NE WIN, GENERAL (1911–2002)

Durable Strongman

General Ne Win was the dominant figure in Burmese politics for more than fifty years. Responsible first for the military survival of the Burmese government in the chaotic conditions that followed on the country’s independence in 1948, he subsequently created a political and economic order that returned the country to chaos in 1988. Ne Win served as deputy commander of the Burmese armed forces prior to independence, and after a number of posts in the military he served as prime minister for eighteen months from 1958 to 1960. In 1962 he conducted a military coup, establishing a Revolutionary Council government that ruled until 1974, when it handed power to the Burma Socialist Program Party (BSPP), which he also headed. Not until 1988 did he finally resign from his last political position, but even in retirement and in his nineties, his was a

Burma's General Ne Win, 1966. (Bettmann/Corbis)

name that inspired awe in Burmese political circles.

Born in 1911 in the town of Pyi (Prome), he attended Rangoon University but left before completing his degree. While working at the central post office in the colonial capital, he joined the Dobama Asiayone (We Burmans Association), an active nationalist group that refused to cooperate with the colonial government. In 1940 he was selected by the Asiayone to join twenty-nine other young men to leave the country and receive military training from the Imperial Japanese army on Hainan Island. The famous "Thirty Comrades," led by General Aung San (1915–1947), returned in 1942 as the officer corps of a Japanese-allied Burmese army to fight against the retreating British forces. The Burma Independence Army (BIA) was reorganized and renamed the Burma National Army (BNA), and Ne Win was its deputy commander under General Aung San. The BNA subsequently rebelled against the Japanese and welcomed the returning British back in 1945 as

putative allies. Leading the first Burmese troops into Rangoon at the end of the war, Ne Win broadcast live on the radio to the nation the re-taking of the capital by national forces.

Unlike Aung San and many other of the thirty comrades who resigned from the military to enter politics at the end of the war, Ne Win's subsequent career centered on the army. He became deputy commander, working with the British in preparation for Burma's eventual independence, to meld the nationalists in the Burmese army with troops that they had earlier raised in the country. Following a number of campaigns against his former allies in the Japanese resistance, Prime Minister Nu (1907–1995) appointed Ne Win as commander of the armed forces in 1948. At the height of the civil war following independence, Nu turned to him as deputy prime minister. The Burma army during these years developed a tradition of self-reliance and a deep distrust of the motives and aims of civilian politicians as well as the larger international community. Again in 1958, Ne

Win entered the cabinet, this time as prime minister of the eighteen-month caretaker administration, which had been called to power to allow the noncommunist politicians to resolve their own issues. The caretaker government was noted for its efficiency and skill in tackling a number of the country's economic and social issues. Ne Win negotiated a border agreement and treaty of friendship with China during this period.

Alarmed at the direction that reelected prime minister Nu's government was taking the country in 1962, he conducted a coup, which swiftly replaced the civilian government with a revolutionary council regime dedicated to the establishment of socialism by Burmese means. The Burma Socialist Program Party became the sole legal party and assumed formal control of the state from the revolutionary council in 1974. Ne Win remained president until 1981 and party chairman until 1988. By then, the political consequences of the inability of the government's autarkic socialist policies to create economic growth were evidenced by several months of demonstrations and strikes throughout the country. In an effort to lessen tensions Ne Win resigned, but in the face of continuing demonstrations, the military, under men trained by him, intervened, violently suppressing the demonstrators and reestablishing military rule. Ne Win faded from the political scene at that time.

Ne Win succeeded in keeping Burma from becoming embroiled in major international conflicts, such as the war between India and China (1962). He also restrained involvement in the Second Indochina War (1964–1975), which surrounded the country during his years in office. Nonetheless, Ne Win's political legacy is usually seen in the continuing underdevelopment of the country as a consequence of autarkic socialist policies. His earlier exploits in the nationalist movement, the achievement of independence, and leadership of the armed forces against a number of internal communist and separatist insurgent groups have been largely forgotten.

NEGRAIS

Negrais, an island south of Bassein in the Burmese delta, in the early eighteenth century was the site of a commercial settlement by the English East India Company (EIC), established in rivalry with the French at Syriam (where the English had also established a factory, 1647–1657). The objective was to secure access to Burmese teak for shipbuilding purposes. With the outbreak of hostilities between the Mon kingdom of Pegu and the Burmese Toungoo dynasty at Ava in 1740, 1742, and 1743, both the French and the English withdrew from Syriam. However, the French returned to Syriam in 1749 to meet the Mon need for military arms and munitions. As a consequence, Anglo-French rivalry in the region motivated the English to occupy nearby Negrais Island. In 1754, Alaungpaya (Alaung-hpaya) (r. 1752–1760) sent a delegation to Mr. Brooke, English resident at Negrais, to secure support. In 1755 and 1757 Alaungpaya granted audiences to Captain Baker and Robert Lester as he sought to obtain arms and munitions from the English to fight the Mon. Intrigues on both sides saw the French and English seeking to sell arms to the opposing parties. Consequently both the French and the English were embroiled in the Burmese civil wars of 1740–1757 between the Mon of Pegu in Lower Burma and the Burmese forces of Alaungpaya. The latter subsequently estab-

lished the Konbaung dynasty (1752–1885) when he reunited Burma after the sacking of the Mon capital at Pegu in May 1757.

Finding the Negrais venture not very profitable, as well as too risky in view of the civil war, the EIC withdrew many of its people; Captain Newton, the head of the EIC factory in Negrais, arrived in Bengal with thirty-five Europeans in May 1759. In July 1759, the EIC accepted Captain Southby's offer to go to Negrais to retrieve the company's teak timbers. He sailed in the *Victoria Snow* with Captain Walter Alves. Perceiving that the English (as well as the French) lent support for the Mon, Alaungpaya became infuriated. In July 1756 his forces captured two shiploads of arms aboard French ships (and their entire crews) destined from Pondicherry, India, for Pegu.

In October 1759, Alaungpaya dealt decisively with the French, executing Bourno, the chief of the French factory, whom he suspected of dissimulation; the captain and officers of the French ship, *Galithie*; and a missionary, Father Nerini. Alaungpaya then turned on the English. He destroyed their settlement at Negrais Island, massacring most of the remaining inhabitants, such as Southby and other EIC personnel, including Hope and Briggs. Captain Whitehill had been captured, but he was released on payment of a ransom and later departed on a Dutch ship. Alaungpaya had suspected the Negrais settlement of abetting the 1758 Mon revolt at Pegu, launched while he was occupied in the northwest of the country. Captain Alves, on board the vessel of a Captain Miller, whose assistance he had sought to get the EIC's teak timbers at Negrais on board his own ship, witnessed Alaungpaya's assault force—some fifteen to twenty large boats of twenty to thirty oars each—rowing speedily downriver. Miller weighed anchor and made out of the harbor. As he did so, Alves saw some five hundred men of the assault force land on the beach. Alves, back on his own ship, made for Diamond Island, where he stayed until 23 October 1759, together with Captain Miller. Back in Bengal in November 1759, Alves gave his account of the events.

In May 1760, Alves returned to Burma on a mission to secure the freedom of the survivors and negotiate for the release of the EIC's property seized at Negrais. He blamed the Armenian, Gregory, for the tragedy at Negrais. Gregory, according to Alves, had incited Alaungpaya

with false information about the complicity of the English settlement in the Mon revolt. Alves received an invitation from Alaungpaya for the English to resume trade. Alaungpaya and his successor, Naungdawgi (r. 1760–1763), were anxious for commercial relations to resume in order to obtain munitions, firearms, and cannon with which to pursue military expeditions against their neighbors in mainland Southeast Asia. Alves was successful in gaining the release of the EIC's property and the five surviving English captives who had been on board Captain Whitehill's ship. In view of Alaungpaya's invitation to resume trade, Alves left two of the captives at Syriam to await instructions from the governors in Bengal or Madras with respect to trade. But the EIC did not resume commercial relations with Burma until after the 1795 mission of Michael Symes.

NEOLITHIC PERIOD OF SOUTHEAST ASIA

European archaeologists originally defined the Neolithic, or “New Stone Age,” as the period before the Bronze Age when stone implements, such as adzes, pestles, and mortars, were shaped by laboriously polishing them. The Neolithic clearly carried associations with agriculture because the adzes suggest forest clearance, and grains could be ground down and refined with the mortars and pestles. This is the essence of the Neolithic, as understood by scholars interested in Southeast Asia: the period of agriculture before the use of metals, as epitomized in Peter Bellwood’s landmark book, *Man’s Conquest of the Pacific* (1978).

Bellwood noted that plant fossils infrequently survive in the archaeological record, especially in the tropics of Southeast Asia, so direct evidence of agricultural activities will rarely be preserved. To circumvent that problem, he observed that the societies of Melanesia, Micronesia, and tropical Polynesia were Neolithic at the time of European contact because agriculture was ubiquitous while metals were effectively absent. Many of these island societies lacked pottery, and some did not produce stone adzes; the great majority, however, had at least one or the other in addition to agriculture. On the other side of the ledger, there were also hunting-and-gathering societies in the region that made pottery (the Andaman Islanders) or polished stone adzes (Australian Aborigines, South Island Maoris), but no hunter-gatherers who made both. Accordingly, Neolithic agricultural groups could be neatly distinguished from stone-using hunter-gatherers in the region based on the presence of at least two of these three indicators: pecked or ground stone adzes, pottery, and evidence of agriculture. In *Man’s Conquest of the Pacific*, Bellwood applied his “two out of three” criterion to recognize Neolithic sites in the Southeast Asian archaeological record.

Considered this way, the Neolithic period for Southeast Asia as a whole lasted from around 8,000 years ago till about 2,000 years ago, although in any locality the Neolithic

lasted only one to four millennia. There are two reasons for this discrepancy. First, the markers of the Neolithic did not arise simultaneously across Southeast Asia but instead appeared some 4,000 years earlier in the borderlands with China than in Indonesia. Second, mainland Southeast Asia had a true Bronze Age that commenced at some point between 2000 and 1500 B.C.E. and lasted till the arrival of iron. However, there is minimal evidence for bronze in southern Thailand or island Southeast Asia before iron reached those places in the centuries after 500 B.C.E. Examples (all dates are approximate) include the following. In North Vietnam and northern Thailand, the Neolithic lasted from 6000 to 2000 B.C.E., whereas in Taiwan it lasted from 4200 to 200 B.C.E. For central Thailand and Cambodia, it occurred between 4000 and 2000 B.C.E.; in the Malay Peninsula and Borneo, 2500 and 500 B.C.E.; in the Philippines, 2000 and 200 B.C.E.; and in eastern Indonesia, 1500 and 1 B.C.E.

The oldest signs of the Neolithic in North Vietnam and northern Thailand are associated with the last local phase of the stone-working tradition known as the Hoabinhian. Hoabinhian tools were made by knocking flakes off river pebbles to leave a tough edge useful for tasks such as woodworking. By 6000 or possibly even as early as 8000 B.C.E., these edges were sometimes made still more durable by polishing them, especially in a group of sites north of Hanoi, assigned to the Bacsonian subtradition. By 5500 B.C.E. pottery was common in North Vietnam. It bore cord markings on the outer surface from being beaten by a paddle wrapped in matting before the vessels were hardened through drying and firing. Also, traces of rice, possibly a cultivated variety, have been found in Xom Trai, a Hoabinhian site near Hanoi. Spirit Cave, located at the far north of Thailand, has revealed similar indications. Fragments of canarium nuts, betel nuts, bottle gourds, and other economically useful plants have been discovered in levels dated to between 7500 and 5500 B.C.E. At about 6000 B.C.E., cord-marked pottery appeared along with polished stone adzes and small slate knives.

The sites referred to above are rock shelters that were occupied most likely by hunter-gatherers who obtained their Neolithic items through exchange with agricultural groups living nearby in hamlets. Archaeologists are very

lucky if they can find hamlets whose traces are preserved in a recognizable form, and the oldest known, open-air Neolithic sites are dated to around 5000 B.C.E. Several sites along the coast of North Vietnam, with pottery and stone tools similar to those found in late Hoabinhian rock shelters, fit the bill. Population growth during later times is suggested by the mounds, of one to three hectares in area, that lie a short distance upstream from Hanoi and that are related to the Phung Nguyễn culture (about 2500 to 1500 B.C.E.). Excavations at these sites have revealed a full Neolithic culture represented by abundant adzes and other artifacts of polished stone, a wide range of pottery styles, and rice grains.

On the Khorat Plateau, in northeast Thailand, pollen records reflect an increase in fires and forest clearance after 4500 B.C.E.; this is evidence left by early slash-and-burn farmers who had colonized the forests of the plateau. Its oldest known villages, Ban Chiang and Non Nok Tha, date back to 3500 to 2000 B.C.E., a period when pots, stone adzes, and shell beads were buried with the dead. Cord-marked pottery is definitely present in the region by 4000 B.C.E., as recovered from Laang Span in Cambodia. In eastern Cambodia and southwestern Vietnam, archaeologists have found upwards of thirty-one circular earthworks with an average area of 3.8 hectares. Radiocarbon dates on charcoal from these ancient villages range from about 2500 to 300 B.C.E.—that is, the Neolithic to the early Iron Age, as supported by the artifacts at the sites. Adzes and other tools of stone greatly outnumber the rare Iron Age finds such as a garnet bead and several glass ornaments. The pottery may be cord-marked, incised, and stamped with geometric motifs, or covered with a red wash of clay after the vessels had been fired (red-slipped). Rice impressions and charred rice husks can sometimes be observed in the vessel walls.

Archaeologists used to believe that bronze metallurgy evolved on the Khorat Plateau by 2500 B.C.E., but its appearance is now dated to between 2000 and 1500 B.C.E. Bronze did not immediately diffuse to south-central Thailand, where two exemplary Neolithic sites—Khok Phanom Di and Ban Kao—were both occupied between 2000 and 1500 B.C.E. Khok Phanom Di is a large mound, five hectares in area, made up of the debris from repeated phases of habitation. Its hundreds (probably thousands) of hu-

man burials were furnished with mortuary pots, some of them true masterpieces; an extraordinary abundance of shell jewelry; pebbles used in burnishing pottery; stone adzes; and the oldest known asbestos cloth in the world. The female master potters may have been held in higher esteem than any other residents at Khok Phanom Di. The subsistence economy was based on the natural resources that abounded in the marine and coastal habitat near the site; rice, either locally cultivated or imported, was also consumed. Ban Kao is a smaller mound (two hectares) renowned for its burials furnished with a wide range of cord-marked and incised pots, including vessel types that are otherwise best known in China and Taiwan, as well as a variety of stone adzes and ornaments of bone, stone, or shell. The concept of a Ban Kao “culture” is often extended to cover similar grave goods dated between 2000 and 500 B.C.E. in the Malay Peninsula.

The Neolithic originated in Malaya (and Sarawak) earlier than the mortuary assemblages related to Ban Kao. By 4000 B.C.E. in Malaya and in Sarawak around 8000 B.C.E., polished edges on pebble tools (similar to Bacsonian examples) were made. In Malaya, Gua Kechil yielded potshards and stone adzes that may date back to 3000 B.C.E., while the huge mounds of shellfish refuse (the vestiges of thousands of meals) at Guar Kepah contained necked adzes of stone and small numbers of potshards. The Guar Kepah middens lie seven kilometers inland and were probably built up during a period of higher sea levels between 3000 and 2000 B.C.E. In Sarawak as well, the full Neolithic used to be dated back to 3000 B.C.E., based on radiocarbon dates from the bones of people buried with pots and stone adzes at the famous site of Niah Caves. True, radiocarbon dates on burial containers and pieces of wood in the graves all postdate 2000 B.C.E., and rice grains found in the pots are younger than 1000 B.C.E. However, another cave in Sarawak, Gua Sireh, contains a Neolithic layer dated to about 2500 B.C.E. from its radiocarbon dates, including one on rice from a potshard. This Neolithic layer has enough rice husks to suggest that rice was locally cultivated. The cord-marked and carved decorations on the pots are very similar to examples from Thailand and Malaya.

Plain and red-slipped rather than cord-marked pottery characterized the Neolithic

sites in the south and east of Sarawak. The immediate origins for this tradition appear to lie in Taiwan. The relevant cultures are the Yüan-shan of north Taiwan (ca. 2500 to 700 B.C.E.), the Lungshanoid of west Taiwan (ca. 2500 to 500 B.C.E.), and the late Neolithic/Iron Age of southeast Taiwan (ca. 1500–1 B.C.E.). Yüan-shan artifacts include stone adzes, spearheads, and arrowheads of polished slate; stone bark-cloth beaters; clay spindle whorls; and red-slipped, stamped, and incised pottery that lacks cord marking. Lungshanoid sites contain red cord-marked pottery in a variety of forms very similar to those found in China at the time, reaping knives of slate, and a material culture otherwise similar to that found in Yüan-shan sites. The late Neolithic in southeast Taiwan has pottery related to the Yüan-shan plain ware. However, jade was the stone of choice in the manufacture of adzes, chisels, projectile points, and ornaments such as earrings, beads, and bracelets. One site, Pei-nan, grew to an area of eight hectares as the inhabitants constructed storehouses and homes of slate and other stone, and buried thousands of family members within the village precincts.

These cultures had apparently evolved from Taiwan's "mother" Neolithic culture, the Ta-p'en-k'eng, established by 4200 B.C.E. Ta-p'en-k'eng pottery is similar to the pottery found in shellfish middens in southeast China at that time, suggesting an origin in China. Neolithic agriculture in Taiwan is indicated by forest clearance at around 3000 B.C.E. in central Taiwan, rice impressions in pottery dated to about 2500 B.C.E. in south Taiwan, and the Lungshanoid reaping knives. Pei-nan, in particular, must have been a permanent settlement based on farming; clay figurines of pigs and dogs probably reflect the farm animals kept at the site.

The Neolithic of northern Luzon at the north of the Philippines can evidently be derived from Taiwan. Plain and red-slipped pottery arrived as early as 2500 B.C.E., in one case associated with the outlines of two small huts, but without evidence of stone adzes or agriculture. Polished stone adzes may have appeared by 2000 B.C.E., based on finds from estuarine shellfish middens. The pottery in these middens has decorations similar to the Yüan-shan repertoire, and some vessels stood on a circular footring (as found on many Taiwan pots). Red-

slipped shards, sometimes with rice chaff in the fabric, as well as ceramic stoves and spindle whorls, are dated to about 1500 B.C.E. at Andarayan. At Arku Cave, beginning at 1500 B.C.E., burials were furnished with a range of goods: pottery similar to the Pei-nan wares, clay spindle whorls, earrings (including two of jade) and beads of stone and shell, a bark-cloth beater, and adzes of stone. In addition, projectile points of slate occur as surface finds in Luzon.

If the Luzon Neolithic can be regarded as a poorer version of the Taiwan Neolithic, this attenuation becomes even more marked south of Luzon. Only the Kalumpang sites on the western coast of Sulawesi echo many of the same features. Kamassi, which probably dates to slightly before 1000 B.C.E., contains a range of stone adzes, as well as knives and spearheads of slate, bark-cloth beaters, and possible reaping knives of stone, clay figurines, and a remarkable range of red-slipped and decorated pottery, including vessels with ring feet. Minanga Sipakko, dated to 1000 to 500 B.C.E., has yielded a smaller range of the same goods. Both sites would have been hamlets about one-tenth of a hectare in area. Domestic pig remains from Kamassi reflect the role that farming played in the economy (in addition to fishing and hunting).

Otherwise, south of Luzon the pattern is one of occasional Neolithic goods being added to the locally established, pre-Neolithic material culture. In the southern Philippines, shell adzes and ornaments appeared before 4000 B.C.E. at Duyong Cave in Palawan, while shell artifacts were made at other sites in Palawan and Mindanao during preceramic times. One Duyong burial dated to 3000 B.C.E. or slightly later was furnished with particularly fine shell goods and a polished stone adze. Lack of evidence for pottery or agriculture in the southern Philippines of the same antiquity prevents the Duyong burial from being considered Neolithic; presumably, the stone adze had been imported from a distant overseas location (Vietnam or Taiwan). Shell adzes were also made prior to 6000 B.C.E. on the tiny island of Gebe, which lies east of Halmahera at the northeastern extremity of Maluku, while in East Timor shell beads were being produced by 4000 B.C.E. In both cases, these fine shell artifacts appeared millennia before the first traces of the Neolithic. Simpler artifacts of shell, with a broken edge evidently used for scraping, frequently oc-

cur in prepottery contexts in Java, southwest Sulawesi, and East Timor. The production of shell artifacts was widespread in the region between the southern Philippines, Indonesia, and East Timor both before and after the Neolithic.

Pottery appeared widely in the Indonesian region at approximately 2000 B.C.E., but with few indications of an immediate change in other aspects of material culture. For example, Leang Tuwo Mane'e, in the islands between Mindanao and Sulawesi, possessed pottery perhaps as early as 2500 B.C.E. In Agop Atas in Sabah, northeastern Borneo, the oldest pottery may date to 2000 B.C.E.; in Ulu Leang 1 and Leang Burung 1 in southwestern Sulawesi, pottery arrived between 2000 and 1500 B.C.E.; in East Timor, the oldest pottery dates to between 2500 and 2000 B.C.E. The earliest pottery at these locations is always plain, or occasionally red-slipped. Domesticated pig is present in East Timor by 1500 B.C.E., and water buffalo (or cattle) in southwestern Sulawesi by 1000 B.C.E.; the oldest polished stone tools or indications of cultivated plants, however, would seem to be later arrivals in both cases.

In other places, however, there are signs of the appearance of a "Neolithic package," which suggests the actual migration of groups of people as opposed to the mere exchange of novel material goods. On Kayoa, a tiny island near Halmahera in Maluku, a clearly intrusive culture appeared by 1500 B.C.E., represented by red-slipped pottery, polished adzes, shell beads and bracelets, and the remains of domesticated pigs and dogs. Especially remarkable is the Neolithic occupation of Bukit Tengkorak in Sabah, between approximately 1000 and 300 B.C.E. In addition to the presence of pottery and stone adzes, the inhabitants operated a shell industry producing the same items found at Kayoa; they imported obsidian from New Britain in Melanesia, approximately 3,000 kilometers to the east. These sites definitely point to a community of maritime traders who were widely established in the South Seas by 1,000 B.C.E. The direct antecedents of this community may have been responsible for the widespread occurrence of pottery by around 2000 B.C.E. in island Southeast Asia.

Since writing *Man's Conquest of the Pacific*, Peter Bellwood has increasingly identified the rapid spread of pottery across island Southeast Asia with the migration of early Austronesian

speakers. If he is correct, these migrating groups would have possessed the material equivalent of the words that can be reconstructed at each stage in the early diversification of Austronesian—words related to agriculture (especially rice), domesticated animals, watercraft, housing, arts and crafts, and so forth. Accordingly, pottery by itself would imply pottery plus agriculture and therefore a Neolithic economy. This is the basis for Bellwood's view that the combination of population growth fueled by agriculture and seaworthy watercraft permitted early Austronesians to migrate from southeast China to Taiwan and the South Seas, before fanning out across the Pacific. A more cautious approach, however, would require archaeological evidence of the items reconstructed as words in early Austronesian to be confident that the site was inhabited by early Austronesians and not people who spoke another language. It can also be pointed out that the tree and root crops that formed the basis for agricultural systems in the Pacific must have originated in island Southeast Asia or Melanesia. Either these crops had been domesticated in these regions before the migration of pottery-making Austronesians, or the Austronesian migrants would have been dependent on local knowledge in rapidly switching from their rice-centered subsistence economy to roots, palms, and other tree crops.

This is a major point of review today—that is, whether the movement of pottery through island Southeast Asia and into adjacent parts of the Pacific is sufficient evidence to identify a migratory movement of farming populations, and if so, the nature of the transformations involved in the movement from Taiwan to the Pacific. A similar debate reverberates on mainland Southeast Asia, where Austro-Asiatic languages are widely spoken, and authorities take different positions on relating Austro-asiatic to the spread of the Neolithic. Sarawak is critical in this discussion, as some of its languages seem to incorporate an Austro-asiatic element, in agreement with the apparent derivation of its Neolithic from the mainland, yet all indigenous Sarawak languages are today Austronesian. A very important technical advance for archaeologists lies in their awareness that phytoliths, the microscopic silica skeletons of plant cells, preserve well in archaeological sites, and in many cases they can be identified as to genus, species, and cultivated versus wild variety. Phytoliths

thus have the potential to reveal the true history of plant domestication in Southeast Asia. This would represent a major advance on educated guesswork based on pottery and stone adzes, the chance recovery of rice grains and other perishable plant remains, and current efforts to lock together Southeast Asia's indigenous languages and its Neolithic period.

NETHERLANDS (DUTCH) EAST INDIES

The Netherlands East Indies as a territorial unit, like most polities in Southeast Asia, crystallized only toward the end of the nineteenth century. During the days of the Dutch East India Company (VOC), "Indies" was a generic term for this area of operation of the company. According to its charter, the region comprised all seas and countries east of the Cape of Good Hope and west of Nagasaki in southern Japan. The scattered VOC establishments along the Asian coasts formed a maritime trading empire. During the first years of the Dutch East India Company, large territorial conquests were rare, but soon the VOC strived to dominate the production of cash crops and the elimination of competitors. Within several decades, the VOC conquered the main spice-growing areas in the Moluccas (Maluku) and Ceylon (Sri Lanka); it subdued the main commercial centers in the archipelago, and regulated trade in many other products by force.

The VOC maritime empire revolved administratively around Batavia, taken in 1619, and economically around the spice-producing is-

lands and the intra-Asian trade system. Since their first ventures into Asian waters, Dutch interests and forces have always been concentrated in the Indonesian archipelago. A certain sense of *mare nostrum* crystallized in the VOC headquarters concerning the central waters of the Indonesian archipelago. Although virtually uncontrollable, the VOC considered the coasts bordering the Java and Banda Seas as their sphere of influence. Foreign adventures into the archipelago were eyed with suspicion. Thus an embryonic concept of archipelagic integrity already existed far before the Dutch government even aspired—or was able—to conquer and rule all the islands. The only major territorial acquisition in the eighteenth century was along the north coast (*pasisir*) and the western highlands (Priangan, Preanger) of Java.

The period between 1780 and 1825 saw a swift contraction of the Dutch Indies. During the Anglo-Dutch War of 1780–1784 and later during the Napoleonic Wars (1803–1815) the British took over many Dutch posts at the Cape of Good Hope, Ceylon, the establishments along the Indian coasts, and Melaka. They also occupied most establishments in the archipelago, but these were returned to The Netherlands in 1816. Henceforth, Dutch colonial efforts concentrated on the Indonesian archipelago. The Netherlands East Indies government inherited many of the strategic policies and operations from the VOC, but also extended and refined its system of exploitation. For most of the nineteenth century, Dutch efforts concentrated on Java, in particular the indigo, coffee, and later increasingly sugar, tobacco, and tea production.

The administration of colonial affairs was done by a surprisingly small number of officials. The administrative corps that dealt with most indigenous affairs in Java and Madura, the Corps Binnenlandsch Bestuur, consisted of only 158 men in 1850; forty years later this number had grown to a mere 277 (Van den Doel 1996: 94). More significant was the military, who made up the largest part of the European immigrants until the late nineteenth century. Administration was efficient and had limited aims: to maintain order and extract the produce from the land. In the first half of the nineteenth century, Java acquired its dominant position in the economic policies of the East Indies government. The spice monopolies from the Moluc-

can islands lost their profitability and were abandoned later in the nineteenth century. It was the sugar, indigo, coffee, tobacco, and later tea from Java that constituted the main assets of the Netherlands Indies. These cash crops were to be cultivated by the local inhabitants and delivered to the government as taxes. This so-called Cultivation System had its heyday during the period from 1830 to 1870, but for certain products the system of forced deliveries was stopped only much later.

