power from the radical left to the conservative right. In July Ali Akbar Hashemi Rafsanjani was elected president, and he was re-elected for a second term in 1993. Rafsanjani's policies for economic, sociocultural, and political reforms were obstructed by the radical faction of the left between 1989 and 1993, and then by the rising conservatives on the right. At this juncture, a new coalition was formed between the moderate, pragmatist group that followed Rafsanjani and the radical, leftist faction within the regime who were excluded from power by the conservative and fundamentalist forces.

Mohammad Khatami's 1997 presidential campaign platform emphasized the rule of law, building a civil society, a moderate foreign policy, and the protection of civil liberties guaranteed by the Islamic constitution. His victory was as much a manifestation of the voters' rejection of the extremist politics of the left in the 1980s and the right in the 1990s as it was an affirmation of Khatami's moderate, well-reasoned, and liberal campaign statements. His 1997 electoral triumph over Ali Akbar Nateq-Nuri would not have been possible, furthermore, without the vast human and financial resources that were contributed to his campaign by members of the pragmatist camp of the incumbent president, Rafsanjani, as well as the many formerly radical elements within the regime. During much of Khatami's first presidential term (1997–2001), his supporters rallied behind the slogans of civil society and the rule of law, but they were besieged by the conservatives, who had gained effective control over key positions within the Islamic state. These included positions in the judiciary and the Council of Guardians, the armed forces and the militia, the intelligence services and vigilante groups working in tandem with them, the broadcast media, and the para-statal foundations. The latter, putatively philanthropic foundations that are not subject to the fiscal and regulatory agencies of the state, form a massive network of patronage and corruption and "an economy within the economy" that effectively controls as much as one-third of the country's domestic production.

Khatami's election victory in 1997 was followed by two other sweeping wins by reformist candidates in the municipal elections of 1999 and the Majles elections of 2000. In the 2000 election the reformists won some 200 of the 290 seats in parliament, thus giving the pro-Khatami candidates a decisive majority in the legislative body, but the conservatives, on the defensive against a formidable majority of the people, resorted to tactics of intimidation and vigilantism against their political rivals. Through their control of the judiciary they started a systematic crackdown of the press, intellectuals, and other outspoken critics of the regime.

In July 1999 *Salam,* a popular pro-reform newspaper, was closed by the order of the Press Court. Following peaceful demonstrations on the campus of Tehran University against the closure, militia forces entered the student dormitories and brutally attacked students, killing one of them in the assault, and injuring and arresting hundreds. The dormitory assault ignited a series of protests over the next several days that escalated into full-scale riots when

the demonstrators were attacked by vigilante partisans of the Party of God (Ansar-e Hezbollah). In April 2000 the conservative-dominated judiciary continued the campaign of intimidation against the press. More than forty pro-reform newspapers and magazines were forcibly closed because of their alleged "denigration of Islam and the religious elements of the Islamic revolution." Over the next several months, journalists and editors were the primary targets of the conservatives' attacks against the print media. Iran's best-known investigative journalist and the editor of the newspaper *Fath,* Akbar Ganji, was sentenced to ten years in prison (later reduced to six years) for his writings that implicated several senior officials in the 1998 murders of five intellectuals and political activists. This and the imprisonment of another two dozen well-known journalists prompted the Paris-based Reporters sans Frontiers to dub Iran "the largest prison for journalists in the world."

In April 2000 several prominent Iranian intellectuals, journalists, publishers, and women's rights activists traveled to Berlin to attend an international conference on the future of reform in Iran. Upon their return to Iran many of the participants were brought to trial before the Revolutionary Court in Tehran on charges of conspiring to overthrow the Islamic Republic. In March 2001 the judiciary ordered the closure of the religious-nationalist Iran Freedom Movement (the only tolerated opposition group in the country since the revolution) on charges of attempting to overthrow the Islamic Republic, arresting and detaining twenty-one of its leading members. Khatami's failure to implement his promised political reforms and the lack of any significant improvement in the economy during his first four-year term did not prevent him winning the June 2001 presidential election with 77 percent of the vote. In spite of two mandates for change that he has been given by an overwhelming majority of his countrymen, and even though pro-reform candidates are in control of the Majles as well, Khatami faces the same constitutional constraints and political obstacles from his conservative opponents that stymied his first presidential term.

The catastrophic attacks on the World Trade Center and Pentagon on 11 September 2001 brought a new phase in United States–Iran relations. Iranian authorities promptly condemned the terrorist attacks, and the mayor of Tehran sent a message of sympathy to the mayor of New York City. The Iranian people showed their sympathy by organizing gatherings in commemoration of the victims of 9/11. In response to the terrorist attacks, the U.S. government put together what it called a coalition against terrorism. As part of this approach, it lent aid to the Northern Alliance, the forces that Iran had supported from their formation in 1996 to fight against the Taliban regime and Osama bin Ladin's forces in Afghanistan. Following 9/11, Iranian and U.S. military advisors worked side by side with Afghan opposition forces to bring down the Taliban. After dismantling the Taliban network and creating a new regime in Afghanistan in Fall 2001, neoconservatives in the Bush administration supported regime change in a number of other countries. This policy unfolded on 29 January 2002 when in his State of the Union address President Bush labeled Iran, Iraq, and North Korea as an "Axis of Evil." On 13 December 2002 the United States accused Iran of launching a secret nuclear weapons program and published satellite images of two sites under construction in the towns of Natanz and Arak. Iran denied any military purpose behind its nuclear activities and agreed to inspections by the Vienna-based International Atomic Energy Agency (IAEA), but refrained from "full cooperation." Despite Iran's insistence that its nuclear program—which included uranium-enrichment activities—was designed to meet its energy needs only, the IAEA gave Iran until 31 October 2003 to provide evidence that it was not trying to build nuclear weapons. Persuaded by the foreign ministers of Great Britain, France, and Germany, Tehran agreed to "total transparency" over its nuclear activities, promising full cooperation with the UN's nuclear agency and agreeing to suspend uranium enrichment, while reserving the right to resume the process if it deemed necessary.

The 2003 Nobel Peace Prize was awarded to the Iranian human-rights activist and ardent reformist Shirin Ebadi, boosting Iranian hopes for the rule of law, justice, and democracy. Yet, in spite of the appeal of liberal-democratic ideas of individual freedom, pluralism, and political tolerance, and the overwhelming endorsement of these ideas in four national elections, the reform movement has had

but a limited influence on Iran's political conditions. The willingness of the conservative forces to heed the popular mandate for greater political and cultural freedoms, economic reform, and respect for law—and, above all, for an end to the use of violence—will determine whether a gradualist course of reform will succeed.

IRAN-CONTRA AFFAIR

U.S. political scandal involving Iran, Israel, and Nicaragua.

There were no official relations between the United States and Iran after the long U.S. embassy hostage crisis during the Iranian revolution from 1979 to 1981. Beginning in 1984, Shi'ite groups in Lebanon began kidnapping U.S. citizens and other Westerners. The hostage crisis involved the Central Intelligence Agency (CIA) when William Buckley, station chief in Beirut, was seized in March 1984. Out of concern for the release of Buckley, who could potentially reveal U.S. intelligence information, and in the belief that Iran had influence over the kidnappers, the U.S. administration launched an operation whereby missiles and military spare parts were sent to Iran via Israel. This shipment resulted in the release of one U.S. hostage, but not of Buckley, who was already dead. U.S. officials traveled to Iran to establish contacts, and further arms shipments were made.

At the same time and in a completely unrelated effort, the U.S. administration tried to figure out

ways to bypass a congressional prohibition of U.S. assistance to the Contra rebels who were attempting to overthrow the leftist Sandinista government in Nicaragua. Lt. Col. Oliver North of the National Security Council devised a plan in which the proceeds from the Iranian sales would fund the Contras. This policy violated both the U.S. commitment not to negotiate with terrorists and the prohibition on aiding the Contra rebels (the two Boland Amendments).

In late 1986 a Beirut-based magazine reported that there were secret negotiations between U.S. officials and Iranians. This led to investigations in the United States and exposure of the operations. U.S. president Ronald Reagan appointed a special commission under the direction of former senator John Tower to investigate. Later, there was a joint congressional committee formed and a special prosecutor appointed. In the end, only some of those involved (North and the two successive National Security Advisers: Robert McFarlane and John Poindexter) were tried and even fewer convicted of any wrongdoing, but it was a political scandal that compromised U.S. credibility with its allies for having violated its pledge not to negotiate with terrorists, and for having sent arms to Iran and having violated a legal ban on providing assistance to the Contras. The actual involvement of President Reagan and of Vice President George H. W. Bush was never clearly established as far as illegal activities were concerned.

IRANIAN BUREAU OF WOMEN'S AFFAIRS

A bureau created to improve conditions for women through education, training, and the reform of laws affecting women's status.

The Iranian Bureau of Women's Affairs was created in December 1991. The idea for its founding came from Marziyeh Seddiqi, an American-educated Iranian engineer who later became the bureau's head of planning and research and a member of the Fifth Parliament (1996–2000), and from Shahla Habibi, whom President Hashemi Rafsanjani later appointed director of the bureau and his adviser on women's affairs. These two women had worked closely together, organizing a seminar on the issue, calling for the cooperation of cabinet ministers, and submitting the project of creating the bureau to the president. An offshoot of the presidential office, the bureau's goal was to identify and ameliorate problems in the condition of women and to propose solutions that would elevate women's status and promote their economic, social, cultural, and political participation. Its projects included work on women's education and training, women's managerial skills, reform of the civil code and divorce law, sending female students abroad for higher education, and creating a center for women's employment and a center to provide women with legal advice. Maʿsoumeh Ebtekar, a university professor and the editor of a woman's journal, *Farzaneh,* who in 1997 became vice president in charge of the protection of the environment, was in charge of the bureau's education and training program. The bureau worked closely with the High Council of the Cultural Revolution, which determines general policies of the state, with the Social and Cultural Council of Women (created in 1987), with cabinet ministers, and with members of parliament. As a result of this collaboration, women's commissions or bureaus were created in various ministries, cabinet ministers appointed advisers on women's affairs, and several motions were presented by women members of parliament to ameliorate the status of women. Following President Mohammad Khatami's election in 1997, the bureau changed its name and became the Center for Women's Participation, chaired by Zahra Shojaie.

IRANIAN LANGUAGES

Family of languages spoken in Iran and adjacent countries.

The Iranian languages are closely related to those of the Indo–Aryan family, such as Sanskrit, Hindi, and Urdu; both families (the Indo–Iranian and Indo–Aryan languages) are part of the Indo–European language family, which also contains the Germanic, Slavic, Celtic, Romance, and Greek languages. The principal Iranian languages and groups of languages or dialects are discussed below.

The Southern and Southwestern Languages

Modern Persian is the official language of Iran, Afghanistan, and Tajikistan. There are numerous local variants, the most important being the spoken Persian of Afghanistan (Dari) and of Tajikistan (Tajik). The differences between standard Persian and Dari are not great; but the grammar of Tajik, especially the verbal system, has long been influenced by the neighboring Turkic languages and contains constructions that are foreign to standard Persian. Some of the earliest major Modern Persian texts, written by Persian Jews in the Hebrew alphabet, are in several variants of Persian and contain many archaic features.

Modern Persian is descended from Middle Persian, which is known through documents from the late Parthian and Sassanian periods (from c. 200 C.E.). The earliest examples are on coins from the rulers of Fars and inscriptions from the early Sassanian kings that are written in a local variant of the Aramaic alphabet. The Middle Persian Zoroastrian scriptures were written in a more developed variant of the same script, the Pahlavi alphabet, in which many letters are not distinguished. There is also a large Manichaean literature written in a Syriac script, and a few fragments of Christian texts.

Middle Persian is descended from Old Persian, the language of the Achaemenid inscriptions composed by Darius and Xerxes and their successors (c. 520–340 B.C.E.). It is written in a simple cuneiform script invented by the Persians, rather than the complex cuneiform systems of the Babylonians and Elamites in use at the time.

The languages (dialects) spoken in southern and southwestern Iran in the areas of Bakhtiar, Lorestan, and Fars are all more closely related to Persian than to other Iranian languages.

Kurdish is spoken mainly in western Iran, eastern Iraq, Turkey, and in the southern areas of the former Soviet Union. There are several dialect groups: southern (e.g., Kermanshahi), central (e.g., Sorani, Mokri), and northern (e.g., Kurmanji).

West and east-northeast of Tehran, in Mazandaran, and along the southwestern coast of the Caspian Sea a group of related languages is spoken: Tati, Taleshi, Gilaki, Mazandarani, Semnani, and others. Probably also a member of this group is Zaza or Dimili, spoken in eastern Turkey. All of these languages may be ultimately related to the Parthian language, known through documents and Manichaean texts (c. 1st century B.C.E.–3rd century C.E.).

South of the Central Desert, Dasht-e Kavir, a group of languages referred to as the Central Dialects is spoken: Khuri, Naʿini, the dialect of the Zoroastrians of Yazd and Kerman, and others. These may be related to the ancient Median language, the official language of the Median state (c. 700–560 B.C.E.).

In southeastern Iran there are three related languages in several dialects: Larestani and North and South Bashkardi.

Baluchi is spoken mainly in eastern Iran and Pakistan. It has several dialects.

The Northern or Northeastern Languages

North and northeast of Iran, descendants of the various Scythian or Saka languages are still spoken.

Ossetic, in three dialects, is spoken in the Caucasus. It is the descendant of the old Alanic language(s), of which fragments are known.

Pakhtun is spoken in Afghanistan, where it is official language, and in northwest Pakistan.

Numerous languages are spoken in Afghanistan, north of the Afghan border with the central Asian republics, and east of the border with Pakistan; none of them has a written tradition. The most important are the Shughni group (Shughni, Sarikoli,

Yazghulami, Roshani, etc.), Yidgha and Munji (Munjani), Yaghnobi, and Wakhi.

Yaghnobi is descended from a dialect of Sogdian, a Middle Iranian language known from a large corpus of Buddhist, Manichaean, and Christian texts, as well as secular documents (4th–10th centuries, C.E.).

Wakhi is related to the Middle Iranian language Khotanese, spoken in Chinese Turkistan and known from a rich Buddhist literature and secular documents (c. 5th–10th centuries C.E.).

Two other Middle Iranian languages, Bactrian (c. 1st century B.C.E.–c. 4th century C.E.) and Chorasmian (Khwarazmian; c. 3rd–14th centuries C.E.), have no known descendants.

Avestan is the language of the holy scriptures of the Zoroastrians. Old Avestan is very similar to the language of the Indian *Rigveda* and may have been spoken about the middle of the second millennium B.C.E. Young Avestan is similar to Old Persian and may have been spoken throughout the first half of the first millennium B.C.E.

Among the many grammatical features that distinguish the Iranian languages from one another three can be mentioned.

Gender

The distinction between grammatical masculine and feminine has been lost in Modern Persian and Balochi but exists in Kurdish and Pakhtun. For example: Persian, *īn mard/zan āmad*; Pakhtun, *dā saṛay rāyay* (this man came) but *dā ṣ̌əja rāyla* (this woman came).

Cases

In many Iranian languages two or more cases are distinguished (in Ossetic, nine). For example: Mazandarani, *per ume* (my father came), *pére sere* ([my] father's house), Baluchi, *ē ā mardē gis int* (this is that man's house), *gisā int* (it is in the house), Pakhtun, *da de saṛī kitāb* (this man's book).

Ergative Constructions

In many Iranian languages the past tense of transitive verbs is expressed by a construction that resembles the English passive. This construction was originally used for the perfect tenses, corresponding to the English "I have done." For example: Old Persian, *adam akunavam* (I did) but *manā kr̥tam* (I have done); Pakhtun *z rasedəm* (I arrived) but *dā saṛray me wúlid* (I saw this man).

IRANIAN REVOLUTION (1979)

Mass, nationwide uprising lasting several months and culminating in the overthrow of the monarchy.

In February 1979, the regime of Mohammad Reza Shah Pahlavi collapsed in the face of an organized popular revolution. This event marked the end of over 450 years of monarchical rule that had begun with the establishment of the Safavid dynasty in 1501; a republican form of government replaced the deposed monarchy. Some scholars trace the origins of the Iranian Revolution to the 1953 coup d'état against the prime minister and National Front leader Mohammad Mossadegh or to the abortive 1963 uprisings sparked by the arrest of Ayatollah Ruhollah Khomeini. The more immediate cause of the revolution, however, was the failure of the shah's government to address the multifaceted cultural, economic, political, and social grievances that had been building up in Iranian society during the 1970s. The shah not only ignored these grievances but used his secret police agency, the SAVAK, to repress expressions of discontent and both real and suspected opposition activities.

During 1978, Khomeini was the person who succeeded in uniting the diverse currents of discontent into a unified anti-shah movement. He was a senior clergyman of Shiʿism living in exile in Iraq since 1965. Khomeini effectively used popular Shiʿite themes, such as the moral and religious righteousness of struggling against oppression and for jus-

tice, to appeal broadly to both religious and secular Iranians. By 1977, his network of former students had begun circulating tapes of his sermons at religious gatherings; these sermons denounced the shah's injustice and called for strict adherence to the 1906 constitution, which had established a constitutional monarchy, with the shah subordinate to the elected Majles, or parliament. (The shah, like his father before him, had asserted his authority over the Majles by controlling parliamentary elections and creating what in practice amounted to a royal dictatorship.) The government tried to counteract Khomeini's growing popularity by placing in a pro-regime newspaper an article that defamed the ayatollah's character. Its publication provoked major protest demonstrations in Qom (January 1978), which resulted in several deaths and the closure of the city's bazaars. The incident galvanized opposition to the shah and set in motion a cycle of protest demonstrations—and brutal repression—every forty days, the fortieth day after a death being a traditional Iranian commemoration of the deceased.

By August 1978, it had become obvious that the repressive tactics that had worked in the past no longer were effective in containing the ever-growing protest movement. The shah sought to defuse the opposition by appointing a new government of royalist politicians who had maintained ties to the clergy, by freeing some political prisoners, and by relaxing press censorship. This led to a major demonstration in Tehran, where more than 100,000 people marched through the city carrying photos of Khomeini and handing out flowers to the soldiers and police; the latter were asked to join the call for free elections. Similar peaceful but smaller-scale demonstrations took place in many other cities. Apparently frightened by the strength of the movement and the evident solidarity among religious and secular groups, the shah declared martial law in Tehran and eleven other cities and ordered the arrest of National Front and Freedom Movement leaders. The first day of martial law, 8 September 1978, became known as Black Friday because several hundred people were killed in Tehran as troops forced thousands of demonstrators to leave the area of the parliament building, where they had gathered to demand free elections.

Black Friday first stunned and then enraged the people. In response to urging from Khomeini, strikes spread throughout the country, affecting factories, shops, schools, the oil industry, utilities, and the press. By the end of October, Iran's economy was paralyzed. The shah appointed a military government with authority to force oil workers and others back to their jobs. He also freed imprisoned National Front, Freedom Movement, and clerical leaders in hopes that they would go to Paris, where Khomeini had moved, and convince the ayatollah to moderate his views. These tactics failed. Many army conscripts were refusing to shoot at unarmed civilians and even deserting their units, and the strikes continued. Khomeini announced he would accept nothing less than the removal of the shah, and the main secular and religious opposition leaders supported his position. Despite the military government, demonstrations continued throughout November, and each day produced more martyrs as people were killed in cities and towns when the army tried to suppress protest marches. It was clear that the shah's government had lost control of the streets. Fearful of more bloodshed during the Shiʿite religious month of Muharram (the religious calendar is a lunar one, and Muharram began on 1 December in 1978), the government agreed to allow traditional mourning processions if religious leaders promised to keep order. Millions of Iranians participated in peaceful marches throughout the country, but instead of mourning the martyrdom of the saint Imam Hosain, they called for the downfall of the shah. The popular slogan chanted everywhere became "*Azadi, Istiqlal, Jomhuri Islami*" (freedom, independence, Islamic republic). These terms meant political freedom from the oppression of the secret police, independence from the shah's alliance with the United States, and a republican government based on Islamic principles of justice.

The popular message of Muharram was clear, even to the shah, who now sought a dignified way to leave Iran and preserve the throne for his eighteen-year-old son. He persuaded longtime National Front opponent Shapur Bakhtiar to form a government. On 16 January 1979, the shah left Iran on a trip officially described as a medical rest. On 1 February 1979, Khomeini, triumphantly returned from exile, refused to recognize the legitimacy of Bakhtiar's government and appointed a provisional government headed by Freedom Movement leader Mehdi Bazargan. Demonstrations against Bakhtiar and in favor of Bazargan took place throughout the coun-

try. On 11 February 1979, military leaders ordered their forces back to their barracks and to remain neutral in the civilian political struggle. This announcement led to the collapse of the Bakhtiar government and the victory of the revolutionary movement.

IRAN–IRAQ WAR (1980–1988)

War between Iran and Iraq, 1980–1988.

On 22 September 1980, Iraq launched a surprise military attack on Iran, thereby igniting a war that would last for eight years, ending only when both countries agreed to accept the terms of a United Nations (UN) cease-fire resolution. Iraq's stated reason for initiating the war was defensive: The government in Baghdad claimed that Iranian forces were staging raids across their common border and that Iran's leaders were using the media to incite Iraqis to revolt. But Iraq had experienced more serious "border incidents" with Iran in the past, most notably in the years 1971–1975, when the regime of Mohammad Reza Shah Pahlavi had provided well-publicized "covert" assistance for a rebellion among Iraq's Kurdish minority. The same Iraqi leaders who were determined to avoid major conflict with Iran in 1975 had become, only five years later, confident of defeating Iran in battle. The Iraqi perception of changes in international, regional, and domestic politics contributed importantly to the decision to invade a larger and more powerful neighbor.

In the fall of 1980, Iran was isolated internationally as a result of the hostage crisis with the United States. Iran's relations with the other superpower, the Soviet Union, also were problematic because Tehran opposed the Soviet role in Afghanistan. In addition, all the Arab neighbors of Iran shared Iraq's apprehensions about the Iranian rhetoric of "exporting Islamic revolution." Within Iraq, Iran's revolution had emboldened an antigovernment movement among some Shiʿite Muslims, although the actual extent of this opposition may have been exaggerated in the minds of officials. Finally, intelligence about Iran supplied by Iranian military officers who had fled their country in the wake of the 1979 revolution was replete with information about serious factional rivalries among the political leaders and disarray and demoralization within the armed forces. The combined weight of all these factors persuaded Iraqi leaders that war against Iran could be undertaken with minimal costs and major potential benefits, such as seriously weakening or even causing the downfall of a much distrusted regime.

Initially the war went well for Iraq. Iranian forces were surprised by and unprepared for the attack. Iraqis captured Iranian border towns in all four provinces adjacent to Iraq, as well as Iran's major port, Khorramshahr. The Iraqis also besieged Abadan, one of Iran's largest cities and the site of its largest oil refinery, and several smaller cities located 12 to 20 miles removed from the border. After several weeks, however, the Iranians recovered from the shock of invasion and mobilized a large volunteer army that stopped the Iraqi advance. Iraq offered a cease-fire in place, which Iran rejected on grounds that part of its territory was under enemy occupation. For the next six months, the two armies fought intermittent battles along the front line in the western part of the Iranian province of Khuzestan, with neither side achieving any significant victory. Beginning in mid-1981, however, the Iranians gradually gained an advantage, breaking the Iraqi siege of several cities, including Abadan in September. A major victory for Iran came in May 1982, when it recaptured Khorramshahr. Several weeks later, in response to Israel's invasion of Lebanon, Iraq announced its forces would withdraw from all Iranian territory.

Iranian soldiers celebrate the taking of Iraqi territory near Basra in 1987. The Iran–Iraq War was one of the more destructive of the twentieth century, and although hostilities ended with a UN-mediated cease-fire agreement in 1988, the countries still have not signed a formal peace treaty. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

The summer of 1982 seemed an appropriate time to end the war, but Iran's leaders were beginning to feel victorious and wanted revenge. Thus, in July they decided to continue the war by taking it into Iraq. During the next five years, the advantage in the land battles on the Iraqi front remained with Iran, although it was an advantage that gained Iran only a few miles of ground, notably the Majnun Islands in 1984 and the Fao Peninsula in 1986. Strategy in this period may be described as a war of attrition; thousands of men, especially on the Iranian side, which used human wave assaults as a tactic, died in battles that ended as stalemates. In the air, the advantage was on Iraq's side, and the latter used its superiority in aircraft and missiles to strike at Iran's oil installations, industrial plants, shipping, and cities. Iraq also began to use chemical weapons against Iranian forces. Baghdad even authorized the use of chemical weapons against its own Kurdish minority in northeastern Iraq after some of them rebelled and provided logistical support to Iran.

Iraqi missile and aerial bombing of Iranian oil shipping led Iran to retaliate against the shipping of neutral Arab states such as Kuwait, which Iran accused of collaborating with Iraq by providing billions of dollars in loans. The result was the "tanker war" in the Persian Gulf, a phase that added an international dimension to the war when major countries intervened during 1987 to assert the freedom of the seas by sending armed naval ships to escort neutral vessels through Gulf waters. The situation prompted the UN Security Council to pass a cease-fire resolution (1987). Iran initially was reluctant to accept this resolution, but a combination of factors finally secured its acceptance: Iraq's extensive use of chemical weapons in battles during early 1988; a renewed wave of Iraqi missile strikes on Iranian cities, including the capital, Tehran; an increasing war-weariness among the general population; and uncertainty about the intentions of the United States and other countries that had intervened to suppress the tanker war. The UN-mediated cease-fire came

into effect in August 1988. By that time, Iran had lost 150,000 men in battle, and about 40,000 more were listed as missing in action; 2,000 Iranian civilians also had been killed in Iraqi bomb and missile strikes. Iraq had lost more than 60,000 men in battle, and at least 6,000 Iraqi Kurdish civilians had been killed by chemical weapons unleashed on them by their own government.

IRAN NOVIN PARTY

Political party created in Iran in 1963 to support government's reform program.

Iran Novin (New Iran) Party was created as a "majority" or government party in 1963 by Mohammad Reza Shah Pahlavi in place of the Melliyun (National) Party, a royalist party, in order to maintain the semblance of a two-party system. The other was the Mardom or People's Party. The establishment of the Iran Novin Party coincided with the period of a government-sponsored modernization and reform program known as the White Revolution or the "Revolution of the Shah and the People" (1963–1979).

The party platform represented the shah's program of reform, which included land reform, sale of state-owned factories in order to implement the land reform, enfranchisement of women, nationalization of forests and pastures, formation of literacy corps, and implementation of profit-sharing schemes for industry workers. The party chairman, Hasan Ali Mansur, a royalist from a rich landowning family, was at the same time appointed as prime minister. After Mansur's assassination in 1965, the chairmanship, as well as the premiership, was given to Amir Abbas Hoveyda, who served until 1975, the longest tenure in the post. Some of the party leaders, including Hoveyda, were suspected of having Freemasonic ties, often associated with the British in Iran. Hoveyda controlled the party thoroughly.

In the late 1960s, the Women's Party of Iran Novin was created in order to enroll women in the political process. The official organ of the Iran Novin Party was the daily *Neda-ye Iran-e Novin* (Voice of new Iran) with an approximate circulation rate of five thousand in 1970. The New Iran Party was dissolved in March 1975 when the shah decided to create a single-party system with the establishment of the Rastakhiz (or Resurgence) Party, with Hoveyda as secretary-general of the new party.

IRAQ

Major country of the Middle East.

Iraq, with its current political boundaries, is a new country. It is a product of the twentieth century, formed in the aftermath of World War I. The term *Iraq* was adopted by the government in 1921. Historians disagree about the origin of the word. The most common interpretation is that it is derived from *al-Raq al-Arabi,* a term used in the Middle Ages to designate the southern delta region of the Tigris and Euphrates Rivers from the al-Raq al-Ajami, the Persian Mountains. Before Iraq was established as a state, the Europeans referred to the area as Mesopotamia, a name that was given to the area by the

ancient Greeks which means the land between two rivers. It corresponds roughly to the Ottomans' provinces of Baghdad, Basra, and Mosul.

Geography and Population

Iraq covers about 169,000 square miles and is surrounded by six countries—Kuwait, Saudi Arabia, Iran, Turkey, Jordan, and Syria. It is essentially a landlocked country. The country's access to the high seas is through two major ports, Umm Qasr on the Persian Gulf and Basra, which is located at the Shatt al-Arab, the confluence of the Tigris and Euphrates Rivers. Geographically, the country is divided into four areas: the Syrian Desert in the west and southwest; the river valleys of the central and southeast areas, which contain the most fertile agricultural soil; the upland between the Upper Tigris and Euphrates Rivers; and the mountains of the north and northeast. The climate is subtropical, with long dry summers and a wide difference in temperatures between summer and winter. Rain falls mostly between the months of October and April, but not heavily.

Iraq's population of about 24 million is a mixture of ethnic and religious communities. About 95 percent is Muslim, of which 60 percent are Shiʿite. Four percent are Christians of various denominations. There are a few other small religious communities of Yazidis, Sabeans, and Jews. About 80 percent of the population is Arab. They live in an area that stretches from Basra to Mosul including the western part of the country. The Kurds represent 18 percent of the population, and they live mainly in the mountains of the northern and eastern areas of the country. The majority of the Kurds are Sunni; a small minority are Kurdish Shiʿa called *Fiyliaya.* The Kurds of Iraq speak two different dialects of the Kurdish language—Sorani and Karmanji. Other small ethnic communities include the

Turkomen, Assyrians, Yazidis, and Armenians. Arabic is the official language of Iraq; Kurdish is used in the Kurdish area in addition to Arabic.

Baghdad, the capital of Iraq, is the largest city in the country, with a population of five million. Basra, the second largest city, has a population of more than a million and half, and is the gateway to the Persian Gulf. Mosul, in the north, is the third largest city, and has a population of more than a million. Kirkuk City, also in the north, has more than half a million people. It is situated among major oil reserves. In addition to these cities, Iraq is the site of several Shiʿite holy cities, including al-Najaf, where Imam Ali is buried, and Karbala, where Imam Husayn is buried. Both cities are located on the Euphrates River southwest of Baghdad.

Oil was discovered in large quantities in 1927 near Kirkuk City. The Iraqi Petroleum Company (IPC), a consortium of the British Petroleum Company, Shell, Mobil, Standard Oil of New Jersey (Exxon), and the French Petroleum Company, was formed to manage oil production. IPC and its subsidiaries obtained concessions from the Iraqi government and had total control over oil production. The concessions covered practically the entire land area of Iraq, and they lasted for many decades. For all intents and purposes, Iraq played no role in oil development from the time it was first discovered until the 1950s. Oil production was very limited before 1950, but it began to rise in the 1950s when the Iraqi government slowly but steadily gained control over it. The production increased significantly after Iraq nationalized its oil industry in 1972. Oil production reached its peak in 1979, reaching 3.5 million barrels a day, twice the amount produced in 1971, a year before the nationalization. Since then, the production has decreased as a result of the Iran-Iraq War (1980–1988), the Gulf Crisis and War of 1991, and the invasion of Iraq by U.S. forces in March 2003. Iraq has a proven oil reserve of more than 112 billion barrels, second only to the reserve in Saudi Arabia. Since the 1950s, oil has been the mainstay of the Iraqi economy and the major source of funds for social and economic development.

Pre-Twentieth-Century History

Although Iraq is a new country, it has an extraordinarily rich and complex history. Historians and archaeologists consider Iraq to be the cradle of civilization. It is associated with many ancient civilizations such as the Sumerians, the Akkadians, the Babylonians, the Chaldeans, and the Assyrians. It is the land of the biblical Garden of Eden and of the Hanging Garden of Babylon, the site of the first farming settlements and urban settlements and of the invention of writing and the wheel, and the home of Hammurabi (1800–1760 B.C.E.), the great lawgiver (author of the Code of Hammurabi).

In 637 C.E. Islam poured into Iraq. In 750 C.E. the Abbasids triumphed and the center of the Islamic empire shifted from Damascus to Iraq. In 762 C.E. the second caliph Abu Jaʿfar al-Mansur (754–775 C.E.) founded the new city of Baghdad as the

Statue of Abu Jaʿfar al-Mansur in Baghdad. Al-Mansur, the second caliph of the Abbasid Dynasty, ruled Iraq from 745 to 775 C.E. new capital of the empire. During the reign of Harun al-Rashid (786–810 C.E.) and his son Maʾmun (813–833 C.E.), the Abbasid Empire reached its peak in material splendor and intellectual advances. Baghdad enjoyed grand glory and prosperity as the center of Islamic culture. The city became an international trade center for textiles, leather, paper, and other goods from areas ranging from the Baltic to China. Baghdad also became a magnet for scientific and intellectual achievements. The famous Bayt al-Hikma Academy was established in 830 C.E. by the great patron of scholarship, Caliph al-Maʾmun. The academy included several schools, astrological observatories, libraries, and facilities for the translation of scientific and philosophical works from Greek, Aramaic, and Persian into Arabic.

The empire began to disintegrate gradually, and in 1256 Baghdad and the Abbasid caliphs were destroyed by the Mongols. The Ottoman sultan, Süleiman the Magnificent, incorporated Iraq into his empire in 1534. Thereafter, except for a period of Persian control in the seventeenth century, Iraq remained under Ottoman rule until the Ottoman Empire came to an end at the end of World War I.

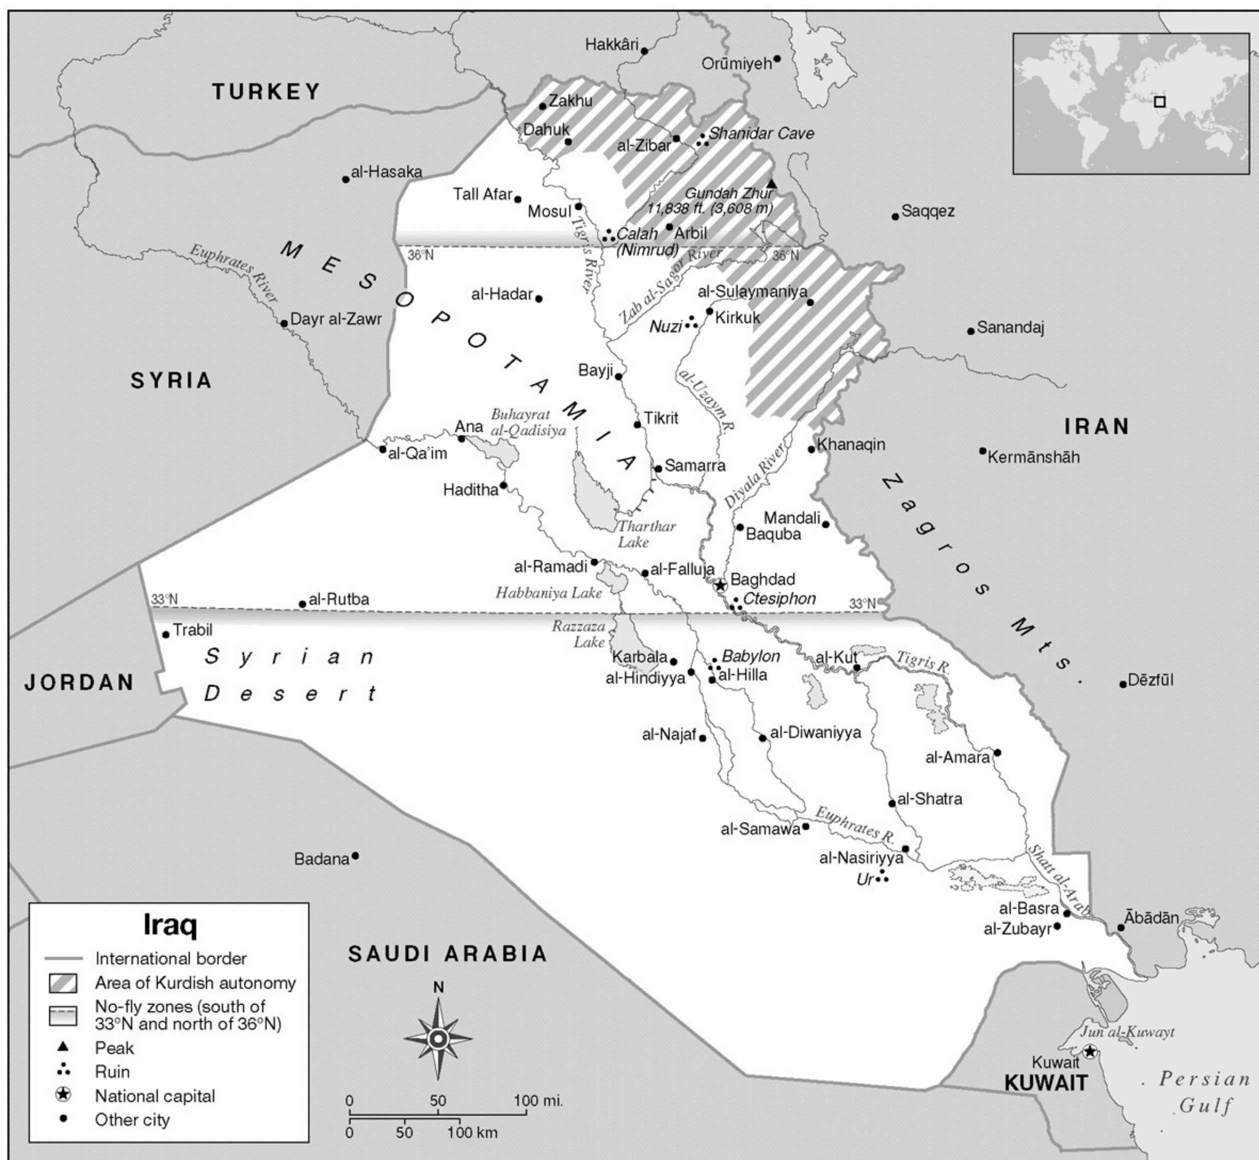
Administratively, during the Ottoman rule, Iraq was divided into three provinces: Mosul, where most of the Kurds lived; Baghdad; and Basra, where most of the Arabs lived. During that period, Iraq was totally neglected and the economy was in a state of disarray and confusion. In the second half of the nineteenth century a few Turkish governors, such as the reform-minded Midhat Paşa, introduced a few modern improvements such as the establishment of modern secular schools, reorganization of the army, creation of codes of criminal and commercial law, improvement of provincial administration, and a new system of transportation.

The British occupied Iraq during World War I. After the war, the Treaty of Sèvres placed Iraq under a British mandate. In 1921 the British established a constitutional monarchy headed by Faisal I ibn Hussein, a member of the Hashimite House (House of Hashim) of Arabia and one of the leaders of the anti-Turk Arab Revolt of 1916.

Early Nationhood

On 13 October 1932 Iraq became independent and joined the League of Nations. Between 1932 and 1941 Iraq's political situation was unstable, marked by tribal and ethnic revolts, military coups, and countercoups. In 1941 a nationalistic government assumed power, angering the British and prompting them to reoccupy Iraq and to install a pro-British government.

Between 1941 and 1958 Iraq was basically ruled by two British-oriented rulers: Nuri al-Saʿid, who assumed the office of prime minister several times; and Abd al-Ilah, the regent. From 1932 to 1958, Britain exercised significant influence over the ruling elite. During this time, modern secular education was expanded and became accessible to the general public in a limited way. Economic development was slow but gained some steam in the early 1950s when oil revenue increased. Political life was



Map by XNR Productions, Inc. The Gale Group.

marred by corruption and manipulation of the election process and domination by a few personalities.

After World War II, Iraq, like many other developing nations, experienced a rise in anti-imperial sentiment that demanded the reduction of British domination and the introduction of social and economic reform. These trends culminated in the nationalistic military coup of 14 July 1958. The coup was executed by the Free Officers, led by General Abd al-Karim al-Qasim, who stayed in power until February 1963. During the coup the king, the regent, and Nuri al-Saʿid were killed. This coup brought significant changes in Iraq's domestic and foreign policies. The Hashimite monarchy was replaced with a republican regime, and Iraq withdrew from the Baghdad Pact and began a foreign policy of nonalliance. The new regime initiated land reform and expanded education on all levels. It also challenged the existing profit-sharing arrangement with oil companies, and in December 1961 it enacted Public Law No. 80, which resulted in the expropriation of 99.5 percent of the IPC group's concession area that was not in production. This was also a period of political turmoil: There was an attempted coup in Mosul in 1959 and an attempted

assassination of Qasim, and the Kurds launched armed rebellion against the government.

The Rise of Saddam Hussein

In February 1963 the Baʿth Party, along with nationalistic officers, seized power in a bloody coup. Nine months later, the Baʿth Party was kicked out of power by a coup led by Abd al-Salam Arif, one of the original Free Officers of the 1958 coup. On 17 July 1968 the Baʿth Party came back to power through a bloodless coup. This marked the ascendance to power of Saddam Hussein, which lasted until the U.S. invasion of Iraq in March 2003. From 1968 to 2003 Hussein dominated the political scene, even when he was vice president from 1968 to 1979. He was the undisputed leader, ruling Iraq with an "iron fist" and discouraging opposition through elimination, imprisonment, and the use of multiple security forces. For all practical purposes, all political activities outside of the Baʿth Party were outlawed.

In the 1970s Iraq nationalized its oil industry. As the price of crude oil went up, the government invested a lot of money in improving the infrastructure of the country, its education system, and social services. The Kurdish revolt reached its peak in the mid-1970s due to the support it had received from Iran, Israel, and the United States. These countries viewed Iraq as a threat. During this period, Iraq advocated Arab nationalism, adopted anti-imperialism policies, and allied itself more with Soviet Union. Also, Iraq adopted a policy against the so-called reactionary regimes of the Gulf who were allies of the United States. Therefore, Iran, Israel, and the United States were interested in destabilizing the regime through the Kurdish revolt.The attempt to quell the Kurdish rebellion in the north was unsuccessful, and in 1975 Saddam signed a treaty with the shah of Iran in which Iraq agreed to share the Shatt al-Arab with Iran in return for the ending of Iran's support of the Kurds. Within a few weeks of concluding the agreement, the Kurdish revolt was quashed, and for more than a decade, the Kurdish region was relatively quiet.

On 16 July 1979 Saddam formally assumed the presidency of Iraq. He began his presidency by eliminating a number of high-ranking members of the Baʿth Party, accusing them of plotting against him. Soon his relationship with Iran began to deteriorate in the aftermath of the Iranian Revolution (1979). A border skirmish between the two countries was used by Saddam to justify the invasion of Iran on 22 September 1980. Saddam erred in his assumption that the war was going to be quick; it lasted for eight years. Iraq was left with hundreds of thousands dead and wounded and a seriously damaged economy. Iranian bombardments of oil facilities in Iraq's south significantly impaired the oil industry, which was the mainstay of the Iraqi economy. The government shifted spending from projects of modern development to spending on the military to meet the requirements of the war. The Kurds resumed their revolt against the Iraqi government with the support of the Iranian government. By the time the Iran-Iraq War ended in July 1988, Iraq was $80 billion in debt to several countries, including Kuwait, Saudi Arabia, France, the Soviet Union, and Japan.

Between 1988 and 1990, Saddam's government struggled to put the country back in order. After the war, Saddam turned against the Kurds. His forces savaged their villages for siding with Iran during the war, forcing many of the Kurds to leave the mountains for detention centers in other parts of the country. The drop in oil prices on the international front led to serious tensions between Iraq and Kuwait. Saddam accused both Kuwait and the United Arab Emirates of conducting an economic war against Iraq by intentionally flooding the oil market by exceeding their export quotas within the Organization of Petroleum Exporting Countries (OPEC). According to Saddam, the high output of these two countries kept prices low, leading to a big reduction in Iraqi oil revenue that was sorely needed to rebuild the country.

The Kuwaiti government stubbornly refused to yield, and the U.S. ambassador to Iraq gave mixed messages—on the one hand declaring that any dispute between Arab countries was not a U.S. matter, and on the other joining Britain in encouraging Kuwait not to accommodate Iraq. Saddam's invasion of Kuwait on 2 August 1990 ultimately led to the first Gulf War, which was executed by the United States and its coalition on 17 January 1991. The war's code name was Operation Desert Storm, and it lasted for forty-three days. The United States and its allies flew more than 110,000 sorties that

dropped a total of 99,000 to 140,000 tons of explosives on Iraqi targets—the firepower equivalent of five to seven of the nuclear bombs that were dropped on the Japanese city of Hiroshima during World War II. The war destroyed the infrastructure of Iraq, knocking out electricity grids, roads, bridges, communication systems, sewage and water purification systems, factories, and telephone systems. A United Nations (UN) report written shortly after the war stated that the destruction caused by the war returned Iraq to a preindustrial state.

In the aftermath, both the Kurdish ethnic community in the north and the Shiʿite Muslim community in the south revolted against Saddam's regime. The Kurds hoped to establish an independent state in the north, and the Shiʿa hoped to topple Saddam's regime and replace it with a more sympathetic government. Despite Saddam's recent defeat in the war, he was able to muster enough power to crush both rebellions. He dealt with the rebels harshly, killing thousands of people and wounding many more. Hundreds of thousands of Kurds fled Iraq to the neighboring countries of Turkey and Iran. This massive flight prompted the United States, along with Britain and France, to impose a no-fly zone for Iraqi aircraft in the north. Also, the United States, Britain, and France established a Kurdish Autonomous Zone in Iraq, which Iraqi forces were not allowed to enter, and where Kurds ruled themselves. This new arrangement allowed hundreds of thousand of refugees to return to their homes and villages. The Kurdish zone, for all practical purposes, was independent. It had its own currency, taxes, and educational system. In this area, Kurdish was the primary language and Arabic was waning as the official language.

On 6 August 1990, four days after the Iraqi invasion of Kuwait, the United Nations Security Council passed Resolution 661, imposing on Iraq the most repressive sanctions and embargo in the history of the organization. When the Gulf War ended, the United Nations Security Council passed several new resolutions concerning Iraq. Resolution 687, passed on 3 April 1991, continued the sanctions and the embargo on Iraq until it dismantled its weapons program, including all long- and medium-range missiles, and all chemical, biological, and nuclear facilities. The dismantling was to have been implemented by the Vienna-based International Atomic Energy Agency (IAEA), which had been inspecting Iraq for any possible military use of its nuclear facilities since the 1970s, and the newly established UN Special Commission (UNSCOM) under the chairmanship of Rolf Ekeus, a Swedish diplomat. Resolution 713 established a permanent UN monitoring system for all missile test sites and nuclear installations in the Iraq. Resolution 986, passed in 1992, allowed Iraq to sell $1.6 billion worth of oil every six months, subject to renewal, for the purchase of food and medicine. About one third of the money raised through the sale of oil was designated for war reparations for Kuwait and payments to the UN for its operations in Iraq. Iraq agreed in principle to the first two resolutions, but it rejected the third one on the grounds that it did not allow Iraq to control the funds realized from the sale. But by 1996 the life of the Iraqi people was approaching destitution, and the government was forced to accept the terms of Resolution 986. In 1998 the sale limit was raised to $5.52 billion worth of oil every six months, and in 1999 to $8.3 billion.

Iraq was not happy with UNSCOM's intrusive inspections, and there were confrontations between Iraqis and the inspection teams. The United States, the driving force behind the inspections, used these confrontations as grounds for bombing Iraq in 1993, 1996, and 1998. The last bombardment, codenamed Operation Desert Fox, lasted for four days. Before it began, Richard Butler, the second head of UNSCOM, withdrew the inspections teams without the authorization of the UN Security Council. The bombardment put the future of UNSCOM in doubt, and the inspectors did not return until 2002, and then under a different name. By the time of the 1998 confrontation, the UN had destroyed more than 95 percent of Iraq's weapons of mass destruction (Iraq claimed that it had destroyed the last 5 percent, but could not account for it). There were two reasons for the difficulties that the inspection teams faced: Iraq's concern that the inspection teams violated its sovereignty, and the U.S. government's misuse of some members of the inspection teams as spies.

The sanctions and the embargo begun in 1990 had a dreadful impact on Iraqi society. They hit the sanitation and health-care systems hard, and also led to the breakdown of the electric system, which contributed to chronic problems with sewage and water

treatment. The sanctions also contributed to inadequate diets, resulting in malnutrition and a proliferation of diseases, which led to a high mortality rate among children. Furthermore, the sanctions led to many social ills such as homelessness of children, increased crime rates, high divorce rates, a drop in the marriage rate, and the virtual destruction of the educational system. Thousands of schools were left in a state of disrepair. The sanctions weakened the oil industry, the mainstay of the Iraqi economy, because of a lack of spare parts and a lack of investment to update oil facilities. The sanctions lasted for almost thirteen years and contributed to the deaths of more than one million people, many of them children, women, and elderly people. Two UN chief relief coordinators—Denis Halliday in 1998 and Han von Sponeck in 2000—resigned their posts in protest of the continuation of the sanctions.

The terrorist attacks on the World Trade Center and the Pentagon on 11 September 2001 marked a turning point in U.S. policy toward Iraq. The foreign policy of the Republican administration of George W. Bush was controlled by neoconservatives who advocated a regime change in Iraq. Some of the planners of the new policy were behind the passage of the Iraq Liberation Act of 1998, in which the Congress allocated $100 million to help Iraqi opposition groups in their quest to remove Saddam from power. After 11 September, the neoconservatives pushed for the removal of Saddam by military means. The UN adopted Resolution 1441, which demanded that Iraq allow the weapons inspections teams to return. There were two teams—one from the International Atomic Energy Agency, headed by Muhammad El-Baradei from Egypt, and another from the United Nations Monitoring, Verification, and Inspection Commission (UNMOVIC), headed by Hans Blix from Sweden. The new resolution gave the inspectors more freedom to operate and conduct their activities inside Iraq, and it imposed more restrictions on Saddam's regime than previous resolutions had. Iraq agreed to the resolution and emphatically denied having any weapons of mass destruction, stating that it had destroyed all of them. However, the Iraqi government could not give a full accounting of the missing items. Both heads of the inspection teams asked for more time to finish their job.

The United States and Britain refused to wait for UN consensus on the issue. The United States government continued to claim that Saddam had weapons of mass destruction and that he was a threat to U.S. and world security, and on 17 March 2003 the United States, along with Britain, initiated a military invasion against Iraq, defying world opinion. On 9 April 2003 Baghdad fell, and the occupation of Iraq began. The claims that Iraq possessed weapons of mass destruction, including biological, chemical, and nuclear weapons, turned out to be questionable. In May, under pressure from the United States, the UN Security Council adopted Resolution 1483, which legalized the result of the invasion (though most UN member nations had considered it to be illegal). On 16 October 2003 the UN adopted Resolution 1511, again under U.S. pressure, which authorized a multinational force under U.S. leadership to replace and reduce the burden on the U.S. occupying forces.

IRAQI NATIONAL CONGRESS

An Iraqi opposition group.

The Iraqi National Congress (INC) is an umbrella Iraqi opposition group founded in 1992. It was

formed with the aid of and under the direction of the United States government following the 1991 Gulf War, for the purpose of fomenting the overthrow of Saddam Hussein. Selected to chair the executive council was Ahmad Chalabi, a secular Iraqi Shiʿite Muslim and mathematician by training. The INC represented the first major attempt by opponents of Hussein to join forces, bringing together not only Sunni and Shiʿa Arabs (both Islamic fundamentalist and secular) and Kurds, but also varying political tendencies, including democrats, nationalists, ex-military officers, and others.

In June 1992 nearly 200 delegates from dozens of opposition groups met in Vienna, along with Iraq's two main Kurdish militias, the Democratic Party of Kurdistan (Iraq) and the Patriotic Union of Kurdistan (PUK). In October 1992 the major Shiʿite groups joined the coalition and the INC held a pivotal meeting in Kurdish-controlled northern Iraq, in which it chose a three-person Leadership Council and a twenty-six-member Executive Council. A number of opposition groups continue to belong to the INC, but most have since gone their own ways, leaving the INC primarily a vehicle for Chalabi and his supporters.

The INC's political platform promised human rights and rule of law within a constitutional, democratic, and pluralistic Iraq; preservation of Iraq's territorial integrity; and complete compliance with international law, including United Nations resolutions relating to Iraq. Like the majority of other Iraqi opposition groups, its stated goal was to topple Saddam's regime and its replacement with a democratic form of government with federalism and decentralization at its basis. The INC received $12 million of covert CIA funding between 1992 and 1996. After several years of nonfunding, the administration of George W. Bush agreed to give $8 million of the $25 million that the INC requested in January of 2002.

The INC was subsequently plagued by the dissociation of many of its constituent groups from the INC umbrella, a cutoff of funds from its international backers (including the United States), and continued pressure from Iraqi intelligence services. A major problem the INC faced after the American occupation of Iraq starting in 2003 was the limited degree of support it commands inside the country.

IRAQI WOMEN'S FEDERATION

See General Federation of Iraqi Women

IRAQI WOMEN'S UNION

Umbrella organization of Iraqi women's groups.

The Iraqi Women's Union was an umbrella organization created in 1945 by progressive, upper-class women to unite all legally sanctioned women's associations and clubs. The union's aims were "to assist women to improve family conditions in the service of society" by raising their "health, social, civil, legal, and economic standards" through civil, constitutional, and peaceful means; and to unify all women's associations in Iraq and initiate cultural, social, and national contacts with Arab and international organizations committed to advancing women's issues. One of their first major social projects in Iraq was the abolition of brothels as degrading to women. In addition, they mobilized women as volunteers during national disasters. In the civil sphere, they campaigned for greater women's rights, particularly in relation to child custody after a divorce, and for an amendment of the legal code in regard to inheritance. In the economic sphere, they campaigned for the improvement of working conditions for nurses, who were mainly women. In addition, they were active in the cultural sphere in promoting awareness of women's issues by organizing a biweekly series of literary, political, and social lectures and debates, which were held at their headquarters in Baghdad. They also sponsored biweekly movies and documentaries of a social and cultural nature. In 1954 the union organized a "Women's Week" in which lectures by legal personalities and political figures were presented in support of women's issues. At the height of its political activities between

1951 and 1958, the union demanded amendments to Iraq's constitution guaranteeing women's equality, right to vote, and right to stand for political office.

IRAQ PETROLEUM COMPANY (IPC)

Successor to Turkish Petroleum Company.

The Iraq Petroleum Company (IPC) was organized in 1928 from the remains of the Turkish Petroleum Company (TPC). In 1927, TPC discovered the large Kirkuk field in the Kurdish Mosul region of Iraq. Seven years later, IPC completed a crude oil pipeline with termini in Tripoli, Lebanon, and in Haifa, then in the British mandate of Palestine. Its oil exports reached 1 million tons per year by the end of 1934, but revenues remained modest until the 1950s.

Iraq's militant oil policy can be explained by the country's dependence on pipelines to move crude oil to market, and by its history of bitter conflicts with IPC. The IPC pipeline to Haifa, vulnerable to sabotage, was severed during the Arab–Israel War (1948), and the pipeline through Syria was blown up during the Arab–Israel War (1956). Shipments of crude through the IPC pipeline in Syria were halted for three months in 1966 and 1967 because of a dispute over transit fees between IPC and the government of Syria. This was a preview of the relative ease with which transit countries were able to halt the flow of crude oil through IPC-owned pipelines following the imposition of sanctions by the United Nations in response to Iraq's invasion of Kuwait in August 1990.

Iraq's conflicts with IPC began during the negotiations over the original TPC concession. The government had demanded a 20 percent equity share in the company to give it some influence on management policies, including production levels. The TPC partners resisted giving a share to Iraq and called upon their home governments, then engaged in carving the Ottoman Empire into mandates for themselves, to help them. Needing British support to prevent the Mosul *vilayet* from being lost to Turkey, the government of Iraq reluctantly signed an agreement giving TPC a concession until 2000 and omitting the provision for an equity share for itself.

The most serious dispute between Iraq and IPC was over the laggardly development of Iraq's oil resources. IPC concentrated on developing its fields in Mosul, which depended upon the limited capacity of vulnerable pipelines to transport crude to markets. Development of the southern oil fields, close to the gulf where export via tanker was possible, did not occur until the 1950s. Iraq was convinced that IPC's foreign ownership was responsible for this delay, although other factors, such as the Red Line Agreement, are also likely explanations. IPC's foreign owners agreed to revise their concession agreement in 1952 to conform to the new industry standard of 50–50 profit sharing without the rancor that accompanied these negotiations in Iran. IPC also went along with another industry standard in 1959 and 1960, unilaterally reducing the prices paid to host governments for crude oil. This prompted Iraq to join four other oil-exporting countries to found the Organization of Petroleum Exporting Countries (OPEC) in 1960.

Negotiations between the government of Iraq and IPC in the early 1960s were beset by the inability of each side to understand the reasons behind the positions taken by the other. In December 1962 Iraq's Public Law 80 (PL 80) called for repossession of more than 99 percent of IPC's landholdings, including its share of the southern oil fields. The law also established the Iraq National Oil Company (INOC). PL 80 allowed Iraq to preserve its income stream from IPC, which retained its producing properties in Kirkuk, but also initiated a protracted struggle with IPC over the law's legitimacy. After intensive negotiations, IPC regained control of the southern oil fields in a new agreement initialed in 1965 but lost these rights after passage of Public Law 97 in August 1967, which gave INOC exclusive rights to develop all the territory expropriated under PL 80. IPC threatened to sue purchasers of oil from the disputed fields. INOC developed the disputed fields by itself and disposed of production through barter agreements, in order to circumvent the IPC ban on crude sales.

Following the 1968 coup and the installation of the al-Baʿth party, the government of Iraq moved

rapidly toward nationalization. Continued conflicts over IPC's production rates, and company demands to be compensated for losses it had sustained as the result of PL 80, led to Public Law 69 (1 June 1972). This law nationalized IPC and established a state-owned company to take over its operations in Kirkuk. In response, IPC extended its embargo to cover oil from Kirkuk. The immediate impasse between Iraq and IPC was resolved in an agreement reached in February 1973, in which substantial concessions were made by both sides. By the end of the year, however, Iraq had nationalized all foreign oil holdings, including all of the remaining properties of IPC.

IRBID

Largest city in northern Jordan.

Located 53 miles (85 km) north of the capital city, Amman, Irbid is the third-largest city in Jordan (population 267,200 in 2003) and the traditional administrative capital for the northern province.

Known during the Roman Empire as Arbila, Irbid was counted among the ten towns of the Decapolis—a commercial federation of towns in Judea, Jordan, and Syria during the first century B.C.E.

When reconsolidating their rule over Jordan in the nineteenth century, the Ottoman Empire's representatives in Damascus made Irbid the seat of the subgovernorate of Ajlun, the first district in Jordan to be ruled directly by the Ottomans. As such, Irbid became the home of some of Jordan's first public institutions. Irbid continued to serve as the capital of Ajlun during the emirate of Transjordan and of today's governorate of Irbid.

As an administrative and commercial center, Irbid has undergone considerable population growth, particularly since the 1950s. Irbid is also home to Yarmuk University, one of Jordan's three public universities.

See also Jordan; Yarmuk University.

IRGUN ZVA'I LE'UMI (IZL)

Militant Jewish underground organization in pre-state Israel.

A revisionist group of militants broke from the Haganah in 1931 and formed the Irgun Zvaʾi Leʾumi (Etzel). In 1937, the Irgun signed an agreement with Vladimir Zeʾev Jabotinsky, the president of the Revisionist New Zionist Organization, and became the defense organization of the Revisionist movement. During and after the Arab uprising of 1936–1939 and the British White Paper of May 1939, the Irgun embarked on a series of terrorist attacks on British and Palestinian targets. With the eruption of World War II, however, the Irgun suspended attacks and many members joined the British forces to be trained and to fight against Nazi Germany. Irgun commander in chief David Raziel was killed in Iraq while leading a group of volunteers on behalf of the British army. A small group of dissident Irgun members, led by Abraham Stern, broke with the Irgun, formed LEHI (the "Stern Gang"), and continued to carry out violent actions against the Mandatory forces.

In 1942 Menachem Begin assumed command of the Irgun and, in early 1944, formally embarked on armed revolt against the British in Mandatory Palestine. Though comprised of a small group of poorly equipped Jewish guerrillas, the Irgun inflicted damage on the British forces through a combination of factors, including successful use of the element of surprise, intimate familiarity with the topography and terrain, broad local Jewish sympathy, and a campaign of public relations abroad that built on sympathy for the victims of Nazi genocide.

In 1945, after the British Labour government refused to alter its Palestine policies, the Jewish Agency arranged an alliance of Haganah, Irgun, and LEHI forces, the United Hebrew Resistance Movement, which carried out violent actions against the Mandatory forces. In mid-1946, however, the Jewish Agency reinstituted its policy of self-restraint and disbanded the alliance, but by then the Irgun was sufficiently large to independently escalate attacks on British targets.

The Haganah and mainstream Zionists consistently opposed the Irgun and its terrorist actions. In July 1946, when the Irgun blew up the British army headquarters and the Secretariat of the Mandate government in the King David Hotel in Jerusalem, it was strongly denounced. Less than a month after the British executed four Irgun members in the Acre Prison, in April 1947, an Irgun force of thirty-four men dynamited their way into the prison and freed 250 Jewish and Arab prisoners. The following day, the daring action was widely reported in the world media. On 14 May 1948, with the proclamation of the State of Israel, the Irgun agreed to disband and join the new Israel Defense Force; they continued, however, to carry out a number of independent actions, the most serious of which led to the Altalena affair.

The Irgun did not achieve official recognition until 1968, when President Zalman Shazar formally recognized its efforts, along with those of the Haganah and all groups, including NILI, the Jewish Legion, and LEHI, in the struggle for independence and defense of the State of Israel.

IRSHAD AN-NISWAAN

The first Afghan women's journal.

Irshad An-Niswaan (Lady's guide), the first Afghan women's journal, was established in March 1921 as a weekly in Kabul under the direction of three people: Asma Rasmiyya; the famous Afghan journalist Mahmud Tarzi; and the mother of Queen Surraya. Ruhafza, the editor of *Irshad An-Niswaan,* was related to Mahmud Tarzi. In addition to national and international news, *Irshad An-Niswaan* published articles of particular interest to women. Its mission was to inform women of important national and international issues and make them aware of their rights and responsibilities as mothers and citizens. The journal also provided an opportunity for young women writers to contribute articles for publication. *Irshad An-Niswaan* was published in Persian and was intended primarily for upper-class, educated women readers and female students. It ceased publication after the fall of King Amanullah in 1929.

In 1994, during the government of Burhanuddin Rabbani, a short-lived monthly bilingual women's magazine, in Persian and Pashtun, took the same name and was published in Kabul under the editorship of Laila Sarahat Rushani. It focused primarily on the social life and traditional activities of women but included articles on literature and politics as well.

Senzil Nawid

IRYANI, ABD AL-RAHMAN AL-

[1909–1998]

Second president of the Yemen Arab Republic.

Abd al-Rahman al-Iryani served as head of state of the Yemen Arab Republic from the overthrow of President Abdullah al-Sallal in late 1967 until the bloodless coup led by Ibrahim al-Hamdi in mid-1974. Born in 1909 in the Iryan region of North Yemen, al-Iryani hailed from a famous family of Sunni jurists and teachers; he was the head of that family for five decades. His pre-1962 political activities qualify him as a father of the modern Yemeni republic, and his tenure as head of state was most notable for the republican-royalist reconciliation that ended the Yemen Civil War, for the drafting and adoption of the 1970 constitution, and for holding Yemen's first parliamentary elections in 1971.

A traditionally trained *qadi* (judge) who held to some modern ideas, he bridged the gap between the imamate of the past and the new republic. Indeed, some called him the "republican imam," and claimed that this was the key to the successful transitional role he played; many Yemenis referred to him simply as "the Qadi." After 1974 he spent most of his exile in Damascus, was invited by the regime to return to Yemen in 1982, and made almost annual visits to his native land thereafter. Upon his death in 1998, he was returned to Yemen for a hero's burial.

ROBERT D. BURROWES

ISA FAMILY, AL-

Prominent Palestinian family from Jaffa.

A Greek Orthodox family of landowners, businessmen, and politicians, the al-Isas became most known in the twentieth century as publishers of the long-lived newspaper *Filastin.* Brothers Yusuf and Isa Daʾud Isa, who both attended the American University of Beirut, Lebanon, founded the newspaper in 1911. Leaders of the Nahda al-Urthuduksiyya (Orthodox Renaissance) before World War I, they were also active in the anti-Zionist movement. Isa's son Raja became editor of *Filastin* in 1951 and of the *Jerusalem Star* in the 1960s. He is now a publisher and owner of the Jordan Distribution Agency in Amman, Jordan. Another member of the family, Michel al-Isa, headed a battalion in defense of Jaffa against the Israelis in the 1948 Arab–Israel War.

A second prominent branch of the al-Isa family is based in Beirut, Lebanon. Elias al-Isa was a wealthy contractor in the early twentieth century from Bsous. His son Emile is a retired banker, and his son Raymond is an architect and engineer.

ISAWIYYA BROTHERHOOD

Religious brotherhood.

The Isawiyya brotherhood, or Isawa, was founded in Meknes, Morocco, in the sixteenth century by Shaykh Muhammad bin Isa al-Sufyani al-Mukhtari, known as Shaykh al-Kamil (the perfect master). The brotherhood is found all over Morocco and Algeria and has extended its influence to other Muslim countries such as Libya, Syria, and Egypt. Each year during the three days following the Mulud, members hold a celebration in Meknes where music, ecstatic dances, and extravagant rituals are collectively performed. Because it preaches renouncement, Isawa recruit their disciples mostly among poor social categories.

RAHMA BOURQIA

ISFAHAN

Former capital of Iran and major industrial center.

Isfahan is located in west central Iran along both banks of the Zayandeh River. Its origins date back to the Achaemenid era (c. 550–330 B.C.E.), but it did not emerge as an important city until 1150, when Toghril Beg, founder of the Seljuk dynasty, chose it as his capital. The city's golden age coincided with its status as the capital of the Safavi dynasty (1598–1722). Shah Abbas I (r. 1587–1629) and several of his successors embellished the city with bridges, mosques, *madrasehs,* and palaces, many of which are extant and are considered among the finest examples of Islamic architecture. In 1722, an army of invading Afghans besieged Isfahan for several months before finally capturing and looting it and deposing the shah. These events ushered in more than two decades of steady economic and political decline interspersed with several brutal massacres of prominent citizens of the city.

Isfahan at the beginning of the nineteenth century was no longer a major city; it had ceased to be Iran's capital, and its population was only 25 percent of what it had been during the height of Safavi power. Its role as a regional commercial center recovered during the reign of Nasir ed-Din Shah Qajar (1848–1896). In the 1920s entrepreneurs began developing modern factories, especially textile mills, which by the early 1960s employed nearly 20,000 workers and produced one-half of Iran's total output of textiles. The renewed prosperity stimulated greater and more diversified industrialization, and the city became the center of the country's steel industry during the 1970s. Isfahan has experienced considerable immigration, growing at an average annual rate of 4 percent during the last seventy years of the twentieth century. In the 1996 census, its population had reached 1,266,000, making it the third-largest city in Iran. The city also remains the country's premier tourist center, drawing thousands to see such famous Safavi-era architectural landmarks as the Meydan-e Imam, Masjid-e Imam, Masjid-e Shaykh Lotfollah, and the covered bazaar.

FARHAD ARSHAD
UPDATED BY ERIC HOOGLUND

ISFAHAN UNIVERSITY

Public university in Isfahan, Iran.

Founded in Isfahan in 1949 as part of an effort to establish public institutions of higher education in the provinces of Iran, Isfahan University had 3,654 students by 1970. It had faculties of administrative sciences and economics, educational sciences, engineering, foreign languages, letters and humanities, and pure sciences, with 450 teachers and 12,000 students, as of 2002. The Isfahan University of Medical Sciences, with faculties of medicine, dentistry, and pharmacy, and a school of nursing, had 300 teachers and 6,321 students as of 2002.

PARVANEH POURSHARIATI

ISHAAQ, KAMALA IBRAHIM
[1939–]

Sudanese painter.

Kamala Ibrahim Ishaaq (also Ishaq) was born in Sudan, and trained at the Faculty of Fine Arts in Khartoum and at the Royal College of Art in London. She taught at the Khartoum School of Fine and Applied Art and was a pioneering member of the group known as the Khartoum School, which is widely regarded as responsible for developing the modern art movement in the Sudan. Like many other artists from Arab and African countries, Ishaaq conducted extensive field research on local cultural practices as a basis for her own work. Her early paintings drew on her intensive study of and participation in *zars,* primarily female rituals of spirit possession and purification in northeast Africa. This exploration of local themes was in keeping with the Khartoum School's interest in articulating a distinct Sudanese cultural identity, which they believed consisted of a mixture of African and Islamic traditions. In the 1970s, Ishaaq departed from her earlier work when she joined with two of her students to create the Crystal Manifesto, which some argue was an implicit critique of the Khartoum School. Opposed to the heavy values placed on skill and craftsmanship and an empirical view of the world, the Crystalists argued that humankind was trapped in a crystal-like prism, whose nature looked different depending on the observer's angle, thus providing a source of possibility within the entrapment. This existentialist perspective shaped her later work, which explored women's oppression and possession more broadly, most notably in paintings of grossly distorted female subjects, some imprisoned in crystal cubes.

JESSICA WINEGAR

ISHAQ, ADIB

[1856–1885]

Arab intellectual.

A Syrian Christian by birth, Adib Ishaq was educated in French schools in Damascus and Beirut. Emigrating to Egypt, Ishaq became the editor of the noted journal *Misr.* While he has been described as an early promoter of Arab nationalism, Ishaq avidly supported the Ottoman Empire as a viable political community. Inspired by liberal thought of France, Ishaq wrote extensively about the nature of freedom and society. In his view, there were several layers of social organization in the Middle East, each of which defined itself differently. There was an "Arab" identity shared by those who spoke Arabic, an "Ottoman" identity shared by those who acknowledged the sultan as sovereign, and even an "Eastern" identity shared by those who felt besieged by the West. These layers were not mutually exclusive; they overlapped, and it was possible for one individual to hold to more than one of these identities.

ISLAH PARTY

Yemeni political party.

The Islah Party (or Reform Grouping) was formed in 1990, soon after the People's Democratic Republic of Yemen and the Yemen Arab Republic united to form the Republic of Yemen (ROY). Although widely characterized as Islamist, Islah is actually a coalition of the Hashid Tribal Confederation, the Muslim Brotherhood, some prominent businesspeople, and a few other small groups; among the latter are militant Islamists, some allegedly with connections with al-Qaʿida. In April 1993 the party won the second-largest bloc in the ROY's first democratic parliamentary elections, gaining about half the seats won by the General People's Congress (GPC) but several more than those won by the Yemeni Socialist Party (YSP), the two parties that unified Yemen in 1990 and then shared power from 1990 to 1993. Although Islah then joined with the GPC and the YSP to form a grand coalition, the party nevertheless remained marginalized until 1994, when civil war brought about the demise of the GPC–YSP partnership and the exile of most YSP leaders. After the war, a new government was formed by the GPC and Islah, providing the latter with key cabinet posts and increased political strength. After the 1997 elections, in which it made a slightly poorer showing than in 1993, Islah declined an invitation to join the government and went into the opposition; after the 2003 elections, it continued to play the role of opposition to the GPC government. Whether in the government or in the opposition, Islah has been an important player in Yemeni politics. For one thing, there are strong tribal ties between President Ali Abdullah Salih, the head of the GPC, and Abdullah ibn Husayn al-Ahmar, the head of Islah. For another, when not in the government, Islah has often acted and been treated as if it were; and, when in the government, it has often behaved as the opposition.

UPDATED BY ROBERT D. BURROWES

ISLAH TALEBAN PARTY

A conservative political party in Iran that supported Reza Khan's coming to power as shah and helped support his policies.

An heir to the Moderate Party (or *Firqeh-ye Iʿtidal*), a conservative party that supported the aristocracy and the traditional middle class, the Islah Taleban (Reformers) Party was established in 1910. Like its predecessor, the Islah Taleban was a conservative party led by prominent clerics, merchants, and landed aristocracy. The party was instrumental in paving the way for Reza Khan's assumption of power as the king of Iran. Almost unanimously, the party supported a bill introduced by the Revival Party that deposed the Qajar dynasty and proclaimed Reza Pahlavi the king (shah) of Iran. With three other political parties, the Reformers formed the alliance system that Reza Shah used for implementing his policies. The leading members of the party were instrumental in passing a new law in the parliament calling for universal adult male suffrage. But in the semifeudal conditions of the country in the early twentieth century, this law extending the vote to the uneducated rural masses helped only to strengthen the elite. The famous Iranian poet Mohammad Taqi Bahar wrote of the law in 1944 that "it continues to plague the country even today."

ISLAM

A strictly monotheistic faith, Islam is the religion of more than 1.2 billion people, or a fifth of the world population. Muslims can be found mostly in Western and Central Asia, Southeast Asia, and Africa. Only about 350 million live in the Arab world.

Pre-Islamic Arabia and the Rise of Islam

Islam appeared in the seventh century at a time of social and religious decay in the Arabian Peninsula. Arabian society was essentially tribal and the supremacy of tribal law encouraged warfare, raiding, and vendettas. Usurious economic practices led to the impoverishment and enslavement of a number of weaker tribes, and social ills such as alcoholism and prostitution were rampant. Associationism (or *shirk,* as the pre-Islamic religious tradition was referred to at the time) was the main faith, and it acknowledged a number of intercessory gods associated with the Creator, Allah. The representations of these gods were housed in an important shrine (the Kaʿba) in Mecca and attracted most Arabian tribes at the time of the annual pilgrimage (hajj). But Associationism was losing its appeal, as can be seen from the spread of Judaism, Christianity, and especially Hanifism, a local monotheism that took Abraham as its central figure and maintained a simple ethical doctrine and the inevitability of a Day of Judgment.

Islam arose claiming to be the embodiment of Hanifism and the continuation of earlier monotheistic traditions. Muhammad, the Prophet of Islam, started preaching in Mecca in 611 C.E. and quickly gained a strong following. Worried that it might lose its profitable control over the pilgrimage, the leadership of Mecca launched a merciless war on the new faith, forcing the Prophet to seek refuge in 622 C.E. in a neighboring town, Medina, in an event known as *hijra* (migration) that marks the beginning of the lunar calendar of Islam. Having prohibited alcohol, gambling, prostitution, raiding, and usury, and prescribed *zakah* (alms-tax) to restore economic equality, replaced the tribal bond with the bond of faith, and instituted Islamic law as the sole reference in settling disputes, Islam spread rapidly throughout Arabia, despite the continuing hostility of Mecca. But since half of Mecca's population had already converted to the new faith, the surrender of the city was only a matter of time, and when the Prophet died in 632 C.E., most of Arabia was Muslim.

Under the first four *rashidun* (rightly guided) caliphs, the Islamic state spread quickly in the Near East, where it was welcomed by a local Semitic and Arab population that was only too pleased to be rid of the ethnically foreign and abusive rule of the Byzantines, as well as in Persia, where the Sassanid Empire had already started to crumble. Later, the Umayyad dynasty (661–750), which followed the *rashidun* caliphs, spread the frontiers of the new empire from Spain to India.

Theology and Beliefs

Tawhid, the concept of the absolute unity and transcendence of God, forms the cornerstone of Islamic theology as expressed in the Qurʾan, the holy book of Islam, which the Muslims believe to be the verbatim word of God, revealed to the Prophet in successive revelations over the span of his prophetic career. *Tawhid* forms the content of the *shahada* (literally, "witnessing," the profession of faith that states that there is no god but God and that Muhammad is His messenger) which therefore constitutes the only requirement for conversion to Islam. The *shahada* and the four main rituals compulsory on the faithful (worshipping *salah* five times a day, fasting from dawn to sunset through the month of Ramadan, performing the pilgrimage to Mecca once in a lifetime, and paying the *zakah,* or alms-tax, annually) eventually became known as the five pillars of Islam.

Young Egyptian Sunni Muslims attend class in a school affiliated with the famed Islamic al-Azhar University. In the Shubra suburb of Cairo alone, there are thirteen such schools that instruct pupils between the ages of ten and eighteen. Students of al-Azhar are taught a traditional school curriculum focused primarily on Islamic subjects. © AFP/CORBIS. REPRODUCED BY PERMISSION.

The Qurʾan represents God as an omnipotent, all-powerful Creator, Master of the Day of Judgment. All of creation is created to worship God; humanity, which received lordship over creation when it accepted God's vice-regency *(khilafa)* on earth, is to account on the Day of Judgment for "what [they] did with the boon of life" (Qurʾan 102:8). All human beings are under the same obligation to obey the divine law ("Noblest among you is the most righteous" Qurʾan 49:13), and this equality is further expressed in the universality of the messages that God sends to His creatures throughout time and place, starting with Adam and concluding with Muhammad ("There is not one community wherein a warner has not been sent" Qurʾan 35:24). Other religions are therefore considered to be based on divine revelations that had been somewhat altered by oral transmission over time, but their followers (the People of the Book) can be ensured reward in paradise given belief in God and good deeds: "The Muslims, the Sabeans, the Christians, the Jews, anyone who believes in God . . . and does good deeds shall find their reward with God and will not come to fear or grief" (Qurʾan 2:62). Although the Qurʾan only mentions Semitic prophets (including Jesus, whom it celebrates as a human messenger of God, and local Arabian prophets), the designation of "the People of the Book" was later extended by the Muslims to all other main religious traditions they encountered, on the basis of the Qurʾanic affirmation of the universality of prophecy. Muslims and followers of other traditions are exhorted to cooperate in establishing a moral society and prohibiting evil and mischief.

Ethics

The Qurʾan exhibits a firmly actionalist system of ethics based on individual responsibility in the realization of the optimal social, economic, and political structure of the *umma,* the universal community of believers. Mutual consultation *(shura)* for the ideal political system, just and fair business practices in the economic system, and financial and moral responsibility to one's extended family members in the social system are to be supplemented by various safety nets for the more vulnerable segments of society, such as *zakah* (poor-tax) and *mahr* (the inalien-

able dowry due the bride). Though no self-denial is advocated, the individual is urged to exercise restraint over his and her natural appetites and to show *rahma* (compassion, forgiveness) in all dealings with one's fellow human beings. Pride and greed are especially condemned, as they lead to injustice to others and hence to oneself *(zulm al-nafs),* ultimately leading to the path of self-destruction. There is no concept of sinful nature, but recurrent sin leads to the hardening of the soul and the eventual silencing of one's conscience. The partial rewards and opportunities provided in this life are considered to be just as much a test to the individual as the difficulties and hardships, and one is exhorted to exercise *sabr* (steadfastness) in the face of life's challenges.

The difficulty of the task is acknowledged by the Qurʾan, which expresses faith in humanity's ultimate success in carrying out God's trusteeship. The individual is urged to remain focused on his or her relationship with God and to never fail to seek Him, for He "hears the prayers of everyone who calls on Him" (Qurʾan 2:186). This intensely personal and spiritual relationship, which the Qurʾan tries to integrate in the individual's life through the five daily prayers, also expresses the human need for the presence and support of one's Creator and Sustainer, for only "with the remembrance of God do human hearts find peace and come to rest" (Qurʾan 13:30). Thus the Qurʾan postulates a direct and intimate relationship between the individual and God (hence the absence of clergy in Islam) and God is said to be closer to His creatures than their jugular vein.

Paradise and Hell are in the Qurʾanic view the consummation of the individual's life on earth. What is to come is therefore not "another world," but the response to what one has done in this life. This world is to be recreated in a different form at

the end of its time span, ushering in the Day of Judgment that will inaugurate punishment and reward; these are set along an absolute scale of justice tempered only by God's infinite mercy, which is assured to all those who genuinely seek it.

Political and Cultural Developments

Islam as a faith spread first in the Near East and Egypt, where in the first few centuries Arab Islamic civilization flourished. The caliphate split after the Abbassid takeover of the Near East and Egypt, while Spain remained under Umayyad rule until 1492. The Abbassid dynasty ruled until 1258, though in the latter part of their rule only nominal allegiance was given to the caliphs in Baghdad by the amirs and sultans who, in effect, governed the various provinces of the empire and fought each other over territory. The internecine war, partly caused by Sunni-Shiʿite conflict, allowed the invading Crusaders (eleventh through thirteenth centuries) to establish a state in Palestine. It was not until Salah al-Din (Saladin, d. 1193) that Egypt and the Near East were united under Sunni rule, which in turn helped to defeat the Crusaders and later to repulse the Mongols who had sacked Baghdad in 1258. But as the Arab world fell into decline, the Sunni Ottoman Turks swept through Byzantium and extended their rule over the Near East and most of North Africa, ushering in Ottoman Islamic civilization. In the East, the Shiʿite Safavid dynasty took over Iran at the end of the sixteenth century, helping to spread a highly sophisticated Persian culture throughout Central Asia and into Northern India, where a brilliant Indian Islamic civilization climaxed under the Great Moghuls between the sixteenth and eighteenth centuries.

During this period Islamic arts, science, and technology flourished throughout the Muslim world, with contributions in astronomy (al-Biruni, d. 1048; Ibn al-Shatir, d. 1375), algebra and trigonometry (al-Khawarizmi, d. 850; Umar al-Khayyam, d. 1131;

Sharaf al-Din al-Tusi, d. 1213), physics and chemistry (Ibn Hayyan, d. 815; Ibn al-Haytham, d. 1250), and biology and medicine (Abu Bakr al-Razi, d. 925; Ibn Sina, d. 1037, also known as Avicenna, whose *Canon of Medicine* remained the definitive reference book in the field until the seventeenth century in both East and West.)

Islamic Law

The emphasis on submitting to the divine will (the literal meaning of *Islam*) and fulfilling the main Qurʾanic injunction, "to enjoin the good and prohibit evil" led to the rapid development of Islamic law *(fiqh)*. In terms of legal sources, the Qurʾan was the first and absolute reference; and since it had mandated obedience to the Prophet, his *sunna* (example), which was provided in the reports of his sayings and deeds, naturally came second. Much of the law, however, had to be inferred, and the jurists turned to their own intellectual effort *(ijtihad)* expressed in the methodology of *qiyas* ("analogical reasoning," that is, finding a *ratio legis* parallel to one already identified in the Qurʾan or *sunna*). Such individual opinions, however, did not become binding until they submitted to *ijma,* or consensus of the schools of law, though all parties acknowledged to the others the right to dissent *(ikhtilaf).* Eventually, the schools of law coalesced into four main schools. The processes by which laws may be derived became the subject of an extensive and separate discipline, *usul al-fiqh* (literally, the principles of *fiqh*). Islamic law developed rapidly into an extensive field in the first few centuries of Muslim history, but innovation subsided considerably as a result of the reliance on precedents and past consensus.

Religious Schisms

The most important schism in the Muslim community occurred over a political split in the early community. After the Prophet's death, most Muslims supported the election of Abu Bakr and later of Umar ibn al-Khattab, the Prophet's closest companions. However, a small number known as the Shiʿat Ali (the party of Ali), insisted on keeping the caliphate within the Prophet's family and championed his cousin Ali. Eventually, the Shiʿa became a religious movement, basing their position on the claim that God would not leave His community without guidance, and justifying it through prophetic sayings and esoteric interpretation of the Qurʾan. The belief in the authority of the imams (the leaders who were entitled to rule) was made part of the Islamic creed and gave rise to a clerical structure in Shiʿite Islam. In all other matters of *fiqh* and dogma, the Shiʿa are similar to the Sunnis, though this applies only to the Ithnaʿashariyya ("Twelvers," who believe in a line of twelve imams), and the Zaydis (who recognize only five imams) and not to the other groups (the Ismaʿilis, the Alawis, the Druze, etc.) that split from them and whose beliefs ran contrary to the doctrines of *tawhid* and the finality of Muhammad's prophecy. Thus the main difference between the Sunnis and the Shiʿa lies more in the political issue of the community leadership (with the beliefs and practices that the latter entails) than in doctrinal difference of dogma.

Philosophical Developments

The philosophical developments in the Muslim world expressed the tension between the Islamic (Semitic) worldview and the Hellenistic heritage, which to some extent had become part of the Near East's cultural makeup. At one end stood the heirs of Hellenistic thought (called *falasifa*) such as al- Kindi (d. 870), al-Farabi (d. 950), and Ibn Rushd (d. 1198, also known as Averroes) who used Greek logic and incorporated into their works Greek notions such as the eternity of the world, the distinction between essence and existence, and Hellenistic angelology.

At the other end stood the traditionists, staunch defenders of Islamic dogma and method, generally represented by the Hanbalis. Their greatest proponent was Ibn Taymiyya (d. 1328), who delivered devastating blows to the Greek logic used by the *falasifa* in his *al-Radd ala al-Mantiqiyyin.* In between the two groups were two theological Kalam schools; the earlier one, known as the Muʿtazila, was closer to the philosophers and upheld the independence of reason from revelation, the necessity for God to abide by justice, and the creation of the Qurʾan; such views prompted the rise of the later school, the Ashʿariyya, which restored the pre-eminence of revelation, the absolute omnipotence of God, and the uncreated nature of the word of God (making use of a somewhat revised Greek logic). Their greatest representative was Abu Hamid al-Ghazzali (d. 1111), who used his incisive analysis of causality to undermine the philosophers.

Mysticism

Mystical thought, which had a basis in the spiritual worldview of the Qurʾan and the simple and intense piety of early Muslims, became more formalized through the gradual absorption of Hellenistic, Persian, and Indian thought, and became known as Sufism. The main architect of the Sufi theosophy was Ibn Arabi (d. 1240). Sufi poetical expression of the divine love, articulated by Rabiʿa al-Adawiyya (d. 801) and Jalal al-Din al-Rumi (d. 1273), became very popular throughout the Muslim world. But its foreign elements led to opposition by the orthodox jurists and theologians, especially those whose strictly legalistic and ritualistic interpretation of the faith found no place for spiritual expression. Ironically, their opposition encouraged the spread of Sufism as a reaction to their impoverished representation of the personal relationship to God—as did the increase in worldliness and materialism spreading in the Muslim world as the empire expanded. However, most great theologians and jurists (e.g., al-Ghazzali, who silenced the critics of Sufism; Ibn Taymiyya; Muhammad ibn Abd al-Wahhab) defended and indeed practiced the Sufi way, though all of them condemned in strong terms the philosophical expression of Sufism, which advocated a form of pantheism (*wahdat al-wujud,* the unity of being) and extreme asceticism. But Sufism spread widely, and the *tariqas* (Sufi orders, such as the Qadiriyya in the Near East, the Mawlawiyya (Mev levis and the Naqshbandiyya in Central Asia and Turkey, and the Shadhiliyya in North Africa) were the main impetus behind the spread of Islam in Africa and East Asia.

Reform Movements

The insistence on the importance of spiritualism over and above the law led on one hand to asceticism and withdrawal but also, on the other, to libertarianism, a trend that was accentuated in popular religion by the belief in miracles, superstition, and cultic practices into which the veneration of Sufi saints had slowly degenerated. In North Africa and India, the Sufi movements had also absorbed the cultural and religious heritage of their new converts, a syncretism that included at times non-Islamic beliefs and practices. Meanwhile, the law had become more and more reified as the need for innovation subsided and *taqlid* (imitation or reliance on past tradition) became the norm. The jurists' inability to respond to new needs became a problem as new challenges arose with the industrialization of Europe, which forced the Ottomans to adopt Western laws and institutions. All these problems set the stage for the reform movements of the eighteenth century.

The reform movements rejected consensus as a source of law as it had become a hindrance to change, and they advocated *ijtihad* instead. At the same time, they emphasized a strict interpretation of *tawhid* and repudiated the syncretic beliefs adopted by the Sufi movements as well as the morally lax social practices and the popular beliefs in magic, superstition, and saints' intercession. Building on the philosophical and political thought of Ibn Taymiyya, Muhammad ibn Abd al-Wahhab (d. 1792) started in Arabia the reform movement of Wahhabism, which then spread in the Near East as the Salafiyya movement. At same time, separate but similar movements spread in Africa under the leadership of Ibn Idris (d.1837) and al-Sanusi order (d. 1859), and in India under Sirhindi (d. 1624). These were Sufi masters who criticized the former excesses of the Sufi movements and used the *tariqas* to restore orthodoxy of belief and practice and to purge the movements of syncretic accretions.

However, the colonial ambitions of the European powers quickly changed the Muslim scene from one of reform to one of confrontation with a greater power that soon overcame most of the Muslim world and won from the ailing Ottoman Empire significant concessions. Instead of internal social change, the reform movements turned to armed resistance, and instead of focusing on doctrinal purity and legal tools, the new discourse centered on the necessity of resisting the West and on apologetics for Islam, for the defeat of the Muslims was contemptuously blamed by Western Orientalists on the backwardness and inferiority of Islam.

Islamic Modernist Movements

Islamic modern thought is considered to start with Jamal al-Din al-Afghani (d. 1897), a man with encyclopedic knowledge of both Western and Eastern disciplines who traveled throughout the Muslim world in hope of uniting it in the fight against Western colonization. He advocated reform of education

and law and was followed in Egypt by one of his most famous students, Muhammad Abduh (d.1905), a jurist who became the head of the famed al-Azhar *fiqh* university. But few practical solutions were offered, and the problem was compounded by the call by some of his students like Rashid Rida (d. 1935) for compromise with Western institutions, such as interest and the creation of national entities separate from the Islamic Ottoman rule. In India, Muhammad Iqbal (d. 1938) called for a return to the original ethos of Islam and the establishment of the independent state of Pakistan, while Sayyid Ahmad Khan (d. 1898) called for more drastic changes in Islamic thought and cooperation with the British colonial power. The compromises advocated by some led then to an attitude of general rejection of change on the part of most jurists and theologians, and although all had agreed on the necessity of reforming law and education and of adopting Western advances in science and technology, the discourse remained general and did not offer specific and coherent suggestions. In effect, the colonial powers, which by now had also taken over the Near East after the defeat of the Ottoman Empire at the end of World War I, had imposed their legal, political, and educational systems on their colonies. After independence, the local governments maintained the Western institutions they had inherited, leading to the Islamic Revolution in Iran in 1979 and giving rise, throughout the Muslim world, to opposition movements (such as the Muslim Brotherhood in Egypt and Jordan, the Jamiʿat-e Islami in Pakistan, the Front Islamique du Salut in Algeria and the Rafah Party in Turkey) that called for the restoration of Islamic law and fought the adoption by Muslim elites of the Western ideologies of secularism, socialism, and nationalism. These ideological conflicts, which have led to tensions or all-out civil war in many countries, are exacerbated by the policies of autocratic regimes that do not tolerate opposition or democratic rule and by Western intervention (directly or in support of such regimes) to preserve Western interests in oil and to protect Israel. These interventions have become the focus of Muslim resentment and radicalism throughout the Muslim world.

ISLAMIC ACTION FRONT

Jordanian Islamist political party.

Jabhat al-Amal al-Islami (Islamic Action Front, IAF) grew out of Jordan's Muslim Brotherhood. The two overlap in membership and outlook but are not synonymous. The IAF has maintained a strategy of loyal opposition, emphasizing reformist rather than militant tactics, and is by far the largest and best-organized political party in the kingdom.

The Muslim Brotherhood operated with tacit state approval for decades but was technically registered as a charity. After Jordan's political liberalization process began in 1989, the Brotherhood was the best-organized movement in the country. Its candidates won twenty-two out of a total of eighty

seats in the new parliament, with twelve more going to independent Islamists. The IAF was founded in 1992, immediately following the legalization of political parties in Jordan for the first time since the 1950s.

The IAF is known for its regressive social views regarding the rights of women but is also active in charitable work for the poor. The party has been a vocal opponent of U.S. policy in the region, especially regarding Palestine and Iraq, and opposed the Jordanian peace treaty with Israel in 1994. Following the treaty, the IAF organized an ongoing campaign to prevent normalization of relations with Israel at any level.

The IAF has developed increasing levels of support among the lower classes and especially among urban Palestinians of various classes. Hence the IAF sees its electoral strengths in urban, Palestinian-majority communities such as Irbid, al-Zarqa, and most districts of Amman. Yet Jordan's electoral laws favor rural areas and traditional sources of support for Jordan's ruling Hashimite family. To the surprise of the regime, however, Islamists dominated the 1989 elections and Islamist leader Abd al-Latif Arabiyyat even served as the elected speaker of the parliament from 1990 to 1993.

Before the 1993 elections, changes in the elections laws and the unpopular performances of Islamist leaders as cabinet ministers led to a decrease in IAF electoral success. The IAF took sixteen seats and six more went to independent Islamists. IAF secretary general Ishaq Farhan did manage to keep his parliamentary seat, but Arabiyyat lost his reelection bid. In recognition of his importance and influence in the Islamist movement, however, the king appointed Arabiyyat to the upper house of parliament.

The IAF and most opposition parties, from the secular left through the religious right, demanded a revision of the electoral law. When no changes were made, the IAF led a coalition of eleven opposition parties from across the political spectrum in an electoral boycott. As a result, no IAF members were seated in the 1997–2001 parliament, but six independent Islamists did secure seats, including former IAF members Abdullah Akayla and Bassam Ammush. Since IAF figures had been successful within Jordan's professional associations, winning key leadership posts, these associations took the lead, in the absence of the IAF from the 1997–2001 parliament, in maintaining IAF activism on such issues as the antinormalization campaign.

The IAF returned to full electoral participation in 2003, despite a new electoral law that increased the number of deputies to 110 (including a minimum of six seats for women) and maintained uneven electoral districts. The party negotiated its participation with the palace, fielding only thirty candidates. Secretary General Hamza Mansur and Shura Council president Arabiyyat (president of the party's Shura or consultative council) decided not to run themselves, and also excluded controversial IAF figures such as Abd al-Munʿim Abu Zant. Abu Zant, who shortly thereafter won a seat as an independent, was expelled from the IAF for running anyway. The party gained eighteen seats in the election, including one for Haya al-Musaymi, the only woman candidate in the IAF, who won the largest vote of any woman candidate. An additional six seats went to independent Islamists, many of whom, like Abu Zant, were former IAF members. Having returned to parliament, and with a solid base in the professional associations, the IAF pursued its agenda: abrogating the 1994 peace treaty; preventing normalization of relations with Israel; supporting Palestinian aspirations; countering U.S. dominance in the region; and establishing *shariʿa* and more traditional roles for men and women in Jordanian society.

ISLAMIC CONGRESSES

Muslims, either of a certain faction or in general, convening to promote solidarity and interaction among Muslim peoples and states.

Although the concept of Muslim solidarity is intrinsic to the faith of Islam, it took no organized form until modern times. In the course of the twentieth century, Islamic congresses have emerged as the structured expression of that concept. Some of these congresses have evolved into international Islamic organizations that promote political, economic, and cultural interaction among Muslim peoples and states.

The idea of Muslims convening in congresses first gained currency in the late nineteenth century, in the Ottoman Empire. The advent of easy and regular steamer transport accelerated the exchange of ideas among Muslims and made possible the periodic assembling of representatives. The idea also appealed to Muslim reformists, who sought a forum to promote and sanction the internal reform of Islam. Such an assembly, they believed, would strengthen the ability of Muslims to resist the encroachments of Western imperialism.

A number of émigré intellectuals in Cairo first popularized the idea in the Muslim world. In 1900, one of them, the Syrian Abd al-Rahman al-Kawakibi, published an influential book entitled *Umm al-Qura* (that is, Mecca), which purported to be the secret protocol of an Islamic congress convened in Mecca during the pilgrimage of 1899. The fictional congress culminated in a call for a restored Arab caliphate, an idea then in vogue in reformist circles. Support for such a congress also became a staple of the reformist journal *al-Manar,* published in Cairo by Rashid Rida. The Crimean Tatar reformist Ismail Bey Gaspirali (in Russian, Gasprinski) launched the first concrete initiative in Cairo in 1907, when he unsuccessfully worked to convene a general Islamic congress.

Al-Kawakibi's book, Rida's appeals, and Gaspirali's initiative all excited the suspicion of Ottoman authorities. The Ottoman Turks believed that a well-attended Islamic congress would fatally undermine the religious authority claimed by the theocratic Ottoman sultan-caliph and, in particular, it feared the possible transformation of any such congress into an electoral college for choosing an Arab caliph. Steadfast Ottoman opposition thwarted all the early initiatives of the reformers.

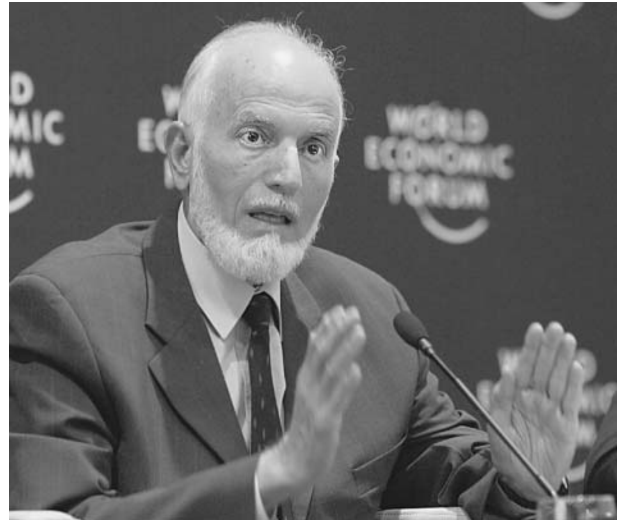
With the final dismemberment of the Ottoman Empire after World War I, some Muslim leaders and activists moved to convene general Islamic congresses. In each instance, they sought to mark their causes or their ambitions with the stamp of Islamic consensus. In 1919, Mustafa Kemal Atatürk convened an Islamic congress in Anatolia to mobilize pan-Islamic support for his military campaigns. During the *hajj* (pilgrimage) season of 1924, Sharif Husayn ibn Ali of the Hijaz summoned a pilgrimage congress in Mecca to support his claim to the caliphate—a maneuver that failed to stall the relentless advance of Ibn Saʿud (Abd al-Aziz ibn Saʿud Al Saʿud). Following Ibn Saʿud's occupation of Mecca, he convened his own world congress during the pilgrimage season of 1926. The leading clerics of al-Azhar in Cairo convened a caliphate congress there in 1926 to consider the effects of the abolition of the caliphate by Turkey two years earlier. The congress was supported by King Fuʾad, who reputedly coveted the title of caliph, but no decision issued from the gathering. In 1931, Muhammad Amin al-Husayni, the mufti of Jerusalem, convened a general congress of Muslims in Jerusalem to secure pan-Islamic support for the Arab struggle against the British mandate and Zionism. In 1935, pan-Islamic activist Shakib Arslan convened a congress of Europe's Muslims in Geneva to carry the protest against imperialism and colonialism to the heart of Europe. Each of these congresses resolved to create a permanent organization and convene additional congresses, but all such efforts were foiled by internal rivalries and the intervention of the European powers.

As more and more countries in the Middle East achieved political independence following World War II, Muslim leaders increasingly offered new plans for the creation of a permanent organization of Muslim states. After the partition of India, Pakistan took a number of initiatives in the late 1940s and early 1950s but soon encountered stiff opposition from Egypt, which gave primacy of place to pan-Arabism and the Arab League. When Egypt's President Gamal Abdel Nasser transformed pan-Arabism into a revolutionary doctrine, Saudi Arabia sought to counter him by promoting a rival pan-Islamism, as-

sembling congresses of Muslim activists and *ulama* (Islamic clergy) from abroad. In 1962, the Saudi government sponsored the establishment of the Mecca-based Muslim World League, which built a worldwide network of Muslim clients. Beginning in 1964, Egypt responded by organizing large congresses of Egyptian and foreign *ulama* under the auspices of al-Azhar's Academy of Islamic Research in Cairo. These rival bodies then convened a succession of dueling congresses in Mecca and Cairo, each claiming the sole prerogative of defining Islam. In 1965 and 1966, Saudi Arabia's new king, Faisal (son of Ibn Saʿud), launched a campaign for an Islamic summit conference that would have balanced the Arab summits dominated by President Nasser, however, had sufficient influence to thwart the initiative, which he denounced as a foreign-inspired Islamic pact, designed to defend the interests of Western imperialism.

Israel's 1967 devastating pre-emptive attack on Egypt, Syria, and Jordan, along with its annexation of Jerusalem, the West Bank, Gaza, the Golan Heights, and the Sinai, eroded faith in the brand of Arabism championed by Nasser, inspiring a return to Islam. This set the scene for a renewed Saudi initiative. In September 1969, following an arsonist's attack against the al-Aqsa Mosque in Jerusalem, Muslim heads of state set aside their differences and met in Rabat, Morocco, in the first Islamic summit conference. King Faisal of Saudi Arabia took this opportunity to press for the creation of a permanent organization of Muslim states. The effort succeeded, and, in May 1971, the participating states established the Organization of the Islamic Conference (OIC; *Munazzamat al-muʾtamar al-Islami*). The new organization, headquartered in Jidda, Saudi Arabia (pending the liberation of Jerusalem), adopted its charter in March 1972.

The OIC eventually earned a place of some prominence in regional diplomacy, principally through the organization of triennial Islamic summit conferences and annual conferences of the foreign ministers of member states. The OIC's activities fell into three broad categories. First, it sought to promote solidarity with Muslim states and peoples that were locked in conflict with non-Muslims. Most of its efforts were devoted to the cause of establishing a state of Palestine and recapturing Jerusalem. Nonetheless, it supported the movement



Abdullah O. Nasseef, the Saudi Arabian president of the World Muslim Congress. An international, nongovernmental organization, the Congress was established in 1926 and is based in Karachi, Pakistan. The organization's motto is "Verily, all Muslims are brethren," and its members strive towards unity between Muslim nations and world peace on the basis of justice. **© AP/Wide World Photos. Reproduced by permission.**

of Muslims from Eritrea—incorporated into Ethiopia in 1962—to the Philippines. Second, the organization offered mediation in disputes and wars among its own members, although its effectiveness was greatly limited by the lack of any force for truce supervision or peacekeeping. Lastly, the OIC sponsored an array of subsidiary and affiliated institutions to promote political, economic, and cultural cooperation among its members. The most influential of these institutions was the Islamic Development Bank, established in December 1973 and formally opened in October 1975. The bank, funded by the wealthier OIC states, financed development projects while adhering to Islamic banking practices.

The OIC represents an ingenious attempt by various Arab governments to organize Muslim states. But it has not put an end to instances of individual states to summoning international congresses of *ulama,* activists, and intellectuals. Saudi Arabia and Egypt, realigned on the conservative end of the Islamic spectrum, have cooperated increasingly in mounting large-scale Islamic congresses. Their rivals—Iran, Libya, and Iraq—have done the same. Divisive events, such as the war between Iran

and Iraq (1980–1988), the lethal attack upon several hundred Iranians in Mecca during the pilgrimage season of 1987, and the Iraqi invasion of Kuwait in 1990, produced congresses and countercongresses, each claiming to express the verdict of a united Islam. Leaders of Muslim opposition movements have also met in periodic congresses, sometimes in Europe. Less than a century after al-Kawakibi's book, a crowded calendar of congresses now bind Muslim states together more than ever before. On the whole, to the extent that healthy and heated discussion of alternatives between friends is salutary, such efforts—however confusing to the outsider—appear most salutary and indicative of a new political awareness among Muslim states and their peoples.

ISLAMIC COUNTRIES WOMEN SPORT SOLIDARITY GAMES (1992 AND 1997)

International sporting event for women from Islamic countries.

The Islamic Countries Women Sport Solidarity Games, reserved for women from Islamic countries, were held in 1992 and 1997 in Tehran, Iran. Athletes from eleven countries participated in 1992 and from sixteen countries in 1997. Women competed in events including badminton, basketball, volleyball, swimming, archery, and handball. Kyrgyzstan won in 1992; Iran won in 1997. The games had two aims: to provide a venue for Islamic women to participate in sports in an international arena while remaining faithful to Islamic dress codes; and to strengthen solidarity between Islamic countries and express cultural unity.

Principally sponsored and organized by the Islamic Women Sport Solidarity Council, which was headed by Faezeh Hashemi, former parliamentarian and editor of the journal *Zanan* (Women), the games were also internationally sponsored by the IOC, reinforcing Islamic cultural unity.

The games aroused interest both nationally and internationally due to the focus on women and the idea of an Islamic alternative to international sporting events. The 1992 event marked the first time an Iranian woman participated in an international sporting event. The games were particularly controversial in 1997 because they coincided with the football World Cup qualifier match between Iran and Australia in Tehran, which Iranian women attended in defiance of government orders. The third Islamic Countries Women Sport Solidarity Games were scheduled for December 2004.

ISLAMIC JIHAD

Palestinian Islamic fundamentalist resistance movement.

Islamic Jihad emerged from the Islamic revivalist tradition of the association of Muslim Brotherhood in Israeli-occupied Gaza and was formed by Palestinians studying in Egypt. Rather than pursue the Brotherhood's policy of the gradual Islamization of Palestinian society as the basis for future liberation from Israeli occupation, certain militants in the late 1970s began arguing for a more active, armed, Islamic response to the occupation much as secular groups associated with the Palestine Liberation Organization (PLO) had undertaken. Sources of inspiration included such militant historical figures as Shaykh Izz al-Din al-Qassam in Palestine and Sayyid Qutb in Egypt, as well as the revolutionary movements spawned by Muhammad Abd al-Salam Faraj in Egypt (the Jihad Organization) and the Ay-

atollah Ruhollah Khomeini in Iran. What tied these traditions together was their belief in active struggle (jihad) in the service of Islam as opposed to mere preaching.

It is believed that Islamic Jihad emerged as an actual organization in 1980. Two early leaders were Abd al-Aziz Awda, deported by Israeli authorities in November 1987, and his successor, Fathi Abd al-Aziz Shiqaqi, himself deported in August 1988. Shiqaqi operated in Lebanon thereafter until his assassination in Malta in October 1995. Jihad's new head became Ramadan Abdullah Shallah, who moved to Damascus in the mid-1990s. The group has always maintained close relations with Iran. One of Islamic Jihad's first dramatic acts against the Israeli occupation was an attack on a group of soldiers in Jerusalem in October 1986, followed by a series of well-planned attacks on Israeli targets in late 1987. These helped to precipitate the Palestinian uprising, known as the Infidada, against Israeli rule in the occupied territories, which erupted in December 1987. Islamic Jihad has operated as a small, clandestine group of militants who seek the total liberation of all of Palestine through armed struggle rather than a mass-based organization like the Muslim Brotherhood or HAMAS. Its activities were severely hampered by Israeli repression during the Intifada. Jihad operated alongside but separate from the PLO's Unified National Command of the Uprising during the Intifada. Jihad activists were among the 418 Palestinians from the territories deported by Israel in December 1992.

Jihad opposed the Israeli–Palestinian peace talks, which began in 1991, as well as the subsequent 1993 Oslo Accord. In 1992 it joined the "Damascus Ten," a grouping of Palestinian organizations opposed to the peace talks, which changed its name to the National Democratic and Islamic Front in 1993. Jihad continued to attack Israeli targets even after establishment of a Palestinian Authority (PA) in Gaza and the West Bank in 1994, promoting considerable friction between it and the PA leadership. Jihad figures were arrested; Abdullah al-Shami, the group's spokesman and spiritual leader in Gaza, was arrested by the PA on six different occasions for Friday sermons that criticized the PA and its president, Yasir Arafat. Eschewing any compromise with Israel, Jihad activists have resorted to suicide bombings against Israelis during the 1990s.

Jihad and HAMAS were rivals until the al-Aqsa Intifada tended to bring them together in their activities. Jihad also has undergone some internal problems. Abd al-Aziz Awda eventually left Jihad and returned to the PA from his Israel-imposed exile with Arafat's approval. In 2003 al-Shami was pushed out of his positions and quit the movement as well.

ISLAMIC SALVATION ARMY (AIS)

Armed wing of the Islamic Salvation Front, which fought the Algerian regime from 1994 until its disbanding in October 1997.

The Islamic Salvation Army (AIS), or Armée islamique du salut, was founded in Algeria on 18 July 1994 as the "fighting wing" of the Islamic Salvation Front (FIS). Madani Mezrag, who eventually became the national amir (commander) of the organization, and Ahmed Benaïcha (future commander of the western region), were among its founders. The AIS wished to distance itself from the Armed Islamic Group (GIA), which had emerged in 1993 to fight the regime and anyone opposed to the Islamist movement; at the same time, the AIS was fearful of the marginalization of the FIS because many FIS members—including Abderrezak Redjam, Mohamed Saïd, Saïd Makhloufi, and the political refugee Anouar Haddam (all Jazʾarists, the so-called Algerianists as opposed to the *salafists*)— had joined the GIA in May 1994. In their communiqué announcing the creation of the AIS, Mezrag and Benaïcha advocated "recourse to jihad, in the path of God, as a means of establishing an Islamic state in Algeria, prelude to the establishment of the Caliphate." The AIS proclaimed allegiance to imprisoned FIS leaders Abassi al-Madani and Ali Benhadj.

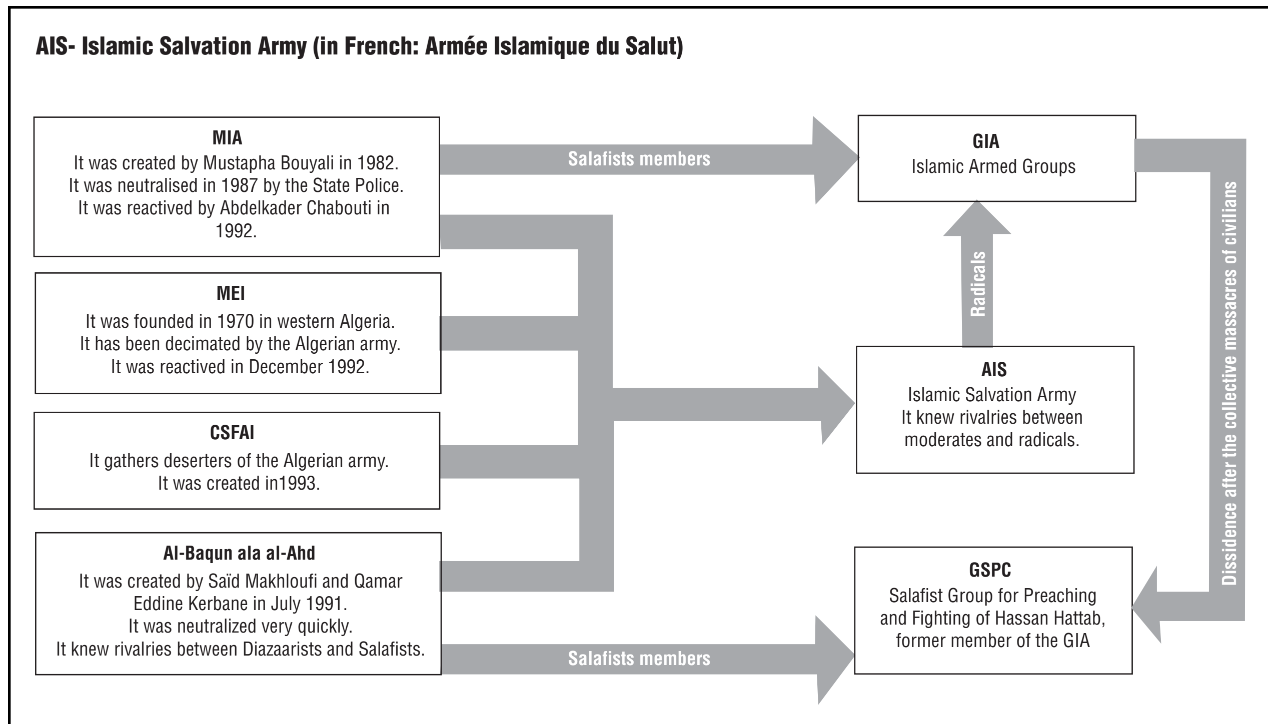

FIGURE BY GGS INFORMATION SERVICES, THE GALE GROUP.

Unlike the GIA, the AIS conducted, unsuccessfully, classic guerrilla warfare modeled on that which the National Liberation Army (ALN) fought against colonial France from 1954 to 1962. The AIS tried, in vain, to control major portions of the territory, but did garner some support in rural areas. As early as 1995, the AIS sought to negotiate a political solution with the regime. Unlike the GIA, which used horrific methods against its opponents, the AIS, despite recurring alliances with the GIA, advertised its opposition to bombings and indiscriminate massacres of civilians. Its forces were allegedly fighting security forces, not civilians. In 1995 and 1996 the AIS fought gruesome wars against GIA forces. Those wars, which had repercussions on the families of AIS fighters, worked to the advantage of the regime. Negotiations between the Algerian military and the AIS resulted in a unilateral truce proclaimed by Mezrag on 1 October 1997. Thousands of AIS fighters surrendered and handed over their weapons to the authorities. In January 2000 those fighters obtained amnesty under the terms of the "Civil Concord" decreed by President Abdelaziz Bouteflika after his election in April 1999. Both Mezrag and Benaïcha offered their services to the authorities to fight the GIA and the Salafist Group for Preaching and Combat (GSPC), which has links to al-Qaʿida.

ISLAMIC UNIVERSITY OF MEDINA

Institute of religious higher education in Saudi Arabia.

Medina has been a center of religious education in the Islamic world for hundreds of years. The Islamic

University of Medina was founded in 1961, according to Saudi sources, to spread the teachings of Islam in the world; by 1995 it had 3,058 students and 378 staff. About 80 percent of the students are Saudis, and the remainder foreigners. Tuition is paid by the government, and applicants must be Muslims of "good moral character" and be able to read the Qurʾan. The university has faculties in *shariʿa* (Islamic law), Qurʾan, *daʿwa* (proselytizing), *hadith* (traditions of the prophet Muhammad), and Arabic. Because the university reflects the influence of the country's powerful and conservative religious establishment, its mission and curriculum reflect the same restrictive view of Islam.

ANTHONY B. TOTH

ISMAʿIL, ABD AL-FATTAH

[?–1986]

Yemeni government official.

From North Yemen, Abd al-Fattah Ismaʿil emigrated to Aden for work as a young man. He became coruler of the People's Democratic Republic of Yemen (PDRY) with his rival Salim Rabiyya Ali from mid-1969 to mid-1978. Ismaʿil served during this period as head of the regime's evolving political machine. He was an insistent, dogmatic proponent of "scientific socialism" and is regarded as the father of what became a well-developed ruling party, the Yemeni Socialist Party. He ousted Rabiyya Ali in 1978 and led the PDRY until his own ouster in 1980. He returned from his Moscow exile in 1984, only to die in Aden in the intraparty blood bath of January 1986.

ROBERT D. BURROWES

ISMAʿIL IBN IBRAHIM

[1830–1895]

Modernizing viceroy of Egypt, reigning from 1863 until his deposition in July 1879.

Ismaʿil ibn Ibrahim (1830–1895), pictured with his son, Tewfik, assumed the leadership of Egypt in 1863. Throughout his reign, he spent enormous amounts of money on his dream of a modern Egypt, and borrowed heavily from foreign nations. These debts would lead to British occupation three years after his son replaced him in 1879.

Born in Cairo, Ismaʿil ibn Ibrahim was educated at the Qasr al-Ayni Princes' School established by his grandfather, Muhammad Ali Pasha, and at the Saint-Cyr Military Academy in France. He served briefly on the council for the sultan of the Ottoman Empire in Istanbul and then chaired the corresponding vice-regal council in Cairo.

Upon succeeding his uncle, Muhammad Saʿid Pasha, in 1863, he started a policy of national modernization in Egypt by ordering the construction of factories, irrigation works, public buildings, and palaces. Many traditional Cairo and Alexandria

neighborhoods and buildings were razed to facilitate the Europeanization of these cities. His reign marked the inauguration of many Egyptian cultural institutions, including the Cairo Opera House, the National Library (Dar al-Kutub), the Egyptian Museum, the Geographical Society, and various primary, secondary, and higher schools, such as Dar al-Ulum. The Suez Canal was completed during his reign; its 1869 inauguration occasioned a gala celebration attended by many European leaders.

Ismaʿil also established Egypt's system of provincial and local administration and convened the Majlis Shura al-Nuwwab, the country's first representative assembly. He reorganized the national and *shariʿa* (Islamic law) courts, established the mixed courts, created the postal service, and extended railroads and telegraph lines throughout Egypt. He sent explorers to the African interior and armies to complete Egypt's conquest of the Sudan. Egypt became more independent of the Ottoman Empire. Since Ismaʿil obtained the title of *khedive* (Persian for "little lord"), he gained permission to pass down his khedivate according to the European rules of succession and the right to contract loans without first obtaining permission from Istanbul. His industrial, military, and construction projects proved costly, and he indulged in other extravagances having no long-term value to Egypt, such as his many palaces and extensive luxuries that he bought for his wives and mistresses or bestowed upon Europeans he wished to impress.

At first, Ismaʿil paid for his program with revenues derived from the expanded output of Egyptian cotton, for which demand boomed during the American Civil War. Later, when European industrialists could buy cotton from other sources, Ismaʿil raised taxes and took loans from European bankers at increasingly unfavorable terms. Unable to repay them, he resorted to unorthodox financial measures—such as the 1871 Muqabala loan and the sale of his government's Suez Canal shares in 1875—finally conceding to European control over Egyptian state revenues and disbursements through the 1876 Caisse de la Dette Publique.

In 1878 he surrendered much of his power to the dual control of a "European cabinet" that included English and French ministers. Financial stringencies ensued, leading to an uprising by Egyptian army officers who had been put on half-pay, causing the European cabinet to resign. European creditors and their governments suspected Ismaʿil of engineering the uprising to regain his absolute rule. In July 1879, their envoys in Constantinople persuaded the sultan to replace him with his eldest son, Tawfiq. Ismaʿil left Egypt and lived out his life in exile. Although ambitious for Egypt's development and his own reputation, his achievements were eclipsed by his fiscal misrule, which led in 1882 to the British occupation.

ARTHUR GOLDSCHMIDT

ISMAʿILI SHIʿISM

Islamic movement that split from the Twelver Shiʿa over the successor of the sixth imam, Jaʿfar al-Sadiq (d. 765).

Some believed that Jaʿfar had appointed his son, Ismaʿil as his successor, but Ismaʿil predeceased Jaʿfar, thus making his brother, Musa, their father's successor. Supporters of Ismaʿil, however, maintained that his son, Muhammad, should become imam.

The Ismaʿili movement, whose followers are generally known as seveners of Ismaʿilis, spawned several subdivisions, including the Fatimids, the Assassins, the Tayyibis, and the Nizaris. The Fatimids developed from a group of Ismaʿilis who had maintained their movement in secret from the time of Jaʿfar's death until about the mid-ninth century. This group believed that Ismaʿil had not really died but had gone into occlusion, and that Muhammad, the seventh imam, would reappear as the *Mahdi.* The Fatimids founded Cairo in 969 C.E. and were wiped out in 1021 after their sixth caliph, al-Hakim, died. Al-Hakim's followers consolidated in the mountains of Syria and are known as Druze.

Outside Egypt, the Ismaʿili movement was propagated by Hasan-i-Sabbah, from his mountain fortress of Alamut in northern Iran in 1090 C.E. The movement he founded was known as the Assassins because of their use of hashish (users of hashish are called *hashshashin* in Arabic. Hasan's followers were notorious for murdering their enemies as a form of intimidation, from whence *assassin* was coined. After Hasan's death, the followers of the movement came to be known as Nizari Ismaʿilis, named for Nizar, an heir to the Fatimid caliphate whose claim was usurped in a palace coup, and whose namesake succeeded Hasan, claiming descent from the Fatimid Nizar. The Nizar Ismaʿili rule at Alamut ended with the Mongol conquest of 1256. Survivors kept the movement alive, however, settling in Azerbaijan and India. In 1840, their imam took the title Agha Khan, which continues until today. His followers, known as Khojas, are located mainly in Gujarat, Bombay, and East Africa, with others scattered around the world, including a small group based at Salamiyya, Syria.

POLITICAL PARTIES

OVERVIEW

Officially, the State of Israel, a democratic republic established by proclamation 15 May 1948.

Israel (in Hebrew, Medinat Yisrael) is a small state in both population—estimated at 6.7 million in September 2003—and size—encompassing some 8,019 square miles. It is located on the eastern coast of the Mediterranean Sea, bordered on the north by Lebanon and on the east by Syria and Jordan. In the south, from a short coastline on the Gulf of Aqaba, Israel's border runs northwestward to the Mediterranean along the Sinai Peninsula of Egypt. The West Bank and Gaza Strip territories have been under Israel's administration since the 1967 Arab–Israel

MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

Tel Aviv is Israel's second largest city, boasting a population of over 400,000. Founded in 1909, Tel Aviv merged with the much older city of Jaffa in 1950, becoming Tel Aviv–Jaffa. This dynamic city along the Mediterranean Sea is a popular cultural center and tourist destination. © ROYALTY-FREE/CORBIS. REPRODUCED BY PERMISSION.

War. In 1981 Israel extended its law and jurisdiction to the Golan Heights, taken from Syria in 1967.

Israel extends 260 miles south from the northern border with Lebanon and Syria to Elat on the Gulf of Aqaba, and east from the Mediterranean for 60 miles to the Rift Valley, through which the Jordan River flows. The southern half of Israel, mostly desert, is known as the Negev—an area of arid flatlands and mountains. North of the Negev is a highland region with a series of mountain ranges that run from the Sea of Galilee in the north to Judea and Samaria (the West Bank) in the south, divided by the Plain of Esdraelon (some 300 feet below sea level). A narrow but fertile coastal plain 3 to 9 miles wide along the Mediterranean shore is where most Israelis live and most of the industry and agriculture are located, including the citrus crop.

About 90 percent of Israel's people live in urban areas; the three largest cities are Jerusalem, Tel Aviv, and Haifa. Jerusalem is Israel's capital and largest city; it is the spiritual center of Judaism (the Jewish religion) and also a holy city for Christianity and Islam. West Jerusalem, the newer part of the city, is inhabited mainly by Jews. East Jerusalem—captured by Israel from Jordan in 1967—is inhabited mainly by Arabs.

Tel Aviv serves as the country's commercial, financial, and industrial center, and houses some government agencies. Haifa, on the Mediterranean, is a major port city, the administrative and industrial center of northern Israel. Beersheba is considered the capital of the Negev region. In the 1950s Israel's government began creating "development towns," to attract industry to lightly populated areas and to provide homes for new immigrants.

Israel has hot dry summers and cool mild winters, although the climate varies from region to region, partly because of elevation. In August, the

While agriculture is not one of the larger factors in Israel's economy, the country produces almost enough crops to satisfy its yearly domestic need, and also exports significant quantities of citrus fruits, eggs, and processed foods. A sizeable portion of Israel's crops are produced by kibbutzim and moshavim on land leased to them by the Israeli Land Authority. © Ted Spiegel/Corbis. Reproduced by permission.

hottest month, the temperatures may reach 98°F in the hilly regions and as high as 120°F near the Dead Sea. In January, the coldest month, temperatures average 48°F in Jerusalem and 57°F in Tel Aviv. Israel has almost continuous sunshine from May through mid-October. The *khamsin,* a hot dry dusty wind, sometimes blows in from deserts in the east. Almost all the rainfall occurs between November and March, and great regional variations exist. In the driest area, the southern Negev, the average yearly rainfall is only 1 inch. In the wettest area, the hilly parts of upper Galilee, average annual rainfall is 42 inches. Snow also falls sometimes in the hills.

Israel has six administrative districts—Central, Haifa, Jerusalem, Northern, Southern, and Tel Aviv. Elected councils are the units of local government, responsible for such services as education, water, and road maintenance.

Economy

At its independence in 1948 Israel was a poor country with only a little agricultural or industrial production. The economy has grown substantially, and today Israel enjoys a relatively high standard of living, despite limited water and mineral resources. Human resources (large numbers of educated immigrants) plus financial assistance from Western nations (especially the United States and Germany) contribute to Israel's economic well-being. The nation's main trading partners are the United States, Great Britain, Germany, and Italy.

Israel is poor in energy sources, having no coal deposits or hydroelectric power resources and only small amounts of crude oil and natural gas. In 2004 Israel had a technologically advanced market economy with substantial government participation. It imports crude oil, raw materials, and

Beginning in the 1970s, Israel's manufacturing sector began to move away from traditional products such as textiles, chemicals, and metal products into more high-technology fields such as electronics and computer products. Manufacturing employs the second largest percentage of the country's workforce. © Ricki Rosen/Corbis Saba. Reproduced by permission.

military equipment. It has intensively developed its agricultural and industrial sectors. Israel imports significant quantities of grain but is largely self-sufficient in other agricultural products. Cut diamonds, high-technology equipment, and agricultural products (fruit and vegetables) are the leading exports. The influx of Jewish immigrants from the former U.S.S.R. during the period 1989 to 1999, coupled with the opening of new markets at the end of the Cold War, energized Israel's economy, which grew rapidly in the early 1990s; growth slowed in 1996 when Israel imposed tighter fiscal and monetary policies and the immigration bonus declined. Growth was 7.2 percent in 2000, but the outbreak of the al-Aqsa Intifada, difficulties in the high-technology, construction, and tourist sectors, and fiscal austerity in the face of growing inflation, led to small declines in GDP in 2001 and 2002. These rebounded by the end of 2003.

Population

When Israel was established in 1948 it had about 800,000 people. In 2003 Israel's population numbered about 6.7 million; about 81 percent are Jews. Between 1948 and the 1990s more than 2 million Jews migrated to Israel, many to escape persecution in their home countries. In 1950 and 1952 respectively, the Knesset (parliament) passed the Law of Return and the Nationality Law, which together grant the right to every Jew to immigrate to the country and, with minor exceptions, to be granted automatic citizenship. Israel's Jewish population shares a common spiritual heritage but comes from diverse ethnic backgrounds—each group has its own cultural, political, and recent historical roots. The two main groups are the Ashkenazim—who came from the countries of Central and Eastern Europe—and the Mizrahim and Sephardim—who came from the countries of the Middle East and around the Mediterranean. At the time of independence, most

of Israel's Jews were Ashkenazim; as a result, the political, educational, and economic systems are primarily Western in orientation. The massive migration of Jews from the former U.S.S.R., which began in the glasnost era of Mikhail S. Gorbachev (late 1980s), brought more than 185,000 in 1990 and hundreds of thousands in subsequent years, and Soviet Jews became the largest ethnic group in Israel in the twenty-first century.

Arabs make up nearly all the remaining 19 percent of Israel's population. Most are Palestinians whose families remained after the independence of Israel and the 1948 Arab–Israel War. Arab and Jewish Israelis generally have limited contact, live in separate areas, attend separate schools, speak different languages, and follow different cultural traditions.

Israel has two official languages—Hebrew and Arabic. Many Israelis also speak English or Russian, and many Ashkenazic Jews speak Yiddish, a Germanic language spoken since the Middle Ages by Jews in Central and Eastern Europe. Because of their diverse diaspora origins, Israelis also speak a great many other languages, reflecting their diverse histories.

On 14 May 1948, when the British Mandate over Palestine expired, Israeli prime minister David Ben-Gurion signed the new Jewish state of Israel into being. This action had immediate consequences, as the new nation was promptly invaded by five Arab states, initiating Israel's War of Independence, which lasted until early 1949. © AP/WIDE WORLD PHOTOS. Religion

About 20 percent of Israeli Jews observe the religious principles of Judaism and are classified as Orthodox; an additional 50 percent observe some of the principles some of the time, and the rest (30%) tend to be secular. Orthodox Israelis hold that Jewish religious values should play an important role in the shaping of government policy, but secular Israeli Jews seek to limit the role of religion in the state.

Of Israel's non-Jewish population, about 73 percent are Muslims, the largest group of which are Sunni. Another 11 percent of the non-Jews are Christians, mostly Roman Catholic and Eastern Orthodox. Of the remaining 16 percent, the majority are Druze, but there are also some Baha'i and other small religious communities. All faiths are guaranteed religious freedom by law.

Education

Education has a high priority in Israel. One of the first laws passed there established free education and required school attendance for all children between the ages of five and fourteen. Attendance is now required to age sixteen. Adult literacy is estimated to be in excess of 97 percent. The Jewish school system instructs in Hebrew, and the Arab/Druze school system in Arabic; both are government-funded systems.

Israel has a number of internationally recognized institutions of higher education—the Technion, Haifa University, Hebrew University of Jerusalem, Tel Aviv University, Ben-Gurion University, Bar-Ilan University, and the Weizmann Institute of Science.

The Arts

With a population drawn from more than one hundred countries, Israel is rich in cultural diversity and artistic creativity. In music, dance, theater, films, literature, painting, and sculpture, many artists work within the traditions of their own ethnic groups. Others have blended various cultural forms

Israel's population, in thousands, by religion

	Druze	Christians[1]	Muslims	Jews	Total
1950	15,000	36,000	116,100	1,203,000	1,370,100
1960	23,300	49,600	166,300	1,911,300	2,150,400
1970	35,900	75,500	328,600	2,582,000	3,022,100
1980	50,700	89,900	498,300	3,282,700	3,921,700
1990	82,600	114,700	677,700	3,946,700	4,821,700
2000	102,500	133,400	952,000	4,914,100	6,102,000[2]

[1]Until 1994, included those not classified by religion by Ministry of Interior.

to create a uniquely Israeli tradition. The arts not only reflect Israel's immigrant diversity, they also draw upon Jewish history and religion and address the social and political problems of modern Israel. The arts are actively encouraged and supported by the government.

Publishing is a major industry—the number of books published per person in Israel is among the highest in the world. Most Israeli authors write in Hebrew, and some have achieved international fame; the novelist and short-story writer Shmuel Yosef Agnon shared the 1966 Nobel Prize for literature. Other renowned authors include Hayyim Nahman Bialik, Saul Tchernichovsky, Amos Oz, and Avraham B. Yehoshua. Israel's newspapers are published daily in Hebrew, with others available in Arabic, Russian, English, French, Polish, Yiddish, Hungarian, and German.

The Israel Philharmonic Orchestra performs throughout the country and on frequent international tours, as does the Jerusalem Symphony, the orchestra of the Israel Broadcasting Authority. Israeli and international artists tour as well, and almost every municipality and small agricultural settlement has a chamber orchestra or jazz ensemble. Folk music and folk dancing, drawing from the cultural heritage of the many immigrant groups, are very popular, as is the theater. Among the museums are the Israel Museum in Jerusalem, which houses the Dead Sea Scrolls and an extensive collection of Jewish religious and folk art; and the Museum of the Diaspora, which is located on the campus of Tel Aviv University. Archaeology is an important pursuit, and archaeological remains are on display throughout the country.

Government

Israel has no written constitution; instead, it follows "basic laws" passed by the Knesset (parliament) that deal with subjects such as the president, the Knesset, the judiciary, and other matters generally found in a written constitution. Legislative powers are vested in this unicameral body of 120 members, elected for a term not to exceed four years, in a national, general, equal, secret, direct, and proportional election. The Knesset passes legislation, participates in the formation of national policy, and approves budgets and taxes. All Israeli citizens eighteen years or older may vote. Voters do not cast ballots for individual candidates in Knesset elections, but instead vote for a party list, which includes all the candidates of the political party. The list may range from a single candidate to a full slate of 120 names. A party's seats in parliament are approximately proportional to the share of the votes it receives in the national election.

The prime minister—the head of government—is normally the leader of the party that controls the most seats in the Knesset and must maintain the support of a majority of the Knesset to stay in office. He or she selects, forms, and heads the cabinet, which is Israel's senior policymaking body, composed of the heads of each government ministry as well as other ministers; appointments to the cabinet must be approved by the Knesset. The president—the head of state—is elected by the Knesset to a seven-

year term. The powers and functions are primarily formal and ceremonial; actual political power is limited. The president's most important task is selecting a member of the Knesset to form a government, although political composition of the Knesset has, so far, essentially determined this selection.

Since 1948, Israel's governments have been coalitions of several political parties—the result of several factors: the intensity with which political views are held; the proportional representation of the voting system; and the multiplicity of parties. These factors have made it all but impossible for a party to win an absolute majority of seats. Despite the constant need for coalition governments, they have proven remarkably stable. Political life in Israel was dominated during the period of the British Mandate by a small and relatively cohesive elite that held positions in government and other major institutions. The strength of the Israel Labor Party until 1977 helped to stabilize the political situation. Between 1977 and 1983 Prime Minister Menachem Begin's political skills had the same effect. Rigorous party discipline exists in the Knesset.

The judiciary comprises both secular and religious court systems.

Political History

The independence of the State of Israel in 1948 was preceded by more than a half century of efforts by Zionist leaders to establish a sovereign state as a homeland for dispersed Jews. The desire of Jews to return to their biblical home was voiced continuously and repeatedly after the Romans destroyed Jerusalem in 70 C.E. and dispersed the population of Roman Palestine. Attachment to the land of Israel (Eretz Yisrael) became a recurring theme in Jewish scripture and literature. Despite the ancient connection, it was not until the founding of the World Zionist Organization by Theodor Herzl near the end of the nineteenth century that practical steps were taken toward securing international sanction for large-scale Jewish resettlement in Palestine. Small numbers of Jews had remained in the area or had returned to it throughout the centuries, mostly (but not only) Orthodox scribes and scholars residing mainly in the four holy cities of Jerusalem, Hebron, Safed, and Tiberias. Modern Zionism was given added weight by the Balfour Declaration in 1917, which declared the British government's support for the creation of a national home for the Jewish people in Palestine, and Britain was granted a League of Nations mandate for Palestine after World War I that lasted until after World War II.

In November 1947 international support for establishing a Jewish state led to the adoption of the United Nations (UN) partition plan, which called for dividing mandated Palestine into a Jewish and an Arab state and for establishing Jerusalem as an international city under UN administration. Violence between Palestinian Arabs and Jews erupted almost immediately. On 15 May 1948 the State of Israel proclaimed its independence. Armies from neighboring Arab states entered the former Mandate lands to fight Israel in the Arab–Israel War of 1948. In 1949 four armistice agreements were negotiated and signed between Israel and Egypt, Jordan, Lebanon, and Syria. No peace treaties were signed, however, and the new Israeli state maintained a shaky UN-supervised armistice with its Arab neighbors.

After Egypt nationalized the Suez Canal and formed a unified military command with Syria, Israel invaded the Gaza Strip and the Sinai Peninsula in October 1956, in concert with French and British operations against Egyptian forces concentrated near the canal. At the conclusion of the 1956 Arab–Israel War Israel's forces withdrew (March 1957) after the United Nations established an Emergency Force (UNEF) and stationed it along the Egyptian side of the 1949 armistice line and on the Strait of Tiran to ensure passage of Israel-bound ships. In 1966 and 1967 terrorist incidents and retaliatory acts across the armistice demarcation lines increased. In May 1967, after tension had developed between Syria and Israel, Egypt's President Gamal Abdel Nasser moved armaments and troops into the Sinai and ordered withdrawal of UNEF troops from the armistice line and from Sharm al-Shaykh at the Strait of Tiran. Nasser then closed the strait to Israel's ships, blockading the Israeli port of Elat at the northern end of the Gulf of Aqaba. On 30 May Jordan and Egypt signed a mutual-defense treaty.

In response to these and related events, Israel's forces attacked Egypt on 5 June 1967. Subsequently, Jordan and Syria joined in the hostilities of the 1967 Arab–Israel War. After six days of fighting, Israel

controlled the Sinai Peninsula, the Gaza Strip, the Golan Heights, the West Bank, and East Jerusalem. At Khartoum on 1 September an Arab summit meeting resolved to have "no peace with Israel, no recognition of Israel, [and] no negotiations with it." On 22 November 1967 the UN Security Council adopted Resolution 242, which called for the establishment of a just and lasting peace; Israel's withdrawal from territories occupied in June 1967; the end of all states of belligerency; respect for the sovereignty of all states in the area; and the right to live in peace within secure recognized boundaries. Swedish ambassador Gunnar Jarring was given the task of implementing the resolution. In the spring of 1969 Nasser initiated the War of Attrition between Egypt and Israel along the Suez Canal. The United States helped to end these hostilities and achieved a cease-fire in August 1970, but subsequent efforts to negotiate an interim agreement to open the Suez Canal, achieve disengagement of forces, and move toward peace were unsuccessful.

On 6 October 1973, Yom Kippur (the holiest day of the Jewish year), Syrian and Egyptian forces attacked Israeli positions along the Suez Canal and in the Golan. Initially, Syria and Egypt made significant advances, but Israel recovered on both fronts, pushing the Syrians back beyond the 1967 cease-fire lines and crossing the Suez Canal to take a position on its west bank. This war was followed by renewed and intensive efforts toward peace. The United States and the Soviet Union helped to achieve a cease-fire based on Security Council Resolution 338, which reaffirmed UN Security Council Resolution 242 as the framework for peace and for the first time called for negotiations between the parties to establish "a just and durable peace in the Middle East."

The United States actively helped Israel and Egypt to reach agreement on cease-fire stabilization and military disengagement. On 5 March 1974 Israel's forces withdrew from the Suez Canal, and Egypt assumed control. Syria and Israel signed a disengagement agreement on 31 May 1974, and the United Nations Disengagement and Observer Force (UNDOF) was established as a peacekeeping force in the Golan. Further U.S. efforts resulted in an interim agreement between Egypt and Israel in September 1975, which provided for another withdrawal by Israel from the Sinai, a limitation of Egypt's forces therein, and stations staffed by U.S. civilians in a UN-maintained buffer zone between Egypt's and Israel's forces.

In November 1977 Egypt's President Anwar al-Sadat launched an initiative for peace. Sadat recognized Israel's right to exist and established the basis for direct negotiations between Egypt and Israel. This led to meetings at the presidential retreat of Camp David, Maryland, when U.S. president Jimmy Carter helped to negotiate a framework for peace between Israel and Egypt and for a comprehensive peace in the Middle East (known as the Camp David Accords)—with broad principles to guide negotiations between Israel and the Arab states. An Egypt–Israel peace treaty was signed in Washington, D.C., on 26 March 1979 by Prime Minister Menachem Begin and President Sadat, with President Carter signing as witness. This was the first peace treaty between Israel and an Arab state, and it effectively ended the conflict between them. They agreed that negotiations on a transitional regime of autonomy for the West Bank and Gaza would begin one month after ratification. Under the peace treaty, Israel returned the Sinai to Egypt in April 1982. In 1989 the governments of Israel and Egypt concluded an agreement that resolved the status of Taba, a disputed resort area in the Gulf of Aqaba.

Since the 1948 war Israel's border with Lebanon had been quiet compared to its borders with other neighbors. After the Jordanian Civil War (1970–1971), many Palestinians were expelled from Jordan and most eventually went to southern Lebanon, so hostilities against Israel's northern border increased. In March 1978, after a series of terrorist attacks on Israel originating in Lebanon, the Israel Defense Force (IDF) were sent into Lebanon. Israel withdrew its troops after the passage of UN Security Council Resolution 425, which called for the creation of the UN Interim Force in Lebanon (UNIFIL), a peacekeeping force.

In July 1981, after additional fighting between Israel and the Palestinians in Lebanon, U.S. president Ronald Reagan's special envoy, Philip Charles Habib, helped to secure a cease-fire. In June 1982, in response to attacks on Israeli and Jewish targets and the attempted assassination of Israel's ambassador in London, Israel invaded Lebanon with the objective of removing the Palestine Liberation Or-

ganization (PLO)'s military and terrorist threat to Israel. In August 1982, after the siege of Beirut and an evacuation plan mediated by several states, the PLO withdrew its headquarters and some forces from Lebanon, relocating in Tunisia. With U.S. assistance in May 1983, Israel and Lebanon reached an accord to withdraw Israeli forces from Lebanon; however, in March 1984, Lebanon, under pressure from Syria, abrogated the agreement. In June 1985 Israel withdrew most of its troops from Lebanon. A small residual Israeli force and an Israeli-supported Lebanese militia remained in southern Lebanon in a "security zone," regarded by Israel as a necessary buffer against attacks on its northern territory.

Until the election of May 1977, Israel had been governed by a coalition led by the Labor alignment or its constituent parties. After the 1977 election, the Likud (Union) bloc came to power, forming a coalition with Menachem Begin as prime minister. Likud retained power in the election in June 1981, and Begin remained prime minister. In 1983 Begin resigned and was succeeded by his foreign minister, Yitzhak Shamir. New elections were held in 1984. The vote was split among numerous parties, and neither Labor nor Likud was able to attract enough small-party support to form a coalition. They agreed to establish a broadly based government of national unity. The agreement provided for the rotation of the office of prime minister and the combined office of deputy prime minister and foreign minister midway through the government's fifty-month term. During the first twenty-five months of the unity government's rule, Labor's Shimon Peres served as prime minister, while Likud's Shamir held the posts of deputy prime minister and foreign minister. Peres and Shamir exchanged positions in October 1986.

The November 1988 elections resulted in a similar coalition government. Likud and Labor formed another national unity government in January 1989, without providing for rotation. Again Shamir became prime minister and Peres deputy prime minister and finance minister. That government fell in March 1990 after a no-confidence vote precipitated by disagreement over the government's response to a U.S. peace initiative. Labor Party leader Peres was unable to attract sufficient support to form a government, and Shamir then formed a Likud-led coalition government, which included members from religious and right-wing parties; it took office in June 1990. After Iraq's invasion of Kuwait in the summer of 1990 and the Gulf War of 1991, a new peace initiative by the United States led to a major Arab–Israel peace conference, the Madrid Conference (1991).

Soon after Madrid, right-wing parties resigned from Shamir's government over the issue of Palestinian self-rule. Yitzhak Rabin's victory as the new head of the Labor Party in the 1992 Knesset elections brought a clear shift from right to left-of-center, and toward a more pragmatic approach on Arab–Israeli issues. The new government began to alter the nature and direction of Israeli policy, seeking to restore the concepts of Labor Zionism to the center of Israeli politics.

The Madrid Peace Conference was followed by a series of multilateral discussions focusing on functional issues such as refugees, arms control and regional security, water, economic development, and the environment, as well as bilateral negotiations that convened in Washington, D.C. In spring and summer 1993, even as official negotiations continued with little progress in Washington, Israeli and PLO representatives conducted secret negotiations in Norway that led to an exchange of letters and the signing in September 1993 of an historic Declaration of Principles (DOP).

The exchange of letters and DOP, also known as the Oslo Accord, contained the PLO's recognition of Israel's right to exist in peace and security and Israel's recognition of the PLO as the representative of the Palestinian people. The PLO renounced the use of terrorism and other forms of violence, and committed itself to resolve the conflict with Israel through peaceful negotiations. The accord provided for Palestinian autonomy, starting in Jericho (a city of the West Bank) and the Gaza Strip, and for continued negotiations between the two sides to establish the basis for the future relationship between Israel and the Palestinians.

The lengthy and at times acrimonious negotiations known as "the Middle East peace process" saw Israel and the PLO attempting to negotiate interim agreements for a phased Israeli withdrawal from Palestinian population centers and the creation of a Palestine (National) Authority in the West Bank and Gaza Strip. Delays, outbreaks of Palestinian and

Israeli violent opposition, and recriminations about the process soon began to wear down the initial euphoria of the 1993 signing ceremony. The most serious incidents of violence included the massacre of Muslim worshipers in Hebron in February 1994 by Baruch Goldstein; the assassination of Yitzhak Rabin in Tel Aviv in November 1995; and suicide bombings of Israeli buses and terrorist attacks on shopping areas in spring 1996 by members of the Islamic resistance movement HAMAS.

The signing of the DOP allowed Israel and Jordan to publicly continue their decades-long secret negotiations, which culminated in the signing of a peace treaty between the two countries on 26 October 1994. This treaty led to a relatively "warm peace" (compared to its Israeli–Egyptian predecessor) that included a wide range of relationships in numerous sectors.

The assassination of Prime Minister Rabin by Yigal Amir was unexpected and unprecedented, and reflected sharp differences within the Israeli polity on the peace process. Shimon Peres was chosen to lead the government, and he attempted to pursue the Israeli–Syria peace track, but was stymied by the lack of Syrian response and by suicide bombings and Katyusha rocket attacks into northern Israel from southern Lebanon. Peres responded with Operation Grapes of Wrath, directed against Hizbullah bases in Lebanon.

In May 1996 Israelis participated in their first-ever election under a new electoral law requiring them to cast two ballots—one for the Knesset and the other for prime minister. The elections saw the victory of Likud's Benjamin ("Bibi") Netanyahu over Labor's Peres by a margin of less than 1 percent of the votes cast. Netanyahu's victory was attributed to support from the political right and the religious parties, to the failure of the sympathy vote for Rabin to materialize, to Peres's diminished stature among Jewish voters because of his ineffective reactions to terrorism, and to the Arab community's failure to provide Peres with strong support partly because of extensive IDF military operations against the PLO in Lebanon. The election permitted Netanyahu to create a right-of-center coalition government. Netanyahu's tenure was marked by slow progress on the peace process, highlighted by the U.S.-brokered signing of a Hebron redeployment agreement in January 1997 and the Wye Plantation Accord of 1998.

In the May 1999 elections Israelis were again offered two ballots. This time Labor's new leader, Ehud Barak, running as head of the "One Israel" ticket, defeated Netanyahu by a wide margin (56% to 44%) and then formed a broadly based coalition government. Barak was widely seen in Israel and abroad as a true successor to Rabin—an individual with strong security credentials who sought a compromise agreement with the Palestinians. Hope was generated for a reinvigorated peace process, especially because of the substantial involvement of U.S. president Bill Clinton. Barak also moved ahead on other issues. In keeping with a campaign pledge he ordered a unilateral Israeli withdrawal from Lebanon in March 2000. The withdrawal was carried out swiftly, ending Israel's eighteen-year presence in Lebanon and resulting in the United Nations declaring Israel to be in full compliance with UNSC Resolution 425. The withdrawal also seemed to offer a prospect for further negotiations with Syria on outstanding bilateral issues and on the Israel-Lebanon relationship.

The Syrian track became a focal point for Barak's policy, and in January 2000 Clinton, Barak, and Syrian foreign minister Faruk al-Shara joined in an inconclusive meeting in Shepherdstown, West Virginia. Clinton followed up with a summit meeting with Syrian president Hafiz al-Asad in Geneva in March, but the two leaders failed to close the gap between the Israeli and Syrian positions, primarily over the line to which Israel would withdraw from the Golan Heights. Asad's death in June 2000 put an end to Syrian-track negotiations during Barak's tenure.

In summer 2000 President Clinton sought to achieve an Israeli–Palestinian breakthrough with an invitation to Ehud Barak and Yasir Arafat to attend a summit meeting. But the Camp David Summit failed to achieve an agreement, with all parties blaming the others for the failure—especially Barak and Clinton pointing to Arafat's refusal to consider Barak's offer as the basis for future negotiations. This effectively marked the end of the Middle East peace process. In late September 2000 the al-Aqsa Intifada erupted, sending Israelis and Palestinians into a deadly cycle of bloodshed and violence.

Domestic Issues and Electoral Politics since 2000

The decade of the 1990s was marked by a significant immigration of some one million people from the former Soviet Union—the largest single migration to Israel from any one country. This profoundly altered the nature of Israel's society, economics, and politics. At the same time, the economy continued to grow and prosperity became more widespread as Israel's GDP grew beyond the $100 billion level, although there was negative growth when the violence of the al-Aqsa Intifada severely affected the flow of tourism. The economy was also affected by the worldwide economic downturn and by recessions in the United States, Europe, and Japan. Nevertheless, by 2004 the economy began to recoup some of the losses of the previous few years, and positive GDP growth was again recorded.

In January 2003 Israel's first astronaut, Ilan Ramon, was launched into space aboard the U.S. space shuttle *Columbia,* generating pride and elation across Israel and among Jews worldwide. Tragically, Ramon was killed along with his fellow astronauts when the craft disintegrated upon its return to earth in early February after a successful mission in space.

The outbreak of the al-Aqsa Intifada and the protracted failure to achieve a cease-fire and restart the peace process contributed to the disintegration of Ehud Barak's governing coalition. His resignation in December 2000 without the dissolution of the Knesset led to the first-ever election in Israel for prime minister only. That election was marked by the lowest turnout of eligible voters in Israel's history—about 62 percent—and signaled some uncertainty in the body politic. Ariel Sharon's landslide victory (62.6% to Barak's 37.2%) in February 2001 was attributed to Barak's failure to make peace with either Syria or the Palestinians, and to the heightened insecurity and substantial violence caused by the intifada. Sharon was elected as the candidate more likely to bring about the security Israelis were seeking. His election brought Likud back to power, and he formed a government coalition in March 2001 with Labor participation based on the Knesset that was elected in 1999.

Security and the resurrection of the peace process were the dominant themes of Sharon's tenure. Suicide bombings and other violence (such as the assassination of Tourism Minister Rehavam Zeʾevi) continued to remind Israelis of their vulnerability and of the failure of the peace process. The inability or unwillingness of the Palestinian Authority to put an effective halt to terrorist acts led the Israeli government in December 2001 to declare Yasir Arafat "irrelevant" in the struggle against terrorism and to seek alternative leadership among the Palestinians to foster the moribund peace process. Subsequently, Israel began to isolate Arafat and labeled him "an enemy of the entire free world."

Arms continued to flow to the Palestinians (as evidenced by the January 2002 Israeli interception and capture of the ship *Karine-A,* which was carrying arms from Iranian sources to Gaza) and violence escalated. In response to the March 2002 massacre of mostly elderly Passover celebrants at the Park Hotel in the resort town of Netanya, the IDF launched major raids into the West Bank against terrorist targets in Operations Defensive Shield and Determined Path, in effect reoccupying for several months Jenin, Hebron, Bethlehem, and other population centers it had previously ceded to the Palestinian Authority.

The increasing use of Palestinian suicide bombers claimed hundreds of Israeli civilian lives and led to severe retaliations by the IDF in the form of increased surveillance at checkpoints, destruction of the homes of suicide bombers' families, closures, targeted assassinations of militants, and the building of a security fence. Although it was widely supported by an Israeli population traumatized by suicide bombers infiltrating Jewish population centers and soft targets from the West Bank, the planned 450-mile security barrier (more than 95 percent of which was to be chain-link fence, with the remainder concrete walls) was criticized for being built beyond the Green Line (1949 armistice lines) and for causing hardship by disrupting the daily movements of the Palestinian population. The decision to proceed with this measure despite international criticism and sharp Palestinian denunciation reflected a growing unilateralist tendency among Israel's leaders to consider disengagement and separation from the Palestinians.

The failure of the peace process and the climate of despair and insecurity created a new watershed for Israeli foreign and security policy, and for do-

mestic politics within Israel. It is against this background that the United States and its fellow "Quartet" members (Russia, the UN, and the European Union) pursued their efforts to have the parties agree to halt the violence as a prelude to resuming negotiations. In April 2003 the U.S. State Department made public the Quartet's "Road Map," which incorporated President George W. Bush's June 2002 vision of a two-state solution for the Israel-Palestinian impasse. Diplomatic activity on this front included shuttle diplomacy and high-level meetings, and the selection of two successive Palestinian prime ministers to negotiate with Israel.

In October 2002 Labor quit Sharon's national unity coalition government. Elections were held for the Sixteenth Knesset in January 2003, based on a revised electoral law that abandoned the separate ballot for prime minister used since 1996. The focus of the campaign was peace and security, and Labor's new leader, Amram Mitzna, led his party to its worst electoral defeat, in which its respresentation declined to only nineteen seats in the Knesset, compared to thirty-eight seats for Sharon's Likud. In February 2003 Sharon presented his new coalition government to the Knesset for its approval. The coalition was a narrower one in which Likud was clearly the dominant party, with a reinvigorated militantly secular Shinui Party as the major partner. Sharon's new government seemed poised for domestic changes on religion-society issues and for a continuing tough stand on the matter of security and peace for Israel. In 2004 the peace process was moribund, and a continuing intifada with its climate of insecurity was the main determinant of Israeli foreign and security policy, with strong implications also for domestic politics within Israel.

Military and Politics

The heavy involvement of the Israeli military in Israel's society, economy, and politics and the occasional politicization of the armed forces.

Over the last decade of the twentieth and the beginning of the twenty-first centuries, issues of military-civilian relations and the role the army (Israel Defense Force, IDF) plays in Israeli society have been intensively studied and analyzed by historians, social scientists, journalists, and others in a plethora of published books and articles. The subject is, however, not new to public awareness, having been on the national agenda since Israel's founding and even earlier. The problem is usually addressed on one or more of three levels: the impact of the military on civilian life; the extent of civil control of the military; and the extent of politicization of the military and its involvement in political decision making.

During his tenure as the Israeli prime minister, David Ben-Gurion meshed several existing defense organizations into the single national military known as the Israel Defense Force (IDF), then strove to keep it free from political entanglements. Referring to the IDF as a "nation builder," Ben-Gurion also greatly expanded the role of the military in society, frequently using it to accomplish civilian tasks. © PHOTOGRAPH BY HANS PINN. Impact of the Military on Civilian Life

Israeli society has been marked by the central and pervasive role of the military in Israeli politics, daily life, and culture. Three out of eight politicians who served as prime ministers since 1983 were ex-generals (Yitzhak Rabin, Ehud Barak, and Ariel Sharon), one was elected president (Ezer Weizman), and Shimon Peres, although not formally a military person, grew out of the ranks of the Ministry of Defense. During the same period at least a dozen other ex-generals served in the cabinet as ministers. Most of those who served as IDF chiefs of staff ended their careers in politics (Haim Bar-Lev, Mordechai Gur, Rafael Eitan, and Amnon Lipkin-Shahak, for example). In the economic sphere, many ex-generals became corporate heads; others became mayors of large towns. Some generals were nominated as chancellors of universities and others have become headmasters of prestigious high schools.

Almost universal military conscription brings entire cohorts of young men and women to serve in the military for long periods. The large participation of civilians in military reserve duty *(miluʾim)* introduces the military experience into almost all Jewish, and many Druze, households. Military affairs are central in every news broadcast from early morning to late at night, and military jargon permeates modern Hebrew vernacular. Many domestic issues are viewed by Israelis as being essentially security issues. Security considerations prevail in the planning and execution of many civilian projects, such as road construction, land tenure, and housing designs. A pledge to give security considerations first priority is a central part of the political platform of all parties when candidates run for parliament (the Knesset) and when leaders negotiate to form government coalitions. Security considerations are routinely used to stifle criticism raised against harsh measures taken by the authorities.