The period around 1870 brought fundamental changes in the Dutch presence in the archipelago. Technological changes such as steamshipping, railways, and rapid-fire weapons facilitated communications, conquest, and exploitation. These years also brought a transition from the old system of state monopolization and taxation in crops to a more liberal economy. The government retreated from the market and terminated—in gradual stages—the system of forced deliveries. This opened opportunities to private entrepreneurs, who were now allowed to establish estates on unused grounds in Java, but soon also extended their range of activities to other parts of the archipelago.

The Netherlands Indies went through a phase of conquest, which, unlike the imperialistic programs of other European states, remained limited to the existing Dutch sphere of influence, in the so-called Outer Islands of the Indonesian archipelago. Campaigns against local rulers were launched in rapid succession. The territorial conquests were finalized only toward 1910. This meant that large parts of the archipelago had known colonial rule for only one or at most two generations, and that when Dutch rule reached its nadir in the 1940s, many elderly people still had lively memories of pre-colonial times. Besides, many areas outside Java were indirectly ruled, leaving local authority structures at least nominally intact.

Economic interests and military conquest went hand in hand. The Netherlands Indies government issued its first mining and estate concessions in Belitung and in Sumatra from 1850. A new plantation system was established in Deli, in northeast Sumatra, based on contracts between entrepreneurs and the sultan and using imported coolie labor from Java and China. The advent of new products such as oil and rubber from Sumatra and Borneo (Kalimantan) triggered the rise of large capital in the Indies,

which eventually overshadowed the “old,” largely family-based capital of the Java sugar plantations. After (and sometimes preceding) the subjection of the islands outside Java, Dutch and other foreign entrepreneurs and companies moved in. Backed by Dutch capital and a well-developed system of labor recruitment in Java and China, they capitalized on the growing demands for new products in the world. Centers of activity remained largely confined to Sumatra, Riau, and southeast Kalimantan.

Around the turn of the twentieth century, the Netherlands Indies entered a new phase. Rather than exploitation, the tasks of the government were to be directed toward development of the country, to the benefit of its people. Under this so-called Ethical Policy, which was launched in 1901, the Indies government greatly expanded its efforts in building an infrastructure and developing an educational system. The number of schools for the Indonesian inhabitants grew quickly, and the country became the domain of engineers and educators.

Dutch migration to the Indies never became massive, but the increasing presence of Europeans, especially after 1910, had a strong impact on the cities. New architectural styles, motorized traffic, radio, cinema, and the mechanization of daily life were primarily associated with the Western presence, but they also affected Indonesian circles, where these modernisms became the subject of heated debate. Colonial presence remained very uneven throughout the archipelago. During the 1920s and 1930s, Dutch presence became predominant in the big urban centers on Java and Sumatra. In 1930 the European population of the Netherlands Indies numbered about 240,000; 71 percent had been born in the Indies (de Jong 1998: 410). The Indonesians numbered 59 million, and Chinese and others grouped under the label “foreign orientals” 1.3 million (Ricklefs 2001: 197). The great majority of the Dutch lived in the main urban centers on Java. Outside the cities, Dutch presence was felt only indirectly.

Unification and modernization triggered Indonesian nationalism. The first “nationalist” stirrings were still expressions of regional sectionalism and strove for cultural self-assertion in the face of foreign dominance and modernization—for example, the Javanese organization Boedi Oetomo (Budi Utomo, Noble Endeavor, 1908). The first political party that explicitly ad-

vocated independence for the Indies was the Indische Partij (1912), which interestingly had a large Eurasian (Indo-European) leadership and following. In its wake was the Sarekat Islam, which promoted the emancipation of the Indonesian people through education. It succeeded in attracting an enormous following of perhaps 700,000 members in 1916 and had branches in many parts of the Indies (de Jong 1998: 451). Initially the Netherlands Indies government reacted positively on these new appeals. It instituted a *Volksraad* (People’s Advisory Council) and developed plans for further democratization and emancipation of the Indies.

But developments went too slow for many activists, and positions quickly radicalized, resulting in mass meetings and strikes. The government proved to be adamantly opposed to any suggestion of independence or sedition, and it resorted to repression. Leaders of the Indische Partij were exiled, instigators of strikes were imprisoned, and plans for political reforms giving the Netherlands Indies a larger autonomy were shelved in 1920. In these circumstances, the more radical movements of communists and Islamists thrived. After abortive communist uprisings in 1926–1927, all nationalist stirrings were answered by repression. Nationalist leaders spent most of the 1930s in detention or exile.

For the last decade of its existence, colonial inhabitants could live fairly unclouded lives in the colony and close their eyes to the anticolonial ideology. As Governor-General Bonifacius C. de Jonge (t. 1931–1936) remarked in 1936: “Another three hundred years must pass, ere the Indies will perhaps be ready for some form of autonomy” (Van den Doel 1996: 244). With only a token democracy through the *Volksraad* and with Dutchmen dominating the administration, the Netherlands Indies government failed to develop a strong Indonesian civil service. The Indonesian road to freedom was one of anticolonialist struggle, not of an administrative takeover, and this has left an indelible mark on the Indonesian state.

The Netherlands East Indies was lost to the Dutch in the early months of 1942, when Japanese forces invaded the archipelago; the Dutch Indies government surrendered on 9 March at Kalijati. Most Dutch and other Europeans were removed from public life and imprisoned by the Japanese. In the perception of the Indonesian peoples, the Netherlands East Indies had ceased

to exist. Government, media, propaganda, and nationalist leaders referred to “Indonesia,” which had been the accepted name for the archipelago since the nationalist meetings of the late 1920s.

After the surrender of Japan in August 1945, the territories of the former East Indies became even more fragmented. The nationalist leaders proclaimed independence on 17 August and used the power vacuum before the arrival of Allied troops to bring large parts of Java under their control and set up republican organizations in the other islands. The revolutionary republican government controlled large parts of Java until the end of 1948, when Dutch attacks drove them from most of their strongholds. Because of increasing international pressure, the Dutch government consented in new negotiations and eventually transferred its sovereignty to the republic in December 1949. For some years the Dutch kept up the fiction of a Dutch-Indonesian Union, until President Soekarno (Sukarno) (t. 1947–1967) unilaterally cancelled the treaty in 1956. Under both military threat from Soekarno and international pressure, the last remainder of the former Netherlands Indies, Dutch New Guinea (Irian Barat or Papua), was ceded to Indonesia in 1962–1963. The Dutch East Indies had ceased to exist.

NEW ECONOMIC POLICY (NEP) (1971–1990)

The New Economic Policy (NEP) was introduced in response to the May 13, 1969 incident. One of the reasons given as a cause of the Sino-Malay clashes was disparity in economic opportunities among the different communities. The objectives of the NEP, therefore, were to eradicate the identification of people according to race, geography, and their economic activities. For example, the Malays were often identified as rice growers who lived in rural areas, Indians were associated with the production of rubber in estates, and the Chinese were known as businessmen and entrepreneurs living in urban areas. This generalization created a mindset that affected the different communities

socially as well as psychologically. Second, the NEP aimed at eradicating poverty among all and integrating the different communities.

The government introduced various economic plans to realize the NEP. These were five-year plans, and a midterm evaluation was conducted to monitor each plan. The NEP commenced from the Second Malaysia Plan, which was undertaken from 1971 to 1975. Thereafter followed the Third Malaysia Plan (1976–1980), the Fourth Malaysia Plan (1981–1985), and the Fifth Malaysia Plan (1986–1990).

The objectives and approaches of the NEP were varied and changed from phase to phase to achieve specific aims. They were mainly targeted to improve the economy of the Malays, while the interests and welfare of the other communities were not sidelined.

After twenty years of the NEP, the government aimed at achieving 20 percent equity for the Malays. Although clear improvements were shown, a midterm study of the Fifth Malaysia Plan revealed that the target was not attained. Consequently a decade-long Development Plan (1991–2000) with new strategies was then introduced to achieve the ultimate aims of eradicating poverty and increasing Malay participation in the economy.

NEW ECONOMIC ZONES (NEZs) (VIETNAM)

New Economic Zones were urban population relocation programs implemented in South

Vietnam and instituted by the revolutionary government after the fall of Saigon in 1975. The program did not attain much success.

One of the first policies undertaken by the communist regime following reunification of Vietnam, this program was based on the post-war situation and an attempt to organize human resources. On the one hand, because of more than ten years of war—the Second Indochina War (1964–1975)—millions of persons were displaced and many were eventually attracted to urban areas. The cities, and especially Saigon (with 4 million inhabitants at this time), were too crowded, accounting for almost two-thirds of the South Vietnamese population. Moreover, the unemployment rate increased with the “liberation,” notably in proportion to the demobilization of the Army of the Republic of Vietnam (ARVN), or Saigon army. On the other hand, the agricultural sector had to be boosted, and many rural areas reconverted from war zone to zone of production.

In theory, the relocation program was simple. Some 1.5 million people had to leave Hồ Chí Minh City (Saigon) by the end of 1976 for new rural settlements located in the north of the former capital urban area—namely, the provinces of Dong Nai, Song Be, and Tay Ninh. The authorities provided transportation, land and a small house, some tools, and rice for the first few months. In practice, despite some well-known achievements, the undertaking was not easy. The land sometimes had to be cleared of land mines or was not very fertile, and the work was always hard. When the task became too burdensome or the obstacles too insurmountable, settlers drifted from the land. Consequently, objectives were periodically downgraded.

New Economic Zones were not a new idea. In the 1960s, the Democratic Republic of Vietnam (North Vietnam) incorporated a resettlement program in its first development plan. In 1976, too, the program had been set within the new development plan and relocation extended to the national level.

Economic Rationale or Class Struggle?" *Indochina Report* no. 11. Singapore: Institute of Southeast Asian Studies (ISEAS).

NEW PEOPLE'S ARMY (NPA)

The New People's Army is the military arm of the Communist Party of the Philippines (CPP). It was organized in 1969 and adopted a strategy of protracted people's war. It survived government attempts to crush it and rose to be a serious threat by 1984. With the collapse of the Marcos government (1965–1986) it weakened, but it gained strength in the late 1990s with the failure of President Joseph Estrada (t. 1998–2000) to institute effective government.

The New People's Army was born out of the merger of remnants of the Huk peasant movement and the new Communist Party of the Philippines (CPP) in 1969. Bernabe Buscayno (1943–) led the Huks, while Jose Ma. Sison (1939–) headed the Communist Party of the Philippines. The NPA was officially formed on 26 December 1969, the anniversary of Mao Zedong's birth; it was separate from the pre-Pacific War (1941–1945) Partido Komunista ng Pilipinas (PKP, Communist Party of the Philippines), which was based on peasant leadership and Russian communist thought. Sison and Buscayno, unhappy with the PKP leadership, organized the CPP-NPA, which was oriented along Maoist lines and led by young intellectuals, mostly university educated.

The NPA was placed under the leadership of Buscayno, alias Commander Dante, and adopted a strategy of protracted people's war following the Maoist model. It started with only ten rifles, but it soon began ambushing government military forces.

Government forces attacked and almost overwhelmed the NPA camp, but its members moved to Isabela Province, where they established a revolutionary base. Violent dispersals of antigovernment rallies in early 1970 led several student radicals to join the NPA. The NPA was further bolstered by the defection on 29 December 1970 of Lieutenant Victor Corpuz, an idealistic army officer disillusioned with the government. He brought with him several automatic rifles from the armory of the Philippine Military Academy.

Government forces launched major attacks that forced the NPA to hold a "Long March"

along the Sierra Madre Mountains toward the Bicol region of Luzon, a march that lasted for fourteen months. The NPA established contact with sympathetic governments and managed to obtain firearms. The government, however, succeeded in seizing one of those shipments. This, as well as the bombing of a political rally in Manila in August 1971, which was blamed on the NPA, served as one of the reasons for President Ferdinand Marcos to declare martial law in 1972.

In 1974, the CPP leadership centralized party leadership but decentralized NPA operations. NPA guerrilla groups were given autonomy, in view of difficulties in communication. In Metro Manila, so-called Sparrow Units attacked corrupt policemen and seized their weapons. Ambushes of government military forces in the provinces also yielded weapons as the guerrilla army spread throughout the Philippines, thriving on socioeconomic discontent. Following the CPP line, it opposed imperialism, U.S. neocolonialism, the presence of U.S. military bases, and the Philippine government and elite, all of which contributed to social injustice in the Philippines.

Government campaigns during the Martial Law era (1972–1981) under President Ferdinand Marcos (t. 1965–1986) led to the surrender in 1976 of Victor Corpuz, and the capture in 1977 of both Sison and Buscayno. Sison and Buscayno were given the death sentence by a military court, but the sentence was not carried out. Despite their capture, second-generation CPP and NPA leaders carried on. By 1980 the CPP claimed that it had established twenty-six guerrilla fronts nationwide (Mediansky 1986: 1). The Philippine armed forces estimated the strength of the NPA as 16,000 regulars (*ibid.*). By 1984 the CPP claimed that the NPA was operating in sixty-three of the country's seventy-three provinces (*ibid.*: 3). The NPA initiated 2,700 armed encounters, compared with 1,000 initiated by government forces (*ibid.*: 1).

In its operations, the NPA used selective terror against local officials, known criminals, abusive landlords, and businesses, collecting so-called revolutionary taxes. Failure to pay resulted in destruction of property or death.

As Marcos began to lose popularity, increased military operations led to human rights abuses. Paramilitary forces, organized by civilians, exacted revenge against their enemies. De-

teriorating economic conditions further depressed living conditions among the poor, and affected persons sought refuge with the NPA. In 1984 the NPA was rated as a serious threat and no longer merely an irritant.

The NPA remained a threat until 1986, when Marcos was deposed. President Corazon Aquino (t. 1986–1992) began formal negotiations for a cease-fire and released political prisoners, including Sison and Buscayno. Military campaigns led to the capture, in 1986, of Rodolfo Salas, then the NPA commander.

Lack of communications and overly autonomous units resulted in breakaway groups that did not follow the CPP's general strategy. This led to disunity and suspicion, resulting in large-scale purges that cost the NPA several key cadres and revolutionary fighters. Government programs under Presidents Aquino and Fidel V. Ramos (t. 1992–1998) furthered the NPA's decline. Worsening economic conditions brought about by the Asian currency crisis (1997–1998) and misgovernment under President Joseph Estrada, however, have contributed to the revival of the NPA in recent years.

The NPA was a successor to the Huk rebellion of the late 1940s in the sense that it was antigovernment and sought socioeconomic reforms. The NPA is, however, based on Maoism, guided by the *Red Book*. Its founders were not peasants but young intellectual leaders, from leading universities, seeking a revolutionary new order.

**NEW SOCIETY MOVEMENT
(KILUSANG BAGONG
LIPUNAN, KBL)**

The New Society Movement was a political party created by Philippine president Ferdinand Marcos (t. 1965–1986) during the period of Martial Law (1972–1981). It was organized to provide a political party loyal to Marcos for upcoming elections, and to maintain Marcos's hold on the government. It became the dominant power during Marcos's term as president but declined into obscurity after Marcos was ousted from power in 1986.

During the early years of martial law in the Philippines, President Marcos wielded executive, legislative, and judicial powers. With the closure of the legislature, Marcos's decrees and proclamations had the force of law. Following criticisms of Marcos's one-man rule, however, together with the adoption of a new constitution that provided for a national legislature, Marcos decided to establish a transitional national assembly. The national assembly would be called the Interim Batasang Pambansa (IBP, Interim National Assembly), and its creation would show that Marcos was no longer ruling single-handedly. The legislature, however, would have to be loyal to Marcos.

Toward this end, in February 1978, Marcos formally created the New Society Movement, or Kilusang Bagong Lipunan (KBL), which was duly registered with the Commission on Elections. This was just in time for the upcoming elections for the IBP. Marcos claimed that the KBL would be an umbrella organization that would include the pre-Martial Law parties such as the Nacionalista and Liberal Parties. The old political parties did not become absorbed by the KBL, however, and the KBL ended up as a new party.

It derived its name from the phrase *Bagong Lipunan* ("new society"), which Marcos claimed he was establishing with the Martial Law regime: a new society in the sense that it would be rid of the old society's ills, such as graft and corruption, indiscipline, lack of respect for authority, a sociopolitical-economic order dominated by traditional landowning rul-

ing families (oligarchs), and patronage politics. In practice, however, the KBL was composed of old politicians to give a semblance of democracy and normalcy to Marcos's one-man rule.

The KBL was not clearly defined at first, beyond being a political party. It had no organizational by-laws until 1980, and Marcos treated the body as a party or a coalition movement depending on the situation. It became the dominant party and most formidable political organization during the Martial Law period, and its power extended to government employees, who were advised by their superiors to join in order to benefit from political patronage and other favors. As Marcos's own party, it had access to money and other resources for its political campaigns.

Although Marcos claimed that it brought in new politics, it was actually a new manifestation of the old patron-client political system. The KBL's secretary-general was Jose Roño, who was minister of local government and thus in a position to reward patronage and loyalty. "Old Society" politicians reemerged in local politics, although publicly the controlled media criticized such politicians.

The KBL's first political participation was in the 7 April 1978 IBP elections. Led by Marcos's wife, Imelda Romualdez Marcos (1930–), the KBL won 185 seats in the IBP, losing only 14 seats. The election was marred by charges of fraud and irregularities. Three days after the election, only 10 percent of the vote in Manila had been tallied, whereas before martial law the whole Manila area would have been counted within twenty-four hours.

The KBL participated in the next elections held under martial law, an election for local officials held on 30 January 1980. In this election, the first since 1972, sixty-nine of seventy-three gubernatorial posts were won by the KBL. In May 1984, the KBL joined the elections for the regular national assembly. A majority of the seats were again won by the KBL, but opposition politicians made a significant showing, emphasizing the growing disaffection with Marcos.

The KBL machinery supported Marcos in the February 1986 snap election. With Marcos's ousting, the party lost visibility and fell into decline. Pro-Marcos loyalists in the party continued to support Marcos, and they joined in the coup attempts against Corazon Aquino

(1933–). With the crushing of those attempts, the KBL became a relic of Marcos's Martial Law regime.

The KBL was superficially meant to introduce new politics into the Philippines, but it merely served as a tool to legitimize Marcos's Martial Law regime. As such it maintained and even encouraged patronage in government, thus keeping with it the old order.

**"NEW VILLAGES"
(MALAYA/MALAYSIA)**

During the Malayan Emergency (1948–1960), Britain realized that the key to defeating the communist forces was to isolate them from their predominantly Chinese squatter support base. Hence, from 1950 to 1954, under the "Briggs Plan," approximately half a million people were resettled in "New Villages." This scheme was pivotal to the defeat of the communist forces in Malaya. It also served as a model for other insurgency wars.

In 1950, as director of operations, Lieutenant General Harold Briggs initiated the Briggs Plan: the consolidation of isolated squatters into secure, economically viable villages in areas away from communist influence. The economic boom consequent of the Korean War (1950–1953) greatly facilitated resettlement, and within a year 331,000 people were resettled in 315 villages (Coates 1992: 99). High Commissioner General Sir Gerald Templer (t. 1952–1954) continued support for the development of New

Villages. He emphasized that the villages should provide a new and better life so that those villagers would become citizens integrated into mainstream society.

Facilities in each village typically included access to agricultural land, water supply, a school, sanitation, a community center, a dispensary, and electricity. A sound village economy was the most important factor for success. However, Malay opposition to the granting of permanent land title to New Villagers limited their access to agricultural land. Many villagers were to switch from farming to better-paid employment on estates and mines. Security arrangements for villages included barbed-wire fences, food rationing and control, searches, and a Home Guard. Intelligence networks identified communist sympathizers.

The communist forces were singularly unsuccessful in opposing resettlement, and, cut off from support, they retreated deeper into the jungle. By 1961, toward the end of the Emergency, 573,000 people had been resettled in more than 500 New Villages (Stubbs 1989: 169, 262; Coates 1992: 104). The United States applied the "New Village" concept in Vietnam in the Strategic Hamlet program, though without the same success.

NEWSPAPERS AND MASS MEDIA IN SOUTHEAST ASIA

The history of newspapers in Southeast Asia is closely intertwined with the modern political history of the region. Printing presses came with the colonial powers, and the first broad-

sheets served the commercial interests of the colonists. Missionaries focused on the local people and began the vernacular press, which, ironically, by the turn of the twentieth century, had developed into nationalist publications supporting independence movements. The postindependence period has seen a blossoming of the mass media accompanied by a continuing struggle over government control and censorship. The globalization process, with its satellite TV, global news services, and the Internet, is testing the limits of government control. The democratization process is emboldening local civil society to demand the political transparency that only a free press can provide.

In 1593, Spanish friars brought the first printing press to the Philippines. The first newsletter in the region, Thomas Pinpin's *Successos Felices*, appeared in 1637 in Spanish and was so popular that a second edition appeared two years later. The first regular newspaper in the region, *Bataviase Nouvelles*, a weekly produced in Jakarta, appeared in 1744. It was forced to close two years later when it attracted the displeasure of the colonial authorities. The same fate awaited the Spanish-language *Del Superior Gobierno* in Manila, first published in 1811 but discontinued the following year. Other examples of early colonial newspapers in the region included the *Singapore Chronicle* in 1824 and the *Bangkok Recorder* in 1844. Many did not last long. If the authorities did not close them down, lack of profitability often had the same outcome. The oldest surviving newspaper in the region is the *Straits Times*, which first hit the presses in 1845.

The early newspapers were published by and for the colonists, but the missionaries had a different readership in mind. They understood the power of the written word to advance their evangelical purposes. To help bring the Bible to local people, French missionaries romanized the Vietnamese character script in the seventeenth century; the resulting *quốc ngữ* became the national written language, greatly facilitating communications to a mass audience. In Melaka, the London Missionary Society decided to reach Chinese speakers in their own language, and in 1815 they published the world's first Chinese newspaper, *Ch'ai shih su mei yueh t'ung chi ch'uan* (*Chinese Monthly Newspaper*). By 1821 the missionaries were publishing *Bustan Ariffin* in Malay, either in Malay-Jawi Arabic script or in

romanized Malay. The first Indonesian-language newspaper was *Bromartini* in 1855, followed by *Soerat Khabar Bahasa Melajoe* the following year. Thailand was never colonized. The royal palace launched the first vernacular press partly in an attempt to counter the work of the missionaries. King Rama IV (r. 1851–1868) published the *Royal Gazette* in 1856 in the Thai language, and it continues in publication to this day.

Local teachers saw in newspapers the means of bringing education to the masses. Educational newspapers were particularly popular on the Malay Peninsula and in the Dutch colonies in the late nineteenth century. *Sekola Melayu* was published in 1888 to help Malay students, and although it folded in 1893, it was followed by many successors, including *Jawi Peranakan*, *Seri Perak*, and *Bintang Timur*. In Indonesia, *Soeloeh Pengadjar* (*The Teachers' Torch*) was published in 1887 in both Malay and Javanese, followed by *Matahari Terbit* in 1895 and *Taman Pengadjar* in 1897. These newspapers became a forum for teachers and other intellectuals to discuss native education, female education, modernization, and educational progress. The earliest publication of the twentieth century best known for its role in raising Indonesian national consciousness, *Bintang Hindia*, was launched in 1902, ironically with considerable assistance from Dutch colonial authorities. Abdul Rivai, its editor, argued for change and modernization; he urged local intellectuals, as the "aristocrats of the mind," to take the leading role. The first native-owned newspaper, *Soenda Berita*, appeared in 1903. The vernacular press in the region had a popularity that went well beyond the small literate local elites. The oral folktale tradition of the villages was adapted to the new urban setting with storytelling being complemented by readings from the newspapers.

The distinction between supporting progress and espousing nationalism and independence was soon lost. As early as 1889, Isabelo de los Reyes was using his *El Ilocano* to sow the seeds of rebellion against the Spanish. Other Filipino nationalists, such as José Rizal (1861–1896) and Andres Bonifacio (1863–1897), were writing in the periodical *La Solidaridad* and in the underground newspaper *Kalayaan* (*Liberty*), which was secretly printed by the presses producing *El Diario de Manila*. When Spain handed the islands over to the United States under the Treaty of Paris of 1898, the new U.S. colonial masters

promptly suspended some local vernacular newspapers, such as *La Justicia* and *El Nuevo Dia*. The Philippine press was, however, guaranteed its freedom under the Jones Act, passed by the U.S. Congress in 1916. In Indonesia the vernacular press also played an important role in the independence struggle, with *Pewartu Deli*, first published in Medan in 1910, *De Express* (1912), and *Medan Muslimin* (1915) being prominent. Anticolonialism was channeled into the Sarekat Islam movement supported by newspapers such as *Sarotomo*. The movement soon published its own newspapers, *Oetoesan Hindia* and *Hindia Serikat*.

The involvement of the press in the independence struggle was mirrored throughout Southeast Asia. In Cambodia the first Khmer-language newspaper was *Nagaravatta*, in 1936, which maintained a mildly critical tone against the French colonial authorities and complained of lack of opportunities for educated Khmers. Its main wrath was directed toward the Vietnamese overseers. In Burma (Myanmar) an early critic of colonialism was the *Ludu Kyibwa-yay* press, established in Mandalay in 1938 and directed by Ludu U Hla and his wife, Daw Amar. Throughout the 1940s in Vietnam, underground copies of *Thang* (*Victory*) were printed on jungle presses by the independence movement for distribution to the masses. In Laos in 1950 the Lao Resistance Front published the quarterly *Issara* (*Freedom*) to rival the publications in Vientiane such as *Lao Mai* and *Lao Chaleun*.

The proindependence press of the region operated either underground or in constant fear of censorship or closure by colonial authorities. The Japanese occupation in 1942 was welcomed by some local activists but had few benefits in terms of freedom of the press. The colonial master changed, but not the colonial situation. The fate of the *Straits Times* in Singapore provides a good example. Having renamed Singapore *Syonan-to*, the Japanese took over the newspaper premises and produced an edition called the *Shonan Times*, which was later renamed *Syonan Shimbun*. Its last edition appeared on 3 September 1945. With the fall of Japan the former newspaper staff members emerged from internment, and the *Straits Times* reappeared four days later.

The early years of independence brought a flowering of democracy in Southeast Asia often

accompanied by progressive constitutions guaranteeing freedom of speech. Newspapers such as the *Bulletin* in Manila and the *Guardian* in Rangoon (Yangon) established themselves as vigorous and independent voices. But it was not long before the authorities reasserted control, often adopting the legal and administrative practices of the former colonial rulers. This era coincided with the advent of the electronic media; the trend in most countries of the region was one of government ownership or control of radio and television stations.

In Indonesia, President Sukarno (t. 1945–1967) declared martial law in 1959 and authorized military censorship of the press. President Suharto (t. 1967–1998) maintained the restrictions and in 1982 brought in an onerous licensing system, forcing media outlets to cooperate with the authorities—ostensibly for the economic development of the nation. The banning of popular magazines such as *Tempo*, *DeTik*, and *Editor* in 1994 demonstrated that the New Order regime in Indonesia could not break from its authoritarian roots. President Marcos (t. 1965–1986) in the Philippines also declared martial law in 1972, under which he managed a system of control of the media that ranged from newspaper closures and deals with cronies to the occasional assassination of investigative journalists. Prime Minister Dr. Mahathir bin Mohamad (t. 1981–2003) in Malaysia used the inherited colonial press-control laws and added some of his own in 1984 to silence most criticism. In 1987 the *Star* and *Sin Chew Jit Poh* had their licenses revoked. Local and foreign journalists alike today work in fear of criminal prosecution and civil actions being taken against them and heard before a judiciary of questionable independence. Prime Minister Lee Kuan Yew (t. 1959–1990) in Singapore, a notoriously successful libel litigant, was also quick to employ the law as a means of control to institute a subtle system of self-censorship in the city-state.