Obviously, the salience of the military in Israel's political culture is a result of the prolonged conflict between Israel and the Arabs and the recurrent flare-ups of violence engendered since the early 1920s (some count at least a dozen major violent outbreaks). However, critics of Israeli society have in recent years also observed self-propelling dynamics that cannot always be explained away as inevitable outcomes of the contingencies of conflict with the Arabs. Some moderate critics tend to characterize Israel as a "garrison state" or a "nation in uniform." More strident observers speak of the total "militarization" of Israeli society and politics. Most would admit, however, that, despite the dangers brought by such tendencies to the country's sometimes flawed political system, Israel has managed to maintain its essentially democratic, pluralistic, and liberal political system.

Young Palestinians hurl stones at approaching Israeli troops in the Gaza Strip. In 2002 Israeli tanks moved into the village of Beit Lahiya, and soldiers conducted house-to-house searches, arresting three men they claimed were wanted militants.

Civil Control of the Military

Concerns of defense and security preoccupied the Zionist settlers in Palestine from the outset. But only in the early 1920s, when Palestinian resistance to the Zionist project took on more violent and institutionalized forms, was the small, self-appointed secret group ha-Shomer (The Watchman, founded in 1907) replaced by a larger and more popular organization called the Haganah (Defense). From its inception it was clear that the military arm of the movement had to be supervised and directed by the political leadership. After a short period in which it was controlled by the Histadrut (the General Federation of Jewish Labor), it came under the supervision of a broadly based political committee, drawing its power from the elected executives of the Jewish Agency (representing the World Zionist Organization) and the Vaʿad Leʾumi (representing the Yishuv, i.e., the Jews of Palestine). The establishment in 1937 of the Irgun Zvaʾi Leʾumi (ETZEL, or IZL) and three years later the further secession of Abraham (Yaʿir) Stern to form Lohamei Herut Yisrael (LEHI, or the Stern Gang) challenged the authority of the democratically elected political leadership of the Yishuv and gave rise to ten years of strife. One result of this dissidence was to eventually fortify the principle— to which the majority of the Jews and the much larger Haganah would adhere—that military organizations and movements must yield to their civilian leaders.

The outbreak of the Palestinian Revolt of 1936 to 1939 dispelled earlier Zionist hopes that they might eventually convince the Palestinians of the blessing that Jewish colonization of Palestine would bring them. From this point on, few Jews in Palestine doubted the need for a strong military organi-

zation. The Haganah was expanded, weapons were purchased, military training became universal, and units of permanent obligatory service were introduced. Most historians view this period as the turning point at which Zionists recognized the need to resort to force.

David Ben-Gurion was a strong proponent of the principle of civilian supremacy over the military. In the mid-1940s he emerged as the undisputed leader of the Zionist movement and became the first prime minister and minister of defense of the State of Israel in May 1948. With the transformation of Menachem Begin's Irgun into a civilian political party in the summer of 1948, the IDF's showdown with (and attack on) the Irgun ship *Altalena,* and the final crushing of the Stern Gang and the Irgun military squads in Jerusalem following the murder of Count Folke Bernadotte in September, civilian control over the military establishment was assured and was never seriously challenged from the right.

Ben-Gurion was also concerned that most of the command positions in the strongest and most prestigious elite corps of the IDF, the Palmah, were under the ideological influence of MAPAM, a left-wing party that questioned his own authority. Ben-Gurion saw in this situation a dangerous politicization of the military and ordered the disbanding of the Palmah. As soon as the war was over, he dismissed many high-ranking officers affiliated with MAPAM. During the fifteen years of his premiership, he nominated two chiefs of staff who were active members of his own party (Moshe Dayan and Zvi Tzur). But he also nominated to this position three generals who were strictly professional soldiers and did not belong to any party (Yigael Yadin, Mordehai Makleff, and Haim Laskov) and promoted to the rank of general many ex-Palmah battalion commanders. He also assured, before his own resignation, that Yitzhak Rabin, ex-chief of operations of the Palmah, would be nominated as IDF chief of staff in 1964.

Along with his resolve to depoliticize the officer corps, Ben-Gurion never saw a problem in expanding the role of the military in society and using its efficient and disciplined mechanisms to accomplish strictly civilian tasks. Military engineers were often utilized for road and bridge construction. Army instructors were involved in the establishment of agricultural settlements (NAHAL, an acronym for Noʿar Halutzi Lohem, Fighting Pioneer Youth) for new immigrants. When heavy rains or floods threatened to destroy the tent towns used as temporary housing for new immigrants, the military was called in to manage entire civilian communities.

Moreover, Ben-Gurion saw the IDF as the great "nation builder." The compulsory universal service, which included tens of thousands of young immigrants who were inducted soon after their arrival in the country, was designed not only as a security measure but also as an educational endeavor in which Hebrew and elementary schooling were taught and patriotic ideals inculcated. This rationale was also used to justify the establishment of a special military radio station (Galei-Tzahal), a weekly magazine for soldiers (*ba-Mahaneh,* In the camp) and a monthly journal for officers (*Skira Hodshit,* Monthly review). Many of these functions were later discontinued when the IDF became overburdened with military assignments and defense budgets became strained. Nevertheless, the recruitment and army training of young immigrants from the former Soviet Union in the 1990s may well account for the rapid socialization of those young men and women into Israeli society.

Politicization of the Military

In the mid 1950s, during the brief tenure of Moshe Sharett as prime minister (1954–1955), the boundaries between the civilian authority and the military leadership were sharply perforated, especially around the controversial role played by the politically minded chief of staff, Moshe Dayan; the chief of military intelligence, Binyamin Givli; and even the minister of defense, Pinhas Lavon (who replaced Ben-Gurion during 1954). What Sharett wrote in the intimacy of his private diary—that many of the military offensives were either taken without proper cabinet authorization or were expanded beyond the scope authorized—was hardly a secret to the public. Several events gave rise to the widespread impression that the army was acting beyond political control, including the foolhardy activation of a Jewish espionage ring in Egypt in June 1954, the order for which has remained a controversial mystery; the cruel massacre of sixty-five Palestinian civilians in

the village of Qibya in October 1953; the unwarranted scope of the attack on Syrian positions on the Sea of Galilee in December 1955; and the murder of five Bedouins in the Judean Desert by a group of paratroopers. The return of Ben-Gurion (toward whom the personal loyalty of Dayan was impeccable) to head the ministry of defense at the end of February 1955 stabilized the situation. After that, the legacy of a strict separation of the military command from active politics remained more or less intact for many years. According to the military norm, soldiers, including career officers, were permitted to sign up as members of a political party, vote in elections, and even attend party meetings as observers; but they were not permitted to be active in party life in any mode or form.

In recent years, however, the likelihood that high-ranking officers may become active politicians after retirement (after a half-year "cooling-off" period) has given rise to recurrent suspicions that those officers may be trying to pave their way into politics well ahead of their retirement, compromising their professionalism by acting and expressing themselves in ways aimed at helping them in their future political careers. During the first two decades of statehood the majority of senior officers tended to sympathize with center and left-of-center parties close to the Labor-Zionist movement. In recent years, however, a right-wing swing may have penetrated IDF's high command. Many retired generals have found their place in the ranks of the Likud and even parties to its right (such as Generals Rehavam Zeʾevi and Rafael Eitan).

The nomination of ex-military men to leading political positions has blurred the boundaries between the military and the civil authorities from another perspective as well. Yigal Allon and Moshe Dayan were the first military figures to occupy important ministerial posts, but both were already political figures during their military service and both managed, as ministers, to faithfully uphold civil authority vis-à-vis the military. But later, when officers who spent a large part of their lives as professional soldiers entered the government, a shift in civil-military boundaries could be clearly observed. The 1982 war in Lebanon is a case in point. Ariel Sharon, as minister of defense, prosecuted the war effort primarily out of military considerations, clearly exceeding the goals set for him by Prime Minister Begin and his cabinet. Likewise, responses to the second Palestinian Intifada (September 2000–), which were handled by three generals (Sharon as prime minister, Shaʾul Mofaz as minister of defense, and Moshe Yaʿalon as chief of staff), reflected more a military perspective than a civil-political one.

The intensification of Palestinian resistance since the fall of 2000 and the ensuing attempts to defuse tensions and put the peace process back on track have demanded of the IDF higher levels of confrontation with civilians, both Arabs and Jews. The wide diffusion of warfare and the localization of operational management have given to the military command—even to commanders of lower levels—greater autonomy and ability to influence major political outcomes. On the other hand, scenes of Israeli soldiers battling against Jewish settlers, while not unprecedented, have introduced a new dimension in civil-military relations. The resurgence of a refusal to serve in the Occupied Territories, on the one hand, and the repeated guidance that religious leaders of the settlers' movement give their followers to refuse orders to evacuate settlements, on the other, are still marginal phenomena, but they do point to new cracks in Ben-Gurion's legacy of total depoliticization of the military.

OVERVIEW OF POLITICAL PARTIES IN

Political parties played an important role in Israel's achieving statehood; many parties operated as organized structures for decades prior to independence.

Among the factors accounting for the central role of political parties in Israeli politics are: (1) the electoral system, (2) the breadth of party influence in all levels of government during much of the early statehood period, (3) the complexity of major political issues, (4) the intensity of Israeli democracy, and (5) social, economic, and political modernization. The combination of these factors has often resulted in considerable political immobility—a governmental inability to take decisive action in specific policy areas for fear of generating a no-confidence vote and losing its political legitimacy.

Electoral System

Israel's electoral system has led to both centralization of control within many parties and frequently to extreme fragmentation of the party system. Structurally, the country is a single constituency, with proportional representation. Voters cast their ballots for a single party list, and parties receive a number of seats in the Knesset in proportion to the votes they receive. A party that receives 10 percent of the vote will receive 12 seats in the Knesset (10 percent of 120 seats); individual winners are determined by their position on the formal electoral lists that parties file with the Central Elections Commission prior to the vote; if a party wins 10 seats, the top ten names on its list are elected, but the eleventh is not. Names lower on the list may move up if vacancies occur in the party's Knesset delegation between elections. The position of candidates on each party's list is determined by the party organization; some parties use primary elections, some use conventions, and some lists are simply determined by party leadership.

Electoral behavior has been affected in recent years by several phenomena. One is the arrival of modern campaign techniques, including television, which have made it possible for charismatic entrants to affect a party's electoral fortunes. Another is the emergence of hitherto underrepresented groups like the Sephardim who have used arenas such as local mayoralty campaigns to challenge a party's central leadership. The two major parties, the Labor Party and the Likud, have responded by broadening their process of selecting party leaders and Knesset candidates through a series of primary elections involving all of their members. Some parties represent very specific constituencies, for example Russian immigrants. Others focus on a single ideological position.

Electoral reform has been an issue in Israel for decades, and after every election proponents of reform have used that election as further proof that reform was necessary. After many years of active debate, in 1992 the Knesset approved a major change in the Israeli electoral system, allowing the prime minister to be elected directly rather than being chosen from among members of the Knesset. Voters would have two ballots, a vote for prime minister and a separate proportional representation vote for a political party for the Knesset. The new electoral system affected three Israeli prime ministerial elections: May 1996, May 1999, and the special election of February 2001. Rather than creating more stable coalition governments—which was the intent of the change—the new system resulted in increased support for small parties in the Knesset and decreased support for the parties of the prime ministerial candidates. In March 2001, the Knesset voted to bring back the electoral system that had operated from independence until 1992, under which voters would cast a single ballot for a political party to represent them in the Knesset and the prime minister would be selected from Knesset members. The first election under the re-established electoral system took place in January 2003.

The fragmented party system is the result of another feature of the electoral system: one of the world's lowest thresholds for winning a legislative seat. Until 1992, a party needed only 1 percent of the vote to win a seat in a Knesset election, which brought many small parties to the Knesset. This meant that no party has ever received a majority in the Knesset, so it has always been necessary for prime minister–designates to form complex and fragile coalitions, making it exceptionally difficult for their governments to survive if they propose bold initiatives. When the threshold was raised to 1.5 percent in the 1992 election, it had some effect: Only

Prime Minister Ariel Sharon (center) at headquarters for the Likud Party. The Likud is a right-wing political party established in 1973 by members of several smaller parties, including the Herut and the Israeli Liberal Party. In 1977, the party was elected to power, ending twenty-nine years of rule by the Israeli Labor Party. © AFP/CORBIS. REPRODUCED BY PERMISSION.

ten of the twenty-six parties that ran candidates won Knesset seats.

Breadth of Party Influence

Another aspect of party activity is the legacy and breadth of party influence in the early years of statehood. In the prestate period and the early years of statehood, the importance of political parties was enhanced by their role in various quasi-governmental activities, including employment, education, housing, medical care, immigrant absorption, publishing, and even sports. Although many of these functions were later taken over by the government, elections in nongovernmental organizations like the Histadrut (General Confederation of Trade Unions) and the Jewish Agency continue to be contested within the framework of candidate lists submitted by the major political parties.

Political Issues

The importance of small parties has also been magnified by the complexity of Israeli political issues. The political parties can be divided into five major groups, but the groups are not at all homogeneous, and many parties fit only partially into any group. These groups are (1) the left, which is generally socialist in domestic politics and conciliatory on the Palestinian issue; (2) the center and right, which generally is less sympathetic to socialist ideology, takes a hard line on the Palestinian issue and Greater Israel, and would give up none of the territories won during the Arab-Israel War (1967); (3) the religious parties, which have held

the balance of power in every government in Israel's history and some of whose members have made coalitions with both Labor and Likud in exchange for the furtherance of Orthodox religious interests; (4) reform parties, which have pressed for changes beyond those advocated by any of the larger, more entrenched parties; and (5) the far left, Communist, and Arab parties, which provide choices for voters but whose members have traditionally been outside of the mainstream of political decision making.

The proliferation and survival of the many parties is encouraged by the ideological and issue-oriented setting within which Israeli parties operate. Israeli parties cluster around many major issues, including at least one dealing with government activity in the domestic economy, one dealing with policy in relation to Arab states and the Palestinians, one dealing with government and religion, one dealing with government and Zionism (which is distinct from religion), and one dealing with national security (which is distinct from Arab relations). Many issues touch more than one of these dimensions. Given the number of central issues in the polity—and this list of issues does not include the problems of immigrants, gender-related issues, ethnicity and politics, and many other highly contentious issues around which a political party might be created—it is no wonder that literally dozens of political parties compete in each election.

Intensity of Israeli Democracy

Each of the larger groupings of parties is made up of several subgroups, and each of these at one time or another has been a separate political party that ran candidates for the Knesset; many of them still consider themselves to be distinct. The result is what seems a never-ending series of political marriages and divorces, and even though both Labor and Likud have been fairly well established for some time, most of the numerous factions within each insist on keeping their own names.

Modernization

The role of political parties has been diminished by aspects of social, political, and economic modernization. These include an electorate increasingly likely to scrutinize the parties, a large increase in the number of Israelis who consider themselves independents, and dissatisfaction with all of the traditional political parties. The result is that many new parties and movements have frequently received sizable votes, even in their initial ventures into the electoral fray.

Political parties continue to be the vehicle of political activity in Israel, and even with recent structural changes in the political system, no pattern of increased nonpartisan activity has emerged in the polity that would suggest a diminution of the role of political parties in the future.

Political Parties in

Major or significant political parties in Israel, including pre-state forerunners.

Agudat Israel ("Society of Israel")

Agudat Israel is political party founded in Poland in 1912, created by the ultraorthodox Agudat Israel Jewish organization, and established in Palestine in the early 1920s. Agudat Israel moderated its antisecular worldview by indicating its willingness to participate in the 1948 government-in-formation and the initial 1949 to 1951 government coalition by the terms of an agreement known as the "status quo letter," which avoided making key decisions about the relationship of the new state and organized religion. In 1949 the party formed part of the United Religious Front; in the elections of 1955 and 1959 it formed part of the Torah Religious Front with Poʿalei Agudat Israel. The party left the governing coalition in 1951 and remained in opposition until 1977, when it supported Menahem Begin's Likud-led coalition. In 1984 Agudat Israel joined the Begin-Peres national unity government and has since remained part of it, although it has refused a ministry.

Agudat Israel was originally anti-Zionist and messianic, although it has been willing to cooperate with Zionists in areas of immigration, settlement, and defense. In the 1980s this non-Zionist party, directed by a Council of Torah Sages (a panel of rabbis to whom both religious and secular decisions are referred), continued to advocate a theocracy and increased state financial support for its religious institutions. It is generally considered to be pragmatic on foreign-policy issues, including the future of the territories occupied since 1967. It is also concerned with all matters of domestic policy, matters it perceives to affect religion in general, and especially its own educational institutions.

In preparation for the 1984 Knesset elections many of the party's Sephardic members left Agudat Israel and started a new party, SHAS, resulting in a decline in Agudat Israel's Knesset representation from four to two seats.

Ahdut ha-Avodah ("Unity of Labor")

This socialist party was founded in 1919 by veterans of the Jewish Legion and other Palestine pioneers. With strong support in the Kibbutz ha-Meʾuhad movement, Ahdut ha-Avodah (or Achdut ha-Avodah) worked for the unification of Jewish labor movements and the development of new forms of settlement and labor units. It rejected Marxist doctrines of class warfare in favor of social democracy. In 1930 it joined with others in founding the MAPAI Party. After becoming independent from that party in 1944, Ahdut ha-Avodah joined with ha-Shomer ha-Tzaʾir, a Zionist socialist youth movement, to found the more radical left-wing MAPAM in 1948. It split with MAPAM in 1954, formed an alignment with MAPAI in 1965, and in 1968 merged again with MAPAI and the RAFI parties to form the Israel Labor Party.

Alignment (Maʾarakh)

From 1969 to 1984 the Alignment existed as a combination of the Israel Labor Party, MAPAI, and the United Worker's Party, MAPAM. Although the two parties retained their organizational independence, they shared a common slate in elections to the Knesset, the Histadrut, and local-government offices.

Am Ehad ("One Nation") (Received 2.8% of the vote, 3 seats, in 2003 election)

The Am Ehad Party is a labor-oriented organization with leadership that overlaps with the leadership of the Histadrut, the national labor union. Its focus is on social welfare issues, workers' rights, and collective agreements. The party's goals in the 2003 election were to keep in front of the public the debates over employment, unionization, the right to strike, and the ability to live with dignity; to reduce social gaps in income; and to have the government take an active role against unemployment. It focused its political platform on workers' rights. It also pursued "citizenship issues," ensuring a pension for every citizen and working for salary equality for women, and pressed several social issues, including free education from nursery school to university, equal rights in the health system, and adequate housing for each citizen.

Arab Democratic Party

The Arab Democratic Party was founded in early 1988 by Abdul Wahab Darawshe, a former Labor Party Knesset member. In 1988 it received about 12 percent of the total Arab vote and one seat in the Knesset elections. In a March 1988 interview, Darawshe acknowledged that his resignation from the Labor Party resulted from the Palestinian in-

Election results 1949–2003

	Left/ Socialist	Non-Socialist	Religious	Other

Election results 1949–2003 [CONTINUED]

	Left/ Socialist	Non-Socialist	Religious	Other
Fourteenth Knesset (1996)	43 (Labor 34) (Meretz 9)	45 (Likud 32) (Yisrael B'Aliyah 7) (Third Way 4) (Moledet 2)	23 (Shas 10) (National Religious Party 9) (Yahdut HaTorah 4)	9 (United Arab List 4) (Hadash 5)
Fifteenth Knesset (1999)	44 (One Israel 26) (Meretz 10) (Shinui 6) (One Nation 2)	39 (Likud 19) (Yisrael B'Aliyah 6) (National Unity 4) (Center 6) (Israel Our Home 4)	27 (Shas 17) (National Religious Party 5) (United Torah Judaism 5)	10 (United Arab List 5) (Democratic Front for Peace and Equality 3) (Balad 2)
Sixteenth Knesset (2003)	44 (Labor 19) (Shinui 15) (Meretz 6) (Am Ehad 4)	46 (Likud 37) (National Union 7) (Yisrael B'Aliyah 2)	21 (Shas 11) (United Torah Judaism 5) (National Religious Party 5)	9 (Arab Parties 9)

tifada in the West Bank and the Gaza Strip and the "diminishing choices" open to Israeli Arab politicians affiliated with the government and yet tied to the Arab community by a sense of shared ethnic identity. Echoing the sentiments of other Israeli Arabs, Darawshe has stated that "the PLO is the sole legitimate representative of the Palestinians" living outside Israel's pre-1967 borders. The party won seats in the twelfth (1988), thirteenth (1992), and fourteenth (1996) Knesset elections, after which its membership merged with other Arab parties.

Balad *(See National Democratic Assembly)*

Citizens' Rights Movement (CRM, "Ratz")

The Citizens' Rights Movement (CRM) was founded in 1973 by Shulamit Aloni, a former Labor Party Knesset member. The CRM was founded as an expression of dissatisfaction with the conduct of the 1973 Arab–Israel War, and its primary issues involved strengthening civil rights in Israel and greater compromise on Israeli-Palestinian issues; the idea of the separation of religion and government has been particularly important to the party's platform. Its most prominent leader was the leftist, social-liberal activist Aloni. The party won three seats in the Knesset election of 1973 and briefly joined the Labor Party government in 1974, but left when Yitzhak Rabin accepted the National Religious Party as a coalition member. The CRM was reduced to one seat in 1977 by the popularity of the Democratic Movement for Change. At various times it negotiated with other left-wing groups (such as Shinui) about multiparty mergers, but no mergers resulted. In 1984 the CRM rebounded to win three Knesset seats and grew to five seats in 1988. It refused to join the 1984 National Unity government on matters of principle regarding cooperation with Likud. The CRM's platform centered on freedom of religion and culture; complete equality of all Israelis without regard to religion, nationality, race, or gender; full opposition to religious coercion; and negotiation with representatives of Palestinians and recognition of their right to self-determination. In 1992 many of its members joined the combined left-wing Meretz Party, which became a coalition partner of Labor.

Degel ha-Torah ("Torah Flag") *(See United Torah Judaism)*

Formed in 1988, the clericalist party is a SHAS-led Ashkenazi spinoff among the ultraorthodox community.

Democratic Front for Peace and Equality (HADASH) (Received 3.0% of the vote, 3 seats in 2003 election)

The Democratic Front for Peace and Equality (DFPE) is considered to be on the "far left" of the political spectrum, and is made up of both Arabs and Jews. It is strongly in favor of the peace process, putting a just, comprehensive, and stable Israeli-Arab peace as a high priority, and it wants to see a Palestinian state established as soon as possible. It supports the State of Israel as a state of all of its cit-

izens rather than simply as a "Jewish state." It also strongly advocates the civil and national rights of Arabs in Israel, including the right of Palestinian refugees of 1948 to either return to their land or to be compensated for property that was abandoned at the time. Related to the issue of Arab rights, it seeks to act on behalf of the Arab working class to raise the standard of living of Israeli Arabs.

Democratic Movement for Change

The Democratic Movement for Change (DMC) was founded in 1976 by several groups, including the Shinui Party, to consolidate movements of dissatisfaction in the aftermath of the Arab–Israel War of 1973. The best-known figures of the DMC were Yigael Yadin, former IDF chief of staff and archaeology professor, and Amnon Rubinstein, Tel Aviv University law professor. Dissidents in the Labor Party helped the DMC to win fifteen seats in the Knesset of 1977. The DMC's program included electoral reform, decentralization of government, reorganization of the educational system, increased emphasis on social integration, and simplification of the bureaucracy. In foreign policy, the DMC stressed the preservation of the Jewish character of the state and territorial compromise on the West Bank, but opposed establishment of an independent Palestinian state there. Divided over the issue of cooperation with the Likud, DMC members decided to join the Likud-led government in 1977 without winning any of the major concessions they had insisted upon. It broke up in 1979 when the Shinui Party left over the issue of the DMC's cooperating with the Likud. The party did not put forward any candidates in the 1981 election.

Free Center

The Free Center was a faction that splintered from the Herut Party in 1967. From 1967 to 1973, through the Seventh Knesset, the Free Center was a party in its own right. It became a faction within Likud from 1973 to 1977, and joined the Democratic Movement for Change in 1977.

GAHAL (Acronym for Gush Herut-Liberalim, "the Freedom-Liberal Bloc," also known as the Herut-Liberal Bloc)

GAHAL is a political coalition list created in 1965 by an electoral combination of the Liberal Party and the Herut Party to compete against the 1965 and 1969 MAPAI-led electoral alignments. In 1967, on the eve of the outbreak of the Arab–Israeli War, GAHAL joined a National Unity Government with Labor; in 1973 GAHAL became part of the Likud Bloc.

General Zionist

A centrist Zionist party during the prestate period, in the 1940s General Zionist split into two factions, A and B, over the issues of attitudes towards the mandatory government and its policies on one hand, and the socialist-dominated Histadrut on the other. In the elections for the First Knesset, group A constituted the Progressive Party; group B, the General Zionists. United for a number of years after 1961 under the name of Liberal Party, they split again when one part (basically former group B) joined Herut in 1965 to form a joint list (GAHAL). The former Progressives continued as Independent Liberals.

Gesher ("Bridge")

Gesher was a splinter party founded in 1996 by a number of former Members of Knesset from the Likud, led by Likud MK David Levy (a former foreign minister known for his support for the Moroccan community in Israel). It was seen by many as a centrist-right party focusing on the social and economic problems of the population in Israel's periphery and development towns, populated initially by immigrants from North Africa.

HADASH *(See Democratic Front for Peace and Equality)*

Herut Party ("Freedom")

The Herut (Freedom) Party was founded in 1948, and until 1983 was led by Menachem Begin, a protégé of the Revisionist Zionist Vladimir Ze᾽ev Jabotinsky. Herut was a right-wing party founded by people who had been active in the Irgun in the prestate years, and had an ideology based on Revisionist Zionism. One of the key characteristics of the Revisionist movement was an emphasis on Jewish control of the territory of *Eretz Yisrael.* In 1973 Herut became the senior member of the Likud bloc, which included the Free Center Party, and which Begin led to victory in 1977. Prior to 1977, Herut

was identified as a party of opposition, one that would never control a plurality of the national vote (despite a brief appearance in a government of national unity from 1967 to 1970). Since 1977 the Herut, as the major partner of Likud, has been a successful alternative to the Labor Party coalition, and the Herut/Likud bloc has formed the basis of most Israeli governments.

Herut was traditionally associated with the idea of a Greater Israel, which includes the West Bank and Gaza, and many of its leaders favor annexation of those areas. It is committed to a diminution of government regulation in the economy, fewer concessions to the Palestinians, and strong security. It relies heavily on the Sephardic community to stay in power as part of the Likud coalition, which it joined in 1973.

Ihud Le'umi *(See National Union)*

Israel be-Aliyah ("Israel on the Increase") (Received 2.2% of the vote, 2 seats, in 2003 election)

One of the key issues of this party refers to the importance of *aliyah* (immigration) to the state. The party was founded in 1996 by Natan Sharansky, a well-known "refusnik" from the former Soviet Union. It is the only single-issue party that has been successful in recent years. It seeks to advance the rights of all immigrants, not just immigrants from Russia and the former Soviet Union, but Sharansky's background related to the former Soviet Union has made his appeal to that group especially strong.

The party seeks to make progress on the peace process by supporting a democratized Palestinian Authority. It also seeks to support the ingathering of most of the Jewish people in *Eretz Yisrael* (the land of Israel), and to expand the conditions necessary for the absorption of the Jewish people in the land of Israel.

Israel Beiteinu ("Israel Our Home")

Israel Beiteinu is an immigrants' rights party formed in 1999 by former prime minister Benyamin Netanyahu's Russian-born former chief of staff, Avigdor Lieberman. It seeks to curb what Lieberman says are the excessive powers of the police force, justice ministry, and court system. Its platform includes a commitment to work for tolerance, mutual respect, and respect for the rights of the individual; to work in the social and economic fields to assist weak population groups and young couples in the field of subsidized housing; and to work to advance rehabilitation projects for development towns on the basis of land reform.

The party supports the creation of a presidential system of government in Israel, and the entrenching of a fully written constitution and an active constitutional court. It supports a more vigorous separation of government and religion and the adoption of the recommendations of the Neeman Commission on orthodoxy of Judaism in Israel, and wants an expansion of the openness of the civil service. The party also seeks to transfer the authority for dealing with new immigrants from the Ministry of Immigration Absorption to local government.

Israel Communist Party ("Miflagah Komunistit Yisraelit," creating the acronym MAKI)

Under the general name Miflagah Komunistit Yisraelit (MAKI), communist parties in Palestine and Israel date back to at least 1919 and have undergone many metamorphoses. MAKI's membership recognized the new state of Israel and its flag and anthem, but denied linkages between the state and Jews overseas. One of its primary issues involved insisting upon the right of Arabs to establish a state in the territory recommended by the 1947 United Nations Partition Resolution. Ideology of class warfare and affiliation with international communist movements resulted in the party being seen by some Jews as anti-Zionist, and therefore it was excluded from participation in Yishuv affairs. After the establishment of the State of Israel, there were attempts by MAKI, the mainly Jewish communist party, to unify Jewish and Arab communists.

In 1964 an irreconcilable split over policy toward Arab nationalism and pan-Arabism resulted in a split and the formation of an Israeli Arab communist party, which took the name RAKAH (an acronym for Reshima Komunistit Hadashah, "New Communist List") as an alternative to the overwhelmingly Jewish MAKI. In the 1973 election the two communist parties, RAKAH and MAKI, ran together as Moked ("Focus"), but since 1973, only

RAKAH has borne the name *communist.* Jewish communists have carried on their activity in other structures, such as the Democratic Front for Peace and Equality or SHELI (an acronym for Shalom l'Israel, or "Peace for Israel"). One or more communist parties have had seats in every Israeli Knesset, but they have never been included in the coalition governments by which Israel has always been governed.

Israel Labor Party (With Meimad, received 14.5% of the vote, 19 seats, in 2003 election)

The Israel Labor Party (ILP, Mifleget ha-Avodah) has been the major social-democratic party of Israel since its formation in 1968 through a merger of MAPAI, RAFI, and Ahdut ha-Avodah Poʿalei Zion. It has never stood for election on its own, but rather has been the major partner in the Alignment, which was formed in 1969 with MAPAM. Labor, in various manifestations, was in power from the foundation of the State of Israel in 1948 until its defeat by the Likud under Menachem Begin in 1977, with the exception of two periods (1967–1969 and 1984–1988), when it shared power with the Likud in a National Unity government. It returned to full power in the election of 1992. As the senior member of the Labor Alignment in each Knesset since the ILP's formation, it received 80 to 85 percent of the Alignment's seats. Its leaders, Israel's most prominent Labor-Zionist figures, were also prime ministers when the Alignment was in power: Levi Eshkol (1968–1969), Golda Meir (1969–1973), Yitzhak Rabin (1974–1977 and 1992–1995), Shimon Peres (1995–96), and Ehud Barak (1999–2001).

The ILP's programs are broadly pragmatic in foreign policy and moderately socialist in domestic policy. In regard to the Palestinians, it has been willing to negotiate with only minimal preconditions, generally preferring a settlement through a Jordanian-Palestinian confederation. It has sought to restart negotiations with the Palestinians based upon a "land for peace" formula, and is willing to consider unilateral withdrawal from certain parts of the West Bank and Gaza Strip—within the framework of the Oslo Accords—if that will bring secure borders. Its public goal has been to "pursue peace as if there were no terror and fight terror as if there were no peace process." But Labor has also joined other Israeli parties in insisting that Israeli security be the first priority. It rejects the idea of annexation of the West Bank and Gaza but insists that the status of Jerusalem is not negotiable: Jerusalem is the indivisible capital of Israel, under Israeli sovereignty, including eastern neighborhoods, with special status accorded to places holy to Islam and Christianity. The party supports continuing all peace talks with nations of the region. Specifically, it wants to continue talks with Syria, and has indicated that it would be willing to make compromises on the issue of the Golan Heights if sufficient security concerns are met.

Party platforms have also stressed equality for Arab citizens of Israel. On domestic affairs, the ILP stands for a mixed economy, central economic planning, an extensive network of government-run social services, and close cooperation with the Histadrut, but also a large role for the private sector. On the role of religion, it accepts the "status quo agreement," under which religious affairs will be under the jurisdiction of the Orthodox rabbinate and rules about such matters as public transportation on the Sabbath will remain as they were at the time of the founding of the state. However, the party would also like to see Jewish religious pluralism and more rights for the Reform and Conservative movements.

The history of the ILP has often been stormy, providing an arena for conflicts among its strong leading personalities. Among these conflicts was the rivalry between Rabin and Peres, often over questions of who was responsible for ILP election setbacks and for the failures of some government policies. In 1977 Rabin's difficulties over an allegedly illegal bank account belonging to his wife were considered by some to be one of the causes of the Alignment's defeat by the Likud under Begin. In turn, many attribute subsequent electoral defeats to the "colorless" Peres, citing his replacement by Rabin as an important factor in the Alignment's decisive electoral victory in 1992. In an important reform of internal Israeli political party organization in 1968, the ILP broadened the selection process for Knesset candidates through primary elections, a practice that has since then been adopted by some other Israeli parties as well. Following the assassination of Prime Minister Rabin in November 1995, Shimon Peres was elected Labor Party leader.

Kach ("Thus")

Kach, an ultranationalist party, came into being around Rabbi Meir Kahane, a U.S.-born right-wing Orthodox extremist. Kach advocated the forcible expulsion of Arabs from Israel and the Occupied Territories, followed by Israeli sovereignty there. A number of other party leaders have been implicated in Kach-supported terrorist activities. In 1988 the Likud and the Citizens' Rights Movement succeeded in having the Knesset pass a Basic Law empowering the Central Elections Board to prohibit any party advocating racism from contesting parliamentary elections in Israel; Kach, which had gained one seat in the 1984 elections after several earlier unsuccessful attempts to enter the Knesset, was outlawed from participating in the 1988 elections.

Liberal Party

The Liberal Party is a centrist party formed in 1961 by members of the General Zionist and Progressive parties. It is primarily interested in furthering the cause of a strong private sector in the economy with minimal government interference. In 1965 it joined the Herut Party in forming an electoral list called GAHAL, causing one of its wings to split off to become the Independent Liberals. The Liberal Party continues to exist as an independent entity within the Likud. In the Begin cabinet of 1977 one of Liberal's leaders, Simha Ehrlich, served as finance minister; two other Liberals, Yitzhak Modaʾi and Moshe Nissim, held the same post in the National Unity government of 1984. Another Liberal leader, Arie Dulzin, served for some time as chairman of the World Zionist Organization (WZO).

Likud ("Union") (Received 29.4% of the vote, 38 seats, in 2003 election)

An Israeli electoral bloc established in 1973, the Likud consisted originally of several independent parties: the Herut Party, the Liberal Party, the Free Center, State List, and part of the Land of Israel Movement. Much of the emphasis of its program has been on extension of Israeli sovereignty to the territories conquered in the Arab–Israel War of 1967. In large part, Likud was the direct ideological descendant of the Revisionist Party, established by Vladimir Jabotinsky in 1925. The Revisionist Party, so named to underscore the urgency of revision in the policies of the WZO's Executive, advocated militancy and ultranationalism as the primary political imperatives of the Zionist struggle for Jewish statehood. The Revisionist Party demanded that the entire mandated territory of historical Palestine on both sides of the Jordan River, including Transjordan, immediately become a Jewish state with a Jewish majority.

Taking advantage of public disenchantment with the Labor Party in 1977, Likud won forty-three Knesset seats and formed a coalition government led by Menachem Begin, which continued until 1984. In that year, neither Likud nor the Labor Alignment bloc won enough to form a coalition without the other. The two joined in a National Unity government in which Likud leader Yitzhak Shamir held the office of prime minister for half of the electoral period, and the blocs divided other government offices. In 1988 Likud and other right-wing and religious parties improved their showing, and Shamir again led the government until the Labor victory of 1992. During its years in power, Likud strongly resisted surrendering sovereignty over the Palestinian territories and made little progress in reducing the role of the government in the economy. One of Likud's problems has been the presence in it of several strong individuals and their factions, including Shamir, former chief of staff Ariel Sharon, and Moroccan leader David Levy, all of whom have tried vigorously to become dominant. In 1993 the Likud chairmanship was won by Benjamin Netanyahu, former ambassador to the United Nations and brother to the hero of the Israeli raid on Entebbe. He defeated his former rivals, Moroccan-born David Levy and Ariel Sharon, as well as younger figures such as Zeʾev Begin, with a spirited campaign based on American-style politics and effective use of the media, even though it was an election confined to party members.

The Likud has indicated that it is willing to negotiate peace with a Palestinian leadership "not compromised by terror," but it has also stated that it is opposed to the dismantling of Israeli settlements in the Occupied Territories. It advocates increasing the population of the settlements in the West Bank, to which it believes Israel has a right, and calls for improvement of the social and economic conditions of Israel's disadvantaged communities, which consisted largely of Jews originating from Middle Eastern and Arabic lands, and the maintaining of the

current status quo in government-religious relations. The Likud campaigned heavily against the Oslo Accords. Allthough it claims that it will not "go back" on what has been done, the Likud has been extremely cautious.

MAPAI (Acronym for Mifleget Poʿalei Eretz Yisrael,or "Israel Workers' Party")

MAPAI is the principal Zionist and Israeli socialist party (1930–1968). Founded upon the merger of Ahdut Ha-Avodah and Ha-Poʿel Ha-Tzaʿir in 1930, it constituted the central and dominant political force in the labor movement, in the Yishuv (Jewish community of Palestine under the British Mandate), in the Zionist movement, and later in the State of Israel. Under the spiritual inspiration of Berl Katznelson, the party became the main ideological and political vehicle for the Jewish labor movement during the Yishuv period. Its central program focus was uniting socialist and national goals. To do that, however, it was necessary to work with nonsocialist parties and to accede to some of their premises.

MAPAI's chief political leader from the mid-1930s to 1963 was David Ben-Gurion. A leading pragmatist, he was frequently criticized by party elements who were more ideological. In 1963 Ben-Gurion resigned from MAPAI over the Lavon Affair. In 1965 MAPAI became a partner in the formation of the Labor Alignment, and in 1968 that organization in turn joined with the RAFI Party to form the Israel Labor Party. The 1965 election was the last one in which MAPAI ran candidates under its own name. During its existence, MAPAI's membership supplied all but one of Israel's prime ministers, all but one of the state's presidents and Knesset speakers, and all secretaries-general of the Histadrut.

MAPAM (Acronym of Mifleget Poʿalim Meʾuhedet, or "United Workers Party")

Founded in 1948, MAPAM was a Marxist-Zionist party that followed a Moscow-led policy until the death of Josef Stalin, when it disavowed that orientation. MAPAM split in 1954; former members of Ha-Shomer Ha-Tzaʿir remained with MAPAM, while former members of Ahdut Ha-Avodah-Poʿalei-Tziyon left MAPAM to form Ahdut Ha-Avodah. Thereafter, MAPAM concentrated much more on local matters. Combining the goals of Labor Zionism with a refusal to dispossess Israeli-Arabs, it received considerable criticism when it accepted Arab members. It advocated greater neutrality in foreign policy and a greater restraint in defense. Immediately after 1967, MAPAM opposed the establishment of Israeli settlements on the West Bank and strongly urged negotiations with the Palestinians. It was also among the quickest and most vigorous objectors to the Arab–Israeli War of 1982.

After 1969 MAPAM became a member of the Labor Alignment with MAPAI and other parties. There were forceful arguments within MAPAM over whether the Alignment's ideology was so mild that MAPAM's very principles were being violated, but those favoring continued membership prevailed until 1984, when the Alignment took part in the formation of the National Unity government in which Likud was a partner. MAPAM broke away from the Alignment and resumed its independent existence in the fall of 1984, when the Labor Party decided to join Likud in forming the National Unity government. In 1992 MAPAM joined with Shinui and the Citizen's Rights Movement to form Meretz, which became Labor's main coalition partner.

MAPAM's socioeconomic program was the most socialist of any Israeli party. It was also one of the strongest proponents of equality for Israeli Arabs. It did not, however, advocate class struggle in orthodox Marxist terms. MAPAM has advocated a strong national security and defense posture, with many of its members playing leading roles in the IDF. At the same time, it has urged continuing peace initiatives and territorial compromise, and has opposed the permanent annexation of the territories occupied in the Arab–Israel War of 1967 beyond minimal border changes designed to provide Israel with secure and defensible boundaries. MAPAM has long believed in Jewish-Arab coexistence and friendship as a means of hastening peace between Israel, the Palestinians, and the Arab states.

Meimad ("Dimensions—Movements of the Religious Center") (With Labor Party, received 14.5% of the vote, 19 seats, in 2003 election)

Meimad was established in 1988 as a religious Zionist alternative to the National Religious Party. Meimad's goal was to represent, to cultivate, to

strengthen, and to disseminate the values of religious Zionism in Israel and abroad, and to incorporate Orthodox religious practice in Israeli public life, but it did not want to do so by restrictive legislation. Its platform called for working for the development of the State of Israel and influencing its social, economic, political, and spiritual life on the basis of the Torah. Meimad maintained that peace between Israelis and Arabs was possible and that Israel could negotiate land for peace. In 1999 Meimad joined Ehud Barak's One Israel Party.

Meretz ("Energy") (Received 5.2% of the vote, 6 seats, in 2003 election)

Meretz is seen as a left-wing, social-democratic secular party. Comprising MAPAM, Shinui, and the Citizens' Rights Movement, Meretz won twelve seats in the 1992 Knesset elections and became the most important coalition partner in Israel's Labor Party. Its most widely publicized program includes advocating for more conciliatory policies on negotiations with the Palestinians, supporting an accelerated peace process and a just and comprehensive peace between Israel and its neighbors, and dismantling settlements and withdrawing from the West Bank and Gaza Strip. Many young Israelis are also attracted to its reformist views on education, economic, human rights, and environmental issues. Meretz is a democratic, peace-seeking party in which Jews and Arabs work in complete equality. Meretz is committed to human rights, to equality of citizens of the country, to social justice, to Israel's security, and to the values of humanistic Zionism. Its concern with social justice has led it to take some activist positions in relation to economic policy. It has promoted more state funding for education because since education is the cornerstone of a democratic society. It has also advocated freedom of religion and greater separation between religion and the state, arguing for equal status for all branches of Judaism.

Mizrahi

Mizrahi consists of offshoots of the Orthodox Jewish world Mizrahi movement, established in 1902 with the aim of securing "Eretz Yisrael for the people of Israel according to the Torah of Israel." The Mizrahi and Ha-Poʿel Ha-Mizrahi ran as separate political parties in the elections to the first Israeli Knesset (1949), joining together to form the National Religious Party (NRP) in 1956. From 1951 to 1977, Mizrahi candidates occupied ten to twelve seats in the Knesset. Although the Mizrahi-Ha-Poʿel Ha-Mizrahi movement played a major role in establishing the public religious character of Israel in its initial decades of nationhood, the party's power and prestige had declined by the 1980s. The party continued to struggle to establish mandatory recognition of the Sabbath as the national day of rest and of the practice of *kashrut* (strict observance of dietary laws) in all national institutions, settlements, and organizations, so that the state's constitution would be based on *halakhah* (Jewish religious law). Mizrahi envisages, in the ultimate stage, a Jewish state governed according to *halakhah,* and it considers the present-day secular state to be a precursor of that state.

Since 1981 the number of NRP Knesset seats declined by more than 50 percent. This has been attributed to a number of causes, including the perceived stance of the majority party, Likud, to religious tradition; to ideological confusion, stagnation, and an absence of NRP leadership development; to an empowerment of Sephardic Jews and the creation of parties dominated by Sephardic Jews; and to a move by NRP to the religious right, which led many former Mizrahi loyalists into the more sectarian religious parties, such as Agudat Israel and SHAS.

Moledet ("Homeland")

The Moledet Party ran in 1988 on an extremist platform advocating the forcible "transfer" of Palestinian Arabs from the West Bank to Arab states. It argued that population transfer should be a precondition for peace negotiations with any Arab country. It also advocated the annexation of the West Bank and Gaza into Israel and the continuation of settlements in the areas. The party actively opposed the idea of a binational State of Israel. Led by retired IDF General Rehavam ("Gandhi") Zeʾevi, the party won two seats in the 1988 Knesset elections.

Morashah ("Heritage")

Morashah is a nationalist-religious party led by Rabbi Chaim Druckman that broke away from the National Religious Party in 1984. In 1986 it was reincorporated into the National Religious Party.

National Democratic Assembly (Balad) (Received 2.3% of the vote, 3 seats, in 2003 election)

The National Democratic Assembly is an Israeli Arab party that argues that Israel should be a democratic state for all of its citizens. It advocates the right of return for all Arab refugees from the 1948 Arab–Israel War, full Israeli withdrawal from the West Bank, Gaza Strip, and East Jerusalem, and sthe creation of a Palestinian state in the territories conquered in 1967, the capital of which should be eastern Jerusalem. It promotes economic and social advancement of a national Arab minority, and advocates cooperation with Jewish elements that are willing to support its major goals.

National Religious Party (NRP, Mafdal) (Received 4.2% of the vote, 6 seats, in 2003 election)

The National Religious Party, founded in 1956, was the largest and most influential component of the religious bloc, and a member of every Israeli government up to 1992. It had the reputation of being less militant and more pragmatic than some of the others in the religious bloc. At times this image led to its being overshadowed by parties such as TAMI and SHAS, both of which charged that the NRP failed to give adequate representation to Oriental Jews. It advocates a religious Jewish lifestyle as well as full participation in Israeli society for Orthodox Jews, and legislation based on the legal system of the Torah and Jewish tradition. Its central goals are to preserve the religious character of the country, and to ensure the provision of all religious services to the public and to individuals by means of state, local, and other public institutions. It supports the retention of the Occupied Territories based on national security considerations as well as Biblical and Zionistic beliefs, and promotes the expansion of settlements in Judea, Samaria, and the Gaza Strip, as well as in other territories that it sees as the Land of Israel. During the 1950s, 1960s, and 1970s, the NRP always had ten to twelve seats in the Knesset, and usually controlled the Ministry of Religious Affairs as well as the Ministry of the Interior. After 1981 it fell to a consistent level of four to six seats. The losses led it to move further to the right on domestic issues and to a somewhat more moderate position in regard to the territories occupied by Israel.

National Union (Ihud Leʾumi, received 5.5% of the vote, 7 seats, in 2003 election)

The National Union is a coalition of three right-wing secular parties—Moledet, Tekumah, and Israel Beiteinu—that came into existence in February 2000. The three parties advocate the voluntary transfer of Arabs from the West Bank and Gaza to other Arab countries, and are against concessions to the Palestinian Authority and the creation of a Palestinian state.

One Nation *(See Am Ehad)*

Poʿalei Agudat Israel ("Agudat Workers' Organization")

Poʿalei Agudat Israel was an organization originally established in Poland in 1922 that initiated activities in Palestine in 1925. The PAI identified with Agudat Israel on religious matters, and advocated cooperation with secular workers' organizations and service in the Israel Defense Forces. In most elections the PAI ran on a joint electoral list with Agudat candidates. In 1960 PAI joined the government coalition against the advice of the Agudat Council of Sages.

Poʿalei Mizrahi ("Spiritual Center Workers")

An Orthodox religious workers' movement founded in Palestine in 1922 by a left-wing faction of Mizrahi, in 1956 it joined Mizrahi to form the National Religious Party.

Progressive List for Peace

Also known as the Progressive National Movement, this non-Zionist party was one of the strongest challengers to the Israeli Arab community's RAKAH Party. The movement came into being in 1984, advocating recognition of the PLO and the establishment of a Palestinian state in the West Bank and the Gaza Strip alongside Israel. It won two seats in 1984 elections, for Muhammad Miʾari and Mattityahu Peled, who along with Uri Avnery and Yaacov Arnon met with Yasir Arafat in 1984 and 1984, challenging the Israeli law banning contacts with the PLO.

RAFI (Acronym for Reshimat Poʿalei Israel, or "Israel Labor List")

In 1965 MAPAI members who were dissatisfied with the formation of the Labor Alignment split off to

form the RAFI Party. Their grievances included resentment over the alleged inflexibility of MAPAI and its failure to give opportunities to young leaders, and their displeasure with the handling of the Lavon Affair (a bitter dispute over government handling of a 1954 espionage and sabotage operation gone awry). The leading dissident was David Ben-Gurion, who was joined by others, including Moshe Dayan, Shimon Peres, and Yizhak Navon. Among the programs that RAFI advocated were regional elections, personal election of mayors, government financing of elections, overhaul of much of the systems of health and unemployment insurance, and free compulsory education between the ages of 1 and 16. RAFI won ten seats in the Knesset in 1965. In 1968 Dayan and most other RAFI leaders, with the exception of Ben-Gurion, rejoined MAPAI and were among those who (along with Ahdut Ha-Avodah) founded the Israel Labor Party.

RAKAH (Acronym for Reshima Komunistit Hadash, or "New Communist List.")

In 1965 a group of former supporters of the Communist Party of Israel—MAKI—broke away from the main group to form RAKAH. RAKAH consisted primarily of Arab communists, and it participated in the 1988 elections. In the 1973 elections RAKAH and MAKI created a joint electoral list called Moked ("Focus").

SHAS (Acronym for Sephardi Torah Guardians) (Received 8.2% of the vote, 11 seats, in 2003 election)

SHAS is an ultraorthodox Sephardic religious movement led by spiritual mentor Rabbi Ovadia Yosef. Due to long-simmering anger over the absence of Sephardic leadership in the party, and specifically over inadequate representation of ultraorthodox Sephardim in the Council of Torah Sages, the Jerusalem Sephardic members of Agudat Israel broke away and established the Sephardi Torah Guardians Party (SHAS) in the early1970s. It was so successful in the October 1983 municipal elections in Jerusalem that it ran a national slate of candidates in 1984 and became an impressive force. SHAS has continued to win seats since 1984, becoming increasingly successful and powerful.

The key issues with which SHAS has been associated all relate to the relationship between government and religion. Most fundamentally, SHAS seeks to develop the traditional values of religion and orthodox Judaism in Israel—specifically, Sephardic Jewry. SHAS says that it supports the Talmudic precept of the supreme value of preserving life, and is therefore amenable to territorial compromise if it would bring true peace. It says that it supports autonomy for Palestinians, but it has opposed a Palestinian state. On explicitly religious issues it says that it supports the religious status quo, but would like to see a "Jewish state in every way." The core belief of the party is that governmental policies should be based on strict Jewish law. In the past, the party has been prepared to relinquish land in return for peace, but in recent years has been increasingly uncomfortable with this policy given increased terror.

SHELI (Acronym for Shalom l'Israel, or "Peace for Israel")

SHELI was created in 1977 by MAKI and several other groups. It disbanded before the 1984 elections.

Shinui ("Change") (Received 12.3% of the vote, 15 seats, in the 2003 election)

Shinui was established as a liberal, secular Zionist party in 1973 after splitting from the Democratic Movement for Change in protest against the Arab–Israel War of 1973. It became an ally of the Labor Party and a strong voice for electoral and constitutional reform and for a more flexible policy in the Arab–Israel dispute. It stood for a secular state, and advocated separating religion and the state; it announced that it would not sit in a government coalition with ultraorthodox religious parties. In relation to the Palestinian issue Shinui indicated that it was in favor of a territorial compromise for peace, but that it would be tough on security issues. In economic issues it supported a free-market economy and privatization of government-owned businesses.

In 1992 Shinui, MAPAM, and the Citizens' Rights Movement joined to form Meretz, which won twelve seats and became the main coalition partner of the Labor Party.

State List

In June 1963 Ben-Gurion resigned as Israel's prime minister, citing "personal reasons," and Levi Eshkol

took over the posts of prime minister and defense minister. But Ben-Gurion remained active politically, and a rivalry developed between him and Eshkol. In June 1965 the MAPAI Party split, and Ben-Gurion established RAFI ("Israel Labor List"), which won ten Knesset seats in the following election. In 1968 RAFI rejoined MAPAI and Ahdut Ha-Avodah to form the Israel Labor Party, and Ben-Gurion formed a new party, the State List (Ha-Reshima Ha-Mamlachtit), which won four Knesset seats in the 1969 elections.

TAMI (Acronym for Tnuʾat Masoret Israel, or "Tradition of Israel Movement")

TAMI was formed from a faction within the National Religious Party in 1981, primarily to increase attention to the problems of Sephardi (Oriental) Jews, especially those from North Africa. It won three seats in the tenth Knesset of 1982 and was part of the second Begin coalition government, but fell to only one seat in 1984. Its program was Zionist and traditional, with emphasis on equality of opportunity for members of all ethnic groups. It was one of only a few essentially ethnic parties in Israeli history. In 1988 it became a faction of the Likud.

Tehiyah ("Renaissance")

Tehiyah, or Ha-Tehiyah, was founded in 1979 by former supporters of the National Religious Party to oppose the return of Sinai land to Egypt as provided by the Camp David Accords. A radical right-wing party, it won three seats in the Knesset of 1981 and five in 1984. It did not join the 1984 National Unity government, in protest against the latter's policy limiting new settlements. In the 1988 election Tehiyah fell back to three seats, and it failed to win any in 1992. Tehiyah advocated the eventual imposition of Israeli sovereignty over the West Bank and supported the transfer of Palestinian Arabs in the West Bank to other Arab countries. It included among its main successes the 1980 Jerusalem Law and the extension of Israeli law to the Golan Heights.

Third Way (Ha-Derekh Ha-Shlishit)

The Third Way was founded in 1995 as a political movement, and it became a party in 1996. The Third Way was founded by Members of Knesset who broke away from the Labor Party, claiming that Labor was making compromises that were dangerous to Israel's security, particularly with regard to withdrawals on or from the Golan Heights. The Third Way saw itself as a centrist party, and claimed to be the only reasonable alternative to Labor and Likud (hence the "third way," if Labor was one choice and Likud the other). It was, essentially, a one-issue party, dealing with concessions to the Arabs over policies governing the Occupied Territories.

Torah Religious Front

The Torah Religious Front was formed by the Agudat Israel and Poʿalei Agudat Israel parties to campaign in the 1955 and 1959 elections. The front excluded the two Mizrahi religious parties, claiming that they were insufficiently committed to the concept of a Torah state. The Torah Religious Front was dissolved prior to the 1961 elections.

Tzomet ("Crossroads")

Tzomet, a right-wing party, was formed in 1983 to 1984 as a splinter within the Tehiyah Party, and it won two seats as an independent party in the 1988 Knesset election. In the 1992 election it won eight seats. It joined the Likud in 1996.

Tzomet was designed as a secular party. The basis of its platform was a hard line on the Palestinian issue, but it also advocated populist positions on many quality-of-life issues. It opposed the Oslo Accords, and supported Israel's retention of the West Bank. Although its members called for an active pursuit of peace with the Palestinians and Israel's neighbors, it was opposed to territorial compromise and suggested that Arab refugees in and from the Occupied Territories should be resettled in Arab countries. It promoted Jewish settlements in Judea, Samaria, and Gaza.

United Arab List (Received 2.1% of the vote, 2 seats in the 2003 election)

The United Arab List is a union of three Israeli-Arab parties—the United Arab Party, the Arab National Party, and the Islamic Movement. Under the leadership of, it calls for Israel to have a not overtly Jewish character, saying that Israel should be a state for all of its inhabitants. The party advocates a full Israeli withdrawal from the West Bank, the Gaza Strip, and East Jerusalem, and seeks the establishment of a Palestinian state with Jerusalem as its cap-

ital It also calls for the right of return for Palestinian refugees from the 1948 Arab–Israel War.

The party seeks full equality in Israeli society for both Jews and non-Jews, and a just and durable peace between Israel and its neighbors based on the principle of two states for two peoples, the Israeli and the Palestinian.

United Religious Front

The United Religious Front was an electoral alliance created in 1949 composed of the four religious parties: Mizrahi, ha-Poʿel ha-Mizrahi, Poʿalei Agudat Israel, and Agudat Israel. In 1951 the four parties campaigned separately.

United Torah Judaism (Received 4.3% of the vote, 5 seats, in the 2003 election)

United Torah Judaism is a coalition of two ultra-orthodox parties—Agudat Israel and Degel Ha-Torah—representing religious factions in Israel, Europe, and the United States. It is predominantly Ashkenazi. Its basic premise is that governmental policies should be based on Jewish law, and it believes that the Land of Israel was given by God to the Jewish People.

It calls for all domestic and foreign policies to be based in Torah law. Different members of the party support either the religious status quo or the passing of more religious legislation, primarily in the areas of the Law of Return and personal status (the "Who is a Jew?" question). While not active in the political debate over peace, United Torah Judaism is seen as slightly further to the right than SHAS.

The Agudat Israel membership calls for an for and increased role for the Torah in the spiritual, economic, and political life of the Land of Israel. Degel Ha-Torah's concerns focus upon representing the Torah-observant public in Israel in the institutions of government—in the government, the Knesset, and the local authorities—in order to protect and fulfill the special needs of this public in all areas of life, and to prevent discrimination against the Orthodox religious *(haredi)* public. It also seeks to influence Israeli society to observe a Jewish way of life in accordance with the Torah.

ISRAELI SETTLEMENTS

Towns and villages built since the 1967 Arab–Israel war on lands captured and occupied by Israel.

Since the 1967 Arab–Israel War, successive Israeli governments have promoted the settlement (colonization) of the West Bank and Gaza Strip by Israeli citizens. By 2003, there were in excess of 200,000 settlers residing in a number of villages and townships throughout those areas and at least the same number in the suburbs of east Jerusalem.

The first phase in West Bank settlement activity took place under the Labor governments that remained in power until 1977. Known as the Allon Plan, after its initiator Deputy Prime Minister Yigal Allon, the settlement blueprint was a minimalist one aimed at constructing a line of agricultural settlements along the new eastern border in the Jordan valley. This was part of a concept that assumed that civilian settlements contributed to the defensive posture of the country and that it was necessary to ensure defensible borders between Israel and Jordan. The Allon Plan also proposed the establishment of additional settlements around Jerusalem and in close proximity to the Green Line border as a means of ensuring future territorial changes in favor of Israel. The rest of the West Bank region was deemed unsuitable for settlement because of the dense concentration of Palestinian population, unlike the Jordan valley, which was sparsely populated. Allon envisaged a situation in which the rest of the West Bank would eventually be part of an autonomous area under Jordanian administration and linked to the Kingdom of Jordan by means of a territorial corridor running from Ramallah via Jericho (the only major Palestinian population center in the Jordan Valley) to the border crossings on the Jordan River.

Israeli soldiers stand guard in the West Bank. The West Bank, which had been annexed by Jordan in 1950, came under the control of the Israeli military after the War of 1967. The area was home to many Palestinians, and clashes arose when Israeli settlers began to move into the territory. © MIKI KRATSMAN/CORBIS. REPRODUCED BY PERMISSION.

Settlement localities and population, 2001

Settlement type	Number of settlements (West Bank and Gaza Strip)	Population
Rural	10	9,700
Rural communal	69	41,700
Rural Kibbutzim	9	1,800
Rural Moshavim	32	8,800
Total rural population	**120**	**62,000**
Urban 2,000–9,999	14	57,500
Urban 10,000–19,999	4	63,000
Urban 20,000–49,999	1	25,800
Total urban population	**19**	**146,300**
Grand total	**139**	**208,300**

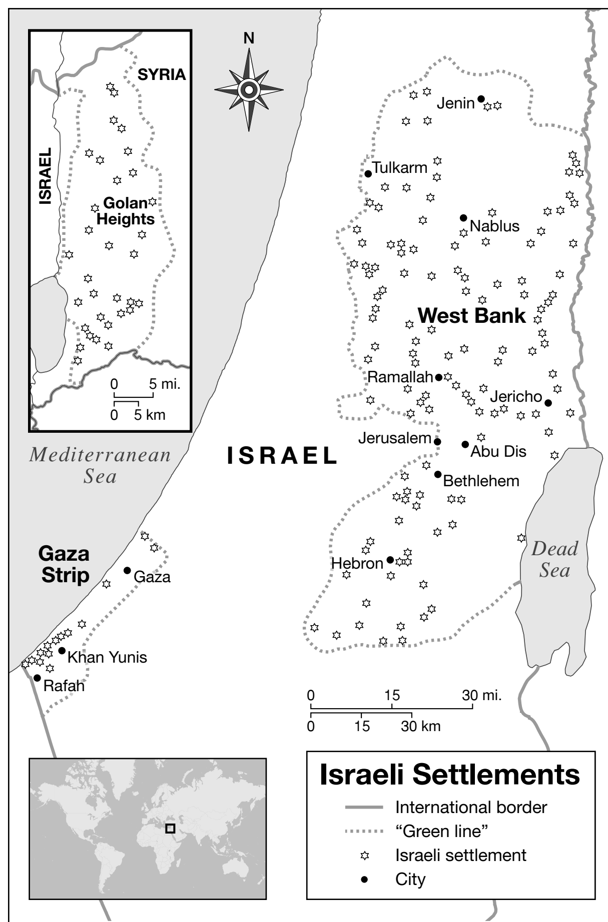
TABLE BY GGS INFORMATION SERVICES, THE GALE GROUP.

Following the Arab–Israel War of October 1973, a new religious nationalist movement, Gush Emunim ("Bloc of the Faithful"), was established with the objective of promoting settlement throughout the West Bank and Gaza. They saw this as a means of extending Israeli control over the whole of the historic Greater Israel ("Eretz Yisrael ha-Shelemah").



Map by XNR Productions, Inc. The Gale Group.

They criticized the Allon plan for being minimalist and too compromising in its territorial claims. Their settlement blueprint was rejected by the Rabin government of the time, but was later accepted in 1977 following the rise to power of Israel's first right-wing Likud government under the leadership of Menachem Begin.

Settlement activity took off vigorously in the early 1980s when the planning regulations and restrictions were lifted to make it easier to create suburban communities as an alternative to agricultural and socially controlled small settlements. Under the slogan of "five minutes from Kfar Saba," Israelis were now able to build detached houses on large land plots which they received at a low cost and, at the same time, retain their places of employment in the Tel Aviv and Jerusalem metropolitan centers. During the 1980s and 1990s, the road and transportation infrastructure linking Israel to the West Bank was improved, thus enhancing the appeal of the region for many Israelis who were attracted to settle there for economic rather than ideological or political reasons.

Following the first National Unity government of 1984, the Israeli cabinet announced a freeze on all new settlement activity. But, despite this and similar announcements by subsequent governments, settlement activity continued unabated, even under the pro-peace administrations of Yitzhak Rabin and Ehud Barak. At the most, there were periods in which no new settlements were constructed, but the expansion and consolidation of existing communities to allow for "natural growth" never ceased. Under the Ariel Sharon administration after February 2001, militant settlers constructed new settlement outposts on their own initiative. These were deemed illegal by the government as a means to differentiate them from the so-called "legal" settlements and were forcibly removed in an attempt to appease international criticism of settlement activity.

The settlements are organized in a system of small towns (some of them, such as Ariel, Emanuel, and Maʿaleh Adumim, consist of over 20,000 inhabitants each) and villages. A system of municipal regional and local councils, similar to that in operation inside Israel itself, caters to their daily needs in the areas of public services, schools, health clinics, and welfare services. This system of local government operates totally independently and separately from the parallel, but much poorer, system that continued to function for the majority Palestinian population of the region.

The establishment of the settlements has resulted in the expropriation of much Palestinian land in both the public and private domain. Israeli high court rulings at the end of the 1970s warned against the use of private land for such purposes, but there are differences of opinion concerning just what is private and what is public land. Under international law, even the use of public land in occupied territories can only be justified for bona fide defensive purposes, not for the sake of civilian settlement activity. Security problems during the Al-Aqsa intifada that broke out in September 2000 led Israel to destroy Palestinian olive groves, orchards, and other agricultural assets in attempts to enhance the safety of the settlers and their families. Similar con-

cerns have also resulted in the construction of bypass and controlled-access roads throughout the region, enabling settlers to reach their homes without having to drive through the Palestinian towns and villages while causing disruptions to the normal movement of Palestinians.

The issue of settlements has been a major point for discussion in all negotiations aimed at bringing an end to the conflict. Most observers agree that any future peace agreement between Israel and the Palestinians based on territorial compromise will necessitate the evacuation and removal of most, if not all, of these settlements. The inconclusive territorial negotiations that accompanied the Oslo Accords either ignored the settlement issue altogether or attempted to redraw the borders in such a way as to include as many settlements on the Israeli side of the border—whether in exchange for territory elsewhere or as out-and-out annexation. The building of a unilaterally imposed security wall begun in 2002 in effect implemented this policy on the ground.

ISRAEL LABOR PARTY

See Israel: Political Parties in

ISTANBUL

Largest city of Turkey; capital of the Byzantine and Ottoman empires.

Istanbul is the only city in the world straddling two continents (Europe and Asia). Its situation at the southern end of the Bosporus Strait and on the Golden Horn (an inlet of the Bosporus bisecting the European side) provides the city with excellent harbors. When the Ottoman sultan Mehmet II conquered the city in 1453, he took the title "Master of the Two Seas and Lord of Two Lands," glorifying his new capital at the junction of land routes from Asia and Europe, and of sea routes from the Black Sea and the Mediterranean (through the Dardanelles Strait).

Istanbul's roots date to a short-lived Mycenean settlement in the second millennium B.C.E. and the foundation of Byzantium as a Megaran colony in the seventh century B.C.E. The city rose to greatness when the Roman emperor Constantine I chose this "New Rome" as his capital in 324 C.E., renaming it Constantinopolis and extending its area over seven hills on the peninsula between the Golden Horn and the Sea of Marmara. The most imposing Byzantine monuments of the city date from the reigns of early emperors who followed Constantine, and throughout its eleven centuries as capital, the city continuously was adorned by fine examples of Byzantine architecture. By the mid-fifteenth century, however, the once mighty Byzantine Empire had shrunk to such an extent that it held only the city and its immediate environs, surrounded on all sides by the rising Ottoman state. Mehmet II conquered the city in 1453 and set about to rebuild and repopulate his new capital. Within a century, Istanbul had a cosmopolitan population that reflected its international status and the multiethnic character of the empire. Of the two Greek names of the city, Kustantaniyye remained an official designation, but the colloquial eis ten polein, Turkified as Istanbul, was firmly established as the city's name.

In the seventeenth century Pera, located on the heights above Galata, became the site of European embassies and merchants' mansions, leading to the Europeanization of the city's municipal administration, architecture, banking, and trading. Greater Istanbul covered a large area beyond the walled city. However, the population was concentrated in the walled city and across the Golden Horn in Galata; fishing villages along the Bosporus became fashionable summering suburbs, expanding with the advent of steam ferry service. Railway lines constructed late in the nineteenth century led to the further development of European and Asian suburbs along the Sea of Marmara. In the last days of the Ottoman Empire, the city and its suburbs had a total population

Istanbul's impressive Blue Mosque was completed in 1616 during the reign of Sultan Ahmet I. The architecture is classic Ottoman, with a perfect proportion of domes and semidomes, and the interior is covered by twenty thousand blue ceramic tiles that give the landmark its nickname. © Rose Hartman/Corbis. Reproduced by permission.

of about 900,000: 560,000 Muslims, 205,000 Greeks, 73,000 Armenians, 52,000 Jews, and several thousand Europeans, according to a 1914 census.

During World War I, the Ottoman capital was defended successfully at the Dardanelles (Gelibolu/Gallipoli). Despite this victory, the city suffered typical wartime deprivations, and after the armistice it was occupied by the Allied powers. It was the only defeated capital to be subjected to occupation, primarily because of its strategic position and the international importance of the Turkish Straits. The Turkish nationalist movement that defeated the occupation was directed from Ankara, then a secondary city on the Anatolian plateau. After victory, the sultanate and the caliphate were abolished (in 1922 and 1924, respectively), and the Turkish republic (founded in 1923) chose Ankara as its capital, because it was both easier to defend against foreign powers and untainted by the Ottoman past. During the occupation, Istanbul experienced an influx of White Russians fleeing Bolshevik rule. Most of these Russians, along with many of the local Greeks and Armenians, left in the early years of the republic. Istanbul became much more Turkish, albeit at the cost of a reduced population. The prewar population level was regained only after 1950, when an explosive rate of growth began. Much of this new growth was due to the migration of the rural poor to the industrializing urban areas. By the 2000 census, Istanbul's population had reached 9,119,135.

With the population explosion, the city has suffered the breakdown of transport, electricity, gas, and water supply. Temporary shantytowns, or *gecekondu*s, gradually have transformed into permanent tenements. In older quarters of the city, graceful wooden houses have given way to blocks of characterless

Istanbul boasts many forms of public transportation, including trams. The tram line, managed by the Istanbul Municipality, was renovated in the early 1990s, and tickets between the tram system and bus system are conveniently interchangeable.

apartments. Nevertheless, this ancient capital of two great empires retains a rich architectural heritage and extraordinary setting, so that Istanbul remains one of the great cities of the world. Two bridges across the Bosporus connect the European and Asian suburbs, and a new business center has developed further to the north. Istanbul has regained its historical role as the region's international trading and financial capital.

UPDATED BY ERIC HOOGLUND

ISTANBUL TECHNICAL UNIVERSITY

Oldest engineering college in Turkey.

Istanbul Technical University (ITU) is one of the oldest engineering colleges in the world; it traces its origins to 1773, when the Ottoman Empire established a military engineering school in Constantinople as part of a modernization effort. In 1884 a separate department in the school was set up for civilian students. That department was transferred to the Ministry of Public Works in 1909 and was spread over several campuses in Istanbul until 1920, when its present campus was established on a hill overlooking the Turkish Straits. After Turkey was proclaimed a republic in 1923, additional departments were added to provide training in railroad construction, electro-mechanics, civil engineering, and architecture. In 1944 the school was reorganized and named Istanbul Technical University. Its eleven faculties offer instruction in thirty-three departments, including engineering, architecture, management, and the sciences. The university has also expanded its programs in research and development.

Lewis, Bernard. *Istanbul and the Civilization of the Ottoman Empire.* Norman: University of Oklahoma Press, 1989.

NIYAZI DALYANCI

ISTANBUL UNIVERSITY

Largest and oldest public university in Turkey.

Founded in 1900 and reorganized in its present form in 1933, Istanbul University comprises the faculties of letters, science, law, economics, forestry, pharmacy, dentistry, political science, business administration, veterinary science, engineering, and two faculties of medicine, as well as schools of fisheries, journalism, paralegal studies, and tobacco

specialist education. With 3,500 teaching staff and 60,000 students (46 percent female) in 2002, it is Turkey's biggest university.

Istanbul University sometimes claims descent from the complex of eight madrasa colleges (religious schools) endowed by Mehmet II soon after the conquest of Constantinople (now Istanbul) in 1453. However, a university in the European sense was first proposed in the era of Tanzimat, the Ottoman Empire's reform period in the 1860s. After some abortive attempts, the university was launched in 1900, incorporating newly established faculties and colleges founded in the previous two decades. After the establishment of the Republic of Turkey in 1923, the staff as well as the programs of Istanbul University were suspected in Ankara, the new capital, of resistance to republican reform. Finally, in 1933 a complete overhaul of the academic programs and a purge of the staff brought it in line with republican thinking. This era of reestablishment was facilitated by the influx of large numbers of German and other European scholars, many of them Jewish, fleeing Nazi intimidation or persecution. The refugee scholars were especially active in the fields of law and economics, but other programs, including Islamic studies, benefited from a substantial European presence.

In spite of the government's attempts to promote Ankara University during the 1950s, Istanbul University remained the country's biggest and most prestigious academic establishment. Its academic staff and students were in the forefront of political protests in the late 1950s and during the 1970s. Its legal experts were influential in the preparation of the 1961 constitution, promulgated after the 1960 military coup. Its economists have been champions of Turkish membership in the European Union since the mid-1980s.

ISTIQLAL PARTY

This entry consists of the following articles:

ISTIQLAL PARTY: LIBYA
ISTIQLAL PARTY: MOROCCO
ISTIQLAL PARTY: PALESTINE
ISTIQLAL PARTY: SYRIA

ISTIQLAL PARTY: LIBYA

Political party of Tripolitania, Libya, 1948–1952.

Istiqlal (Independence party) was founded in 1948 by Salim al-Muntasir, former leader of the United National Front of Libya, from which many members were drawn. One of several political parties that briefly flourished under the British military administration at a time of intense debate about the future of Libya, the Istiqlal's influence belied a small following. It came under the patronage of a powerful lobby advocating renewed Italian rule in Tripolitania, activity the British authorities eventually suppressed. The party was a divisive element in Tripolitanian politics at a time when most of the province's leaders were trying to make a coherent case for Libyan unity and independence. It was one of four Tripolitanian political groups whose views on Libyan independence were heard by the United Nations in 1949. Like all other officially sanctioned parties, the Istiqlal was suppressed as a result of the disturbances that followed the first postindependence elections of February 1952.

JOHN L. WRIGHT

ISTIQLAL PARTY: MOROCCO

Leading party in the Moroccan nationalist movement, 1946–1956, and chief competitor of the monarchy during the first postindependence decades.

Istiqlal was founded in 1943 by the core leadership of the banned Parti National. Headed by Ahmed Balafrej and Allal al-Fasi, it drew its strength from the traditional bourgeois elites of the northern cities, particularly Fez, the emerging national bour-

geoisie, and more leftist urban professionals. Its charter, issued on 11 January 1944, demanded independence from France with a constitutional monarchy under the sultan. The publication of the charter and the resulting arrest of Balafrej provoked serious urban unrest in January and February 1944. Fasi returned to Morocco in 1946 after nine years in Gabon and assumed undisputed leadership of the party. By 1950 Istiqlal's membership was 100,000. After 1951 Istiqlal supported the sultan against the French authorities. In 1952 the party was suppressed following riots in Casablanca, but it played an important role in the negotiations for independence (1953–1956).

Istiqlal assumed a dominant position in the initial postindependence Moroccan governments, but internal splits and competition from the palace prevented it from establishing lasting dominance. In 1959 Istiqlal was weakened by the secession of some of its more dynamic leaders (for example, Prime Minister Abdullah Ibrahim, Mehdi Ben Barka, Mahjoub Ben Seddiq, and Muhammad al-Basri), who formed the Union Nationale des Forces Populaires (UNFP), which favored far-reaching social reforms and vigorous development programs through nationalization of key economic sectors.

The monarchy refused to acquiesce to Istiqlal's efforts to reduce its powers. From the end of 1962 to 1977, King Hassan II repelled challenges to his rule and consolidated his political supremacy. Like the other opposition parties, Istiqlal was harnessed into service by Hassan during the mid-1970s in support of his Western Sahara policy. In Istiqlal's case, that was hardly unexpected, since it had been the original standard-bearer of the claim of historical rights to "Greater Morocco," which in the doctrine's purest form included all of Mauritania and parts of Algeria, Senegal, and Mali, as well as the Spanish enclaves of Ceuta and Melilla.

Fasi died in 1974 while in Romania to explain the king's Western Saharan policy; Muhammad Boucetta replaced him as secretary-general. Boucetta and other Istiqlal leaders were co-opted into the government in 1977, but following the 1984 elections, Istiqlal returned to opposition ranks. Although no longer the leader of the nationalist movement, Istiqlal maintained a significant place in the political landscape, thanks in part to its affiliated labor confederation, the Union Générale des Travailleurs Marocains (UGTM), and its influential daily newspapers, *Al-Alam* and *L'opinion.* In May 1992, with the Union Socialiste des Forces Populaires (USFP), the Parti du Progrès et du Socialisme (PPS), the rump UNFP, and the tiny Organisation pour l'Action Démocratique et Populaire (OADP), Istiqlal formed the "Democratic Bloc" *(al-kutla)* to press for constitutional and electoral reform. Istiqlal won forty-three seats in Parliament in the direct balloting portion of the 1993 elections, a gain of nineteen seats from 1984, but only eight seats in the indirect portion of the vote, a decline of nine seats. Along with the USFP, Istiqlal was now roughly equal in size to the pro-palace Union Constitutionelle and the Mouvement Populaire as the largest parliamentary factions. They refused the terms offered to them for joining a new government, and thus remained in opposition. In the 1997 elections the Istiqlal received nearly the same number of votes as the leading vote-getter, the USFP, but owing to the vagaries of the system, declined to thirty-two seats. Charging widespread fraud, the party's congress

The Istiqlal Party was formed by Moroccan nationalists in 1943 and supported Sultan Muhammad V in his quest to bring self-rule to the country. The sultan was deposed in 1953, but the French allowed him to return to power in 1955, and the Istiqlal Party was able to hold its first public meeting in Rabat two months later. © Bettmann/Corbis. Reproduced by permission.

called for the election's annulment and rejected participation in any new government. Two months later, however, the USFP was chosen to lead the new government, and the Istiqlal, under the newly elected secretary-general, Abbas al-Fasi, joined the forty-one-member cabinet, receiving six posts, with Fassi becoming minister of health. The USFP-Istiqlal relationship in government was frequently rocky. In the 2002 elections, the party increased its strength in parliament to forty-eight seats, and eight cabinet seats in the new government headed by the king's loyalist Driss Jettou. Fasi's new position was minister of state without portfolio. However, many in the party were disappointed with the party's junior status in the government, and unhappy with Fasi's leadership. One focal point of internal opposition was led by Abd al-Razzak Afilal, the leader of the UGTM.

Istiqlal Party: Palestine

Important political party established in Palestine, August 1932.

The party's creation was spurred by the Husayni–Nashashibi split, which had almost paralyzed the Palestinian national movement. Its founders, most of whom hailed from the Nablus area, called for the adoption of new methods of political action, including noncooperation with the British Mandate authorities and nonpayment of taxes. The party also called for total Arab independence, pan-Arab unity, the abrogation of the Mandate and the Balfour Declaration, and the establishment of Arab parliamentary rule in Palestine.

After reaching its maximum degree of influence, especially among the young and the educated, in the first half of 1933, the party began to decline very rapidly. Among the factors responsible for its decline were the active hostility of the Husayni camp, the lack of financial resources, and the differences between the pro-Hashimite and pro-Saʿudi elements within the party. A distinctive mark of the party was its espousal of the idea that British imperialism was the principal enemy of the Palestinians; thus the party urged them to focus their struggle not simply on Zionism, but on British colonialism as well.

Istiqlal Party: Syria

The Independence party, officially founded in Damascus on 5 February 1919.

Also known as Hizb al-Istiqlal al-Arabi (Arab Independence party), the party was established after the demise of the Ottoman Empire and during the Arab kingdom of Syria under Faisal I ibn Hussein. Its core members were drawn from the committee of the secret Arab society al-Fatat (Young Arab Society). The founding members of the Istiqlal were Saʿid Haydar, Asʿad Daghir, Fawzi al-Bakri, Abd al-Qadir al-Azm, Salim Abd al-Rahman, Faʾiz al-Shihabi, and Muhammad Izzat Darwaza, its secretary who was at the same time the secretary of al-Fatat. They decided to come into the open and form a political party under a new name. Al-Fatat continued to exist as the mother party of the Istiqlal, which was considered its spokesman. Members from the other Arab secret so-

ciety, al-Ahd (the Covenant), also joined the Istiqlal. Party adherents, known as al-Istiqlaliyyun (the Independentists), were active in the towns of Syria, where the party had branches during the early years of the French Mandate. Istiqlal also included Palestinian members, who were active against the British Mandate authority in Palestine, 1923–1948.

Istiqlal called for Arab unity and independence; it was secular rather than religious. Faisal had supported it financially and politically while he ruled Syria (1918–1920). The party supported the Great Syrian Revolt of 1925 and party members supported the Palestine Arab Revolt of 1936–1939. It is not known whether the Syrian party was still functioning in 1936.

ITALY IN THE MIDDLE EAST

The Italian presence in North Africa loomed large in the nineteenth and twentieth centuries.

Modern Italian dreams of an empire along the southern rim of the Mediterranean long predated the achievement of Italian reunification. As early as 1838, Giuseppe Mazzini, the great theoretician of the *Risorgimento,* had argued that Tunisia, the key to the central Mediterranean, would have to belong to Italy. By 1861, with the first achievement of the *Risorgimento* of an independent Italian kingdom, some were already looking toward the recovery of former territory from the Roman Empire and for a Mediterranean role for the new nation. By the mid-1860s, there were public expressions of concern over the danger of Italy being excluded from the region altogether by powers such as France and Great Britain.

The opening of the Suez Canal in 1869 and the recovery of Papal Rome the following year spurred Italian mercantilist and classical dreams. On the one hand, they wished to benefit from the commercial advantages offered by empire, on the other, many Italians wished to re-create the greatness of classical Rome. The latter sentiment was particularly acute as far as Tunisia was concerned, where there were already 25,000 Italians in the Regency by 1881. Furthermore, Italian aspirations had been lulled into a false sense of security by a twenty-year-long treaty with the Beylik after 1868. The French annexation of Tunisia as a protectorate in 1881 came, therefore, as a very unpleasant surprise.

As a result, Italy rushed to join other European powers in trying to carve out a colonial empire in Africa during 1882, as part of the scramble for Africa. Italian troops landed at Assab, on the Red Sea coast, and in 1882 began the process of creating a colony in Eritrea—an attempt that was to last fourteen years—and of establishing its presence in Somalia. Italian attempts to occupy Ethiopia, however, were to be unsuccessful, culminating in the catastrophic Italian defeat at Adwa in 1896.

By the start of the twentieth century, however, Italian self-confidence had been restored and attention was being directed toward North Africa once again. The new wave of Italian colonial interest was signaled by the Italian–French agreement of December 1902, which recognized Italian interests in Libya. Peaceful penetration began thereafter, as Italian commercial houses and banks began to appear along the Libyan coast. In 1911, Italy declared war on the Ottoman Empire in Libya and invaded the coastal regions.

A concerted intellectual and journalistic effort conducted in Italy persuaded public opinion that a colony in Libya would be a worthwhile endeavor: Not only would it re-create the dream of imperial Rome (frustrated by France's annexation of Tunisia in 1881) but it was believed that Libya was potentially very fertile. It was argued as well that Tripoli was still the crucial endpoint of trans-Saharan trade and, thus, a source of immense wealth. Such arguments were opposed by the socialists, who saw the national crusade for Libya as a diversion from the essential task of revivifying Italy itself.

In reality, however, there were immense pressures building up inside Italy for the development of settler colonies as demographic growth threw into stark relief the problems faced by poverty-stricken regions. Only Libya was left as a potential destination for Italy's excess population, apart from migration to the Americas. As a result, the illusory claims of journalists over the potential offered by Libya were reinforced by the hard realities of domestic economic crises.

The difficulties of establishing a firm grasp on Libya, after the 1911 invasion, were revealed by the two Italo–Sanusi wars, and it was only in 1932 that the new colony was declared pacified. Italy soon discovered that Libya's agricultural potential was a myth, and the new colony turned out to be a constant drain on the metropole's resources. By 1942, 110,000 Italians resided in Libya, of whom 40,000 were involved directly in agriculture; the development of an infrastructure and of colonial settlement had cost the vast sum of 1.8 billion Italian lire, and Italy had little to show for its colonial experiment.

Nonetheless, Libya had been molded into the Fascist vision, which, during the 1930s, had in addition sought to avenge the defeat of Aduwa in Ethiopia. The definitive military pacification of Libya had occurred directly after the Fascists had come to power in Rome, in October 1922. Libya was also seen by the Fascist Party as an ideal testing ground for their ideas of racial development, where Libyans were to become Italian Muslims and Italy, under Mussolini, would become the protector of the Muslim world. All these ambitions were to be destroyed by Allied victory in Libya in 1943.

The one other major Fascist experience in Africa was to be the Italian attempt, once again, to conquer Ethiopia. Despite Italian military superiority, the conquest was never completed. It also led to Italy's ostracism by the League of Nations. Finally, the Italian presence there was ended during World War II by British troops, who restored the emperor, Haile Selassie Miriam, to his throne.

Italy's African experiences have, however, left some traces on the modern scene. In 1935, France offered concessions over Libya's southern international border as part of a complex attempt to satisfy Italian claims in Tunisia and in Nice—as well as trying to prevent Italy from joining Nazi Germany as an ally. Although the proposal was never realized, it still remains to bedevil modern international relations, as a result of the competing claims between Libya and Chad to the Aozou Strip.

See GLOSSARY

İZMIR

Third largest city in Turkey and seaport on the Aegean Sea.

İzmir (formerly known in English as Smyrna) is situated at the head of a long bay. With mountains in the Aegean region of western Anatolia stretching east to west, the river valleys from the Anatolian plateau leading to the Aegean Sea allow easy communication with a considerable hinterland. Due to these advantages, the city has been an important trading center over a long period of time: Its origins go back to the third millennium B.C.E., and it maintained its prominence during Hittite, Greek, Roman, and Byzantine domination. During the fourteenth century, İzmir was held by the Turkish Aydin *Beyliği* (emirate), and when Aydin—like other Anatolian Turkish emirates—was incorporated into the rising Ottoman state around 1400, İzmir became an Ottoman city.

During the early nineteenth century, İzmir's European trade was disrupted first by the Napoleonic Wars and then, in the 1820s, by the war of Greek independence. However, beginning in the 1830s, industrializing Europe's demand for Anatolian raw cotton and wool soon restored trade. Dried fruits (raisins and figs), tobacco, olive oil, and animal hides were also exported at unprecedented levels. Its population increased considerably, as the city attracted not only foreigners but also an influx of population from both Anatolia and the Aegean islands. The first railroad to be built in Anatolia was laid between İzmir and Aydin to facilitate the exports of its rich hinterland. Just before World War I, İzmir and its vicinity had a total population of 210,000, of which 100,000 were Muslims, 74,000 Greeks, 10,000 Armenians, 24,000 Jews, and 2,000 Europeans.

Turkey's port city of İzmir, known before 1923 as Smyrna, a name derived from an ancient myth involving Aphrodite and the daughter of the king of Cyprus. Excavations in 1948 uncovered mudbrick defense walls that suggest İzmir was already a city-state as early as the eighth century B.C.E. © YANN ARTHUS-BERTRAND/CORBIS. REPRODUCED BY PERMISSION.

After the defeat of the Ottoman Empire in 1918, the victorious allies allowed Greek occupation of the city and its hinterland. But Greek occupation sparked a nascent Anatolian resistance, and the Turkish war of independence ended with the recapture of İzmir in September 1922. The city was devastated by a huge conflagration as the Greek forces and population withdrew to the Aegean; its burgeoning industry was wrecked and its foreign trade sharply declined. The new Turkish Republic, however, was determined to restore İzmir's prominent commercial role and held its first national congress there in 1923 to set economic policy. Although İzmir became a much more Turkish city than it had been in Ottoman times, Muslims immigrating from Crete, the Aegean islands, and Salonika replaced the Greek population and helped preserve a relatively cosmopolitan atmosphere; the city quickly regained its historic role as Turkey's leading exporter and it was second only to Istanbul in imports.

Since the 1950s, İzmir has experienced a significant degree of industrialization, establishing strong automotive and food processing sectors and modernizing its traditional textile production. In 2002, it produced 13.5 percent of Turkey's gross domestic product and employed 9.7 percent of the coun-

try's total labor force. İzmir has grown faster than any other Turkish city except Istanbul; its population reached 3,370,866 in 2000. In addition to its commercial importance, İzmir serves as the focus of a hinterland rich in classical and Turkish cultural heritage. Among the nearby sites of importance are Ephesus, Pergamum, and Sardis.

UPDATE BY BURÇAK KESKIN-KOZAT

İZMIR ECONOMIC CONGRESS

Turkish economic summit meeting, 1923.

Convened in February 1923 during a recess in the Lausanne Peace Conference, the İzmir Economic Congress consisted of more than 1,100 Turkish delegates representing agriculture, trade, artisans, and labor, as well as top political leaders, including Mustafa Kemal Atatürk. The resolutions adopted were referred to as the Economic Pact *(Misak-i Iktisadi),* signifying that the government considered them as important as the previously promulgated Turkish National Pact *(Misak-i Milli),* which enunciated the goal of political independence. These resolutions proclaimed the intention of developing the nation's economy by relying on the free activity of Turkish entrepreneurs. Foreign capital was to be welcome provided it adhered to Turkish law. Monopolies were opposed. Thus, the congress inaugurated a phase of reliance on private enterprise. This phase ended after the consolidation of the republican regime and the onset of the worldwide depression in the late 1920s. It was replaced by a concerted policy of state initiatives on the economy, including ownership and operation of major enterprises.

J

JABABDI, LATIFA

[1955–]

Moroccan women's rights advocate; founder of L'Union de L'Action Feminine (FUA).

Latifa Jababdi was born in Tiznit of Berber heritage. She received a degree in sociology and feminist studies from Mohammed V University in Rabat, and in 2003 was preparing a doctorate in sociology at the Université du Québec à Montréal, Canada, on the integration of women in development.

At the age of fourteen Jababdi joined the Party of Liberation and Socialism (PLS) and took part in the student movement in the 1960s that campaigned for greater democracy in Morocco. This group was associated with the New Left, and Jababdi herself became a member of the PLS, the Communist Party of Progress. She was condemned in 1977 for threatening state security and spent two-and-a-half years in prison with other well-known Moroccan feminists such as Fatna el-Bouih because of her participation in the illegal Marxist-Leninist group "March 23."

In 1984 Jababdi ran for office, but no women were elected. Disappointed, she went on to serve as editor of the *8 Mars* newspaper, named after International Women's Day (8 March, or *Thamaniya Mars*) and written by and for Moroccan women interested in feminist issues. She later founded L'Union de L'Action Feminine (FUA) in 1987. The FUA has seventeen offices throughout Morocco and one in Paris. It offers literacy classes and workshops, seminars, festivals, and publications such as *8 Mars.*

In 1993 Jababdi launched a campaign to change the *mudawana,* the female-status code of Moroccan family law that reduces all women to legal minors. She collected one million signatures for a petition given to King Hassan II requesting the abolition of marital tutorship and polygamy, recognition of women's full maturity at age twenty-one, gender equality in marriage, and judicial divorce. The king convened a committee of women to examine these issues further. Revisions to the *mudawana* concluded that women could no longer be repudiated by their husbands without their knowledge. No sweeping changes to the *mudawana* have been made, but

Moroccans hope that Muhammad VI will soon do so.

JABAL AL-AKHDAR, LIBYA

Eastern "green mountain" region.

An area of Libya in the hinterland of the eastern city of Benghazi, with mountains of nearly 3,300 feet (1,000 m). It is one of the few parts of Libya with relatively good rainfall (98–118 in/yr; 250–300 cm/yr) but with difficult terrain and soil conditions, characterized by grain cultivation with modest yields and livestock grazing.

JABAL AL-AKHDAR, OMAN

The highest and best-watered region in the western Hajar Mountains of Oman.

About ninety-five miles southwest of Muscat, the highest peak of the Jabal al-Akhdar ("green mountain" in Arabic) region is Jabal Shams, which rises to nearly 10,000 feet. The region received its name from the relatively abundant vegetation found on its slopes and valleys. Because it receives up to twenty-eight inches of rain per year, and portions of it have suitable soil in its valleys, plateaus, and man-made terraces, a variety of agricultural products can be grown in Jabal al-Akhdar, including wheat, legumes, and a variety of fruits such as grapes, pomegranates, and peaches. Irrigation is provided by the *falaj* system, an ancient technique using channels to direct water from sources underground to crops some distance away. The main region of habitation is the Sayq plateau. The seaward side of Jabal al-Akhdar faces the Gulf of Oman, and the main towns are al-Rustaq, al-Awabi, and Nakhl. On the interior-facing slopes lie Nizwa, Manah, and Izki. Jabal al-Akhdar is part of the once nearly inaccessible area of Oman proper to which Muslim minority groups such as the Ibadi sect fled as a result of conflicts in Arabia during the late seventh and early eighth centuries C.E. After converting much of the local population, Ibadi imams rose to power in 751 C.E., and Jabal al-Akhdar remained a stronghold of the Ibadi imamate until 1959.

JABAL AL-KHALIL

Group of mountains constituting the southernmost part of the Judean mountains, surrounding the town of Hebron (Khalil), about twenty miles south of Jerusalem.

Jabal al-Khalil forms the tallest part of the mountain ridge extending north to Tiberias. The ridge was where most villages of Palestine were concentrated during the nineteenth century. While agricultural cultivation increased under Jordan's rule, between 1948 and 1967, many villagers of the relatively congested and unindustrialized Jabal al-Khalil migrated for work to the east bank of the Jordan River. Since the 1967 Arab-Israel War, Ja-

bal al-Khalil has been part of the Israeli-occupied West Bank and the site of a growing number of Israeli settlements, such as Kiryat Arba.

The Oslo Accords, signed on 13 September 1993, provided for a transitional period not exceeding five years to Palestinian interim self-government in the Gaza Strip and the West Bank. On 15 January 1997 a joint protocol provided for the redeployment of Israeli troops and the handing over of 80 percent of the Hebron area to the Palestinian Authority. The area remained, however, in continuous strife and instability.

ELIZABETH THOMPSON
UPDATED BY YEHUDA GRADUS

JABAL, BADAWI AL-

[1905–1981]

Pen name of Muhammad Sulayman al-Ahmad, a Syrian poet of high reputation in the Arab world.

Badawi al-Jabal was born in the village of Difa in the district of al-Haffa, in Latakia province, to Sulayman al-Ahmad, the head of a distinguished Alawite family. His pen name was given to him, according to the compiler of his poetry, Midhat Akkash, by the editor of the Damascus newspaper *Alif Ba,* apparently in 1920. The editor liked the poetry, but because the poet was not well known, the editor agreed to publish the poetry under the pseudonym of Badawi al-Jabal, a reference to the cloak *(aba'a)* and the headband *(iqal)* the poet wore at the time—like a *badawi* (bedouin) coming from al-Jabal (the Alawite mountain).

Badawi al-Jabal practiced politics and poetry at an early age. As a nationalist, he joined the National Bloc, and later on the National Party. He was imprisoned by the French mandatory authorities in Syria, and in 1939 he sought refuge in Baghdad. While there, he taught Arabic at the University of Baghdad and also supported the revolt of Rashid Ali al-Kaylani against the British in 1941. Upon returning to Syria, he was apprehended by the French authorities in 1942. Later on, he was twice elected to parliament, in 1943 and 1947. In the 1950s, he became minister of health. The defeat of the Arabs in the 1967 Arab–Israel War was a great shock to him; he wrote much poetry inspired by it. He adhered to the old school of Arabic literature and poetry, which upholds the classical mode. His poetry was also influenced by a mystical orientation. Selections from his poetry were published in Damascus in 1968 by Midhat Akkash. A full anthology appeared in Beirut in 1978 with an introduction by Akram Zuʿaytir.

JABAL DRUZE

A volcanic massif in southern Syria, between the plain of Hawran and the Eastern desert.

This mountain region has a curved, conelike surface, its highest peak rising to 5,915 feet (1,803 m). On the west, the basalt upland is surrounded by lava, which tapers into the fertile plains of Hawran and Jawlan, famed since Roman times for their abundance in grain. The western slopes of the mountain receive an average annual rainfall of about 11.7 inches (300 mm). The soil is especially suitable for vine and fruit trees.

The term *Jabal Druze* was first applied to the Shuf region of Mount Lebanon where the people of the Druze community predominate. Under the Mamluk sultanate (1260–1517), some Druze, suffering from Mamluk punitive expeditions against them, took refuge in Jabal Hawran. After the Qaysi–Yamani war at Ayn Dara in Lebanon in 1711, the Yamanis, most of whom were Druze, who were overpowered in the fighting, fled to Jabal Hawran, where they formed the bulk of the Druze community. Later on, more Druze fled from Mount Lebanon to the Hawran in the wake of the 1860 events, when punitive measures were taken against them. Others went there during World War I to avoid Ottoman Empire conscription and the famine. Because of this considerable Druze settlement in Jabal Hawran, it became known in the latter part of the nineteenth century as Jabal Druze. In the 1930s, Jabal Druze was also referred to as Jabal al-Arab to avoid the sectarian term of *Druze* and also in recognition of the

nationalist role played by the Druze, headed by Sultan al-Atrash, in leading the Great Syrian Revolt against the French (1925–1927).

JABAL NABLUS

Group of low mountains in the Nablus region.

Located about 30 miles (48.3 km) north of Jerusalem, Jabal Nablus forms the northern edge of the Central Highlands that extend south to Hebron (Arabic: al-Khalil). The region, dotted with hillside agricultural villages, has been known particularly for its olives and olive oil soap. For much of the Ottoman era, Jabal Nablus was ruled as part of Damascus province, and dominated for centuries by the Tuqan family. The area became known in Palestinian folklore as Jabal al-Nar (Mountain of Fire) for its resistance to Britain's rule in the mandate period (1922–1948).

JABAL SHAMMAR

A mountainous region in northwestern Saudi Arabia.

Named for the Shammar tribal confederation, Jabal Shammar consists of the Aja Mountains, which are mainly granite; the basaltic Salma Mountains; the high sand dunes of al-Nafud; and scattered oases. A mixed economy of pastoral nomadism, oasis agriculture, and urban crafts and trade prevailed until the modern era. The region's principal city, the oasis of Haʾil, has been for centuries an important stopping place for persons traveling between the holy cities of Mecca and Medina and the towns and cities of Iraq and Iran. Hail continues to be an important regional center of transportation, commerce, and administration, as well as one of the principal agricultural areas in Saudi Arabia.

JAʿBARI FAMILY

Prominent Palestinian family from Hebron.

The Jaʿbari family dominated political posts in the Hebron district from the 1940s to the 1970s. They rose to prominence in Palestinian politics through their support of Jordanian rule in the West Bank. In the 1970s and 1980s, the family's political support declined as their cooperation with the governments of Israel and Jordan came under increasing criticism.

ELIZABETH THOMPSON

JABARTI, ABD AL-RAHMAN AL-
[1753–1825]

Egyptian historian and scholar.

Abd al-Rahman al-Jabarti is best known as the foremost Egyptian Muslim chronicler of Napoléon

Bonaparte's invasion and occupation of Egypt from 1798 to 1801. His family was originally from the village of Jabart on the Red Sea coast, but al-Jabarti himself was born in Cairo to a wealthy family whose economic base included *iltizams* (tax farms) and a *waqf* (religious endowment). Both he and his father were educated at al-Azhar University.

Al-Jabarti's studies included medicine and arithmetic, but his main scholarly activity was writing histories of Egypt. His principal works were *Ajaʾib al-Athar fi al-Tarajim wa al-Akhbar* (Wondrous seeds of men and their deeds), *Muzhir al-Taqdis bi Dhahab Dawlat al-Faransis* (The demonstration of piety in the demise of French society), and *Tʾarikh Muddat al-Faransis bi Misr* (History of the French presence in Egypt).

There is debate over whether *Tʾarikh Muddat al-Faransis* is an earlier version of *Muzhir al-Taqdis.* Both are short works dealing only with the period of French occupation. *Tʾarikh Muddat al-Faransis* appears to be an eyewitness account of the events, probably written in 1798; *Muzhir al-Taqdis* was probably completed in 1801. *Ajaʾib* is a longer work covering Egyptian history from 1688 to 1821 in four volumes. There are also questions about the relative dating of the first three volumes of *Ajaʾib,* which include the events of the French occupation, and *Muzhir al-Taqdis.* The parts of *Ajaʾib* relevant to the French occupation are now thought to have been completed in 1805 or 1806, after *Muzhir al-Taqdis.* The issue of the relative dating of the two works is considered important because *Muzhir al-Taqdis* is more critical of the French than *Ajaʾib,* which, if it were indeed written after *Muzhir al-Taqdis,* suggests that it could have been a "revisionist" work reflecting the real opinions of al-Jabarti, as opposed to "official" versions of the events related in the other works.

Although al-Jabarti is a key figure in late eighteenth- and early nineteenth-century Egyptian history, historians have reevaluated the period itself. In particular, they question the idea that the French invasion marked the definitive onset of modernity in the Middle East. Both historians Peter Gran and Kenneth Cuno argue, from otherwise different perspectives, that the French invasion is best understood as an event in the larger processes of Egyptian history. In the same vein, the nature of al-Jabarti's histories has been reexamined. Jack Crabbs, for example, argues that al-Jabarti was an outstanding, but typical, medieval Egyptian historian who happened to have recorded extraordinary events. In contrast, Gran claims that al-Jabarti's accounts of the French invasion, and his historiography in general, were cultural manifestations of a nascent capitalist transformation already underway before the first European attempts to colonize the region. But aside from such issues, there is general consensus that al-Jabarti's histories were the best account of the French invasion from an Egyptian or Arab perspective, and generally above the standards for accuracy and detail common in late Ottoman historical writing. Al-Jabarti remains one of the principal sources for historians interested in early modern Egypt.

WALTER ARMBRUST

JABHA AL-WATANIYYA, AL-

Tripolitanian nationalist movement.

The political movement, al-Jabha al-Wataniyya (United National Front), was established by Tripolitanian notables during the British military administration of Tripolitania after World War II to oppose the return of Tripolitania to Italian trusteeship. Instead they advocated the resolution that eventually prevailed: the independence of all the provinces of Libya together under the leadership of the amir of the Sanusi order.

See also SANUSI ORDER.

LISA ANDERSON

JABOTINSKY, VLADIMIR ZE'EV
[1880–1940]

Founder and leader of Zionism's Revisionist movement.

Vladimir Ze'ev Jabotinsky was a man whose talents, charismatic personality, and Revisionist movement attracted a large and passionate following and polarized Zionism. Born in Odessa on 18 October 1880, he studied law in Switzerland and Italy. He became a journalist at a young age, serving as a correspondent for Russian dailies writing under the pseudonym "Altalena." He was a prolific writer and essayist in several languages. He wrote the historical novel *Samson the Nazarite* (1926) as well as numerous short stories, poems, songs, plays, and political and autobiographical tracts. He translated Hebrew poetry into Russian and translated Dante Alighieri's *Inferno* into Hebrew, and he was the author of Hebrew dictionaries and textbooks. He continued his literary work even as he became a major political leader.

Zionist leader Jabotinsky promoted an assertive and nationalistic approach to the rebuilding of the Jewish homeland. In 1925, Jabotinsky formed the Union of Zionist Revisionists, which advocated massive immigration to form a Jewish state on both sides of the Jordan River. © Government Press Office (GPO) of Israel. Reproduced by permission.

Following the Kishinev pogroms of 1903, Jabotinsky became a leading figure in Russian Zionism and a strong advocate of Jewish self-defense. With the onset of World War I, he sided with Britain and lobbied for the creation of a Jewish Legion within the British Army. He saw the Legion as a means for furthering the Zionist cause by linking it to British aspirations in the Middle East. The creation of the Legion was announced in 1917, and in 1918, Lieutenant Jabotinsky entered Jerusalem with his Legionnaires as part of General Edmund Allenby's army. To his dismay, Britain disbanded the Jewish Legion at war's end. Jabotinsky helped lead the Yishuv's resistance to Arab rioters in Jerusalem in April 1920, and following the riots he was arrested by the British and sentenced to fifteen years in prison. After intense lobbying by the Zionist leadership, High Commissioner Herbert Samuel granted amnesty, and upon Jabotinsky's release from jail he received a hero's welcome in the Yishuv.

From 1921 to 1923, Jabotinsky served as an increasingly controversial member of the Zionist Executive. He publicly criticized official Zionist policy for being overly moderate in pursuit of Zionist goals. In January 1923, he resigned from the Executive. From this point onward he would be a polarizing figure, adored by his followers and despised by his detractors. Jabotinsky had long demanded that the World Zionist Organization (WZO) openly declare the final aim of Zionism to be the establishment of a Jewish state with a Jewish majority on both sides of the Jordan River, to be facilitated by massive, unlimited immigration. According to Jabotinsky, Zionism should return to the grand political vision of Theodor Herzl and reject the incremental Zionism embraced by Chaim Weizmann and the socialism of the Labor movement. He also wanted the Mandate to be "revised" to its original, pre-1922 status that included Transjordan as part of Palestine. These demands became the platform of Revisionist Zionism.

The Revisionist movement was composed of three main organizations, all headed—at least symbolically—

by Jabotinsky: a political party, a youth movement, and an underground military organization. Jabotinsky founded the party, the Union of Zionist Revisionists (ha-Histadrut ha-Zionit ha-Revisionistit, or ha-Zohar), on 25 April 1925 in Paris. He led the party until his death. Betar (Brit Trumpeldor) was Jabotinsky's youth movement. It began its activities in Riga in 1923. Betar's primary emphasis was on formal military training and discipline. Jabotinsky defined Betar's values and structure to the smallest details, wrote its charter and anthem, designed its brown-shirt uniform, and served as its spiritual and organizational leader. Many Betarim, including Menachem Begin, eventually made their way into the Irgun Zvaʾi Leʾumi, the militant underground founded in 1937 and inspired by Jabotinsky's ideas and positions. Although Jabotinsky was technically its "supreme commander," he was able to exert only limited control over the Irgun from its inception.

Jabotinsky believed that the Arabs would never accept the Zionist project, and he proposed that an "iron wall" be constructed to drive home to them the inevitability of the Jewish state. The British accused the Revisionists of provoking the Arab riots of 1929, and Jabotinsky was barred from reentering Palestine. From 1929 until his death in 1940, he would never again set foot in the country, a fact that greatly hindered the success of his movement in the Yishuv. But despite his strong criticism of British anti-Zionist policies, Jabotinsky maintained a pro-British orientation. He believed that Zionist goals meshed with Britain's own interests and that once the British were convinced of this they would live up to the promises of the Balfour Declaration and the Mandate.

Jabotinsky tried but failed to get the WZO to adopt the Revisionist program at the biannual Zionist Congresses. He denounced Labor's call for class struggle and argued that Zionism should focus on the needs of the Jewish nation in its entirety, and everything else, including class and the individual, should be subordinated to the nation. His rhetoric was often similar to Benito Mussolini's and his followers were denounced by Laborites as "Jewish fascists." The animosity between Revisionists and Labor Zionists occasionally led to physical clashes, and in October 1934, Jabotinsky and David Ben-Gurion met in London to discuss a rapprochement. The resulting accords were angrily rejected in a Labor referendum in March 1935. In April, Jabotinsky and his party withdrew from the WZO and founded the New Zionist Organization (NZO). Following this act, support for Revisionism declined within the broader Zionist movement.

Jabotinsky died on 4 August 1940 while visiting a Betar camp in New York. Many of his positions that were rejected as "extremist" during the 1920s and 1930s became part of mainstream Zionism by the 1940s, including the open demand for a Jewish state with a Jewish majority and unlimited immigration. Jabotinsky was the intellectual and political father of the Zionist right. Begin called himself "Jabotinsky's disciple," although the two men openly disagreed on tactics. Jabotinsky's territorial maximalism and rejection of any partition of Eretz Yisrael can be found in several contemporary Israeli parties and movements.

PIERRE M. ATLAS

JABR, SALIH

[c.1896–1957]

Iraqi politician.

Salih Jabr was born in al-Nasiryya, in southern Iraq, to a Shiʿite Muslim family of limited means. He learned to speak Turkish early in life. During the

British occupation of al-Nasiryya, he worked for the British revenue officers as a petty clerk and learned to speak English. In the early 1920s, Jabr graduated from Baghdad Law College. He was appointed judge shortly after graduation because the government of Iraq was dominated by Sunni Muslims and the demand for educated Shiʿa was great. His professional and public career advanced rapidly. He was elected a deputy senator; appointed governor of several provinces; and served as minister of education, justice, finance, social work, the interior, and foreign affairs numerous times. During the Rashid Ali al-Kaylani uprising, Jabr was governor of Basra. Because he sided with the regent and helped him to escape from Iraq, he was dismissed as governor, arrested, released a short time later, and allowed to go to Iran. With the collapse of the uprising, he returned to Iraq and was appointed minister of the interior.

On 29 March 1947 the regent invited Jabr to form a new government and appointed him prime minister, the first Shiʿite to hold this post. The regent hoped that Jabr, being a Shiʿite, would secure support for the revision of the Anglo–Iraqi Treaty of 1930. The treaty gave Britain numerous privileges, including the right to have two military bases in Iraq over the next twenty-five years. Many Iraqis were not enthusiastic about Jabr and did not welcome him. The nationalists resented him for his support of the British during the Rashid Ali uprising and for sending hundreds of people to prisons and detention camps when he became minister of the interior after the uprising. The leftists disliked him for marrying the daughter of al-Jaryan, one of the largest landlords in southern Iraq.

Jabr announced a sweeping and ambitious program for his government. On the domestic scene, he called for social, economic, and cultural development. On the international scene, he called for a revision of the Anglo–Iraqi Treaty of 1930, ratification of the Iraq–Transjordan Treaty, and the signing of the Turkish–Iraqi Agreement. As prime minister, Jabr proved to be less liberal than his predecessors. His term in office was marred by violent demonstrations. In less than six months in office, he banned the two moderately Left parties and put their leaders, Kamil Chadirchi and Abd al-Fattah Ibrahim, on trial. Three leaders of the Communist Party were sentenced to death. The Portsmouth Treaty—the revision of the Anglo–Iraqi Treaty of 1930—was signed in January 1947. Public dissatisfaction and resentment among the masses led to what came to be known as the Wathba uprising. Violent demonstration erupted against Jabr for several weeks in Baghdad and across Iraq. Virtually every element of Iraq's society—students, teachers, lawyers, doctors, artisans, members of parliament and of political parties—demanded his resignation. Several people lost their lives.

The Wathba uprising underlined the people's resentment of and dissatisfaction with the government and its foreign connections. Several factors contributed: the nationalist resentment over the continuous British interference in Iraq's affairs; the British role in creating the problems in Palestine by the establishment of Israel; and the high cost of living and inflation aggravated by a bad crop year. The Wathba forced Jabr to resign on 27 January 1947. He fled to his home on the Euphrates, then later to Jordan and England. The succeeding government repudiated the treaty.

Jabr was rehabilitated and became minister of the interior in the government of Tawfiq al-Suwaydi in 1950. During his term in office, he introduced a law permitting Iraqi Jews to leave the country, provided they gave up their nationality and property. Over 130,000 Jews left the country.

In 1951, Jabr formed a conservative party, Hizb al-Umma al-Ishtiraki (National Socialist party), to challenge Nuri al-Saʿid. The principles of the party were democracy and nationalism. But in reality, the party was neither democratic nor nationalist, drawing its members largely from tribal and feudal elements. Most of the support came from the Middle Euphrates—Jabr's birthplace—and from the Shiʿite community.

Jabr died of a heart attack while giving a speech opposing Prime Minister Nuri al-Saʿid.

AYAD AL-QAZZAZ

JACIR, EMILY

[1970–]

Palestinian multimedia artist.

Emily Jacir is a multimedia artist whose work represents the Palestinian contribution to the international avant-garde trend, at the turn of the twenty-first century, of exploring issues of borders and displacement. Dividing her time between Ramallah and New York, Jacir uses her personal experience and that of many displaced and exiled Palestinians to explore the voluntary and forced movement of people, and its relationship to real or imagined borders between places. She works in a variety of media, including photography, installation, performance, video, and sculpture. Two noteworthy examples of her work include a refugee tent stitched with the names of the Palestinian villages destroyed by Israel in 1948, executed by a large number of Palestinian-rights supporters. For another piece, she asked Palestinian exiles around the world what they would like her to do for them upon arrival, with her U.S. passport, in their native land. Jacir documented the various requests and her attempts to fulfill them, and then exhibited these testimonies to the pain of displacement and memory. Jacir received her M.F.A. from the Memphis College of Art and studied at the Whitney Independent Study Program. She has exhibited widely in the United States, Europe, and the Middle East, and maintains especially active ties with the art scene in Palestine.

JESSICA WINEGAR

JADID, SALAH

[1926–1993]

Syrian army officer and politician.

Salah Jadid was an Alawi Muslim born in the village of Duwayr Baʿabda. After attending the Syrian military academy at Homs, he rose to be director of Officers' Affairs at the army's General Staff in 1963 and, from 1963 to 1965, chief of staff of the army. Jadid jointed the Syrian Social Nationalist Party as a youth, along with his brother Ghassan, but later became a member of the Baʿth party. Along with air force officer and fellow Baʿthist Hafiz al-Asad, Jadid was a key member of the secret Military Committee of Baʿthist officers formed in 1959 when Syria was part of the United Arab Republic (UAR) along with Egypt. Jadid served as chair of the committee on two occasions until it was superseded by the Baʿth Regional (Syrian) Command's Military Bureau in August 1965.

Jadid rose to become assistant secretary-general of the party from 1965 to 1970, but this modest title belied the fact that he was really the leader of the Baʿth in Syria, particularly its military wing. While not a deeply ideological man, Jadid headed the party during the period of the "radical Baʿth" from February 1966 to November 1970. He increasingly came into rivalry with Asad, who was close to the "pragmatic" civilian wing of the party. Asad eventually seized power in 1970 and threw Jadid into prison, where he died in August 1993.

MICHAEL R. FISCHBACH

JAFFA

An ancient port on the central coast of the eastern Mediterranean, south of modern Tel Aviv, Israel.

Jaffa, known as Joppa in biblical times, became an important entrepôt in the nineteenth century when the local rulers constructed walls, planned markets,

established a central mosque, and built a road leading to Jerusalem. Occupied by the Egyptian Ibrahim Pasha in 1831, Jaffa prospered because the Egyptians encouraged trade, immigrated to the city, and relaxed restrictions against minorities. With the return of Ottoman rule after 1840, the port became a stop for steamships plying the eastern Mediterranean and, after the opening of the Suez Canal in 1869, for oceangoing liners. The port was expanded to accommodate grain, olive, and citrus exports. Jaffa was linked to Jerusalem by road and rail to serve pilgrims and tourists. German Templar and American colonies were established near the city.

The population expanded from 5,000 in the mid-nineteenth century to nearly 40,000 in 1914, of whom 15,000 were Jews. They made Jaffa the center for the first and second *aliya* until the development of Tel Aviv just to the north of Jaffa. The city was deserted during World War I because the port was closed, citizens were conscripted into the Ottoman army, and the Turks forced many of the inhabitants to leave the city. Under the British mandate, as Tel Aviv developed into an almost exclusively Jewish city, Jaffa expanded. Its population, the majority of whom were Palestinians, reached more than 30,000 in 1922.

A center of opposition to Zionism, Jaffa suffered during the strike called during the 1936 to 1939 Arab rebellion. The rebellion paralyzed the port; it did not recover, and the port of Tel Aviv replaced it. Most of the Jews left Jaffa at that time.

Riots broke out after the United Nations decision to partition Palestine in 1947 and, in the fighting that ensued, the Jews took the city (May 1948). Most of the 65,000 Palestinians abandoned the city—only 4,000 remained. A large number of Jewish immigrants were housed in the city, and in 1950, Jaffa was incorporated into the Tel Aviv municipality, officially called Tel Aviv-Yafo. Jaffa remains a religiously mixed section of the larger metropolitan area.

In 1968, a plan to reconstruct Jaffa and renovate its old buildings was undertaken. The city is noted for its gardens, artists' studios and galleries, the old fishing harbor and ancient site of the original port, and modern boat docks. The city is also known for its export of oranges.

JALLUD, ABD AL-SALAM

[1941 or 1944–]

Libya's former second in command.

A childhood friend of Muammar al-Qaddafi, Abd al-Salam Jallud became the second most powerful figure in Libya after the military coup that brought Qaddafi to power on 1 September 1969. Born into a nomadic tribe of the Fezzan region, he is, like Qaddafi, a graduate of the Libyan military academy. Jallud was a captain when he joined in planning the coup against the Libyan monarchy; after its success, he was promoted to major and made the de facto deputy chair of the ruling Revolutionary Command Council. He was the country's prime minister from 1972 to 1977, when the establishment of the *jamahiriya* was proclaimed; in 1979, both he and Qaddafi resigned their formal government positions but they remained in full control of the affairs of state. Jallud also occupied, sometimes simultaneously, the posts of interior minister, minister of economy, and minister of finance. He held the post of prime minister during the abduction in Tripoli of the Lebanese Shiʿite leader Imam Musa al-Sadr. Jallud is considered more pragmatic, less ideological, and a more skilled negotiator than Qaddafi. His loyalty to the Libyan regime was the subject of speculation. Despite his allegiance to a radical revolutionary ideology, Jallud occasionally criticized the "demagogic" tone of Qaddafi's discourse. The latter's reorganization of the Libyan security services in 1993 partially confirmed the fall from grace of Jallud and his family tribe, the Migariha. In 1994 he was temporarily placed under house arrest. Since then, and particularly after the Libyan regime entered into negotiations with the United Kingdom and the United States over resolution of the Lockerbie case and the lifting of the United Nations–imposed economic embargo over Libya, Jallud has occupied a marginal place in Libyan politics.

JALLULI FAMILY

A family important in the commercial elite of nineteenth-century Tunisia.

The Jalluli family was influential at the bey's court, and thus secured *iltizam* (tax farms), monopolies, and supply contracts. They were also *qa'ids* of Sfax, and thereby responsible for the collection of taxes and security in that city.

Important members of the family in the nineteenth century were Mahmud (d. 1839), Muhammad (d. 1849), and Hassuna. In the 1830s Mahmud made his fortune as a corsair. Between 1805 and 1808, he had been chief customs collector, one of the most lucrative concessionary posts; he was also a prominent figure at the bey's court under Hammuda Pasha (ruler of Tunisia, 1777–1814). Muhammad ran the *qiyada* of Sfax for a number of years. In 1829, the Jallulis saved the government of Husayn Bey from bankruptcy. In 1864, Hassuna gained the *qiyada* of Sfax. Following the insurrection of 1864, the family was regarded by Muhammad al-Sadiq Bey as a stabilizing force.

The Jallulis' tradition of state service continued into the twentieth century. Many Jallulis are prominent in Tunisia's commercial and political elite.

JAMAHIRIYYA

In Libya, "rule of the masses."

This new word was coined by Muammar al-Qaddafi and adopted by the Libyan General People's Congress in 1977 as part of the country's official name: the Socialist People's Libyan Arab Jamahiriyya. It is designed to convey the abolition of "government" and the beginning of the "era of people's authority" in Libya.

JAMALI, MUHAMMAD FADHIL AL-
[1903–1997]

Iraqi educator, diplomat, and prime minister.

A Shiʿite born in the al-Kazimiyya quarter of Baghdad to a lower-middle-class family, Muhammad Fadhil (also Fadil) al-Jamali received a religious education at al-Najaf. He attended the newly established Teachers Training College in Baghdad, and then was sent to the American University of Beirut, receiving a B.A. in 1927. He did postgraduate work at Teachers College, Columbia University, in New York, where he wrote on the problems of bedouin education. He returned to Iraq in 1932 and served in the ministry of education until 1942.

Touring Europe in 1937, Jamali made arrangements for an Iraqi delegation to attend the Nuremburg rally the following year. His admiration of Germany was expressed in a published comparative study of education, *Ittijahat al-Tarbiyya wa al-Taʿlim fi Almaniya wa Inkiltira wa Faransa* (Modern ways of training and culture in Germany, England, and France). When later asked about his support for Germany, he replied that he was not a socialist, not a capitalist, but a Muslim Arab. In the late 1930s, he also invited teachers from Syria and Palestine to write textbooks and to teach in Iraq.

Jamali encouraged Shiʿa to attend the Teachers College and he used his position as director-general in the ministry of education to establish schools in Iraq's rural south and to provide scholarships for Shiʿa to study abroad. Because he was not directly involved in Prime Minister Rashid Ali

al-Kaylani's government, Jamali retained his post in the ministry of education after the government was brought down in 1941. From 1942 until the end of the monarchy in 1958, he held various posts for the ministry of foreign affairs, including in Washington, D.C., in the United Nations, and in the Arab League, except during his brief tenure as prime minister from September 1953 to April 1954. Jamali served during a period of disastrous floods. Dissatisfaction with his flood-relief program and his involvement in the regent's intervention in Syrian politics led to a change of government.

After the violent overthrow of the monarchy in the revolution of 1958, Jamali was tried by a revolutionary military tribunal and sentenced to death. This was commuted to a fifty-five-year sentence, but he only spent three years in prisons. After he was pardoned in 1961 he moved to Tunis, Tunisia, and taught at Tunis University. He died there in 1997.

JAMALZADEH, MOHAMMAD ALI

[1892–1997]

Iranian short story writer.

Mohammad Ali Jamalzadeh was born in Isfahan, Iran, and studied in Tehran, Beirut, and Paris. From 1916 to 1930, he worked for the Iranian embassy in Berlin and participated with a group of Iranian intellectuals there to publish the journal *Kaveh.* Jamalzadeh is known as the pioneer of Iranian short stories in the Western style. In 1921, he published *Yeki bud yeki nabud* (Once upon a time), a collection of six stories with a simple and flowing narrative style characteristically distinct from classic Iranian written prose. Later, Jamalzadeh moved to Switzerland as the representative for the International Employment Agency in Geneva. His autobiographical work, *Sar-o tah yek karbas* (Cut from the same cloth), was published in English as *Isfahan Is Half the World: Memories of a Persian Boyhood* in 1983. Jamalzadeh died in 1997 in Geneva, Switzerland.

JAMIʿA AL-ARABIYYA, AL-

See Newspapers and Print Media: Arab Countries

JAMIʿA AL-ISLAMIYYA, AL-

Loosely organized network of neofundamentalist Islamist groups in Egypt.

When Egyptian president Gamal Abdel Nasser outlawed the Muslim Brotherhood in 1954, some of its members formed splinter groups and adopted more radical tactics to achieve their goal of an Islamic state. The Brotherhood developed its own secret armed wing during its most violent period, between 1945 and 1965, and was associated with numerous assassinations. Under presidents Anwar Sadat and Husni Mubarak, it was revitalized and brought back into the mainstream, and its ideology and objectives are now different from those of al-Jamiʿa al-Islamiyya. It has undertaken a policy of nonviolence and formed coalitions with the secular Wafd Party in 1984 and the Socialist Labor Party and the Liberal Party in 1987 to form the Islamic Alliance (al-Tahaluf al-Islami).

Al-Jamiʿa al-Islamiyya (also al-Gamaʿa al-Islamiyya, Islamic Society) was established as a faction of al-Jihad (holy war) by a local leader (amir), Gamal Farghali Haridi. It is a network of approximately twenty small groups whose members sometimes cross-participate. The groups emerged in the 1970s and 1980s as branches of the Muslim Brotherhood's youth movement; the most notorious, al-Jihad, led by Muhammad Abd al-Salam Faraj, claimed responsibility for Sadat's assassination in 1981. This group has been linked to various violent incidents and Muslim–Christian confrontations in Upper

Egyptian towns such as Asyut, Minya, and Bani Suwayf.

Other affiliate groups are the Islamic Liberation Organization (also known as the Technical Military Academy Group, TMA), the Samawiyya, Saved from the Inferno (al-Najun min an-Nar), the Islamic Vanguard, the New Islamic Jihad, Excommunication and Emigration (al-Tafkir wa al-Hijra), and Muhammad's Youth (Shabab Muhammad). Although it is no longer thought to exist, Muhammad's Youth dates back to 1965, when some of its members wanted a gradual creation of an Islamic state and others supported immediate confrontation. Its leader, an agriculture student from Asyut, Shukri Mustafa, was sentenced to death in 1977 for kidnapping and murder. Its members were absorbed into Saved from the Inferno and Repose and Meditation (al-Tawaqqufwa al-Tabayyun). Another group, the al-Qutbiyyan, was influenced by the teachings of Sayyid Qutb of the Muslim Brotherhood, who was sentenced to death in 1965. In 1990 members of the al-Aqsa Martyrs of the World Islamic Front for Liberation assassinated the speaker of the National Assembly, Rifʿat al-Mahjub. In 1992 al-Jamiʿa attacked tourists, prompting the government to enact strict antiterrorism measures. In 1995 Husni Mubarak accused Sudan of having ties to the Jamiʿa al-Islamiyya after an assassination attempt on his life in Ethiopia.

Research from around the Middle East indicates that instances of neofundamentalist terrorism are increasingly a youth phenomenon. Islamists recruit among high school students and teachers. Between 1970 and 1990 the average age of young Islamists caught in police sweeps dropped from 27 to 21. Leaders in southern Egypt are often university students, while those in Cairo and the delta region are generally professionals. Recognizing the lack of opportunity among disenfranchised youth, the government has promised to expand resources in youth and sporting centers throughout the country.

JAMIʿAT-E ISLAMI

Afghan Islamist political party.

Jamiʿat-e Islami (Islamic Society) was formed in Kabul in 1971 in reaction to the increasing secular and leftist trends in Afghanistan at the time. In 1975, after the government of Muhammad Daud came to power, the organization moved its headquarters to Peshawar, Pakistan, and became a political and guerrilla resistance organization dedicated to the overthrow of the Afghan government. In 1978, Burhanuddin Rabbani became its leader. Advocating the establishment of an Islamic government in Afghanistan and strict adherence to *shariʿa* (Islamic law), Jamiʿat-e Islami has connections with other international Islamist movements, including the Muslim Brotherhood and the Jamiʿat-e Islami of Pakistan.

Jamiʿat-e Islami's greatest following has been among Afghanistan's northern ethnolinguistic groups, particularly the Tajiks, in part because the leader, Rabbani, is a Tajik. Jamiʿat-e Islami commanders have included the martyred Ahmad Shah Masʿud (1953–2001) and Ismaʿil Khan, who controls Herat province. In 1992, the Jamiʿat-e Islami returned to Kabul along with the other resistance groups to form an Islamic government, and in 1993 Rabbani became president of Afghanistan. Forced from power when the Taliban captured Kabul in 1996, the remnants of Jamiʿat-e Islami, including Rabbani and Masʿud, fled to the north of Afghanistan, where they formed the United Front to resist Taliban control. When, in turn, the Taliban were forced from Kabul in December 2001, the United Front was the first group into Kabul. As a result, the leaders of the Jamiʿat-e Islami now hold most of the key positions in the interim government of Hamid Karzai.

JANGALI

A nationalist and reformist movement in Iran in the early twentieth century.

The Jangali movement was formed in the forests *(jangal)* of northwestern Iran. Its members, under the leadership of Mirza Kuchek Khan and Ehsan Allah Khan, were intent on eradicating foreign influence in the country.

The Jangalis were active in the constitutional revolution of 1905–1911, and their aim was to restore the sovereignty and autonomy of Iran under a broad Islamic framework. They established a revolutionary council, Ettehad-e Eslam (Islamic unity), published a newspaper called *Jangal,* and enlisted the help of Ottoman and German military advisers. The Jangalis stole from the rich landowners of Gilan to give to the poor and to support their movement. The 1917 Bolshevik revolution in Russia enhanced their standing in Iran. The movement spread to Mazandaran, another Caspian province, and in 1918 the Jangalis nearly took Qazvin. In that year, the British signed an agreement with Mirza Kuchek Khan, in which Britain would recognize Jangali autonomy in Gilan in return for a cessation of hostilities between the two camps and the expulsion of all German and Ottoman Jangali advisers. The agreement was seen as a compromise by the more radical faction of the movement under the leadership of Ehsan Allah Khan, and their split enabled the Cossack Brigade, dispatched from Tehran, to temporarily quell the uprising. Following the Russian revolution of 1917, Russian troops invaded Rasht, the capital of the province of Gilan, in 1920, and Mirza Kuchek Khan proclaimed the Socialists Republic of Gilan. The Soviet–Iranian treaty of 1921 stopped Soviet aggression in the country; the Soviets withdrew their troops and Reza Khan, later to become the first Pahlavi monarch, obliterated the Jangalis by October 1921. Mirza Kuchek Khan was executed, and Ehsan Allah Khan fled to the USSR.

NEGUIN YAVARI

JANISSARIES

Military corps in the Ottoman Empire's army from the late fourteenth century to 1826.

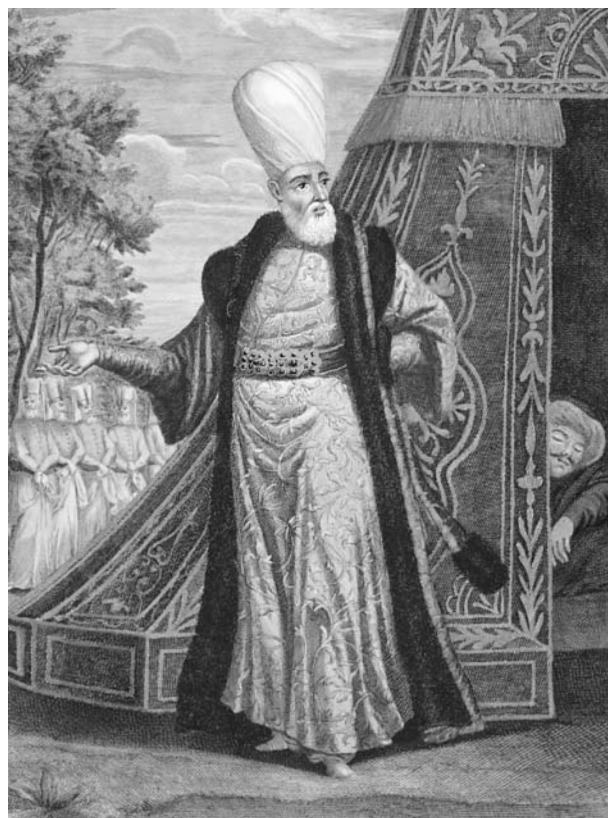
The term *janissary* is the anglicized form of the Turkish *yeni çeri* (new troops). The Janissary corps was established in the late fourteenth century. The Janissaries' first recruits were from the ranks of young Christian prisoners of war; they were converted to Islam, taught Turkish, and given a rigorous military training. At the end of the sixteenth century, the Janissary corps began to admit untrained, mostly Muslim-born, recruits. The admission of untrained recruits marked the beginning of the janissaries' decline as a fighting force and their growing corruption. The basic regulations that had preserved the special character of the corps for some two centuries were treated with growing laxity, until they were abandoned altogether. The janissaries were allowed to marry and have families; then, in order to support their dependents, they were permitted to engage in gainful activities. Over the years, an ever-increasing number of janissaries gave up the practice of living at the barracks and training regularly, and the corps became largely a poorly trained and undisciplined militia. Commissions were sold to the highest bidders, and numerous civilians seeking to enjoy tax exemptions and other privileges bought their way into the corps. Consequently, the number of janissaries steadily increased from 12,000 in the early sixteenth century to 140,000 around 1820. The great majority of these men were not soldiers, but shopkeepers, artisans, porters, and followers of other trades, who rarely performed any military duties but zealously defended their privileged position. Identified with large segments of the urban population, they became a powerful caste resisting change.

The janissaries consistently opposed attempts to introduce military reforms because those required training and submission to discipline. They also objected to any attempts to create a new military force

that might replace them or threaten their privileged position. In the last decade of the eighteenth century, Selim III (r. 1789–1807) hesitatingly introduced a new infantry corps known as the *Nizam-i Cedit.* The janissaries objected to the new force, and they eventually led a coalition of conservative forces that overthrew Selim and abolished his reforms (May 1807). An attempt by the grand vizier, Bayrakdar (Alemdar) Mustafa Paşa, to reintroduce the Nizam-i Cedit also was foiled by the janissaries, and Bayrakdar himself was killed (November 1808).

Following Bayrakdar's death, Mahmud II (r. 1808–1839) concluded a pact with the janissaries, known as *Sened-i Ita'at* (Deed of Obedience), promising not to introduce military reforms in return for a janissary commitment not to intervene in political affairs. However, the Greek war of independence that broke out in 1821 (and lasted until 1830) confronted the Ottoman Empire with new and dangerous challenges, including the possibility of European intervention. The janissaries proved ineffective against the Greek insurgents, and the sultan was forced to enlist the support of his governor of Egypt, Muhammad Ali Pasha, who had a new, European-style, modern army. The contrast between the ineffectual janissaries and the disciplined, successful Egyptian troops softened public opinion toward military reform. Capitalizing on this new mood, early in 1826 Mahmud proposed a plan (the Eşkinci/Eşkenci project) to reform a small segment of the Janissary corps, transforming it into a regular, modern, European-style force. Although most of the senior officers approved the plan, soon after its implementation the janissaries once again rose in rebellion. The sultan, however, had taken precautions against such a threat. With the support of the *ulama* (body of Islamic scholars) and the general public, loyal forces including artillery and naval units quickly suppressed the rebellion with considerable bloodshed (15 June 1826). Mahmud seized the opportunity to abolish completely the Janissary corps and the Bektashi sufi order affiliated with it.

Thus ended an institution that had existed for almost five centuries and that had become a hallmark of Ottoman power, in both its greatness and decline. The suppression of the janissaries, which became known in Ottoman history as the Beneficial Event (Vaka-i Hayriye), made a great impression on contemporaries in the Ottoman Empire and abroad. It also cleared the way for comprehensive, European-style military and administrative reforms that, in the long run, affected every aspect of society, and extended the life of the Ottoman Empire into the twentieth century.



The janissaries were the standing army of the Ottoman empire, formed in the late fourteenth century. The corps began as an elite and highly disciplined fighting force, but lax recruitment policy, an overabundance of privileges, and an aversion to reform led to a severe decline in its effectiveness by the early nineteenth century. © HISTORICAL PICTURE ARCHIVE/CORBIS. JARALLAH FAMILY

Prominent Palestinian family from Jerusalem.

The Jarallahs belonged to Jerusalem's old Muslim elite, and were counted among the city's *ashraf* or descendants of the prophet Muhammad. Family members held religious posts in Jerusalem for hundreds of years and emerged at the end of the nineteenth century among the local Ottoman bureaucratic-landowning class, although less influential than the Husaynis and Nashashibis.

In 1921, Husam al-Din Jarallah (1884–1954), a graduate of al-Azhar, received the highest number of votes in an election for mufti (canon lawyer) of Jerusalem. But the rival Husaynis organized a petition campaign and succeeded in placing their candidate, al-Hajj Amin al-Husayni, in the post. Husam nonetheless served as chief justice of the religious courts, and in 1948 was finally appointed mufti by Jordan's King Abdullah, to replace the anti-Hashimite Husayni. While Husam al-Din was a pro-Hashimite moderate, other family members took stronger stands against Zionism. Hasan Jarallah, for example, in 1918 helped found an organization that took violent action against Arabs who sold land to Jews, called Jamʿiyyat al-Ikha wa al-Afaf (Association of Brotherhood and Purity).

JARASH

Jordanian town and archaeological site.

Lying 29 miles (47 km) north of Jordan's capital city, Amman, the ruins at Jarash are some of the most famous in the Middle East and, along with Petra, one of Jordan's two main tourist attractions.

Founded as part of Alexander the Great's empire (c. 334 B.C.E.), Jarash became a thriving Roman provincial city during the first to third centuries C.E. It was one of the ten cities of the Decapolis, a commercial federation in Roman Syria. After its decline from shifting trade routes, Jarash lay in ruins until about 1884, when the Ottoman Empire introduced Circassians (Muslims from the Caucasus mountains fleeing Russian rule) as settlers. The town later grew to incorporate Arabs as well. By 1994, the population stood at 21,300; 2002 estimates put it at 26,300.

The first European to report on Jarash's Roman ruins was the German Ulrich J. Seetzen in 1806. Serious restoration and archaeological work were undertaken by the Transjordanian government in the 1920s on the city's amphitheater, forum, colonnaded road, temples, churches, and other buildings. The ruins now offer one of the best examples of provincial architecture from the Roman Empire, and serve as the backdrop for Jordan's most celebrated cultural event, the internationally known Jarash Festival for music and dance.

JARRING, GUNNAR

[1907–2002]

Swedish diplomat; UN special envoy to the Middle East (1967–1971).

After studying linguistics at Lund University, Gunnar Jarring joined the Swedish foreign ministry and served in Asia. He was Sweden's UN ambassador (1956–1958) and ambassador to the United States

(1958–1964). In November 1967, when he was serving as Sweden's ambassador to Moscow, he was appointed by UN Secretary-General U Thant as special envoy to promote an Arab-Israel peace settlement based on Security Council Resolution 242. In 1968 he embarked on shuttle diplomacy and addressed a series of notes to the parties. But they displayed little trust in his judgment and ability to promote peace, and turned elsewhere. Jarring's mission was suspended temporarily when UN representatives of the four powers began talks. It resumed briefly after the August 1970 cease-fire agreement ended the war of attrition along the Suez Canal, and again was suspended because of Egyptian violations of that agreement. It was restarted in December 1970. In February 1971 Jarring presented Israel and Egypt identical notes proposing a peace settlement. Egypt expressed readiness to consider peace in return for total Israeli withdrawal and a resolution of the Palestinian problem. Israel said it was ready to enter into peace talks but would not return to the 4 June 1967 lines. Israel felt Jarring had exceeded his mandate and role by conducting negotiations instead of letting the parties negotiate directly. His mission effectively lapsed and was not formally terminated until 1990.

MERON MEDZINI

JAWAHIRI, MUHAMMAD MAHDI AL-
[1900–1997]

The leading neoclassical poet of modern Iraq.

Muhammad Mahdi al-Jawahiri, born in al-Najaf, became a teacher in the 1920s. His poetry brought him to the notice of King Faisal I, who became his patron and protector. Closely associated with the Communist Party, al-Jawahiri became president of the Journalists' Association after the Revolution of 1958, and was Iraq's ambassador to Czechoslovakia until 1963. He returned to Iraq in the early 1970s but went into exile in Damascus a few years later. He was famous for his forceful revolutionary poetry.

PETER SLUGLETT

JAZEERA, AL-

Arab satellite television based in Qatar.

Al-Jazeera is a pan-Arab satellite television station founded in 1996, shortly after the failure of the Arabic British Broadcasting Corporation (BBC) experiment, with funding from the amir of Qatar. On 1 November 1996, al-Jazeera started broadcasting six hours a day. It expanded to twelve hours in 1999, and to twenty-four hours in 2001. In 2003 it had 500 employees, twenty-seven bureaus worldwide, and 35 million viewers. Only 40 percent of its revenue comes from advertising; the rest comes from selling programs, footage, and other services. Al-Jazeera is a leader in providing news. Its self-proclaimed ethic is "independence, objectivity, and freedom of expression." In 1999 it won the Ibn Rushd Prize for Freedom of Thought. Al-Jazeera's independent programming has angered many Arab governments, especially its news, commentary, and call-in and debate shows such as "The Opposing View" that are critical of Arab regimes.

Al-Jazeera scooped all competition, including Cable News Network and BBC, with exclusive interviews and videos of the bombing of Kabul in October 2001. During the war on Iraq in 2003, al-Jazeera angered the U.S. government by airing pictures of U.S. prisoners of war as well as reports critical of the occupation. Its web site occasionally has been hacked. Al-Jazeera is both praised and vilified. Arab viewers clamor for al-Jazeera when governments shut down its signal, while critics denounce it as a "sinister salad of sex, religion and politics, topped with sensationalist seasoning." With

its commanding viewer following, however, al-Jazeera has become a major media player in the Arab region.

JEHAD-E SAZANDEGI

Postrevolutionary organization in Iran for developing rural areas of the country.

The leaders of the Iranian Revolution believed that the deposed monarchy of Mohammad Reza Shah Pahlavi had neglected both agriculture and rural economic development in its program to create an urban and industrialized society. Therefore, government attention to the "deprived" rural sector became an ideological pillar of the Islamic Republic. A special government organization, the Jehad-e Sazandegi (literally, the Construction Crusade), was set up with the mandate to provide basic infrastructure to all of the country's 70,000 villages. The Jehad's projects included road construction, rural electrification, provision of piped potable water, building waste water systems, and implementing numerous programs to enhance agricultural productivity. The philosophy of Jehad stressed local participation in development projects, and its trained cadres mobilized thousands of villagers in cooperative efforts that eventually brought modern amenities to and transformed the appearance of most villages. Its achievements included the construction of 60,000 kilometers of rural roads between 1979 and 1999 and the extension of piped water to 850,000 rural households in the same period.

Jehad's successes raised its profile and it became a cabinet-level ministry in the mid-1980s. As a ministry, its hands-on approach to agricultural productivity problems sometimes clashed with the more bureaucratically inclined approach of the ministry of agriculture. Rivalry between Jehad and the ministry of agriculture prompted the government of President Ali Akbar Hashemi Rafsanjani (1989–1997) to streamline state rural development programs by merging the two ministries, a policy that both resisted. Eventually, Jehad was incorporated as an organization within the ministry of agriculture, but it has maintained a separate identity and its focus on rural development.

JENIN

Palestinian city in the West Bank.

Jenin (also Janin) is one of three Palestinian towns (the others being Nablus and Tulkarm) that formed the "Triangle" region of north-central Palestine. The city was noted in history for the bounty of its agriculture, particularly fruits and vegetables. Both the Ottomans and the British made Jenin the administrative center of an administrative sub-governorate bearing its name as well.

The Arab–Israel War (1948) changed the town's fortunes drastically. It was noteworthy for the fact that, although the Haganah captured Jenin briefly in June 1948, it quickly withdrew after fighting with Palestinian and Iraqi forces. The eventual cease-fire

lines left the city within the Jordanian-controlled West Bank, and cut it off from the traditional markets for its agricultural exports to the north and west, in what now had become Israel. Beyond this, the war caused the population to increase from 3,990 in 1945 to 10,000 as Palestinian refugees swelled the town's ranks. From June 1967 until November 1995, Jenin lay under Israeli military occupation until it came under the control of the Palestinian Authority. By 1997, Jenin's population stood at 26,650.

During the al-Aqsa Intifada that began in 2000, the Israeli army reoccupied parts of the city on several occasions. The eleven-day Israeli assault on the nearby Jenin refugee camp in April 2002, populated by some 10,000 refugees, devastated the camp. The destruction prompted international outrage, and "Jenin" became a symbol of the violence of the second Intifada.

JERICHO

Modern Palestinian oasis town, resting on the ruins of the ancient city.

Jericho dates archaeologically to about 9000 B.C.E. It is best known from the Bible as the city conquered by Joshua (c. 1400 B.C.E.) leading the Hebrew tribes and as the site where Zacchaeus spoke with Jesus from a tree.

Jericho is about 15 miles (22.5 km) northeast of Jerusalem, and some 825 feet (250 m) below sea level. The 2003 population estimate was 19,140 (not counting the Palestinian refugee camps). After the Ottoman Empire was defeated and dismembered in World War I, Jericho became part of the British mandate over Palestine, which began in 1922. The town became a winter resort. When Israel became a state in 1948, Jericho fell under Jordanian rule after the first Arab–Israel War. The United Nations Relief and Works Agency built three large Palestinian refugee camps near it and, shortly before the Arab–Israel War of 1967, the population of the city and the camps was estimated at 80,000. Almost all the inhabitants of those refugee camps became refugees yet again in 1967, crossing the Jordan River into Jordan. On 13 September 1993, Israel and the Palestine Liberation Organization signed an agreement under which Jericho, along with the Gaza Strip, became an area of Palestinian autonomy beginning in 1994.

Benjamin Joseph

JERICHO CONGRESS (1948)

Conference of Palestinians organized by King Abdullah.

Held in Jericho on 1 December 1948, the Jericho Congress was convened in response to the establishment of the State of Israel and the corresponding loss to the Arabs of most of Palestine. This provided the legal basis for the union of central Palestine (the West Bank and East Jerusalem) with Transjordan (East Bank). The conference was presided over by Shaykh Muhammad Ali Jaʿbari, mayor of Hebron, and included leaders from Jerusalem, Hebron, Bethlehem, Nablus, and Ramallah, as well as representatives of refugees from Israeli-occupied cities and towns. It was attended by 1,000 delegates, including mayors, tribal chiefs, *mukhtars,* and military governors from all over Palestine. The conferees voted unanimously to request unity with Jordan; proclaimed Abdullah I ibn Hussein to be king of all Palestine; affirmed faith in the unity of Palestine; called for the return of Palestinian refugees to their homes; called on Arab states to continue the fight to save Palestine; and asked King Abdullah to hold elections for legitimate Palestinian representatives for consultations on affairs of Palestine. It was understood that the union would not compromise Arab rights to Palestine. The conference also repudiated the All-Palestine Government in Gaza sponsored by the Arab Higher Committee. On 7 December, the Jordanian cabinet under Tawfiq Abu al-Huda approved the resolutions, and parliament ratified them 13 December.

The Jordanian election law was amended, doubling the number of seats in the lower house of parliament to forty, designating half for representatives from the West Bank and Jerusalem and the other half from Jordan. Elections to the new, expanded parliament were held in 1950, and unity was ratified unanimously on 24 April 1950.

Egypt strongly opposed the union. Syria criticized it but did not oppose it outright. Britain approved of the congress and its resolutions. Israel's recognition of the union was implicit in the armistice agreement between the two countries. The United States granted *de jure* recognition on 31 January 1949.

JERUSALEM

City that is sacred to Jews, Christians, and Muslims, and that has become embroiled in the politics of the Arab–Israel conflict.

Located in the Judaean mountains, on the watershed between the Judaean hills and the Judaean desert, Jerusalem (in Hebrew, *Yerushalayim;* in Arabic, *Bayt al-Maqdis* or *al-Quds al-Sharif*) overlooks the Dead Sea to the east and faces Israel's coastal plain to the west. It has warm, dry summers and cool, rainy winters. Jerusalem was inhabited as far back as the fourth millennium B.C.E. By the late Bronze Age, it was occupied by the Jebusites. The city became the Jewish national and religious center after its conquest by King David (c. 1000 B.C.E.) from the Jebusites until the destruction of the second Jewish temple (70 C.E.) and the rebellions against Roman occupation, which resulted in the Jews' exile from the city and their dispersion. The Western Wall of the temple complex was the only remnant to survive destruction and over the course of time became the focus of Jewish veneration. As the scene of the last ministry, death, and resurrection of Jesus, Jerusalem emerged as one of the five original Christian patriarchates and has remained a center of Christian pilgrimage since the reign of the Roman emperor Constantine, when it was rebuilt as a Christian city. After the Muslim conquest (638 C.E.), the construction of the al-Aqsa mosque and the Dome of the Rock (part of the complex known as al-Haram al-Sharif) to commemorate the Night Journey of the prophet Muhammad focused Muslim attention on the city. It became the first *qibla* (direction of prayer), and is the third holiest city of Islam.

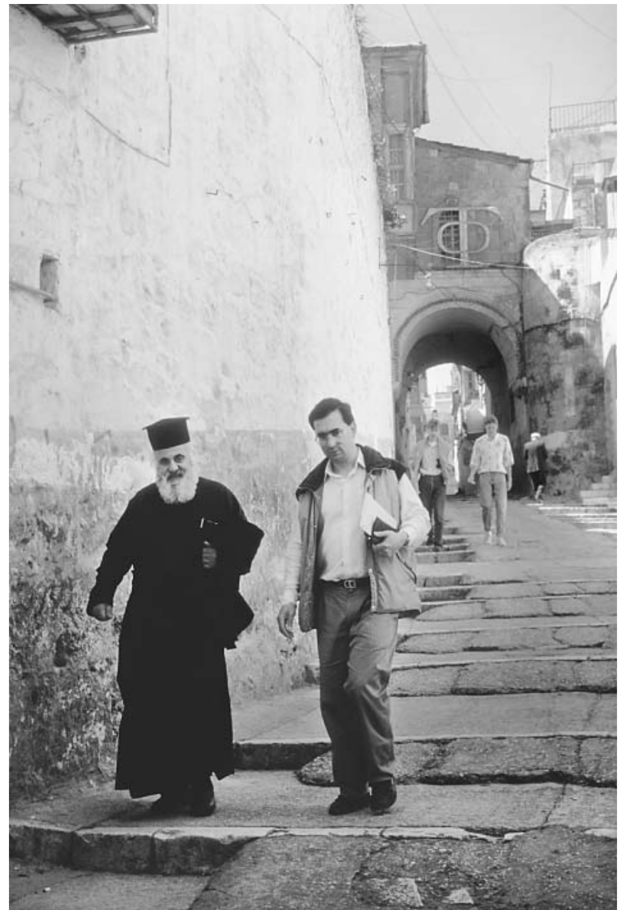
Nineteenth-Century Jerusalem

Conquered by the Ottomans in 1517, Jerusalem remained a backwater town in the province of Syria until the nineteenth century, when Europeans and Ottomans refocused on its religious significance. During the brief reign of Ibrahim ibn Muhammad Ali (1832-1840), relaxed restrictions against the *dhimmi* (non-Muslim) population and renewed interest by Western Christians in the Holy Land resulted in an increase in tourism, the installation of European consulates, the beginnings of biblical archaeology, and the establishment of Protestant institutions adjoining those of the Roman Catholic (Latin), Greek Orthodox, Coptic, Armenian, and other Christian denominations. Communal conflicts over the religious jurisdiction of the Christian holy places led to the Crimean War (1854–1856), after which the keys to the Church of the Holy Sepulchre were entrusted to the Muslim Nusayba family.

The city plan at the time remained as it was when it was rebuilt by the Romans as Aelia Capitolina. Walled, with a system of principal streets, it was dominated by the holy sites and divided into Muslim, Christian, Jewish, and Armenian residential quarters with maze-like streets, bazaars, churches,

synagogues, and mosques. It was the residence of Muslim Arab notables and, later, members of the Ottoman official class. The Khalidi, Nashashibi, and Husayni families played important roles in local politics and Muslim religious administration. The Jewish population included the Mizrahi Jews (Jews from the Middle East, North Africa, and Western Asia) who had lived there since ancient times or who had migrated after the expulsion of Spanish (Sephardic) Jewry in 1492. Some of their leading families included the Navon, Amzalak, Antebi, and Valero families, who became important as translators, bankers, and merchants. Ashkenazic (European) Jews began to immigrate to Jerusalem during the early nineteenth century, including Hasidim (called *haredim* in the late twentieth century), who were dependent upon philanthropy from abroad to support them while they lived a life of full-time study. In the 1860s, at the invitation of British consul James Finn and philanthropist Sir Moses Montefiore, who donated money for the construction of residential areas outside the walls, Jews, some Muslims, and the Russian Orthodox Church began to build new neighborhoods along the roads to the Old City. By 1860 the city's population stood at approximately 40,000, which grew to 55,000 by 1900.

In 1873 Jerusalem was placed under direct Ottoman rule from Constantinople (now Istanbul), and during the reign of Abdülhamit II, who championed its Islamic significance, it underwent major expansion. A municipal council, dominated by Muslim Arabs, was established. Jerusalem became a major provincial city with new courts, a modern water system, mosques, and public offices. New residential and commercial construction, both inside and outside the walls, was undertaken by the local population and by Europeans who established banks and built schools, hospitals, and hospices. Roads were paved, the city was linked by rail to Jaffa on the Mediterranean coast, and Ottoman secondary schools were set up close to new Muslim neighborhoods. The visit to Jerusalem by Kaiser Wilhelm II of Germany (1898) heralded the city's emerging importance in the Ottoman Empire. In 1917 Jerusalem was occupied by the British army under the command of General Edmund Allenby; it later became the capital of what the British called Palestine. The British ruled Palestine within the rubric of the mandate system from 1922 to 1948. The New City expanded with the development of additional Palestinian Arab and Jewish neighborhoods. The British improved the water-supply system, paved roads, planted gardens, and encouraged the repair and construction of buildings. More significantly, they allowed large-scale Jewish immigration into Palestine. Indeed, the terms of the mandate included the Balfour Declaration (1917), which obligated Britain to foster Jewish immigration, land purchases, and institution building. This quickly led to a growth in the population in the city from just over 91,000 in 1922 to almost 133,000 in 1931. By 1944, according to the American Committee of Inquiry, the Jewish population in the city was 97,000, with 30,630



The Christian Quarter of Jerusalem is situated in the northwest section of the city and has a population of around five thousand people. The area is home to the Church of the Holy Sepulchre, which is built over the remains of Golgatha, where Christ was crucified, and the tomb he rose from. Pilgrims from across the world journey to worship at this holy site. © Richard T. Nowitz/Corbis. Reproduced by permission.

Muslims and 29,350 Christians (the overwhelming majority of Muslims and Christians were Palestinians).

Zionism and Palestinian Nationalism under British Mandate

Jerusalem became the center of both Zionist and Palestinian nationalist institutions and aspirations during the British mandate. The Supreme Muslim Council was located in Jerusalem, headed by the Jerusalem mufti, Hajj Muhammad Amin al-Husayni (who then also controlled the considerable *waqf* income that under Ottoman rule had gone directly to Constantinople). Palestinian political life was complicated by the bitter rivalry between the Husaynis and the Nashashibis for control of the Palestinian nationalist movement. Jerusalem's mayors were Arab notables active in the nascent Palestinian nationalist movement, and once again included members from the Husayni and Nashashibi families, including Musa Kazim al-Husayni, Raghib al-Nashashibi, Husayn Fakhri al-Khalidi, and Mustafa al-Khalidi. The Arab Executive was also headed by Musa Kazim al-Husayni. With the Arab and Jewish populations governed by the British under separate systems, the Zionists developed economic, social, educational, and political institutions of their own, including the Hadassah Hospital and the Hebrew University of Jerusalem. The Jewish Agency was headquartered in the city as well. Nationalist passions, and Palestinian fears of political and demographic displacement in the face of continued Zionist immigration, led to violence as early as April 1920. The more serious Western (Wailing) Wall Disturbances of 1929 were a result of the politicization of religious shrines. During the Palestine Arab Revolt (1936–1939) Palestinian guerrillas actually occupied the Old City for a time. Both incidents were suppressed by overwhelming British police and military force.

The Arab–Israel Wars and Aftermath

During the Arab–Israel War of 1948, Jerusalem was the scene of bitter fighting. Fighting between Palestinians and the Jewish Haganah began in late November 1947, and by late April 1948, 1most Palestinian neighborhoods in West Jerusalem had been captured by Jewish forces and depopulated, and the vacant houses handed over to Jews. Jordan and other Arab states entered the fray on 15 May 1948. Although the Jordanian Arab Legion waited three days to enter Jerusalem, it ended up engaging in fierce fighting with Jewish forces for control of the Old City. The surrender of the Jewish Quarter after ten days' fighting, and the expulsion of its remaining Jewish population, left the city divided into Israeli-controlled West Jerusalem and Jordanian-controlled East Jerusalem, including the Old City. Despite United Nations General Assembly Resolution 181 (II) of 29 November 1947, that called for the city to be controlled neither by Jews nor Arabs, as well as later proposals for its internationalization supervised by the United Nations Trusteeship Council, the city remained divided between Jordan and Israel. Access between the two sectors was via the Mandelbaum gate. Both sectors of the city had been emptied of inhabitants belonging to the other side, and both the Jordanian and Israeli governments neglected, destroyed, and/or allowed the desecration of captured cemeteries and religious sites.

East Jerusalem was officially incorporated into Jordan in 1950 and remained subordinate to Amman throughout the period of Jordanian rule, despite protestations by mayors Arif al-Arif and Ruhi al-Khatib. Requests to establish an Arab university in Jerusalem were denied. Many of the Palestinian elite left the city; they were replaced by notables from Hebron invited to the city by Jordan. Though the city expanded northward, plans to incorporate the neighboring villages in the direction of Ramallah into the city never crystallized. Hotels were built, and construction began on a royal palace at Tall al-Full.

In 1950 Israel proclaimed Jerusalem as its capital even though almost all governments maintained embassies in Tel Aviv, where the real work of the state was done. Institutions such as the Hebrew University and Hadassah Hospital, which had come under Jordan's rule, were rebuilt in West Jerusalem. Christians, including Palestinian Christian citizens of Israel, were allowed to cross through the gate to visit the shrines in East Jerusalem on Christmas. Jews, however, were denied access to their holy places. In general, Jerusalem became a backwater for both Palestinians and Israelis alike.

In the Arab–Israel War of June 1967 another round of fierce fighting broke out. Jordanian forces

shelled West Jerusalem on 5 June and two days later Israeli paratroopers assaulted East Jerusalem, including the Old City. The Arab Legion and local Palestinians put up a stiff resistance, but were defeated. Israelis were jubilant at being able to pray at the Western Wall for the first time since 1948; Palestinians were mortified to see Muslim and Christian holy sites under Jewish control. Israel immediately began effecting significant changes to the newly unified city. It placed East Jerusalem under its legal and administrative jurisdiction on 28 June, thereby effectively annexing it and uniting it with West Jerusalem. Following on Jordanian procedure, Israel dramatically expanded the municipal city limits into the West Bank. On 30 July 1980 the Israeli Knesset declared the newly expanded city to be the "eternal" capital of Israel. Israeli authorities also confiscated Palestinian land in the Old City to rebuild the destroyed Jewish Quarter, and destroyed 135 Palestinian homes and two historic mosques to build an expansive pilgrims' plaza facing the Western Wall. Finally, new Jewish settlements like Pisgat Zeʾev were constructed in East Jerusalem surrounding the Old City. The acceleration of settlement building for Jews under the Likud governments starting in 1977 resulted, by the mid-1980s, in 12 percent of the Jewish population of Jerusalem residing in East Jerusalem beyond the 1948 armistice line (Green Line). By contrast, the Palestinian neighborhoods in West Jerusalem that were captured in 1967 were not resettled, and remain inhabited by Jews. By 2000, the city's population stood at 670,500 in the expanded city: 454,600 Jews and 215,400 Palestinians. Under the administration of Jewish mayor Teddy Kollek (1965–1992), all barriers dividing the city were removed. The city underwent a major beautification program that included the construction of a ring of parks around the Old City. Other green spaces, combined with zoning regulations, also served to prevent the expansion of Palestinian built-up areas while Jewish settlement construction continued and, in general, Kollek neglected development of the Palestinian parts of the city.

The Jewish Quarter of Jerusalem was heavily damaged during the Arab–Israel War of 1948. Restoration began after the Israeli conquest of the city in 1967. Located in the southeast section of the city, with a population of approximately 2,300, the Jewish Quarter contains the Western Wall (once Wailing Wall) of the Temple Mount, the holiest site in Judaism. © Daniel Laine/Corbis. Unified Jerusalem

Jerusalem is the seat of the government of the state of Israel, and the site of the Knesset, Supreme Court, Chief Rabbinate, and the offices of many Jewish institutions. Most countries of the world, however, maintain their embassies in Tel Aviv, in deference to United Nations General Assembly Resolultion 181 (II) of 1947 and the unsettled international legal status of the city. Since 1967, Muslim and Christian holy places have been under the jurisdiction of their respective religious authorities, with the al-Haram al-Sharif under the administration of the *waqf* and *shariʿa* courts. Jerusalem Palestinians were also granted Israeli permanent residency cards, and thus treated differently from West Bank Palestinians.

The unification of Jerusalem in 1967 revived the religious and political competition for control of the city. Some of the new Israeli neighborhoods in

East Jerusalem have been settled by *haredi* (ultra-orthodox) Jews, for whom Jerusalem is the center of their religious worldview that calls for strict observance of the Sabbath rest. Their opposition, at times violent, to secular vehicular traffic through these neighborhoods has renewed the religious-secular conflict among Jews in Israel. *Haredi* votes enabled the Likud candidate, Ehud Olmert, to become mayor of Jerusalem in 1993 and to place *haredi* members on the Municipal Council. In 2003 the city voted in its first *haredi* mayor, Uri Lupolianski. Through immigration and natural increase, the *haredi* population will soon exceed that of the secular Jewish residents of the city. For the Jewish religious nationalist settlers, who also have a presence in these neighborhoods and have bought or leased housing in Palestinian neighborhoods in the Old City or in villages such as Silwan that have Jewish historic significance, Jerusalem is holy land never to be relinquished.

For the Palestinians, Jerusalem remains their spiritual and national capital. They have viewed these political and demographic changes with great alarm, and have been angered by violent threats to their shrines. In August 1969 an Australian Christian set fire to the al-Aqsa mosque, destroying a twelfth-century pulpit. Israeli police thwarted several Jewish attempts to blow up the shrines in al-Haram al-Sharif in the early 1980s. In April 1982 a U.S.-born Israeli began shooting inside the Dome of the Rock, killing two Palestinians.

To bolster the Arab-Islamic nature of East Jerusalem, the Jordanian and Saudi governments have helped to fund the more than 2,000 Muslim endowments in the city—Islamic schools, colleges, mosques, welfare services, and commercial enterprises, as well as the repair of Islamic holy sites. Archaeological excavations also carry political ramifications in Jerusalem and have led to violence. Palestinian disturbances broke out in September 1996, prompted by Israel's opening of an ancient tunnel running adjacent to al-Haram al-Sharif. Intra-Jewish confrontations sometimes occur over archaeological digs that *haredi* Jews claim desecrate ancient Hebrew burial grounds.

The signing of the Oslo Accord in 1993 has accelerated the political struggle over the city as both Israel and the Palestinians prepare for the "final status talks" that were slated to determine the future of the city. Despite Israel's insistence that the unified city is its eternal capital, Palestinians continue to maintain that it (or at least East Jerusalem) is the capital of a future Palestinian state, as stated in the 1988 declaration of independence by the Palestine Liberation Organization (PLO). Indeed, the city has become the Palestinian religious, cultural, and intellectual center, and, through the establishment of the Arab Studies Society (1979) by Faysal al-Husayni at Orient House, the site of Palestinian archives collected to build and transmit Palestinian nationalism. After the onset of the Israeli–Palestinian peace process after 1993, the PLO gave al-Husayni responsibility for assessing municipal functions of a Palestinian part of the city, and the Orient House began to play the de facto role of a municipal institution with national functions. For their part, Israeli authorities in the 1990s began tightening residency requirements for Palestinians in East Jerusalem, a process that led to hundreds of them losing their residency rights. Israel's decision to build a Jewish settlement at Har Homa (in Arabic, *Jabal Abu Ghunaym*) in Jerusalem's southern suburbs angered Palestinians and threatened the peace process. Even Arab-Arab friction grew in 1994 when Israel's peace treaty with Jordan maintained Jordan's role in Islamic religious affairs in the city, to the outrage of Palestinians.

These political struggles witnessed the intensification of the level and degree of violence in the city. In October 1990 Israeli security forces opened fire on Palestinians in al-Haram al-Sharif who were stoning Jewish worshippers at the Western Wall below, killing seventeen. The violent opposition to the peace process by Islamic fundamentalist groups such as HAMAS and Islamic Jihad, who operated within the Palestinian Authority, led to numerous terrorist attacks on Jewish civilian targets that killed dozens. An unnerving development in this regard was the beginning of suicide bombings by members of the two groups. These suicide bombings on buses in Jerusalem led directly to the election victory of the Likud in 1996, and soured many Israelis to the idea of the peace process. The visit of the controversial Likud politician Ariel Sharon to al-Haram al-Sharif in September 2000 led to a particularly intense outbreak of the violence of the al-Aqsa Intifada, which has prompted Israeli authorities to

close Orient House and restrict non-Jerusalem resident Palestinians from entering the city, while HAMAS and Islamic Jihad carry out more suicide bombings, including in non-Zionist religious Jewish neighborhoods. In response, Israel began constructing a barrier cutting off Palestinian population centers from Jewish areas. In January 2004, Israeli authorities began extending the wall so that it cut off the Palestinian suburb of Abu Dis from the city proper. Jerusalem remained a city on the edge by early 2004.

JEWISH AGENCY FOR PALESTINE

Established in 1929 to enlist non-Zionist Jewish support for the national home in Palestine.

The League of Nations mandate for Palestine, awarded in the Treaty of Sèvres (1920), called for a Jewish agency that would be expected to provide Britain with advice and aid in discharging its duties in the establishment of a Jewish nation. Chaim Weizmann insisted that this agency be used to broaden Jewish support for economic development in Palestine, particularly among those ambivalent about Zionism's political aims. To mobilize that kind of support, Weizmann offered non-Zionists a measure of power over the development of Palestine's Jewish national home. Eastern European Zionists were reluctant to share power with those not fully committed to the Zionist political cause, so the founding of the Jewish Agency was delayed until 1929, when the World Zionist Organization (WZO) faced a severe financial crisis.

When the sixteenth congress of the WZO created the Jewish Agency, it accepted the principle of parity in membership between Zionists and non-Zionists on its three governing bodies—the 224-member council, the administrative committee, and the executive. The president of the WZO was to serve as Jewish Agency head unless opposed by 75 percent of the council. Of the non-Zionists on the council, 40 percent were Americans, and many had international reputations. The nature of the agency's

David Ben-Gurion, chairman of the Jewish Agency for Palestine and Israel's future prime minister, with Israeli troops at Haganah. After World War II, Ben-Gurion was a supporter of the 1947 United Nations partition plan, which proposed separate Jewish and Arab states in Palestine. © BETTMANN/CORBIS. REPRODUCED BY PERMISSION.

economic and social mission allowed both non-Zionists and Zionists to participate without compromising or altering their divergent principles: Economic aid could be provided to Palestinian Jewry either on the grounds that it was a community in distress or as a means to building the infrastructure of a Jewish state. Parity in the agency was not sustained. Because the agency never created effective links with non-Zionist philanthropic organizations, non-Zionists continually lost positions to Zionists and the balance of political alignment shifted in favor of the Zionists.

The Jewish Agency initially opened offices in Jerusalem, London, and Geneva. During World War II, it opened an office in New York City. Its political department conducted negotiations with Britain, particularly over annual immigration quotas. Functioning as the equivalent of a foreign office, the political department established contacts with a number of Palestinian leaders and organizations. The agency supervised the transfer of Jewish capital from Germany to Palestine during the 1930s, as well as the emigration—legal and illegal—of thousands of Jews from Nazi-dominated Europe. The agency also assumed partial control over the Yishuv's defense forces.

At the end of World War II, the agency helped prepare Palestine's Jewish population for war (the Arab-Israel War of 1948) by uniting, at least for a short period, the Haganah, Irgun, and Lohamei Herut Yisrael (LEHI). During that time, members of the agency's executive served in the central ministries of what became Israel's government—as prime minister and treasurer, and in the departments of Foreign Affairs and Defense. In the first years of statehood, the agency undertook primary responsibility for the settlement of Israel's immigrants from Europe and Islamic countries, and it later supervised the mass immigration of Jews from the former Soviet Union and Ethiopia into Israel.

Although a government ministry was eventually created to manage the process of immigrant absorption, the Jewish Agency retains significant control over organizing the rescue of diaspora Jews in danger. While some authority pertinent to agricultural settlement still resides with its offices, the agency's major tasks are now cultural and charitable. The agency expends a major portion of its budget on Jewish education and serves as the main fund-raising organization linking Israel to diaspora Jewry.

DONNA ROBINSON DIVINE

JEWISH BRIGADE

Established by the British war cabinet in 1944 as the only Jewish military unit to fight the Axis powers.

The Jewish Brigade represented the culmination of efforts by Jews in both Palestine and the United States to create an independent Jewish fighting force. In 1939, Jews in Palestine began to volunteer for military service, and after repeated pressure from the Jewish Agency and other Jewish organizations, in 1942 the British agreed to form a Palestine Regiment. The Palestine Regiment was sent to serve in the Middle East, although its responsibilities there were primarily restricted to guard duty.

Finally, in September 1944, the British created the Jewish Brigade (in Hebrew, *Ha-Hayil*) out of the Palestine Regiment, a field artillery regiment, and other auxiliary service units. The men, numbering approximately 5,000, were placed under the command of a Canadian-born Jew, Brigadier Ernest Frank Benjamin of the Royal Engineers, and they continued their training with the Eighth Army in Italy. In early 1945, the soldiers of the Jewish Brigade saw their first fighting at Alfonsine, and in April 1945 they led the offensive across the Senio River.

As they moved into northern Italy, the Jewish soldiers met Holocaust survivors for the first time; thereafter they provided them with food, clothing, and assistance immigrating to Palestine. They continued these activities in Belgium, Austria, Germany, and Holland and also assisted the Allied authorities in searching for Holocaust survivors.

In 1946, the Jewish Brigade was disbanded, partly because of increasing tension between the Yishuv and the mandatory authorities.

JEWISH COLONIAL TRUST

Financial organ of the Zionist movement.

The Jewish Colonial Trust (JCT) was established in England in 1899. The first Zionist Congress (1897) had created the World Zionist Organization; the JCT was one of two subsidiaries subsequently set up in order to promote Jewish settlement in Palestine. The JCT was in charge of banking operations and of colonization projects in Palestine. It set up the Anglo–Palestine Bank, which virtually became the official bank of the Jewish national home, as a subsidiary. By 1936 it was the second largest bank in Palestine (after Barclay's). The other subsidiary, the Jewish National Fund, was responsible for the purchase of land that was to become the inalienable property of the Jewish people.

See also Banking; Jewish National Fund; World Zionist Organization (WZO).

Jenab Tutunji

JEWISH COLONIZATION ASSOCIATION

Philanthropic organization (also known as the ICA and the PICA, or Palestine Jewish Colonization Association) founded in 1891.

Baron Maurice de Hirsch founded the ICA to assist Jews in Europe and Asia to flee persecution and go to countries in the Western Hemisphere. He initially endowed it with $10 million as a joint stock company, and the amount was eventually increased fourfold. The ICA assisted Jews by establishing agricultural settlements; most of these were in Argentina but there were also some in Brazil. It also helped Jewish farmers in Canada and the United States and provided assistance to Jews who were still living in Russia and the newly created states of Eastern Europe after World War I. In Palestine, the ICA took over the support and consolidation of colonies Baron Edmond de Rothschild had created.

Since Israeli statehood, the ICA has helped support settlements as well as research and training in agriculture. It also works with the Hebrew Immigrant Aid Society and the Joint Distribution Committee in providing relief aid.

See also Joint Distribution Committee.

JEWISH LEGION

Four battalions of Jewish volunteers in the British army during World War I.

On the urging of Russian Zionist Vladimir Ze'ev Jabotinsky, Jewish units were formed to serve in the British army during World War I. The "Zion Mule Corps" consisted of 650 Palestinian Jews; it served in Gallipoli and was disbanded in 1916. The Thirty-eighth Battalion Royal Fusiliers (800 men) was recruited in England mainly from Russian immigrants, and was sent to Egypt and then Palestine in February 1918. The Thirty-ninth Battalion Royal Fusiliers enlisted some 2,000 men in the United States under the leadership of David Ben-Gurion, Yizhak Ben-Zvi, and Pinhas Rutenberg. It arrived in Egypt in August 1918 and was sent to Palestine. The Fortieth Battalion Royal Fusiliers was recruited from Palestinian Jews in British-controlled southern Palestine in July 1918. Commanded by Lieutenant Colonel John Henry Patterson, these units of the Jewish Legion participated in Edmund Allenby's campaigns in Palestine and Syria in 1918. At the end of the war, the Thirty-eighth and Thirty-ninth battalions were disbanded, but the 1,000 men of the Fortieth Battalion remained in active service as part of the British forces in Palestine until after the riots of May 1921.

Proponents of Zionism believed that if their volunteers supported Britain in World War I, it would reflect favorably on their aspirations for a national home in Palestine. A decidedly practical result was that members of the Jewish Legion—including Berl Katznelson, Shmuel Yavnieli, Dov Hos, Eliahu Golomb, and Levi Eshkol—gained valuable organizational and military experience and later formed the nucleus of the future Jewish army in Palestine, the Haganah.

JEWISH NATIONAL FUND

Land-purchase and development fund of the World Zionist Organization.

The Jewish National Fund (JNF), or Keren Kayemet le-Yisrael in Hebrew, was set up in 1901. Its primary aim was to buy land in Palestine for the "eternal possession" of the Jewish people. The concept of public ownership was based on the biblical injunction that the land of Israel belongs to God and that it may be leased for forty-nine years.

Funds raised by Jews all over the world were used to buy land in Palestine for Jewish settlements. The first land was bought in 1904 at Kfar Hittim in lower Galilee. The first forest was planted by the JNF in 1908; this became a major activity of the JNF after the establishment of the State of Israel. By 1960 the JNF had 637,000 acres of land, and control of these was passed to a body set up by the government of Israel. This constituted 10 percent of the area of Israel. Since the 1990s the JNF has built reservoirs and has become involved in river rehabilitation in addition to its traditional functions of afforestation and the creation of parks. In 1997, the JNF opposed proposals set forth in a government-sponsored report to privatize the ownership of its land, on which hundreds of thousands of Israelis live.

JEWS IN THE MIDDLE EAST

History of Jewish presence in the area from 2000 B.C.E.

The origins of the Jewish people are in the Middle East. Earliest Jewish history dates from the second millennium B.C.E.and its echoes appear in the Hebrew Bible. The Bible also recounts the vicissitudes of national life in ancient Israel and the evolution of Judaism. By the time of the Romans' expansion and their destruction of the Second Jewish Commonwealth in 70 C.E., Jews were living in much of the Middle East and some had moved into the western Roman Empire—Europe. The foundations of post–Second Temple Judaism were then laid by rabbis in Roman Palestine and in Parthian and Sassanian Babylonia. They canonized the Scripture, redacted the liturgy, and created the Talmud and Midrash.

After World War II, many Jewish emigrants fled to Israel to escape physical and religious persecution. Between 1948 and 1951, over 650,000 Jews immigrated to Israel, many, such as these Yemenite Jews, from other Middle Eastern countries. **© PHOTOGRAPH BY DAVID ELDAN. GOVERNMENT PRESS OFFICE (GPO) OF ISRAEL. REPRODUCED BY PERMISSION.**

Beginnings of Muslim Rule

With the conquests of Islam from the seventh century on, the majority of world Jewry came under Muslim rule. The demographic centers of world Jewry were located in the Middle East and the Maghrib, which included North Africa and Muslim regions of the Iberian Peninsula. Jewish merchants kept records in Arabic rendered in Hebrew script, and major rabbinic works in Judeo-Arabic were written by luminaries such as Saʿadyah Gaon in Iraq or Maimonides in Egypt. Jews in Persia also developed a Judeo-Persian literature.

In the later Middle Ages, the quality of Jewish life in the Middle East declined following transformed economic, social, and intellectual climates in the region. Native Christianity disappeared from the Maghrib and general attitudes toward non-Muslims hardened both there and further east. The laws of differentiation (in Arabic, *ghiyar*) were enforced with greater vigor and consistency than in earlier periods. Over time, Jews were increasingly confined by law or custom to restricted quarters, called *mellah* in Morocco, *qa ʿat al-Yahud* in Yemen, *mahallat* in Iran, and *harat al-Yahud* elsewhere.

The arrival, beginning in the fifteenth century, of Sephardim—Jewish refugees from Christian Spain, Portugal, and Sicily—and the Ottoman conquest of much of the region in the early sixteenth century breathed new demographic, economic, and cultural life into Middle Eastern Jewry. Jews in many eastern Mediterranean cities continued to speak Judeo-Spanish (Ladino). Some wealthy Sephardic families were intermediaries linking European commerce with local economies, but in time this niche was lost to Armenians, Greeks, and Levantine Christians. Most Jews, artisans and petty merchants, were poor. Culturally, Sephardic rabbinic codification and mystical exploration continued to evolve.

In the nineteenth century expanding European economies in the area enabled Jewish and Christian merchants to link up with European consular interests or seek foreign protection that became available under the Capitulations (in Turkish, *imtiyazat*). At the same time, many came to enjoy improved civil status in the Ottoman Empire under the Tanzimat reforms. They also availed themselves of Western education provided by foreign cultural and religious missionaries. From 1862 on, the Alliance Israélite Universelle (AIU) was the main propagator of the French language and European-style education among Jews from Morocco to Iran. By 1900 more than 100,000 students had studied

Jews attend a synagogue in Baghdad. Until 1947, over one hundred thousand Jews lived in Iraq, but after Arab-Jewish hostilities mounted over the creation of the State of Israel in 1948, most fled to Israel. © FANCOISE DE MULDER/CORBIS. REPRODUCED BY PERMISSION.

in AIU schools. The AIU stressed Enlightenment values, created new expectations, and aroused feelings of international Jewish solidarity. It produced cadres of Westernized Jews with a social advantage over Muslims who lacked such education, as the Middle East was drawn into world capitalism. Educational mobility led to geographical mobility as Jews in the region moved from areas of lesser economic opportunity such as Morocco, Syria, and the Turkish Aegean isles to areas of European economic concentration such as Algeria and Egypt. Others emigrated to Europe and South America. Jews from Iraq settled in ports in India, Burma, Malaysia, and China.

Against the backdrop of these trends, Jews were incorporated into different political frameworks during the nineteenth and twentieth centuries. In Algeria they were French citizens from 1870; in Tunisia, after the French Protectorate in 1883, some could apply for citizenship, and eventually about one-third of them did so; Syrian Jews lived under a French mandate after World War I; in Iraq, they were citizens of an independent Arab state from 1932; and in Yemen, Jews retained the status of *dhimmi* in a Muslim polity until they began to migrate to Israel after 1948. Within these diverse conditions Jews exhibited a range of cultural and political responses.

AIU education partially separated Jews from local Muslims and heightened their receptivity to French colonialism in the Maghrib, Syria, and Lebanon. With some exceptions, such as Yaʿqub Sanu, the father of modern Arab theater and political journalism in Egypt, and Albert Carasso, active in the Young Turk movement, Jews were not prominent in the intellectual and political currents developing in the Islamic world. In Iraq, only a handful of Jewish writers wrote in literary Arabic.

Rise of Zionism

A small number of Jews were touched by the Haskala, the Hebrew-language Enlightenment of mid- to late-nineteenth-century Europe. Books and newspapers in Hebrew circulated throughout Middle Eastern communities. A Judeo-Arabic press was active in some countries, notably Tunisia. Newspapers made Jews of the region aware of currents sweeping others parts of the Jewish world, including migration, religious reform, and Zionism.

From its very earliest days, Zionism made modest inroads into major urban centers in the Middle East. Sympathy for the movement was often philanthropic rather than political. Zionism did arouse popular enthusiasm in the wake of the 1917 Balfour Declaration, the Allied victory in World War I, and the San Remo Conference in 1920. In 1917 thousands of Jews gathered in Cairo and Alexandria in support of the Balfour Declaration, and similar scenes greeted Chaim Weizmann and the Zionist Commission for Palestine when they passed through Egypt the following year. Several hundred Jewish families emigrated from Morocco to mandatory Palestine between 1919 and 1923, to the chagrin of French colonial authorities. About 1,000 Jews from Iraq and smaller numbers from Syria settled in Palestine at this time.Others arrived from Libya in the 1930s as part of sports events, and stayed in the country. There had been a stream of Jews from Yemen to Palestine, totaling several thousand from 1880 to 1929, when the imam of Yemen ordered an end to the emigration.

The initial enthusiasm for Zionism subsided due to opposition from colonial authorities, members of the Jewish upper classes, and, most importantly, growing Arab and pan-Islamic nationalist movements. With rare exceptions, such as Sasson Heskayl, who served as Iraq's first finance minister; Joseph Aslan Cattaoui, who was Egypt's minister of finance in 1923 and minister of communications in 1925; or Léon Castro, editor of the Egyptian Wafd Party's French-language daily *La Liberté,* Jews in the Muslim world were studiously apolitical, especially in Arab countries. From the time of the Western Wall riots in Jerusalem in 1929, Arab nationalism became increasingly anti-Zionist, and, despite frequent disclaimers, both nationalist leaders and followers often merged anti-Zionism with antisemitism.

A Jewish wedding ceremony in Syria in 1988. Syrian Jews, referred to by the government as "follows of Moses" rather than "Jews," were treated as a suspicious religious community and are under constant surveillance by the police. © Corbis Sygma. Reproduced by permission.

In the 1930s and 1940s the growing admiration among Arabs for German national socialism and Italian fascism, which stood in opposition to the colonial powers of Great Britain and France, discouraged Jews from finding a place in the societies that Arab nationalists wanted to create. In Turkey, too, some Jews were affected by the Axis sympathies of the government that at times was paralleled by discrimination against nonethnic Turks.

World War II affected Jews in the Muslim world in various ways. In June 1941, at the end of the short-lived pro-Axis regime of Rashid Ali a-Kaylani, Iraqi Jewry suffered a pogrom called the Farhud; Jews in Libya became subject to racial laws enacted in Italy;

and Vichy, France, rescinded the citizenship of Jews in Algeria. Jews in Egypt and Mandatory Palestine felt deeply threatened by the German Afrika Korps advancing into western Egypt. Throughout the Middle East, Jews had heard the mufti of Jerusalem, Hajj Muhammad Amin al-Husayni, broadcast in Arabic from Berlin, calling upon listeners to "kill the Jews wherever you find them, for the love of God, history, and religion." Many Jews began to ponder their future in the region both in relation to European colonial powers and to the local Muslim societies.

Post–World War II

The postwar years witnessed a renewal of pan-Islam and pan-Arabism on the one hand and Jewish nationalism on the other. A rapid chain of events undermined the weakened underpinnings of Jewish life in the Arab countries. Anti-Jewish riots occurred in Egypt and Libya in November 1945. In December 1947, following the United Nations partition vote on Palestine, riots rocked Jewish communities in Aden, Bahrain, and Aleppo. With the establishment of the state of Israel in May 1948, restrictive administrative measures were imposed on Jews in Egypt, Syria, and Iraq, both during and after the Arab–Israel War of 1948. From May 1948 through 1951 more than 650,000 Jews migrated to Israel, half of them from the Middle East. Major migrations from Morocco and Tunisia arrived in the mid-1950s and early 1960s. By 1967 the majority of the 800,000 Jews in Arab countries at mid-twentieth century had left. During this period, half of Turkey's 80,000 Jews and about one third of Iran's 100,000 Jews departed for Israel, but others, including nearly half of Maghribi Jewry, went to France and elsewhere.

By the 1980s Jews of Middle Eastern origin—*adot ha-mizrah*—comprised well over half of Israel's Jewish population. Migration to Israel by Jews from the former Soviet Union made the percentages of Middle Eastern and European origin groups equal in the 1990s. By 2000 the Jewish community in Turkey stood at about 20,000. Iranian Jewry functioned actively until the revolution of 1979 that established the Islamic republic. Jews then immigrated to Israel, Europe, and the United States, and in 1989 about 22,000 remained in Iran. Very few Jews now reside in the Arab world; the largest group—about 3,500—lives in Morocco. Since the 1980s Morocco has encouraged Jewish tourists from Israel and elsewhere, and Tunisia has done the same since the 1990s.

JEZREEL VALLEY

A major internal plain stretching almost 30 miles (48 kilometers) across northern Israel, from the northwestern base of Mount Carmel to the Jordan Valley.

The Jezreel Valley is called, in Hebrew, *Emek Yizreʿel*; in Arabic, *Marj ibn Amir*; and in English, the Plain of Esdraelon. Its larger, western portion is based on the westward flowing Kishon (Muqatta) River, while its smaller, eastern portion is based on the eastward flowing Harod (Jalud) River. Separating the hills of the lower Galilee in the north from the Carmel

ridge and Samarian hills (Jabal Nablus) in the south, the valley has been a natural route for travelers, merchants, nomads, and armies for thousands of years. Its agricultural land has consistently been cultivated by surrounding hill settlements.

Named for the ancient Israelite city of Yizreʿel (Hebrew for "may god sow"), the valley has supported varying levels of population throughout history. The dense habitation of pre-Crusader times later gave way to a thinner population and the emergence of marshland, both of which fluctuated historically and seasonally. During British rule in Palestine, Zionist organizations purchased parts of the valley and undertook Jewish settlement and marshland drainage, resulting in the rapid increase of its predominantly European-born Jewish population alongside the local Arab population. The events surrounding the 1948 war and the establishment of Israel resulted in a sharp decrease in the valley's Arab population and another increase in its Jewish population. The 1949 Israeli-Jordanian armistice lines cut across the southeastern valley just north of Jenin, leaving most of the valley within the borders of Israel and a small portion in the West Bank.

GEREMY FORMAN

JIBRIL, AHMAD

[1935–]

Palestinian militant.

Born in Ramla, Ahmad Jibril found himself in Syria after the Palestinian refugee exodus of 1948. He served in the Syrian army and was the national chess champion of Syria in 1956. He left the army in 1958 and formed the Palestinian Liberation Front in 1961. The organization began military operations in 1965, and merged with the Popular Front for the Liberation of Palestine (PFLP) in December 1967. Jibril left the PFLP in November 1968 out of frustration at the group's preoccupation with ideological debates, and formed the Popular Front for the Liberation of Palestine–General Command, a nonpolitical, armed organization dedicated to fighting Israel. Jibril helped form the Rejectionist Front in 1974 along with the PFLP and several other groups.

Jibril's PFLP–GC was responsible for the April 1974 terrorist attack against the Israeli town of Kiryat Shmona, in which eighteen Israelis died. A 1987 operation in which a fighter flew into Israel on a hang-glider and killed six Israeli soldiers helped spark the first Intifada. Jibril's group also fought against Palestine Liberation Organization (PLO) loyalists in Lebanon in 1983 in support of a Syrian-backed mutiny, and has consistently opposed PLO policy ever since from his headquarters in Damascus.

JIDDA

Saudi Arabian port on the Red Sea.

Jidda is the second largest city of Saudi Arabia, with a population of some two million. It is also the largest city of the Hijaz, located in the country's western region, along the Red Sea. Its prosperity dates from its designation by the early Islamic state as the port of nearby Mecca. Jidda was occupied by the first Saudi state at the beginning of the nineteenth century, then Muhammad Ali of Egypt restored it to nominal Ottoman authority in 1811. It was the last city in the short-lived Hashimite kingdom of Hijaz to resist the Al Saʿud, finally surrendering after a long siege in 1925. Jidda is important as the commercial and banking center of the country, the site of the Islamic Port of Jidda (Saudi Arabia's largest port) and King Abd al-Aziz Airport, through which most of the pilgrims pass during the

annual *hajj* (pilgrimage). The centuries-old immigration of Muslims from around the world makes Jidda one of the most cosmopolitan of Saudi Arabia's cities.

JIHAD

A term that derives from the Arabic word jahada, *meaning "to strive."*

The Arabic nouns *juhd, mujahid, jihad,* and *ijtihad* mean endeavor, training, exertion, effort, diligence, and fighting. "Traditionally jihad was understood to be justified for three reasons: to repel invasion or its threat, to punish those who had violated treaties, and to guarantee freedom for the propagation of Islam" (Abedi). According to Iranian ayatollah Morteza Mutahhari, Jihad as a defensive act is explained in the *Hajj sura* 22:38–41, where it is said that God gives permission (for warfare) to those who have been attacked. In an Islamic legal context, the term *jihad* is most often used to refer to a martial campaign in the cause of religion and is therefore frequently translated as "holy war." Many now would argue that there is no such thing as a holy war, and that Islam does not sanction war but rather defense of Islamic values (this is certainly the case in the longest conventional war between two Muslim nations, Iran and Iraq, 1980–1988). Iran called the war a sacred defense rather than a jihad.

According to classical Muslim legal theory, the only kind of lawful military conflict is jihad, and a jihad can only be used to fulfill at least one of two main objectives. The first is the effective spread of Muslim ideals and values into a region of society unmoved by the call to Islam. The second is defense of the Muslim community from external threats. In addition to discussing the conditions necessary to establish these objectives, Muslim teachings on jihad also deal with important related issues such as the immunity of noncombatants, ethical restrictions on the applications of destructive force, and the circumstances warranting armistice. In fact, the doctrine of jihad is probably best understood as being similar to the "just war" theory in Western Christian contexts. Over the course of the twentieth century, jihad discourse was polarized by modernists like Muhammad Shaltut (died 1963) who argue that, in the modern era, offensive jihad should only take the form of a peaceful propagation of Islam, and revolutionary Islamist groups such as Islamic Jihad, HAMAS, and Hizbullah, which maintain that Muslims around the world are obliged to use any available means to fight against the forces of Western imperialism.

SCOTT ALEXANDER
UPDATED BY ROXANNE VARZI

JINNAH, MUHAMMAD ALI
[1876–1948]

Founder and first governor-general of Pakistan.

Muhammad Ali Jinnah was born in Karachi in 1876 and died in the same city in 1948, while serving as governor-general of Pakistan. Originally, Jinnah had stood for a united India, but when Muhammad Iqbal, the poet-philosopher, articulated the two-nation theory in 1930, Jinnah adopted the theory as his own political ideology. He helped to achieve the foundation of the state of Pakistan in 1947 through negotiations with the All-India National Congress and the British government.

Jinnah went to London in 1893, studied law at Lincoln's Inn, and qualified as a barrister (attorney) on 11 May 1896. He settled in Bombay, India, actively practicing law through the 1930s. His political career can be divided into phases. In the first phase, from 1906 to 1937, Jinnah was a member of the National Congress and called himself "an Indian first, and a Muslim afterwards." He was opposed initially to the Muslim demand for separate electorates, but in 1926 he shifted his support to the principle of separate electorates that guaranteed fixed proportional representation for Hindus and

Muslims in legislatures. Despite this shift, Jinnah asserted that Muslims' rights and interests would be protected in a united India. In the second phase, from 1937 to 1947, Jinnah's position reversed completely. His dissatisfaction started with Mohandas (Mahatma) Gandhi's position at the London Roundtable Conference (1939) and spread to frustration with the Muslim League, the British government's communal award based on the principle of separate electorates, the ultimatum to the Muslim League to merge with the National Congress in order to participate in provincial governments in 1937, and the suggestion of majority rule to the neglect of the Muslims, which probably convinced Jinnah that the National Congress was determined to establish majority Hindu rule in a united India.

In the second phase of his career Jinnah endeavored to create a separate Pakistani state with the approval of the British and the National Congress. In March 1942 at Lahore the Muslim League adopted the Pakistan Resolution, which demanded the partitioning of India into two states. In February 1942 the British government sent to India a prominent minister, Sir Stafford Cripps, to secure the cooperation of the Indian leaders for the defense of India. Muslims were assured that "dissident provinces" would be free to leave an independent and united India. Cripps's mission failed, but Jinnah saw Pakistan in Cripps's proposals.

In May 1946 the British sent the cabinet mission to India to negotiate a constitutional formula for the transfer of power to India. The cabinet mission plan divided India into three zones: Hindu majority provinces (present-day India); Muslim provinces in the Northwest (Pakistan); and Bengal and Assam, where Muslims would have a slim majority. Provinces could opt out of the plan to form a new federation after ten years. Jinnah accepted the proposal, and so did the congress. When the congress president publicly expressed reservations in implementing the plan, Jinnah rejected the plan, making the state of Pakistan a reality on 14 August 1947.

HAFEEZ MALIK

JIZYA

A poll tax.

Several poll taxes were levied throughout the Middle East from the time of the Muslim conquests (seventh century). Caliph Umar II (717–720 C.E.) established the principle that they should be levied only on non-Muslims. Islam exempted women, children, and the disabled or unemployed from the tax.

In 1855, the Ottoman Empire abolished the tax, as part of reforms to equalize the status of Muslims and non-Muslims. It was replaced, however, by a military-exemption tax on non-Muslims, the Bedel-i Askeri.

JMA'A TRIBAL COUNCIL

North African Berber political unit.

In precolonial North Africa, Jmaʾa represented the highest political authority in the tribe, led by an *amghar* (chief). During periods of war, the *amghar* became the chief of war *(amghar n-l-baroud).* Each subtribe had its representative in the Jmaʾa. In the contemporary period, although some villages still have a Jmaʾa, its functions have been, however, reconciled to the management of collective social events.

RAHMA BOURQIA

JOHNSON–CROSBIE COMMITTEE REPORT (1930)

A survey in Palestine.

The Johnson–Crosbie committee collected data from 25,573 Palestinian Arab families in 104 villages. The report calculated that Arab peasant debt per family averaged 27 Palestinian pounds, the equivalent of a year's income. It also found that the average cultivator held a mere 56 *dunums* (14 acres; 6 ha) whereas 75 *dunums* (18.5 acres; 7.5 ha) were required for basic economic maintenance. The survey was conducted by William Johnson and Robert Crosbie, officials in the British administration in Palestine.

ELIZABETH THOMPSON

JOHNSON, LYNDON BAINES [1908–1973]

U.S. president, 1963–1969.

Lyndon Baines Johnson succeeded to the presidency after the assassination of John F. Kennedy in November 1963. Although a long-time member of the U.S. House of Representatives (1937–1949) and U.S. Senate (1949–1961), and a most effective legislative leader, he had little experience in foreign affairs. With an escalating war in Vietnam, the Middle East had low priority for him.

He was unable to persuade Egypt to limit its armament program; to balance U.S.S.R. arms sales to Egypt, Syria, Iraq and elsewhere, Johnson authorized increased military sales to Israel and to conservative Arab regimes, particularly to King Hussein ibn Talal of Jordan. When Egypt blocked the Strait of Tiran to Israeli shipping in May 1967, Johnson denounced the act as illegal. During the Arab–Israel War of June 1967, Johnson kept the United States neutral, although American sympathies were clearly with Israel. Through his ambassador to the United Nations, Arthur Goldberg, Johnson gave crucial support to UN Resolution 242, passed in November 1967, which has been the keystone of Arab–Israeli diplomacy since then. In 1968, Johnson declined renomination for another term.

JOHNSTON PLAN (1953)

Development plan for the Jordan River.

This comprehensive plan was drawn up by U.S. Special Ambassador Eric Johnston in 1953, for regional development of the Jordan River system. The hope was that it would reduce regional conflicts by promoting cooperation and economic stability. The two major riparians—Israel and the Kingdom of Jordan—had their own plans for water development, but each objected to the other's plan. Eric Johnston attempted to reach a unified plan through negotiations that dealt with water quotas, use of Jordan water for outside the water-basin area, use of the Sea of Galilee (also called Lake Tiberias or Lake Kinneret) as a storage area, incorporating the Litani River into the Jordan system, and international supervision.

Negotiations lasted from 1953 to 1955 and the Unified Plan was negotiated, with Johnston playing the key role in pushing the compromises along. The Unified Plan was accepted by the technical committees of the League of Arab States (Arab League) and Israel. Israel's government informed the United States that it would accept the plan, but in October 1955, the Arabs decided not to ratify it. In fact, there has been implementation of the Johnston Plan on the part of Israel and separately by Jordan.

JOHN XIX

113th Coptic patriarch of Egypt, 1928–1942.

The successor of Cyril V (1874–1927), John XIX had an uneventful patriarchate. He had been chosen by Cyril to be the *abuna* (archbishop) of the Ethiopian Orthodox Church but declined the offer. For many years metropolitan (chief bishop) of the Egyptian provinces of Behariya and Minufiyya, in 1892 he went into exile after a dispute with the Coptic Community Council but eventually regained its favor for his part in reforming the church's handling of bequests and administration of educational institutions. As patriarch, John established near Cairo a theological college to improve their education. He appointed the *abuna* and several bishops of the church in Ethiopia.

DONALD SPANEL

JOINT DISTRIBUTION COMMITTEE

Charitable organization that assists Jews in distress.

The Joint Distribution Committee (JDC) was established in 1914 by a committee of relief agencies, including the American Jewish Relief Committee (affiliated with the American Jewish Committee), the Central Relief Committee (part of the Orthodox movement), and the People's Relief Committee (affiliated with American labor groups). Initially, the JDC assisted Jews in central and eastern Europe before, during, and after World War I, and later it helped reconstruct the Jewish communities in those regions. Before and during World War II, the JDC worked to rescue Jews from Nazi-occupied Europe; after the war, it assisted in the resettlement of displaced persons. Thereafter, the JDC focused its attention on helping the Jews of central and eastern Europe and those in Muslim countries. In 1991 it helped the Israeli government airlift nearly 15,000 Ethiopian Jews from Ethiopia to Israel.

In the early years of the twenty-first century the JDC, in response to a rising level of terrorist attacks in Israeli cities, funded activities for Israeli children who were left alone in the afternoon while their parents worked. It also became active in helping the Jewish community in Argentina, hit by the economic crisis there, setting up a soup kitchen for Jewish and non-Jewish children.

BRYAN DAVES
UPDATED BY PAUL RIVLIN

JORDAN

A small Arab kingdom east of the Mediterranean Sea.

Jordan is bordered on the north by Syria, on the east by Iraq, on the south by Saudi Arabia, and on the west by Israel and the West Bank. The Gulf of Aqaba, an extension of the Red Sea, abuts its southernmost tip. To the west, it shares the Dead Sea (an inland salt lake) with Israel and the West Bank. Jordan is a crossroads in the region: The hajj (Islamic pilgrimage) route from Turkey and Syria passed through Jordan to the Hijaz and the holy cities of Mecca and Medina. A major trunk road runs from Iraq to Jordan's only port, Aqaba. Oil pipelines, now nonfunctioning, were built from Iraq and Saudi Arabia across Jordan to Mediterranean ports. Prior to the establishment of the State of Israel (1948), Jordan (called Transjordan from 1920–1946) was the transit route from Palestinian ports to Iraq, Saudi Arabia, and the Persian/Arabian Gulf. With a population that is about 50 percent Jordanian Arabs and 50 percent Palestinian (most refugees from the first Arab–Israel War of 1948), and a location between Israel and the powerful Arab states, Jordan is frequently buffeted by Middle Eastern and international political currents.

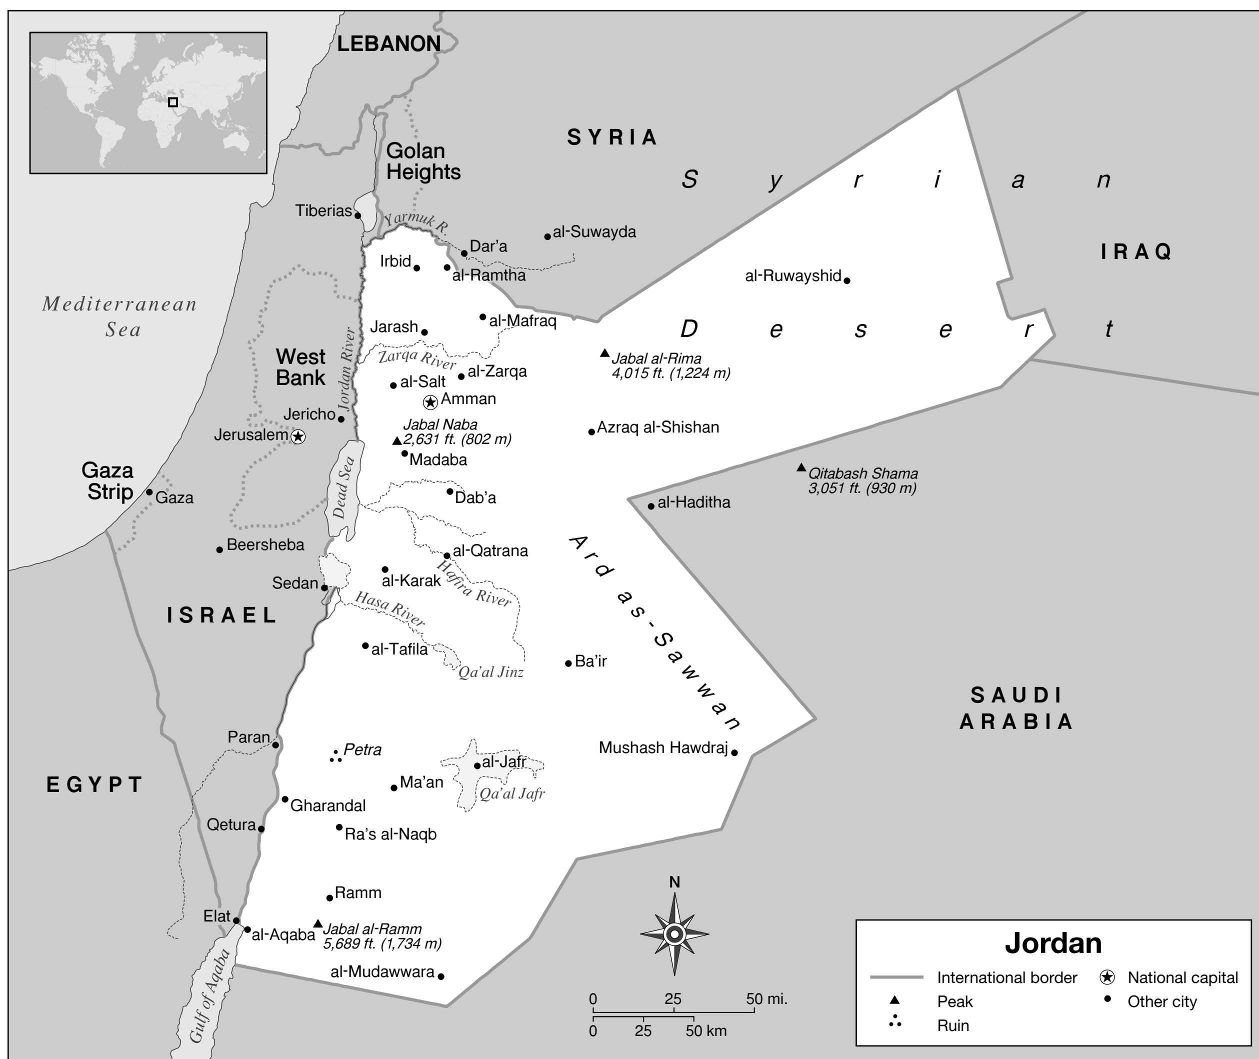
The site of Petra, the ancient city of Arabia, in southwestern Jordan. Once the stronghold city of the Nabataens, Petra was conquered successively by the Romans, the Muslims, and the Crusaders before it fell into ruins after the twelfth century. The fortress was rediscovered in 1812 by the Swiss explorer Johan Burckhardt. Redondo, Carmen, photographer. From a photograph in The Atlas of People & Places, by Philip Steele. Aladdin Books Ltd., 2002. Photograph © Carmen Redondo/Corbis. Reproduced by permission.

Geography and Climate

Jordan's landmass, almost 90,649 square kilometers (38,000 square miles), is marked by three distinct geological systems: the Jordan rift valley, the Transjordan plateau, and the Arabian/Syrian desert. At 397 meters (1,302 feet) below the level of the Mediterranean Sea, the Jordan valley contains the Dead Sea, the lowest surface point on the planet (the lowest actual point being beneath the ocean). Since the 1960s, the Jordanians have developed a sophisticated irrigation system in the valley, because it receives little rain. Given the topography and low rainfall, most of Jordan is a classic desert, with only 3 percent arable (partly under irrigation) and 1 percent forested. The Jordan valley is, however, warm in winter, so off-season fruits and vegetables can be produced for temperate markets. To the east of the rift valley, the Transjordan plateau runs like a wedge from the Syrian border to Maʿan in the south of the country. The plateau is composed of broad rolling plains, cut by precipitous valleys or wadis (streambeds that have water only during the rainy season). Rain-fed agriculture and animal husbandry are practiced here. To the east and south of the plateau, lies the Arabian/Syrian desert, a wasteland only sparsely populated by Bedouin.

Jordan possesses few natural resources; its only significant mineral deposits consist of phosphates, which are mined, and potash, which is extracted from evaporation of Dead Sea water. Jordan has very few petroleum deposits and no coal. Its important rivers are the Yarmuk River (shared with Syria and Israel), the Jordan River, (shared with Israel and the West Bank), and the Zarqa. Except for the small oasis of Azraq in the northeastern desert, Jordan has no natural freshwater lakes. An artificial lake was established behind the King Talal dam on the Zarqa River.

Jordan has a pleasant warm climate with little humidity, but also little precipitation. In the winter in the capital of Amman, the average high temperature is 11 degrees C (52 degrees F) and the average low is 4.4 degrees C (40 degrees F); in the summer they are 30 degrees C (86 degrees F) and 18 degrees C (64 degrees F). In the northern part of the Transjordan plateau, precipitation averages



MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

64 centimeters (25 inches), but in the southern part it falls to an erratic 25 to 35 centimeters (10 to 14 inches)—barely enough to raise a wheat crop. The desert and the Jordan valley receive 0 to 25 centimeters (0–10 inches) of rain. Typical of the eastern Mediterranean, the precipitation falls only during the late autumn, winter, and early spring—the rainy season.

The People, Language, and Religion

Jordan's population of 5,460,265 (mid-2003 estimate), lives largely in the fertile highlands of the Transjordan plateau. Smaller numbers live in the Jordan valley, where they practice agriculture or mining, and in the desert, where they herd sheep, goats, and camels or enlist in the military. About 50 percent of the population are Jordanians who originate from the land east of the Jordan river. Most of the balance have their origins in Palestine. Many arrived as refugees in Jordan following the establishment of the State of Israel and the Arab–Israel Wars of 1948 and 1967. Other Palestinians moved to Jordan beginning in the 1950s. As a result of the Gulf Crisis and war, about 300,000 Palestinians with Jordanian citizenship moved from Kuwait back to Jordan, where they increased the population by 9 percent. While relations between the refugees and other Jordanians are relatively amicable today, Palestinian guerrilla organizations did conduct an unsuccessful civil war against the Jor-

A semidesert region in southern Jordan, Wadi Rum boasts sweeping vistas, spectacular rock formations, and towering granite and sandstone cliffs. Once a holy place for Nabataens, Wadi Rum is now inhabited by several Bedouin tribes. © PETER M. WILSON/CORBIS. REPRODUCED BY PERMISSION.

danian regime in 1970 ("Black September"). Both groups are of Arab stock and think of themselves as part of the larger Arab nation.

In terms of minorities, about 5 percent of the population are Arab Christians, mostly Greek Orthodox. They have positive relations with the Muslim majority and hold responsible and high-level positions in business, industry, commerce, banking, and government. Ethnic minority groups are even smaller; among these are Armenian Christians, Chechen Muslims, and Circassian Muslims. Some Circassians are royal palace guards.

The official language of Jordan is Arabic. Throughout the Arab world, although the written language is virtually the same, spoken dialects have developed. The Arabic spoken in Jordan conforms to the general eastern Mediterranean dialect; however, one finds some variations in the spoken language between the rural and urban regions, the older and younger generations, and the Jordanians and Palestinians. The influence of modern communications and education is causing many of these differences to be tempered or to disappear. Among the ethnic minority groups, Arabic is spoken in public but their mother tongue is often spoken at home.

Islam is Jordan's official religion. Ninety-five percent of the population are of that faith and almost all are Sunni Muslims. The government supports the established religion through its ministry of Awqaf (Waqf) and Islamic affairs. (Religious pluralism is also officially countenanced; the state recognizes and respects the rights of religious minorities.) Islam deeply affects the lives and behavior of many Jordanians. Praying five times a day, attendance at mosque on Fridays, tithing, fasting during Ramadan, and the Hajj to Mecca are aspired

to and practiced by many. The wave of popular Islamic fundamentalism that has affected the Middle East since the 1970s has had its influence in Jordan. Some practice their religion more diligently and demonstrably. Islamic classes and discussions, including informal and formal organizational activities, are popular; some women follow the religious dress code characterized by modest long coats and head scarves.

Jordan is a highly urbanized country. Seven out of every ten Jordanians live in towns of 5,000 or more; the balance resides in villages and encampments. With the return of the Palestinian Jordanians from Kuwait in 1990 and 1991, many of whom settled in Amman, 1,864,500 people lived in that city by 1999. In the 1970s, there was a great contrast between urban and rural living standards. Urbanites enjoyed basic services, such as drinking water and electricity in their homes, with schools and clinics in close proximity to their residences. By the late 1980s, those differences had substantially, but not entirely, disappeared. In urban areas, 99 percent have electricity in their residences; in the rural areas, the figure is 81 percent. For drinking water, the figures are 92 percent and 78 percent respectively. In terms of living space, while there are certainly some crowded quarters in the urban regions, they do not approach the crowded conditions often associated with developing countries. About 10 percent of the people reside in Palestinian refugee camps, where living conditions are congested. In rural areas, around 25 percent live in stone and mud houses; a diminishing number (less than 5 percent) follow the traditional life of the Arab Bedouin, living in tents and tending camels, sheep, and goats.

Jordan is substantially overpopulated, given its limited natural resources, because of the influx of Palestinian refugees and the very high birth rate. This overpopulation is a major reason for the degree of urbanization in the country. Low rainfall and a growing population put pressure on the very limited water supply. Some significant cuts in irrigation have already occurred and more are expected. In addition, as of the early twenty-first century, some 52 percent of the population is below 20 years of age—a heavy burden on the economy and service sector, especially in education.

Economy

Jordan's economy is highly skewed by its growing population and its dependence on the economies and politics of the Middle East. From the period of its gradual independence from Great Britain in the late 1940s and early 1950s, development has been the watchword of Jordan's economy. Beginning from a modest base, it grew by 11 percent per year from 1954 to 1967. During this period, Jordan received considerable economic and financial assistance first from Britain and later from the United States. After a period of decline caused by wars, civil strife, and international and regional constraints, it recommenced steady growth in 1974. This was stimulated by substantial aid and remittances from the oil-rich states of the region, plus a period of relative stability in Jordan and the region. By the mid-1980s, along with the Middle East economy generally, growth slowed to the point of stagnation. In 1988, the Jordanian currency, the dinar, was considered to be overvalued by international financial circles and devalued by 40 percent. This economic decline was exacerbated by the Gulf Crisis and war (1990–1991). Among other things, Jordan lost most of the remittances from the returned Jordanians who had been working in the Persian (Arabian) Gulf states as well as the direct financial aid from those countries.

In terms of both labor force and share of gross national product (GNP), Jordan's economy is dominated by the service sector (over 60 percent in both categories), followed by mining and manufacturing, construction, and agriculture. The service sector overshadows the economy because of the country's relatively large population, high birth rate, number of government employees in both the civilian and military sectors, and the government's successful efforts at extending essential services throughout the country. The mining and manufacturing sector is composed of five large companies—phosphate mining, potash extraction, fertilizer and cement facilities, and an oil refinery (that refines imported oil)—as well as many small factories and artisans. Agriculture, which is usually important in developing countries, claims less than 10 percent of both GNP and the labor force in Jordan.

In the 1990s, Jordan started moving in another economic direction: free trade. After the 1994 peace

treaty with Israel, the United States and Jordan established "Qualified Industrial Zones" (QIZs) in the country. Under this system, manufacturers in the twelve QIZs use a combination of Israeli, Jordanian, and West Bank–Gaza materials to manufacture goods that are then exported to the United States duty free. Jordan's exports to the United States grew from $20 million in 1999 to $200 million in 2002. However, only 20 percent of these manufacturers are Jordanian firms, and only one-half of the 20,000 work force in the QIZs are Jordanians. Then in 2000, Jordan signed a Free Trade Agreement with the United States, according to which the two nations pledged to phase out their respective import tariffs over ten years. Jordan's commitment to U.S.–led free trade was symbolized by Jordan's hosting of the World Economic Forum meeting in June 2003. There has been another side of these close economic ties: The United States has provided $3 billion in financial and military aid since 1993, including $700 million as payment for Jordan's role in the 2003 Iraq war. Still, unemployment was about 20 percent in 2003.

History

Throughout most of recorded history, Jordan (formerly Transjordan) was not a distinct geographical or political entity. Rather it was usually just a provincial area of a larger state or empire. The exceptions might be the biblical Moabite kingdom centered in what is now Karak, the Nabatean trading state ruled from its unique capital carved out of the rose-colored stone cliffs of Petra, and the Crusader state led by Renard de Châtillon, who built a large citadel in Karak. Otherwise, the area was ruled successively by the Hittites, Egyptians, Assyrians, Babylonians, Persians, Israelites, Greeks, Seleucids, Ptolemies, Romans, Byzantines, and the Muslim dynasties (Umayyads, Abbasids, Fatimids, Ayyubids, and Mamluks). In 1517 the Ottoman Empire established control in the region that would endure until the last days of World War I.

After World War I, Transjordan came under the British-sponsored rule of King Faisal I ibn Hussein and the short-lived United Syrian Kingdom. In July 1920, France drove Faisal out of Syria and took control of most of the Arab kingdom, while Britain continued to claim Transjordan, as prescribed in the secret French-British Sykes-Picot Agreement. In the meantime, Faisal's brother, Amir Abdullah I ibn Hussein, arrived in Maʿan with an entourage of followers in the fall of 1920. In 1921, British colonial secretary Winston Churchill accepted Abdullah as the ruler of Transjordan under the League of Nations Mandate System for Britain (while Faisal was made ruler of Iraq). Amir Abdullah, with the crucial cooperation and financial help of Britain, established the basic institutions of the state—a government, parliament (Council of Notables, later replaced by the Legislative Council in 1928), a constitution (the Organic Law in 1928), and a security force (the Arab Legion). After World War II, in 1946, an Anglo-Jordanian treaty was signed, to be revised in 1948—after which the emirate of Transjordan became the Hashimite Kingdom of Jordan and Abdullah was crowned king.

In May 1948, Jordan, along with several other Arab states, entered Palestine and joined the Arab–Israel War of 1948 six months after fighting first broke out between Jewish forces and local Palestinians. In 1949, at the end of the war, Jordan was in military possession of that portion of central Palestine that came to be called the West Bank. Following considerable political maneuvering and parliamentary elections on the East Bank (of the Jordan river—the old Transjordan) and the West Bank, the two entities were coupled via a parliamentary vote as a unitary kingdom. On 20 July 1951, angered by Jordan's secret negotiations with Israel, a Palestinian assassinated King Abdullah in Jerusalem's al-Haram al-Sharif, whose shrines are the third holiest Islamic sites in the world. He was succeeded by his son Talal ibn Abdullah. By constitutional means, Talal was removed from the throne in 1952 due to mental illness. He was succeeded that year by his son, Hussein ibn Talal, who was then a minor. King Hussein did not officially take up his duties until he reached the age of eighteen in 1953.

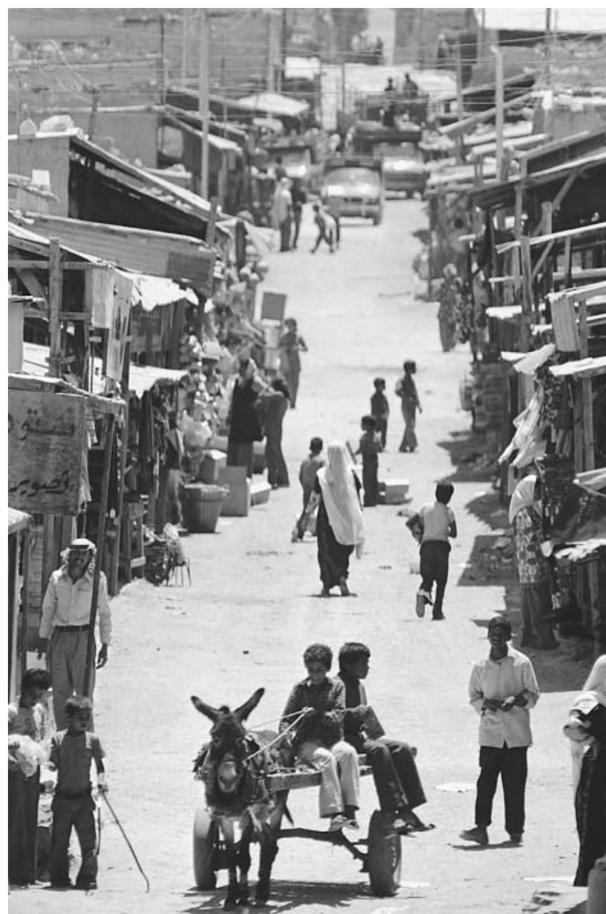
Jordan's history during King Hussein's long reign (1952–1999) may be divided into three major periods. The first two decades were marked by internally and externally generated crises and threats to Hashimite rule and the very existence of the country: Radical Arab nationalism stimulated street riots, challenges to the regime from Jordan's Prime Minister Sulayman al-Nabulsi in 1956 and 1957, destabilization by larger and stronger Arab states, and the devastating loss of the West Bank to Israel

in the Arab–Israel War of June 1967. In addition, the Palestinian guerrilla organizations confronted Jordan in the bloody Black September civil war in 1970. Nonetheless, while relying on his loyal military to survive, King Hussein and his circle helped put in place the bases for social and economic development.

The second phase, starting after the Arab–Israel War of October 1973, is distinguished by quieter political conditions within Jordan, rapid development fueled by funds (direct grants, loans, individual remittances) derived from the oil boom in neighboring states, and improved relations with most of Jordan's Arab neighbors in a relatively less radical regional atmosphere. Despite Jordan's problems with the Palestinians and its frequently strained relations with the Palestine Liberation Organization (PLO), the country became an accepted player and the king came to be a respected leader in most Arab capitals. Indeed, Jordan hosted two Arab summits—1980 and 1987—in Amman.

The third phase was dominated by the end of the Cold War and the alteration of regional relationships. In a sense, as a precursor to these changes, King Hussein decided to disengage Jordan politically and administratively from the West Bank in July 1988, in response to the pressures from the Palestinian Intifada (uprising), which began in late 1987. More important was the withdrawal of the Soviet Union as an active player in the region (1989–1990), the United States's ensuing dominance in areas of its perceived interests, and the resulting polarization of the Arab world. The 1990–1991 Gulf Crisis and war left Jordan (then diplomatically allied with Saddam Hussein's Iraq) and a few other poor Arab states politically, economically, and regionally isolated.

On the domestic level, though, Jordan began a gradual democratization process; its parliament had been recalled in 1984 after a hiatus that began in 1970, and in 1989, elections (generally considered to be the freest in the Arab Middle East) were held. Subsequently, under a mandate from King Hussein, leaders from all political streams wrote a national charter defining the general principles for political life in the country. They include democracy, pluralism, and the recognition of the legitimacy of the Hashimite throne. A special general



Fourteen miles from Jordan's capital city of Amman lies Baqʿa, the country's largest refugee camp. Some 120,000 Palestinians left the West Bank and flooded into Baqʿa after the Arab–Israel War of 1967. Approximately 10 percent of Jordan's population lives in camps such as this, and the influx of refugees has contributed to the country's severe overcrowding problem.

congress, of 2,000 representatives, ratified the document on 9 June 1991. Democratization initially led to significant parliamentary gains by opposition Islamic candidates and parties, although nonideological, pro-regime politicians dominated the parliament by the early 2000s.

Jordan fully embraced the United States–sponsored Middle East peace process and, along with other Arab states and the Palestinians, participated in direct negotiations with Israel beginning at the October 1991 Madrid Conference. In the wake of the September 1993 Oslo Accord between Israel and the PLO, Jordan signed its own peace treaty

with Israel in October 1994, the second Arab state to do so. In November 1995, King Hussein traveled to Jerusalem for the first time since 1967 to attend the funeral of assassinated Israeli prime minister Yitzhak Rabin.

Hussein's own death in January 1999 from cancer devastated Jordanians, many of whom had never known any leader but him, and who had come to associate him with the very existence of Jordan. Two weeks prior to his death, Hussein had shocked the nation by ousting his brother, Hassan, from the post of crown prince that he had held since 1965, and replacing him with his eldest son, Abdullah II ibn Hussein. The young king quickly assumed the throne upon his father's death, and faced monumentally large shoes to fill. Since then, he has pulled Jordan even closer to the United States and its vision of the Middle East. In addition to developing bilateral free trade agreements, Jordan also allowed the United States to station troops in the country before and during the American invasion of Iraq in March 2003. With the Jordanian economy still in trouble, the Israeli–Palestinian peace process stalled, and a new regional balance of power given the direct intervention of the United States in Iraq, King Abdullah faced some serious challenges by late 2003.

JORDANIAN CIVIL WAR (1970–1971)

Fighting between the Jordanian army and Palestinian guerrillas in 1970 and 1971.

Between 1967 and 1970, Palestinian guerrilla groups associated with the Palestine Liberation Organization (PLO) established a strong presence in Jordan. By the summer of 1970, their attacks against Israel, which prompted Israeli counterattacks, and their activities within Jordan posed a significant threat to the stability, if not the existence, of the Jordanian monarchy. As a complicating factor, in the aftermath of the Arab defeat in the 1967 Arab–Israel War, Iraqi troops were stationed in Jordan. They, along with a strong Syrian military presence just north of Jordan's border, constituted an additional security threat to the regime of King Hussein ibn Talal.

In June 1970, guerrillas and the Jordanian army clashed in the capital, Amman, but fighting ceased after an agreement was struck allowing Palestinian fighters to continue their presence. In early September, another round of clashes erupted, with serious new complications. The Popular Front for the Liberation of Palestine (PFLP), led by George Habash, hijacked four international airplanes, forcing three to land in Jordan with their hostages. After Jordanian authorities negotiated an evacuation of the passengers and an end to the standoff, the PFLP blew up the empty planes. This spectacle, in the full glare of the international media, drove King Hussein to appoint a military cabinet, signaling his intent to confront the guerrillas once and for all. Jordanian troops began a major assault against PLO

targets on 17 September. Iraqi troops, by minor repositioning, indicated they would not interfere; but on 19 September as many as 200 Syrian tanks, along with Syrian-controlled Palestine Liberation Army forces, invaded to assist PLO forces. Jordan requested help from the United States, and Israel made moves indicating it might intervene. Because of internal Syrian politics and direct communications between King Hussein and Hafiz al-Asad, then Syrian air force commander, Syrian planes did not join the battle. Bereft of air cover, the Syrian force was driven back by Jordanian planes and tanks on 22 September. Subsequently, Jordan's army defeated the Palestinian guerrillas on the ground after ten days' fighting and thousands of casualties, including heavy civilian losses in Palestinian refugee camps.

With considerable assistance from Egypt's President Gamal Abdel Nasser, King Hussein and PLO Chairman Yasir Arafat (who had escaped from Jordan) signed a peace accord in Cairo dated 27 September, which called for the withdrawal of the Palestinian forces from Amman. In July 1971, the army undertook extensive and harsh mopping-up operations in northern Jordan, driving the PLO completely out of Jordan. As punishment for its actions against the Palestinians, Kuwait and Libya ended financial aid to Jordan, and Syria closed its border and airspace to Jordanian traffic. Although Jordan suffered economically and politically for its defeat of the guerrillas, it eventually renormalized relations with the Arab world, especially after the October 1973 Arab–Israeli War.

JORDANIAN OPTION

A term used to describe the foreign policy of the Israeli Labor Party; a preference for reaching a settlement with the Hashimite rulers of Jordan rather than with the Palestinians.

The origins of the Jordanian Option can be traced to the contacts between the Jewish Agency (the official link between the Jews in Palestine and the British mandate authorities) and King Abdullah I ibn Hussein of Jordan, which culminated in a secret agreement to partition Palestine between themselves in 1947. After the attainment of Israel's independence, on 15 May 1948, Israeli leaders saw the survival of the Hashimite monarchy in Jordan as essential to their own nation's security.

After Israel captured the West Bank of the Jordan River during the 1967 Arab–Israel War, Labor Party leaders opposed the creation of a Palestinian state and strove, unsuccessfully, for a territorial compromise with Jordan. The Jordanian Option ceased to be Israel's official policy following the rise to power of the Likud Party in 1977. Later, whether in opposition or as the Likud's coalition partner, the Labor Party continued to advocate the Jordanian Option. By cutting the links between Jordan and the West Bank in July 1988, Jordan's King Hussein announced, in effect, that a Jordanian Option no longer exists—if it ever did.

JORDAN RIVER

River that forms the boundary between Israel, the Palestinian Authority, and Jordan; it flows south from Syria to the Dead Sea.

The Jordan River rises from the confluence of three major springs and streams located on the southern and western slopes of Mount Hermon (Arabic, *Jabal al-Shaykh*). The largest is the Dan and the other two are the Hasbani (Hebrew, *Nahal Senir*) and the Baniyas (Hebrew, *Nahal Hermon*) streams. The streams unite about 4 miles south of the Lebanon-Israel border. These springs usually provide 50 percent of the water of the upper Jordan, the rest coming from surface runoff in the rainy winter months. The discharge flows into the northern end of the Ghawr, which is the valley of the Dead Sea and the northern extremity of the Great Rift Valley that runs south to Africa, ending at Mozambique.

The upper Jordan River flows swiftly through the Hula Valley, additional water coming to it from minor springs and Wadi Barayghit (Hebrew, *Nahal Iyyon*). Four miles south of the Jordan's outlet from Lake Hula, the water course deepens and the river runs for 10 miles, plunging 850 feet. The central Jordan river begins north of the Sea of Galilee (also called Lake Tiberias or Lake Kinneret), leaving the southern exit of the lake, where it meets up with a few more streams and most importantly with its main tributary, the Yarmuk River. The Yarmuk originates in the eastern rift and forms the border between Syria and the Kingdom of Jordan as it flows westward to enter the Jordan River 6 miles south of the Sea of Galilee at 985 feet below sea level. The lower Jordan River flows southward, dropping to 1,310 feet below sea level, emptying into the Dead Sea, a great salt lake whose surface level is the lowest point on Earth's surface.

The Jordan and Agriculture

The water of the Jordan is freshest at the headwaters and becomes more saline as it enters the Sea of Galilee; the salinity rises rapidly as it moves south to the Dead Sea. Agriculture depends in part on water quality (freshness) and in part on soil quality (organic matter and minerals). Over the years, and after much intensive study and advice, during the British Mandate (1922–1948) the Zionists in Palestine determined that the northern Negev Desert had fertile soil and that all it needed was a good supply of water. At that time, the only large-scale development plan for the Jordan River was carried out by the Zionist leader and hydroelectric engineer Pinhas Rutenberg; even that was limited by the British Mandate administration to the construction of one power station to supply hydroelectric power to Palestine west of the Jordan. All Rutenberg's plans for irrigation and electrification of the area east of the Jordan River came to nothing.

When the state of Israel came into existence in 1948, plans were drawn for the diversion of water from Jisr Banat Yaʿqub, on the upper Jordan, to be taken via massive pipelines across the Jezreel Valley and south along the coastal plain, terminating in Beersheba, where it could be used most effectively. When work began on this diversion scheme in 1952, Syria complained to the United Nations that it violated the demilitarized zone agreement of the 1949 armistice (which ended the 1948 Arab–Israel War). Israel was ordered to cease construction, and U.S. Special Ambassador Eric Johnston was appointed to devise a scheme for regional development of the Jordan River system. Johnston's Unified Plan, worked out from 1953 to 1955, was never formally ratified by the League of Arab States but has been implemented by Israel and by the Hashimite Kingdom of Jordan in separate schemes.

Israel has constructed the Cross Israel Water Carrier, which was its original idea, but the carrier was started at the northern end of the Sea of Galilee—a costly modification, considering that the water had to be pumped up to the level of the Jezreel Valley. Across Israel, the government built smaller pipelines radiating out over the farmland to bring water for irrigation. The entire system forms a water grid, easily controlled and measured; it was completed in 1964.

The Kingdom of Jordan has constructed the East Ghawr Project, hooking up a pipeline to the Yarmuk above Adassiya, which parallels the flow of the Jordan River. The pipeline is on a much higher level than the river, just below the high ridges, and the radiating smaller pipelines flow by gravity to the rich Jordan Valley soil, irrigating the farms. The final stage of the project, under Jordan Valley Authority control (created in 1973), was completed in 1980 when the pipeline reached the Dead Sea.

Hydropolitics

After the 1967 Arab–Israel War, new issues complicated an already complex situation, since Israel took

and occupied Jerusalem and the West Bank of the Jordan. Discovering the existence of the huge aquifer under the spine of the mountains of the West Bank, Israel began to pump winter floodwaters into the aquifer to use it as a better water storage area than the Sea of Galilee. Israel refuses to allow the Palestinians in the West Bank to drill deeply for new wells lest they tap this vital storage area. By taking the Golan Heights from Syria, Israel also gained complete control over the Galilee, the upper Jordan River, and even part of the Yarmuk River. This gave Israel effective control over the Jordan River, preventing water diversion downstream by either Jordanians or Palestinians. Indeed, securing control over the water supply was one of several Israeli motivations in launching the 1967 war in the first place.

Throughout the 1970s, 1980s, and 1990s, Israel continued to build settlements in the West Bank, diverting surface water from the Jordan and more groundwater from underground aquifers, in each case lessening the amount of water available for Palestinian towns and cities. The 1973 Arab–Israeli War did nothing to change this situation, nor did the wars of the 1980s in Lebanon and in the Persian Gulf. The situation for Palestinians and Jordanians, suffering from chronic water shortages, grew steadily more desperate.

The post–Gulf War atmosphere included a return to the regional peace process, beginning in 1991 with meetings in Madrid. These were followed by specialized rounds of multilateral talks, including negotiations over water and environmental issues. By 1993, Israel and the Palestine Liberation Organization began direct negotiations at Oslo. This was followed by the 1994 peace treaty between Jordan and Israel, in which water rights loomed large. The treaty returned the Wadi Araba (a major source of groundwater) to Jordanian control, while leasing the same land back to an Israeli kibbutz for twenty-five years. It is not accidental that the treaty was signed at the Wadi Araba. The two states agreed that Jordan could build a dam and divert water from the Yarmuk River, while Israel would consider Jordan's water needs when releasing waters from the Galilee to the lower Jordan. Since Jordan had no capacity for storing Yarmuk floodwaters, Israel agreed to pump winter water from the Yarmuk for storage in the Sea of Galilee, which would then be sent back to Jordan in the summer.

In practice, however, repeated summer droughts and overuse of water resources together have depleted the regional water supplies, even lowering the water level of the Galilee. As a consequence, Israel has tended to send Jordan less water than expected. This has led Jordan to obtain supplemental and emergency supplies from Syria and has also led Jordan and Syria to finally begin construction of a decades-old project: the Wihda, or Unity, Dam (also called the Maqarin Dam) on the Yarmuk River. In the West Bank, Israeli reoccupation, the Palestinian uprising (since September 2000), and the collapse of much of the regional peace process has at least delayed any hope of more equitable access to surface or groundwater supplies. Hence the water situation for the Palestinian Authority remains dire and will be a vital point of negotiation with Israel.

Hydropolitics are vitally important to Israel, Jordan, Syria, and the Palestinian Authority as they approach the point when they will be using all their available water and yet have rapidly growing populations. Unless there is a major technological breakthrough, and unless greater levels of cooperation can be arranged between these riparian peoples, hydropolitics may precipitate ecological disaster and possibly the next war.

JOSEPH, DOV

[1899–1980]

Israeli lawyer and cabinet member.

Dov (Bernard) Joseph was born in Montreal, where he began his Zionist activity as a teen. In 1917 he became the first editor of the *Judaean,* a prominent Canadian Zionist publication. In 1918 he joined the Jewish Legion. He emigrated to Palestine in 1921 and became a lawyer. He received a doctorate from the University of London in 1929. From 1936 to 1945 he was a legal adviser in the political department of the Jewish Agency for Palestine. This brought him into close contact with the department's head, Moshe Sharett. In 1945 he was appointed to the Jewish Agency Executive, where he continued his leadership of the political department. During the fall of 1947 he was dispatched by the World Zionist Organization to the United States to push for a United Nations vote in support of partition. During Israel's War of Independence he was military governor of Jerusalem. On 17 September 1948 the United Nations mediator Count Folke Bernadotte was assassinated by Lohamei Herut Yisrael (LEHI)—the "Stern Gang," led by Abraham Stern—on his way to an appointment with Joseph. Joseph took the lead in the arrest of the responsible LEHI members.

Joseph served in various ministerial capacities between 1949 and 1955, and was a member of Knesset (MAPAI) until 1956. From 1957 to 1961 Joseph served as treasurer of the Jewish Agency, and as Israel's minister of justice from 1961 to 1965. He died in Jerusalem in 1980.

JUBAYL, AL-

A small port on the Gulf coast of Saudi Arabia.

Al-Jubayl traditionally served the Najdi hinterland, especially al-Qasim district. The kingdom's Second Five-Year Development Plan (1975–1980) teamed al-Jubayl with Yanbu on the Red Sea coast in an ambitious industrial development scheme involving crude oil refining, petrochemical complexes, and steel-manufacturing industries, linked by trans—Saudi Arabian oil and gas pipelines. The development of the two sites was expected to take ten years and cost in excess of $70 billion. Al-Jubayl was to be the bigger of the two, with three petroleum refineries, six petrochemical plants, an aluminum smelter, and a steel mill, as well as support industries and an industrial seaport. By 1999, seventeen basic industrial plants had been established and the city had an estimated population of 101,000, projected to grow to 290,000 by 2010. It also had acquired an industrial college and an airport.

JUDAISM

The religion of the Jewish people.

Judaism developed out of scripture (the Torah) and an oral tradition of legal and ethical conduct as inscribed in the Talmud, codes, mystical literature, and rabbinic commentaries. Although traditional

Jews assume that Judaism has remained unchanged from the revelation at Sinai to the present, most scholars agree that it has been transformed by the vicissitudes of Jewish history since the days of the Bible.

A significant turning point in Judaism occurred when the wandering Israelites entered into the Promised Land and later when they built their Holy Temple in Jerusalem. For much of this time, the religion was essentially a temple cult, organized around regular ritual sacrifices and a series of three pilgrimages to Jerusalem, and practiced by a people ruled by kings, guided by prophets, and ministered to by priests.

After the Babylonian destruction of the First Temple in 586 B.C.E. and even more so following the Roman destruction of the Second Temple in 70 C.E., Judaism became a religion of exile. Replacing the temple and temple rites were synagogues, regular prayer, and an emphasis on the lifelong study of sacred texts in the Torah. Rabbis and teachers replaced the priests and prophets, and Jewish community leaders, the kings. This new Judaism was a more portable religion, appropriate to a wandering people. Moral and ethical laws became central, but ritual praxis, governed by strict codes and guided by rabbinic interpretation of the law, was also crucial. The Torah became the focus of Judaism, the yeshiva its most important sanctuary, and a return to the Promised Land Zion and a rebuilding of the temple in Jerusalem remained abiding hopes and part of the promise of messianic redemption.

The Diaspora has led to a nuancing of Jewish tradition into distinct customs. Among the most outstanding have been the custom variations between Sephardic Jews, whose expatriation occurred in the Middle East, North Africa, and the Iberian Peninsula, and Ashkenazic Jews, who trace their origins to France and the German-speaking countries but who emigrated ultimately to almost all of Europe and later to the Americas. Sephardic Jews and Ashkenazic Jews share a belief in Scripture and a dependence on the Talmud, but they have evolved variations in custom and ritual praxis based upon their varying ethnic experiences and the disparate rabbinic authorities by whom they have been guided over the years. Nevertheless, many of the rabbis and their commentaries have, through time, acquired a religious legitimacy that supersedes these differences. Thus, for example, Rashi, an eleventh-century Ashkenazic exegete, and Maimonides, a twelfth-century Sephardic rabbinic codifier, are recognized by all Jewish traditions to be authoritative interpreters of Judaism.

By and large, Judaism defines a Jew as someone born of a Jewish mother or someone who has submitted to religious conversion. Although there is debate about what constitute the minimal requirements of conversion, the *halakhic* (Judeo–legal) minimum requirement consists of circumcision for males, immersion in the waters of a ritual bath *(mikveh),* a period of Torah study, and a commitment to be bound by all the laws of Judaism. During the twentieth century, some non-Orthodox Jews expanded this religious definition to include children of either a Jewish father or mother and do not require a commitment to keep all the laws. The definition is a crucial one in Israel, which guarantees full citizenship rights to all Jews.

Through most of the period of the Diaspora, Judaism has tended to focus on matters of praxis more than on principles of faith, because, it was argued, the former better guaranteed the religion's continuity while ensuring the integrity of belief. Since the eighteenth century and especially in the twentieth century, however, a large-scale move away from praxis has occurred. A result of religious reform and social changes that brought Jews out of their status as pariahs and into the mainstream of Western societies, this development has led to a Judaism that focuses more on its moral and ethical principles and on some vague notions of ethnicity than it does on ritual praxis. Accordingly, in contemporary Judaism, those who strictly maintain traditions, ritual praxis, and time-honored Jewish codes of conduct now constitute a growing minority.

Although the principles of Jewish faith have been the subject of much discussion and debate among Jewish philosophers and rabbinic commentators, among the most commonly cited essentials are thirteen principles listed by Maimonides. These include a belief in a single Creator, a unique and everlasting God, who is incorporeal, who existed before time began and will last after it has passed, and who alone is worthy of worship. It also includes a belief in the utterances of the prophets, and especially

the words of Moses; a conviction that the entire Torah was divinely revealed to Moses at Sinai and passed on intact to the Jewish people, who may not replace it with another set of teachings; and a belief that God is omniscient and that He creates all life, rewards the good, and punishes the bad. Finally, it includes a faith in the promise of messianic redemption. In the same way that only a minority of Jews today abide by all the rules of Jewish law and praxis, so is it likely that only a few Jews today hold all of the thirteen beliefs.

Although Judaism has demonstrated a remarkable capacity to survive the vicissitudes of Jewish history and the vagaries of existence in the Diaspora, including persecution and pogrom (most recently during the European Holocaust), some observers are anxious about its future in the context of an open society like America's and that of a secular state like Israel, the two largest population centers of Jewry today. Pointing to a decline in numbers of Jews in America as well as a diminution of Jewish education, practice, and faith, these observers argue that Judaism's days as a vital religion are numbered in America and throughout the Diaspora. On the other hand, looking at Israel's large-scale redefinition of Jews as secular Israelis, other observers worry no less about the future of the religion in the Jewish homeland. To some of these observers, the answer to these anxieties is to press for the coming of the Messiah. To others, the answer is a revitalization of Jewish education and a return to Jewish tradition.

JUDEO-ARABIC

The various forms of Arabic spoken or written by Jews from before the rise of Islam to modern times.

Like all Diaspora Jewish languages, Judeo-Arabic is distinguished from its non-Jewish cognate, Arabic, in the use of the Hebrew alphabet, a significant number of Hebrew and Aramaic loanwords and elements, and its own distinguishing grammatical, syntactical, and phonological forms.

In the Middle Ages, written Judeo-Arabic, which depending upon the subject matter ranged from Classical to Middle Arabic in style, became a primary medium of Jewish intellectual creativity for theologians, philosophers, grammarians, lexicographers, and legal scholars, and was also the primary medium of correspondence. Only for poetry (which in Islamic society is considered the supreme national art form) was Hebrew the principal language of expression. Owing to the decline of Hellenistic humanism after the High Middle Ages and the increased social isolation of Jews within the context of a larger Arab world after the thirteenth century, the regional varieties of modern Judeo-Arabic that emerged in the late fifteenth century were characterized by their vernacular nature.

During the nineteenth and early twentieth centuries, Judeo-Arabic books and newspapers were published from Morocco to India (where there was an Iraqi Jewish mercantile colony). Many of the books were translations or adaptations of European popular literature and, in some instances, works of Haskalah Hebrew writers. By the 1920s, Judeo-Arabic publication was declining in many places as French became the main language of high culture for many Jews, because of the Alliance Israélite Universelle schools. Nevertheless, it remained the spoken language for the great majority of Jews until their mass exodus to Israel in the mid-1950s. Judeo-Arabic is dying out among the second and third generations born in Israel, France, and the Americas, who tend to speak their national languages (Hebrew, French, and English, Spanish, or Portuguese).

JUMAYYIL, AMIN

[1942–]

President of Lebanon, 1982–1988.

Amin Jumayyil (or Gemayel) studied law at St. Joseph University in Beirut, and is noted for his oratorical skills in Arabic. A moderate who was not active in the Phalange party, founded by his father, Pierre Jumayyil, he concentrated on his political career after being elected to parliament in 1970, the youngest deputy in the body. Jumayyil was named president on 23 September 1982 after the assassination of his brother Bashir Jumayyil, through consensus among the various political factions, key Arab states, and Western powers. He based his policies on his alliance with the United States, which ultimately led to the unraveling of his presidency. Under pressure from Syria, he abrogated the U.S.–brokered 1983 security agreement with Israel. On 17 February 1984, the last of the multinational force withdrew from Beirut. Without support, Jumayyil was a lame-duck president. He remained in office until the end of his term in 1988. Minutes before leaving office, he violated the terms of the 1943 National Pact (which required a Sunni Muslim serve as prime minister) by appointing fellow Maronite Christian Gen. Michel Aoun to the post. Given his poor relations with Syria, he left Lebanon and went into exile.

Jumayyil taught at Harvard University, wrote, and lectured. The death of Syrian president Hafiz al-Asad in June 1990 paved the way for his return to Lebanon. Jumayyil found an ally in Druze leader Walid Jumblatt, who forsook his traditionally pro-Syrian line to join what had been the Maronite campaign against Syria.

MAJED HALAWI
UPDATED BY MICHAEL R. FISCHBACH

JUMAYYIL, BASHIR

[1947–1982]

Militia leader; later president of Lebanon.

Bashir Jumayyil (also Gemayel) was the son of Pierre Jumayyil, a right-wing, militant Maronite leader who founded the fascist Phalange party. Bashir Jumayyil grew up in Beirut and joined the Phalange early in his youth. He studied law at Saint Joseph University and was very active in the militarized youth branch of the Phalange. He supervised the anti-Palestinian armed branch of the movement and provoked clashes with Palestinian organizations in Lebanon after forming the BG (his initials, using the French spelling of his name) militia in 1974, a year before the eruption of the Lebanese Civil War. Jumayyil became a key militia leader in the Civil War. He rose to prominence in the battle against the Palestinian refugee camp in Tall al-Zaʿtar in 1976 and was appointed president of the Military Council after the mysterious death of William Hawi. He formed the Lebanese Forces in 1976 as an umbrella group for the right-wing Christian militias under his command. He ruthlessly eliminated his rivals in 1980 and expelled fighters belonging to the National Liberal Party, his former allies. His name is associated with the bloodiest day of the Civil War, Black Saturday, when he and his followers massacred hundreds of innocent Muslim civilians to avenge the death of four members of the party. He led the fight against Syrian forces in 1978 and struck a close alliance with Israel, which propelled him to the presidency after Israel invaded Lebanon in 1982. He was assassinated in a massive car bomb in September 1982, weeks after assuming the presidency. His son Nadim has become active in Lebanese politics in alliance with the forces loyal to General Michel Aown.

ASʿAD ABUKHALIL

JUMAYYIL, PIERRE

[1905–1984]

Lebanese nationalist; founder of al-Kataʾib (Phalange) party.

Pierre Jumayyil was born in Bikfayya, Mount Lebanon, into a Maronite family. He completed his education at Jesuit schools and obtained a degree in pharmacy. In 1936 Jumayyil attended the Berlin Olympics, where he was impressed by the youth movement of the National Socialist (Nazi) Party. He decided, upon his return to Lebanon, to form a similar group, al-Kataʾib (the Phalange). Initially, al-Kataʾib stood at the divide between the two main currents of Christian public opinion: that of Emile Eddé, which favored the consolidation of France's hegemony in Lebanon, and that of Bishara al-Khuri, which called for Lebanon's independence with close ties to the Arab world.

After a failed attempt in 1951, Jumayyil was elected deputy from Beirut in 1960. He had led the opposition to President-elect Fuʾad Chehab, the candidate of the consensus between President Gamal Abdel Nasser of Egypt and the United States that ended the 1958 civil war; nevertheless, he joined a four-member national reconciliation cabinet that was formed on 24 September 1958. He subsequently participated in most cabinets formed by Chehab and by his protégé successor, Charles Hilu.

In 1968, Jumayyil entered into al-Hilf al-Thulathi (Tripartite Alliance) with former President Camille Chamoun and Deputy Raymond Eddé, gradually distancing himself from Chehab. In 1970, the Hilf candidate, Sulayman Franjiyya, was elected president.

Jumayyil staunchly opposed Nasserism and Arab nationalism. He was particularly hostile to the armed Palestinian fighters in Lebanon. The Kataʾib repeatedly clashed with Palestinian fighters in the early 1970s. In January 1975, Jumayyil denounced the Palestine Liberation Organization for sowing anarchy in Lebanon, and the following month demanded a referendum on Palestinian presence in the country. The Ayn al-Rimmani incident of 13 April 1975, which ignited Lebanon's civil war, occurred between Kataʾib members and Palestinian fighters.

During the Lebanese Civil War, with the Kataʾib as his base, Jumayyil was at the center of the Christian right camp. He played a key role in obtaining the introduction into Lebanon of troops from Syria, who initially helped the Christians to achieve a reversal of the successes of the Palestinian–leftist alliance. His relations with Syria, however, deteriorated as the Kataʾib's military cooperation with Israel, which culminated in Israel's invasion of Lebanon in 1982, grew ever stronger.

During the civil war, Jumayyil worked with the traditional Muslim leadership to create a right-wing Christian–Muslim alliance. With the failure of these efforts, he began advocating political decentralization, which many considered a call for the de facto partition of Lebanon. At the time of his death, Jumayyil was a minister in the National Unity government of Rashid Karame.

JUMBLATT FAMILY

Prominent Druze family in Lebanon.

The Jumblatts are one of two rival Druze family confederations in Lebanon (the other being the Yazbaki). The family traces back to a Kurdish family from Janbulad, Syria, and to the chieftain Ali Janbulad, from Aleppo. They came to Lebanon in the seventeenth century after a failed rebellion against the Ottomans. With the support of Prince Fakhr al-Din II al-Maʿhi, the family was invited to settle in the Shuf, establishing itself in Mukhtara. After their conversion to the Druze religion, the extinction of the Maʿnid dynasty enabled them to become shaykhs of the Shuf. They extended their feudal domain south of the Shuf, coming to rival in power, and later forming the opposition to, the Chehab dynasty. In the nineteenth century, the Jumblatt family became one of the most prominent political (zuʿama) families in Lebanon. In the twentieth century, the his-

tory of the family is indistinguishable from the history of the Druze in Lebanon. In the 1920s, during the French mandate, the political leadership of the family was assumed by Nazira Jumblatt, who succeeded her husband Fuʾad after his assassination in 1921. She cooperated with the French authorities to prevent the Druze from defying the mandate government.

The political prominence of the family was boosted by the emergence of Kamal Jumblatt (Nazira's son), who until his death in 1977 dominated Lebanon's political life. The nature of the Jumblatt leadership changed when Kamal promoted progressive and socialist policies that extended his leadership beyond the confines of the Druze family confederation. He also succeeded in marginalizing, perhaps more than at any other time in the modern history of the Druze in Lebanon, the role of the Yazbaki Arslan family. This was especially true under the leadership of the highly ineffective Prince Majid, whose close association with Maronite Christian leader Camille Chamoun discredited him, particularly after the outbreak of the Lebanese Civil War of 1975. Kamal emerged as the spokesperson of the leftist/Muslim coalition that he had helped found before the outbreak of civil war. The death of the Yazbaki *shaykh al-aql* (the highest religious authority among the Druze) also helped the Jumblatt family, whose *shaykh al-aql* became the Druze religious leader in Lebanon, thereby unifying, for the first time in modern times, the religious leadership of the community.

Upon Kamal's assasination, his son, Walid, assumed leadership of the family and of the Progressive Socialist Party it led. He played an important role in the Lebanese Civil War of 1975 through 1990 and in postwar Lebanese politics, continuing the family's significance in that country.

JUMBLATT, KAMAL
[1917–1977]

Lebanese Druze politician.

Kamal Jumblatt was the son of Fuʾad (assassinated when Kamal was a boy) and Nazira Jumblatt. A bright young man, he showed deep interest in academic matters and distanced himself from the political affairs of the Druze community, of which his mother was the political leader. He studied at St. Joseph University and attended the Sorbonne. As a student Jumblatt was far from the radical politics with which he was later associated. He was sympathetic to the French mandate in his youth but became a supporter of Bishara al-Khuri after independence. His first prominent political role was in 1952, when he was instrumental in the formation of the opposition block that worked for the ouster of President al-Khuri.

Over the years, Jumblatt became identified with socialist and pro-Palestinian politics. He initially tried to mobilize non-Lebanese Druze, and he founded the Progressive Socialist Party in the late 1940s. The party, however, gradually lost its non-Druze leaders and became a political tool for Jumblatt political leadership. Jumblatt was inconsistent: He championed secularization of politics in Lebanon while cultivating sectarian support among Druze followers, and he promoted socialist policies while remaining a large landowner. He emerged as a prominent pan-Arabist in 1958, when he was one of the key leaders of the popular uprising against the rule of Camille Chamoun. He became a staunch supporter of Gamal Abdel Nasser.

In his political career, Jumblatt maintained the roles of both insider and outsider. He held ministerial posts in cabinets beginning in the 1940s, although he always spoke as the representative of the antiestablishment. In the 1960s, Jumblatt formed a loose coalition of leftist and Muslim organizations and parties to champion support for the Palestine Liberation Organization (PLO) in Lebanon and to call for major reforms of the political system in Lebanon. By 1975, Jumblatt had become one of the most effective and popular leaders in the country. He headed the Lebanese National Movement (which comprised leftist and Muslim organizations) and aligned himself with the PLO. His conflict in 1976 with the regime in Syria over the future course of

the Lebanese Civil War of 1975, which Jumblatt wanted to end with a decisive victory for his coalition, led to his death the following year at the hands of assassins believed to be working for Syria.

Although Jumblatt's critics question his motivations during the civil war (he was often accused of frustration at not being able to run for president, an office reserved for Maronites), he succeeded in playing a role that far exceeded the historical role of the Jumblatt family. Some say that he solidified the ties between the Druze and Arabism, at the same time that others within the community wanted him to focus more on the affairs of the community.

As'ad AbuKhalil

JUMBLATT, WALID

[1949–]

Lebanese politician.

Like his father, Kamal, Walid Jumblatt did not seek the political leadership of the Druze community in Lebanon or of the Jumblatt family. It was thrust upon him in the wake of his father's assassination in 1977. Jumblatt studied at the American University of Beirut and seemed uninterested in politics. In his first years as leader, he was uncomfortable with his new role and merely followed his father's path. However, he quickly made peace with the regime in Syria. He later abandoned his father's pan-Arab vision and decided to focus more on the affairs of the community. Following Israel's 1982 invasion of Lebanon, Walid reorganized the Progressive Socialist Party, making it a purely Druze fighting force. He led the defense of the predominantly Druze mountain areas against the encroachments of the Maronite-led Lebanese Forces. His stand within the community was strengthened when he allowed his militias to fight an all-out war against the Lebanese Forces, aided by some Palestine Liberation Organization factions. The fighting, in what became known as the War of the Mountains in 1983, was accompanied by bloody massacres, committed by both sides.

Jumblatt survived a 1982 assassination attempt that soured his relationship with the regime of Amin Jumayyil. He later formed the nucleus of the opposition to Jumayyil after the agreement of 17 May 1983 between Israel and Lebanon, which was rejected by Syria. Jumblatt dissolved his militia after the election of Ilyas al-Hirawi as president in 1989. He ran in the 1992 elections and won. His party also won another seat in parliament, bringing its total to ten. Jumblatt was named minister for the affairs of the displaced peoples in 1994 and served in several other cabinet positions.

Jumblatt's close relations with Syria, dating back to the 1980s, began to change in autumn 2000, when he joined his voice to what had been a largely Christian call for a reduction of the Syrian troop presence in Lebanon. He and his political allies, including Christians, did well in parliamentary elections, indicating a shift in his long-held political strategy.

JUSTICE AND DEVELOPMENT PARTY

See AKP (Justice and Development Party)

JUSTICE PARTY

Turkish political party.

The Justice Party (JP) was founded in early 1961 by the former chief of the general staff, Ragip Gümüspala and ten associates, four of whom had been active in the Democrat Party (DP). The JP was created as a continuation of the DP and absorbed the latter's provincial party organization. Three groups comprised the JP in the early years and vied for its leadership: a group of officers centered around Gümüspala; a right-wing group led by Gökhan Evliyaoğlu; and a liberal wing, which succeeded in making Süleyman Demirel head of the party in 1964. The JP received 43.8 percent of the vote in the October 1961 elections and formed a coalition government with the Republican People's Party (RPP) that lasted until May 1962. In the October 1965 general elections, the Demirel-led JP received 53 percent of the vote and 240 out of 450 seats in the National Assembly. The JP also won the 1965 and 1969 elections, but despite a rapidly growing economy, expanding political instability led the military to threaten to intervene. On 13 March 1971 the Demirel government resigned.

When civilian politics resumed in 1973, Demirel refused to form a coalition with the RPP, and the JP became the main opposition party. In 1975, Demirel formed a coalition government, known as the Nationalist Front, with three other parties and independents. Although the coalition lasted more than two years, members of the coalition seldom cooperated, preferring to work to infiltrate supporters into the bureaucracy. In addition, during these years, the JP became associated with the extremist right-wing positions of one of its partners, the Nationalist Action Party. The 1977 elections were held in the midst of increasing street violence. Following the elections, the RPP formed a minority government that lasted less than one month, and Demirel attempted to form a government. The second JP-dominated Nationalist Front government lasted only through 1977. The JP formed a third government in December 1979: It was in power at the time of the Black September coup. One of the first acts of the new military government was to close down all existing parties, putting an end to the JP. In 1983, the True Path Party was established as a continuation of the JP.

Like the DP, the Justice Party won support from peasants in the wealthier regions of the country, commercial farmers, and the business community. In addition, the party won the votes of many workers and residents of the squatter districts of the cities, but in the 1970s, the RPP began to win the loyalty of these two groups. Like the DP, the JP sought to expand the private sector but also intervened widely in the economy through the public sector, controls over trade, and other regulations. Through 1970, the JP pursued a policy of import-substituting industrialization. Beginning in 1970, the government attempted to reorient the economy toward exporting, a move resisted by many industrialists.

Despite similarities with the DP, a number of changes in Turkey prevented the JP from replicating its predecessors' electoral success. First, the proliferation of smaller parties made it necessary to form coalition governments in the 1970s. Second, the RPP made many inroads into the urban coalitions that had supported the DP in the 1950s and the JP in the 1960s. Third, in 1967, a more militant workers' union was formed, which refused to cooperate with the government. Fourth, small businessmen in the party were alienated by JP policies that favored large businessmen, particularly in Istanbul. Many small-business owners supported the National Order Party, led by Necmeddin Erbakan, which captured a portion of JP votes. Fifth, the JP continued the DP policy of closely allying with the West. But, particularly after American condemnation of the Turkish intervention in Cyprus in 1974, many people criticized the JP for being too close to the West. Finally, in the 1960s, rising tensions led to escalating political violence. All of these factors combined to make it more difficult for the JP to form stable governments than it had been for the DP.

DAVID WALDNER

K

KAʿBA

The most important shrine of Islam.

The Kaʿba is a sanctuary consecrated to the worship of God. A simple cubic structure (12.6 m by 13.1 m by 11.3 m by 11.2 m with a height of 13 m), it stands at the center of Mecca. It constitutes the *qibla,* the direction to which Muslims must orient themselves in prayer, and it is at the heart of the hajj, the pilgrimage prescribed at least once in their lifetime for the faithful. The doors are situated in the northern wall and the whole structure is covered with a black cloth embroidered with golden Qurʾanic calligraphy and replaced with a new one every year.

The Kaʿba in pre-Islamic times was the main temple of Associationist Mecca and a pilgrimage site for all Arabians. Associationism, the pre-Islamic religious tradition of Arabia, and later the Qurʾan itself, attributed the construction of the Kaʿba to Abraham, to whom most Arabian tribes traced their ancestry through his son Ishmael. According to tradition, the Black Stone, which was and to this day remains encased in one of the walls of the Kaʿba, was believed to be the only remnant of the original construction; and some traditions report that it had originally fallen from the sky. The pre-Islamic temple housed symbols of the various deities worshiped in association with the creator Allah, as well as representations of Mary and Jesus and Jewish symbols. Tradition reports that when Mecca surrendered to the Prophet, the latter's first act after granting amnesty to all Meccans was to ride to the Kaʿba, empty it of all representations and re-dedicate it to the worship of the one God.

Although in principle fighting is not allowed in its vicinity, the Kaʿba was destroyed and rebuilt more than once in Muslim history, and the Black Stone stolen but eventually returned. Today, political demonstrations around the Kaʿba and during the hajj are not allowed. Over time, a large mosque (al-Masjid al-Haram) was built around it. Though neither in itself an object of worship nor considered as having a "sacred" nature, the Kaʿba remains to the Muslim the holiest place on earth.

MAYSAM J. AL FARUQI

KABAK, AARON ABRAHAM

[1880–1944]

Hebrew novelist.

Born near Vilna (now Vilnius, Lithuania), Aaron Abraham Kabak studied at universities in Berlin and Switzerland and settled in Palestine in 1911. He left in 1914 but returned in 1921. As a teacher at Jerusalem's Rehaviah Gymnasium (secondary school), he had great influence on the literary and educational dynamics of the city.

In 1905 Kabak wrote the first Zionist novel in Hebrew, *Levaddah* (By herself). His *Shelomo Molkho* (1928–1929), a three-volume work about the sixteenth century pseudo-messiah, was the first historical novel in Hebrew. *Ba-Mish*ʿ*ol Ha-Zar* (In the narrow path), written in 1937 after his return to Orthodox Judaism, describes the teachings of Jesus of Nazareth, the Jew. Although he retained its Jewish content, Kabak modernized the Hebrew novel by ridding it of its hitherto conventional protagonists, motifs, and settings.

ANN KAHN

KABUL

Afghan city and province.

Kabul is both Afghanistan's largest city and national capital and the name of the province that surrounds the city. Kabul is at nearly 1828 meters (6,000 feet) above sea level and situated near the Khyber Pass, a major route between Afghanistan and Pakistan. Strategically located on north-south and east-west trade routes, Kabul has been a major city for thousands of years; the oldest reference to it is found in the *Rig Veda,* an ancient Sanskrit text (1500 B.C.E.). The city now holds more than 2 million people; an accurate census has not been taken.

Since 1980 Kabul has suffered considerable physical, social, and economic damage. Bombs or artillery have destroyed many of the main buildings, particularly during the civil war of the early 1990s, and many of the educated elite have fled Kabul. Since the Taliban fell in December 2001, the city has been crowded with returning refugees and Afghans who are internally displaced because of fighting, the drought, or the general collapse of the rural economy. In 2003, Kabul was controlled by the Afghan interim government of Hamid Karzai, but remained without basic services. Security remained problematic and an international peacekeeping force policed Kabul.

GRANT FARR

KABUL UNIVERSITY

Afghan university.

Founded in 1932 during the reign of Nadir Shah, Kabul University began as a medical school with Turkish and French faculty. In 1959, dormitories were built to house students from rural or outlying areas. By 1963, the university had eight faculties, including faculties of law and political science, natural sciences, economics, home economics, education, engineering, and pharmacy.

As student demand increased, a quota system was imposed in 1964 that fixed the urban-to-rural ratio at 60 to 40 percent. In the late 1960s and early 1970s Kabul University became a center of political activity, although the government officially banned such activity on campus in 1968. Many of the future leaders of Afghanistan, from both the left and the right of the political spectrum, began their political careers by engaging in campus politics during this time. When the communist government came to power in 1978 many of the faculty left Afghanistan. In the period after 1992 fighting between various militia groups destroyed many of the university buildings, the remaining faculty fled, and the university was essentially closed.

The government of Hamid Karzai reopened the university in 2002, but the lack of basic facilities created hardships and led to student demonstrations.

KABYLIA

Berber-speaking mountainous area in northern Algeria east of Algiers.

Kabylia, derived from the French Kabylie, is based on the Arabic *qabila* (tribe; pl., *qabail*). The region is traditionally divided into two parts: the Djurdjura Mountains (highest point 7,565 ft.) separating the Great Kabylia, to the north and centering on the regional capital, Tizi-Ouzou, and the Lesser Kabylia, to the south and east. Population density in this very hilly and not very fertile region is quite high. Though the area produces much of Algeria's olive oil and dried figs, the agricultural economy cannot support the total population. Thus historically the Kabylia has been a region of emigration to the Algerian port cities and the manufacturing centers of France. Although difficult to count accurately, the current Berber (Tamazight)-speaking population of the region is estimated at roughly four million.

Kabyle participation in Algeria's war of independence (1954–1962) was strong and determined. Upon independence, however, the Arab leadership of the National Liberation Front declared Algeria to be an Arab-Muslim nation. It broke up Berberist organizations and repressed the use of Tamazight, deeming it a threat to national unity. In 1980 largely peaceful, student-led demonstrations protesting the government's suppression of Berber cultural events broke out at Tizi-Ouzou—the administrative, commercial, and cultural center of the region—and then spread to other parts of the Kabylia. Violently repressed by the regime, these events came to be known as Berber Spring. Since then, and despite the strong opposition of Muslim fundamentalists and dominant sectors of the Algerian regime, Kabyles slowly have been able to obtain limited recognition for their cultural traditions and language: Tamazight was recognized as one of the languages of the country in 1989, and a Berber culture curriculum has been developed at the University of Tizi-Ouzou. However, censorship against Berber cultural demonstrations continues at different levels. Kabyles pride themselves in their distinct cultural achievement and traditions, which include poetry, jewelry, and music.

During the events known as the Black Spring of April 2001, Kabyle youth protested the *hogra,* a Tamazight word signifying the abuse of authority and the violation of citizens' rights on the part of the authorities. Structural unemployment fueled by International Monetary Fund policies, continued Islamist and state-sponsored violence, and lack of prospects for the youth contributed to the revolt.

In March 2002 the Algerian government finally decided to include Tamazight as a national language. Nevertheless, under the slogan "no forgiveness, no vote," the Kabyle citizens' movement called for a boycott of the Algerian legislative elections of May 2002; voter turnout in Tizi-Ouzou was 2 percent. In another concession in 2003, President Abdelaziz Bouteflika agreed to include the Tamazight language in the national education system.

See ISRAEL: POLITICAL PARTIES IN

KADIVAR, MOHSEN

[1959–]

Iranian cleric who rejects the notion of political rule by the clergy.

Mohsen Kadivar was born in Fasa, a small town in the southern province of Fars, Iran. He studied electrical and electronic engineering at the University of

Shiraz prior to the Iranian Revolution of 1979. With the onset of the revolution, Kadivar started studying at the seminary in Shiraz, and in 1981 he went to Qom, where he studied *fiqh* (Islamic jurisprudence) and the related principal sciences *(usul),* as well as Islamic philosophy under Ayatollah Hosainali Montazeri. Kadivar concurrently studied in the university system and received a Ph.D. in Islamic philosophy and theology from Tehran's Teachers' Training College.

In his writings, Kadivar has strived to reveal a harmony between reason *(aql)* and revelation by analyzing and interpreting classical Islamic and Shiʿite texts. In his two books, *Nazariyeha-ye Dulat dar Fiqh-e Shi* (1997; Theories of state in Shiʿite law) and *Hukumat-e Velayi* (1998; Government by the guardian), Kadivar has criticized the notion of *velayat-e faqih* (guardianship of the jurist) by attempting to show the lack of Qurʾanic, rational, and *fiqh* grounds for the idea of political rule by the clergy headed by a supreme jurisprudent. As a result, the Special Court for the Clergy charged Kadivar with propaganda against the Islamic Republic, dissemination of lies, and creating confusion in public opinion, for which he served a prison term of eighteen months. He was released in July 2000.

FARZIN VAHDAT

KADRI, MUFIDE

[1889–1911]

Turkish modern artist.

Mufide Kadri was one of the earliest female modern artists in the Middle East. She was born in Turkey and trained in private lessons under Osman Hamdi Bey and Salvatore Venery of the Istanbul Fine Arts Academy, an institution that did not admit women for a number of years. Despite an early death, at the age of twenty-two, many of her works survive and are on display at the Istanbul Art Museum. They include portraits done in the impressionist style, a trend common among Middle Eastern artists at the beginning of the twentieth century.

KAFR QASIM

Arab village in Israel, site of 1956 massacre.

On the eve of the 1956 Arab–Israel War, 29 October 1956, Israeli border police deliberately shot and killed forty-nine Israeli Arabs—workmen, women, and children—who were returning to Kafr Qasim, for the violation of a curfew of which they were not aware. A commission of inquiry was formed on 1 November 1956, which established the extent of responsibility and compensation.

Eight of the eleven military personnel brought to trial were convicted of murder and given sentences of up to seventeen years. All were released by 1960 through a partial pardon.

ELIZABETH THOMPSON

KAHAN COMMISSION (1983)

Israeli judicial commission that investigated the 1982 massacres at the Sabra and Shatila refugee camps in Beirut.

The Israeli government established the Commission of Inquiry into the Events at the Refugee Camps in Beirut (the Kahan Commission) in response to a massive public outcry following the killing of an estimated 800 to 1,200 Palestinian civilians in the Sabra and Shatila refugee camps on the outskirts of Beirut by right-wing Christian militiamen, primarily of the Lebanese Phalange Party, on 16 and 18 September 1982. The massacres occurred in territory under the control of the Israel Defense Force in the wake of Israel's June 1982 invasion of Lebanon, and the perpetrators were Israeli allies. On 24 September 1982, some 400,000 Israelis demonstrated in Tel Aviv against their country's

continuing involvement in Lebanon and in favor of an official investigation into the massacres. The three-person commission was chaired by Yitzhak Kahan, president of the Supreme Court; the other members were Aharon Barak, a Supreme Court justice, and retired army general Yona Efrat.

The commission issued its report on 7 February 1983. It noted that the Phalange had secured the permission of Major General Amir Drori, of the Northern Command, to enter the camps. This was approved by Israel's chief of staff, Lieutenant General Rafael Eitan, and Minister of Defense Ariel Sharon. The commission found that Israel's leaders and commanders bore indirect responsibility for the massacre by not anticipating Phalange revenge attacks against the unprotected Palestinians and by not acting to halt the killings soon enough, once indications of the bloodletting began to emerge from the camps. The commission chastised Prime Minister Menachem Begin, Foreign Minister Yitzhak Shamir, and the (unnamed) head of the Mossad for their indifference to the events at the time, but it found particular fault with Drori, Eitan, the director of military intelligence General Yehoshua Saguy, and Division Commander General Amos Yaron. Most seriously, the commission found that Ariel Sharon bore personal responsibility for the tragedy and recommended that the prime minister consider removing him from office. On 10 February 1983, the cabinet voted to remove Sharon from his position as defense minister, although he remained as minister without portfolio.

Given the dread with which most Israelis came to regard the Lebanese quagmire in which Israel remained embroiled for the next seventeen years, Sharon's election as prime minister in February 2001 constituted a remarkable case of political rehabilitation. But the disaster in Lebanon dogged his premiership when, in June 2001, a group of Sabra and Shatila survivors filed a war-crimes complaint against him in a Belgian court under a 1993 Belgian law allowing claimants to bring cases against foreigners accused of crimes against humanity, regardless of where they occurred. One year later, however, a Belgian appeals court dismissed the case on the grounds that Sharon was not domiciled in Belgium, so the case never went to trial. No Lebanese inquiry into the massacre was ever carried through to completion.

KAHANE, MEIR

[1932–1990]

Rabbi, founder of U.S. Jewish Defense League and the Kach Party in Israel.

Born in New York, Meir Kahane was active in youth movements before becoming a rabbi and writer for Jewish nationalist journals. He founded the Jewish Defense League (JDL) in 1968 to combat anti-semitism. The JDL soon became known as a militant Jewish self-defense organization, and it encountered difficulties with the government because of its violent tactics.

In 1969 Kahane moved to Israel, where he began to speak out against the Black Jews in Dimona. In 1972 his Kach (also Kakh; "thus" in Hebrew) Party became a proponent of inducing Palestinians to leave the West Bank voluntarily; if they would not leave, Kahane proposed expelling them. He believed that Israel should become a theocratic state, and wanted the government to pass laws formally entrenching Orthodox Judaism as the official state religion. He ran for the Knesset unsuccessfully in 1973 and 1977. In 1980 he was sentenced to six months in prison for plotting to attack Muslim shrines on the Temple Mount (al-Haram al-Sharif). After his release he ran for the Knesset in the 1984 election and won a seat, but in 1988 Kach was outlawed on the grounds that it was a racist party. Kahane was assassinated in New York in November 1990.

Kahane's son, Binyamin Kahane, founded the organization Kahane Hai ("Kahane Lives") after his father's assassination. In March 1994 it was declared by the Israeli cabinet to be a terrorist organization

and was therefore banned, as Kach had been. Binyamin was assassinated, too, by some Palestinians in a drive-by shooting in December 2000 in the West Bank. According to a 2003 U.S. Department of State report, the group has continued organized protests against the Israeli government and has harassed Palestinians in the West Bank. Kach members have also threatened to attack Israeli government officials and have vowed revenge for the death of Binyamin Kahane and his wife. They have also been suspected of involvement in a number of attacks on Palestinians since the start of the al-Aqsa Intifada.

KAID, AHMED

[1927–1978]

Algerian officer and government minister.

Ahmed Kaid was born near Tiaret. He attended the French military school at Hussein-Dey and then the Normal School for teacher training in Algiers. Before the Algerian War of Independence (1954–1962), he aligned with the moderate nationalist Union Démocratique du Manifeste Algérien (UDMA) of Ferhat Abbas. He joined the Front de Libération Nationale (FLN) and rose to assistant chief of staff of the Armée de Libération Nationale (ALN). Kaid sided with the Ahmed Ben Bella–Houari Boumédienne faction after the war. He was elected to the National Assembly and served as minister of tourism (1963). He resigned in 1964, though he retained his seat on the Central Committee of the FLN. After Boumédienne's coup, he became minister of finance (1967) and then was chosen to head FLN. He resigned in 1972, critical of the party's bureaucracy and of the Agrarian Revolution. In March 1976 while in France, he publicly criticized the Boumédienne government. Given his anti-Boumédienne position, suspicion rose over his death, reportedly from a heart attack. Thousands attended his funeral in Tiaret.

KALEMIYYE

Ottoman hierarchy of scribes, clerks, and accountants headed by the reis ül-küttap.

Aside from the sultan's own staff, the *kalemiyye* (scribal institution) was one of three powerful bureaucracies in the Ottoman government, the others being the *seyfiyye* (military) and *İlmiyye* (religious). From 1794, the *kalemiyye* was headquartered in the Sublime Porte, and while the grand vizier was nominally its head, the *reis ül-küttap* held the real power. In the early nineteenth century, the major Tanzimat reformers emerged from the *kalemiyye,* the most prominent of them Mustafa Reşid Paşa, who was *reis ül-küttap* in 1827–1830. In 1835, the *kalemiyye* was joined with the sultan's imperial bureaucracy. Later renamed the *mülkiyye,* it would be reformed several times during the nineteenth century, as former patronage systems were replaced with regular salaried employees and formal departments and ministries were organized. It would come to include the finance, commerce, interior, foreign affairs, and other ministries.

KALISCHER, HIRSCH

[1795–1874]

Rabbi and precursor of Zionism.

Born in western Poland in a region acquired by Prussia in 1793, Hirsch Kalischer was aware of nationalist struggles from an early age, perhaps sensitizing him to the misery of European Jewry. He was engaged early in his career in a defense of traditional Judaism against the Reform movement. Subsequently, he began to argue that the redemption would only come after action was taken by the Jewish people on their own behalf. He elaborated these ideas in *Derishat Tziyon* (1862; Seeking Zion), a book about modern Jewish agricultural settlement in Palestine.

Kalischer was successful in persuading the Alliance Israélite Universelle, a French organization for the international defense of Jewish rights, to found an agricultural school in Jaffa, Palestine, in 1870. He made numerous visits to wealthy Jews in Germany to recruit their support for Jewish settlement in Palestine.

KALVARYSKI, CHAIM MARGALIUT-

[1868–1947]

Land-purchase agent and adviser on Arab–Jewish relations in Palestine.

Chaim Margaliut-Kalvaryski was born in Poland and emigrated to Palestine in 1895, after completing studies in agronomy in France. Between 1900 and 1922 he served as an administrator of the Jewish Colonization Association in the Galilee, helping to acquire extensive areas for Jewish settlement. Beginning in 1913 he became involved in political discussions with Arab nationalists in Beirut and Damascus. Between 1923 and 1927 Kalvaryski was employed by the Palestine Zionist Executive as an adviser on Arab affairs. Despite controversies over his methods and doubts about his financial management, he was recalled to head the Joint Bureau of Jewish Public Bodies that was formed to coordinate relations with the Arabs following the 1929 Palestine riots.

Kalvaryski was a member of the Palestine government's first Advisory Council (1920–1923) and the Vaʿad Leʾumi (National Council of the Jews) beginning in 1920, and was active in Jewish groups promoting binationalism and rapprochement with the Arabs of Palestine and the neighboring countries. He also devised several of his own peace plans, which he discussed with Arab leaders.

Kalvaryski's articles and speeches were published in various Hebrew newspapers and periodicals and in a collection entitled *Al Parshat Darkeinu* (At the parting of our ways; Jerusalem, 1939).

KAMAL, AHMAD

[1849–1923]

The first prominent Egyptian archaeologist and Egyptologist.

Ahmad Kamal Pasha studied under Heinrich K. Brugsch (1827–1894), a German archaeologist, a scholar of hieroglyphics and demotic Egyptian, and the director of the short-lived school of Egyptology in Cairo in the 1870s. Kamal made his career in the Egyptian Antiquities Service and helped open professional archaeology and Egyptology to Egyptians (they were dominated by Europeans). His long campaign succeeded when immediately after his death,

the department that evolved into today's Faculty of Archaeology of Cairo University was established.

DONALD MALCOLM REID

KAMAL, ZAHIRA

[1945–]

Palestinian activist.

Director of the Gender Department of the Palestinian Authority's Ministry of Planning and International Cooperation as of 2003, Zahira Kamal has represented Palestinians through her writing and activism for more than thirty years. Trained as a physics teacher, she founded and, from 1978 to 1992, led the Women's Work Committee (later the Union of Palestinian Women's Action Committees), an organization serving professional, clerical, and industrial women workers and closely affiliated with the Democratic Front for the Liberation of Palestine (DFLP). Originally a member of the political leadership of the DFLP, she was imprisoned in 1979 and held under town arrest in Jerusalem from 1980 to 1986. She left the party for FIDA, the Palestinian Democratic Union, when that group split from the DFLP in support of the Madrid and Oslo peace negotiations with Israel. With Yasir Abd Rabbo, who led the split from the DFLP, Kamal was a delegate to the 1991 Madrid Conference. She also headed the Women's Affairs Technical Committee, which monitored women's issues as a component of the interim peace negotiations. Kamal was appointed head of the Ministry of Planning and International Cooperation (MOPIC) Gender Planning and Development Directorate in 1995. A noted writer on issues of gender and Israeli–Palestinian relationships, she has engaged in active dialogue with Israeli groups, particularly women's groups, for years, and is cofounder of the Jerusalem Link, an organization which supports women's participation, awareness-raising, and leadership development within the context of the peace process.

RACHEL CHRISTINA

KAMIL, KIBRISH MEHMET

[1832–1913]

Ottoman grand vizier.

The son of a military officer, Kibrish Mehmet Kamil was born in Nicosia on the island of Cyprus (in Turkish, Kibris). He was graduated from the military academy in Cairo and served as adjutant to Abbas Paşa. Between 1860 and 1879, he held various positions in the Ottoman provincial bureaucracy, rising to the position of governor of Kosovo and Aleppo. In 1879, he became a cabinet minister, serving for short periods as minister of education and of religious foundations until becoming grand vizier on 25 September 1885, replacing Küçük Sait Paşa who became a rival and regular replacement. Between 1885 and 1891, he successfully stabilized Ottoman finances while encouraging foreign investment in Ottoman railroads and industries. In 1895, at the start of a second stint as grand vizier, he fell into the sultan's disfavor and was sent into exile, serving eleven years as governor of İzmir. Although an opponent of the Committee for Union and Progress, he was appointed grand vizier for a third time on 5 August 1908, serving until 14 February 1909. During this period, when Abdülhamit II was still sultan, Kamil Paşa worked to balance the budget, reorganize the bureaucracy and armed forces, and put an end to the millet system and the privileges enjoyed by foreigners according to the capitulations.

KAMIL, MUSTAFA

[1874–1908]

Egyptian nationalist leader, orator, and editor.

Mustafa Kamil, the son of an army officer from an ethnic Egyptian family, was educated in government schools, the French School of Law in Cairo, and the University of Toulouse, France, where he received his law degree in 1895. A strong opponent of the British occupation of Egypt, he soon became closely associated with Khedive Abbas Hilmi II and with Ottoman Sultan Abdülhamit II, both of whom supported him materially as well as morally in his campaigns to persuade European governments and peoples to demand the evacuation promised by successive British governments. He also worked closely with Muhammad Farid and other Egyptians to form a secret society, initially under the aegis of the *khedive,* to inculcate resistance to the British among the people of Egypt. This society, known from its inception as al-Hizb al-Watani (the National Party), became a public political party, open to all Egyptians, in December 1907. He also founded a popular daily newspaper, *al-Liwa* (The banner), in 1900, which became the official party organ, and a boys' school that bore his name. He wrote many articles for the French press, for *al-Muʾayyad* under Shaykh Ali Yusuf, and for *al-Liwa,* as well as a book on the Eastern Question called *al-Masʾala al-Sharqiyya,* in which he strongly supported the Ottoman Empire. He delivered many stirring speeches in French and in Arabic, of which the best remembered was translated into English as "What the National Party Wants." He died of tuberculosis (but some think he was poisoned) in the thirty-fourth year of his life, and his funeral was the occasion for a massive demonstration of popular grief. Remembered as a fervent patriot and occasional supporter of pan-Islam, he called for the British evacuation of Egypt and a constitutional government but showed little interest in economic or social issues.

KANAFANI, GHASSAN

[1936–1972]

Palestinian writer and political activist.

A native of Acre, Palestine, Ghassan Kanafani published the Arab National Movement's official organ, *al-Raʾy* (Opinion), with George Habash. Kanafani was also a prominent spokesman and ideologue for the Popular Front for the Liberation of Palestine. Believed by Israel's intelligence service, Mossad, to have been involved in planning terrorist operations, Kanafani was assassinated by a hit team from Israel who detonated a car bomb outside his home in Hazmiyya, near Beirut, killing him and his seventeen-year-old niece, Lamis Najim. Kanafani's Danish wife, small son, and daughter escaped unhurt. Kanafani's successor, Bassam Abu Sharif, also was targeted by Israel's intelligence; he lost the sight in one eye and several fingers when a letter bomb exploded in his Beirut office.

At his death, Kanafani had already established himself as a prolific writer and commentator. Among his best-known works is *Rijal fi al-Shams* (1963; Men in the sun), based on his traumatic experiences as a refugee. Some of his other books include *The Middle of May, The Land of Sad Oranges,* and *That Which Is Left Over for You.*

KANDAHAR

Afghan city and province.

Located in southern Afghanistan, the province of Kandahar has a population of approximately 700,000, most of whom are Durrani Pushtuns. The city of Kandahar is the provincial capital and the second largest city in Afghanistan, with a population of about 200,000. It was Afghanistan's original capital. Centrally situated on trade routes between the Iranian plateau and the Indian subcontinent, Kandahar has been an important city for centuries and has played a major role in the history of Afghanistan. Most of the leaders of Afghanistan have come from the Pushtun tribes in the Kandahar area.

During the War of Resistance (1978–1992), Kandahar was the scene of intense fighting and much of the city was destroyed. Almost half of the population of the province fled to neighboring Pakistan during the war, but most subsequently returned.

Kandahar played a central role in the Taliban movement (1996–2001). Although Kabul remained the capital of Afghanistan, Mullah Omar, the leader of the Taliban government, kept his residence in Kandahar.

KANIUK, YORAM

[1930–]

Israeli author.

Born in Tel Aviv into a family deeply involved in the cultural life of that city (his father was one of the founders of the Tel Aviv Museum), Yoram Kaniuk served in the Haganah, the underground army of Jewish Palestine, and fought in the 1948 War. A painter, journalist, and theater critic, he is best known as a novelist. He is the author of many works of fiction, including children's books, and a few works of nonfiction. Although his works have been translated into twenty languages, only some of his books have appeared in English, and most of these are earlier works; his later ones, notably the remarkable if painful *Post-Mortem* (1992) and *Ahavat David* (1990), remain unavailable in English. Kaniuk's distinguishing trademark is the fiercely lucid—some might say cruel—literary eye he brings to bear on life in contemporary Israel. Indeed, Israel itself and the price it has exacted from the Jewish soul is the ever-present, overriding theme of all his novels. The uncompromising truths of his fiction, at times personally and nationally autobiographical, bring the reader face to face with the white-hot paradox of life and Jewish history. Kaniuk has been the recipient of the Bialik Prize, the French Prix de Droits de l'Homme, the Prix Méditerranée Etranger, and the Israel President's Prize for Literature. As of 2004, he continued to live in his native city of Tel Aviv.

UPDATED BY STEPHEN SCHECTER

KAN, SUNA
[1936–]

Turkish violinist.

A born violinist, Suna Kan attracted her audiences with a stage presence of serene statuesque beauty combined with a serene beauty of tone she produced from her instrument. Kan was born in Adana, Turkey, in 1936. Her extraordinary talent was recognized when she started playing the violin at the age of five. Walter Gerhard, Gilbert Back, Licco Amar, and Izzet Albayrak were among her teachers in Ankara. She played Mozart's A major and Viotti's A minor violin concertos with the Ankara Presidential Symphony Orchestra when she was nine years old. In 1949 she was sent to France by the Turkish government to study at the Paris Conservatory, where she was a pupil of Gabriel Bouillon. She graduated in 1952, winning the first prize. Kan won first prizes at the Geneva Competition in 1954 and the Viotti Competition in 1955, second prize at the Munich Competition in 1956, and the City of Paris Prize in the Marguerite Long/Jacques Thibaud Competition in 1957.

She had a brilliant international concert career between 1958 and 1977, during which she performed with most of the world's greatest orchestras under the direction of the most famous conductors. She also performed double concertos with legendary musicians such as Yehudi Menuhin, Piérre Fournier, André Navarra, and Frederick Riddle. She toured all over Europe, Russia, Canada, Japan, China, South America, Ethiopia, United Arab Republic, Kenya, and Iran.

Kan was a founding member and principal soloist of the Turkish Radio-Television's Ankara Chamber Orchestra, with which she toured Turkey, Europe, and Russia between 1977 and 1986. Since 1986 she has devoted herself to the music education of her countrymen, conducting masterclasses and summer schools. She has not retired from the concert stage and continues to perform regularly. She has recorded all of Mozart's violin concertos and Ulvi Cemal Erkin's violin concerto. She received Chevalier dans l'ordre du Mérite from the government of France, and is also the State Artist of the Turkish Republic.

FILIZ ALI

KARACAN, ALI NACI
[1896–1955]

Turkish journalist and publisher.

Born in Istanbul, Ali Naci Karacan attended Galatasaray Lycée. He began working as a reporter at a young age, before World War I, first at *Tasvir-i Efkar* and then at the oppositional paper *Ikdam.* Later, he worked as an editor for famous newspapers such as *Vakit.* He was cofounder, in 1918, of *Akşam,* with well-known journalists Salih Rifki Atay and Kazim Şinasi Dersan. In 1935, Karacan became editor of Turkey's newly founded leftist daily *Tan.*

Karacan's greatest success was founding the daily paper *Milliyet* in 1950. Karacan and his son Ercüment quickly carved a place among a number of new newspapers of the period, including Sedat Simavi's *Hürriyet,* founded two years before. Carrying the slogan "Independent Political Newspaper" on its masthead, *Milliyet* matched *Hürriyet*'s slick style, but also managed to appeal to intellectuals with a well-respected staff of writers. Under the editorial leadership of Abdi İpekci, it became an influential player in Turkey's political arena in the 1960s and 1970s. By then, the Karacan family, including grandson Ali Naci Karacan, controlled a publishing syndicate that included printing and book and magazine publishing companies.

KARAITES

Religious sect that was formed in Babylonia in the eighth century C.E.

The Karaites hold to a literal interpretation of scripture, rejecting Talmudic and rabbinic interpretations that are based on an oral tradition. In twentieth-century Israel, there were two small communities of several hundred persons in Galilee and Jerusalem. The Jewish status of Karaites is ambiguous; in Israel, they have the option of holding identity cards that label them either as "Karaite" or "Karaite-Jew."

SAMUEL C. HEILMAN

KARAK, AL-

A provincial capital in the central part of Jordan.

During the Bronze Age, starting about 2400 B.C.E., the region surrounding Karak supported sedentary agriculturalists. Semitic tribes settled there in 1200 B.C.E. and, in 850 B.C.E., the great King Mesha consolidated what came to be known as the Moabite kingdom. Then, atop a small mountain, Karak was settled and fortified. Nearby on the plains of Muʾta, the first battle between the Arab Muslims and the Byzantine Empire was fought in 629 C.E. The Crusader Renauld de Châtillon ruled the broad region east of the Jordan rift from the massive fortress he built at Karak.

After World War I, Karak was a southern province of the short-lived Syrian Kingdom. Following its demise at the hands of the French in July 1920, the local tribal shaykhs declared the Karak region to be the independent Arab Government of Moab, led by Rufayfan al-Majali. In 1921, it became part of the Emirate of Transjordan. In 2003, Karak is an agricultural market town of 23,200 people and the government center for the Karak district of Jordan. The majority are Sunni Muslim, but a significant minority are Christian. One of Jordan's institutions of higher education, the University of Muʾta, is located nearby in the village of that name.

See GLOSSARY

KARAMA, BATTLE OF (1968)

Battle (also known as Karameh) in the Jordan valley in which Yasir Arafat and his Fatah faction successfully resisted Israeli forces.

After the Arab–Israel War of 1967, although repeated artillery shelling by Israel had driven Palestinian refugees from the Jordan valley to the Biqa and Marka refugee camps outside Amman, there were still 25,000 to 35,000 refugees in Karama. In early March 1968, information on an impending attack by Israel had come from Arafat's agents in the occupied territories and Jordan's intelligence services under the command of Colonel Ghazi Arabiyyat. The Palestinians and Jordan's army decided to take a stand. President Gamal Abdel Nasser of Egypt offered to send air power, but Jordan's King Hussein refused because he feared another disaster like that of 1967.

On 21 March about 15,000 troops began the assault from Israel in three armored brigade formations using M-48 Patton tanks. Their main columns hit the Shuna–Karama area near the King Abdullah Bridge, north of the Dead Sea and Ghawr Safi. A smaller attack took place in neighboring al-Himma, but Jordan's army command believed that the main thrust was taking place in Karama. Jordan's artillery stopped Israel's tank column at the Allenby Bridge, near the crossroads of the main road from Shuna to Karama. Palestinian commandos (*fidaʾiyyun*) were able to destroy several of Israel's tanks and armored cars, and engaged Israel's airborne troops entering the town of Karama. The town was destroyed after fierce fighting between Israel's troops and approximately 200 to 300 Palestinian commandos. Israel admitted losing 21 soldiers, but the Palestinians claimed the real figure was over 200.

The significance of the battle lay in the fact that, for the first time, Palestinian fighters had successfully engaged Israel's army, scoring a major symbolic victory. Although Jordan's military sources indicated that Jordan's troops did the bulk of the fighting, King Hussein allowed Arafat and al-Fatah to take credit for the victory, thus boosting the prestige of the Palestine Liberation Organization (PLO). After Karama, thousands of young Palestinians flocked to the PLO's guerrilla wings and began paramilitary training.

KARAME, ABD AL-HAMID

[1890–1947]

Lebanese politician; prime minister (1945).

Abd al-Hamid Karame was born into a prominent Sunni family of Tripoli, whose scions traditionally held the office of mufti of the city. He himself served in that post until France's mandatory power replaced him with a man more agreeable to them. A socially conservative and very devout man, he vehemently opposed the creation of Greater Lebanon in 1920. During the 1920s and 1930s, Karame repeatedly clashed with the authorities, demanding the annexation of Tripoli and its hinterland to Syria. Although he was the dominant political figure in Tripoli, he never developed a national base, and thus failed to pose a real challenge to France. A pragmatic politician, he established a close relationship with Britain in the early 1940s, when he joined the movement for Lebanon's independence, reconciling himself to the concept of Lebanon as an entity separate from Syria. Although Karame initially supported President Bishara al-Khuri, under whom he served as prime minister between January and August 1945, he eventually became the leader of an opposition group first called the Independent Bloc and, after April 1946, the Reform Bloc. Following his death in 1947, his son Rashid inherited his political mantle.

KARAME, RASHID

[1921–1987]

Lebanese politician; prime minister at various times from the 1950s through the 1980s.

Rashid Karame, the son of Abd al-Hamid Karame, received a law degree from Cairo University in 1947. He was elected deputy for Tripoli in 1951 and remained a member of parliament until his death. A staunch Arab nationalist and an advocate of political and social reforms, he gained influence through patronage and his ability to function within a confessional political system.

Karame became prime minister in 1955 but resigned in 1956 to protest President Camille Chamoun's refusal to sever diplomatic relations with France and Britain in the wake of the Suez crisis. He became a major opponent of the Chamoun regime and was a leader of the uprising against Chamoun in 1958. After the Lebanese Civil War (1958), President Fu'ad Chehab appointed him prime minister. Karame held the premiership regularly under both Chehab (1958–1964) and his successor, Charles Hilu (1964–1970).

In the late 1960s and early 1970s, Karame supported the presence of armed Palestinians in Lebanon and a radical restructuring of the country's political system. Such positions brought him into conflict with key Maronite politicians, including President Sulayman Franjiyya. In June 1975, when he appeared to be the only politician who might overcome the growing polarization in the country, President Franjiyya appointed him prime minister; he resigned in June 1976.

After Israel's invasion of Lebanon in 1982, Karame emerged as a leading opponent to President Amin Jumayyil's government. With Druze leader Walid Jumblatt and former President Franjiyya, he founded the National Salvation Front in July 1983. In April 1984, Jumayyil bowed to pressures and appointed him prime minister of a government of national unity. Although he formally remained premier until he resigned in May 1987, his authority was limited. He was assassinated on 1 June 1987, when a bomb exploded aboard his helicopter.

GUILAIN P. DENOEUX

KARAM, YUSUF

[1822–1889]

Lebanese hero known for his opposition to Ottoman rule in Lebanon.

Born to a Maronite family in Ehden, north Lebanon, Yusuf Karam had an eclectic education. He wrote and spoke fluent Arabic, Syriac, Italian, French, and English. He also learned the art of fighting and horse riding.

In 1841, he participated in his first battle against the Ottomans to lift the siege against the town of Dayr al-Qamar. At the age of twenty-three, he succeeded his father as governor of Ehden. During the conflicts between Maronite Christians and Druze from 1840 to 1845, he was appointed by the Ottomans to become governor of the Christian district headquartered in Juniya. In 1860, Karam refused the Ottomans' offers that he lead a small contingent of Lebanese soldiers. Exiled from Lebanon by the Ottomans, Karam returned in 1864, but he was exiled again in 1867 and died in Italy in 1889.

GEORGE E. IRANI

KARBALA

Site of sanctuary honoring Husayn ibn Ali's martyrdom.

Karbala is the name of a plain located in Iraq, approximately 55 miles (88.5 km) south-southwest of modern Baghdad and close to the west bank of the Euphrates. The plain is the recorded site of the infamous mass killing, in 680 C.E. (A.H. 61), of the prophet Muhammad's grandson Husayn ibn Ali and his small band of supporters by the forces of Yazid ibn Muʿawiya, the second Umayyad caliph. According to tradition, the decapitated body of Husayn was buried in a spot not far from the battlefield. As a result, Karbala and its environs quickly became known as Mashhad al-Husayn (the tomb shrine of Husayn), and today it is still one of the principal pilgrimage centers for Twelver Shiʿite Muslims, who revere Husayn as one of the great imams, or divinely inspired leaders, of the Muslim community.

Each year, for example, beginning on the first and culminating on the tenth of the Muslim month of Muharram, large numbers of pilgrims gather at the shrine complex at Karbala and perform solemn passion plays and other commemorations of Husayn's great martyrdom (other Twelver Shiʿites around the world do the same). According to the common belief of Twelver Shiʿites, Husayn's suffering and death constitute a source of redemption for all who are sincerely devoted to Husayn and his fellow imams. Many Twelvers believe that such practices as ritual visitation to Karbala as well as to other sacred tombs are excellent means of realizing this devotion to the imams and the salvific blessings it entails.

Throughout its long history, Karbala has generally prospered as a richly endowed pilgrimage site. A few notable exceptions to this sanctuary's history of good fortune include its destruction by the Abbasid caliph al-Mutawakkil in 850 C.E. (A.H. 236), its storming and looting by the *muwahhidun* (wahhabis) in 1801 C.E. (A.H. 1215), and the widespread devastation it suffered as a consequence of the confrontation after the Gulf War between Iraq's Republican Guard and Shiʿite rebel forces in March 1991.

SCOTT ALEXANDER

KARBASCHI, GHOLAMHOSAIN

[1953–]

Governor of Isfahan and mayor of Tehran in the 1980s and 1990s.

Born in 1953 into the family of a high-ranking cleric, Gholamhosain Karbaschi attended Haqani Seminary in Qumand and was arrested in 1975 for his antishah activities. After his release from prison in 1978, he left the seminary and put himself at the service of the Iranian Revolution. He was appointed the representative of Ayatollah Ruhollah Khomeini in the gendarmerie, then the Islamic Republic News Agency, and finally as the governor of Isfahan province—a position in which Karbaschi demonstrated his strong managerial capabilities. In 1989, when Ali Akbar Hashemi Rafsanjani became president, he appointed Karbaschi the mayor of Tehran—an expanding metropolitan city that had experienced years of neglect, war economy, and mismanagement.

Karbaschi transformed Tehran by planning for control of waste and air pollution and by building highways, parks, libraries, art galleries, and cultural centers. He established *Hamshahri,* a daily newspaper with a new look and the largest circulation in the country, which advocated Rafsanjani's economic-development policies. With support from Rafsanjani, Karbaschi and fifteen other pragmatic technocrats founded the Executives of Construction Party (ECP) in 1996 in order to counter the conservative candidates from the Militant Clergy Association (MCA) in the fifth parliamentary election. Karbaschi was the first secretary-general for the party, serving until 1998. In 1997 Karbaschi helped to engineer the election of Mohammad Khatami as president.

Karbaschi's policy of taxing the rich for urban public projects and building chain stores around the city earned him the nickname Robin Hood, and angered the conservative merchants in the bazaar and their clerical allies in the MCA. His efforts to block some land transfers among major players of the MCA—and his participation in Khatami's election—prompted his opponents from the MCA and the Society of Islamic Coalition to use their political influence in the judiciary to stop Karbaschi's political machine.

In April 1998 Karbaschi was arrested and tried by the conservative judiciary for alleged embezzlement and mismanagement of state funds. His controversial trial, which was broadcasted publicly, captivated the nation, generated public debate and agitation, and led to his conviction. His original sentence of five years' imprisonment, twenty lashes, and a twenty-year ban from political activities was reduced on appeal to two years' imprisonment, a cash fine, and a ten-year ban from politics. After serving nine months in prison, he was pardoned through Rafsanjani's intervention. Since his release from jail, he has been leading a quiet life with occasional public appearances and nonpolitical interviews.

Ali Akbar Mahdi

KARIYUKA, TAHIYA

[1915–1999]

Dancer and actress on stage, radio, and screen.

Born Badawiya Muhammad Karim Ali al-Sayyid, in Manzala, Egypt, Tahiya Kariyuka debuted as a carioca dancer in Badiah Masabni's famous Cairo casino. The carioca, a tango variation performed by Fred Astaire and Ginger Rogers in the 1933 film *Flying Down to Rio,* had become wildly popular. Kariyuka's solo version of a dance intended for a couple can only be imagined; however the moniker stuck, although its pseudo-Brazilian/Hollywood connotations did not. Among Kariyuka's fellow dancers at the Casino was Samiya Jamal (also Gamal), another accomplished dancer and actress. The two women remained rivals until Samiya's death in 1994.

Kariyuka's first role was a small appearance in a short 1935 film; her first starring role was in 1946, with actor Najib al-Rihani, known as the Molière of Egypt, in the film *Liʿbat al-sitt* (The woman's game). She eventually appeared in over 190 films as well as numerous stage plays and radio serials. She is best known for her role as the seductress Shafaʿat in the 1956 film *Shabab imraʾa* (A woman's youth). She was also politically active, and her call for a return to democracy after the Free Officers' coup of 1952 led to her being jailed for three months in 1953. In 1981 she served as president of the Egyptian Actors Union. She allegedly married more than a dozen

times but was unmarried at the time of her death from heart failure.

ROBERTA L. DOUGHERTY

KARMAL, BABRAK

[1929–1996]

President of Afghanistan, 1980–1986.

Babrak Karmal was a founder of the Marxist movement in Afghanistan and the president of Afghanistan and secretary-general of the People's Democratic Party of Afghanistan (PDPA) from 1980 to 1986. He was born in 1929 in Kamari, a village near Kabul, into the family of Mohammad Hossayn, an army general and one-time governor of Paktika. Karmal received his high-school education in Kabul at Nejat School, from which he graduated in 1948. He entered Kabul University in 1951 and became active in student politics and in the Afghan communist movement. Known as a gifted orator, in 1954 he adopted the name *Karmal,* which in Persian means "friend of labor."

From 1953 to 1956, Karmal was imprisoned for his political activism, but he was well treated in jail because of his family connections. In 1965 and 1969, during the period of constitutional reforms (1963–1973), he was elected to the Afghan parliament. He was a founding member of the PDPA in 1965. When the party split into two factions in 1967, he led the Parcham (flag) faction. Karmal's background in the Kabul elite put him at odds with other members of the Marxist movement in Afghanistan.

At the time of the Saur Revolution (April 1978), the two rival factions of the PDPA united and swept into power. Karmal was elected vice-chairman of the Revolutionary Council and deputy prime minister of Afghanistan. In July 1978, the Parcham members of the party were purged, and Karmal was named ambassador to Czechoslovakia.

On 27 December, 1979, Soviet troops entered Kabul and Hafizullah Amim, the president of Afghanistan at that time, was assassinated. Karmal returned to Kabul with the Soviet forces and was installed as president of Afghanistan on that date. Karmal was unable to unite Afghanistan or to win the trust of the resistance fighters, and the country spiraled into civil war during his term. Although he was a gifted orator, Karmal was never an effective leader. He was more a thinker than a doer, more an ideologue than a politician. In addition, his aristocratic urban background often worked against his Marxist rhetoric, especially in a country such as Afghanistan, which is mostly rural and largely populated by peasants.

In 1986, in part because of his failing health, Karmal was replaced by strongman Mohammed Najibullah and left Afghanistan for Moscow. He returned to Kabul in 1989, only to leave for Moscow again when the Najibullah government fell in 1992. He died of cancer in Moscow on 1 December 1996.

GRANT FARR

KAR, MEHRANGIZ

[1944–]

Iranian lawyer, writer, and women's rights activist.

Mehrangiz Kar was born in Ahvaz, Iran, in 1944. She studied law at the School of Law and Political Science, Tehran University. After graduation, she worked for the Social Security Department and also wrote for the press, publishing more than 100 articles on current social and political issues in newspapers and magazines. She obtained her attorney's license in 1978, shortly before the Iranian Revolution, but she did not start her own practice until the early 1990s. In 1992 Kar began collaboration with *Zanan,* a monthly journal (launched the same year) with an Islamic feminist agenda. Her advocacy of

political, legal, and constitutional reform, including the promotion of civil society and democracy and the dismantling of legal barriers to women's rights, made her a target of the antireformist backlash that followed the massive reformist victory in the February 2000 parliamentary elections. In April 2000, Kar was arrested for participating in the Berlin conference on the future of reforms in Iran, charged with acting against national security and disseminating propaganda against the Islamic regime. Released after six weeks, then tried in closed hearings in January 2001, she was convicted and sentenced to four years' imprisonment. Granted bail to leave the country for medical treatment, she moved to the United States. The appeal court later reduced her sentence to a fine, but meanwhile her husband, Siyamak Pourzand, was jailed. She has published several books in Persian and has received many international awards, including the 2002 Ludovic-Trarieux Award.

ZIBA MIR-HOSSEINI

KARNOUK, LILIANE

[1944–]

Egyptian-Canadian artist, writer, and educator.

Liliane Karnouk is an Egyptian-Canadian visual artist, writer, and arts educator who has also worked in theater and furniture design. She was trained at the Academy of Fine Arts in Rome and at the University of British Columbia. She is well known as one of the few authors who have introduced modern Egyptian art to an English-speaking audience, producing two authoritative volumes on the subject. She was also instrumental in shaping the art department at the American University in Cairo. Karnouk is the recipient of prestigious Ford Foundation grants to further the knowledge of contemporary Egyptian art, and her paintings and installations have been exhibited extensively in her native Egypt and Canada, as well as in Europe. Working in a range of materials from the industrial to the organic, her conceptual works have dealt with themes related to the desert, ancient Egypt, plants and organic designs, and Islamic philosophy regarding the functional and the aesthetic. Her work is primarily concerned with exploring her own experience between East and West.

JESSICA WINEGAR

KARP REPORT (1984)

Report into irregularities in police investigations of violence by Jewish settlers against Palestinians in the Occupied Territories.

The Karp Report was issued by a committee of Israeli jurists headed by Deputy Attorney General Judith Karp. The committee was appointed by Attorney General Yitzhak Shamir in 1981 in response to Israeli law professors who expressed concern over the deterioration of the rule of law in the territories occupied by Israel since the 1967 war.

The committee examined seventy cases, fifty-three of which had been left unsolved, in which Israeli settlers were charged with harassing Palestinian residents in the Hebron region who had refused to sell their land. The report found "serious shortcomings" in investigations when Arabs were victims: investigations of complaints lodged by Palestinians were inadequate. It criticized the police for failing to seriously investigate charges, noted delays in pursuing cases, and faulted the separation between the regular and military police. The report advised a reassessment of the instructions given to Israeli soldiers for opening fire on civilians, recommended an increase in the number of civilian police in the West Bank, and criticized the refusal of Jewish witnesses—especially settlers in the West Bank—to cooperate with police in investigations related to Arab victims.

The Israeli right wing charged that the investigation had failed to examine cases in which Palestinian Arabs went unpunished for attacks on Jews.

Karp resigned after the Likud-led government neglected the report's findings.

KARZAI, HAMID

[1957–]

President of the transitional government of Afghanistan.

Hamid Karzai, born 24 December 1957 in Kandahar, Afghanistan, the fourth of seven sons of a chief of the Popalzai tribe, was a leader in efforts to reconstitute Afghanistan after the demise of the Taliban in 2001. After being educated in Kabul, he earned a postgraduate degree in political science in Shimla, India. During the war against the Communist regime in Afghanistan (1980–1992) Karzai was an active supporter of the opposition, contributing money and serving as political advisor to certain resistance leaders. In 1992 he served as deputy foreign minister in the government of Burhanuddin Rabbani, but he resigned in 1994. Soon after the Taliban arose as a force in Kandahar in 1994 Karzai began to support them, donating $50,000 and a large hoard of weapons in hopes they would quell the fighting among the various commanders. The Taliban leadership wanted him to be their envoy to the United Nations (UN), but he refused. He came to believe that the Taliban were mere proxies for Pakistani and Arab radical Islamists, and in 1997 he joined family members in Quetta, where he worked for the reinstatement of the former king, Mohammad Zahir. In the next year he collaborated with other Pushtun chiefs in inciting an anti-Taliban movement; in response, in 1999 the Taliban murdered Karzai's father. Elected chief of the Popalzai tribe in his father's place, Karzai immediately defied Taliban warnings by organizing a 300-vehicle convoy of Pushtun mourners to carry his father's remains back to Kandahar, an act that won him wide respect.

Soon after the 11 September 2001 attacks against the United States, Karzai began to organize a tribal militia to fight the Taliban. His request for help from the U.S. ambassador in Islamabad was refused, but he won support from the British. On 8 October 2001, one day after the United States started bombing the Taliban, he led militia into the Kandahar area. The Taliban almost captured him, but he was rescued by U.S. helicopters. The U.S. government only reluctantly came to see him as a key Pushtun leader. When a body of prominent Afghans assembled in Bonn, Germany, to constitute a new regime, the United States and representatives of the Northern Alliance, now the main political instrument of U.S. policy in Afghanistan, induced the attendees to name him leader of a provisional administration. Installed on 22 December 2001, Karzai's task was to organize a *Loya-Jirga* (national assembly) that would elect a temporary head of state who would form a permanent government. In the summer of 2002 the *Loya-Jirga* elected him president of the Afghan Transitional Authority, commissioning him to draft a new constitution, form a national army, and set up a national election by 2004. As transitional president his main achievement by the summer of 2003 was the securing of commitments from other countries of more than $4 billion for reconstruction. Early in his regime, his greatest difficulty was the incorrigibility and truculence of local commanders, many of whom paid no remittances to the Kabul government. There have been several attempts on his life, the most notable on 5 September 2002, when a gunman missed him at point-blank range.

KASAP, TEODOR

[1835–1905]

Turkish Ottoman journalist, dramatist, and publisher.

Teodor Kasap, the son of a manufacturer, was born in Kayseri, Turkey. When he was eleven, his father died and he moved to Istanbul, where he was ap-

prenticed to a Greek merchant and studied at a Greek school. While working in the merchant's store, he met a French officer who had come to Turkey during the Crimean War. Under the patronage of this officer, he went to France in 1856 to complete his studies. Upon his return to Istanbul, Kasap gave private French lessons, through which he entered the Istanbul literary circuit.

On 24 November 1870 Kasap published the first issue of the first Ottoman humor magazine, *Diyojen*. *Diyojen* quickly became famous for its caricatures and high-quality articles; among the regular contributors were Namik Kemal and Ebüzziya Tevfik. *Diyojen* also featured translations from French literature: Kasap's translation of Alexandre Dumas's *The Count of Monte Cristo* was one of the first Turkish translations of a French novel.

The caustic humor that was featured in *Diyojen* led the government to order it temporarily closed after only four issues. Kasap eventually published 183 issues of *Diyojen* before it was ordered permanently closed in 1873. Following this, he published two other magazines, *Cingirakli Tatar* and *Hayal* (both in 1873), and a daily political newspaper, *Istikbal* (1875). In 1877, Kasap was sentenced to three years in prison for a cartoon criticizing censorship of the press that appeared in *Hayal*. He was released from prison on the condition that he cease publishing *Hayal* and *Istikbal*; upon his release, he went into exile in Europe. Following a stay in Europe of several years, he was pardoned by Sultan Abdülhamit II and allowed to return to Istanbul where he was employed in the sultan's private library.

In addition to his publishing and journalistic activities, Kasap is known for his plays. His first play, *Pinti Hamit*, was performed at the Gedikpaşa Theater in 1873; this was followed by *Iskilli Memo* in 1874 and *Para Meselesi* in 1875. The first two were based on plays written by Molière, the last, on a play written by Dumas. Kasap believed that Turkish theater had to draw upon local sources and customs; his play *Iskilli Memo* was based on Turkish folk theater (Ortaoyunu). He was opposed to unreflective adoption of Western theatrical genres, and he defended local traditions of drama: "Theater, like civilization, does not enter a country from the outside, but must come from within."

See also Abdülhamit II; Namik Kemal; Newspapers and Print Media: Turkey; Ortaoyunu.

KASHANI, ABU AL-QASEM

[1882–1962]

Iranian religious leader and political activist, important for his role in the events of 1945–1955, the postwar decade.

Born in Tehran, Abu al-Qasem Kashani was taken at an early age by his father to al-Najaf in Iraq, where he began his formal religious education in Islam. With his father, he fought against the British in the battle of Kut al-Amara in 1916. Hostility to British imperialism was destined to remain the chief emphasis of his political life. Kashani also participated in the anti-British uprising of 1921, as a result of which he was compelled to return to Persia (Iran). He remained politically inactive until 1941, when the British forces occupying Iran arrested him for alleged contacts with agents. Released in 1945 (after World War II), he was placed under house arrest in 1946 for opposing a new press law.

In 1948, he organized demonstrations that called for volunteers to fight the Zionists in Palestine (Israel was established in May 1948) and also began collaborating with the militant organization Fedaʾiyan-e Islam. In 1949, he was exiled to Beirut on charges of involvement in a failed attempt on the life of the shah, Mohammad Reza Shah Pahlavi. He returned in triumph in 1950 and was elected to the *majles* (Iran's legislature), where he worked with Mohammad Mossadegh in bringing about the nationalization of the Iranian oil industry. From the fall of 1952 on, relations between the two men declined, and Kashani stood aside when Mossadegh was overthrown by the U.S.-sponsored royalist coup of August 1953. Kashani nonetheless resumed his own oppositional activities in 1954 and was arrested anew in 1955. He was released in January 1956 and, intimidated by the death of his son under questionable circumstances, remained politically inactive until his death in March 1962.

KASHIF AL-GHITA FAMILY

A family of Shiʿite ulama *and* mujtahidun *originating in the Shiʿite holy city of al-Najaf in southern Iraq.*

The founder of the family, Jaʿfar ibn Khidr al-Najafi (1743–1812), was an *alim* (singular of *ulama*) who wrote the *fiqh* (Islamic jurisprudence) textbook *Kashif al-Ghita* (The uncoverer of the error), from which the family surname was derived. In 1807, he led the defense of Najaf against the raiding Wahhabis, a Sunni fundamentalist and purist movement led by amirs of the house of Al Saʿud, based in Najd.

Jaʿfar's sons, Shaykh Musa ibn Jaʿfar (1766–1827), Shaykh Ali ibn Jaʿfar (d. 1837), and Shaykh Hasan ibn Jaʿfar (1776–1848), were *mujtahidun* (senior Shiʿite religious authorities empowered to issue religious decrees based on primary sources; singular *mujtahid*) in Najaf, where they were involved in political developments. Shaykh Musa ibn Jaʿfar Kashif al-Ghita mediated between the Ottoman Empire and the Persians during the 1820s.