The communist countries of the region had no interest in freedom of the press, preferring to view the role of the media as one of nation-building through propaganda. The official newspapers they produced were dull and repetitive and lacked credibility. *Nhan Dan*, the Vietnamese party daily, *Pasason* in Laos, and the *Working People's Daily* in General Ne Win's (t. 1962–1988) Burma all unashamedly shared this propagandistic philosophy.

The legitimate concerns in the region over the domination of news by Western news agencies saw a trend toward the establishment of national news agencies. Although succeeding in bringing a focus on local events, the national news agencies too often became apologists for their governments. ANTARA, formed in Indonesia in 1937, became an instrument for the control of the news in the hands of Sukarno and, even more so, Suharto. Marcos also used the Philippine News Agency, established in 1961, to control the content of the news. Similar patterns emerged with the Malaysian News Agency, BERNAMA, established in 1968, and the Thai News Agency, established in 1977.

With the turn of the twenty-first century, the mass media in Southeast Asia finds itself in a ferment of change and reform, buffeted by both the globalization and democratization processes. Competition from satellite TV, global news services, and the Internet has stripped away the national communications borders in which the mass media outlets work. High levels of literacy and growing middle classes are widening the market and attracting new competitors. English-language newspapers such as the *Nation* in Bangkok and the *Jakarta Post*, virtual newspapers such as *Malaysiakini.com*, and syndicated services provided by groups like the Philippine Centre for Investigative Journalism are playing a leading role in raising the standards of journalism in the region. But profitability is no more ensured in this environment than it was in previous eras. Government control of the news is becoming less acceptable to the increasingly strident voices of civil society, as well as more difficult to accomplish technically. Freedom of the Internet has become the litmus test for judging the freedom-of-expression credentials of governments throughout the region. Considerable progress has been made in countries such as Indonesia since the time of President Bacharuddin Jusuf Habibie (t. 1998–1999), Thailand under the 1997 Constitution, and the Philippines of the post-Marcos period, but the battle for freedom, quality, and probity in the mass media of Southeast Asia is far from over.

NGHE-TINH SOVIETS (1930–1931)

Nghe-Tinh Soviets were organizations in the Bolshevik style, dominated by peasants in the village. They were set up in the central provinces of Nghe An and Ha Tinh during the Nghe-Tinh Revolt against French colonial rule in 1930–1931.

Inhabitants of central Vietnam have historically been known as the most obdurate and rebellious of Vietnamese, possibly because of their poor living conditions. After the French conquest of Vietnam, Nghe-Tinh became one of the centers of the anti-French resistance movement. In 1929 the Great Depression (1929–1931) affected Vietnam and caused high unemployment among workers, and many peasant families suffered. This resulted in political turbulence. The Nghe-Tinh Revolt began on 1 May 1930. Peasants and workers of the two provinces—Nghe An and Ha Tinh—demonstrated under the leadership of local groups of the newly formed Vietnamese Communist Party (VCP). The revolt went on for several months and reached its high point in September, when peasants and workers seized power in some villages of the two provinces. In those vil-

lages, the French regimes were overthrown and peasant councils called soviets were set up. Because of that, the revolt was also called the Nghe-Tinh Soviets Movement. The soviets announced some social and economic reforms and took some measures that benefited peasants, including rent and tax reductions, land confiscation and redistribution, and punishment of some landlords. On 12 September 1930, French aircraft fired at a crowd of 6,000 demonstrators. After that the uprising became clandestine and took the form of assassinations and terror. The French suppressed the uprisings; many communist leaders were arrested, and some of them died in prison. The communist organizations involved were demolished.

In commemoration of the martyrs of the Nghe-Tinh Soviets Movement, the date 12 September has been named “The Commemorative Day of Nghe Tinh Soviets” by the Vietnamese government.

NGÔ ĐÌNH DIỆM (1901–1963)

Catholic President of South Vietnam

Ngô Đình Diệm, head of state of the Republic of Vietnam (South Vietnam) between the Geneva agreements in 1954 and his overthrow in 1963, symbolized in his country both anti-colonialism and anticommunism, but he failed to build a separate country.

Diệm was born on 3 January 1901 in Huế (central Vietnam) in a Mandarin and Catholic family. Serving as minister of Emperor Thanh Thai (r. 1889–1907), whom the French deposed in 1907, his father, Ngo Dinh Kha, re-

signed from the imperial court in protest. Like his older brother Thuc, who became a bishop, Diệm contemplated the priesthood, but he finally followed in the footsteps of his other older brother, Khoi. A provincial governor like Khoi at twenty-five, Ngô Đình Diệm was named minister of interior seven years later (1933) by Emperor Bảo Đại (r. 1925–1945, 1949–1955) but had no real influence. Consequently, he resigned after only three months and had no further public activity for many years.

In 1942 he approached the Japanese without much success in gaining influence or a public appointment. In 1945, soon after the August Revolution, he was captured by the Việt Minh while traveling from Saigon to Huế and exiled to a settlement near the Chinese border, where he learned of the assassination of his brother Khoi by the Việt Minh. Therefore, when six months later he was taken to Hanoi to meet Hồ Chí Minh (1890–1969), he declined the latter's offer of an appointment to serve in his communist-led government. In the following years, he failed in his efforts to muster support from the population, rejected in the late 1940s a new offer to join Bảo Đại in the French-sponsored government of the State of Vietnam, and finally decided in 1950 to leave the country. He traveled through Asia (Japan and the Philippines) and Europe (the Vatican), and he spent two years in a New Jersey seminary, meeting some U.S. personalities. Eventually, in May 1953, he left the United States for a monastery in Belgium, from where he frequently traveled to Paris to meet his younger brother Ngô Đình Luyen, who was then lobbying for him.

His opportunity came in 1954, soon after the French failure at Dien Bien Phu and during the Geneva Conference of that year. On 18 June 1954 he was named prime minister by Bảo Đại. He was then in his French residence; he returned on 26 June 1954 to Saigon, where another brother, Ngô Đình Nhu, arrived to rally supporters. Three weeks later the war was over, but Vietnam faced partition. Diệm, backed by the United States, had to strengthen his rule in Saigon and in the southern part of Vietnam (South Vietnam). That meant that, while the Việt Minh transferred about 100,000 southern activists to the north, according to the Geneva agreements, Diệm had to neutralize the French

influence in South Vietnam. Advised by U.S. colonel Edward D. Lansdale, he secured the agreement of General Nguyễn Văn Hinh, the Vietnamese chief of staff, to leave for France. Then, in 1955, he was faced with the challenge of the Cao Dai, Hoa Hao, and Binh Xuyen factions, at the expense of outbreaks of fighting in Saigon. Finally he deposed Bảo Đại in a referendum, claiming that he had won 98.2 percent of the vote. He proclaimed the Republic of Vietnam (South Vietnam), and on 26 October 1955 promoted himself to become “chief of state.”

One strategic issue remained—namely, the general elections for the whole country, scheduled for 1956 in accordance with the Geneva agreements to open the way to reunification. But Ngô Đình Diệm preferred to organize elections only in South Vietnam and without communist parties, on 4 March 1956, in order to give a constitution to the Republic of Vietnam; he refused to consider other proposals.

The Diệm regime was constitutionally a presidential system but in practice authoritarian, under the rule of the celibate and Catholic president, his family, and allies, and especially his brother Nhu and his exuberant wife, Madame Nhu, as first lady. Many U.S. advisers supported the regime's efforts to rebuild an army, to realize a land reform program, and to fight the communist influence. But in the late 1950s, despite strong repression and the establishment of population relocation programs, the regime failed to contain the revival of communist activity. In December 1960 the foundation of the National Liberation Front in South Vietnam gave concrete expression to the communist threat. In facing the “Viet Cong” (VC, Vietnamese communists), Ngô Đình Diệm had no other way than to lobby for more and more support from the United States. Washington viewed Vietnam as a strategic place to contain communism. By 1961, newly elected U.S. president John F. Kennedy (t. 1961–1963) had already involved Special Forces in a “special war” in South Vietnam.

Meanwhile, other opposition forces were growing. In 1960 a military coup failed to overthrow Ngô Đình Diệm, and in 1963 Buddhist demonstrations and self-immolations contributed in destabilizing the regime. Therefore, convinced that Ngô Đình Diệm was not the best tool for fighting the communists, the

A young Buddhist monk stoically keeps a cross-legged posture as flames engulf him in ritual suicide on 5 October 1963. It was the sixth suicide in less than four months by a Buddhist religious to protest the policies of the Ngô Đình Diệm government. Three American newsmen who witnessed the suicide were attacked by Vietnamese secret police. (Bettmann/Corbis)

Kennedy administration and U.S. ambassador Henry Cabot Lodge assisted a new military coup, which succeed on 1 November 1963. Diệm and his brother Nhu were captured and killed in a military vehicle. The end of the Ngô Đình Diệm regime opened the way for massive U.S. involvement in Vietnam—the Second Indochina War (1964–1975), popularly known as the Vietnam War.

**NGUYỄN ÁNH
(EMPEROR GIA LONG, r. 1802–1820)**

Born at Phú Xuân (Huế) in 1762, Nguyễn Ánh, one of the grandsons of the Nguyễn lord Võ Vương, grew up amid the sociopolitical crisis following his grandfather's death in 1765.

The outbreak of the civil war drove the Nguyễn away from their capital. As in 1777 the Tây-sơn had managed to kill nearly all the principal members of the Nguyễn family, except Võ Vương's successor, the fifteen-year-old Nguyễn Ánh, who thus became the leader of the Nguyễn resistance movement. Pursued by his adversaries, however, he was reduced to arduous peregrinations in the Gulf of Siam. Out of despair, he resolved to go to Batavia or to Melaka to seek assistance from the Dutch, and apparently also tried to contact certain Malay sultanates in the view of obtaining help from them. Eventually, King Taksin (r. 1767–1782) of Siam offered him shelter in Bangkok and gave him aid. However, it was the active involvement in Vietnamese political and military life of the French missionary Pierre Pigneaux (Pigneau de Béhaine, 1741–1799), bishop of Adran, who had espoused Nguyễn Ánh's cause from the very beginning, that proved to be decisive in the revival of the Nguyễn dynasty.

During the vicissitudes of the years from 1778 to 1784, Pigneaux constantly urged Nguyễn Ánh to empower him to negotiate a formal treaty of alliance with the French monarchy, but it was not until late 1784, when an attempt with the aid of King Rama I (r. 1782–1809) of Siam to recoup his fortunes had miscarried, that Nguyễn Ánh at last authorized the missionary bishop to leave for Pondichéry to negotiate with the French authorities on his behalf. And, on 28 November 1787, the Treaty of Versailles was ready for signature—by the bishop of Adran on behalf of the “King of Cochin-China,” and the Count de Montmorin on behalf of the French king Louis XVI (r. 1774–1792). The basis of the bargain was the promise of French help for the Nguyễn dynasty against the Tây-sơn in return for the granting to the French of preferential status and the right to found settlements in Vietnam. Nevertheless, the commander of the French possessions in the Indies, with whom it rested whether to launch the intervention provided for in the treaty, did not find it advisable to undertake the expedition. Pigneaux resolved, therefore, to single-handedly raise ships, transport armaments, and recruit European technicians and mercenaries to help in Nguyễn Ánh's war against the Tây-sơn. He then joined Nguyễn Ánh, who had succeeded in the meantime in recovering control of Gia Định; on 7

September 1788, Nguyễn Ánh's forces occupied Saigon, which from then on became their principal base.

Thanks to the missionary bishop, who worked closely with him and sometimes actually accompanied him on campaigns, from his arrival at Saigon in 1789 until his death in 1799 at the siege of Qui Nhơn, the Tây-sơn capital, Nguyễn Ánh had over his adversaries the advantage of benefiting from European assistance. It is possible that he would have defeated his enemies without French aid, but there can be no doubt that the team of French advisers assembled in his behalf by Pigneaux was to a great extent responsible for his victory. In terms of money, men, and materiel the French role was small, but in terms of technical expertise it was highly significant. The military and naval experts brought by Pigneaux indeed introduced something of European organization and equipment to Nguyễn Ánh's army. The naval forces that swept the ships of the Tây-sơn from the seas were organized and trained by Frenchmen, while on land French officers introduced the principles of fortification pioneered by Sébastien Le Prestre Vauban (1633–1707). Nguyễn Ánh had a modernist vision that enabled him to apprehend fully the potentialities of Western technology, and, through the means of his European officers, he could set up a very effective military power.

Nguyễn Ánh's military success, however, did not depend simply on external assistance, important though that was. His method of seasonal expeditions—sending his forces north; leaving with the monsoon in June, to occupy territory, build fortified posts, and establish garrisons; returning to base at the end of the campaigning season—was an effective technique of gradual penetration into Tây-sơn territory. He was skilled too in the use of propaganda, stimulating a movement in the south among those disaffected or simply exhausted by the pressures of the long war and the exactions of the Tây-sơn government, who provided his expanding state with valuable manpower either for military service or for agricultural work. The restoration of agriculture in Gia Định, thus obtaining a food supply sufficient to maintain a long war, and the development of an efficient system of intelligence in the Tây-sơn territories were two of Nguyễn Ánh's positive achievements. His final victory was obtained swiftly:

Qui Nhơn fell in July 1799, Huế in 1801, and Hanoi in July 1802.

It was on 1 June 1802, shortly before the final conquest of Tonkin, at a ceremony in the temple of his ancestors at Huế, that Nguyễn Ánh, at the age of forty, after twenty-five years of continuous warfare, adopted the title of Gia Long. In 1804 he named his kingdom Việt Nam, then proclaimed himself emperor in 1806. He had already received investiture from the Qing emperor. The capital of the restored dynasty was established at Huế, the old capital of the Nguyễn principality, ending Hanoi's 800-year tradition as focus of the system. Gia Long's motive for the transfer was partly the wish to strengthen the central power by acquiring a more central capital, and partly the mistrust of the people of Hanoi and the Red River delta. The new capital was built between 1804 and 1819 on the model of Beijing, with its three cities in one, the Capital City (*Kinh-thành*), the Imperial City (*Hoàng-thành*), and the Forbidden City (*Từ-cấm-thành*).

Laying the foundations of a modern state, Gia Long had first to restore an administration and an economy devastated by thirty years of civil war. Initially he depended heavily on the military commanders who had fought with him in the long war. Until a new generation of mandarins could be trained, there was a severe shortage of officials who could be regarded as politically reliable. The north in particular—where the Nguyễn had never had a political base—presented special problems, and surviving Lê dynasty officials were mainly appointed there. The adoption of the system of regional overlords—one ruling northern Vietnam (Bồc Thành) from Hanoi and the other ruling southern Vietnam (Gia Định Thành) from Saigon—gave rise, however, to internal tensions, since the two overlords, Nguyễn Văn Thành in the north and Lê Văn Duyệt in the south, were old commanders and personal rivals whom Gia Long was able to play off against each other. Lê Văn Duyệt, a veteran of many campaigns who had particularly close and friendly relations with Gia Long, enjoyed an effectively independent command in Saigon, appointing his own officials and managing relations with Siam, Cambodia, and Europe in his own way.

The regime set up by Gia Long was an absolute and centralized monarchy, his conser-

vatism being reinforced by his experience of hardship and danger as a political refugee. One important aspect of the growth of absolutism was the borrowing of Chinese institutions over the whole range of political and administrative life: thus, legislation was revised with the substitution in 1812 of a new law code, inspired by the Chinese code of the Qing, to the old *Hồng Đức* code of the Lê. Administrative, educational, financial, and military reforms were undertaken, and great public works were carried out: roads (in particular the mandarin road linking the Chinese border to Cambodia), canals, dykes, granaries, ports, and citadels. In 1805, Cambodia had again to acknowledge Vietnamese suzerainty, and Gia Long could drive back a Siamese invasion in 1813. His learning from the West notwithstanding, Gia Long took care not to grant any privilege to foreigners, his policy being one of taking advantage of the competencies of Europeans on his own chosen terms and for the profit of the country only. The establishment of the British at Singapore in 1819 made him suspicious, and just prior to his death on 3 February 1820, at the age of fifty-eight, he recommended that his successor, Minh Mạng (r. 1820–1841), treat the Europeans well but not let them acquire any political influence.

NGUYỄN DYNASTY (1802–1945)

Assuming the title Gia Long on 1 June 1802, Nguyễn Ánh founded the dynasty that was to occupy the Vietnamese throne until 1945. After the first sovereigns, from Gia Long (b. 1762, r. 1802–1820) to Tự Đức (b. 1829, r. 1847–1883), however, the imposition of French rule led to the irremediable decline of the dynasty, with successors often being minors and frequently deposed at will. In any case, those who ascended the throne after Tự Đức were emperors in name only, reigning but not governing. Nguyễn sovereigns were as follows: Gia Long (b. 1762, r. 1802–1820); Minh Mạng (b. 1792, r. 1820–1841); Thiệu Trị (b. 1807, r. 1841–1847); Tự Đức (b. 1829, r. 1847–1883); Dục Đức (b. 1852, designed to succeed Tự Đức to the throne, but deposed on 23 July 1883); Hiệp Hòa (b. 1847, r. July–November 1883); Kiến Phúc (b. 1869, r. 1883–1884); Hàm Nghi (b. 1871, r. 1884–1885); Đồng Khánh (b. 1864, r. 1885–1889); Thành Thái (b. 1879, r. 1889–1907); Duy Tân (b. 1899, r. 1907–1916); Khải Định (b. 1885, r. 1916–1925); and Bảo Đại (b. 1913, r. 1925–1945).

The Nguyễn era began as what could be considered a golden age in the history of Vietnam, marked by a considerable extension of Vietnamese territory. Gia Long transmitted a unified kingdom from the China border to the Gulf of Thailand (Siam) to Minh Mạng, who stretched it westward, integrating in particular eastern Laos in 1827–1828 as five new prefectures into the Vietnamese administrative organization. This kingdom comprised three main regions (*Kỳ*): Trung Kỳ, the central part; Bắc Kỳ (Tonkin), with the administrative seat of its imperial governor-general (*tổng trấn*) at Bắc-thành (Northern Citadel, Hanoi); and Nam Kỳ (Cochinchina), with its administrative center at Gia Định (Saigon), also the seat of an imperial governor-general. In order to increase the effectiveness of the administration, Minh Mạng had the power of the northern and southern overlords destroyed, and in 1831 he divided the

country into thirty-one centrally controlled provinces, with the capital, Huế, constituting a special district (*Thừa Thiên Phủ*). A more centralized system of remuneration for the administrative machinery, which replaced the distribution of “allotment lands” on a hierarchical basis with that of cash salaries, was also introduced. The bureaucracy depended upon a communications system that was probably superior to any found in neighboring societies, thanks to the Mandarin Road, built in the first decade of the nineteenth century, and its regular relay stations running from the north to the Mekong Delta.

The structure of power was not actually very impressive. At any one time, probably fewer than 2,000 individuals performed mandarinal functions as full laureates of the civil service examination system, revived by Gia Long in 1807—a rather small number of administrators for a society of perhaps 9 to 10 million people (Nguyễn 1970: 68–76). Yet the substantial extension of the territoriality of the dynasty created problems in the construction of the political order, and contested identities kept on growing at the margins, where the Vietnamese political center controlled imperfectly. (For instance, Vietnam even failed in its bid to annex what remained of Cambodia, which Thiệu Trị had to evacuate in 1841.) And under the first four emperors of the dynasty, southern Vietnam remained a frontier land. Of the 1,024,338 officially recorded male taxpayers in all of Vietnam in 1847, only 165,598 of them lived in the six southern provinces, and southern landholding patterns were not surveyed until 1836 (Nguyễn 1970: 28–29). Nevertheless, in 1839 the Vietnamese court officially changed the name of the country it governed to “The Great South” (*Đại Nam*), with the explanation that Vietnam’s recent territorial thrust south to the Mekong justified this change in the political nomenclature.

Bureaucratic centralization closely modeled on the Chinese pattern, with a severe application of the Confucian code, was the weapon with which the Nguyễn dynasty fought centrifugal trends, military and political, in the provinces. It must be said, however, that the process of borrowing, which seemed to become almost unnecessarily submissive at times, was a reflection of the belief that Confucianism exemplified universal and not simply Chinese patterns of experience, while representing the

most advanced technology for social control and administration. Hence it was not the contemporary Manchu system that the Nguyễn wished to imitate, but the system as it was believed to have existed at great periods in the past. This also explains why the Nguyễn chronicles described the Vietnamese ruler in the nineteenth century as the true custodian of Confucian orthodoxy, culturally superior to the Qing.

Unfortunately, greater bureaucratic efficiency contributed to the aggravation of the country's structural, social, and economic defects. The administrative centers did not develop into commercial urban centers, with the exception of the major cities and ports. Royal monopolies on high-value produce and restrictive taxes on the export of rice, salt, and metals put a brake on earlier moves toward commercial development. In agriculture the lot of the masses remained unimproved, as the problem of landlessness remained unsolved, while compulsory labor service weighed heavily upon the peasants, who were conscripted to construct irrigation canals, city walls, roads, bridges, and, above all, the walls and new palaces at Huế. In other words, the bureaucracy that the Nguyễn strove to build exceeded the needs of an agricultural society based on a subsistence economy. The numerous peasant revolts sparked off by famine and epidemic were evidence that this bureaucracy, for all its relative efficiency compared with other Southeast Asian governments, had failed to create an adequate standard of living or security for its villagers.

The Tự Đức reign (1847–1883), the longest of the Nguyễn dynasty, was especially marked by popular uprisings. But, while his predecessors had confronted insurrections only in the provinces, Tự Đức had also constantly to guard against a coup d'état within his own court and household—a new feature in the history of the dynasty. As the Vietnamese imperial family had grown larger in the nineteenth century, it had begun to lose cohesion and to develop factions, and the process accelerated under Tự Đức. The first attempt to overthrow him was made in 1851–1853 by his half brother, Prince Hồng Bảo, who had hoped to succeed Thiệu Trị in 1847. Then, in 1864–1865 the throne was shaken by another attempted coup, whereas it had not yet recovered from the shock of the French invasion of Cochín China and the signing in 1862 of the Treaty of Saigon, sanctioning

the loss to the French of the three eastern provinces of Cochín China.

In the face of the deliquescence of the regime in conjunction with unprecedented predicaments caused by Western expansion, the basic problem for the Nguyễn court was the reconstruction of social and political order on lines that would enable it to resist the pressures of Western imperialism. But reform proposals submitted to the imperial court during these critical years were in no condition to generate more dynamic changes. Instead, the increasing threat from France induced a new kind of paralysis, which turned out to be fatal for the Nguyễn dynasty. After having been repeatedly forced to give in to France's pressure, the court of Huế resigned itself finally to the humiliating acceptance of French domination.

As a result, French rule in most of Vietnam was based, from 1885 to 1945, on a protectorate arrangement with the Nguyễn dynasty. Under the supreme authority of the French governor-general, the Nguyễn continued to govern throughout northern Vietnam (Tonkin) and central Vietnam (Annam). Therefore, Vietnamese nationalists, when they set to the struggle to win back the independence of the country, had to confront both the dynasty and French colonialism. Paradoxically, they would invoke the liberating values of the French Republic to challenge an instinctively conservative and authoritarian government—the Nguyễn dynasty—whose power was sustained by French colonial rule.

NGUYỄN EMPERORS AND FRENCH IMPERIALISM

The death of Emperor Tự Đức in 1883 without a direct heir, coincident with the attack launched by the French on Vietnam, left the Nguyễn dynasty wholly absorbed by the problem of securing its own survival. Flouted by ministers whose maneuvers had contributed to the making and unmaking of sovereigns at a vertiginous speed from 1883 to 1885, the Vietnamese monarchy could do nothing but yield to the invaders' demands. The protectorate treaty of 6 June 1884 was the first act to submit its authority to French power. Under the terms of this treaty, the Vietnamese emperor surrendered the control of his foreign policy and his armed forces to France. He was to retain autonomy over his domestic affairs; in reality, while he continued to style himself the emperor of Đại Nam, his sovereignty was soon to be permanently recast by the political and governmental transformations that modified the initial agreement.

France at first seemed to have wavered between two lines of conduct: either to satisfy itself with an attenuated form of protectorate, basically more apparent than real, or to try to take in hand by means of more direct and efficient methods the complete reorientation of the country. The drive for more immediate control quickly prevailed over the fair implementation of the protectorate treaty. As a consequence, the Vietnamese monarch found himself increasingly dispossessed of his powers. The devolution of his authority was most clearly demonstrated in the dismemberment of the kingdom. With Nam Kỳ (Cochin China) hav-

ing been transformed into a French colony twenty years earlier, a dichotomy was now introduced into the political regime of the other two parts of the old empire of Đại Nam: while Trung Kỳ (Annam) remained under the nominal rule of the Vietnamese monarch, with the French, however, controlling the local administration as provided for by a special convention, signed on 31 July 1885, Bắc Kỳ (Tonkin) became a fictitious protectorate, increasingly submitting to direct French administration, without the protected government being able to exercise any control. Theoretically, Tonkin remained under the authority of the emperor in Huế, who was represented on the spot by a *Kinh-lược* (imperial high commissioner), empowered to appoint officials and to make all decisions concerning the administration of Tonkin. But as under article VII of the protectorate treaty, mandarins in Tonkin could be dismissed at the request of the French, the *Kinh-lược* was in fact in a subordinate position to the French administration. Tonkin's administrative organization was thus taken away from the Huế court and placed under the discretionary power of the protectorate's agents. This confiscation of the emperor's authority was to be completed ten years later, with the devolution in 1897 of the *Kinh-lược* prerogatives to the French *résident supérieur* in Tonkin; in the different provinces, the Vietnamese mandarins were kept at their posts, but the French *résidents* and their delegates held the real power.

The creation of the Indochinese Union in 1887, which consolidated French rule over Vietnam while transforming the whole of Indochina into a French colonial possession, represented also another step in the dispossession of the Vietnamese monarch's political sovereignty. More than just an administrative framework, the Union constituted a unified collectivity, whose constituent countries were subsumed under its authorities and lost all their sovereign attributes as states. Their public and private law was to a large extent subordinated to the statutory power of the French governor-general.

The Vietnamese monarchy surrendered the final vestiges of its authority by the royal edict of 15 August 1897, which handed over to the French the task of collecting all taxes in return for the payment to the Vietnamese government of the sums necessary for the sovereign's expen-

diture and the upkeep of the imperial court and the royal administration; and by the royal edict of 27 September 1897, which declared that the *résident supérieur* in Annam was henceforward to preside over the emperor's privy council and equally the council of the royal family. Some autonomous statutory power was supposedly reserved to the Vietnamese sovereign: ritual affairs, traditional education, subjects relevant to the kingdom's justice and administration, the fiscal system (but not the treasury), penal law, and the status of individuals in public and private law. But, in order to be enforceable, royal regulations had to be accompanied by the *résident supérieur's* endorsement and the governor-general's approval. Such strict judicial tutelage was therefore tantamount to veritable direction.

The last scraps of political and judiciary power remaining to the Vietnamese monarch were to be taken away from him at the death of Emperor Khải Định by the convention of 6 November 1925, which stipulated that only regulations relating to rituals would form the subject of royal edicts, and the sovereign would henceforth be confined to the celebration of rites. He preserved, besides, the right of pardon and the right of granting honorary distinctions and titles of nobility, posthumous grades, and certificates of appointment of the tutelary spirits to be worshipped in the villages of Tonkin and Annam. All that concerned the control of state affairs would be settled by the representatives of the protectorate. Vietnamese administration was thus definitively replaced by French administrative organization. Policy, laid down in Paris by ministerial decrees, was implemented in Vietnam by the French bureaucracy, which extended downward from the governor-general, the *résidents supérieurs* of Annam and Tonkin, and the governor of Cochin China to a network of lesser officials.