The most prominent scion of the Kashif al-Ghita family in the twentieth century was Muhammad Husayn Kashif al-Ghita (1877–1954), who received the title and status of *marja* (supreme religious authority). He was the author of numerous books on religious topics, printed in Arabic and Persian, and had adherents throughout the Shiʿa world. In his books he showed the need for Islamic unity and expressed his views about the ideal Islamic society. He maintained a correspondence with the Maronite intellectual Amin Rihani. He traveled to Hijaz, Syria, and Egypt, and lectured at al-Azhar University in Cairo. In 1909, he published a book, *al-Din wa al-Islam aw al-Daʿwa al-Islamiyya* (Religion and Islam, or The Islamic call), which called for a revival of Islam and its purification from recent trends of extremism and superstition.

During the 1920s and 1930s, Muhammad Husayn was an active Shiʿite politician in Iraq. In the period of unrest and tribal rebellions (1934–1935), he formulated the Shiʿite demands, but refused—due to the strife among the Shiʿite tribes and politicians—to commit himself to the tribal rebellion under Abd al-Wahid Sikkar, which was backed and manipulated by Sunni Baghdadi politicians of the Ikha al-Watani Party. Starting from the late 1930s, he introduced moderate reforms and modernization in his *madrasa* (religious college) in Najaf.

In 1931, Muhammad Husayn Kashif al-Ghita attended the Muslim Congress in Jerusalem—the first Shiʿite *mujtahid* to take part in a Muslim Congress—and led the prayers at the opening ceremony at the al-Aqsa Mosque.

Following World War II Muhammad Husayn began to warn against the dangers of communism. In 1953, he held talks with the British and American ambassadors on the communist influences among young Shiʿites in Iraq.

KASHWAR KAMAL, MEENA
[1956–1987]

Afghan feminist, poet, and political activist.

Meena Kashwar Kamal was born in 1956 in Kabul. Her husband, Faiz Ahmad, a physician, was a member of the Afghan Maoist Communist political movement, Shoʿla-i-Jawid (Eternal flame); however, it is not clear whether Kashwar Kamal adhered to the same political ideology. Kashwar Kamal's political and feminist ideas were shaped during the late 1960s and early 1970s, a period of intense student involvement in politics in Kabul and other major cities in Afghanistan. After her husband's assassination in 1976, she abandoned her studies at Kabul University and devoted her time to social and political activities. In 1977, at age twenty-one, she or-

ganized the Revolutionary Association of Women of Afghanistan (RAWA) in Kabul as an alternative platform to the Marxist-Leninist Democratic Organization of Afghan Women, to fight against the fundamentalism of radical Islamists.

After the Soviet intervention in Afghanistan in 1979, Kashwar Kamal shifted her focus to the liberation of Afghanistan. She declared, "To fight against the Russian aggressors is inseparable from struggle against the fundamentalists. Nevertheless, for the time being we should give priority to the former." In October 1981, she was invited to attend the congress of the anti-Soviet Socialist Party of French President François Mitterrand as a representative of the Afghan resistance. From there, she visited other European countries, speaking in support of the Afghan resistance. Her strong anti-Soviet and antifundamentalist feminist stance earned her the animosity of both radical Islamists in Pakistan and the pro-Soviet regime in Afghanistan. She was killed in her home in Quetta, along with two close associates, on 4 February 1987, allegedly at the instigation of Gulbuddin Hekmatyar, leader of the radical Islamic Party of Afghanistan. Her work, however, has continued under the banner of the Revolutionary Afghan Women's Association.

KASRAVI, AHMAD

[1890–1946]

Iranian writer and reformer.

Born into a religious family in Tabriz, Ahmad Kasravi received a religious education and for a brief time was a preacher. As a young man, he joined the Tabriz branch of the reformist Democrat party, which had acquired a reputation in the national assembly for being anticlerical. Kasravi was expelled from the party in 1917 for his opposition to a growing trend among Tabriz Democrats to emphasize provincial concerns over national concerns. In 1921, he moved to Tehran, where he spent the remainder of his life working as a social reformer, activist, and historian. Kasravi was one of the most prolific and influential writers of early twentieth-century Iran. His important works include *History of Iran's Constitutional Revolution, An Eighteen-Year History of Iran, Shiʿigari,* and *Piramun-e Islam* (all of them in Arabic). Kasravi often criticized the Shiʿite clergy in his writings, especially in the two latter works, both of which were condemned by some clergy. He was assassinated by a member of the radical Fedaʾiyan-e Islam.

KASSALLAH

Commercial and agricultural center of eastern Sudan.

Founded in 1840, Kassallah grew rapidly, and within a few decades became the most important commercial and agricultural center in eastern Sudan. During the Mahdiya revolt, its Turko–Egyptian defenders withstood the siege by the Mahdists from 1883 until 1885, when the garrison surrendered after the Mahdi had captured Khartoum. In 1894 the Italians, who had occupied Eritrea, captured the town; they did so again for a few months in 1940, before Kassallah was liberated by Allied forces under British command. As the gateway to Eritrea and Ethiopia and the *entrepôt* for the rich agricultural lands in the Gash River delta of the Sudan, Kassallah became the center for road and rail traffic between Port Sudan and Khartoum. Its strategic location has made it the sanctuary for the thousands

of refugees who have fled from the Eritrean–Ethiopian war since the mid-1960s. The influx of refugees has swollen the population beyond any accurate assessment, but Kassallah has become the largest city in the Sudan after the Three Towns (Khartoum, Khartoum North, and Omdurman).

ROBERT O. COLLINS

KASZTNER AFFAIR

Dramatic and highly politicized slander trial in Israel from January 1954 to June 1955.

Gossip journalist Malkiel Grunwald stood accused of defaming Dr. Rudolf Kasztner, director of public relations for the ministry of commerce and industry and hero of Holocaust rescue efforts on behalf of Hungarian Jewry. Kasztner's role in the failed 1944 negotiations to "buy" the survival of Hungary's Jews from Adolf Eichmann was portrayed by the defense as collaboration with the Nazis in exchange for the freedom of a handpicked few of Kasztner's friends and relatives who were transported to Switzerland as an agreed-upon "good faith" gesture. According to defense counsel Shmuel Tamir, whose Herut Party's political agenda was to associate Kasztner's "war-crimes" with the Jewish Agency and by extension with MAPAI party, it was to ensure this "delivery" that Kasztner kept from Hungarian Jewry the truth about its expected fate and encouraged Palestinian Jewish parachutists to surrender to the authorities. He was also disparaged for testifying on behalf of one of his Nazi interlocutors, Kurt Becher, at the Nuremberg trials after World War II. Grunwald was acquitted. Reverberations of the trial led to the resignation of Prime Minister Moshe Sharett's government in June 1955. Kasztner was assassinated in March 1957 by three youths associated with the extreme right, ten months before Israel's Supreme Court overturned the ruling in the Grunwald case.

ZEV MAGHEN

KATEB, YACINE

[1929–1989]

A leading Algerian literary figure.

Born in Constantine, Algeria, Yacine Kateb was marked by the 1945 massacres that French colonial troops committed in eastern Algeria. He was imprisoned during those years of repression and then went into exile in France, where he survived by taking low-paying jobs. He joined the National Liberation Front (FLN) during the 1950s and served as FLN representative in various countries. He earned fame with *Nedjma* (1956), a love story. Three years later he published *Le cercle des représailles* in Paris. After Algeria's independence, Kateb devoted his time to writing and theater. His political views angered the regime. Kateb's position that dialectal Arabic and Berber should be the only national languages conflicted with the regime's all-out campaign to make Arabic the only national language. In response, the authorities sought to marginalize him. Modest, Kateb worked with his theater troupe and wrote plays and books, including *Le polygone étoilé* (1966) and *L'homme aux sandales de caoutchouc* (1970). Because he was spurned by the authorities who controlled the national publishing house, most of Kateb's works were published in France. Kateb also wrote plays in dialectal Arabic and French, the most famous being *Mohammed prends ta valise* (1971), *Saout Ennisa* (1972), *La guerre de 2000 ans* (1974), and *La Palestine trahie* (1972–1982). He was awarded France's Grand Prix National des Lettres in 1987. He died of leukemia on 28 October 1989 in Grenoble, France.

YAHIA ZOUBIR

KATTANI, MUHAMMAD IBN ABD AL-KABIR AL-

[?–1909]

Idrisi sharif; head of the Kattaniya Sufi brotherhood; anticolonial leader in the period of the Moroccan Question.

As head of the Kattaniya Brotherhood, in 1904 Muhammad ibn Abd al-Kabir al-Kattani led the

notables of Fez in opposition to France's reform plan presented to Morocco's sultan Abd al-Aziz. Disappointed with the sultan's acquiescence to French pressure, in 1907–1908 he led demonstrations at Fez in favor of deposing Abd al-Aziz and proclaiming Abd al-Hafid as sultan. He also sought to impose conditions on the latter when he assumed the throne, committing him to a program of unwavering opposition to European rule.

In 1909, Kattani's unrelenting public attacks on Abd al-Hafid led to the former's arrest and execution. Subsequent generations of Moroccan nationalists have, however, viewed him as a hero for his staunch opposition to French colonial rule.

See also Abd al-Aziz ibn al-Hassan; Abd al-Hafid ibn al-Hassan; Kattaniya Brotherhood.

Bibliography

Edmund Burke III

KATTANIYA BROTHERHOOD

A Moroccan Sufi order, formally intended to enhance the spirituality of its adherents, which played a major political role in the early twentieth century.

The Kattaniya brotherhood (in Arabic, *tariqa*) was founded in Fez, Morocco, in 1890 by Muhammad ibn Abd al-Kabir al-Kattani—known popularly as Muhammad al-Kabir. Al-Kabir was inspired by the Sufi doctrines and practices of the established Darqawi *tariqa.*

The Kattani family, known for its scholars and jurists, claimed descent from the prophet Muhammad through Morocco's Idrisi dynasty. The Kattaniya rapidly gained adherents in Fez, Meknes, and Morocco's rural regions, but the brotherhood was condemned by reformist *ulama* (religious scholars). In 1909, Muhammad al-Kabir fled Fez to sanctuary with a neighboring tribe when the new ruler, Sultan Mulay Abd al-Hafid (ruled 1908–1912), ordered his arrest and closed all Kattaniya *zawiyas* (Islamic compounds). Pursued and beaten, he was executed soon after he was brought back to Fez.

Once the French protectorate was established (1912–1956), the Kattaniya again flourished under Shaykh Muhammad Abd al-Hayy al-Kattani—a scholar, popular religious leader, implacable foe of the Alawite dynasty, and a beneficiary of French colonial rule. In 1953, Abd al-Hayy joined other antinationalists in calling for the deposition of Sultan Muhammad V, and the Kattaniya brotherhood rapidly collapsed.

Dale F. Eickelman

KATZNELSON, BERL

[1887–1944]

Labor Zionist leader, writer, and publisher.

Berl Katznelson was born in Belorussia and went to Palestine in 1909. He became a farm laborer and a friend of A. D. Gordon. In World War I, he was in the Jewish Legion with David Ben-Gurion and Yizhak Ben-Zvi. With them, and as a theoretician in Labor Zionism, he created the platform for bringing together the several Labor Zionist (socialist) parties into a unified framework. He was a founder of Ahdut Ha-Avodah in 1919, the Histadrut labor organization in 1920, and the MAPAI political party in 1930. In 1925, he founded the Histadrut's daily newspaper, *Davar,* which he edited until 1936, and its publishing house, Am Oved.

Central to Katznelson's outlook was the notion that Zionism would not be achieved without socialism because of the need to direct investment. He called his socialism "constructive" to signal both its preference for the interests of the workers and its priority for building the infrastructure necessary in a state. During World War II, the knowledge of the Holocaust changed his rigid stance against the Arabs and inclined him toward compromise.

See also Ahdut Ha-Avodah; Ben-Gurion, David; Ben-Zvi, Yizhak; Histadrut; Zionism.

KAWAKIBI, ABD AL-RAHMAN AL-
[1854–1902]

Central figure in the development of Arab nationalist thought.

Abd al-Rahman al-Kawakibi was born in Aleppo but grew up in Antioch, where he studied a variety of subjects in Arabic, Turkish, and Persian under the supervision of a prominent scholar related to his mother. He then returned to Aleppo and served as an editor of the Ottoman-sponsored newspaper *al-Furat* during the latter half of the 1870s. In 1878, he founded the city's first privately published Arabic-language newspaper, the weekly *al-Shadaba.* He played active roles in the then newly established Chamber of Commerce, the municipal administration, and the government-owned Tobacco Corporation. His outspoken advocacy of programs to help the poor won him the nickname Abu al-Duʿafa (Father of the Weak). His willingness to challenge the authorities eventually brought him into conflict with the provincial governor, who arrested him for sedition and confiscated his property. An appeals court ordered his release but refused to return his possessions, so around 1898 he emigrated to Egypt and entered the service of the Khedive Abbas Hilmi II. He died in Cairo.

Al-Kawakibi is best known for two short treatises, written in Aleppo but first published in Cairo. The first, *Umm al-Qura* (The mother of towns, i.e., Mecca), appeared in print in 1899 under the pseudonym al-Sayyid al-Furati. Structured in the form of a discussion among twenty-two Muslims planning to set up a secret society to revitalize the Islamic world, the book's thesis is that Islam will remain incapable of resisting the intellectual and political challenges emanating from Europe unless the leadership of the faith *(khalifa)* is returned to the Arabs from the (Ottoman) Turks. If a new *khalifa* were to be established in Mecca and were accorded authority only in religious matters, then the political position of all Muslims would be greatly strengthened. Despite its controversial if not explosive argument, this book went virtually unnoticed until it was serialized in Rashid Rida's journal *al-Manar* in 1902 and 1903.

The second treatise, *Tabaʾi al-Istibdad wa Masari al-Istiʿbad* (The attendants of despotism and the destruction of subjugation), is a spirited critique of tyranny in all its myriad forms: political, intellectual, economic, spiritual, and national/racial. For al-Kawakibi, each of these despotisms can be traced to earthly rulers' refusal to acknowledge the rule of Allah. Bringing an end to tyranny thus entails recognizing the supremacy and oneness of God *(tawhid).* But in order to prevent despotism from reemerging, governments must be made fully accountable to the people and wealth must be distributed equitably. Al-Kawakibi thus presents a program for social reform that is sharply at variance with that advocated by contemporaneous Islamic thinkers, who generally considered both democracy and socialism to be antithetical to Islam. There are indications that al-Kawakibi outlined several other writings during his years in Aleppo, but the notes for these works were seized and destroyed by the Ottoman police.

Fred H. Lawson

KAYLANI, ABD AL-RAHMAN AL-
[1841–1927]

First prime minister of Iraq.

Scion of an ancient aristocratic family, Abd al-Rahman al-Kaylani was the head of the Qadiri (Sufi) mystical order, established by his ancestor, Abd al-Qadir al-Kaylani (or al-Jilani) (1077–1166). He was also the *naqib al-ashraf* (a noble title denoting responsibility for the genealogical records listing the descent of a city's families from the prophet Muhammad; the title conveys the status of titular head of those families) of Baghdad.

Sir Percy Cox, British civil commissioner after World War I, regarded the Kaylani family as the most aristocratic and monarchial in Baghdad, and suggested that Abd al-Rahman al-Kaylani be made amir of Iraq. In November 1920, al-Kaylani was appointed president of the Iraqi Council of Ministers, the nucleus of the future Iraqi administration. In 1921, as a candidate for the planned throne of Iraq, al-Kaylani objected to the choice of Faisal I ibn Hussein of Hijaz as king of Iraq, but gradually resigned himself to the idea, realizing that the British insisted on Faisal. Al-Kaylani resigned from the Council of Ministers on Faisal's accession in August 1921. Subsequently he was appointed by Faisal as head of the cabinet and became the first prime

minister of Iraq. Al-Kaylani conducted talks with Britain about the Anglo–Iraqi Treaties and also objected to the Mandate. In 1922, as the official representative of Iraq, al-Kaylani signed the treaty with Britain but on condition that it would be ratified by the Constituent Assembly.

KAYLANI, RASHID ALI AL-

[1892–1965]

Four-time prime minister of Iraq in the 1930s and 1940s and a symbol of Arab nationalist resistance.

Rashid Ali al-Kaylani (also al-Gilani) was born in Baghdad in 1892. Although a member of one of the oldest local families, Rashid Ali's personal circumstances were quite modest, as a family disagreement had deprived his father of the stipend from the Qadiriyya *waqf* to which he was entitled as a Kaylani family member.

In 1924 he was appointed minister of justice in the cabinet of Yasin al-Hashimi, probably his closest political colleague; they were cofounders, in 1930, of Hizb al-Ikha al-Watani (Party of National Brotherhood), which spearheaded the opposition to the Anglo–Iraqi treaty of that year. By 1933, however, when the treaty had taken effect, both men acquiesced to the new situation, and Rashid Ali accepted his first premiership (20 March–28 October).

Out of office between October 1933 and March 1935, Rashid Ali and Hashimi spent much of this period encouraging the Middle Euphrates tribes to rebel against the governments of Ali Jawdat al-Ayyubi and Jamil al-Midfaʿi. By March 1935, they had succeeded to the extent that Jawdat and Midfaʿi could no longer form cabinets; Hashimi became prime minister and Rashid Ali minister of interior in a government that lasted until the coup d'état by Bakr Sidqi in October 1936.

By the late 1930s, Britain and France had become increasingly unpopular in the Arab Middle East. In addition, while pan-Arab nationalism had little following in Iraq outside the officer corps, anti-British—and to some extent pro-Axis—feeling was heightened by the combination of the general weakness of the institutions of the state after the death of King Faisal I; the existence of widely shared aspirations for independence from Britain; the arrival of al-Hajj Amin al-Husayni, the *mufti* of Jerusalem, in Baghdad in October 1939; and the fact that a small clique of nationalist officers, the so-called Golden Square, had come to exercise a pivotal influence on Iraqi politics.

Rashid Ali became the chief political ally of the nationalist officers of the Golden Square and became prime minister in March 1940 after the fall of Nuri al-Saʿid's fifth ministry. Saʿid, unpopular because of his staunch support for Britain, considered, somewhat overoptimistically, that Rashid Ali, who had opposed the Anglo–Iraqi treaty, was both less compromised than himself and better able to resist the Golden Square's more extreme demands.

Under the terms of the 1930 treaty, the Iraqi government agreed to allow the transit of British troops across its territory in time of war. Britain sought to take advantage of this provision in June 1940, and permission in principle was given in mid-July. However, in spite of requests from Britain, Iraq refused to break off relations with Italy when Italy declared war on Britain in June 1940, and in consequence, the Italian legation in Baghdad developed into a center of anti-British intrigue. In addition, in August 1940 Rashid Ali and the mufti entered into secret negotiations with Berlin.

Matters rapidly came to a head, since Rashid Ali, who had the support of most of the armed forces, would not yield to British pressure to resign because of his refusal to allow troops to land in Iraq and pass through the country to Palestine in November 1940. By January 1941, he had been forced to step down as prime minister, but he returned to power on 12 April. In consequence, the regent Abd al-Ilah, Saʿid, and other pro-British politicians fled to Transjordan (now Jordan).

British troops landed at Basra a few days later; while this showed that Britain meant business, it be-

came clear that Rashid Ali and his government enjoyed widespread popular support. Given the balance of forces, the defeat of the Iraqi army by British troops after the thirty days war (May 1941) was very much a foregone conclusion. The much-heralded German support never materialized, and Rashid Ali fled the country with some of his closest supporters, reaching Germany in November 1941. He stayed there until May 1945, subsequently taking refuge in Saudi Arabia, where he remained until 1954.

After the overthrow of the Iraqi monarchy, Rashid Ali returned to Baghdad in September 1958, apparently hoping that his previous services to the state would be properly acclaimed. When adequate recognition was not forthcoming, he set about inciting rebellion among the tribes of the Middle Euphrates in a quixotic attempt to unseat the government of Abd al-Karim Qasim. He was arrested in December 1958, tried and condemned to death, but subsequently pardoned by Qasim. He died in Beirut on 30 August 1965.

KEBAN DAM

Dam built on the Euphrates River in eastern Turkey.

In 1974, near the provincial capital city of Elaziğ (1980 population about 143,000), the Keban Dam was opened by Turkey's Prime Minister Bülent Ecevit, after eight years of construction. A future prime minister, Turgut Özal, had been an engineer on the project. When it was completed, the Keban Dam was the world's eighteenth-tallest dam at 680 feet (207 m); it created Turkey's third-largest lake.

The Keban Dam is part of Turkey's Southeastern Anatolia Project, a long-term hydroelectric program designed to increase the country's electrical generating capacity by 45 percent. It includes two other dams—one on the Tigris River and a second, the Atatürk Dam, completed in 1990, on the Euphrates. The project is intended to increase irrigable land in the region by 700,000 acres (283,000 ha) and to stimulate the economy of the region, largely inhabited by Kurds. The project has been a source of political tension with Syria and Iraq, since both depend on the same rivers for water.

See also Ecevit, Bülent; Özal, Turgut; Southeastern Anatolia Project.

KEINAN, AMOS

[1927–]

Israeli writer and satirist.

Amos Keinan helped create Israeli culture and served as one of its severest critics. A member of the generation that fought for an independent Jewish state, he soon accused Israel of moral and political decline particularly with regard to its military actions. Influenced by the Canaanite movement, Keinan also argued that Israel lacked a genuine national identity. As a regular columnist for two of Israel's leading newspapers, *Yediot Aharonot* and *Haaretz,* Keinan was widely known for his caustic satire. Keinan's writings are pessimistic and preoccupied with the possibility of destruction. Among his works are *Shoah II* (Holocaust II; 1975); *Ba-Derekh Le-En Harod* (On the road to En Harod; 1984, recounting the destruction of Israel); *Mi-Tahat La-Perahim* (Under the flowers; 1979), an anthology of short stories describing attitudes toward death during war; and *Sefer ha-Satirot* (Book of satires; 1984). A collection of his plays appeared in 1979.

KEMALETTIN BEY

[1870–1927]

Turkish architect.

Kemalettin was born in Istanbul into a middle-class family; his father was a naval captain. After graduating from the School of Civil Engineering in 1891, he became the assistant to the German architect A. Jasmund, who designed Istanbul's Sirkeci railroad station. Kemalettin later studied at Germany's Charlottenburg Technische Hochschule. Upon returning to Istanbul in 1900, he worked as chief architect in the ministry of war and taught at the School of Civil Engineering. He was a founder of the First National Architectural Movement in the early part of the twentieth century. The style developed by him and his contemporary Vedat Bey has been termed Ottoman Revivalism, because it incorporated the architectural elements of the classical Ottoman period over basically neo-Renaissance structures. When in 1909 he was appointed to the architectural department at the ministry of religious foundations, he began to apply his ideas of a national architecture. Architects trained under his guidance at the ministry helped to spread his vision throughout the Ottoman Empire.

Kemalettin was responsible for the restoration of historical monuments and the design of new buildings, including new mosques, mausoleums, office buildings, prisons, hospitals, schools, and train stations. His buildings were characteristically symmetrical with reference to the entrance, while protrusions at the two ends and at the central axis served to highlight this symmetry. These protrusions were often towers covered with domes, in the classical Ottoman style. He emulated Renaissance architecture by dividing his facades into three sections separated by continuous molding; he used different window orders in each section to render the three sections as distinct entities. The facades had rich carvings, tile panels, and carved moldings, composed in careful symmetry.

One of Kemalettin's most important works is a complex of 124 apartment houses and 25 shops he designed in 1918, the first examples of reinforced concrete construction in Turkey. The Republic of Turkey, established in 1923, recruited Kemalettin to design the portal of the new Turkish Grand National Assembly building and to complete the design of the Ankara Palace Hotel across from the new parliament building. In addition, he designed a series of housing projects for civil servants.

KEMALISM

The official present-day political ideology of the Republic of Turkey.

Kemalism refers variously to the thought of Mustafa Kemal Atatürk (1881–1938); the ideology and regime of the single-party period (1920–1950) in the Republic of Turkey; the official Turkish political ideology to date (semiofficial in the 1961 constitution, fully official and imperative in the 1982 constitution); the principles of national education and citizenship training; the hegemonic public philosophy in contemporary Turkey; and finally to the name of the persistent Turkish personality cult.

Westernist Reforms in Turkey

Kemal derived his legitimacy from the commandership in chief of the successful war of independence (1919–1922), which ended up in the

foundation of the republican Turkish nation-state on the ruins of the Ottoman Empire (1299–1922). No less important, this legitimacy was reinforced by his extreme qualities of charismatic leadership. Kemal and his followers, after abolishing the sultanate and the caliphate, proceeded to build up an authoritarian, single-party state, with discernable totalitarian characteristics in certain ideological and institutional spheres. The Kemalists implemented, alternately gradually and forcefully, a series of radical reforms in the political, legal, educational, and cultural fields, including adoption of Western legal codes (some liberal, such as the Swiss civil code; some fascistic, such as the penal and labor codes); latinization of the Ottoman alphabet; adoption of the Western calendar and units of measurement and imposition of Western clothing and headwear; the closing down of social and associational institutions of Islamic sects; unification of education in the sense of prohibiting schools of religious instruction and creating a new system of secular national education; and disestablishment of Islam in general beyond the narrow laicist sense of separation of religion and politics, but at the same time bringing religion under the control and supervision of the state through a Directorate of Religious Affairs.

The main thrust of these reforms was Westernization and secularization of the society, based on a rejection of the Ottoman Islamic past and on a synthesis of Western values with the virtues of old, original, Turkish "national character," not excluding a tertiary element of the purified, pre-Arabic-Persian-Ottoman version of Islamic morality. Many of these reforms constituted the completion of a long process of Westernist modernization, some inaugurated by the "Re-Ordering" (Tanzimat, 1838) and the First and Second Constitutional periods (1876 and 1908), some others formulated by Ziya Gökalp and partially implemented by the Unionists (1908–1918). Whether the Kemalist reforms constitute a revolution or radical reform is the subject of an ongoing debate, but the Kemalists identified themselves as "transformist" *(inkilapi).*

Interpretation and Classification of Kemalism

Partly impressed by the Westernist reformist and laicist character of "cultural Kemalism," most interpreters—Turkish and foreign alike—have designated Kemalism as a tutelary democracy overlooking or playing down the severely antidemocratic essence of "political Kemalism" both as an ideology and as a regime. This standard interpretation of Kemalism has also been partly guided by an imputation of false causality, in the sense that the development of the single-party regime after the end of World War II into a sort of multiparty parliamentary system (1946–1950), as a result of external pressures, was attributed to the unfolding of the internal dynamics of the first thirty formative years of the Turkish republic. As a matter of fact, this rootless parliamentarianism has been thrice interrupted by military coups (1960, 1971, 1980) of varying degrees of violence—all declared to be staged, among but above all other things, in the cause of Kemalism.

Kemalism as a "Third Way" Ideology

Kemalism was an early brand of those "third way" *(tertium genus)* ideologies and regimes of the post–World War I world of late-modernizing capitalist countries which were to borrow further elements, especially in the 1930s and early 1940s, from the full fascisms of interbellum Europe. Kemalism was antisocialist and anti-Marxist, antiliberal but not anticapitalist; that is, it was corporatist capitalist. It belonged more to the solidaristic species of corporatism formulated by the Turkish social and political thinker Ziya Gökalp, only later assuming partial fascistic overtones in certain ideological and institutional spheres. The Kemalist single-party regime rested on a class alliance of civilian-military petite bourgeoisie, big landowners, a nationalistic commercial bourgeoisie, and an incipient and subordinate industrial bourgeoisie, which it was the explicit ideology of the Kemalists to create and strengthen through neomercantilist policies of economic statism (etatism). This developmentalist objective required accelerated capital accumulation through labor policies which provided a cheap and disciplined labor force for private enterprises, for state economic enterprises, and for joint ventures between the two and through fiscal policies that called for transfer of resources from the agricultural countryside to industry and the urban centers, especially after the Great Depression.

"Transformation" Becomes Repression

The Kemalist regime, aiming at the creation of a bourgeois society without liberal politics, was not a

de jure but a *de facto* dictatorial regime. Mustafa Kemal Atatürk, as the "greatest father" *(Ata-Türk)* of the nation, as the "eternal chief" of the single party, as the president of the republic, as the effective head of the executive branch (in breach of the 1924 Constitution that formally called for a sort of cabinet system) which governed in accordance with his directives, sat at the apex of this system. The parliamentary facade but thinly veiled the fact that the legislature (the Grand National Assembly) was regularly "packed" by Atatürk and his lieutenants, second-degree electors rubber-stamping the candidates handpicked by the former. The parliament, in Kemal Atatürk's own words, was coterminous with the parliamentary group of his Republican People's Party.

In other words, Kemalism was a plebiscitary, Bonapartist-charismatic "chief-system" in whose ideology the identity of the charismatic leader, the nation and its will, the state, and the party was emphatically expressed. Opposition, pluralism, and freedom of press and association, among others, were suppressed in the name of "transformationism" as against the overstretched category of reactionary forces. This attitude and its attendant formal and informal arrangements were to leave a durable imprint on the political culture, political-legal regime, and institutional structures of contemporary Turkey—the most recent fortification of which was to be made after the 1980 military coup in the form of the 1980 Constitution, the new Political Parties Act, the Higher Education Act, the Associations Act, and so forth. Certain liberalizations of the 1950s and 1960s had already been reversed immediately after the semicoup of 1971, restorationist reorderings and preparations of which were to culminate in the systemic overhauling executed by the 1980 coup.

The Six Arrows

The Kemalist ideology is summed up by, but cannot be reduced to, the Six Arrows: (1) Republicanism, meaning antimonarchism rather than democratic res publica; (2) Nationalism, aiming at linguistic and cultural identity-building rather than being an expansionist or irredentist political program; with a less known second face that has racist undertones; (3) "Peopleism," not in the common sense of populism but one which postulates a unified, indivisible, harmonious "whole people"; (4) Statism/etatism; (5) Laicism; and (6) "Transformism," meaning radical, especially cultural, reformism in contradistinction to both revolutionism and evolutionism—all seminally formulated by Gökalp, subsequent distortions notwithstanding.

Technically a rightist ideology, Kemalism in the Turkish context, however, proved to be very pervasive and all-embracing, thanks to characteristics typical of most "third way" ideologies, which try to "reconcile the incompatibles" in order to have a catchall appeal. Hitherto all Turkish political groups, from the extreme right to the center, and more interestingly, to many gradations of the left, have professed (and had to profess) allegiance to Kemalism. Its appeal to the right and center parties is more opaque in view of its authoritarian, "above-parties" and "above-classes," corporatist context. It has been and continues to be very functional in this sense, being the "grund-norm" of political legitimacy in Turkish politics, reproduced by the intelligentsia and forcefully guarded by the military. As for the left, most have incorrectly taken Kemalism's developmentalist statism for a form of state socialism, its anti-imperialism for a kind of anticapitalism, and some of its political reforms for a variant of bourgeois revolution (that would mechanically lead into a socialist revolution)—forgetting the profoundly antidemocratic character of political Kemalism. This consensus, surviving the 1990s despite the foregoing, excludes only a very marginal sector of academe and the nonauthoritarian left, as well as the fringes of the fundamentalist—but not the orthodox, statist-religious right. The former is excluded for obvious reasons; the latter less because of the authoritarian aspects of Kemalism than for its, in their view, excessive Westernism. It should also be noted that the much-spoken-of revival of Islam in Turkey in the 1980s was not initiated by the fundamentalist groups—certainly one of the beneficiaries—but by the military (1980–1983) and civilian (1983–) governmental policies of granting religion a far greater domain of legitimacy than hitherto seen in the history of the Republic of Turkey. The military-imposed Constitution of 1982 provided for compulsory courses on "religious culture and morality" in elementary and secondary education "under the control and supervision of the state." This constituted the first significant deviation from the otherwise intact Kemalist orthodoxy of Turkish establishment

politics. In breaking, in this instance, with the classical Kemalist principle of laicism, which has excluded religious instruction from the national education and citizenship training system, the military sought to add Islam to Kemalism in its program of depoliticization, control, and ideological manipulation of Turkey's youth and society, paralleling measures it has taken in many other spheres.

Works on Kemalism, interchangeably called Atatürkism, are legion. Attempts at differentiating the two are polemical and unfounded; Atatürk and his followers baptized their own ideology as Kemalism. A great many of these works, however, are hagiography or are based on secondary or tertiary evidence, whether they be belletristic or academic. In academe, too, Kemalism remains the social scientific official ideology—the obvious contradiction in terms notwithstanding.

Taha Parla

KENAZ, YEHOSHUA

[1937–]

Israeli author.

Born in Petah Tikvah, a small town outside Tel Aviv, in 2004 Yehoshua Kenaz lived in Tel Aviv, where he worked on the editorial staff of the Hebrew daily *Haaretz.* A graduate of the Hebrew University and the Sorbonne, he translates works from French in addition to being a literary, film, and theater critic. Kenaz has authored both short stories and novels, and has had four of his works translated into English. Characterized by a harrowing beauty, his fiction captures something of the dark sadness of life, mirroring in the stories' various settings Israel's hemmed-in horizons. He skillfully turns his characters' dilemmas into situations of comic pathos and ironic heroism, thereby transforming Israeli conundrums into universal literature, much as Joyce did with his native Ireland. Kenaz has been awarded the Bialik Prize, the Prime Minister Eshkol Prize, the Alterman Prize, the Agnon Prize, and the Bar Ilan University Newman Prize. The film *On the Edge* was based on his book *After the Holidays.*

KENNEDY, JOHN FITZGERALD

[1917–1963]

U.S. President, 1961–1963.

Born in Brookline, Massachusetts, John Fitzgerald Kennedy was the son of Joseph P. Kennedy, first chairman of the U.S. Securities and Exchange Commission and ambassador to Britain from 1937 to 1940. After a Harvard University education, Kennedy served in the navy during World War II, then served as U.S. congressman (1947–1953) and senator (1953–1960) from Massachusetts.

As a senator, Kennedy supported Algeria's independence from France. After taking office as president in 1961, Kennedy's policy toward the Middle East shifted from that of previous administrations. He initially supported Egypt's President Gamal Abdel Nasser, whom he saw as a progressive leader, favoring nationalism, who might keep the Arab world out of the Soviet Union's orbit. Nasser's conflict with Saudi Arabia over the Yemen Civil War undermined Kennedy's policy, however. At the same time that he was attempting to woo Nasser, Kennedy also strengthened U.S. ties with Israel, and he approved the sale of Hawk antiaircraft missiles to Israel in 1962—the first advanced U.S. weapons system sold to Israel. Yet he was plagued by Israel's attempts to develop nuclear weapons at its Dimona nuclear facility, and his attempts to press the Israelis on the matter damaged his relationship with Israeli prime minister David Ben-Gurion.

Kennedy also made some timid diplomatic efforts aimed at resolving the Palestinian refugee problem. He dispatched Joseph E. Johnson to the region in

1961 and 1962 to develop a plan aimed at making progress on the issue, under the aegis of the United Nations Conciliation Commission for Palestine. In the end, however, he failed to support Johnson's recommendations after Israel objected. The "informal talks" launched in the spring and summer of 1963 similarly made no progress.

KENTER, YILDIZ

[1928–]

Turkish actress and director.

Yidiz Kenter, born in Istanbul, is the older sister of Musfik Kenter. After graduating from the Ankara State Conservatory in 1948, she won recognition for her work in small theaters in Ankara and soon began to perform in Turkey's State Theater. In 1959/60, she and her brother left the State Theater to form their own performance company, the Kent Actors. She has twice won the prestigious İlhan İskender award—for her role in the play *Salincakta İki Kişi* (Two people on a wwing) in the 1959/60 season, and for her play *Nalinlar* (Clogs) in the 1961/62 season.

DAVID WALDNER

KEREN HAYESOD

Fundraising division of the World Zionist Organization.

Keren Hayesod (also Keren ha-Yesod), the Palestine Foundation Fund, was established by the London Zionist Conference in 1920 to serve as the major fundraising division and financial institution of the World Zionist Organization (WZO), administered by a board of trustees appointed by the Zionist Executive and Jewish Agency. Its main office was moved in 1926 to Jerusalem, where it has been ever since.

During its inception, Keren Hayesod was the subject of a disagreement between the U.S. and European branches of the WZO. The former, headed by Louis Brandeis, argued for an economic approach in which the Keren Hayesod would raise funds for specific, economically practical projects. The Europeans, headed by Chaim Weizmann, argued for a broader approach in terms of participants and projects that would encourage the support of the Jewish masses and include a range of settlement activity. In the end, the European faction prevailed and the fund had the dual goals of settlement and fostering private-enterprise ventures. Until the establishment of Israel, Keren Hayesod was the major agency involved in financing immigration, absorption, housing, and rural settlement in the *yishuv.* It also purchased arms and paid for other expenses involved in Israel's War of Independence (1948). Since then, Keren Hayesod has encouraged business development in partnership with the private sector. In the United States, it functions as part of the United Jewish Appeal, raising funds for immigration and absorption and for services to the underprivileged in Israel.

CHAIM I. WAXMAN

KERMAN

A province and its capital city in south-central Iran.

The province of Kerman is in south-central Iran. The construction of the town of Kerman probably

began in pre-Islamic times. When Marco Polo visited the city in 1271 it had become a major trade emporium linking the Persian Gulf with Khorasan and Central Asia. Subsequently, however, the city was sacked many times by various invaders. The present city of Kerman, 661 miles southeast of Tehran, and the capital of the modern province of Kerman, was rebuilt in the nineteenth century to the northwest of the old city, but it did not recover until the twentieth century. Carpet weaving is one of the main industries of the city, and the carpets produced there are renowned internationally. A number of modern establishments such as textile mills and brickworks also have been constructed. The province's mineral wealth includes copper and coal. The population of the city in 1996 was 385,000. The total population of the province in 1996 was 2,004,328.

Parvaneh Pourshariati

KESSAR, ISRAEL

[1931–]

Israeli trade union leader; member of the Knesset.

Israel Kessar was born in Yemen and immigrated to Mandatory Palestine in 1933. His education focused on sociology and economics; he received a master's degree from Tel Aviv University. Employed first as a teacher of new immigrants, Kessar then worked in the Ministry of Labor. His work in the Histadrut, Israel's trade union, began in 1966, and he held many positions: treasurer from 1973 to 1977, chairman of the Trade Union Department and deputy secretary-general from 1977 to 1984, and secretary-general from 1984 to 1992. He was elected to the Knesset in the same year and served in the Eleventh, Twelfth, and Thirteenth Knessets (serving as minister of transportation from 1992 to 1996). His cooperation with the government while he was secretary-general of the Histadrut was important to the ultimate success of the emergency economic stabilization plan, which while fighting to keep real wages from falling too steeply also guarded against policies that would increase unemployment.

KGB

Soviet espionage organization.

KGB, or Komitet Gosudarstvennoi Bezopasnosti (Committee for State Security), was the Soviet Union's state security and political police agency, serving as the main internal and external intelligence and counterintelligence bureau, and external espionage and counterespionage organization from 1954 to 1991. It was somewhat similar to the U.S. Central Intelligence Agency (CIA) and British MI-6. Under Communist Party control, it was the world's largest secret police and espionage organization, with seven directorates including foreign operations; internal political control; military counterintelligence; surveillance; and border guards. The latter included 300,000 personnel dispersed in Eastern Europe and the Central Asian Republics. Turkey, Iran, and Afghanistan were special targets.

KHADDAM, ABD AL-HALIM

[1932–]

Syrian politician.

Born in 1932 to a Sunni family of modest means from the coastal town of Jabla, just north of Banyas, Abd al-Halim Khaddam became active in Baʿth party politics while attending secondary school in Latakia in the late 1940s. During his student days, he forged a fast friendship with another young firebrand, Hafiz al-Asad. After graduating from the Faculty of Law at Damascus University, he practiced law and taught school before devoting himself to a career inside the party apparatus. He married into a prominent Alawi family in 1954.

By 1964 Khaddam had become governor of the troubled city of Hama, whose citizenry rose in rebellion against the Baʿth-dominated regime that April. He was governor of Qunaytra when the Israelis overran the Golan three years later. He then served as governor of Damascus city, before assuming the post of minister of the economy and foreign trade during the turbulent final years of the Salah Jadid period (1966–1970). When his old friend Hafiz al-Asad seized power in November 1970, Khaddam was promoted to the post of foreign minister. President al-Asad entrusted him with the thankless duty of negotiating the May 1974 disengagement agreement with Israel and with the difficult task of mediating among rival Lebanese factions during the tense period between the outbreak of the civil war in April 1975 and Syria's intervention in the conflict the following June. He was also given the delicate assignment of lobbying Arab leaders to reject the Egyptian–Israeli peace initiative of 1977–1978 and the tricky role of emissary between Damascus and Tehran during the uncertain months immediately following the 1978–1979 Iranian revolution.

When President al-Asad fell ill at the end of November 1983, Khaddam was appointed to the six-person committee charged with keeping affairs of state in order. Four months later, in a move clearly intended to counterbalance the influence of the president's ambitious brother Rifʿat, al-Asad named Khaddam as one of Syria's first three vice presidents, forcing him to relinquish the foreign ministership. Shortly thereafter, one of his sons married a daughter of the venerable al-Atasi clan in a lavish ceremony at the Damascus Sheraton Hotel. By the mid-1990s, some felt that his evident astuteness and longevity made him the most likely candidate to succeed Hafiz al-Asad as president of the republic. Yet al-Asad began grooming his youngest son Bashshar al-Asad for the job, and Bashshar assumed the presidency when his father died in June 2000. Khaddam remained a vice president, but not being a protegé of the younger al-Asad, slipped into a largely ceremonial role in Syrian politics.

UPDATED BY MICHAEL R. FISCHBACH

KHADER, ASMA

[1952–]

Jordanian lawyer, human-rights activist, and a founder of Sisterhood Is Global Institute in Jordan.

Asma Khader (also Khadr), a Jordanian lawyer and human-rights activist, is founder and president of Mizan: The Law Group for Human Rights in Jordan and a founding member of the Arab Association for Human Rights. She served for two terms as president of the Jordanian Women's Union. Khader is a member of the Jordanian and Arab Lawyers' Unions and was recently appointed to the Executive Committee of the International Commission of Jurists.

Khader played an instrumental role in developing a legal literacy program for Jordanian women, as well as establishing the Jordanian Children's Parliament. She was instrumental in conducting human-rights education workshops in 1984 in different areas of Jordan and launched a program to integrate human-rights education within the school curricula. Khader is the founder and reporter of the National Network for Poverty Alleviation. Sponsored by the United Nations Development Program (UNDP) Poverty Strategy Initiative, the network was established in October 2000 in cooperation with the Families Development Association. Encompassing more than ninety participants from governmental and nongovernmental organizations as well as independent individuals, the network focuses on tackling poverty in Jordan and is also involved in the preparation of the Millennium Development Goals Report in Jordan. In 2003, Khader was the recipient of the UNDP's Poverty Eradication Award in the Arab states.

Khader served in 1999 as legal counsel to the Jordanian National Campaign Committee to Eliminate So-called Crimes of Honor in Jordan. She also served as a counsel to the Permanent Arab Court on Violence against Women in 1996 and as a judge in the Court's public hearings in Lebanon in 1997. She serves on the advisory committee of

various national and international women's and human-rights organizations, including the Advisory Committee of the Women's Rights Division of Human Rights Watch and Equality Now. In addition, and at the request of prominent international and regional human-rights organizations such as Amnesty International, she has monitored trials and served on various human-rights fact-finding missions. Khader has maintained a private legal practice for over twenty-three years and was recently appointed minister of state and spokesperson for the Jordanian government.

KHALAF, ABDULHADI

[1945–]

Bahraini political activist and academic who has lived in Sweden since 1990.

Abdulhadi (also Abd al-Hadi) Khalaf was born in Bahrain in 1945. He received his primary and secondary education there, then went abroad for college. He obtained a doctorate in sociology from Sweden's University of Lund in 1972. Returning to Bahrain, he became a candidate for the country's first National Assembly and was elected in December 1973. The assembly was an advisory body with limited powers to approve laws drawn up by the government. Several months after the National Assembly convened, Khalaf was expelled and arrested on charges of supporting one of several banned political groups that called for a constitutional monarchy. He was released from prison in 1975, then rearrested in 1976, again because of his political activities on behalf of democratic government.

Between 1975 and 1990, Khalaf was among the small group of Bahraini intellectuals who developed the country's fledgling system of higher education. In 1990, he accepted an appointment to teach sociology at the University of Lund and moved to Sweden. He continues to write articles about Bahrain's politics and society for Arabic and English publications.

EMILE A. NAKHLEH
UPDATED BY ERIC HOOGLUND

KHALAF, SALAH

[1933–1991]

Palestine Liberation Organization leader, also known as Abu Iyad.

Born in Jaffa to a religious Muslim family, Salah Khalaf fled to Gaza during the 1948 Arab–Israel War. After 1951, he attended the University of Cairo, where he joined Yasir Arafat's Palestinian Students Union. He and Arafat founded the al-Fatah organization in Kuwait, where Khalaf was working as a schoolmaster in the 1960s. Khalaf played a leading role in the fighting of Black September in 1970, participated in the Lebanese Civil War in the late 1970s, and was linked to several violent and terrorist incidents in the 1970s and 1980s. By the late 1980s he had emerged as the second most powerful leader of the Palestine Liberation Organization (PLO), in charge of intelligence and security.

Khalaf was killed 14 January 1991 in the Tunis suburb of Carthage at the villa of Abd al-Hamid Ha'il (Abu al-Hawl) (the Fatah security chief). The gunman was Hamza Abu Zayd, a guard stationed at the villa. Khalaf had married the daughter of a wealthy Palestinian businessman, with whom he had six children. He was author of a widely read memoir, *My Home, My Land,* written with Eric Rouleau.

ELIZABETH THOMPSON

KHALDUNNIYYA

Tunisian educational society.

Khaldunniyya was founded by the Young Tunisians in 1896 and named in honor of the fourteenth-century Tunisian intellectual Ibn Khaldun. Intended to acquaint Tunisians who were illiterate in European languages with the contemporary European world, it offered instruction in Arabic in a wide variety of subjects. The organizers of the Khaldunniyya especially sought to reach Zaytuna University students in order to enhance their still largely traditional curriculum.

See also ZAYTUNA UNIVERSITY.

KENNETH J. PERKINS

KHALED, LEILA

[1948–]

Palestinian hijacker, feminist, and activist.

Leila Khaled (also Layla Khalid), long-time activist and Central Committee member of the Popular Front for the Liberation of Palestine (PFLP), was born on 9 April 1944 in Haifa, Palestine. Her family left Haifa as refugees to Lebanon on 13 April 1948, just before the State of Israel was established. Khaled joined a Lebanese cell of the Arab Nationalists Movement (ANM) in 1958. She was a student and activist at the American University of Beirut (AUB) in 1962 to 1963, but left because of financial difficulties and was employed as a teacher in Kuwait for a number of years. In Kuwait she became active with al-Fatah, which did not grant her request to join its military wing. In 1968 Khaled made contacts with PFLP cadres in Kuwait, and in 1969 she was accepted for military training in its Special Operations Squad. She left Kuwait for Amman, Jordan in 1969 in order to undertake resistance activities. Khaled became infamous when she and a male colleague hijacked a TWA airplane headed for Tel Aviv on 29 August 1969, forcing the flight to land in Damascus, where they blew it up after emptying it of passengers. Khaled underwent a number of clandestine plastic-surgery operations in Lebanon to transform her world-renowned face. In 1970 she commandeered another flight with a male colleague (who was killed in the operation) on behalf of the PFLP. This hijacking, of an Israeli El Al airplane, was thwarted, and the plane was forced to land in England, where Khaled was held by the British government and eventually released in a prisoner exchange. Khaled repeatedly stated that the aim of the hijackings was to gain international recognition of the plight of Palestinians as an issue of national dislocation and desire for self-determination rather than a refugee problem to be resolved through charity. Her well-known biography, *My People Shall Live* (1971), demonstrates a combined feminist and nationalist orientation, and provides a leftist analysis of the Palestinian-Israeli conflict. Khaled survived a number of assassination attempts—in one, Israeli forces killed her sister. She attended university in the Soviet Union in the early 1980s, married her second husband in 1982, and worked with the PFLP-affiliated Palestinian Popular Women's Committees in Damascus following its establishment in the mid-1980s. She is a member of the Palestine National Council and a high-ranking leader in the General Union of Palestinian Women. Khaled's stances have not softened with age. In the 1990s she denounced the Oslo Accords, calling them fundamentally flawed because they did not address the status of Jerusalem, the ending of the Israeli occupation of territories occupied in June 1967, the right of return for Palestinian refugees, or Palestinian sovereignty. Although her actions are considered terrorism by many in the West, she has achieved the status of political icon throughout much of the Arab world.

FRANCES HASSO

KHAL, HELEN
[1923–]

Lebanese painter.

Born in the United States to Lebanese parents, Helen Khal studied at the Lebanese Academy of Fine Arts and returned to study at the Art Students League in New York. She returned to Lebanon to live and work, and in the 1960s she opened and directed the first permanent art gallery in that country, Gallery One. She continues to paint and write art criticism for Lebanese journals and newspapers. She is also the author of *The Woman Artist in Lebanon* (1987). Khal's paintings are primarily an exploration and expression of the emotive capacities of color, a theme inspired by the intense light of Lebanon. A notable portion of her work examines the relationship between color and the human figure. Her later work plays with relationships between fields of color in a way similar to Rothko and the New York color field painters. Khal's work was part of the major *Forces of Change* exhibit of Arab women artists in the United States and has also been included in the biennials of Sao Paulo and Alexandria.

KHALIDI, AHMAD AL-SAMIH AL-
[1896–1951]

Palestinian educator, writer, and social reformer.

Ahmad al-Samih al-Khalidi studied pharmacy at the American University of Beirut until 1917. After a brief stint in the Ottoman military, he worked for the education department of the British Palestine Government between 1919 and 1925. From 1925 until 1948 he headed a teacher-training school in Jerusalem, which was renamed the Arab College. It was the best secondary school in the country. He was appointed in 1941 assistant director of education for the British Mandate in Palestine. While he was director of the Arab College he issued one of the earliest proposals for the partition of Palestine, which called for dividing the country into Arab and Jewish cantons.

Khalidi wrote works on education, psychology, and history, some of which became textbooks in a number of Arab countries, including *Anzimat al-Taʿlim wa al-Hukm fi rif Filastin* (Systems of learning and leadership in the rural areas of Palestine, 1968). In addition, he translated a number of foreign works into Arabic, including those of Viennese psychoanalyst Wilhelm Stekel and American psychologist Robert Sessions Woodworth. In the early 1940s Khalidi became interested in Palestinian orphans. He established the General Arab Committee for Orphans and opened a school in Dayr Amr, Jerusalem, for sons whose fathers were killed in the Palestine Arab Revolt of 1936 to 1939. Later he added a girls' school nearby. After the 1948 Arab–Israel War, Khalidi established a school for orphaned Palestinian refugees in Hinniyya, southern Lebanon.

See also Arab College of Jerusalem.

Michael R. Fischbach

KHALID IBN ABD AL-AZIZ AL SAʿUD
[1912–1982]

King of Saudi Arabia, 1975–1982.

Khalid ibn Abd al-Aziz Al Saʿud was born in 1912 in Riyadh, the seventh son of King Abd al-Aziz Al Saʿud (known as Ibn Saʿud in the West), the founder of Saudi Arabia. Khalid's only full brother was Muhammad ibn Abd al-Aziz Al Saʿud, two years his elder.

Khalid was educated in the royal court, studying the Qurʾan, Islamic history, and a limited range of several practical subjects, together with firsthand observation of court politics. He did not pursue an overtly political career. Nonetheless, from early adulthood he played an important part in family councils and by his thirties had become part of the small circle of princes that would guide Saudi Arabia's affairs. Of all his brothers he was, perhaps, the closest to the aloof Faisal. When only nineteen, Khalid acted as viceroy in Hijaz during Faisal's absences, and he later accompanied Faisal to the United States

in 1943 and was deputy prime minister in the cabinet that Faisal, acting as the Saudi prime minister, appointed in October 1962. Following Faisal's accession as king in November 1964, the senior princes and he pressed the reluctant Khalid to become crown prince. After several months of resistance, Khalid yielded to their pressure.

Khalid rose to the throne three days after the assassination of Faisal in 1975. Although the period of his rule was characterized by tremendous economic wealth generated by oil exports, and rapid development in nearly all sectors of the economy and society, Khalid's reign included some of the most turbulent episodes in recent Saudi history. Contradictions in Saudi society that had begun to develop during the reign of Faisal broke to the surface during the Khalid years. For example, although Khalid's regime supported the spread of religious education and encouraged a conservative Islamic worldview, many members of the ruling family espoused or at least tolerated Western values and lived a lavish lifestyle untrammeled by religious restrictions. This and other factors led to deep resentments among segments of the population and open opposition, which broke out most dramatically in the seizure of the Grand Mosque of Mecca in 1979 and uprisings in the Eastern Province among the Shiʿite population.

Khalid acknowledged the legitimacy of some complaints that those who seized the Grand Mosque had raised and sought to address them. Following the disturbances among the long-mistreated Shiʿia of the Eastern Province (al-Hasa) in 1979 and 1980, he launched a major new development project in the principal Shiʿite area and made a personal visit—the first time a reigning Saudi monarch had done so. His 1976 tour of the other conservative Arab Gulf states to discuss common security concerns initiated the process that led to creation of the Gulf Cooperation Council in 1981.

KHALIDI, HUSAYN FAKHRI AL-
[1894–1962]

Palestinian politician who hailed from a prominent Jerusalem family.

Born in Jerusalem, Husayn Fakhri al-Khalidi studied medicine at the American University of Beirut and Istanbul University. After service in the Ottoman army, he joined the Arab Revolt and later worked for the department of health in Aleppo during the short-lived rule (1918–1920) of King Faisal I ibn Hussein in Syria. He was mayor of Jerusalem from 1934 to 1937, the last time that the city's mayor was elected by the entire population. In 1935 he founded the Reform Party (Hizb al-Islah). He was elected member of the Arab Higher Committee, a Palestinian political body formed in 1936 to direct the Palestinian national struggle. Al-Khalidi was then exiled by British authorities to the Seychelles islands from 1937 to 1942 along with other nationalist leaders. In 1946 he was a member of the reconstituted Arab Higher Committee. As a senior politician, al-Khalidi participated in the London Roundtable Conference (St. James Conference) of 1939.

After 1948 he served as Jordan's foreign minister in the cabinets of Fawzi al-Mulqi (1953) and Samir Rifaʿi (1955). In April 1957 al-Khalidi was appointed prime minister of Jordan during the political crisis brought on by the dismissal of Prime Minister Sulayman al-Nabulsi, but his cabinet lasted only one week. Al-Khalidi spent the rest of his life in Jericho where he wrote articles for the Jerusalem daily *al-Jihad* and authored a book entitled *al-Khuruj al-Arabi* (The Arab exodus). Al-Khalidi's unpublished autobiography illuminates many aspects of Arab and Palestinian politics.

MUHAMMAD MUSLIH
UPDATED BY MICHAEL R. FISCHBACH

KHALIDI, WAHIDA AL-

[1900–?]

First president of the Arab Women's Executive Committee, the coordinating committee of the women's movement in Palestine during the British Mandate.

Wahida al-Khalidi completed her high school education in a school run by nuns and spoke six languages. She married Dr. Husayn Fakhri al-Khalidi, who was active in the Palestinian national movement during the British Mandate. He served as mayor of Jerusalem in 1934 and as a member of the Islah (Reform) Party. Wahida al-Khalidi was a founding member and president of the Arab Women's Executive Committee (AWE) in the late 1920s and early 1930s. She was active in demanding a political role for women and in distributing aid to the revolutionaries in the 1936 through 1939 revolt. She was a member of the Palestinian delegation to the Eastern Women's Conference on Palestine, held in Cairo in 1938. In 1939 she stopped working with the AWE, possibly due to her husband's deportation to the Seychelles islands in 1937.

ELLEN L. FLEISCHMANN

KHALIDI, WALID

[1925–]

Palestinian intellectual and strategist.

Walid Khalidi has devoted much of his life to research and writing on the Palestine question. In 1963 he cofounded the Institute for Palestine Studies, an independent nonprofit Arab research and publication center. He has taught at the American University in Beirut, as well as at Oxford and Harvard, and has been a research associate at the Center for International Affairs and the Center for Middle East Studies at Harvard University. He has written and edited several articles and books including *From Haven to Conquest* (1970); *Conflict and Violence in Lebanon: Confrontation in the Middle East* (1979); *Before Their Diaspora, A Photographic History of the Palestinians 1876–1948* (1984); and *All That Remains: The Palestinian Villages Occupied and Depopulated by Israel in 1948* (1992). A consummate expert on the Palestinian question and the Arab–Israeli conflict, he played an important role in shaping the Palestine Liberation Organization's (PLO) peace strategy toward Israel, and was a member of the Jordanian delegation to the peace talks with Israel (1991–1992). Despite Khalidi's role in developing PLO policy, he has never been affiliated with the PLO.

See also INSTITUTE FOR PALESTINE STUDIES; PALESTINE LIBERATION ORGANIZATION (PLO).

MUHAMMAD MUSLIH

KHALID, KHALID MUHAMMAD

[1920–1996]

Egyptian political and religious thinker and writer.

Born to a modest family, Khalid Muhammad Khalid studied Islamic law at al-Azhar University. He was influenced greatly by the liberal ideology of the Wafd Party as championed by authors such as Ahmad Amin and Taha Husayn. He joined the opposition group al-Hayʾa al-Saʿdiyya, founded by Ahmad Mahir and Mahmud Fahmi al-Nuqrashi, who had split from the Wafd Party, and he wrote critically of the government of Mustafa al-Nahhas, whom his party opposed. He was jailed and released, but imprisoned again in 1950 after the publication of his widely successful book *From Here We Start,* which was banned by the government. The book advocated a representative government and socialist economic policies such as nationalization of means of production and limited private property, and it is said to have greatly influenced Gamal Abdel Nasser, whose government Khalid strongly supported. His opposition to the role of religion in the state and

his call for the suspension of *shariʿa* led to a strong condemnation from al-Azhar theologians and to a rebuttal by Muhammad al-Ghazali in a book entitled *From Here We Know.* Khalid also opposed the Muslim Brotherhood, and especially the violent policies followed by one of the Brotherhood's branches. But his disenchantment with the failed economic policies of Nasser's government—and the transformation of the government into a totalitarian regime—gradually led Khalid to join the Islamic revivalist movement. In 1989 he published *Islam and the State,* in which he declared that he had misrepresented the historical and political role of Islam, and advocated political solutions closer to the ideology of the Muslim Brotherhood. He wrote more than thirty books and his writings remain influential in Egypt.

MAYSAM AL FARUQI

KHALIFA, SAHAR
[1941–]

Palestinian novelist and short-story writer.

Sahar Khalifa (also Khalifeh), a leading Palestinian author of novels, short stories, and plays, was born in Nablus, where most of her stories are set. Khalifa attended high school in Amman and, shortly after graduating, entered into an arranged marriage at the age of eighteen. Thirteen years and two daughters later, Khalifa divorced her husband, began working, and pursued a post-secondary education. She received her bachelor's degree in English and American literature at Bir Zeit University in the West Bank, and then traveled to the United States for her graduate studies. She received her doctorate in American Studies at the University of Iowa. Khalifa is best known in the English-speaking world for her 1984 novel *Wild Thorns* (first published in Arabic in 1976), which portrays the conflict between occupied Palestinians and the Israeli army from a variety of perspectives and in different voices, both male and female, young and old, Arab and Israeli. Khalifa's other works include *We Are Not Your Slave Girls Anymore* (1974), which was serialized and made into a radio program; *The Sunflower* (1980); *Memoirs of an Unrealistic Woman* (1986), a novel said to be based on her own bitter experience of a loveless, arranged marriage; *The Door of the Courtyard* (1990); and *The Inheritance* (1997). Khalifa's works have been translated into Hebrew, Dutch, Russian, and Swedish, in addition to English. She has taught literature at the University of Iowa and Bir Zeit University, and founded the Women's Affairs Center in Nablus, an organization focusing on women's economic and political empowerment, which now has additional branches in Gaza City and Amman.

LAURIE KING-IRANI

KHALIL, SAMIHA SALAMA
[1923–1999]

Founder of the Palestinian charitable society Inʿash al-Usra (Rejuvenation of the Family).

Samiha Salama Khalil (Umm Khalil) was born in Anabta, near Tulkarm. A strong, resourceful, and proactive natural leader, she is best known as the founder of the Palestinian charitable society Inʿash al-Usra (Rejuvenation of the Family), as well as for her bold though unsuccessful attempt to stand for election for the presidency of Palestine, running against Yasir Arafat in 1996. Khalil mounted a presidential campaign centering on democratization, justice, and equality for all, and received nearly 10 percent of the vote. A firm believer in empowerment and self-sufficiency in the face of the adversities that history had visited upon Palestinians, Khalil inspired many others, primarily women, through her life of community and national service. In 1948 Khalil became a refugee, fleeing to the Gaza Strip, where she remained until sailing to Beirut in 1952. Soon thereafter, she returned to Palestine, this time to the West Bank, where, in 1965, she became president of the Women's Federation Society, al-Bira, as well as of the Union for Voluntary Women's Societies and the General Union of Palestinian Women (GUPW). That year she also founded,

with the help of many local women volunteers, the Inʿash al-Usra Society in a garage in Ramallah. The society's empowering message of self-sufficiency and communal dignity became indispensable as the Israeli occupation became increasingly oppressive in the 1970s and 1980s. At the time of Khalil's death, Inʿash al-Usra had a monthly operating budget of $500,000 and successfully administered vocational embroidery, nursing, and beauty programs, as well as offering nursery facilities and residential child care. Inʿash al-Usra was closed down several times by the Israeli military during the 1970s until the early 1990s, and Khalil was arrested on a number of occasions. She died on 26 February 1999 at the age of 76.

KHALIS, MOHAMMAD UNIS

[1919–]

Afghan resistance leader.

The leader of one branch of the Hezb-e Islami party, Mohammad Unis Khalis was born in 1919 in Gandamak among the Khugiani Pushtun and studied Islamic law and theology. He fled Afghanistan in 1973 at the time of the coup led by Muhammad Daud. At first he joined the Hezb-e Islami party led by Golbuddin Hekmatyar, but he left to form his own party of the same name in 1978. During the war of resistance (1978–1992), his men fought in the Khugiani area, and Khalis, despite his advanced age, often accompanied them.

In 1992, he returned to Kabul with the other Islamic leaders to play a role in the attempt to form an Islamic government. He is strongly Muslim and anti-Western and opposes universal suffrage as well as the participation of the Shiʿa in Afghanistan politics.

KHAL, YUSUF AL-

[1917–1987]

Lebanese poet; founder of the poetry review Shiʿr.

A Protestant born in Tripoli, Lebanon, Yusuf al-Khal was educated in literature and philosophy at the American University at Beirut (AUB). After World War II, he spent several years in the United States, where he worked as publishing director at *al-Huda,* a New York–based magazine catering to Lebanese emigrants. The years spent at AUB and in the United States provided him with a great familiarity with Western (particularly Anglo-Saxon) literature, and he even edited an anthology of American poetry.

Back in Lebanon, he became a leading figure in an emerging group of young modernist Lebanese poets who were determined to break away from the traditional poetic forms that had prevailed in the Arab world since al-Nahda, the cultural awakening of the late nineteenth century. In January 1957, drawing on his experience as a journalist and publisher, he founded the poetry review *Shiʿr,* which remained a rallying point for avant-garde Arab poets—including Khalil Hawi, Adonis, and Badr Shakir al-Sayyab—until it ceased to exist in the early 1970s.

In *Shiʿr,* al-Khal pressed for the opening up of Arab poetry to the influence of the new poetic current emanating from the West. He advocated making colloquial Arabic the basis of literature as a way of reviving and widening the appeal of Arabic poetry, which, he thought, would otherwise be condemned to die out slowly. His own poetry was written in a language that approached that of everyday conversation. Its rhythm and skillful manipulation of images and sounds established him as the most prominent Lebanese member of the group of poets belonging to the free verse movement. Unlike many of his contemporaries, however, he always refrained from mixing poetry and politics; he even

condemned "engagement literature," which he saw as a source of cultural decay.

KHAMENEHI, ALI

[1939–]

Leader (rahbar) *of the Islamic Republic of Iran and successor to the constitutional functions of Ayatollah Ruhollah Khomeini.*

Ali Khamenehi was elected president of Iran for two successive terms, in 1981 and 1985. Following the death of Ayatollah Ruhollah Khomeini in 1989, an elected council of religious law experts chose Khamenehi to succeed Khomieni as Iran's chief faqih (religious jurist). © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

Born in the northeastern Iranian city of Mashhad, Khamenehi began his advanced studies in Islam in 1958, with a year's attendance at courses on Islamic jurisprudence in al-Najaf, Iraq. He received most of his training in Qom, where he studied with ayatollahs Damad, Haeri, Tabatabai, and most importantly Khomeini.

During the uprising in Iran of June 1963, inspired by Khomeini, Khamenehi acted as liaison between Qom and his native city of Mashhad; he was jailed twice for this in 1964. Released in 1965, he resumed propagating the revolutionary vision of Khomeini in Mashhad while teaching the Qurʾan and Islamic law. These activities earned him further periods of imprisonment as well as banishment in 1968, 1971, 1972, 1975, and 1978. After the Iranian Revolution in February 1979, Khamenehi emerged as a key figure in the elite of clerical activists who founded the Islamic Republican Party and came to dominate the Iranian parliament during its first postrevolutionary term. In July 1979 he was appointed undersecretary for defense in the Mehdi Bazargan cabinet, becoming acting minister of defense after Bazargan's resignation.

Among the most determined opponents of Abolhasan Bani Sadr, the first president of the Islamic republic, Khamenehi played an important role in the events leading to his dismissal in June 1981. On 27 June, while delivering the Friday sermon at Tehran University, Khamenehi was injured in one of the numerous assassinations of leading government figures that followed the disgracing of Bani Sadr. When Mohammad Ali Rajai, the next president, was assassinated in August 1981, Khamenehi was appointed head of the Islamic Republican Party. On 2 October 1981, he was elected president of the Islamic Republic. He also served as deputy minister of defense and commander of the Revolutionary Guards. Khomeini appointed him in 1980 to be the leader of the Friday congregational prayers in Tehran. He was also elected as a deputy of the Islamic Consultative Assembly (Majles) in the same year. He was elected for a second term as president, with an overwhelming majority, on 16 August 1985.

After the death of Khomeini on 4 June 1989, Khamenehi was swiftly chosen as his successor, despite his lack of seniority in the learned hierarchy of Iranian Shiʿism; this choice received popular ratification in August 1989, when the modifications to the constitution were approved. For example, because of Khamenehi's policies regarding the freedom of the press (he has approved the judiciary's shutdown of more than 100 reformist newspapers) he and the conservatives have come to be known as "hard-liners" in most Western political writings. Khamenehi continues to hold an important place in the leadership of the Islamic Republic and has followers outside Iran, as witnessed in the many Web sites dedicated to his teachings and speeches.

KHARG ISLAND

Island off the coast of Iran in the Persian Gulf.

Kharg Island, located about 30 miles from the Iranian mainland, historically has been associated with Iran, although the British occupied it briefly in 1838. The discovery of an offshore oil field in the waters around Kharg in the early 1960s stimulated the development of the island as a site for major petroleum and petrochemical installations. Connection by pipelines to the underwater oil fields, as well to the oil fields in Khuzistan, transformed Kharg into Iran's largest oil-loading terminal by the early 1970s. During the Iran–Iraq war (1980–1988), Kharg repeatedly was bombed, and its oil facilities suffered extensive damage, but they were reconstructed in the early 1990s.

UPDATED BY ERIC HOOGLUND

KHARRAZI, KAMAL

[1944–]

Iranian foreign minister.

Kamal Kharrazi was born into a clerical family in Tehran in 1944. He attended Alavi high school in Tehran, where he met many of his future political colleagues in the Islamic Republic. He holds B.A. and M.A. degrees in Persian language and literature from Tehran University. He studied in the United States and received his Ph.D. in education from the University of Houston, where he joined the first generation of Iranian Moslems, such as Ibrahim Yazdi and Mostafa Chamran (1932–1981), who had established the Islamic Student Association in the United States. Kharrazi also maintained an active profile in the Muslim Students Association in Canada and the Islamic Research Institute in London.

Returning to Iran after the Iranian Revolution (1979), he was appointed by his Houston colleague and the then foreign minister, Ibrahim Yazdi, as deputy foreign minister for political affairs. Given his close association with clerics, he was assigned to several other positions: vice president for planning at the Islamic Republic of Iran Broadcasting (1979), director of the Islamic Republic News Agency (1980–1989), member of the Supreme Defense Council of Iran, head of the War Information Headquarters (1980–1988), and ambassador and permanent representative of the Islamic Republic at the United Nations (1989–1997). In 1997 President Mohammad Khatami appointed him minister of foreign affairs.

Kharrazi's tenure has been marked by Khatami's efforts to de-ideologize Iranian foreign policy, improve relationships with Iran's neighbors, and develop constructive relationships with Western countries. Despite conservative objections, he divorced his government from Ayatollah Ruhollah Khomeini's 1989 *fatua* condoning Salman Rushdie's death for writing *The Satanic Verses,* made an official visit to Iraq in 2000, and made many conciliatory gestures toward the United States. There have been a number of contacts between delegations from Iran and the United States since the removal of the Taliban regime in Afghanistan in 2001.

In the absence of any real power associated with his position, Kharrazi has been a moderate pragmatist. He has tried to promote the interest of his country while minimizing the negative international reactions to policies of the Islamic Republic at home and abroad. His appointment as foreign minister was a compromise. Although he attracts criticisms

from both reformists and conservatives on issues dear to each camp, his pragmatic moderation has saved his long career in the foreign ministry. In 2003, shortly before the U.S. invasion of Iraq, he was summoned to a closed session of the parliament by reformist deputies and asked to explain his policies toward Iraq and his passive policy on the division of Caspian Sea resources among the five shoreline states. He was also criticized for his hiring practices in the ministry, especially the employment of several family members.

ALI AKBAR MAHDI

KHARTOUM

Capital of Sudan.

The Three Towns—Khartoum, Omdurman, and Khartoum North—together comprise the political, commercial, and administrative center for Sudan. Located where the Blue Nile and White Nile join to flow north toward Egypt, the capital city is the largest urban complex in the country. Its population of 850,000 in 1980 swelled to nearly 4 million by 2002, as the result of the influx of migrants from drought areas in the west and displaced persons from the war-torn south. Their immigration has transformed the character of the Three Towns from largely Arab, with Nubian enclaves, into a polyglot mix of peoples and cultures.

Khartoum, the political capital, means "elephant trunk" in Arabic. It was a small village called al-Jirayf, on the south shore of the Blue Nile, before the Turko-Egyptian conquest of 1821. The invading force established a small garrison near Mogren village, which became the government center in 1826. The government provided free building materials to encourage the residents to replace their straw huts with permanent brick houses; built a dockyard, military storehouse, barracks, and large mosque; and encouraged commerce by steamer on the Nile and overland to the west and east. A telegraph line linked Khartoum to Egypt by 1874 and, later, to the Red Sea coast and the west. The town remained relatively small, however, peaking at 30,000. The Mahdiyya forces captured Khartoum on 26 January 1885, which signaled the demise of Turko-Egyptian rule and was dramatized by the death of the British officer Charles Gordon on the steps of the Turkish governor-general's palace.

Khartoum was sacked by the Mahdists (1885–1898), but was restored as the capital after the British forces seized Omdurman and Khartoum on 1 September 1898. During the Anglo-Egyptian condominium (1898–1956), the British rebuilt Khartoum and constructed a series of stone government buildings along the Nile waterfront, flanking the imposing governor-general's house. They planned the city streets to resemble Union Jacks, built distinct residential quarters for Europeans and Sudanese, opened Gordon Memorial College in 1903, and established an industrial zone. A railway bridge across the Blue Nile was opened in 1909. The population grew rapidly from 30,000 in 1930 to 96,000 at the time of independence.

Since independence the principal government offices, embassies, European-style hotels, airport, offices, shops, and villas have been located in Khartoum; so has the University of Khartoum (known until independence on 1 January 1956 as Gordon Memorial College). By 1973, a third of a million people lived in Khartoum; in 2003 the total exceeded two million. Wealthy merchants live in palatial houses in al-Riyadh district, just across the highway from impoverished slums and squatter housing.

Omdurman, located on the southern side of the junction of the White and Blue Niles, served as the capital of the Sudan during the Mahdist period. As many as a quarter million people lived there during the 1890s. As the place where the Mahdi died, it had a special sanctity. The British initially emptied the city, but it grew to a sprawling residential area with some one million inhabitants. It has traditional-style housing: The wealthier areas have stone and brick villas with courtyards and gardens hidden from the street by high walls, and the poorer

Sudan's capital city, Khartoum, was founded in 1821 as an Egyptian army camp and quickly grew to become a trade center and slave market. Today Khartoum is one of the country's largest cities and is Sudan's chief administrative and transportation center. © NEEMA FREDERIC/CORBIS SYGMA. REPRODUCED BY PERMISSION.

areas consist of mud-brick huts in walled-off compounds along dirt roads. Different ethnic groups tend to live in distinct quarters, with a large public market serving the entire city. The government periodically razes districts filled with migrants from the west and internally displaced people from the south, in an attempt to force them out of the city. The parliament building, television and radio stations, and major academic institutions such as Omdurman Islamic University and al-Ahfad College for Women are located there. The headquarters of the leading political parties and religious movements, notably the Ansar and its Umma party and the Khatmiyya brotherhood and its Democratic Unionist party, are in Omdurman. The skyline is dominated by the silver-colored dome of the Mahdi's tomb and its adjacent great mosque, destroyed by British gunboats in 1898 but rebuilt in the 1940s.

Khartoum North (Halfaya, Khartoum Bahri), located on the north bank of the Blue Nile, was the site of two small villages before the Turko-Egyptian occupation. It contained the encampment of the Khatmiyya sufi order during that period. Destroyed by the Mahdists, it was completely rebuilt by the British and contained the terminus for the railway from Egypt, which reached the capital in 1899. Spurs to Port Sudan in the east and to Sennar, farther south, opened in 1909. The railway was extended west to al-Ubayd in 1911. Today, two bridges link Khartoum North to Khartoum and Omdurman. Khartoum North's location at the junction of those lines provided a base for the rapid growth of industry and residential areas. The main manufacturing industries are located there as well as extensive middle-class and squatter housing areas. By 2002, about a half million people lived in Khartoum North, as against 40,000 in 1956 and 151,000 in 1973.

KHATAMI, MOHAMMAD

[1943–]

President of Iran, elected in 1997 and re-elected in 2001.

Mohammad Khatami was born in Ardakan, central Iran, in 1943. His father was a widely respected Shiʿite cleric and raised his children in a religious household. Khatami attended the University of Tehran and obtained a B.A. in philosophy before going to the seminary to study Shiʿite theology. In the late 1970s, he went to Hamburg as manager of the Islamic Center, which served the large number of Iranian students in West Germany. Following the Iranian Revolution, he was appointed supervisor of the newly nationalized Keyhan Publishing Company. In 1980, he was elected to the First Majles al-Shura (parliament) as a deputy from Ardakan. Khatami was associated with the progressive faction of clergy, which advocated a liberal interpretation of Islam and the implementation of economic and social polices that would promote the welfare of middle- and low-income groups. As minister of culture and Islamic guidance from 1989 to 1992, he angered conservatives by relaxing censorship on the press and cinema. After resigning under pressure, he became director of the National Library and participated in several academic seminars where he called for democratization of the political system.

Khatami entered the 1997 presidential election and won nearly 70 percent of the popular vote on the strength of his promises to initiate social reforms, create a civil society, and promote a dialogue of civilizations. His victory launched the reform movement, the most notable characteristic of which was the proliferation of newspapers that championed accountable government and launched investigations of political institutions and politicians suspected of abusing civil rights. The activities of the reformists prompted a backlash from conservatives, who felt threatened by the reforms. By 2000, the conservatives had proven adept at using the judicial system to stymie many reform policies and even to send some reform politicians to prison on charges of slander. Khatami, who disliked confrontations, publicly expressed frustration with his office's limited authority to counteract judicial decisions. Nevertheless, he agreed to run for a second term in 2001 and was reelected with 70 percent of the vote. During his second term, although Khatami remained the titular head of the reform movement, many reformist politicians openly criticized him for failing to actively support them and for effectively allowing the opponents of reform to gain the political initiative.

ERIC HOOGLUND

KHATIBI, ABDELKABIR

[1938–]

Moroccan sociologist, literary critic, and writer.

Abdelkabir Khatibi, born in al-Jadida, Morocco, received a doctorate in sociology from the Sorbonne in 1965. He is both a professor of sociology at Muhammad V University in Rabat and a researcher at the Centre de Recherche Scientifique de Rabat.

Khatibi writes in French. One of his early works is a play titled *La mort des artistes* (The death of the artists), which was staged in Paris in 1963. Khatibi's work is distinguished by a double identity that results from his double culture, which he perceives positively, as revealed in his book *Amour bilingue* (1983), translated by Richard Howard and published in the United States as *Love in Two Languages* (1990). The diversity of the Maghrib is studied and analyzed with lucidity and realism in *Maghreb pluriel* (1983; Plurality of the Maghrib). Khatibi's first

work of fiction was *La memoire tatotée* (1971; Tattooed memory), a highly autobiographical novel. Another of his novels, *Un été à Stockholm* (1990; A summer in Stockholm), explores human relations within the context of love. This theme is also the subject of a collection of poetry, *Dédicace à l'année qui vient* (1986; Dedication to the upcoming year).

Khatibi's well-known *La blessure du nom propre* (1974; The wound of the proper name) reveals his interest in the popular culture of Morocco. No matter how removed his philosophical thinking is from his culture, he almost unfailingly links it to his Arab Islamic roots and elevates it to a universal precept. This is obvious in *Le livre de sang* (1979; The book of blood) and *Ombres japonaises* (1988; Japanese shadows), where he studies the seductive power of the narrative based on the *Arabian Nights.* His study of the concept of the false prophet in his play *Le prophète voilé* (1979; The veiled prophet) uses examples from Arab Islamic history.

Some of Khatibi's writings reveal his interest in the political situation of the contemporary Arab world, particularly the Palestinian problem. Although he criticizes Zionism in *Vomito blanco* (1974; White vomit), his *Le même livre* (1985; The same book) stresses the similarities between Arabs and Jews in a correspondence with his Jewish friend Jacques Hassoun.

Khatibi's production is prolific as well as varied. His writings cover a wide range of topics, some purely literary, such as *Le roman maghrébin* (1958; The Maghribi novel), *Ecrivains Marocains, du protectorat à 1965. Anthologie* (1974; Moroccan writers, from the protectorate to 1965, an anthology), and *Figures de l'étranger* (1987; Faces of the foreigner). Khatibi is also interested in art and has written on calligraphy (with Mohammed Sijilmassi) in *L'art calligraphique arabe* (1976; Art of Arabic calligraphy) and painting (with M. el-Maleh Maraini) in *La peinture de Ahmed Cherkaoui* (1976; The painting of Ahmed Cherkaoui). His book *Le livre de l'aimance* (1995; The book of love) explores love and passion among women and men. Khatibi returns to his native Morocco in *Triptyque de Rabat* (1993; A Rabat triptych) after having expanded the limits of territoriality in *Un été à Stockholm* (A summer in Stockholm). He tackles political restrictions, women's emancipation, and a critical look at the self.

AIDA A. BAMIA

KHATTABI, MUHAMMAD IBN ABD AL-KARIM AL-

[c. 1880–1963]

Moroccan leader of resistance to Spanish and French colonial conquest.

Muhammad ibn Abd al-Karim al-Khattabi was born in the Rif mountains, a Berber region of northern Morocco, sometime in the 1880s. His father was appointed *qadi* of the largest and most powerful tribe of the central Rif, the Banu Waryaghal (Aith Waryaghar in Berber) by sultans Hassan I and Mulay Abd al-Aziz, although neither had much influence over day-to-day affairs in the region. His father, like many other people in the area, also had an association with the Spanish military in the enclaves of Melilla and Alhucemas island, the latter immediately offshore from the village of Ajdir, where the Khattabi family lived. The Spanish authorities hoped to use their influence with him, and with other local notables, to ease their path in occupying the northern zone of Morocco.

Abd al-Karim's early life was a mixture of Moroccan and Spanish influences. He studied at the Qarawiyyin University in Fez, where he was influenced by teachers of the Salafiyya movement. In 1907 he went to Melilla where he became, in rapid succession, teacher, military interpreter, and *qadi,* and finally *qadi qudat* (chief judge) of the Moroccan community in the Spanish enclave. He also wrote and translated articles for *El Telegrama del Rif,* the local newspaper. In 1913, the year after the joint Franco–Spanish protectorate was declared over Morocco, he was decorated for his services to Spain.

During World War I, this relationship with the Spanish authorities broke down because of Abd al-Karim's impatience with Spanish cooperation with France and his corresponding sympathy for Germany, despite his desire to marry the benefits of European technical modernization with Islamic re-

form. In 1915 he was arrested and imprisoned in Melilla on suspicion that his German sympathies had taken the form of subversive activities. Although he was released quite quickly, the Spanish authorities never regained his trust or sympathy.

In 1919, as the Spanish army began a slow march westward from Melilla toward the central Rif, his father broke relations with the Spanish garrison in Alhucemas island and joined a slowly growing resistance movement centered in the Banu Waryaghal. At the same time, Abd al-Karim left Melilla and returned to Ajdir. This resistance movement was based upon an unstable unity between the various tribal subdivisions and depended on the continued functioning of customary legal and political systems. When his father died—or was murdered—in 1920, Abd al-Karim succeeded in taking the leadership of the resistance and secured a more stable unity by insisting on the imposition of the *shariʿa.* At the same time he trained a military nucleus using European methods and weapons.

This military nucleus enabled him to defeat the Spanish forces in the eastern part of the Spanish protectorate in July 1921. He went on to set up a government in the central Rif that united his two aims of modernization and Islamic reform. In February 1923 he received *bayʿas* (formal declarations of allegiance) from various central Rifi tribes that justified his leadership in terms of fulfilling requirements for the caliphate—justice, unity, order, and the preservation of *shariʿa*—and referred to him as imam. On other occasions he referred to himself as *amir al-muʾminin,* a title that, despite its caliphal connotations, reflected not so much a claim to universal leadership as a statement of the religious nature of his movement. The official title of the Rif state was al-Dawla al-Jumhuriyya al-Rifiyya (State of the Rifi Republic), although the Rifis themselves referred to it as *al-jabha al-rifiyya* (the Rifi front) reflecting its temporary nature. The confusion of titles reflected the fluidity of the political structures in the Rif. Nevertheless, they were strong enough for Rifi forces to again defeat the Spanish in northwestern Morocco in 1924 and the French in 1925, before the combined strength of the two European armies put an end to his state.

After his surrender in May 1926, Abd al-Karim was exiled on the French island of Réunion, where

Moroccan leader Muhammad ibn Abd al-Karim al-Khattabi (ca. 1880–1963) spent much of his life building resistance to French and Spanish colonialism in Morocco. He and his followers fought many successful battles until his forced surrender during Franco-Spanish retaliation in 1927. **© BETTMANN/CORBIS. REPRODUCED BY PERMISSION.**

he stayed until 1947. In that year he escaped from a ship taking him back to France while it was traveling through the Suez Canal. He spent the rest of his life in Egypt, where he became the titular leader of the North African Defense League, the umbrella organization for Maghribi nationalists. He refused to return to Morocco at independence in 1956 saying that, since there were still foreign (American) troops on Moroccan soil, the country was not truly independent. He died in Cairo in 1963.

Abd al-Karim has been described by both French colonialist and modern Moroccan nationalist writers as a typical example of Berber resistance to outside authority. But others have seen him as a great guerrilla leader, part of a tradition including China's Mao Tse-tung and North Vietnam's Ho Chi Minh. Abd al-Karim himself situated his ideological stance in religious and nationalist terms. Despite the clear religious feeling of his followers, he told Léon Gabrielli, a French intelligence officer, that he specifically rejected the label of a jihad, saying that such medieval concepts were not relevant to the modern world. In an interview in the Egyptian Islamic journal *al-Manar* after the war, however, he admitted that he had made use of religious sensibilities as a rallying cry, although he pre-

sented himself in the context of the Salafiyya movement and modern Moroccan and Arab nationalism, and blamed his defeat on the opposition of the *tariqas* (Sufi religious brotherhoods), particularly the Darqawiyya, which was one of the biggest in the Rif, and on the failure of many of his supporters to accept his long-term political objective of replacing tribal systems with central government control and the absolute rule of the *shariʿa*. It is true, however, that other *tariqas* did support him, and in fact, the Rif was too small and too poor to resist the combined force of two European armies.

KHAWR

See Glossary

KHAYR AL-DIN

[c. 1822–1890]

Prime minister of Tunisia (1873–1877) and grand vizier of the Ottoman Empire (1878–1879).

Khayr al-Din, a Circassian from the Caucasus Mountains, was sold as a slave in Constantinople at a young age; he was then resold to an agent of the bey of Tunis. As a teenager he arrived as a Mamluk at the court of Ahmad Bey. After receiving an education at the military school established by Ahmad Bey, Khayr al-Din rose through the military ranks to cavalry commander *(fariq)*. He spent the years 1853–1857 in Paris arguing Tunisia's position against Mahmud ibn Ayad, who had defrauded the government of millions of dinars. Under Ahmad Bey's successor, Muhammad Bey, Khayr al-Din served as minister of marine *(wazir al-bahr)* from 1857 to 1859. He later presided over the Majlis al-Akbar (Great Council), a parliamentary body established in 1860.

In conflict with Prime Minister Mustafa Khaznader (his father-in-law), whose ruinous policy of incurring foreign loans was just beginning, Khayr al-Din resigned in 1862 and spent the next seven years in Europe. In response to his European experience, and in hopes of reforming the political system in Tunisia, he wrote *The Surest Path to Knowledge Concerning the Condition of Countries* (1868). In it he discussed the economic superiority of the West and offered a practical guide for improving the political system in Tunisia. He saw the *ulama* as the key guarantors of the political system who would ensure that the *shura* ideal of Islam would be upheld, and urged them to fulfill this role.

Khayr al-Din returned to Tunisia in 1869 in order to preside over the International Debt Commission. In his new political capacity, he conspired to discredit and replace Khaznader as prime minister. Faced with mounting pressures from foreign consuls and the disastrous state of Tunisia's finances, the bey retired Khaznader in 1873 and made Khayr al-Din prime minister. As prime minister, Khayr al-Din had to contend with the machinations of foreign consuls (particularly those of France, Britain, and Italy), the press campaign of his father-in-law to discredit him, his Mamluk rivals, and the economic downturn of the mid-1870s. Furthermore, he had lost faith in the pact of security of 1857 and the constitution of 1861. He realized that these liberal reforms were merely camouflage behind which Khaznader had been able to hide his ambition to become the wealthiest and most powerful member of the bey's government, and that they had been implemented to enhance foreign influence in Tunisia. Having witnessed firsthand Europe's aggressive intentions toward Africa, as well as the machinations of the foreign consuls in Tunis, Khayr al-Din had come to perceive that Europe was the paramount threat to Tunisia's existence and that the reincorporation of Tunisia into the Ottoman Empire was perhaps the country's one hope to avoid being occupied.

Khayr al-Din's disillusionment with constitutionalism led him to conclude that reforms should

be directed to a wise elite in cooperation with an enlightened *ulama.* These two groups could limit the arbitrariness of absolutist rule and implement principles of justice and freedom according to the *shariʿa* (Islamic religious law). He then advocated a selective incorporation of those elements of Western civilization compatible with Islam. His final goal was the implementation of the Islamic concept of *maslaha* (the public good).

To help him introduce his reforms, Khayr al-Din appointed his Circassian and military school colleagues to positions of authority. He was also supported by Muhammad Bayram V, whom he appointed to direct the Hubus Administration, the government press, and *al-Raʾid al-Tunisi,* the official gazette of the government.

Khayr al-Din tackled administrative, financial, and tax reform, and ended the expensive *mahalla* military taxation expeditions against the tribes. To improve the country's economy, he expanded land under cultivation from 60,000 to 1 million hectares (132,000–2.2 million acres), reformed the customs system to protect Tunisia's handicraft and other industries, and launched public works projects such as paving the streets of Tunis. He founded Sadiqi College in 1875, and established a public library (al-Abdaliya). He briefly instituted a complaint box for citizens and sought to introduce a mixed judicial system to prevent foreign efforts to protect minorities in Tunisian courts. In his attempts to limit tyranny, he tried to persuade the bey to acquiesce to Ottoman claims of sovereignty and to restrictions on his arbitrary rule.

Khayr al-Din's efforts turned Muhammad al-Sadiq Bey against his reformist minister. Khayr al-Din's support of the Ottomans in the Russian–Turkish War of 1877 provided the bey with an excuse to dismiss him. Complicating his pro-Ottoman stance and loss of the bey's confidence were economic and financial difficulties, intrigues of foreign consuls and of the bey's favorite, Mustafa ibn Ismaʿil, and Khaznader's vilification campaign. All of these factors finally forced Khayr al-Din to resign on 2 July 1877. He went into self-imposed exile in Constantinople, where, because of his pro-Ottoman viewpoint, he was rewarded with a brief appointment as Ottoman grand vizier in 1878 and 1879. After his removal as grand vizier, Khayr al-Din retired to private life and spent his final years in Constantinople, where he died.

Khayr al-Din's legacy in Tunisia proved an inspiration for later reformers such as the Young Tunisians. Sadiqi College was the most enduring of his accomplishments. Young Tunisians and later Tunisian nationalists, including Habib Bourguiba, were educated there.

KHAZʿAL KHAN

[c. 1880–1936]

Shaykh of Muhammara, independent tribal chieftain in Iran.

In 1897, Khazʿal became chief to the Muhaysin, a powerful Arab tribe whose territory, mostly in Persia (now Iran), extended into Iraq. Confirmed as march-warden by the weak Qajar shah, he expanded his sway over the Kaʿb and other local tribes. As de facto ruler of Khuzistan, with a potential army of 20,000 tribesmen, he was courted as a strategic ally by the British; when oil was discovered at Masjed Soleyman in 1908, Khazʿal granted them the necessary rights of way for a pipeline to the Persian/Arabian Gulf and port facilities at Abadan. In the 1920s, however, after Reza Shah Pahlavi came to the throne and began centralization—which was also seen to be in Britain's interest—Khazʿal's British patrons were unwilling to support him and defy the shah. The Iranian army, having subjugated neighboring Luristan, advanced on Khuzistan; in 1925, Khazʿal was arrested at Muhammara (now Khor-

ramshahr) and kept in Iran's capital, Tehran, until his death.

JOHN R. PERRY

KHAZNADER, MUSTAFA

[1817–1878]

State treasurer (1837–1861) and prime minister (1861–1873) of Tunisia.

Mustafa Khaznader was born Georges Kalkias Stravelakis, on the island of Chios. In 1821, during the Greek rebellion against the Turks, he was seized, taken to Constantinople, and sold into slavery. In 1827 he was sent to Tunis, where he was sold again. He converted to Islam and took the name Mustafa.

Mustafa became a close friend of Ahmad ibn Mustafa, future bey of Tunis. When Ahmad became bey in 1837, he named Mustafa *khaznader* (state treasurer). (His long tenure in this office led to the use of Khaznader as his surname.) The centralization of governmental authority under Ahmad Bey and the combination of an increasingly complex tax structure and a rudimentary tax collection apparatus obliged the government to farm out the various taxes in *iltizam.*

Mahmud ibn Ayad, the top tax farmer, conspired with Khaznader to fleece the government of millions of dinars by transferring funds to France and acquiring French citizenship. In 1852, having transferred the equivalent of 50 million francs, he fled to France and acquired French citizenship; he was unable to secure citizenship for Khaznader. The latter's involvement in the affair apparently did not lessen the bey's ultimate faith in his finance minister.

Khaznader built up a powerful patronage network through his own marriage into the bey's family and marriage of his children into prominent political and business families. He encouraged Ahmad Bey in his reforms because these enabled him to profit from new tax farms and other financial ventures. Under Muhammad Bey (1855–1859) and Muhammad al-Sadiq Bey (1859–1882), Khaznader supported the reforms of the Fundamental Pact (1857) and the constitution of 1861 because these sought to restrict the power of the bey and increase the power of his ministers.

Between 1859 and 1869, Khaznader and his associates virtually ran and ruined the Tunisian state. The Grand Council, established as a kind of Parliament to implement the 1861 Constitution, was staffed with his cronies. Beginning in 1863, Khaznader floated a series of foreign loans that bankrupted the government by 1868. To pay for these loans, he authorized the doubling of the personal income tax, the *majba.* When this went into effect in 1864, there arose a widespread tribal revolt. It was severely repressed, the constitution was suspended, and Khaznader ran the state even more firmly. But in the long term, his financial policies destroyed the state's financial viability. Bad harvests, famines, and epidemics compounded Tunisia's financial plight and led to the International Finance Commission of 1869, set up by foreign creditors to ensure that Tunisia paid its debts.

Khaznader's son-in-law Khayr al-Din used his position on this commission to discredit Khaznader and to force the bey to dismiss him. In 1873, Muhammad al-Sadiq Bey reluctantly agreed to retire Khaznader and confiscate some of his wealth. In his place, the bey appointed Khayr al-Din prime minister. During the latter's tenure of office (1873–1877) Khaznader continually attacked him and sought his removal. Finally, in 1877, the bey discharged him. Khaznader's triumph was short-lived, however; he died the following year.

KHEMIR, SABIHA

[1959–]

Tunisian painter, illustrator, and writer.

Sabiha Khemir was born in Tunisia. She is a painter, illustrator, writer, and historian of Islamic art, based in London. She studied at the University of Tunis and received a Ph.D. from the School of Oriental and African Studies at the University of London. Most of her works are highly detailed pieces, exe-

cuted in pen and ink, and often explore legendary figures and events from Islamic history. They appear on the covers of some important translations of Arabic novels, especially by Naguib Mahfouz and Alifa Rifaat. Khemir has described her illustrations as rooted in the history of Islamic book illustration, especially miniatures. She sees the simplicity, purity, and precision of black-and-white pointillism as reflecting the ethos of Islamic art. Like many Arab artists of her generation, Khemir recreates the past treasures of art from her part of the world as a way to transform the present. In her essay "Mobile Identity and the Focal Distance of Memory," she described this practice as an attempt to "animate our present reality with the timeless values of our civilisation" (p. 46). In this essay and others, Khemir writes about issues of identity, history, and memory in the Arab world and the Arab diaspora, drawing on her personal experience. She has also written and presented two documentaries on Islamic art for British television. She published her first novel, *Waiting in the Future for the Past to Come,* in 1993.

JESSICA WINEGAR

KHIDER, MOHAMED

[1912–1967]

Algerian revolutionary.

The son of a poor family from Biskra, Mohamed Khider was born in Algiers, the capital of Algeria, and became a bus driver/fare collector. He joined the Etoile Nord Africaine (ENA; Star of North Africa) of Messali al-Hadj and the Parti du Peuple Algérien (PPA; Algerian People's Party). He favored armed rebellion against the French, although he tried to reconcile Messalists and centralists of the Mouvement pour le Triomphe des Libertés Démocratiques (MTLD; Movement for the Triumph of Democratic Liberties). As a cofounder, Khider was known as an historic chief of the Front de Libération Nationale (FLN; National Liberation Front). During the Algerian War of Independence (1954–1962), he served with the "external" FLN and in 1956 was involved with initial French government contacts. He was seized along with other historic chiefs (Ahmed Ben Bella, Hocine ait Ahmed, Mohamed Boudiaf, and Rabah Bitat) in the infamous skyjacking of an Air Maroc airplane in October 1956.

After the war, he became secretary-general of the FLN but later disagreed with Ben Bella concerning the relationship between the party and the army in independent Algeria. Thereupon, he resigned and went into exile but kept a substantial sum of the party funds (to be used by the Algerian opposition), which was invested in a Swiss account. Khider was assassinated in Madrid in 1967, but the Algerian government failed to recover the funds. Khider's reputation was later officially rehabilitated in 1984.

PHILLIP C. NAYLOR

KHIDHIR, ZAHRA

[1895–1955]

Pioneer of women's rights and education in Iraq.

Zahra Khidhir was born in Baghdad to a prominent scholarly and religious family, and was the eldest daughter. Her father, Mullah Khidhir al-Kutubchi, was a scholar at one of the most prestigious Sunni educational centers in Baghdad, Abu Hanifa's Mosque. After his retirement in 1870, he established the first bookshop in Baghdad, al-Zawra, which pioneered the publication of Iraqi literary and political works and the distribution of Arab literary and political journals. The bookshop became a hub of Iraqi intellectual and nationalist discourse in the early twen-

tieth century. The tradition was carried on by his youngest son, Abd al-Karim, who took over the bookshop in 1920 and changed its name to Maktabat al-Sharq. Abd al-Karim was assassinated in the nationalist uprising of 1941. All of Mullah Khidhir's five children played important roles in Iraq's emergence as a modern nation state.

In 1918, Zahra opened a private school for girls in Iraq and enrolled forty students in three classes—Qurʾanic studies, mathematics, and home economics. As the first school for girls in Iraq, it was applauded by progressives and opposed by conservatives who sought to forestall change. After the First World War, she took an active part in Iraqi resistance to British occupation, and following Iraq's independence in 1921 was one of the first women appointed to head a public school for girls. She continued her struggle for women's rights and was one of the founders of the Young Women's Muslim Association (YWMA) of Iraq in the early 1950s. She remained active for the rest of her life.

KHOMEINI, RUHOLLAH

[1902–1989]

Leader of the Iranian revolution of 1979.

Ruhollah Musavi Khomeini was born in Khomein, central Iran, in 1902. His early religious education was in Khomein as a student of Akhund Molla Abolqasem, Aqa Shaykh Jaʿfar, Mirza Mahmud Eftekhar al-Olama, Mirza Mehdi Daʿi, Aqa Najafi, his brother-in-law, and Ayatollah Morteza Pasandideh, his older brother. Khomeini left for Arak, a religious center in central Iran, in 1920. In 1922, when Ayatollah Abd al-Karim Haʿeri left Arak for Qom and founded the Feyziyeh religious seminary, Khomeini accompanied him to study there. In 1929, Khomeini went to Tehran to marry Khadijeh Saqafi, the daughter of a prominent ayatollah. Their first son, Mostafa, was born in 1930 and died under mysterious circumstances in 1977 in Iraq; three daughters, Sediqeh, Farideh, and Fahimeh, and another son, Ahmad, who died in 1995, followed.

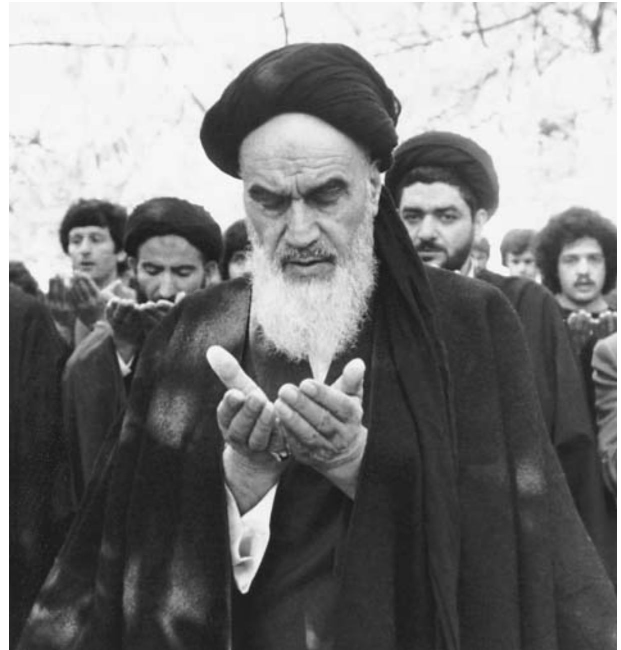
Ayatollah Haʿeri died in 1937, and by that time Khomeini, who had completed his formal education in 1928, had established himself as one of the more active and prominent religious scholars of Qom. Haʿeri was succeeded by Ayatollah Hosayn Borujerdi. Khomeini also studied with Borujerdi, serving as his special assistant. Borujerdi's primary preoccupation, however, was the expansion and strengthening of the Feyziyeh and preserving its autonomy from governmental supervision. To do so, Borujerdi generally assumed an apolitical and quietist stance throughout his tenure as director. In deference to his mentor, Khomeini did not openly participate in the political movement over oil nationalization in the early 1950s. Following the death of Borujerdi in 1962, however, activist *ulama* at the Feyziyeh openly pursued an oppositional stance regarding Mohammad Reza Shah Pahlavi's policy of alliance with Western countries, secularization, and centralization of the state.

Khomeini's first direct involvement with the country's political affairs took place in October 1962, when the government drafted a law that would grant diplomatic immunity to U.S. military personnel stationed in Iran. Khomeini expressed his opposition in sermons that became increasing strident in their criticism of the shah's foreign policies, including his tacit support of Israel, which pious Muslims opposed because of the way it had been created out of Palestine. Khomeini's criticisms increased after the shah launched the White Revolution in January 1963. Khomeini was arrested, along with several other prominent clergymen, on 5 June 1963 after delivering a fiery sermon denouncing the shah for taking a pro-Zionist, pro-U.S., and anti-Islamic stance. His arrest sparked several days of demonstrations in Qom and several other cities, which were suppressed forcibly and with scores of deaths. Khomeini was incarcerated in Tehran and released under pressure from other prominent clerics in early 1964. That July, he again was in the vanguard of the religious opposition decrying final passage of

the bill granting diplomatic immunity to all U.S. military representatives and their families. Khomeini was imprisoned and subsequently exiled to Turkey. In 1965, he was allowed to take up residence in al-Najaf, Iraq, a Shiʿite shrine city with Shiʿite Islam's most important religious seminary. In exile, Khomeini continued to draw supporters from among Iranian clerics and the bazaar middle class, and he continued to criticize the shah's policies, notably in 1971 when the shah lavishly celebrated the 2,500th anniversary of monarchy and in 1975 when the shah inaugurated Iran's single party, the Rastakhiz.

During the late 1960s and early 1970s, while in al-Najaf, Khomeini formulated his concept of *velayat-e faqih,* or the governance of the religious jurist. Essentially, the doctrine called for an Islamic government supervised by the clergy to ensure that it did not violate Islamic principles. Khomeini already had a network of supporters inside Iran, including Mehdi Bazargan, Mortaza Motahhari, and Mahmud Taleqani, and he spent these years fostering his ties with Iranian oppositional groups abroad, including the Islamic student associations. Leaders of the latter included Ibrahim Yazdi, Sadeq Qotbzadeh, Abolhasan Bani Sadr, and Mostafa Chamran, all of whom rose to prominence after the Iranian Revolution of 1979.

In January 1978, when the first antigovernment protests occurred in Iran as a direct response to official media efforts to slander Khomeini, the ayatollah had access to a well-established and influential infrastructure inside the country. As the demonstrations intensified during the spring and summer, Khomeini rejected all pleas for compromise and instead heightened his anti-shah declarations. In October 1978, under pressure from the Iranian government, the then vice president of Iraq, Saddam Hussein, expelled Khomeini. The ayatollah obtained political asylum in Paris, where he not only enjoyed attention from the Western media but also gained access to wider communication with Iran. In January 1979, the shah, failing to quell the strikes and demonstrations, left Iran after having installed National Front leader Shapur Bakhtiar as prime minister. Khomeini returned to Iran amid widespread celebrations on 1 February 1979 but refused to acknowledge legitimacy of Bakhtiar's government. On 11 February 1979, Bakhtiar's government,



Khomeini was expelled from Iran in 1964 and and given refuge first in Turkey and then in al-Najaf, Iraq, where he continued to criticize the shah and spread his political ideas through a network of students. Due to pressure from the Iranian government, Saddam Hussein, then the vice president of Iraq, expelled Khomeini from the country in October 1978.
© Bettmann/Corbis. Reproduced by permission.

the last royalist cabinet in Iran, fell, marking the success of the Iranian Revolution. Bazargan, appointed by Khomeini, assumed office as leader of the provisional government.

After the revolution, the new constitution incorporated the concept of *velayat-e faqih* and named Khomeini as the first *faqih* and leader of the revolution *(rahbar-e enqelab).* But Khomeini did not exercise a direct role in the operation of the government. Rather, his domestic policies in the initial postrevolutionary period were marked by subtle compromises undertaken to consolidate the revolution. Political opposition was tolerated, and a noncleric, Abolhasan Bani Sadr, emerged as his choice for Iran's first president. However, his break with Bani Sadr, the eight-year war with Iraq (1980–1988), the severing of diplomatic ties with the United States, international isolation, the armed uprising by the internal opposition (1981–1982), and factional strife within Islamic circles combined to radicalize his political views.

An Iranian student gives a speech during the occupation of the U.S. embassy in Tehran, backed by posters of Ayatollah Ruhollah Khomeini. Khomeini criticized the West's political influence on his country and staunchly opposed Mohammad Reza Shah Pahlavi's alliance with the United States. © AP/WIDE WORLD PHOTOS. REPRODUCED WITH PERMISSION.

Khomeini died on 5 June 1989. Although his former student and revolutionary ally Ayatollah Hosayn Ali Montazeri had been designated as his successor in 1983, the two men increasingly differed over policies after 1985. Montazeri's open criticisms in 1988 about the lack of human rights protections for opponents of the regime led Khomeini to demand his resignation in early 1989. Thus when Khomeini died several weeks later there was no designated successor. However, before his death, he had authorized the formation of a committee to revise the constitution, especially the articles pertaining to *velayat-e faqih.* The amendments made it possible to consider for the position of paramount *faqih* a person with appropriate political qualifications even if he lacked superior religious credentials. It seems that Khomeini had concluded near the end of his life that a proper political perspective was more critical for ensuring the long-term viability of the Islamic state than expertise in the nuances of Islamic law.

UPDATED BY ERIC HOOGLUND

KHORASAN

Province in northeastern Iran.

The northeasternmost province *(ostan)* of Iran, with its capital at Mashhad, Khorasan is dominated by a zone of mountain ranges, a continuation of the Alborz Mountains in northern Iran, running roughly northwest to southeast. It is the longest province in the country, covering 194,700 square miles. Khorasan is bounded on the north by the steppes and deserts of Turkmenistan and on the east by Afghanistan; to the west and south lie extensive landlocked deserts such as the Dasht-e Kavir and Dasht-e Lut. Khorasan receives adequate rainfall only in the more northerly mountain zone, where there is a relatively flourishing agricultural and pastoral economy and the population is quite dense. The southern region typically has an oasis pattern of life sustained by wells and irrigation systems called *qanats* (underground canals).

Khorasan's strategic position as a corridor between the steppe and the settled parts of the Middle East endowed it with a rich cultural and political history up until the modern period. Through Khorasan, armies of Alexander the Great of Macedonia (356–323 B.C.E.) passed to Central Asia and India, and Turkish people moved into the Middle East. In

Built in 1418, the Shrine of Imam Reza stands in Mashhad, the capital city of the Khorasan province. Reza was an early ninth century Shiʿite religious leader, and his shrine is considered by Shiʿa as the holiest one in Iran. © CORBIS. REPRODUCED BY PERMISSION.

the pre-Islamic times Khorasan was one of the four great provinces of Iran. In the early Islamic period Tus was one of the great cities of Central Asia. The seventh Shiʿa Imam, Reza, came to Tus in the early ninth century. He died in a nearby village, and his tomb then developed into a pilgrimage site. The village eventually developed into the city of Mashhad.

During the second half of the eighteenth century, parts of Khorasan passed into the hands of the Durrani Afghan chief Ahmad Shah for a short period of time. But in the late eighteenth century, Khorasan was fully restored to the newly established Qajar dynasty. As a result of continuous wars with the Uzbeks (Ozbegs) and Turkmens, however, life in the northern regions of Khorasan continued to be precarious. Commerce and agriculture declined, and many Iranians were captured as slaves by the central Asian emirates. Only Russian intervention and annexation of Khiva in 1873 and the crushing of the Turkmens in 1881, actions motivated by Russian political ambitions, finally ended the insecurity.

Meanwhile, relations with the amirs of Afghanistan continued to deteriorate. Yet another superpower intervention, this time British, put a halt to this hostility. Herat, also a part of Khorasan, was ceded to Afghanistan after a brief war between the Qajar ruler Naser al-Din Shah and the British in 1856 and 1857. The boundary dispute between Iran and Afghanistan was not settled until 1934 to 1935.

Variegated political and cultural influences on Khorasan have created a heterogeneous population in the region, including tribes such as Turkmens, Kurds, Baluchi, Arabs, and others. The population of Khorasan in 2002 was over 6 million, with over 1.8 million people living in Mashhad.

PARVANEH POURSHARIATI

KHRAIEF, BECHIR

[1917–1983]

Tunisian novelist and short story writer.

Bechir Khraief, born in Nefta, is considered the father of fiction writing in Tunisia. He first worked in trade, selling fabrics during the day while attending night school. His occupation gave him an excellent insight into the life of the Tunisian people and enhanced the realism of his writings. When Khraief went into teaching, he looked back on those years as the best of his life. His writings reveal his strong attachment to his Tunisian roots. Like other writers of his generation, Khraief published his writings first in the journal *Al-Fikr* (founded in 1955).

Khraief, noted for his realistic approach, simple style, and use of dialect in dialogue, gives a truthful and interesting depiction of Tunisian life while shying away from philosophical themes. His efforts to endow his short story "Al-murawwid wa al-thawr" (The trainer and the bull), in his collection *Mashmum al-full* (Smelling the Arabian jasmine [Tunis, 1971]), with a specific theme failed. Another story in the same collection, "Khalifa al-aqraʾ" (Khalifa the bald), reveals his skill as a fiction writer.

Khraief's writings provided a panorama of Tunisian life in its different settings. His novel *Al-dajla fi arajiniha* (Dates on the branch [Tunis, 1969]) reveals various aspects of desert life, although he often uses too many details, a weakness that characterizes some of his other works. *Iflas aw hubbak darbani* (Being penniless or your love hit me [Tunis, 1959]),

on the other hand, paints a picture of the Zaytuna University circles as well as of the middle class when Tunisia was undergoing the social transition from a traditional to a modern society.

Motivated by the same nationalist feeling that influenced his fiction, Khraief wrote two historical novels, *Barq al-layl* (Night's lightning [Tunis, 1961]) and *Ballara* (Tunis, 1992), which was published posthumously.

AIDA A. BAMIA

KHRIMIAN, MKRTICH

[1820–1907]

Patriarch of Constantinople, 1869–1873; catholicos of all Armenians, 1892–1907.

Born in the city of Van, Mkrtich Khrimian joined the church in 1845, after the death of his wife and child. He was ordained a *vardapet* (celibate priest) in 1854. He began publishing the periodical *Ardsvi Vaspurakan* (The eagle of Vaspurakan) in 1855 and a year later returned to Van as the prior of the monastery of Varak. In 1858 he resumed publication of *Ardsvi Vaspurakan.* In 1862 he became prelate of Daron and prior of the monastery of Surp Karapet.

Khrimian was ordained a bishop in 1868 and elected Armenian patriarch of Istanbul in 1869. Because of his efforts to document the exploitation of the Armenian populace and to register official complaints with the Sublime Porte, he was forced to resign in 1873. Five years later, he led an Armenian delegation that hoped to appeal to the conferring powers at the Congress of Berlin. Unsuccessful, Khrimian returned to Istanbul and delivered the homily for which he is most remembered, the "Sermon of the Iron Ladle," in which he stated that each power at Berlin took a share of the contents of a great soup bowl with an iron ladle, whereas he had only a paper petition and thus could bring nothing back to the Armenian people. It marked a turning point in Armenian political consciousness.

In 1879 Khrimian was elected prelate of the Armenians in Van. Suspected of associating with Armenian resistance groups, he was recalled to Istanbul and in 1890 was exiled to Jerusalem. In 1892 he was elected catholicos (supreme patriarch) of all Armenians at Echmiadzin. Khrimian's refusal to obey the Russian imperial edict of 1903, which authorized seizing the properties of the Armenian church, galvanized the Armenian communities of Russia to protest the decision, resulting in the eventual rescinding of the edict in an effort to reduce the turmoil in the Transcaucasus.

ROUBEN P. ADALIAN

KHRUSHCHEV, NIKITA S.

[1894–1971]

Soviet politician; premier of the USSR, 1958–1964.

Before the Communist revolution, Nikita S. Khrushchev, son of a Russian villager, worked in the Ukrainian coal region of Donbas. He joined the Communist Party (CPSU) in 1918 and rose rapidly through its ranks. After Josef Stalin's death in 1953, Khrushchev became first secretary of the CPSU, retaining this position until 1964, when he was ousted by opponents led by Leonid Brezhnev.

In contrast to Stalin, Khrushchev adopted the policy of peaceful coexistence with the West. In the Middle East, however, he engaged in political competition with the United States. Arguing the advantages of "scientific socialism" and offering military and economic assistance, Khrushchev hoped to persuade the neutralist leaders of Egypt, Syria, Iraq, and Algeria to join the USSR in an anti-Western "zone of peace," as he called it. While several accepted Soviet assistance, no Arab leader took seriously Khrushchev's ideological arguments. Consequently, Moscow established relatively close relations with several Arab states and supported them in the 1956 war with Israel but was not able to sway them from their independent course.

KHUBAR, AL-

Port of Saudi Arabia.

Located in the Eastern Province, on the Persian Gulf coast of Saudi Arabia, al-Khubar (also al-Khobar) was founded in 1923 as a fishing and pearling village by members of the Dawasir tribe fleeing from Bahrain. It thrived as a terminal for the first crude oil that was shipped from Saudi Arabia to Bahrain for refining, until a deep-water port was constructed at nearby al-Dammam. A causeway and four-lane highway link Bahrain and Saudi Arabia at al-Khubar. In June 1996 an explosive device attached to a vehicle was detonated outside an al-Khubar apartment complex in which U.S military personnel lived; nineteen U.S. servicemen were killed and 400 persons (including 109 Americans and 147 Saudis) were injured. No group or person claimed responsibility for the attack, but by 1998 it was widely assumed to be the work of operatives affiliated with Osama bin Ladin's al-Qaʿida group.

LES ORDEMAN
UPDATED BY ERIC HOOGLUND

KHURI, BISHARA AL-

[1890–1964]

Prime minister of Lebanon under the French mandate; first president of independent Lebanon (1943–1952).

Bishara al-Khuri (also Khoury, Khouri) was born into a Maronite family and studied law in Paris. After spending World War I in Egypt, he returned to Lebanon and in 1922 was appointed secretary of Mount Lebanon. He served as prime minister in 1927–1928 and 1929. During the 1930s, his rivalry with Emile Eddé dominated Maronite politics. Al-Khuri strove to develop good relations with moderate Sunni circles, gambling that since they had opposed the establishment of Greater Lebanon, they would abandon their demand for unity with Syria if the Christians asserted their independence from France. He created the Constitutional Bloc Party in 1934 and cooperated closely with a group of Sunni politicians, led by Riyad al-Sulh.

After being elected president of the republic in 1943, al-Khuri chose Sulh as prime minister, and they concluded the oral agreement known as the National Pact. It defined the terms of the Maronite–Sunni partnership that provided the framework of Lebanon's politics until the outbreak of the Lebanese Civil War in 1975. In 1947, al-Khuri rigged the parliamentary elections in an effort to obtain passage of a constitutional amendment that would allow him to run for reelection in 1949. After 1949, he faced a powerful coalition including the Druze leader Kamal Jumblatt and the Maronite politicians Pierre Jumayyil, Camille Chamoun, and Raymond Eddé. In September 1952 a general strike compelled al-Khuri to step down.

KHUTBA

Sermon delivered from an elevated pulpit (minbar) *by a* khatib, *or Muslim preacher, at Friday prayers and at special celebrations.*

The Friday *khutba* precedes the noon prayers that bring local Muslim communities together at the mosque. The *khatib* usually follows a formula in which he admonishes those present to be pious, conducts a prayer on behalf of the faithful, and recites part of the Qurʾan.

The *khutba* has also traditionally included an expression of loyalty to the sovereign. This practice has at times carried political significance, as in 1953, when the French deposed the Moroccan sultan Muhammad V. Many *khatibs* refused to invoke the name of his French-appointed replacement and even suspended prayers, a protest that ultimately led to his return and the independence of Morocco in 1956.

Khatibs also address public issues, and many governments today circulate suggested themes on public health, political issues, and other topics for the weekly *khutba.* In recent years, the *khutbas* of famous religious leaders have been distributed directly to the faithful on cassette tape, thereby reaching a wide audience, often across national boundaries.

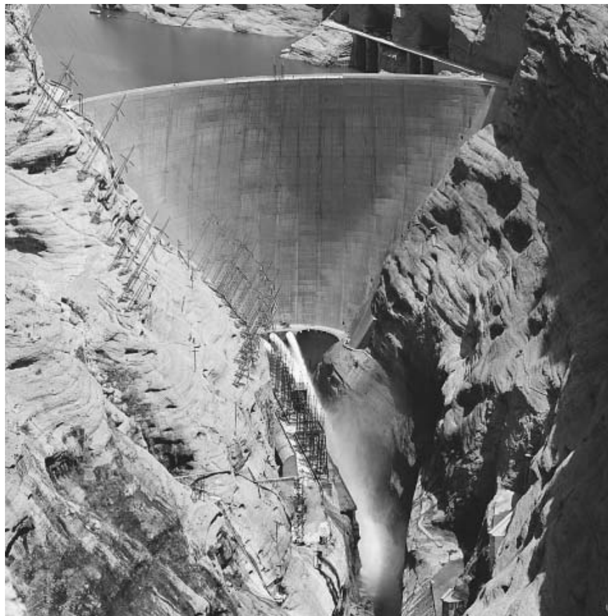
ELIZABETH THOMPSON

KHUZISTAN

A province in southwestern Iran with its capital at Ahvaz.

The Iranian province of Khuzistan is in a fertile southwestern region of alluvial plains made by two rivers, the Karkheh and Karun. It is situated between the Zagros Mountains and the sea. On the north Khuzistan borders Lorestan (Luristan) province; on the south, the Persian Gulf. The Iran-Iraq border forms the western part of its boundaries, and on the east lies the Hindiya or Hindijan River.



Completed in 1962, the Diz River Dam has provided water for both irrigation and electricity in this southwestern Iranian province for more than 40 years. © ROGER WOOD/CORBIS. REPRODUCED BY PERMISSION.

Khuzistan's climate is hot and very humid in the summer due to a lack of altitude—averaging only 10 meters (33 feet) and in the south and 100 meters (328 feet) in the central parts of the region; the southerly inclination of the land (which makes it susceptible to maximum effects of the sun); the hot winds from the Syrian Desert and Saudi Arabia; and the lack of snow-covered mountains, forests, or open water to ease the effect of these winds. In spite of its heat and humidity, Khuzistan has always been amply provided with water by the Karkheh, Diz, and Karun rivers, and noted from earliest times for its prosperity. Thriving agriculture produces plentiful grain, rice, sugarcane, citrus fruits, melons, and dates, as well as cotton. The Persian Gulf provides abundant seafood.

Arabs form a substantial portion of the Khuzistani population. The local Arab Shiʿite dynasty of the Mushaʿsha (who established their rule in the region for a short period in the fifteenth century and acted as powerful governors of the region until the nineteenth century), and other Arab tribes such as the Banu Kaʿb and Banu Lam (who immigrated from Arabia and the lower course of the Tigris in the eighteenth and nineteenth centuries), generally referred to the region as Arabistan, especially the western parts of the province. In 1925, under Reza Shah Pahlavi, the ancient name of the region, Khuzistan, was established as the official, legal name.

The prosperity of Khuzistan declined after the eighteenth century primarily beause of Iranian–Arab hostility, damage to agriculture by migrations and nomadism, raiding of trade caravans (especially by the Banu Lam), and lack of central authority. Prosperity returned to Khuzistan in the twentieth century because of various factors: the discovery of oil at Masjed Soleyman in 1908; the construction and growth of the Abadan oil refinery by the 1950s; the construction of the Trans-Iranian railway in 1938; the 1962 construction of the Muhammad Reza Pahlavi Dam on the Diz River (which provided the

MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

region not only with hydroelectricity but also with water for market gardening and other agricultural projects on a large scale); the development of the natural-gas industry (which exported 28 billion cubic feet of natural gas to the U.S.S.R. in 1973); and the development of Khorramshahr as one of the major ports of entry on the Persian Gulf. The Iran–Iraq War (1980–1988) was largely fought in Khuzistan, causing extensive damage. According to the 1996 census, the population of the province was 3,746,772.

PARVANEH POURSHARIATI

KHYBER, MIR AKBAR

[1925–1978]

Afghan Marxist leader.

Mir Akbar Khyber was an Afghan poet and a cofounder of the Marxist movement in Afghanistan. He was born in Logar Province in 1925 and graduated from military high school in 1947. He was imprisoned for his political activities in 1950 and spent the next five years in jail, where he met other leftist inmates including Babrak Karmal, later president of Afghanistan. Although he became a career police officer, he also was a leading member of the Parcham faction of the People's Democratic Party of Afghanistan and the editor of its newspaper, *Parcham.*

By the late 1970s he found himself at odds with other Marxist leaders, in part because he believed that the Marxist movement could not rule Afghanistan even if it took power. In addition, he had strong nationalist beliefs that were unpopular with his Marxist comrades. Khyber was killed by an unknown assassin who shot from a passing Jeep on 17 April 1978. Ironically, it was his assassination that sparked a major demonstration that led to the Saur Revolution and the Marxist takeover of Afghanistan.

GRANT FARR

KHYBER PASS

Pakistani pass into Afghanistan.

The Khyber Pass begins about 10 miles outside the Pakistani city of Peshawar in the northwest frontier province and ends on the Afghan border at Torkham. Because it is the main connection between Afghanistan and the Indian subcontinent, the route through the Khyber Pass constitutes one of the major means of access to Central Asia. The pass, which narrows at one point to 200 yards, reaches an altitude of 3,500 feet. The pass is situated in the Afridi tribal areas, where the government has little authority; as a result, kidnapping and smuggling are common occurrences along the route. The British built a narrow-gauge railroad that passes from Peshawar to Torkham.

After 1980 the pass became a major route for refugees leaving, or later returning to, Afghanistan, and for guerrilla fighters entering Afghanistan. Pakistan has periodically closed the border crossing at the Afghan side of the pass in an attempt to control the movement of unwanted refugees.

GRANT FARR

KIANURI, NUR AL-DIN

[1916–1999]

First secretary of Iran's Tudeh Party, 1978 to 1983.

Nur al-Din Kianuri was born in the village of Nur in Mazandaran. His grandfather was Ayatollah Fazlollah Nuri, the famous archconservative clerical leader executed during the Constitutional Revolution. Kianuri's father, however, was a prominent proconstitutionalist, later killed in a street shootout. Kianuri received his schooling in Tehran, studied architecture in Germany during the late 1930s, and joined the faculty of Tehran University in 1941. He became a member of the Tudeh Party, Iran's communist organization, in 1942 and was elected to its central committee in 1948. In the mid-1940s, he married Maryam Firuz, the head of the Tudeh women's organization. Maryam Firuz is the daughter of Prince Nasrat al-Dowleh (Farmanfarmayan), a well-known Qajar dynasty aristocrat killed by Reza Shah Pahlavi.

Kianuri fled Iran after the 1953 coup and spent over twenty-six years in exile—mostly in East Germany. He was elected first secretary of the Tudeh Party in late 1978, because he headed the wing of the party that supported the Iranian Revolution—a policy favored by the then Soviet Union. In 1983, however, when the Tudeh criticized the Islamic Republic of Iran for prolonging the war against Iraq, much of their leadership, including Kianuri, were arrested and tortured into "confessing" that they were spies and traitors plotting to overthrow Ayatollah Ruhollah Khomeini. Although most of his colleagues were executed, Kianuri and Maryam Firuz were not. Kianuri died in 1999 while still under house detention.

ERVAND ABRAHAMIAN

KIAROSTAMI, ABBAS

[1940–]

Internationally acclaimed Iranian film director and screenplay author.

Abbas Kiarostami was born in Tehran and educated in fine arts. He is best known for his Kokar film trilogy *(Where's the Friend's House, Life Goes On,* and *Under the Olive Trees),* which documents daily life in a mountain village in the Caspian. The trilogy is credited as the apex of the Iranian new wave, a form of cinema with which Kiarostami is closely identified. The Iranian new wave came about in the 1960 when directors such as Kamran Shirdel and Forugh Farokhzad, influenced by Italian neorealism, the French new wave, and the poetics of surrealism, began to blur the line of documentary and fiction. The struggle of children is the central theme of many of Kiarostami's films (and he was the founder of the film department at the Institute for Intellectual Development of Children and Young Adults, which he ran during the first years after the Iranian Revolution of 1979), but it is his films *Close-Up* (1990), about an adult who impersonates fellow director Mohsen Makhmalbaf, and *Taste of Cherry* (1998), about a middle-class Tehrani man on the verge of suicide (for which he won the Palm d'Or at Cannes), to which most film critics refer when labeling him an auteur. His most recent films, *ABC Africa* and *Ten,* have moved away from his signature style of deep landscape photography, long takes, little plot, and lush photography, toward the digital medium and women characters (until the movie *Ten,* the only women in Kiarostami's films were village mothers and off-camera workers, never leading roles).

ROXANNE VARZI

KIBBUTZ

A collective community in Israel.

The kibbutz (also *kevutza*; pl. kibbutzim, *kevutzot*) has long been the symbol and embodiment of socialist Zionism, which defined it as the most effective way to settle the land and build a new society. Never in-

volving more than a small minority of the Israeli population, kibbutz members were promoted as the elite of Israeli society and the kibbutz was presented as the model of the new, egalitarian society. It became one of most effective fund-raising symbols among diaspora communities and has always been a priority sightseeing attraction for visitors from abroad. A prominent American Jewish social scientist once quipped that there were probably many more books and articles written about the kibbutz than there were actual kibbutzim. This is in large measure true and indicates the exalted status of the kibbutz and its members in a society whose political elite viewed it as beneficial to the country's development.

The first kibbutz, Deganya, was founded by a group of pioneers from Russia in December 1909, in the Jordan River Valley just off the southern shore of the Sea of Galilee. By the end of 1948 there were 177 kibbutzim whose population of 54,200 comprised 6 percent of the Israeli population. By 2000, only about 2 percent of the Israeli population, or 118,000 individuals, lived on its 270 kibbutzim.

The various streams of socialist Zionism devised different types of kibbutzim but at least originally all adhered to the basic tenets of collectivism, namely that all property was communal and the kibbutz provided for the needs of all of its members. Everyone worked in and for the kibbutz and all jobs were, ostensibly, of equal status. Members shared in the goods and services according to their needs as defined by democratically decided criteria. The kibbutz functioned as a populist democracy, with all members having equal voice in the operation of the community. Until the 1970s, kibbutzim were overwhelmingly involved in agricultural production.

The more ideologically socialist kibbutzim practiced strong age segregation, with adults and children—even young infants—living separately, not only during the daytime hours but at night as well. An original motivating factor for this type of living arrangement was to foster the notion that the kibbutz was more important than the family. Over time, commitment to this ideology dwindled and traditional family patterns, including that of children living with their parents, reasserted themselves in the overwhelming majority of kibbutzim.

Agriculture is the second largest branch of employment on kibbutzim. Advanced farming methods and hard work help kibbutz members coax remarkable crop yields from what is often dismissed as nonarable land. © Paul A. Souders/Corbis. Reproduced by permission.

Each kibbutz is essentially autonomous, both socially and economically. They do, however, belong to movements with political affiliations, which provide a wide range of services to them. In principle, the kibbutz is committed to accepting the decisions of its political movement, but there have been a number of exceptions.

The kibbutz movements themselves have undergone a variety of transformations. The vast majority are secular socialist movements. The Hashomer Hatzair kibbutzim federated into the Kibbutz Artzi movement in 1927. Two other kibbutz federations, representing somewhat different ideological commitments, were ha-Kibbutz ha-Me'uhad and Ihud ha-Kibbutzim. In 1980, these latter two merged into the United Kibbutz Movement *(Takam).* In October 2000, a decision was taken to merge the United Kibbutz Movement and Kibbutz Artzi into the Kibbutz Movement, a movement which, in mid-2003, represented 244 of the existing 267 kibbutzim. Another, much smaller, secular federation contains the five kibbutzim that belong to the Zionist Workers *(ha-Oved ha-Zioni)* movement.

Eighteen religious Zionist kibbutzim also exist. Of these, sixteen are affiliated with the Religious

Kibbutz members weave a fishing net. Members rotate job assignments, and all jobs are open to everyone, regardless of gender, though women typically choose to work in education and health services rather than agriculture and industry. © PHOTOGRAPH BY ZOLTAN KLUGER. GOVERNMENT PRESS OFFICE (GPO) OF ISRAEL. REPRODUCED BY PERMISSION.

Kibbutz *(ha-Kibbutz ha-Dati)* movement, and two national-haredi (ultra-orthodox) kibbutzim belong to the Poalei Agudat Israel movement.

Since the 1980s, many of the basic tenets of the kibbutzim have undergone radical transformation, such as the commitment to agricultural production and the ban on employing non-kibbutz members. Kibbutzim are now heavily engaged in manufacturing, and some have opened large shopping centers.

The kibbutz population is aging. This is due both to declining birth rates and to the greater rate of younger people leaving the kibbutz. Between 1988 and 1998, kibbutzim witnessed a 30 percent decrease in the number of children below the age of four and a 10 percent increase in the number of members sixty-five and older.

The educational level of the kibbutz population continues to be higher than that of the larger Jewish population in Israel. In 1998, 47 percent of kibbutz residents above the age of fifteen had more than thirteen years of formal education, as compared to 39 percent of the Jewish population of Israeli society as a whole. Likewise, 20 percent of the kibbutz population have post–high school certificates, as compared to 12 percent of those in the Jewish population of Israeli society as a whole.

By 1990, industry replaced agriculture as the largest branch of employment on kibbutzim; agriculture is now the second largest branch and education the third.

A variety of factors lie at the root of the transformation and decline of the kibbutz. These include a growing desire on the part of parents to be the primary socializers of their children, increased educational aspirations for youth, and the increased industrialization of the larger Israeli society. Most significantly, as a result of the end of Labor hegemony within Israel with the election of Menachem Begin and the Likud alliance in 1977, the kibbutzim no longer retain the elite status they once enjoyed in the political economy of the country. This has forced them to become much more self-sufficient. Some of those that were not successful were forced to disband or reorganize in a noncommunal form.

CHAIM I. WAXMAN

KIBBUTZ MOVEMENT

Association representing agricultural collectives.

The kibbutz movement (Ha-Tnu'ah Ha-Kibbutzit Ha-Meuhedet; acronym, TAKAM) is an association comprising three of the four federations of agricultural collectives in Israel that operated in Palestine before independence, including Hever Ha-Kvutzot, Ha-Kibbutz Ha-Meuhad, and Ha-Kibbutz Ha-Artzi. The consolidation of the separate kibbutz federations, to an extent, reflected both bureaucratic realignments since the 1948 independence of Israel and the changing balance of political party power in the election arena.

The kibbutz is a socialist community without private ownership and was first improvised in 1909 at Degania, in Ottoman Palestine, by young Jewish immigrants devoted to the establishment of a highly egalitarian society. Theirs was a small agricultural community, concentrating on a single crop. After World War I, immigrants from Europe and Russia

brought ambitious schemes for an organization based on the Bolshevik Revolution, postulating that Palestine might only be developed by an all-embracing commune of Jewish workers. In 1921, they founded the first large kibbutz in the Jezreel valley at Ein Harod, with a diversified crop base and, eventually, with industries.

In 1924, a third form of collective was founded at Beit Alpha, by Ha-Shomer Ha-Tzaʿir (Young Guard), rooted in egalitarian principles and the possibilities for self-fulfillment in a small community. An association of religious (Orthodox Jewish) kibbutzim, Ha-Kibbutz Ha-Dati, has not affiliated with the all-embracing kibbutz movement federation.

KIKHYA FAMILY

Political family of Cyrenaica (Libya).

Umar Mansur al-Kikhya was educated at the Ottoman Empire's capital, Constantinople. His first official post under the Turkish administration of Cyrenaica was as *qaʾimmaqam* (district officer) of Gialo oasis. In 1905, the sultan gave him the title of pasha, and in 1908 he was one of three Cyrenaican representatives in the Ottoman parliament. After the 1911 Italian invasion of Libya, he went into exile in Egypt and practiced law in Alexandria to raise funds for the resistance in Libya. In 1920, he returned to Cyrenaica and became native-affairs adviser to Governor Giacomo di Martino. At a time when Italy was trying to put a Cyrenaican constitution and an elected parliament into effect, Umar Mansur acted as liaison between the Italian authorities and the head of the Sanusi order, Sayyid (Amir) Idris. He was particularly active in the negotiations leading to the accord of al-Rajma in October 1920. When, however, these arrangements broke down in 1923 and Amir Idris al-Sanusi went into exile, Umar Mansur was tried on charges of misleading the Italian government and spent many years in prison and in exile.

After the Allies liberated most of North Africa during World War II, the British brought Umar Mansur back to Benghazi, where he began to campaign for the recognition of Idris as ruler of a self-governing Cyrenaican emirate, assisted by and formally allied to Great Britain. His was an important voice in keeping international public opinion aware of the Cyrenaican case at a time when it could easily have been ignored. On the declaration of Cyrenaican autonomy in July 1949, Umar Mansur was appointed head of the amir's *diwan* (royal court). In November 1949, he became prime minister of the first Cyrenaican government after his son, Fathi, had resigned as the designated prime minister. He also held the interior, foreign affairs, defense, and education portfolios. Although he initiated a vigorous program, he came into increasing conflict with the younger opposition leaders grouped around the Omar Mukhtar Club, largely on the emotive issue of a purely Cyrenaican independence (which Umar Mansur and others of his generation favored) or the independence of a united Libya. Opposition to his administration also grew within the sole legal political organization, the Cyrenaican National Congress, and in March 1950 he was forced to resign. He was appointed president of the upper house of the all-Libyan parliament, the Senate, in March 1952, but was dismissed in October 1954 for his public criticism of the new base-leasing agreement with the United States.

Omar Mansur's son Fathi first entered public service as justice secretary in the new British military administration in Cyrenaica in 1943. In July 1949, Fathi had been named prime minister of the first Cyrenaican government, which took office in September, during his absence abroad. Fathi never took office, however, resigning on the grounds that his powers would have been too restricted. He returned to his law practice in Egypt.

In 1949, Hajj Rashid al-Kikhya was president of the Cyrenaican Legislative Assembly and was one of seven Cyrenaican representatives on the preparatory committee of twenty-one Libyan members, set up in July 1950, to decide the composition of the Libyan National Assembly and to draft the constitution.

KIKHYA, RUSHDI AL-

[1900–1988]

Syrian politician and founder of the People's Party.

Rushdi al-Kikhya was born in Aleppo, where he was elected deputy in 1936, 1943, 1947, 1949, and 1954. In 1948, together with other Aleppo leaders such as Nazim al-Qudsi and Mustafa Barmada, al-Kikhya formed the People's Party. This party represented the interests of the business community in Aleppo and northern Syria. It won the support of the prominent Atasi family of Homs against the head of the National Bloc headed by Shukri al-Quwatli and other notables from Damascus. In August 1949, al-Kikhya was appointed minister of interior in the cabinet headed by Hashim al-Atasi. In December 1949, he was elected speaker of the Syrian parliament. In September 1954, following the overthrow of the Shishakli dictatorship, the People's Party participated in the first free elections in post-independence Syria. Al-Kikhya firmly believed in the union of Iraq and Syria under Hashimite rule.

KIMCHE, DAVID

[1928–]

Israeli intelligence officer, diplomat, and writer.

"Dave" Kimche was born in London in 1928, and emigrated to Israel in 1948 and fought in the Arab–Israel War of 1948. He attended the Hebrew University in Jerusalem (where he earned a Ph.D.) and the Sorbonne in Paris. He was employed as a journalist by the *Jerusalem Post* before joining Israel's foreign intelligence service, the Mossad, in 1953, and worked under journalistic "cover" in Paris, specializing in clandestine links with countries such as Morocco and Iran, and from 1976, with Lebanon's Christians. He rose in the ranks of the Mossad to be deputy head (for external relations) under Yitzhak Hofi.

In 1980 Kimche left the Mossad because of disagreements with Hofi over Lebanon policy. He was appointed director-general of the Foreign Ministry under Prime Minister Menachem Begin, and was the chief Israeli delegate at Khalda, outside Beirut, in the December 1982 talks with Lebanon and the United States discussing Israel's withdrawal from Lebanon following the 1982 invasion. In 1985 he played a key early role in the Iran-Contra Affair, in which Israel worked secretly with the United States to supply antitank missiles to Iran as part of an effort to free U.S. hostages held by Iranian-inspired Islamic militants in Lebanon.

Following retirement from government service in 1987 Kimche was a guest lecturer at Tel Aviv and Bar-Ilan universities and president of the Israel Council on Foreign Relations. Kimche authored several books, among them *The Secret Roads, Both Sides of the Hill* (with his brother Jon), *The Afro-Asian Movement,* and *The Last Option.*

KING–CRANE COMMISSION (1919)

A U.S. commission of inquiry sent to Syria and Palestine in 1919 to investigate the wishes of the populace regarding the political future of the territories.

U.S. president Woodrow Wilson opposed British and French plans to annex territories conquered from the Ottomans during World War I. The proposed League of Nations provided a formula, the mandate system, that would allow these territories to be taken over temporarily, until they were guided to self-determination, by the power to whom the mandate was awarded. The covenant of the league stipulated that "the wishes of these communities must be a principal consideration in the selection of a mandatory power." At the Council of Four, the United States proposed an Allied commission consisting of representatives from France, Great Britain, Italy, and the United States to ascertain the wishes of the inhabitants of Syria, Palestine, and Iraq. The British and French, at odds with each other and interested in dividing up the spoils of war, declined to join. President Wilson then sent two U.S. representatives, Henry C. King and Charles R. Crane, to interview Syrians and Lebanese regarding Syria and Palestinians and Jews regarding Palestine. The two envoys spent June and July 1919 in the region but did not go to Iraq.

The King–Crane Commission found that the inhabitants of Syria and Palestine opposed being placed under a mandate, which they perceived as a disguised form of colonial rule. They wanted independence for a united Greater Syria, including Lebanon and Palestine, with Faisal I ibn Hussein as king; but if they had to accept tutelage, their first choice of guardian would be the United States, which had no history of imperialism, and their second would be Great Britain. The Syrians were opposed to any French rule.

The King–Crane Commission also looked into Zionist claims and demands, which it had initially supported. It concluded that Zionist leaders anticipated "complete dispossession of the present non-Jewish inhabitants of Palestine, by various forms of purchase." General opposition to Zionism led the King–Crane Commission to recommend limiting Jewish immigration, reducing the Zionist program, and giving up on the project of a Jewish commonwealth in Palestine.

The British and French ignored the report and occupied and divided up the territories between themselves. As the British historian Elizabeth Monroe points out: The "report came to nothing because of Wilson's failure to grasp that consultation is a virtue only if the consulting authority has the will and the ability to act on what it finds."

PHILIP MATTAR

KING DAVID HOTEL

Famous hotel and landmark in Jerusalem.

The "King David," the most prestigious hotel in Israel, was established by Ezra Mosseri, an Egyptian Jewish banker, in the late 1920s. It was opened to the public in January 1931, and over the years became the site of many important historical events. It is located in the center of Jerusalem overlooking the ramparts of the 3,000-year-old city and an impressive landscape of the Judean Desert, the Dead Sea, and the mountains of Moab in Jordan. The simple symmetric rectangular edifice, clad in reddish stone, was designed by Emile Vogt, with interior decoration by G. H. Hufschmidt, both Swiss architects. While the exterior, with its roof crenellations, echoes the old city walls, the interior is an eclectic mix of motifs from Ancient Near Eastern and Islamic art, meant to evoke the atmosphere of a biblical palace.

During its first two decades it hosted myriad international dignitaries such as Winston Churchill, Haile Selassie (then exiled emperor of Ethiopia), King George II of Greece, Amir Abdullah of Transjordan, King Faisal of Iraq, and many other kings, princes, artists, generals, and diplomats. In 1938,

with a world war on the horizon, the British sequestered more then half of the space to house the Military Area Command and the Secretariat of the Mandatory administration. On 22 July 1946 the Irgun Zvaʾi Leʾumi (IZL), a Zionist extremist underground organization, blew up the entire southern part of the hotel's six stories, which housed the Secretariat, killing ninety-one people—British, Arabs, and Jews. This bloody operation put an end to the loose coalition of the three Zionist underground movements and triggered severe repressive measures by the British authorities. The entire hotel was then put to the use by the British and remained so until their departure from Palestine on 14 May 1948.

During the Arab–Israel War of 1948 the King David Hotel briefly housed various officials of the Red Cross and the United Nations, including Count Folke Bernadotte, the United Nations mediator, and eventually the Israeli army, which used it as a front-line stronghold. After that war the hotel, which remained on the Israeli side of the divided city, was rebuilt and once again became a luxury residence that hosted many state guests of Israel, UN and U.S. peace mediators (such as U.S. secretaries of state Henry Kissinger, George Shultz, and James Baker), and prominent writers and journalists. In 1977 it played host to President Anwar al-Sadat and many of the diplomatic meetings that led to peace between Israel and Egypt.

KING SAʿUD UNIVERSITY

The oldest and largest university in Saudi Arabia.

Established in 1957 as the University of Riyadh and renamed in 1982, King Saʿud University has about 31,000 students, one-fourth of the country's total. In addition, it has some 2,700 instructors working in thirteen colleges, most on the large and modern Riyadh campus and others on smaller campuses in al-Qasim and Abha. The language of instruction for most subjects is Arabic, except for engineering and medicine, which are taught in English. During the 1961–1962 academic year, women were permitted to enroll as external students (taking correspondence courses from their homes) in the colleges of arts and administrative sciences for the first time. On-campus instruction became available to them beginning with the 1975–1976 academic year. As in other areas of Saudi society, women in higher education were given separate facilities and unequal access to areas of study. In the 1990s the university offered majors in sixty-one subjects and doctoral programs in Arabic, geography, and history.

KIRKBRIDE, ALEC SEATH

[1897–1978]

British army officer, colonial administrator, and diplomat.

Alec Seath Kirkbride was born in Leeds and moved with his parents to Egypt in 1906. In 1916 he enlisted in the Royal Engineers and was commissioned in the same year. In early 1918 he was posted to the Arab army, which was commanded by Amir Faisal bin Hussein of the Meccan Hashimite family. This put him in touch with a number of experts who would help shape British policy in the Middle East, including Wyndham Deedes, T. E. Lawrence, and David G. Hogarth.

After World War I Kirkbride was sent to Transjordan with some other British political officers (including his brother, Alan Logan Kirkbride) to assist the local chiefs in administering their territories, which the British in Palestine were reluctant to control directly. He was posted to al-Karak (the biblical Wall of Moab) and, with a sense of history, he called his administration the National Govern-

ment of Moab. He was the first British official to meet the amir, Abdullah I ibn Hussein (Faisal's brother) upon the latter's arrival in Transjordan in March 1921.

Between 1921 and 1939 Kirkbride served in various posts in the administration of Palestine and Transjordan. Until 1927 he was a member of the high commissioner's secretariat in Jerusalem. From 1927 to 1937 he was assistant British resident in Amman. Between 1937 and 1939 he served as district commissioner of Galilee and Acre. In 1939 he was nominated British resident in Transjordan, and when the country won its independence in 1946 he was upgraded to become the first British minister in Amman. Kirkbride was a lifelong friend of Amir (later king) Abdullah and became one of his closest advisers and confidants. Abdullah's assassination in 1951 had a traumatic impact on Kirkbride, and he asked to be transferred to another post. In late 1951 he was appointed the first British minister to Libya, a position he held until his retirement in 1954.

UPDATED BY JOSEPH NEVO

KIRKUK

A city in northeastern Iraq at the foot of the Zagros Mountains.

Historically a Kurdish city, Kirkuk today has an Arab plurality. According to the 1977 census, the population was 535,000; in 2004, it was estimated to be 784,100. The city is in the heartland of the Kurdish region; the Kirkuk oil field, the largest oil field in Iraq, is also the center of the Iraqi petroleum industry. Refineries and major oil pipelines lead from Kirkuk to Syria, Lebanon, and Turkey.

KIRYAT ARBA

Jewish settlement outside of Hebron (Khalil).

The name of Kiryat Arba is taken from the biblical description of the place where Abraham is reputed to have purchased a plot of land to bury his wife, Sarah. One of the oldest and largest Jewish settlements in the occupied West Bank, Kiryat Arba was established in 1968, after Rabbi Moshe Levinger and his followers checked into a Hebron hotel and refused to leave. By 2002, the population of Kiryat Arba numbered 6,000, with an industrial area and a number of educational—mostly religious—institutions.

Although many settlers came to Kiryat Arba for purely economic reasons, the community is particularly known for its militant leadership, committed to an ideology of extending Jewish sovereignty over the territories occupied by Israel in 1967 and provoking Arabs to emigrate. Many of the leaders of the Kach movement are residents of Kiryat Arba. Violent encounters with Palestinians in Hebron have continued through the years. Jewish settlers have been killed while on their way to worship at the Tomb of the Patriarchs (Machpelah Cave), and in 1994 a resident of Kiryat Arba, Dr. Baruch Goldstein, massacred Muslim worshipers in the al-Ibrahimi Mosque. Residents of Kiryat Arba formed the core of the Jewish settlers who took up residence in the city of Hebron itself, concentrating around a former Jewish property known as Bet Hadassah.

Under the terms of the 1997 Hebron Agreement negotiated by then prime minister Benjamin Netanyahu, Kiryat Arba retained a territorial link to the site of the Tomb of the Patriarchs in Hebron, although the rest of the city was transferred to the Palestinian Authority as part of the Oslo Accord.

UPDATED BY DAVID NEWMAN

KISAKÜREK, NECIP FAZIL

[1905–1983]

Turkish Islamist publisher and writer.

Born in Istanbul, Necip Fazil Kisakürek began his writing career at a Kemalist monthly youth magazine in the late 1920s. He wrote for other magazines, like Sedat Simavi's *Yedigün* (Seven days), and in 1936 started his own arts and ideas journal, *Ağaç,* which he published for one year. Kisakürek also published three volumes of poetry in those years and began writing plays about materialism and despair in modern life. Although his works in this period expressed the mystical turn of mind that would later inform his Islamist politics, in the 1930s, he joined Western-influenced artistic movements like the D-Group.

In 1945, he became editor of *Büyük Doğu* (Great east), an Islamist magazine whose anti-Westernization message carried influence particularly in rural areas. From 1950, the ruling Democrat party provided financial support to the magazine, but in a twist of politics, Kisakürek was jailed in 1952 in a crackdown on politically oriented Islamist publications. He resumed publication of *Büyük Doğu* and turned it into a daily paper in 1957. In the 1960s and 1970s, he alternatively lent his influence in religious circles to the National Salvation Party and to the neofascist National Movement Party of Colonel Alparslan Türkes. Kisakürek continued writing plays (several of which were made into films), poetry, and political memoirs in the 1960s and 1970s.

ELIZABETH THOMPSON

KISCH, FREDERICK HERMANN

[1888–1943]

British career officer; director of the Political Department and chairman of the Palestine Zionist Executive (PZE), 1923–1931.

Frederick Hermann Kisch was born in India, the son of a British civil servant. He served in military intelligence in Paris during and after the World War I peace conference (1919–1922). In 1923, Kisch's Anglo–Jewish background was put to use in efforts at improving the tense relations in Palestine between the Yishuv (Palestine's Jewish community) and the British mandate administration. Another of his priorities as PZE chairman was to convince both his superiors and local Jewish leaders of the importance of devoting more attention and funds to dealing with Arab–Jewish relations. He cultivated contacts with Amir Abdullah of Transjordan and others; supported C. M. Kalvaryski's attempts to organize a pro-Zionist Arab movement in Palestine; and sought to influence Arab opinion through press subsidies. He frequently criticized the British attitude of encouraging "extremist" Arab leaders while discouraging those who might have taken a more "moderate" view of Zionism. Throughout his tenure, he enjoyed the complete confidence of Dr. Chaim Weizmann, president of the World Zionist Organization, and was seen by many as "Weizmann's man" in Palestine.

After leaving his Zionist post in 1931, Kisch resided and worked in Haifa and continued to advise the Yishuv on security matters. In 1938, he published an edited version of the extensive diaries that he had kept during his period as political secretary and chairman of the PZE. In addition to detailing the day-to-day complexities of Anglo–Zionist and Arab–Jewish relations, his *Palestine Diary* offers a colorful portrait of the political parties and personalities of the Yishuv during a formative period of its development.

Kisch returned to active military service in World War II as an army engineer with the rank of brigadier. He was killed while inspecting a minefield in Tunisia.

NEIL CAPLAN

KISSINGER, HENRY

[1923–]

American diplomat.

Born in Fürth, Germany, Henry Alfred Kissinger moved with his Jewish middle-class family to the United States in 1938 trying to escape from Hitler's antisemitic regime. They settled in New York and were naturalized U.S. citizens in June 1943. Kissinger studied at City College, joining the U.S. Army in 1943, serving as an interpreter and intelligence officer in Europe. Once back in the United States in 1947, he received a bachelor of arts degree, summa cum laude, at Harvard in 1950, a master of arts degree in 1952, and a doctorate in 1954, both at Harvard, where in 1957 he became a professor of government and international affairs. As a scholar, Kissinger contributed to the realist school of international relations, which argued that foreign policy should be based on rational calculations of state interests, not on ideals of freedom and democracy.

During the administrations of presidents John Fitzgerald Kennedy and Lyndon Baines Johnson, Kissinger played the role of part-time consultant, and he was the main intellectual force in engineering Kennedy's "flexible response" strategy, which aimed at maintaining both conventional and nuclear forces to react against Communist aggression, instead of using massive nuclear retaliation. As his biographer Robert Schulzinger has pointed out, Kissinger "engineered the most significant turning point in United States foreign policy since the beginning of the cold war." Kissinger founded his foreign policy on two ideas: the raison d'état, in which the national interest justified any means to pursue a country's aim; and the balance of power, in which no country is dominant, and in its independence can choose to align or oppose other nations, always according to its national interest. During the Cold War, Kissinger criticized the U.S. view that "the Soviet Union was an ideological rather than a geopolitical threat." Considering that the world's trend was competition instead of cooperation, it was necessary for the United States to continue to be present in two critical theatres, Europe and Asia, but in a moderate role.

U.S. secretary of state Henry Kissinger, left, speaks with Egyptian president Anwar al-Sadat. **© CORBIS. REPRODUCED BY PERMISSION.**

From 1969 to 1975, Kissinger served as national security adviser. He completely changed the role of the secretary of state and the professional foreign service, transferring their power to the White House. This decentralization led him to personally conduct secret negotiations with North Vietnam, negotiating the Paris agreements of 1973 that ended the U.S. involvement in Vietnam; with the Soviet Union, designing the first détente; and with China, reviving their relations, first with his secret trip to Beijing in July 1971, followed by President Richard Nixon's visit in February 1972. Unfortunately, in the short run Kissinger's diplomacy, based on force and realism, did not see the results of its efforts. The Communist victory in Vietnam in 1975 and the end of détente with the Soviet Union diminished Kissinger's previous foreign policy achievements. Moreover, the role that he played in the bombing of Cambodia in 1969 and in Chile's coup d'état backed by the Central Intelligence Agency (CIA), which led to the death of President Salvador Allende in 1973, still overshadow his reputation as a statesman.

As secretary of state from 1973 to 1977, he was the chief architect of the so-called "shuttle diplomacy" to the Middle East. For much of Nixon's first

Henry Kissinger (b. 1923) served as secretary of state under both Gerald Ford and Richard Nixon. Although his actions in the Cambodian and Vietnam wars have been heavily debated, he commanded a great deal of respect, and in 1973 was awarded the Nobel Peace Prize, along with Vietnamese leader Le Duc Tho. Kissinger, right, is pictured with Israeli prime minister Yitzhak Rabin. © MOSHE MILNER. GOVERNMENT PRESS OFFICE (GPO) OF ISRAEL. REPRODUCED BY PERMISSION.

term, the Middle East was a marginal area; in fact Kissinger, as national security adviser, did not support Secretary of State William P. Rogers's 1969 Middle East peace plan, even after Egypt's President Gamal Abdel Nasser accepted it as a framework for negotiations. Kissinger suggested that a prolonged stalemate "would move the Arabs toward moderation and the Soviets to the fringes of Middle East diplomacy." But in 1973 the Arab–Israeli conflict moved from the periphery to center stage of American strategic interests. Kissinger, appointed secretary of state that September, was determined to use the war to start a peace process. He immediately realized that if either Israel or the Arabs achieved a decisive victory, it would be difficult to reach a compromise solution during peace negotiations. His strategy was therefore to seek a return to the prewar situation, thereby preventing either side from winning the war while creating momentum for a peace process. His gradualist approach lasted a good twenty-three months, in the course of which five agreements were concluded. Negotiations commenced immediately following the cease-fire of 22 October 1973, on 23 October at Kilometer 101 on the Cairo-Suez road. Kissinger believed it would be a mistake to seek a comprehensive settlement that could not be attained and that, by leading to frustrated expectations, would result in an enhanced role for the Soviet Union in the Middle East. Instead, he elected to pursue a step-by-step approach: achieving more modest goals that, by producing results, would create the momentum needed to tackle the bigger issues. This strategy led to the formal signing of the so-called Six-Point Agreement, signed by Egyptian and Israeli military representatives at Kilometer 101 on 11 November 1973, when the two countries exchanged prisoners of war. The second agreement was to convene a conference in Geneva under joint American-Soviet auspices with the participation of Israel and the Arab States. The conference lasted two days (21–22 December 1973) and was attended by the United States, the Soviet Union, Israel, Egypt, and Jordan, and the secretary-general of the United Nations, Kurt Waldheim; it turned out to be nothing more than a symbolic event. In January 1974 Kissinger began the third episode of his shuttle diplomacy: a series of flights between Aswan, Tel Aviv, and Jerusalem, during which he hammered out the terms of Sinai I, a disengagement agreement separating the armies of Israel and Egypt, signed on 18 January at Kilometer 101. In May 1974 Kissinger undertook a fourth round of shuttle diplomacy, this time between Damascus and Tel Aviv, to reach a disengagement agreement between Syria and Israel. The armistice was signed on 31 May. After negotiations between Jordan and Israel, and between Israel and Egypt, failed in March 1975, Kissinger, as President Gerald Ford's secretary of state, embarked on the fifth and last round of shuttle diplomacy; he negotiated Sinai II, signed on 1 September, which called for further withdrawal of Israel's troops into the Sinai desert.