Emptied of their substance and maintained in a subordinate position, the Vietnamese monarchy and its bureaucracy lingered on as ramshackle relics of the past. Even so, the princes placed on the throne after 1884, generally in their nonage and invested or dethroned at will by palace intrigues or the whim of the colonial authorities, still maintained a high conception of their position. The sixteen-year-old Duy Tân, for example, willingly lent himself in 1916 to an abortive attempt to overthrow the

French in central Vietnam, proving through his gesture that the loss of national independence was still gnawing at the conscience of the Nguyễn monarch.

Yet, if Vietnam's political regime had not been altogether transformed, it was because the explosion after 1885 of the *Cần Vương* (Aid the King) movement had warned the colonial authorities about the strength of dynastic loyalty. In the beginning of the twentieth century, this loyalty still manifested itself every time the monarchical institution itself was threatened. For many, kingship was indeed all that was left to symbolize Vietnam as a political entity. Protected and dominated as he was, the monarch still remained a personage who symbolized the traditions and represented the nation; it was therefore indispensable to defend the king's prerogatives, in order to preserve whatever was essential.

For the French, too, the decision to maintain Vietnamese kingship was one of expediency. It would placate those who were faithful to the old order, for whom the abolition of kingship would lead to the establishment of a policy of assimilation, together with the suppression of the institutions, customs, and traditions to which the people remained extremely attached. The colonial administration had to admit that it would be unwise to do away altogether with the Nguyễn monarchy, that the king was still a great social force, and that the conservative components of Vietnamese national tradition were still realities with which the protectorate had to reckon. For the French, then, it was politic to maintain the king as the symbol of Vietnamese authority in Annam, removing him and replacing him with another if he made any show of indocility.

There was another reason for preserving the monarchy. For the French the development of modern revolutionary movements was far more dangerous than the nationalism of the mandarins and the Confucian scholar-gentry, whereas the ancient order and the country's traditional forces could form a useful barrier to revolutionary nationalism. Pierre Pasquier, who was to become *résident supérieur* in Annam in the 1920s and later governor-general, advocated thus a policy of association, declaring: "A king . . . of whose collaboration we may be sure, can be a useful adjutant for our action. He can, through us, ensure the peace of the

people's minds and contain the movements that could arise on the right as well as on the left" (Nguyễn 1985: 154).

Unfortunately, by then the Nguyễn monarchy was generally thought to have gone bankrupt and the king to have become only a screen that the French used to cover their misdemeanors. Therefore the restoration of the ancient regime ceased to appeal to Vietnamese nationalists, as patriotism no longer identified itself with loyalty to the monarchy. This refusal to consider the monarchy as the national symbol was to have far-reaching consequences. It led to a total rejection of the traditional political order, especially Confucianism insofar as it represented governmental ethics. The Vietnamese intelligentsia, faced with the incapacity of the Huế court to oppose the French presence, began to abandon Confucian teaching and react against Confucian ethics, which had dominated Vietnamese public life for centuries. It had become clear to the learned elite that Confucian society and Confucian governmental institutions could not rise to the challenge of Western intellectual and technological competition. National liberation needed therefore to go hand in hand with modernization, not with the veneration of an antiquated past. Pleading for a rupture with the past, reformers advocated the construction of a new educational system and a new society in which there would be no place for the traditional monarchy. Phan Châu Trinh's (1872–1926) action, for example, showing more hostility toward the enslaved monarchy of the Nguyễn than toward the French, was typical of this trend.

By attacking the monarchical regime, Phan Châu Trinh only expressed the prevalent thinking among the majority of Vietnamese nationalists, whose disaffection with the monarchy was total. By the 1920s, young Vietnam, no longer interested in preserving the monarchy, completely spurned the old hierarchical, formal, moralizing Confucian Annam. The new generations, much more concerned with the twin problems of modernization and nation-rebuilding, declared themselves ideologically unattached and in radical rupture with the old attitudes of opposition. Under these circumstances, attempts such as those of Phạm Quỳnh at invigorating anew the monarchy were bound to meet with a hostile reception.

It was then that the revolutionary crisis of 1930 occurred—when the Vietnam Nationalist Party (Việt Nam Quốc Dân Đảng) launched the mutiny at Yên Bái and the new Indochina Communist Party organized mass demonstrations among the peasantry and strikes among the workers—as the voicing of a general rejection of the colonial order. This crisis was to shake French colonialism in Vietnam to its foundations. Perceiving communism as a new expression of radical nationalism, the colonial power imagined that it should be fought, first through implacable repression, and second by political means, through attempts at depriving it of its possible allies among the upper classes of Vietnamese society and by strengthening the alliance between those classes and the colonial administration through means of limited concessions. In this context, the monarchy became an instrument with which to combat communist insurgency. Consequently, experiments were conducted at consolidating the existing legal and social structure and at reinforcing the prestige and improving the functioning of the mandarin apparatus. The young emperor Bảo Đại was sent back to Huế in September 1932, after ten years of study in France. The 1925 convention, which had deprived the Vietnamese sovereign of his last prerogative, was rescinded on 10 September 1932 in order to preserve the fiction of a protected state.

The concessions made were, however, devoid of political substance, and in no way signified a return of genuine sovereignty to the Nguyễn monarch. The reforms that Bảo Đại was allowed to promulgate in Huế in 1932–1933 aimed only at modernizing the Vietnamese administration; they concerned only the penal code, financial regulations, and the mandarins' status. Conversely, such claims as the demand for a Vietnamese constitution or for the return of Tonkin to an authentic protectorate regime were rejected outright. The plea for a liberal grant of autonomy, perhaps dominion status, as in the British Empire, was firmly refused. On 31 March 1933, the governor-general categorically dismissed the request of the Chamber of the People's Representatives in Annam for an increase of its prerogatives; on 2 May, Prime Minister Nguyễn Hữu Bài, the spokesman of traditionalist opposition, was retired; on 12 July, the minister of the interior, Ngô Đình Diệm, the reformists' leader, had to hand in his resignation. Bảo Đại, realizing that his impe-

rial government had only formal authority and no real power, abandoned whatever desire he might have had for personal government and confined himself to being a figurehead like his predecessors.

The policy of restoration of colonial power was steadily pursued even under the government of the Popular Front (1936–1939) in France, whose colonial policy turned out to be very little different from that of other French governments. Such political measures as were adopted with regard to Vietnam were therefore very limited. None had reference to the status of the country. They simply satisfied some partial demands of the Vietnamese nationalists: amnesty for political prisoners, suppression of the preliminary authorization for publishing Vietnamese newspapers, and the like. In the absence of a new bourgeoisie that could exercise any real influence, the colonial authorities continued to lean on the traditional elite and to consolidate the foundations of their power. This policy also implied that a certain revision of the line that restricted and weakened the powers of the court of Huế was necessary, and that some authority should be restored to the monarchy and its bureaucracy. Governor-General Jules Brévié (t. 1936–1939) specified in 1937: “[P]resently it is in our interest to give back to the Annamese monarch the prestige and authority he may have lost. He is indeed the keystone of this country’s political and social edifice” (Nguyễn 1985: 160–161). This led to a cautious strategy of upgrading the Nguyễn monarchy with a reform project designed in 1939 under the pressure of the Japanese threat and aimed at restoring to the royal government its apparent participation in the administration of Tonkin (creation of an upper house common to both Annam and Tonkin, and the participation of Tonkin in the court’s expenditure). What mattered ultimately was to use the monarchy both as a bulwark against subversion in the countryside and as a pole of consolidation of the Vietnamese ruling class.

Thus far from 1930 to 1945, the successive French governments, regardless of their political coloring, constantly followed the same colonial policy. Even during the Japanese occupation, the concessions were made by the governor-general, Jean Decoux (t. 1940–1945), not at the expense of French authority in the country but to consolidate it. The French colonial power

was not prepared to give up any of its control. This same colonial mentality was still prevalent among French politicians after Bảo Đại had reasserted the desire of the Vietnamese for independence at the end of the Japanese interlude of 1940–1945. In March 1945, Bảo Đại denounced all the treaties that had established the French protectorate, and on 25 August 1945 he abdicated in favor of Hồ Chí Minh’s Democratic Republic of Vietnam.

That, however, was not the end of the story of the relationship between the Vietnamese monarchy and French colonial power. In 1948, looking for an alternative to the communists, the French again turned to Bảo Đại in the hope of negotiating through him for a political settlement with the Vietnamese nationalists. On 8 March 1949, France recognized Vietnam, with Bảo Đại as chief of state, as an independent state within the Indochinese Federation and the French Union.

NGUYỄN VĂN THIỆU (1923–2001) **Last President of South Vietnam**

South Vietnamese head of state for ten years during the Second Indochina War or Vietnam War (1964–1975), General Nguyễn Văn Thieu was also the last president of the Republic of Vietnam.

Thieu was born on 5 April 1923 in Tri Thuy, a small village near Phan Rang (in the southern part of central Vietnam) of a family of farmers and fishermen. The youngest of five children, he had the opportunity to get his schooling in Saigon. In 1945 he enlisted in the Việt Minh national liberation force and rose through the ranks to become a district chief. However, by August 1946 he became disillusioned with the Việt Minh. After an abortive attempt to become a merchant marine officer, he joined the Military Academy at Huế in 1948, when the French began the training of newly created Vietnamese

army officers. After a few months in the French infantry school in Coetquidan, he obtained his lieutenant's commission in 1949. Two years later, in 1951, he married Nguyễn Thị Mai Anh from My Tho and converted to her religion, Catholicism. At this time, inside the French camp, he participated in the concluding years of the First Indochina War (1946–1954), establishing a reputation as an efficient but cautious officer. He attained the rank of major and became a battalion commander.

After 1954, Thieu embarked on a career as an officer in the Army of the Republic of Vietnam (ARVN)—namely, of South Vietnam. As commander of the 21st Infantry Division and deputy commander of the Second military region (southern-central Vietnam), he became officer-in-charge of the Dalat National Military Academy from 1956 to 1960. He was sent to Texas twice (1957 and 1960) and attended the Joint and Combined Planning School of the Pacific Command in Okinawa. In 1960, by then a colonel, he commanded the First Infantry Division, responsible for the Demilitarized Zone (DMZ) and the two other provinces of the northern part of South Vietnam. Then, in December 1962, Thieu assumed command of the Fifth Infantry Division stationed at Bien Hoa, just north of Saigon.

The eighteen-month period separating the end of the Ngô Đình Diệm regime and the commencement of massive U.S. commitment in Vietnam was decisive. In 1963, then a general, Thieu was one of the military leaders who plotted Diệm's overthrow. In the 1 November military coup, in which the president was killed, he personally led a regiment in an attack on the presidential palace. Amid the complex power struggle, Thieu progressively appeared as a key figure of the South Vietnamese political scene. His credentials then included chief of staff of the army, vice minister of defense, and secretary general of the Armed Forces Council. In 1964 he became commander of the Fourth Army Corps (Mekong Delta area), and, in February 1965, he was appointed deputy prime minister and minister of national defense in the government of Phan Huy Quat (t. 1964–1965). Thus, in June, when the latter relinquished the government to the military, Thieu emerged as the right man at the right place. The ten-officer military body that assumed power in a National Leadership Committee elected him as chair-

man and chief of state, with Nguyễn Cao Kỳ as premier.

Nguyễn Văn Thieu headed the South Vietnamese regime from 1965 to 1975, during the entire period of the Vietnam War. For the first time, he worked with Premier Cao Kỳ to restore the electoral process. On 11 September 1966, more than 80 percent of South Vietnam's registered voters went officially to the polls and elected a 117-member constituent assembly. In accordance with the new constitution, Thieu was elected president on 3 September 1967, with 34.5 percent of the votes, to a four-year term with Nguyễn Cao Kỳ as vice-president. Although the war was worsening, he promised in his inaugural speech, particularly addressed to the Communists, that peace negotiation was always welcomed. He then proceeded to Australia, in December 1967, to confer with U.S. president Lyndon Baines Johnson (t. 1963–1969). But in late January 1968, he had to face the Tet offensive launched by the Việt Cong. During the Paris peace talks he was denounced by the communist side as the main enemy but always maintained his position, as he told President Richard Nixon during their meeting in June 1969 at Midway: no peace agreement before the return of Hanoi's regular troops to the north. Reelected in 1971, he denounced the Kissinger–Le Duc Tho cease-fire agreement in late 1972, but reluctantly he honored its clauses. Nevertheless, he did not abide by the political part of the Paris Agreement, signed in January 1973. In March 1975, when the communists launched their last offensive against the Saigon regime, from Ban Me Thuot, he decided to order the retreat of southern forces from the central highlands. He never recovered the strategic initiative. However, after the fall of Xuan Loc, a small city in the northeast of Saigon, on 21 April 1975, he resigned and left the country. Nine days later, the Popular Army entered Saigon.

During the last twenty-six years of his life in exile, first in London and then in Boston, he never published any declaration or analysis of Vietnam's recent history or contemporary situation. He died on 29 September 2001, aged seventy-eight.

NIAH CAVES (SARAWAK)

The Niah Caves are a complex of caves located in the Niah–Subis limestone massifs, about 110 kilometers from the town of Miri in Sarawak, Malaysia. The Niah–Subis limestone massifs date back to the Miocene age, with its highest peak called Gunong Subis at 390 meters. The Great Cave is the largest of the caves found in the Niah–Subis limestone massifs. The Great Cave has about twenty-six acres of floor space with several openings, the largest known as the West Mouth. The West Mouth measures more than 60 meters high and more than 240 meters wide. It was used for human habitation as well as a cemetery. The Niah Caves are an important archaeological site, as they provide evidence of the longest sequence of early human existence in Southeast Asia. The whole sequence may span from 40,000 to 2,000 years ago. The Niah Caves are today one of Southeast Asia's major archaeological sites, and also one of the major tourist destinations in Malaysia.

History of Archaeological Research

Since 1864 the Niah Caves and Borneo have attracted the attention of famous natural scientists such as Charles Darwin (1809–1882), Thomas Huxley (1825–1895), and Alfred Wallace (1823–1913), who visited in search of the “missing link” in the evolution of humans. The Niah Caves were believed to contain evidence of the evolutionary development of early hu-

mans. In 1880, Alfred Hart Everett (d. 1898) first visited the Great Cave of Niah, where he searched for fossils of early humans. It was not until 1954 that archaeological explorations and excavations began in the Niah Caves by Tom Harrisson (1911–1976). His work continued intermittently in Niah until 1967. In 1976, Zuraina Majid and the Sarawak Museum resumed excavations at the West Mouth, followed by Graeme Barker, who restudied the stratigraphy and paleoenvironment of Niah in 2000–2001.

Past Environments at Niah

The Niah environment from the late Upper Pleistocene through the Holocene saw marked environmental changes around the caves. The location of the Niah–Subis limestone massifs in relation to the coastline was altered several times by changing sea levels during the late Quaternary. From 40,000 years ago till 11,000 years ago, the Niah–Subis massifs were likely to be further inland. From about 11,000 years ago the sea level rose, and around 5,000 years ago, it was higher than it is today: the Niah–Subis massifs were about 24 kilometers inland. The climate was cooler at Niah, with a submontane environment during the upper Pleistocene, where the Sunda Shelf was exposed. At that time Borneo's climate was probably cooler by 5 to 7 degrees Celsius than today, with half as much precipitation and a winter drought. Many different types of animals roamed in the more open forest; some became extinct, while others have gone through morphological evolutionary changes. With the rise in sea level at the end of the Pleistocene about 11,000 years ago, temperatures and rainfall increased, and the vegetation and fauna became closely similar to the type of rain forest seen today.

Niah's Archaeological Finds

A variety of archaeological artifacts were uncovered during excavations at the Niah Caves. The artifacts included human skeletons, lithic, ceramics, animal bones, shells, and botanical remains. One of the most important finds in the Niah Caves is the “deep skull,” discovered at the West Mouth in Niah. This *Homo sapiens* skull was radiocarbon-dated to 38,000 years ago. Apart from that, the West Mouth also contained more than 200 burials, together with ce-

ramics, dating to about 3,500 years ago. There were also some boat and jar burials at Kain Hitam in Niah, dated to the first millennium C.E., as well as some wall paintings of boats being paddled and dancing human figures.

The Niah lithic assemblage consists of pebble tools, flake tools, charred stones, quartz fire strikers, haematite, and debitage. The pebble tools include chopper, ax-adze, pounder, sharpener, knife, hammerstone, and mortar, while flake tools include end scraper, notched scraper, semilunar scraper, and pointed flakes. The faunal remains suggested that forest and riverine environments were exploited. Hunting and gathering were probably done mainly at forests and streams surrounding Niah. From the forests, a variety of mammals such as the bearded pig, porcupine, Sambar deer, mouse-deer, monkey, monitor lizard, orangutan, bear, tapir, otter, squirrel, rhinoceros, and crocodile were hunted, while from the rivers, streams, and estuaries, fish and shellfish were obtained. Several extinct species were also hunted, such as the banteng, giant pangolin, and Sumatran tapir. Botanical remains at Niah suggest that the *kepayang* (an intoxicating fruit that causes dizziness) was collected for food. Ceramics at Niah include earthenware and stoneware. Two of the most unusual earthenware types are the three-color ware and the double-spouted pottery. The rest of the earthenware was plain, glazed, burnished, or with impressed or incised designs. The impressed designs include net, checked, textile, and cord-marked. The pottery vessels are generally round-bottomed and have a globular body with an everted rim and narrow lip. The pottery are coarse-tempered, low-fired, and usually thick-bodied.

Niah's Culture Sequence

The culture sequence of the Niah Caves is rare and important, because it contained the longest known duration of human habitation in Southeast Asia, from 40,000 years ago till 2,000 years ago. Niah's culture sequence has been divided into two main traditions: ceramic and preceramic. The ceramic tradition dates back to about 3,000 years ago and is characterized by the introduction of ceramics, a decreasing use of the pebble and flake artifacts, and a significant increase in charred and ironstones. The preceramic tradition, on the other hand, dates

between 40,000 years ago and 3,000 years ago and is characterized by flake and pebble artifacts. The preceramic levels contained several extinct species of animals, such as the banteng, Sumatran tapir, and giant pangolin. During this period they utilized the forests, rivers, and estuarine regions to hunt for animals and fish and collect shellfish, while raw stone materials of metamorphic sandstone, jasper, and chert were obtained from more distant places. They also collected food from edible plants such as the *kepayang* *Pangium edule*, and used stone and bone artifacts for food preparation and the manufacture of wooden artifacts.

NOLI ME TANGERE (1887) AND EL FILIBUSTERISMO (1891)

Inspiring Novels

Noli Me Tangere and *El Filibusterismo* are the titles of two novels written by Filipino writer José Rizal (1861–1896). Rizal was a participant in the Propaganda Movement, a group of Filipino expatriates in Europe who devoted themselves to the struggle for political reforms in the Spanish colonial government in the Philippines. Rizal's writings have strongly influenced the emergence of nationalism and the independence struggle in the Philippines. The

novel *Noli Me Tangere* (or *Noli*) is a book that, in the words of Rizal biographer Guerrero, “changed the history of a nation” (Guerrero 1963: 148).

Rizal had left the Philippines in 1882 to study in Spain with the financial support of his family in the Philippines. He had observed the injustices of Spanish colonial rule, the political influence and the abuses of the friars, and the repression of any dissidence and opposition among the population. Early on he planned to write a novel to depict the life of his people and the social and political conditions of colonial oppression. He worked on his manuscript for several years and finished the book in February 1887. Although the book was written in Spanish, he could not publish it in Spain, as it was likely to be prohibited by the Spanish government. He therefore had the book printed in Berlin (a press run of 2,000 copies), with financial help from a wealthy Filipino friend. He then sent copies to his friends in Europe and tried to ship the books to Spain and the Philippines. In the Philippines the government and the Catholic Church considered the book subversive and prohibited its importation and banned it. Those who had copies in their house risked arrest and deportation. In Europe, Rizal’s friend Ferdinand Blumentritt, an Austrian professor, passionately defended the book against attacks in several journal articles, describing it as “the greatest literary work ever written by a Filipino, or about the Philippines at all” (Sichrovsky 1997: 51).

Noli Me Tangere in Latin signifies “Touch Me Not,” the first words of the famous phrase spoken by Jesus to Mary Magdalene in the garden after the resurrection: “Touch me not, for I have not yet ascended to my father” (John 20:17). Rizal used these words to express the idea that he was dealing with political and social problems in his country that the Spanish government and the friar orders did not want to be “touched,” mentioned, or discussed. The novel is the story of Ibarra, the son of a wealthy landowner who returns to his hometown in the Philippines. He finds his family oppressed by the friars, and when he attempts to establish a school and work as a teacher, opposition comes from the same members of the clergy. The main message of the book is that the problems of colonial oppression cannot be solved within the setting of a small town.

Rizal returned to the Philippines in 1887–1888. During that year his family in his hometown of Calamba, province of Laguna, was engaged in a bitter conflict with the Dominican order that owned the land they were tilling. The friars demanded a sizable increase of the land rent, and when the Rizal family protested, and the controversial son José became involved in the conflict, the friars ejected the family from their estate. The elder Rizal was deported to the island of Mindoro, and José’s mother was publicly humiliated. As Rizal was in danger of being arrested, his family urged him to leave the country.

Soon after his return to Europe in 1888, Rizal started working on his second novel, *El Filibusterismo*, or *Fili*. The book was printed in Ghent, Belgium, in 1891 with a small circulation. In the Spanish Philippines in the late nineteenth century, the word *filibusterismo* meant “rebellion” or “subversion,” the breaking away of the colony from the mother country; a *filibusterismo* was a rebel. Rizal dedicated his book to the three Filipino priests, Mariano Gómez, José Burgos, and Jacinto Zamora, who were executed by the Spanish government in the Philippines in 1872. He took several hundred copies with him in 1892 when he returned to the Philippines; while in transit in Hong Kong, the British authorities confiscated the novels.

Fili is a romantic and dramatic continuation of the story told in *Noli*, but more pessimistic, as Rizal has incorporated the bitter experiences of his family a few years earlier. The book presents a sharp analysis of the problems of colonialism and discusses the dilemmas of reform versus revolution in a series of brilliant dialogues and debates. The protagonist, Ibarra, has survived an attack and returns under the name Simoun, a dark and vengeful individual who wants to punish the corrupt Spanish rulers and the abusive friars and start a revolution. However, all his plans fail, the revolution does not succeed, and Simoun escapes to the mountains, where he discusses his motives and his disappointment with a priest shortly before his death.

The problem of reform versus revolution continued to haunt Rizal. Although he concluded that the Spanish colonial regime was unwilling to modify its stand and that peaceful reforms were impossible, he rejected the idea of

an armed revolution. He took this position probably for strategic reasons, because he foresaw that the people were ill prepared and that a revolution would fail. He returned to the Philippines in 1892, where he was arrested and deported to Mindanao for four years. In August 1896 the Katipunan movement raised the flag of revolution against the Spanish regime. Rizal had distanced himself from the uprising, but the Spanish government considered him a subversive and had him executed on 30 December 1896.

After his death Rizal became the venerated national hero in the Philippines. His novels have been translated several times and are obligatory reading in Philippine high schools. His hesitancy at the time of the revolution has often been seen as a weakness, and for many Filipinos, Andres Bonifacio (1863–1897), the leader of the Katipunan, is the real nationalist hero. However, Rizal's political and philosophical stance cannot be explained simply by his middle-class background or a lack of courage. In his books he deeply analyzed the pros and cons of revolutionary violence, and he stood for his point of view, as he showed by sacrificing his life for his country.

NON-ALIGNED MOVEMENT (NAM) AND SOUTHEAST ASIA

The Non-Aligned Movement (NAM) is a group of states representing the interests of developing countries. It has its origin in the Asian-African Conference held in Bandung, Indonesia, in 1955 and was formally founded in 1961 as a reaction to the bipolar structure of international relations. For the Southeast Asian members of the NAM, with the exception of Indonesia, it has never been a key instrument of foreign policy, and its importance has further diminished since the 1970s.

As international politics following the end of World War II (1939–1945) became increasingly dominated by the Western democracies and Eastern communist blocs, the first Asian-African conference at Bandung in April 1955 marked the beginning of an independent cooperation movement of Third World countries. All independent Southeast Asian states were among the twenty-nine delegations to the conference. Non-alignment, which had been advocated by the prime minister of India, Jawaharlal Nehru (1889–1964), since 1949, did not mean pacifism but independent participation in international relations. It was an expression of a separate identity, with peaceful coexistence, anti-imperialism, and racial equality as its principles and was appealing to newly independent states emerging from the colonial experience. As a discussion forum for common concerns and a platform for developing joint policies, the

NAM has always comprised member states with differing ideologies and could never create an institutionalized administrative structure or a formal constitution. In Southeast Asia, the NAM found its most prominent and active spokesmen in the governments of Indonesia.

The NAM was founded at a summit meeting in the Yugoslavian capital of Belgrade in 1961 by twenty-five countries. Since then, eleven summit meetings have been held, and the NAM today consists of 115 members, including all Southeast Asian states. One of its main objectives is to enhance negotiating power within the UN system, a task assigned to the closely affiliated Group of 77 in the economic sphere.

During its early years, the NAM had a strong base in Asia with its influential members China and India; however, the deterioration of Indian-Chinese relations, the later exclusion of China, and the admission of European and increasing numbers of African states shifted its focus away from Asia. In addition, Southeast Asian states themselves followed different approaches toward international relations. The Philippines and Thailand shared the view that their security against the perceived communist threat depended on defense arrangements with the United States—as expressed in the Southeast Asia Treaty Organization (SEATO) of 1954. Indonesia and Burma, on the other hand, strongly advocated an independent foreign policy that implied no military alliances with either of the two superpowers. Nonalignment thereby never more than nominally encompassed Southeast Asia as a whole, but was rather an expression of political tactics pursued by individual Southeast Asian states. From the mid-1960s and particularly in the 1970s, regional cooperation in Southeast Asia came to be seen as a more effective strategy for promoting the interests of states over a loose association such as the NAM. Meanwhile, increasingly militant NAM policies toward the West were often in discord with those of Southeast Asian countries.

At a NAM summit in Lusaka in 1970, Southeast Asia became a focus of attention when Tun Abdul Razak (t. 1970–1976), the prime minister of Malaysia, presented his proposal to make Southeast Asia a Zone of Peace, Freedom and Neutrality (ZOPFAN), which was subsequently endorsed by the NAM members. By the mid-1970s—as highlighted during

the first NAM summit after the end of the Vietnam War (1964–1975) in Colombo in 1976—the Association of Southeast Asian Nations (ASEAN) countries became, however, increasingly alienated by the NAM. Burma and Vietnam used the movement to voice opposition against the ongoing pro-Western regional cooperation process in Southeast Asia. Countries such as Singapore, Thailand, and the Philippines were too closely affiliated with the developed Western nations to endorse the NAM's calls for a complete restructuring of the global economy during those years. By the time Burma withdrew from the movement at the Havana summit in 1979 to protest against the alignment of its neighbors with the West, NAM had become rather insignificant for Southeast Asia as a forum for conducting international relations. Finally, by the late 1980s, the NAM changed in reaction to the changed global power structure and decided to focus on the fight for human rights and protection of the environment, rather than on the fight against colonialism. Southeast Asian states were content to go along with this, while strong opposition came from hard-line African and Latin American states. Indonesia demonstrated its unwavering adherence to the principles of non-alignment once more as late as 1992–1995, when it chaired the NAM.

The Non-Aligned Movement was a significant foreign policy initiative for the newly independent states of Southeast Asia, especially for Indonesia, during the first postwar decade. However, it was constantly contested by U.S. engagement in Southeast Asia against communism and became increasingly insignificant, especially through the success of ASEAN.

See Phra Naret (King Naresuan) (r. 1590–1605); Toungoo Dynasty (1531–1752)

NORODOM, KING (1836–1904)

Juggling Franco-Siamese Influence

As Cambodian king, Norodom reigned from 1860 to 1904. His father, Ang Duong (Ang Duang) (1796–1860), became Cambodia's monarch in 1847 after a period of enforced residence in Siam (Thailand). When Duong died in 1860, Thai patronage of the Cambodian court remained in force, and several claimants jockeyed for the throne. Norodom, although Duong's eldest son, was unable to consolidate his rule. In 1863, a French delegation from their new colony in southern Vietnam (Cochin China) visited the Cambodian capital and promised Norodom protection in exchange for some commercial advantages. Norodom capitalized on the vagueness of the terms (and French ambitions in the region) to counterbalance continuing patronage from Siam, and in 1864, after obtaining the royal regalia from Bangkok, he was crowned king by a team of French and Siamese officials.

Over the next twenty years, the French became dissatisfied with Norodom's autocratic style and his unwillingness to accept their political control or to open Cambodia to French investment. In 1884 a French official came to Phnom Penh aboard a gunboat and delivered an ultimatum to Norodom, demanding that he

abolish slavery in the country, allow French officials to control his finances, and accept resident French political advisors throughout the kingdom. A nationwide revolt against the French soon broke out, probably with Norodom's connivance. It took the French three years to restore order, aided by Norodom's brother, Sisowath Monivong (r. 1927–1941), whom the French had come to favor as Norodom's successor.

The remaining years of Norodom's reign were marked by the intensification of French control and a weakening of royal institutions. At one point French officials tried to have the king declared insane, so as to put a more malleable ruler on the throne. In his last years, Norodom became for all intents and purposes a recluse, baffled by history, perhaps, but proud of his achievements.

NU, U (1907–1995)

Promulgator of “Buddhist Socialism”

U or Thakin Nu became the first prime minister of the former British colony of Burma (Myanmar) when the country regained its independence on 4 January 1948. Born in the Irrawaddy Delta town of Wakema in 1907, the son of local shopkeepers, he was educated at Rangoon University. While at the university he became involved in student nationalist politics with other future nationalist leaders, including General Aung San (1915–1947) and U Thant (1909–1974), who subsequently became secretary general of the United Nations. Graduating from student union politics, he became involved in the Dobama Asiayone, or We Burmans Association, members of which called themselves Thakin, or Master, in defiance of the British. A man interested in world literature, he was one of the co-organizers of the *Nagani*

(Red Dragon) Bookclub, founded to translate socialist and Marxist writings into Burmese. In 1940 the British interned him for activities in opposition to Burma's assistance to Britain in the war against Nazi Germany.

Upon his release from jail by the Japanese when they invaded the country in 1942, Thakin Nu was chosen by Dr. Ba Maw (b. 1893) to serve as foreign minister in his Japanese-sponsored government in 1942. Hoping to abandon politics for a career as an author in 1945, when the British resumed control of the colony, Thakin Nu was made vice-president of the Anti-Fascist People's Freedom League (AFPFL), the popular political front organization with which the British subsequently negotiated Burma's independence. Nu was elected president of the constituent assembly formed after elections in 1947 to write the first constitution for independent Burma. Upon the assassination of General Aung San in July 1947, Nu assumed the deputy chairmanship of the Governor's Executive Council, effectively the prime ministership, on the eve of independence.

Immediately after independence was regained, the AFPFL splintered and the country was thrown into civil war between Nu's neutralist, Socialist Party-backed government and a variety of communist and ethnically designated separatist and revolutionary groups. Dependent on the army under General Ne Win for protection in the areas of greatest conflict, for a time during 1949 U Nu's government was dubbed the "government of Rangoon," as large areas of the country, including several major cities, were under the control of rebel groups. Nu's AFPFL government rested on the support of various political barons and local bosses in the parliament. Many of these had their own private armies, which often had better weapons and supplies than did the government's army. Disgusted by the squabbling for the spoils of office among his political colleagues and the resultant corruption, Nu resigned following national elections in 1956 to "clean up the party." Resuming office in 1958, the AFPFL soon split between his "Clean" faction and the "Stable" faction of the two deputy prime ministers. Faced with the prospect of renewed conflict, he invited General Ne Win (1911–2002) to form a six-month military "caretaker" government, which, in the event, remained in office for eighteen months.

Portrait of U Nu, the prime minister of Burma. (Bettmann/Corbis)

Although winning reelection under the Union Party label in 1960, U Nu was ousted by Ne Win in a military coup in March 1962. Failing in a comeback attempt with the support of armed insurgents along the border with Thailand in the late 1960s and early 1970s, Nu eventually slipped from political view. He did, however, make a brief but vain resurgence at the time of the collapse of Ne Win's Burma Socialist Program Party (BSPP) government in 1988. At that time Nu asserted that he was still the only legitimate head of government in the country, a claim that received little support from other politicians and the wider public. His attempted political revival was lost among the many new political voices and groups that had emerged in Burma in the twenty-six years since he had last held office.

Nu is a devout Buddhist, and his years in government were noteworthy for his attempts to bridge the gulf between the West and China at the height of the Cold War. During his period in government, Burma became one of

the founding members of the Non-Aligned Movement (NAM), along with the India of Pandit Jawaharlal Nehru (1889–1964) and the Indonesia of President Sukarno (1901–1970). In 1960 he advocated making Buddhism the state religion of Burma, antagonizing non-Buddhists as well as some members of Buddhist sects different from his own. Although never a member of the Socialist Party, which formed the intellectual core of his government, he advocated a set of political ideas that attempted to meld Theravada Buddhist and socialist concepts. His last major project, after accepting a pension from General Ne Win in an amnesty in 1980, was to embark on a major translation of Buddhist texts into English. His autobiography, written in the third person by a fictitious nephew, provides candid insight into his life.

NURUDDIN AL-RANIRI (d. 1658)
Champion of Orthodox Islamic Mysticism
 Writer, historian, and Sufi theologian and critic Nuruddin al-Raniri was the outstanding champion of orthodox mysticism, denouncing the *Wahdat al-Wujud* ("Unity of Being") of Wujudiyah mysticism as heresy. Malay literature was much richer for his prolific contribution, from religious treatises and translations to voluminous historical works.

Nuruddin al-Raniri was of Quraisy parentage from Ranir (Rander), a cosmopolitan Gujarati port not far from Surat in northwest India. His paternal side was descended from the

Humaid of the Hadramaut. Henceforth his full name was Nuruddin bin Ali bin Hassanji bin Muhammad Humaid al-Raniri. The date of his birth is unknown. His travels, sojourns, and writings revealed that he was active during the first half of the seventeenth century. He completed his religious education at Mecca during the early 1620s and apparently in Pahang in the next decade, where he acquired his fluency in the Malay language. (Pahang was then under Acehese rule.)

From 1637 to 1644, Nuruddin was in Aceh. By then the proponents and supporters of heretical Wujudiyah—namely, Hamzah Fansuri and Shamsuddin al-Sumatrani (d. 1630) and the latter's patron, Sultan Iskandar Muda (Mahkota Alam) (r. 1607–1636)—had all died. Nuruddin had gained the support of Sultan Iskandar Thani (r. 1636–1641) and also briefly of Sultanah Taj al-Alam Safiatuddin Shah (r. 1641–1675), paving the way for him to "cleanse" Sufi mysticism of alleged heresies and heretical teachings. At the same time he strengthened the orthodox doctrine of *Wahdat al-Shuhud* ("Unity of Witnessing"). His denunciation of Hamzah and his supporter Shamsuddin were focused on his identification with the Western philosophers, the Zoroastrians, the Brahmins, and others as to the ideas of God, Nature, and Man, and the pantheistic view that God permeates everything that is seen. Nuruddin also condemned Hamzah's belief that God is a Simple Being, that the Qur'an was created, and in the eternity of the World (Al-Attas 1966). Hamzah's *Al-Muntahi* (*The Adept*) was the focus of Nuruddin's 1664 denunciation in his *Tibyan fi ma'rifat al-adyan* (*Explanatory Notes in Knowing Various Religions*), in which he also attacked the heresies of Shamsuddin. The purging in Aceh was also played out in Mughal India, where the doctrine of *Wahdat al-Wujud* ("Unity of Being") faced theological opposition (Johns 1957: 34; Drewes and Brakel 1986: 16–17).

A prolific writer, Nuruddin wrote and translated (in to Malay) no fewer than twenty works of Malay and Arabic. His religious books included *Sirat al-Mustakim* (1628), *Asrar al-insan fi ma'rifat al-ruh wa'l-rahman* (1641), *Akhbar al-akhirah fi ahwal al-kiamah* (1642), and *Jawahir al-'ulum fi kashf al-ma'lum* (1642). Three works on mysticism (*Fath al-mubin 'ala al-mulhidin*, *Hujjat al-siddik lidaf al-zindik*, and *Lata'if al-asra*) and

one on catechism (*Nubdha fi da'wa 'l-sill ma 'a sahibibi*) were apparently lost. Nuruddin's historical *magna corpus* was the seven-volume *Bustan a's-Salatin* ("Garden of Kings") (1638). He also penned *Kisah Iskandar Zulqarnain*, which tells of the exploits of Alexander of Macedonia (356–323 B.C.E.), from whom the Malays claimed descent. He rendered the Arabic *Sharh al-'aka'id al-Nasafiya* into Malay, entitled *Durrat al-Fara'id bisharh al-'ak'id*.

After losing favor at court, Nuruddin left Aceh in 1644 and returned to India. He died in September 1658.

NUSANTARA

The Malay Archipelago

Nusantara refers to the Javanese archipelagic empire outside Java. This Javanese expression gained currency during the thirteenth century

in the ambitious imperialistic plans of the Singahasari ruler Kertanagara (r. 1268–1292), who laid the foundations of the kingdom and empire of Majapahit (1293–ca. 1520s). In his efforts to establish Javanese paramountcy over the islands in the vacuum created by a declining Srivijaya, Kertanagara's projected vision, realized through the domination over eastern parts of Java and conquests of Madura and Bali, made Nusantara a realistic ambition. In his footsteps, Majapahit rulers attempted to make Nusantara a reality. Despite the claims in the *Nāgarak-ertāgama*, the poem by the Buddhist prelate Prapanca that glorified Majapahit and that listed virtually the entire present-day Indonesian archipelago as well as Malaysia as within the Majapahit empire, it was highly doubtful that it was factually true. The current historical evidence, however, points to a more restricted boundary of Majapahit's imperial presence, limited to the greater part of East Java and the islands of Madura and Bali. Nonetheless, it was possible that Majapahit's sphere of influence, as against direct domination, extended nominally westward to Sumatra and the Malay Peninsula and stretched as far eastward as the Bandas and the Moluccas. Nusantara, therefore, from this perception was realized. The term "Nusantara" then came to be increasingly identified with the Malay Archipelago—that is, the present-day Republic of Indonesia and the Federation of Malaysia.

OC ÈO

A Major Archaeological Site of Vietnam

(*Go*) *Oc Èo*—that is, “(the mound of) *Oc Èo*” in Vietnamese—is the local name for a major archaeological site in Vietnamese territory credited to the polity known as Funan. It is situated in the floodplain of the lower Mekong Delta, halfway between the river and the coast of the Gulf of Siam, some 30 kilometers southwest of the provincial capital of Long Xuyên. In the early 1940s, *Go Oc Èo* was the first site to have been discovered, excavated, and proven to belong to the latter polity, known until then from written sources alone. Vietnamese archaeologists have used this place-name as a generic term to designate the culture that flourished in the lower part of the Mekong Delta during the first half of the first millennium C.E. In Vietnam alone, they have now brought to light more than 300 sites of this “Culture of *Oc Èo*.”

The term “*Oc Èo*” is also most commonly used by archaeologists to designate a complex of sites in the vicinity of the eponymous “Mound of *Oc Èo*.” This complex extends over a good 20 square kilometers, and includes sites dating back to Funan and to the following periods (from the first to the twelfth centuries C.E.). A first group of sites in this complex lies in the floodplain at the foot of the granitic outcrop of Mount Ba Thê; the other group is situated on its lower and middle slopes. Louis Malleret, of the *École Française d’Extrême-Orient*, first discovered this site complex in 1942; he excavated it

only once, in 1944. The long war that was then starting prevented archaeologists from working there till a few years after the reunification of Vietnam (1975). Malleret nevertheless managed to publish and acquire—for what is now the Museum of History of Hồ Chí Minh City—an impressive collection of some 10,000 archaeological artifacts, some 90 percent of which come from the *Oc Èo* area. Finds from recent excavations at *Oc Èo* and surroundings are now kept at the provincial museums of Long Xuyên and Rach Gia.

When Malleret discovered the sites, the floodplain near *Oc Èo* was still a marshy wasteland. He was able to survey and plot—part on the surface and part from aerial photographs alone—a large number of sites and features. Many of these sites were obliterated from the surface when the area was later transformed into modern rice fields and crisscrossed by a dense network of irrigation canals. Recent systematic excavations, guided by modern remote-sensing and geophysical techniques, have nevertheless confirmed many of the earlier assumptions. However, because of intense looting starting in the early 1940s and man-made disturbance after the 1960s for agricultural development, the site of *Oc Èo* may forever keep many of its secrets.

Most of the floodplain sites in the first group fall within a 2,500-by-1,500-meter rectangular area surrounded by moats that were visible only in pre-1960s aerial photographs but have recently been revealed in excavations.

Vietnamese sculpture of the head of Kirti Mukka. This sculpture was excavated from the site of the ancient city of Oc Èo, which was a major trading city in the first to sixth centuries. (Leonard de Selva/Corbis)

Site density and variety are highest within this moat area, indicating an urban concentration. The moat city is bisected by an ancient, man-made canal that runs southwest toward the coast; in the northeast, this canal joins with another ancient canal that connects the Oc Èo complex with the major Funan site of Angkor Borei, some 70 kilometers away, in Cambodian territory. During the first chronological phase of Funan (first to third centuries C.E.), settlement in the floodplain appears to have been limited to low natural mounds, which, under normal conditions, would not have been inundated. Houses on stilts were built of wood; some of these buildings would have been large, judging from the impressive diameter of the wooden piles (up to 30 centimeters), and were covered with terra-cotta grooved, flat tiles. The density of artifacts recovered from this first

phase is high (particularly pottery). Some were imported from India. During the second phase (fourth to sixth centuries C.E.), large brick sanctuaries were erected on the same mounds. Canals were most probably dug during this second phase, allowing flood control and the settlement of a larger number of people in the lower floodplain. This flourishing period of the history of Oc Èo is also the time when an extraordinary variety of artifacts in bronze, tin, gold, and glass were manufactured locally. The main canal would have allowed this industrial production to reach the coast and be exported overseas. Ongoing research may also help document other functions of this canal network: it is quite possible that the drainage of the floodplain and the newly acquired irrigation control helped open up new tracks of land for rice growing. For reasons that are not yet clear, the

urban site in the floodplain was suddenly abandoned toward the seventh century, at a time when the polity of Funan appears to have disintegrated. Future research will have to determine the share of environmental, economic, or political factors that brought about such radical changes in settlement patterns. The changes include silting of the canals, severe change in climate, increasing competition from the Austronesian-speaking states that were fast developing in insular Southeast Asia, growth of agriculture in the interior plains of present-day Cambodia, and a progressive shift inland of the political centers of the southern Indochinese peninsula—or a combination of these factors.

The second group of sites at Oc Èo are situated on the lower and middle slopes of Mount Ba Thê, overlooking the floodplain settlements. Sites situated at the interface between the floodplain and the rising ground of the mound were occupied during the earliest phase of Funan and produced a range of artifacts similar to those found in the floodplain. A jar burial, typical of Southeast Asian protohistorical cultures, was recently brought to light on slightly higher ground. It contained ashes, as well as a few gold and carnelian beads. During the second phase, temples also were built in brick and stone on the slopes of Mount Ba Thê. Very few remains of the earliest structures have so far been found there, as their bricks were systematically reused to build new temples. Remains recently excavated near the modern Buddhist sanctuary of Linh Son appear to indicate that this was the location of a large religious complex of which only surrounding buildings have so far been found. The central shrine most probably lies under the mound on which the modern sanctuary was built early in the twentieth century. The ancient sanctuaries and their extensions were built up and enlarged over the following centuries. Some of these religious structures have been dated to as late as the twelfth century. Indeed, as Funan waned and the pre-Angkorian and later Angkorian polities gained political power in the interior of Cambodia, Oc Èo appears to have turned into an active, albeit peripheral, religious site only.

The archaeological site at Oc Èo presents a good example of the cultural developments occurring in Southeast Asia during the first part of the first millennium C.E. Like other known sites of the coast of western Southeast Asia, it

came into existence in the first or second century C.E. as a dense coastal settlement with far-reaching trade contacts with the rest of Southeast Asia, the Indian Ocean, and the South China Sea. During this early phase, its people appear to have clung to indigenous religious practices, as attested to by the recently found jar burial, even if material culture already shows strong influences, mainly from the Indian subcontinent. Ceramic traditions revealed at Oc Èo bring proof of such technological transfers. As in other contemporary sites of Southeast Asia, artifacts from across the Bay of Bengal that belong to the earlier phase of Oc Èo, such as Roman and Middle Eastern medals and intaglios, inscribed Indian gems, beads, and ceramics, bear no witness yet to the Indianization of Funanese society. These artifacts attest only to the remarkable cosmopolitanism of Oc Èo. Soon enough, however—sometime between the late third and the fifth centuries—Indian cultural traits started to be adopted in the political and religious spheres. Indian stately behavior and the notion that rulers can be legitimized by their close affiliation with Hindu divinities gained ground in Funan, as they did in other contemporary polities of Southeast Asia. The statuary and inscriptions recovered at Oc Èo and its surroundings, as elsewhere in other Funan sites in the Mekong Delta, indicate that both Buddhism and Brahmanism were practiced. The latter, judging from rare fifth- and sixth-century inscriptions and from the much larger number of Visnu statues found in the Mekong Delta, appears to have been favored by the rulers. In Oc Èo as on the Malay Peninsula, in South Sumatra, or in West Java, it appears that devotional cults to Visnu, a divinity closely associated with kingship and political power, were the rule. Like the Buddhists, these Brahmanical sects accepted universalist doctrines that were convenient means of proselytizing among foreign people who did not belong to the rigid caste system of India.

OIL AND PETROLEUM

The hydrocarbon deposits (oil, petroleum, gas) of Southeast Asia are concentrated in the younger geological formations between the major Tertiary folds that run like an arc through the region. From the north in the central de-

pression of Burma (Myanmar), hydrocarbon deposits extend through eastern Sumatra into northern Java. From there one arc extends through Seram into northern New Guinea; another follows the southern, eastern, and northern coasts of Borneo. The extent to which these geological deposits were actually exploited to produce commercial quantities of hydrocarbons depended on a range of other factors: geology alone cannot explain their development.

While oil had long been part of the local economy and oil deposits had been exploited on a small scale for domestic purposes, it was largely the development of the internal combustion engine toward the end of the nineteenth century that provided the catalyst for hydrocarbon exploitation. The exploration phase began in the 1870s and was largely a product of European interest in exploiting regional resources. In the Dutch East Indies the colonial Mines Service was important in mapping likely deposits, and, by the early 1880s, commercial drilling was under way in both the northern Sumatran fields around Aceh and the Palembang fields in southern Sumatra. A number of smaller fields in central and east Java were also onstream by the end of the nineteenth century. Elsewhere in the East Indies, the important fields of Balikpapan in eastern Borneo were providing almost one-half of the total output of the Dutch East Indies by 1910, alongside smaller fields in Ceram. Other fields outside the Dutch East Indies included those in Sarawak and Brunei around Miri, which had come onstream by the second decade of the twentieth century. Finally, the oil fields of central Burma were an important source of revenue for the British colonial administration by 1910.

A first key feature of the development of the hydrocarbon industry was the dominance of outside interests—it was first and foremost a colonial industry. Partly this was a consequence of the large capital investments and technical expertise required to develop the industry; partly it was the result of a close relationship between colonial governments and overseas firms. In Burma, the Burmah Oil Company quickly dominated the oil industry, while in Sarawak and Brunei it was Royal Dutch Shell that dominated oil prospecting and development. In the Netherlands (Dutch) East Indies,

the large fields and refineries of East Kalimantan were controlled again by Royal Dutch Shell through a monopoly company, Bataafsche Petroleum-Maatschappij (BPM), which was to dominate the region's economy for some thirty years. Royal Dutch Shell also dominated petroleum production in Sumatra. U.S. and Japanese interests were of only minor significance in the colonial period—the relationship between company and colonial administration remained a close one.

A second important feature of the industry was its general lack of impact on other aspects of the economy. In most parts of colonial Southeast Asia, petroleum extraction and processing remained essentially an “enclave” economy. Inasmuch as most of the skilled and supervisory labor was imported from Europe, the impact on local industries and infrastructure was limited, and profits were repatriated to European investors rather than reinvested in the region. By the late 1930s, the industry was vital to significant regions in Borneo, Burma, Java, and Sumatra. In Thailand and British Malaya, by contrast, few easily exploitable resources were available.

In the period after the Pacific War (1941–1945), the nature and structure of the industry were transformed. The process of decolonization has meant changes in the structure of the industry, with partial nationalizations in Indonesia and Burma leading to uneasy relationships between the multinational companies dominating the industry and the new governments of the region. Huge increases in both demand and production have transformed the industry, and rapid upward and downward movements in commodity prices have had important macroeconomic effects in both large countries such as Indonesia and smaller producers such as Brunei. Technical advances in recent decades have extended the industry offshore into new oil and LNG (liquefied natural gas) deposits. These in turn have created a range of new opportunities alongside greater technical and environmental challenges.

**OMAR ALI SAIFUDDIN III,
SULTAN OF BRUNEI (1914–1986)**

Architect of Modern Brunei

His Highness Sultan Haji General Sir Omar Ali Saifuddin III, ruler of the British Protectorate of Brunei from 6 June 1950 until his abdication on 4 October 1967, exercised power when the real benefit of oil wealth first began to be felt in his domain.

His reign, coinciding with the height of the Cold War, was an era of political awakening locally combined with declining British power. Ruling by decree after the revolt of 1962, he resisted democratization and any idea of having his country absorbed into a federation of a “British Borneo.” (On the “Greater Malaysia” issue he was rather more ambiguous.) During his reign Islam was strengthened and the Malay language promoted, welfare services were expanded, and the first national development plans were implemented. A constitution was promulgated in 1959, when internal self-government was regained from the United Kingdom and the detested administrative link with Sarawak was abrogated. He founded the Brunei Malay Regiment, the Brunei Museum, and several orders of chivalry. As “Seri Begawan” (Emeritus) Sultan (1967–1986), he remained the real power in the land, taking particular responsibility for relations with the British, and

he became minister of defense in the first postindependence cabinet (1984–1986).

Born on 23 September 1914, son of Sultan Sir Muhammad Jamalul Alam (r. 1906–1924), Sir Omar was educated at the Malay College, Kuala Kangsar, and became an accomplished poet. Short in stature and soft-spoken, he married three times and was blessed with many children. In 1947 he was promoted to vizier rank and, in 1953, was knighted by Queen Elizabeth II (r. 1952–). Having suffered from diabetes for several years, Sir Omar died on 7 September 1986 at Bandar Seri Begawan, which had been so named in 1970 in homage to him.

The Seri Begawan Sultan enjoys a high reputation as “Architect of Modern Brunei”; many places in the country are named after him, and the anniversary of his birth has been commemorated every year since 1991 as Hari Guru (Teachers’ Day).

ONN BIN JA'AFAR (1895–1962)

Founder-President of UMNO

Better known as Dato' Onn, Onn bin Ja'afar is closely linked to the new political developments in Malaya immediately after the Pacific War (1941–1945). Dato' Onn is especially remembered as the leader of the Malays against the Malayan Union scheme imposed by Britain in 1946 and as founder of the United Malays National Organization (UMNO), which continues to dominate Malaysian politics today. Under his leadership and partly organized by UMNO, Malays held peaceful demonstrations all over Malaya, forcing Britain to replace the Malayan Union with the Federation of Malaya in February 1948. A founding member of the Communities Liaison Committee (CLC) in 1949 and influenced by its recommendations, Onn ventured to transform UMNO into a noncommunal party. But when his ideas were rejected he left UMNO in August 1951 and formed the Independence of Malaya Party (IMP) in September.

Born on 3 February 1895, Onn was the fourth son of Dato' Ja'afar bin Muhammad, the first *Menteri Besar* (chief minister) of “Modern Johor,” by his fifth wife, Rugayah Hanim Abdullah. Dato' Ja'afar (1838–1919) served under Sultan Abu Bakar (r. 1862–1895) and Sultan Ibrahim (r. 1895–1959). Rugayah, a Turkish lady, was first married to Sultan Abu Bakar's younger brother, Tengku Abdul Majid, and then to a rich merchant, Syed Abdullah Al-Attas, before marrying Dato' Ja'afar. Adopted by Sultan Ibrahim, Onn was sent in 1903 to England to accompany the Johor princes in their studies there; he was enrolled at Alderburgh Lodge School, Suffolk. On returning to Malaya in 1910, Onn was sent to the prestigious Malay College in Kuala Kangsar, where he studied Malay language and literature.

Starting as a probationary clerk in the Johor Civil Service in 1911, Onn was promoted and transferred a number of times from one department to another before he was conscripted into the Johor military forces in 1917 and was stationed at Pulau Belakang Mati (today renamed Sentosa Island), Singapore. Back in Johor in 1919 he served in various departments, but being openly critical of the sultan, his job was terminated in 1927. It was while living in exile doing odd jobs in Singapore that, with the help of Syed Hussein Alsagoff and other relatives,

Onn was appointed editor of the newly established *Warta Malaya* in January 1930 and became active as a journalist. He began to get involved in bigger issues, especially those pertaining to the welfare of the Malays in general. Onn left *Warta Malaya* in 1933 and, together with Syed Alwi Al-Hadi, started a new periodical, *Lembaga Malaya*, in 1934. In 1935, Onn began to publish the daily *Lembaga*, and in 1936, at the invitation of Syed Hussein, he started *Warta Ahad*, the Sunday edition of *Warta Malaya*. When he was recalled to Johor and appointed unofficial member of the Johor Legislative Council in January 1936, Onn moved the publication of *Lembaga* and *Lembaga Malaya* to Johor Bahru. In 1939 he was appointed private secretary to the Johor heir apparent, Tengku Ismail.

When Japan conquered Malaya in 1942, Onn was appointed food officer for Johor. In April, Onn became a member of Kesatuan Melayu Muda (KMM, the Young Malay Union), and he participated in the Kesatuan Rakyat Indonesia Semenanjung (KRIS, Union of Peninsular Indonesians) when it was formed in May 1945. Appointed by Sultan Ibrahim as district officer of Batu Pahat on 19 August 1945, Onn contributed significantly to ending the postwar Sino-Malay clashes in the district. In January 1946 he started the Pergerakan Melayu Semenanjung Johor (Johor Peninsula Malay Movement), which participated actively in the 1946 Malay Congress. It was while serving as UMNO president that Onn was appointed acting Menteri Besar of Johor in October 1946. Confirmed as Menteri Besar on 17 September 1947, Onn resigned in 1949 because of some misunderstanding with the Malay sultans over his proposal for the appointment of a Malay deputy high commissioner for Malaya. Onn was made chairman of the newly instituted Rural Industrial Development Authority (RIDA) in December 1950 and a member of the Ministry of Internal Affairs in February 1951. Both responsibilities ended in January 1955.