DAVID WALDNER
UPDATED BY PAOLA OLIMPO

KITCHENER, HORATIO HERBERT

[1850–1916]

First earl of Khartoum, British field marshal, and colonial administrator in the Sudan, 1899–1900, and in Egypt, 1911–1914.

Horatio Herbert Kitchener was born in Ireland, the second son of Henry Horatio Kitchener, an eccentric Anglo–Irish landowner. Educated at home, then in Switzerland (where he became fluent in French), and at the Royal Military Academy, Woolwich, England, Kitchener was commissioned in 1871 into the Royal Engineers. He devoted most of the rest of his life to sustaining the British Empire in Egypt, the Sudan, South Africa, and India. He never married.

While working on land surveys in Palestine, Cyprus, and the Sinai Peninsula between 1874 and 1883, he learned Arabic and acquired a passion for porcelain and old furniture. He joined the reconstituted Anglo–Egyptian army in 1883, after Britain had occupied the country in 1882 because of Suez Canal debts and the Urabi revolt. He participated in Lord Wolseley's tardy expedition of 1885 that failed to rescue the hapless British General Charles ("Chinese") Gordon at the siege of Khartoum in the Egyptian Sudan. He also helped delimit the territory of the sultan of Zanzibar and served as governor-general of the Eastern Sudan before returning to the Anglo–Egyptian army as adjutant general in 1888.

Kitchener's exploits in battle against the Mahdi and his followers and his reputation as a methodical and penurious military organizer captured the attention of the British public and ruling elite. He was promoted to *sirdar* (commander in chief) of the Anglo–Egyptian army in 1892. Under control of the Foreign Office and Lord Cromer, Kitchener brilliantly organized the River War campaigns of 1896–1898, which ousted the followers of the Mahdi from the Sudan. His desecration of the Mahdi's remains failed to harm his extraordinary popularity in England, and the mustachioed Kitchener of Khartoum became the symbol of Great Britain at her imperial zenith.

At Fashoda, in 1898, he repulsed France's efforts to control the Nile's headwaters. In South Africa, he organized the ruthless crushing of the Boers. Then, while commanding the Indian Army, he deviously wrecked the political career of India's viceroy, Lord Curzon. When Sir Eldon Gorst (the former British foreign office agent and consul-general in Egypt) died in 1911, the Liberal government sent Kitchener back to Egypt as agent and consul-general, with instructions to keep Egypt quiet while seeing to its economic health.

Kitchener was regal in style, where Gorst had been self-effacing. Egypt was relatively quiet politically during Kitchener's tenure, and he worked to improve the lot of the Egyptian *fellah* (peasant) and extended the irrigation system. He banned nationalist newspapers and excluded certain Egyptian leaders, including Saʿd Zaghlul, from office. At least two attempts by nationalists to assassinate him failed. He cut Khedive Abbas Hilmi II's finances, trying, unsuccessfully, to force him to abdicate. As the Ottoman Empire waned, he kept Egypt "neutral." Hoping to bring it and the Sudan under formal British control, he sought to end the Capitulations and opened anti-Ottoman discussions with various Arab leaders, especially the son of Sharif Husayn ibn Ali of Mecca.

When World War I began, British Prime Minister Herbert H. Asquith insisted Kitchener join the British cabinet as war minister. He grasped the nature of modern war, but his popularity and prestige were not enough to compensate for his deficiencies as a politician, administrator, and organizer. He died midway through the war.

PETER MELLINI

KLÉBER, JEAN-BAPTISTE

[1753–1800]

French general.

Jean-Baptiste Kléber accompanied General Napoléon Bonaparte to Egypt in 1798, and was placed in command of the expeditionary force of France after Napoléon's departure in 1799. Kléber then negotiated the terms of the French evacuation with Britain's Admiral Sidney Smith, but when the British government refused the terms, Kléber attempted to reconquer Egypt. He defeated an Anglo–Turkish army at Heliopolis in 1800 and took Cairo, but was then assassinated by an Egyptian.

ZACHARY KARABELL

KNESSET

The parliament of Israel.

The Knesset is unicameral, with 120 members who are elected for a term of four years. A majority may call for early elections. The Knesset's power of judicial review is limited, but it can, with special majorities (that is, fixed numerical requirements that may be more than a majority of those present and voting on a given occasion), change the Basic Laws—the constitution. (Only simple majorities—more than half of those present in the Knesset at any given time, which could be less than half of the 120 Members of Knesset—are necessary to make ordinary legislation.) The Knesset chooses the prime minister, the cabinet, and the symbolically important president of the state, and it can dismiss the government through a no-confidence vote. In addition to legislative duties, it has broad investigative powers. It must be in session for at least eight months of each year. Members enjoy wide legislative immunity.

Most of the Knesset's work is done by standing committees. The legislative process is similar to those of most other countries. After a first reading, a bill is sent to committee where it may be studied and amended, after which it returns to the full Knesset for second and third readings. Israel has a classical parliamentary system; the Knesset has relatively little political independence. Committee membership corresponds to party strength in the Knesset, and deputies are restrained by their parties under tight discipline. Knesset members may introduce private bills, question members of the government, and present motions for debate of subjects not on the government's agenda. However, these rarely have a significant impact.

Knesset members are subordinate to political parties because of the electoral system, a single national constituency in a proportional representation system. Voting is by party lists. Until 1992 parties needed only 1 percent of the votes to win a seat, and the result of this system was the presence of numerous small parties. There has never been a time when a single party had a majority in the Knesset; coalitions have always been necessary. When the threshold was raised to 1.5 percent in 1992, the number of parties dropped markedly.

Structural characteristics strengthen the role of the executive at the expense of parliamentary independence. It has been estimated that 95 percent of the bills are introduced into the Knesset by the government. Knesset debate on them, both in committees and on the floor, seldom leads to any outcome other than that desired by the coalition members.

UPDATED BY GREGORY S. MAHLER

KOCHI

See GLOSSARY

KOÇ, VEHBI

[1901–1996]

Turkish businessman.

Born in Ankara, Vehbi Koç entered trade in 1917 at a grocery store in Karaoğlan. In the 1920s he founded his own company and accumulated businesses steadily, emphasizing assembly industries for import substitution, including cars and trucks. By the 1970s he was called the wealthiest man in Turkey. Koç's group sales doubled in the 1970s to $1.1 billion, profiting particularly from increased demand for consumer goods. In 1987, he controlled 117 firms. Koç Holding A.S. remained in the early 1990s the largest of an elite group of conglomerates that dominate Turkey's private economy. These companies have benefited from government ties and foreign capital.

Koç remained a member of the original state Republican People's Party through the 1950s, when many businessmen were attracted to the new Democrat Party and its call for free enterprise. But he resigned from his party in 1960, opposing the growing violence between the two, which harmed the business environment. After the military coup of 1960, Koç advocated strong government against anarchy, although in the 1970s he opposed efforts by the employers' union to allow government to intervene in collective bargaining. As a leading member of the Turkish Industrialists and Businessmen's Association (Tüsiad), he advocated social reform in conjunction with promoting Turkey's entrance into the European Economic Community. His son Rehmi M. Koç took over as chairman of the vast Koç Holding A.S., which in 2001 employed some 39,800 people.

KOLLEK, TEDDY

[1911–]

Israeli politician; mayor of Jerusalem, 1965–1993.

Teddy Kollek was born in Hungary and moved to Mandatory Palestine in 1934. In 1935 he became a founding member of Kibbutz En Gev. In 1942 he was recruited by the Jewish Agency to serve as an intelligence officer in Istanbul, where he maintained contact with Jewish communities in Europe. After returning from Istanbul in 1943, Kollek worked for the intelligence branch of the Jewish Agency and was frequently sent to Cairo, where he arranged for stolen British weaponry to be smuggled to Palestine for the Haganah.

During the 1940s his principal contribution to the Zionist movement was the acquisition of armaments, primarily in the United States. After returning to Jerusalem following World War II, Kollek supported David Ben-Gurion in the formative years of Israel's independence. He was sent back to the United States to work with Abba Eban in the Israeli embassy and was responsible for liaison with Jewish groups and the U.S. State Department. In 1949 he was made head of the United States desk of Israel's Foreign Ministry and from 1952 to 1964 served as director general of the prime minister's office.

Shimon Peres first recommended that Kollek run for mayor of Jerusalem in 1965. He wanted Kollek to represent his new party, Rafi, which was primarily made up of Ben-Gurion supporters who were unhappy with MAPAI. Although Kollek did not want the position, he accepted the assignment to support Ben-Gurion. Kollek won, and soon afterward began working for the social, political, and geographical unification of Jerusalem after the eastern part of the city was conquered from Jordan in the June 1967 war. He made overtures to the city's Palestinian population and strove to make all religious groups, orthodox as well as secular, feel that they had a place in the city. One of Kollek's initiatives involved establishing the Jerusalem Foundation, the goal of which was to raise money for the beautification and cultural enhancement of the city. The foundation was an enormous success and was instrumental in a great number of cultural and recreational initiatives.

During his later years in office Kollek was criticized by many, including his deputy mayor, Meron Benvenisti, for paying much more attention to the development of Jewish Jerusalem than he did to Palestinian (East) Jerusalem. Palestinians were

especially frustrated by bureaucratic hurdles placed in the way of their building and developing their land, while Jewish developers received government encouragement.

Although Kollek was offered other positions over the years, including the ministry of tourism, the Weizmann Institute of Science, and the Jewish Agency, he remained as mayor of Jerusalem. In 1988 he was awarded the Israel Prize for his accomplishments. Five years later, after serving as mayor for more than twenty-five years, he was defeated by Likud candidate Ehud Olmert.

GREGORY S. MAHLER

KOL, MOSHE

[1911–1989]

Israeli cabinet minister and political leader.

Moshe Kol was one of the signers of Israel's Declaration of Independence and a member of the provisional government. He was born on 28 May 1911 in Pinsk, Belorussia. He attended a Hebrew secondary school, founded a local Zionist youth movement, edited a Hebrew newspaper, and was one of the founders of the World General Zionist Organization.

Kol arrived in Palestine in 1932 and was active in many Zionist organizations. He became a member of the Histadrut's Executive, a post which he held until 1947. He was active in youth *aliyah* (immigration) activities, and in 1948, just before the formation of the state of Israel, he was elected world head of Youth Aliyah.

Kol was elected to the First Knesset and chaired its Education Committee. He headed the Progressive Party from 1949 and was chairman of the Liberal Party from 1961 to 1965, when the Progressives joined the Liberals. After the 1965 split in the Liberal Party, Kol founded and led the Independent Liberal Party. He held many Jewish Agency and cabinet posts during his lifetime, and served as minister of development and tourism (1965) and minister of tourism (1969). He died on 7 July 1989.

KONYA

Large city in central Turkey and capital of Konya province.

Konya is located in a large fertile plain in Anatolia. A town has existed on its site since at least 1200 B.C.E. When the area was part of the Roman Empire, the town was known as Iconium. Konya was the capital of the Seljuk Turks' kingdom in Anatolia between 1081 and 1334 and contains several historical monuments dating from that period, most notably the monastery and tomb of Celaleddin Rumi (d. 1273), a leading founder of Sufism and Sufi Orders. Modern Konya is a major industrial center and one of Turkey's largest cities, with a population of approximately 1.3 million. Konya province ranks as the country's major grain-producing region. The total population of the province (including the city of Konya) was 2,192,166, according to the census of 2000.

KONYA, BATTLE OF

Victory of Egyptian forces over the Ottoman army in December 1832.

An army sent by Egypt's Muhammad Ali and led by his son Ibrahim Paşa occupied Konya on 21 November 1832 after sweeping through Palestine and Syria during the previous year. On 21 December, outside of Konya, Ibrahim Pasha defeated the army sent by Sultan Mahmud II and led by Mehmet V Reşat, opening the way for conquest of all of Anatolia. Russian, British, and French intervention forced an Egyptian retreat to Syria and Cilicia, which was formalized in an agreement in March 1833.

ELIZABETH THOMPSON

KOOK, ABRAHAM ISAAC HACOHEN

[1865–1935]

Religious Zionist theoretician.

Born in Latvia, Abraham Isaac Hacohen Kook received his early education was in the local *cheder* (Jewish day school). His father was a scholar who gave him a great love for Eretz Yisrael, the Land of Israel. He then studied privately with several well-known Jewish scholars and, later, in the yeshiva in Volozhin. In addition to the traditional Talmud, he studied literature, philosophy, and kabbalah (Jewish mysticism), during his young adult years; he also began writing on Talmudic literature, philosophy, and poetry. He served as a rabbi in Lithuania from 1888 to 1904 and immigrated to Palestine in 1904, where he was appointed rabbi of Jaffa. His enthusiastic support of Zionism, which he perceived as part of messianic redemption, antagonized much of the rabbinic leadership, whose members opposed, on religious grounds, both the notion and the movement. In 1914, he traveled to Europe and, prevented from returning by the outbreak of World War I, assumed the temporary position of rabbi in a London congregation; there he also attempted to establish a movement for spiritual renewal, Degel Yerushalayim (Flag of Jerusalem), which was to supplement the secular Zionist movement. He returned to Palestine after the war, was appointed chief rabbi of Jerusalem and, when Palestine's rabbinate was established in 1921, he was selected as the Ashkenazic chief rabbi.

Kook's personal warmth and his interaction with all Jews, regardless of their degree of religiosity, as well as his attribution of holiness to all participants in the Zionist endeavor, became legendary and won him admiration even among the most secular Zionists; they mistook his individual acceptance of them as acceptance of their secularism in principle, however. Although firmly entrenched in traditional learning, he was also well versed in modern Western thought. He manifested simultaneously the sensitivity of the mystic and the intellectual sharpness that took cognizance of the rational. As a communal rabbi, he was attuned to contemporary difficulties and attempted to accommodate his rabbinic decisions to both his interpretation of religio-legal decision making and the contemporary situation. This was, at times, another source of tension in his relations with various Orthodox Jewish sects. Another manifestation of his relatively modern perspective was his view of higher Jewish education. He established a school, the yeshiva Merkaz ha-Rav, which was unique in its incorporation of Bible studies and Jewish thought with traditional Talmudic studies, to promote a deep commitment to Zionism. The yeshiva was small and remained so after his death, when it was headed by his son, Rabbi Zvi Yehuda Kook, and his son-in-law, Rabbi Shalom Natan Raʿanan. It became a major institution only after the Arab–Israel War of June 1967.

Kook's voluminous writings are available in Hebrew, but only a few have been translated into English.

See also ARAB–ISRAEL WAR (1967); KOOK, ZVI YEHUDA.

CHAIM I. WAXMAN

KOOK, ZVI YEHUDA

[1891–1982]

Lithuanian-born rabbi, teacher, and leader of Gush Emunim, the religious Zionist settlement movement.

Zvi Yehuda Kook was born in Kovno, Lithuania, the son of Rabbi Abraham Isaac Hacohen Kook. The family immigrated to Palestine in 1904, and Zvi studied in yeshiva (Jewish religious school) in Jerusalem. Later, he administered his father's yeshiva, Merkaz ha-Rav. When his father died, in 1935, he began editing his father's extensive writings. He retained his father's mystical tradition and devotion to Zionism.

After the Arab–Israel War of June 1967, Kook's messianic approach to Zionism attained new levels of political significance. He advocated that Israel keep all the territories captured in that war, which made him a nationally known figure instead of the relatively quiet scholar he had been. He became the spiritual leader of the dominant nationalist wing of the religious Zionist movement. Following the October 1973 Arab–Israel War, he led the settlement movement called Gush Emunim into the new administered territories and opposed the evacuation of settlers from the Sinai, as was agreed by Israel and Egypt in the Camp David Accords.

Most of his writings, which include traditional essays on the Talmud and volumes on contemporary public issues, were edited by students and published posthumously.

KOOR INDUSTRIES

Major Israeli industrial conglomerate.

Koor Industries was founded by the Histadrut in 1944, and until 1958 it was part of the Solel Boneh group. Its main areas of activity are building materials, electronics, telecommunications, and chemicals.

Koor's biggest component is Tadiran, one of Israel's largest companies, a producer of electrical, electronic, and telecommunication equipment. It also owns Telrad, another major telecommunications producer. Other large companies in the group include the Nesher cement company and Soltam, an armaments firm, which has incurred financial losses as a result of declining military purchases. Among the older companies in the group are Phoenicia, a glassmaking company, and Koor's metal production subsidiary.

Between 1987 and 1989, Koor suffered a major financial crisis and accumulated losses of US$845 million. In 1989 alone, its losses came to US$303 million. After protracted negotiations between Hevrat Ovdim, the government, and the banks of Israel and abroad to whom Koor was in debt, the company was rescued by a government loan, made on condition that it implement a radical restructuring program. This involved reducing the labor force, selling subsidiaries, and closing unprofitable production lines. Koor's workforce fell from 31,000 in 1987 to about 17,000 in 1992. It has shares in 35 companies, compared with 130 in 1989.

In 1991 and 1992, Koor's financial position improved and its net profits in 1992 came to 375 million shekels. It has raised funds on the stock exchange and has been able to repay debts owed to the banks.

Given that the company was owned by the Histadrut, this posed serious ideological problems, but reforms were implemented. Koor's admission to the manufacturers' association of private sector employers in 1992 was an indication of the extent of these changes. It remains one of the largest industrial groups in the economy, although its share in total industrial output declined sharply from about 25 percent in the early 1980s to about 8 percent in 1992. In that year, Koor's sales came to 6.1 billion shekels ($2.5 billion), of which 1.8 billion shekels ($725 million) were exports. Its operating profits equaled 630 million shekels. Koor is now considering investments in the tourist and retailing sectors.

Koor's shares are owned by the Israeli bank, Hevrat Ovdim, the government of Israel, and others. In 1993 the government sold shares that it acquired in exchange for loans made to Koor.

PAUL RIVLIN

KOPRÜLÜ, MEHMET FUAT

[1890–1966]

Turkish literary scholar, historian, and statesman.

Born in Istanbul during the last decades of the Ottoman Empire, Mehmet Fuat Koprülü was descended from a family of viziers and taught at the Ottoman University (reorganized as Istanbul University) from 1913 to 1943. He was a prolific scholar, best known for his many fundamental contributions to the study of Turkish and Ottoman classical and folk literature, religion and political and institutional history. Koprülü was also prominent in public life. He was elected to the Turkish Grand National Assembly in 1935, representing Kars and, later, Istanbul until 1957. He was a cofounder of Turkey's new opposition Democrat Party in 1946; following the party's 1950 electoral victory, he served as foreign minister (1950–1956), except for a brief period as a minister of state and deputy prime minister (1955).

See also DEMOCRAT PARTY; TURKISH GRAND NATIONAL ASSEMBLY.

ULI SCHAMILOGLU

KORDOFAN

Region and administrative province of Sudan.

Kordofan (Kurdufan) is bounded by the White Nile on the east, Darfur in the west, the Bahr al-Arab River in the south, and desert in the north. In the southeast corner of the plain the Nuba Mountains (2,000–4,000 feet; 610–1220 meters) rise dramatically from the surrounding plain inhabited by the Nuba people (unrelated to the Nubians of the Nile Valley in northern Sudan). The Nuba are farmers who have crafted complex terraces on their hillsides and cultivated fields on the plains below. Known for their complex body decoration, musical performance, and wrestling (which is an obsessive pastime), each hill community has its own culture. They speak more than a dozen Kordofanian languages and the Arabic of the Baggara Arabs, with whom they have an historic and hostile relationship. The Baggara are cattle-owning nomads who roam widely over the plains surrounding the Nuba Mountains. They were the first and most fervent followers *(al-Ansar)* of Muhammad Ahmad al-Mahdi and remain firm supporters of the Mahdi's great-grandson, the leader of the Umma Party, Sadiq al-Mahdi. Since the 1980s the Baggara Arabs, supported by the Sudanese government, have seized the opportunity presented by the civil war to drive the insurgent Nuba from the plains and destroy their sanctuaries in the hills in the name of Islam. This has aroused the concern and intervention of the international community, which aims to preserve the Nuba and their culture.

ROBERT O. COLLINS

KOSHER

In Judaism, refers to dietary regulations for daily life.

Kosher is a Yiddish word, from Hebrew *kasher,* "proper" or "fit." The laws of *kashrut* (dietary laws) define foods fit for use, those that are kosher for Jews. They are mentioned in numerous verses of the Bible (especially in Deuteronomy), but they were interpreted for daily use by the sages of the Talmud (in the commentaries called the Mishnah, c. 200 C.E., and in the Gemarah, commentaries on the Mishnah). They went into effect, for the most part, during the early Diaspora, and they helped establish both a religious and a folk sense of community among a dispersed nation. Those who traveled, who were engaged in international trade, or who were dispossessed from century to century could seek others who shared a sense of proper food handling.

The laws of kashrut define how to kill, handle, and prepare meat and dairy products. They define which animals may be considered food at all, and which parts of kosher animals may be used. For example, fish without fins and scales may not be eaten, and animals without horns and cloven hooves may not be eaten. Animals that eat carrion are unfit, as is the eating of meat with dairy products. Vegetables, fruits, and grains are never unfit. Thus, out of necessity, many Jews who travel without kosher food available become vegetarians in order to keep the kashrut tradition.

ZACHARY KARABELL

KOVNER, ABBA

[1918–1987]

Organizer of Vilna ghetto revolt, World War II partisan leader, and acclaimed Hebrew poet.

Born in Sevastopol, Russia, and raised in Vilna, Poland. Kovner joined ha-Shomer ha-Tzaʿir and planned immigration to Eretz Yisrael (Palestine) but was prevented by the German invasion of 1941. His wartime resistance activities—notably in founding an umbrella resistance force in the Vilna ghetto, the United Partisans Organization—made him a symbol of the heroism of Jewish fighters in the Holocaust to generations of Israelis. Kovner cofounded the Jewish Museum in Vilna in 1944, then helped to organize clandestine Jewish immigration to Eretz Yisrael, cofounding the Brichah, and was briefly imprisoned by the British in Egypt. On his release, he joined the Givʿati brigade and fought in the Arab–Israel War of 1948. Books of Kovner's poetry, which focuses on the Holocaust and Zionism, were published in Israel in the 1940s (reprinted from partisan newsletters), 1950s and 1960s. At the Eichmann trial in 1961, Kovner testified to the brutality of Germans and their collaborators in the Vilna ghetto, as well as to reprisals meted out by Jewish partisans against captured German soldiers. Kovner's poetry, mimicking the epics of the Russian symbolists, focused on his experience of the Holocaust in Vilna and his sense of isolation as a survivor thereafter. For Kovner, postwar Jewish and Israeli experience was also part of the ongoing experience of the Holocaust. His work thus traced reflections of the Holocaust in the present and was not solely a lament of the losses and pain of the past—for example, his 1970 poem "Huppa bamidbar"' (A canopy in the desert," Kovner, 1973).

Kovner cofounded the Holocaust journal *Yalkut Moreshet* in 1963, and was awarded the coveted Israel Prize for literature in 1970, though few of his Israeli contemporaries shared his focus on Jewish resistance, viewing European Jews instead as predominantly passive victims of the Nazis.

ZEV MAGHEN
UPDATED BY GEORGE R. WILKES

KRIM, BELKACEM

[1922–1970]

Algerian revolutionary leader.

A Kabyle (a Berber group), Belkacem Krim was born near Dra-el-Mizan and was an employee of the Mirabeau mixed commune. In 1945 he joined Messali al-Hadj's Parti du Peuple Algérien and then the Organisation Spéciale. Following the assassination of a forest ranger in 1947, Krim was always on the run from French authorities. In 1954 he assisted in the organization of the Comité Révolutionnaire d'Unité et d'Action, which led to the formation of the Front de Libération Nationale (FLN) and became one of the nine "historic chiefs" of the revolution (the Algerian War of Independence,

1954–1962). During the Gouvernement Provisoire de la République Algérienne years, he served as war minister (1958), vice president of the Council of Ministers (1958), foreign minister (1960), and minister of the interior (1961). He was the chief FLN negotiator with the French, resulting in the Evian agreement (March 1962). He opposed Ahmed Ben Bella and was eventually forced to leave Algeria, given his opposition to Houari Boumédienne, who took over the government in June 1965. In 1969 he organized in opposition the Mouvement Démocratique de Renouveau Algérien. He was assassinated, probably by Boumédiennist agents, in Frankfurt in 1970. Krim was officially rehabilitated in 1984.

KUCHEK KHAN-E JANGALI

[1888–1921]

Iranian revolutionary fighter.

Mirza Kuchek Khan-e Jangali was born in Rasht, Iran. He attended religious school in Tehran and was in contact with Russian revolutionaries in Baku and Tbilisi. He cooperated with the constitutional revolution of 1905–1911 but he espoused a religious pan-Islamist worldview. From 1909 to 1911, he collaborated with the constitutionalists in fighting the despotic Qajar monarch, Mohammad Ali Qajar. In 1913, Mirza Kuchek Khan was exiled to Tehran, where he frequented political and pan-Islamist religious meetings. In 1914 he returned to his native Gilan and rose in rebellion against the central government with the help of Ottoman and German military advisers. The movement's official organ, *Jangal,* was published in 1917. Following the Bolshevik revolution of 1917 and the Anglo–Iranian Agreement of 1919, Mirza Kuchek Khan sided with the Russian Bolshevik regime and, in 1920, proclaimed the Socialist Republic of Gilan. The Soviet–Persian Agreement of 1921 reversed all czarist policy in Persia, and Mirza Kuchek Khan was hence deprived of Soviet support. He was executed in 1921. During the lifetime of the Gilan republic, he initiated a land-reform policy and was intent on eradicating foreign influence, even that of the Russians, in Iran. Mirza Kuchek Khan was also a poet and wrote under the pen name of "Gomnam," which means "unknown."

KUDSI, NAZIM AL-

[1906–1998]

Syrian lawyer-politician, born in Aleppo, from landowning, scholarly Sunni family.

During the French mandate, Nazim al-Kudsi (or al-Qudsi) was one of the leaders of the Nationalist Youth (al-Shabab al-Watani), an elitist organization that began to take shape in Damascus at the encouragement of Fakhri Bey al-Barudi, a Damascene notable. Al-Kudsi's class origin and the advanced Western education he received in Beirut and Geneva enabled him to acquire a number of political positions: leader of the Aleppo-based People's party; member of the Syrian parliament; foreign minister and prime minister for brief intervals in 1949, 1950, and 1951; president of the Syrian parliament from 1951 to 1953 and from 1954 to 1957; and president of Syria following the dissolution of the Egyptian-Syrian union in 1961. Following the Baʿth party coup of March 1963, al-Kudsi withdrew from political life and left Syria to live in Lebanon from 1963 to 1986, later taking up residence in France. He died in Jordan in February 1998.

KURD ALI, MUHAMMAD

[1876–1953]

Syrian historian, literary critic, and educator.

Muhammad Kurd Ali was a man of letters who began his career during the Ottoman Empire as a pioneer journalist and then devoted his mature years to scholarship as a historian, literary critic, and memoirist. His writings embraced a wide range of subjects, but he paid special attention to the historical achievements of Arab–Islamic civilization and to a comparison of those achievements with the ascendancy of Western Europe.

Kurd Ali's father was from a long-established Damascene (Syria) family of Kurdish ancestry, while his mother's family was Circassian (from the Caucasus region of Russia). The family was of modest means. Kurd Ali's upbringing took place during a period of intellectual ferment in Damascus. Therefore, he was the beneficiary of a considerable range of educational opportunities, both formal and informal. After completing his secondary studies at a standard government school, he spent two years at the Lazarist school in Damascus where he acquired fluent French and began a lifelong appreciation of French literature and culture. He was also profoundly influenced by his personal contact with the Damascus circle of religious reformers and studied under their most prominent member, Tahir al-Jazaʾiri. In addition, he was a friend of Rashid Rida and an admirer of Muhammad Abduh, whose lectures he attended at Cairo's venerable institution of Islamic learning, al-Azhar University. Kurd Ali's outlook was further shaped by two lengthy visits to Europe (1908 and 1913), which convinced him that Western society possessed certain attributes that were worth emulating.

In 1901, Kurd Ali took up residence in Cairo, where he honed his journalistic skills in the lively Egyptian press, writing and editing for such well-known publications as *al-Muqtataf* and *al-Muʾayyad.* He founded his own journal, *al-Muqtabas,* in 1906 and transferred it to Damascus in 1909. It was as the publisher, editor, and principal correspondent of *al-Muqtabas* that Kurd Ali rose to prominence in Damascene society. *Al-Muqtabas* was an outspoken reformist journal that addressed such sensitive issues as Ottoman misrule, the stagnation of the Islamic world, and the special role the Arabs had to play in the revival of Islam. Despite his criticism of the Ottoman government, Kurd Ali favored Syria's continued affiliation with the empire. During World War I, he supported the government by serving on the editorial board of an Ottoman-sponsored newspaper, *al-Sharq.*

Following the Ottoman defeat and the establishment of a separate Syrian state, Kurd Ali abandoned political journalism. Although he served two terms as Syrian minister of education (1920–1922 and 1928–1931), he generally eschewed politics and devoted his energies to scholarship. He played a leading role in the establishment of the Arab Academy of Damascus in 1919 and served as its director until his death. Modeled on the Académie Française, the Arab Academy facilitated the publication of classical and contemporary works in Arabic and generally sought to encourage a public interest in literature. Kurd Ali's personal contributions to this endeavor were substantial. He edited several classical texts, compiled a six-volume history of Syria *(Khitat al-Sham),* and wrote other works on literature and on the achievements of Arab–Islamic civilization. He also published four volumes of memoirs.

Kurd Ali's historical studies were intended not only to inform readers about the past but also to demonstrate the positive achievements of Arab–Islamic civilization. He believed that European progress was generated by the rediscovery of ancient knowledge during the Renaissance, and he argued that Arab Muslims must become aware of the achievements of their ancestors in order to experience their own awakening and renewal.

KURDISH AUTONOMOUS ZONE

Region of northern Iraq where Iraqi Kurds have been living under de facto autonomy since 1991.

At the instigation of France, on 5 April 1988 the United Nations Security Council produced Resolution 688 condemning "the repression of the Iraqi civilian population in many parts of Iraq, including most recently in Kurdish populated areas" and demanding "an immediate end to this repression" and immediate access to all parts of Iraq for humanitarian organizations. Given this international awareness of the plight of the Kurds, the collapse of the Kurdish uprising in March 1991 that followed the Gulf War and the flight of hundreds of thousands of Kurds to the borders of Turkey and Iran shocked Westerners. On 10 April, under pressure from his own constituents, U.S. president George Bush prohibited Iraqi planes from flying north of the 36th parallel, creating the so-called No-Fly Zone, and on 17 April he announced the creation of a "safe haven" inside Iraqi Kurdistan. At first, the Allies created three protection zones: around Zakho, Amadia, and Shila Diza. The signing of a Memorandum of Understanding between the UN and the Iraqi government on 18 April 1991 allowed the repatriation of thousands of Kurdish refugees within the framework of Operation Provide Comfort.

While Masʿud Barzani, Jalal Talabani, and the other leaders of the Kurdistan Front, a coalition of Kurdish parties, were negotiating with Iraq's President Saddam Hussein in Baghdad, an uneasy military situation prevailed in Kurdistan. The Kurdish *peshmergas* ("those who face death," i.e., fighters) were able to enter the cities of Erbil and Sulaymaniyya, which were theoretically still controlled by the Iraqi army. On 20 August 2002 Barzani returned to Kurdistan with a draft agreement that was rejected by the other parties, ending the negotiations. In October 2002 the Iraqi armed forces and the Iraqi administration evacuated Irbil and Sulaymaniyya, maintaining their presence in what is called the "useful Kurdistan": Kirkuk, Khanakin, and Sinjar.

For the first time in their history, the Kurds controlled a large area of Kurdistan—more than 15,400 square miles—in which they planned to set up their own institutions, organizing elections in May 1992 and forming a Kurdish government in July 1992.

But in May 1994 fighting resumed between the Democratic Party of Kurdistan, Iraq (DPK) and the Patriotic Union of Kurdistan (PUK), and in spite of the diplomatic efforts of the French and British governments, this fratricidal war continued until the U.S. government imposed the Washington Agreement in September 1998. The Kurdish Autonomous Zone remains divided into two regions, each ruled by a Kurdish regional government, based in Irbil (DKP) and Sulaymaniyya (PUK). In spite of these problems, the Kurdish Autonomous Zone has made tremendous progress since 1996 thanks to the implementation of UN Security Council Resolution 986—the Oil for Food resolution—and the injection of hundreds of million of dollars in the region. On 8 September 2002 Barzani and Talabani reached an agreement in Sari Rash on the normalization of relations between the two warring parties, which led to meetings of the Kurdish parliament in full session in Irbil and Sulaymaniyya in October 2002 and the adoption of a draft federal constitution.

During the Iraq War (2003), Kurdish forces placed themselves under the authority of the invading American-led coalition forces, and constituted a major part of the coalition's northern front. They also helped capture Mosul and Kirkuk from Iraqi forces.

KURDISH REVOLTS

The organized efforts of stateless Kurds to form a Kurdish state or achieve autonomy.

Since the late nineteenth century, the Kurds have made ceaseless efforts to achieve statehood or self-

Iraqi Kurdish refugees relocate to Iran after the failure of their 1991 uprising against the government of Iraq. During the rule of Saddam Hussein, the Iraqi government often sought to suppress the Kurds, most notably in 1988 when he authorized a poison gas attack on Halabja, Iraq, which killed five thousand Kurds. © THIERRY ORBAN/CORBIS SYGMA. REPRODUCED BY PERMISSION.

rule. These efforts have been identified, from a state-centered perspective, as "rebellion," "revolt," "insurrection," "insurgency," "sabotage," "treason," "turmoil," "religious fanaticism," "subversion," "banditry," "tribal feud," "secessionism," "sedition," "conspiracy," "unrest," "foreign agitation," "plot," or "intrigue," and, more recently, "terrorism." By contrast, the Kurds themselves and a body of less partisan literature use terms such as "resistance," "revolution," "patriotism," "national liberation," "independence movement" or "nationalist movement," "autonomy movement," "emancipation," "uprising," "(armed) struggle," and "self-determination." Western powers, such as Russia, Britain, France, Germany, and the United States, as well as states in the region have intervened in these revolts either as supporters or adversaries of the Kurds.

Although labeled as the world's largest "stateless nation," most Kurds lived under the direct rule of independent and autonomous Kurdish principalities, often nominally dependent on the overlord states of Ottoman Turkey and Iran. As part of their administrative-military modernization and centralization projects, the two states overthrew the last remaining principalities in the mid-nineteenth century.

The fall of the principalities brought the extension of state power to all parts of Kurdistan. The leadership of revolts then transferred, according to some historians, to the sheikhs, or leaders of religious orders, although tribal and feudal lords continued to rebel. The most important revolt, occurring in 1879–1880 against Turkey and Iran, was undertaken by Shaykh Ubaydullah. Some scholars see this revolt as the first stage of Kurdish nationalism because Ubaydullah tried to unite the Kurds in an independent Kurdish state. However, he and many other leading sheikhs were part of the landed feudal aristocracy motivated by class and clan interests.

Modernist nationalist ideas were first expressed by the Kurdish poet Hajji Qadiri Koyi (1818–1897). However, the modernist nation-building and state-building projects of Iran and Turkey, powerfully expressed in the Constitutional Revolution of 1906–1911 and the Young Turk Revolution of 1908, denied the Kurds any degree of self-rule.

World War I led to the redivision of Ottoman Kurdistan among the new states of Turkey, Iraq, and Syria. Together with Iran, they emerged as centralized nationalist regimes that used violence to assimilate autonomy-seeking minority groups such as the Kurds. Kurdish nationalist resistance emerged, in part, as a reaction to modernist state violence.

A series of revolts shocked republican Turkey soon after its formation in 1923: the Shaykh Saʿid revolt (1925), the Ararat revolt (1927–1931, led by Khoybun, a nationalist party), and the Dersim revolt (led by religious leader Sayyid Riza). Some historians see the Shaykh Saʿid revolt as a new stage in the history of Kurdish nationalism because it was planned by a nationalist party although led by a religious leader. In Iran a series of tribal revolts in the 1920s and early 1930s reacted to Reza Shah Pahlavi's harsh centralization project. The most serious (1918–1930) was led by tribal leader Ismaʿil Agha Simko. In the unstable post–World War I Iraq, the British occupying administration allowed religious leader Shaykh Mahmud autonomous rule as a

bulwark against Turkish military incursions. He revolted and declared himself "King of Kurdistan" in 1922, only to be removed after a series of battles in 1923–1924.

During World War II and soon after, the hegemonic rule of tribal, feudal, and religious leaders gradually gave way to modern-style, secular, nationalist, party-centered politics of urban intellectuals and activists, while the peasantry remained the main fighting force, now called *peshmarga,* "those who face death." In the absence of civil society, political parties often had to work clandestinely and were forced into armed confrontation in mountainous countryside, but urban civil forms of dissidence began to emerge. The most important party, Komeley J. K (Society for the Revival of Kurdistan, 1942), aimed at the creation of a greater Kurdistan, reorganized as the Democratic Party of Kurdistan, Iran, and established the first modern Kurdish government, the Kurdish Republic of 1946, in northwestern Iran.

The longest Kurdish revolt in Iraq (1961–1975) was launched by Mulla Mustafa Barzani, leader of both the Barzani tribe and the Kurdish Democratic Party, Iraq (KDP; also known as the Democratic Party of Kurdistan, DPK). It resumed in 1976 under the newly formed Patriotic Union of Kurdistan and the reorganized KDP, which in the wake of the 1991 U.S.-led war against Iraq formed the Kurdish Regional Government in the "Safe Haven" created and protected by the United States and the United Kingdom. Both parties participated in the 2003 U.S.-led war against the Baʿthist regime of Saddam Hussein.

In Turkey dissidence resumed in the 1960s with the participation and leadership of students, urban intellectuals, and political activists, who were, as of the 1970s, part of the leftist social movements of the country. The Kurdistan Workers Party (PKK, in Kurdish acronym) launched an armed struggle for Kurdish independence in 1984. It gradually shifted to political struggle, especially after the abduction in Kenya of its leader Abdullah Öcalan by Turkish commandos in 1998, and reorganized into the Freedom and Democracy Congress of Kurdistan (KADEK, in Kurdish acronym) in 2002.

In Iran the Kurds demanded autonomy during the Iranian Revolution and after the Islamic Re-

The Kurds are a non-Arabic people, who speak a language closely related to Persian. Kurds are Muslims but adhere to different Islamic sects, and include Sunni, Shiʿa, Alevi, and Ahl-e Haqq Kurds. There are eight to ten million million Kurds living in the border areas of Armenia, Turkey, Syria, Iran, and Iraq (an area known as Kurdistan), with another eight million living in southwest Turkey. **© Hulton|Archive by Getty Images. Reproduced by permisison.**

public assumed power in 1979. Faced with Tehran's large-scale military offensive, the traditional nationalist KDP of Iran and the newly formed radical Komele (the Revolutionary Organization of the Toilers of Kurdistan), together with other groups, engaged in armed resistance, which continues to this day.

The transition from patriarchal-tribal-feudal to democratic politics has been going on since the 1890s. The nationalist movement has become increasingly urbanized, has embraced secularism, socialism, and liberalism, and has allowed the more visible participation of women. Nevertheless, a radical rupture between tribal-feudal and democratic politics—especially in Iraqi Kurdistan—has not yet occurred.

KURDISTAN

The land of the Kurds.

Kurdistan does not have boundaries on any map, but it extends over five Middle Eastern states: Turkey, Iraq, Iran, Syria, and parts of the former Soviet Armenia. It is a 620-mile (1,000 km) strip of land that, stretching from the southeast to the northwest, extends from Kermanshah (Iran) to the Gulf of Iskenderun (or Alexandretta, Turkey). Its width varies from about 150 miles (250 km) to 250 miles (400 km) between Mosul and Mount Ararat. The heart of Kurdistan is two long chains of mountains, the Taurus and the Zagros, which have many summits towering over 9,800 feet (3,000 m), while Mount Ararat reaches 16,900 feet (5,157 m).

Two long rivers, the Tigris and the Euphrates, have their sources in Kurdistan, which is also watered by two huge lakes—Van in Turkey and Urmia in Iran. Despite its harsh climate, Kurdistan is very fertile and rich in natural resources, particularly petroleum (especially in Kirkuk). Sulaymaniya, Diyarbakir, and Sanandaj have long been considered the "capitals" of Iraqi Kurdistan, Turkish Kurdistan, and Iranian Kurdistan, respectively. Iran is the only country where the word *Kurdistan* officially appears on the map, as a province.

There are no official statistics, but it is estimated that the Kurds number more than 25 million. Sharing a common culture (although they speak three different Kurdish dialects—Kurmanji, Sorani, and Zaza) and artifically divided by international borders that were imposed on them after World War I, the Kurds have not been able to develop a single and unified Kurdish national movement. They have fought separately in Turkey (Öcalan's Kurdistan Workers Party), in Iraq (KDP and Patriotic Union of Kurdistan), and in Iran (KDPI, Iran), sometimes even allowing the neighboring countries to play upon their divisions. Long considered an obscure minority problem, the Kurdish issue has become an international question since the invasion of Kuwait (1990), the Gulf War (1991), and the creation in northern Iraq of a Kurdish Autonomous Zone, which is now shown on all maps of the Middle East.

KURDISTAN WORKERS PARTY (PKK)

Kurdish party in Turkey that fought a guerrilla war for Kurdish independence, 1984–1998.

The PKK (*Partiya Karkeren Kurdistan,* or Workers' Party of Kurdistan) has been, both ideologically and in its emphasis on violence, the most radical Kurdish political movement ever. During the last two decades of the twentieth century, the PKK was the most formidable opposition force in Turkey, where it was established, waging a bloody guerrilla war from 1984 to 1999 that cost perhaps 35,000 lives. It was and still is also active among the Kurds in the neighboring states, and it became a prominent factor in the Kurdish diaspora.

The PKK came out of one of the radical left tendencies in the Turkish student movement of the

early 1970s, when a handful of students at Ankara University, including some Turks as well as Kurds, decided to take up the Kurdish issue and to devote themselves, as they claimed, to the liberation of the oppressed Kurdish people from both national and class oppression. Seeking proximity to the masses they left the university and went to eastern Turkey, where they attempted to mobilize disaffected Kurdish youth against tribal and feudal leaders as well as against the state. In 1978 they formally organized the party, of which they became the political bureau. Abdullah Öcalan (c. 1946–), himself born in the village of Omerli to a poor Kurdish peasant family, became the chairman and soon assumed dictatorial powers in the organization.

At the time of the 1980 military coup in Turkey, the PKK was one of about a dozen Kurdish nationalist organizations and had become notorious through a series of violent conflicts with several of these rival organizations as well as with tribal chieftains. It was the only one of these organizations that was not virtually wiped out in the wake of the coup. The largest mass trials and the heaviest sentences concerned PKK activists, but small armed groups kept resisting arrest and clashing with army and police. Öcalan himself earlier had escaped to Syria; with Palestinian and Syrian support he began organizing proper guerrilla training for his followers, in camps in the Biqa Valley in Lebanon and later in northern Iraq.

In 1984 PKK bands, probably operating from Iraq, carried out their first raids on military positions inside Turkey. In spite of massive counterinsurgency operations, including air raids on suspected PKK camps and repeated invasions of Iraq by ground troops, the PKK managed to expand its area of operations and strike increasingly forcefully deep inside Turkey. Guerrilla bands stayed inside the country for extended periods and locally recruited numerous young fighters. The government mobilized Kurdish militia forces—mostly tribesmen under their own leaders—to fight the PKK; these ultimately numbered over 65,000. The countryside became polarized as both the PKK and the government pressured villagers to take sides and responded brutally to suspected disloyalty.

The 1990s brought great ideological and strategic changes, in part as a result of the PKK's military successes, in part in response to changes in the environment. The party, which had found new supporters and sympathizers among broader strata of Kurdish society, shed its Marxism and adopted a more accommodating attitude toward Islam. It renounced the struggle for a united and independent Kurdistan and aimed instead at a far more modest compromise with the Turkish authorities. It strongly supported such civil society initiatives as human-rights associations, legal pro-Kurdish parties, and village or neighborhood committees, and it attempted, without complete success, to bring them under its control. Realizing that Turkey never would give in to Kurdish demands without pressure from Europe, the PKK gave up its earlier violent protest demonstrations abroad and concentrated on developing an effective international lobby instead. A satellite television station (MED-TV, later Medya-TV) with studios in Belgium that broadcast to the Middle East and Europe provided the PKK with an effective modern means of propaganda and nation-building.

The PKK made various unsuccessful efforts to engage the Turkish authorities in negotiations and several times declared a unilateral cease-fire, but it failed to make a transition from military to political struggle. Counterinsurgency operations in the mid-1990s targeted especially the civilian wing of the Kurdish movement and forced a separation of the PKK from its potential supporters through massive village evacuations. Turkey put increasing political and military pressure on Syria, which had continued supporting the PKK, and secured in 1998 the expulsion of Öcalan. After unsuccessful efforts to find asylum in various European countries, he was hunted down in Kenya in 1999 by Western intelligence services (and according to some accounts, Israeli agents as well) and handed over to Turkish commandos, who flew him to Turkey, which put him on trial for high treason.

During the trial Öcalan renounced most of the ideas the PKK had stood for and ordered the PKK guerrilla fighters to lay down arms. Some disappointed followers turned their back on him, but the remaining political bureau members continued to consider him to be the supreme leader and to follow his orders. Most guerrilla units withdrew from Turkey into northern Iraq; significant numbers later gave themselves up to the Turkish authorities.

Öcalan was convicted and sentenced to death in 1999, but this was commuted to life imprisonment in 2002. At a party congress in 2002 the PKK was formally dissolved and transformed into a new organization, KADEK (Congress for Freedom and Democracy in Kurdistan), which vowed to be non-violent and democratic. The congress duly elected Öcalan again as its president. In early 2003 the party still had several thousand armed men and women in Iraqi Kurdistan and at least tens of thousands of active supporters in Kurdistan and the diaspora.

KURDS

People of Aryan origin who live in an area that embraces the highlands of eastern Anatolia and the northwest Zagros Mountains.

Kurds have been living for millennia in the region they call Kurdistan, which is divided today among five countries: Turkey (15 million), Iraq (5 million), Iran (8 million), Syria (1.5 million), and the Caucasus of the former Soviet Armenia (500,000).

History

Scholars debate whether the Kurds originally belonged to a group of Iranian (Indo-European–speaking) populations living around Lake Urmia who migrated westward during the seventh century B.C.E.; others emphasize the indigenous character of the Kurds living in the Taurus and Zagros mountain ranges since antiquity. Clearly, they have always been seen by their neighbors as a people apart, as documented by the medieval geographer Abu Ishaq al-Farsi some thousand years ago.

Their history becomes clear after the conquest of Tikrit by Islam, when Caliph Omar's troops prevailed in 637 C.E. Arab chronicles detail Kurdish revolts against their successive masters; they also tell of the rise of Kurdish dynasties—the Shahdids, the Hasanwayhids, and the Merwanids.

Playing upon the rivalry between the Ottoman Turks and the Iranians, the Kurds managed a measure of autonomy in the nineteenth century, and Amir Bedir Khan (1805–1870) ruled as the "uncrowned king of Kurdistan" over a large portion of Ottoman Kurdistan in the 1840s. After World War I and the demise of the Ottoman Empire, Kurdistan was apportioned to Iran, Iraq, Syria, and Turkey (the Caucasus region had been within Russia since the beginning of the early 1800s). There were numerous Kurdish revolts led by religious or tribal leaders including Simko in Iran, Shaykh Mahmud Barzinji in Iraq, and Shaykh Said Piran in Turkey.

Kurdish Culture

Despite the influence of the neighboring cultures and the displacements of populations, and despite the campaigns of open or covert assimilation, Kurdish identity asserted itself by use of the Kurdish language, although the majority of the population is illiterate. Kurdish is not a dialect of Persian as some writers have claimed, but an Indo-European language of the western Indo-Iranian branch. Kurdish (or Kurdi) is characterized by a distinct grammar and syntax and by its own rich vocabulary.

Linguists working in France at the Paris-based Institut Kurde have been editing a dictionary of 50,000 words. There are three main Kurdish dialects: the Kurmandji, spoken in Turkey and in the northern part of Iraqi Kurdistan; the Sorani, used in Iran and in southern Iraqi Kurdistan; and the Zaza, also spoken in Turkey. Since the Kurdish people are subjected to national borders, the Kurdish language is written in three different types of characters: the Latin, or Roman, alphabet in Turkey and Syria; the Arabic alphabet in Iraq and Persia; and the Cyrillic alphabet in the former Soviet Union. Although, or because, Kurds are forbidden by many governments of the region to study their own language at school, they demonstrate a passion for their own idiom. There is a Kurdish proverb or saying for every situation, and daily life inspires popular songs (often about love and death, but also about war and hunting). Stirred by the feats of their

leaders, poets have written epics that are memorized and transmitted from generation to generation; one of these is Ahmad Khani's *Mem o Zin,* the Kurdish *Romeo and Juliet.*

Religion

Most of the Kurds adhere to Sunni Islam, save for some districts of Turkey where they are Alevis and the southern part of Iranian Kurdistan where they are Shiʿa and Ahl-e Haqq (which, both in Turkey and in Iran, negatively affects their relationship to the Kurdish national movement). Sufism is traditionally very strong in Kurdistan. After the demise of the principal Kurdish feudal leaders, the Kurdish revolts of the late nineteenth century and early twentieth century were led by religious shaykhs belonging to one or another of the great dervish orders, particularly the Qadiriyya order or the Naqshbandi.

Observing a tolerant Islam that is marked by holdovers from Zoroastrianism such as the celebration of the new year *(Nowruz)* on 21 March, Sunni Kurds have coexisted for centuries with a number of Kurdish minorities, including Yazidis, who live around Jabal Sinjar; Ahl-e Haqq in the region straddling the border between Iraq and Iran; Shiʿa in the Kermanshah region of Iran; Jews in Badinan, Iraq (until the 1950s) and Kermanshah Iran; and Nestorians—Christian Assyrians, by far the largest group. This coexistence is mostly peaceful, but it has been marred by some conflicts that contributed to a negative opinion of the Kurds in the West. In 1846, Amir Badr Khan invaded the Nestorian districts, provoking a violent reaction in Europe and a punitive Ottoman expedition that led to his capture. At the end of the nineteenth century and during World War I, the Kurds participated in the Turks' mass killing of Armenians. In February 1918 Simko, the leader of the Kurdish revolt in Iran, assassinated the Mar Shamʿun, the Nestorian patriarch—an act that was condemned by other Kurdish leaders such as the Barzani family.

Anthropology, Ethnography, Sociology

At the beginning of the twentieth century, Kurdish society was not very different from the Kurdistan depicted in eighteenth- or nineteenth-century European travelers' narratives: Feudal chiefs were living in castles in relative luxury while peasants lived in natural caves or in mud huts, cultivating wheat and barley, tobacco and rice; most Kurds were nomads or seminomads, spending the summers with their herds of sheep and goats in the mountains and migrating back with them to the lowlands in the winters. The big tribes—the Herki, the Jaf, and the Shikak—were known by their number of tents (1,600 tents for such a tribe, and so many guns for one tent). The Kurds lived outside the towns, which were inhabited mainly by Turkish soldiers, officials, and merchants, as well as by Jews, Armenians, and other Christian minorities.

There were a few historical cities that served as trade centers for many centuries. These included Diyarbakir, Sulaymaniyya, and Bitlis in Ottoman Kurdistan, and Kermanshah and Sanandaj in Iranian Kurdistan. In Kurdish villages land tenure was conservative, with aghas owning the land—sometimes several villages—on which the poor peasants were working and paying a rent of as much as half their annual crop. Traditional Kurdish society has been seriously eroded by the exploitation of petroleum in Kirkuk and by Saddam Hussein's wars in Iraqi Kurdistan; by the policy of systematic destruction of the tribal system by the Pahlavi shahs of Iran; and by Turkey's policy of repression and assimilation, in particular during the fifteen-year-long war against the Kurdistan Workers Party (1984–1999). Most Kurds live now in the villages and in the big cities of Kurdistan, although a number of them have looked for refuge in Istanbul, Tehran, Baghdad, or Western Europe, where the Kurdish diaspora (over half a million Kurds in Germany alone) has prompted calls for a political solution to the Kurdish issue.

KÜTAHYA, PEACE OF

An 1833 pact granting Ottoman Empire territories, including Egypt, to Muhammad Ali Pasha and his son, Ibrahim Pasha.

In 1831, Muhammad Ali Pasha, the Ottoman governor of Egypt, attacked Syria, also part of the Ottoman Empire. Commanded by his son Ibrahim Pasha, Muhammad Ali's forces were successful. The empire's sultan, Mahmud II, responded to this rebellion, only to be soundly defeated by Ibrahim near Konya on 21 December 1832. Ibrahim continued his advance through Anatolia and occupied Kütahya in early February 1833. With Ibrahim so near Constantinople (now Istanbul), seat of the empire, Mahmud turned in desperation to Russia. Czar Nicholas I sent Russian ships to the Bosporus in late February, and Russian troops encamped at Hunkâr–Iskelesi soon after. At this point, the other European powers intervened. Egypt's ally France pressured Ibrahim to settle with the sultan, and Britain wished to defuse the crisis before Russian troops became involved in hostilities. On orders from his father, Ibrahim demanded the provinces of Syria and Cilicia, as well as Crete and Egypt for his father. At the end of March 1833, an agreement was concluded between Ibrahim and the sultan's representative, Mustafa Raşit Paşa. Ibrahim and Muhammad Ali were granted the aforementioned territories, and the Egyptian army then withdrew from Kütahya. The Peace of Kütahya was not an official treaty, but rather a pact between the sultan and his vassal. It concluded the First Egyptian Crisis and left Muhammad Ali in an extremely strong position, so strong that Britain's foreign minister, Lord Palmerston, was determined that he would not be allowed to maintain that position permanently. Eight years later, in the Second Egyptian Crisis, Muhammad Ali lost much of what was gained at Kütahya. After the First Crisis, Russia and the Ottoman Empire signed a mutual-defense agreement, the Treaty of Hunkâr–Iskelesi.

ZACHARY KARABELL

KUT AL-AMARA

Town in Iraq.

Kut al-Amara is approximately 100 miles (160 km) southeast of Baghdad on the left bank of the Tigris, opposite the mouth of the Shatt al-Hayy, the old canal connecting the Tigris with the Euphrates. The name Kut al-Amara, often shortened to Kut, derives from the Hindi word *kot,* meaning fortress.

Kut al-Amara's main claim to fame—or rather notoriety—is the decimation of several thousand British and Indian Allied forces stranded there during World War I by the advancing Turkish forces on 29 April 1916, after a five-month-long siege. The whole affair boiled down to a miscalculation on the part of the British commander, Major General Charles Townshend, who thought he could take Baghdad. Repulsed at Ctesiphon by the Turkish forces in late November 1915, Townshend was forced to retreat to Kut. In the end, after all attempts to redeem the situation failed, the Allied forces surrendered. According to the records, approximately 2,000 Allied soldiers lost their lives during the siege, and almost 12,000 were taken as prisoners of war.

KUTTAB

Basic school in Islamic education.

The *kuttab* was originally attached to a mosque, and the school taught children and new converts to be true believers of Islam. In the morning, students

would recite and memorize passages from the Qur'an. In the afternoon, they would learn to write, study Islamic prayers and rituals, and, particularly in the Arab East, study Arabic grammar and poetry.

Beginning in the mid-nineteenth century, secular studies were introduced in many *kuttabs,* especially in cities, where they faced competition from new Western-style primary schools. In 1926, the Republic of Turkey abolished the *kuttabs* and instituted secular education and society.

Throughout the Middle East, most religious education is now taught in government schools, but *kuttabs* have remained an important vehicle of rural education, particularly in Saudi Arabia and Egypt.

ELIZABETH THOMPSON

KUWAIT

Arab country situated at the northern end of the Persian/Arabian Gulf.

The state of Kuwait *(dawlat al-Kuwayt)* is located at the northern tip of the Persian Gulf. Its name in Arabic means "small fort," perhaps referring to an outpost left by sixteenth-century Portuguese sailors. Kuwait borders Iraq and Saudi Arabia.

MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

Land and People

Kuwait's 7,800 square miles of territory are mostly flat except for a ridge in the north overlooking the Bay of Kuwait and a hill about 300 meters high in the southwest. The bay is Kuwait's most distinctive geographic feature, providing a sheltered harbor that many regard as the best port in the Persian Gulf. Kuwait has little available freshwater but, with 96.5 billion barrels of proven petroleum reserves, it produces most of its freshwater supplies from seawater in conjunction with electricity generation.

Summers are hot, with temperatures regularly topping 45 °C (113 °F) and sometimes exceeding 50 °C (122 °F). During other times of year, temperatures are moderate, especially at night, and, occasionally in winter may dip below freezing. Annual rainfall is about three inches per year, but varies locally from mere traces to downpours averaging several inches at a time. There is frequent wind and dust storms are common, especially during the spring and summer.

Before Iraq invaded Kuwait in August 1990, Kuwaiti citizens made up about 28 percent of the population of 2.1 million. Palestinians, peaking at about 400,000 persons, constituted the largest immigrant community, many having come to Kuwait after the 1948 and 1967 Arab–Israel wars. Kuwait also hosted an estimated quarter-million stateless Arabs, the *bidun* ("without"—for without citizenship). *Bidun* worked primarily as police and military personnel and were treated almost as citizens. When oil prices collapsed in 1986, the government tried to curb guest-worker immigration and encouraged *bidun* to emigrate. Following liberation in February 1991, most Palestinians were deported in retaliation for Yasir Arafat's support of Saddam Hussein's invasion, while *bidun* continued to suffer discrimination. Guest workers came increasingly from Egypt and South Asia. By 2003 the population had returned to 2.1 million but the proportion of citizens was approximately 40 percent. Nearly all native

Triumphant citizens of Kuwait City celebrate the liberation of the country from Iraqi forces in 1991. The invasion began in August 1990 with Iraq shelling the main bases of the Kuwati Army and Air Force. The United Nations issued an ultimatum to Saddam Hussein to withdraw his troops, and when he refused, U.S.-led coalition forces were deployed. © PATRICK DURAND/CORBIS SYGMA. REPRODUCED BY PERMISSION.

Kuwaitis are Muslim; approximately 15 to 20 percent are Shiʿite and the rest Sunni. Most guest workers also are Muslim.

Few nomads remain in Kuwait. Most of the population is urban, concentrated in Kuwait City and its closely adjoining suburbs. Suburbs also are burgeoning in what formerly were called "outlying areas" farther from the city center. Building is booming south of the city, inland as well as along the coast; in Ahmadi, home of the Kuwait Oil Company; and in the rapidly urbanizing zone between Kuwait City and Jahra.

History

During the third millennium B.C.E., what is now Kuwait was part of a highly developed culture based on maritime commerce and linked to ancient Sumer. Kuwait's modern history began in the early eighteenth century when several clans of the al-Utub tribal grouping (part of the Aniza tribal confederation to which the Al Saʿud belong), left drought- and famine-stricken central Arabia and settled on the northern Gulf coast. The Al Sabah were formally established as rulers in 1756. They directed Kuwait's affairs in consultation with members of other paramount clans who, like them, had become merchants.

Throughout the eighteenth and nineteenth centuries, the Al Sabah proved adept at the maneuvering necessary for a small state to survive next to powerful Saudi and Rashidi neighbors. They were especially successful in capitalizing on the rivalry between the imperialist Ottomans and British. In 1899 Mubarak Al Sabah (Mubarak the Great) reached the first in a series of secret agreements with the British relinquishing authority over Kuwait's foreign relations and potential oil reserves to Britain in exchange for protective services and secret subventions. The

Kuwaiti-British bond remained in effect until 1961. It ensured that the succession to the rulership would remain with Mubarak's direct descendants. The British helped to set up and run the state's administration but neglected to demarcate Kuwait's borders when states in its region were created by the victors of World War I. A general agreement on Kuwait's boundaries was reached by British, Saudi, and Iraqi representatives at the Uqayr Conference (1922), shrinking Kuwait's territory. But the ambiguity of Kuwait's borders invited attempts by both the Saudis and Iraqis to shrink Kuwait further and, with the 1990 Iraqi invasion, to extinguish its independent existence altogether.

Economics

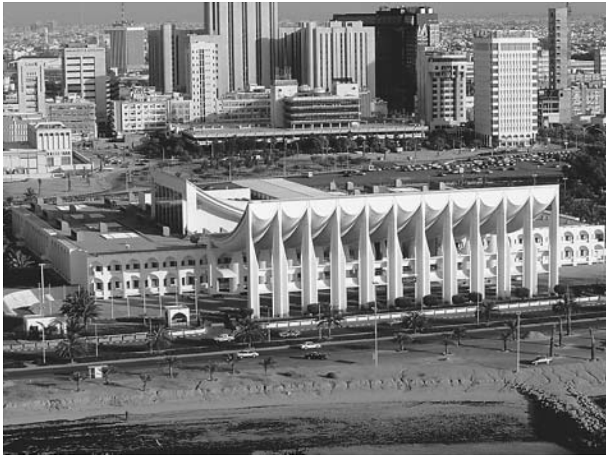
Nineteenth-century Kuwait enjoyed enviable prosperity from maritime trade, pearling, and fishing. Its economy was devastated by World War I, Saudi raids, and the introduction of Japanese cultured pearls in the late 1920s. The Great Depression in the United States also affected Kuwait, but oil was discovered in 1938, promising a new prosperity. Amir Ahmad al-Jabir had granted the concession to develop Kuwait's oil to the Kuwait Oil Company (KOC), a joint venture between British Petroleum (formerly the Anglo-Iranian Oil Company) and the American-owned Gulf Oil Corporation. Kuwait's oil production expanded rapidly following the nationalization of Iranian oil by Prime Minister Mohammad Mossadegh in 1951. Conflicts with KOC's operators underlay Kuwait's decision to become a founding member of OPEC in 1960. It nationalized foreign oil properties in the 1970s and, in 1980, established a holding company, the Kuwait Petroleum Corporation (KPC), for all its hydrocarbon assets, including those located abroad. In the 1990s Kuwaitis began debating the wisdom of inviting foreign oil companies back to produce oil in Kuwait on a contract basis and, by the turn of the century, debate over oil privatization had become a staple of parliamentary politics.

The government invested Kuwait's oil income directly, by expanding domestic and foreign oil holdings through KPC and its various subsidiaries; indirectly, it made large purchases of foreign blue-chip securities. Most of the latter are held by the Reserve Fund for Future Generations (RFFG), established in 1976 to ensure Kuwait's post-hydrocarbon prosperity. By law, the RFFG receives 10 percent of annual government revenue; it is the only reserve of its kind anywhere in the Gulf. By the early 1980s, Kuwait's portfolio income exceeded its income from oil and gas.

This changed following the 1990 Iraqi invasion. RFFG funds were tapped to provide approximately $26 billion toward liberation efforts. Billions more were spent during the war to support Kuwaitis in and outside the country and, after the war, to extinguish 732 oil well fires, to repair or replace industrial and civilian infrastructure, and to indemnify Kuwaitis through direct payments and large salary increases. Even before the invasion, financial misappropriations through insider trading, sweetheart contracts, and alleged embezzlement had eaten into Kuwait's financial reserves. This continued following liberation despite parliamentary oversight and a strengthened audit bureau. Whereas before the invasion Kuwait held approximately $100 billion in the RFFG and in the state's General Reserve Fund, its postliberation assets were estimated at only $30 to $35 billion. Owing to these financial reversals, Kuwait today is more dependent on oil revenues than it was twenty years ago.

Other investments had equally ambiguous results. Kuwait has made extensive indirect investments in human capital, offering citizens generous social services, medical benefits, and free education from kindergarten through postgraduate school. Literacy rates grew rapidly, and life expectancy in 2003 reached seventy-seven years. Full employment was a government goal but, like social services, became harder to provide after liberation because of straitened capital availability and soft oil markets. Kuwaiti economic policy also is affected by changing attitudes toward personal responsibility, including policies affecting the private sector, curtailing subsidies, and imposing user fees.

Kuwait's foreign aid history has undergone a similar transition over the past four-plus decades since the 1960s. Oil-rich Kuwait invested in projects in other Muslim countries, but few were profitable. It also pioneered direct assistance through foreign-aid programs. It hosts university students from abroad and was the first developing country to establish its own international aid organization, the Kuwait Fund for Arab Economic Development. Yet



Kuwait's National Assembly Building was designed by Jørn Utzon, the man responsible for the iconic Sydney Opera House. Construction on the massive edifice was completed in 1985. The building sustained heavy damage during the Iraqi invasion in 1990 and extensive renovations were needed. © YANN ARTHUS-BERTRAND/CORBIS. REPRODUCED BY PERMISSION.

as with direct investment projects, Kuwait (along with its OPEC peers) found itself criticized by aid recipients for demanding that they adhere to international standards of compliance with loan and grant requirements. Even before Kuwait incurred large economic liabilities from the Iraqi invasion and occupation, Kuwaitis had begun to reconsider their foreign aid policies.

Government and Politics

Kuwait's dynastic, patriarchal system of government remains firmly in the hands of the Al Sabah, strengthened first by British support and then by Kuwait's oil wealth. Merchant attempts to recover their authority continue to be stymied. Although the 1962 constitution established an elected National Assembly, the parliament's ability to curb the rulers' power was undermined by two multiyear amiri suspensions of civil liberties guarantees. The parliament's power is diluted in several other ways: The amir's cabinet appointments are ex officio members; and an informal tradition gave a monopoly on the prime ministry to the crown prince until 2003. Elections are enthusiastically contested. Native-born Kuwaitis and sons of naturalized Kuwaiti citizens who are twenty-one years of age or older may vote in parliamentary elections but, despite an equal rights provision in the constitution, women are forbidden by law to vote or run for parliamentary office.

The two constitutional suspensions provided opportunities for the amir to manipulate the voter base. Elections held in 1981 after a five-year parliamentary hiatus were run in redrawn districts incorporating thousands of newly naturalized bedouin. Four years into the second suspension, the amir tried to quash the parliament altogether, holding new elections in June 1990 for an extraconstitutional "National Council" lacking the National Assembly's legislative powers. The Iraqi invasion ended this experiment; a new National Assembly was elected in October 1992.

The 1992 election marked a significant political watershed for Kuwait. Antigovernment candidates, about half of them Islamists, won thirty-five of the fifty seats. The ideological balance between Islamist and secularist parliamentarians (there are no legal parties in Kuwait, although a minority of candidates associate themselves with political clubs whose stands on issues they share) brought policy making to a virtual halt through much of the 1992 parliament's four-year term. Its successor, the 1996 parliament, was equally deadlocked on major issues, prompting the amir to dismiss the body in 1999 and call for new elections within sixty days, the first constitutional transition of this kind. The 1999 parliament also reflected a close balance between liberal and Islamist forces, but members of both coalitions were notably more flexible than their predecessors. Cross-coalitions centered mainly on economic issues were occasionally able to mobilize parliamentary majorities.

The most serious domestic political problem faced by Kuwait and other Gulf monarchies is uncertainty over ruler succession. Rulers and heirs apparent are mostly old and ailing, and the size of ruling families, along with evidence of clashing personal ambitions, heightens insecurity about future governance.

Foreign Relations

Kuwait's foreign relations reflect its changing economic circumstances and the resumption of direct intervention by major powers from outside the region. Prior to the Iraqi invasion, Kuwait used "checkbook diplomacy," hoping to buy off enemies and

win friends among its neighbors. The 1990–1991 Iraqi invasion and widespread Arab popular support for it illustrated the failure of that strategy. Kuwait's long-standing nonaligned policy was undermined by the collapse of the Soviet Union. Kuwait's current strategic dependence on the United States, which spearheaded the coalition of forces liberating Kuwait in 1991, leaves it vulnerable to direct pressure to conform to U.S. policy wishes. Since then, Kuwait has since faced pressure to increase arms purchases and provide access to more than a third of its territory as a platform for the 2003 U.S. and British invasion of Iraq. Given rising prospects for violent conflict in the Middle East, should the absence of regionally based security arrangements continue, Kuwaiti near-term foreign policy autonomy is, for all practical purposes, foreclosed.

KUWAIT CITY

Capital of Kuwait.

The origins of modern Kuwait appear to date to a settlement generally identified on early maps as *Grane,* a phonetic spelling of of *Qurayn* (Arabic for either "hillock" or "little horn," both describing features of the coast). By the last third of the eighteenth century, the name *Kuwait* ("little fort") also was used by the migrating clans from central Arabia who had settled there. In the nineteenth century, Kuwait developed into a significant entrepôt, the home port of large trading vessels. Shipbuilding was a major industry, along with pearl fishing, which employed some 700 ships and 15,000 men by the early twentieth century. The town was walled in 1920 during four months of furious preparation to defend it against bedouin marauders, an event laying the groundwork for the state's current definition of citizenship. Residents of the town in 1920 and their descendants became "first category" citizens under the nationality law of 1959.

With the influx of oil wealth in the 1950s, the town was transformed. Under a master plan drawn up by a British firm, most of the old city was razed and rebuilt to contemporary Western tastes. Between 1960 and 1964 the Palestinian-American architect and city planner Saba George Shiber sought to reincorporate elements of Kuwait's past into the city's urban landscape. His influence is visible in the National Assembly building and the seafront water towers.

The 1990 to 1991 Iraqi occupation and war inflicted extensive damage on buildings and infrastructure in the city. Remnants of the wall and its gates were almost totally lost, the Dasman and Sief Palaces were damaged extensively, and the old suq was destroyed. Much of the new Kuwait was trashed as well. Public and private buildings, including homes, were filled with broken furniture, damaged books and papers, and occasional strategic deposits of human waste. An appalling wreckage was left in the Kuwait Museum, a complex housing a notable collection of Islamic art whose courtyard on the seafront had been home to a now-missing old Kuwaiti dhow.

Postwar rehabilitation proceeded rapidly and has been overtaken by new construction. The city center has acquired new high-rises. There is an explosion of growth in the suburbs, especially in Salmiya, which now sports American-style malls and a seafront aquarium. Prior to the invasion, urban sprawl spilled primarily southward, along the coast beyond Salmiya and inland to suburbs such as Jabriya and Rumaythiya. Now the city is spreading north and west as well, past the health and science

complexes lying beyond the university's Shuwaykh campus, and inland, toward Jahra.

What has not changed is the traffic. The city hub is surrounded by a series of concentric arcs—the Ring Roads—connected by major thoroughfare and highway "spokes." On and off the highways, the city is beset by traffic congestion with its associated noise, pollution, accidents, and parking problems. The population of Kuwait in 2004 was 2,257,549 residents.

KUWAIT FUND FOR ARAB ECONOMIC DEVELOPMENT

Organization set up in 1961 to extend foreign aid to Arab, Islamic, and Third World countries, primarily in Asia and Africa.

The Kuwait Fund for Arab Economic Development (KFAED) was the first foreign-aid vehicle entirely financed by a developing state. Established to aid other Arab countries, KFAED's recipient list grew following the rapid rise in world oil prices in the early 1970s to include developing countries around the world. KFAED supplies project aid, mostly in the form of concessional loans, technical assistance, and training. Its capitalization reached KD 2 billion in 1981 and, since then, it has been self-financing: repayments serve as the source of funds for subsequent loans and grants. Kuwait's foreign assistance effort through KFAED and other agencies averaged more than 5 percent of GDP per year from the mid-1960s until oil prices collapsed in the mid-1980s.

Between January 1962 and March 2003, KFAED made 631 loans to 99 countries for a total of KD 3.345 billion, and it supplied KD 73 million in grants and technical assistance to 163 countries. Slightly more than one-half of the commitments in each category went to other Arab states. KFAED also contributed KD 335 million to eight development institutions.

The 1990 Iraqi invasion of Kuwait exposed the ineffectiveness of foreign aid as a generator of diplomatic support for Kuwait among its neighbors and peers. Since then, Kuwait's economic circumstances have become more straitened and Kuwaitis have grown cynical about the utility of foreign aid either to themselves or to populations in recipient countries. In April 2003, responding to sharp criticism and political pressure from other Arab governments and mass publics regarding Kuwait's position on the U.S.-led war in Iraq, several proposals were made in parliament to limit KFAED's autonomy. One sought to amend KFAED's charter to require its awards to support Kuwait's foreign policy goals; another to forbid KFAED to award assistance to any country whose government had attacked Kuwait's support for the 2003 U.S.-led attack on Iraq; a third to require that every new KFAED loan be approved by a parliamentary vote. Despite support for KFAED from the government and liberal elites, and the budget autonomy which offers KFAED fiscal independence from domestic critics in and outside of parliament, the lack of correspondence between the national interests of Kuwait and those of the recipients of its foreign aid leave KFAED vulnerable to a reevaluation of foreign policy tools that could diminish its future role.

KUWAIT PETROLEUM CORPORATION

National oil company of the State of Kuwait.

The Kuwait Petroleum Corporation (KPC) was formed in 1980 as a holding company for most of the state's hydrocarbon assets. These had been acquired through the nationalization of foreign-owned equities in the 1970s and through the purchase of domestic investors' shares of state-private joint ventures. Major subsidiaries include the Kuwait Oil Company (KOC), which develops and produces domestic oil and gas; the Kuwait National Petroleum Company, which refines and exports oil and gas products and markets them directly domestically; the Kuwait Oil Tanker Company, which operates crude, product, and gas carriers; the Petrochemical Industries Company, which produces, distributes, and markets petrochemicals; and the Kuwait Foreign Petroleum Exploration Company, which engages in exploration, development, and production of hydrocarbons outside of Kuwait, mostly through joint ventures. Among KPC's foreign subsidiaries are KPC International, parent of Kuwait Petroleum International (KPI), which supervises overseas refining and marketing operations.

KPC acquired refining, storage, and marketing assets in Europe during the 1980s to extend its vertical integration. It also acquired a U.S.-based firm, Santa Fe Braun, with drilling, construction, and production assets, but KPC gradually sold most of these operations as incompatible with its long-term corporate goals. The Iraqi invasion and occupation of Kuwait demonstrated the usefulness of KPC. Its character as the parent of European subsidiaries and affiliates attracted support from host governments; KPI's London offices ran operations outside of Iraqi control and coordinated planning for reentry and reconstruction following liberation. Reconstruction was made more difficult by Iraqi sabotage, which left 727 oil wells damaged, most of them on fire. The fires were extinguished and all the wells capped within nine months by nearly forty teams of firefighters from around the world, including from KOC.

In recent years, KPC has been planning for the privatization of some of its assets. Deciding what should be privatized and how has been contentious. Kuwait's constitution vests ownership of mineral assets in the state but does not prohibit foreign ownership of other than production assets. One model was worked out when Equate, a subsidiary of Petroleum Industries Company, itself a subsidiary of KPC, was established. Equate is owned 45 percent each by the government and Union Carbide and 10 percent by local shareholders, who have very little say in how the company is run. Other models include the direct sale of selected operations to a group of investors and the sale of a portion of equity in existing companies through an initial public offering, with or without restrictions on the nature and number of buyers. International oil companies are eager to acquire production interests in countries with high reserves, like Kuwait, which faces competition for their investment dollars from Russia, the central Asian republics, and Africa. With the privatization of Iraqi oil a likely legacy of the 2003 U.S.-British invasion, additional privatization of KPC's operations is highly likely, too.

KUWAIT UNIVERSITY

Kuwait's principal institution of higher education, established in 1966 and geared to prepare Kuwaitis for professional careers in a variety of fields.

When it opened in 1966, Kuwait University consisted of colleges of science, art, and education, and a college for women. It had 31 faculty members and 418 students. During the Iraqi invasion of Kuwait in 1991, occupation forces looted and damaged the university and used some of its buildings to hold prisoners. Much of the war's damage was repaired within a year of the country's liberation, and by the mid-1990s enrollments had attained prewar levels. The student body has always had a Kuwaiti majority, and in the late 1990s there were 13,261 Kuwaitis and 1,397 non-Kuwaitis enrolled. The student body consists of about twice as many women as men.

By the early twenty-first century, the number of colleges had expanded from the original four to twelve, including colleges of dentistry, engineering,

law, medicine, and *shariʿa* and Islamic studies. The number of students reached 19,000, with 1,297 teaching staff. In mid-2003, plans were being implemented to establish a college of marine science. Most of the colleges are coeducational; the college of women provides a same-sex environment and courses of study in nutrition, food and family studies, information science, and communication science and languages.

L

LAABI, ABDELLATIF

[1942–]

Moroccan poet and novelist.

Abdellatif Laabi was born in Fez, Morocco, to a Muslim family. He obtained a B.A. in French literature and taught French at the Lycée Mulay Idris. He founded the journal *Souffles* (Breaths) with Mohammed Khair-Eddine and Mustafa Nissaboury in 1966; the Arabic version of this journal was called *Anfas.* Laabi was imprisoned in 1972 and released on 18 July 1980. He has lived in France since 1985.

Laabi received strong support from friends and intellectuals all over the world while in prison. He continued to write poetry during this period and received many literary prizes. He describes his prison years in a series of poems and letters titled *Chroniques de la citadelle d'exil* (1983; Chronicles of the citadel of banishment).

Laabi seeks to eliminate the dividing lines between literary genres, but he is primarily a poet with an impressive number of poetry collections, including *Le règne de barbarie, et d'autres poèmes* (1980; The cruel rule and other poems), which marks the beginning of his poetic and literary writings. His most recent publications are *Le spleen de Casablanca* (1997; The spleen of Casablanca) and the illustrated collection *Petit musé portatif* (2002; A small portable museum). Laabi's success with poetry led him to write plays, including *Le baptême chacaliste* (1987; Jackalian baptism), *Exercices de tolérance* (1993; Drills in tolerance), and *Rimbaud et Shéhérazade* (2000; Rimbaud and Scheherazade). He also published four novels. *L'oeil de la nuit* (1969; The eye of the night), *Les rides du lion* (1989; The wrinkles of the lion), and *Le chemin des ordalies* (1982; The road of ordeals), re-edited in 2000 as *Le fou d'espoir* (Crazy with hope), relate his painful years in prison. His *Le fond de la jarre* (2002; The bottom of the jug) evokes the traditional life in Fez during the colonial period.

Laabi has translated extensively from Arabic into French: the poems of the Moroccan Abdallah Zrika, published as *Rires de l'arbre à palabre* (1982; Laughter of the palaver tree); an anthology of Palestinian poetry, *La poésie palestinienne de combat* (1970;

Palestinian struggle poetry); Mahmud Darwish's poetry, as *Rien qu'une autre année* (1983; It is only another year); *Soleil en instance* (1986; Sun in process), by the Syrian novelist Hanna Mina; a collection of poetry by the Iraqi Abd al-Wahhab al-Bayati, *Autobiographie du voleur de feu* (1987; Autobiography of the fire thief); and a collection of poems by the Palestinian Samih al-Qassim, *Je t'aime au gré de la mort* (1988; I love you at the pleasure of death).

Laabi's works reveal an interest in the human being and a strong commitment to the Palestinian cause. Much of his writing can be described as revolutionary. His long-term goal was to sever the strong link to Western culture in order to end the cultural alienation of the Maghribi writer. Yet he also sought renewal through the elimination of antiquated and unsuitable traditions. His pre-prison poetry was characterized by a violent anger provoked by the repressive policy of the time. The writings published in *Souffles* reflect a similar attitude. His post-prison poetry shows signs of greater wisdom, maturity, and depth of reflection.

Laabi explained his positions, ideology, and prison experience in a series of conversations with Jacques Alessandra published under the title *La brûlure des interrogations* (1985; The scald of interrogations). He provided in the same book a useful assessment of the literary scene in Morocco and an insight into his writings and thought.

LAAYOUNE

The largest city in Western Sahara.

Laayoune (also El-Aaiun, El-Ayoun, al-Ayun) is both the largest city in Western Sahara and the capital of one of the three provinces that Morocco established in the territory. The discovery of potable water at the site resulted in the establishment of a Spanish military garrison in 1938, marking the beginning of the town. It was made the capital of Spain's new Sahara province in 1958. The Spanish authorities subsequently established a port on the Atlantic coast 18 miles from the town, along with facilities for the export of newly discovered phosphates. The European population when the Spanish withdrew in 1976 was approximately 10,000; the local Sahrawi population was around 30,000, a considerable number of whom were living in tents or makeshift structures on the edge of town. Many of the Sahrawis fled to Algeria with Polisario forces in 1975 and 1976. Since then, the population has grown to 175,000. Morocco has sought to consolidate its control of the territory by launching large-scale infrastructure projects such as the construction of hospitals, schools, and a football stadium and the expansion of drinking water facilities, and it has given incentives to Moroccan professionals to work there.

In 1991 Morocco orchestrated the entry of around 35,000 persons of Sahrawi origin in order to expand the list of eligible voters for the proposed UN referendum on the future of the western Sahara. Most of them were housed in tents in so-called unity camps. Fall 1999 witnessed major socioeconomic protests, with Sahrawis complaining of poor employment and housing conditions and discrimination in favor of Moroccans from the north. The unrest occasioned a harsh police crackdown in the city, aided by vigilante action by "northerners." The events shook the Moroccan regime headed by newly installed King Muhammad VI and contributed to the deposal of longtime interior minister Driss Basri. The government declared a new policy emphasizing regional development in order to win the hearts and minds of the population in advance of the proposed UN referendum. This new strategy was highlighted by three visits to the region by the king between October 2001 and February 2002, when he presided over a mass ceremony of allegiance to the throne.

LABOR AND LABOR UNIONS

Depending on the country, trade unions in the Middle East are nonexistent (in some cases, illegal), state-controlled, or independent, but they rarely represent many workers effectively.

There are also an increasing number of socioeconomic problems (from child labor to the situation of migrant labor to widespread adult unemployment) that they can do little to address although these problems have been worsened by the impact of globalization on much of the region.

Formal trade-union structures in the Middle East grew out of European imperialism and colonialism—especially from the extension of capitalist markets and the introduction of mechanized production. From a relatively undeveloped division of labor with a guild form of collective action, the labor force now comprises a clearly articulated division of labor, new means of production, and workers who own nothing but their labor power. This process occurred relatively quickly in each locality but at very different times. The critical period was from the beginning of the twentieth century until shortly before World War I. After World War II, Middle Eastern economies became relatively closed, socialist, or quasi-socialist. Trade unions played secondary roles and have often been subordinated to state policies.

During the late years of the Ottoman Empire (in Anatolia and the Arab provinces) and the Qajar dynasty (in Iran), peasant production predominated. Urban areas accounted for little more than 15 percent of the economy. Industry was largely artisanal (skilled manual labor), based on simple instruments of production. The division of labor within productive enterprises was slight. Competition from European production often forced domestic artisanal and craft producers out of old sectors and into new ones and new government structures reduced the effective support of the state for their associations. In Iran and Egypt, integration into the world capitalist market reduced the role of artisans and craftsmen in textile production and animal transport even as it opened up some new sectors of the economy. Something similar occurred in Tunisia, although there foreign domination began in the late 1800s.

Direct colonial control, where it existed, transformed property rights to allow the creation of capitalist corporations and also the political power European and local entrepreneurs needed to affect tariff regulations and local costs to ensure their success. Trade unions arose in the context of European colonial domination and thus invariably engaged not only in local social conflict but in the political struggles over control of the various states.

Foreign capitalists used access to political power and to external sources of capital to take advantage of cheap local raw materials and labor in most of the Arab world (but this was somewhat less true of the relatively more independent states of Turkey and Iran). In Palestine, the Arabs were gradually dominated by the European-backed Jewish settlers. In Tunisia, French control allowed the Europeans to command both the agricultural and the mineral sectors. In Iran and Iraq, foreigners (Europeans and Americans) provided the capital for developing the petroleum industry, and intense conflict over the role of the state occurred repeatedly.

European capitalists often introduced foreign (European) labor into the region at higher wages than local laborers could command. They also brought in local workers from various sections of the countryside to work in factories; their employees thus had little in common and were easily manipulated. In Palestine, this interplay of nationalist politics and social conflict was particularly acute because the socialist institutions of the Zionist labor movement often acted to exclude Palestinian Arabs from particular labor markets; the General Federation of Labor in Eretz Yisrael (Histadrut)—unlike Arab, Turkish, or Persian trade unions—created the foundations of a labor economy to support Zionist nationalism as well as to protect the rights of workers. Exceptionally, Histadrut thus had a dual role, as investor as well as trade union, insofar as Histadrut controls the Hevrat ha-Ovedim firm with its many subordinate companies. Elsewhere, the struggle of workers against capital was often perceived as a national struggle and was co-opted into the struggle of nationalist politicians.

Two important political currents guided the early labor movement. Marxist intellectuals from outside the working class brought the ideas of class struggle and "scientific socialism" into the working class and often (but not always) also recruited workers into Leninist political parties. Workers hostile to the

dominance of the liberal professionals in their movement also created their own independent unions.

In the Maghrib (North Africa), and especially in Tunis, the struggle for independence reached a heroic climax with the creation of a separate labor-union structure, the Union Générale des Travailleurs Tunisiens (General Union of Tunisian Workers; UGTT). It was led by Ferhat Hached rather than French communists in 1946. Elsewhere in the Arab world, leaders of the trade-union movement associated with the nationalist left allied themselves with political elites. After gaining independence, they extended the power of the state over the economy by nationalizing firms and creating a corporate trade-union structure. State investments created large public sectors in most countries, and it is the workers in the public sector who usually make up the bulk of trade-union members.

Those countries in the Middle East with unions generally have a single, often compulsory, trade-union structure. Countries with single-, state-, or ruling-party–controlled federations are Djibouti, Kuwait, Libya, Mauritania, Somalia, Syria, and Yemen. Iraq's public-sector employees were part of the state-controlled union federation until 1987, when the law was changed to exclude them so the state could cut its public-sector wage bill. Foreign nationals there, mainly Egyptians, are reported to be underpaid and mistreated. In these countries and in Egypt (where the Egyptian Trade Union Federation is formally separate from the state and the ruling National Democratic party), strikes by public-sector employees are illegal, and collective bargaining between workers and employers as equals is absent. The mid-1980s saw a renewal of protests and strikes in Egypt, especially in the public sector, as the government retreated from its social-welfare commitments. In many countries in the region, strikes are illegal and workers have few ways of challenging the power of the state or private employers.

The bulk of child labor in the region remains in agriculture but these children often work in export-intensive agriculture. By some estimates, there may be as many as two million children who work in Egypt. Most of them work in the fields, but they also play a role in urban small-scale production. Child labor is a problem on its own but it also inhibits the acquisition of literacy by substantial sections of the population.

Israel's Histadrut, although founded in 1920 in British-mandated Palestine, now controls significant economic resources through its associate institutions—thus remaining the state's sole trade union. Since 1953, Israeli Arabs have been accepted as members. Palestinians in the West Bank and Gaza Strip lack strong unions; both the Israeli government and the Palestinian nationalist movement are uncertain about the long-term effects of unions, and, in the pre-1993 Israel-Palestine Liberation Organization (PLO) accord atmosphere, union creation was difficult. In Lebanon and Jordan, autonomous and plural trade-union federations exist—in Lebanon, they continued to operate during the civil war.

In Tunisia, an independent trade-union federation with historic links to the ruling Neo-Destour party has operated independently and sometimes in antagonism to the state. The union federation was engaged in a massive wave of strikes in January 1977. In Morocco and Algeria, multiple trade-union federations exist independently of the state, and high unemployment coupled with low economic growth has produced labor unrest.

In Bahrain (where worker arbitration committees exist), Oman, Qatar, Saudi Arabia, and the United Arab Emirates, trade unions are illegal. Persistent reports exist of the arrests and executions of workers attempting to form unions in the eastern oil-rich provinces of Saudi Arabia, which also have large Shiʿite populations. Because a large part of the workforce in many of the countries of the Arabian peninsula are migrant laborers from elsewhere in the Arab world or from non-Arab Muslim countries, the absence of unions intensifies their liability to mistreatment. These workers, who in some cases make up a majority of the workforce, have no political rights and can be easily deported if they appear troublesome to their employers.

In Turkey, the trade-union movement was not integrated into the state, and plural union movements remained, the most important of which is the Confederation of Turkish Trade Unions (Türk Iş). Although dominant, Türk Iş faces competition from

several other trade unions, notably DISK (The Confederation of Revolutionary Trade Unions, which was banned after the 1980 coup) and Islamic and Turkish nationalist confederations (Haqq Iş and MISK, respectively).

Trade unions in Iran have infrequently functioned freely since the 1950s. Between the 1953 coup and the 1979 Iranian revolution, the state actively intervened in trade-union affairs. After the revolution, there was (in addition to unions) an experiment in a broader form of workers' councils, known as *shura.* In 1983, the labor minister of the Islamic Republic of Iran failed to win passage of a restrictive new law. Most unions and the *shura* system were dissolved in 1985, and the government appears to have accepted the principle that workers and owners enter into individual contracts rather than collective agreements.

In the precolonial period, unions were often weak but provided workers with some independent voice in regard to the state and firm owners; in the post-colonial period, the material conditions of workers and their families have been more profoundly affected by decisions of central political authorities than by union struggles. If privatization continues to increase in Middle Eastern economies, "wildcat" struggles by workers are likely to increase. Privatized industries frequently attempt to increase profits by decreasing the size of the work force, thereby setting the stage for conflicts with unions (where they exist) and with sections of government that fear the impact of growing unemployment.

LABOR ZIONISM

One of the main ideologies and political currents within the Zionist movement.

From the beginning of the twentieth century, Labor Zionism dominated the political philosophy of the Jews who went to resettle in Palestine, both during the British Mandate and then as the philosophical banner of the dominant political party in the new State of Israel until the parliamentary elections of 1977. Its leaders are considered the founding fathers of the Jewish state, the architects of its most distinctive social and economic institutions.

Origins of Labor Zionism

Two powerful ideologies of the nineteenth century—nationalism and socialism—were synthesized into several Labor Zionist expressions. Even before the establishment of the first Zionist organizations, Moses Hess published in 1862 *Rome and Jerusalem,* which advocated a socialist Jewish commonwealth in Palestine as the only solution to the plight of the Jewish masses in the diaspora, especially those of Russia, Eastern Europe, and the Middle East. As a member of the League of Communists, along with Karl Marx and Friedrich Engels, Hess became one of the first Jewish writers to discuss the collective existence of the dispersed Jews in terms of the socioeconomic conditions of capitalism and to put forth the idea of a political and economic revolution as the solution to the so-called Jewish problem.

For Labor Zionists, the core of the Jewish problem was not that Jews existed in Christian and Islamic host countries, but that only a small proportion of Jews were farmers or workers in the mainstream of their adopted societies. Most were scholars and teachers of Jewish studies or merchants and traders

In the early 1900s, over forty thousand Jews fled to Palestine to escape brutal Russian pogroms. The first Labor Zionist leader to actually reside in Palestine, Aaron David Gordon, believed that only through physical labor and a return to the land could the Jews truly form their own nation. © HULTON-DEUTSCH COLLECTION/CORBIS. REPRODUCED BY PERMISSION.

on a small or large scale. The explanation for this distorted occupational structure was rooted in modern European history, with its legislation that excluded Jews in most countries from joining guild-dominated trades or from owning land (the Austro-Hungarian Empire was an exception). According to Labor Zionist views, most Jews had been denied the opportunity of engaging in productive labor, and therefore their socioeconomic structure was fatally distorted. Although there were Jewish artisans, merchants, and farmers throughout the diaspora, Labor Zionism assumed there were too few to create an agricultural and craft base for a new Jewish society. For that reason, the framework of ordinary class analysis had to be reworked to account for the plight of European Jewry. In socialist doctrine, class struggle arises from the relations of production, but Jewish socialists saw that most Jews needed to gain access to "the conditions of production,"—to land, natural resources, and channels of trade.

Without a country of their own, Jews had to acquiesce to those with economic and political power; consequently, they were also forced to discharge functions that other groups refused. In Russia, for example, Jews were routinely called upon to fill pioneering roles in new territories of the Pale and to develop economies there, but they were evicted by edict when the economies matured and competitors for their positions emerged from the national majority. Not only did such circumstances produce uncertainty, they also posed enormous dangers. Each expulsion was accompanied by an ideology of degradation that justified the destruction of Jewish property and lives. The ideology of Jew hatred became so internalized that Jews in these circumstances came to accept their powerlessness as natural and unchangeable. Antisemitism thus affected their economic options, political position, social status, and self-conception. Since socialism postulated class struggle as the means to final and full human liberation, Jews, who were unable to participate in the process, could not expect to benefit from the outcome.

Labor Zionism in Palestine

In the nineteenth century the educated youth of Russia and Eastern Europe proved a receptive audience for socialism. Educated and assimilated Jewish youth also became socialists, but some were Jewish nationalists as well, and they became Labor Zionists. In 1905 two small Zionist labor parties were founded by Eastern European Jewish youths who went to Palestine. They both advanced the idea of socioeconomic normalization and emphasized that in their own national society Jews would assume all economic roles, not just the restricted and vulnerable occupations of the diaspora. Although the ultimate aim was to create in Palestine a Jewish working class, the immediate concern was to find or create employment in a land that had no industrial base. The only jobs at first were on farms owned by Jews—earlier immigrants or those from the religious community of Jerusalem—whose own economic base was insecure, sustained by philanthropic external financial aid. On these farms Jews had to compete with local Palestinians who were willing to work for low wages. Jewish farmers first had to be convinced to employ Jews instead of Palestinians, even if costs were higher and profits lower. The immigrant Jews themselves had to be persuaded to work for lower wages than they might have expected.

One of the political parties, Poʿalei Zion (Workers of Zion), tried to organize craftsmen into unions and initiated strikes in protest against the conditions of employment in the Jewish farming colonies. A small group from this party also turned its energies toward self-defense. Some Labor Zionists had founded guard units in Eastern Europe to protect Jewish communities there during pogroms. They and their defense concepts were transported to Palestine and expanded; their members were hired as guards on Jewish farms.

The second labor party, ha-Poʿel ha-Tzaʿir (The Young Worker), was formed just weeks before Poʿalei Zion. Assuming a capitalist development in Palestine, ha-Poʿel ha-Tzaʿir nevertheless traced its intellectual roots to Russian populism (rather than Marxism), rejected most of the socialist doctrine, and shunned the very word socialism. It had no ties to the international workers' movement, opposed strike actions, and rejected the utility of class struggle. It romanticized the idea of labor, but called on Jews to return to the soil, to drain swamps, to build roads. It also established the first kibbutz, Deganya, and was involved with the founding of the first *moshav* (agricultural cooperative), Nahalal.

The political changes triggered by the Russian Revolution and the end of World War I facilitated the spread of Labor Zionism from 1917 to the early 1920s. The dissolution of the Ottoman Empire and the changed boundaries of Austria-Hungary and Russia stimulated many Jews to leave for the new British Mandate territory of Palestine, where the Labor Zionists pressed for the rapid immigration and settlement of Jewish workers. Many adherents, taking matters into their own hands, crossed war-torn borders to enter Palestine without regard to the established policies of either the World Zionist Organization (WZO) or Palestine's Mandate government. Coming of age in the midst of the traumatic conditions of war, revolution, and counterrevolution in Eastern Europe, these Labor Zionists also experienced the postwar pogroms that were unleashed by the Ukrainians and the Poles.

Economic and political circumstances in Palestine forced both political parties to readjust their strategies and activities. The proposals for cooperative settlement on the land that were advanced by

One of the biggest stumbling blocks the Labor Zionism movement faced was the fact that Jews had little experience with physical labor, since in most countries they were banned from owning land or seeking certain guild-dominated occupations. **© HULTON-DEUTSCH COLLECTION/CORBIS. REPRODUCED BY PERMISSION.**

the leadership of the WZO provided plans for employment, but the new agricultural settlements challenged the socialist emphasis on industrial development. Both parties also had to find ways to justify their cooperation with the bourgeois Zionist leadership and their policies. After World War I, there were powerful incentives to unify the labor movement. In 1920 the Histadrut (General Federation of Labor) was founded, bringing into a unified framework all Labor Zionist political parties and undertaking, on their behalf, a broad range of political, economic, and cultural activities. One segment of the Labor Zionist movement founded in Vienna (1916) was ha-Shomer ha-Tzaʿir (The Young Guard). Its members were youths educated for kibbutz life in Palestine, and it retained its distinctive structure and ideology, although it also joined the Histadrut. It founded agricultural collectives, and its vision of liberation owed as much to Sigmund Freud as to Marx.

For the settlers in Palestine, the careful balancing between Labor Zionist ideology and practicality—the need to revise policies because of changing circumstances—often involved a deviation from socialist principles. Many Labor Zionists, concluding

that such adjustments foreclosed all hope for realizing socialism in their time, left their political parties, and some even left Palestine. The evolving political parties were sometimes fractured by the strains of accommodating political reality. Sometimes, however, circumstances generated strong impulses to unity. In 1930, the MAPAI political party was founded, unifying Ahdut ha-Avodah and ha-Poʿel ha-Tzaʿir. MAPAI led the labor movement in Palestine on a course of constructive socialism, seeking class goals plus a democratic Jewish nation. It also cooperated with the nonsocialist movements that accepted some social-democratic principles. These principles had been promoted by Berl Katznelson, but their implementation was executed by the party's pragmatic leader, David Ben-Gurion. Those who did not accept Ben-Gurion's pragmatism in dealing with the British Mandate authorities in 1935 joined Vladimir Zeʾev Jabotinsky and formed the Revisionist movement. Other disagreements led to the formation of other parties, but Ben-Gurion of MAPAI proclaimed the new State of Israel in 1948, and MAPAI provided all but one of the early prime ministers, Histadrut secretaries-general, and Knesset (legislature) speakers, and presidents.

LACHERAF, MOSTEFA

[1917–]

Algerian intellectual, minister, and ambassador.

Mostefa Lacheraf was born in Sidi Aissa in northern Algeria. His father was a Muslim magistrate. Lacheraf was educated at the lycée in Mostaganem and then at Paris's prestigious Lycée Louis-le-Grand. He joined Messali Hadj's Mouvement pour le Triomphe des Libertés Démocratiques (MTLD) but left it in 1952. Subsequently, as a member of the Front de Libération Nationale (FLN), he was seized along with the "historic chiefs" of the Algerian War of Independence—Ahmed Ben Bella, Hocine Ait Ahmed, Mohamed Khider, and Mohamed Boudiaf—in the infamous French skyjacking of an Air Maroc airplane in October 1956. Lacheraf was imprisoned from 1956 to 1961. After Algeria's independence, he helped to draft the Tripoli Programme (1962). He later served as ambassador to Argentina and Mexico. He was an adviser to Colonel Houari Boumédienne, who appointed Lacheraf as minister of national education (April 1977). Lacheraf's ministry was very controversial because he questioned the pragmatism of official Arabization policies—he urged a bilingual approach. In 1982 Lacheraf became Algeria's permanent delegate to UNESCO. He was appointed to the Conseil Consultatif National in 1992. He is an opponent of Islamism and has defended the army against its critics—notably in a petition that he signed with other intellectuals in March 2001. His most famous works are *L'Algérie, nation et société* (1965, 1978; Algeria: Nation and society) and, coauthored with Abdelkader Djeghloul, *Histoire, culture et société* (1986; History, culture, and society).

LACOSTE, ROBERT

[1898–1989]

Resident minister of Algeria from 1956 to 1958.

Robert Lacoste was a socialist who served as resident minister during the Algerian War of Independence under the Mollet, Bourgès-Maunoury, and Gaillard Fourth Republic governments. He supported repression, which included torture, thereby eroding civilian control, in order to keep Algeria under French control. Lacoste also promoted accelerated social and economic programs, highlighted by his efforts to "Algerianize" the administration. He increased Algeria's departments (to twelve) and drafted the Loi Cadre (enabling or framework law) designed to enhance internal autonomy and Muslim representation. He was a fervent advocate of France's involvement in the Suez War of October 1956. Lacoste later served in the French senate from 1971 to 1980.

LADINO

Various forms of Judeo-Spanish spoken and written by the Sephardim—Jews who came to the Ottoman Empire and the Maghrib (North Africa) after their expulsion from Spain in 1492.

Ladino is also called Spanyol or Judezmo; in Northern Morocco, it is called Haketía. It is at base Old Castilian (Spanish, a Romance language). Like all Diaspora Jewish languages, it is written in Hebrew characters and has a significant Hebrew and Aramaic vocabulary. It also—depending upon the region—has assimilated loanwords from Arabic, Greek, Turkish, Italian, and French.

Ladino was the language of Jewish merchants throughout much of the Islamic Mediterranean region from the sixteenth through nineteenth centuries. Except for folk songs and ballads *(cantígas* and *romances)* and some rabbinical writings, there was only a limited Ladino literature until 1730, when Jacob Culi published his popular encyclopedic *Me'am Lo'ez* in Istanbul. In the nineteenth and early twentieth centuries, Ladino became the primary medium of modern learning among Jews in the Ottoman Empire. Hundreds of novels and plays were translated from French, Hebrew, and Yiddish writers. There was a flourishing Ladino press in Turkey, Greece, the Balkans, Palestine, and Egypt.

The language policies of the post–World War I Republic of Turkey, the destruction of much of Balkan Jewry during World War II, and the migration of most of North African and Levantine Jews to Spain, South America, France, and Israel has led to the near disappearance of Ladino as a living language.

LADO ENCLAVE

Colonial territory in Sudan, connecting the Congo and Nile rivers.

The Lado Enclave was a remnant of the ambitions of King Leopold of Belgium to link his personal empire (the Congro Free State) with the Nile, whose waters flowed to the Mediterranean Sea. He appeared to have achieved his goal in 1894 when Great Britain ceded to him the Bahr al-Ghazal, which gave access to the Nile, in a futile attempt to prevent French encroachment on the vital Nile waters. Leopold yielded to French pressure to abandon the Bahr al-Ghazal but demanded his rights under a treaty with Great Britain to retain a small enclave called Lado, which would connect the two great waterways of Africa, the Congo and Nile rivers. Because the Congo Free State and the Lado Enclave were the personal fiefs of King Leopold and not of Belgium, whose government had no desire to acquire the enclave at the expense of Britain's hostility, they passed into history upon the death of Leopold on 17 December 1909. By a treaty signed between Belgium and Great Britain in 1906, the enclave was incorporated into the Anglo-Egyptian Condominium.

ROBERT O. COLLINS

LAHAD, ANTOINE

[1929–]

Lebanese leader of the Israeli-backed South Lebanon Army.

A Christian from Dayr al-Qamar, Antoine Lahad graduated from the Lebanese Military Academy in 1952. He eventually reached the rank of major general in the Lebanese army. In January 1984, following the death of Saʿd Haddad, the founder and leader of the Israeli-funded, -equipped, and -trained South Lebanon Army, Lahad was enticed by Israel out of retirement to become the new head of the militia. Under his leadership, the militia was expanded and upgraded, and its dependence upon Israeli support intensified. Lahad and his "army," which had a negative reputation in South Lebanon, ended their role in 2000 when Israel withdrew from South Lebanon due to the escalation of the resistance movement against its troops. Lahad and his associates sought asylum in Israel. In 2003 the Israeli press reported that Lahad had opened a Middle Eastern restaurant called Byblos, and he was nicknamed "General Hummus" by journalists.

LAHHUD, EMILE

[1936–]

President of Lebanon, 1998–.

Emile Lahhud was born in 1936 to a Maronite family that had a long tradition of serving in the Lebanese army. Lahhud joined the military academy in 1956 and rose through the ranks thereafter. His family was known for avoiding sectarian politics, and Lahhud did not side with any of the warring factions during his military career. His father was one of the founders of the Lebanese army, and later served in the Lebanese parliament as a moderate, pro-Arab parliamentarian. Emile attended military courses and received training in the United States and Britain; he became a symbol of the new nonsectarian Lebanese army that was reformed after the end of the Lebanese Civil War in 1989.

Lahhud was appointed commander in chief of the Lebanese Army in 1989, and he was credited with infusing the new army with ideas of national unity and Arab identity. Lahhud worked very closely with the Syrian government, and was one of Syria's allies in Lebanon. He insisted on a very large budget for the new Lebanese army, which reinstituted compulsory military service for Lebanese males. The role of the army and the intelligence apparatus increased with the expansion of the ranks and size of the military-intelligence apparatus of the government, which reduced the heavy-handed involvement of the Syrian military in Lebanese affairs, although the Syrian government still exercised great political influence in Lebanon thereafter. As commander in chief, Lahhud closely coordinated with the Hizbullah-led Lebanese resistance in south Lebanon (during the Israeli occupation of southern Lebanon from 1982–2000), providing logistical and political support for Hizbullah.

Lahhud was elected president in 1998, and his inaugural speech promised wide-ranging political and economic reforms. His blueprint for government included a promise to fight corruption, but his administration has so far avoided attacking the powerful symbols of corruption in government. His administration was also marred by an acute conflict with prime minister Rafiq Hariri.

LAHIJI, SHAHLA

[1942–]

Women's rights activist and publisher in Iran.

Shahla Lahijistarted writing for newspapers at age fifteen and was admitted to the Association of Women Writers and Journalists at age sixteen. The first female publisher in Iran, she founded in 1984 and is director of Roshangaran Publishing, a prominent publishing house of women's books. She also established the Women's Studies Center, a private research institute devoted to women's issues.

Lahiji has written several books, including *Portraits of Women in the Work of Bahram Beizaie, Filmmaker and*

Scriptwriter in 1989 and *The Quest for Identity: The Image of Iranian Women in Prehistory and History* with Mehrangiz Kar in 1992.

In 2000 she was arrested with eighteen other Iranians who had participated in a conference in Germany on the future of Iran. She was charged with acting against internal security of the state and sentenced to four years' imprisonment, but she was released after two months. Over the years she has maintained her critical, secular stance, always promoting the right to free speech and advocating equality between men and women in Iranian culture, law, and society. She received the Women in Publishing Award in 2000, after which she continued to live and work in Iran.

CHERIE TARAGHI

LAHOUEL, HOCINE

[1917–]

Algerian nationalist.

Born in the Constantine region, Hocine Lahouel joined Messali al-Hadj's Etoile Nord-Africaine (North African Star) in 1930. He was a leader in the Parti du Peuple Algérien (Algerian People's Party) and an editor of *El Ouma.* Together with al-Hadj, he was imprisoned by the French in 1937. In 1946, Lahouel participated in the Oran elections as a candidate for the Mouvement pour le Triomphe des Libertés Démocratiques (Movement of the Triumph of Democratic Liberties), becoming its secretary-general in 1950. A leading centrist within the movement, Lahouel was torn between supporting the paramilitary operations of the Organisation Spéciale (Special Organization) or the imperfect electoral process after World War II. In the late 1940s, Lahouel took a harsh stance against the Berberist members within the nationalist movement. Together with A. Kiouane, he founded La Nation Algérienne (The Algerian Nation), an organization opposed to L'Algérie Libre (Free Algeria). He joined the Front de Libération Nationale (National Liberation Front) in 1955 and represented it in Indonesia and Pakistan. In 1965, he became president of the National Textile Society. Together with Ben Youssef Ben Khedda, Ferhat Abbas, and Mohamed Kheireddine, Lahouel was placed under house arrest from 1976 until 1977 after cosigning an antigovernment manifesto entitled "New Appeal to the Algerian People." They were deemed "reactionary elements" by the Algerian government, and Lahouel lost his post in the National Textile Society.

PHILLIP C. NAYLOR
UPDATED BY VANESA CASANOVA-FERNANDEZ

LAMARI, MOHAMED

[1939–]

Lieutenant-general and chief of staff of Algeria's People's National Army.

Born in 1939 in Algiers, Mohamed Lamari is the strongman of the Algerian army and security services. He has a reputation as an absolute opponent of the armed Islamist movement. Trained in the cavalry at Saumur War School in France, he joined the National Liberation Army in 1961. After independence, he studied at the military academy in Moscow and then at the war school in Paris.

After holding several positions in the Algerian military hierarchy, he commanded the regional military staff (1970–1976) and was attached to the operations office of the national military staff until 1988, after which he became head of the fifth military region and was then promoted to the rank of land forces commander.

In January 1992, along with other generals, he demanded the resignation of President Chadli Bendjedid. In mid-1992 Lamari was appointed head of the special antiterrorist units at the Defense Ministry. Ten months later he was promoted to chief of staff of the armed forces when Liamine Zeroual replaced General Khaled Nezzar as defense minister. Lamari vigorously opposed the plan for reconciliation with the opposition parties, including the Islamists, proposed by Zeroual and his supporters. His promotion in 1994 to the rank of lieutenant-general at the moment when President Zeroual announced the failure of the dialogue with the opposition parties signaled that the eradicators were

in the ascendant and that Lamari had become the most powerful man in Algeria. From mid-1994 on, he ordered a vigorous military campaign against the armed groups and intensive bombardments of Islamists. He was delegated by President Zeroual to sign all acts and decisions, including decrees on mobilizing reservists, the creation of popular militias, the treatment of security information addressed to the national press, and the creation of areas in southern Algeria to preserve gas sites and oil fields.

In addition to his determination to eradicate Islamism, Lamari is known for initiating the army's professionalization project and for being the architect of military cooperation agreements between Algeria and its foreign partners, including the United States, the North Atlantic Treaty Organization, and Turkey.

LA MARSA CONVENTION

The document that formally established the French protectorate over Tunisia.

The La Marsa Convention was signed in June 1883 and ratified by the French Chamber of Deputies in April 1884. The force behind the convention was Paul Cambon, resident general in Tunisia from 1882 to 1886. The convention provided for a French loan to the bey, allowing him to settle his debts to other European states and thereby bringing an end to the International Financial Commission. With these measures, France won control over the Tunisian economy and, with the protectorate in place, the political affairs of Tunis as well.

LAMRANI, MUHAMMAD KARIM

[1919–]

Moroccan politician and business leader.

Educated in Morocco and France with a degree in economics, Muhammad Karim Lamrani served as an economic adviser to Hassan II in the 1960s. Lamrani went on to various prominent offices, including vice chairman, then president, of the Casablanca Chamber of Commerce; director of the national airline, Royal Air Maroc; and director general of the Sharifian Office of Phosphates. Hassan II appointed Lamrani as prime minister on six occasions—in 1971, 1972, 1983, 1985, 1992, and 1993. Unaffiliated with any major political group, Lamrani effectively served as a mediator between the crown and opposition parties. As prime minister, Lamrani was a champion of the private sector of the Moroccan economy.

In the early 1990s Lamrani led a government formed mainly by technocrats to guide the country through a difficult period of economic liberalization reforms. Renewed activism by Moroccan labor unions and Lamrani's failure to rally the opposition parties' support proved to be a major obstacle for the prime minister's policies in an atmosphere of social discontent. King Hassan II replaced him with Abdellatif Filali in 1994. Lamrani remains one of the wealthiest and most influential businessmen in Morocco.

UPDATED BY ANA TORRES-GARCIA

LAND CODE OF 1858

Extension of Tanzimat reforms to agricultural property and taxation.

The Ottoman Land Code of 1858 (Turkish, *Arazi Kanunnamesi*) was an extension of the Tanzimat reforms to the areas of agricultural property and taxation. Aimed at increasing tax revenues while replacing local rule by notables with centralized administration, the code reaffirmed prior laws pertaining to land, updated some old terminology, and

introduced two major innovations that, by permitting individuals to possess large areas of land, completely transformed the relationship of people to land in many parts of the Ottoman Empire during the last half of the nineteenth century.

Land Ownership and Taxation prior to 1858

Classical Ottoman land-tenure legislation made a fundamental distinction between the right to cultivate land *(tasarruf)* and the absolute ownership of land *(raqaba).* The two main categories of land were *mülk* and *miri.* The owners of *mülk* land combined the right to cultivate with absolute ownership; this land was largely confined to orchards adjacent to villages and constituted a small proportion of land in the empire. *Mülk* land comes closest to private property as understood in the West. *Miri* land was owned by the state; the actual cultivators of the land were essentially tenants of the state, although they were entitled to pass on the right of cultivation to their heirs. *Miri* land consisted of arable land upon which crops were sown and constituted the vast majority of agricultural land in the empire.

Taxes on agricultural lands were a primary source of income for the Ottoman state. By the late fourteenth century, a system of revenue collection was established called the *timar* system. Large grants of land were given to military officers who collected the land tax and used it to procure and equip military forces to fight the empire's wars. Until the 1800s, this system was gradually replaced by one called *iltizam* (tax farming). Wealthy individuals, often government officials, would bid at open auction for the right to collect taxes. An agreed-upon proportion of taxes would be transferred to the government, and the tax farmer could keep the rest. While initially tax farms were granted for limited periods of time, in a further development, they were granted for life, and even became inheritable. These grants were known as *malikane.* A consequence of *malikane* was that tax farmers increased their autonomy from the state and often became local rulers *(ayan).* The *ayan* did not challenge the state's claim to ownership of land, but they did prevent the state from collecting taxes, enhancing their own power. In the early nineteenth century, *ayan* from the western provinces of the empire were briefly able to impose their will on the sultan. But this supremacy was short-lived, and by 1815, Sultan Mahmud II had reestablished the dominant position of the central state.

Mahmud II's successful campaign to reassert state control over the *ayan* created a need for a new system to administer the state's vast tracts of land while preventing reemergence of the *ayan* political challenge. Land Reform was taking place throughout the Middle East. The distinguished historian Ahmed Cevdet Paşa, who served on the commission that drafted the code, stated that the radical administrative and financial changes created by the Tanzimat reforms of the first half of the century produced the need for new regulations of landed property. In addition, the growing need of the state for revenue demanded new forms of land tenure and taxation that would enhance cultivation of existing lands and encourage the reclamation of dead lands, while guaranteeing state collection of tax revenues. Finally, both merchants and farmers inside the empire and European countries were pressuring the sultan to pass reforms that would rationalize the government. Part of this rationalization would be accomplished by guaranteeing the property rights of the sultan's subjects. The 1858 Land Code was a response to these multiple needs.

The passage of the code was preceded by several reforms. In 1846, a ministry of agriculture was established to stimulate agricultural production. Efforts were made to sedentarize nomadic tribes, both to provide laborers for the cultivation of cotton and to subject them to taxation. Tax exemptions offered villages for performing public services such as road building were abolished; new state agencies would perform these services. The agricultural tax, which previously had fluctuated between 10 and 50 percent of the product was fixed at 10 percent; this tax was called the *üşür.* In 1847, the government prepared a system of land registration; land would be registered in a centralized government office, the *defterhane,* and owners would be given deeds of ownership.

Land Ownership and Taxation following the 1858 Land Code

The Land Code was characterized by marked continuity with the classical fifteenth- and sixteenth-century *qanuns* regulating agrarian property rights. The fundamental distinction between *tasarruf* and

raqaba was retained, and land continued to be divided into five categories: *mülk, miri,* waqf (tax-exempt land devoted to supporting religious establishments), *metruk* (land designated for the public activities of villages, such as the village threshing floor), and *mevat* (dead and unclaimed land). The preponderance of land continued to be owned by the state. The Land Code reiterated basic legal doctrine on the means of acquiring land through possession and cultivation of land for a ten-year period, the condition that land uncultivated for a three-year period became *mahlul* (lapsed ownership), and the means of inheriting land. The code liberalized the right of bequeathing land, in the hope that keeping land within one family would lead to greater efforts to improve land.

Despite its conservative nature, the Land Code did contain two crucial innovations that would alter the nature of land ownership in much of the Middle East. The first innovation was the obligation of landowners to register their land with the government and receive formal deed to the land. This measure was not designed to prevent absentee ownership; indeed, the code specifically stated that legal ownership of land took precedence over actual occupation and cultivation. Thus, whereas previously the *ayan* had possessed the right to collect taxes, now those who did not cultivate land could still possess land and become taxpayers. The code was thus concerned with determining the legal status of the taxpayer, suggesting that the drafters of the code perceived the new legislation as a revenue-raising instrument. The code did, however, prohibit any individual or several individuals from gaining title to occupied villages in their entirety. Nevertheless, the second innovation found in the code permitted individuals to own vast tracts of land; beginning in 1858, the state could issue deeds to formerly unoccupied lands. This was designed to increase the area of land under cultivation. When these two innovations were combined, it meant that individuals could now on paper own very large tracts of land.

The major consequence of the 1858 Land Code was the separation of the taxpayer/owner from the cultivator in many parts of the empire. Before the code's passage, peasants had leased land from the state, and powerful individuals had acted as intermediaries who collected taxes from the actual cultivator; after the code's passage, powerful individuals could legally own land that they leased to peasants. It is frequently asserted that this outcome was precisely the opposite of what was intended by the Ottoman government. Inefficient administration of the law, it is contended, allowed powerful individuals to register in their own names lands previously held by peasants. This occurred because peasants depended on local notables for protection; because peasants were afraid that registration of land would be followed by conscription or increased tax burdens; because peasant indebtedness to moneylenders led to forfeiture of deeds to land; because peasants were too ignorant to comprehend land registration; or because bedouin *shaykhs* used their authority within the tribe to usurp all the land of their tribesmen.

More recent scholarship has contested this view, arguing that the consequences of the Land Code differed from region to region in the empire and that peasants were willing to participate in and benefit from the new system. In Palestine, for example, in the hilly country surrounding Jerusalem, peasants did register land in their own names, and a survey of property records did not find a single case of a city notable or moneylender registering land. On the coastal plains, however, city notables were able to take advantage of the government's new policy of selling deeds to unclaimed lands. Large-scale landlords took possession of vast tracts of land, still mostly unoccupied or unclaimed. Similarly, in Anatolia large estates were formed on wasteland, often located in swampy plains and in the Kurds' tribal lands to the east. In areas of established peasant settlements in central Anatolia and on the coasts, peasant ownership continued to be the predominant form of land tenure.

In other regions, large estates were created. In Mesopotamia (now Iraq), Ottoman governors, seeking the cooperation of tribal shaykhs, permitted them to register tribal lands as their personal property, creating large estates. In Syria, powerful local families had obtained *malikane* grants and ruled almost unchecked from the eighteenth century. By 1858, the distinction between *mülk* and *miri* land had been considerably blurred. Thus, the Land Code seems to have accelerated, not caused, the creation of large estates. The major mechanism for estate formation in Syria seems to have been peasant indebtedness and default to moneylenders. As a re-

sult, by the start of the twentieth century, large landholdings had been created and many peasants reduced to the status of tenant farmer or sharecropper. In Syria, as in other regions of the empire where peasants lost ownership of land, estate formation did not mean the creation of unified, plantation-like farms; instead, absentee landowners negotiated arrangements with individual peasants, who continued to farm small plots of land.

Although a great deal of research remains to be done, these divergent consequences of the Land Code mitigate against drawing any overly generalized conclusions about its results. If in Syria and Iraq urban notables and tribal *shaykhs* were able to wrest ownership of land from peasants, in Palestine and Anatolia large estates were created primarily through the sale by the state of wasteland that needed to be reclaimed. The capacity of peasants in parts of Palestine and Anatolia to obtain legal possession of their land suggests that peasants were not automatically unwilling to register their land; it would seem to be the case that in many regions, they were unable to do so.

It is not clear that the creation of large estates constitutes the failure of the 1858 Land Code. If a primary purpose of the code was to raise state revenues, it was a success: Between 1887 and 1910, a period when the territory of the empire was shrinking, the revenue collected from the agricultural tax increased from 426 million to 718 million piastres.

LAND DAY

Strike by Palestinians to protest confiscation of Arab land in Israel (30 March 1976).

After Israel's government announced plans to confiscate Arab land in February 1976, the National Committee for the Defense of Arab Lands, the first political organization claiming to represent the entire Palestinian population of Israel, called for a strike and named it Land Day. In the Galilee region, where the appropriations were to take place, villagers clashed with Israel's troops, leading to six Arab deaths, and numerous arrests and injuries. These incidents were similar to demonstrations at Kafr Qasim twenty years before.

The strike demonstrated the political strength of Rakah, the Communist party of Israel, which had organized the demonstrations and had created the committee. Land Day was declared a Palestinian national holiday in 1992 and is celebrated annually with demonstrations and a general strike by Palestinians residing in Israel, the West Bank, and the Gaza Strip.

LAND REFORM

Land tenure refers to the relationships, rules, and institutions that define rights of ownership in, and access to, landed property.

Officials in Egypt survey land in the Fayum oasis. A land reform program in the country during the 1950s limited ownership size, controlled rents, and ceded property rights to tenants. © HULTON-DEUTSCH COLLECTION/CORBIS. REPRODUCED BY PERMISSION.

Land reform generally denotes government measures designed for a relatively equitable redistribution of agricultural land, but actual reform measures can reflect a range of ideological positions. The political nature of reform is difficult to avoid given the effect of changes in land tenure arrangements on the social relations and hierarchies they embody.

The distribution of property rights is a key indicator of the relationship between state and society, as well as a fundamental determinant of production and distribution. While a wide range of land tenure systems have worked themselves out across the modern Middle East, three phases in the changing relationship between state and society can usefully be highlighted where landed property is concerned. The early phase begins during the nineteenth century when centralizing state structures, colonial rule, and the emergence of global capitalism and market forces often concentrated property rights in relatively few hands. A second phase emerged in the post–World War II period when governments, often coming to power as anticolonial national independence movements, implemented ambitious programs to develop agriculture, redistribute land to middle-class or smaller farmers, and substitute state-supervised cooperatives and monopolies for private marketing networks. A third phase may be discerned in which states have, since the 1980s, repositioned themselves in the economy and, under local and international pressure, retreated to various degrees from direct intervention in agriculture.

In pursuit of fiscal and administrative goals toward which modern states typically aspire, the Ottoman state and its successors, the European-dominated colonial administrations in the Middle East, were determined to make more legible the complexity of local, often communal, landholding patterns and to pursue the standardization and individualization of title to land. The land register and the cadastral map were the instruments that best reflected the new centralized, unmediated reality officially sought by the state. Utilitarian arguments in favor of private property were commonly put forth. For example, in societies that were overwhelmingly agricultural and where land was the principal factor of production, tax collection could be facilitated by the individualization of rights. Further, it was widely assumed that unless individual users knew they would capture the benefits of investment and conservation, degradation and overuse of resources would ensue. As a wealth-creating institution, the promise of individualized property rights, particularly in the colonial period, was that resources would naturally find their way through the market into the hands of those individuals who value them most. In colonies of settlement—Algeria, Morocco, Tunisia, Libya, and Palestine—a market in land also obviously facilitated the transfer of native property to European immigrants who mainly accumulated large estates. Moreover, by asserting in philosophical terms that private property constituted the basis of civilization, European colonial officials could point to the evidence of communally or tribally held property in a colonized territory as demonstration of the necessity of imperial rule.

Subject to such pressures and interests, a variety of landholding patterns emerged. The critical variables appear to have been the considerable ecological diversity and the will or the capacity of the state to control relations at the local level. For example, in the Ottoman Empire during the nineteenth century, in Thrace and those areas of Anatolia close to

Istanbul, small-scale farming became the norm. By contrast, in the more remote areas of the empire, such as Eastern Anatolia or Syria, the need to rely on local intermediaries for administration created a highly skewed distribution of land. In some cases, the local governor played a central role: Across the provinces of Baghdad, Mosul, and Basra, Midhat Paşa initiated a process whereby cultivators of land were granted title deeds that secured virtually complete rights of ownership (although, in tribal areas, cultivators were often turned into tenant farmers when the name of the most powerful individual was placed on the title deed). In Ottoman Palestine large estates came into being once new land laws and modern registration procedures created the opportunity to benefit from the increasing foreign demand for agricultural products by purchasing vast tracts of land on paper.

European colonialism could have a profound impact on land tenure patterns. In Algeria, the best farmland was seized by French colonists, who forced the indigenous population onto marginal land or dispossessed them. This pattern of concentration under colonialism prevailed elsewhere. In Egypt a highly unequal distribution of ownership placed tremendous political and economic power into the hands of those few families who dominated rural areas. During the British mandate over Iraq, the administration came to rely heavily on intermediaries and, rather than seek direct contacts with all landowners, in fact strengthened the position of large landowners vis-à-vis small owners and tenant farmers: By 1932 only 10 percent of government revenues were derived from land taxes (as compared to 25 percent in 1921). In Iraq one of the region's (and the world's) most unequal land distributions was thereby created: By 1953, 1.7 percent of the landholders had 63 percent of the land; 75 percent of the population was landless. The impact of European imperialism on land tenure relationships varied, however, across the Middle East, the transformation often being dependent on the role played by local power structures and interests. In Transjordan British efforts to settle individual title to land overlapped with patterns on the ground.

Sharecropping was the most common method of farming, though estates in Egypt and the Maghrib relied on more direct management by the landowner or his representative. During the first half of the twentieth century, rural conditions deteriorated and landlessness was implicated in a number of problems: urbanization, high birth rates, low productivity, and lack of purchasing power. Meanwhile, large landlords enjoyed wide powers under the direct or indirect influence of European powers. In the post–World War II period, land reform—responding generally to the widespread call, "land to the tiller"—was adopted by newly independent governments to tackle socioeconomic inequities. While improvements flowing from land reform have been difficult to measure, the political goal of eliminating the power of large landowners has generally been regarded as successful. Countries experiencing significant land reforms during this phase include Egypt, Syria, Iraq, Algeria, Tunisia, Iran, and the People's Democratic Republic of Yemen.

Mohammad Reza Shah Pahlavi of Iran grants a land deed to a grateful new owner. Beginning in 1962, Iran went through a series of land reform measures, many of which were unpopular with clerical leaders and the poorer classes. © Bettmann/Corbis. Reproduced by permission.

Egypt

The pioneering attempts at land reform here progressively lowered the legal limitation of ownership size from 200 feddans (1.038 acres) in 1952 to 50 in 1969. Those who received land, whether through reform or "distress sales" of the wealthy, were rarely the poorest rural people. Direct beneficiaries were either the year-round workers of the estates—not the

landless seasonal workers—or members of the rural middle class who could afford to purchase land made available. The reforms also controlled rents and, by making it nearly impossible to evict tenants, ceded property rights to them. Remarkably, output did not fall: The government created a system of supervised agricultural cooperatives that allowed for economies of scale, took over marketing functions, and facilitated the application of inputs such as improved seed and credit. These cooperatives were also used by government to extract part of the agricultural surplus by manipulating the terms of trade. Egypt was in this way transformed into a country of predominantly small farms. Farms under five feddans covered roughly 66 percent of the land area in 1975, but by the early 1980s the share of small farms had fallen to 52 percent, largely as a result of the consolidation of the very smallest farms.

Syria and Iraq

Both countries attempted to follow the Egyptian model despite the very different conditions prevailing. Much larger areas of land were appropriated than in Egypt, the agroecologies were enormously varied (again, in contrast to Egypt where virtually all land was irrigated), stronger resistance was met, and there were far fewer trained officials. Output fell considerably. Although the Syrian and Iraqi governments found it relatively easy to expropriate land, they found it difficult to redistribute it and to take over the marketing functions. Only in the 1970s were Baʿthist governments able to redistribute land and to create fully functioning cooperatives.

Algeria

When European colonial farmers hastily abandoned large farms at the time of independence (1962), employees on many estates tried to manage them collectively. So-called *autogestion* was immediately championed by politicians, but eventually proved economically counterproductive. Pressure grew and in 1972 the government began attempts to expropriate all private farmland that exceeded the area a family could directly exploit. Agrarian reform encountered considerable resistance and evasion. By 1980, about 13 percent of the arable land had moved into the reform sector, but economic growth was disappointing compared to private farm production.

Tunisia

Reform here went through three stages. From 1956 to 1960 holders of usufruct rights (legal rights to use and profit from property owned by another) were transformed into owners. In 1961 the state began to acquire land formerly held by European colonialists, and a "cooperativization" program was launched, aimed at incorporating the surrounding small farms. Local resistance, poor investment policies, the cessation of World Bank funding, social conflict, and uncertainty about property rights all took their toll on agricultural production. By the end of 1969, cooperativization was abandoned, and the private sector was increasingly relied upon.

Iran

Beginning in 1962 landlords were required to sell to the government any land in excess of "one village." A second phase gave landlords options, such as forming "corporations" with their former tenants and distributing shares rather than land, leasing land for cash, and so on. The "farm corporation" concept, however, was unpopular with peasants; it often led to small farmers selling out to larger ones. Further, landless agricultural workers were excluded from the reform, and many, perhaps most, of the recipients of land received too little to support a family. The reforms also adversely affected the land and water rights of Islamic charities. During the 1970s the shah's government became increasingly obsessed with promoting large farms and agribusinesses. These were mostly unsuccessful and survived only thanks to massive state subsidies. After the Iranian Revolution (1979), in the early days of the Islamic republic, considerable amounts of land changed hands as Pahlavi officials were expropriated, peasants occupied land, and local religious officials took advantage of opportunities. A long debate in the *majles* (legislature) has since ensued about the legality and the desirability of further land reform, but Muslim jurists have reached competing conclusions regarding the compatibility of such measures with the basic principles of *shariʿa.*

(Former) People's Democratic Republic of Yemen

In 1968 land reform was implemented after independence. Previously, most farmers were tenants; the rulers, merchants, and religious institutions

owned most of the land. Land was redistributed to private farmers, some 65 percent of whom were organized into cooperatives. About 23 percent of all cropped land was held as state farms.

Since the 1980s governments have increasingly withdrawn from direct management of agriculture. Expanding reliance on the private sector in both farm production and marketing, as well as on reduced regulation of farm prices, is visible today in many of the countries in the region. In Egypt, for example, landowners are for the first time since 1952 permitted to evict tenants. In large part, such liberalization measures have resulted from unhappiness with the sluggish performance of state farming and from the prevailing conventional wisdom in favor of foreign direct investment and international trade. However, social inequities can be expected to grow, at least in the short run, and free-market reforms will likely require various forms of political repression as increased levels of popular opposition are confronted.

UPDATED BY MARTIN BUNTON

LANDSMANNSCHAFTEN

Jewish immigrant benevolent associations.

These groups were formed by Jews in North and South America and Israel according to place of origin of members, to assist their persecuted *landsleit* (hometown brethren) overseas and to ease their emigration and immigration. In the New World, such groups multiplied exponentially until World War I, began to decline after 1930, and largely disappeared by the 1960s. In Israel such organizations developed welfare institutions, mutual aid societies, and even several short-lived political parties.

ZEV MAGHEN

LANGER, FELICIA

[1930–]

Israeli human rights attorney; defender of Palestinian rights.

Born in Poland in 1930, Felicia Langer emigrated to Israel with her husband, Moshe Langer, a Holocaust survivor, in 1950 to be with her mother. Langer became a member of the anti-Zionist Israeli Communist Party. She became disenchanted with the new state of Israel for its treatment of Palestinians. Trained as a lawyer, after the 1967 war she devoted her entire practice to assisting Palestinian political prisoners. She worked for more than two decades in defense of Palestinian rights, often taking her cases to the Supreme Court, charging violations of the Geneva Convention, to which Israel is a signatory.

Langer faced social ostracism, physical assaults, and death threats for her defense of Palestinians. During the first Palestinian *intifada* (uprising) of 1987 through 1991, she was overwhelmed by the impossibility of adequately representing her clients in the Israeli courts. "I felt I could not address the judge as 'your honor' as a gesture of protest I closed my Jerusalem office and left the country."

Langer resettled in Tübingen, Germany, and continued to criticize the Israeli treatment of Palestinians in Israel and the Occupied Territories. She is a member of the Israeli League for Human Rights and received the Right Livelihood Award for human rights in 1990. She is the author of several books

documenting human rights violations in Palestine, including her best-known work *With My Own Eyes* (1975), *These Are My Brothers* (1979), *An Age of Stone* (1987), and an autobiography, *The Epoch of Stones, and Rage, and Hope.*

LANSDOWNE, HENRY CHARLES KEITH PETTY FITZMAURICE

[1845–1927]

British politician.

Becoming fifth marquess in 1866, Henry Charles Keith Petty Fitzmaurice Lansdowne, or Lord Lansdowne, held posts in various Liberal administrations in Britain and was governor-general in Canada (1883–1888) and viceroy in India (1888–1894). As war secretary (1895–1900) and foreign secretary (1900–1905) under prime ministers Lord Salisbury, Arthur Balfour, and Henry Campbell-Bannerman, Lansdowne negotiated the Anglo-French Entente of 1904, which, among other things, settled Anglo-French differences over Egypt and Morocco. In Morocco's crisis of 1905, Lansdowne acknowledged French supremacy in that country and supported France against Germany. Involved in the diplomatic intrigues surrounding the proposed Baghdad Railway, Lansdowne, Balfour, and many Cabinet members were in favor of supplying funding for the project, but in the face of anti-German public opinion, they were forced to drop the proposal.

LARAKI, AHMAD

[1931–]

Moroccan diplomat and minister.

Ahmad Laraki earned a medical degree in Paris and in 1957/58 joined the ministry of foreign affairs in Morocco. He served as permanent representative to the United Nations from 1957 to 1959 and as ambassador to Spain, Switzerland, and the United States from 1962 to 1967. Appointed as prime minister in 1969, Laraki weathered rising discontent in Morocco, particularly over economic problems and government corruption, as well as an attempt on the life of Hassan II in 1971. In August 1971, Laraki was replaced by Muhammad Karim Lamrani. From 1971 to 1974, he headed the ministry in charge of medical affairs. In 1974 Laraki was appointed to head the ministry of foreign affairs, an office he held until 1977.

LATA'IF AL-MUSAWWARA MAGAZINE

Trendsetting Egyptian weekly magazine.

Al-Lata'if al-Musawwara (Illustrated witticisms) was a pictorial compilation of current events, politics, famous people, social organizations, sporting events, fashion, and social criticism. It was founded by Iskandar Shahin Makarius, whose family was also involved with the publication of *al-Lata'if, al-Muqtataf,* and *al-Muqattam.* The journal began in 1915, at a time when pictures of any sort were rare in Egyptian publications. Nevertheless, by the final year of its publication in 1941, many other journals began to copy and surpass its style, and its original readership was drained perhaps by its own offshoots: *al-Awlad* (Children), *al-Arusa* (Bride), and *al-Fan al-Sinema'i* (Cinematic art).

Since early twentieth century, Egypt was a place in which even urban literacy rates were low, a journal with large pictures and easy-to-read text was a welcome innovation. Makarius invited readers to

submit their own photographs of unusual occurrences, crimes, sporting events, celebrities, oddities, and children, as well as political cartoons or caricatures. Promoting photography was typical of the magazine's support of new styles of consumption, as was its advanced advertising. Advertisements promoted local (non-Western) products, stores, and industries, often utilizing nationalist iconography. Ads appealed to women through the use of indigenous models, feminine forms of address, and products for the modern Egyptian home. Although these techniques became common in the early 1920s, in 1915 they were innovative. The emphasis on advertising demonstrated a shift from the limited press of the late nineteenth and early twentieth centuries, which had depended upon subventions and subscriptions. Makarius promoted his advertising department, boasting immediate results in a 1920 advertisement and claiming a circulation of 40,000. While this figure is probably close to double the true circulation, the magazine had appeal to readers of Arabic as far away as Brazil.

LATAKIA

Major Syrian seaport.

On the Mediterranean Sea, Latakia was known in Greek as Laodicea after the name of the mother of Seleucus Nicator (301–281 C.E.), who built it. A fertile coastal plain stretches around Latakia (Arabic, *al-Ladhaqiyya*). According to the 1982 administrative divisions of Syria, the province of Latakia included 4 *mintaqas* (sections) based on Latakia, Jabala, al-Haffa, and al-Qardaha, 13 *nahiyas* (subdivisions) based on 13 towns, 501 villages, and 590 farms. The population of Latakia province in 2002 was 1 million; the city population was about 345,000.

LA TUNISIE MARTYRE

Manifesto of the Tunisian nationalist movement.

Written by two leading Tunisian nationalists, Abd al-Aziz Thaalbi, the founder of the Destour political party, and Ahmad Sakkah, this manifesto was published in Paris in 1921. It presented the key demands and premises of the fledgling Tunisian movement for nationalism. At its heart was the claim that, prior to the French occupation (1881), a viable Tunisian state had been in place, complete with its own constitution, representative assembly, open press, and healthy economy. On the basis of those earlier institutions, a new and independent Tunisia would be established.

LAUSANNE CONFERENCE (1949)

United Nations–sponsored international conference to resolve the Arab–Israeli conflict.

The United Nations Conciliation Commission for Palestine (UNCCP) was created by UN General Assembly Resolution 194 (III) of December 1948 with the lofty goal of mediating among the warring parties after the Arab–Israel War of 1948. The UNCCP's first major initiative in this direction was to hold a conference in Lausanne, Switzerland, from 27 April to 12 September 1949, at which it hoped to bridge the differences among Arabs and Israelis.

Israel, Jordan, Egypt, Lebanon, and Syria sent delegations; Iraq refused. Various delegations claiming to represent Palestinian refugees were also present. Among these were the Arab Higher Committee and the General Refugee Congress, represented by Muhammad Nimr al-Hawwari and Aziz Shehadeh. Other Palestinians representing large landowners like Shukri al-Taji al-Faruqi and Saʿid Baydas arrived later to work with al-Hawwari.

The conferees never met in a general session. Rather, the UNCCP held separate meetings with the

Arabs and Israelis over many months. Informal meetings were held, but the formal procedures produced little. One document that emerged was the Lausanne Protocol that dealt with territorial and boundary issues. Almost immediately after signing it, the warring parties sparred over its implementation.

The conference discussed other issues as well, especially relating to Palestinian refugees. Israel offered to repatriate 100,000 of them in the context of a final settlement. The refugees' abandoned property also emerged as a major issue. In June 1949 the UNCCP created its first subcommittee, the Technical Committee, to investigate practical ways of resolving refugee issues. The conference also produced the United Nations Economic Survey Mission for the Middle East (the Clapp Mission), established by the UNCCP in late August to explore economic solutions to the refugee problem.

MICHAEL R. FISCHBACH

LAUSANNE, TREATY OF (1923)

Renegotiation of treaties ending World War I resulting in more favorable treatment of Turkey.

Defeat in World War I resulted in a harsh peace treaty for the Ottoman Empire. The Treaty of Sèvres (1920) stripped Turkey of all its European territory except for a small area around Constantinople (now Istanbul); demilitarized the straits between the Black and Mediterranean seas, opened them to ships of all nations, and placed them under an international commission; established an independent Armenia and an autonomous Kurdistan in eastern Anatolia; turned over the region around İzmir to the Greeks; restored the capitulations; and placed Turkish finances under foreign control. By separate agreement, some parts of Turkey left to the Turks were assigned to France and Italy as spheres of influence.

Unlike the other nations on the losing side in World War I, Turkey was able to renegotiate its treaty terms. This was the result of the decline of the sultan's power, the rise of the nationalists under Mustafa Kemal Atatürk, and the defeat of the Greeks' attempt to expand their power in Turkey. The latter development placed Turkish forces near British troops in the area of the straits and led to an armistice at Mudanya in October 1922 at which the Allied powers restored Constantinople and the straits to Turkish authority and called for a peace convention to renegotiate the terms laid down at Sèvres. The Allies invited both of the contesting powers in Turkey—the sultan's government and the nationalists under Kemal—to a conference at Lausanne, Switzerland. This precipitated Kemal's decision to separate the positions of sultan and caliph, abolishing the former, exiling Mehmet VI and giving the residual powers of caliph to his cousin, Abdülmecit II. Thus, when the conference at Lausanne began in November 1922, Kemal's Ankara government was the sole representative of Turkey.

İsmet Paşa, later İsmet İnönü in honor of his two victories over the Greeks at İnönü, led the Turkish delegation as the newly appointed foreign minister. He was determined to reestablish Turkish sovereignty and negotiate as an equal with the British, French, and Italians at the conference. However, İsmet found himself treated as a supplicant rather than the representative of a government with recent victories. Unable to compete with the sophisticated debate of the Allied diplomats, İsmet responded with his own unique tactics. He feigned deafness, contested every point however minor, read long prepared statements, delayed debate by consultations with his colleagues, and periodically insisted on deferring discussion pending instructions from Ankara. These tactics led to a break of negotiations for two months beginning in February 1923.

The Lausanne conference resulted in seventeen diplomatic instruments. Turkey recognized the loss of its Arab provinces, but plans for an independent Armenia and an autonomous Kurdistan were abandoned. The European powers no longer demanded capitulation, and although Turkey agreed to minor financial burdens and tariff restrictions, there were to be no war reparations. The Greeks lost their zone around İzmir, and no other powers retained zones

of influence. Turkish territory in Europe expanded, but control over Mosul in Iraq and Alexandretta in Syria remained with the British and French respectively. Finally, the conference recognized Turkish sovereignty over the straits, although there were some concessions in the form of a demilitarized zone and an international commission to supervise transit through the straits. In short, İsmet achieved virtually all that nationalist Turkey under Kemal's leadership desired.

LAVON AFFAIR

1960s political crisis in Israel sparked by the security "mishap" of 1954.

The Lavon Affair was a dramatic and divisive political crisis that shook the entire Israeli political system, led to the resignation of prime minister David Ben-Gurion in July 1963, and caused major shifts in political alignments in the state. Its roots lay in what the Israeli press nicknamed *Esek ha-Bish* (the "Mishap"). A dormant group of Israeli-trained Egyptian Jews who were prepared for missions of espionage and sabotage in the event of war were ill-advisedly activated in June 1954 under orders from Colonel Benjamin Gibli (Givly), the head of the Intelligence Division of the Israeli Defense Forces. They were instructed to detonate firebombs in a few U.S. and British cultural institutions in Cairo and Alexandria in order to disrupt the negotiations, which were nearing conclusion, on the evacuation of British troops from bases along the Suez Canal. The group was captured by Egyptian security services. Two of the leading saboteurs were sentenced and hanged, an Israeli spy committed suicide in prison, and the others were sentenced to long terms of imprisonment.

Colonel Gibli maintained that he had received orders from Pinhas Lavon, who at the time was replacing Ben-Gurion as minister of defense. A secret inquiry committee appointed by the government of Moshe Sharett could not reach a clear judgment, and both Gibli and Lavon were obliged to resign their respective posts.

Four years later the commander of the special unit in charge of the operation in Egypt disclosed that one of the documents presented to the 1954 cabinet inquiry committee was forged. The attorney general was asked by Ben-Gurion to look into these allegations. Colonel Gibli admitted the forgery but continued to claim that he had received the order orally from Lavon, and that he had been compelled to forge the document when he realized that Lavon was trying to put all the blame on him. Lavon, who was then serving as secretary-general of the Histadrut, Israel's powerful trade-union umbrella organization, demanded a public exoneration from Ben-Gurion, who declined to give it, insisting that the affair had to be subjected to a judicial investigation.

Despite strict censorship, the incident became known under different euphemisms and code names to the general public, stirring up a political crisis within and outside of the Labor Party. The entire country was divided between those who supported Ben-Gurion's position and those who opposed him. The aging prime minister had angered the second generation of party leaders by promoting a group of still younger people such as Moshe Dayan and Shimon Peres to important posts in the government, jumping over the heads of his erstwhile loyal lieutenants. For his part, Ben-Gurion was enraged that Lavon had brought his grievances to different forums outside of the party and had mobilized pressure by parties and newspapers that sought to weaken Labor's long-standing political dominance.

In order to quiet things down, the minister of finance, Levi Eshkol, by then the most powerful political figure besides Ben-Gurion, asked the minister of justice, Pinhas Rosen, to lead a ministerial committee of seven to determine how to deal with Lavon's demand for exhonoration and to bring the crisis to an end. This committee ruled that Lavon had not given the order for the sabotage action and that the document was indeed a forgery. But Ben-Gurion was indignant and threatened to resign

if Lavon did not quit his post at the Histadrut. Ben-Gurion, the "Old Man," was still powerful enough to impose his will on the party's central committee, but the entire affair weakened his standing among most of his party's elite. Eshkol refused to retract the committee's exonerating verdict and Ben-Gurion continued to demand a judicial inquiry. Additional friction ensued between Ben-Gurion and the party elite, led by Golda Meir, minister of foreign affairs, who until then had been a long-time loyal supporter of Ben-Gurion. These frictions included a bitter controversy over Israel's relations with West Germany and over the development of the Israeli nuclear option.

The tired and embittered seventy-seven-year-old Ben-Gurion resigned in June 1963. Levi Eshkol replaced him as prime minister and minister of defense. In the 1965 elections Ben-Gurion and some of his supporters in the Lavon Affair split from the Labor Party and formed a new party, Rafi (List of Israeli Workers). This effectively marked the end of Ben-Gurion's political career.

MORDECHAI BAR-ON

LAVON, PINHAS

[1904–1976]

Israeli labor leader and politician.

Born in Galicia, Poland, Pinhas Lavon was active in a Zionist socialist youth movement and was one of the founders of the Gordonia-Pioneer Youth Movement. After immigrating to Mandatory Palestine in 1929, he was active in the Kibbutz movement and became one of the ideologists of MAPAI, whose secretary-general he was in 1938 and 1939. Elected to the Histadrut Executive Committee, he became its secretary-general from 1948 to 1951. Elected to the Knesset in 1949, a year later he joined the cabinet as minister without portfolio, minister of agriculture, and from 1954 to 1955, minister of defense. In that position Lavon sought to reform the Defense Ministry, thereby angering many of its top officials and senior echelons of the Israel Defense Force (IDF). In 1954 his name was linked to a failed operation in Egypt, in which a cell of young Egyptian Jews, activated by the IDF, placed explosives in American facilities in Cairo, with the intent of souring relations between Egypt and the West in order to delay the British withdrawal from Egypt, thus removing a buffer between Egypt and Israel. Lavon argued that he did not give the order to carry out these operations. The director of Military Intelligence claimed he had.

Lavon was forced to resign his post as defense minister when the leadership of MAPAI felt his erratic behavior and hawkish policies were not acceptable. They persuaded David Ben-Gurion to return from his self-imposed retirement. Lavon was reappointed secretary-general of the Histadrut (1956–1961). In 1959, with new evidence in his hands, Lavon demanded the re-opening of the investigation of the 1954 affair in order to clear his name. In the process he accused senior IDF officers and Defense Ministry officials of perjury. Ben-Gurion demanded Lavon's ouster from the Histadrut. In 1964 he left the MAPAI party. The Lavon Affair led to a split in the ruling MAPAI Party and to Ben-Gurion's resignation in 1963. To his dying day Lavon continued to demand that his name be cleared. New research suggests that he knew of the operation but did not necessarily sanction it.

LAW IN THE SERVICE OF MAN

See HAQ, AL-

LAW, MODERN

Varieties of legal systems in Middle Eastern countries.

Modernization of law in the Middle East has entailed converting to civil law systems (generally based directly or indirectly on the French model) and, in the process, restricting and transforming the heritage of Islamic law *(shariʿa)* as set forth in juristic treatises.

Centralized legal systems, in which lawmaking is monopolized by governments of nation-states and uniform law applies throughout the national territory, are now in place throughout the Middle East, though the process remains incomplete in parts of the Arabian Peninsula. The adoption of modern legal systems has led to the marginalization or suppression of formerly vital local and customary legal systems. Modernization of legal systems has also eliminated special, extraterritorial status for members of powerful foreign communities who had succeeded in getting exemptions from the premodern legal systems of Middle Eastern countries.

The Role of *Shariʿa*

In its early stages, modernization of Middle Eastern law involved a large degree of Westernization, since the models for the new laws were European and the lawyers and other legal professionals who staffed the modernized legal systems were trained either in Europe or along European lines. Westernizing reforms were most often imposed from above by members of ruling elites or under the auspices of European powers. The process was initially slow and involved establishing new systems that operated alongside of—rather than replaced—the older, *shariʿa*-based systems. Gradually, the scope of the new legal systems widened, and the *shariʿa*-based system was increasingly confined (generally to matters of personal status, such as marriage, divorce, and inheritance). Over time, many states reined in the autonomy of this remnant of the *shariʿa*-based system, sometimes even folding its courts into the newer structures. However, only Turkey completely secularized its law.

The reaction against these trends was slow in coming. In the middle of the twentieth century, some outside of the systems of religious law and education began to complain that Middle Eastern societies were abandoning their Islamic nature. In the 1960s and 1970s, this argument took a particularly radical turn, as movements arose claiming that the failure of existing governments to implement Islamic law rendered them un-Islamic and therefore illegitimate. Although in most countries those calling for revolution in the name of defending Islamic law were a minority, the denunciation of the marginalization of the *shariʿa* had great resonance.

Some countries therefore worked to move their legal system in an Islamic direction, and many pledged in their constitutions to make the principles of the *shariʿa* a (or even the) main source of law. Yet this vague promise provoked new problems. The *shariʿa* as traditionally understood was not a legal code with easily identifiable rules but a broad intellectual tradition. Introducing elements of Islamic law into the legal system raised questions of what interpretation should be used and who had the authority to interpret law. Further, training in Islamic legal sciences had atrophied in some locations. The result was that secularly trained legal personnel often bore primary responsibility for applying the law. This did not stop attempts to integrate elements of the Islamic legal tradition in various fields of law. This solution has proved controversial in many societies, but only a few countries have resisted the general trend.

Political and Other Pressures on Legal Development

Besides the conflict over the role of Islamic law, three other conflicting pressures have operated over time. First, many Middle Eastern states attempted to build socialist economic systems through law in the 1950s through the 1970s. This effort often led them to use law as a means to restructure property rights (through measures like land reform and rent controls). Since the 1980s these states have faced international pressure to liberalize their economic and legal frameworks.

Second, the general political environment has deeply affected legal development, most obviously (but not exclusively) in constitutional law. Early constitutional efforts in the nineteenth century seem fairly modest in retrospect, focusing on establishing clear political structures and chains of command. Some tried but failed to constrain the authority of the ruler. In the twentieth century,

constitutions became markers of sovereignty and were generally issued after independence. After midcentury, with the rise of revolutionary ideologies, Middle Eastern governments often experimented with attempts to transform the social order through the constitutional and legal order. In addition, the spread of authoritarianism made it common to construct special court systems and emergency laws to solidify existing regimes. But Middle Eastern governments have faced demands for political liberalization and enhanced guarantees for the rule of law, the independence of the judiciary, and respect for international human rights principles.

Finally, international factors have fluctuated in importance over time. Middle Eastern countries have varied in the degree to which they sought integration in the increasingly internationalized post–World War II legal environment. For example, they followed differing policies regarding submission to dispute-resolution institutions such as the International Court of Justice and international arbitration, and they also have disparate records of ratifying major international treaties. In general, however, the trend has been in favor of closer integration in the internationalized legal order.

As a result of these pressures, modernization of law—which started as a top-down reform process in the nineteenth century—had become an extremely sensitive and highly politicized topic by the beginning of the twenty-first.

British and French Influences

Leaving aside their occasional Islamic components, modern laws in the Middle East have been shaped by the same forces that led to the adoption of the civil law systems of continental Europe in almost all countries around the world. The primary, and partial, exceptions are those that were dominated by Britain. British colonization or the exercise of British mandatory or protectorate authority in the Middle East led to some transplants from the common law in areas like Aden (later part of South Yemen), Bahrain, Sudan, and Oman. Nevertheless, the common law had little long-term impact on the legal systems of many countries that fell under British rule, such as Egypt, Iraq, Jordan, and Kuwait. Thus civil law, mostly of French derivation, now predominates throughout the Middle East, and the occasional remnants of common law seem unlikely to survive. For example, in 1987 Bahrain broke from British tradition, choosing to enact a commercial code derived from Egyptian and Kuwaiti models, which were themselves French in inspiration.

The contemporary legal systems of Middle Eastern countries thus share the basic features of French law, such as relying on comprehensive and systematic statements of the law in codes as formal sources of law, maintaining a sharp distinction between public and private law and between commercial and private law, and using the inquisitorial mode of procedure in criminal cases. Characteristics of the French judicial system such as separate administrative court hierarchies and the parquet/prosecutor's office are also found. French law codes have also been influential, sometimes directly and sometimes through the intervening influence of Egyptian law (which adopted and adapted much French law). However, parts of the substantive legal provisions in Middle Eastern codes often have no counterparts in continental European law, corresponding instead to governmental policies, local custom, or Islamic principles. Various codifications of *shariʿa* law were enacted into law, especially in matters of personal status, and many secular codes refer to principles of Islamic law or custom as supplementary sources of law.

The Progress of Reform

Although a few states substantially reformed their legal and judicial systems in the nineteenth century, in most areas of the Middle East change did not begin in earnest until the early twentieth century. It was delayed in countries like Afghanistan, Bahrain, Kuwait, Oman, Saudi Arabia, the states comprising the United Arab Emirates, and Yemen until the middle of the twentieth century. Newer legal systems generally initially focused on constitutions, criminal law, procedural rules, and matters involving contracts and commerce. The longest-enduring control of *shariʿa* law was over personal status matters, although even in this area it was for the most part ultimately reformed or systemized in codes. Saudi Arabia has remained the most resistant to this trend, never having made a formal break with the preexisting Islamic system of jurists' law but instead following a steady course of supplementing juristic

Merve Kavakci, a newly elected member of Turkey's Parliament, was asked to leave the swearing-in session when she arrived for the ceremony wearing an Islamic head scarf. The scarves are a controversial issue in Turkey, seen as representing an Islamic threat to the secular constitution, and public servants are forbidden to wear them. **© AP/Wide World Photos. treatises by gradually introducing governmental "regulations" in areas important for administration and economic development.

The Ottoman Empire began comprehensive legal reform in the mid-1800s, undertaking many codification projects, some of which remained influential long after its collapse. Modernization began with attempts to codify Islamic criminal laws in 1840 and 1851, which were followed by the adoption of two French-inspired codes, a penal code in 1858 and a penal procedure code in 1879. An Ottoman constitution was adopted in 1876 (though it was quickly suspended); it was amended and restored in 1909. Inspired by French models, a commercial code (later borrowed by Saudi Arabia in 1931) was enacted in 1850, and commercial procedure codes were enacted in 1861 and 1880. The most famous monument of the Ottoman legal modernization process was the Majalla (Mecelle), issued between 1869 and 1876. This was an attempt to develop a codified version of Islamic law by relying on principles found in treatises of jurists of the Hanafi school, the official school of law in the Ottoman domains. In addition to substantive rules on civil and commercial transactions and on procedures and evidence, the Majalla was composed of statements and general principles of law designed to guide the application and interpretation of its provisions.

After the collapse of the Ottoman Empire, the Majalla survived in some of its former territories, though most eventually turned to French-based codes, as occurred in Iraq in 1951, in Jordan in 1966,

in Kuwait in 1980, in Lebanon in 1932, in Libya in 1954, and in Syria in 1949. The substantive provisions of the Majalla still exert an influence, inspiring many provisions of the 1951 Civil Code of Iraq and the 1985 Code of Civil Transactions of the United Arab Emirates. The Ottoman Family Law of 1917 was another historical experiment with crafting a modern statute out of *shariʿa* rules, using the innovative technique of combining principles of family law from different Sunni schools of law.

Egypt, which during the nineteenth century became largely independent of Ottoman control, began legal reform in the mid-nineteenth century. Initially, legal reform proceeded on two tracks. For cases involving Egyptians, Ottoman models were initially used before the legal system converted to a French model in the 1880s. For cases in which a foreigner was involved, Egypt constructed Mixed Courts that were more purely French from the beginning. In 1937, however, Egypt secured international agreement for the unification of its legal system and began to draw up a new set of comprehensive codes. Much of this work was overseen by the Egyptian jurist Abd al-Razzaq al-Sanhuri (1895–1971). An expert in European and Islamic law, he played a major role in drafting the influential Egyptian Civil Code of 1948 (effective in 1949). This essentially French code, which allowed the *shariʿa* to be used as a supplementary source of law, provided the model for the civil codes subsequently adopted in Iraq, Jordan, Kuwait, Libya, and Syria and indirectly influenced the 1984 Sudanese Civil Transactions Act. Italian law shaped Egypt's 1937 criminal code.

As a result of long-standing French political domination of North Africa, French legal culture spread through the region. During the time that Algeria was a French colony, from 1830 to 1962, it was integrated into the French legal system. Algeria enacted new codes after independence in which

French influence persisted. In 1984 it adopted a code of family law reinstating *shari*ʿ*a* rules and reinforcing the patriarchal structure of the family. Faced with popular pressures for legal reform, in 1989 Algeria adopted a new constitution that diluted the militant socialist character of the 1976 constitution and reflected demands both for strengthened human rights guarantees and for changes that would give the constitution a more Islamic character. In 1861 Tunisia had become the first Middle Eastern country to enact a constitution. As a French protectorate, from 1881 to 1956, Tunisia enacted in 1906 a code of obligations and contracts that combined elements of French and Islamic law, and in 1913 it adopted a penal code. After independence Tunisia amended old codes and enacted new ones, the most significant being its 1956 Personal Status Code, constituting the most progressive interpretation in Arab law of Islamic legal requirements in the area of family law. Morocco, a French protectorate from 1912 to 1956, enacted in 1913 its Code of Obligations and Contracts, which was similar to the 1906 Tunisian code. Morocco enacted some French-inspired codes after independence, but it retained many rules of traditional *shari*ʿ*a* law in its 1958 Personal Status Code and incorporated aspects of Islamic criminal law in provisions of its 1962 Penal Code.

Distinctive Paths of Legal Development

Some Middle Eastern countries followed distinctive paths of legal development. For example, Iran adopted a constitution in 1906 and 1907. An Iranian Civil Code was enacted in the period from 1927 to 1937 that combined elements of Twelver Shiʿi law with French and Swiss law. French law provided the models for other codifications undertaken by Iran in the 1930s. The progressive Iranian Family Protection Act of 1967, amended in 1975, was abrogated after the Islamic revolution of 1978–1979. Since the revolution, Iran has officially endorsed Islamization, adopting a constitution in 1979 that placed an Islamic jurist at the apex of the scheme of government and established Islamic principles as the supreme law of the land. Westernized legal professionals and Western-style legal training were replaced; Shiʿa clerics and Shiʿi jurisprudence were given a preeminent role in the legal system. However, there was no return to the old system of jurists' law: Iran's parliament retained its lawmaking authority, and French legal influences were not obliterated.

Turkey was reconstituted in 1921 as a nation-state after the collapse of the Ottoman Empire. Under Kemal Atatürk (1881–1938), the military leader who became the first president, Turkey pursued a program of complete secularization of law, which led to the abandonment of Islamic law even in personal status matters. In 1928 Islam lost its status as the state religion. Turkey imported European codes in the 1920s that were variously taken from German, Italian, and Swiss sources. The Turkish constitutions of 1921, 1924, 1961, and 1982 have differed in many respects, but Turkey's governments have continued to uphold the principle of secularism.

Israel emerged in 1948 as a Jewish state with a legal system in which there coexisted elements deriving from the Ottoman law of prepartition Palestine, Jewish law, and Western law, the latter being an unusual hybrid of common law and civil law elements. As with almost all other Middle Eastern countries, however, personal status law retains a religious basis.

Upon achieving independence in 1951, Libya largely divested itself of Italian law, which had been imposed after it was colonized by Italy in 1912. Egyptian influences on the new legal system were initially strong, but after the 1969 revolution Libya pursued a separate course of radical legal changes that were dictated by the theories of its leader, Muammar al-Qaddafi.

UPDATED BY NATHAN J. BROWN

LAW OF RETURN

Law that allows Jews to immigrate to Israel and become Israeli citizens.

The Law of Return *(Hok ha-Shvut)* was passed by the Knesset on 5 July 1950. In accordance with the notion that Israel is a Jewish state and the state of the Jews, the law provides that any Jew is entitled to immigrate to Israel and acquire a certificate and status of *oleh,* an immigrant with automatic citizenship. The law was amended in 1954 to exclude individuals with a criminal past that might endanger public welfare. An amendment in 1970 extended citizenship rights to non-Jewish spouses and children of Jews.

Some Orthodox leaders have called for an amendment to the law that would narrowly define a Jew as one born of a Jewish mother or one who converted according to Orthodox tradition. To many, this proposed amendment makes the debate over Jewish identity so volatile that it threatens the fabric of worldwide Jewish unity. It has sparked passionate debate both in Israel and the Diaspora over definitions of Jewish identity, and has aroused strong opposition from the Jewish Reform and Conservative movements. There have been periodic calls for repeal of the law by some non-Zionists and others who view it as discriminatory. From their perspective, Israel should be a state like any other modern state, without laws that discriminate on the basis of religion or ethnicity.

LAWRENCE, T. E.

[1888–1935]

British soldier and adventurer, known as Lawrence of Arabia.

Thomas Edward Lawrence was born on 15 August 1888 in Tremadoc, Wales, and was educated at the University of Oxford, where he graduated with a thesis on the military architecture of the Crusades. Having developed an interest in archaeology and Arab culture, he toured the Crusader castles in Greater Syria when the region was in its last years under Ottoman rule. At the outbreak of World War I, disgusted by the hypocrisy of his own society's values, Lawrence turned from an adventurer into a secret agent, becoming the famed Lawrence of Arabia. From the British Military Intelligence Service in Cairo, which he joined in 1914, he was dispatched to the Hijaz, where the Hashimites acted as the Ottoman sultan's representatives of the two holy cities of Mecca and Medina. Lawrence's mission was to help organize the Arab tribes into a national movement that ultimately was to serve British imperialism. The Arab national movement, in which Lawrence himself came to believe, turned into a military success, and in 1918 Lawrence and Hashimite prince Faisal (later King Faisal I ibn Hussein of Iraq) entered Damascus before the arrival of the British army so as to avoid a Muslim backlash.

In spite of the success of the so-called Arab Revolt of 1916 to 1918, Lawrence, who narrated his adventures in *Seven Pillars of Wisdom* (1926), thought that his battle for an "Arab cause" was "lost" because "the old men came out again and took from us our victory" in order to "re-make [the world] in the likeness of the former world they knew" (Introduction to the first edition, 1926; passage omitted from later editions). Unable to cope with his fractured self and with the historical necessities of British imperialism, Lawrence ultimately stopped believing in a meaningful Arab national movement, which he thought was only "necessary in its time and place" (*Letters,* in

1930, p. 693). He rejoined the air force in 1925 and served as an enlisted man until 1935. On 19 May of that year, shortly after his discharge, he was killed in a motorbike accident in Dorset.

LEAGUE OF ARAB STATES

This foremost pan-Arab organization provides the institutional expression for the aspiration of Arab unity.

The League of Arab States, also known as the Arab League, is composed of twenty-two independent Arab states that have signed the Pact of the League of Arab States. Palestine, represented by the Palestinian Authority, is included as an independent state. The multipurpose League of Arab States seeks to promote Arab interests in general, but especially economic and security interests. It also works to resolve disputes among members and between member states and nonmember states. It has the image of unity in the protection of Arab independence and sovereignty. It promotes political, military, economic, social, cultural, and developmental cooperation among its members.

The league is an international governmental organization with permanent headquarters in Cairo, Egypt. From 1979 to 1990 its headquarters were in Tunis. It maintains delegations at United Nations

Secretary-General Amr Mousa of the League of Arab States speaks at the United Nations in 2003. Mousa, a career diplomat, also served as the foreign minister of Egypt after 1991.
© AP/Wide World Photos. Reproduced by permission.

facilities in New York and Geneva, and at the Organization of African Unity in Addis Ababa, Ethiopia. It also has offices in such key cities as Washington, D.C., London, Moscow, Paris, Bonn, Beijing, Brussels, Vienna, Madrid, Rome, and New Delhi. The league has not realized the perfect Arab unity desired by some Arab nationalists. From its inception some states emphasized state sovereignty in accordance with the league's pact and rejected federalist or unionist proposals. The league not only serves the mutual interests of its members, but also reflects the differences. The league members agreed to an Arab Charter on Human Rights in 1994 and to the Arab Convention for the Suppression of Terrorism in 1998.

History

The League of Arab States was founded on 22 March 1945 with the signing of the pact by seven Arab states. Sixteen additional states joined, but in 1990 Yemen (Aden) and Yemen (Sanʿa) merged to form the Republic of Yemen, bringing the total to twenty-two.

Although the league was formed after World War II, the process that led to its creation is a function of the development of Arab nationalism, which predated the twentieth century but grew dramatically after World War II. Egyptian prime minister

The League of Arab States meets in Bludan in 1946. Formed in 1945, the league is a voluntary association of independent countries whose main purposes are to strengthen ties among member and nonmember states, coordinate their policies, and promote their common interests. © BETTMANN/CORBIS. REPRODUCED BY PERMISSION.

Mustafa al-Nahhas, Iraqi prime minister Nuri al-Saʿid, and Transjordan's King Abdullah I ibn Hussein are credited with being early architects of the league in the 1940s. The British initiated, in part, the preparatory talks leading to its creation. In the fall of 1944, seven Arab states met in Alexandria, Egypt, to discuss the creation of a "Commonwealth of Arab States." On 7 October 1944 Egypt, Iraq, Lebanon, Syria, and Transjordan signed the Alexandria Protocol, which envisioned a league of independent states, rather than a union or federation. The main points of the protocol were subsequently incorporated into the league, as was an appendix stressing Palestinian independence. The league's initial members were Egypt, Iraq, Lebanon, Saudi Arabia, Syria, Transjordan (now Jordan), and Yemen (Sanaa).

The league's general structure has remained intact since its formation, but the scope of its activities has expanded dramatically, especially in nonpolitical fields. The organization consists of a council, special committees, and a secretariat-general. In addition, the league has become an umbrella organization responsible for the numerous specialized agencies, unions, and other institutions created to promote Arab interests.

Organization

The pact established a council as the league's principal organ. It is composed of representatives of each member state, with each state having one vote. Unanimous decisions of the council are binding on all members. Majority decisions are binding only on those members that accepted them, except that majority decisions are enforceable on all members for certain specific matters relating to personnel, the budget, administrative regulations, and adjournment. The council implements league policies and pursues league goals. It meets twice a year, in March and September, but extraordinary meetings can be called at the request of two members.

Special committees have been established to support and represent the council. The league's committees have included the Political Committee, Culture Committee, Communications Committee, Social Committee, Legal Committee, Arab Oil Experts Committee, Information Committee, Health Committee, Human Rights Committee, Permanent Committee for Administration and Financial Affairs, Permanent Committee for Meteorology, Committee of Arab Experts on Cooperation, Arab Women's Committee, Organization of Youth Welfare, and Conference of Liaison Officers.

The secretariat-general consists of the secretary-general, assistant secretaries-general, and other principal officials of the league. It is responsible for administrative and financial activities. The council, with the approval of a two-thirds majority of the league's members, appoints the secretary-general to a renewable five-year term. The secretary-general has the rank of ambassador.

The office of the secretary-general was held by Egyptians during the first three decades of the league: Abd al-Rahman al-Azzam (1945–1952); Abd al-Khaliq Hassuna (1952–1972); and Mahmud Riyad (1972–1979). A Tunisian, Chadli Klibi, held the post from 1979 until 1990. He resigned during the controversy surrounding the Gulf Crisis. Ahmad Ismat Abd al-Majid, an Egyptian, served as secretary-general from May 1991 to 2001. He was followed in 2001 by the popular Egyptian foreign minister Amr Moussa (also Musa).

In 1950 the Treaty of Joint Defense and Economic Cooperation complemented the league pact

and provided for the establishment of the Joint Defense Council and the Permanent Military Commission. An Economic Council was set up under the treaty in 1953. An Arab Unified Military Command was formed in 1964. In 1976 an Arab Deterrent Force was sent to Lebanon under league auspices.

Financing

The League of Arab States is financed by an assessment of charges made to each member. The secretary-general prepares a draft budget and submits it to the council for approval before the beginning of each fiscal year. The council then fixes the share of the expenses or dues to be paid by each member state. This share may be reconsidered if necessary.

The league experienced significant difficulties in the collection of member-state dues in the aftermath of the Gulf Crisis (1990–1991) and subsequently. Its 1991 budget was over $27 million, with the largest share being assessed to Saudi Arabia (14%), Kuwait (14%), Libya (12%), Iraq (10%), Egypt (8.5%), Algeria (8%), the United Arab Emirates (6.5%), and Morocco (5%). Bahrain, Kuwait, Libya, Morocco, and Yemen had reservations concerning their share of the league budget. The 1999 budget was set at $26.5 million, but when Amr Moussa took office in 2001, it was estimated at $50 million. Also, late dues reportedly had reached $100 million, with some states more than a decade in arrears. According to Article 15 of the league's bylaws, approved in 1973, members can be denied

Issues at Arab League summits

No.	Date and location	Resolutions, outcomes
1st	January 1964, Cairo	Agreed to oppose "the robbery of the waters of Jordan by Israel."
2nd	September 1964, Alexandria	Supported the establishment of the Palestine Liberation Organization (PLO) in its effort to liberate Palestine from the Zionists.
3rd	September 1965, Casablanca	Opposed "intra-Arab hostile propaganda."
4th	29 August–1 September 1967, Khartoum	Held post-1967 Arab-Israeli War, which ended with crushing Israeli victory; declared three "no's": "no negotiation with Israel, no treaty, no recognition of Israel."
5th	December 1969, Rabat	Called for the mobilization of member countries against Israel.
6th	November 1973, Algiers	Held in the wake of the 1973 Arab-Israeli War, it set strict guidelines for dialogue with Israel.
7th	30 October–2 November 1974, Rabat	Declared the PLO to be "the sole and legitimate representative of the Palestinian people," who had "the right to establish the independent state of Palestine on any liberated territory."
8th	October 1976, Cairo	Approved the establishment of a peacekeeping force (Arab Deterrent Force) for the Lebanese Civil War.
9th	November 1978, Baghdad	Condemned the Camp David Peace Accords between Egypt and Israel, and threatened Egypt with sanctions, including the suspension of its membership if Egypt signed a treaty with Israel.
10th	November 1979, Tunis	Held in the wake of Israel's invasion of Lebanon in 1978, it discussed Israel's occupation of southern Lebanon.
11th	November 1980, Amman	Formulated a strategy for economic development among League members until 2000.
12th	November 1981/September 1982, Fez	Meeting was suspended due to resistance to a peace plan drafted by Saudi crown prince Fahd, which implied de facto recognition of the Jewish state. In September 1982 at Fez, the meeting reconvened to adopt a modified version of the Fahd Plan, called the Fez Plan.
13th	August 1985, Casablanca	Failed to back a PLO- Jordanian agreement that envisaged talks with Israel about Palestinian rights. Summit boycotted by five member states.
14th	November 1987, Amman	Supported UN Security Council Resolution 598 regarding cease-fire in the Iran-Iraq War. Also declared that individual member states could decide to resume diplomatic ties with Egypt.
15th	June 1988, Casablanca	Decided to financially support the PLO in sustaining the Intifada in the occupied territories.
16th	May 1989, Casablanca	Readmitted Egypt into Arab League, and set up Tripartite Committee to secure a cease-fire in the Lebanese Civil War and re-establish a constitutional government in Lebanon.
17th	May 1990, Baghdad	Denounced recent increase of Soviet Jewish immigration to Israel.
18th	August 1990, Cairo	12 out of 20 members present condemned Iraq for invading and annexing Kuwait. Agreed to deploy troops to assist Saudi and other Gulf states' armed forces.
19th	June 1995, Cairo	Held after a hiatus of five years. Iraq not invited.
20th	October 2000, Cairo	Set up funds to help the Palestinians' Second Intifada against the Israeli occupation, and called on its members to freeze their relations with Israel. Iraq was invited.
21st	March 2001, Amman	Held after the election of Ariel Sharon as Israel's prime minister, it appointed Egypt's Amr Mousa as the Arab League's new secretary-general.
22nd	March 2002, Beirut	Adopted the Saudi Peace Plan of Crown Prince Abdullah, which offered Israel total peace in exchange for total Israeli withdrawal from Arab territories conquered in the 1967 war. Opposed the use of force against Iraq.
23rd	March 2003, Sharm al-Sheikh, Egypt	Agreed not to participate in the U.S.-led attack on Iraq, but allowed the United States to use military bases in some of their countries.

TABLE BY GGS INFORMATION SERVICES, THE GALE GROUP.

voting rights if their delinquent dues total more than their total assessment of the current year and the two preceding years.

Policy

The League of Arab States has had a significant impact on the Middle East and on its members. Although it has not been a stepping-stone to Arab political unity, it has fostered Arab cooperation in many fields. Cooperation on political questions, however, has been difficult. In fact, political conflicts in the Arab world are frequently reflected in the league. Governmental diversity is protected in the league pact, which requires each member to respect the systems of government of other members. The pact also requires states to abstain from action calculated to change the systems of government in other members.

The Cold War served to draw political lines within the league between clients of the United States and those of the Soviet Union. Despite the wealth of some of its members, the league is more closely aligned to the South in the North-South conflict, sometimes acting as a bloc for the South in the United Nations.

The league has actively sought to bolster Arab security, but its efforts are limited by inter-Arab rivalries. It has facilitated the peaceful settlement of disputes between its members, as between Morocco and Mauritania; between groups within member states, as in Lebanon or Somalia; and between members and outside parties, as between Libya and the United States. The league has acted as a regional alternative to the United Nations in this regard.

The league has been united in its support for Palestine vis-à-vis Israel, but has come under increasing criticism in recent years for failing to do enough for the Palestinians and for Iraq. Egypt's treaty with Israel (the 1978 Camp David Accords) resulted in its suspension from the league from 1979 to 1989. Members were also divided over the Fahd Plan (1981); over the leadership of the Palestine Liberation Organization (PLO); and over the Iran-Iraq War (1980–1988). Iraq's invasion of Kuwait and the first Gulf War (1991) prompted additional controversy. The U.S. move against Iraq in 2003 brought strong and united condemnation of "American-British aggression against Iraq." The league also emphasized its cooperation with the United Nations.

Membership

League members are: Algeria, Bahrain, Comoros, Djibouti, Egypt, Iraq, Jordan, Kuwait, Lebanon, Libya, Mauritania, Morocco, Oman, Palestine, Qatar, Saudi Arabia, Somalia, Sudan, Syria, Tunisia, United Arab Emirates, and Yemen. In November 2002 Libya asked to withdraw its membership. Any independent Arab state is theoretically entitled to become a member, but a request for membership must be made through the permanent secretariat-general of the league and submitted to the council. Eritrea assumed an observer status in January 2003.

Satellite Organizations

Numerous specialized organizations and other institutions that promote Arab cooperation and protect Arab interests in a wide array of fields fall under the league umbrella. These include, among others: the Academy of Arab Music; Administrative Tribunal of the Arab League; Arab Bank for Economic Development in Africa; Arab Bureau of Narcotics; Arab Bureau for Prevention of Crime; Arab Bureau of Criminal Police; Arab Center for the Study of Arid Zones and Dry Lands; Arab Civil Aviation Council; Arab Fund for Economic and Social Development; Arab Fund for Technical Assistance to Africa and Arab Countries; Arab Industrial Development Organization; Arab Labour Organization; Arab League Educational, Cultural, and Scientific Organization; Arab Maritime Transport Academy; Arab Monetary Fund; Arab Organization for Agricultural Development; Arab Organization for Standardization and Metrology; Arab Organization of Administrative Sciences; Arab Postal Union; Arab Satellite Communications Organization; Arab States Broadcasting Union; Arab Telecommunications Union; Council of Arab Economic Unity; Council of Arab Ministers of the Interior; Inter-Arab Investment Guarantee Corporation; Organization of Arab Petroleum Exporting Countries; and the Special Bureau for Boycotting Israel.

Prospects

After the second Persian Gulf war in 2003, relations between member states of the league remained uncertain. Amr Moussa moved to reunify the Arab

ranks and worked through the United Nations. The uncertainties unleashed in the gulf spawned new dangers aimed at regimes friendly to the United States. The crisis offers new challenges to Arab leadership that could enhance the role of the Arab League. The league's aspiration of Arab unity will be central to the creation of a new world order, as will the inevitable divisions in the Arab ranks. Arab cooperation in nonpolitical areas will continue under the league's aegis and will promote not only improved relations among Arabs, but also between Arabs and outside states and organizations.

LEBANESE ARAB ARMY

Muslim military group in Lebanon.

The Lebanese Arab Army was formed in 1975 by a group of Muslim officers and soldiers who defected from the army of Lebanon and accused its Maronite leadership of collaboration with Maronite right-wing militias. Supported by the Palestine Liberation Organization (PLO; the al-Fatah movement in particular), it succeeded in overrunning military barracks controlled by the army of Lebanon. The Lebanese Arab Army's role came to an end in the spring and early summer of 1976, when its forces (along with PLO forces and forces loyal to the Lebanese National Movement) clashed with the army of Syria, which was supporting the coalition of Maronite-oriented right-wing militias.

LEBANESE CIVIL WAR (1958)

Uprising against the government.

Fifteen years after Lebanon became officially free of French mandatory control, it assumed its role as an independent republic on the basis of an unwritten national pact, whose symbolic and practical importance is difficult to exaggerate. In May 1958, the nation of 1.1 million people, whose political institutions reflected the balance of power between its confessional communities, exploded in civil war.

Rooted in a series of interlocking factors of domestic, regional, and international origin, the primary causes of the war were domestic in nature. They were shaped by the policies of the presidential regime of Camille Chamoun (1952–1958), whose personal ambitions capped a domestic politics and foreign policy that greatly exacerbated existing divisions in a state whose civil and national consciousness were less developed than its successful mercantile character.

President Chamoun's ambition to succeed himself in office contributed to the existing political tensions and was widely viewed as one of the major catalysts of civil strife. The Lebanese government claimed that civil insurrection was a function of external intervention organized by Egypt and Syria, in the United Arab Republic (UAR). But the war that

Women belonging to the Phalanges Libanaises party demonstrate during the Lebanese civil war. © Bettmann/Corbis. Reproduced by permission.

was sparked by the assassination of the journalist Nasib Matni, on 8 May 1958, was rooted in preexisting grievances that involved questions of political access; confessionalism and class; group identity and national consensus; and the major discontent of political elites displaced by corrupt elections in 1957, as well as the dissatisfaction of those constituencies deprived of significant representation.

Opposition groups that included an array of established political figures, some of whom would come to office in the post-Chamoun regime for the first time, opposed the president's perpetuation in office, and, in some instances, his foreign policy as well.

Under the Chamoun regime, Lebanon threw its support to the conservative Arab coalition and became a staunch advocate of U.S. policy and the Eisenhower Doctrine of 1957. That stance identified Lebanon with the anti-Nasserist and anti-Arab nationalist forces in the region. The intensification of domestic tensions exploded with the Nasib Matni assassination, and President Chamoun was challenged by the opposition. The Lebanese government's response was to blame civil strife on interference by the UAR and to charge it with the

attempt to undermine Chamoun regime and state. These charges came before the League of Arab States (Arab League) and the United Nations, which assigned a task force to investigate charges of massive infiltration by foreign forces in Lebanon. It was on the basis of this same charge that President Chamoun had requested assistance from the United States. With the military coup in Iraq on 14 July, an event that shook the Western powers, the United States responded on 15 July with military intervention in Lebanon, while Great Britain gave protective cover to the Jordanian regime. The United States remained in Lebanon overseeing the election of a new president, Fuʾad Chehab, an event which marked the beginning of a new phase in the nation's development. Many would argue, however, that the fundamental roots of this first civil war had not been satisfactorily resolved.

LEBANESE CIVIL WAR (1975–1990)

Domestic conflict in Lebanon.

There is no consensus among scholars and researchers on what triggered the Lebanese Civil War. The strike of fishermen at Sidon in February 1975 could be considered the first important episode that set off the outbreak of hostilities. That event involved a specific issue: the attempt of former President Camille Chamoun (also head of the Maronite-oriented National Liberal Party) to monopolize fishing along the coast of Lebanon. The injustices perceived by the fishermen evoked sympathy from many Lebanese and reinforced the resentment and antipathy that were widely felt against the state and the economic monopolies. The demonstrations against the fishing company were quickly transformed into a political action supported by the political left and their allies in the Palestine Liberation Organization (PLO). The state tried to suppress the demonstrators, and a government sniper reportedly killed a popular figure in the city, Maʿruf Saʿd, who was known for his opposition to the government and his support for the Palestinians.

The events in Sidon were not contained for long. The government began to lose control of the situation in April 1975, when a bus carrying Palestinians was ambushed by gunmen belonging to the Phalange party. The party claimed that earlier its headquarters had been targeted by unknown gunmen. The attack against the bus in Ayn al-Rummana marked the official beginning of the Lebanese Civil War. Initially, the war pitted Maronite-oriented right-wing militias (most notably the Phalange party and the National Liberal party) against leftist and Muslim-oriented militias (grouped together in the Lebanese National Movement) supported by the PLO. The eruption of military hostilities produced a heated political debate on whether the army of Lebanon, led by a right-wing Maronite commander, should be deployed to end the fighting. Most Muslims and leftists opposed any use of the army, which was seen as anti-Palestinian; most right-wingers called for its immediate deployment.

The characterizations of the combatants in the civil war often obscure the nature of the conflict. Many Lebanese still see the civil war as the product of a conspiracy hatched by outsiders who were jealous of "Lebanese democracy and prosperity." The civil war should be viewed as a multidimensional conflict that at its roots is a classical civil strife with the domestic parties determining the course but rarely the outcome of the fighting. Over the course of Lebanese history external parties have insisted on preventing the Lebanese from proceeding unrestrained in their civil strife. Had the Lebanese been allowed to continue fighting without external restraints, some sects in Lebanon would have been eliminated long ago. This is not to say that the external parties—notably Syria, Iraq, Iran, and Israel—have not contributed to the intensification of the conflict whenever it suited their interests. All of these states have had proxy militias operating in Lebanon.

The roots of the civil war are a set of issues, some having to do with domestic politics and others with foreign policy. It is fair to say that the system of sectarian distribution of power that had been

The controversial military figure Ariel Sharon (b. 1928), pictured left, has served as both defense minister and prime minister of Israel. Sharon is most widely known for his lengthy occupation of Lebanon from 1982 to 1985, and for his continuing conflict with Palestinian leader Yasir Arafat. © AP/Wide World Photos. sponsored by France since 1920 led to the increasing frustration of Muslims, who grew demographically but not politically. In 1975 the political system continued to assume that the figures of the 1932 census—the only census in Lebanon's history—which showed the Maronites to be the single largest sect in the country, had not changed. However, it was widely known that the Shiʿa had long been the single largest sect, although their political representation was small. The ceremonial post of speaker of Parliament was reserved for the Shiʿa, whereas the presidency was reserved for Maronites, and the prime ministership for Sunnis. The Shiʿa included a disproportionate number of poor people, and, to add to their misery, predominated in the area of southern Lebanon that in the 1960s became an arena for Israel-Palestinian conflict. The state of Lebanon, which always avoided provoking Israel, simply abandoned southern Lebanon. Many of the people there migrated to the suburbs of Beirut which are known as "poverty belts." The young Shiʿite migrants, who had not participated in the prosperity of prewar Beirut, joined many Lebanese and Palestinian organizations.

The Sunnis had grievances, too. The office of the prime minister was marginalized by the strong presidency of Sulayman Franjiyya, who was elected in 1970. In 1973, when Prime Minister Sa'ib Salam could not fire the commander in chief of the army after a commando raid launched from Israel that targeted three high-ranking PLO leaders, the issue of the powers of the prime minister emerged as a symbol of the sectarian/political imbalance in the country. Socioeconomic dissatisfaction plus political resentment produced an unstable political system.

The presence of Palestinians in Lebanon was another thorny issue. The state decided to crack down on their armed presence in Lebanon while right-wing militias were being armed and financed by the army. Many leftists and Muslims wanted the state to support the Palestinians and to send the army to protect southern Lebanon against raids from Israel. The PLO, on the other hand, was tempted to take advantage of the domestic turmoil to shore up support for its cause and to undermine the military power of the Army, which had long harassed Palestinians.

The first phase of the Lebanese Civil War did not end; it merely came to a temporary halt as a result of regional and international consensus. When it was becoming clear that the PLO and its Lebanese allies were about to overrun predominantly Christian areas, Syria intervened militarily in Lebanon and, with support from Israel, the United States, and France, fought the Palestinians and their Lebanese allies. The fighting stopped for a while, although southern Lebanon continued to be an arena for the conflict between Israel and the Palestinians, as well as the armed militias, who were present throughout Lebanon. By 1978, Syria's relations with Maronite-oriented parties had worsened, and the rise of Bashir Jumayyil as head of the Lebanese Forces—the coalition of right-wing fighting groups—caused a change in the course of the civil war. Israel became a close ally of the Lebanese Forces, and Syria's regime decided to sponsor the leftist-Palestinian coalition. In the spring of 1978, Israel's army invaded Lebanon in order to end any military presence in southern Lebanon, except that of the pro-Israel militia. Although international opprobium forced Israel southward, and although UN forces were deployed in southern Lebanon to pacify the region, Israel continued to occupy part of southern Lebanon, calling the strip of land "the security zone."

The civil war took another turn in 1982, when Israel invaded Lebanon again; this time Israeli's forces reached Beirut. Israel took advantage of the deteriorating security situation throughout the country and expected that popular frustration with the misconduct of members of the PLO, and Syrian and Lebanese troops, would provide positive climate for its all-out military intervention. The invasion claimed the lives of some 20,000 Lebanese and Palestinians. Israel also wanted to influence the 1982 presidential election; Bashir Jumayyil was elected president but was assassinated a few days later. His assassination was the pretext that the Lebanese Forces gave for their mass killing of Palestinian civilians in the Sabra and Shatila refugee camps.

Amin Jumayyil, the next president, supported the signing of an Israel-Lebanon peace treaty in May 1983. Lebanon's opposition, coupled with Syria's rejection on the pro-Israel, pro-United States orientation of Jumayyil, resulted in the eruption of hostilities throughout the latter's administration. When Jamayyil's term ended in the summer of 1988, he appointed the Maronite commander in chief of the army, Gen. Michel Aoun, as interim president. His appointment was rejected by many Lebanese, and Aoun launched a "war of national liberation" against Syria's army in Lebanon. His shells, however, fell on innocent Lebanese living in areas under Syria's control.

The beginning of the end of the civil war came in October 1989, when Lebanese deputies gathered in the city of Ta'if in Saudi Arabia. The meeting produced a document of national accord. It was impossible to implement, however, until General Aoun's forces were defeated in October 1990, when Syria's troops attacked his headquarters and he was forced to seek refuge in France. President Ilyas al-Hirawi was elected in 1989, and the territorial integrity of Lebanon has been partially restored.

LEBANESE CRISES OF THE 1840s

Druze versus Christian sectarian violence.

The London Treaty of 1840 ended the Egyptian occupation of Mount Lebanon (1831–1840). Soon afterwards the Ottomans dismissed the local governor, Bashir II, whose collusion with the Egyptian ruler Muhammad Ali had discredited him with the local population. The years of Egyptian manipulation of sectarian politics produced a backlash under

the Ottomans in the Druze versus Christian conflicts at Dayr al-Qamar in 1841. Bashir III, the last Chehab amir, was replaced in 1842 by a direct governor, Umar Pasha al-Nimsawi (the Austrian). Continued civil strife and European pressure led the Ottomans to establish a system of two subgovernorates in Mount Lebanon *(qa'im maqamiyatayn)* divided on religious lines. Despite further sectarian clashes in 1845 at Mukhtara, Jazzin, and Dayr al-Qamar, the tottering new system survived until 1860 when the mutasarrif system finally ended Mount Lebanon's autonomy.

LEBANESE FORCES

Lebanese political-military organization.

The Lebanese Forces (LF) emerged in 1976 under the leadership of Bashir Jumayyil. At that time various Lebanese Christian militias had joined forces to destroy the Palestinian Tall al-Zaʿtar Refugee Camp. In August 1976 a joint command council was established to integrate those militias formally and to achieve a degree of political independence from the traditional Maronite Catholic (Christian) political leaders. Jumayyil took control of the military wing of his father's Phalange Party and then proceeded to incorporate other Christian militias. Those that resisted were forcibly integrated. In 1978 Jumayyil subjugated the Marada Brigade, the militia of the Franjiyya family and former president Sulayman Franjiyya, killing his son Tony Franjiyya in the process. In 1980 the Tigers militia of Camille Chamoun was absorbed.

By the early 1980s, the LF controlled East Beirut and parts of Mount Lebanon, and Jumayyil became its "commander." He did not confine the LF to combat; he also created committees within its structure responsible for health, information, foreign policy, education, and other matters of public concern. Jumayyil established links with Israel, and he consistently battled with Syrian forces. The LF began to decline in 1982, when President-elect Bashir Jumayyil was assassinated. After numerous succession struggles, including the brief tenure of Fuʾad Abu Nadir as head of the forces, Elie Hobeyka—notorious for his role in the 1982 bloodshed in the Sabra and Shatila refugee camps—assumed the leadership of the LF. After Hobeyka signed the Syrian-sponsored Tripartite Declaration in December 1985, against the wishes of president Amin Jumayyil, LF chief of staff Samir Geagea launched an attack on Hobeyka early in 1986 and took over the LF. Although Geagea was able to take advantage of the mood of frustration and despair among the Christian masses, Israel, his chief backer, was less interested in his cause than it had been—although it continued to supply his forces with money and arms.

After the appointment of General Michel Aoun as interim president by Amin Jumayyil, Lebanon's army tried to disarm the LF but failed to eliminate its political and military power. The defeat of Aoun by Syrian troops in 1990 led Geagea to try to impose himself as the overall Maronite leader. His attempt to become president of the Phalange Party failed, and George Saade remained the head of that predominantly Maronite party.

Geagea promised to allow Lebanon's army to confiscate weapons and ammunition belonging to his militia, according to the terms of the Taʾif accord. He promised to transform his militia into a political party and obtained a license toward that end. Lebanon's army, however, accused his forces of obstruction and discovered large amounts of hidden supplies and weapons. In early 1994, when a bomb exploded in a church in East Beirut, Lebanese authorities uncovered a terrorist ring that answered to Geagea personally. The government found evidence linking him to a series of bombs, car bombs, and assassinations. He was arrested and has been in prison since 1994.

LEBANESE FRONT

A coalition of major Christian conservative parties, which became an important player in the 1975 civil war in Lebanon.

Established in 1976, the Lebanese Front included the National Liberal Party of the former president, Camille Chamoun; Sulayman Franjiyya, the president of Lebanon when the Lebanese Civil War began in 1975; Pierre Jumayyil, head of the Phalange—the front's major military power; the Guardians of Cedars; the Permanent Congress of the Lebanese Orders of Monks; al-Tanzim of Dr. Fuad Shemali; the Maronite League headed by Shakir Abu Sulayman; and other independent personalities such as Dr. Charles Malik, Fu'ad Bustani, and Edward Honein.

In August 1976, the coalition established a military branch, known as the Lebanese Forces, which could mobilize 30,000 troops. At the beginning of 1978, Franjiyya became critical of the open collaboration between Israeli government officials and front leaders Chamoun and Jumayyil. Franjiyya was also against the Camp David peace accord negotiations between Egypt and Israel (approved by other front members) but championed a close relationship with Syria. In May 1978, Franjiyya resigned from the front. It was subsequently wracked with dissent and disintegrated.

The Lebanese Front charter had stressed the need to maintain the unity of Lebanon, to reestablish the authority of the law, and to respect private enterprise in the economic sector.

LEBANESE NATIONAL MOVEMENT (LNM)

A coalition of Islamic and leftist Lebanese parties and groups.

Established in 1975, the Lebanese National Movement (LNM) advocated, among other objectives, the solidarity of Lebanon with the Palestinians, the adoption of a proportional system of elections, and the elimination of political and administrative sectarianism. During the Lebanese Civil War, the LNM joined forces with the Palestine Liberation Organization (PLO) and was headed by Kamal Jumblatt. After his assassination in 1977, his son Walid Jumblatt took over and, in October 1982, announced the dissolution of the LNM.

LEBANESE UNIVERSITY

University located in Beirut.

The Lebanese University, established in 1952, is under the jurisdiction of the ministry of education. It was founded to allow Lebanese from lower-income groups to receive a university education, which for decades had been the monopoly of those who could afford private universities. It has two branches—one in East Beirut and the other in West Beirut—and smaller branches in the provinces of the north, the south, and the Biqa valley. University faculties (departments) include law, political science and management, engineering, literature and humanities, education, social sciences, fine arts, journalism and advertising, business administration, and agriculture. The language of instruction is Arabic; study of one foreign language is required by all faculties.

Although the Lebanese University has filled a gap and has catered to a sector of the population that had been virtually left out of the private educational system, holders of degrees from the Lebanese

University are regarded as inferior job applicants, compared with holders of degrees from the American University of Beirut or Saint Joseph University. The state apparatus also favors graduates of the two private universities. The Lebanese University's lack of endowment forces it to be totally dependent on state funding, which is not always forthcoming. Classes are overcrowded, and there are no admissions standards. Staff and faculty are underpaid, which forces many of them to seek outside employment as well. Furthermore, the large student body enables some students to show up only for final exams.

Like other institutions, the university was affected by the Lebanese Civil War of 1975. Many professors were forced to take a political stance, and some were pressured by armed students to change their grades. Some of the buildings of the university were occupied by militias, and others were heavily damaged.

LEBANESE WOMEN'S COUNCIL

Association of Lebanese women's and human rights organizations.

The Lebanese Women's Council (LWC), or Lebanese Council of Women, is an umbrella association encompassing over 140 women's and human rights organizations, including welfare, religious, academic, political, and feminist organizations. It has been a key advocate for women's rights in Lebanon since its establishment in 1952 by Lebanese feminists Ibtihaj Qaddurah and Laure Moghaizel. At its inception, the LWC focused on furthering political rights for Lebanese women and on encouraging women to run for public office.

Today the goals of the LWC have broadened to include supporting women's rights in education, health, and employment. The organization also advocates for women's legal rights (for example, the right of women to pass citizenship to their children). In addition, it continues to work to support women political candidates; in 2003 there were only three women in the Lebanese parliament.

The LWC participates in numerous local and international coalitions. Most notably, it took part in the 1995 UN Fourth World Conference on Women in Beijing as well as in Beijing +5, the five-year assessment of the Beijing Conference, held during a special session of the UN General Assembly in New York City in 2000. The LWC was one of the drafters of the subsequent report of the Non-Governmental Committee for the Follow-Up of Woman Issues. It also was instrumental in attaining Lebanon's ratification (with reservations) of the Convention on the Elimination of all forms of Discrimination against Women (CEDAW) in 1996. CEDAW is a human-rights treaty focused on women's rights that was adopted by the UN General Assembly in 1979. As one of the major women's rights organizations in Lebanon, The LWC continues to work toward the institutional and legal implementation of CEDAW.

LEBANON

Independent Arab country located on the eastern end of the Mediterranean Sea.

A small country of 10,632 square kilometers (4,105 square miles), with a maximum length (north to south) of 217 kilometers (135 miles), Lebanon is bordered by Syria and Israel. There is no current

A mountain range in Aqura, Lebanon. © ROGER WOOD/CORBIS. REPRODUCED BY PERMISSION.

reliable census of Lebanon's population (the last official census was conducted in 1932); in 1994 the country's population was estimated to be around 3 million. The sectarian composition of the population remains a contentious issue because political power has been distributed according to a formula that favors the Maronites (Catholic Christians), who in the 1932 census reportedly constituted the largest religious group in the country. The demographic profile of the population has changed dramatically since 1932, with the Shiʿite Muslims becoming more prominent because of their high birth rate. Some estimates put the Shiʿa at 45 percent of the population, and most authorities agree that Muslims (including all sects) are now the majority, constituting some 70 percent of the overall population.

The historical myth of Lebanon, which has been challenged by the Lebanese historian Kamal Salibi, among others, is predicated on the belief that Lebanon has always been a haven for persecuted minorities, its rugged mountains providing shelter for heterodox groups from throughout the Middle East. Lebanese ultranationalists claim that Lebanon has been in existence since before Phoenician times. The late Princeton University historian Philip Hitti suggested that people have been residing in what is today Lebanon for thousands of years. Lebanon as a political entity is a twentieth-century phenomenon, the product of the division between Britain and France of the spoils of World War I. Central Lebanon, known as Mount Lebanon, was occupied by Maronites, Druze, and Shiʿa. Those groups have lived together yet apart, separated by geographic lines of demarcation and by fear and suspicion. Lebanon cannot, and may not, continue to exist as a political entity in the absence of the minimum degree of social-national cohesion.

Lebanon under the Ottoman Empire

For much of the period between 1516 and 1918, Lebanon was only quasi-independent. This relative autonomy is exaggerated by those who claim that the

MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

Lebanese state has been in continuous existence for thousands of years. The region in question, Mount Lebanon, was governed by a local prince (from the Maʿnid and, later, from the Chehab dynasties) who was in turn under the jurisdiction of a sultan of the Ottoman Empire. The political independence of the local ruler depended on the relative power of the government in Istanbul at a given time, and on the degree of external intervention in Lebanese affairs. During the earlier part of the period in question, the Druzes were the politically ascendant group. In the nineteenth century, however, the ruling Chehabi dynasty converted (originally secretively) to Maronite Christianity, and the Maronites began moving into areas that had been exclusively Druze-inhabited. The power of the Maronite Church, which was taking advantage of the consequences of Tanzimat, was also increasing.

In 1840 Mount Lebanon was divided into a southern district (Druze) and a northern district (Maronite). Druze–Maronite clashes occurred throughout the century, and a major conflict in 1860 left the Druzes militarily victorious and the Maronites politically victorious (due to support by European powers). The war resulted in the establishment of a European commission to oversee the situation. After negotiation with the Ottoman government, it was decided that Lebanon should be ruled by a non-Maronite, non-Lebanese Christian citizen of the Ottoman Empire. The governor (*mutasarrif* in Turkish, and later in Arabic too) would be assisted by a council of representatives from the various sects, with the Maronites constituting the largest group. The regime established in 1861 continued until World War I.

Lebanon Under French Mandate

During World War I, Lebanese and Syrians of all religions were executed for anti-Turkish activities. After the war, France would not allow the "protected" Maronites, who called France al-Umm al-Hanun (the Tender Mother), to be placed in an inferior position in Lebanon. Before the beginning of the French mandate system, Lebanese Maronites launched a strong propaganda campaign, characterized by Christian evangelical zeal, in Egypt (where members of the Maronite elite resided) and in France. The campaign led to the creation of Greater Lebanon, which included Mount Lebanon, southern Lebanon, Tripoli and the North, the Biqa region, and the Beirut region. The addition of those areas was motivated not by considerations of national harmony but by calculations of economic viability and French calculations. The predominantly Muslim population of the annexed areas was not consulted, and many staunchly opposed what appeared to be a Western-engineered attempt to sever ties between Lebanon and the larger, surrounding Muslim Arab nations.

In 1926 the French mandate authorities urged the elected Lebanese representatives to draft a new constitution. The constitution affirmed the political, diplomatic, economic, and legal supremacy of the French government and their ally the president, who was to be a Christian. Article 95 confirmed the sectarian foundation of Lebanese politics by stipulating that governmental posts shall be distributed "equitably" between the sects. This in effect established a system that had as its basic unit not the individual citizen but the sect. The highly controversial 1932 census revealed that the Maronites were the

most numerous sect; consequently, the highest government posts were reserved for them.

Independence and Nationhood, 1943–1975

Although official and quasi-official Lebanese historiography claims there was an "independence movement" in the country, British–French rivalries in the Levant helped to bring about the independence of Lebanon in 1943. Bishara al-Khuri, the foremost Maronite politician and first president after independence, and Riyad al-Sulh, the foremost Sunni politician and first prime minister after independence, were the architects of Lebanon's National Pact. This unwritten document became, in the words of Maronite Phalange leader Pierre Jumayyil, more important than the written laws of the country. It stipulated that the Christians (for whom the Maronites spoke, according to the agreement) would not seek protection or alliance with France, and the Muslims (for whom the Sunnis spoke) would respect the sovereignty of Lebanon and renounce dreams of unity with Syria or any other Arab country. The National Pact also decreed that the presidency of Lebanon would be held by a Maronite, the weak speakership of parliament by a Shiʿite, and the prime ministership by a Sunni. It is still regarded as a social contract, though most Lebanese were not consulted about its provisions.

The country was governed by a small group of wealthy politicians who monopolized power within their sects. Political competition, when it occurred, was between members of the economic/political elite and not between average citizens. The first president, Bishara al-Khuri (1943–1952), disregarded the minimum standards of honesty and integrity. His cronies and relatives enriched themselves, and he had the parliament (which was chosen in the scandalously fraudulent 1947 election) amend the constitution so that he could have a second term as president. In 1952 a large bloc of parties and politicians formed a front to force his ouster. After his resignation, Camille Chamoun was elected president.

The rule of Chamoun was marked by what many considered to be violations of the National Pact. Although early in his career he had been identified with pan-Arab politics, he closely aligned Lebanon with the West during his presidency, particularly on anticommunism and anti-Nasserism. His opposition to Gamal Abdel Nasser, the president of Egypt, provoked many Lebanese who admired the Egyptian leader. Following the example of his predecessor, Chamoun flagrantly rigged the 1957 elections to ensure a subservient parliament that would allow him a second term, and thus ousted most of his rivals from parliament. In 1958 the Lebanese civil war (still known in Lebanon as the "1958 Revolution") broke out, and the United States dispatched the marines to protect the Chamoun regime.

The Roman Temple of Bacchus stands in ruins in Baʿalbak, Lebanon. **© Carmen Redondo/Corbis. Reproduced by permission.**

The most important politician in contemporary Lebanese history was president Fuʿad Chehab (1958–1964). This former commander in chief of the Lebanese army remains the only politician in the history of Lebanon to have an "ism" associated with his name. Chehabism, the ideology of limited political and economic reforms, was based on the realization that the social and political unrest in Lebanon had socioeconomic roots. Chehab worked to reorganize the Lebanese administrative structure in an attempt to stem the corruption that had been rampant since independence. His regime, however, did not go far enough in its reforms, and Chehab, who distrusted the politicians, ruled through his trusted military aides and his ruthless Intelligence Apparatus (Deuxième Bureau). Rule by the military establishment was inconsistent with the constitution's promises of freedom; the army used heavy-handed tactics against all who opposed the regime.

Chehab was succeeded by his follower Charles Hilu (1964–1970). Hilu quickly disillusioned his

former mentor and associated himself with the right-wing factions such as the Phalange Party, of which he was a founder. He preserved the rule of the Deuxième Bureau (military intelligence) because he lacked a political power base. His weak response to internal instability led to the election of Sulayman Franjiyya (1970–1976), a semiliterate ultranationalist who favored strong support for the army in light of the growing power of the Palestine Liberation Organization (PLO) in Lebanon. Franjiyya sought to use the army to crush the PLO as King Hussein did in Jordan. The army was too weak to succeed, and Israel was increasingly exposing Lebanon's impotence against their continued military actions in Lebanon, which did not distinguish between Lebanese and Palestinian targets, or between civilian and military targets. Franjiyya urged the army to arm and train members of the right-wing Maronite militias in Lebanon, which he wanted to use in his war against the Palestinians. During his presidency there were numerous clashes between the PLO and the Lebanese army aided by right-wing militias. Franjiyya's autocratic rule brought calls for a more meaningful partnership between the president and the prime minister.

Civil War, 1975–1990

Much has been written about the civil war, but there is no consensus about its origins. Lebanese often emphasize the external causes of what befell the country; they seem reluctant to place any blame for the protracted conflict on themselves. The civil war allowed various external forces to intervene openly in Lebanese affairs. Syria and Israel both exploited the conflict for their own purposes. In 1976 Syria intervened in the war to save the right-wing militias from what seemed an inevitable defeat by the leftist-PLO alliance. It did not want Lebanon to turn into a radical arena that could drag Syria into an unwanted confrontation with Israel.

The presence of Syrian forces in Lebanon made possible the election of Ilyas Sarkis as president in 1976, and Israel began its de facto occupation of part of southern Lebanon. The relationship of the PLO and its Lebanese allies with Syria began to improve as soon as right-wing militia leader Bashir Jumayyil (then commander of the Lebanese Forces) solidified his alliance with Israel and initiated a campaign against Syria's forces in Lebanon. The latter responded with heavy bombardment of East Beirut, the site of Lebanese Forces' headquarters. In the south, Israel formed a surrogate militia to further its goals. In 1978 Israel launched a full-scale invasion of Lebanon, and was later forced to withdraw to a narrow strip that it called its Security Zone. The United Nations dispatched troops to serve as a buffer between the PLO forces and Israel's forces.

In 1982 Israel launched its biggest invasion ever. Its forces advanced all the way to Beirut and brought about the election of Bashir Jumayyil as president. The invasion resulted in the deaths of some 20,000 Lebanese and Palestinians, mostly civilians. The PLO came under pressure to withdraw its forces from Lebanon. Jumayyil was assassinated before he officially assumed his responsibilities, and pro-Israel forces killed the Palestinians and Lebanese in the Sabra and Shatila refugee camps in revenge for Jumayyil's assassination. Amin Jumayyil (1982–1988) succeeded his brother Bashir as president and began a rule by the Phalange Party. In 1983 the security situation deteriorated further when Druze and Maronite militias engaged in one of the most ferocious battles of the Lebanese civil war. The Druze militia was able to evict Christians from areas under its control.

The rule of Amin Jumayyil divided the country more sharply than ever before, and most Muslims boycotted his government. In 1988, minutes before the expiration of his term, he appointed General Michel Aoun (the Maronite commander in chief of the army) as interim president. Aoun cracked down on the Lebanese Forces and declared a war of "national liberation" against Syria's forces in Lebanon. The war did not bear political fruits for him, although it did generate enthusiasm among the Maronite masses. In 1990, when world attention was focused on Iraq's invasion of Kuwait, Syria's forces entered Lebanon and destroyed the force commanded by Aoun, who fled to France.

The civil war theoretically ended with the defeat of Aoun and the establishment of the authority of the government of President Ilyas al-Hirawi. The support of Syria and Saudi Arabia for the new administration revived hopes for badly needed financial aid to wartorn Lebanon. President Hirawi and Prime Minister Rafiq Bahaʾuddin al-Hariri solidi-

fied the rule of the Lebanese government and disarmed the militias in the country except for the Party of God, which continues to wage a war of national resistance against Israel's occupation of southern Lebanon. Whether the war has ended completely or whether a truce at last prevails in Lebanon is a question that requires knowledge of the future. Hirawi was succeeded in 1998 by commander in chief Emile Lahhud, who—like his predecessor—enjoyed strong Syrian support. Lahhud's relationship with Hariri was tense, and he preferred Salim al-Hoss as his prime minister. But Hariri was able to utilize his enormous financial powers, and his regional connection, to replace Hoss after a two-year term as prime minister. Hariri and Lahhud continue to express disagreements on a range of issues, from privatization to election laws.

LEBANON, MOUNT

A rugged mountain range that constitutes the geographical core around which modern-day Lebanon was established in 1920.

Mount Lebanon extends from the hinterland of Tripoli in the north to that of Sidon in the south. Because of its geographical isolation and rugged landscape, it historically attracted minorities in search of a haven from persecution. Maronites moved into the area in the seventh century, and they continue to this day to form the majority of its population. South of the Beirut-Damascus highway, Mount Lebanon is predominantly populated by Druze. Smaller Greek Orthodox and Greek Catholic communities also inhabit the area.

Over the centuries, Mount Lebanon developed its own traditions and a distinct identity. Under Ottoman rule (1516–1916), it enjoyed considerable political autonomy. Governance of the area was in the hands of an indigenous amir, who paid nominal allegiance to the Ottoman sultan and oversaw a political structure dominated by a few powerful local families. Following intercommunal hostilities and the mass killing of Christians by Druze in 1860, European countries, particularly France, pressured the authorities in Istanbul to formally grant the area autonomous status in the Ottoman Empire. The so-called Règlement Organique of 1861, guaranteed by the Great Powers, thus established Mount Lebanon as a self-governing province headed by a Christian governor. This development paved the way for the subsequent creation of the modern state of Lebanon in 1920, when the French mandatory power added parts of Greater Syria to Mount Lebanon. Today Mount Lebanon refers to one of the five administrative provinces (governorates) into which Lebanon is divided.

LEGISLATIVE COUNCIL (PALESTINE)

A 1922–1923 British proposal, never implemented, for a limited form of self-government in Palestine.

The League of Nations entrusted Palestine to Great Britain—which conquered the territory in December 1917—as a mandate, one of whose terms called for the "development of self-governing institutions." As a first step in that direction, the high commissioner of Palestine, Sir Herbert Louis Samuel, formally proposed in August 1922 to the country's Muslim, Christian, and Jewish communities the establishment of a legislative council. The council was to be composed of twenty-three members: the high commissioner, ten appointed British members; and twelve elected members—ten Palestinians (eight Muslims and two Christians) and two Jews. However, the British denied the council legislative authority over such central issues as Jewish immigration and land purchases in order to safeguard its Balfour policy of support for the Jewish national home. To allay Palestinian concerns regarding Jewish immigration, the elected members were to form a standing committee to advise the Palestine government on immigration issues.

Palestinian leaders argued that participation in the council would be tantamount to acceptance of the British mandate and Balfour policy, which they opposed. They considered unfair the allocation of only 43 percent of the seats to Palestinians, who constituted 88 percent of the population. And they objected to the limitations placed on the power of the council. A campaign against the proposed council by the Palestine Arab Executive and the Supreme Muslim Council was a potent factor in the Palestinian boycott of the council elections in February 1923. The Jews accepted the proposal despite their objections to the allocation of only two seats to Jews, which, they argued, would have reduced them to a minority role and would have meant that the concerns of the Jewish people as a whole would have been ignored. The poor election turnout caused the high commissioner to shelve the proposal.

The idea was revived repeatedly from 1923 until 1936. It was discussed, for example, in 1928 when a new high commissioner, Sir John Chancellor, took over, but it was derailed by the Western (or Wailing) Wall disturbances of 1929, only to reemerge as a proposal in the Passfield White Papers of 1930. Although the new proposal was similar to the 1922 proposal, the Palestinians this time did not oppose it, but the Jews rejected their minority role in the council and sought a parity formula that would recognize the numbers and the economic role of world Jewry. Intermittent discussions continued until 1935. By then the proposed composition of the council had expanded to twenty-eight, of whom fourteen were to be Muslims and Christians (five nominated), eight Jews (five nominated), five British officials, and one a nominee representing commercial interests. The Palestinians were divided over the proposal, and the Jews were strongly opposed to it. This opposition prompted the British government to once again suspend its implementation, and the concept finally died with the start of the Arab Revolt of 1936 to 1939.

The Legislative Council was probably a missed opportunity for the Palestinians because it could have improved their political and socioeconomic conditions. It could have given them an opportunity to help draft legislation and to participate in formulating expenditure allocations and Jewish immigration quotas. It could have also provided them with a platform to criticize British policy and to appeal for the support of the British public and the League of Nations. Most of all, it could have put them in a position to ask for more.

LEIBOWITZ, YESHAYAHU

[1903–1994]

Israeli chemist, philosopher, and social critic.

Yeshayahu Leibowitz was born in Riga, Latvia, and educated at the University of Berlin and Basel University. He was professor of biochemistry at Hebrew University and editor of the *Hebrew Encyclopedia,* and was widely known for his iconoclastic views and outspoken opinions. As a philosopher, he is best known as an interpreter of Maimonides, whom Leibowitz staunchly portrayed as an ardent theocentrist. As a rationalist and an opponent of mysticism, Leibowitz denied any sacred character to the State of Israel and its agencies. He was a religiously observant Jew who adamantly insisted on the separation of religion and state, including the dissolution of the government-supported rabbinate. He believed that Halakhah, Jewish religious law, developed before there was a Jewish state and has become so firmly set that it cannot be adapted to the new circumstance of statehood. He was loudly critical of the tendency to mystify the 1967 Arab-Israel War, and he totally opposed Israel's occupation and administration policies in Palestine. His rationalism also served as the basis of his opposition to viewing the Western Wall as a holy Jewish shrine.

Leibowitz wrote more than a dozen books (in Hebrew). At least eight books of conversations with him have been published, and more than a half-dozen books about him and his thought have been published.

LEMSINE, AICHA

[1942–]

Pseudonym for Aicha Laidi, an Algerian novelist and essay writer.

Aicha Lemsine was born in the Nemencha, Algeria, to a Muslim family. As of 2004 she was living in Algeria and was active in women's literary organizations, in addition to contributing newspaper articles on the political and ethnic situation in her country. Her first novel, *La chrysalide* (1976; The chrysalis), is a romantic account of women of two generations; the elder battles polygamy and the younger displays her emancipation by becoming pregnant out of wedlock. *Ciel de porphyre* (1978; Porphyry sky), set during the Algerian War of Independence, tells the story of the initiation of a young woman into the Resistance. Lemsine's third book, *Ordalie des voix* (1983; Voices of tribulations), consists of interviews with Arab women on their role in society and their struggle to achieve emancipation.

LEND-LEASE PROGRAM

Provided U.S. military aid to the Allies in World War II.

Lend-lease was a program that, from 1940, enabled President Franklin D. Roosevelt to extend aid to any country whose fate he felt was vital to U.S. defense—for the sake of national security. Not until March 1941 did the U.S. Congress pass the Lend-Lease Act. It provided for military aid to the World War II Allies, under the condition that equipment extended would be returned or paid for after the war. In practice, lend-lease became the main wartime U.S. aid program of the Roosevelt administration.

Little was returned, and even less was paid for. Coordinated first by Harry Hopkins and then by Edward Stettinius, the lend-lease programs conveyed the equivalent of some $3 billion in aid to the Middle East and the countries of the Mediterranean.

Lend-lease for the Middle East was administered primarily through Cairo, Egypt, and Tehran, Iran. Both Egypt and Iran were occupied by the Allies—Iran from the autumn of 1941 to 1945. In 1942, the United States supplied its ally, the U.S.S.R., via the Persian/Arabian Gulf and Iran; therefore, Iran became eligible for lend-lease. Although lend-lease was supposed to aid only democratic countries in the struggle against the Axis, petroleum-rich Saudi Arabia was also included in the program by February 1943. The lend-lease program was terminated in August 1945.

ZACHARY KARABELL

LESKOFCALI GALIP

[1829–1867]

Ottoman poet.

Born in Nicosia (Levkosia), Cyprus, Leskofcali Galip was the son of an exiled Rumelian *ayan.* He came to Constantinople (now Istanbul) in 1846 and by 1851 had entered the civil service. He composed in a classical style similar to his contemporaries, Naili and Fehim. A collection of his works, *Divan,* was published in 1916.

DAVID WALDNER

LESSEPS, FERDINAND DE

[1805–1894]

French entrepreneur and promoter of building a canal to connect the Mediterranean and the Red seas.

After consular service for France at Lisbon and Tunis, Ferdinand de Lesseps became the French consul in Alexandria, Egypt, where he befriended Muhammad Ali Pasha's son, Saʿid. De Lesseps was appointed consul at Cairo from 1833 to 1837 and, after serving in other countries, resigned from diplomatic service in opposition to the Second Republic of France. In 1854, when Saʿid became *khedive* (ruler), de Lesseps returned to Egypt. Despite the findings of scientists who accompanied Napoléon Bonaparte during his occupation of Egypt (1798–1801) that a canal could not be built from the Mediterranean Sea to the Red Sea, de Lesseps (not an engineer) had become convinced of the feasibility of the project. He hoped to use his friendship with Saʿid to promote his plan. De Lesseps quickly convinced Saʿid to back him, in part by persuading Saʿid that his name would be immortalized as the builder of the Suez Canal. In 1856, de Lesseps organized an international commission to study the technical aspects of the project. He also set up a company that would be financed by selling shares to the Egyptian and European governments. The Egyptian government provided labor through conscription, and construction took from 1859 to 1869. De Lesseps is remembered as the inspired leader who did whatever was necessary to get the canal built.

LEVANTINE

Noun or adjective that defines the non-Muslim populations and cultures of the modern Middle East.

The term *levantine* is French in origin—*levantin*—and implies a geographic reference to the sun rising—*soleil levant*—in the east, or *levant.* The French coined the term because France, in the sixteenth century,

was the first Christian national state to exchange diplomatic recognition with the Ottoman Empire located in the eastern Mediterranean littoral. By the early 1800s, English travel literature referred to the lands of the Ottoman Empire as the Levant. Indeed, in the 1990s the London-published international business weekly the *Economist* still refers to their reporters based in Cyprus as their Levant correspondents.

The Rise of a Levantine Bourgeoisie

From the 1500s to the 1850s, Levantine traditionally meant a European resident of the Levant involved in European–Ottoman trade. By the end of the nineteenth century, the label was significantly broadened to include a European born in the Levant whose parentage included Greek or Armenian blood. Moreover, Levantine was by then applied to Syro-Lebanese Christians, Sephardic Jews, Maltese, Cypriots, Armenians, and Greeks, all minorities in the Muslim East living and doing business in the large trading centers of the Ottoman Empire. The term almost always indicated an urbanized commercial bourgeoisie whose members were usually rich and influential merchants and who were different, due to their Westernized education and culture, from the petit bourgeoisie in the provincial towns and the villages of the hinterland.

Historically, the development of a Levantine bourgeoisie was the result of significant trade with Europe and reflected the growing cultural interaction that both preceded and paralleled imperial ties between Europe and the lands of the Ottoman Empire. The Westernization of Levantines was the result of commerce, travel, emigration, and attendance at the foreign missions' schools that dotted the eastern Mediterranean by the mid-1800s. Believing in progress, Levantines saw Europe as the leader of a progressive world, and easily accepted its values. They formed a mercantile elite whose cultural anchors transcended local and regional boundaries, and whose perspective was fixed on Europe. Consequently, there arose a natural affinity between these modernizing groups, regardless of their ethnonational backgrounds, in different parts of the Middle East. Levantines were individuals who were never Muslims nor usually Arab Christians, whose origins were somewhere in the eastern Mediterranean, and whose primary language and culture, except for Syro-Lebanese Christians, were not Arabic. Because Levantines were conversant in a number of foreign languages and local dialects, many became the indispensable interpreters and translators of the foreign consulates throughout the Levant.

As non-Muslims, members of these minorities usually acquired the protection of European powers in order to benefit from the privileges afforded foreigners under the Capitulations. Centuries of insecurity under Mamluk or Ottoman rule had conditioned them to try to obtain the protection of European powers who, in most cases, were only too willing to extend it. This phenomenon had begun as early as the seventeenth century in Lebanon with the Maronite Christians, who received French protection inside the Ottoman Empire.

Twentieth-Century Evolution of the Term

By the 1900s *Levantine* had acquired a negative moral coloration. Sir Evelyn Baring, British agent and consul-general in Egypt from 1883 to 1907, adhered to the traditional definition, but emphasized the southern European origin of those to whom the term applied. He further included a pejorative nuance that had recently been attached to the term: "Levantines . . . suffer in reputation by reason of qualities which are displayed by only a small minority of their class . . . among this minority are to be found individuals who are tainted with a remarkable degree of moral obliquity." Other writers were more specific and referred to Greek or Armenian money lenders or to "sellers of strong waters to Muslims in most cities of Western Asia."

The pejorative implication gained ground. An impressive publication that served as a guide to British investors in Egypt, in discussing Alexandria as a summer resort, informed its readers that the city became the temporary home of "businessmen from the capital unable to get over to Europe and a certain class of Levantines who invariably return to Cairo richer than they left." Thus, the term *Levantine* evolved to encompass both ethnocultural identity as well as moral judgment. From applying to a European born and living in the eastern Mediterranean, it came to include either an Eastern Christian or another member of a non-Arab minority whose business dealings were ethically tainted to the

point of implementing the profit motive even while on vacation.

The metamorphosis of the term probably reflected a change in the attitudes of Europeans toward the East. By the end of the nineteenth century, European Arabists believed that Eastern civilization was "purer, more spiritual and more wholesome" than Western civilization, and that European greed and viciousness were destroying the Arab East. To such Europeans, Levantines were the carriers of Western and European greed and viciousness, since it was through them—Christian brothers of the Europeans and, to a lesser extent, Jews—that it flowed into Eastern and Arab society.

By the 1920s *Levantine* and *Levantinism* had also acquired political nuances commensurate with the seismic effects of World War I on the region. Various authors used the terms to describe the political crisis affecting Turkish society; the expression ascribed Turkey's defeat in World War I to the fact that Turks from Istanbul had "become Levantiny." Writing in the postcolonial mid-1950s, Elie Kedourie, an Iraqi Jew by birth and an incisive student of Middle Eastern politics and society, maintained that by the 1940s the Levant was perceived as much a region of the spirit as a region of the globe, and that the spread of Levantinism was the characteristic malady of Islamic and Arab society.

Albert Hourani, an Arab Christian and a perceptive student of Middle East history, writing shortly after World War II, maintained that Levantinism was a symbol of national and ethnocultural dispossession. He further ascribed to it philosophical aspects of the human condition, a sort of postwar mal de siècle, by stating: ". . . to be a Levantine is to live in two worlds or more at once without belonging to either; to be able to go through the external forms which indicate the possession of a certain nationality, religion or culture without actually possessing it. It is no longer to have a standard of one's own, not to be able to create but only able to imitate. . . . It is to belong to no community and to possess nothing of one's own. It reveals itself in lostness, pretentiousness, cynicism and Despair" (Hourani, 1947). Undoubtedly affected by the postwar atmosphere of frustrated nationalist self-assertion, Hourani cast Levantines as a group adrift without the contemporary concerns of national self-realization. However, his alarm underlines the concerns of Arab Christian minorities caught in the dilemma of decolonization: the fear of rejection by the Arab Muslim majority.

The twentieth-century political definitions of Levantinism encompass the notion that people and cultures can be divided into genuine and hybrid, with the implication that the former are clearly superior to and more desirable than the latter. They present an arbitrary division of historical phenomena driven by ideology and containing ahistorical value judgments. To apply this perspective to the Middle East overlooks the fact that the area has historically absorbed a number of vastly diverse cultures, languages, customs, and values. Although some of these cultures had a stronger influence than others, they all contributed to the region's heterogeneity. Thus, an understanding of Middle East history must include an assessment untainted by ideological prisms, but comprising a perspective that includes the experience and the contributions of its diverse populations.

JEAN-MARC R. OPPENHEIM

LEVINGER, MOSHE

[1935–]

Spiritual leader of Gush Emunim and Hebron settlers.

Moshe Levinger was born in Jerusalem in 1935 to highly educated German-Jewish immigrant parents. After completing his army service, he studied in Yeshivat Merkas ha-Rav, where he was strongly in-

fluenced by its head, Rabbi Zvi Yehuda Kook, who is widely viewed as the spiritual father of Gush Emunim. It was, apparently, there that Levinger developed his strong belief that he is obligated by the Torah to help re-establish the kingdom of Israel in all of Eretz Yisrael. After his ordination, he lived in a kibbutz in the Upper Galilee. He married an American immigrant, Miriam, who was a nurse.

In April 1968 Levinger led a group of Jews who rented a hotel in Hebron to celebrate the Passover and subsequently refused to leave. They were supported by the Eretz Yisrael ha-Shelema (Whole Land of Israel) movement, and several weeks later they moved to an Israeli military compound nearby. Within a few months, they began the construction of Kiryat Arba on confiscated land. Levinger was the ideological leader of Gush Emunim and, in a 1987 poll undertaken by an Israeli weekly, was voted, along with Menachem Begin, as the "person . . . who has [had] the greatest effect on Israeli society in the last twenty years." On the other hand, he was named "Israel's foremost religious fascist" by *The New Republic.*

Levinger and his family live in the Jewish quarter of Hebron. Along with his wife, he asserted that Judea and Samaria (the West Bank) cannot again be left *Judenrein,* and he announced his intention to live with the local Arab community, to work with them to provide education and health, but to remove those who would harm Jews. He was arrested and imprisoned for killing a Palestinian after his car was attacked in 1989. His rigid personality has lost him many followers even among supporters of the ideology of Gush Emunim, but he still remains the spiritual leader of the Jewish community in Hebron.

DAVID NEWMAN

LEVIN, HANOCH

[1943–1999]

Israeli playwright and storyteller.

Hanoch Levin was born and grew up in a poor section of Tel Aviv. He began writing satirical plays while still a student. Levin's work is avant-garde, minimalist, and controversial. His *Malkat ha-Ambatya* (Queen of the bathtub, 1970), a satire on Israeli society after the Arab–Israel War of 1967, created an uproar, and performances had to be canceled.

Levin's plays ridicule many of Israel's national myths: the ideals of its youth culture, family life, and the exuberance following the military victory in 1967. His work stresses the dull parochialism of people's lives. His plays include *Solomon Grup* (1969), *Hefetz* (1972), and *Yaʿakobi ve-Ledental* (1972). The latter was widely performed both in Israel and abroad. Many of his plays were first staged at the Cameri, Tel Aviv's municipal theater, and in 1988 Levin was appointed its in-house playwright.

LEVIN, SHMARYAHU

[1867–1935]

Zionist orator, propagandist, and advocate.

After serving in the Duma (Russian parliament), in 1906, Shmaryahu Levin left Russia. In Germany, he gained support for founding the Haifa Technion (1908). During World War I he mobilized the support of American Jews for the Zionist cause. A strong supporter of Chaim Weizmann within the Zionist movement, Levin settled in Palestine in 1924.

MARTIN MALIN

LEVIN, YIZHAK MEIR

[1894–1971]

Merchant, banker, Jewish leader, and communal activist.

Yizhak Meir Levin was born in Poland and descended from a family of Gerer Hasidim. He was a leader of and active participant in Agudat Israel, a worldwide Orthodox Jewish organization and a political party

in Israel, from its inception in Poland following World War I. Levin was elected to the organization's world presidium in 1929 and headed its delegation to Palestine in 1935.

Escaping Nazi-occupied Poland, he reached Palestine in 1940, where he worked for the rescue of Jews stranded in Europe. In 1947, he was placed in charge of the Israeli branch of Agudat Israel. As a party member, he was elected to the first Knesset (parliament), serving as minister of social welfare until 1952, when he resigned over the issue of drafting women into the army, to which he was thoroughly opposed. He remained a member of the Knesset until his death.

See also AGUDAT ISRAEL.

LEVONTIN, ZALMAN

[1856–1940]

Zionist leader.

Born and educated in Russia, Zalman Levontin later became a businessman and banker. Levontin was a close associate of Theodor Herzl and a founding member of the Zionist settlement of Rishon le-Zion. Levontin was the director of the Jewish Colonial Trust in 1901; he moved to Palestine, where he founded the Anglo-Palestine Bank (which later became the Bank Leumi L'Yisrael).

See also BANKING.

BRYAN DAVES

LEVY, DAVID

[1937–]

Israeli political leader.

Born in Morocco, David Levy has held either an elected or an appointed office in Israel's government since 1965. He was one of the first North African immigrants to rise to national political prominence. Since 1969 he has been a member of the Israeli Knesset. From 1977 to 1998 he served as a government minister—as minister of immigration and absorption (1977–1979), minister of housing and construction (1979–1980; 1981–1984), and minister of foreign affairs (1990–1992; 1996–1998). He made a bid for the Likud leadership in the 1992 election, suggesting that the leadership of the party was guilty of anti-Sephardic racism, but he eventually lost to Benjamin (Binyamin, or Bibi) Netanyahu. Afterwards, he left the Likud Party and helped form the Gesher ("Bridge") Party, only to realign with Netanyahu just before the 1996 election. Although Levy joined the coalition of Prime Minister Ehud Barak following the election of 1999, serving as foreign minister, he resigned from the coalition in August of 2000 in protest to Barak's willingness to make concessions to the Palestinians in the peace negotiations. In April 2002, in the government of Prime Minister Ariel Sharon, Levy was appointed minister without portfolio—a member of the Cabinet with the right to attend Cabinet meetings and advise the prime minister but without responsibility for a division of government bureaucracy (as are the Ministry of Housing, Ministry of Labor, Ministry of Foreign Affairs, etc.). Levy resigned from this position in July of the same year.

UPDATED BY GREGORY MAHLER

LIBERAL CONSTITUTIONALIST PARTY

Egyptian political party founded by former Prime Minister Adli Yakan (October 1922).

Members of the party, mainly landowners and intellectuals, were former members of the Wafd who came to oppose Saʿd Zaghlul because of his intransigence and demagogery. The program of the party, written by Ahmad Lutfi al-Sayyid, called for an independent Egypt, constitutional rule, the protection of civil rights and free speech, and social justice. The party defended the 1922 declaration of

independence granted by Britain, which many nationalists considered inadequate, and supported the 1923 constitution, which it had helped to draft. In the late 1920s and early 1930s, the party alternated between allying with the Wafd against Britain and joining with Britain in forming anti-Wafd governments. The newspaper of the party was *al-Siyasa* (Politics). The party was banned by the Revolutionary Command Council in 1953.

LIBERATION RALLY

Political party formed by Egypt's Revolutionary Command Council following the January 1953 ban on all existing political parties.

The Liberation Rally was intended to mobilize popular support for the new regime—the Free Officers who had overthrown the government of King Farouk in a military coup in 1952—by co-opting student leaders and workers. The Liberation Rally called for the unconditional withdrawal of the British from the Suez Canal zone, self-determination for Sudan, the establishment of a socialist welfare state, pan-Arabism, and the installation of a constitution guaranteeing civic liberties. The rally became associated with Gamal Abdel Nasser in his struggle for supremacy with General Muhammad Naguib, who was supported by the Muslim Brotherhood. Following a clash between the Liberation Rally and the Muslim Brotherhood on the campus of Cairo University in January 1954, Nasser began to mobilize his support in the Rally against Naguib. After Naguib and his supporters were purged from the government, the Liberation Rally was dissolved.

LIBERTY, USS

U.S. ship attacked by Israel.

On 8 June 1967 the electronic surveillance ship USS *Liberty* was 14 nautical miles north of al-Arish, Egypt, gathering intelligence data when it was attacked by three Israeli combat aircraft, and later by three torpedo boats, one of which launched a torpedo that demolished the *Liberty*'s communications room and killed twenty-five technicians. A Mayday message from the ship drew rescue aircraft from the carrier USS *America,* and Israel halted the attack. In all, 34 crew members were killed and 171 wounded.

Israel's attack has never been satisfactorily explained. The *Liberty* was displaying the U.S. flag very prominently and the attack continued after the ship had been identified by Israeli pilots whose conversations were monitored by a U.S. surveillance aircraft. Israel swiftly apologized for what it called "a tragic error." Although a U.S. inquiry found no evidence that the attack was premeditated, military experts concluded that it could not reasonably be attributed to error, and that Israel must have felt that the information being gathered by the *Liberty* could be so damaging that it accepted the risk of incurring the anger of the United States. Two possible explanations are (a) that Israel was "cooking" (intercepting and altering) messages between Egypt and Jordan in hopes of drawing Jordan into the war so that Israel could occupy the West Bank, and (b) that Israel wanted to conceal the true extent of its dramatic victory over Egypt in order to delay the imposition of a cease-fire. Israel paid $7 million in damages to the families of the U.S. crewmen but never admitted culpability. Controversy about the incident, which was frequently cited in the propaganda war between Israel and its critics, continued to rage for decades afterwards.

UPDATED BY IAN BLACK

LIBYA

In theory, a jamahiriyya *(state governed by the masses); in reality, the Socialist People's Libyan Arab Jamahiriyya is ruled by Muammar al-Qaddafi.*

In 2002 Libya's population was about 5.4 million, distributed over 686,000 square miles on the northern coast of Africa, bordered to the north by the Mediterranean Sea, to the west by Tunisia and Algeria, to the south by Niger and Chad, and to the east by Sudan and Egypt. The capital city, Tripoli, and the other principal urban centers, Misurata, Benghazi, and Derna (or Darnah) are on the coast; several large oases, including Sabha (or Sebha), provincial capital of the southern region of Fezzan, and Kufrah, in the southeast, were major trading centers of the trans-Saharan caravan trade, but they are now principally administrative centers. The population clusters along the coast, where two ranges of hills—Jabal al-Gharb in the western province, Tripolitania, and Jabal al-Akhdar in Cyrenaica, the eastern region—divide the narrow coastal plain from the arid plateaus and deserts to the south.

Climate and Resources

Except along the coast, Libya's climate is severe, with wide extremes of temperature, particularly in the mountains and deserts. There is scanty rainfall; even along the coast, the timing of the annual average of 8 inches of rain is unpredictable. As a result, less than 2 percent of the country's surface is arable, and only another 4 to 5 percent is suitable for raising livestock. Historically, much of the country's wealth derived from animal husbandry and from trans-Saharan and coastal trade rather than from agriculture. During the late 1950s, large quantities of petroleum were discovered and by 1968 oil exports accounted for more than 50 percent of gross domestic product (GDP). Since then, oil revenues have generally represented one-half to one-third of GDP. In 2002, Libya had one of the highest per capita incomes in Africa, $7,600, and a relatively high population growth rate at 2.4 percent. Thanks to oil, the government provides generous welfare benefits to Libyan citizens and the economy relies heavily on foreign workers; in the 1980s and 1990s, more than half a million foreign nationals, mostly Africans, have found employment there.

Population and Culture

Libya has a largely homogeneous population, both ethnically and religiously. Virtually all the citizens are Arabs practicing Sunni Islam. Small communities of Berbers, many of whom are followers of Ibadi Islam, still reside in the western hill villages, but nothing remains of the once substantial Jewish community, most of which moved to Israel. Libya is not home to any major educational or cultural institutions; apart from some locally venerated saintly families, the people of the area traditionally looked to Tunisia and Egypt for their religious teachers and legal authorities. Despite the contemporary urbanization of the country—over two-thirds of the population live in Tripoli and Benghazi alone—the importance of pastoral nomadism in recent history is evident in the continued social and political significance of kinship and tribal ties. Although women are being educated in increasingly large numbers, they ordinarily marry while in their late teens and are not expected to work outside the home.

Government

The Libyan government structure was designed by Muammar al-Qaddafi (also Muʿammar al-Qadhdhafi), who holds no formal position of authority but serves as head of state. As he conceives it, Libyans rule themselves, without the intervention of elections, politicians, or political parties, through a system of local and national committees and congresses that deliberate, administer, and supervise the affairs of the country on their behalf. By most accounts, the basic people's congresses and committees do fulfill governmental functions at local levels, but in national, particularly foreign, policymaking, Qaddafi and his immediate advisers are believed to make virtually all important decisions.

History

At the beginning of the nineteenth century, today's Libya was three loosely administered provinces of

An oil rig in the Libyan desert. Large deposits of petroleum were discovered in the late 1950s, and oil is now the country's principle resource, accounting for 95 percent of Libya's export trade. © Bettmann/Corbis. Reproduced by permission.

the Ottoman Empire, ruled by the local Qaramanli dynasty in Tripoli. In 1835, disturbed by local unrest, the Ottoman central government overthrew the dynasty and thereafter Libya was ruled directly from Istanbul.

Although never a rich province, Libya prospered during the second Ottoman era. As the Ottoman order spread throughout the territory, many nomads settled in coastal villages; local agricultural production and trade increased. The Sanusiyya, a religious brotherhood with political aspirations, saw its substantial trading interests flourish in Cyrenaica and the Sahara.

By the beginning of the twentieth century, Italy had established Libya as a sphere of influence, and in 1911 Rome launched its long-anticipated invasion. The Ottoman government mounted a major war effort to oppose the Italian encroachment but was soon forced to withdraw, preoccupied by unrest and nationalism in the Balkans. Local Libyan leaders took up the cause of resistance, however, and the Italians faced an armed insurgency until well into the 1930s, only to lose the province a decade later in the North African campaigns of World War II. Libya was then governed by British and French military administrations until the country was granted independence by the United Nations at the end of 1951.

The upheavals occasioned by the precipitous withdrawal of the Ottoman administration, the protracted Italian conquest, and the devastating battles

Residents in Tripoli celebrate as drinking water reaches their city as part of the Great Man-Made River project. for control during World War II left Libya one of the poorest countries in the Middle East. The population had been nearly halved by famine, war casualties, and emigration. At independence, illiteracy rates were well over 80 percent, and the per capita income was no more than $25 a year; the country's major export was scrap metal scavenged from World War II battlefields.

The leader of the Sanusiyya brotherhood, Idris al-Sayyid Muhammad al-Sanusi, had spent the years between the world wars in exile in Cairo, where he came to know the British authorities, who sponsored him as the king of the new country. Despite qualms in Tripoli about Idris's partiality for Cyrenaica, provincial leaders acquiesced in his accession to ensure the country's unity and independence. In the early years, the British subsidized Libya's operating budget while the king's clientele and local tribesmen staffed the administration.

The export of commercial quantities of oil during the early 1960s coincided with the heyday of Arab nationalism. A new generation of politically active Libyans argued that the monarchy's close ties with Britain and the United States were now both economically unnecessary and politically undesirable. Moreover, the administration proved unequal to the task of allocating the new wealth, and the government foundered in corruption and mismanagement. On 1 September 1969, a twenty-seven-year-old captain, Muammar al-Qaddafi, and a small group of his friends and fellow military officers engineered a bloodless coup; the king abdicated as his government collapsed.

At the outset, the new regime appeared to be a typical Arab nationalist military government, with an additional Islamic coloring, reflecting both Qaddafi's personal piety and the regime's efforts to appeal to the followers of the deposed Sanusi leader.

Map by XNR Productions, Inc. The Gale Group.

The British and U.S. military bases were closed, the remaining Italian residents were expelled, alcohol was forbidden, nightclubs and churches were closed, and Qaddafi called his fellow rulers to join him in establishing a unified Arab state.

By the mid-1970s, however, with the publication of the first volume of Qaddafi's Green Book, the Libyan regime began to develop its distinctive profile. Disappointed with the failure of other Arab rulers to heed his calls for immediate and unconditional unity and with the average Libyan's apparent lack of revolutionary fervor, Qaddafi concentrated on domestic affairs, proclaiming a cultural revolution at home. The Declaration of the Establishment of the People's Authority, issued on 2 March 1977, stated that direct popular authority would now be the basis for the Libyan political system. It also changed the official name of the country from Libya to the Socialist People's Libyan Arab Jamahiriyya. A newly coined Arabic word, *jamahiriyya* was translated unofficially as "state of the masses." Under the new system, the people exercised authority through people's committees, people's congresses, unions, and the General People's Congress (GPC). Qaddafi was designated GPC general secretary and the remaining members of the now defunct Revolutionary Command Council (RCC) composed the GPC general secretariat.

In part because of accompanying economic reforms—retail trade was abolished as exploitative;

In 1977, eight years after seizing power in a bloodless coup, Libyan head of state Muammar al-Qaddafi declared the country's political system would be based on direct popular authority, declaring Libya a "state of the masses." In 1979 he relinquished all formal administrative posts, but remained the country's unquestioned leader. © UPI/CORBIS-BETTMANN. REPRODUCED BY PERMISSION.

wage earners were declared partners in their enterprises; rent was outlawed and houses given to their occupants—opposition to the new edicts grew quickly. The regime reacted harshly. During the early 1980s, "revolutionary committees" were established to ensure the revolutionary enthusiasm of the Libyan people, and it was these committees that carried out the assassination of Libyan opposition figures abroad.

By then the regime had grown disenchanted with Arab leaders and devoted itself to exporting the Libyan revolution throughout the world. As a result, Qaddafi found himself in disputes not only with his neighbors but with the Western powers, particularly the United States. Accusing Qaddafi of having harbored terrorists and sponsored terrorism throughout the world, the administration of Ronald Reagan bombed Tripoli and Benghazi in April 1986 in hopes of reforming (if not removing) the Libyan leader. Despite its international isolation and the economic difficulties precipitated by the fall of oil prices during the mid-1980s, it was not until the implosion of its international patron, the Soviet Union, at the end of the decade, that the Qaddafi regime began to show signs of moderating its opposition to the international status quo.

Domestically, a period of economic and political liberalization, called green perestroika by some observers, marked the late 1980s. Often molding economic and political decisions into a single package, the liberalization program implemented by Qaddafi initially proved popular with the Libyan people. An increased emphasis on human rights and political reform accompanied some liberalization of the economy. The merger of economic and political reforms rolled necessary but painful austerity measures into a generally popular reform package, including curbs on the revolutionary committees, amnesty for political prisoners, and increased tolerance of the exiles constituting the bulk of regime's opposition. Economic components of green perestroika included the legalization of private ownership of shops, small businesses, and farms, together with increased private retail trade incentives. Unfortunately, the program failed to attract long-anticipated, and much desired, foreign investment, largely because modest attempts to create an internal market were not accompanied by the reversal of the political experiments begun in 1969.

Accused of complicity in the December 1988 terrorist bombing of a transatlantic flight, Pan Am 103, Libya was subjected to United Nations (UN)-sponsored economic sanctions in 1991 for failing to extradite the two men indicted for the action. Alleged Libyan involvement in the terrorist bombing of UTA flight 772 over Niger in September 1989 further complicated Libyan external relations in this period. Libya remained under the yoke of UN-sponsored sanctions until 1998, when it accepted a proposal to try the suspects in the Pan Am 103 bombing in the Netherlands under Scottish law. Successful in thwarting opposition on several fronts in the second half of the 1990s, Qaddafi enjoyed a strengthened domestic position at the time, enabling him to remand the two suspects with minimal concern for domestic repercussions.

Following suspension of the UN sanctions, Libya initiated an aggressive international campaign to end its commercial and diplomatic isolation. Initially focused on Africa, Qaddafi launched a series of bilateral and multilateral initiatives, beginning in February 1998 with the creation of the Community

of Sahel-Saharan States (COMESSA), which linked poor, land-locked African states with oil-rich Libya. In August 1999, he called for the creation of a United States of Africa, including an African central bank. He later added the goal of a pan-African parliament with lawmaking powers. A measure of Libya's improved standing in Africa was the support it received, in the face of determined opposition from the United States and human rights groups, for chairing the UN Human Rights Commission in 2002. In addition to regional initiatives, the Qaddafi regime also aggressively pursued expanded bilateral ties with a number of African states.

At the same time, Libya moved to strengthen economic and political relations with key European states like Britain, Italy, and Russia. The Libyan economy, adversely affected by low oil prices throughout much of the previous decade, stood to benefit from the expanded European trade and investment essential to the revitalization of the petroleum sector. The Qaddafi regime also worked to expand its political options in Europe, increasing its dialogue with bodies like the European Union and the Euro-Mediterranean Partnership and promoting Libya as a natural bridge between Europe and Africa.

After the special court sitting in the Netherlands found one of the two Pan Am 103 defendants guilty in January 2001, the Qaddafi regime expanded its efforts at global rehabilitation to include the U.S. government. In the aftermath of the 11 September 2001 terrorist attacks on New York and Washington, Libya actively cooperated with the United States and its allies in the war on terrorism. In return, Qaddafi sought Washington's support for a permanent lifting of the UN sanctions, together with the bilateral sanctions progressively imposed by the United States after 1986.

In the longer term, the Qaddafi regime hoped to achieve a restoration of full commercial and diplomatic ties with the United States. Libya took several steps that affected its relations with the United States and the world. In September 2003 Libya agreed to pay $2.7 billion to the families of the victims of Pan Am 103, after which the UN Security Council permanently lifted its sanctions regime. In December 2003 Libya renounced its unconventional weapons programs, agreeing to international inspections to verify compliance. And in January 2004 Libya also reached a final settlement in the UTA 772 case, in which it agreed to pay the families of victims $170 million.

LICA

The abbreviation for the League against German Anti-Semitism, Association Formed by all Jewish Works and Institutions in Egypt.

LICA (Ligue contre l'Antisémitisme Allemand, Association Formée par Toutes les Oeuvres et Institutions Juives en Egypte) was founded in April 1933 as part of the mass protests organized by the Cairo B'nai B'rith against rising German antisemitism.

Among the leading founders was Léon Castro, lawyer, journalist, and Wafd party activist. In September 1933, the organization joined the International League against German Anti-Semitism (also abbreviated as LICA), which had recently been formed in Amsterdam, the Netherlands, with Castro as its vice-president. About the same time, a youth section, LISCA (Ligue Internationale Scolaire contre l'Antisémitisme; International Student League against Anti-Semitism) was founded in Egypt. By 1935, LICA counted about 1,500 members, and LISCA had about 650.

LICA organized an active campaign in Egypt's Hebrew- and European-language press. It also undertook a boycott of German goods and films. The boycott was most successful in barring German films from Egyptian theaters and in affecting the sale of a number of German products. Egyptian and British officials fearing possible disorders and financial repercussions, however, intervened to halt the boycott, which continued unofficially thereafter on an individual level.

LIGUE TUNISIENNE POUR LA DÉFENSE DES DROITS DE L'HOMME (LTDH)

Tunisian human rights organization.

The Tunisian League for the Defense of Human Rights (LTDH) was officially recognized in May 1977, thus being the oldest politically independent human rights organization in North Africa. All major political groups were represented on its executive committee, with most being dissidents of the Parti Socialiste Destourien (Destourian Socialist Party; PSD). During its first decade of existence the league proved to be an active and independent organization that increasingly gained popular support. By 1982 the LTDH had 1,000 members in 24 local chapters. By 1985 it had 3,000 members in 33 chapters, and four years later it had 4,000 members in 40 chapters.

In 1985 the LTDH elaborated a charter to define precisely what it stood for. Members decided that the United Nations Universal Declaration of Human Rights (UDHR) would be adopted as the model but modified to fit Tunisian conditions. Internal debates focused on adaptations of the articles on the rights to change one's religion and to marry a non-Muslim, and the rights of illegitimate children.

After President Zayn al-Abidine Ben Ali came to power in 1987, part of its leadership joined ranks with the government. Controversial statements made by the league's president, Moncef Marzouki, during the Gulf War, against adopting an unconditional pro-Iraqi stance, further eroded popular support and deepened dissent within the organization. In June 1991 the league issued a critical statement on arrest and detention procedures that eventually attracted international attention. This incident aggravated the league's relations with the government.

In March 1992 the National Assembly passed a law that sought to tame the LTDH and bring it under Democratic Constitutional Rally (RCD) control or effect its dissolution by 15 June. Refusing to comply, the LTDH dissolved itself. The ensuing international outcry led the regime to reconsider the law. On 26 March 1993, under pressure from President Ben Ali, the court authorized temporary resumption of the league's operations.

In 2000, at the league's fifth national congress, Mokhtar Trifi was elected its new president. Since then, the new outspoken leadership of the organization has faced strained relations with the regime, even enduring the suspension of its new executive and the disruption of its activities.

LIKUD

An Israeli electoral bloc established in 1973.

Originally, Likud consisted of several independent parties: the Herut Party, the Liberal Party, the Free

Center, State List, and part of the Land of Israel Movement. Much of the emphasis of its program has been on extension of Israeli sovereignty to the territories conquered in the Arab–Israel War of 1967. It also called for improvement of the social and economic conditions of disadvantaged communities known as Oriental Jews (Edot ha-Mizrah).

Taking advantage of public disenchantment with the Labor Party in 1977, Likud won forty-three Knesset seats and formed a coalition government led by Menachem Begin, which continued until 1984. In that year, neither Likud nor the Labor Alignment bloc won enough to form a coalition without the other. The two joined in a National Unity Government in which Likud leader Yitzhak Shamir held the office of prime minister for half of the electoral period, and the blocs divided other government offices. In 1988, Likud and other right-wing and religious parties improved their showing, and Shamir again led the government until the Labor victory of 1992.

During its years in power, Likud strongly resisted surrendering sovereignty over the Palestinian territories and made little progress in reducing the role of the government in the economy. One of Likud's problems has been the presence in it of several strong individuals and their factions, including Shamir, former Chief of Staff Ariel Sharon, and Moroccan leader David Levy—all of whom have tried vigorously to become dominant. In 1993, the Likud chairmanship was won by Benjamin Netanyahu, former ambassador to the United Nations and brother to the hero of the Israeli raid on Entebbe. He defeated his former rivals as well as younger figures like Ze'ev Begin, with a spirited campaign based on American-style politics and effective use of the media, even though it was an election confined to party members.

LILIENBLUM, MOSES LEIB
[1843–1910]

Russian Zionist writer and philosopher.

Moses Leib Lilienblum received an Orthodox education and was a recognized scholar of the Talmud. His major activity was as a publicist and social critic. For most of his early career, he advocated normalization of Jewish life in Russia and closer association with that country's non-Jews, as well as an evolutionary concept of religious practice, in the spirit of Haskalah (enlightenment). As political difficulties increased in Russia, he also demanded equal rights. After the pogroms in the late 1870s, however, he became an ardent Zionist and one of the first Russian writers to campaign for the return of Jews to Palestine. One of his main associations was the Hibbat Zion movement. In addition to these political activities, Lilienblum was a renowned literary critic. His approach has been described as anti-aesthetic pragmatism, stressing the usefulness of art to society and that "the Jewish people wanted to live for the sake of life and not for any purpose beyond life." His influence was based on the great simplicity as well as the logic of his writings.

LITANI OPERATION (1978)

Israeli invasion of Lebanon in 1978.

Following a Palestine Liberation Organization (PLO) assault on a civilian bus traveling Israel's Haifa–Tel Aviv highway that killed thirty-seven Israelis, in March 1978 20,000 troops of the Israel Defense Forces (IDF) invaded Lebanon to the Litani River. The operation's goal was to destroy PLO bases and staging areas south of the Litani and to drive PLO guerrillas beyond the range of the Israeli-Lebanese border. The invasion caused an estimated 1,000 Lebanese and Palestinian casualties and prompted UN Security Council Resolution 425, which called for a cease-fire, an Israeli withdrawal, the dispatch of Lebanese army units to the area, and the creation of a United Nations Interim Force in Lebanon (UNIFIL) peacekeeping force. Israel objected to the

resolution's failure to censure anti-Israeli PLO activity in and stemming from Lebanon. The IDF occupied a stretch of Lebanese territory 37 miles long and 3 to 6 miles deep, ceding it after three months as a buffer zone to UNIFIL and to an Israeli-supported local Lebanese militia headed by Saʿd Haddad. Over the next four years the PLO reinfiltrated south Lebanon, and the Litani Operation's failure to secure Israel's northern border figured in the larger scope of Israel's 1982 invasion of Lebanon.

LITANI RIVER

River in Lebanon.

MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

Flowing entirely within Lebanon, the Litani rises in the Biqa valley and flows south between the Lebanon mountains to the west and the anti-Lebanon mountains to the east until Nabatiya, where it turns sharply to the west crosses Lebanon and empties into the Mediterranean Sea.

The major Litani development plan, initiated in the 1950s, was concluded in 1966; it includes the Qar'un reservoir and the Awali hydroelectric power station, which utilizes the water diverted via a tunnel. Hydropower and domestic use receive priority over irrigation, and Shiʿa farmers in the south resent this, fearing diversion of all the water to the north.

After 1971, the growth in southern Lebanon of the Palestine Liberation Organization (PLO)—by refugees from the Jordanian Civil War—resulted in a rise in hostilities in that border area with Israel. These led in 1978 to Operation Litani by Israel and the 1982 Arab–Israel War. The fear exists in Lebanon that Israel will divert the Litani to join the Jordan River system, but Israel has replied that this is politically unfeasible.

LITERATURE: ARABIC

Arabic literature of the nineteenth and twentieth centuries diverged substantially from inherited practices.

Arabic literature has its roots in pre-Islamic odes, enshrining prosodic and thematic conventions that remained unchallenged centuries after the ethos of desert life had ceased to be widely applicable. The emergence of historic Islam in the seventh century C.E., together with the dogma that the Qurʾan is the actual word of God and that its superhuman eloquence is the miracle that proves the genuineness of the Prophet's mission, gave the language of that period an all but hallowed character that was perpetuated in formal writing but displaced by local uninflected vernaculars in everyday Arabic speech.

The literary tradition was therefore tinged with a conservative and puristic quality that gave it uncommon homogeneity and continuity. Its conservativeness also insulated it from daily concerns, so that the uneducated majority turned instead to regional folk literatures that were ignored or even despised by the establishment. Nevertheless, changes did occur. One was a growing taste for verbal ornaments, such as the pun and the double entendre. What modern Arabs inherited from the immediate past, therefore, was the literature of a conservative elite in which correctness, convention, and linguistic virtuosity were prized above content or originality.

By the 1800s, the encroachments of Europe brought new perceptions to Arab intellectuals, who came to admire the very power that the colonialists used against them and sought the knowledge that made it possible. By the 1870s, especially in Egypt and the Levant, a new westward-looking elite had emerged. From it came the producers and consumers of the new literature.

New Direction

The conscious adaptation of literary standards to changed conditions was gradual. The earliest Arab intellectuals with extensive opportunity to get to know Europe, such as the perceptive Rifaʿa Rafi al-Tahtawi (1801–1871) and the more mercurial Faris (later, Ahmad Faris) al-Shidyaq (1804–1887), were aware that Europeans had different concepts of literature than Arabs did, but they deemed them inferior. And yet a new form of writing was coming into being, which was evident wherever there was a need to convey information (as in the books of Shidyaq and Tahtawi). It was fostered in translations, even nonliterary ones, where Arabic had to accommodate notions never before expressed; and it was important to a new Middle Eastern profession born of an imported technology: journalism.

The new direction was strikingly illustrated in the career of Abdullah al-Nadim (1845–1896), the fiery orator of the Urabi rebellion. He was well established as a master of finely bejeweled rhymed prose, but when he took to journalism, he faced up to the need to reach a wide public. He experimented, briefly, with writing an occasional piece entirely in the vernacular, but the choice he deliberately made was to use a vocabulary as close as possible to that of everyday speech without deviating from the rules of classical Arabic grammar. Others have since wrestled with the strains and anomalies of writing in the Arabic idiom that no one speaks and, indeed, the colloquial has gained a large measure of acceptance in the theater and a more grudging one in the dialogue of novels and short stories. But al-Nadim's practice has prevailed among prose writers for at least eighty years, with only a few in the last generation allowing themselves liberties with the syntax as well.

The transformation was not merely stylistic; by the 1870s, admiration of Europe's successes in science and technology was extended, by a loose association, to political, social, and philosophic endeavors as well. The adoption of European aesthetic norms could not lag far behind. By the turn of the twentieth century, direct and unadorned prose was widely recognized as not only functional but also literarily desirable. Because the learned were few, the principal medium of dissemination was the periodical press, so some major literary works were serialized before appearing in book form.

With little to encourage specialization in any one genre, the recognized stylists found their main vehicle in short prose pieces, such as the moralistic essays and tearful narratives of Mustafa Lutfi al-Manfaluti (1876–1924). Indeed, the first half of the twentieth century was dominated by immensely prolific and versatile writers, among whom were Taha Husayn (1889–1973) and Abbas Mahmud al-Aqqad (1889–1964). They were virtually all secularist and liberal sociopolitically, and romantic in their literary inclinations. Although few set out their aesthetic

The 1988 Nobel Prize for literature went to Najib Mahfuz of Egypt. Mahfuz is the author of over thirty novels and thirty-two books of poetry, many of which have been adapted for theatre, film, and television. **© Vernier Jean Bernard/Corbis Sygma. Reproduced by permission.**

principles systematically, they accustomed their generation to seek neither formalism nor virtuosity in literature but sincerity and emotion. Experience and maturity, the events of World War II, the subsequent decline of Britain and France, and above all, the challenges of independence in tandem with the turmoil of the Palestinians caused the next generation to turn away from romanticism. The keynote of postwar Arabic writing has been political commitment and realism, strongly tinged with socialism.

Prose

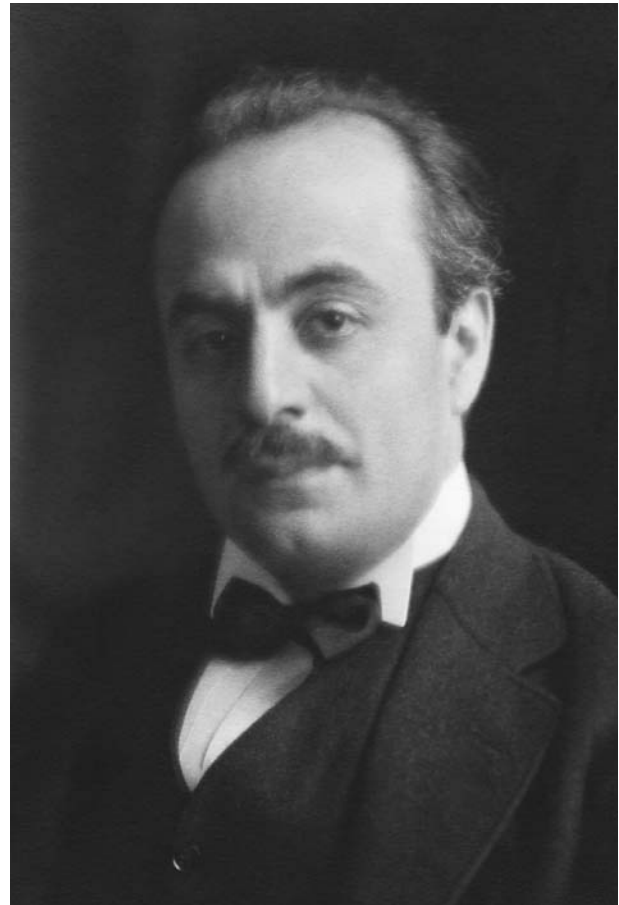
The prose style of the West fostered genres previously unknown in Arabic literature. In particular, narratives were discredited as no more than folk art, and the only form to have gained the critics' acceptance as serious literature was the *maqama,* pioneered by Badi al-Zaman al-Hamadhani (968–1008). It was a short piece that usually recounted, in highly ornate prose, some petty fraud perpetrated by an amiable rogue. By the end of the nineteenth century there was growing public demand for short stories and novels of the European type. The demand was readily met by translations, adaptations, or imitations. The short story proved particularly suitable to the needs of journals and an excellent medium for the piecemeal propagation of new ideas and perceptions. In its Arabic garb, it was brought to a high level of sophistication as early as the 1920s by such authors as Mahmud Taymur (1894–1973).

The novel was a more difficult form, especially in the absence of an Arabic tradition. Translations and adaptations aside, a pioneering attempt at a long narrative was made by Muhammad al-Muwaylihi (1858–1930) in *Hadith Isa ibn Hisham* (The Discourse of Isa ibn Hisham), in which a resurrected pasha had a series of adventures that offered opportunities to comment on social changes. The fact that it borrowed the name of the narrator and, in places, the style of (al-Hamadhani), caused it to be labeled an extended *maqama,* but the purpose it served was different, and its link to the novel form was tenuous.

Jurji Zaydan (1861–1914), the indefatigable owner and editor of the journal *al-Hilal,* published more than a score of romances, each twined around some episode of Islamic history—but invention in them is minimal. The first novel of recognized merit rooted in contemporary Arab life was *Zaynab,* the story of a village girl married against her will; it was written by Muhammad Husayn Haykal (1888–1956) in 1910/11 and first published anonymously. No others of consequence were published until the 1930s, when several writers with already established reputations, such as Taha Husayn, Mahmud Taymur, and Ibrahim Abd al-Qadir al-Mazini (1890–1949), turned to the novel. Greater progress was made under the banner of realism, notably by Najib Mahfuz (b. 1911), the first Arab to devote most of his energies to one genre. His abundant, varied, and highly competent production earned him the Nobel Prize for literature in 1988.

Theater

Even more than the novel, dramatic literature was hindered by the absence of any regional precedent, except as folk art, and by resistance to the use of the Arabic colloquial—even between unlearned characters and before mixed audiences. Yet drama made a comparatively early start; the first performance was *The Miser,* a play which, although not a translation of Molière's play, owed a great deal to the great French comedic playwright (1622–1673). It was produced in Beirut (Lebanon) in 1847 by Marun al-Naqqash (1818–1855). His company, and several others that branched out of it or imitated it, found acceptance in Egypt, but their activities were looked upon as mere entertainment. In fact, although some writers established in other genres also tried to write plays, no Arab acquired a reputation as a playwright until the 1930s, when Tawfiq al-Hakim (1898–1987), who had had experience as a hack writer for a theatrical company, returned from a period of study in Paris determined to give drama a recognized place among literary arts. His long career, marked by productivity and versatility even into old age, brought him fame and inspired an impressive group of new playwrights.



Kahlil Gibran was a Lebanese poet, philosopher, and artist who immigrated to the United States. *The Prophet*, perhaps his most famous work, is a book of twenty-six poetic essays which has been translated into over twenty languages. © E.O. Hoppe/ Corbis. Reproduced by permission.

Poetry

In contrast to the newly imported genres, Arabic poetry has a long and rich tradition. In the first three-quarters of the nineteenth century, poets perpetuated the highly ornate style of their immediate predecessors. When the times called for a less ornamental and more purposeful poetry, the practice of the most talented turned not to European models but to the example of early poets from an equally dynamic age. By the turn of the century, a school now known as the neoclassical quickly attained a high level of accomplishment, emulating the grandiloquent odes of Abbasid poets but addressing the public issues of the day. Its leading exponents were Ahmad Shawqi (1868–1932) and Muhammad Hafiz Ibrahim (c. 1872–1932).

Resonant as they were, their voices were not the only ones to be heard. Others favored more radical initiatives and the expression of more personal emotions. From outside the Arab heartlands, Syrian Christian émigrés to the Americas headed by Kahlil Gibran (1883–1931) echoed a type of poetry long accepted in the West. Not least influential were the leading critics al-Aqqad and Taha Husayn, who harried the neoclassicists for not equaling the subtleties of the British poet Percy Bysshe Shelley (1792–1822) or the French poet Alphonse de Lamartine (1790–1869). The leanings of these various groups were unmistakable, and after the death of Ahmad Shawqi and Hafiz Ibrahim, the romanticism already evident in prose became evident in poetry as well.

Another new note was sounded in 1949 when two Iraqis, Badr Shakir al-Sayyab (1926–1964) and Nazik al-Malaʾika (b. 1923), almost simultaneously published their first experiments with free verse. The adoption of lines of uneven length with muted

rhymes irregularly arranged, or with no rhymes at all, was the most radical departure ever from classical Arabic poetry. No less significant is that the movement grew—and has continued to grow—out of perceptions shared with Western poets of international stature, especially T. S. Eliot (1888–1965). Most revolutionary of all has been its purpose; for it has given rise to a host of committed poets often able to give voice to their predicaments as individuals and, at the same time, as Arabs and as humanists.

All Genres

All along, Arab writers have given expression to the fervor and then to the disappointments and antagonisms generated by the succession of Western ideologies embraced by the elite. This expression has to some extent been tinged by the prestige of the world power most closely associated with each ism. In the second half of the twentieth century, following growing disappointment in the way the liberalism and secularism associated with Western Europe had worked out, the dominant doctrine has been socialism, but the collapse of the Soviet Union undermined confidence in its forthcoming triumph. Very few carry their disillusion to the extent implied in a short story by Mahmud al-Rimawi (b. 1948) titled "The Train" and included in his *Liqa lam yatimm* (2002). In it, a train running to an unknown destination and stopping only at deserted stations is packed with people who have been on it long enough for a baby girl to be born to one of them, and the name she is given is Palestine. More confidently, contributors to all literary genres view themselves as individuals sharing a distinctive experience but informed by a universal consciousness, and dealing with issues that have a humanistic as well as an Arab dimension.

Literature: Arabic, North African

North African writers convey their ideas in French and Arabic in a variety of literary genres.

The three countries of the Maghrib—Algeria, Morocco, and Tunisia—share more than common geographic boundaries. They all succumbed to foreign invasions in the past and fell victim to the same colonial power: France. Colonial rule in the countries of the Maghrib differed only in its strength and its duration, Algeria having endured the longest and most traumatizing occupation. The French army landed on the coast of Algeria in 1830 and completed its occupation of the country in 1881. Tunisia was conquered in 1880, and in 1912 Morocco was colonized. Algeria was a French province from 1848 until it achieved independence in 1962; the other two countries remained French protectorates until 1956.

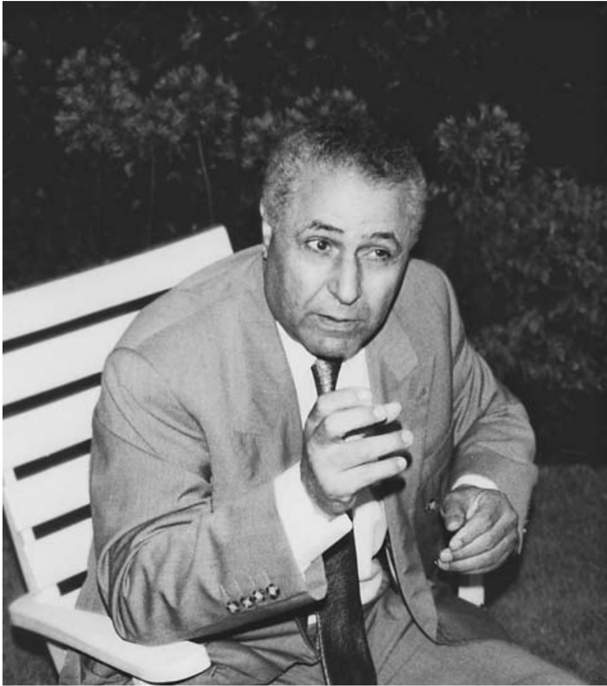
In Algeria, Arabic lost its efficacy long before it was declared a foreign language in 1938. Algerians conceded the fact that the language of the colonizer was the language of bread, but because it is the language of Islam, Arabic maintained its place in the lives of the people, even the Berbers, who spoke various Berber dialects. It became primarily the language of religious teaching and practice. Culturally, Morocco and Tunisia experienced French colonialism in a more subdued manner because they had centers of Arabic learning—the two mosque universities, al-Qarawiyyin in Fez and the Zaytuna in Tunis—that safeguarded and continued an existing cultural tradition. Many schools opted for bilingual instruction, so Arabic was on a par with French. The linguistic situation in the Maghrib has provoked heated polemics between the partisans of French and those of Arabic, particularly in Algeria. Although it remains an issue to the present day due to the growing number of writers expressing themselves in French, it has lost its political connotation.

The three countries of the Maghrib are similar in the role assumed by traditional Muslim centers,

Abdelwahhab Meddeb, a Tunisian poet and scholar, often draws upon his Arab Islamic history and heritage in his writings, which include novels, poetry volumes, translations, and essays. © AP/Wide World Photos. Reproduced by permission.

the *zawiyas.* Jealous of their power over the population and intent on playing a role in the political arena, some Zawiya leaders placed themselves in an ambiguous position when they cooperated with French colonial authorities The French used them to legitimize their presence and gain the support of the local population. Aided by widespread illiteracy, the *zawiyas* maintained their control until they were challenged by the reformists of the Salafiyya movement, who were increasingly alarmed by the interference of the colonial administration in the religious affairs of their countries. The Algerian Reda Huhu ridiculed the official imams appointed by the colonial authorities and even spoke of an "official Islam," in contrast to the "people's Islam" in his *Ma Himar al-Hakim* (Conversations with al-Hakim's donkey).

Following in the footsteps of the Salafiyya of the Mashreq, Maghribi intellectuals such as Allal al-Fasi (1910–1974) in Morocco, Abd al-Hamid Ben Badis (1889–1940) in Algeria, and Mohammad al-Fadel Ben Ashour (1909–1970) and Mohammad al-Taher Ben Ashour (1879–1973) in Tunisia confronted the leaders of the *zawiyas.* Their aim was to prove the compatibility of Islam and modernity, and the absence of a contradiction between progress, even in a Western context, and Islam. Their position appealed to the Maghribi youth. Opening up to the West, however, did not occur without a price, even for the French-educated Maghribis. The clash of the two civilizations was successfully dramatized by the Moroccan Driss Chraibi in *Succession ouverte* (1962; Heirs to the past) and *Le passe simple* (1983; The simple past), the Algerian Mouloud Mammeri (1917–1989) in his novel *Le sommeil du juste* (1955; The sleep of the just), and the Tunisian Albert Memmi (b. 1920). Memmi endured hardships as a Tunisian Jew caught between family traditions, colonial policy, and Nazi ideology, which he related in his novel *La statue de sel* (1953; The statue of salt).



Moroccan author Mubarak Rabi belongs to the country's first generation of contemporary writers. His works include short stories, plays, novels, children's books, and psychological studies of childhood socialization processes. COURTESY OF AIDA BAMIA.

Maghribi writers writing in French are finally reconciled with their native culture and at ease in their setting. Some, such as the Algerian Habib Tengour (b. 1947), the Tunisian Abdelwahhab Meddeb (b. 1946), and the Moroccan Taher Ben Jelloun (b. 1944), dug into their Arab Islamic history and their folk heritage in search of subject matter for their works. Independence has, in a certain way, liberated the writers from guilt vis-à-vis their adoption of the French language.

The 1980s witnessed an explosion of production in the Maghrib in various literary genres, in prose and in verse, and in Arabic and French. Particularly prominent in this trend are the women writers. They are slowly filling a space that for many years was dominated by the lone presence of the Algerian novelist Assia Djebar (b. 1936). Approaching the women's world from a feminist angle, her writings shed much of their traditionally romantic outlook on gender relations and with *L'amour, la fantasia* (1985; Fantasia: An Algerian Cavalcade) and *Ombre sultane* (1987; A sister to Scheherazade), she achieved a new depth by mixing history and fiction. Although Djebar has given a voice to Algerian women through films and plays, her greatest contribution is in fiction. Her latest novel, *La femme sans sepulture* (2002; Woman without a shroud) is a somewhat fictionalized biography of an Algerian woman who fought during the war of independence. Algeria's now long list of other women writing in French includes established names such as Leila Sebbar (b. 1941), Aicha Lemsine (b. 1942), and Anna Greki (1931–1966), and new names such as Hawa Djabali (b. 1949), Miriam Ben (b. 1928) and, more recently, Nina Bouraoui (b. 1967).

Women writing in Arabic, on the other hand, have relied more on poetry to express themselves. One of the early poets, Ahlam Mustaghanmi (b. 1953), has recently turned to fiction, publishing two novels, *Dhakirat al-jasad* (1996; Memory of the flesh) and its sequel *Fawda al-Hawas* (1998; The chaos of the senses). In Tunisia, Hélé Béji (b. 1948) contrasted traditional and modern cultures in her first novel, *L'oeil du jour* (1985; The eye of day). Women writing in Arabic who preceded her include Hind Azzouz (b. 1926), Nadjia Thamer (b. 1926), Arusiyya Naluti (b. 1950), and the poet Zoubeida Béchir (b. 1938). Contributing to the feminist debate in the Arab world, Zahra al-Jlasi (b. 1950) published *al-Nas al-Mu'annath* (2000; The feminine text). In Morocco, Khanatha Bannounah (b. 1940) has contributed four collections of short stories and two novels, *al-Nar wa al-Ikhtiyar* (1968; Fire and choice) and *al-Ghad wa al-Ghadab* (1981; The future and the fury). A new generation of women novelists is slowly making headway but many have not published more than a single novel.

The boundaries of the Maghribi writers have expanded tremendously, both geographically and culturally. Consequently, it is impossible to ignore the growing presence of Maghribi literature outside the countries of the Maghrib, both in Europe and in the Americas. Many writers live and work outside the Maghrib, and come into contact with various cultures. The Tunisian Mustafa Tlili brings his experience in the United States to his novels, and the writings of a Tunisian residing in Canada, Hédi Bouraoui (b. 1932), reveal a rich canvas on which multiple Western cultures intertwine with Maghribi folklore. Majid el-Houssi bridges Italian and Tunisian cultures in his poetry and fiction.

It is important to mention the role that private publishing houses in the Maghrib have played in the promotion of Maghribi literature. Although they impose a financial burden on aspiring young writers who publish their works at their own expense, they nevertheless provide them with greater freedom of expression and accelerate the publication process with the elimination of bureaucracy.

The writings of the Maghribis have echoed during the last two decades the concerns of the population and the social ills in Morocco that contribute to clandestine immigration, as dramatized in Youssouf Amin Elalamy's *Les clandestins* (2000; The clandestines). The rejection of both the Islamists and the government in power in Algeria has fallen on the shoulders of women novelists struggling to secure their rights in a society where they are constantly victimized. Many of the more political writers have so far been the authors of a single work, so it is difficult to assess their literary future.

Whereas more writers in Algeria are resorting to the French language as their medium of expression, the scene in Morocco seems well balanced between Arabic and French, with the scale tilting in favor of Arabic. New fiction works of great literary value are being published, among them Ahmad al-Tawfiq's novels in which he reconciles Arab and Berber traditions, Izz ed-dine Tazi's huge literary production, and the numerous works of Mohammad Shukri, Mubarak Rabi, and Bensalem Himmish. The change in leadership in Morocco after 1999 led to the release of many prisoners who published books describing their experiences in what came to be called prison literature. In contrast, francophone literature in present-day Tunisia is not a strong trend and offers no clear direction. Except for Hélé Béji (b.1948) and to a lesser extent Moncef Ghachem (b. 1947), few have established a reputation beyond Tunisia's borders.

Algerian author Assia Djebar is one of North Africa's most acclaimed writers. Djebar is best known for her fictional works, which frequently address feminist issues and focus on themes of social emancipation. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

Algeria

To counteract the impact of French culture, the Association of Algerian Muslim Ulama (AUMA) was founded in 1931 by Abd al-Hamid Ben Badis (1889–1940). Its motto was "Algeria is my country, Islam is my religion, and Arabic is my language." The AUMA contributed to the revival of the Arabic language and the launching of a significant literary movement through its schools and its press. Well-known literary figures such as Ahmad Reda Huhu (1911–1956) and Zuhur Wanisi (b. 1936) either taught in the schools of the AUMA or studied there. Both fiction and poetry were published in the AUMA's two papers, *al-Shihab* (1925–1939) and *al-Basaʾir* (1935–1956). It is fair to say that modern Arabic literature in Algeria was born in the shadow of the AUMA.

While fiction in Arabic was in an early stage and limited to short stories, Algerian fiction in French made its first appearance in the period between the two world wars. However, the most significant novel, *Le fils du pauvre* (The pauper's son), by Mouloud Feraoun (1913–1962), was not published until 1950. Its author stated that his motivation to write it was his desire to present a true portrait of the Algerian people, in reaction to Albert Camus's novels dealing with life in Algeria. Algeria's earlier novels were mostly ethnographic, but they became

increasingly political as most writers set out to define and defend their national cause. They voiced the people's aspiration to freedom, described social ills, and condemned France's repressive colonial policy. The nascent literary movement coincided with the political consciousness of the Algerians heightened by their participation in the Etoile Nord Africaine, a party established in 1925 by Maghribis in France.

The Algerian War of Independence (1954–1962) was another literary catalyst. It became the topic of choice for novelists, short-story writers, poets, and playwrights, especially after independence. Few, however, succeeded in reproducing the tragic and momentous events of the struggle without writing documentary-type works. The most original novel on the subject is Mohammed Dib's (1920–2003) *Qui se souvient de la mer* (1962; Who remembers the sea). Writers dwelt on the war years, using incidents mainly to incriminate the parasites and the false nationalists who exploited the ideals of the revolution and the memory of the martyrs. Rachid Boudjedra (b. 1941) pointed the finger at the new leadership and their coconspirators, the religious authorities, in his novel *La fépudiation* (1969; Repudiation). Al-Taher Wattar's *al-laz* (1974; The ace) stresses the tragic fate of the martyrs of the war who were quickly forgotten after independence.

The French Algerian literature gained momentum following independence while Arabic writing lagged behind for more than a decade. In view of Algeria's Arabization policy, the French language was not expected to survive for long in postindependence Algeria; although the prediction did not materialize, the advocates of the two languages engaged in heated polemics on the merits of one over the other. The debates subsided in virulence, and the linguistic choice of the Maghribi writers is still a subject of contention. The only writer to cross the language barrier in Algeria is, so far, Rachid Boudjedra. With his novel *al-Tafakkuk* (1982; The dismantling) he began the trend of writing novels in Arabic and translating them into French, a process that continues to the present day. It is doubtful, however, that readers view Boudjedra as an Arab-language writer.

After the war of independence, writers' interests shifted to other social, personal, and philosophical themes. Minority groups such as the Berbers used their writings to promote their heritage. The most committed writer of the postindependence period was Mouloud Mammeri (1917–1989). Meaningful works also were published by the novelist Nabile Farès (b. 1940). Before them, the Amrouche family—Jean el-Mouhouv (1906–1962); his mother, Fadhma At Mansour (1882–1967); and his sister, Mary Louise Amrouche (1913–1976)—endeavored to safeguard the Berber folk heritage.

One of Algeria's most prolific and greatest writers, Mohammed Dib, shifted his attention from politics to other topics following independence. Between his well-known trilogy, Algeria, which included *La grande maison,* (1952; The big house), *L'incendie* (1954; The fire), and *Le métier à tisser* (1957; The loom), and his latest novel, *L'Infante maure* (1994; The Moorish Infanta), the author traversed a path that led him from a direct approach and straightforward style to the depths of abstraction. He remains attuned to events in Algeria in his collection of short stories, *La nuit sauvage* (1995; The savage night), which depicts violence in his country and in the rest of the world. Dib was among those who believed that the role of the writer as an advocate for the national cause was finished when their country achieved independence. Another who began writing in the colonial period and continued long after independence is the poet Noureddine Aba (1921–1996). After Algeria's independence he dedicated his efforts to other Arab causes, particularly to the Palestinian problem, which figures in two of his poetic plays, *Montjoie Palestine* (1970; Palestine, my joy) and *Tel El-Zaatar s'est tu à la tombée de la nuit* (1981; Tel El-Zaatar fell silent at night). Many younger poets writing in Arabic have also expressed a great affinity with the ordeal of the Palestinian people.

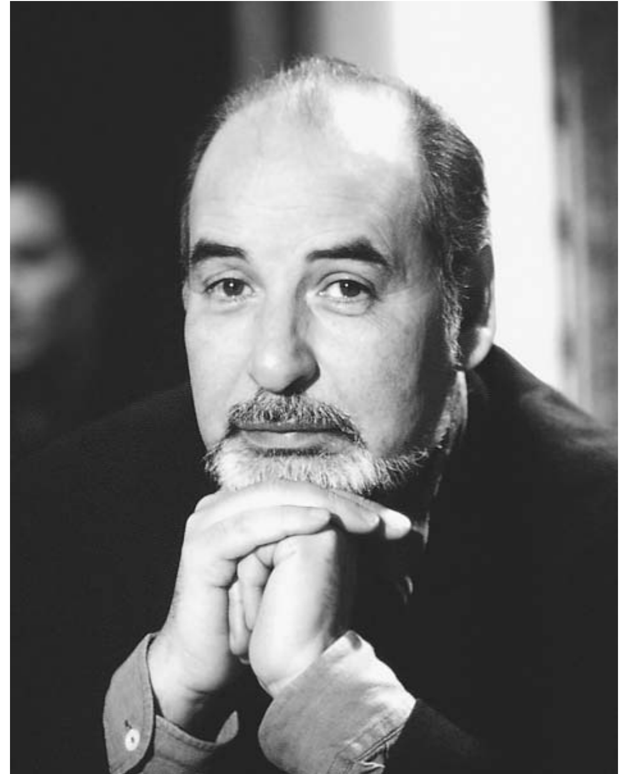
The younger generation of writers who did not experience the war years have manifested a particular concern with their leadership's handling of the political, financial, and social affairs of the country. Writers such as Taher Djaout (1954–1993), Rachid Mimouni (1945–1995), and the poet Hamid Skif (b. 1951) have not minced their words in criticizing the government. In the 1990s the dissent was aimed at the government and the Muslim fundamentalists, in Boudjedra's *FIS de la Haine* (1992), Mimouni's *La malediction* (1993; The malediction), and

Djebar's *Le blanc de l'Algérie* (1995; The white of Algeria) and *Oran, langue morte* (1997; Oran, a dead language), in which the author mourns the assassinations of Algerian writers and intellectuals, including Taher Djaout. Most of the works dealing with violence in Algeria reveal the difficulty of reproducing the magnitude of the tragedy in fiction. Unable to distance themselves from events they endured daily, writers provided testimonies rather than fictional accounts of reality, a trend observed in Leila Aslawi's *Survivre comme l'espoir* (1994; To survive like hope), Latifa Ben Mansour's *La prière de la peur* (1997; The prayer of fear), and Nina Hayat's *La nuit tombe sur Alger la blanche* (1995; Night falls on white Algiers). In Arabic, Laraj Wasini wrote *Sayyidat al-Maqam* (The mistress of the abode), relating the events in the framework of a love story, while Wattar used his traditional Sufi approach in *al-Wali al-Tahir yaʿudu ila makamihi al-zaki* (2000; The chaste Wali returns to pure his tomb).

Other angry voices heard around the Mediterranean in the mid-1980s were those of the second generation of Maghribi immigrants, mainly Algerians living in France (and in Belgium), known as Beurs. They decried their feelings of loss and their search for identity in violent texts that reflected deep frustration, some of which have achieved notoriety: Farida Belghoul's (b. 1958) *Georgette* (1986), Sakina Boukhedenna's (b. 1959) *Journal and "nationalité: immigré(e)"* (1987; Nationality: Immigrant), and Mehdi Charef's (b. 1952) *Le thé au harem d'Archi Ahmed* (1983; Tea in the harem). Their movement is significant for its global nature. One writer, Azouz Begag, who attracted the attention of the critics with his first novel, *Le gone du chaâba* (1986; The lad of the alley), has established himself as a spokesperson for the Beur with a prolific literary production. Begag shows the human face of the immigrant in quietly humorous works such as *Dis Oualla* (1997; Say, by God) and *Le passport* (200; The passport) where Arabic terms abound.

Morocco

Morocco's modern literary history is in many aspects similar to Tunisia's, but its proximity to the Iberian Peninsula has added an extra dimension to its culture. The Arab Islamic heritage of Andalusia and the flight of many Muslims and Jewish Andalusians to Morocco upon the reconquest of Spain has linked Morocco to Europe historically and culturally. Because French occupation came late to Morocco and as a result of the political organization of the territory, French culture did not deeply or easily infiltrate the educational foundations of the country. It was also counteracted by the Arab Islamic cultural activities centered in Fez.



Tahar Ben Jelloun, one of North Africa's most successful post-colonial authors, was born in Morocco in 1944 but immigrated to France in 1971. A practicing psychologist as well as a writer, Ben Jelloun produced many works of poetry, prose, and criticism, frequently touching on themes of racism and alienation. © RUSSELL CHRISTOPHE/CORBIS KIYA. REPRODUCED BY PERMISSION.

The two writers who dominated the colonial period and wrote in French, Driss Chraibi and Ahmed Sefrioui, did not promote French ideals. Chraibi denounced the traumatic impact of Western civilization and the hardships of the emigrant workers in France, and in his latest novels has become an advocate of the Berber cause. Sefrioui, on the other hand, revived the folk literature of his country, thus drawing the line between his world and the Western world. Another writer, Mohammad Khair Eddine (b. 1941–1995), has shown strong connections with

his country in spite of his vagabond life and the many years he spent outside Morocco. A younger novelist, Taher Benjelloun (Taher ben Jelloun; b. 1944), well known for his innovative style and form, won the Prix Goncourt for *La nuit sacrée* (1987; The sacred night).

Parallel to an important literary movement in French, Morocco counts an impressive array of distinguished writers expressing themselves in Arabic, including Mohammad Ezzeddine Tazi (b. 1948) and Mohammad Zafzaf (1946–2001). Many among them, such as al-Miloudi Shaghmoum (b. 1947) and Abdessalam al-Boqqali (b. 1932), are bilingual and have used their multiculturalism to produce original works reflecting new trends in the European novel. A few, such as Mohammad Aziz al-Habbabi (1922–1993), write in both Arabic and French. Many of the Moroccan novels written in the middle of the twentieth century were historical, stressing the authors' pride in the country's past. Bensalem Himmish's (b. 1949) *Majnun al-Hukm* (1990; Power crazy) and Lotfi Akaley's (b. 1943) *Ibn Battuta* (1998; Ibn Battuta, the well-known Arab traveler) found in Arab culture and history a rich source of material for their fiction works.

Poetry is a particularly popular genre in Morocco among those writing in Arabic and in French. The imprisonment of Abdellatif Laabi for his daring critical works shows the efficacy of this literary genre. Poety is celebrated on a national and official level in Morocco. It occupies a major place in the yearly Rabat cultural festival. Moroccan poetry has a permanent center known as Bayt al-shiʿr (The house of poetry), under the presidency of the poet Muhammad Bannis. Among Moroccan women poets, Malika al-Asimi is exceptionally outspoken, discussing intimate topics and contesting society's restrictions, in her two collections *Kitabat Kharij Aswar al-Alam* (1988; Writings outside the walls of the world) and *Aswat Hanjara Mayyita* (1988; Voices from a dead throat). An equally bold attitude can be observed in Siham Benchkroun's *A toi* (2000; To you).

Traditional in form and patriotic in content at the beginning of the twentieth century, Moroccan literature has taken a more personal and philosophical trend since the mid-1970s, with a tendency for renewal and experimentation in form and style.

Tunisia

Tunisia's cultural history is quite different from that of its neighbor, Algeria. Tunisia benefited from the activities of the *Zaytuna* mosque-university and the Sadiqi college; both were instrumental in preserving and promoting Arabic culture. The country's close contacts with the Mashriq in opposition to the term *maghrib* (referring to North Africa) designates the Egypt and the Levant were another asset in its rich literary activities. As Tunisian writers contributed to the *nahda,* the literary revival in the Arab world, the most significant input came from the poet Abu al-Qasim al-Shabbi (1909–1934).

Most Tunisian writers expressed themselves in Arabic. Between the two world wars the journal *al-Alam al-Adabi* (1930–1952; The literary world) encouraged writers of the young generation, including members of the most famous literary group of this period, Jamaʿat Taht al-Sur (Below the wall group), which counted such established authors as Ali al-Duʿaji (1909–1949) and Mahmoud al-Mesʿadi (b. 1911). A similar role was assumed by the journal *Al-Fikr* (1955–1986; The thinking, or The thought) in the second half of the twentieth century.

Tunisia had very few writers in French during the colonial period. The best known among them was Albert Memmi, who now lives in France. Surprisingly, their numbers have soared in the last two decades. Although they write in French, they borrow heavily from their Arab Islamic heritage. A few, such as Salah Garmadi (1933–1982) and Taher Bakri (b. 1951), are bilingual poets.

Arabic literature in Tunisia, especially fiction, continues to flourish. It is a field for innovation and experimentation both in style and in form. The nationalist and patriotic works of the early period, the period of the French protectorate, gave way to a broader variety of subjects; the tone also became less moralizing. It is not unusual to find writers contributing to more than one literary genre, producing novels, short stories, and plays. The theater, too, has had a revival in Tunisia thanks to the efforts of Izziddin al-Madani (b. 1938). Because of the numerous cultural festivals held in Tunisia, many plays are performed.

Of the three countries of the Maghrib, Tunisia has the largest number of women writing in Arabic.

Although the mere fact of their writing is a reflection of change in society, the women do not always promote complete emancipation. Slowly but progressively their tone has become more daring. Raising certain questions is in itself a revolutionary stance: Subjects such as birth control and abortion, discussed by Hind Azzouz (b. 1926) in *Fi al-Darb al-Tawil* (1969; On the long road), are a novelty. Some, such as Fatima Slim (b. 1942), observe the loss of the old values in a changing society. The most uninhibited is Laila Ben Mami (b. 1944), author of *Sawmaʿa Tahtariq* (1968; The burning hermitage), who believes in sexual freedom for the artist.

The image of the modern woman also is defined by male writers. Generally, most novelists of the late 1960s and the 1970s called for a bigger role for women in society. In the novel *Wa Nasibi min al-Ufuq* (1970; My share of the horizon), Abdel Qader Ben Shaikh (b. 1929) calls for the emancipation of women, the easing of parents' control, and the relaxing of social traditions. Mustafa al-Farsi (b. 1931) takes a similar position in *al-Munʿaraj* (1969; The curve). As reflected in literature, Tunisian women suffered from a changing society and the consequences of their efforts to balance the claims of a traditional upbringing with those of the modern world in which they wanted to prove themselves. The situation claimed some victims in the period of transition—for example, the characters drawn by Natila al-Tabayniyy (b. 1949) in *Shayʾun fi Nafsika* (1970; Something within yourself)—but an irreversible trend was set for future generations.

Some contemporary writers have achieved recognition for their innovative techniques and timely topics while remaining close to the people's problems. Such is the case of Mohammad al-Hadi Ben Saleh (b. 1945), who portrayed the bread riots in his novel *Sifr al-Naqla wa al-Tasawwur* (1988; The book of transfer and imagination). Poetry, too, responded to the people's concerns, as shown in the work of Mohammad al-Habib al-Zanad (b. 1946) in his collection *al-Majzum bi lam* (1970; The form tense). Fadila al-Shabi (b. 1946) believes in the free expression of the poet in her work, without outside guidance. Another poet, Samira al-Kasrawi (b. 1957), is preoccupied with the political situation in the Arab world, as is obvious in her books *Balagha Shiʿriyya fi al-Rafd wa al-Huriyya wa al-Rasas* (1982; Poetic eloquence in rejection, freedom, and bullets) and *Malhamat al-Mawt wa al-Milad fi Shaʿbi* (1983; The epic of death and life for my people). Tunisian poetry maintains a constant connection with the problems of the Arab world and especially those of Palestine. Writers reacted to the Gulf War of 1991 in a spirit of Arab solidarity; one example is Aroussia Nalouti (b. 1950), who incorporates the war into her novel *Tamas* (1995; Tengance).

Some writers, poets, and novelists seek an escape from life's constraints in love, sexual adventures, and exile, but few find solace, which explains Ridha Kéfi's (b.1955) pessimism in his poetic collection *Mariya al-Mayyita* (1981; Dead Mary) and his novel *al-Qina Taht al-jild* (1990; The masque under the skin). Similar sentiments prevail in Nefla Dahab's (b. 1947) third novella, *Samt* (1993; Silence).

Though many writers have authored only a single book or are still searching for the most suitable form for their ideas, it is possible to trace a general trend in Tunisian literature: There is a growing sense of melancholy and disappointment in the most recent writings, which has led to introversion. This is manifested in a fashion for autobiographical novels, an example of which is Hassouna Misbahi's (b. 1950) *Kitab al-Tih* (1997; The book of the maze).

LITERATURE: HEBREW

A long and varied tradition that includes innovative techniques and more conventional approaches, a focus on the individual as well as on nationalist concerns.

Modern Hebrew literature began in late eighteenth-century Prussia, surrounded by Yiddish and German. It developed and came of age in central and eastern Europe, centuries after Hebrew ceased being a spoken language. Only after World War I and the destruction of many Jewish cultural centers in Europe did Palestine and later Israel become the focus for Hebrew *belles lettres*, this time in a Hebrew-speaking milieu.

Haskalah Era

The year 1784, when *Ha-Me'asef*, the first Hebrew periodical, appeared, serves as a period marker for the beginning of modern Hebrew literature. Its founder, Moses Mendelssohn, a German Enlightenment philosopher, was the leader of the Jewish Enlightenment, or Haskalah, which advocated the modernization of Jewish religious and social life. The writers of the Haskalah chose to write in Hebrew not only because it was known to many readers, but also because Hebrew was the only remnant of Jewish independence.

For almost a century, Hebrew literature was committed to the Haskalah movement. From Germany, it spread to Polish Galicia and later to Russia. Poetry was the dominant genre until the mid-nineteenth century. While romanticism was raging in Europe, Hebrew poetry was neoclassical, universalistic, and mimetic. It didactically reinterpreted biblical stories, failing to develop a genuinely poetic idiom. Nevertheless, Haskalah literature revolutionized culture by extracting the literary creation from its religious and communal framework and revived, despite its limitations, the poetic language and universal themes of the Hebrew Bible.

This poetry's most powerful voice was Judah Leib Gordon, who retold biblical and historical stories with dramatic intensity, satirized Jewish life with wit, and empathized with the plight of Jewish women. Micah Joseph Lebensohn's highly charged romantic poems were more individualistic.

The first popular novel was *Ahabat Zion* (Love of Zion; 1853) by Abraham Mapu. Its pastoral view of nature and biblical theme and language reflect Haskalash taste. In 1865, Mapu attempted to depict contemporary life, but not until the work of Mendele Mokher Sefarim later in the century did the form mature and acquire new literary and linguistic models. Mendele stands at the crossroads between Haskalah and the period of nationalism and social realism. He manipulated postbiblical materials—Mishnah, the Talmud, and prayer—to create an innovative prose style.

Hibbat Zion Era

The year 1881, with its wave of pogroms in Russia, marks the shift from Haskalah assimilationism to the Zionist credo of auto-emancipation. The newly established school of Hibbat Zion (Love of Zion) produced national poetry, replete with sentimental and hyperbolical avowals of love for mother Zion and her miserable children, the Jewish people, as well as romantic poetry.

The philosopher of the new nationalist movement and the editor of its periodical, *Ha-Shiloach,* was Ahad Ha-Am, who saw Zion as the future spiritual and cultural center of the Jewish people. He believed that the nonspoken Hebrew of his time could articulate concepts, not emotions, and that the literature should concentrate on Jewish issues exclusively. The challenge to both Ahad Ha-Am's stifling prescription and Mendele's realism and style came from Isaac Leib Peretz, David Frischmann, and the neoromantic Micah Joseph Berdyczewski who all maintained that Hebrew literature was like all others. The individual's subterranean energies motivate Berdyczewski's works of lyrical prose and his style. He believed that national renaissance and vitality would come only with releasing the irrational creative spark and rejecting the restraint of traditional Judaism's intellectualism.

Bialik, Agnon, and the Modernist Era

Modern consciousness burst into Hebrew literature in the 1890s through Berdyczewski's fiction and Hayyim Nahman Bialik's verse. Writers began experimenting with modernist techniques. With Bia-

lik, for the first time in Hebrew literature, the "I" of the individual became the central entity, and poetry became the arena of the self. Bialik's verse, like that of the Bible, is both a powerful lyrical expression and a rich essence of the Jewish culture that produced it. From 1892 to 1917, Bialik was dedicated to the idea of national revival. He searched for a meaningful Jewish identity while anguished by a loss of faith.

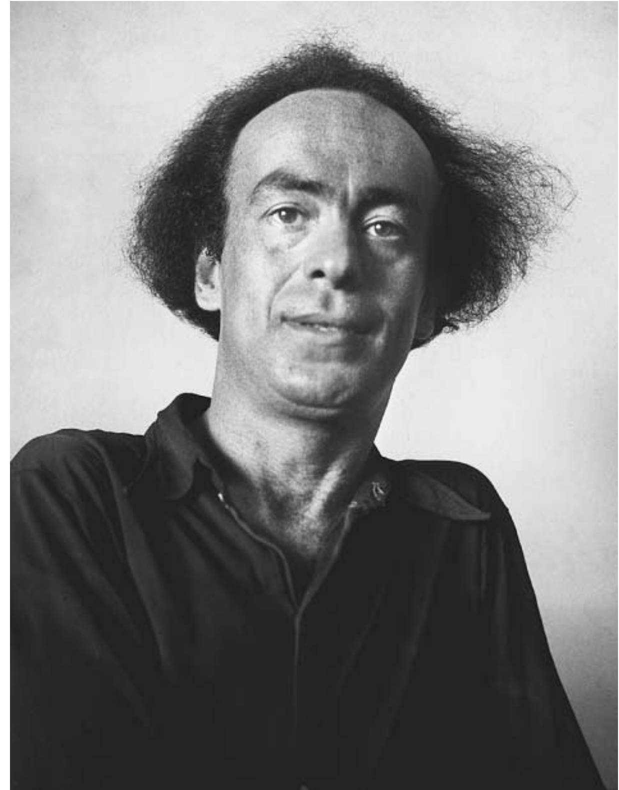
Saul Tchernichovsky expanded the horizons of Hebrew poetry through his admiration of Hellenic beauty and mastery of classical form. Like Berdyczewski, he broke the constricting bounds of Hebrew literature and the Jewish framework and aspired to express the totality of existence.

Many of the writers of this period started in Europe and continued in Ottoman-ruled Eretz Yisrael, or Palestine. Works of this second Aliyah period (1904–1914) were often dominated by questions of identity and by the pendulum of despair and hope reflecting the crisis of immigration. Yosef Hayyim Brenner's seemingly fragmented, unrefined prose reflects the tortured inner worlds of his intellectual, uprooted, antiheroes and their existential struggles. In his quest for truth and realism, he improvised a semblance of spoken Hebrew and slang. Uri Nissan Gnessin's novellas of alienation and uprootedness, written in a lyrical, figurative prose, are among the first stream-of-consciousness narratives in world literature.

But the towering figure of Hebrew fiction was Shmuel Yosef Agnon, the 1966 Nobel laureate. Zionist philosophy was only one component of Agnon's complex artistic and spiritual oeuvre, which merges Jewish sources with European traditions. Agnon tells the story of the Jews in the modern age: faith and heresy, exile and redemption, Holocaust, uprootedness and belonging. But the Jewish condition is also a reflection of the human condition: tragic fate; nightmarish, at times surrealistic existence; social disintegration; and loss of identity. Like Agnon, Hayyim Hazaz, the expressionist, wrote in a style different from the spoken language about Jewish life in Europe and Eretz Yisrael.

Shlonsky Era

At the heart of Hebrew literary activity at the time of the British mandate was poetry. With Bialik's hegemony challenged in the 1920s, minor, deviant voices were heard: Rachel, whose lean, intimate diction, musical lyricism, and unfulfilled pioneer and personal dreams won her the public's unmatched love; Esther Raab, the poetically untamed individualist; David Vogel, the lyrical minimalist; and Avraham Ben Yizhak.



Famed Hebrew poet Avraham Shlonsky (1900–1973). Best known for his contributions to modern Hebrew poetry, Shlonsky is also credited with translating many classic works, including *Hamlet* and *King Lear*, into Hebrew. © PHOTOGRAPH BY ZOLTAN KLUGER. GOVERNMENT PRESS OFFICE (GPO) OF ISRAEL. REPRODUCED BY PERMISSION.

The most vocal revolutionary was Avraham Shlonsky, the editor of *Ktubim* and later *Turim.* Classicist style, layered language, and nationalist preoccupations were overthrown by Russian and French symbolism and postsymbolism, futurism, and German neoromanticism and expressionism as modernism swept through Hebrew verse. Shlonsky's symbolist poetics, subconsciously motivated images and *melos* (tune) abound with intellectual insight. With linguistic virtuosity, he articulated his war-weary generation's despair, exposing urban alienation or

describing, like his fellow pioneers Isaac Lamdan, Rachel, and Uri Zvi Greenberg, the struggle and infatuation with a new landscape.

In Shlonsky's close leftist circle were Natan Alterman and Leah Goldberg. Alterman's maiden collection, *Stars Outside* (1938), nourished more than a generation of poets with its captivating rhythms, carnivalesque imagist world, and oxymoronic metaphors. He later wrote engaged poetry but strictly separated his lyrical and public verse. An unofficial national spokesman, Alterman wrote a column in the labor daily *Davar* in which he took active part in the struggle for independence and for Jewish immigration against British rule. Goldberg refused to write ideological poetry. Well versed in world literature, she often used complex traditional forms to create her own modernist verse.

In his poetics of form, Yonatan Ratosh favored Shlonsky's school, but ideologically he belonged to Vladimir Zeʾev Jabotinsky's nationalist camp. Believing in a shared cultural heritage for the entire Middle East, Ratosh founded the Canaanite movement and created idiosyncratic verse suffused with prebiblical mythology and vocabulary.

Expressionism shone through the poetry of Greenberg, the ultranationalist who prophesied the Holocaust and Jewish sovereignty. Drawing from personal and national landscapes and vocabularies, his Whitman-like verse captures raw feeling and pain, messianic and historical visions.

Dor Ba-Arez

While European Jewry was approaching its demise, the first generation of native Hebrew speakers was coming of age in Eretz Yisrael. Its writers, nicknamed Dor Ba-Arez (A Generation in the Land), made their debut in 1938 with a story by S. Yizhar. They were associated with Zionist socialism and its aspirations, and their realist-positivist works reflect the collective experiences of the new Jew: kibbutz, youth movement, Haganah, and the War of Independence in 1948. The individual character and inner turmoil and the shadow side of society are often neglected or suppressed in short stories and novels by Nathan Shaham, Aharon Meged, Moshe Shamin, and Yigal Mossinsohn. But their readers, awed with heroism and struck by the idea of national redemption, received them warmly. Yizhar's introspective, lyrical prose is distinguished in its depiction of mood and contemplation, its renditions of sensory impressions and landscape, and its narrator's wartime ethics and empathy for the Arabs.

Poets of the time, such as Haim Guri, Ayin Hillel, and Nathan Yonathan, expressed an intimate, physical attachment to their local space. They adopted Alterman's poetics, and the values landed in his poems—loyalty, friendship, and the eternal bond between the dead and the living—helped them integrate the traumas of the 1948 battles. Poems from Guri's *Flowers of Fire* became sacred texts, read alongside Alterman's in memorials for the fallen in war. Somewhat different from this generation's unified voice were Abba Kovner and Amir Gilboa who lamented their destroyed European homes.

With the establishment of the state and the waves of immigrants changing the land's character, some writers wrestled with their disillusion through historical novels with reference to present discontent. Others, like Benyamin Tammuz and David Schachar, nostalgically depicted childhood and bygone days.

Generation of the State poets of the 1950s and 1960s unbridled the nationalist agenda's long hold on Hebrew literature. Free, ironic poetics, influenced by modernist English, American, and German works usurped symbolist poetics and nationalist norms. This group believed that poetry ought to focus on the individual's experience not the collective; it rejected pathos and transcendentalism in favor of the concrete and existential and lowered the diction in favor of everyday discourse and freer form. Natan Zach, the spokesman of this school, attacked Alterman and his disciples and foregrounded previously marginalized poets like Vogel and the American Hebrew imagist Gabriel Preil. With poetic genius and originality, Zach's critically acclaimed free verse realized the new principles. Yet, his friend Yehuda Amichai's poetry was more easily accepted, due in part to Amichai's ability to merge poetic and linguistic traditions. Amichai's antiwar lines such as "I want to die in my bed" expressed this generation's yearnings, while his conceitlike metaphors and whimsical combinations of colloquial and classical Hebrew revolutionized Hebrew verse. David Avidan's linguistic inventiveness was at the forefront of this school. Dan Pagis,

who survived a concentration camp, conveyed a sense of horror in his enigmatic verse. Dahlia Ravikovitch delved into the psyche's depths. Her intense, at times desperate, verse elegantly reintroduced archaisms and myths to the poetry without surrendering spoken language and syntax.

Fiction of the 1950s and 1960s followed poetry's lead in its challenge to Zionist prescriptions. It focused on the individual's psychological world or on universal, existential themes. The confessional, erotic novel *Life as a Fable* (1958) by Pinhas Sadeh reflected the turn inward and away from realism. Early stories by Amos Oz and Avraham B. Yehoshua are metaphorical and allegorical. Amichai's surrealist novel, *Not of This Time, Not of This Place,* uncovers suppressed wishes for an alternative existence. Amalia Kahana-Carmon's works explore life's mysteries and delve into intense, personal analysis reminiscent of Virginia Woolf. Aharon Appelfeld's characters wander through inner and outer nightmares of the Holocaust.

Post–1973 Era

After the Arab–Israel War of 1973, the myth of the new Jew was shattered. Hebrew literature's role as the arena for examining the national state of affairs was partly reinstated: Collective tensions were again realized through individual destinies. Post-1973 literature depicts the Israeli condition in relation to changes in social values, the Arabs, immigration and absorption, Jewish roots, the Diaspora, and the Holocaust. Questions of Jewish and Israeli existence occupy late works of veteran 1948 authors, but also others. The Generation of the State abandoned its abstract, schematic universalism and returned to concrete Israeli life, understanding symbolic layers of its texts. Yehoshua's late family novels, for example, are rich with realistic detail and make original and unpopular political, national, and historical philosophical statements. Oz lowered his diction and substituted fantasy with realistic, semiautobiographical works. The renewed interest in the tangible brought late blooming to Yizhak Ben Ner, Yeshayahu Koren, Yehudit Hendel, Shulamit Hareven, Yaacov Shabtai, and Yehoshua Kenaz. Shabtai painstakingly forges the decline of his pioneer parents' Tel Aviv milieu. His *Past Continuous* follows the protagonist's stream of associations in a style unprecedented in Hebrew literature. Kenaz's

Natan Alterman (1910–1970), an Israeli writer known for his poetry lamenting the themes of life and independence, won the Israel Prize in 1968. Because of his Jewish nationalistic views, some of his early writings were seen as contentious and were censored by the British colonizers of Palestine. Aside from his poetry, he has also written both children's books and journalistic contributions. © Photograph by Moshe Milner. Government Press Office (GPO) of Israel. Reproduced by permission.

patient, almost painful realism depicts social and psychological states with authenticity and linguistic mastery. Longing for a declining Eretz Yisrael translates into a bittersweet return to childhood for Ben Ner, Shabtai, and Meir Shalev. Others, like Kenaz, Ruth Almog, and David Grossman, look back with anger. In many of their works, however, the pained personal story is loaded with social and national meaning.

The many writers active in the 1970s and 1980s belong, then, to a number of literary generations. But despite the supposed centrality of male-authored works wrestling with the Zionist undertaking and all its reverberations, subversive narratives crystallized. Although only a few novels and short stories by women had been published previously, in the 1980s

there was a proliferation of woman authors. Kahana-Carmon argued that mainstream Hebrew literature, an offspring of synagogue culture, indoctrinated Jewish readers to expect a male national spokesman, while intimate matters of the soul were relegated to the women's gallery of the synagogue, or rather the margins of literature. Dvora Baron was the only woman whose prose won critical acclaim before the 1950s. Hendel, Hareven, Naomi Frenkel, Rachel Eytan, Kahana-Carmon, and later Almog broke through in the interim. But the female voice, often undermining conventional conceptions of women and family institutions, conquered a well-deserved place only in the 1980s.

Prose fiction of the late 1980s and early 1990s was characterized by postmodernist pluralism. Opposing styles coexisted: conventional artistic measures; buds of religious or mystical writing; self-referential experiments with genre, language, theme, and typography. Orli Castel-Bloom's stories and novels shatter myth, reality, and text with lean language as she undermines any existence of truth. Yuval Shimoni internalized fiction and the connections between signifier and signified, while Yoel Hoffman's unpaged works in numbered paragraphs, surrounded by empty spaces or miniature pictures, are dotted with German, translated in the margins. He blends Far Eastern with Western philosophy and blurs the boundaries between languages, sexes, the self, and the universe.

Unlike prose, poetry opened itself to a wide prism of possibilities in the 1970s, but its public role was diminished. In the spirit of poststructuralism, this generation of poets had no use for common poetics. Yair Hurvitz wrote romantic symbolist verse, with high diction, and strove to unite opposites. Meir Wieseltier's modernist poetry is biting, almost vulgar, with social, political, and existential emphases. Yona Wallach smashed all borders of psyche and language, theme and form. Her poetry "unravels the unconscious like a fan" and allows words to flow without social, cultural, or literary inhibitions or taboos. Older poets who became central were Zelda and Avoth Yeshurun, whose poetry dismembers reality. Aharon Shabtai created a personal mythology drawn from Greek classics. In her "Data Processing" series, Maya Bejerano drowns chaos in a psychic, rhythmical associative stream.

The war in Lebanon and the Intifada in the late 1980s led to a reawakened interest in political and protest poems. Various contemporary issues—including erotic and homosexual themes, and imagery drawn from the modern media—came to prominence in the 1990s.

LITERATURE: PERSIAN

Since the Iranian Revolution, Persian literature has become more and more relevant to contemporary politics, society, and day-to-day living.

The first nine centuries of imaginative literature in the Persian language constituted an aesthetically rich tradition. Modern Persian literature emerged

at the beginning of the twentieth century and arguably has constituted an equally exciting chapter in the development of the Persian literary tradition. Modern imaginative literature emerged from a history of court patronage, Sufi brotherhoods, and Twelver Shiʿite environs to address a general Iranian audience. Iranian writers began to comprise a new class of intellectuals, independent of crown or turban.

Prose

Prose developed more quickly than verse during the twentieth century, starting with journalistic writing by leaders of the Constitutional Revolution, such as that by Ali Akbar Dehkhoda (1879–1956). In a preface to *Once upon a Time* (1922), the first collection of Persian short stories ever, Mohammad Ali Jamalzadeh argued that literature in straightforward, living prose was a key to education and enlightenment for Iranians. His six stories in that volume introduced realism, local color, and popular language into one genre of Persian writing.