Onn's debut outside UMNO proved to be a failure. Winning only two seats in the Kuala Lumpur municipal election in 1952 and unable to overcome the growing influence of the Alliance Party in the subsequent local elections, Onn disbanded IMP and formed Partai Negara (PN) in 1954, but he failed to win any seat in the 1955 elections.

With the cooperation of Partai Islam Se Malaysia (PAS), Onn was finally elected to Parliament to represent a constituency in Terengganu in 1959. PN also won 4 of the 24 seats in the state. But by this time Onn was already more than sixty years old and was unwell physically. When one PN representative joined PAS and the other three went over to UMNO on 22 October 1961, the PN had reached its end.

Onn died on 18 January 1962 and was laid to rest next to his father in Johor Bahru. His son, Hussein Onn (1922–1990), was the third prime minister of Malaysia (t. 1976–1981).

OPIUM

Opium was first significant in Southeast Asia as an item of trade in the seventeenth and eighteenth centuries, as a financial prop to the colonial empires. In the twentieth century, it was produced in, consumed in, and exported from Southeast Asia.

Opium was probably introduced into Southeast Asia not long after the drug was first re-

ported in China, about the ninth century C.E. It may well have first come from India or possibly the Arab world, via the maritime trade route. At that time opium was used primarily as a medicine, but by the time Europeans arrived in Southeast Asia it was also being used by warriors prior to battle and by couriers and others undertaking strenuous tasks in both India and Southeast Asia.

In about 1690, it was reported that in Java opium was being mixed with tobacco and smoked. Prior to that time the drug was generally ingested. Around the same time, Dutch traders and ultimately the Dutch East India Company (VOC) came to dominate the trade in the drug from India to Southeast Asia. Markets for it developed in Java and Sumatra, particularly among miners and pepper planters. Dutch traders may have introduced the drug and the habit of smoking it to the Chinese when they occupied Taiwan. Not long afterward, it seems that some Chinese devised a manner of smoking the drug without tobacco. This was already being practiced before the beginning of the eighteenth century and appears to have provoked the first attempts by the Chinese government to prohibit the use of the drug.

In the latter half of the eighteenth century, the British took control of the opium-producing areas of India and began to develop the trade in a more systematic manner. The English East India Company (EIC) declared a monopoly over the cultivation of opium in Bihar and Benares and began making the drug available to independent traders, the so-called country traders who carried it to China, selling a portion of their cargo in Southeast Asia en route. The traditional Malay market absorbed some portion of this, while Chinese laborers who were beginning to form important settlements during these years consumed increasing amounts. By the nineteenth century, Chinese laborers had become the major consumers of opium in Southeast Asia.

It was to protect the opium trade to China (and the tea shipments coming back through Southeast Asia) that the British settlements of Penang (1786) and Singapore (1819) were established. During the nineteenth century, as the trade to China increased from about 4,000 chests (there were about 60 to 70 kilograms per chest) annually in 1800 to more than 100,000

chests in 1880, Southeast Asian consumption seems to have absorbed about 20 percent of the total (Trocki 1990: 57).

Excise revenue farmers who contracted the privilege of marketing opium from the colonial states sold much of the drug to resident Chinese as well as indigenous Southeast Asians. This monopoly was called an opium farm. Some form of farm existed in every part of the region, and Chinese entrepreneurs almost invariably ran these highly profitable enterprises. Between 1885 and 1910, the farming system was gradually phased out and was replaced by government-run monopolies. During the 1920s, the cost of opium was gradually increased with the intention of reducing consumption.

By this time, however, Japanese pharmaceutical companies had developed a competitive product in injectable morphine. At the same time, cultivation of the poppy had spread throughout China and into neighboring Laos and Burma (Myanmar). Cultivation continued to flourish in China until the early 1950s, when the People's Republic of China (PRC) suppressed it. Retreating Guomindang (Kuomintang, KMT) armies came to dominate the production of opium in northern Burma in the 1950s and 1960s and, with support from the U.S. Central Intelligence Agency (CIA), began to convert the drug to heroin and to export it. This laid the foundation for the traffic in the region currently known as the Golden Triangle (the area straddling Burma, Thailand, and Laos).

Cultivation of the opium poppy has become an important part of the illegal economy of the region. In the 1960s, the Vietnam War (1964–1975) created an opportunity for the trade to flourish, and new markets developed in Saigon and Bangkok. The drug also found markets in Australia, Europe, and the United States. Control of the opium crop in the Shan hills fell into the hands of warlords such as Lo Sing Han and Khun Sa. The warlords increased production to around 2,500 tons of raw opium and made Southeast Asia the major source of illegal heroin in the world by the early 1970s (McCoy 1991: 285).

ORANG ASLI

Orang Asli (Malay: “original people”) is a general term for the still-tribal and recently tribal populations of Peninsular Malaysia (West Malaysia). The term was introduced around 1960 as a replacement for the earlier label “Malayan aborigines.” Closely related populations (sometimes known collectively as “Maniq”) also exist in small numbers in southern Thailand.

The Orang Asli, who numbered at least 119,000 at the time of the Malaysian Census of 1996, do not constitute a single ethnolinguistic population, being differentiated by linguistic affiliation, mode of livelihood, and social-organizational pattern. The majority of the Orang Asli belong within the same generally “Southern Mongoloid” population as most of the other peoples of Southeast Asia.

Orang Asli settlements are found in the rural portions of all states of Peninsular Malaysia (apart from Perlis). Most of their villages are small, with populations ranging from 12 to about 200. In some areas, larger settlements have been formed through government-supported “regroupment” schemes, aimed at concentrating the Orang Asli in permanent settle-

ments more amenable to centralized administration. Increasingly, individual Orang Asli families are also living outside these settlements and in urban areas.

Depending on the criteria employed, the Orang Asli are divisible into fifteen to twenty distinct ethnolinguistic groups. Based on linguistic affiliation, the Orang Asli populations of southern Thailand and Peninsular Malaysia are differentiated into four groups—namely, Northern Aslian (Jahai, Batek, Chewong), Central Aslian (Semai, Temiar, Jah Hut), and Southern Aslian (Semelai, Mah Meri, Semaq Beri), classified under the Mon-Khmer language family; under the Austronesian family is the Malayic (Jakun, Temuan, Orang Kuala).

Modes of Livelihood

Until recently, most Orang Asli subsisted by the swidden farming of tapioca, hill rice, and other crops, supplemented by fishing, trapping, hunting, and the extraction and trading of forest products. A small number of Orang Asli, perhaps not more than 2 percent of the total, spent a significant part of their lives as nomads, moving in family groups every few days or weeks, either hunting and gathering in the forest or along the shore or fishing from dwelling-boats at sea.

More recently, many Orang Asli have moved toward the cash-based petty commodity production of fruits and other items, and to various forms of wage labor and salaried jobs. Increasingly, those with secondary and tertiary educations are entering more formal kinds of career-based employment in the modern sector. A major employer is the Department of Aboriginal Affairs (Jabatan Hal Ehwal Orang Asli [JHEOA]), but few Orang Asli have been appointed to senior positions there.

Religion

The indigenous religions of the Orang Asli display a generally animistic and revelatory outlook. Various entities in the environment (plants, animals, mountains, territories, etc.) are thought of as possessing subjectivities (“souls”) that can be communicated with by ordinary people—privately through dreams and publicly through trance and dance. Spirit-mediumship

Rural Orang Asli Populations of Southern Thailand and Peninsular Malaysia, 2000

(among the northern Orang Asli) and shamanism (in the south) form the basis of religious ceremonial and healing practice. There has been much sharing of religious revelations among individuals in different settlements and among different ethnolinguistic groups.

Since the nineteenth century, some Orang Asli have adopted various world religions: Christianity (Catholic and Lutheran), Baha’i, and Islam. A few communities have even taken up Chinese-religionist practices. In recent years there has been a significant degree of conversion to Islam in some parts of the country, sponsored largely by both central and state governments, but much of this appears to be nominal rather than substantial. In former times, the adoption of Islam by an Orang Asli would be accompanied by assimilation into the Malay community, but that is no longer the case; there are a growing number of “Asli” Muslims. As in

the rest of Southeast Asia, the adopted world religion is usually practiced in a nonexclusive syncretism with the indigenous Orang Asli religion, which is still adhered to strongly.

Languages

Orang Asli languages fall into two distinct divisions. One-third speak Austronesian languages that are, with a single exception, closely related dialects of Malay. (The exception is Duano, spoken by the Orang Kuala of Johor.) In contrast, two-thirds speak distinctive languages belonging to the Southern Mon-Khmer division of the Austroasiatic stock. These “Aslian” languages (as they are called by linguists) fall in turn into four subdivisions: Northern, Central, Southern (each containing several languages), and Jah Hut (consisting of a single language). The Aslian languages, whose wider relation-

ships lie with such mainland languages as Vietnamese and Cambodian, are thought to have emerged within the peninsula over the past 3,000 years or so, providing living evidence for the country's remoter history. The peninsula's Hoabinhian and Neolithic remains, archaeologists believe, were produced by the ancestors of today's Aslian speakers.

Social Organization

Several patterns of social organization are found among the Orang Asli. Three basic patterns have been identified, though not all Orang Asli follow them.

The northern and central Orang Asli deal with each other in an egalitarian manner, based mainly on kinship relations. These relations are extended outward to embrace, in principle, all Orang Asli (and sometimes beyond), so that strangers will usually try to establish some genealogical connection, however distant, before getting to know each other better. Residential and marital preferences play a part in this, too. The northern groups (Kensius, Kentaqs, Jahais, and Mendriqs) tend to associate more closely with relatives connected to them through males, though that is not a formal rule. They also avoid marrying anyone with whom they have a traceable genealogical relationship. This ensures that they maintain social linkages over considerable distances, as is appropriate for a historically nomadic population.

The central groups (the Temiars and upland Semais) avoid marrying consanguineal kin. But (unlike their northern neighbors) they encourage marriage between individuals who are already related by marriage, and they place equal emphasis on relations through males and those through females. This has led to the formation of relatively distinct populations occupying single river valleys, along which are positioned their respective zones of resource utilization.

Among the southern groups (Semelais, Jakuns, and others), kinship relations are not as widely extended as among the northern and central Orang Asli. There is some preference for marrying "cousins"—that is, people already related consanguineally. Residential patterns within the village tend to be based on relations through females, while extravillage activities (such as trading in forest products) tend to be

based on relations through males. Associated with this is a degree of within-village ranking, more concerned with prestige than with economic difference.

Current Circumstances

The great majority of Orang Asli are Malaysian citizens, and as such they are potentially able to reap the usual benefits of citizenship. In addition, they are considered, in some contexts, as *bumiputera* (that is, Malaysians accorded special privileges on the grounds of indigenism). However, that categorization has been applied inconsistently and has so far provided little political or economic advantage to the Orang Asli. Unlike all other citizens, the Orang Asli also fall under a special piece of legislation, the Aboriginal Peoples Ordinance (1954), enacted during the Malayan Emergency (1948–1960). At that time the Orang Asli were crucial to the government's military campaign against forest-based guerrillas, and the ordinance was intended to guarantee protection against exploitation in behalf of a population thought of as unable to protect itself.

Authorized by this legislation, JHEOA has for decades acted as the provider of health, educational, and other services to the rural Orang Asli. In practice, however, this has meant that the Orang Asli have had less control over their own circumstances and resources than they might otherwise have attained. Moreover, research has shown that the Orang Asli have become relatively (and in some cases absolutely) poorer in health and wealth than all other peninsular Malaysians.

Pressure to change this situation has come from the Orang Asli Association of Peninsular Malaysia (POASM), founded in 1980, which now claims a membership of more than 15,000. This nongovernmental organization has helped generate a broader sense of pan-"Asli" identity among the Orang Asli, while also ensuring that the rest of the Malaysian public is aware of the problems affecting contemporary Orang Asli life. The largest concern is that of land rights: less than 2 percent of the land occupied by Orang Asli communities is actually guaranteed to them under law, and there have been many cases in which Orang Asli communities have had their land alienated for other

purposes. This no longer goes unchallenged, however; several court cases brought since the 1990s have been decided in favor of Orang Asli complainants.

ORANG LAUT

The Orang Laut once comprised a diverse collection of local groups that together, until the nineteenth century, occupied much of the mar-

itime zone surrounding the Straits of Melaka, including parts of the east Sumatran coast and the islands of the Riau-Lingga and Pulau Tujuh groups. Descendants of these people are still found there, and a small offshoot community, the Urak Lawoi', live farther north, in the islands of southwest Thailand, from Phuket to the Adang group. All speak varieties of Malay. In addition to diverse local names, most identify themselves as "sea people"—either, in Malay, as *Orang Laut*, or by dialect variants as *Urak Lawoi'* or *Desin Dola'*.

Before the arrival of the first Europeans, groups of Orang Laut made their home in the labyrinth of tidal channels that wind through the mangrove forests fringing the southern tip of the Malay Peninsula and eastern coast of Sumatra. Working from small dugout houseboats, they collected crabs and molluscs and trapped and speared fish. The women wove mats and sails from nipah palm leaves, while the men cut mangrove bark for tannin and timber for firewood. To the south, in the Riau-Lingga archipelago, other groups were expert mariners, and many regularly navigated over considerable distances, fishing, gathering crustaceans and other marine life, and hunting sea turtles. At low tide they collected molluscs and bivalves, pearl oysters, and cowrie shells.

Later, in the first centuries C.E., as Chinese trade developed, the list of valued sea products grew. Added were pearl shell, black branching coral (*akar bahar*), tortoiseshell, and, most important, *trepan* or sea slugs. With their swimming and diving skills and intimate knowledge of navigational passageways and seafloors, the Orang Laut knew how to locate and acquire these items for trade. From the fifth century onward, the increasing use of sea transport to carry goods between western Asia and China favored the rise of local ports, with harbors in the Straits of Melaka enjoying a decided advantage. In the seventh century, the great maritime market of Śrīvijaya emerged, based in southeast Sumatra. A major source of Śrīvijaya's power was the relationship its rulers developed with the Orang Laut. Because of their seafaring skills and ability as a naval force to keep open the surrounding sea-lanes, control over these people was vital to Śrīvijaya's rise to power. For nearly six centuries, Śrīvijaya controlled the seas by commanding the loyalty of its Orang Laut allies.

Melaka eventually succeeded Śrīvijaya. In the best-known account, a prince who fled Sumatra, taking with him his followers and a band of Orang Laut, established Melaka. As the first ruler, he rewarded his followers with noble titles, and in acknowledgment of their loyalty, married his son to the daughter of the Orang Laut leader, making the latter his chief minister. Political legitimacy was thus perpetuated. Melaka's power as a port similarly depended upon the loyalty of the Orang Laut. Being Malay newcomers, however, and relatively few in number, the authority of Melaka's rulers had to be confirmed by local aboriginal clans (*suku asli*), including the Orang Laut. In giving their support, the latter accepted, in practice, a Malay system of governance and incorporation in a Malay political and economic ambit.

In 1511 the Portuguese captured Melaka, forcing the sultan to flee to Bintan, then home to a large Orang Laut community. In 1526 the sultan's son established the kingdom of Johor, with its royal residence on the Johor River. Sea people were again an integral part of the new state. During the subsequent seventeenth and eighteenth centuries, various subcommunities of Orang Laut were incorporated in the kingdom by their formalized ties to its rulers. These ties were articulated by means of specific corvée duties assigned to each community, these duties, in turn, being associated with differing degrees of status. Thus, higher-status groups, residing mainly on larger islands or along sea-lanes, were charged with patrolling surrounding waters and protecting traders wishing to trade in Johor, while harassing others; they also served, when called upon, as the naval fighting force. Lower-status groups performed more humble tasks, including caring for the king's hunting dogs. Later, with the intrusion of European colonial power and the breakdown of central hegemony, fighting groups transferred their allegiance to local Malay chieftains, who engaged them as pirate crews. As a result, one of the consequences of the suppression of piracy in the mid-nineteenth century was a rapid sedentarization of a number of these higher-status groups and their assimilation into the Malay population. By contrast, more marginal, lower-status groups have tended to preserve a separate Orang Laut identity, even when they have abandoned boat nomadism and settled ashore.

By the eighteenth century, Malay hegemony was everywhere in decline, and with it the status and fortunes of the Orang Laut. In Riau, effective power passed into the hands of Bugis newcomers, and the Orang Laut were displaced by Bugis seamen whose navigational and fighting skills made them largely redundant. For most, the only role left was fishing and the procurement of sea products. With the English establishment first of Penang (1786) and then of Singapore (1819), Malay commercial hegemony in the Straits of Melaka came to an end. Traditionally, the priority of the Orang Laut had been acknowledged and was symbolized by their participation in court ceremonies. By the nineteenth century, however, the Orang Laut had lost that role and ceased, from that time onward, to play any significant part in Malay politics. Their once-proud status was gone, and by midcentury the Orang Laut themselves were fast disappearing as an identifiable group. Once an important population in the Straits of Melaka, the Orang Laut became thoroughly marginalized, a remnant collection of scattered pariah communities, viewed by their neighbors with disdain and living on the outer fringes of Malay society.

ORDE BARU (THE NEW ORDER)

One might formally date the inception of Indonesia's *Orde Baru* (New Order) at 11 March 1966. That was the date when President Sukarno (t. 1945–1967) signed the famous Letter of Authority of 11 March—the Supersemar (*Surat Perintah Sebelas Maret*)—granting Lieutenant General Suharto (1921–) executive authority to take all necessary measures to ensure security and order. In truth, however, the New Order's origins are more appropriately found in the events surrounding the failed "coup attempt" of 1 October 1965. Those events effectively killed off Sukarno's Guided Democracy and rendered irrelevant both the style of Sukarno's leadership and the ideological content of his regime. They excised a large part of the army's senior leadership. They led, moreover, to the obliteration of the Partai Komunis Indonesia (PKI). In time they allowed Suharto, in the absence of any serious elite-level competition, to whittle away and finally destroy Sukarno's power, and to accede to the presidency in March 1968. For the next thirty years, Indonesia was to remain under the sway of Suharto's New Order.

The New Order was slow to take shape, a consequence of the prolonged battle of wills and tactics between Suharto and Sukarno be-

tween October 1965 and February 1967. Only when Suharto, by about mid-1966, had gained the decisive edge in that battle could the construction of the New Order begin. As it gradually developed over the next few years, the New Order assumed some defining ideological and practical characteristics, the most substantial of which were driven by Suharto's own strongly conservative notions—the product of his own reflectiveness on culture and experience, rather than any book learning—about the nature of Indonesian society.

In its mature form, the New Order was a political and social system based around authoritarian corporatism. It was premised upon a set of ideas that had roots both in Javanese conceptions of hierarchy and order and in European fascist notions of the supremacy of the state and the community over the individual and of strong national identity, solidarity, and integration. Under such a framework, individual rights and freedoms were subservient to larger social purposes and responsibilities. The scaffolding for such ideas was provided by a revivification and narrowing of the previously nondescript state ideology of Pancasila, with its five pillars (belief in one God, a just and civilized humanity, the unity of the nation, deliberative democracy, and social justice), and by the Constitution of 1945. The essential spirit of the New Order was pragmatic, programmatic, and professedly nonideological.

Accordingly, the New Order was always fiercely opposed to so-called ideological conceptions of politics and society rooted either in the competitive West or in what were seen as primordial attachments, such as communism, liberalism, and religiously based (especially Islamic) political thinking. Its resistance to such ideas was based on the fear that Indonesia would face decline and even destruction if its old-style political parties, championing varieties of such thinking, were allowed to compete freely with each other; the experience of the 1950s had allegedly shown that such competition brought only governmental paralysis and popular confusion, tension, and division, and put at risk the stability and security of the nation.

The greatest of the New Order's enemies was communism and the party that represented its ideas, the PKI. According to New Order thinking, the essence of Indonesia had been established by tradition and history; the PKI had been

bent on destroying that essence and replacing it with class-based animosity. It was not difficult for Suharto and those close to him to place the blame for the ill-fated “coup” of October 1965 on the PKI. Before he had established an ascendancy over Sukarno, Suharto had already begun the bloody work of extirpating the party. Liberalism, too, was to be opposed, because it championed vigorous, pluralistic competition between competing ideas and worldviews and a sense of individual primacy; it was therefore deemed to be the cause of harmful, wasteful fractiousness. Similarly, those seeking to establish a state based upon Islam had to be opposed relentlessly.

Under the New Order, then, Indonesians were to be relieved of the needless anxieties and discord wrought by totalizing views of the world. By contrast, the acceptance of Pancasila—taught to millions in specially designed courses through the 1980s and after and, by dint of 1985 legislation made the obligatory sole philosophical foundation for all mass organizations and political parties—meant that there was nothing of that disputatious kind to discuss anymore, and that the people could be freed for their real task: economic and social development.

Such development was based (through a rolling series of five-year plans from 1969) on the orthodoxies of neoliberal economic theory propounded by the team of technocrats installed by Suharto to stabilize and then reshape and revivify the economy from the wreckage left by Sukarno. It was sustained first by wind-fall oil profits through the 1970s and early 1980s and then by export-oriented deregulation in the late 1980s, and it led to a period of sustained economic growth the likes of which the country had never before experienced. Notwithstanding frequent claims of widening gaps between rich and poor, it raised the standard of living of the great majority of Indonesians substantially, providing huge increases in agricultural productivity, major success in family planning, near-universal primary education, and the creation of significant physical infrastructure. Its success was grounded, to a considerable degree, on the provision of political stability that provided the means for undistracted focus on economic improvement and an ideal basis (together with the 1967 Foreign Investment Law) for attracting foreign, especially Japanese and U.S., capital.

The technocrats, however, did not enjoy unqualified presidential support in the implementation of their orthodoxies. Suharto was always careful to provide himself with sufficient off-budget funding (much of it from the Pertamina Oil Company and other state-owned enterprises) to shore up his support within the armed forces through the provision of business opportunities, to soften the hard edges of the market-driven economy, and to provide succor to the large and powerful band of economic nationalists in elite circles.

The grand design of the New Order did not rest for its legitimacy upon any significant popular consultation. While, in its earliest years, the regime enjoyed the support of a broad coalition of anticommunist civilian forces, both secular and Islamic, its power came from its physical capacity to enforce its will upon Indonesians. The spine of the New Order regime was the army, employed in Indonesia not as a weapon against internal threat but as a territorially organized force for policing and control. Moreover it is equipped with a dual function, which gave it a significant role in government and in what became a more centralized and efficient bureaucracy. The greatest weapon of the army was the fear it evoked. This fear was grounded first in the remorseless massacres of PKI members and supporters it promoted and permitted in 1965–1966. Furthermore, it was seen in the army’s willingness, evidenced in such incidents as the “Petrus” execution of alleged criminals of 1983–1985 and the killings of rioting Muslims in Tanjung Priok in 1984, to put down opposition ruthlessly and at every turn. It was armed with a highly developed capacity for repression, including a well-oiled intelligence apparatus and the security body Kopkamtib, which had wide-ranging and arbitrary powers of arrest and detention of those allegedly posing a threat to internal security.

The New Order, however, was eager that its rule not rest on naked repression alone. Accordingly, it retooled the existing parties; Suharto was not keen to face the social disruption that might have ensued from an attempt to uproot them totally. Eventually in 1973 amalgamating hitherto disparate parties into two groupings, one secular in orientation (Partai Demokrasi Indonesia—Indonesian Democratic Party) and the other Islamic (Partai Persatuan Pembangunan—Development Unity Party), he created what was

essentially a state-based party, Golkar, to represent the regime's interests. These three groupings were not intended to stand in competitive relationship with each other; the notion of a parliamentary opposition was always rejected. Rather, their role was to serve as mechanisms of interest articulation to refine and improve government programs, not to challenge them. From the early 1970s, the notion of the "floating mass" meant that no party political activity was allowed in local areas, except for the brief and regulated campaigning space of a month or so before elections. Criticism of the government was outlawed, government officials were pressed to vote for Golkar, candidate lists were carefully screened, and the state bureaucracy acted as a Golkar electoral machine, dispensing propaganda and patronage. In 1971 and at five-yearly intervals from 1977, parliamentary elections were held as expressions of "Pancasila Democracy." Golkar always won, usually with more than two-thirds of the votes and parliamentary seats.

Such tactics always ensured a Golkar majority in that part of the parliament open for elections; the military enjoyed uncontested access to around one-fifth of the parliamentary seats. The parliament itself provided one-half of the Provisional People's Consultative Assembly (Majelis Permusyawaratan Rakyat, MPR); the remainder were regime appointees based on regional location and social function. The MPR, almost wholly the creation of the regime, met for a week or so every five years in order to reappoint Suharto as president and his candidate as vice-president; there were never any contested elections for these posts, for there were never any alternative candidates. The MPR also endorsed the regime's broad policy plans for the subsequent five years, usually couched in terms of development, unity, struggle, and political security, and clothed in ever more soporific Pancasila-style jargon. The New Order never sought to amend the 1945 Constitution, which accorded wide executive powers to the president and which was deemed sacred and inviolable by Suharto.

The New Order's policy focus was always determinedly domestic. Apart from its efforts to integrate West Irian (1969) and (rather more clumsily) East Timor (1975), for much of its life the New Order's foreign policy interests were governed by pragmatism. They were restricted to strong support for the Association of Southeast

Asian Nations' (ASEAN) regional grouping, seen as the best means for avoiding or limiting regional instability, and the development of those external relationships that promised aid and soft loans for Indonesia's development. Over the last decade or so of the New Order's life, however, Suharto adopted the stance of the world statesman, leading the way in the development of a solution to the Cambodian crisis, successfully acceding to the chair of the Non-Aligned Movement (NAM) in 1991, eventually embracing the concept of Asia Pacific Economic Cooperation (APEC), and even sending peacekeeping troops to Bosnia. Along the way, he reestablished relations with the People's Republic of China (PRC), frozen since 1967. This development was partly a result of Suharto's perception of his own success and his desire to share his governing ideas with the world, and partly of the ending of the Cold War and the gradual evaporation of the West's forbearance of his domestic repression. Indonesia's foreign policy assertiveness sometimes manifested itself as angry rebuttal, particularly as Western criticism of Indonesia's human rights record heightened through the 1990s, and it resulted in such measures as Suharto's 1992 abolition of the Inter-Governmental Group on Indonesia (IGGI) because of Dutch efforts to connect aid to the enhancement of Indonesia's human rights performance.

From the late 1980s onward, domestic dissatisfaction with the New Order increased. Criticism came from the armed forces, which felt that their proper centrality in the New Order was being eroded by Suharto, and from a growing band of middle-class critics, students, and urban workers, themselves the product of the New Order's economic success. Critics focused on three central issues: the question of the presidential succession; the festering sore of New Order corruption, especially of the dimensions indulged in by Suharto's own family and conglomerate cronies; and the need to develop political machinery of a more democratic, pluralist, and consultative kind. Suharto sometimes intimated a desire to respond to these criticisms—thus his efforts to broaden his appeal by his public embrace of Islam in the early 1990s—but in the end he judged that the political costs to himself and his country were too great to entertain any substantial change, and that his country could not afford to dispense with his services.

Although impending breakdown had been signaled by a rash of ethnic and religiously based social conflicts from the mid-1990s and the regime's ever more ruthless and obsessive concern with security, the Asian currency crisis, beginning in July 1997, finally provided the conditions for the collapse of the New Order. The legitimacy that Suharto's economic "miracle" had provided him suddenly disappeared. Although he was unanimously reelected as president in March 1998, his support rapidly ebbed thereafter, so that he had no option but to resign on 21 May 1998. Since Suharto was himself the embodiment of the New Order, and its institutional vitality was inseparable from his own political success, the regime collapsed with him.