During the 1920s, Nima Yushij (1895–1960) began experimenting with traditional forms and content in Persian poetry. He experimented with individuating the lyric speaker and eschewed didactic intent; his quatrain-sequence poem "Legend" (1922) and other poems in the 1920s heralded the new sensibility.

The 1930s marked the first age of the preeminence of prose in Persian literature, a situation that held true to the end of the century. Sadegh Hedayat (1903–1951) played the chief role in this development. His four collections of short stories from 1930 to 1942 and his enigmatic, surrealistic novella, *The Blind Owl* (1937, 1941), demonstrated how a new Persian literary language could create atmosphere and voice surrealism.

The Short Story and the Novel

The Iranian short story grew to maturity in the 1940s and thereafter. During the period beginning with the 1941 Allied occupation of Iran and the abdication and exile of Reza Shah Pahlavi (r. 1925–1941) and ending with the American-orchestrated coup d'état that brought down the short-lived government of Mohammad Mossadegh (1882–1967) in August 1953, no government censorship interfered with or controlled literary expression. However, beginning in 1885, when Naser al-Din Shah Qajar (r. 1848–1896) established an office of censorship, and throughout most of the twentieth century, Persian literary artists labored under the constraints of censorship. There were exceptions: the first two years of the constitution (1906–1908); the so-called "Twelve Years of Freedom" (1941–1953); and the revolution years (1977–1979). This has meant that, except during the period from 1941 to 1953 period, Iranian prose fiction, lyric verse, and drama have had to resort to indirection and symbolism when dealing critically with the Iranian present.

During the 1940s, Sadeq Chubak (1916–1995), Ebrahim Golestan (1922–), Jalal Al-e Ahmad (1923–1969), and others joined Hedayat and Bozorg Alavi (1904–), who had published his first collection of short stories in 1934, providing Iranian audiences with fiction written in various styles, including realist, naturalist, and social realist, paving the way for later generations of short-story writers who contributed to magazines and collections of stories to the end of the century. Chief among them was the prolific Gholamhossein Saʿedi (1935–1985).

During the 1950s the Iranian novel likewise gained a foothold and led to mature works in the 1960s and after. Alavi's *Her Eyes* (1952), Beh'azin's *The Serf's Daughter* (1952), and Al-e Ahmad's *The School Principal* (1958) dealt critically with the Reza Shah Pahlavi and early Mohammad Reza Pahlavi eras.

From the 1960s on, Iranian novels became central to Iranian literary life. Chubak published *Tangsir* (1963) and *The Patient Stone* (1966). Houshang Golshiri (1937–2000) published *Prince Ehtejab* (1969), with a stream-of-consciousness narration and a condemnation of monarchy and aristocracy, which some critics think is Iran's best novel. In 1969, Simin Daneshvar (1921–), who in 1948 became the first Iranian woman to publish a collection of short stories with the *The Extinguished Fire,* published *Savushun* (The mourners of Siyavosh), which became Iran's best-selling novel of all time, reportedly selling more than 150,000 copies by the 1990s.

Poetry

The 1940s and 1950s also witnessed the blossoming of new or modernist Persian verse. Nima began

publishing verse again in 1938, and his experiments and achievements with untraditional verse forms attracted the attention of Ahmad Shamlu (1925–), Mehdi Akhavan-Saless (1928–1990), and other major figures in the next generation of modernist poets. In response, traditionalists maintained their devotion to classical forms, diction, and didacticism, but used them to write about contemporary issues. Conservative readers still outnumbered those receptive to modernist verse; they pointed to the achievements of traditional poets Mohammad Taqi Bahar (1886–1955) and Parvin E'tesami (1907–1941), or accepted the moderate modernism of Faridun Tavallali (1919–1985) and others who maintained quatrain sequence forms and traditional imagery and figures of speech while hinting at modern issues. By the 1970s, however, the traditionalists were in retreat or in the minority, although the debate over traditionalism and change in Persian poetry remains alive in Iranian literary circles.

In the 1950s and 1960s, modernist Persian poetry achieved great things. Shamlu approached free verse in forceful works supporting his causes. Akhavan-Saless breathed fresh air into traditional meters, using Iranian myths and history as texture for his poetry. From the mid-1950s to the end of 1966, Forugh Farrokhzad (c. 1934–1967) added a dimension and voice to modern Persian poetry that Persian literature previously had lacked: a female speaker and female concerns. Her verse, dealing with a lyric speaker's growth and concerns as an individual, as a poet, and as a woman, represents a culmination of Nima's modernism. Another trend appears in the poetry of Sohrab Sepehri (1928–1980), that of the nature poet with, in his case, neo-Sufic or pantheistic implications.

By the mid-1970s, modernist Persian poetry had come to a standstill. Although a new generation of poets had begun to publish and modernist poetry was produced in abundance into the 2000s, no new poets joined the highest ranks or fully replaced the earlier poets. Nader Naderpur (1929–), a popular poet from the mid-1950s and the most prominent moderate modernist, crossed the moderate line in the 1980s after opting for self-exile in Paris and then Los Angeles. Voicing the alienation and anger of Iranians abroad who opposed the Islamic Republic, Naderpur's characterizations of life in Iran of the 1980s and 1990s, and of the Iranian exile's lack of integration in the life of the West, strike familiar chords for many Iranians. Another poet in exile, Esmaʿil Khoʾi (1938–), who had been an almost first-rank modernist before the revolution, seemed to gain poetic timbre through his suffering in exile in London.

Censorship and Writers Abroad

Circumstances and censorship during the Pahlavi era muted or silenced literary voices. During the first two decades of the Islamic Republic, establishment pressure and censorship seemed designed merely to coerce writers to avoid sexual imagery and direct questioning of Islam but not to silence them. In consequence, and also because of a decrease in other entertainment after the revolution and an increase in the reading public due to a mass literacy campaign in the early 1980s, Persian literary activity, especially in prose fiction, became a profession for self-employed writers for the first time in Iranian history. Novelists, short-story writers, and some essayists became able to support themselves through writing as of the 1980s. Moreover, Iranian novels began to compete for readership for the first time with Western novels in translation.

Among landmark works in Iranian prose fiction after the revolution are: Esmaʿil Fasih's *Sorayya in a Coma* (1984), Shahnush Parsipur's *Tuba and the Meaning of Night* (1989) and *Women without Men* (1990), and Reza Baraheni's *Song of the Slain* (1983) and *Secrets of My Land* (1987). With their negative depictions of Iranian SAVAK (secret police) and American intelligence and military figures, Baraheni's fictions signal a post-Pahlavi literary trend denouncing life under the U.S.-supported Pahlavi regime. Fiction that presented similarly negative depictions of life under the Islamic Republic, such as Golshiri's *King of the Benighted* (1990), were banned in Iran, although in the case of Golshiri, manuscripts of his explicitly critical novels and short stories were smuggled out of the country and published in Europe and the United States.

One novel stands by itself: Mahmoud Dowlatabadi's *Klidar* (1983), a tragic saga of mid-twentieth century tribal and village life in 3,700 pages, which brought its author recognition as the leading writer of fiction in the Islamic Republic period. Just as Ali Mohammad Afghani's *Ahu Khanom's Husband* (1961)

earlier had encouraged Iranians to think that the Persian language had the resources to serve as the vehicle for any sort or length of prose fiction, Dowlatabadi's *Klidar*—the title refers to a Kurdish village area in Khorasan—convinced readers of the richness of the everyday rural Iranian experience and of descriptive Persian prose, even though Dowlatabadi attempts nothing experimental in his story.

Of all pre-revolution genres, Iranian drama suffered most in the 1980s. Although it was still a new medium in the late Pahlavi period, or a medium to which few Iranians had direct exposure, it had grown by leaps and bounds, with the prolific Saʿedi the best-known playwright. Stage dramas been had turned into television dramas and became screen-plays for the New Wave cinema of the 1970s, as had several important short stories and novels. By the mid-1980s Iranian cinema was thriving again, but without the plots, themes, and texture that romantic love stories and women in anything other than traditional Islamic garb would provide. Iranian stage drama began to regain status in the 1990s, with the government supporting theaters in provincial cities. Persian drama also flourished in the West, where local Iranian communities in major cities enthusiastically supported touring companies. Prominent among them was that of Parviz Sayyad in Los Angeles. Through the 1980s, Sayyad staged plays featuring his earlier folk character Samad, who first went to the Iran–Iraq war and then came back from the front. Another play presented an imaginary trial stemming from the 1978 torching of Abadan's Rex Cinema, which killed hundreds of patrons who were locked inside. Sayyad's one-man show in the early 1990s, presenting himself and Samad in witty conversation, one on video and the other live, provided sophisticated, culture-specific entertainment and introspection into the nature of modern Iranian artistic expression.

The Persian literary essay survived the revolution, both at home and abroad. Originally Western in inspiration, it is socially and politically involved. It came of age in the first four decades of the twentieth century. Writers exhibited signature styles and concerns that were a far cry from those at the beginning of the century, when a florid, Arabic-laden style and a rhetorical eye to the past prevailed. Shahrokh Meskoob's conversational style in *Iranian Nationality and the Persian Language* (1981) and Al-e Ahmad's brusque and sometimes angry voice in *Weststruckness* (1962, 1964), *Lost in the Crowd* (1966), and *A Stone on a Grave* (1964, not published until 1981) are more recent examples.

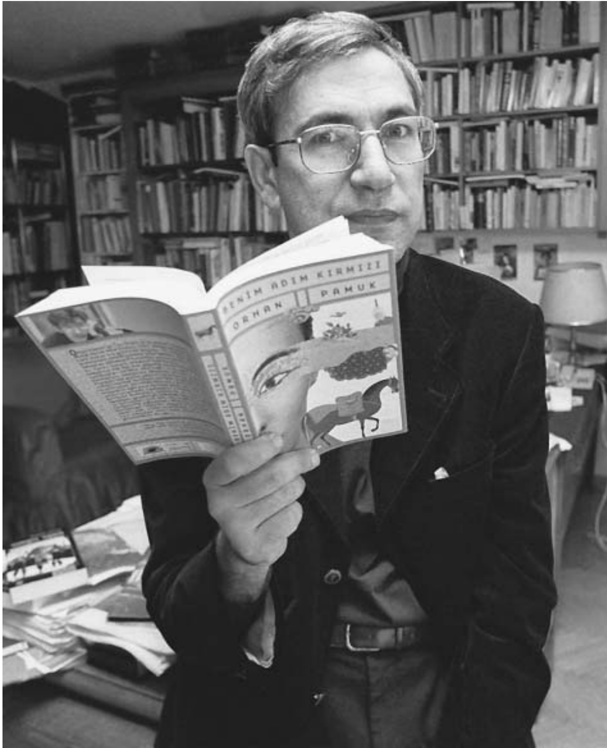
Literature: Turkish

National literature that began during the Tanzimat period of the Ottoman Empire.

Halide Edip Adivar, Nazim Hikmet, Sait Faik Abasiyanik, Fazil Hüsnü Dağlarca, Nüsret Aziz Nesin, Yaşar Kemal, and, more recently, Orhan Pamuk are writers whose works are known outside of Turkey.



Orhan Pamuk, one of Turkey's most famous novelists, at his home in Istanbul, December 1998. This photograph was taken just days before Pamuk rejected the title of "State Artist," one of Turkey's most coveted prizes, in protest against the country's restrictive policies on freedom of the press. © AFP/CORBIS. REPRODUCED BY PERMISSION.

As more translations appear—the latest is a postmodernist novel titled *Gece* (Night), by Bilge Karasu—an increasing number of works are being recognized as having universal appeal. The literature represented evolved in the second half of the nineteenth century with a group of writers who were members of the bureaucratic intelligentsia. Committed to the Tanzimat reforms, they sought to bring change to literature as well, making it a vehicle for influencing sociopolitical thinking and culture in general. At its inception, therefore, modern Turkish literature has set both didactic and aesthetic goals: to be an art form and source of enjoyment, but also to be engaged.

The pioneers of modernism—İbrahim Şinasi (1826–1871), Namik Kemal (1840–1888), and Ziya Paşa (1825–1880)—were familiar with European literatures and had lived in Europe. They witnessed the central role literature played there, a role lacking in Turkey, where two distinct literary traditions (elitist and popular) split society. The first, following Arab-Persian classical Islamic tradition and seeking artistic perfection rather than social reality, gave priority to poetry *(divan şiiri);* was rigid in verse form, meter, and rhyme patterns, highly sophisticated in rhetoric and imagery; and employed language saturated with Arabic and Persian loanwords largely unintelligible to the masses. The second was based on Turkish folk traditions of form, content, and style in both poetry and prose, and linked the Turks to their Central Asian heritage. In general it was denigrated by the small, educated class. Religiously inspired works, many of them mystic, were important in both traditions.

In the 1860s the Şinasi-Namik Kemal-Ziya Paşa school took the first steps toward modernity. Through translation and adaptation (primarily from French), then original composition, they introduced Western-style poetry and fiction, and wrote the first Turkish plays designed for the modern stage. They also turned to journalism—the *Tasvir-i Efkar* (Description of ideas) was the principal forum for introducing their works—and accustomed readers to editorials, essays, and literary criticism propagating such concepts as fatherland, patriotism, nation, justice, freedom, and constitutional government. They did not completely reject the past, but gave old poetic forms new elements of content and style, using language more comprehensible to the expanding, middle-class reading public. This movement surged again under the republic, resulting in the romanization of the alphabet and measures to produce an *öz türkçe* (pure Turkish), both of which had a great effect on literature.

These writers lauded proreform statesmen and satirized traditionalists. They targeted social customs like arranged marriages and moralized against the harem system, marital infidelity, prostitution, and inhuman treatment of slaves. Namik Kemal's play *Vatan yahut Silistre* (Fatherland or Silistria, 1873) caused antiregime demonstrations, and he spent many years in exile as a result. He and his colleagues put reform before creative art, and in articles and prefaces to their works stressed the didactic and social role of literature. Abdülhak Hamit Tarhan (1852–1939) and Recaizade Mahmud Ekrem (1847–1914), in contrast, showed increasing concern with aesthetics. Ekrem, a teacher, published his lectures,

which displayed his knowledge of Western literature and concern for liberating Ottoman poetic style, and was led into a literary battle with Muallim Naci, represented (somewhat unjustly) as the prime defender of the old style. Ekrem also influenced the literary school that flourished in the 1890s, the Edebiyat-i Cedide (New Literature) or Servet-i Fünun (Wealth of Sciences), the latter the title of the journal serving as its main platform. Its leading poets, Tevfik Fikret (1867–1916) and Cenap Sehabettin (1870–1934), spoke lyrically of love and nature in a Turkish inspired by the language of the *divan* poets. Fikret also wrote very provocative antiregime poems.

In fiction, building on the pioneer efforts of Ahmet (1844–1912), the leading prose writer, Halit Ziya Uşhakliğil (1866–1945), brought to his novels a more developed literary realism and psychological analysis. His two collections of prose poems show an inclination for artistry that set a trend followed by his contemporary Mehmet Rauf (1875–1931), and still finds the occasional follower today.

Although the 1908 constitutional period brought hope to writers after the repressive control of Abdülhamit II, further Ottoman decline and Europe's antagonism engendered permission and anti-Western outbursts among writers of the Fecr-i Ati (Dawn of the Future) group that formed in 1909. Meanwhile, a current of Nationalism gained strength, poets such as Mehmet Emin Yurdakul (1869–1944) proclaiming pride in being a Turk and turning to the folk tradition for verse form, meter, and language. The presence in the empire of émigré Turks from Russia fanned consciousness of belonging to a wider "Turanian" nation, and groups of scholars and writers, including Yusuf Akçuroğlu (1876–1935), Mehmet Fuat Köprülü (1890–1966), and Ziya Gökalp (1876–1924), promoted study of the early history and culture of the Turks. The most important group was Genç Kalemler (Young Pens), formed in 1910, which stressed language reform. Despite strong romanticism, the short stories of its leader, Ömer Seyfettin, represent a breakthrough in the strongest in modern Turkish literature.

World War I and the War of Independence, culminating in the demise of the Ottoman Empire and the founding of the Turkish Republic, presented writers with a fresh panorama of people, places, and events to observe and depict, even greater possibilities for artistic choice through emphasis on Westernization, and an ever-increasing array of readers. Novelists of the older generation, such as Halide Edip Adivar (1884–1964), the first important activist woman writer; Yakup Kadri Karaosmanoğlu (1889–1974) and Reşat Nuri Güntekin (1889–1956), represent an important advance in both narrative and character analysis, their works depicting the weaknesses of late Ottoman society, the inner conflicts of its people, the surge of patriotism during the War of Independence, and the new roles of women.

In poetry, three prominent poets adhered to the classical meter and verse form: Yahya Kemal Beyath (1884–1958), a neoclassicist who expressed his nationalism by nostalgically recalling Ottoman splendors; Ahmet Haşim (1885–1933), a symbolist steadfast in an art for art's sake approach, painting dreamlike vignettes of nature in its most tranquil moments; and Mehmet Akif Ersoy (1873–1936), who, although also choosing the classical traditions, wrote in a language very close to prose and spoken Turkish.

Of the many ideologies to which the Turks were exposed from the early days of the Republic, communism captivated Nazim Hikmet (1902–1963), the major poet of the century. Having been imprisoned for many years, he fled Turkey in 1951 and spent his remaining years behind the Iron Curtain. He fashioned Turkish free verse, and his works (prison poetry, love lyrics, social or political declamation, long narrative verse) display a striking fluidity of language and a new depth of human understanding. Only Fazil Hüsnü Dağlarca (b. 1914), with the breadth of his aesthetic view and intellectual delving into the metaphysical, approaches his stature.

Of prime importance has been the development of realist village literature. Urban-born nineteenth-century and early-twentieth-century writers seldom focused on Anatolia and its rural population. With the center of government moved to Anatolia, and especially after the introduction of a two-party system, the villager became a focus of attention for fiction writers, who now included those born in villages or closely familar with village life. Yaşar Kemal writes of the plight of the peasants in the Taurus Mountains and Çukurova Plain. Other writers have

followed the villagers in their migration to country towns or big cities. In recent years an increasing number of works have drawn attention to the problems facing Turks who have migrated to Germany and other European countries since the late 1960s. Among other writers who depict the "little man" with deep understanding are Nüsret Aziz Nesin (b. 1915) and Sait Faik Abasiyanik, who has over 100 short stories set in Istanbul, nearly half of them on the island of Burgaz, revealing the life of the fisherfolk on the Sea of Marmara.

Poets also turned to the "common man." In 1941, Ornan Veli (1914–1950), Oktay Rifat (1914–1988), and Melih Cevdet Anday (b. 1915) published a collection of poems, *Garip* (Strange), calling for poetic realism untrammeled by rules and dictates, unadorned and in colloquial speech, concerned with and attempting to communicate with the man in the street. In the mid-1950s Anday joined the Second New Movement, a group including Ilhan Berk (b. 1916), Cemal Süreya (1931–1990), and Edip Cansever (1928–1986), who turned to obscurantism, writing poetry that was abstract and abtruse, in some cases almost totally incomprehensible.

Women were rarely mentioned among the writers of the Ottoman Empire before the nineteenth century. Their number increased after the Tanzimat, when a new generation of well-educated women emerged who understood French and were familiar with the works of both the French Romantics and the new Ottoman writers. Best known is Fatma Aliye Hanim (1862–1936), elder daughter of Ahmed Cevdet Paşa. The first Turkish woman novelist, her publications also included translations of French, articles, works on history, and a newspaper for women. Halide Edip Adivar served as a model for women from the early days of the Republic, both as a writer and as an activist. Women have turned to fiction rather than poetry. Güiten Akin (b. 1933), for example, a poet who has won many awards, is the only women represented in *The Penguin Book of Turkish Verse.* In contrast, the surge of enthusiasm for the short story in the 1970s, the Füruzan phenomenon, is credited to the stories published by Füruzan (Selçuk; b. 1935), a young writer of village background who deals especially with the exploitation of villagers in the cities.

In the 1990s women continue to participate fully on the Turkish literary scene. Both male and female writers continue to explore the wealth of their heritage and new avenues of expression.

LIVNAT, LIMOR

[1950–]

Israeli politician and government minister.

Born in Haifa, and after graduating from high school, Limor Livnat served in the Israeli army's 7th Armoured Brigade as an education and welfare sergeant. Later she studied Hebrew literature at Tel Aviv University. During her student days she became active in Likud student politics and was also involved in women's rights as a member of the Women's Lobby. Her views accorded with the hawkish side of Likud. Livnat vehemently opposed the Oslo Peace Process and campaigned for the rights of Jews to live anywhere in the State of Israel. She also consistently opposed the establishment of a Palestinian state and later the Road Map, a three-part phased peace plan

presented to Israel and the Palestinian Authority in March 2003 by the Quartet (United States, United Nations, European Union, and Russia) that calls for a two-state solution, or a Palestinian state alongside Israel.

First elected to the Knesset in 1992, she attracted attention by diligence, quick grasp of issues, and close attention to detail. In the 1996 elections she headed the Likud's Information Office and actively supported the candidacy of Benjamin Netanyahu. He rewarded her with the post of communications minister in his cabinet (1996–1999). Livnat was responsible for the growing communications market in Israel, supervising the licensing of cable television channels, and administering the Broadcasting Law. Between 1999 and 2001 she served on the Knesset's Education and Culture Committee and the Committee for the Advancement of Women. In 2001 Prime Minister Ariel Sharon appointed her as minister of education, and reappointed her two years later. In this post she paid special attention to educational programs instilling nationalist values and Jewish themes, arguing that Israeli school children were not sufficiently exposed to Jewish history and heritage.

LLOYD GEORGE, DAVID

[1863–1945]

British statesman; prime minister of Great Britain during World War I.

Of Welsh ancestry, David Lloyd George, first earl of Dwyfor, was born in Manchester, England, and became a solicitor. He was a Liberal member of parliament from 1890, and during World War I served as minister of munitions (1915–1916) and secretary of state for war (1916). In December 1916 he replaced H. H. Asquith as prime minister. As head of a coalition government from 1916 to 1922, he directed Britain's war policies to victory in 1918 and played a leading role in the peace settlements.

Lloyd George's governments made a number of fateful decisions regarding the Middle East. The most momentous was the Balfour Declaration (November 1917), which promised British support for a Jewish national home in Palestine. Lloyd George strongly supported Zionism; he later said that his intention had been to lay the foundation for a future Jewish state. In December 1917 British troops entered Jerusalem—this was Lloyd George's "Christmas present to the British nation." His government issued a number of statements designed to reassure Arab nationalists, France, and others apprehensive about British intentions in Palestine. But as he put it: "We shall be there by conquest and shall remain, we being of no particular faith and the only Power fit to rule Mohammedans, Jews, Roman Catholics, and all religions."

At the 1919 Paris peace conference he secured agreement on a partition of the former Ottoman territories of the central Middle East between Britain and France. France was to be granted mandates over Syria and Lebanon, Britain over Mesopotamia (henceforth known as Iraq) and Palestine (subsequently expanded to include Transjordan). In Palestine Lloyd George appointed Sir Herbert Samuel as the first high commissioner, charged with implementing the Balfour Declaration. He also approved the decision by Samuel, supported by the colonial secretary, Winston Churchill, to annex Transjordan to Palestine—without, however, extending the Jewish national home east of the Jordan. Following the French ouster in July 1920 of the amir Faisal from Damascus, where his supporters had declared him king of Syria, the British arranged for Faisal's accession to the throne of Iraq.

Lloyd George's downfall came as a result of his ill-judged support for Greece in its attempt to conquer western Anatolia. The military defeat of the Greeks by Mustafa Kemal (later Atatürk) doomed this effort. The Chanak crisis of October 1922,

when British occupation forces in Constantinople were threatened by advancing Turkish troops, led the Conservative Party, on whom Lloyd George depended for his majority in the House of Commons, to withdraw their support. In the ensuing general election, he suffered a humiliating defeat. Lloyd George never held office again.

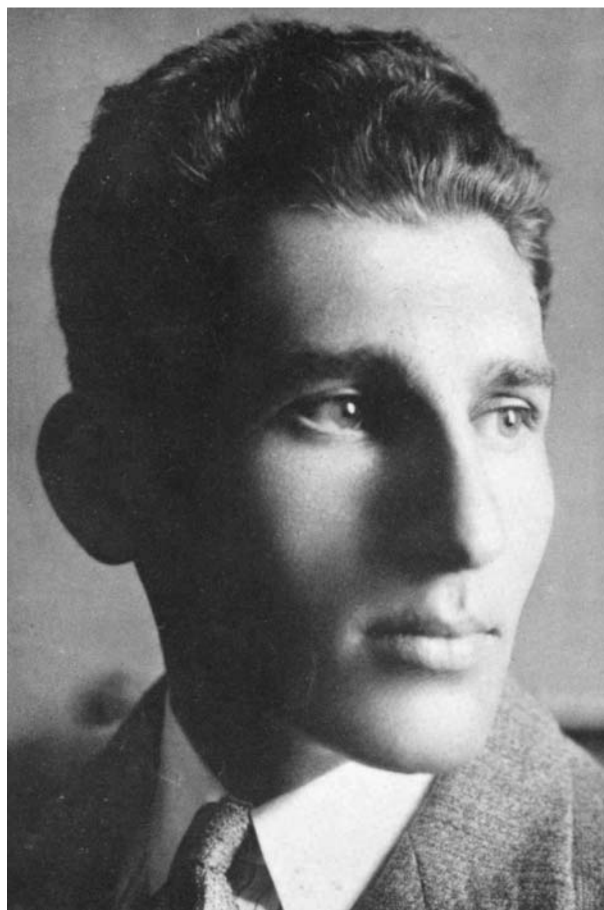
BERNARD WASSERSTEIN

LOHAMEI HERUT YISRAEL

Zionist underground militia whose name translates as "fighters for the freedom of Israel," abbreviated as LEHI.

Lohamei Herut Yisrael, or LEHI, also known as the Stern Gang, was founded on 26 June 1940 by Abraham (Yaʿir) Stern in a split with the Irgun Zvaʾi Leʾumi (IZL) over ideology and tactics. It would always remain small, ranging from 200 to 800 members. Stern and his followers viewed Britain as the foremost enemy of the Jewish people and of Zionism and rejected the Irgun's declared truce with Britain for the duration of the Second World War. LEHI's ideology was an evolving blend of fascist, Bolshevik, and messianic nationalist elements, which led the organization in its early years to see Nazi Germany and Fascist Italy, and later the Soviet Union, as potential allies in the "anti-imperialist" armed struggle against Britain.

In 1941 the group tried to reach an agreement with Nazi Germany in the hope of ousting Britain from Palestine. From 1940 to 1944, while the other Zionist underground groups, including the Irgun, were cooperating with Britain in the war effort, LEHI carried out an anti-British campaign of propaganda and terror attacks, setting off bombs, killing soldiers and police officers, and robbing banks to fund their activities. On 9 January 1942, LEHI members accidentally killed two Jewish bystanders in an attempted robbery of a Histadrut bank in Tel Aviv. The Zionist leadership and the majority in the Yishuv opposed LEHI's methods; LEHI was widely regarded by both Jews and the British as a terrorist underground and was often ostracized and persecuted as such. In the early months of 1942, members of Haganah intelligence and the Palmah began kidnapping LEHI fighters, a policy that would continue on and off until the group's final demise in 1948.



Abraham Stern (1907–1942), a native of Poland, emigrated to Palestine in 1925, where he later joined the militant organization Irgun to fight for Jewish independence. He saw the British presence in Palestine to be more of a threat to Jewish nationalism than the Arabs. COURTESY OF THE JABOSTINSKY INSTITUTE IN ISRAEL.

LEHI entered a crisis period when Stern was killed by members of the British Criminal Investigation Division (CID) on 12 February 1942. By 1943 the organization had been reconstructed under the leadership of Natan Yellin-Mor, Israel Eldad, and Yitzhak Shamir. Ideologically, LEHI moved to the left after Stern's death, openly embracing the Soviet Union and class struggle in addition to anti-imperialism. It would always remain marginal ideologically but at various times would cooperate organizationally with the other underground groups. When the Irgun began its armed revolt against Britain in February 1944, LEHI joined in. In coordination with the Irgun, LEHI attacked or bombed British military and administrative sites in Palestine, including police and radio stations and CID headquarters.

On 6 November 1944, LEHI members assassinated Walter Edward Guinness, Lord Moyne, the senior British minister in Cairo. The assassination led the Yishuv leadership to initiate operations known as "the Saison" to liquidate the dissident underground organizations. In 1945 and 1946, LEHI was an active member of the Hebrew Resistance Movement, an ad hoc framework that coordinated anti-British operations among all the Jewish undergrounds. In April 1948 LEHI participated with the Irgun in the attack on the Arab village Dayr Yasin. On 17 September 1948 LEHI members assassinated the United Nations mediator, Count Folke Bernadotte, in Jerusalem. Following this incident David Ben-Gurion declared the organization illegal and it was forcibly dismantled. Its members established a political party, the Fighters Party, which won only one seat (and 1.22 percent of the vote) in the elections for the first Knesset in 1949.

LEHI members became divided along ideological lines, with Yellin-Mor taking a strong leftist position advocating class struggle, a pro-Soviet foreign policy, and support for proletarian movements in Arab countries. Eldad led the right-wing faction that embraced positions in line with Revisionist maximalism, while Shamir took a less ideological and more pragmatic stance. The split ultimately proved irreconcilable, and the Fighters Party did not survive to the second Knesset elections in 1951. Some members drifted to MAPAM or the Israeli Communist Party, while others joined Menachem Begin's Herut.

LOI CADRE

French legislative initiative (1957–1958) during Algerian war of independence (1954–1962).

Premier Maurice Bourgès-Maunoury staked his government's political life on the Loi Cadre, which attempted to resolve the contradiction of acknowledging Algeria's "personality" while keeping it integral to France. The French government charged Resident Minister Robert Lacoste with the task of drafting the document for administrative reform. Its provisions divided Algeria into eight to ten autonomous territories linked by a federal organ. The single electoral college increased Muslim political participation but also recognized ethnic interests (e.g., the Kabylia). The Loi Cadre aimed to sap the strength of Algerian nationalism. The *pieds-noirs* (European settlers in Algeria) viewed it suspiciously. The National Assembly repudiated the reform and Bourgès-Maunoury's ministry. Though a redrafted Loi Cadre eventually passed during Félix Gaillard's ministry, the extension of *pied-noir* power in the planned territorial assemblies impaired its reforming intent. When Charles de Gaulle came to power, his government discarded this initiative, though it supported the concept of a single electoral college before eventually pursuing an agonizing decolonization.

PHILLIP C. NAYLOR

LONDON CONFERENCE (1956)

Two conferences convened in August and September 1956 in London to handle the crisis triggered by President Nasser's nationalization of the Suez Canal Company.

In response to Egypt's nationalization of the Suez Canal Company in late July 1956, the United States, Britain, and France convened two conferences to which certain maritime states were invited to consider the proper reaction to the crisis. The first London Conference met from 18 to 23 August 1956. The invitation was sent to all states signatory to the 1888 Constantinople Convention, which regulated the administration and supervision of the Suez Canal, plus states that shipped considerable cargo through the Canal. Egypt declined to attend but the Soviet Union and the representative of India tried to represent the views and the rights of Egypt. During the conference Selwyn Lloyd, Britain's minister of foreign affairs, managed to induce eighteen states, including the United States, to sign a formal declaration demanding the establishment of a new international agency, representing the interests of the Canal users, to take over the administration of the Canal affairs.

The expected failure of a delegation, headed by Australian prime minister Robert Menzies, to convince Nasser to accept the London Conference decisions and the growing signs of an imminent Franco-British military operation moved John Foster Dulles, the U.S. secretary of state, to call for a second conference, which convened in London on 19 September. The eighteen states that had signed the first declaration adopted Dulles's proposal to establish a Suez Canal Users Association (SCUA), which was mandated to deal with matters of finance and administration of the Canal on a practical level and thus enforce the users' rights. But, as Anthony Eden later said, the new association was "stillborn." The new Egyptian management continued to operate the Canal successfully, leaving the SCUA unable to enforce its own agenda.

There was nothing illegal in Egypt's nationalization of the Suez Canal, but the British and French governments considered it a severe blow to their standing in the Middle East and North Africa. The London conferences were part of a larger campaign to mobilize international pressure to make Nasser revoke his action. As it later became clear, these two Western powers were less interested in annulment of the nationalization as in a clear rebuff to the Egyptian president and perhaps his ouster as leader of both Egypt and the Arab world. Indeed, even while they were drumming up international diplomatic support, their chiefs of staff were busy planning and preparing a military attack on Egypt, code-named "Musketeer." To a large degree the London conferences were little more than an attempt to go through the motions in order to prove that only a military response could solve the problem. Following a last-minute failed attempt by UN secretary-general Dag Hammarskjöld to mediate a compromise, the British and French, in collusion with Israel, decided to opt for a military solution, leading to the Suez war (Israel's "Sinai Campaign") in late October 1956.

MORDECHAI BAR-ON

LONDON CONVENTION

International agreement to keep warships out of the Bosporus.

On 15 July 1840, British Foreign Secretary Lord Palmerston obtained the adherence of the Ottoman Empire, Prussia, Russia, and Austria to a treaty redefining the international status of the Straits of the Bosporus and the Dardanelles. Under its terms, no foreign warships, except small vessels on diplomatic missions, were to pass the straits while the Ottoman Empire was at peace.

In a separate protocol, a graduated series of penalties was laid out if Muhammad Ali, viceroy of Egypt, and his son, Ibrahim Pasha, refused to retreat from Syria. Consequently, Britain's navy bombarded Beirut and Acre, landing troops. This threat to cut off Egyptian supply lines forced the Egyptians to retreat south of the Sinai. On 13 July 1841, the 1840 London Convention was reaffirmed, this time with French adherence. As France had been Muhammad Ali's patron, this second London Convention was a clear defeat for France. Muhammad Ali lost everything for which he had gambled, retaining only the hereditary viceroyship of Egypt, south of the Sinai desert.

ARNOLD BLUMBERG

LONDON (ROUNDTABLE) CONFERENCE (1939)

Conference convened at St. James's Palace (London) to consider the future of Palestine.

In late 1938, as fears of a European war loomed, Britain sought ways of pacifying growing Arab displeasure over her pro-Zionist policy in Palestine. On 7 November 1938 the British Cabinet proposed convening a conference that would bring together Jews and Arabs in "separate parallel discussions between His Majesty's Government and the Arabs, and His Majesty's Government and the Jews."

The Palestinian position heading into the conference called for the establishment of an Arab national government in Palestine; the cessation of all Jewish immigration; the prohibition of further land sales to Jews; and the granting of minority rights to Jews. Representatives of several Arab states met in Cairo in January 1939 and agreed on a joint position. During the days leading up to the opening session, Jewish Agency Chairman David Ben-Gurion advocated the following four guidelines for the Zionist negotiation strategy: no concessions on immigration; no Arab state, but a regime based on parity in Palestine; cantonization might be acceptable if the Jewish area was not less than that recommended by the Peel Report and if control over immigration were in Jewish hands; and a Jewish state would be willing to belong to a future Middle Eastern confederation.

The conference opened at St. James's Palace on 7 February 1939. Representatives of Egypt, Iraq, Saudi Arabia, Transjordan, Yemen, and the Palestinians (led by Jamal al-Husayni, George Antonius, and Musa al-Alami) met with British officials, who held parallel discussions with members of the Jewish delegation. Colonial Secretary Malcolm MacDonald served as host and go-between. Because of the Arab refusal to meet directly with the Jewish delegation, the British managed to convene only two informal meetings between several representatives from the Arab states and Jewish delegates.

During the lengthy discussions, the Arabs presented their position as formulated in Cairo, demanding an end to the Mandate and insisting on the creation of an independent Arab state in Palestine. They also argued that the Husayn–McMahon Correspondence (1915–1916), which they interpreted as including Palestine within the areas of promised Arab independence, took precedence over the 1917 Balfour Declaration, which committed Britain to promote a Jewish national home in Palestine. The Jews, for their part, would not budge from their insistence on large-scale immigration into Palestine, becoming even more adamant in light of Adolf Hitler's escalating anti-Jewish policies and the recent annexation of Austria.

Faced with no prospect of mutual agreement after some three dozen sessions with the parties, on 15 March 1939 Malcolm MacDonald outlined Britain's proposals: After ten years, a Palestinian state would be created, possibly a federation with Arab and Jewish cantons. Since the Arabs would have a majority in the assembly, legal guarantees would be included for the Jewish minority and its national home. During the coming five years, 75,000 Jewish immigrants (of whom 25,000 would be refugees) would be admitted into Palestine. Subsequent immigration would depend on Arab consent.

The conference officially ended on 17 March. Chaim Weizmann informed MacDonald that the Zionists were unable to accept Britain's terms. British

officials in Cairo resumed contact with representatives of the Arab states, leading to some modifications of MacDonald's provisions in an effort to gain fuller Arab acceptance of the proposed new British policy. Finally, on 17 May 1939, Britain published the MacDonald White Paper, the end result of the London conference's failure to reach an Arab-Zionist agreement. Its terms—admittedly "disappointing to both Jews and Arabs"—would govern Britain's official Palestine policy for the coming war years, although little was implemented on the ground, with both Arab and Zionist leaders continuing their efforts to obtain changes favorable to their respective causes.

LONDON, TREATY OF (1871)

Pact restoring Russian access to the Black Sea.

Articles XI–XIII of the 1856 Peace of Paris restricted Russian access to the Turkish Straits and forced a demilitarization of the Black Sea. Czar Alexander II (1855–1881) never accepted this defeat of Russian interests, and in 1870, he finally found an opportunity to amend the galling Black Sea clauses. With the French faring badly in the Franco-Prussian War, in October 1870 Alexander instructed his foreign minister, Prince Aleksandr Gorchakov, to announce that Russia no longer wished to abide by Articles XI–XIII. The French agreed to an international conference to discuss the proposed Russian revision. The conference opened in London in January 1871, and an agreement was reached by March. The Treaty of London annulled the Black Sea naval rearmament. However, in compensation, the sultan of the Ottoman Empire was given greater latitude to close the straits in times of war.

LONDON, TREATY OF (1913)

Pact securing Italian claims in the Middle East.

Signed on 26 April, this treaty paved the way for Italy's entry into World War I on the side of the Entente (France and Britain). In return for its support, Italy was promised territory in the Balkans and Anatolia as well as the right to annex Libya, which it had occupied in 1914, and the Dodecanese Islands, part of Greece and formerly, when taken by Italy in 1912, part of the Ottoman Empire.

LOTZ, WOLFGANG

[1921–1993]

Israeli espionage agent in Egypt, 1960–1965; dubbed "the champagne spy" for his extravagance.

Born in Mannheim, Germany, Wolfgang Lotz moved with his mother to Palestine after Hitler's

rise to power, changed his name to Ze'ev Gur-Aryeh, and fought in the Haganah and Israel Defense Forces (IDF). Sent to infiltrate Egypt's military and political circles posing as an ex-Nazi and race-horse breeder, Lotz befriended high-echelon officers and transmitted invaluable information, until caught in 1965 and sentenced to life in prison. Freed in a POW exchange after the Arab–Israel War (1967), Lotz eventually tired of civilian life in Israel and moved to West Germany, then to California.

ZEV MAGHEN

LUKE, HARRY

[1884–1969]

British civil servant in the Middle East.

Harry Luke was British chief commissioner in Georgia, Armenia, and Azerbaijan, then assistant governor of Jerusalem (1920–1924). He served on the commission investigating the Jaffa Riots in 1921 and was chief secretary in Palestine (1928–1930). In August 1929, as acting high commissioner, Luke permitted activist Jewish youth to march to the Western Wall. Jews were attacked, and riots broke out a few days later. Unable to restore order, Luke asked for reinforcements from Jordan and Egypt and turned public security over to the Royal Air Force. He served as lieutenant governor of Malta (1930–1938), then as governor of Fiji and high commissioner of the western Pacific (1938–1942). Among his published books are *A Handbook of Palestine* (1922) and *The Handbook of Palestine and Trans-Jordan* (1934).

JENAB TUTUNJI

LURS

Luri-speaking people of western Iran.

Lurs are found primarily in three provinces in and adjoining the Zagros Mountains of western Iran: Luristan in the west, Chahar Mahall Bakhtiari in the center, and Boir Ahmad/Kuhgiluyeh in the south. Lurs also comprise a majority of the population of Ilam, to the west of Luristan, and many Lurs live in northern Khuzistan province. Lurs speak Luri, a nonwritten language closely related to Persian. During the nineteenth century, most Lurs were organized as tribal groups and practiced pastoral nomadism, although there were some Luri agricultural villages in the fertile plains of Luristan. The largest Luri tribe was the Bakhtiari. Other important tribes included the Boir Ahmadi, the Kuhgiluyeh, and the Mamasani. During the reign of Reza Shah Pahlavi, the Luri tribes, as well as others, were forcibly disarmed and settled. Although many tribal groups returned to pastoral nomadism after 1941, the economic changes in Iran before and since that date have made this way of life less and less appealing. By the early 2000s, the majority of Lurs lived in cities, including the major industrial centers of Borujerd and Khorramabad in Luristan, and did not identify with any tribal group. About one-third of Lurs lived in villages, and only 10 percent continued to practice seasonal migrations organized by livestock-herding tribes. The overwhelming majority of Lurs are Shiʿa Muslims, although a small number are Ahl-e Haqq.

LUXOR

Upper Egyptian commercial and tourist center.

This town on the east bank of the Nile in Upper Egypt is called al-Uqsur in Arabic. It is noted for its ancient temple and its proximity to Karnak, Thebes, and the tombs of the pharaohs, queens, and nobles on the opposite (west) bank of the Nile. It is the site of numerous Coptic churches and monasteries. With the coming of Islam, it became the site of mosques, notably that of al-Hajjaj, built above the Temple of Luxor. After the discovery of King Tut's tomb in 1922, the area became one of Egypt's premiere tourist attractions, and to this day the local economy is strongly dependent on tourism.

ARTHUR GOLDSCHMIDT
UPDATED BY PAUL S. ROWE

LUZ, KADISH

[1895–1972]

Israeli labor leader and third speaker of the Knesset.

Born in Bobruisk, Byelorussia, Kadish Luz studied economics, agriculture, and sciences at Russian and Estonian universities. Luz served in the Russian army during World War I. After the Bolshevik revolution, he assisted Joseph Trumpeldor in founding the Hehalutz Zionist youth movement, then immigrated to Palestine where he worked at land reclamation and road building. He became a leader of the kibbutz movement and the Histadrut, and from 1951 was a MAPAI member of the Knesset, Israel's parliament. Luz was minister of agriculture (1955–1959) and speaker of the Knesset (1959–1969).

ZEV MAGHEN

LYAUTEY, LOUIS-HUBERT GONZALVE

[1854–1934]

French officer and colonial governor of Morocco during the French protectorate, 1912–1925.

Born in Nancy, France, Louis-Hubert Gonzalve Lyautey was one of the generation of army officers who had been affected by Germany's defeat of France in the Franco-Prussian War (1870–1871). As did many others, he tried to compensate through the colonial adventure. First in Tonkin (French Indochina), then in Madagascar, under General Joseph S. Gallieni's command, he experimented with a doctrine of colonization after the British model—which respected the culture and institutions of the colonized populations more than the French system had.

At the beginning of the twentieth century, when he served in Algeria, first in the southern territories and then as chief of the division based in Oran, he drew a negative image from the colonial system as it was instituted there. Above all, he wanted to keep the original Algerian model from extending into Morocco when that country came under French control. Since the conquest of Morocco was not easy, his theses became attractive to the French government at the beginning of the French protectorate in 1912; they were already preparing for the oncoming conflict with Germany, now called World War I (1914–1918), and wanted to maintain their resources and troops in Europe.

After Lyautey's appointment to Morocco in 1912, he succeeded in freeing the commercial and religious center of Fez from the *makhzen* (mercenary) system of the tribal peoples. He regained the lowlands and the main cities, which traditionally were under their control. Then he had to get Sultan Mulay Hafid, who would not cooperate, to abdicate and put his brother Mulay Youssef on the throne.

Lyautey was a monarchist, and he admired Napoléon Bonaparte's methods of administration in early nineteenth-century Egypt. He wanted to follow them and to get the support of a legitimizing authority, which would help him subdue Morocco without his own submission to strict controls from Paris. Therefore he tried to maintain the Moroccan monarchy while making sure that it would not present a source of future problems. Under such conditions, the new sultan was allowed to keep the major Islamic prerogatives of Moroccan sovereignty: to be a caliph and an imam.

On 30 March 1912, when Lyautey signed the Fes Treaty, establishing the French protectorate over Morocco, which was going to define the relationships between the two countries until 1956, he was given the mission to reform the structure of the colonial administration. He would succeed in doing so by joining to the traditional services of the makhzen at the central and local levels a parallel French hierarchy. Without any resistance on the part of the sultan, Lyautey would create the laws and regulations by edict, which would guarantee the "administrative legal, educational, economic, financial and military reforms the French government will judge have to be introduced on Moroccan territory" (Article 1 of the Fes Treaty). Lyautey would then be able to establish a quick modernization, using only a few competent civil servants. At the beginning, this plan was widely accepted. He would also be able to place most of the country under the formal author-

Resident general of Morocco Louis-Hubert Gonzalve Lyautey (1854–1934; seated, third from left) dining at the table of Sultan Mulai Yussef, Morocco, ca. 1925. © HULTON-DEUTSCH COLLECTION/CORBIS. REPRODUCED BY PERMISSION.

ity of the *makhzen* by using traditional ways of negotiating with the tribes and by limiting his need for force.

His opposition to both parliamentary and political control by France led him to preserve the autonomy of Morocco so that, in the long run, he might exert a larger hidden power. The romantic idea of a feudal system constituted the basis for his debatable policy. As a tolerant Roman Catholic, he was open toward and respectful of Islam; since he was attracted to marginal people (those living neither within one system nor the other), he thought they might help him understand this country's essence—outside official circles. Adept at understanding cultural differences and hierarchical controls, he came to consider the possible development of two distinct but parallel societies that might save old cities and architecture but also lead in education. It was a separated system (akin to a "mild" apartheid) because he refused to introduce into Morocco the French system that prevailed in Algeria, based on colonization by poor whites. He then had to turn to private bankers, especially the Banque de Paris et des Pay-Bas, but he was unable or unwilling to avoid the expropriation of the richest, most fertile lands for the benefit of French settlers. Although he cared about the sultan's interests, he did not or could not prevent the basic elements of a future berber policy to take root.

Under the authority of the protectorate, Lyautey practiced a direct administration policy and benefited from it, because of the fiction of Moroccan sovereignty. In keeping the sultan, he confined him to an outdated traditionalism. Meanwhile, Lyautey's colonial *officiers des affaires indigènes* (officers in charge of native affairs) had been taught his ruling philosophy, and they used the pashas and the Arab shaykhs as intermediaries, to keep things under control. His system did not leave much space for the development of a Moroccan elite, which he became aware of toward the end of his mission. From 1920, he worried about the future of the country and considered

formulas that would allow an easy withdrawal of French control.

His authority was shaken by the beginning of the rebellion of Rif leader Abd al-Karim, who in 1921 began fighting against the Spanish in their sector of Morocco. By April of 1925, Abd al-Karim had turned to fight the French. A French-Spanish force was organized against him in July and in September, under World War I hero French Marshal Henri-Philippe Pétain; the Rifians were driven back. Toward the end of September, Lyautey resigned, and he left Morocco for France in October. He was replaced by a civilian resident and by Marshal Pétain as the military leader. Lyautey left as the legendary leader who had safeguarded the sultan's monarchy, the reputation of the country in international affairs, and its resources and finances through development of its phosphate mining company. He left as the launcher of its modernization.

He ended his life in France as an anti-republican, supporting the extreme right—an admirer of Italian dictator Benito Mussolini. He was suspected, not long before his death, to have encouraged the aborted coup against the French parliament on 6 February 1934, launched by the Croix de Feu (Cross of Fire, a French fascist organization).

LYDDA

Town in Israel (*in Hebrew,* Lod; *in Arabic,* al-Lidd).

An ancient biblical town, Lydda was known through the nineteenth century as an intermediate center for caravans and for its magnificent Byzantine basilica over the tomb of St. George. Under Ottoman rule, it was an Arab town that was part of the Jerusalem *sanjak* (district) and an important center for soap and olive oil manufacture. During the 1930s, it became one of the most important railroad junctions in the Middle East, with lines connecting Jaffa, Jerusalem, and Cairo. Lydda sustained human and material losses in the 1927 earthquake. During the bloody events of 1936 to 1939, the Jews left the town and it became a base of operations for Palestinian Arabs who were attacking Jewish towns. Most of the town's more than ten thousand Palestinian Arabs escaped or were forcibly evacuated by the Israel Defense Force during the 1948 Arab–Israel War.

Lydda is located northeast of Ramla, south of Ben Gurion Airport (originally opened in 1937). It is also the center of Israel's aircraft industry. Both the airport and the industry constitute important sources of income for the town's population. At the end of 2002 the population numbered 66,500, including more than 4,000 Muslim and Christian Palestinian citizens.

M

MA AL-AYNAYN

[1840–1910]

Important figure in the religio-political history of Mauritania and southern Morocco.

Ma al-Aynayn (also known as Shaykh Muhammad Mustafa ibn Muhammad Fadil al-Qalqami) was the son of Muhammad Fadil, founder of the Fadiliyya Sufi brotherhood, a religious scholar and leader among the nomadic populations of northern Mauritania. Like his father, Ma al-Aynayn was head of the Fadiliyya, a noted scholar, and political leader. A prolific author, he is credited with over 140 books on a wide variety of topics.

A close ally and adviser of the sultans of Morocco from 1859, Ma al-Aynayn cooperated in the extension of Moroccan authority into the Western Sahara. Under Sultan Hassan I and his successor Abd al-Aziz, he organized resistance to imperialist incursions into the western Sahara by France and Spain.

At his death in 1910 he was succeeded by his son Ahmad Hibat Allah, known as "El Hiba."

EDMUND BURKE III

MAʿALOT

Urban community in Upper Galilee, Israel.

Founded in 1956 to replace two *maʿabarot* (temporary housing communities) of mostly North African Jewish immigrants, Maʿalot is situated some 6 miles south of the Lebanese border, in the heart of the Western Galilee, on hilly terrain at an elevation of 1,970 feet, with a commanding view of Wadi Koren. In 1963 the town united with the nearby Palestinian village of Tarshiha. The town's population,

totaling some 20,000 in 2002, works mainly in industry.

On 15 May 1974 three Arab terrorists from Nayif Hawatma's Democratic Front for the Liberation of Palestine, disguised in Israeli uniforms, entered Maʿalot, overpowered and killed a guard posted outside, and took control of a school building, where a group of ninety children on a field trip slept on the floor. Some of the children were killed on the spot, but others escaped by jumping out of a window on the second floor. The terrorists demanded the release of Arab guerrillas from Israeli prisons by 6:00 P.M. and threatened to kill the hostage children if the demands were not met. At 5:45 P.M. a unit of the Israeli army's elite Golani Brigade stormed the building, killing the three terrorists, but not before the terrorists killed sixteen children and wounded seventy.

UPDATED BY YEHUDA GRADUS

MAʿARIV

Daily newspaper published in Tel Aviv.

Maʿariv was founded in 1948 by a group of journalists as an afternoon paper, following their departure from another newspaper, *Yedi'ot Aharonot.* The splinter group was headed by Ezriel Carlebach, who became the paper's first editor.

For many years, *Maʿariv* garnered the largest readership of any paper in Israel. Over the years its fortunes have waned considerably. Under its editor, Dan Margalit, *Maʿariv* defines itself as broad based, apolitical, and with an appeal to both secular and religious Israelis.

ANN KAHN

MAʿBARAH

Residential transit camps for immigrants in Israel established in the early 1950s.

In the years 1950 to 1952, when Israel was unprepared for mass immigration, about 250,000 immigrants (many of them from Iraq and Romania) lived in about 110 *maʿbarot* (plural of *maʿbarah*). Conditions were dismal: Housing was in canvas shacks and tents, or at best in tin huts; infrastructure, sanitation, and water supply were deplorable; health and education facilities were inadequate. But in comparison with the immigrant camps of 1948 to 1949, people were less dependent upon public officials, and there were more employment opportunities. *Maʿbarot* were spread throughout the country, particularly near agricultural locations, and the government undertook massive relief-work projects. Many *maʿbarot* residents put down roots in their localities and stayed on to live in permanent housing that was eventually erected nearby by the government. Most residents obtained housing within two to three years, but some remained in temporary housing for close to ten years. Beginning in 1953 immigrants were moved to newly built houses, ending the *maʾabarot* stage of absorption.

The bitterness of the *maʿbarot* experience, particularly among *adot ha-mizrah* (Israeli Middle-Easterners), had wide ramifications in Israeli politics and culture. It figures in Israeli literature, particularly in the writings of major authors of Iraqi origin such as Sami Michael, Shimon Balas, and Eli Amir. In their earlier writings the authors presented realistic descriptions of the assertiveness of *maʿbarot* residents striving to become established Israelis. In their later writings some of the authors depicted social uprootedness and alienation, and some evinced nostalgia for the Jewish life of their countries of origin.

MABARRAT MUHAMMAD ALI

Egyptian women's organization.

The Mabarrat Muhammad Ali, or the Muhammad Ali Benevolent Society, was founded in 1909 by

Princess Ayn al-Hayat Ahmad, a member of Egypt's royal family and a noted philanthropist. She called on other members of the royal family to donate funds to establish a small clinic in one of the poor quarters of Cairo. The Mabarrat was formed to run the clinic and quickly expanded into an organization of women from prominent political families. Hidaya Afifi Barakat (1899–1969), an Egyptian Muslim, and Mary Kahil (1889–1979), a Syrian Christian, were for many years the driving forces in the organization.

In subsequent decades members of the Mabarrat held concerts and other fund-raising events to support medical relief for Egypt's poor. Eventually it established and administered a network of hospitals and outpatient clinics throughout Egypt. During the severe malaria and cholera epidemics of the 1940s, the Mabarrat distributed emergency relief and administered vaccination programs.

The Wafdist Ministry of Health, which was locked in a power struggle with the palace, saw the Mabarrat as a rival. Following the Free Officers' coup of 1952, all independent charitable societies came under direct governmental supervision. In its first half-century, the Mabarrat hospitals and clinics had served hundreds of thousands of people. Barakat continued to volunteer under the new regime. In 1969, on the last day of her life, the state awarded her its First Class Order of Merit for public service. Kahil was similarly recognized in 1972.

NANCY GALLAGHER

MACCABI

International Jewish sports organizations.

Named for the Judean heroes who fought Antiochus in the second century B.C.E., the Maccabi World Union began in 1895 with the formation of clubs like the Israel Gymnastics Club in Istanbul and others in Bucharest, Berlin, and Saint Petersburg. By World War I, membership in the Turkish Maccabi was two thousand.

Although not ideologically a Zionist movement, the Maccabi was part of the phenomenon of a rising Jewish national consciousness during the late nineteenth and first half of the twentieth centuries. Maccabi clubs became important institutions in British-mandated Palestine, Egypt, Lebanon, Syria, and Libya. There was a popular Maccabi club in Baghdad during the late 1920s, but it ceased to be officially active as anti-Zionist Arab nationalism turned virulent. Along with groups such as the Union Universelle de la Jeunesse Juive (Universal Union of Jewish Youth), Jewish Scouts, cultural associations, and modern Hebrew-language schools, the Maccabi helped to foster a feeling of solidarity among Middle Eastern and North African Jewry with their coreligionists worldwide, as well as sympathy for Zionism.

MACDONALD LETTER

See MACDONALD, RAMSAY

MACDONALD, MALCOLM

[1901–1981]

British politician who played a central role in the decolonization of the British Empire.

The son of the first British socialist prime minister, Ramsay MacDonald, Malcolm MacDonald was the link between the Jewish Agency and Britain's cabinet following the publication of Passfield's White Paper of 1930 that restricted Jewish immigration to Palestine. Between 1931 and 1935 he was parliamentary undersecretary of state for dominion affairs. In the first months of 1935 and from 1938 to 1940 he served as colonial secretary, and between 1935 and 1938, as secretary of state for dominion affairs.

When MacDonald became colonial secretary for the second time, in view of the deterioration of law and order due to the rebellion of Palestinian Arabs (1936–1939) and the looming threat of a world war, he tried to stabilize the situation by placating the Arab states. Opposing the proposed partition of Palestine, he envisaged, initiated, and organized the London (Roundtable) Conference of early 1939, in which representatives of Arab states participated along with the Palestinian Arabs, and a Jewish delegation from abroad joined the Palestinian Jewish

delegation. The failure of the conference resulted in the formulation of a new British policy on Palestine embodied in MacDonald's White Paper of May 1939. This document set limits on Jewish immigration and land sales, and held out the promise of an independent state in Palestine.

MACDONALD, RAMSAY

[1866–1937]

Prime minister of Great Britain (1924, 1929–1935).

Ramsay MacDonald is best known in connection with the Middle East as the author of the MacDonald Letter (1931), sent to Chaim Weizmann, which overrode the white paper of 1930 and served as the legal basis for administering Palestine until the white paper of 1939.

From January to October 1924, MacDonald was Britain's first Labour prime minister. He again became prime minister in 1929. The onset of the Great Depression precipitated a crisis in 1931, and MacDonald was persuaded to head an all-party national government until 1935. In that year he was replaced by Stanley Baldwin.

The white paper of October 1930 presented the findings of two commissions. The Shaw Commission report of 1930 concerned the investigation of an outbreak of violence between Arabs and Jews in 1929, and the mass killing of Jews in Hebron and Safed. It found that the deeper cause of the violence was the uprooting of Arab villagers from the lands they had cultivated for generations, as a result of land sales to Jews.

The Hope-Simpson Commission was appointed to study the matter. Its report, completed in October 1930, found that a significant portion of the Arab rural population was on the verge of destitution. It recommended that the immigration of Jews should be assessed not only in terms of the absorptive capacity of the Yishuv but also in terms of its economic impact on the Arab rural population. It recommended a land development scheme primarily to aid displaced Arab farmers and suggested greater controls on immigration.

The Zionists were outraged, perceiving this as undermining the terms of the mandate. Weizmann maintained that the obligation of the mandatory power was to the Jewish people as a whole, not just the 170,000 Jews already in Palestine. To protest, on 20 October, Weizmann resigned the presidency of the Jewish Agency, which served as a liaison with Britain's government.

The government came under very strong pressure from Zionists, as well as from established British political figures and political parties. To placate Weizmann, MacDonald issued a letter addressed to him as head of the Jewish Agency, and submitted it to the Council of the League of Nations. The letter was also recorded as an official document and dispatched to the high commissioner of Palestine as an instruction of the cabinet.

While reiterating the principle that Britain's mandate involved a double undertaking to the Jewish as well as the non-Jewish population of Palestine, the letter reaffirmed responsibility for establishing a national home for the Jewish people in Palestine. It spoke in positive terms of the obligations of the government to facilitate Jewish immigration under suitable terms, subject to the abstract proviso that "no prejudice should result to the rights and position of the non-Jewish community." The negative impact of immigration on Arab farmers was displaced from the central position it had occupied. No reference was made to the proposed development scheme or to another proposal for the creation of a Legislative Council.

MacDonald's letter also precipitated an Arab rebellion during the years 1936 to 1939, an outcome the authors of the Shaw and Hope-Simpson reports had been trying to avoid.

MACMICHAEL, HAROLD

[1882–1969]

High commissioner of Palestine (1938–1944).

Harold MacMichael favored abandoning the Peel Commission's partition plan, temporary suspension of land sales to Jews, and limiting immigration of Jews for a few years. He initially opposed implementing the provisions of the White Paper for gradual Palestinian Arab self-government, then shifted his position.

MacMichael recommended that Britain terminate the mandate and the Jewish Agency, and under various scenarios, set up either a small, independent Jewish state or one with dominion status, and allowing local autonomy for an Arab state while Britain retained control over the holy places. His recommendations were not accepted.

When there was a controversy about establishing a Jewish army, MacMichael recommended that the recruitment program for the Jewish settlement police and special constabulary be expanded; he feared, however, that a Jewish army in Palestine could be turned against the mandate or used to back up postwar Zionist demands. In August 1944, MacMichael was the target of an unsuccessful assassination attempt by Jewish extremists.

MADANI, ABASSI AL-

[1931–]

Algerian founder and president of the Islamic Salvation Front (Front Islamique du Salut; FIS), a major opposition political movement.

Born in Sidi Okba in southeast Algeria, son of a rural imam, Abassi (often referred to by his last name, Madani) had a dual education in Qurʾanic and French schools. An early recruit to the nationalist movement, he was arrested by the French authorities in 1955 for placing a bomb at Radio Algiers. He spent the remainder of the Algerian War of Independence in prison.

Upon the country's independence, Madani became a schoolteacher while simultaneously pursuing a *licence* degree in philosophy at the University of Algiers. Influenced by the Islamic philosopher Malek Bennabi, he became active in *Al-Qiyam* (Values), an association that popularized the ideas of Middle Eastern fundamentalist thinkers. Yet he remained within the conservative "Arabist" wing of the National Liberation Front (FLN), and was elected to the Algiers departmental assembly in 1971. While studying for a doctorate in London in the mid-1970s, he became acquainted with international Islamist circles. Appointed professor of education at the University of Algiers, he began preaching in various mosques around the city. For his participation in violent anti-regime demonstrations, he returned to prison in December 1982, serving sixteen months of a two-year sentence.

Madani quickly capitalized upon the liberalization of the regime after the October 1988 riots by founding the FIS in February 1989. In this he worked closely with a younger firebrand preacher, Ali Ben Hadj. Emerging as the strategist of the Algerian Islamist movement, he organized an effective electoral machine, which rode to an unanticipated victory in the municipal elections of June 1990. The FIS captured 54 percent of the popular vote and won control of some 850 city councils including

those of Algiers, Oran, Constantine, and Annaba. Heady with victory, Madani called for national parliamentary elections, then declared a general strike in May 1991 to protest the gerrymandering electoral law under which the government proposed to hold the election. The strike led to violence, Madani was reported to have threatened jihad against the army, and once again—on 30 June 1991—the Islamist militant was arrested on charges of conspiracy against the state.

Imprisoned once again and his party officially dissolved, Madani nevertheless remained a significant interlocutor for the government during the civil war of the 1990s. In 1997, he was released from jail but kept under house arrest. In July 2003, he completed his twelve-year sentence; in failing health and his party still banned, he remained a controversial symbol of political protest in Algeria.

ROBERT MORTIMER

MADANI, ABDULLAH AL-

Journalist and member of both the Constitutional Assembly and the National Assembly in Bahrain.

A religiously trained Shiʿite, Abdullah al-Madani represented a rural district in Bahrain. He was elected to the Constitutional Assembly in 1972 and 1973. In both assemblies, he was the leader of the conservative (Shiʿa) religious bloc—the other two blocs being the bourgeois nationalists and the reformists (leftists). During his service, he started a weekly magazine, *al-Mawaqif,* which he edited and published. He was conservative on social-Islamic issues but liberal on political issues. His editorials in *al-Mawaqif* probably made him some enemies; he was assassinated in the late 1970s.

EMILE A. NAKHLEH

MADANI, TAWFIQ AL-

[1899–1983]

Secretary-general of the Algerian Association of Reformist Ulama, ambassador, and historian.

Born in Tunis, Tawfiq al-Madani studied at Zaytuna University and became a cofounder of the Destour Party. His pro-nationalism activities provoked his expulsion from Tunisia to Algeria where he contributed profoundly toward reviving Arabic study and a national identity. His works include *Book of Algeria* (1931), an introduction to the country for youth that was implicitly nationalist, and *The War of Three Hundred Years Between Algeria and Spain* (1968). He wrote the play *Hannibal* and was editor-in-chief of *al-Basa'ir.*

Besides his cultural role, Madani also played an important political role. In 1952 he became secretary general of the Algerian Association of Reformist Ulama (body of *mullahs*) and integrated that organization within the revolutionary Front de Libération Nationale (FLN). He was later chosen minister of cultural affairs (1958) in the *Gouvernement Provisoire de la République Algérienne (GPRA).* He became minister for *habous* (religious foundations) in Ahmed Ben Bella's first two governments. He later served as ambassador to Iraq and Pakistan. He retired in order to devote time to his scholarship, which included editorial work for the Centre National D'Etudes Historiques (National Center for Historic Studies) and its journal *al-Tarikh* (History).

See also FRONT DE LIBÉRATION NATIONALE.

PHILLIP C. NAYLOR

MADKOUR, IBRAHIM

[1902–1995]

Egyptian scholar.

Born in Abu al-Numrus, Giza, Ibrahim Madkour gained worldwide recognition for his efforts to promote the recovery and publication of the texts fundamental to Arabic and Islamic culture. Following studies at Dar al-Ulum, Madkour was sent to Paris, where he received a Ph.D. in 1934. The two required dissertations, "La place d'al-Farabi dans l'école philosophique musulmane" (Al-Farabi's place in the Muslim philosophical school) and "L'Organon d'Aristote dans le monde arabe" (Aristotle's organon in the Arab world), both published in the same year, remain fundamental texts for the history of Islam. Returning to Egypt, he was appointed professor of philosophy at the Fuʾad I University (later, University of Cairo) in 1934. Named minister of social affairs prior to the 1952 revolution, Madkour had his

greatest influence on Arabic culture through his work with the Academy of Arabic Language (member 1946–1959, general secretary 1959–1974, and president 1974–1995), the Union of Academies of Arabic Language, and the Supreme Council of Culture in Egypt.

He launched the projects of editing Avicenna's great multivolume work the *Kitab al-Shifa* (Healing) in 1949; the Muʿtazilite theological summa of Abd al-Jabbar, *al-Mughn* (Sufficer); and Ibn al-Arabi's massive *al-Futuhat al-Makiyya* (Mekkan contributions). In addition, he facilitated the publication of several of Averroes's works and encouraged Georges Chehata Anawati in his translation of Avicenna's *Metaphysics* as well as Daniel Gimaret, Jean Jolivet, and Georges Monnot in their translation of al-Shahrastani's *Kitab al-Milal wa al-Nihal* (Book of religious communities and of sects).

In his constant encouragement of scholars to recover the rich medieval Arabic and Islamic patrimony, then to present it in critical, scientific editions and sound translations, Ibrahim Madkour made this heritage known throughout the world. He died in Cairo in 1995.

CHARLES BUTTERWORTH

MADRASA

Arabic word for an Islamic college and, more specifically, a center for religious and legal studies.

The madrasa originated in Eastern Iran in the tenth century and spread to major urban centers throughout the Middle East by the late eleventh century. The architect of the madrasa as a state-sponsored institution of higher education was Nizam al-Mulk (died 1092 C.E.), the prime minister of the Seljuk empire. These residential colleges were designed by the ruling elite both as a training ground for state bureaucrats and as a Sunni Islam response to the propaganda of Ismaili Shiʿism already being generated at al-Azhar, the theological learning center founded by the Fatimid dynasty in Cairo in 969 C.E. As part of a Sunni Muslim religio-political agenda, the madrasa spread throughout the Islamic world. The madrasa system augmented already extant mosque-centered training sites for the study of religion and law. Unlike these centers, the madrasa forged links between the *ulama,* the religious scholars who directed Islamic education, and the ruling government authorities whose financial support made their control of the madrasa possible.

The madrasa system of education was linked to the mosque, which traditionally had been the place of instruction for Muslims in the Qurʾan and in the Hadith—the traditions that preserved the words and deeds of the Prophet Muhammad. The madrasa combined the site for education with student residences. Libraries and sometimes hospitals would adjoin the madrasa. Financial support for the educational institution was generated by the state in the form of a charitable endowment called *waqf.* The revenue on these endowments paid for the maintenance of the buildings, student stipends, and instructors' fees.

The course of instruction at a madrasa included the Qurʾan, tradition, Arabic language, theology, arithmetic, geometry, astronomy and, often, medicine; however, the study of Islamic law *(shariʿa)* provided the core of the madrasa's rigorous curriculum. Initially, madrasas were founded to provide specialized instruction in one of the four Sunni legal schools. In time, legal instruction in one or more of the Sunni legal schools might be offered in a single madrasa.

The method of instruction relied heavily on memorization—of the Qurʾan and as many traditions as possible. Once these preliminaries were accomplished, students were trained in the technicalities of the law, divergent legal opinions, and the disputed questions that distinguished their law school from the other Sunni legal schools. After four or more years of study, an instructor determined whether an individual student could be licensed to teach law and given a diploma, a signed certificate called an *ijaza.* Any Muslim male could join a madrasa, but the number of students per teacher was usually limited to twenty. Only male students studied at madrasas; Muslim women were not allowed to study Islamic law. Major Sunni madrasas were founded at Medina, Cairo, Tunis, and Fez. Al-Azhar remains the most famous Sunni theological center in the Arab world; it underwent a series of curriculum reforms in the early twentieth century that made the director of that institution the

prime link between the Egyptian government and the country's traditional religious elite. Shiʿite madrasas in Iran include those of Mashhad and Qom and, in Iraq, al-Najaf, and Karbala.

In the nineteenth century, the Ottoman Empire founded schools influenced by European models to train their military officers, bureaucrats, and doctors. Similar professional schools were also created in Egypt and Tunisia during this period to offer instruction to those Muslims in government service forced to contend with the European colonial presence in the Middle East. These non-Islamic educational institutions created new urban nationalist elites. In the twentieth century, the breakup of the Ottoman Empire and the formation of Arab states hastened educational reform; secular schools of higher education undermined the madrasa system in the Sunni Muslim world. State-sponsored higher education throughout the Middle East promoted new secular avenues of social mobility and professional prestige for male and female Muslim students in areas such as medicine and engineering. Shiʿite madrasas flourish in Iran since the Ayatollah Ruhollah Khomeini's Iranian Revolution of 1979 reestablished Islamic rule.

MADRID CONFERENCE (1991)

Middle East peace conference, 30 October–1 November 1991.

Convened in 1991, the three-day Madrid Middle East Peace Conference was a historic breakthrough in Arab–Israeli diplomacy. It became a link between the end of the 1991 Gulf War and the signing of the 1993 Oslo Accord. It broke the taboo against Arab states, Palestinians, and Israelis meeting in public. In the years after the conference, bilateral and multilateral talks ensued, agreements were reached, and countries other than the United States became overtly engaged in managing the conflict.

A series of factors made the Madrid Conference possible. With the end of the Cold War, no patron could provide military assistance to sustain support for an Arab military option against Israel. Otherwise reluctant Arab states that had vilified Egypt for her separate peace with Israel during the 1970s were willing to accept Israel as a fact, primarily because the United States had, in defeating Saddam Hussein's aggression against Kuwait, secured the territorial integrity, sovereignty, and political independence of Arab Gulf states. Extensive pre-negotiations over several years had outlined the conference's procedures, content, and representation issues. Since the conference validated its earlier peace treaty with Israel, Egypt warmly endorsed the conference's convocation. Tirelessly, after the Gulf War's conclusion, in eight diplomatic shuttle missions, U.S. secretary of state James A. Baker III persevered in convincing reluctant Israeli and Arab neighbors to meet in Madrid on 30 October 1991.

Historically, Israel had shunned conference diplomacy, where it feared that Arab states could align themselves uniformly against it and impose unwanted solutions. Israel accepted this conference's format because bilateral talks were to emerge immediately from the ceremonial opening, with a U.S. assurance that the conference would not dictate solutions. While Moscow and Washington officially convened the conference, both Israel and the Arab world again placed their faith almost exclusively in U.S. diplomacy to push negotiations forward. For Israel, the United States remained its most dependable ally. After much hesitation, the Syrian leadership attended the Madrid Conference because it was conceptually based on Security Council Resolutions 242 and 338, which called for an exchange of territory for peace through direct negotiations between the parties. The Palestinian representation issue, which bedeviled the conference's preparations, was solved with creation of a

Jordanian-Palestinian delegation. Israel refused to attend a conference with the Palestine Liberation Organization (PLO) as a separate negotiating entity. While Yasir Arafat's PLO was not seated at the conference, indirect PLO participation ensured his containment of, if not control over, Palestinian leaders in the West Bank and Gaza who were emerging as a political alternative to the PLO's leadership. Grudging support for the conference also helped refurbish the Palestinians' tarnished international image due to their earlier ringing endorsement of Hussein's invasion of Kuwait.

No real negotiations were carried out at the conference; each delegation head used the podium to make political points to audiences listening at home. Political and regional issues, not military matters, were the main items on the negotiating agendas that flowed from the conference's opening. In the years that followed the conference, Palestinian–Israeli and Syrian–Israeli negotiations evolved, some of which led to detailed discussions and agreements during the 1990s. For several years after Madrid, multilateral talks were conducted in different world venues where issues of arms control, economic development, the environment, refugees, and water were discussed. While the United States continued to catalyze the diplomatic process in the 1990s, the Madrid Conference officially made the conflict's resolution and management a multilateral undertaking, thereafter engaging advocacy and financial support from individual European states, the European Union, Canada, Japan, Saudi Arabia, and others.

MAGEN DAVID ADOM (MDA)

The national emergency medical, ambulance, blood, and disaster service of Israel.

Magen David Adom (MDA; "red shield of David" in Hebrew) was founded on 7 June 1930 as a first-aid society for the city of Tel Aviv with about twenty volunteers, an ambulance, and a first-aid hut. Seventy years later, MDA served the entire population of Israel with 9,000 volunteers, 1,000 paid employees (including physicians, medics and paramedics, ambulance emergency medical technicians, and blood bank and fractionation experts and technicians), and 600 ambulances.

MDA supplies all of the blood used for transfusions by Israel's armed forces and more than 85 percent of the country's blood requirements. It also provides first-aid instruction.

In 1950 MDA's duties and responsibilities were legally defined in the Magen David Adom Law, in which MDA was recognized as the organization entrusted to carry out in Israel the functions assigned to a National Red Cross Society under the Geneva Conventions. MDA failed, however, to gain recognition from the League of Red Cross Societies (which accepts the Red Crescent Society based in Muslim countries and the Red Lion and Sun Society based in Iran) because of Arab and Communist-bloc objections. The issue remains unresolved despite support from the American Red Cross for MDA's inclusion. Some progress was evident in mid-2003 with the signing of the first bilateral cooperation agreement between the MDA and the International Committee of the Red Cross.

MAGHRIB

Arabic term for northwest Africa in general, and for Morocco in particular.

In its broadest meaning, the Maghrib (also Maghreb) refers to Morocco, Algeria, Tunisia, Tripolitania, and, occasionally, Libya. The region is characterized by fertile plains and the Atlas mountain range near the Mediterranean and Atlantic coasts, and sweeping desert in its hinterland.

The term *maghrib* comes from the Arabic word meaning "west" or "place of sunset." The Arabs conquered the region between 643 and 711 C.E., and ruled it through semiautonomous kingdoms

and tribes. From the ninth to the fourteenth century, the Maghrib produced impressive Islamic realms with robust trade economies tied to Saharan caravan routes. In the sixteenth century, the Ottoman Empire conquered the coasts of present-day Tunisia and Algeria, while the interior desert regions and Morocco remained autonomous, free from imperial rule.

France colonized the Maghrib between 1830 and 1912, and from that period, French was commonly spoken in addition to Berber and Arabic. Morocco and Tunisia achieved independence with little violence in 1956, while Algeria fought the bitter Algerian War of Independence from 1954 until 1962 to achieve its freedom. Libya, once a colony of Italy, was next governed by France and Britain, and became independent in 1951.

MAGIC CARPET OPERATION

Airlift of Jews to the new State of Israel from the southern Arabian Peninsula.

Operation Magic Carpet was the popular name given to Operation on Wings of Eagles, the airlift that, between 16 December 1948 and 24 September 1950, brought most of the ancient Jewish communities of the southern Arabian peninsula to the new State of Israel. The evacuees included about 43,000 Yemenites, more than 3,000 Adenis, and nearly 1,000 Habbanis (from Hadramawt).

This dramatic operation was run by the Jewish Agency with assistance from the American Joint Distribution Committee. The planes for the airlift came from a specially formed U.S. charter airline, the Near East Air Transport Company. During the height of this exodus, in the fall of 1949, as many as eleven planes flying around the clock carried people from the departure point in the British protectorate of Aden to Lod Airport in Israel. Many of the Yemenite refugees trekked hundreds of miles over rough terrain, in many cases entirely on foot, to reach the Hashid transit camp in Aden to await evacuation.

NORMAN STILLMAN

MAGNES, JUDAH

[1877–1948]

U.S. Reform rabbi, founder and first president of the Hebrew University of Jerusalem.

Judah Magnes was born in San Francisco, and received rabbinic ordination at Hebrew Union College in 1900 and a doctorate in philosophy at the University of Berlin and University of Heidelberg. He served as rabbi of New York's Temple Emanuel from 1906 to 1910, when he was forced to resign because he was viewed as too traditional. He then served as rabbi of New York's Conservative Congregation B'nai Jeshurun from 1911 to 1912. He was one of the founders of the American Jewish Committee and president of New York's organized Jewish community (the *Kehilla*) from 1908 to 1922, and he helped to found the Yiddish daily newspaper *Der Tag,* the American Civil Liberties Union, and the American-Jewish Joint Distribution Committee. He was a delegate to the Zionist Congress in 1905, and served as secretary of the Federation of American Zionists from 1905 to 1908.

Magnes immigrated to Palestine in 1922 and became the first president of the Hebrew University of Jerusalem in 1925. He rejected the dominant Zionist notion of "the negation of the Diaspora" and continued to believe that both Zion and the diaspora were of equal importance in Jewish life. His personal contacts and political discussions with Harry St. John Philby, Musa al-Alami, George An-

tonius, and Nuri Saʿid periodically put him at loggerheads with the official Zionist leadership. He was one of the leaders of the Ihud (unity) movement, a small group of intellectuals who opposed the establishment of a Jewish state in Palestine and argued instead for a binational state. Among his colleagues were such notables as Martin Buber, Hans Kohn, Arthur Ruppin, Samuel Hugo Bergman, and Gershom Scholem. A confirmed pacifist for much of his life, Magnes modified his views after Hitler's rise to power. Following the creation of the Jewish state and the outbreak of war in early 1948, Magnes continued to lobby, during the few remaining months of his life, for a confederation of Middle Eastern states and for a conciliatory and humanitarian approach to the conflict.

MAHALLA AL-KUBRA, AL-

Egyptian city in the Nile delta.

Mahalla al-Kubra is a city (pop. 395,000 in 1996) located near the center of the Nile delta, some sixty miles (96.5 km) north of Cairo, in the province of Gharbiya. The climate is, like much of Egypt along the Mediterranean, relatively wetter than that of Cairo, with humidity averaging about 60 percent. Winter temperatures range from 43–66F° (6–19C°), while summer ranges from 63–88F° (17–31C°).

The delta is the great cotton-growing area of Egypt, and the principal industry of Mahalla is cotton-textile production, as it was for much of the twentieth century. Mahalla is, in fact, the center of the Egyptian textile industry, but rice and flour mills are also important. The area has been associated with textiles for a long time, since silk weaving became important there in the Middle Ages. In 1927, Egypt's Bank Misr created the Misr Spinning and Weaving Company there—a giant modern industrial plant and one of the three largest industrial undertakings in Egypt (the other two being a sugar refinery in Giza province and a textile firm in Alexandria). As of 2002, textile production accounted for about a quarter of Egypt's industrial revenues.

MAHALLE SCHOOLS

Provincial schools in the Ottoman Empire.

Most of the public schools in the Ottoman Empire were built and funded by local governments. These governments often organized councils to build the schools, hoping that they would stimulate economic development. Most *mahalle* schools offered elementary-level education, although curricula varied. With the 1869 Regulation for Public Instruction, the central government organized provincial councils to distribute state funds and encourage standardization of curricula and examinations at the local schools.

The number of students in mahalle schools rose from 242,017 boys and 126,454 girls in 1867 to 640,721 boys and 253,349 girls in 1895, roughly one-third of all children of elementary school age. There were only 35,731 students in the Ruşdiye schools (funded by the central government), and nearly 400,000 in foreign and Millet System elementary schools.

MAHDAWI, FADIL ABBAS AL-

[1915–1963]

Iraqi army colonel with a bachelor's degree in law; a cousin of Prime Minister Abd al-Karim Qasim.

Fadil Abbas al-Mahdawi was born in Baghdad to a poor family. He became known for his role as head of the special military court, commonly called the people's court. Established by Abd al-Karim Qasim, the court was infamous for its unorthodox and demagogic procedures. From 1958 to 1962, the court tried leaders of Iraq's monarchical regime (1958–1959), members of the Baʿth party who had tried to assassinate Qasim (1959), and army officers who attempted a coup against Qasim (1959). Mahdawi was executed, along with Qasim, by the officers who staged a successful coup against his regime in February 1963.

LOUAY BAHRY

MAHD-E ULYA, MALEK JAHAN KHANUM

[1805–1873]

Wife of Mohammad Shah Qajar, third monarch of Persia's Qajar dynasty, and mother of Naser al-Din Shah, the fourth monarch. She became known as Mahd-e Ulya upon her son's accession to the throne in 1848.

Malek Jahan Khanum Mahd-e Ulya was the daughter of Soleyman Khan E'tezad al-Dowleh Qajar Qovanlu; her mother was the daughter of Fath Ali Shah, second monarch of Persia's Qajar Dynasty. Her marriage to Mohammad Shah, third monarch of the Qajar dynasty, in 1819 united the two branches of the Qajar tribe, as decreed by Agha Mohammad Qajar, the founder of the dynasty. In addition to her son, she had a daughter, Malekzadeh Khanum, who married Mirza Taqi Khan Amir Kabir, who later became premier for her brother the shah. Mahd-e Ulya was well educated, knew Arabic, was an accomplished calligraphist, and was well versed in literature.

Mahd-e Ulya was entrusted with the affairs of state at the end of her husband's life, until the crown prince could reach the palace in Tehran from Tabriz, the traditional seat of the heir to the throne. She had ruled successfully and continued to be involved in politics after her son became shah but was displeased by her daughter's husband, Amir Kabir, who was trying to enact modern reforms as premier. Court intrigues caused Amir Kabir to lose the trust of the young shah, and he was dismissed, then exiled, and later put to death.

Mahd-e Ulya has been blamed for this action and remains an unpopular historical figure because of her association with the death of one of Persia's most remarkable ministers.

MANSOUREH ETTEHADIEH

MAHDI

Arabic term for the redeemer or messiah.

In Arabic, the term *al-mahdi* means "the guided one." For Islam, the term developed through medieval Shiʿite thought into a concept charged with genealogical, eschatological (referring to the end of the world), and political significance. By the eighth century, the *mahdi* would be characterized as a descendant of the prophet Muhammad, whose appearance as the redeemer, or messiah (from Hebrew *mashiah,* the anointed), presaged the end of the world and all earthly political and religious corruption.

Today, in Iraq and Iran, and in portions of Arabia and the gulf, the Shiʿa branch of Islam is represented by Twelver Shiʿites, who believe in the return of the hidden twelfth descendant of Muhammad as the *mahdi.* Until he reappears, Twelver Shiʿites believe that only their *mujtahids* (an elite group among their religious learned) have the power as the *mahdi*'s intermediaries to interpret the faith.

The concept of the *mahdi* is not central to the beliefs of Sunni Islam, but it has popular appeal. In 1881, Muhammad Ahmad (d. 1885) claimed to be the *mahdi* and led an uprising in the Sudan that outlasted him and was not put down by the British until 1898. *Mahdism* inspired unrest during the nineteenth century in both West and North Africa. In 1849, Bu Zian led a revolt in Algeria against taxation and the French occupation in the name of the *mahdi.*

MAHDIST STATE

Independent government formed in the northern Sudan from 1885 to 1898.

The Mahdist state was established in the Sudan in January 1885 by Muhammad Ahmad ibn Abdullah, the self-declared *mahdi* (the expected divine leader of Islam), after he routed the Turko-Egyptian government and armed forces. He died 22 June 1885 and was succeeded by Muhammad Turshain Abdullahi, who ruled as Khalifat al-Mahdi (successor of the Mahdi) until 1898. Abdullahi, the Mahdi's closest lieutenant since 1881, commanded the army, treasury, and daily administration during the rebellion. A member of the Taʿaysha tribe, he led the troops of the *baqqara* (cattle-herding) nomads of the western provinces of Kordofan and Darfur.

Khalifa Abdullahi transformed a tribally based, religious-nationalist uprising into a centralized bureaucratic state that controlled most of the northern Sudan. From 1885 to 1891, his rule was contested by the Ashraf (relatives of the Mahdi) and their supporters in the tribes that originated in the Nile valley *(awlad al-balad).* The Khalifa, whose troops controlled the capital of Omdurman and the corn-growing Gezira, prevented the Mahdi's kinsman Khalifa Muhammad Sharif ibn Hamid from being named ruler and deposed most of the military and administrative leaders of the awlad al-balad army. The Khalifa also feared losing control over the baqqara forces and even his Taʿaysha tribe and therefore, in March 1888, ordered them to march to the capital and serve as his standing army. There, the Taʿaysha had to be placated by massive supplies of food and gold, and their presence exacerbated the Khalifa's rift with the *awlad al-balad*. When the Ashraf attempted a final rebellion in November 1891, the Khalifa destroyed their military and bureaucratic power.

Natural calamities in 1889/90 led to famine and epidemics, which were exacerbated by the limited administrative capacities of the government and the food requirements of the troops. The exodus of the tribal forces also reduced grain and cattle production in the west while overburdening the Nile valley. Meanwhile, the Khalifa regularized the operations of the state treasury and reintroduced the taxes and administrative methods of the Turko-Egyptian period. Moreover, he organized a 9,000-person bodyguard, commanded by his son Uthman Shaykh al-Din. Called the Mulazimiyya, that half-slave force superseded the Taʿaysha tribe as the principal military support for the regime. The Khalifa thus isolated and destroyed any alternative power centers and consolidated his control over the state apparatus.

The territorial limits of the Mahdist state encompassed most of today's northern Sudan. Its control of the Nile river route through the south was tenuous: it only ruled Bahr al-Ghazal in 1885/86, and Belgian and French expeditions began to penetrate the south in the mid-1890s. The Khalifa controlled Darfur from 1887 to 1889, but the border region with Ethiopia remained contested and British troops controlled Suwakin port on the Red Sea. Seesaw battles with Ethiopia helped to open the way for Italy to consolidate control over Eritrea and

to capture grain-rich Kassallah, and for Britain to capture the Tukar region south of Suwakin.

The Mahdi had envisioned that his revolution would spread throughout the Muslim world. But the Khalifa's effort to march on Egypt was crushed at the battle near Tushki on the Egyptian frontier, 3 August 1889. (The Khalifa had sent messages inviting Britain's Queen Victoria, the sultan of the Ottoman Empire, and the khedive of Egypt to submit to the Mahdiyya.) The Khalifa then focused on consolidating his administration at home, rather than attempting to spread the message abroad.

The Mahdist state fell in 1898, not as a result of internal disintegration, but at the hands of the superior power of the Anglo-Egyptian army led by Lord Horatio Herbert Kitchener. His forces entered the Sudan in early 1896 from Egypt and constructed a railway system as they moved south. In April 1898, three thousand Sudanese died in the battle at Atbara; eleven thousand died in the battle of Karari, north of Omdurman, on 2 September 1898, which marked the end of the Mahdist state. The Khalifa escaped to the west, dying in the battle of Umma Diwaykarat, near Kosti, 24 November 1899.

The Mahdist movement was based on a blend of religion, social discontent, and antiforeign sentiment. In its short time span, the Mahdist state became bureaucratized and lost its religious aura. Although the tribes resented taxes and the controls imposed by government, the increasingly complex administration and judiciary stabilized the regime and enabled it to rule over wide expanses for its thirteen years.

ANN M. LESCH

MAHFUZ, NAJIB

[1911–]

Egyptian author; winner of the Nobel Prize for Literature, 1988.

Najib Mahfuz (also Naguib Mahfouz) was born in the Jamaliyya district of Cairo in 1911 and began writing at the age of seventeen. He studied philosophy at Cairo University, and is said to have been influenced by Balzac, Zola, Camus, Tolstoy, Dostoevsky, and Proust. He has written nearly forty novels as well as some fourteen volumes of short stories, many of which have been translated and published in English. The first Arab writer to have devoted most of his energies to one literary genre, he excels at the experimental novel, most notably in *al-Liss wa al-Kilab* (1961; *The Thief and the Dogs*), in which he employs modern techniques such as stream-of-consciousness. He has freely acknowledged his indebtedness to the early Fabian socialist Salama Musa, and although he later showed some skepticism about the sufficiency of reason as the arbiter of human affairs, there are no indications that he favors the revival of the traditional values of Islam, or that he has ever departed from a broad humanism. Mahfuz is as much a social historian or anthropologist as a writer who, like a fly on the wall, captures an unadulterated picture of daily life among Cairo's urban masses. He recreates a world he is intimately familiar with, lending a story of his creation to a space that is ethnographic. His novels are also highly political and historic. In *Miramar* to the *Cairo Trilogy,* he weaves a political history of Egypt between the wars, and yet his objective narration and use of a polyphonic narrative (in *Miramar*) prevents them from being one-sided. However, after translating James Baikie's *Ancient Egypt* into Arabic in 1932, Mahfuz was inspired to write a series of historical novels set in pharaonic times. One of them, *Radubis* (1943), which concerned a young pharaoh who loses the support of his people, was interpreted as an attack on Egypt's King Farouk. It was not until 1959, when he published *Children of Gebalawi* (also known as *Children of the Alley*), that his work was denounced—by religious leaders as blasphemous. It was banned in Egypt, and later published in Beirut. In 1994 Mahfuz was stabbed in the neck, presumably by religious extremists angered by his unorthodox depictions of religious prophets. Najib Mahfuz has more than fifty titles to his credit, more than a dozen of which

are available in translation. He was awarded the Nobel Prize for literature in 1988.

PIERRE CACHIA
UPDATED BY ROXANNE VARZI

MAHIR, AHMAD

[c. 1886–1945]

Egyptian politician; prime minister, 1944–1945.

Ahmad Mahir was one of the most important figures in the early history of the Wafd party in Egypt, which under the leadership of Saʿd Zaghlul came to prominence in Egyptian politics after World War I and the Egyptian Revolution of 1919. Son of Muhammad Mahir, Egypt's under-secretary of state for war, and brother of Ali Pasha Mahir, he attended Cairo University for a doctoral degree in law and economics.

Implicated in the November 1924 assassination of Sir Lee Stack, the British governor-general of the Sudan, but acquitted of all charges, Mahir occupied several ministerial positions in Wafd governments before being expelled from the party in January 1938, along with Mahmud Fahmi al-Nuqrashi, as a result of an internal party dispute. The two then founded the Saʿdist party (named for Saʿd Zaghlul). Mahir served as prime minister of Egypt from October 1944 to February 1945. During the preliminaries to the San Francisco conference at which the United Nations was to be founded, Mahir, believing that Egypt's future interests lay in participation, advocated a declaration of war against the Axis. On 24 February 1945 he was assassinated while presenting this proposal to the Egyptian parliament.

ROGER ALLEN

MAHIR, ALI

[1882–1960]

Egyptian politician.

While Ali Mahir and his younger brother, Ahmad Mahir, were both prominently involved in the politics of Egypt during the turbulent years between the two world wars, their careers took quite different paths. Ali was educated in the law and an early associate of Saʿd Zaghlul and the Wafd (Egyptian independence party) in the years following Egypt's anticolonial uprising in 1919 (Egypt had become a British protectorate). Following the squabble between Zaghlul and Adli Pasha in 1921, Mahir dissociated himself from the Wafd. In 1922, Britain had been forced to declare Egypt a sovereign state but reserved rights to the Suez Canal and to defend Egypt. With a Machiavellian instinct for political intrigue and survival, Mahir managed to occupy a large number of political positions in the ensuing decades, including service on three occasions as prime minister of Egypt.

Mahir was closely associated with the palace, being appointed chief of the royal cabinet in 1935. His services were always at the king's disposal whenever there was a need to express royal displeasure at outside pressure, most especially when the British were involved. Mahir's terms as prime minister were short. He served in the post for a few months in 1936 but was dismissed during the constitutional discussions that followed the death of King Fuʾad and the succession of King Farouk. Equally brief was his premiership from 1939 until June 1940, when his palace affiliations and King Farouk's preference for the Axis powers (Germany and its allies) led to British demands that Mahir be dismissed.

Following World War II, Ali Mahir continued to play his role as one of the éminences grises of Egyptian political life. It was hardly surprising that, following the uprisings in Cairo in January 1952, Mahir was one of several politicians asked to serve as prime minister in the period leading up to the July Revolution. It was Mahir who conveyed to King Farouk the command of the Revolutionary Council (chaired by General Muhammad Naguib) that the king abdicate. Following Farouk's abdication and departure for Italy in June 1953, Mahir continued to play a role as chairman of a constitutional commission. Its work was never completed, being

overtaken by the rapid developments of the ensuing months—the abolition of the monarchy and the proclamation of a republic under General Naguib, who turned it over to Gamal Abdel Nasser.

MAHMUD II

[1785–1839]

Ottoman sultan, 1808–1839.

Mahmud, the youngest of twelve sons of Sultan Abdülhamit I, ascended the throne of the Ottoman Empire on 28 July 1808. Demonstrating strong leadership and dedication to traditional values, he gradually assembled a coalition of religious and political leaders who desired to reestablish orderly government. During Mahmud's reign, the Ottoman Empire continued its decline in relation to the West: Its dependence on Europe increased, and it suffered military humiliation and territorial losses. But within the reduced confines of his realm, Mahmud's achievements were considerable. He resurrected the sultan's office and reformed and rejuvenated the central government. He arrested the disintegration of the state and initiated a process of consolidation. In spite of his intensive reform activities, Mahmud did not attempt to alter the basic fabric of Ottoman society, rather to strengthen it through modern means, and generally he succeeded in integrating the old elite into the new institutions. This was in keeping with his strong attachment to the ideal of justice in the traditional Ottoman sense. The sobriquet he selected for himself, "Adli" (Just, or Lawful), is an indication of the cast of his mind. Although he may not have intended it, Mahmud's reforms produced basic change and launched Ottoman society on the course of modernization in a final and irrevocable manner.

Wars with Russia (1806–1812, 1828–1829) resulted in the Ottomans ceding to Russia the area of Bessarabia (Treaty of Bucharest, 28 May 1812) and subsequently the Danube delta in Europe and the province of Akhaltsikhe (Ahisha) in Asia (Treaty of Adrianople, 14 September 1829). The latter treaty also required the Ottomans to pay Russia a sizable indemnity and to recognize the autonomy of Serbia, Moldavia, Wallachia, and Greece under Russian protection. Later, as a result of negotiations among the European powers, Greece became an independent monarchy (July 1832).

During his efforts to quell the rebellion in Greece (1821–1828), Mahmud appealed to Muhammad Ali, his governor of Egypt, for assistance. Although Egypt's newly formed, European-style army initially was successful (1825–1827), the plight of the Greeks elicited European intervention. Britain, France, and Russia sent their fleets to Greece, and on 20 October 1827, inside the harbor of Navarino, they destroyed an Ottoman-Egyptian fleet. Muhammad Ali sought compensation for his losses in Greece and demanded that Mahmud cede to him the governorship of Syria. When this request was rejected, Egypt's army invaded Syria (October 1831), defeated three Ottoman armies, marched into Anatolia, occupied Kütahya (2 February 1833), and was poised to march on Constantinople. Mahmud sought help from the great powers, but only Russia dispatched a naval force to defend Constantinople (February 1833). This induced Britain and France to offer mediation that resulted in the Peace of Kütahya (8 April), which conferred on Muhammad Ali the governorship of Syria and the province of Adana.

Despite military disasters, Mahmud proceeded with his reform measures, continuing to focus on centralization of government and greater efficiency in its work. Since early in his reign, he had introduced significant improvements in the military, especially in the artillery and the navy. In the spring of 1826, with his authority restored at the capital and in many provinces, Mahmud decided to reorganize part of the janissary corps as an elite unit of active soldiers called Eşkinciyan. Mahmud enlisted the support of the religious and bureaucratic elite as well as the janissary officers themselves. Nevertheless, on the night of 14 June the janissaries rose up in arms. Mahmud mustered loyal troops, and on 15 June the rebellion was crushed with considerable

bloodshed. Two days later an imperial decree abolished the janissary corps.

The suppression of the janissaries had an enormous impact on Ottoman society and also in Europe, where the Janissary Corps had been viewed for five centuries as the military strength of the Ottoman Empire. In an effort to gain universal approval, the regime called the incident "the Beneficial Affair" *(Vaka-i Hayriye).* The Eşkinciyan project was abandoned in favor of a more ambitious plan calling for the formation of an entirely new army organized and trained according to Western models. Military defeats and the apparent failure of the government's attempts to reform the army rekindled unrest and rebellion in far-flung provinces, especially in Bosnia, Albania, eastern Anatolia, and Baghdad. The government was generally successful in suppressing these uprisings by employing the newly disciplined troops, who proved effective at coercion and centralization.

In 1835 Mahmud reconstituted the entire government into three independent branches: the civil bureaucracy, the religious-judicial hierarchy, and the military. Their respective heads were considered equal and were responsible directly to the sultan. The aggrandizement of the court, now the seat of all power, was mainly at the expense of the grand vizier's office. To underscore the reduction of his authority, in 1838 the grand vizier's title officially was changed to prime minister. At the same time, his chief assistants were given the title of minister. Consultative councils were established to supervise military and civil matters and to propose new legislation. The highest of these, the Supreme Council for Judicial Ordinances *(Meclis-i Vala-yi Ahkam-i Adliye),* established in 1838, acted as an advisory council to the sultan.

The military, which during Mahmud's last years was allocated about 70 percent of the state's revenues, continued to be the focal point of reform. Most significant was the gradual extension of the authority of the commander-in-chief. His office came to combine the roles of a ministry of war and general staff, and was in charge of all land forces. The navy continued to operate independently under the grand admiral, whose administration comprised a separate ministry.

Mahmud II came to power in 1808, after the deposition and murder of his brother, Mustafa IV. His most notable achievement was the destruction of the janissaries, an elite Ottoman fighting corps that had become inefficient and rebellious. **© GETTY IMAGES. REPRODUCED BY PERMISSION.**

In May 1835 an Ottoman expeditionary force occupied Tripoli in Africa, claiming it back for the sultan. In the following years, Ottoman fleets appeared several times before Tunis, but were turned back by the French navy. In the spring of 1839, believing that his army had sufficiently recovered and that a general uprising in Syria against Egypt's rule was imminent, Mahmud precipitated another crisis. On 24 June the Egyptians decisively routed the Ottoman army at Nizip. Mahmud died on 1 July, probably before learning of his army's defeat.

MAHMUD DURRANI

[1765–1829]

Amir of Afghanistan, 1800–1803, 1809–1818.

Mahmud Durrani was one of twenty-one sons of Afghan Amir Timur Shah (1773–1793) and the second oldest. Mahmud was governor of Herat, and in 1800 he successfully fought his half brother Zaman Shah for the Kabul throne. Content to leave the governing to Barakzai ministers, Mahmud was ousted by another half brother, Shah Shuja, the seventh son of Timur. Mahmud was imprisoned but escaped to Kandahar in 1809 and regained the Kabul throne in 1813. Once again driven from power in 1819, he retired to Herat, where he died in 1829; according to some reports the cause of death was malaria, but others suggest that he was poisoned by his ambitious son Kamran.

Mahmud's reign marked the beginning of internal conflict and civil war, which was to continue throughout the nineteenth century, until the reign of Abdur Rahman (1880–1901). During this period, much of the territory originally belonging to Afghanistan was lost. Mahmud was a weak leader who preferred to enjoy the perquisites of royalty rather than tending to affairs of state.

MAHMUDIYYA CANAL

Artificial waterway in Egypt.

Built between 1817 and 1820 at the command of Muhammad Ali, viceroy of Egypt, this navigation canal connected Alexandria with the delta village of al-Atf and hence with Bulaq, the port city of Cairo. Its construction cost 35,000 purses (7.5 million French francs). Possibly as many as 300,000 peasants were conscripted to dig it during the period of concentrated work in 1819, costing between 12,000 and 100,000 casualties. Owing to the Nile floods, the canal has been dredged often, and annual improvements have been made since its construction. It also provided some summer irrigation and some of Alexandria's drinking water supply.

MAHMUD, MUHAMMAD

[1877–1941]

Egyptian politician and prime minister.

Born into a family of wealthy landowners in Upper Egypt and educated at Oxford University in England, Muhammad Mahmud was one of the original members of the Wafd. Along with Saʿd Zaghlul and two other Egyptian leaders, he was banished by the British to Malta during the anticolonial uprising in March 1919. In 1922, after Britain declared Egypt's independence, he split from the Wafd and became a leader in the Liberal Constitutionalist Party. King Fuad appointed him prime minister in June 1928, and he ruled without a parliament for eighteen months under a "law and order" slogan. During the 1930s he and his party steered a middle course between the royalist government of Ismaʿil Sidqi and the popular Wafd Party.

In 1937, when young King Farouk dismissed the Wafdist cabinet of Mustafa al-Nahhas, Mahmud again became prime minister, heading a cabinet made up of minority parties that excluded the Wafd. His res-

ignation in August 1939 was attributed to ill health but was, in fact, due to Ali Mahir's political intrigues and the king's partiality toward Germany at the onset of World War II.

MAHMUD, MUSTAFA

[1921–]

Muslim physician, author, philanthropist, and television personality.

Born and raised in Tanta, Mustafa Mahmud studied at the Faculty of Medicine at Cairo University. He practiced medicine from 1952 to 1966 and wrote a book, *Allah wa al-insan* (God and the human being), that was banned by a state court during the Nasser era for its materialism. After several years of adherence to leftist, secular, and materialistic values, he gave up his medical practice to write books, including a commentary on the Qur'an, and he gradually became a convinced Muslim, as described in his autobiography, *Rihlati min al-shakk ila al-iman* (My journey from doubt to belief), first published in 1972. Concurrently he began to host a television series called *Al-Ilm wa al-Iman* (Science and faith), portraying the phenomena and the creatures of the natural world and proving God to be their primary cause. The series became immensely popular with Egypt's educated middle class. Dissatisfied with the efficacy of doctors and hospitals in caring for sick people, he raised the funds necessary to build a mosque in the upscale Muhandisin district of Cairo with an attached charitable association, including a hospital and polyclinic, in 1975. This organization now includes an aquarium, library, observatory, geological museum, and seminar hall. While managing this complex of religious institutions, he has continued to write and to speak on television. Among his publications are two books that have been translated into English, *Marxism and Islam* and *Dialogue with an Atheist.* Drawing on charitable contributions by Egyptians and by Arabs from the Gulf states, he has successfully provided generous benefits to a large professional staff and low-cost health care for thousands of patients, independent of the Egyptian government. He has successfully avoided any involvement in revolutionary Islamist movements and forthrightly condemns terrorism. Although not a member of the *ulama,* Mustafa Mahmud has become one of Egypt's most influential and respected authorities on Islamic beliefs and institutions because of his reconciliation of science and faith in terms understandable to modernized Egyptians.

MAHMUD OF SULAYMANIYA

[1878–1956]

Kurdish leader.

Born to a prestigious family of Islamic shaykhs in Barzinja (Ottoman Kurdistan, later Iraq), Mahmud Barzinji became the main adversary of Britain's efforts to integrate the Kurds of the *vilayet* (province)

of Mosul into Iraq. Proclaiming himself king of Kurdistan in the city of Sulaymaniya, he led several revolts from 1918 to 1930—first against the British then against the new Iraqi monarchy.

MAIMON, YEHUDAH LEIB HACOHEN
[1875–1962]

Religious Zionist leader, author, and first Israeli minister of religious affairs.

Yehudah Leib Hacohen Maimon was born in Markuleshti, Bessarabia, Russia. His parents supported the Lovers of Zion (Horevei Zion; also Hibbat Zion) movement and he was exposed to classic religious Zionist writing from an early age. He studied in the yeshivas (Jewish religious schools) of Lithuania, developing extensive ties with other religious Zionists. One of his associations was with Rabbi Isaac Jacob Reines, founder of the Mizrahi party within the World Zionist Organization, and Maimon rose to leadership there. He immigrated to Palestine in 1913, was arrested and imprisoned, then expelled by the Turks in 1915. He returned to Palestine in 1919, by permission of the British, after spending some years in the United States.

Along with Rabbi A. I. Kook, Maimon established the chief rabbinate in Palestine. In 1935, he was elected Mizrahi representative to the executive of the Jewish Agency. Maimon then founded the Mossad Harav Kook educational institute and publishing house, where he edited the periodical *Sinai.* As Israel's first minister of religious affairs, 1948–1951, he set policy regarding a number of major public religious issues. Maimon also authored many books on religious Zionism and major rabbinic figures.

CHAIM I. WAXMAN

MAJALI FAMILY

Prominent Jordanian political family.

The Majali family has been one of two leading Sunni Muslim families in the town of al-Karak in south-central Jordan (the other being the al-Tarawina family). Family members have long served both the Ottoman Turks and the Hashimite family that has ruled Jordan since 1921 and have occupied senior positions in the government and military.

Rufayfan (d. 1945) was decorated by the Ottomans during World War I. He later headed the self-described "Arab Government of Moab" in al-Karak, with British assistance, from 1920 to 1921. After the establishment of Transjordan, he became a significant figure in the socioeconomic and political life of south-central Jordan. He founded the Moderate Liberal Party in 1930 and sat in the Transjordanian legislative council from 1931 until his death in 1945.

Habis (1910–2001) joined the Jordanian Arab Legion in 1932. In the Arab–Israel War of 1948, he commanded the legion's fourth battalion, which defeated the Israelis at Latrun. Thereafter, Majali headed the Royal Guards unit of the army and was aide-de-camp to King Abdullah I ibn Hussein from 1949 to 1951. In 1956 he was appointed assistant chief of staff of the army following the failed coup led by Ali Abu Nuwwar. Majali was chief of staff from 1957 to 1965 and chairman of the joint chiefs of staff from 1965 to 1967. He was appointed defense minister after the Arab–Israel War of 1967, but returned to his post as chief of staff during the Black September crisis of 1970. He was later appointed to the Jordanian senate, and died in April 2001.

Hazza (1916–1960) served as minister of agriculture (1950–1951), justice (1951 and 1954–1955), and interior (1953–1954 and 1955). A rising young star on the political scene, he first served as prime minister in 1955 when King Hussein tried to join the Baghdad Pact, but quickly resigned following popular protests. He served both as prime minister and foreign minister starting in May 1959, but was assassinated in August 1960 in a bomb attack generally believed to have been carried out by agents of the Egyptian-Syrian United Arab Republic. His daughter, Taghrid (1950–), married Prince Muhammad ibn Talal, brother of King Hussein, in 1981.

Abd al-Salam (1925–) received his medical degree from the Syrian University in 1949. He was director of medical services for the Jordanian armed forces, president of Jordan University (1971–1976), and minister of health (1969–1970 and 1970–1971). He served as advisor to King Hussein starting in the late 1980s. Majali was prime minister from 1993 to 1995, during which time he signed the 1994 Jordanian-Israeli peace treaty. He later was prime minister from 1997 to 1998, after which he was appointed to the Jordanian senate.

Abd al-Hadi (1934–) was chief of staff of the Jordanian army from 1979 to 1981, after which he served as ambassador to the United States from 1981 to 1983. Al-Majali returned to Jordan to direct the Public Security Directorate (police) from 1985 to 1989. In 1990 al-Majali formed the Jordanian Covenant Party (Hizb al-Ahd al-Urdunni) to express pro-regime, East Bank nationalist feeling in opposition to leftist and Palestinian-oriented parties. He served in parliament from 1993 to 1997 and was minister of public works from 1996 to 1997. In 1997 his party merged with eight other centrist parties to form the National Constitutional Party. Al-Majali was speaker of the house of delegates in 1997.

MAJALI, HAZZA AL-

[1918–1960]

Jordanian prime minister.

As a member of a very influential clan from the Karak area of southern Jordan, Hazza al-Majali had a strong popular base in Jordan but was viewed as a threat by Palestinians. He was asked by King Hussein ibn Talal to form a government in December 1955 that would push through Jordan's participation in the Baghdad Pact. He was forced to resign, however, a few days later as a consequence of violent demonstrations against joining. He was known to be strongly pro-regime and encouraged cooperation with the West, particularly the United States, Britain, and Germany, who were supporting Jordan at the time both financially and technically. Yet Majali was considered to be progressive for his times because of his activism in parliament. As a member of parliament in 1953, he helped found the National Socialist Party, consisting of thirteen members of parliament. He led them in lively opposition to then Prime Minister Tawfiq Abu al-Huda, forcing him to call for new elections in 1954 rather than face a no confidence vote. He quit the party, however, after Sulayman al-Nabulsi had joined and transformed it into a left-leaning, pro-Nasser party. Majali was assassinated on 29 August 1960, fifteen months into his term as prime minister. During his term, he had earned a reputation for taking firm measures against communism and subversive activities. He was killed by a bomb placed in his office; it was widely assumed to have been the work of agents of the United Arab Republic.

MAJLES

See GLOSSARY

MAJLES AL-SHURA

National assembly of Iran.

The history of a representative, elected assembly in Iran dates to the Constitutional Revolution, when the Majles was stipulated as the legislative branch of government in the constitution. The first elections were held in the summer of 1906, and the new Majles convened in October. Except for a brief period from its inception to the end of World War I, and again from 1941 to 1953, the Majles in monarchical Iran did not enjoy a significant degree of autonomy, and it exercised little initiative in the nation's political life. Women gained suffrage in 1963, and twenty-four assemblies met from 1906 to 1978.

After the Iranian Revolution of 1979, the Majles al-Shura-ye Melli (National Assembly) was

renamed the Majles al-Shura-ye Islami (Islamic Assembly), and it has played a prominent role in political affairs. The first postrevolutionary Majles opened on 28 May 1980 and elected Ali Akbar Hashemi Rafsanjani as its speaker. Its most significant act was the impeachment of the Islamic Republic's first president, Abolhasan Bani Sadr, in June 1981. After Rafsanjani became president in 1989, Mehdi Karrubi succeeded him as speaker of the Majles, a position he held until 1992, when he failed to win a seat in that year's elections. Ali Akbar Nateq-e Nuri then served as speaker until he was defeated in the 2000 Majles elections. Karrubi returned to the Majles in those elections and again was elected as speaker.

MAJLIS SHURA AL-NUWWAB

Egypt's first quasi-representative assembly.

Established in 1866 by a decree from Khedive Isma^cil of Egypt, the *majlis* was intended to be a consultative council that would advise him on administrative matters. But he may have been driven by his growing financial straits to co-opt the landowning notables to raise taxes. Its seventy-five members, barred from government posts while they held office, were elected for three-year terms. Timid at first, they grew more assertive as they gained experience and often passed resolutions for administrative reforms. Nevertheless, they met for only three months at a time and were not even convened in 1872, 1874, and 1875.

While its role was subordinated to the other deliberative bodies, the Privy Council and the Council of Justice, which were smaller and made up of powerful government officials, the *majlis* emerged as one of the standard-bearers of Egyptian nationalism in the era of the Urabi revolution. In part, this happened because the Egyptian landowners were, along with the peasants, victims of Isma^cil's mismanagement and the financial stringencies adopted by Khedive Tawfiq and the Dual Control.

MAKDASHI, HESNA

Lebanese publisher and activist.

Originally from Lebanon, Hesna Makdashi has been active in the Egyptian publishing world since the late 1970s. In Cairo in 1992, together with four other Arab women, Makdashi founded Nour, the first publishing house to specialize in works by and about Arab women. In a publication issued by Nour in 1996, Makdashi reviewed the aims of the publishing house. She stated that the magazine should encourage women's literary and critical production, and also serve as a venue for the announcement of books by women and what is written about them. According to Makdashi, a third aim of the Nour publishing house was to organize an Arab women's book fair every two years that would serve as a platform for discussing the situation of Arab women and featuring their intellectual and creative achievement. Nour publishing house raised the funds to sponsor the first such exhibition in November 1995. The exhibit was held in the prominent Hanager Cultural Center in Cairo and attracted publishers from all over the Middle East. Makdashi served as managing editor of the magazine *Nour,* which featured articles on women writers, announcements and reviews of their literary and scholarly work, and published papers and responses emanating from the book fairs it sponsored.

MAKHMALBAF FAMILY

An Iranian family of film directors, screenplay writers, and producers.

One of Iran's internationally acclaimed film directors in the post-revolutionary period is Mohsen Makhmalbaf. His films are deeply social and deal with issues as diverse as an attack on police in the autobiographical *Bread and the Alley,* where he introduced innovations to the neorealist genre by having the original police officer play himself; to jail in *Boycott*; to the aftermath of war in *The Marriage of the Blessed*; to the situation of Afghan refugees in Iran in *The Bicycle Run*; to film itself in *Saalam Cinema.* He has also made art-house films, including *Once upon a Time Cinema.* He was the subject of a film by a fellow film director, Abbas Kiarostami; *Close-up* is the true story of an ordinary man who impersonated Makhmalbaf to gain access to a wealthy Tehran family. Makhmalbaf caught international attention with his colorful film *Gabbeh,* after which he took a break from filmmaking (in 1996) to start the Makhmalbaf film house, where his wife and children have learned the arts of filmmaking, photography, and writing, and excelled in them. Samira Makhmalbaf, his oldest daughter, became at eighteen the youngest filmmaker ever to enter a film in the Cannes Film Festival with *The Apple.* His wife Marziyeh Meshkini won international acclaim for her film, *The Day I Became Woman.* His son, Maysem, is a photographer and has produced the stills for the family's films as well as a book on his father's film *Silence* and a documentary on Samira's film *The Blackboards.* Makhmalbaf's youngest daughter, Hana, born in 1988, has already made two films and published poetry. Her documentary on Afghanistan debuted at the Cannes Film Festival in 2003.

MAKHMALBAF, MOHSEN
[1957–]

Major Iranian filmmaker of the post-1979 era.

Mohsen Makhmalbaf's career as a filmmaker has never veered far from his career as a political activist and writer—only the genres and the political ideologies have changed over time. Born in Tehran, at the age of fifteen he began an Islamic militia organization. Later, he wounded a police officer in the shah's regime, for which he was imprisoned in 1974 and released with the Iranian Revolution of 1979. Many of his films blur the lines of social realism, fiction, and his own life story: *Boycott* (1985) is based on his experience in prison; *Moment of Innocence* (1995), on the wounding of a police officer (the real police officer plays a role in the film). Makhmalbaf is an innovator of the Iranian new wave, as seen in his films *Gabbeh* (1995) and *Salaam Cinema* (1994). He is also a visual activist concerned with domestic social issues such as the failing economy, as seen in *The Peddler* (1986); Afghans in Iran and abroad, as seen in *The Cyclist* (1987), *Kandehar* (2000), and *Afghan Alphabet* (2002) (as well as in his writings about and activism in Afghanistan); and the aftermath of the Iran-Iraq War, as seen in *Marriage of the Blessed* (1988). He is also an innovator of art-house cinema, as evidenced in films such as *Images from the Qajar Dynasty* (1992). In 1996 he began the Makhmalbaf Film House in Tehran, where he is educating his two daughters, son, and wife in the art of filmmaking and social awareness.

MAKKI, HASAN MUHAMMAD

[c. 1935–]

Yemeni government official.

Born in the mid-1930s, Hasan Muhammad Makki came from a prominent merchant family from the port of Hodeida on the Red Sea; he was a member of the Famous Forty—the boys sent abroad for education by Imam Yahya in 1947—and received his secondary and university education in Egypt and Italy, respectively. Makki held high government office in the Yemen Arab Republic, in each of its five regimes after the 1962 revolution, as well as in the Republic of Yemen after the unification of the two Yemens in 1990; he did so despite his relatively advanced and leftist political views and reputation. In the Yemen Arab Republic he was prime minister during a turbulent time in 1974, president of Sanʿa University from 1975 to 1976, and deputy prime minister or foreign minister on several occasions between the mid-1960s and the mid-1980s. He was first deputy prime minister during the first years of the Republic of Yemen, after Yemeni unification in mid-1990; and in 1994, after the brief civil war, he was appointed adviser to the president. Seriously wounded in the Siege of Sanʿa in 1968 and the victim an assassination attempt during the politically tumultuous spring of 1994, he has been in ill health much of the time since the mid-1990s.

MAKSOUD, CLOVIS

[1928–]

Lebanese lawyer, journalist, and diplomat.

Clovis Maksoud (also Maqsud) was born in 1928 into a Christian family. He completed his graduate studies at the American University of Beirut. Afterwards, he obtained a J.D. from George Washington University and did postgraduate studies at Oxford University. Between 1961 and 1966 Maksoud was the League of Arab States' chief representative in India. Following his diplomatic stint Maksoud went back to journalism, and from 1967 to 1979 he served as the senior editor of the Egyptian newspaper *al-Ahram* and chief editor of the Lebanon-based *al-Nahar Weekly.* Maksoud has authored several articles and books on the Middle East, including: "The Meaning of Non-Alignment," "The Crisis of the Arab Left," "Reflections on Afro-Asianism," and the "Arab Image." Currently, Maksoud is professor of international relations at American University in Washington, D.C., where he also is director of the Center for the Global South. He is also a member of the advisory group of the United Nations Development Program (UNDP).

MAKTUM FAMILY, AL-

Head of Al Bu Falasa tribe and a member of the Banu Yas federation, the ruling family of the Dubai emirate.

The founder, Maktum ibn Buti, seceded from Abu Dhabi in 1833 and established himself independently in Dubai. The rulers of the family were well known for their skill in diplomacy and their interest in trade. The most prominent of them were Rashid ibn Maktum (1886–1894) and Maktum ibn Hashr (1894–1906), during whose reign the Dubai port flourished, particularly in 1902, after the British-Indian Steam Navigation Company made it a port of call. As a result of his encouragement, the rich immigrant merchants from the Lingeh port on the Persian coast came to reside in Dubai. In 1938, because of a reform movement in the emirate, the Dubai municipality was established during the rule of Saʿid ibn Maktum (1912–1958). His son Rashid created and ruled (1958–1990) modern Dubai, becoming vice-president of the United Arab Emirates when it was formed in 1971 and prime minister in 1979.

MALAʾIKA, NAZIK AL-
[1923–]

Iraqi poet and critic.

Nazik al-Malaʾika was born in 1923 in Baghdad, and is one of the greatest Arab poets of the twentieth century. One of the earliest creators and advocates of what is known in the Arab world as modern free poetry, this Iraqi woman influenced the course of contemporary Arabic poetry. Al-Malaʾika's mother was a poet, and her father wrote a twenty-volume encyclopedia on Arabic grammar and literature. In her youth, al-Malaʾika was influenced by the modern poetry of Mahmud Hasan Ismaʿil, Badawi al-Jabal, Amjad al-Tarabulsi, Umar Abu Risha, and Bishara al-Kuli, and also by the contemporary music of Umm Kulthum and Mohammed Abdul Wahab. In 1947 she broke free from the constraints of traditional Arabic poetry and composed the poem "Cholera" in lines of unequal length. Only in this new nonclassical form, she would write, could her emotions be expressed.

Al-Malaʾika has been primarily a poet of blank verse, although she has not strayed entirely from traditional poetic forms. In 1949, her second collection of poems, *Sparks of Ashes,* was published, including a controversial introduction explaining her new poetic theories. Her work was widely read and criticized across the Arab world, altering the debate on Arabic poetry. She became a regular contributor to leading poetry and critical journals in Egypt, Lebanon, and Syria, and soon numerous poems using the same form were in print, many dedicated to al-Malaʾika herself. In 1954 she wrote one of many essays dealing with the repression of women in Arab patriarchal society. Her essay, "Women between the Extremes of Passivity and Ethical Choice," is considered a feminist classic.

A significant event in al-Malaʾika's life was the 1958 Iraqi revolution, which she commemorated with joyous poetry comparing Iraq to an orphan now in a "paternal embrace." The revolution, however, did not yield what it promised, and al-Malaʾika fled to Beirut. When she later returned to Iraq, she and her husband founded a university in Basra where she taught and wrote. She continued to publish for decades, living in Iraq, Kuwait, and Egypt. Her poetry continued to evolve, securing her a place in the canon of Arabic literature.

MALIK

See GLOSSARY

MALIK, CHARLES HABIB
[1906–1987]

Lebanese academic, philosopher, and diplomat.

Born 11 February 1906 to a Greek Orthodox family from Kura in Lebanon, Malik was schooled at the American Tripoli Boys' High School, then attended the American University of Beirut (AUB), Harvard University, and the University of Freiburg. Throughout his academic career, Malik taught philosophy, mathematics, and physics at AUB, where he was also dean. During the 1958 Lebanese Civil War, Malik was president of the 13th session of the General Assembly of the United Nations. Foreign minister (1956–1958) during the presidency of Camille Chamoun, Malik alienated many Lebanese politicians because of his pro–United States and pro-Western stands. He accused Egypt, Syria, and the Palestinians of fomenting trouble in the Land of Cedars.

During the Lebanese Civil War of 1975–76, Malik joined a coalition of conservative Christian leaders known as the Lebanese Front. In several statements and publications, Malik expressed his full awareness of the tragedy of the Palestinian people, but he was very distrustful of the intentions of Muslim leaders in Lebanon. Malik feared that

Lebanon as a land of Christian-Muslim coexistence was bound to be destroyed by outside interference, mainly from Syria and radical Palestinian forces. Malik authored several books and publications and was awarded honorific titles and degrees.

GEORGE E. IRANI
UPDATED BY MICHAEL R. FISCHBACH

MALIKI SCHOOL OF LAW

One of the four approaches (called schools) to Sunni Muslim law.

The Maliki school of law was named after the traditionalist and lawyer Malik ibn Anas (died 795) of Medina (in today's Saudi Arabia). Malik's active career fell at a time when the prophetic sunna (record of the utterances and deeds of the Prophet) had not yet become a material source of the law on equal footing with the Qurʾan and when *hadith* (prophetic traditions) were still relatively limited in number. In his legal reasoning, therefore, Malik made little reference to prophetic traditions and more often resorted to the *amal* (normative practice) of Medina in justification of his doctrines. As expressed in his *Muwatta,* in which he recorded the customary Medinese doctrine, Malik's reliance on traditions as well as his technical legal thought lagged behind those of the Iraqis.

Once the transition from the geographical to the personal schools took place, Malik became the eponym of the former Hijazi or Medinan school. This may be explained by the fact that Malik's writings represented the average doctrine of that geographical area, coupled perhaps with the high esteem in which he was held as a scholar.

Like the namesake of the Hanafi school of law, but unlike the founder of the Shafiʿi school of law, Malik did not provide his school with a developed body of legal doctrine. It was left for his successors, chiefly in the ninth and tenth centuries, to articulate a legal system particular to the school. Among the most important positive law works of the school are: *al-Mudawwana al-Kubra* by Sahnun (died 854); *al-Risala* by Ibn Abi Zayd al-Qayrawani (died 996); al-Tahdhib, an authoritative synopsis of *al-Mudawwana,* by Abu Saʿid al-Baradhi'i (died probably after 1039); *al-Bayan,* a commentary by Ibn Rushd (died 1126) on *al-Utbiyya* of al-Utbi (died 869); *Bidaya al-Mujtahid wa Nihaya al-Muqtasid* by Ibn Rushd al-Hafid (died 1189); *al-Mukhtasar* by Sidi Khalil (died 1365); *al-Mi'yar al-Mughrib wa al-Jami al-Mu'rib* by al-Wansharisi (died 1508), one of the most important *fatwa* collections in the school. Further, in writing on legal theory *(usul al-fiqh),* the Malikis were not as prolific as their Hanafi and Shafiʿi counterparts. Three of their most distinguished legal theoreticians are: Ibn Khalaf al-Baji (died 1081), the author of *Ihkam al-Fusul*; al-Qarafi (died 1285), whose main work on the subject is *Sharh Tanqih al-Fusul,* a commentary on the work of the Shafiʿi jurist and theologian Fakhr al-Din al-Razi; and Abu Ishaq al-Shatibi (died 1388), who elaborated in his *Muwafaqat* one of the most innovative legal theories that is highly regarded by modern legal reformers.

Since early medieval Islam, Malikism succeeded in spreading mainly in the Maghrib (North Africa) and Muslim Spain, being now the dominant doctrine in all Muslim African countries. In Egypt, it has traditionally shared influence with Shafiʿism. Maliki presence may also be found today in Bahrain and Kuwait.

WAEL B. HALLAQ

MALKOM KHAN, MIRZA

[1833–1908]

Persian diplomat, political philosopher, and advocate of modernization.

The son of Mirza Yaʿqub, an Armenian from Jolfa who had converted to Islam, Mirza Malkom (also Malkam, Malkum) Khan studied in Paris, where he became familiar with French social and political theories, especially those of Auguste Comte. On his

return to Persia, he was employed as a translator for the European teachers of the Dar al-Fonun, the modern school of higher learning inaugurated in 1851 by Persia's modernizing premier, Amir Kabir.

In 1857, Malkom wrote the first of his many pamphlets, entitled *Ketabcheh-ye Ghaybi* (The invisible booklet), in which he discussed the urgent need for modern reforms for Persia, if it were to survive as an independent nation. He also organized the Faramush-Khaneh (House of oblivion), a pseudomasonic (secret) organization, which incurred the suspicion of the Naser al-Din Shah. Malkom was exiled in 1861 and went to Baghdad. There he was befriended by Mirza Hoseyn Khan, the Persian ambassador to the Ottoman Empire, who agreed with him about modernization and reforms and who obtained his pardon from the shah. Malkom was then made a counselor in the Persian embassy in Istanbul in 1864, during the early modernization period of Ottoman Turkey, called the Tanzimat. In 1871, Mirza Hoseyn was recalled to Tehran and appointed minister of justice, then prime minister. Malkom was appointed minister to Britain.

From London, Malkom continually addressed the shah and his ministers about the need for modernization reforms. His arguments were not always original, but they were simply argued, easily understood, and effective—he criticized the government, but spared the shah. Some of his suggestions were attempted, but the experiment did not last, since the shah grew tired of the complications of change and the ongoing rivalry at court. He lost interest in all this and became more tyrannical toward the end of his reign.

While Malkom was in London, the shah took three trips to Europe, visiting London each time, where several important concessions were granted to European and British companies. Malkom was involved in their transactions and had the opportunity to benefit financially each time. In 1889, the shah granted a lottery concession to an English company, which came under attack when he returned to Persia, and the concession was canceled. Malkom, however, who knew this, did not reveal the cancellation until he had sold out his own shares.

This unethical situation cost him his position, his title, and his salary. In 1890, he began to publish a pamphlet entitled *Qanun* (The law) in London. In it his arguments turned to criticism, then outright attack, not even sparing the shah. He also mentioned secret societies that were working for reform and suggested that the natural leaders of the people were by right the *ulama* (body of mollas), and that they should lead the movement. It has since been suggested that these secret societies were not actually organized but that Malkom was saying they should be. *Qanun* was smuggled into the country and enjoyed a widespread popularity, making its mark on a generation that was soon to become involved in the Constitutional Revolution.

After the assassination of Naser al-Din Shah in 1896, Malkom was restored to favor and was appointed minister to Italy. He lived to see the beginning of the Constitutional Revolution in 1906. Despite a lifetime of argument in favor of reform, his role in the lottery concession continues to sully his name. Notwithstanding such criticism, his influence on the shah, the politicians of his day, and the modernization of Persia cannot be denied.

MAʿLOUF, AMIN

[1949–]

Prominent Lebanese novelist and journalist now living in and a citizen of France.

Amin Maʿlouf (also Maʿluf) was born in Beirut in a Catholic family of journalists and writers. His father, Rushdi Maʿlouf, was and is still considered one of Lebanon's major publicists. Following his schooling, Maʿlouf joined *al-Nahar,* a major Lebanese daily, and traveled to several countries. In 1977, because of the violence brought by the Lebanese Civil War, Maʿlouf fled with his family to Paris. Maʿlouf is a prolific novelist and writer, and most of his fiction is based on historical events. His books have been

translated into more than twenty languages. His first book, *The Crusades through Arab Eyes,* has become an important reference, especially after the terrorist attacks of 11 September 2001. Among his other novels are *The Gardens of Light* (1991) and *Leo the African* (1986), a narrative of the life and travels of a geographer who lived in sixteenth-century Spain and who, after roaming Africa and the Mediterranean, ended by living in Fez, Morocco. In 1993, Maʿlouf was awarded the prestigious French literary award Le Prix Goncourt for *The Rock of Tanios.* In this book, based in nineteenth-century Lebanon, Maʿlouf details the lives of a Lebanese *shaykh* and his out-of-wedlock son. The novel is filled with local myths, romance, international intrigues, and political games. His more recent novels include *The First Century after Beatrice* (1992) and *Balthasar's Odyssey* (2000). In 1998, Maʿlouf published an essay entitled *Les identités meutrieres* (translated as *On Identity*), which draws on his multilayered identity to explain how fluid identities have become in the age of globalization. In 2000, he wrote an opera libretto, *L'amour de loin (Love from Afar)* based on a twelfth-century love story set in Tripoli (Lebanon) during the Crusades. The opera was performed in Salzburg (2000) and Paris (2001); the music was composed by the Finnish composer Kaija Saariaho.

GEORGE IRANI

MAMLUKS

Rulers in Baghdad from 1749 to 1831.

The Mamluks emerged under Hasan Pasha (1704–1724) and his son Ahmad Pasha (1724–1747), both *wali* (provincial governor) of Baghdad. Hasan Pasha's intent was to strengthen his personal base of power by creating a group of disciplined military and civil functionaries committed uniquely to him and not to the government at Istanbul or the Arabs of Baghdad. A page corps was formed, originally recruited from local families but later composed almost exclusively of slaves (mamluks) imported from the Caucasus and Georgia. These slaves were instructed in reading and writing, but also horsemanship and swimming, a combination of martial and bureaucratic virtues making them superior to Turks and Iraqis as civil servants. Their training emphasized a sense of interdependence and "esprit de corps." They were made to feel that they owed their privilege to their master and to the Mamluk institution. They dominated the power elite, but as an alien force, and were merciless to any suspected rival to their authority. A close disciplined fraternity, and the only effective civil and military organization within the country, the Mamluks provided their pashas with the power of an independent monarch. Nevertheless, Mamluk pashas at no time renounced allegiance to the sultan of the Ottoman Empire. They defended Iraq from the Wahhabis and Persians but did not war on neighbors within the empire.

The first Mamluk pasha, Sulayman Abu Layla (1750–1762), came to power two years after the death of Ahmad Pasha, following an unsuccessful attempt by the Sublime Porte (the Ottoman government) to check Mamluk power by naming nonlocal candidates as pasha of Baghdad. He was followed by Ali Agha (1762–1764) whose obscure Persian birth may have contributed to his fall. The reign of Umar Pasha (1764–1775), while peaceful, was feeble and characterized by ever-lessening authority. His deposition by the sultan introduced in interregnum (1775–1780) during which a number of mostly alien pashas (Abdi Pasha, 1775; Abdullah Pasha, 1775–1777; Hasan Pasha 1778–1780) reigned briefly and without much influence. Sulayman Agha (1780–1802), known as "the Great," restored the dominance and institutions of the Mamluks with such success that his period is known as the zenith of the Mamluk era. His immediate successors, Ali Pasha (1802–1807), Sulayman the Little (1808–1810), Abdallah Pasha (1810–1813), and Saʿid Pasha (1813–1817), all died violently after brief reigns. The last of the Mamluk rulers, Da'ud Pasha (1817–1831), confronted Ottoman resolve, ignited by his failure to provide suitable remissions in the desperate circumstances of the sultan's war with Russia, to end the century-long independence of Iraq and to bring the province once again firmly into the imperial fold. Plague and flooding helped weaken the Mamluk regime and Da'ud ultimately capitulated to the sultan in 1831. He and his family were exiled to Bursa. He was subsequently recalled to service and held a number of important posts throughout the empire before dying in 1851.

ALBERTINE JWAIDEH

MANAMA

Capital and largest city of the State of Bahrain.

Located on the north coast of Bahrain's main island and connected by causeway to Muharraq, Manama was a commercial and pearling center coveted by the Sassanids, Omanis, and Safavids. In 1782, it fell to the Al Khalifa family, under whose control it grew into a key transshipment point for trade between India and the Persian Gulf. After the 1820 General Treaty of Peace with Britain, the city's merchants flourished. By the early twentieth century, Manama was a cosmopolitan center, with large Iranian, Indian, and Gulf Arab communities; in 1946, it became home to the British Resident in the Gulf. Greater Manama houses more than 50 percent of Bahrain's inhabitants. The city's population in 2001 was about 156,000—some 70 percent larger than at independence in 1971. Bahrain's largest port, Mina Sulman, lies at the southern end of the city, next to the former British naval base at al-Jufayr, which now serves as headquarters for the United States Navy's Fifth Fleet.

MANDAEANS

Gnostic baptist community based in Iraq and Iran.

The Mandaeans of today live as their ancestors did, along the rivers and waterways of southern Iraq and Khuzistan, Iran. The Mandaeans (from *manda,* knowledge) practice a religion that has affinities with Judaism and Christianity. Known by their neighbors as *Subbi* (baptizers), they perform repeated baptism *(masbuta)* on Sundays and special festival days. Two small rites of ablution that require no priest, *rishama* and *tamasha,* are performed by individual Mandaeans. All rituals take place on the riverbank.

MAMOON A. ZAKI

MANDATE SYSTEM

The system established after World War I to administer former territories of the German and Ottoman empires.

Until World War I, the victors of most European wars took control of conquered territories as the spoils of victory. This was especially true of the colonial territories of defeated European powers, as the victors sought to expand their own empires. World War I marked a significant break in this tradition. While Britain, France, Italy, and Japan still retained imperial aspirations, other forces tempered these goals. The United States emerged as a world power committed to an anti-imperial policy, one that sought to consider the national aspirations of indigenous peoples as well as the imperial agendas of the victors. The 5 November 1918 pre-armistice statement of the Allies, moreover, affirmed that annexation of territory was not their aim for ending the war.

The result was the mandate system of the League of Nations, established by the treaties ending World War I. Under this system, the victors of World War I were given responsibility for governing former German and Ottoman territories as mandates from the League. The ultimate goal was development of each mandate toward eventual independence. This goal was tempered, some would argue, by the fact that mandates were awarded with full consideration of both public and secret agreements made during the war. For the Middle East, the Sykes-Picot Agreement of 1916 and the Balfour Declaration of 1917 helped structure the division of Ottoman territories between France and Britain.

Article 22 of the League's covenant required that the conditions of mandates vary with the character of each territory. This resulted in the establishment of three classes of mandate. Class A mandates were those to be provisionally recognized as independent until they proved able to stand on their own. Class B mandates were those further from qualifying for independence and for which the mandatory powers took on full responsibility for administration and promotion of the material and

moral welfare of the inhabitants. Class C mandates were those whose best interests were to be served by integration into the territories of the mandatory power, with due consideration being given to the interests of the inhabitants.

The Ottoman territories in the Middle East became Class A mandates. Based on World War I agreements, Britain was given responsibility for Iraq and Palestine (later Palestine and Transjordan); France got Syria (later Syria and Lebanon). These were to be supervised by the Permanent Mandates Commission consisting originally of members from Belgium, Britain, the Netherlands, France, Italy, Japan, Portugal, Spain, and Sweden, to which representatives from Switzerland and Germany were later added, and a representative from Norway took the place of the Swedish representative. Although the non-mandatory powers constituted a majority, the commission never followed an aggressive policy against the interests of the mandatory powers. This was manifest by the fact that Britain and France restructured their mandates by the time the formal system came into place in 1924. Britain split the Palestinian mandate into Palestine and Transjordan, giving a special role in the latter to Sharif Husayn's son, Abdullah, as amir of Transjordan to deter his further pursuit of territorial goals in Syria. France split its mandate in Syria into Syria and Lebanon to enhance the position of Uniate Christians in Lebanon and as part of its overall strategy of sponsoring communal differences to solidify its position of eventual arbiter of all disputes in the area. The British mandate for Iraq remained intact, despite the fact that its population diversity invited similar divisions.

Although few would have predicted it in the early 1920s, all of the Class A mandates achieved independence as provided under the conditions of the mandates. The first was Iraq in 1932, although Britain retained significant diplomatic and military concessions. Syria and Lebanon followed in 1941 as World War II was getting under way. In March 1946, just before the formal dissolution of the League of Nations and transfer of its assets to the United Nations, the Treaty of London granted independence to Transjordan as the Hashemite Kingdom of Jordan. Only Palestine was left to the United Nations under its trusteeship program, and in 1947, Britain presented this thorny problem to the UN General Assembly for resolution. The result was approval of a plan for the partition of Palestine into two Arab and Jewish states and an international city of Jerusalem. Subsequent events precluded implementation of this plan, but since 1949, Israel has been a member of the United Nations.

MANSAF

See Food: Mansaf

MANSURA, AL-

Egyptian delta city.

Al-Mansura is located near Damietta, Egypt, in the delta. Founded by the Ayyubid dynasty as a fortified camp in 1219, it served as a buttress against Crusader expansion in 1221 and again in 1250, when the Mamluks scored a significant victory over Louis IX of France. It has been the administrative capital of Daqhaliyya province since 1526. Although predominantly Muslim, there have been some Copts in

the city since the seventeenth century. Its population was estimated at 441,700 in 2004.

ARTHUR GOLDSCHMIDT

MANSURE ARMY

Ottoman army organized in 1826.

Established by the same proclamation that abolished the Janissary Corps, the new army's formal name translated as the Trained Victorious Soldiers of Muhammad. It soon recruited 12,000 troops, initially organized largely along the lines of the former Nizam-i Cedit and headed by a commander called serasker. The Mansure army was headquartered at a palace in Bayezit (Istanbul), combining the functions of military headquarters and war ministry until the end of the empire. As serasker, Mehmet Paşa Koja Husrev introduced French military organization into the Mansure and by 1830 expanded it to 27,000 troops, including the former cavalry. All remaining Ottoman fighting corps were incorporated into the Mansure in 1838, when the army's name was changed to the Ordered Troops.

ELIZABETH THOMPSON

MANUFACTURES

Goods made from raw materials, originally by hand; also those made by machinery.

In antiquity and into the Byzantine Empire, the Middle East was the center of Western civilization and the region from which a wide variety of goods were first made and traded. The settled farming society allowed time for handicrafts, between crop work, and for market days and market towns. Regional trade became established by land caravan, by riverboats, and by coastal vessels that sailed the Mediterranean, the east coast of Africa, and beyond Arabia, into the Indian Ocean.

Pre-1900

The ancient Near East was the seat of civilizations that traded with one another—luxury goods for the urban elite and utilitarian items for both urban dwellers and for rural agricultural, herding, and artisan folk. Specialty products included textiles, metals, glassware, pottery, chemicals, and, later, sugar and paper. By the fourteenth and fifteenth centuries, however, Europe had progressed to the point that it was exporting to the Middle East not only high technology goods, such as clocks and spectacles, but refined types of textiles, glassware, and metals. During the following centuries the flow from Europe to the Middle East increased; by the nineteenth century, Europe overwhelmed the region with goods produced cheaply and abundantly by the machinery of the Industrial Revolution, including the railroads and steamships that transported them. The Anglo–Ottoman treaty of 1838 (called the Convention of Balta Liman) fixed import duties to the Ottoman Empire at a low 8 percent. These factors drove thousands of Middle Eastern craftsmen and artisans out of business, but some managed to retain their shops and others found employment in the new textile factories of the late nineteenth century.

1900–1945

World War I exposed the region's lack of industry and, with the achievement of total or partial independence, the various governments began to take measures to encourage development. Around 1930, the Commercial and Navigation Treaties regulating tariffs lapsed, and most countries regained full fiscal autonomy. They immediately raised tariffs to favor local industry. They also promoted manufacturing in various other ways, such as encouraging people to buy national goods and giving such goods preference for government purchases. Moreover, they set up special banking, such as the Sümer and Eti banks in Turkey and the Agricultural and Industrial banks of Iran and Iraq, to promote manufacturing and mining; they also channeled credit through existing banks, such as Bank Misr in Egypt. Local entrepreneurs also became more active in the economic field, including manufacturing. In Egypt, the Misr and Abboud groups set up various industries, and in Turkey, the Iş Bank promoted development. In Palestine, where some European and Russian

A Mercedes-Benz plant in Egypt, 1990s. The car manufacturer's origins in Egypt date back to the 1950s, but it was not until 1997 that the company started manufacturing vehicles there, at its 6th of October City factory. © BOJAN BRECELJ/CORBIS. REPRODUCED BY PERMISSION.

Jewish immigrants brought with them both capital and skills, some set up factories or workshops in a wide variety of fields.

It is difficult to estimate the rate of industrial growth: In Turkey, between 1929 and 1938, net manufacturing production increased at 7.5 percent a year and mining advanced at about the same pace. In Egypt, the rate of growth was slightly lower and in the Jewish sector of Palestine distinctly higher. In Iran, between 1926 and 1940, some 150 factories were established with a paid-up capital of about US$150 million and employing 35,000 persons. Nevertheless, industry still played a minor role in the basically agricultural Middle Eastern economy. By 1939, employment in manufacturing and mining was everywhere less than 10 percent of the labor force, and in most of the countries it was closer to 5 percent. Industry's contribution to gross domestic product (GDP) was put at 8 percent in Egypt, 12 in Turkey, and 20 in the Jewish sector of Palestine; in the other countries it was lower. Industry still depended on imports of machinery, spare parts, raw materials, and technicians—and there were no exports of manufactured goods. A wide range of light industries, including textiles, food processing, building materials, and simple chemicals, had developed in Egypt, Turkey, Iran, Palestine, and, to a smaller extent, in Lebanon, Syria, and Iraq. In addition, Turkey had the beginnings of heavy industry—iron, steel, and coal. Petroleum production and refining had become important to Iran, Bahrain, and Iraq. Several countries were meeting most of their requirements of such basic consumer goods as textiles, refined sugar, shoes, matches, and cement.

Post–1945

World War II gave great stimulus to Middle Eastern industry. Imports were drastically reduced and Al-

lied troops provided a huge market for many goods. The Anglo–American Middle East Supply Center helped by providing parts, materials, and technical assistance. By 1945, total output had increased by some 50 percent. With the resumption of trade, from 1946 to 1950, many firms were hit by foreign competition, but the governments gave them tariff and other protection, so output continued to grow at about 10 percent per annum from 1946 to 1953. This rate was maintained, and in some countries (like Iran) exceeded through the 1970s, but in the 1980s it fell off sharply because of such factors as the Iran–Iraq War, the Sudanese and Lebanese civil wars, and the 1980s fall in oil prices.

Table 1 shows a breakdown of the structure of Middle Eastern industry. The main industries are still textiles (including garments); food processing (sugar refining, dough products, confectionery, soft drinks, beer); tobacco; building materials (cement, bricks, glass, sanitary ware); and assembly plants for automobiles, refrigerators, radio and television sets, and so forth, with some of the components produced locally. Important new industries have also developed—notably chemicals—including basic products, fertilizers, and various kinds of plastics; basic metals and metal products; and many types of machinery. A particularly rapidly growing branch is petrochemicals, using gases produced in the oil fields or in refineries. Only in petrochemicals, textiles, and food processing does the region's share approach or exceed 5 percent of world output. Similarly, only in phosphates and chromium is the region's share of mineral production significant.

Israel, however, has a large diamond-cutting industry and is a significant exporter of precision instruments. It is also a large exporter of arms, as is Egypt; in the late 1980s each country exported more than US$1 billion worth of weapons; they ranked third and fourth, respectively, among exporters from developing countries, and twelfth and fifteenth, among world exporters of arms. The Arab boycott has, of course, restricted some of Israel's economic pursuits within the region as well as with some international trade.

Today, manufacturing plays an important part in the Middle East's economy, accounting in many countries for 15 to 20 percent of GDP. Industry, in the broader sense, which includes mining (and therefore oil), construction, electricity, water, and gas as well as manufacturing, generally constitutes over 30 percent of GDP. In the major oil nations it is 60 percent or more, usually employing 20 to

TABLE BY GGS INFORMATION SERVICES, THE GALE GROUP.

30 percent of the labor force (including immigrant labor).

Factors for Low Productivity

With rare exceptions, industries still export very little and survive through government protection. Productivity is low; for example, gross annual value added in 1974 was only worth US$4,000 to US$5,000 in most countries (compared to $20,000 in West Germany). This is particularly marked in the more capital-intensive industries, such as steel, automobiles, and aircraft. In the late 1970s, in the Turkish state-owned steel mill in Iskenderun, a ton of steel took 72 worker-hours, compared with 5 in the United States and 7 in Europe; in Egypt, annual output per worker in the automobile industry was one car, compared with 30 to 50 in leading Japanese firms. In the more labor intensive industries, such as textiles, however, physical output per worker is about 30 to 50 percent of European output. Here, very low wages offset low productivity and enable the Middle East to compete. In 1980, hourly wages in the textile industry were equal to US$1 in Syria and Turkey and 40 cents in Egypt, compared to US$8.25 in Western Europe.

Low productivity in the Middle East is caused by many factors. First, capital investment per employee is low, although governments have poured large amounts into industry; in the late 1970s the share of manufacturing, mining (including oil), and energy was over 40 percent of total investment in Egypt, Iraq, and Syria, and 30 percent in Iran. In the Gulf region's petrochemical industry, however, capital intensity is high and up-to-date machinery is used. Second, industry is greatly overstaffed; many governments compel firms to take on more workers—to relieve unemployment or for other political purposes. Third, the poor health, education, and housing of workers adversely affect their productivity—but conditions are improving. Fourth, there has been much bad planning, with factories being located far from suitable raw materials or good transport.

General conditions are also unfavorable for industrial development. The region is, on the whole, poor in raw materials. Wood and water have become very scarce. Minerals are generally sparse, remote, and often low grade. Most agricultural raw materials are of poor quality, lacking the uniformity required for industrial processes. The protection given to manufacturers of producers' goods (e.g., metals, chemicals, sugar) creates a handicap for industries that use their products. The main exceptions are natural and refinery gas, which are available almost free of cost, and raw cotton, which is of fine quality. The small size of the local market makes it impossible to set up factories of optimum size and the general underdevelopment of industries prevents profitable linkages among industries; both factors raise unit costs. Although the infrastructure has greatly improved, it still does not serve manufacturing adequately; for example, the frequency of power failures led many firms to install their own generators and transport costs remain high. A dependence on imported machinery, spare parts, and raw materials, although declining, is still great—hence, when a shortage of foreign exchange curtails imports, factories work below capacity, further raising unit costs.

Middle East industry also suffers from a lack of competition. Because of the small size of the local market and the high degree of protection, firms often enjoy a quasi monopoly—and behave accordingly. Finally, a great shortage of industrial skills exists at both the supervisory and foreperson levels. Even more serious is the shortage of managers; this is compounded where the government has nationalized the bulk of industry—as in Egypt, Iran, Iraq, Sudan, and Syria. Here market discipline has been replaced by bureaucratic control, so efficiency has been sharply reduced.

On the whole, then, manufacturing does not make the contribution to the Middle East's economy commensurate with either the efforts or the capital invested in it. Conditions may be expected to improve, however, as the society and the economy continue to develop and as some measure of peace takes hold.

MAQARIN DAM

Dam on the Yarmuk river.

Proposed in 1953, the Maqarin (colloquially, Magarin) dam was to span the Yarmuk River between Syria and Jordan. No action was taken toward its construction, however, until 1988, when the two governments decided upon a joint project. Renamed Sadd al-Wahda (the Unity Dam), it will hold some 300 million cubic yards (225 million cu. m) of water. Jordan will pay for construction while Syria will gain use of much of the resulting electricity that is generated. In 1988, when Israel and Jordan held discussions on partitioning the waters of the Yarmuk, Syria refused to participate. Jordan and Syria finally agreed, in April 2003, to go forward with the project. A scheduled inauguration of the project in November 2003 was postponed, however.

MARABOUT

A Muslim saint or holy person in North Africa.

Marabout (Arabic *murabit,* literally, "the tied one") refers in North Africa to saints or holy persons, living or dead, reputed to serve as intermediaries in securing Allah's blessings (Arabic *baraka*) for their clients and supporters. The term also refers to their shrines. In earlier centuries, marabouts "tied" tribes to Islam and mediated disputes. Although *marabout* remains current in French usage, most North Africans today use the term *salih,* "the pious one," which does not imply that Allah has intermediaries, a notion at odds with Qurʾanic doctrine. Unlike Roman Catholicism, Muslims have no formal procedures for recognizing saints, although North African Muslims associate specific "pious ones" with particular regions, towns, tribes, and descent groups. Many shrines are the site for local pilgrimages and annual festivals. Jewish communities in Morocco and Israel have similar practices, calling such a holy person *tzaddik* (or *saddiq*).

MARATGHI, MUSTAFA AL-

[1881–1945]

Egyptian religious leader and politician.

Mustafa al-Maratghi served as head of al-Azhar in 1928/29 and from 1935 until his death in 1945. A supporter of the Muslim reformer Muhammad Abduh, al-Maratghi used his post at al-Azhar to defend the political institutions of Islam and fight against secular nationalist leaders.

Al-Maratghi had played a pivotal role in the Cairo Caliphate Congress of May 1926. The congress discussed the restoration of the caliphate, the

office of political and spiritual leader of the Muslim world, which had been abolished by Mustafa Kemal (Atatürk) in 1924. Al-Maratghi supported the candidacy of Egypt's King Farouk for the caliphate but was opposed by forty teachers from al-Azhar, who argued that the caliphate could not be brought to Egypt as long as the country was occupied by Britain. Meanwhile, Egyptian public opinion was more concerned with the parliamentary elections taking place that month. The congress produced no results. In 1930, al-Maratghi participated in efforts to forge a coalition between the Wafd and the Liberal Constitutionalist parties in opposition to the government of Ismaʿil Sidqi, the prime minister.

DAVID WALDNER

MARDAM, JAMIL

[1894–1960]

Syrian politician.

Born in Damascus to a landowning bureaucratic Sunni Muslim family, Jamil Mardam was active in the Arab national movement from its beginnings in late Ottoman days. He helped to organize al-Fatat and the first Arab Nationalist Congress and was a member of a Syrian Arab delegation to the Paris Peace Conference of 1919. When the Great Syrian Revolt (1925–1927) erupted, Mardam took part in it, seeking, like other Damascene and Druze leaders, not the overturn of the French-controlled system of rule but the modification and relaxation of that rule in a manner that would restore the influence of Syrian notables over local politics. The French had already undercut that influence in various towns as well as in the Jabal Druze. In this regard, Mardam was the principal strategist of the policy of "honorable cooperation" with the French, which stated that popular opposition to French presence should not be allowed to disrupt the delicate negotiations between the French and the leadership of Syria's independence movements.

This policy tarnished the reputation of Mardam and his supporters and forced them to look beyond Syria's frontiers for political support. In an attempt to rehabilitate their reputation and Pan-Arabism, they turned their attention to Palestine, creating in 1934 the Bureau for National Propaganda, a political body devoted to the dissemination of information on Palestine and other critical Arab issues.

Mardam was a founder of the National Bloc, a broad-based group established in 1927 to spearhead the independence struggle in Syria. He also was one of its most active members at the leadership level in Damascus, where the Bloc's headquarters were based. During the French mandate, Mardam was elected a deputy in Syria's National Assembly in 1932, 1936, and 1943 and served as minister from 1932 to 1933, 1936 to 1939, and 1943 to 1945. After full independence was achieved, he served as prime minister from December 1946 to December 1948, as well as minister of the interior in 1947 and minister of defense in 1948.

The growth of action-oriented political organizations in Syria after the Arab-Israel War of 1948 (the Communists, the Muslim Brotherhood, and Baʿth), damaged the prospects of the National Bloc (renamed the National Party in 1943) in the new local and inter-Arab rivalries that governed political life in Syria throughout the 1950s. In the end, the discrediting of the old guard who led the National Bloc rendered the political fortunes of Mardam bleaker and bleaker, thus forcing him out of politics.

MUHAMMAD MUSLIH

MARDOM PARTY

A government-sponsored political party, created in Iran in 1957 as an opposition party.

As a result of pressure for democracy and in the hope of giving the appearance of a two-party system, the Mardom party was established as an "opposition" party under Mohammad Reza Shah Pahlavi's rule in Iran in 1957. Its founder, Amir Asadollah Alam, was a large landlord, a former prime minister, and a close associate and confidant of the shah. The party's official platform included such issues as raising the standard of living for farmers, workers, and government officials, as well as facilitating the acquisition of land by the farmers. Together with the "official" government party, the Nationalist party or Hezb-e Melliyun, however, the Mardom party came to have a reputation for being a government organ, the Nationalist being known as the "yes" party and the Mardom as the "yes, sir" party. In 1975, the Mardom party was dissolved when the shah decided to revert to a one-party system and started the Rastakhiz party. Many people point to the establishment and dissolution of the Mardom party, both government-inspired, as indications of Mohammad Reza Shah Pahlavi's failure in developing Iran's political system.

PARVANEH POURSHARIATI

MARETH LINE

A defensive position in Tunisia.

The Mareth Line was designed by the French to protect Tunisia's southeastern flank against an Italian invasion from Libya. Twenty-two miles (35 km) long, it was named for Mareth, a small town southeast of Gabès. In November 1942, following the defeat of Gen. Erwin Rommel's Afrika Korps at al-Alamayn by British forces under Field Marshal Bernard Montgomery, the Germans rushed reinforcements and equipment to Tunisia. The Mareth Line was the southern key to German defenses.

Breaking through the Mareth Line became a major objective of Allied forces. In March 1943, the British Eighth Army—together with forces from France and New Zealand—assaulted the Mareth Line. An outflanking maneuver by New Zealand troops forced General Jürgen von Armin to withdraw his forces to Enfidaville, near the Cape Bon peninsula.

MA'RIB

Ancient town of North Yemen, enjoying new life because of oil.

Maʾrib was, until the 1980s, the small government center and garrison of the large, sparsely populated Yemeni province of the same name. The town is located about a hundred miles east of Sanʿa, on the edge of the desert. For centuries before the Common Era, Maʾrib was the capital of the trading kingdom of Saba, once ruled by Bilqis, the Queen of Saba (or Sheba). The fabled Maʾrib dam is nearby, and its monumental remains and those of the vast associated irrigation system are still in evidence. The gradual collapse of these works early in the Common Era forced the depopulation of the region; in the 1960s, the sleepy town that remained was all but abandoned after bombardment during the Yemen Civil War. Since the mid-1980s, however, the town has undergone a major renewal as the center closest to the important oil operations in the Maʾrib/al-Jawf basin; major natural gas reserves also have been discovered. The construction of a new dam in the 1980s, financed by Abu Dhabi, made possible the revival of major irrigated agriculture. All this

has also given the area new military significance, especially since much of the province is tribal and beyond the effective control of the state.

MARIETTE, AUGUSTE

[1821–1881]

French Egyptologist.

Auguste Mariette founded the Egyptian Antiquities Service in 1858 and the Egyptian Museum, thereby slowing the indiscriminate destruction and export of pharaonic antiquities to Europe. His workers in archaeology excavated scores of monuments: the Serapeum of the Apis bulls at Saqqara was his most famous discovery. French control of the Antiquities Service was to last until 1952, when the Egyptian monarchy and colonialism ended and a republic was declared.

DONALD MALCOLM REID

MARʿI, MARIAM

[1945–]

Palestinian activist; a founder of Dar al-Tifl al-Arabi.

Mariam (also Maryam) Marʿi was born in Acre (now in northern Israel but then in the British Mandate of Palestine). She received a bachelor of arts degree in counseling education and art from Haifa University in 1975 and a master of arts degree in counseling education from Michigan State University in 1977. She received her doctorate in international education from Michigan State University in 1983. Marʿi worked as an elementary school teacher in Acre from 1966 to 1967 and as an instructor in the Arab Teacher Training College in Haifa from 1973 to 1977. She also directed the Acre branch of the Arab Teacher Training College from 1993 to 1997. She was the founder and director general of Dar al-Tifl al-Arabi (Early Childhood Educational Center) in Acre between 1984 and 1997. She was also the founder and first president of the Acre Arab Women's Association in 1975, and the founder and first president of the Galilee Social Research Center in Nazareth in 1987. Marʿi's activities and publications focus on early childhood education and development, the status of Palestinian women in Israel, and dialogue between Arab and Jewish peace groups. Marʿi received the Rotfield Prize for Education for Peace in 1989, and she serves on the boards of various national and international organizations.

ISIS NUSAIR

MARINE BARRACKS BOMBING (LEBANON)

A bombing that caused the deaths of 241 U.S. Marines in the Lebanese Civil War.

Following the Israeli invasion of Lebanon in 1982 and the massacre by the Phalange militia of Palestinians in the Sabra and Shatila refugee camps on the outskirts of Beirut, the administration of President Ronald Reagan dispatched peacekeeping troops to Lebanon in the framework of the Multinational Force (MNF). The MNF was composed of U.S., French, British, and Italian contingents tasked with shoring up the regime of President Amin Jumayyil, brother of the assassinated Bashir Jumayyil. The presence of U.S. Marines in West Beirut polarized animosities between Christians and Muslims in Lebanon, and the American contingent became the target of hatred and distrust.

Lebanese Muslims, especially Shiʿites living in the slums of West Beirut and around the airport—where the marines were headquartered—saw the MNF not as a peacekeeping force but as another faction in the Lebanese war. U.S. troops particularly were seen as perpetuating Maronite Catholic rule

over Lebanon. Muslim feelings against the American presence were exacerbated when missiles lobbed by the U.S. Sixth Fleet hit innocent by-standers in the Druze-dominated Shuf mountains. On 20 October 1983, a Shiʿite Islamic Jihad member drove a truck loaded with 12,000 pounds of TNT into the lobby where the U.S. contingent was stationed and blew himself up, thereby killing 241 servicemen. In 1984, the Reagan administration withdrew the U.S. contingent from Lebanon.

GEORGE E. IRANI

MARITIME PEACE IN PERPETUITY, TREATY OF (1853)

Treaty between Great Britain and the rulers of the lower Persian Gulf shaykhdoms.

After crushing local opposition to its claim of hegemony over the Persian Gulf portion of its economically important route to India, Britain sought to maintain its prerogatives and influence over the region's rulers and their subjects through a number of general treaties. The first of these was signed in 1820 and called for general disarmament and an end to attacks on British shipping. The treaty did not prohibit declared maritime warfare among local tribes, so this continued unabated, often disrupting the harvesting of pearls, an important source of income for merchants and rulers. In order to prevent attacks during the six-month pearling season, the ruler of Sharjah and Raʾs al-Khaymah suggested to the British that they oversee a truce. The British did so reluctantly, and a maritime truce was signed in 1835 and renewed annually until 1843, when a ten-year truce was signed. Reflecting Britain's willingness to expand its military and political commitments in the Persian Gulf, the 1853 Treaty of Maritime Peace in Perpetuity was meant to make the provisions of the 1843 treaty "lasting and inviolable," and called on the rulers to bring about a complete cessation of hostilities, to punish any of their subjects who attacked subjects of another treaty signatory, and to refrain from retaliating if they were victims of aggression and instead inform the British authorities, who promised to obtain reparations for any injury or damage. The emirates whose rulers signed the treaty were known afterward by English speakers as the Trucial States.

ANTHONY B. TOTH

MARJA AL-TAQLID

Senior clergy of Shiʿism whom faithful are supposed to follow in religious matters.

Marja al-taqlid, or authority appointed to be emulated by believers, is one of the main pillars of Twelve Imam Shiʿism during the period of the occultation of the twelfth imam, the last of the faith's infallible leaders. Twelver Shiʿism holds that the Twelfth Imam, Hasan al-Askari, left earth in 873 C.E., beginning a period of occultation in which Shiʿites are left without a member of the progeny of the first imam, Ali ibn Abi Talib, son-in-law and nephew of the prophet Muhammad, to rule over them. Before his major occultation, the Twelfth Imam appointed four special assistants, the last of whom died in 939 C.E. Shiʿite biographical compilations generally take Abu Jaʿfar Mohammad Koleyni (d. 940), one of the first compilers of Shiʿite traditions, to be the first *marja al-taqlid* after the occultation. In the medieval period, however, the office was not well defined. That task was undertaken by Shaykh Mohammad Hasan Esfahani Najafi, known as Sahb al-Javaher (d. 1849). In all, seventy-seven *marja al-taqlid* were recognized from 940 to 1995 (different sources

provide slightly different tabulations), forty-nine of whom were Iranians and the rest Arabs.

The *marja al-taqlid* is regarded as one of the highest *ulama* (clergy) in Shiʿism; his words and deeds serve as a guide for those members of the community unable to exert independent judgment *(ijtihad).* As such, holders of the position have come to enjoy substantial political clout in the modern period, especially because believers throughout the world provide the *marja al-taqlid* with considerable donations in the form of religious tithes. In fact, one of the qualifications of a *marja* is his ability to attract donations and raise enough money to finance the education of religious students. There are six conditions for the *marja al-taqlid* that are accepted unanimously by Shiʿite theologians, namely maturity *(bulugh),* reasonableness *(aql),* being of the male sex *(dhukurrat),* faith *(iman),* justice *(edalat),* and legitimacy of birth. (These are general principles for the selection of a *marja al-taqlid,* and no specific process has ever been formalized.) Except for a brief period of centralization in nineteenth-century Iran engineered by Shaykh Morteza Ansari (d. 1864), clerical decentralization is an integral part of the Shiʿite hierarchy. Another defining characteristic of the *marja al-taqlid,* which again distances it from the papacy, is that designation to the position is entirely at the discretion of the believers themselves. The *marja al-taqlid* is not appointed by an official body resembling a council of *ulama.*

The sanctity of the office has increased in political clout in the modern period. In 1963, when Ayatollah Ruhollah Khomeini was arrested by the government of Mohammad Reza Pahlavi, the entire Shiʿite world rallied behind him and pressured the shah into releasing him. With the Iranian Revolution of 1979 and the establishment of the governance of the jurist *(velayat-e faqih),* which designates a single leader *(vali-ye faqih)* for Shiʿites, the office of *marja al-taqlid* has acquired an ambiguous position, somewhat rivaling that of the *vali-ye faqih.* Since the death of Khomeini, no single ayatollah has emerged as a sole, authoritative *marja al-taqlid*; rather, several ayatollahs are recognized as sharing relatively equal status as *marja al-taqlids.*

NEGUIN YAVARI
UPDATED BY ERIC HOOGLUND

MARK VIII

108th Coptic patriarch of Egypt serving from 1796 to 1809.

The papacy of Mark VIII is remembered more for the great historic event that occurred during his tenure—the Napoleonic expedition to Egypt (1798–1801)—than for his accomplishments. The prosperity enjoyed by the Coptic laity throughout Mark's career resulted from individual ambition not from the patriarch's initiative. Even construction of the Cathedral of St. Mark (dedicated to the archbishop's namesake) at al-Azbakiyya was the work of two influential citizens, not the patriarch.

Likewise, a Coptic military unit was more effective than Mark in dealing with Muslim tensions. Under the French, many Copts held high political and military positions and were handsomely rewarded for their loyalty. The Islamic majority could not tolerate the double disgrace of so many European Christians descending upon Egypt and their subsequent favoritism shown not only to the Copts but also to all other non-Muslims living in Cairo (Syrians, Greeks, and Jews). Several brutal assaults on the Copts in Cairo occurred during the French occupation and even thereafter. The famous Coptic Legion commanded by the illustrious General Yaʿqub was created to counter this persecution.

In spiritual matters Mark achieved some distinction. He maintained an active correspondence with the Coptic parishes throughout Egypt and sent an important pastoral letter to Ethiopia. Because the church of St. Mark in "Babylon," the Coptic quarter of Cairo, had been destroyed during the Islamic rampages, the patriarch built a new church dedicated to his namesake.

MARMARA UNIVERSITY

Public university in Istanbul, Turkey.

Marmara University was founded as a vocational school in 1883 under the name of Hamidiye Higher School of Business. Until the 1960s, it comprised three separate divisions (secondary, high school, and college). Its title was changed first to Istanbul Academy of Economics and Business Administration in 1959 and later, in 1982, to Marmara University, after the Sea of Marmara, on which it is located. Today, the university has thirteen faculties (education; communications; dentistry; divinity; economics and administrative sciences; engineering; fine arts; health education; law; medicine; pharmacology; science and letters; and technical education), nine vocational schools, and eleven research institutes. It has twelve separate campuses and is one of the most prestigious universities in Turkey.

English is the language of instruction in medicine and in some branches of engineering and social sciences, whereas French is used in the program of public administration. Turkish constitutes the medium of instruction in the rest of the academic units. During the 1998–1999 academic year, the university had 2,539 faculty members and 51,024 students. Its 2003 budget amounted to 93,747 billion Turkish lire, 99 percent of which came directly from state funds.

MARONITES

An indigenous church of Lebanon and Lebanon's largest Eastern-rite church.

The communion between the Maronite church and the Roman Catholic church was established in 1182, broken thereafter, and then reestablished in the sixteenth century. The union allowed the Maronites to retain their own rites and canon laws and to use Arabic and Aramaic in their liturgy, as well as the Karashuni script with old Syriac letters. The origins of the Maronites are a subject of continuing debate. Some historians trace them to Yuhanna Marun of Antioch in the seventh century; others trace them to the Yuhanna Marun who was a monk of Homs in the late fourth and early fifth centuries. In Syriac, the word *maron,* or *marun,* means small lord.

In the late seventh century, following persecution by other Christians for their heterodox views and rituals, the Maronites migrated from the coastal regions into the mountainous areas of Lebanon and Syria. During the Ottoman era, the Maronites remained isolated and relatively autonomous in these areas, although in recent times this autonomy has been greatly exaggerated for ideological and national reasons and made into a national myth. The Maronite community underwent socioeconomic changes in the nineteenth century, when the Maronite Church wielded tremendous economic and political power and the peasants within the community grew increasingly dissatisfied with the uneven distribution of the community's wealth and with the rigid social hierarchy that placed the patriarchate at the top. In 1858, the peasants revolted against the large landowning families, but the church quickly engaged them in sectarian agitation. The revolt soon degenerated into a communal war between Druze and Maronites. This conflict came to characterize much of the history of nineteenth-century Lebanon, as the ruling families of the two communities split over the credibility of the Chehabi dynasty and over other political and economic issues. Land ownership, distribution of political power, and the question of safe passage of one community's members in the territory of the other remained thorny issues in their relationship. The conflict was internationalized in 1860, when France, historically the ostensible protector of the Maronites, sent a military expedition to the area.

The relationship of the two groups was not decisively settled in 1920 with the establishment of the mandate system, but the carnage of the previous century seemed to have ended. The Druze, however, despite their apparent military victory, only seemed to accept the political dominance of the Maronites, who were favored by the French authorities. Their dissatisfaction centered on their desire for a continuous, albeit inferior, political representation.

The Maronite sect has been directed and administered by the Patriarch of Antioch and the East. Bishops are generally nominated by a church synod from among the graduates of the Maronite College in Rome. In 2004, Mar Nasrallah Butrus Sfeir (also Sufayr) was the Maronite patriarch.

In addition to the Beirut archdiocese, nine other archdioceses and dioceses are located in the Middle East: Aleppo, Baʿalbak, Cairo, Cyprus, Damascus, the Jubayl al-Batrun area, Sidon, Tripoli, and Tyre. Parishes and independent dioceses are also found wherever Maronites reside in large enough numbers: in Argentina, Brazil, Venezuela, the United States, Canada, Mexico, the Ivory Coast, and Senegal. Lebanon has four minor seminaries (al-Batrun, Ghazir, Ayn Saʿada, and Tripoli) and a faculty of theology at Holy Spirit University at al-Kaslik, which is run by the Maronite monastic order. The patriarch is elected in a secret ceremony by a synod of bishops and confirmed by the pope in Rome.

An estimated 416,000 Maronites live in Lebanon, although the number is exaggerated by Lebanese ultranationalists, including an unknown number abroad. Maronites make up 16 percent of Lebanon's population. Historically, most Maronites have been rural people, like the Druze, although, unlike the Druze, they are scattered throughout the country, with a heavy concentration in Mount Lebanon. Urbanized Maronites reside in East Beirut and its suburbs. The Maronite sect has been traditionally awarded—thanks to French support—the highest posts in government, and its status within the socioeconomic hierarchy of Lebanon has been, in general, higher than that of other sects. Lebanese nationalism has been associated over the years with Maronite sectarian ideologies, so much so that most non-Maronite Lebanese tend to feel uneasy with the notion of Lebanese nationalism because it has come to signify the Lebanese political system with its Maronite dominance.

The Maronites, like other sects in Lebanon, have suffered from the civil war and its consequences. Although many Maronites were combatants, much of the Maronite civilian population paid a price—as did all civilians in Lebanon—for the recklessness of the warring factions. Many Maronites were displaced, especially from the Shuf Mountains, as a result of battles and forced expulsions. Many (no reliable figures exist) chose to emigrate, going to Europe, the United States, Canada, and Australia in search of peace and prosperity. Maronite leaders continue to warn of the dangers of diminishing Maronite demographic weight due to immigration. The Lebanese political reforms of Taʾif in 1989 did not necessarily undermine the political dominance of the Maronite community, since the presidency, the Central Bank, and command of the Lebanese Army remained in Maronite hands. In fact, the sectarian designation of governmental seats was solidified by the reforms, and the presidency was kept exclusively for Maronites. Nevertheless, the increased powers of the council of ministers curtailed some of the previous arbitrary powers of the president. But the implementation depended, and will continue to depend, on the personal and political impact of politicians, in terms of both their popularity within their own communities and the external support they receive from various regional and international powers. The political nervousness of the Maronite community in 2004, due to the exile of General Michel Aoun and the imprisonment of former Lebanese Forces commander Samir Geagea, has propelled the Maronite patriarch Nasrallah Sfeir into a position of unprecedented political and religious authority.

As'ad AbuKhalil

MARRAKECH

Second largest city in Morocco; one of the four imperial cities of precolonial Morocco, established about 1060 C.E.

Located in the Hawz, an agricultural plain bounded to the south and east by the High Atlas mountains, and watered by the Tansift river, Marrakech is situated in a natural site of great potential. In oppo-

sition to Fez, the Arab capital of Morocco, Marrakech is a Berber metropolis, which drew population from the Berber-speaking groups of the nearby central High Altas mountains. The city was founded by Yusuf ibn Tashfin (1060–1106), first ruler of the Almoravid dynasty (1055–1157), under whom Marrakech became the base for the conquest of Morocco, portions of the Maghrib, and Andalusia. Extensive irrigation works were undertaken at this time, but little remains of the architecture of the Almoravid period.

Conquered by the Almohads (1130–1269) in 1147, Marrakech became the capital of an empire that at its height extended from Tunisia to the Atlantic, and from the Sahara to Andalusia. The Almohads were the effective builders of the city, constructing the Kutubiya mosque, one of the finest examples of Hispano-Moorish architecture, together with the ramparts, a fortress complex, and extensive bazaars and gardens. The celebrated philosopher, doctor, and savant Ibn Rushd (known in the West as Averroes, 1126–1198) lived in Marrakech, where he wrote several of his best-known works.

Marrakech went into a prolonged decline during the reign of the Marinids (1244–1578), whose capital was at Fez. Under the Saʿdians (1510–1603), who made it their capital in 1554, Marrakech once again became an imperial city. Numerous important palaces were constructed at this time, and the irrigation system of the surrounding Hawz plain was revived. The Alawi dynasty (1603-present) has continued this tradition. The city continued to benefit from its position as a crossroad of trade between the mountains, the pre-Saharan steppe, and the fertile plains of central Morocco. Under Sultan Hassan I and his successors Abd al-Aziz ibn al-Hassan and Abd al-Hafid, Marrakech was drawn increasingly into the world capitalist market. In the period of the Moroccan question (1900–1912), European business interests in collaboration with local urban notables and Berber lords based in the city began to acquire substantial holdings in the Hawz plain and the surrounding area.

Under the French protectorate (1912–1956), effective authority was conceded to Madani and Tuhami al-Glawi, who ruled much of southern Morocco as pashas of Marrakech and imperial viceroys. In this period, the city became a major agricultural entrepôt and center of light manufacturing. There was considerable investment in irrigation technologies and agriculture, and the population of the city increased from 70,000 in 1912 to 145,000 in 1921 to 215,000 in 1952.

Since Moroccan independence in 1956, Marrakech has continued to grow. Its population in 1994 was about 673,000 people. It is a center of tourism and an agricultural marketplace for southern Morocco, with a university and important cultural installations.

EDMUND BURKE III

MARRIAGE AND FAMILY

The institutions, patterns, and practices of marriage and the family play a key role in Middle Eastern society.

Marriage and family form the heart of Middle Eastern society, which is structured around the extended family system. Familial loyalty takes precedence over loyalty to work, friends, the law, and the nation. The institutions and practices of marriage are enforced by kinship networks to form reliable alliances. Hence, marriages between families serve important social, economic, and political functions by bringing together families in an expanding network of relationships, which extends membership rights and duties to relatives and their spouses. Each nuclear or extended family arranges different kinds of marriage alliances to accomplish both general and specific purposes. Membership in an influential family may be the only necessary criterion for success.

The Middle Eastern family is unequivocally patriarchal. The male is recognized as the head of his family, and his role is overt, whereas the female's

A Yemenite bride and groom sit in ceremonial attire in front of the traditional feast. In Yemen, marriages are arranged, then finalized with a contract. Islam permits a man to marry as many as four wives, but only if he can treat all as equals. In practice, polygamy is rare. © Richard T. Nowitz/Corbis. Reproduced by permission.

role is more covert. Patriarchy also connotes obeying and respecting the decisions of elders. Respect for elders is held as the highest family duty, and disagreements with patriarchs are considered sinful. Hence, age and bearing children increase an individual's status in the family.

Bonds of obligation and trust unite people, and relationships within families are often multidimensional and intense. Families and kin groups are brought together to witness births, marriages, deaths, religious and other rituals, and the affairs of daily life. In-group cohesion is a sign of a strong family, and individuals may count on family members for unconditional support. Even at times of antipathy among relatives, they defend each other's honor and display group cohesion. Religion plays an important role in dictating family life and law; it is an integral part of the inherited social identity, rather than a matter of choice or personal conviction.

Most family relations, however, are constrained by tradition rather than religion. While traditions provide support for family members, they also constrain their personal freedom and privacy. For instance, it is a common practice for single adults (male and female) to live with their family until marriage. They are governed by their elders and seek their permission regarding personal decisions. Traditions also play an important role in selecting a spouse, proposing a marriage and deciding its various logistics. Marriages are built based on financial security, social status, and child-bearing potentials rather than on love and romance.

Marriages are often arranged by women and are initiated with an official request from an elder in the groom's family to an elder in the bride's family. And elaborate engagement celebration is then held as a public announcement permitting the groom and bride to appear in public together prior to marriage. Engagements usually are short unless economic hardships prevent the couple from securing a residence. Marriage ceremonies are almost always large, expensive, and joyous affairs involving the groom and bride's wider kinship and residential groups.

Children are important elements of a successful marriage. No marriage is considered complete unless it produces many children. The average family size in the Middle East is over six members, including the parents. Desiring large families is common, but sons are often preferred to daughters because sons carry the name of the family, and remain with their parents after marriage in this patrilineal society. Nonetheless, daughters are desired as caregivers of aging parents, while sons are obliged to provide financial security.

Boys' education and work begin at a very early age and are usually mediated by various adult male relatives. Girls' domestic training starts early as well and is transmitted by various female relatives. Overall, relatives, neighbors, and friends participate in raising children and teaching them family values and morals. Young adults are given duties and responsibilities within the family setting, against which they rarely rebel. They are also encouraged to maintain and pass on social values from one generation to another. Disciplining children is an acceptable practice that may be carried out by any relative, neighbor, or friend.

The Middle Eastern family is neither unique nor constant nor uniform. Changes happen at all levels at all times. For instance, while, the bride and the

groom often live with the groom's family in more traditional and rural settings, the trend for the urban middle and upper classes is for a new, separate residence to be established. The groom and bride's families remain in close contact and visit frequently. Similarly, more rural and traditional settings tend to favor marriage at a very young age for both males and females as a tool of social control. However, in modern urban settings, new marriage laws and new opportunities in education and employment have raised the age of marriage for both sexes.

Although polygamy is accepted as a lesser evil than divorce, it is outlawed in Tunisia, Turkey, Israel, and Iraq and is subject to court approval in Morocco, Syria, Jordan, and Yemen. Moreover, polygamy rates have always been low, and they are decreasing rapidly almost everywhere, primarily for economic and social reasons. Alternatively, while divorce is considered a social stigma for both men and women, its rates vary widely across the region and are increasing overall, in tune with rapid social change and economic pressures. In the case of divorce or widowhood, Islamic laws grant women the custody of children until age seven for boys and nine for girls. Divorce is much more difficult for Jews and Christians in the region. Among the Druze, a husband and wife who divorce are forbidden from remarrying, unlike in Islam.

Familial honor is another social asset and stigma. The reputation of any family member influences the reputation of the entire family. However, women who bring dishonor to their families because of presumed sexual indiscretions are forced to pay a terrible price at the hands of male family members. The problem of "honor killings" throughout the Middle East is manifested in the legal safeguards protecting men by granting them special legal exemptions and reduced sentences in cases of conviction.

The Middle East experienced rapid changes and challenges in the twentieth century. While women continue gaining access to formal education and careers, they continue to face societal restrictions concerning their contacts outside the home and beyond their kinship groups. Widespread economic change, especially trends toward modernization and Westernization vis-à-vis reactionary and Islamist movements, have affected customary notions of marriage and the family.

RITA STEPHAN

MARSH ARABS

Inhabitants of the vast marshlands in southern Iraq.

The Marsh Arabs lived in one of the great marsh areas of the world, a 20,000-square-mile (52,000 sq. km) area triangulated by Kut on the Tigris, al-Kifl on the Euphrates, and Basra on the Shatt al-Arab. A significant number may be non-Semitic in origin, perhaps descendants of the ancient Sumerians, although they have mixed with other peoples through time. Called Marsh Arabs by some owing to their language, social structures, and religion, others designate them Ma'dan to reflect that their way of life is dependent on the water buffalo. Nomads of the marshes, relying on a variety of canoes for transport, they follow buffalo herds as their desert counterparts follow camels or sheep. Most are cultivators, reed gatherers, or buffalo breeders. Traditionally they lived in villages in island settlements, on floating platforms, or on man-made reed islands. Today, their structures are of brick and concrete. Roads and causeways connect major settlements facilitating social improvements, especially in education and health.

ALBERTINE JWAIDEH

MAʿRUFI, ABBAS

[1957–]

Iranian writer and editor.

Abbas Maʿrufi was born in Tehran and graduated from Tehran University's Faculty of Fine Arts with a degree in dramatic arts. His novels and short stories experiment with psychoanalytic techniques, incorporating them into a clear and flowing narrative style. He published several collections of short stories in the 1980s and his first and most famous novel, *Samfoni-ye Mordegan* (Symphony of the dead), in 1989. Subsequent novels include *Sal-e Bala* (Year of catastrophes, 1992) and *Peykar-e Farhad* (Statute of Farhad, 1995). Maʿrufi edited the literary journal *Gardoon* in Tehran, but after the publication was closed by the government for "offending religious sensibilities," he left Iran for exile abroad. Since 1996, he has edited *Gardoon* in Europe.

PARDIS MINUCHEHR
UPDATED BY ERIC HOOGLUND

MARZOUKI, MONCEF

[1945–]

Tunisian opposition leader, human-rights activist, writer, physician.

Moncef Marzouki, a Tunisian neurological and public-health specialist trained in France (1973), became a human-rights advocate after observing medical experiments on patients. He returned to Tunisia in 1979 and founded the Center for Community Medicine in the slums of Sousse, south of Tunis. Marzouki cofounded the African Network for Prevention of Child Abuse (1981) and joined the Tunisian League for Human Rights (LTDH), becoming its vice president (1987) and president (1989–1994).

In 1991 his opposition to Iraq's invasion of Kuwait drew Western praise, but the Tunisian government retaliated by neutering the LTDH in 1992. In 1993 Marzouki and seventeen others launched the National Committee for the Defense of Prisoners of Conscience. They were arrested, and he resigned after it was taken over by supporters of the regime.

In 1994 he ran for the presidency even though there was no provision for unapproved candidates, accusing the regime of human-rights violations and

arguing that its experiment with democracy and the anti-Islamist crackdown were excuses for deposing Habib Bourguiba. Without human rights, the ideological vacuum in which secularist and Islamist extremisms flourished would persist. He was imprisoned for propagating false news.

Released after four months, Marzouki was thrice rearrested (in 1996 following a LTDH human-rights report, in 1999 at election time, and in 2000 after allying with exiled Islamists) and twice imprisoned. In 1998 he was founding spokesperson for the National Committee for Liberties (CNLT) and president of the Arab Commission of Human Rights. He subsequently established the Congress for the Republic (CPR), uniting democratic secularists and Islamists against President Ben Ali's "constitutional putsch." From 2002, he ran the CPR from France.

MASADA

Site of Jewish revolt and martyrdom, 74 C.E.

An isolated mountain on the western shore of the Dead Sea, Masada was turned by King Herod the Great of Judea (37–34 B.C.E.) into a major stronghold. In 66 C.E., at the onset of the Jewish revolt against Rome, the extremist *Sicarii* ("dagger-men") captured Masada; after the revolt's suppression, it remained the last Jewish fortress to hold out. When the Romans were about to storm its walls in the spring of 74 C.E., the defenders, preferring death to slavery, decided to commit collective suicide. Men slew their women and children, then killed one another—thus relates Flavius Josephus, the only historian to describe these events. The story of the mass suicide is supported by comparable occurrences in the Greco-Roman world.

In traditional Judaism, Masada went largely unmentioned for centuries. Only with the advent of Zionism did it gain prominence, with the defenders portrayed as freedom-loving heroes and their stance hailed as an example to live by. In Yitzhak Lamdan's influential poem of 1927, Masada came to symbolize the entire Zionist enterprise, with the most famous line announcing, "Masada shall not fall again." From the 1940s, Masada became the goal of ritual treks organized by Zionist youth movements; from the 1950s, recruits of Israel's army swore their oath of allegiance in ceremonies atop Masada. The excavation of the fortress in the 1960s enhanced still further its salience in Israeli consciousness.

The veneration of Masada was never total; for instance, in 1946 David Ben-Gurion coined the slogan "Neither Masada nor Vichy." From the 1970s onward, the Masada myth repeatedly came under attack. The credibility of Josephus's account was questioned; the cruelty of Masada's "dagger-men" toward other Jews was emphasized; and the portrayal of the perpetrators of a group suicide as national heroes was decried as incongruent with Judaism's teachings and educationally misguided. Hard-line Israeli leaders were accused of being possessed by a "Masada complex"—that is, of so identifying with Masada's desperate situation that they were no longer reacting to the reality of their own times.

In 2002 the United Nations Educational, Scientific and Cultural Organization's (UNESCO) proclamation of Masada as a World Heritage Site entailed another round of exchanges between Masada's admirers and detractors.

MASʿADI, MAHMOUD AL-

[1911–]

Tunisian essayist, playwright, and politician.

Mahmoud al-Masʿadi was born in Tazerka, Tunisia. He obtained his *agrégation* in Arabic literature from the Sorbonne in 1947, and was a teacher and educational administrator until 1958. He subsequently held various posts in Tunisia's cabinet and was named the nation's representative to the United Nations Educational, Scientific and Cultural Organization (UNESCO). He was editor of the journal *al-Mabahith* from 1944 to 1947. In 1979 he published his editorials from *al-Mabahith* in a book titled *Taʾsilan likayan* (The grounding of the human being).

Although he is bilingual in Arabic and French, al-Masʿadi writes only in Arabic. He occupies a unique place in modern Tunisian literature. His writings are characterized by a hermetic style that is strongly reminiscent of the language of the Qurʾan. He is deeply influenced by European existentialism and culture as well as by Arab Islamic culture. According to him, existentialism and commitment are strongly linked. His deeply philosophical writings are primarily concerned with a person's role in life and the significance of existence. His play *al-Sudd* (1955; The dam) is an expression of his philosophical outlook on man and his destiny, whereas his novel *Haddatha Abu Hurayra, Qala . . .* (1923; Abu Hurayra said . . .) transposes this philosophical inclination into an Islamic framework. The collection of short stories titled *Mawlid al-Nisyan* (1974; The birth of forgetfulness) portrays the struggle between good and evil in the human being.

AIDA A. BAMIA

MASHHAD

Major city of northeast Iran and capital of Khorasan Province.

Mashhad originally developed as a pilgrimage center after the eighth Shiʿite Islamic imam, Reza, died and was buried (ninth century C.E.) in what then was a small village containing the tomb of Caliph Harun al-Rashid. The village began to develop as a trade center renamed *Mashhad,* or "place of the martyr," during the fourteenth century, after the Mongols had destroyed the ancient city of Tus, located 15 miles to the northwest of what is now central Mashhad. Its growth was slowed, however, by the general insecurity that prevailed in this region until the nineteenth century. After 1850, Mashhad developed as a major transshipment center for the overland trade between Iran and Russia and Iran and British India. The Qajar dynasty shahs expended funds on the embellishment and expansion of the shrine to Imam Reza (originally built during the early fifteenth century), including its affiliated seminary and other religious institutions. During the reign of Reza Shah Pahlavi the city was rebuilt with a ring road around the shrine and wide avenues.

Mashhad began to develop as an important industrial center during the 1930s, initially with carpet and textile manufacturing; by the end of the 1990s, food processing, chemicals, and pharmaceuticals also were significant industries. Its importance as a transportation center is enhanced by air, rail, and road connections to Tehran and the rest of Iran. In 1996 the railway to Turkmenistan was inaugurated; this connected to the main railroad system through the Central Asian republics. Ferdowsi University, established in 1947, provides undergraduate and graduate education in agriculture, art, economics, law, medicine, social sciences, and technology. The Imam Reza shrine continues to be the major tourist site in Iran, attracting several hundred thousand visitors annually. Mashhad is now the second largest city in the country, having grown from a medium-sized city of 147,000 in 1947 to a metropolis of 1,887,405 in 1996.

MASIRA ISLAND

A strategically important island in the Arabian Sea off the south coast of Oman.

Masira Island's rocky hills have made it inhospitable for agriculture, and historically its small population has subsisted on the sea, exporting such products as fish, turtle shells, and shark fins. During World War

II, the British built an air base and a powerful radio transmitter on the island. When Oman attained independence, Sultan Qabus, the ruler, funded the construction of modern housing, schools, and a clinic. The United States signed a ten-year lease for the military facilities on the island in 1980. It was from here that the abortive mission to rescue U.S. hostages in Iran was launched. The island's facilities also were used by coalition forces during the 1990–1991 Gulf War. The United States has spent hundreds of millions of dollars on its military facilities on the island. In the late 1990s the island had about 8,000 inhabitants and hosted one of the largest group of nesting loggerhead turtles in the world.

UPDATED BY ANTHONY B. TOTH

MASMOUDI, MUHAMMAD

[1925–]

Tunisian diplomat.

Muhammad Masmoudi was educated in Tunis and at the law faculty in Paris. As representative of the Neo-Destour Party in France, Masmoudi was one of the party leaders who headed the official talks with France between September 1954 and May 1955 that led to independence. In 1956, he took part in the Tunisian delegation that signed the protocols formalizing independence from France (which had held a protectorate from 1881). Despite uneven relations with President Habib Bourguiba, he held various government posts, including ambassador to France (1965–1969). As minister of foreign affairs (1970–1974), he led an effort to forge ties with Libya, which culminated in a short-lived merger in 1974. With its collapse, Masmoudi was removed from office; shortly thereafter he went into exile, returning in 1977. His ties to Libya put him at the center of controversy in 1984, when he briefly accepted a United Nations post from Libya, from which Bourguiba forced him to withdraw. Masmoudi has also been an important diplomatic mediator between Tunisia and Saudi Arabia. Following his withdrawal from the diplomatic scene, Masmoudi has participated in numerous conferences throughout the Arab world, working for the promotion of scientific research, and has collaborated with the Temimi Foundation for Scientific Research and Information (Tunisia).

MATTHEW S. GORDON
UPDATED BY VANESA CASANOVA-FERNANDEZ

MASPÉRO, GASTON

[1846–1916]

French Egyptologist.

Gaston Maspéro studied at the École Normale, Paris. He succeeded Auguste Mariette as professor of Egyptian Philology and Archaeology at the Collège de France. Upon Mariette's death in 1881, Maspéro followed him as director of the Egyptian Antiquities Service and the Egyptian Museum in Cairo. Maspéro served as director from 1881 to 1886 and from 1899 to 1914, overseeing archaeology throughout Egypt. He published the pyramid texts he discovered at Saqqara, initiated the systematic clearing of the temple of Karnak, and coordinated the publication of the immense catalog of the Egyptian Museum. Maspéro may have published more than any other Egyptologist.

DONALD MALCOLM REID

MASRI, MAI

[1959–]

Filmmaker, director, and producer.

Mai Masri was born in Jordan in 1959 to an American mother from Texas and a Palestinian father

from the Masri family of Nablus. She developed an interest in film and photography during her high school years in Beirut, traveling to the United States to pursue her university education in 1977, where she received her bachelor's degree in film from San Francisco State University in 1981. Masri has directed and produced several award-winning films that provide a fine-grained view of women's and children's lives in situations marked by conflict, uncertainty, and crisis. Her films have been broadcast in the Arab world, Europe, the United Kingdom, and North America and have received ten international awards, including Best Documentary at the Institut du Monde Arabe Film Festival in Paris. She has also directed *Children of Fire* (1990) and *Children of Shatila* (1998), which won Best Director and Best Camera awards at the Arab Screen Festival in London.

During the later years of the Lebanese Civil War, Masri and her husband, Lebanese filmmaker and producer Jean Khalil Chamoun, filmed Lebanese and Palestinian civilians attempting to live and work under bombardments in Beirut and in South Lebanon, turning their copious footage of the war years into award-winning films such as *Under the Rubble* (1983), *Wild Flowers* (1987), *War Generation-Beirut* (1989), and *Suspended Dreams* (1992). All of these films show the costs of war and displacement, but also the strength of the human spirit and the importance of creative expression in the midst of large-scale destruction. In 1995 Masri directed a portrait of Hanan Ashrawi for BBC television, entitled *A Woman of Her Time.* She has also produced *Hostage of Time* (1994) and the feature film *In the Shadows of the City* (2000), which won the Cannes Junior Award. Masri currently lives in Beirut with her husband and their two daughters.

MATRAH

Port city of Oman.

Originally a fishing village, after the sixteenth century Matrah became the hub of Oman's domestic commerce and home of a cosmopolitan merchant community. Today the site of Oman's largest port, Matrah lies adjacent to Muscat, the sultanate's capital. It is essentially being absorbed into the burgeoning capital urban complex.

MATZPEN

Israeli leftist, anti-Zionist group.

Israel's most vilified anti-Zionist group from 1967 to 1972, Matzpen (Hebrew, "compass," also known as the Israeli Socialist Organization) was the first leftist organization to identify Jewish colonization and Palestinian dispossession as the basis of the Arab–Israel conflict. The group, formed by students in 1962, broke with the Communist Party over its acceptance of the Israeli state. Harassed and often hounded out of jobs, a number of members moved abroad, created a European support network, and established contacts with Palestinian leftists there.

Never more than a few dozen strong, Matzpen came to public attention for protesting Israel's occupation of the West Bank in 1967; this was viewed as treachery by those who saw the occupation as a defensive necessity. Most Matzpen members favored a binational state. In their first dialogues at Bir Zeit University, and in subsequent dialogues with the Palestine Liberation Organization and Democratic Front for the Liberation of Palestine representatives, they argued that Jews should enjoy national rights in a future Palestinian state, whereas their Palestinian interlocutors insisted that Jews should have simply cultural and religious rights.

Matzpen attracted further hostility in Israel in the early 1970s, when it encouraged Black Panther protests in Israel and supported Palestinian resistance in the Territories. Its members were accused of supporting foreign espionage, and in 1972 one of them, Ehud "Udi" Adiv, was arrested and later imprisioned, for contacting Syrian authorities. The group split over ideological affiliation in 1972

and nearly dissolved after the Oslo Accord (1993). But the influence of former members—including Moshe Machover, Akiva Orr, Haim Hanegbi, Michel Warschawski, and Leah Tsemel—among leftists engaged in Israeli–Palestinian dialogue and opposed to human rights abuses in the occupied territories grew enormously. By the 1990s, its assertion that Jewish colonization was the primary cause of the Israel–Arab conflict was also a common feature of post-Zionism.

GEORGE R. WILKES

MAUDE, FREDERICK STANLEY

[1864–1917]

British soldier.

Frederick Stanley Maude entered the military in 1884, fought in the South African wars (1899–1902), and became commander of the 13th Division at the Dardanelles in 1915 after the outbreak of World War I. He was ordered to take his troops to Mesopotamia (the area between the Tigris and Euphrates rivers) to relieve the Anglo-Indian forces in the Mesopotamia Campaign besieged at Kut al-Amara. On 22 February 1917 he drove the Ottoman army from the town and then planned the advance that culminated in the fall of Baghdad on 11 March 1917. Shortly after this, the so-called Maude Declaration (actually written by Sir Mark Sykes) announced to the people of Baghdad that Britain intended to grant them self-determination. Maude died of cholera in 1917.

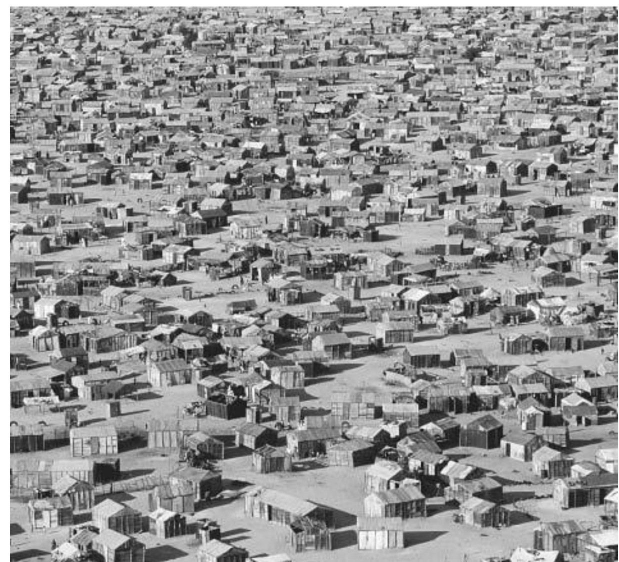
ZACHARY KARABELL

MAURITANIA

Constitutional republic located in northwest Africa.

The Islamic Republic of Mauritania covers an area of 398,000 square miles and is bordered by Western Sahara and Algeria on the north, Mali on the east, Mali and Senegal on the south, and the Atlantic Ocean on the west. The population in 2002 was about 2.6 million people (United Nations estimate). Nouakchott, the capital and largest city, has more than 800,000 people. The second largest city is Nouadhibou, a maritime commercial center in the northwest, with a population of about 100,000.



Due to endemic drought in Mauritania, some 500,000 displaced nomads and oasis dwellers were forced into sprawling shanty towns that surround the capital city of Nouakchott. © YANN ARTHUS-BERTRAND/CORBIS. REPRODUCED BY PERMISSION.

MAP BY XNR PRODUCTIONS, INC. THE GALE GROUP.

Mauritania has twelve administrative regions plus the district of Nouakchott.

Climate and Resources

Mauritania has three major geographic and climatic areas. The northern Sahara region is more than 65 percent of the country. Covered by arid plains, plateaus, and sand dunes, it receives almost no rainfall and is subject to severe fluctuations in temperature. To its south is the Sahel, a wide area consisting of steppes and meadows. On Mauritania's southern border is the Senegal River region, a narrow strip of cooler temperatures and higher rainfall that supports considerable plant life.

The national economy has suffered from a lack of natural resources. Climatic conditions limit agriculture to the Senegal River region, where millet, sorghum, rice, and dates are grown. In the Sahel, livestock raising supports much of the rural population. Oil was discovered in 2001 56 miles southwest off the coast of Nouakchott, and although findings were modest, Mauritania's economy can expect a large boost when it acquires the means to extract and export its oil.

To date, however, iron ore, gypsum, and copper constitute the only major mineral exports. Mauritanian waters are considered to be among the richest fishing areas in the world. In the 1980s offshore fishing grew rapidly, making fish the country's chief export. The small manufacturing sector is based largely on fish processing. Food and capital goods account for the bulk of imports.

Population and Culture

Mauritania boasts a unique mixture of North African and West African culture, and it struggles to unite them. Approximately 66 percent of the population are Maures of Arab, Berber, and black African descent who speak Hassaniya, a dialect of Arabic and one of the two official languages of Mauritania. The remaining population is ethnically black African, composed of Halpulaar, Fulbe, Soninké, and Wolof (speakers of Pulaar, Soninké, and Wolof). French is the other official language of Mauritania, spoken in the marketplace as a common second language. Almost all Mauritanians are Sunni Muslims.

History

In the early 1800s amirs and Islamic religious leaders controlled the area that is now Mauritania. France gradually expanded its military and economic presence from Senegal into Maure areas. Between 1901 and 1912 France gained control of all major regions of Mauritania and declared it a protectorate, ruling indirectly through traditional leaders. After World War II, nationalist parties became active. Under the leadership of Mokhtar Ould Daddah and his Mauritanian Regroupment Party, Mauritania declared its independence from France in 1960. Since independence, Mauritania has faced severe problems with national unity, desertification (enlargement of desert areas), and economic stability. In 2000 the Heavily Indebted Poor Country Initiative qualified Mauritania for debt relief programs. In 2002 Mauritanians wrestled with a severe drought that led to food shortages and the slaughtering of livestock.

Mauritania also faced disputes with its neighbors to the north and south at the end of the twentieth century. In August 1976 the armed POLISARIO Front of Western Sahara invaded Mauritania and forced it to give up its claims to one-third of Western Saharan territory. Morocco quickly took over the land as Mauritanian forces withdrew.

A conflict between Senegal and Mauritania in 1989 intensified to a near-war situation as tens of thousands of Senegalese in Mauritania were expelled or killed, and more than 200,000 white Mauritanians in Senegal were forced to return to Mauritania. In 1991 Senegal and Mauritania resolved their differences and resumed their diplomatic relationship.

In 2000 Mauritania withdrew from ECOWAS (the Economic Community of West Africa) and aligned itself more with the Arab Maghreb Union.

Based on the 1991 constitution, the government is headed by a president elected by universal suffrage, who appoints a prime minister and a constitutional council. The legislature is composed of the National Assembly with seventy-nine members and the Senate with fifty-six members. The constitution guarantees the right of political parties to form. The government is controlled by the Parti Républicain Démocratique et Social (PRDS), whose leader Maaouya Ould Sid Ahmed Taya has been the president since his self-appointment in 1984. Amid claims of election fraud Taya was elected to the presidency in 1992 and again in 1997. Mauritania's 2001 legislative elections were internationally recognized as free and open.

BRADFORD DILLMAN
UPDATED BY NAOMI ZEFF

MAWDUDI, ABU AL-Aʿ LA, AL-

[1903–1979]

Founder and leader of Jamaʿat-i-Islami, one of the most important Muslim parties in Pakistan.

Abu al-Aʿla al-Mawdudi was born in India under British colonial rule. A journalist by profession, he was mostly self-taught although very well read in Islamic sciences and Western thought. He devoted himself first to founding the state of Pakistan and then to the Jamaʿat, which advocated the establishment of an Islamic state in Pakistan. Mawdudi's stance is similar to that of the founders of Egypt's Muslim Brotherhood and was shaped by the same forces: the violent disruption of the traditional economic, social, and political structures in the Muslim world by colonial powers. Their goal was to fight Western intervention and adapt Islamic thought to the needs of the modern world. Mawdudi responded to orientalists' contemptuous descriptions of Islam as a backward and inferior religion with an equally contemptuous denunciation of the self-serving colonialism, nationalism, materialism, atheism, and moral laxity of Western culture.

A prolific writer, Mawdudi attempted to show that Islam is a comprehensive system that encompasses all aspects of life, whether social, political, or economic. He did not advocate a mindless return to the Prophet's time but rather urged Muslims to restore the true Islamic spirit that had been overshadowed by cultural traditions, the *taqlid* (imitation) practice of the theologians, as well as the passive otherworldliness of Sufism. His own commentary on the Qurʾan, which is his best-known work, is such an attempt. His followers tend to be well-educated professionals dedicated to freeing their country from Western political institutions and cultural encroachment and to the restoration of Islamic law. The Jamaʿat is politically active and was suppressed at times because of its opposition to government policies. Shunned as a reformer by conservatives and criticized as too conservative by liberals, Mawdudi can be faulted mostly for calling for new institutions without being able to produce a blueprint for a modern Islamic state.

MAYSALUN

Site of armed combat between French and Arab forces immediately prior to the French mandate over Syria.

Khan Maysalun, a quiet market town on the highway between Beirut and Damascus just east of Alayh, won notoriety as the site of the 24 July 1920 clash between French troops and the armed forces of the Arab government in Damascus. The outcome eventuated in France's taking control of Syria for the ensuing quarter century.

British imperial troops occupied the cities of central Syria as soon as the Ottoman garrisons evacuated them in September 1918. With British acquiescence, an Arab government quickly established itself in Damascus, and Arab nationalists announced the creation of a similar administration in Beirut on 1 October. But when British forces entered Beirut a week later, the nationalist government was disbanded and French military governors took charge of Beirut, Sidon, and Tyre in the name of implementing the League of Nations mandate. The Arab leader in Damascus, Faisal I ibn Hussein, nevertheless toured Lebanon the following month and received an enthusiastic welcome from the populace in each city he visited. On 21 November, he returned to Beirut on his way to the Versailles peace conference.

While Faisal was in Europe, Britain and France negotiated the boundaries separating their respective zones of control in Syria, according to the terms of the wartime Sykes-Picot agreement. The division of Syria into British and French zones was confirmed at Versailles, over strenuous objections from the United States. By the next summer, it was clear that Britain intended to withdraw its troops from central Syria, prompting Faisal to press the British government to take over the mandate for the region. Britain refused to do this, and on 1 November 1919, while the amir was once again in Europe, British commanders in the Syrian interior turned over their positions to forces loyal to Faisal, while those in Lebanon relinquished their garrisons to French units. In the Biqa valley, Lebanese Christians attacked Syrian outposts, providing French commanders with a pretext to move into the area in force at the end of the month.

Faisal returned to Syria in mid-January 1920 and attempted to salvage his reputation, which had

been badly tarnished during the months of fruitless negotiations with the French. He acquiesced in the General Syrian Congress's decision to declare Syria independent that March and accepted the title of monarch of the new unified kingdom of Syria. Not only did Britain, France, and the United States refuse to recognize Syrian sovereignty, but the authorities in Beirut responded to the declaration by proclaiming Lebanese independence under the mandatory authority of the French. Syria then set up a ministry of war under the leadership of Yusuf al-Azma, and King Faisal delivered a series of strongly worded speeches reaffirming the country's independence. Meanwhile, French troops pulled out of Cilicia and took up positions along the Lebanon-Syria border.

On 9 July 1920, the French military command in Beirut issued an ultimatum to the Arab government in Damascus, demanding immediate acceptance of the mandate throughout central Syria. Publication of the ultimatum sparked rioting in Damascus and Aleppo, but the Syrian cabinet reluctantly agreed to its terms on 20 July and dispatched a telegram to inform the French of its decision. The next morning, the Third Division of the Armée du Levant, made up of Senegalese, Moroccan, and Algerian battalions, advanced from Shtura and Zahiya toward Damascus and on 23 July encamped outside Khan Maysalun. An Arab force of some six hundred regular troops and two thousand volunteers led by al-Azma attacked the encampment at dawn the following day and were routed before noon. The Third Division pursued the retreating Arabs and marched into Damascus unopposed on 25 July. Three days later, the French commander ordered Faisal to leave for British-controlled Palestine, and the mandate era began. Maysalun became a symbol of heroic Arab resistance, in the face of insurmountable odds, to European domination.

MAZAR-E SHARIF

Northern Afghan city.

Mazar-e Sharif is a city in northern Afghanistan and the provincial capital of Balkh Province. *Mazar-e Sharif* means "holy tomb"; locals believe that Caliph Ali (656–661) is buried there, although al-Najaf, Iraq, is generally accepted as Ali's actual burial place. Mazar-e Sharif is Afghanistan's largest northern city and a major marketing and trading center for the northern area. The official population taken in 1988 was about 150,000, but with an influx of internally displaced persons, the population in 2003 was thought to be over 600,000. The people in the area are largely Uzbek, but the city contains major Tajik, Turkoman, and Hazara populations as well. During the resistance war (1978–1992) the city was a major stronghold of the Marxist government because of its close proximity to the Soviet Union and its flat terrain, which made it easy to defend against guerrilla activities. After the Marxist government fell in 1992, the city saw fighting between the Tajiks led by Ahmad Shah Masʿud and the Uzbeks under the command of General Abd al-Rashid Doestam.

Mazar-e Sharif became an important city in the resistance against the Taliban. The city changed hands several times between 1997 and 1998, resulting in the killing of several thousand civilians. After the ouster of the Taliban, the forces of General Doestam and General Ata Mohammad fought for control of Mazar-e Sharif.

MAZIQ, HUSAYN

[1916–?]

Libyan politician, prime minister.

With a limited formal education, Husayn Maziq acquired his political skills through extensive practical experience. Head of the Barassa tribe and a long-time Cyrenaican politician, he began his extensive government service in 1943 when the British

administration named him secretary of the interior. He became *wali* (governor) of Cyrenaica in 1953 and also served as foreign minister under the premiership of Mahmud Bey Muntasir (1951–1954). Appointed prime minister in March 1965, his administration focused on maintaining order and stability in Libya. Maziq was forced to resign in 1967 when his government proved unable to cope with public disorder in the aftermath of the June 1967 Arab–Israel War. With the overthrow of the monarchy in September 1969, Maziq was eventually forced into exile by the Muammar al-Qaddafi regime, accused of participating in an abortive July 1970 coup attempt against the new government.

MCMAHON, HENRY

[1862–1949]

Britain's high commissioner in Egypt, 1914–1916.

During Sir Henry McMahon's tenure as high commissioner, he was responsible for mobilizing war matériel from Egypt for Britain's efforts in World War I. McMahon is best known for his role in the negotiations with Sharif Husayn of Mecca that led to the 1916 Arab Revolt against the Ottoman Empire. These negotiations are contained in the Husayn-McMahon correspondence. The extent of the territorial concessions that McMahon pledged for an independent Arab state continues to be a subject of debate.

MEAH SHEʿARIM

A section of Jerusalem established in 1874 as an Orthodox quarter outside the Old City.

Inhabited almost exclusively by ultra-Orthodox Jews, Meah Sheʿarim is one of the most densely populated neighborhoods in Jerusalem and is characterized by a very high birth rate. In 1995 its population numbered 29,214. It houses hundreds of yeshivas and synagogues, and is also the center of Orthodox anti-Zionist ideology and activity. The neighborhood is highly picturesque, and upon crossing into it, one senses having entered the domain of an almost autonomous ethnoreligious culture. Many of its inhabitants view the neighborhood as their own turf, and some view all strangers with suspicion. Its streets are closed to vehicular traffic on the Jewish Sabbath; breaches of that closure are occasionally met with violent reactions. Women are enjoined to dress modestly.

CHAIM I. WAXMAN

MECCA

Islam's holiest city and the third largest city in Saudi Arabia.

Situated about 45 miles east of the Red Sea port of Jeddah in the rocky foothills of the Hijaz Mountains, Mecca has a hot, arid climate, and lack of water and other resources have kept its population and economic fortunes heavily dependent on outside factors. The estimated two million pilgrims who visit the city each year during the hajj season have a vital impact on the local economy. Many of Mecca's inhabitants work in the large service industry that caters to the hajjis, providing transport, security, food, lodging, medical care, and other services. Because many pilgrims from around the world have settled in the city, its population is the most ethnically varied in Saudi Arabia. According to a 2000 estimate there were 1.3 million inhabitants. Non-Muslims are not permitted to enter the city and its environs.

In the sixth century C.E. Mecca became an important market town and stopping point along the caravan routes connecting Yemen with Syria. A square stone structure called the Kaʿba, believed to have been built by Ibrahim (Abraham), also gave the city religious importance. The city is paramount in the history of Islam because it was the birthplace of the prophet Muhammad, the site of many of his revelations from God, the focal point of daily prayer and the main center of pilgrimage. The Kaʿba became the center of the Islamic pilgrimage ritual, and the Grand Mosque eventually was built up around it. The sacred precinct of Mecca extends as far as 14 miles outward from the Kaʿba in an irregular circle. Inside it, a number of prohibitions apply, including bans on fighting, cursing, hunting, and uprooting plants.

Despite its continuing religious significance, Mecca lost its political importance in the seventh century (the first century of Islam) when the capital of the caliphate moved first to Medina and later outside Arabia altogether. Thus Mecca became a provincial backwater ruled by governors appointed from afar. But as central authority weakened, local sharifs claiming descent from the prophet Muhammad were able to assert their control and remain substantially in power from about 965 to 1924, but never with full independence. From 1517, the sharifs fell under the suzerainty of the Ottoman Empire but remained effective local rulers, sharing power with the Turkish governors of Jidda. From 1916 to 1924, Mecca was part of the short-lived Kingdom of the Hijaz proclaimed by the last sharif, but then was conquered and incorporated into Saudi Arabia.

MEDDEB, ABDELWAHHAB

[1946–]

Tunisian novelist and poet.

Abdelwahhab Meddeb was born in Tunis and studied literature, art history, and archaeology in Tunisia and Paris. He subsequently taught history of architecture at the École des Beaux Arts in Paris. Although he writes in French, his books are rich with references to Arabic texts and contain many quotations in Arabic, revealing not only his knowledge of the language but also his familiarity with Arabic literature and civilization. Meddeb's first novel, *Talismano* (1979), shows his constant concern with the past and his reaction to his Arab-Islamic culture.

The interest of Meddeb's writings lies, to a large extent, in his original handling of language and his experimentation with words. His point of departure is the bilingual situation in the Maghrib, which gives the writer access to two cultures and languages and an opportunity to juggle them and, possibly, combine them. The starting point in his novel *Phantasia* (1989; Fantasia) is the human body. Meddeb conceives of writing as an act of perpetual creation, the result of an inner inspiration. The book revolves around the Muslim mystic Ibn al-Arabi, about whom Meddeb later wrote a collection of poems, *Tombeau d'ibn Arabi* (1988; The tomb of Ibn Arabi). The classical Arabic religious and cultural heritage inspired Meddeb's latest book, *Suhrawardi, Chihab al-Din Yahya: Récits de l'exil occidental* (1993; Suhrawardi Shihab al-Din Yahya: narratives of western exile).

MEDICINE AND PUBLIC HEALTH

An improving field based on a combination of traditional and modern practices.

The largest populations, comprising 52 percent of the Middle East, are in Egypt, Turkey, and Iran. About half of the Middle East population is urban. Because of public health advances, a Middle Eastern child born in 1990 can expect to live for seventy years, thirteen years longer than his or her parents. Death rates have fallen faster than birthrates, and at the current pace the population will double in twenty-nine years. Cultural traditions, including Islam, shape some curative options, but socioeconomic factors prevail. Local beliefs in breast feeding and birth spacing enhance maternal and child health. Access to health services, quality of environment, and labor opportunities remain uneven. Israel's comprehensive, Western-style healthcare system and developed economy exclude it from many generalizations here.

Typhoid fever, cholera (on the decrease because of better sanitation and improved water sources), typhus, leishmaniasis, trachoma, and gastroenteritis are characteristic of the area. Increased irrigation has raised the incidence of malaria and schistosomiasis. Smallpox was eliminated by the 1970s through systematic vaccination, but measles remains a problem in some countries. Tuberculosis, which replaced smallpox as the illness of crowded cities, decreased after a 1950s World Health Organization (WHO) and UNICEF immunization program but could resurge if AIDS expands. Ministries of health have combated AIDS, which is seen as the scourge of Western decadence, with frank public health campaigns.

Curative Options: Humoral, Prophetic, Local, and Cosmopolitan

Health care resonates with curative resources and one's life situation. Most people self-prescribe for mild symptoms, whether by taking vitamin C or consulting the local herbalist. Middle Easterners pick eclectically from a repertoire that includes humoral, prophetic, local-practice, and cosmopolitan (modern or Western) cures. Western medicine was introduced in the nineteenth century in medical schools in Cairo, Tunis, and Istanbul, and by the 1920s most governments required practitioners to be licensed.

Humoral medicine, predicated on the balance of the four humors, as in the allopathic, Galenic tradition, is important for herbal pharmacists *(attarin)* who provide such household remedies as ginger for sore throats.

Prophetic medicine *(al-tibb al-nabawi)* is based on sayings of the Prophet Muhammad, such as the *Sahih* by al-Bukhari (d. 870). The *Sahih* contains eighty paragraphs (2.3% of the entire collection) concerned with medical issues, including the ever-popular "God did not send down an illness without also sending down a cure."

In the twentieth century, prophetic medicine has assumed two forms: popular literature, which intermingles standard collections of prophetic sayings with local wisdom, including humoral principles of balanced, normal bodily functions; and formal medical practice, or Islamic medicine, advocated by such groups as the Islamic Medical Organization (IMO). Founded in Kuwait in the 1970s, the IMO administers a hospital that treats patients by the tenets of Islamic medicine and tests Prophetic cures under controlled, laboratory conditions. The experiments concentrate on symptoms ambiguous in etiology and cure, such as renal failure and eczema. The IMO ethical code critiques Western medicine's origin in a "spiritualess" civilization and adjures the Islamic physician to include the patient's therapy managers in the treatment. Other Middle Eastern physicians who consider themselves Islamic practice cosmopolitan medicine but within an Islamic-medicine moral context, such as Islamic benevolent association clinics.

Local and Cosmopolitan medicine frequently overlap. Local practitioners, a trusted first recourse, cooperate with cosmopolitan practitioners. For instance, the traditional birth attendant may encourage the mother through delivery but call the licensed midwife to cut the umbilical cord and provide postnatal care. Training by the ministries of health targets socially accepted but technically inadequate midwives, herbalists, and self-made nurses.

Such local practices as amulets against the evil eye or shrine visitation to enhance fertility, which is forbidden by official Islam, are part of a complex

A child receives immunization shots, Tehran, Iran, 1995. Led by organizations such as WHO and UNICEF, massive immunization campaigns have helped protect thousands of children throughout the world from contracting easily preventable diseases such as polio and measles. **© SHEPARD SHERBELL/CORBIS SABA. REPRODUCED BY PERMISSION.**

curative strategy. Caretakers calibrate symptom severity: They make a vow for a sickly child but rush a fevered child to the hospital. Western, cosmopolitan medicine may be construed in local terms. Traditional Egyptian physiology speaks of circulation of microbes that bombard a patient, much as black magic does, and are neutralized by the injection of a powerful agent, or exorciser. Western medicine may be well understood but not used. For instance, agriculturalists will return to snail-infested irrigation canals to cultivate, though they know doing so means reinfection with schistosomiasis.

Public Health: Child Survival and Maternal Health

Major public health problems among infants and children are dehydration from diarrhea; malaria and immunizable diseases; acute respiratory infections; and injuries from war. Among women, maternal mortality and morbidity from inadequate prenatal, delivery, and postpartum care are often problems. Infant mortality rates (deaths per one thousand live births) dropped in the period 1960–1995 from 214 to 109 in Yemen, 139 to 62 in Iraq, and 89 to 12 in Kuwait.

With oral rehydration solution widely available to parents, mortality from dehydration is no longer a major threat to infants. Nevertheless, early childhood acute diarrhea—exacerbated by nonpotable water, poor sanitation, and malnutrition—may cause more than fifty deaths per one thousand per year in pre-school children. Public health programs consider local perceptions of diarrhea and dehydration and teach mothers the warning signs of dehydration and home recipes for oral rehydration solutions in case mothers cannot obtain commercial packets. Given the synergy between malnutrition and diarrhea, these programs have promoted supplements

based on such local dietary practices as Egypt's seven grains, which has been marketed as Supramin.

The percentage of children who are fully vaccinated ranges from 88 percent in Jordan and 85 percent in Morocco, to 45 percent in Yemen. Full-immunization rates have fallen in recent years, most notably in Iraq, after a decline in support from UN agencies previously leading this worldwide effort. While tuberculosis has subsided, acute respiratory infection remains a significant problem, in part because there is no vaccine to prevent it. In most Middle Eastern countries, it has replaced acute diarrhea as the number-one cause of infant mortality.

War exerts a heavy price on women and children, including death from military operations; starvation; orphaning; disruption of services that protect health, such as water, sewer, irrigation works, and health services; rape and sodomy; and separation of children from their families. For political reasons, there are no accurate data on children killed or maimed in Middle Eastern wars. Estimates are as high as two million killed and five million disabled.

The long conflict in Lebanon severely damaged the quantity and quality of drinking water. One 1990 study found that 66 percent of urban Lebanese water sources were contaminated and that one-third of urban communities were using cesspools for sewage disposal. It is more difficult to assess war's psychic trauma for children than its physical wounds. Civil strife in the Levant, West Bank, Gaza, and Israel has created a generation of children with dead parents and siblings, lost limbs, and nightmares of bombs and mines. Women and children pay much of the human price after several years of sanctions against Iraq. The food-rationing system provides less than 60 percent of the required daily calorie intake, and the water and sanitation systems are in a state of collapse. During the Gulf War, Iraq laid multitudes of mines; the allies also laid some one million land mines along the Iraq–Kuwait border. These pose serious threats to life and limb.

Countries are just beginning to recognize at the policy level the importance of maternal health to the health of a nation. Very few have as yet provided adequate resources. Reproductive morbidity—illness related to the reproductive process—remains relatively unstudied but critical. Over half of a sample of rural Egyptian women had such gynecological morbidities as reproductive-tract infections and anemia. Maternal mortality—fewer than 30 per 100,000 births in developed countries—remains high. Morocco averaged 332 in the late 1980s; an Egyptian province, 126 in the 1990s.

Poor maternal health and nutrition, too-short birth intervals, prematurity, and low birth weight underlie 40 to 60 percent of all infant and child deaths. In 1992, Egypt reported 26 percent of children from zero to thirty-five months with stunted growth, while Jordan and Tunisia reported 18 percent.

Public Health: The Politics of Population, Body, and Food

Women have always sought to control their fertility, first with folk remedies, such as aspirin vaginal suppositories, and now with largely safer, modern technology. Women obtain abortions in private clinics and also try such folk remedies as drinking boiled onion leaves. While birth-control pills, and more recently implants, have been widely used, IUDs (intrauterine device) have been popular in places such as Syria, Egypt, and Jordan. In 1994, 63 percent of Turkish, 47 percent of Egyptian, and 50 percent of Tunisian married women used contraceptives. Side effects or a pregnancy history with at least one infant death often prompt a woman to abandon the birth-control pill.

With population (as with all public health), local custom and socioeconomic context play a more critical role than what Islamic culture allows. For example, fertility rates have dropped in poor Islamic countries, such as Tunisia and Morocco, and remained higher in oil-rich Islamic countries where governments have until recently subsidized child rearing and de-emphasized female education, which is often associated with smaller families.

The Egyptian shaykh al-Azhar has in the past given *fatwas* (religious pronouncements) in support of family planning. The Qurʾan is silent on birth control, but jurisprudence texts record the use of *azl* (coitus interruptus). Muslim promotion of population control waxes and wanes for political and economic, more than religious, reasons. In Pahlavi

Iran, the regime legalized abortion, but the Islamic revolution promptly condemned family planning as a Western imperialist plot. Population skyrocketed and threatened economic growth. In the mid-1980s, Friday sermons in Iran took a 180-degree turn and began to advocate family planning.

Child-survival and maternal-health programs are an integral part of family planning. While the population of the Middle East is growing at 2.7 percent a year, the labor force is growing at 3.3 percent. Jobs for forty-seven million new entrants to the labor force must be found by 2011. The Cairo conference on population in 1994 and the Beijing women's conference in 1995 hotly debated such issues as gender equity, employment and economic development, and a woman's right to control her body. Some Muslim *ulama* (theologians) united with Roman Catholics to oppose a platform seen as threatening family values.

Female excision—a non-Islamic custom practiced locally in Egypt, Sudan, and parts of Africa—is vehemently critiqued by Western feminists. In the Middle East, folk beliefs link excision and fertility; in traditional areas of Egypt, a recently excised girl who crosses before another woman is believed able to strike that woman with infertility. While Egypt outlawed female excision in the mid-1950s, the practice, referred to in the Western press as "female genital mutilation," continues in traditional areas. Middle Easterners criticize Western feminists for seeking to impose their standards cross-culturally.

The politics of medicine includes not only issues of population and cross-cultural judgments, but also such issues as access to food and health facilities. The Sudanese famine of the late 1980s was not a problem of food, because the harvests had been ample; rather, it was an issue of the logistics of food placement during civil strive. Finally a quick review of public health cannot cover specialized treatment and scientific advances in Middle Eastern hospitals and research centers in such fields as oncology and cardiology.

MEDINA

City in Saudi Arabia, second to Mecca as a holy site to Muslims.

Located in Hijaz, about 100 miles from the Red Sea and 215 miles north of Mecca, Medina is revered by Muslims as the prophet Muhammad's destination after his emigration (*hijra* in Arabic) from Mecca in 622 C.E., and as the site of his tomb. Although it is not mandatory, many pilgrims to Mecca also visit Medina. The city became the southern terminus of the Ottomans' Hijaz Railway upon its completion in 1908. The site of a major Ottoman garrison during World War I, Medina and the rest of Hijaz came under Hashimite rule after the empire's defeat. The city's high walls were the last refuge of the Hashimites, and Medina was the last city in Hijaz to fall to the attacking forces of Abd al-Aziz ibn Abd al-Rahman Al Saʿud in 1926, after which many of the city's historical monuments and tombs were destroyed because the conservative religious allies of Abd al-Aziz found them offensive.

Relatively abundant water has enabled Medina to have an important agricultural hinterland, with dates the main crop. However, the growth of the city during the oil era and diversion of water to other uses has caused agriculture to suffer. The annual pilgrimage provides an important source of income, as do trade and the provision of services. Long a center of Islamic learning, the city now hosts the Islamic University of Medina. A 2000 estimate put the city's population at 891,000.

MEDITERRANEAN SEA

Sea between Europe, Africa, and Asia.

The Mediterranean Sea is about 2,400 miles long, covers an area of about 965,000 square miles, and is ringed by a winding coastline of peninsulas and mountains. The sea opens to the Atlantic Ocean through the Strait of Gibraltar, to the Black Sea through the Dardanelles, and to the Red Sea through the Suez Canal.

Since antiquity, the Mediterranean has been an important waterway for trade and has fostered great civilizations on its shores. The sea's strategic significance declined after the sixteenth century as trade routes shifted to the Atlantic but increased again with the 1869 opening of the Suez Canal and its subsequent use for oil shipping. The 1995 Declaration of Barcelona marked the beginning of political and economic collaboration between the European Union and countries on all shores of the Mediterranean.

The pollution of the sea remains a cause of concern for governments in the region, as reflected in the signing of two protocols for the protection of the Mediterranean Sea against pollution in 1980 and 1982. Land-based sources of pollution account for 80 percent of the total pollution. Participant countries in the convention for the protection of the Mediterranean Sea have made periodic commitments to reducing pollution, with mixed results.

MEGED, AHARON

[1920–]

Israeli writer and dramatist.

Born in Włocławek (Poland), Meged emigrated to Palestine in 1926. A member of kibbutz Sedot Yom from 1938, Meged left in 1950 for Tel Aviv. He was an editor of the journal *ba-Shaʿar,* founded the literary biweekly *Massa,* and was literary editor of the *Lamerhav* newspaper before becoming a columnist for *Davar* in 1971. From 1960 to 1971, he was Israel's cultural attaché to London.

Because his writing spans such a long period, it is difficult to class him simply—as he often is classed—as a writer of the "1948 generation." Over the years, his works have been increasingly critical of patriotic exuberance while at the same time firmly focused on a faithful expression of the highest Zionist ideals. Meged's prize-winning works often have autobiographical content, and the anti-hero, as an outsider, is prominent in his writings. In his most notable opus, *ha-Hai Al ha-Met* (1965, translated as *The Living on the Dead,* 1970), he criticizes Israeli society for abandoning the Zionist ideals of the early *halutzim* (pioneers). Among his plays are *Hannah Szenes, Genesis,* and *I Like Mike,* a comedy. Meged's works have been translated into several languages, including English.

A former member of the Peace Now movement, Meged took issue with what he saw as the movement's focus on criticizing Israeli governments, rather than reaching out to Arabs. By 2000, Meged was a leading figure in the left-wing reaction against post-Zionist or revisionist intellectuals, contending that they mounted a fundamental attack on Judaism and Israeli morality and identity, and that their work was based on a fundamental misreading of the readiness of Israel's Arab neighbors for peace.

MEHMET RAUF

[1874–1932]

Ottoman Turkish writer.

Mehmet Rauf was born and died in Constantinople (now Istanbul). He graduated from the Naval Academy and became an officer. In the 1890s, he was a member of the group that published *Servet-i Fünün.* In 1901, he published his most famous novel, *Eylul* (September), which is considered the first Turkish example of the psychological novel. Among the ten novels Mehmet Rauf wrote are *Genç Kiz Kalbi* (1914; A young girl's heart), *Karanfil ve Yasemen* (1924), *Son Yildiz* (1927; The last star), and *Halas* (1929). In addition to his novels, he wrote poetry, some of which was collected in a volume entitled *Siyah Inciler* (1900; Black pearls); plays, including *Cidal* (1922), *Sansar* (1920), and *Ceriha* (1923); and dozens of short stories. Mehmet Rauf also published two women's magazines, *Mehasin* (1909) and *Süs* (1923).

David Waldner

MEHMET V REŞAT

[1844–1918]

Ottoman sultan, 1909–1918.

A brother of Sultan Abdülhamit II, Mehmet V was sixty-five years old in April 1909 when he was chosen by the Young Turks to succeed his deposed sibling as sultan of the Ottoman Empire. Mehmet V is usually seen as a weak ruler who functioned mostly as a figurehead for the Young Turks and the Committee for Union and Progress (CUP). His powers were severely circumscribed by the constitution, which had been restored in 1908. He could not nominate his own ministers without the approval of parliament and the CUP. He remained sultan during World War I, but his influence on policy was negligible, as the war was conducted by the Young Turk triumvirate headed by Enver Paşa. Mehmet V did not command an independent base of support. He died of natural causes on 28 June 1918, before Istanbul was occupied by the Allies, and was succeeded by his younger brother Mehmet VI Vahidettin.

MEIR, GOLDA

[1898–1978]

Labor-Zionist politician; fourth prime minister of Israel, 1969–1974.

Golda Meir, née Goldie Mabovitch, was born in Kiev, Russia. Her family moved in 1906 to Milwaukee, Wisconsin, where she spent her early years and became active in the Milwaukee Labor Zionist Party, later serving as its leader. In 1921 she and her husband, Morris Myerson, emigrated to Palestine and joined Kibbutz Merhavia. Goldie Myerson represented the kibbutz movement in the Histadrut (Labor Federation) and served as secretary of Histadrut's Women's Labor Council (1928–1932). In 1934 she was elected to the Histadrut's Executive Committee. In the years prior to Israel's independence, Myerson was the acting director of the Jewish Agency's Political Department under Moshe Sharett. In this capacity she took an active part in the negotiations with King Abdullah that resulted in long-term, strategic understandings between Israel and Jordan.

When the State of Israel was declared on 14 May 1948, Myerson was one of the signatories to the Declaration of Independence, and she subsequently became Israel's first ambassador to the Soviet Union. Elected to the first Knesset in 1949, Myerson remained a Knesset member until her resignation from the office of prime minister in 1974. As minister of labor (1949–1956) she was credited with initiating major housing and road programs. During

Once described by former Israeli prime minister David Ben-Gurion as "the only man in the cabinet," the tenacious Golda Meir served as foreign minister of the country from 1956 to 1965 on Ben-Gurion's appointment, and herself held the prime ministry from 1969 to 1974. © AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.

the crisis that led to the Sinai–Suez war of 1956, Myerson, a Ben-Gurion loyalist, replaced Sharett as foreign minister and Hebraicized her name to Meir. In the aftermath of the war, Meir played a major role in formulating the framework of relations between Israel, Egypt, the United States, and the United Nations. This framework called for Israel's withdrawal from Sinai and Gaza under U.S. and UN pressure; the stationing of a United Nations Emergency Force (UNEF) in Sinai; and negotiating U.S. assurances of Israel's right of free passage through the Strait of Tiran.

During the early 1960s Meir's main focus as foreign minister was the building of close ties between Israel and newly independent African states. At the same time, Meir energetically consolidated her political power base. Together with other leaders in MAPAI (Labor Party), she led an opposition front against several of Prime Minister David Ben-Gurion's policies, especially Israel's relations with Germany. Ben-Gurion gradually found himself in political isolation within his party and consequently was forced to resign from office in June 1963. Under Levi Eshkol's premiership, Meir strengthened her political position. During Eshkol's tenure, she served as foreign minister, and from 1966 to 1968 as MAPAI's secretary-general. In this role she strove to unite Israel's socialist parties and establish the Israel Labor Party. Prior to the 1967 war, Meir strongly opposed the popular demand for a national unity government that would include the right-wing party and Ben-Gurion's faction. In particular, she rejected the call to appoint Moshe Dayan defense minister in place of Levi Eshkol. Eventually, she was compelled to yield on both counts.

Following Eshkol's death in February 1969, Meir became prime minister. During her tenure she had to deal with growing military tension in the region, especially the war of attrition being fought along the Suez Canal. Increasingly faced with severe internal and external criticism for her "uncompromising positions," Meir refused to accept the authenticity of any specifically Palestinian national attachment to the land that became Israel. Furthermore, her government turned down some offers for partial settlements with Egypt that might have prevented the outbreak of the Yom Kippur War. Her policy as prime minister was based on the following principles: Israel's goal was to conclude formal peace treaties with the Arab states; Israel would make territorial concessions only within the framework of comprehensive peace treaties; and as long as no peace treaties existed, Israel was fully justified in building and fortifying Jewish settlements in the occupied territories.

The Arab–Israel War that erupted on 6 October 1973 caught Israel in a strategic surprise that resulted in heavy losses and forced Israel to ask the United States for emergency military equipment and financial aid. Though broadly admired for her self-restraint during the fighting, Meir could not withstand the accusations that she bore the overall responsibility for the war and its consequences.

Thus, she was obliged to resign from office, though not before laying the foundations for interim agreements between Israel and Egypt, which eventually led to the formal peace treaty between the two countries. Golda Meir died in Jerusalem on 8 December 1978.

UPDATED BY ZAKI SHALOM

MEKNES

A city of northern Morocco.

Meknes is situated 40 miles (60 km) west of Fez and 90 miles (140 km) east of Rabat and is surrounded by Arab and Berber tribes. Its population was estimated in 1994 as 460,000 inhabitants. Close to the fertile plain of Sais, Meknes benefits from its rich agriculture.

Meknes (or Miknas al-Zaytun) is one of the oldest Moroccan cities. The gathering of one faction of the Miknasa tribes (tenth century) seems to be the beginning of the founding of the city, which flourished later under different dynasties that ruled the Maghrib. Meknes gained prestige in the seventeenth, eighteenth, and nineteenth centuries when it became a *makhzaniya* city. Sultan Mulay Ismaʿil built palaces and made this city the capital of his kingdom.

Numerous religious groups—such as the Hamadish Brotherhood and the Isawiyya Brotherhood—consider Meknes to be sacred and hold celebrations there. The most important occurs in the month of Mulud and honors Shaykh al-Kamil.

RAHMA BOURQIA

MEKNES, TREATY OF (1836)

The second treaty between Morocco and the United States, signed at Meknes on 16 September 1836.

With two exceptions (a final clause continuing the treaty beyond its fifty years validity until it was actually cancelled by one of the parties and an addendum concerning protection of U.S. ships in Moroccan ports against third-party enemies), the Meknes treaty precisely mirrored the first U.S.-Moroccan treaty, signed in Marrakech on 28 June 1786. Both treaties focused on two concerns: the protection of U.S. shipping against pirate attacks by Moroccan ships and the enhancement of commercial relations. The question of pirates, or corsairs, was indeed an important issue in 1786, but by 1836 it was no longer relevant: the Moroccan corsairing fleet existed only on paper. Moreover, U.S. commerce with Morocco was insubstantial, and U.S. interest in the country minimal. The consul who signed the treaty, James Leib, left the conduct of negotiations to the vice consul and his interpreter.

The importance of the treaty lay in its symbolic value: it deeply worried the British consul general, E. W. A. Drummond-Hay, and the authorities in London. They believed, quite unjustifiably, that it marked the beginnings of an attempt by the United States to occupy physically a position on the Mediterranean coast of Morocco that would be used to expand U.S. influence. At this time Britain was easily Morocco's largest trading partner, particularly through the garrison colony of Gibraltar, and dominated Morocco's foreign relations. Drummond-Hay tried to steer a path that would open Morocco to foreign—especially British—commerce, while ensuring that other powers—especially France—would not extend their influence too much. The supposed agreement about a U.S. base on the coast would undercut British predominance. In fact nothing of the sort happened; British predominance was sealed by the Moroccan-British treaty of 1856, which paved the way for the real opening of Morocco to international commerce.

MELILLA

Spanish enclave on Morocco's northeast coast.

One of Spain's two remaining footholds on the African continent, the enclave of Mellila occupies approximately 7 square miles on the Guelaia Peninsula, near the city of Nador on Morocco's northeast Mediterranean coast. In addition to the town, there are also two groups of adjacent islands. A majority of the population of 69,000 are ethnically Spanish and Catholic; a substantial minority—about 40 percent—are Berber Muslims, most of whom have Spanish citizenship. In recent years, Melilla, like its companion Spanish enclave Ceuta, has attracted both Moroccans and black Africans seeking to immigrate illegally into Europe.

Founded by the Phoenecians in the third century B.C.E., Melilla was occupied by Spain in 1497, one of several presidios established to protect the Spanish mainland. More territory was added to it after the 1860 war, and in 1861 it was made a free port. Morocco has never ceased to insist on the return of Melilla and Ceuta, but the two countries agreed in 1976 to shelve the dispute as part of their agreement on Western Sahara. In the mid-1990s, as Moroccan political life slowly revived, the status of Mellila and Ceuta became a prime national issue for the country's political parties. The Spanish parliament's approval of statutes of autonomy for the two enclaves in 1995 irked the Moroccans considerably.

The five hundredth anniversary of Spain's control of Melilla was marked in September 1997 in a low-key manner, as Muslim residents complained of socioeconomic difficulties and discrimination. One outcome of the difficulties was the election of a Muslim mayor in 1999. While Morocco's prime minister Abderrahmane Youssoufi suggested in 1999 that Macao and Hong Kong could serve as possible models for a resolution of the dispute, Spain reiterated that no foreign sovereignty claims would be considered, and Spanish prime minister Jose Maria Aznar visited Melilla and Ceuta in January 2000, stressing the "Spanishness" of the two cities. By the end of the century, both cities had become jumping-off points for illegal immigration into Europe and for smugglers of European goods, with potential immigrants from all over the African continent seeking entry. Morocco's assertion of authority over an unoccupied rock outcropping off the Moroccan coast in the summer of 2002 nearly boiled over into an international crisis, as Spain treated it as a Moroccan test of its intentions. Spanish troops evicted the small Moroccan contingent, the status quo was restored, and Spain reinforced its presence in both Melilla and Ceuta and tightened its borders. Moroccans from the neighboring areas are allowed into the towns for work.

MEMMI, ALBERT

[1920–]

Tunisian Jew; émigré; French novelist and sociologist.

Albert Memmi was raised in a poor Jewish quarter in Tunis; however, his evident abilities enabled him to be educated at an elite French colonial secondary school. After university studies in Algiers and Paris, he returned to Tunis, where he taught philosophy at a lycée. Following Tunisia's independence in 1956, he emigrated to France, where he became a professor of sociology at the University of Paris in 1970. The alienation he felt growing up—belonging to neither the Muslim nor European cultures and removed from his traditional Jewish background through French education, yet snubbed by his wealthier Eu-

ropean classmates—was a powerful influence on the themes of his work. Memmi is best known for two types of works: his largely autobiographical novels of alienation and his essays exploring the social psychology of colonization and Jewish identity. These works include his first novel, *La statue de sel* (1953; published as *Pillar of Salt* in 1955), and the influential essay "Portrait du colonisé;" (1957; published as the "Colonizer and the Colonized" in 1965). Racism and the various forms of dependency are significant themes in his later works. Memmi has also edited anthologies of North African francophone literature and in 1990 he published a poetry collection, *Le mirliton du ciel.*

WILL D. SWEARINGEN
UPDATED BY STEFANIE K. WICHHART

MENDERES, ADNAN

[1899–1961]

Turkish politician.

Adnan Menderes was born in İzmir and educated at the American College in İzmir and the Law Faculty of Ankara University. He was elected to the Turkish Grand National Assembly in 1930 as a member of the Republican People's Party (RPP), which had been founded by Mustafa Kemal Atatürk. In 1945, he was one of the deputies who introduced a bill calling for the introduction of multiparty politics and other political rights specified in the United Nations Charter. In 1946 he resigned from the RPP and with Celal Bayar cofounded the Democrat Party, which subsequently challenged RPP policies. In 1950, after the Democrat Party won a majority of seats in the assembly, Menderes became prime minister, a position he held for ten years. His policies aroused considerable opposition on the part of the RPP, and in May 1960 Menderes was ousted by a military coup d'état, charged with corruption and abuse of power, and, along with 600 other former government officials, tried on the island of Yassiada. Menderes and fourteen colleagues were convicted and sentenced to death; he was executed by hanging in 1961.

UPDATED BY ERIC HOOGLUND

MENOU, JACQUES FRANÇOIS

[1750–1810]

French military officer; governor of Egypt, 1800–1801.

The last leader of the French forces that occupied Egypt from 1798 to 1801, Jacques François Menou succeeded General Kléber as Napoléon Bonaparte's governor of Egypt in July of 1800. He converted to Islam in order to marry an Egyptian and changed his name to Abdullah. Believing that French occupation of Egypt would continue for a long time, Menou drafted proposals to encourage Egyptian agriculture, commerce, and industry. When Menou began to survey land-holdings in preparation for the assessment of new land taxes to pay for these reforms, Egyptians of all social classes, already alienated by Menou's declaration of Egypt as a colony of France, opposed him.

In March of 1801, a joint Anglo-Ottoman force occupied the Nile river delta. Leaving the defense of Cairo, the capital, to General Belliard, Menou led his troops to Alexandria. When Belliard surrendered, Menou, isolated in Alexandria, was forced to surrender. French forces left Egypt in October of 1801.

MERNISSI, FATEMA

[1940–]

Moroccan sociologist, author, and feminist Qur'anic scholar.

Born in Fez, Morocco, Fatema Mernissi studied at Muhammad V University in Rabat, where she received a degree in political science. She continued her studies at the Sorbonne in Paris, where she earned a degree in sociology. Her doctorate in sociology is from Brandeis University (1973). She is currently professor of sociology with a research appointment at the Institut Universitaire de Recherche Scientifique, Muhammad V University in Rabat.

Working at the intersection of gender, religion, and sociopolitical organization, Mernissi has taken on some of the most contentious issues of her time, such as pointing out the inconsistencies inherent in basing Morocco's *moudawana* (code of personal status) on religious law while the constitution and penal code are based on civil law, or claiming to establish a democratic polity while denying Moroccan women full and equal political rights. Mernissi has entered difficult religious debates, attributing the betrayal of women's political agency, for example, to misogynistic, patriarchal interpretations of the *hadith.* Mernissi envisions a pluralist, Islamic civil society in which women and the poor would exercise their full rights as citizens.

Widely translated, her work has moved from the study of sexual dynamics in Muslim society in *The Veil and the Male Elite* (1975), to examinations of sexual inequality as experienced by marginalized and silenced women in *Doing Daily Battle* (1983), to the recovery of women's Islamic history in *Forgotten Queens of Islam* (1990). Mernissi next turned her attention to contemporary Islam, looking at the question of fundamentalism in *Islam and Democracy* (1992), at the role of the state and Islamic thought in setting the parameters of women's position in *Women's Rebellion and Islamic Memory* (1993), and at her own memories of growing up Muslim, Moroccan, and female in *Dreams of Trespass* (1994) and *Harem Days* (1999).

Her description of the empowerment of remote villagers in the High Atlas as they worked through a nongovernmental organization (NGO) to solve their own problems concerning water in *Les Aït-Débrouille* (1997) marked Mernissi's shift in focus. She introduced a cross-cultural examination of the production and reception of representations of Middle Eastern women in *Scheherazade Goes West* (2001), and began to invest her energies in local action and democratization through two projects. In Civic Synergy, begun in 1995, Mernissi facilitates writing workshops to enhance the communication skills of NGO members, and in return they provide material for her research on the connection between access to new technologies and growing membership in NGOs. The Civic Caravan is a series of workshops designed to teach young NGO members the arts of dialogue and networking. The thread that runs through all Mernissi's work is the belief in the power of communication to create agency. The female storyteller Scheherazade embodies the intellect, humor, wisdom, and wit that Mernissi associates with active community building, be it in the harem of her childhood where women dream of far horizons, or in the workshops where activists work to build a better community with their own energies and ideas.

MESOPOTAMIA CAMPAIGN (1914–1918)

World War I British military campaign in part of the Ottoman Empire.

In November 1914, within days of the British declaration of war on the Ottoman Empire (which was allied with Germany in World War I), the British landed an Indian Expeditionary Force (IEP) at Basra in Mesopotamia (present-day Iraq). Meeting scant resistance from the Ottoman Turks, the IEF moved north and, in April 1915, Sir John Nixon took command. Nixon ordered his lieutenant, Sir Charles Townshend, to advance north—up the river

Tigris toward Baghdad. By November 1915, Townshend succeeded in advancing to Ctesiphon, just south of Baghdad, but his supply lines were stretched thin, and he was repulsed by the newly invigorated Ottoman armies under the command of German General Kolmar von der Goltz. Townshend retreated south to Kut al-Amara, where he was trapped by the Ottoman Turks.

The British failed to reinforce Townshend, and after a 146-day siege, he surrendered his entire force on 29 April 1916. Lacking men and matériel, the Turks were unable to take advantage of the victory. Under the command of Sir Frederick Maude, the British again advanced north, retook Kut on 22 February 1917 and entered Baghdad on 11 March. By September, the British were in control of central Iraq, and by the war's end in 1918, they had occupied all of Mesopotamia south of the city of Mosul.

MESSIANISM

The expectation that a prophet will arrive at the end of time to usher in the divine kingdom.

Messianism is common to all three of the major Middle Eastern religions. The word *messiah* is derived from the Hebrew Old Testament, where it was used to refer to actual kings who were anointed *(mashiah)* with oil. In the intertestamental period, the term was applied to the future king who would restore the Kingdom of Israel and deliver the people from evil. In Christianity, Jewish ideas about the *messiah* were applied to Jesus. The word messiah was translated into Greek as *Christos,* or Christ, thereby identifying Jesus with Jewish messianic expectations. Though Christianity builds on Jewish messianic precedents, it adds the idea that Christ has already fulfilled messianic expectations in person and that he will return to bring these expectations to their final fulfillment. Comparable ideas are found in Islam in the person of the *Mahdi* (the rightly guided one), a person who will come at the end of time to defeat the enemies of Islam and thus create a just world. Islamic messianism does not, however, deal strictly or solely with the end of the world; it has played a role in various reformist and revivalist movements.

DAVID WALDNER

MESTIRI, AHMAD

[1925–]

Tunisian political opposition leader, formerly an important figure in the Neo-Destour (later the Socialist Destour) Party (PSD).

Ahmad Mestiri, from an upper-middle-class family, was trained as a lawyer and achieved prominence within the Neo-Destour Party in the early 1950s. While the party was outlawed (1952–1954), he served on its clandestine Political Bureau. Mestiri was rewarded for his party services by being appointed minister of justice in 1956 and minister of finance and commerce in 1959. In the meantime, Neo-Destour leader Habib Bourguiba had appointed Mestiri to the Political Bureau in 1957; he was elected to it in 1959. Mestiri also was elected a National Assembly deputy. Additionally, from 1960 to 1966 he was ambassador to Moscow, Cairo, and Algiers.

During the 1960s Mestiri became disenchanted with the unrestrained power exercised by Bourguiba as both president and party leader. He and other opponents of the economic strategies of planning minister Ahmed Ben Salah were particularly critical of Bourguiba for refusing to remove Ben Salah from his post, even when the weight of evidence

indicated the failure of his policies. As a result, Mestiri broke with the PSD in 1968. Following Ben Salah's disgrace in 1969, Mestiri resumed his affiliation with the party. Although widely acknowledged as the leader of a liberal current within the PSD, he was appointed minister of the interior and, in 1971, was elected to the party's Central Committee. Mestiri initiated a campaign to open important party business to broader participation by advocating the direct election of Political Bureau members. He also called for the establishment of institutional constraints on the president. Bourguiba responded by dismissing Mestiri and, in 1972, ordering his expulsion from the party.

By the mid-1970s, Bourguiba became president for life, and opposition elements within the PSD were pushed outside the party, later originating the Mouvement des Démocrates Sociales (MDS) led by Mestiri. The MDS was denied official acceptance as a political party, but he was recognized as the leader of a loyal opposition and was permitted to publish a newspaper, *al-Ra'i.*

The appointment of Mohammed Mzali as prime minister in 1980 inaugurated a more open political era. The PSD again rehabilitated Mestiri, even giving him a minor cabinet post. He accepted the government's invitation to opposition political groups to participate in the 1981 National Assembly elections, but the MDS list failed to gain the 5 percent of the total vote needed to be sanctioned as a political party. During the 1980s, however, the regime moved closer toward the secular opposition to counter emerging Islamist tendencies. Finally, in 1983 Mestiri's MDS was granted formal recognition.

Prior to the 1986 elections, Mestiri was imprisoned for organizing a demonstration protesting the U.S. bombing of Tripoli in April. The MDS therefore boycotted the elections. Relations with the government remained poor until the removal of Bourguiba from the presidency in 1987. Thereafter, Mestiri consulted with President Zayn al-Abidine Ben Ali about implementing an effective system of political pluralism. Nevertheless, the MDS repeated poor results in the 1989 elections. Disappointed with what he considered a fraudulent scrutiny, Mestiri resigned and retired from political life in 1989. His successor at the head of the MDS was Mohamed Moadda.

KENNETH J. PERKINS
UPDATED BY ANA TORRES-GARCIA

MEUSHI, PAUL PETER

[1894–1975]

Maronite patriarch who worked to preserve peaceful Christian–Muslim relations in Lebanon.

Paul Peter Meushi was born 1 April 1894 in the town of Jazzin (southern Lebanon) to a Maronite Christian family. He completed his elementary and secondary education in Lebanon, then left for Rome to join the Gregorian University, where he completed a degree in philosophy and theology. In 1917, Meushi was ordained a priest in Rome and, at the end of World War I, he came back to Lebanon. From then until 1934, when he was nominated to be bishop for the city of Tyre, Meushi served as a priest for two Maronite parishes in the United States (New Bedford, Massachusetts, and Los Angeles, California). In May 1955, by papal decree, Meushi was appointed Maronite patriarch of Antioch and all the East.

In 1958, Lebanon plunged into civil war, the partisans of then-President Camille Chamoun pitted against the opposition—led mostly by Muslims and Christians. Meushi opposed the Chamoun policy of aligning Lebanon with the West, thus alienating the country's Muslim population. Chamoun, however, suspected the patriarch of wanting to reassert religious authority in Lebanon's political affairs, but Meushi was concerned about the fate of Christianity in the Middle East and the preservation of Christian–Muslim coexistence in Lebanon. Cardinal Meushi died 11 January 1975.

GEORGE E. IRANI

MEVLEVI BROTHERHOOD

A Sufi order.

The Mevlevi Brotherhood is a style of Anatolian Sufism founded by Mevlana Celalledina (also Jalal al-Din) Rumi (1207–1273), a Central Asian mystic and poet. He developed the *samaʿa,* a rite of communal recitation, which consists of a call to Allah, performance of the *zikr* (the divine ceremony of remembrance that signifies an attempt to connect and give thanks for the primordial moment of creation),—dancing, and meditating. The *sama'a* evokes a dialogue with nature; members methodically join in an individual, synchronized, whirling dance that emulates the movement of the planets on their journey of spiritual fulfillment. Rumi's son and grandson developed the order into a community of followers, which flourished during the Ottoman era.

The Mevlevis played an important role in Turkey's social and intellectual development, and the order served as a conduit for the common people. Mustafa Kemal Atatürk and his secular colleagues who established the Republic of Turkey distrusted the Mevelvis on account of their influence among the masses and forcibly disbanded the order in 1925. The Mevlevi monastery in Konya was converted into a museum in 1927 and the members were banned from using it. Even though the monastery remains a museum, it serves de facto as a shrine that thousands of pilgrims visit each year. Despite its suppression in Turkey, the Mevlevis spread to other countries and today their centers exist in more than seventy-five cities worldwide.

UPDATED BY RITA STEPHAN

MI-6

Branch of the British government responsible for the collection and analysis of foreign intelligence.

The function of this government service is primarily espionage, the obtaining of accurate information from the enemy by means of spies or agents; double agents generally work for MI-5, the British internal security agency. Cooperation between both services was necessary when working with enemy spies who were uncovered in Great Britain and persuaded to work for the British from then on, thus double-crossing their original masters. Other agencies included primarily the Admiralty, the Air Force, the Home Office, and the Foreign Office; in both World War I and World War II, university faculty members and special professions were inducted into the intelligence services. After the last war, MI-6 continued to work in the Middle East, as did the U.S. Central Intelligence Agency (CIA).

MICHAEL, SAMI

[1926–]

Israeli author.

Michael Sami was born in Baghdad, Iraq. Due to his involvement in the communist underground, he was forced to leave his homeland in 1947 and arrived in Israel in 1948. He has published numerous novels for adults and young adults. He is best

known for his literary representation of women, Middle Eastern Jews, and Arabs, and their political and ethnic struggles and cultural systems.

His first novel, published in English as *Equal and More Equal* (1974), depicts the socioeconomic and cultural frustrations of Jewish immigrants from Arab countries as they arrive in Israel. In *Refuge* (1977), also translated into English, Sami shows the personal and political strife of a group of young Jews and Arabs in the Israeli Communist Party during the 1973 Arab-Israel War. His writing reached its height in his later books and eventually brought him both popular and literary acclaim with the best-selling *Victoria* (1993), a novel based on his mother's life. It shows the traditions and customs of the Baghdad Jewish quarter in great detail, focusing particularly on its male domination, its lack of privacy, and the intensity of sexual motivation. It ends in Israel, where the men are disempowered by their cultural clash with a new reality and hierarchy. Victoria, as her name implies, is the ultimate winner, seasoned by her experience of self-denial and accommodation. Michael's novel *Water Kissing Water* (2001) draws on his background in hydrology, revisiting Little Israel of the 1950s.

ZVIA GINOR
UPDATED BY NANCY BERG

MIDDLE EAST

Regional name with various usages and meanings.

The usage and meaning of "Middle East" have been a source of heated debate. As early as 1949, when other terms, particularly "Near East," were still used, Winston Churchill said: "I had always felt that the name 'Middle East' for Egypt, the Levant, Syria, and Turkey was ill-chosen. This was the Near East. Persia and Iraq were the Middle East." Despite the tacit acceptance of the term by most scholars, journalists, and politicians, few specialists would deny a lingering discomfort with the two words.

Regional geographic names based upon directions are always problematic. They necessarily imply a perspective—in this case, obviously that of "the West." "The East" brings to mind the "Eastern Question" that had plagued Europe since the eighteenth century. Earlier, Europeans had used "the Levant," from the French *lever* (to rise), meaning the place where the sun rises: the eastern coast of the Mediterranean (or of Spain). In the Middle Ages, the favored term was *outremer* (overseas).

"The East," and its adjectival form "oriental," connoted in the European mind more than just a geographic locale. It evoked a world of strange customs, religious fanaticism, exotic sexual practices, and sybaritic culture. As travels and colonial activity made India, and then China, familiar, the need arose to define "East" further. By the late nineteenth century the Ottoman realm was the "Near East" in contradistinction to China and Japan, the "Far East."

It is generally accepted that the earliest reference to "Middle East" occurs in Alfred Thayer Mahan's "The Persian Gulf and International Relations," in the September 1902 issue of the *National Review* (London). Popularization of the new usage is credited to Valentine Chirol, Tehran correspondent for *The Times* who, in the title of the first in a series of articles, "The Middle Eastern Question," dated 14 October 1902, retrieved the term from Mahan's text. An additional factor in its popularization was the shifting balance of power from mainland Europe to the American side of the Atlantic. From an American point of view, everything on the European side of the Atlantic is, geographically, east. Thus, the further reaches occupied by Arabs, Turks, and Persians plausibly seemed more "middle" than "near."

Since the 1950s "the Middle East" has been the favored American term for newly founded academic institutes, programs, and professional associations, though use of "Near East" has persisted in archae-

ological circles and academic departments founded before World War II. The U.S. Department of State compromised with a division for "Near and Middle East" affairs.

Today "the Middle East" encompasses the lands that stretch from Egypt to Turkey and Iraq, including the Arabian peninsula, usually Iran, and, somewhat less frequently, Morocco, Algeria, Tunisia, Libya, and Sudan.

The term is in no way coterminous with "the Muslim (or Islamic) world." The majority of the world's Muslims live outside "the Middle East," by any definition. It has been suggested that "the Middle East" is best considered a purely geographical term that encompasses roughly the area of the earliest wave of Muslim conquests, stretching from Morocco to Afghanistan and Pakistan, with the later inclusion of Anatolia (modern Turkey). Others disagree, saying that such a historical definition would also include parts of Europe (such as Spain and Sicily) and central Asia.

KAREN PINTO

MIDDLE EAST DEFENSE ORGANIZATION (MEDO)

U.S.-proposed group for military security in the Middle East; never formed.

The beginning of 1952 saw riots in Egypt and a continuing erosion of Britain's position in the Middle East. The U.S. foreign policy establishment considered plans to replace Britain as the preeminent power in the Middle East. Paul Nitze, then head of the U.S. Policy Planning Staff, proposed the creation of a Middle East Defense Organization that would protect the Suez Canal and provide military security to the petroleum-producing regions and to the Northern Tier countries of Iran, Pakistan, and Turkey. Cosponsored by Turkey, MEDO was not endorsed by Egypt's President Gamal Abdel Nasser, who viewed MEDO as a tool of American imperialism.

Although both U.S. President Harry Truman and Secretary of State Dean Acheson were committed to MEDO, Egypt's resistance and the generally lukewarm reaction of other Arab states made the realization of MEDO impossible. In 1953, Truman left the White House, and MEDO became defunct. The ideal of a NATO-like security arrangement for the Middle East remained alive, however, and aspects of MEDO were included in the Baghdad Pact.

MIDDLE EAST SUPPLY CENTER (MESC)

World War II agency in Cairo set up to coordinate supply and transport problems of the Middle East.

The economic strength of the Middle Eastern countries was necessary to the success of the Allied war effort. A multitude of agencies—British and American, military and civilian—had roles in ensuring that Middle Eastern economies remained viable and strong. In April 1941, the British established the Middle East Supply Center (MESC) as a clearinghouse for all matters of civilian supply in the Middle East; it reported directly to the ministry of war transport in London. The goal was to regulate and control shipping and commerce among the countries of the Middle East, to eliminate nonessential shipping and trade, and to avoid the political and military hazards posed by populations made hostile because of hunger, unemployment, and the other problems of disorganized economies.

The U.S. Lend-Lease Act of 1941 sent massive amounts of American-made matériel, and after May 1942, the United States joined the British in the MESC, using it to coordinate the American war effort in the Middle East.

MIDDLE EAST TECHNICAL UNIVERSITY

Public university in Ankara, Turkey.

Founded in 1959 as a joint project between the Turkish government and the United Nations, Middle East Technical University (METU) was the first English-language university in Turkey. It comprises faculties of economics and administrative sciences, architecture, education, engineering, and arts and sciences; it also has the School of Foreign Languages and the Institute of Marine Sciences. In 2002 it had a teaching staff of 1,600 and 19,154 students (about 37 percent female).

METU was envisaged as bringing to Turkey American methods of education and organization rather than the European methods practiced at the older Istanbul University and Ankara University. Instruction in English was expected to provide excellent language training for local students and also to enable students from other countries of the region to attend the university. In its early development, it received considerable financial support from the U.S. Agency for International Development, the Ford Foundation, the Organization for Economic Cooperation and Development, and the Central Treaty Organization. Its governance, too, resembled that of an American state university, unlike the other universities where a board of trustees, appointed by the Turkish government, appointed the university president and the deans.

MIDFAʿI, JAMIL AL-

[1890–1959]

Iraqi soldier, politician, and businessman.

Jamil al-Midfaʿi was born in Mosul in what is today northern Iraq. He fought in the Ottoman army in World War I but subsequently joined the Arab Revolt. He became minister of interior in the first cabinet of Nuri al-Saʿid in 1930, holding the post until November 1933. He was prime minister of Iraq seven times between 1933 and 1953.

See also ARAB REVOLT (1916).

PETER SLUGLETT

MIDHAT PAŞA

[1822–1884]

Ottoman provincial governor, grand vizier, and father of the first written Ottoman constitution.

Midhat Paşa (also called Ahmet Şefik) was born into an Ottoman Turkish family in Istanbul. His father, a native of Rusçuk on the Danube, held judgeships in Muslim courts. In his youth, Midhat studied Arabic and Persian in mosque schools, while employed from the age of twelve in offices of the Ottoman Empire's central government at the Sublime Porte. He began to learn French when he was about thirty-five; in 1858, he spent six months on leave in Europe, improving his French.

Midhat was on the payroll of the Supreme Council of Judicial Ordinances from the 1840s to 1861, but was often sent out of Istanbul as inspector or trouble-shooter on short-term missions that took him to Damascus, Konya, Kastamonu, Edirne, Bursa, Silistre, and Vidin. In 1861 he achieved the rank of vizier when appointed governor of the *eyalet* (province) of Niş, where he proved successful as a provincial administrator. In 1864 he was brought back to Istanbul to help the grand vizier, Mehmet Fuad Paşa, draft a law recasting provincial government in larger units (the *vilayet*). Midhat then became governor of the Tuna (Danube) *vilayet,* the first one created, a Bulgarian area with its capital at Rusçuk. Midhat's reputation as an effective provincial governor continued to grow as he built roads and bridges, curbed banditry, settled refugees, and started small factories. He established the first official provincial newspaper in the empire, and cre-

ated agricultural credit cooperatives that evolved into modern Turkey's Agricultural Bank (Ziraat Bankasi). He tried to incorporate Bulgarians into the government councils, but he repressed Bulgarian nationalists.

In 1868 Midhat was appointed head of the new Council of State, created to draft laws, in Istanbul. But friction with Grand Vizier Mehmed Emin Ali Paşa led to his transfer in 1869 to the governorship of the Baghdad *vilayet,* together with command of the Sixth Army. Midhat used his civil and military powers with partial success to settle tribes, to collect taxes, and to institute conscription. Thereafter, Iraqi nomads declined in numbers, and cultivators increased. Midhat's application of the 1858 Ottoman land code furnished tapu (title) deeds to individual cultivators, but principally tribal *shaykhs,* city merchants, and former tax farmers took advantage of the law. In the city of Baghdad, Midhat introduced municipal improvements including street lighting and paving, a bridge over the Tigris, schools, and a horse-car tramway line to a suburb. Here also he established the first Iraqi newspaper, the *Zawra,* a semi-weekly in Turkish and Arabic. In the Baghdad *vilayet,* he established government schools—a technical school and two secondary schools, one preparing students for the military and one for the civil service, with free tuition. Disagreements with the grand vizier, Mahmud Nedim Paşa, caused Midhat's resignation in 1872.

Returning to Istanbul, Midhat persuaded Sultan Abdülaziz to appoint him grand vizier, on 31 July 1872. But political opponents, backed by the Khedive Isma^cil of Egypt and the Russian ambassador, managed his dismissal on 18 October. He had been impolitic, too outspoken. During this time, Midhat had begun to think about a constitution for the empire. Such thoughts occupied him during the next three years, when he had two brief terms as minister of justice, one as governor of Salonika, and periods out of office. By the spring of 1876, Midhat was a key member of a group that sought to bring change to an Ottoman government perceived as ineffectual in the face of financial bankruptcy and of revolts in Bosnia and Herzegovina.

Midhat and others used popular discontent to force the dismissal of Grand Vizier Mahmud Nedim, and then engineered the bloodless deposition of Sultan Abdülaziz on 30 May. Sultan Murat V succeeded. Midhat became president of the Council of State again, and began pressing for a constitution. When Murat V suffered a nervous breakdown, following the deposed Abdülaziz's suicide, Midhat and the ministers deposed Murat in turn for his younger brother. Abdülhamit II succeeded on 31 August 1876 after promising Midhat that he would speedily promulgate a constitution.

Midhat chaired a commission in the fall of 1876 that drafted a constitution providing for an elected chamber of deputies. The sultan accepted it only after his own powers were augmented to include the power of exiling. On 19 December Abdülhamit appointed Midhat grand vizier, and on 23 December promulgated the constitution. At the same time, representatives of the European great powers were meeting in Istanbul to devise reformed administration for the Balkan provinces of the Ottoman Empire. Midhat's hopes that Europe would accept the constitution as the fundamental reform were deceived. An Ottoman consultative council, convened by Midhat, in turn rejected the powers' proposals. The stand-off eventually led to Russia's invasion in April 1877 and the Russian-Ottoman Wars of 1877/78.

Meanwhile, Midhat seemed to act less like a grand vizier responsible to the sultan, and more like a prime minister responsible to the nation. Abdülhamit, who feared Midhat also as a sultan-deposer, exiled him to Europe on 5 February 1877. In late 1878, Midhat was allowed to return, but not to Istanbul. He became governor of the Syrian *vilayet.* In Damascus he was almost as vigorous as in Rusçuk and Baghdad but was refused the broader military power he requested. Abdülhamit transferred Midhat in August 1880 to İzmir as governor, apparently to keep a closer eye on him. There Midhat was arrested on 18 May 1881, taken to Istanbul, tried on trumped-up charges of having participated in the murder of former Sultan Abdülaziz, and convicted. Abdülhamit converted his death sentence to life banishment. Midhat was transported to a prison in al-Ta'if in Arabia. On 8 May 1884 he was strangled by soldiers, presumably on Abdülhamit's order.

As administrator, especially as provincial governor, Midhat achieved much, although some of his innovations were superficial. He was known for his energy, his fairness, his honesty, his Ottoman

patriotism, his secular-mindedness, and his zeal for borrowing Western techniques and institutions. Midhat was also known for his blunt speech and his haste to act, qualities that helped terminate his two short grand vizierates. But without him, there would have been no 1876 constitution.

MIHRAB

An indicator of the direction toward which Muslims face in prayer.

While the etymology of the word is the subject of some debate, *mihrab* (pl. *maharib*) is the Arabic term used to refer to any object, marking, or architectural feature that indicates the direction Muslims must face (that is, toward Mecca) in the performance of the five daily prayers. Since the *mihrab* commonly takes the form of a distinctive recess in the wall of a mosque, the word is often translated as "prayer niche." Traditionally crafted in stucco, marble, or tile and adorned with calligraphic scriptural inscriptions, the *mihrab* is usually the most elaborately decorated piece of architecture in a mosque and in some simpler settings may be the only ornamented part of a mosque's interior.

MILANI, TAHMINEH

[1960–]

Iranian filmmaker.

Tahmineh Milani was born in Tabriz in 1960 and educated as an architect in Tehran. In 1989, after attending a screenwriting workshop and assisting in making films, she wrote and directed her first feature film, *Children of Divorce.* This marked the beginning of her career as a writer and director concerned with social issues, such as the effects of divorce, in middle-class Tehran. Her films focus on strong women protagonists. Her works gained momentum in the 1990s, culminating in two films that address the universal issue of women's rights through the specific problems of women in Islamic Iran. With *Two Women* (1999) Milani earned international recognition and a reputation as a feminist activist in Iran. Her next film, *The Hidden Half* (2001), deals with more personal material from her own past as a left-wing college student opposed to the shah's regime. She was jailed for a short period for suggesting in this film that those like her who were active in the Islamic Revolution were later suppressed by the very regime they helped to bring to power.

MILITARY AND POLITICS

See Military in the Middle East

MILITARY IN THE MIDDLE EAST

Internal security and external conflict have heightened the importance of the military in most Middle Eastern countries.

The use of force and weaponry, including weapons of mass destruction, continues to play a large role in the Middle East. Aggravated by conflicts between and among Middle Eastern nations and their populations, military considerations are paramount in diverse situations ranging from the Israeli–Palestinian conflict to various international terrorist threats, such as that posed by the al-Qaʿida movement, to the fear that various "rogue" states will either use weapons of mass destruction to further their goals or provide them to terrorist movements.

Iraqi deputy commander-in-chief of the armed forces Izzat Ibrahim (sixth from left) with his staff on Army Day in 1991. During the Gulf War, the Iraqi military was composed of three divisions: the Special Republican Guard (responsible for internal defense), the Republican Guard, and a regular army. **© Francoise de Mulder/Corbis. Reproduced by permission.**

The history of the military and the quest for security in the modern Middle East can be examined on three often interlocking levels: internal, regional, and international. The history of each nation reveals a variety of religious, ethnic, tribal, ideological, social, and economic conflicts that often result in violence and therefore also result in a prominent role for the military in internal security. At the regional level, the quest for hegemony by one state has often led to wars among Middle Eastern states, as well as to the exploitation of the internal problems of rival nations. Finally, the Middle East has been an important arena in the international rivalries of the great powers.

Military Organization

European nations and the United States have had a great impact on the training, organizing, and equipping of the military in the Middle East. This accelerated during the nineteenth century, largely due to rivalries among European countries. The result has been a tendency for Middle Eastern nations to organize their militaries along Western lines. More traditional tribal armies, such as that led by Amir Faisal (Faisal I, who later became King of Iraq) and T. E. Lawrence in World War I, continued to play a role but decreasingly so as they were eclipsed by modern forces. For instance, the Ottoman army had significant successes, including the decisive defeat of 200,000 Allied troops at Gallipoli in 1915, the surrender of an entire British army in Mesopotamia in 1916, and continued occupation of Medina throughout the war. The legacy of the Ottomans continued long after the end of the empire in the contributions of trained officers, Arab as well as Turkish, to the emerging nations of the Middle East. Foremost among these was Atatürk, but many Arab leaders, such as Iraq's Nuri al-Saʿid, were graduates of Ottoman military colleges and learned from Ottoman officers.

TABLE 1 BY GGS INFORMATION SERVICES, THE GALE GROUP.

This trend toward Westernization of the military has continued to the point that most Middle Eastern militaries are mirror images of one or more Western models. The model chosen is normally a function of which of the great powers has provided the most support to a nation. Turkey, as part of the North Atlantic Treaty Organization (NATO), organizes its forces along American lines, with doctrine, training, and equipment closely paralleling that of the U.S. military. Iraq, since the 1958 revolution, has traditionally looked to the Soviet Union for support, and its military has reflected this. It has often been said that the success of the United States and its European allies in the 1991 Gulf War stemmed from their fighting an enemy they had been training to fight for decades: the Soviet military organization. Political alliances with Cold War rivals have changed, often rapidly, but change in the military comes more slowly. The result was often a hybrid military.

Israel presents a unique case. At first glance, its military appears to be much like those of the NATO nations from which much of its equipment comes. Some factors, however, make Israel different. Much of its equipment is captured, and imported equipment is often dramatically modified; how else could World War II–vintage Sherman tanks have been successful in the Arab–Israel War of 1973? The successes of the Israeli military affect doctrine and organization, not only in Israel but in other nations whose militaries study those successes and in turn contribute to the Israeli military. Finally, the organization of the Israeli military is more reminiscent of the Swiss citizen army than of the armies of other countries. While most militaries have a reserve system, few have one as extensive as Israel's. Almost all males and many females of military age are in the reserves, on active duty at least thirty consecutive days annually, and available for mobilization in seventy-two hours.

SOURCE: J. C. Hurewitz, *Middle East Politics: The Military Dimension* (1969); T. N. Dupuy, *The Almanac of World Military Power* (1970); and annual issues of *The Military Balance,* published by the International Institute for Strategic Studies (London: Oxford University Press).

Table 1 on active-force levels shows the impact of the military in the Middle East since the Sinai/Suez war of 1956. These figures reflect the many conflicts with which nations in the area have been involved. The figures for Israel are illustrative. In excess of 10 percent of the population was in the military through the 1960s because the military included citizen-armies. The figures after 1969 reflect only those reservists on active duty, but even here Israel has maintained the highest percentage of the population in the military of any Middle Eastern nation. This is a heavy burden but reflects the price that Israel has had to pay for the protracted Arab–Israel conflict. Arab nations around Israel have also maintained large military establishments. Egypt, for example, had almost 1 percent of its population in the military at the end of the 1970s, and both Jordan and Syria had more than 2 percent. By comparison, in 1990 the United States had 0.68 percent of its population on active military duty, with global force projection objectives far greater than any Middle Eastern nation.

Any reduction of force levels would have long-term benefits, including the minimization of the potential for conflict and of the destruction of lives and property that results from conflict. It would also free manpower for more productive activities. Table 2 on defense costs as a percentage of gross national product (GNP) or gross domestic product (GDP) illustrates the amount of fiscal resources that could be put to other uses. An example of this may be seen in the figures for Iran. As war with Iraq loomed, and as a carryover of the shah's perceived role as policeman of the Persian Gulf, Iran spent 13.24 percent of its GNP on defense in 1979. After the end

TABLE 2 BY GGS INFORMATION SERVICES, THE GALE GROUP.

of the war with Iraq and the subsequent weakening of Iraq after the 1991 Gulf War, that percentage went down to 6.34.

The high force levels in the Middle East reflect more than the conflict between Israel and its neighbors. Internal conflicts tend to drive up the levels as well. The figures for Iraq illustrate this tendency. The Kurdish minority in the north was in a state of rebellion when the Baʿth came to power in 1968, forcing a growth in the force level from 0.68 percent of the population in 1955 to more than 1 percent in 1965, 1969, and 1975. The temporary end of the revolt in 1975 may have contributed to the force level reduction in 1979.

However, the relatively low force levels for strife-torn Lebanon may be deceptive since they do not reflect sectarian militias or the presence of Israeli and Syrian troops; if these were factored in, the Lebanese force levels would probably be much higher and more reflective of the level of civil unrest. The same could be said of any number of Middle Eastern conflicts, from the internal unrest in Iraq as it relates to Kurdish populations outside Iraq, who may look toward Iraqi Kurds as the vanguard of a Kurdish nation incorporating Kurdish populations in neighboring countries—a source of Middle Eastern tension that may well rival that between Arabs and Israelis—to the desires of Shiʿite Muslims in Iraq and elsewhere who resent domina-

Syrian president Bashshar al-Assad (right) attends military training games with his army chief of staff Ali Aslan. Syria's armed forces have suffered a decline since the days of former president Hafez al-Assad's and his goal of military parity with Israel, but Bashshar has undertaken a program to modernize and revitalize the system since taking office in 2000. **© AP/WIDE WORLD PHOTOS. REPRODUCED BY PERMISSION.**

tion by Sunni minorities. These conflicts, and others, although perhaps not as well known in the West, will probably continue to foster an elevated level of military and paramilitary investment on the part of Middle Eastern nations.

Military involvement in the internal affairs of other nations also requires an increase in the force level; Egypt's dispatching almost 70,000 troops to Yemen by 1965 to support the military revolt there partially accounts for the increase in Egypt's level from 0.35 percent in 1955 to 0.61 percent in 1965. Conflicts among nations in the Middle East also tend to drive up force levels. This can be seen not only in the figures for Israel and its immediate neighbors but also for Iran and Iraq. After the fall of the shah in 1979, and before the long war between Iraq and Iran and the Gulf War of 1991, the force levels for Iraq increased dramatically.

Finally, the potential for conflict outside the Middle East has an impact on force levels. Turkey has maintained relatively high force levels because of its commitments to NATO and because of the dispute between the Greek and Turkish populations in Cyprus. The NATO commitment dates to the Cold War and the end of that conflict may change the force level requirements. Any change will, however, depend on the role of NATO in the future, and the troop levels that role requires. The conflict

TABLE 4 BY GGS INFORMATION SERVICES, THE GALE GROUP.

in Cyprus remains a stalemate, with no progress being made in United Nations–led talks between the two sides since January 2002.

Tables 3 and 4 on force structure and defense equipment reflect the increasing modernization of the military in the Middle East. With the exception of Turkey, naval forces are modest. Turkey's commitment to NATO has resulted in the largest navy in the area by far, not only in the number of ships but in their size. Egypt, Israel, and Libya have large numbers of naval vessels, but most of these are small and include patrol craft, which are more defensive than offensive.

Most area nations rely heavily on ground and air forces. For example, Israel in 2000 had 120,000 in its active army, 37,000 active air force, and only 6,500 active navy; Syria's figures were 280,000, 40,000, and 6,000, respectively. The equipment of the ground and air forces reflects modern force structures. Ground forces are heavily mechanized, as the figures for heavy and medium tanks show. Accompanying these tanks are large numbers of tracked armored personnel carriers for mechanized infantry, tracked artillery pieces, and modern rocket artillery. Most of this is imported, but an increasing amount is available from local industries. The Israelis have displayed ingenuity in weapons development with the Merkava main battle tank; reactive armor; small-arms weaponry, such as the Uzi submachine gun and Galil assault rifle; and a purported nuclear capability. Other nations have vigorous domestic programs aimed at producing weapons or upgrading imported weapons. Iraq not only tried to develop nuclear weapons, a program set back by the pre-emptive Israeli strike on the Osirak reactor in 1981, but also had a program for an ultra-long-range artillery tube. Iraq also was developing range improvements for its ballistic missiles before the invasion in 2003. Iran's nuclear program aroused alarm in the United States, fueled by its reticence to allow international inspection of its programs. Both Iran and Iraq have had vigorous chemical and biological weapons programs, and it is likely that other nations have done the same.

The Middle East has developed a modern, lethal military capability to wage war on the ground, including sophisticated air defense forces. Matching this modern capability to wage war on the ground is an equally modern air capability. A number of Middle Eastern air forces have fielded the latest American and Soviet aircraft and avionics, all of which are capable of destroying opposing aircraft and supporting ground forces.

A wide variety of weapons systems from an equally wide variety of sources gives the forces in the Middle East, at least theoretically. highly lethal capabilities. Training, maintenance, and supply issues do, however, temper that capability. Some examples of the weapons systems proliferating in the Middle East provide an illustration of the potential effectiveness of the forces. In 1996, well after the Gulf War, Iraq reportedly retained significant numbers of Soviet-bloc surface-to-air missiles (SAMs), ranging from the heavy SA 2, 3, and 6 to the lighter SA 7, 8, 9, 13, 14, and 16, giving it a capability of air defense from fixed-site SAMs, mobile SAMs, and hand-held SAMs. A wide variety also exists in surface-to-surface and air-to-surface missile capability. Iran used about 100 Scud B missiles in its war with Iraq. This missile, which is also in the inventories of Afghanistan, Egypt, Libya, Syria, the United Arab Emirates, and possibly Iraq and Yemen, has a payload of 1,760 pounds (800 kg) of high explosives and a range of 186 miles (300 km). Saudi Arabia has the Chinese-produced CSS-2 missile, which has a range of 1,740 miles (2,800 km) and a payload of 4,730 pounds (2,150 km).

One must also factor in nontraditional military forces when evaluating this aspect of the Middle East. These include the role of terrorist groups and paramilitary organizations that have no parallel in Western militaries. Tribal and ethnic organizations with military arms can also have a great impact. The recent conflict against the Taliban regime in Afghanistan, in which the United States allied itself with tribal paramilitaries normally called the Northern Alliance, illustrates that conflict in the Middle East does not necessarily follow patterns familiar to the Western military. Because of this, the numbers in the various tables of this article cannot adequately reflect the role of nontraditional military forces; they can only roughly measure the order of magnitude of forces from a Western point of view and offer calculations that are useful mainly in estimating the results of conventional conflict.

FIGURE 1 BY GGS INFORMATION SERVICES, THE GALE GROUP.

Internal Conflicts

Middle Eastern military forces have been often been involved in internal conflicts such as domestic unrest, revolutions, and coups d'état. All Middle Eastern countries have police forces dedicated to internal security. Civil strife, however, has often overwhelmed the police forces of many nations. In such cases, the military has assisted in maintaining internal security. Success has been mixed. In Lebanon, the weak state-run army has usually been unable to guarantee domestic peace. This has led to the creation of militias by sectarian rivals, which have the role of maintaining order in their respective areas. Israeli (1982–2000) and Syrian armed forces have also assumed a role in maintaining internal security in parts of Lebanon, with mixed results.

Turkish, Iranian, and Iraqi Kurdish groups seeking increased autonomy or independence have presented internal security problems for those regimes, resulting in the use of the military to restore order. Turkey and Iran have usually been able to achieve a modicum of order through normal police powers and the occasional use of the military. Iraq, by the mid-1970s, had also restored order through military force, but this broke down during the war with Iran and again after the Gulf War (1991).

During its first months of independence, the newly consolidated Israel Defense Force (IDF) under David Ben-Gurion resorted to force to disarm rival Revisionist Zionist terrorist groups such as the Irgun Zvaʾi Leʾumi and the Stern Gang and to ensure their loyalty to a single command. From 1948 to 1965, the army was responsible for administering security and other restrictions on the Palestinian Arab minority in Israel. After the 1967 war, the IDF used military force to maintain security in the occupied territories, but the Israeli police forces have that responsibility within Israel proper. One branch of the Israel National Police is the border guard, which is deployed throughout Israel and the occupied territories. This branch, called the Mishmar ha-Gvul, is organized along IDF military lines and is available to augment the IDF as necessary. This organization is staffed by significant numbers of Druze, Circassians, Bedouin, and other minorities and is open to eighteen-year-old recruits who can choose service with the border guard instead of the IDF. Many commentators predict that military force may have to be used in the event of a peace settlement to control Jewish militants who oppose returning any territory to Arab authority, as was the case during the evacuation of the Jewish settlement of Yamit during the 1982 Israeli evacuation of Sinai, in conformity with the Israeli–Egyptian peace treaty of 1979.

Since World War II, Middle Eastern military establishments have differed from those of Europe and North America in the extent of their participation in revolutions and coups d'état. Some countries have experienced relatively few military coups. Iran has faced two changes of power since World War II—the temporary assumption of power by Mohammad Mossadegh in the early 1950s and the overthrow of the shah in 1979—but the military did not play a major role in either. In Lebanon, the central government has never been strong enough to develop a powerful military, and no coup by a government military has been feasible. Saudi Arabia, the Gulf states, Jordan, and Morocco are monarchies

that have shown remarkable stability in a tumultuous area, and none has faced a serious political threat from its military. The use of tribal levies loyal to the monarch to form large parts of the military may explain this. Tunisia also has not faced a military revolt, although its president, Habib Bourguiba, was deposed by a general serving as prime minister in 1987. Presumably, the military approved.

The experience of other Middle Eastern states has been different. Turkey, long viewed as a paragon of stability in the area, has had three military coups since World War II: in 1960, 1971, and 1980. In all three cases, however, power was eventually returned to civilian politicians. Elsewhere, military coups have resulted in governments run by military leaders, some retaining their uniforms, some shedding them for civilian garb but still relying on the military for their power. King Farouk of Egypt was overthrown in 1952 by a group of military officers led by Muhammad Naguib and Gamal Abdel Nasser. Since that time, Egypt has been ruled by a succession of former military officers: Nasser, Anwar al-Sadat, and Husni Mubarak. Algeria achieved independence from France through military revolt in 1962, and the Algerian military has played a primary role in governing the nation since that time. In 1965, led by Colonel Houari Boumédienne, it overthrew the government of Ahmed Ben Bella; in 1991 it obtained the resignation of President Chadli Bendjedid after elections appeared to presage a turn to Islamic fundamentalism. Syria, Iraq, and Libya have all had similar experiences with their militaries taking control of the government.

Conflict between States

Violence between countries is not uncommon in the Middle East. The Israeli declaration of independence in May 1948 triggered an invasion of Palestine by armies from Egypt, Jordan, Syria, and Iraq, with volunteers from elsewhere. These were repulsed by an Israeli military that was at the time, and has been since, underrated in terms of numbers and equipment. Since 1948, Israel and its Arab neighbors have fought a succession of wars. The first, in 1956, was fought in collusion with two aging empires—Britain and France—and began with an Israeli quasi-blitzkrieg campaign in the Sinai. The 1967 war followed the pattern of the 1956 Sinai campaign, with a surprise attack and dramatic gains by Israel on three fronts, but without the collusion of European powers or the subsequent international pressure to withdraw from territories Israel won from Egypt, Jordan, and Syria.

After 1967, Israeli military successes were not nearly so spectacular. Caught by surprise in the war of 1973, the Israelis fell victim to their 1967 success. Ignoring some of the lessons of combined-arms warfare that led to a quick victory in the earlier war, particularly the need for infantry support of armor and the critical role artillery plays, Israel was eventually able to repulse the Egyptians and Syrians. The humbling of the Israeli military and the aura of Arab success created conditions that helped produce a peace treaty between Israel and Egypt in 1979. The lesson might be that a military force does not have to win to achieve political success, but the problem is how to engineer a loss that leads to success.

The Israeli experience in Lebanon in 1982 is also instructive. Israel has not faced a military coup since it was established, but the role of Defense Minister Ariel Sharon in this operation came close to being a coup. Sharon directed operations far beyond those envisioned by the cabinet headed by Menachem Begin, but was restrained by both international and domestic pressures. Given the potential power of the Israeli right, one cannot exclude the possibility that a militant general might one day become a threat to an elected Israeli government, much like the majors and colonels who have overthrown numerous Arab governments since World War II.

While Arab–Israel wars have captured international headlines over the years, they were not the only wars fought between nations in the Middle East. There have been several mini-wars, mostly border skirmishes between Egypt and Libya, Syria and Jordan, Morocco and the former Spanish Sahara, and others. During the 1960s, Egypt became involved in a protracted campaign in Yemen in support of a revolutionary regime against a royal counterrevolution. This involved thousands of troops, the use of chemical weapons, and the weakening of the Egyptian military to the point that it could not cope with the Israeli surprise attack in June 1967.

The most protracted military encounter was that between Iraq and Iran from 1980 to 1988. The causes of this war included disputes over the border between Iran and Iraq, exploitation of minority and sectarian unrest, particularly among the Kurds and Shiʿa, and the question of which nation would be the primary force in the Persian Gulf. The border dispute centered on the Shatt al-Arab and dated back to Ottoman times. The fall of the shah of Iran in 1979 gave Iraq an opportunity to assert primacy in the Gulf. This, along with the threat that Iran would export its Islamic revolution and the continued subversion of dissident groups in each country, led to an escalation of fighting along the border, and on 17 September 1980 Iraq declared the Shatt al-Arab to be a totally Iraqi waterway. The war that followed was costly. The cost to Iran was about $206 billion, while Iraqi costs were around $147 billion. Firm casualty figures may never be established, but Iranian casualties are estimated at between 1 million and 2 million and Iraqi casualties at between 500,000 and 1 million. Of these, the number of dead ranges from 450,000 to 730,000 for Iran and 150,000 to 340,000 for Iraq. The failure of both sides to force a decision may have been as much political as ideological in nature. In both countries, loyalty to the regime is a valued commodity for the leadership, and military promotions depend as much on loyalty as on military skill. In Iran, the fall of the shah was followed by the decimation of the officer corps and a reliance on religious fanaticism, which led to mass attacks by poorly trained soldiers and militia, with horrendous casualties. Finally, the war was controlled from Baghdad and Tehran with relatively little freedom of action for the commanders on the scene. It may be that victory was associated with a higher level of discretion by local commanders and defeat with strategic and tactical decisions made by the political or ideological leadership in the capitals.

The high cost of the Iran–Iraq War, and the failure of either side to win a decisive victory in spite of the extensive use of chemical weapons, led to the cease-fire of 8 August 1988, brokered by the United Nations with heavy pressure from the United States, European nations, and Iraq's Arab neighbors. Both sides set about rebuilding their military establishments, embarking on ambitious programs to increase their chemical warfare potential and to develop nuclear weapons. There were also efforts to improve artillery and missile-delivery capabilities to provide a more accurate means of projecting munitions.

It was not long before one side felt strong enough to again challenge its neighbors. Less than two years after the cease-fire between Iran and Iraq, on 2 August 1990, Iraq invaded Kuwait, precipitating American and international involvement in the form of operations Desert Shield and Desert Storm—the Gulf War of 1991. Within hours, an Iraqi force that eventually numbered 140,000, with 1,800 tanks, dispatched a Kuwaiti military of 16,000 troops and occupied the nation. Iraq began the invasion able to field an army of 1 million, seasoned by eight hard years of fighting with Iran. Iraq's potential enemies were initially not well situated. Kuwait's ability to fight had been destroyed. Saudi Arabia, viewed by many as Iraq's next target, had a force of only 70,000 troops, 550 tanks, and 850 artillery pieces, far smaller than Iraq's force. The Saudis did have a credible air-defense capability and 155 F-15 and F-5 fighter aircraft. The other Gulf states had some forces but not nearly enough to match Iraq's. Without outside intervention, Iraq had every expectation of retaining Kuwait and possibly threatening Saudi Arabia and other Gulf states.

Contrary to Iraqi expectations, the building of that outside force began within hours of the invasion. The United States decided to implement Plan 1002–90, designed to defend Saudi Arabia. Within a week, the United States deployed 122 F-15s and F-16s to augment the air cover available to the Saudis. By the middle of September, almost 700 aircraft were in place. As the weeks rolled by, the United States, operating under the authority of the United Nations, set about building a coalition force to defend Saudi Arabia and expel Iraq from Kuwait. By January 1991, the coalition force included contingents from the Persian Gulf states, Egypt, Syria, the United States, and several European countries, including some from the old Warsaw Pact bloc. The numbers deployed were impressive—almost 800,000.

At the beginning of the ground war, Iraq had about 250,000 troops in the Kuwaiti theater of operations. These were backed by 4,000 tanks, 3,000 pieces of artillery, and 3,000 armored personnel carriers. Iraq also had Scud missiles capable of reaching Israel and chemical warfare capability. The

Iraqi navy, however, was negligible, and the air force, although sizable, was not a factor after substantial numbers of American aircraft arrived in the area.

On 16 January 1991 (Washington time; 17 January in Iraq), Operation Desert Storm began with an intensive air campaign of four phases. The land war began on 24 February and lasted only 100 hours. The success of the air campaign may be seen in the numbers of tanks, armored vehicles, and artillery pieces remaining on 24 February. Of an estimated 4,280 tanks, 1,772 were out of operation. Iraq had only 53 percent of its prewar artillery and just 67 percent of its armored vehicles. The ground campaign was even more brutal. Total Iraqi losses in January and February were 3,847 tanks, 1,450 armored vehicles, and 2,917 artillery pieces. Although no firm numbers exist on Iraqi casualties and the original estimates of 100,000 killed were exaggerated, a total of 35,000 is not unlikely. This compares with 240 deaths for coalition forces.

Arab states, which had heretofore been notably weak in coalition warfare (as shown by their wars with Israel), were able to derive satisfaction from their successful performance against Iraq, under the tutelage of the United States, in 1991. The experience of the Gulf War may instill a confidence that can be transferred via the noncommissioned officer corps and the officer corps to younger soldiers. The status of the military in those Arab countries, especially the mechanized ground forces and the air forces, has been enhanced. As these are the most modern components of the forces, this may result in a more favorable view of modernization in Arab nations. If the prospects for peace in the area improve and the numbers in the military decrease, then more military personnel with this modern experience will return to civilian life.

Operation Desert Storm ended with the total military defeat of Iraq and its ejection from Kuwait. It left Saddam Hussein in power with considerable military forces at his command. In 2000 he had over 400,000 in his active force structure, with 600,000 reserves, over 2,000 tanks, and 300 aircraft. There were no-fly zones in southern and northern Iraq, enforced by coalition forces, but only for fixed-wing flights. Saddam was able to suppress revolts by Iraqi Kurds and Shiʿa with ground forces and rotary-wing aircraft.

FIGURE 2 BY GGS INFORMATION SERVICES, THE GALE GROUP.

The defeat of Iraq did lead to the destruction of large amounts of chemical weapons and for several years UN inspections precluded the development of weapons of mass destruction (WMD)—chemical, biological, and nuclear. These inspections were suspended for a time but resumed in 2002 because of pressure from the United States, which believed that Iraq had an active program to develop WMD, had secreted significant amounts of such weapons, and was improving its missiles for delivery of such weapons.

The inspection regime was cut short in 2003 when the United States and the United Kingdom attacked, acting on intelligence indicating the possession of chemical and biological weapons and a vigorous program to develop and field nuclear weapons. The United Nations withdrew its inspectors, and the United States and United Kingdom formed a coalition outside the aegis of the United Nations to topple Saddam's regime and destroy its WMD capability.

The coalition consisted of fifty-seven nations, but the United States and United Kingdom provided the overwhelming bulk of forces. The scope of the coalition can be assessed by the fact that it included Micronesia, the Marshall Islands, and Palau, but did not include China, France, Germany, or Russia.

The coalition launched military action against Iraq on 19 March 2003 and declared victory on 1 May. The campaign included simultaneous operations by special operations units, mobile land forces, and air strikes. By 5 April, U.S. forces were in Baghdad, and Saddam's home base of Tikrit fell on 14 April. For the most part, the Iraqi military surrendered en masse or went home. Hussein and his top leadership went underground; several surrendered or were caught or killed over the next few months. Hussein was finally captured by American troops in December 2003.

The military campaign resulted in minimal coalition casualties: fewer than 400 coalition deaths during the campaign and the six months of occupation after 1 May. Use of precision weapons, the surrender of large numbers of the Iraqi military, and the defection of thousands more minimized Iraqi military and civilian casualties, although precise figures were not available at the time of publication.

The successful military campaign gave way to a torturous period of occupation and reconstruction after 1 May. Many of Saddam's military continued to resist the coalition through guerrilla warfare that included attacks on coalition personnel and sabotage of reconstruction efforts. These guerrilla activities were reportedly augmented by terrorist groups from outside Iraq, encouraged by al-Qaʿida and other groups. The failure of the coalition to find WMD or verify the WMD programs that prewar intelligence had indicated presented problems in gaining broader international support and eroded public support in the United States and United Kingdom.

Considerable criticism has been leveled at the intelligence upon which the coalition attack was based. The intelligence does appear to have led to a quick military victory. The criticism, however, centers on the actual threat Iraq posed with its alleged WMD, the ability of the Iraqi military and paramilitary forces to wage guerrilla war after coalition victory, and what would be necessary and actually available to reconstruct the country.

Conflicts with and among the Great Powers

In addition to internal conflicts and wars among area nations, the military in the Middle East has also been involved in conflicts with and among the great powers. In some cases, the local military has had to repulse the incursions of the great powers. They were not generally successful, but there are notable exceptions. The Afghans were formidable foes of the British during the nineteenth century and of the Soviets after 1979. Such success enhanced the status of those under arms and led to greater participation of the military in political decision making. The numerous conflicts in which the Ottoman Empire was involved until the end of World War I led to the increased power of the military in political life and effective control of the government by such military leaders as Enver Paşa. This pattern continued after World War I, with political leadership in the Middle East often devolving on military heroes. During both world wars, the military in the Middle East gained a great deal of experience. Many Arabs remained loyal to the Ottoman Empire and fought in its armies, while others joined forces with Britain against the Turks. French North African divisions fought in the trenches of the western front in World War I. Other European nations had levies of colonial troops in both world wars, and Jews from Palestine served with the Jewish Mule Corps at Gallipoli in World War I and with the Jewish Brigade in Italy in World War II. The experiences of these veterans were critical to the revolutionary movements that ousted Europeans from the Middle East after World War II, and many assumed leadership roles in the new governments.

The Role of the Military

Because of the level of conflict in the Middle East, the role of the military looms large. This is because large portions of the population and much of the national wealth are devoted to military establishments. One way of understanding the Middle Eastern military is in terms of the homogeneity or heterogeneity of the state. In a homogeneous state, such as Egypt, the military serves as a mechanism of upward mobility for the lower middle classes, as is

seen in the careers of Nasser and Sadat. In a heterogeneous state, such as Iraq or Syria, the military serves as a way for a minority, such as the Syrian Alawites or Iraqi Sunnis, to achieve power.

Much as been made of the function of the military as the school of the nation. The military has been increasingly a modern segment of Middle Eastern society, and many believe that this modernization carries over into societies in general. This may be true, but it should not be exaggerated. As the military becomes more career oriented, fewer officers return to civilian life to influence society with their modern skills. Enlisted personnel may learn to operate sophisticated equipment, but if they do not have such devices when they return to their villages, that skill may be of little use. The experience of Israel—a heterogeneous society populated by peoples from all over the world, speaking different languages—is instructive. From 1948 on, the formative common experience of Israelis was their military training and service, during which they learned to share a common language and common values, emphasizing the need to unite in defending the existence of their state. This model could be instructive for other Middle Eastern nations with diverse populations. Whether it is, however, will depend on internal developments within the societies of the Arab, Turkish, and Iranian nations of the area. Whether it will continue to be the pattern in Israel is also questionable. In recent years, Israel has incorporated a large number of graduates from religious Zionist military academies into its military establishment. Not sharing the common experience of other, secularized Israelis in the military, these recruits may cause the military to become less of a school of the nation than it traditionally has been.

The Future

What does the future hold for the role of the military in the Middle East? As long as internal and international strife continue in the area, the military will continue to play a large role. National resources will be devoted to military affairs, and a large portion of the populations will serve. Economic and technological spin-offs will continue, sometimes beneficial but not without negative aspects. The end of the Cold War during the early 1990s seemed to hold out some hope for greater stability and a reduced role for the military in this volatile area. Yet, although there is no longer the intense rivalry between the United States and its allies and one hand the Soviet Union and its allies on the other, the economic resources of the region, not the least of which is oil, continue to result in nations outside the region pursuing their own economic goals and using the continuing regional conflicts to enhance their positions.

Other factors also point to a continuing preeminent role for the military in the Middle East: the eruption and duration of the al-Aqsa Intifada since September 2000, the American destruction of the Taliban regime in Afghanistan following the al-Qaʿida terrorist attack of 11 September 2001, continuing sectarian strife throughout the area, and the rise of radical Islamic fundamentalism, with violent terrorist acts extending far from the borders of the Middle East. All these serve to remind us that the region remains one with more than its fair share of unresolved, protracted conflict and instability—and one in which we may expect a continuing prominent role for the military.

DANIEL E. SPECTOR

MILLET SYSTEM

The term commonly used to describe the institutional framework governing relations between the Ottoman state and its large and varied non-Muslim population.

Although recent research has challenged both the systemic quality and the traditional origins of the arrangements under the millet system, the term, for want of a better one, remains in use.

Fifteen–Seventeenth Century

According to the traditional accounts, the Ottoman sultan. Mehmet II, upon his conquest of Constantinople (now Istanbul) in 1453, granted extensive autonomy to the Greek, Jewish, and Armenian millets—that is, religiously defined communities of the empire—through, respectively, Gennadios Scholarios, the then-reigning patriarch of the Greek Orthodox church in the capital; Moses Capsali, a leading rabbi: and Joachim, a bishop of the Armenian church. They and their successors thereby became titular heads of their coreligionists throughout the land. The traditional accounts, furthermore, claim that the state did not deal with Christians and Jews as individuals, but only as members of their respective communities. Correspondingly, non-Muslims dealt with the state only through the titular heads of their community. Lastly, in matters of taxation—specifically the *jizya*, the poll tax required of non-Muslim heads of household—once the state determined the amount, its apportionment between individuals was left to the community leader, who supervised its collection and was responsible for its payment. Subsequent research has challenged these claims by noting that they are in no way confirmed by contemporary Ottoman sources and that the non-Muslim chronicles on which they were based were compiled centuries after the events they claim to describe.

What the traditional story does accurately represent, however, is the Ottomans' relative indifference to (and to that degree, tolerance of) much of the activities of their non-Muslim subjects before the nineteenth century. They allowed them much autonomy, particularly in matters of religious observance, education, and personal status (birth, marriage, death and inheritance). The sphere of internal communal control, however, was far more limited than that claimed by the traditional accounts, and the opportunities for direct contact between the individual non-Muslim and the Ottoman Muslim state and society were far greater, extending even into the realm of personal status. Thus recent research in Ottoman records has revealed that Christians and Jews regularly had recourse to Muslim courts, in addition to their own courts, even in questions of divorce, inheritance, and other supposedly internal communal matters. Furthermore, the claim by the traditional accounts of hierarchical centralization under the patriarch or chief rabbi in Constantinople is contradicted by the abundant evidence of local arrangements, often under lay control, and often independent of the capital, as well as by the differing structural traditions of each community. Jewish communal organization, unlike that of the Orthodox church, was not pyramidal, and even the Orthodox patriarch of Constantinople (unlike the bishop of Rome) was merely first among equals. As for the Armenian church, it had long been divided by competing centers of hierarchical authority. Certainly no empirewide fiscal administrative systems existed under the control of the so-called millets, and the term itself was not consistently used to designate the communities. Thus in the classical age of Ottoman rule, during the sixteenth and seventeenth centuries, there were neither millets nor a millet system, although there was a considerable, but by no means absolute, degree of local communal autonomy. In this age, from time to time the clerical leaders in Constantinople did assert claims of empirewide authority, but they were rarely successful.

This complex Ottoman practice was by no means an innovation but reflected ancient Near Eastern and Islamic administrative practices (*dhimma*), as well as contemporary reality and communal traditions. In the aftermath of war, conquest, and dynastic turmoil, religious institutions often were the only institutions to survive. Individuals were most comfortable identifying and organizing themselves

according to religion, so the state, even a new one, had no interest in defying them.

Eighteenth–Nineteenth Century

The situation began to change, however, late in the seventeenth century. The Ottoman state's indifference to its non-Muslim subjects diminished when the great powers made their status a stick with which to beat the Turks. As the empire became weaker, European rivals started to vigorously push claims for the protection of the rights and privileges of their coreligionists and other non-Muslims. The Hapsburgs protected the Catholics, particularly those strategically located in what is now Slovenia and Croatia. More aggressive were the Romanovs, who laid claim to the huge Orthodox population conveniently concentrated in provinces adjacent to Russia's frontier. The French asserted an interest in the welfare of the Catholics of the Levant, particularly those in Syria and Lebanon. The British, who had few coreligionists in the region, opposed the claims of their rivals while they protected the few Protestants there and, at times, the Jews. The process of protection was often the first stage of invasion and territorial annexation. The Ottomans proved too weak on the battlefield to confront these challenges directly, and so they were forced to respond with diplomatic maneuverings, administrative accommodation, and, ultimately, commitments to reform. This program for reform in the nineteenth century (the Tanzimat) formally defined and, to a large degree, created the millet system, as it has conventionally come to be understood. For the first time, an attempt was made to impose uniform administrative systems upon all non-Muslim communities throughout the empire. The attempt was consistent with a guiding element of the Tanzimat, the drive toward centralization of all spheres of governance.

The creation of the formal millet system and the consequent abandonment of local autonomy, noninterference, and flexibility, which were the hallmarks of the traditional nonsystem, forced the communities themselves and the Ottoman government to become increasingly embroiled in religious-diplomatic entanglements, which in turn were resolved by the creation of yet more millets. The religious imperialism of Catholic and Protestant missions, which sought to win souls from the indigenous Orthodox and Monophysite churches, as well as other, smaller, churches of the East, complicated the process further. Since these missions were fully supported by the Western powers (i.e., by France, the Hapsburgs, and Great Britain respectively), religious quarrels easily escalated into international crises. The pattern was repeated throughout the nineteenth century.

The Armenian community was the first to succumb to these difficulties. Catholic missions had been very successful in winning converts to Rome from among Monophysite Armenians. Accustomed to the formal hierarchical structure of the Roman church, Catholics repeatedly pressed to replace the traditional lack of system in the relations between Muslims and non-Muslims with a formalized set of institutions. During the late 1820s, they got their opportunity when the Ottomans, desperately in need of foreign support with which to resist the Greek revolt and a Russian invasion, acceded to French pressure to improve the conditions of these converts by establishing a Catholic millet, which was formally recognized in 1831. Since the Ottoman and Roman criteria and procedures for selecting the head of the millet were at odds, however, the millet itself became a source of tension. Furthermore, many important communities within the Ottoman Empire that supposedly came under the jurisdiction of this new institution—notably the wealthy Armenian Catholics of Aleppo, the influential Melkite Catholics (converts from Eastern Orthodoxy), and the numerous Maronites of Mount Lebanon—either resented or ignored it. In 1848 the Melkites obtained their own millet status. In 1850 Protestants followed suit. Other millets were formed: the Bulgarian Uniates in 1861 and the Bulgarian exarchate in 1870. Despite the proliferation of these communal-religious structures, many of the oldest and most deeply rooted Christian churches in the East—the Copts (the indigenous Monophysite church in Egypt), the Jacobites (the indigenous Monophysite church in Syria), and the Nestorians (based in Iraq and southeastern Anatolia) never sought millet status.

The major communities of the empire—Greek Orthodox, Armenian Gregorian, and Jewish—never sought formal millet status in the nineteenth century, since by accepted tradition (the complex historical reality notwithstanding), they had always had it. The reforms of this era nevertheless had a dras-

tic effect upon them as well. The most far-reaching effect derived from the Reform Decree of 1856, which laid the foundation for formal constitutional arrangements reducing the power of the clergy and increasing lay influence. Although Ottoman leaders sponsored these changes in the hope that they might lead to a greater, supracommunal sense of Ottoman patriotic loyalty, the result was often the opposite. Lay leaders, stirred to political activity by the new opportunities that the constitutions now offered, devoted their energies to agitation on behalf of their communities, which increasingly defined themselves as nation-states in the making.

MILLI GÖRÜS HAREKETI

Movement in Turkey that advocated religious education and industrialization.

Milli Görüs Hareketi (National Outlook Movement) was founded by Necmeddin Erbakan and his supporters in the early 1970s. The movement promoted a program of cultural renewal, industrialization, social justice, and moral development as a remedy to social problems caused by secularization and Westernization. It reconstructed Ottoman history to demonstrate the major contribution of the Turks to Islamic civilization and attributed its decline to Westernization. It called for the restoration of Muslim and Turkish national values. The movement stressed religious education and became the defender of Imam Hatip schools, in which religious courses are taught along with other topics. Under the leadership of Erbakan, the National Outlook Movement formed a succession of political parties and participated in three coalition governments in the 1970s; it was the senior partner in the coalition government formed by Erbakan in 1996. The National Outlook Movement also maintains close contacts with Turkish workers in Germany.

MILLI İSTIHBARAT TEŞKILATI

The Turkish government's intelligence bureau, referred to as MIT.

MIT was organized in 1965, as the reformulation of the older National Security Organization of Turkey. At the time, its 4,000 personnel, linked directly to the prime minister, were to track conspiracies within the armed forces and among radical leftist groups. In later years, officials of the Turkish National Security Council sat on MIT's board.

In the 1970s, MIT was criticized for inefficient intelligence on urban guerrilla groups and for subversive infiltration of leftist and Kurdish groups. It did not inform the government, intentionally or out of ignorance, of secret meetings among generals before the 1980 coup. Officials blamed MIT's inefficiency on understaffing—it had only 390 officers in 1979—and a small budget (equivalent to about $30 million in 1983).

MILLSPAUGH, ARTHUR

[1883–1955]

American political scientist.

Arthur Chester Millspaugh was born in Augusta, Michigan, on 1 March 1883. He received degrees

from Albion College in 1908, the University of Illinois in 1910, and Johns Hopkins University in 1916. After teaching political science at Johns Hopkins in 1917 and 1918, Millspaugh joined the U.S. State Department in 1918, serving as a petroleum specialist from 1920 to 1922.

In 1922, he was appointed financial adviser to the Persian government, then dominated by Reza Khan Pahlavi (Reza Shah after 1925) and just after that government had annulled the Anglo-Persian Agreement and canceled all debts due to Russia. Millspaugh set about increasing revenues and affecting economies, improving the credit of the Persian government, and balancing the budget by requiring that the *Majles* (legislature) increase taxes when increasing expenditures. His measures, although initially supported by Reza Khan, met some opposition toward the end of his tenure in 1927.

As his contract neared its end, the Persian government tried to reduce his authority by insisting that any difference between Millspaugh and the minister of finance would be referred to the Council of Ministers or the Majles. Millspaugh argued that his contract left it to the Majles to resolve any problems, a position the government refused to honor. At this point, the government decided to employ German and Swiss financial advisers whose powers were more limited. Millspaugh then went on to work with the government of Haiti with its financial problems and with the Brookings Institute.

During World War II, he returned to Iran in 1942 as an economic adviser, virtually the country's economic czar. Iran had matured and developed a technical bureaucracy that resented the more rigid Millspaugh and his assistants. This mission was not a success, and Millspaugh found himself at odds with both the Iranian government and press as well as the American embassy. In 1945 he returned to the United States to work with the Brookings Institute. He died 24 September 1955.

DANIEL E. SPECTOR

MILNER MISSION

Official British Foreign Office commission sent to Egypt to ascertain Egypt's political aspirations "within the framework of the Protectorate" during the 1919 revolution.

Formation of the commission, headed by Colonial Secretary Alfred Milner, was announced eight months before its arrival in Egypt, weakening its effectiveness. The Wafd organized a nationwide boycott of the Milner Mission to show that the Egyptian people would oppose any extension of Britain's rule. Muslim *ulama* (religious scholars), Coptic priests, students, and women aided the boycott. The Mission was able to meet only King Fu'ad, the ministers, and a few notables. Milner's final report admitted that most Egyptians wanted independence and greatly influenced later British thinking on Egypt. Milner resigned his post in 1921, when the British Cabinet rejected his proposal for giving modified independence to Egypt.

ARTHUR GOLDSCHMIDT

MIMOUNA FESTIVAL

Moroccan and Jewish celebration of spring.

Mimouna is a springtime celebration marked by Jews in Morocco and elsewhere in North Africa. It begins on the evening that Passover ends and continues into the next day. Women set tables adorned with green stalks and filled with dried fruits and nuts, fava beans, wheat, honey, sweets, milk, a fish, and a crêpe prepared after Passover ended. Families visit each other throughout the night, with greetings expressing the beginning of a year full of merit and blessing. The following day, they go outdoors, picnicking in fields or near water.

In North Africa Mimouna entailed the cooperation of local Muslims who gave or sold green stalks and wheat to the Jews in the evening, sometimes loaned clothes to young people who would dress up

in Muslim garb, and invited Jews to picnic on their land. From the mid-1960s, Moroccan Jews in Israel began celebrating the Mimouna picnic in mass gatherings that grew as large as 100,000 people by the end of the decade. The celebration expressed a desire to recognize their integration into the society, and the value of their traditions within it. It became a symbolic bridge between Moroccan Jews, by then the largest country-of-origin group in Israel, and other sectors of the country's population. Mimouna is now a standard part of Israeli society's standard cycle of festivals.

HARVEY E. GOLDBERG

MIMOUNI, RACHID
[1945–1995]

Algerian writer.

Rachid Mimouni was born in the small village of Boudouaou, near Setif, into a poor peasant family. A professor of economics in Algiers, he has, more than other writers of his generation, expressed his disappointment with Algeria's evolution since independence. Among his ten novels, the most acclaimed are *Le fleuve détourné* (1982), *Tombéza* (1984), *L'honneur de la Tribu* (1989, translated as *Honor of the Tribe*), and *La malédiction* (1993, Académie Française Award, 1994). After an essay, *De la barbarie en général et de l'intégrisme en particulier* (1992), violently criticizing the Islamist movement, he had to leave Algeria and settled in Tangier, Morocco.