OSMEÑA, SERGIO, SR. (1878–1961)

Selfless Statesman

Sergio Osmeña, Sr. was a leading Filipino political leader during the U.S. colonial period in the Philippines. He served as president of the Philippine Commonwealth from 1944 to 1946.

Osmeña was born on 9 September 1878 in Cebu City, Cebu. He studied at the Colegio de San Juan de Letran in Manila, but the revolution against Spain (1896–1898) and the Filipino-American War (1899–1902) interrupted his studies, and he joined Philippine revolutionary forces. He edited and published a proindependence Spanish-language paper (*El Nuevo Dia*) in Cebu despite U.S. military censorship.

With the end of the war and the establishment of U.S. colonial administration, Osmeña returned to Manila and studied law at the University of Santo Tomas. He passed the bar exams in 1903 and then served as legal assistant to the governor of Cebu. He was appointed provincial fiscal officer in Cebu and then became provincial governor in 1906. As governor, he suppressed banditry and restored peace and order in his home province.

Moving to national politics, Osmeña co-founded the Nacionalista Party under the banner of immediate independence. He was elected to the first Philippine Assembly, the lower house in the legislature established by the United States, in 1907. Osmeña became the speaker of the assembly, and thus became the highest Filipino official in government at that time. As a political leader, he championed Philippine independence but tempered it with sound legislative leadership to prove to the Americans that the Filipinos had the capability to govern responsibly.

Osmeña served as the leading Filipino political leader until 1923, when he gave way to Manuel L. Quezon (1878–1944). By then the Philippine legislature had been changed to an all-Filipino bicameral body, with the Philippine senate led by Quezon and the house of representatives led by Osmeña. Quezon challenged

Osmeña's leadership and broke away from the Nacionalista Party. Osmeña became senator in 1923 and accepted Quezon's leadership of that body, paving the way for a reconciliation of the Nacionalista Party factions.

Osmeña continued on as senator until 1935, supporting Quezon and subordinating personal ambition to the interests of the party and the nation. He joined some of the Filipino missions to lobby for independence from the United States. In 1933, together with Manuel Roxas (1892–1948), he was able to bring home a U.S. congressional act (the Hare-Hawes-Cutting Act) promising independence.

However, Quezon fought against accepting the act, prompting a rift between him and Osmeña. The act was rejected by the Philippine legislature. Quezon brought home an act (the Tydings-McDuffie Act) in 1934 that was hardly any different from the Hare-Hawes-Cutting Act; it was approved by the Philippine legislature.

Under the terms of the Tydings-McDuffie Act, an almost autonomous government known as the Philippine Commonwealth was established. Osmeña agreed to run as vice-president together with Quezon, who ran for the presidency.

Osmeña took his oath as vice-president of the Philippine Commonwealth on 15 November 1935. He was appointed by Quezon as secretary of public instruction, the first Filipino to hold that position. Osmeña fought for greater government support for public education, not only for schoolchildren but also for adults.

Osmeña ran again for vice-president after constitutional amendments allowed him and Quezon a second term. The outbreak of the Pacific War (1941–1945) intervened, however, and the seat of the government had to be moved from Manila to Corregidor Island. There, on 30 December 1941, he took his oath of office for the second term.

With Quezon, Osmeña was evacuated to the Visayas and from there to Australia and then to the United States, where the commonwealth government-in-exile was established.

Under the constitution, Quezon's term would expire in November 1945, and Osmeña would legally succeed to the presidency. However, Quezon argued that the war had suspended the operation of the constitution and that he should remain president until the conclusion of the war. Osmeña did not push the issue and allowed Quezon to remain president.

Quezon died on 1 August 1944, and Osmeña succeeded him as president of the Philippine Commonwealth. Osmeña landed with U.S. forces under General Douglas MacArthur (1880–1964) in Leyte on 20 October 1944 and reinstated the government there. On 27 February 1945, he reinstated the government in Manila.

As president of the commonwealth, Osmeña faced major problems as a result of the war. Apart from the loss of lives and destruction caused by the war, there were charges of collaboration with the Japanese and lack of peace and order. Opposition politicians rose and convened the National Assembly, weakening the presidency. Independence, under the terms of the Tydings-McDuffie Act, was scheduled for 4 July 1946, and a presidential election was held for the first president of the postwar Philippine Republic. Osmeña lost the election, and he turned over the reins of government to Manuel Roxas on 28 May 1946. Osmeña then retired to Cebu. He died on 19 October 1961.

Osmeña played a strong role in Philippine political history during the U.S. colonial period. He was a nationalist and fought for independence, but he placed his personal ambitions behind national interests and gave way to his rival, Quezon, for the sake of party and national unity. Osmeña's brand of politics was low-key but serious, which reflected his character.

PACTOS DE RETRO “Contract of Resale”

A type of land contract prevalent in the Spanish Philippines that combined both the elements of a loan and a sale was known as a *pacto de retro* or *pacto de retroventa* (even *pacto de retrovendendi*), literally “contract of resale.” Under the *Ordenanzas de Buen Gobierno* (1768), indigenous people were prohibited from pledging their landholdings as collateral for loans. *Pactos de retro* evaded these provisions by providing for the conveyance of the borrower’s land to the lender but with the former having the option to repurchase it for the sum of the loan within a fixed period. Until the time of repurchase, the debtor usually continued to work the land, but as the tenant of the lender. These contracts became common to the major rice-producing regions of Central Luzon from the late eighteenth century and in the tobacco regions of northern Luzon during the nineteenth century. More often than not they became outright transfers of land, as borrowers were frequently unable to repay the loan within the required time and lenders often made further encumbrances upon the property, adding to the price of the resale. It was also often difficult to prove a “right” to repurchase, even if a borrower finally accumulated sufficient money, inasmuch as contracts were seldom drawn up in proper legal form. Many indigenous farmers lost their land, house, and even trees through this process. Chinese mestizos, on the other hand, were able

to acquire property in this manner and to eventually consolidate these scattered holdings into more substantial estates by the end of the nineteenth century. A form of this contract still exists today in the *prenda*, or system of property-pawning.

PADRI MOVEMENT

An Islamic Revivalist Movement

The Padri Movement was an Islamic revivalist movement that took place in the Minangkabau region of West Sumatra, beginning in approximately 1803, though with its roots in earlier attempts at Islamic renewal by Muslim brotherhoods in the area. It was one of the most important revivalist movements in the Islamic world in the nineteenth century.

Minangkabau at the end of the eighteenth century was experiencing an economic boom, with European and U.S. demand for its coffee, cassia, and gambier reaching hitherto unprecedented heights. New sources of wealth opened up for the hill villages where these crops were cultivated. At the same time, Muslim brotherhoods were expanding in Minangkabau. These orders sponsored *surau*, or centers for Islamic studies, and as the new commercial wealth entered the areas where the *surau* were located, their *syekhs*, or chief instructors, became interested in Islamic regulations for the conduct of trade. Islamic law (*syariat/syariah*) now became an important field of study in certain *surau*, in an effort to regulate the existing chaos in the marketplace.

Chief among these *syekhs* who took up the cry "back to the *syariat*" was Tuanku Nan Tua, of a large *surau* in the Agam district. Concentrating on the teaching of Islamic jurisprudence from the 1780s, Tuanku Nan Tua took upon himself the special mission of trying to induce neighboring villages to accept Muslim law in relation to trade and dealing with traders.

This domestic renewal movement was interrupted somewhere about 1803 by currents that swept into Minangkabau from Arabia. Those Minangkabau pilgrims who were in Mecca in 1803 lived through the conquest of the city by an army of warriors who did not simply cry "back to the *syariat*." Instead, their cry expressed itself in a demand for a return to the most fundamental practices of the Prophet (s.a.w.) and his Companions. These were the Wahhabis from Nejd in eastern Arabia, and it was Wahhabi teaching that so impressed certain Minangkabau that they determined to launch a full-scale revival when they returned home. They became known as Padris, men of Pedir, after the Acehnese port from which most Minangkabau pilgrims sailed for Mecca.

Wahhabi revivalism was based on the firm distinction made in the Koran between believer and unbeliever. In delineating the characteristics of the true believer, Wahhabis relied on the teachings of the Koran, pure and simple, and the tradition of the Prophet, idealizing the earliest Islamic centuries and deprecating later developments as "innovations." They launched a jihad, or Holy War, in the Arabian peninsula.

Fired by the desire for jihad, sometime in 1803 these Minangkabau pilgrims returned

home. The best known among them is Haji Miskin, who had earlier participated in the renewal movement. He began to preach that force was necessary to establish Islam in Minangkabau. Centering his teaching on Agam, he gained the support of a former student of Tuanku Nan Tua's, Tuanku Nan Rinceh. This Tuanku came to be regarded as the archetypal Padri. He began by attacking villages where the marketplace was disfigured by large, prominent cockfighting rings, undoubtedly a temptation to traders after they had sold their goods. Tuanku Nan Rinceh aimed to turn each village into an Islamic community as rapidly as possible, using the Wahhabi system as a model along the lines of which such new communities were to be organized. Upon conquest or conversion, a regime of extreme Puritanism was instituted. The outward signs of a Padri village were the abandonment of cockfighting, gambling, and the use of tobacco, opium, betel nut, and strong drink. White clothes, symbolizing purity, were to be worn, with women covering their heads and men allowing their beards to grow; no part of the body was to be decorated with gold jewelry, and silk clothing was to be eschewed. Prayer five times a day was made obligatory. Each village converted to the Padri system was obliged to appoint a *kadi*, or judge. In his judgments he was obliged to consult only the Koran, a more extreme position than even the Wahhabis had taken.

The most characteristic mark of the Padri movement was its organized violence against villages that would not submit to the Padri notion of an Islamic community. This violence reached its apogee with the slaughter of members of the Minangkabau royal family by Tuanku Lintau and his followers in 1815. By 1820 the movement had consolidated itself, particularly in the hill villages where coffee and cassia were grown.

The Padri movement was one of the major Islamic revivalist movements in Indonesia's history and produced a number of leading Islamic figures. It consolidated the Minangkabau region as one of the most staunchly Muslim areas of Indonesia. Recent research has indicated the importance of the economic basis of the movement and has pointed out that it was not, as had been previously thought, a movement against Minangkabau village heads, many of whom in fact supported the Padris.

PADRI WARS (1821–1837)

A Manifestation of Minangkabau Nationalism

The Padri Movement was in full bloom when the Dutch claimed the main Minangkabau port of Padang in 1819 as a result of the post-Napoleonic settlement in Europe. They were gradually sucked into the interior as allies of the remaining members of the Minangkabau royal family, some of whom were slaughtered. What followed were the Padri Wars, with the Dutch pitted against leading Padri villages for control of the agricultural export trade. Ultimately the Dutch were victorious, and they imposed compulsory deliveries of coffee on the Minangkabau.

By 1821 the Netherlands Indies government in Java had become fully informed of the flourishing coffee trade that was largely in Padri hands, and an expeditionary force was sent into the interior. Several conquests of Padri villages were made, and the Dutch also occupied the main western coastal ports, in order to cut the Padris off from their trading outlets. However, the opening of Singapore in 1819 by the English East India Company (EIC) led to a flourishing Padri trade by that route.

The Dutch forward movement stagnated by 1824, and the outbreak of the Java War (1825–1830) permitted only consolidation but not advancement in Minangkabau. In 1831, however, the Dutch renewed their penetration. Dutch policy was in the hands of one of the most famous Dutch governors-general, Johannes van den Bosch (t. 1830–1833), who arrived in the Indies with a commission from the king to make the colony financially independent in the shortest possible time. To reach that goal in Sumatra, van den Bosch set up Dutch-spon-

sored marketplaces for trade in the Minangkabau interior.

But the Minangkabau, and the Padris in particular, showed no inclination to trade within the Dutch framework and tried wherever possible to use either the eastern coast routes or ports on the western coast considerably north of Dutch oversight. Van den Bosch came to the conclusion that force could not be discounted, and in mid-1831 the second Dutch conquest of the Minangkabau interior began. By mid-1832 almost all of the country was in Dutch hands, and both Tuanku Lintau and Tuanku Nan Rinceh had been vanquished.

Despite the conquest of the heartland of Minangkabau, Padris were still active in the northern region of the country. The most famous Padri outpost by 1832 was the village of Bonjol, whose leader, Tuanku Imam Bonjol, became one of Indonesian nationalism's greatest heroes. Imam Bonjol made the Bonjol region into an important center of trade, based on the northern ports of Minangkabau and the Batak lands, and on the eastern rivers away from Dutch oversight and duties. The Dutch attacked Bonjol's ports in 1832, and in the same year Bonjol too submitted. It now appeared that all of the Padri forces had collapsed, and the Dutch were in full control of Minangkabau.

In January 1833, however, Bonjol burst into rebellion, and a general uprising throughout Minangkabau followed. Also caught up in this movement were non-Padri villages and even the remaining members of the royal family. The 1833 rebellion can be regarded as an expression of Minangkabau nationalism, as every locality in addition to Bonjol had some grievance or other against the Dutch: Dutch interference with the coffee trade, taxes, and the demand for labor services were just a few. Superior military force enabled the Dutch to restore their position, although the district of Agam, the original Padri heartland, continued to smolder for several years. The northern Padris fought on until 1837, when Bonjol finally capitulated.

Between the outbreak of the 1833 rebellion and its collapse in 1837, Dutch policy continued to be directed by Johannes van den Bosch, who from 1834 was the Dutch minister of colonies. He argued that the overriding Dutch interest was to harness Minangkabau produc-

tivity to the needs of the Dutch state, as had been done with the introduction of the “cultivation system” (*Cultuurstelsel*) on Java. Van den Bosch felt that success in his enterprise required the elimination of most of the traders in the interior—particularly the peasant traders, who had been one of the mainstays of the Padri movement and whom he saw as merely intermediaries, inflating the price of the coffee sold on the coast. He introduced a system of depots in the highlands where a “protected price” was offered for coffee, thereby aiming to cut out the chain of middlemen who plied the routes to the coast. Minangkabau traders proved resistant to the new policy, however, and the plan to eliminate the peasant trader in the interior was a total failure. In 1847 the Dutch adopted the Javanese system of compulsory coffee deliveries to the government.

The Padri Wars provide a classic case of crisis on the periphery of empire to which the imperial power was obliged to respond. The crisis was a confrontation between two polities intent on “modernization,” each in its own terms. The Kingdom of The Netherlands was a newly created European state determined at all costs to industrialize and modernize. Similarly, the Minangkabau world was responding to the new experience of becoming an important producer of agricultural commodities for the nascent world market economy. The transition to an agricultural export economy imposed great strains on the polity that were met by the adoption of an Islamic fundamentalist ideology. Islamic revivalism was Minangkabau’s path to “modernization,” and the Padri Wars were the outcome of two societies trying to maintain a relationship when their basic goals were in conflict.

PAGAN (BAGAN)

The First Burmese Empire

Pagan or Bagan is the name of both the first Burmese empire (ca. 850–1287 C.E.) and its capital city, built in the dry zone of Upper Burma. Known as Arimaddanapura, City of the Enemy Crusher, in the chronicles, Pagan reached its height during the eleventh and twelfth centuries under its kings Anawrahta (r. 1044–1077), Kyanzittha (r. 1084–1113), Alaungsithu (r. 1113–1167), and Narapatisithu (r. 1173–1210), who expanded its power across most of present-day Burma and down the Tenasserim coast. During this time, Theravada Buddhism from the Sri Lankan Mahavihara tradition became the officially sanctioned religious culture, giving rise to the magnificent temples, stupas, mural paintings, and visual arts for which Pagan is famous. Yet these religious monuments have had a precarious history, narrowly escaping becoming a field of battle between opposing forces in 1283, when the Mongol armies of Kublai Khan defeated the Burmese at Ngasauungyan, a battle witnessed by Marco Polo (1254–1324). They narrowly escaped again in 1826, during the First Anglo-Burmese War, and finally at the end of the Pacific War (1941–1945), when the personal intervention of the great British Burmese scholar G. H. Luce protected Pagan from allied bombing as the occupying Japanese army retreated.

Before Luce, Pagan appeared in the journals of Western envoys and soldiers Michael Symes (1795) and John Crawford (1827), Colonel Havelock (1826), Captain Hannay (1835), and Henry Yule (1855), and the U.S. Baptist missionary the Reverend Eugenio Kincaid (1837). The significance of Pagan’s artistic and cultural heritage was evident to the Burmese king Bodawpaya (r. 1782–1819), who appointed his son, the crown prince, as prince of Pagan, with the responsibility of supervising the city’s restoration. Western archaeological study of Pagan commenced with Dr. Emil Forchhammer in 1881 and gathered pace under the British viceroy, Lord Curzon, who in 1901 saw the need for conservation of Burma’s Buddhist art and monuments. When the Sino-Burmese scholar Taw Sein Ko became director of the Burma Circle of the Archaeological Survey of India (1901–1915), restoration of the temples and reports on the monuments were undertaken in earnest. Together with the pioneering

Pagan, Burma. (Corel Corporation)

work of Charles Duroiselle, C. O. Blagden, Luce and his brother-in-law U Pe Maung Tin, Professor Than Tun, and Burmese scholars U Lu Pe Win and U Bo Kay, their research paved the way for the pivotal role of Pagan in the Burmese cultural identity. In 1975, when an earthquake struck the city causing much damage to the temples, UNESCO provided assistance to the Archaeology Department in Rangoon (Yangon) to finance restoration and an inventory of the monuments.

Situated in the dry zone of Upper Burma, Pagan civilization developed an extensive irrigation system based on the rice-growing center at Kyaukse. Daw Mya Sein has shown that King Anawrahta allotted rice-growing lands in the Kyaukse area to his soldiers in lieu of salaries. Later Pagan kings—Alaungsithu and Narapatisithu—extended the canals, and further bequests to the army continued. In the seventeenth century, during the reign of King Thalun (r. 1629–1648), prisoners of war were settled at Kyaukse to help maintain the irrigation system and serve the king as soldiers. The

lands in the Kyaukse “rice bowl” were still worked by the king’s soldiers in the early nineteenth century under King Bodawpaya, a measure of its importance to both the country’s economy and security (Mya Sein 1973: 4–5). The resource demands of maintaining the irrigation system and alienation of substantial tracts of land in this key area, together with the increasing extent of nontaxable temple lands and resources (leading to ongoing tensions between the Crown and the nontaxable sector), may have seriously weakened the economic strength of Pagan and subsequent Burmese administrations (Aung-Thwin 1985).

Pagan civilization was founded on an indigenous Pyu culture, rather than borrowed from the Mon of Lower Burma as the early colonial scholars had projected. The legend of King Anawrahta’s conquest of the Mon city of Thaton in 1057 and the deportation of its king, artisans, priests, and Buddhist scriptures to Pagan to initiate an efflorescence of Buddhist culture in Upper Burma cannot be substantiated by empirical evidence (Aung-Thwin 2001).

Rather, the evidence of the inscriptions, iconography, and literature testify to a close relationship between the Tibeto-Burmans of Pagan and the Pyu, also a Tibeto-Burman people. When in ca. 832 C.E. the Nanchao state sacked the Pyu cities and deported 3,000 Pyu to Yunnan, the Burmese at Pagan began to emerge as the leaders of Upper Burma, but the remaining Pyu continued on in the life and culture of the polity for hundreds of years. Thus Pyu language occurs on the Myazedi Inscriptions of 1112 C.E.; Pagan (and Ava) epigraphy refers to Pyu people, and Pyu script is used on a terra-cotta votive tablet in the relic chamber of the Shwe-sandaw Pagoda at Pagan. Michael Aung-Thwin has shown that the genesis of Pyu-Burman contact commenced most likely by the mid-ninth century, if not earlier, and continued thereafter for the following centuries (*ibid.*). Similarly, Paul Strachan has pointed out that Pagan as a city dates back to Pyu times, contemporary with the great Pyu cities at Sri Ksetra, Halin, and Beikthano, and was initially just one of many centers practicing wet-rice cultivation in the dry zone of Upper Burma (Strachan 1996: 9). The scholar must be cautious, however, not to replace one extreme position with another, to move from the perspective of seeing Mon influence dominant in Pagan culture to that of seeing it as negligible. While the Pyu influence is undoubtedly evident in the Pagan architectural tradition, the Mon contribution in its bequest of the literary tradition of the Buddhist *Jataka* tales is not disputed.

But the most significant inspiration for the popular and artistic expression of Theravada Buddhism at Pagan came from Ceylon. King Anawrahta sent Buddhist monks to Ceylon to assist in the reformation of Buddhism in that country, beginning a close relationship that has continued until the present time. Under King Kyanzittha, a revision of the *Tripitaka*, the Buddhist scriptures, was undertaken, resulting in the Mon recension being replaced by the Ceylonese recension. The study of Pali, the sacred language of the Theravada Buddhist texts, gave a strong impetus to the subjects chosen for mural paintings on the temples. Other influences came from Mahayanist North India, Pala Bengal, through the medium of royal alliances. Brahmanic influence is also evident at the earliest surviving Pagan temple, the Nat-hlaung-kyang, which is dedicated to Visnu. But these

influences were more decorative than dominant, as Pagan's kings sought to encourage the people's support for Theravada Buddhism in the construction styles of the stupas and temples.

It is convenient to divide the architectural and artistic styles of the Pagan temple-building culture into three periods: early, middle, and late. Motivated by piety and the Burmese desire to make merit (accumulate good deeds through righteous actions), the inscriptions show that both monarchs and populace participated in the endowment, construction, and support of religious edifices. In the early period, light is carefully controlled through skylights and narrow passages to allow filtered rays to shine on the Buddha image within. Built in two units, hall and shrine, with an ambulatory encircling the central mass, the style was said to encourage personal communion with the *hpaya*, or Lord (*ibid.*: 17). The middle period, in the early twelfth century during the reign of King Sithu (r. 1113–1155), reflects the Pyu predilection for cosmically oriented structures showing less distinction between hall and shrine and less attention to control of light. During the late period (1170–1300), the temple builders initiated the architecturally innovative five-faced ground plan, a style original to Pagan. Of the many famous structures, stupas, and temples of Pagan, there is space only to mention the Shwe-hsandaw stupa, said to have been built by King Anawrahta to house the Sacred Hair Relic acquired from Thaton; the Shwe-zigon near Nyaung-U north of Pagan, also credited to Anawrahta and now considered a national shrine for Burmese pilgrims to Pagan; the great Ananda temple built on the plan of a Greek cross, also from the early period, probably during the reign of Kyanzittha; the Myinkaba Kubyauk-Gyi, a cave, or *gu*, temple built by Prince Rajakumar, son of Kyanzittha, in 1113 and inscribed on its four faces in the four languages of Pyu, Mon, Old Burman, and Pali; the Thatbyinnyu temple built by King Alaungsithu in 1144; the Sulamani, built in 1183; and the Mingala-Zeidi, the last great Pagan temple, built by King Narathihapate (r. 1255–1287) and completed just ten years before the Mongol invasions destroyed the political power of the Pagan empire. Labeled the Tarokpye Min, the king who fled from the Chinese, King Narathihapate was killed by his son, Prince Thihathu of Prome, initiating a period of turbulence during

which the last Pagan king, Kyawzwa, was deposed in 1298 and the empire divided with centers at Sagaing, Pinya, and Pagan. The Shans, who moved down into the region during the later thirteenth and early fourteenth centuries, are considered responsible for much of the physical desecration of the religious structures of Pagan.

Undoubtedly, the remains of some three thousand temples evident today are but a small proportion of the total built. None of the secular architecture, built in wood, survives. Only the religious remains, built in brick, testify to the once great empire with its bustling artisans, monks and novices, traders, soldiers, craftsmen, courtiers, and royal officials. The bronze images of Gotama Buddha, and Metteya the Future Buddha, who inspired later Burmese kings, testify to the piety and artistic skill of the Pagan craftsmen.

Such was the fame of Pagan that the twelfth-century Chinese official Chau Ju-Kua included it in his list of twenty-one kingdoms in Southeast Asia with which the Middle Kingdom, Sung China (960–1279), had commercial relations. Seeking to restore this empire and emulate the *cakravartin* status (exhibition of righteous moral behavior) of earlier Burmese monarchs, King Thadominbya (r. 1365–1368) built a new capital at Ava, but he died before he was able to reunite the whole country under his rule.

Pagan today is central to the Burmese/Myanmar cultural identity, a place of pilgrimage and merit-making for all. As such, significant restoration of certain temples has been undertaken in recent years. In 1998 a national project in the spirit of merit-making saw thousands of trees planted by Myanmar people in this desolate plain, as the “greening of Pagan” transformed the dusty reaches of the Irrawaddy (Ayewaddy) River.

PAHANG

The Largest Peninsular Malay State

Pahang is the largest Malay state (36,400 square kilometers) in the Malay Peninsula. It comprises the basin of the Pahang River (475 kilometers), the longest in the peninsula, and a stretch of the east coast as far south as Endau. Chinese records suggest that more than a thousand years ago there was a trading port at the mouth of the river; the word *pahang* means “tin” in the Khmer language. During the period of the Melaka and old Johor kingdoms, Pahang was one of their outlying dependencies. It became an independent state in the nineteenth century. Until recent times much of Pahang remained undeveloped, but as part of Malaysia it has provided large areas of land for agricultural and industrial use.

To the Chinese, Pahang was a producer of tin, though its deposits are much smaller than

those in the west coast states. In the mid-fifteenth century C.E., the rulers of Melaka detached Pahang from its connections with Siam and established a branch of their dynasty as the rulers of Pahang. In the prolonged power struggle of the ensuing two centuries the Pahang rulers were minor players, owing nominal fealty to Johor as successor to Melaka. They continued to export tin, some of which went to the Portuguese and subsequently to the Dutch.

A new era began in 1806 when Ali, a member of the ruling family, succeeded to the title of Bendahara with authority over Pahang. The Anglo-Dutch treaty of 1824 cut the link between Pahang and Johor, by allocating them to the British and Dutch spheres of influence, respectively. Bendahara Ali, though not a ruler of royal status, was in fact independent. At his death (ca. 1857), after a reign of half a century, there was a long civil war (1857–1863) between his two sons; in the end Wan Ahmad was the victor and began a long reign until his death in 1914. Ahmad had obtained support from the ruler of Terengganu, who may have been put up to this by Siam, which hoped to extend its influence southward to include Pahang. The Straits Settlements government was also under pressure from Singapore merchants who had obtained large but ill-defined concessions from Ahmad, whose objective was to increase his revenues and wield more authority over the powerful upriver chiefs of the interior (Ulu Pahang). Ahmad, who had assumed the title of sultan in 1882, resisted British pressure for intervention until 1888, when he agreed to accept a British resident.

A number of the Pahang chiefs, particularly those who had risen to power as supporters of Ahmad in the civil war, were bitterly opposed to the imposition of foreign control, and they led a series of revolts in the period 1892–1894 that were suppressed by the use of considerable force. Ahmad gave no open support to the rebels but did not hide his discontent at the loss of his power, and he withdrew from the government of the state, delegating powers to his son, Tunku Mahmud, as regent.

The financial problems of Pahang as a backward and comparatively undeveloped state were one factor in the formation of the Federated Malay States (FMS) in 1896, but Pahang did not benefit significantly from closer association with the more prosperous western states. Pahang had

gold as well as tin deposits, but its limited mineral resources did not produce sufficient revenues to meet the cost of opening up the state by the construction of roads and other works. When the rapid development of the rubber industry began, Pahang still lagged behind, since its land was less accessible. In 1921, Pahang had only 7 percent of the FMS area under rubber, although it made up more than half the total FMS land area. The census of that year showed that 20 percent of the FMS Malay population lived in Pahang, but only 7 percent of its Chinese and 3 percent of its Indian immigrants. The Malayan east coast railway line had reached Kuala Lipis, then the state capital, only in 1917. The northeast monsoon effectively closed the minor ports of the Pahang coast for half the year.

In the second half of the twentieth century, however, Pahang, with the other east coast states (Kelantan and Terengganu), was drawn into a program of rapid development, including major projects such as the port of Kuantan. Some of the largest areas of planned agricultural expansion (such as Pahang Tenggara) were situated in Pahang where, unlike the west coast, there was still abundant land. It remains an agricultural area, not greatly affected by the industrialization of the west coast, but the exploitation of undersea oil and gas deposits off the coast of Terengganu has given some impetus to the development of the east coast region as a whole.

PAKNAM INCIDENT (1893)

A Taste of French Imperialism

Paknam (lit. the mouth of a river) is a district in Samut Prakarn, a suburban town to the east of Bangkok and home to various light industries. The Chao Phraya River empties itself into the sea at Paknam, hence the name of the district. However, Paknam is better known in Thai history as the venue where Franco-Siamese naval confrontation took place in 1893, referred to as the “Paknam Incident.” This incident led to the Siamese loss of its tributary state of Laos on the left (east) bank of the Mekong River.

Prior to the Paknam crisis, tensions between France and Siam had built up in connection with territorial claims to Laos and Battambang and Siem Reap of Cambodia by both sides. Siam considered the kingdom of Laos on the left bank of the Mekong and Cambodia as its vassal states. In 1867, King Mongkut (r. 1851–1868) concluded a treaty with France by which Siam relinquished its claim to sovereignty over Cambodia, except in Battambang and Siem Reap, and Cambodia became a French protectorate. France claimed that Laos should also be under its sovereignty, inasmuch as Laos sent tributes to Vietnam, which had already been colonized by France.

In the 1890s the French campaign to control the Mekong River and to annex the east bank became more vigorous and was boosted by a French political party called the Colonial Party (*Parti Colonial*) (Tuck 1995: 100, 104). The party was successful in persuading the French parliament to set up the Pavie Mission, led by Auguste Pavie (1847–1925), to work out plans to expand French territory in Indochina, especially a plan to annex Laos. Pavie would later be appointed French resident minister in Bangkok (Wyatt 1984: 203).

By the beginning of 1893, Siam was aware of the possibility that the conflict would break out. In January 1893, in response to Britain’s increasing control of Egypt, some members of the Colonial Party urged the government to increase its control over the Mekong, and they

accused Siam and Great Britain of posing a threat to French security in the region. Moreover, in February 1893 the government also urged the ministry of foreign affairs to absorb the east bank of the Mekong, and in the same month the French parliament eventually approved a military operation against Siam. As a result, in March 1893, Pavie laid French claims to the whole of the east bank of the Mekong (Tuck 1995: 104, 108). In April, French troops were sent to take control of Laos, to which the French now laid claim. Siamese troops in Laos resisted the attempt, which led to the death of a French officer. Pavie used this incident as a pretext to send gunboats to the Chao Phraya in July 1893 to demand reparations. His operation was backed by French naval force from Cochin China.

The initial Siamese response to the French military advance and territorial claims was mixed. In the cabinet, on the one hand, Prince Dewawongse (1858–1923), the minister of foreign affairs, and his younger brother who was a military commander wanted to retaliate by force. The minister of foreign affairs also believed that the British might intervene and that international communities would condemn the French operations. On the other hand, some cabinet ministers were not convinced that Siamese forces would be strong enough to handle the situation. Dewawongse later adopted a more conciliatory solution, after he learned that the British paid little attention to the conflict and even advised Siam to cede some of the disputed territories. But at this stage, King Chulalongkorn (Rama) (r. 1868–1910) himself decided to resist. Furthermore, Rolin Jaequemyns, a Belgian jurist who was the general advisor to the Siamese government and who was known to have strong hostility to the French, also advised the king to resist (*ibid.*: 109, 114).

Fighting broke out on 13 July 1893, after Siamese forces at two forts at Paknam opened fire on the French gunboats. The Siamese government considered the French presence in the Chao Phraya and its attempts to advance to the capital to be an invasion. The fighting caused casualties on both sides, but Pavie used the opportunity to send an ultimatum to the Siamese government on 20 July 1893 demanding the cession to France of all territory on the left bank and of all islands in the Mekong River. Furthermore, Siam had to pay an indemnity of

3 million francs (Wyatt 1984: 203). The French threatened to blockade the Chao Phraya and the gulf if the Siamese government refused to comply. The defenseless Siamese government had to accept the ultimatum (Steinberg 1987: 184–185).

As a result of the Paknam incident, the whole kingdom of Laos was ceded to France. King Chulalongkorn was deeply saddened, and he withdrew from the administration of the kingdom for a while.

PALEMBANG

Capital City of Śrīvijaya

Palembang was an indigenous state in South Sumatra until 1825, and a residency in colonial Indonesia until 1949. Currently it is a province in independent Indonesia.

In the seventh century, the city of Palembang on the eastern coast of southern Sumatra became the capital of the Hindu empire of Śrīvijaya. The region of Palembang had grown out of the settlement of Hindu migrants in South Sumatra in the second century. The city's location gave it access to two strategic waterways (the Melaka and the Sunda Straits), and Palembang was an excellent port for the trade between India and China. From Palembang, Śrīvijaya ruled southern Thailand, the Malay Peninsula (present-day Peninsular Malaysia), Sumatra, West Java, and western Borneo, until it was defeated in 1290 by the Javanese Hindu empire of Kediri, which turned it into a vassal.

Muslim traders from India's Coromandel Coast introduced Islam to Palembang in the

thirteenth century. In the mid-fifteenth century, when Hindu rule in Java crumbled, the ruler and the population of the Palembang region converted to Islam and became independent. In 1544 a colony of Javanese moved to Palembang and established a new dynasty under its leader, Gedangsura. Palembang expanded to Rejang and Pasemah. The ruler of Banten subjugated Palembang and regarded the region as a vassal. Palembang itself apparently did not wholly yield, which led at times to intense armed conflict between the states, particularly over influence in the pepper-producing Lampung area. The demise of Banten in the seventeenth century implied the rise of Palembang. Two rulers established their names at the time: Pangeran Sindang Kinayang (r. 1616–1628), who created a set of laws for the region, and Cindai Balang (r. 1649–1694). The latter took the title of sultan under the name of Abdharrahman. He also established the system of government in the region, particularly the rights and obligations of the ruler and his subordinates.

The Dutch United East India Company (VOC) established trade relations with Palembang in 1617. The VOC was given the right to establish a fortified trading post along the Musi River in Palembang as a means of resisting the Portuguese and the sultan of Mataram. A year later the VOC used military force to obtain a pepper-trading monopoly with Palembang, although it did not establish a trading post. Relations between the VOC and Palembang soured. In 1659 the VOC captured Palembang, burned it, and obtained the right to build a fortress along the Musi River. In 1662 the Dutch received a new monopoly on the pepper trade.

In 1710, following the discovery of tin on the island of Bangka, which was part of Palembang, the VOC's trade with Palembang increased rapidly. The tin deposits of Bangka and neighboring Belitung became the main attraction. After Java had been ceded to the British in 1811, consequent of the Napoleonic Wars (1803–1815), Sultan Mahmud Bahrudin conquered the VOC fortress and killed its occupants. Lieutenant Governor Stamford Raffles (t. 1811–1816) demanded access to Palembang, but the sultan refused until a British force captured the city in 1812. However, newly ascended Sultan Ahmed Najimuddin could not prevent anti-British raids organized from Lampung and Bengkulu. After the reinstatement of

Dutch colonial rule, the sultan asked for Dutch protection in 1818 in return for Dutch colonial control over the area.

A representative of Lieutenant Governor Raffles of Bengkulu persuaded Najimuddin to accept British protection. Incensed, the Dutch dethroned Najimuddin and reestablished Bahruddin. However, Bahruddin used the opportunity to attack the Dutch fortress. A military expedition led by General H. M. De Kock reoccupied the fortress and Palembang in 1821, and Bahruddin was banished to Ternate. The Dutch chose a son of Najimuddin as the new sultan. This allowed Najimuddin to establish himself near Palembang on condition that he would not engage in politics. He defied this condition. In addition, part of the population of Palembang was reduced to grave poverty consequent of the demands imposed by the local rulers.

In 1823 the Dutch agreed with the sultan to take over the government and judiciary in Palembang in return for the payment of a pension to the sultan. However, the sultan reconsidered his decision and unsuccessfully attacked the Dutch in 1824. He was banned to Bangka, his father (Najimuddin) to Batavia. In 1825 the Dutch colonial government ended the sultanate.

The new ruler became the Dutch resident, supported by a *ferdana mantri*, the head of the local nobility. The situation remained a concern, because of the exploitation of the local population by the remaining nobility, who feigned support of the Dutch colonial government imposing its will. The colonial government suppressed local uprisings in 1849. It subsequently took away the powers of the local nobility and established a colonial system of government down to regency level. Unrest continued in later years, such as in 1881, mainly because of the continued influence of relatives of the former sultan and Muslim fundamentalism.

PANCASILA (PANTJA SILA)

Indonesia's Five National Principles

Pancasila (Pantja Sila, from Sanskrit, "five principles") are the five national principles first propounded by President Sukarno (t. 1945–1967) on the eve of Indonesian independence in 1945 and later developed and transformed by Suharto's New Order (1967–1998) as a corporatist ideology.

The five principles were enunciated by Sukarno on 1 June 1945 in a speech to the committee drafting a constitution for independent Indonesia, which was intended to be declared under Japanese auspices later that year. The principles were: (1) Belief in one supreme God; (2) Just and civilized humanitarianism; (3) Indonesian unity; (4) Popular sovereignty governed by wise policies arrived at through deliberation and representation; (5) Social justice for the entire Indonesian people. They were intended partly to identify a set of noble ideals that united the Indonesian people despite ethnic diversity and social difference. The first *sila*, moreover, was specifically intended as a solution to the issue of the place of Islam. By identifying belief in God as a national principle, Sukarno hoped to satisfy some of those who would otherwise have called for an Islamic state. The Pancasila was incorporated into the preamble of the 1945 Constitution and into its 1949 and 1950 successors.

The Pancasila was unimportant as a political symbol during the revolution against the Dutch. In the early 1950s, however, it became the mainstay of those who argued against an Islamic state in Indonesia, and by the early 1960s the Pancasila had become a symbol of anticommunism. Communists, as atheists, were supposed to be unable to accept the *sila* of belief in God, though some communists argued that

they accepted the Pancasila by accepting the reality that many people believe in God.

From 1966, under the early New Order, the Pancasila again became a symbol of resistance to an Islamic state, but from about 1974 it was increasingly developed by the New Order authorities as a more elaborate corporatist ideology. An official *Guide to Realizing and Experiencing the Pancasila* was issued, all civil servants were required to undergo training in Pancasila, and Pancasila moral education was made compulsory at all levels of the educational curriculum. In 1984 all noncommercial, nongovernmental organizations (including religious bodies) were required to adopt the Pancasila as their “sole basic principle” (*asas tunggal*), in order to ensure that they would not challenge the existing order, sometimes called *Demokrasi Pancasila*.

This New Order Pancasila was a corporatist ideology that denied the possibility of legitimate conflicts of influence within society and that emphasized interdependence of different social groups. It emphasized order, obedience, and confidence in the wisdom of authorities. In particular, it stressed the importance of students and young people deferring to their teachers and elders, wives submitting to their husbands, and workers accepting the conditions offered them by their employers. Conspicuously absent from this elaborated Pancasila was any outline of what standards of behavior might be expected from rulers and authorities, and the government discouraged attempts to explore how the Pancasila might provide such standards. In 1981, figures close to the government suggested that Sukarno had not been the author of the Pancasila, thereby seeking to separate it from Sukarno’s leftist populism.

Immediately after the fall of the New Order in 1998, many new political parties identified the Pancasila as their basis, but the term was somewhat discredited by its association with the Suharto era; only to some extent did it revert to being a symbol of resistance to an Islamic state.

PANGKOR ENGAGEMENT (1874) Reorienting Anglo-Malay Relations

The Pangkor Engagement, signed on 20 January 1874 on board a British gunboat anchored at Pangkor Island off the western coast of the Malay Peninsula, ushered in a new phase in Anglo-Malay relations. It introduced the British residential system, the so-called system of indirect rule whereby the resident, for all intents and purposes, was the de facto authority that ruled the state in the name of the sultan.

Abiding by Pitt’s India Act (1784), which eschewed involvement in native affairs or territorial acquisition as measures against costly obligations such as wars or burdensome adminis-

tration, the British restricted their activities to their three outposts of Penang, Melaka, and Singapore, which constituted the Straits Settlements (1826). Nevertheless, owing to occasions upon which British interests were threatened, the British acted accordingly, as in the case of Singapore and Johore in the actions of Stamford Raffles, and in Kedah, Perak, and Selangor thanks to the policies of Robert Fullerton, Henry Burney, John Anderson, and James Low. Overall, British administrators in the Straits Settlements officially held to the nonintervention policy. The Pangkor Engagement reversed this nonintervention principle and, in turn, launched a British forward policy toward the peninsular Malay States.

Events and personalities during the early 1870s combined to bring about a shift in official policy toward the Malay States. Economic and geopolitical ambitions, coupled with humanitarian considerations, spurred British action that witnessed the peaceful settlement of the Perak imbroglio. Since the mid-nineteenth century, Perak and other western Malay States were in a state of chaos in which royal Malay succession disputes intermingled with rivalries between Chinese *hui* ("secret societies") over the rich tin fields in the Larut Wars, while pirates plagued the western coast of the Malay Peninsula. Consequently, tin production and tin exports were severely disrupted, and investments by European and Chinese merchants in the Straits Settlements were threatened. By the last quarter of the nineteenth century, tin had become increasingly important, owing to the expanding tin-plate industry. Moreover, the British were acutely concerned that anarchy in the Malay Peninsula might offer a pretext to other European powers—notably the newly unified Germany and ambitious France—to stake a claim. Although there was widespread human suffering resulting from the wars, the humanitarian element was secondary to British economic and political designs.

Lord Kimberley, secretary of state for the colonies, instructed Sir Andrew Clarke (1824–1902) first to study the situation in the Malay States and then to report the necessary steps to be adopted to ensure peace and the development and protection of British commerce and interests. He was also instructed to weigh the possibility of a British officer residing in the Malay States, with the intention of

safeguarding British interests. Clarke, who was the newly appointed governor of the Straits Settlements in September 1873, was thought more suitable than the incumbent Sir Harry Ord (t. 1867–1873) to implement a policy of intervention.

By the time Clarke arrived in Singapore in November 1873, he had decided to take the initiative to act first because of the urgency of the situation and then to report afterward to London. He, however, needed a pretext. It came in the form of a letter from Raja (later Sultan) Abdullah Muhammad Shah (r. 1874–1876), one of the three claimants to the Perak throne, who appealed to Clarke to mediate and resolve the deadlock of the succession issue. Furthermore, Abdullah requested the residence of a British officer to show the way of an effective system of government. Abdullah's letter of 30 December 1873 was what Clarke needed to launch his initiative, which culminated in a meeting of all warring factions at Pangkor in mid-January 1874.

In accordance with the terms of the Engagement, the Perak Malay territorial chiefs acknowledged Abdullah as sultan, and the contentious Chinese *hui* agreed to keep the peace. The most significant clause was Abdullah's acceptance of a British officer styled "resident" who was to be accredited to his court and whose advice must be sought and acted upon on all state affairs, excepting those relating to Malay customs and practices and the Islamic religion. Furthermore, revenue collection and the general administration of the country were to be reorganized and regulated under the advice of the resident.

Clarke's decisive action, a *fait accompli*, received the blessings of Benjamin Disraeli's (t. 1868, 1874–1880) Conservative government, which had come to power in Britain in January 1874. Similar Pangkor-style treaties were concluded in that same year with other Malay States, Selangor (February) and Sungai Ujong (December), and later with Pahang in August 1888.

The Pangkor Engagement was a landmark episode in the history of the Malay Peninsula. Through the implementation of the residential system, the beginnings of British colonial rule were established that were subsequently to usher in an era of unprecedented economic growth and development and significantly alter

the landscape and demographic pattern of the Malay Peninsula.

**PARAMESWARA
(PARAMESHWARA,
PARAMESVARA)**

Founder of Melaka

Parameswara was a Palembang prince from the Śrivijaya line who founded the kingdom of Melaka on the western coast of the Malay Peninsula. Corrupted from the Malay *Permaisura*, the name exists in contemporary Chinese (transliterated as *Pai-li-mi-su-la* or *Pai-li-su-la*) records and sixteenth-century Portuguese writings. The well-known *Sejarah Melayu* (*Malay Annals*) uses the Muslim name Iskandar Syah instead, for the last Malay king of Singapura (present-day Singapore) who founded Melaka.

Based on the claims of the Javanese in Melaka, Portuguese writers tended to believe

that Parameswara was a Javanese prince from Palembang who after a brief sojourn in Singapura moved north to found the kingdom of Melaka. According to the *Sejarah Melayu*, Iskandar Syah (Parameswara) was a fifth-generation descendant of the Palembang prince Seri Tri Buana, who founded Singapura in the thirteenth century. After escaping Singapura because of Majapahit's invasion, Parameswara moved north on the peninsula and founded Melaka around 1400. Parameswara named his new home *Melaka* after the tree he was sitting under. Guided by his far-sightedness and supported by his followers, who regarded him as a true king, Parameswara devised ways that quickly developed the strategically located Melaka into a trading port that attracted vessels plying the Straits of Melaka.

Parameswara boosted Melaka's position internationally by having diplomatic ties with China, which he visited in 1405 and 1409. His successors continued that policy. It is not fully established whether Parameswara had actually embraced Islam, but by 1450 Melaka had already become an important center for Muslim trade and religion in Southeast Asia. Based on Chinese records, Wang Gungwu (1981) surmised that Parameswara died in 1414, and the *Sejarah Melayu* says that Iskandar ruled Singapore for three years, stopped at Muar for two years, and ruled Melaka for twenty years.

PARARATON (BOOK OF KINGS)

Pararaton is the name of a Javanese traditional historiography. The name means “about the kings/queens”; it is also often said to mean “the book of kings.” The text contains accounts of the rulers of the Singhasari (1222–1293) and Majapahit (1293–ca. 1520s) kingdoms, beginning with Ken Angrok (r. 1222–1227); hence the authentic denomination as *katuturanira Ken Angrok*, “a narrative on Ken Angrok.” Both names are mentioned within the text; the name *Katuturanira Ken Angrok* appears at the beginning, and *Pararaton* at the end, just before the colophon.

The text consists of some mythical and legendary elements at the beginning, especially on the exploits of Ken Angrok. A little more than the second half consists of narratives on historical episodes and incidents after Ken Angrok’s time. The colophon of this text mentions the earliest year for the copying of one of the manuscripts as 1522 śaka, equivalent to 1600 C.E., and the last historical incident mentioned is in the year 1400 śaka, equivalent to 1478 C.E.

The story of Ken Angrok begins with his birth as attributable to the god Brahma’s impregnating a village woman, Ken Endok. Ken Angrok grew as a rascal. Despite his misbehavior, he came across kind men who took him as son or foster son. One of them made Angrok learn how to make gold through occult powers; he subsequently possessed supernatural powers. In the *Pararaton* text Angrok is also identified as an incarnation of the god Vishnu, and as a son of Bhatara Guru (= Siva).

Ken Angrok killed Tunggul Amětung, regent of Tumapël, and married his widow, Ken Dědēs. This lady’s sons became subsequent kings: those from the line of Tunggul Amětung became kings of Singhasari, and those from the line of Ken Angrok became kings of Majapahit. Ken Angrok himself became king of Tumapël, a kingdom that can be identified with Singhasari by cross-referencing with other historical sources.

PARIS CONFERENCE ON CAMBODIA (PCC) (1989 AND 1991)

The Paris Conference on Cambodia (PCC) had its first session in August 1989 and its second session in October 1991. The two sessions of the PCC formed part of the diplomatic efforts to resolve the conflict situation in and around Cambodia. It was at the second session of the PCC that the so-called Paris Agreements on Cambodia were signed. These agreements formally settled the Cambodian conflict.

The conflict situation around Cambodia originated in the bilateral dispute between Cambodia and Vietnam in the late 1970s that led to the Vietnamese military intervention in late December 1978. Following the intervention, the Peoples’ Republic of Kampuchea (PRK) was established in Cambodia, whereas the overthrown government—that is, Democratic Kampuchea (DK)—sought refuge in Thailand. The PRK relied on support from Vietnam and the Soviet bloc, whereas DK in alliance with two noncommunist Cambodian groups in the Coalition Government of Democratic Kampuchea (CGDK) relied on support from China, the Association of Southeast Asian Nations (ASEAN), and the United States. From 1979 to the mid-1980s the conflict was characterized by confrontation.

The International Conference on Kampuchea (ICK), arranged under the auspices of the United Nations in 1981, failed not only to formulate an acceptable framework for all parties concerned but also to bring the parties to the conflict to the conference table. None of the countries supporting the PRK’s and Vietnam’s position attended the conference. Thus the 1981 conference only highlighted the deep divisions at the global and regional levels, as well as among the Cambodian parties.

The second half of the decade saw important changes in the interaction at both levels. At the regional level, the early steps were bilateral discussions between Indonesia and Vietnam. In late 1987, Prince Norodom Sihanouk (1922–), president of the CGDK, met with Hun Sen (1951–), prime minister of the PRK, in Paris. It was the first high-level meeting between representatives from the two Cambodian governments. The regional dialogue brought about an unprecedented meeting in Indonesia in July 1988 known as the first Jakarta Informal Meeting (JIM1), with the participation of the member-states of ASEAN, Laos, Vietnam, and the four Cambodian parties. JIM2 was held in February 1989. It was in this diplomatic context that the first session of the PCC was convened on 30 July 1989.

The first session of the PCC lasted for one month, between 30 July and 30 August. The first session ended without an agreement on how to resolve the Cambodian conflict. Furthermore, the conference did not manage to set up an international monitoring mechanism to supervise the final withdrawal of Vietnamese troops from Cambodia in September 1989. However, at this conference all the four Cambodian parties were present; also in attendance were the Soviet Union, Laos, and Vietnam. The presence of several of the states that refused to attend the ICK showed that the contacts between the concerned parties of the Cambodian conflict had improved, but it was also evident that much work remained before it would be possible to resolve the conflict.

Following the first session of the PCC, the diplomatic efforts shifted toward the activities of the five permanent members of the UN Security Council—namely, China, France, the Soviet Union, the United Kingdom, and the United States. They held several meetings in 1990, and in late August they managed to agree on mutually acceptable principles for the settlement of the Cambodian conflict and on a proposal entitled “Framework for a Comprehensive Political Settlement of the Cambodia Conflict.” The Security Council endorsed the proposal in September and the General Assembly in October. However, the Cambodian parties did not manage to reach a consensus during 1990, despite the establishment of a Supreme National Council (SNC) in September. Eventually they managed to find a formula

for compromises and reached agreements on contested issues between June and September 1991. These developments paved the way for the reconvening of the PCC.

The second session of the PCC was convened on 23 October 1991, and two agreements were signed: the “Agreement on a Comprehensive Political Settlement of the Cambodia Conflict” and the “Agreement Concerning the Sovereignty, Independence, Territorial Integrity and Inviolability, Neutrality and National Unity of Cambodia.” The following participating states were the signatories: Australia, Brunei Darussalam, Cambodia (represented by the SNC under the leadership of its president, Prince Sihanouk), Canada, China, France, India, Indonesia, Japan, Laos, Malaysia, the Philippines, Singapore, Thailand, the Soviet Union, the United Kingdom, the United States, Vietnam, and Yugoslavia, which represented the Non-Aligned Movement. Furthermore, a “Declaration on the Rehabilitation and Reconstruction of Cambodia” was adopted at the conference. The Paris Agreements on Cambodia formally settled the Cambodian conflict.

PARIS PEACE AGREEMENT (1968, 1973) (VIETNAM)

The Paris agreement “on the suspension of hostilities and the restoration of peace in Vietnam” in January 1973 ended a war that had ravaged the country for nearly a decade, but only after four years of negotiations and without long-lasting effect.

Soon after the Tet offensive, U.S. president Lyndon Johnson (t. 1963–1969) announced that bombardments of North Vietnam would be reduced, and he offered to negotiate (31 March 1968). On 13 May the delegations of the United States and of the Democratic Republic of Vietnam (DRV) met for the first time in Paris (Harriman–Xuan Thuy). The organization of the negotiations would prove to be problematic at first. However, four delegations representing the two conflicting parties finally agreed to meet at a roundtable on Avenue Kleber in January 1969. On the one side was Washington and Saigon, and on the other, the DRV and the National Liberation Front (FNL). The latter was replaced by the Provisional Revolutionary Government (PRG), headed by Mrs. Nguyễn Thi Binh. The talks, however, dragged. After four years and more than 140 meetings, nothing seemed to have been solved.

Reconciling the different points of view proved to be complicated. President Richard Nixon (t. 1969–1974) progressively withdrew U.S. troops from South Vietnam, among other reasons because the war was unpopular, and he demanded that the DRV do the same; but Hanoi considered the division of Vietnam artificial and rejected that demand. At the same time Hanoi contested the legitimacy of President Nguyễn Văn Thiệu (t. 1965–1975) in Saigon, but the United States did not intend to sacrifice their ally. The peace plans—“7 Points Plan” of the PRG in July 1971, “8 Points Plan” of Nixon in January 1972—were accompanied by important diplomatic maneuvering, notably Nixon’s journey to Peking in February 1972. Meanwhile the war spread to Cambodia (1970) and to south Laos (1971), and it continued in Vietnam with the general revolutionary offensive in the South and the U.S. mining of North Vietnamese ports (1972).

Nevertheless, in February 1970 secret talks near Paris commenced between Henry Kissinger (1923–), Nixon’s advisor, and Le Duc Tho (1911–), one of the communist leaders in

Hanoi. The talks were revealed by Nixon two years later, in January 1972, initiating the final period of negotiations. Suspension and resumption of the talks alternated for a year, with occasional unforeseen developments: each side more or less gave up their demands, and an agreement was almost secured on 8 October 1972, just before the U.S. elections, but it was refused by Thiệu in Saigon. New demands surfaced, and a U.S. bombing campaign on Hanoi began anew (18–25 December). Nevertheless, Kissinger and Le Duc Tho still met in Paris in January 1973, and the agreement was finally signed on 27 January 1973.

This long-awaited agreement included military as well as political clauses. On the military level, it stipulated the end of U.S. intervention: the end of all military activity on DRV territory on the one hand, and the withdrawal of military involvement from the South on the other. It also established a cease-fire in the South, where the boundaries between the different areas controlled by the conflicting parties were entangled. On the political level, the two South Vietnamese parties were asked to constitute a “Council for National Reconciliation and Concord,” composed of three equal parties (the Saigon government, the PRG, and the “third force”), which was supposed to organize general elections.

However, to reach an agreement is one thing, to enforce it another. The U.S. withdrawal from the war was effective, even though it did maintain a discreet presence in Saigon to back the Thiệu regime.

The cease-fire on the spot was established, turning South Vietnamese territory into a “leopard skin” where it was difficult to move about. But the Council for National Reconciliation and Concord would never see the light of day, despite months of negotiations at La Celle Saint-Cloud near Paris. Two years later, at the time the United States seemed to have turned the page following Nixon’s demission after Watergate and the refusal of Congress to vote for new funds for South Vietnam, a last communist offensive was triggered in the spring of 1975 on the high plateaus. In less than two months, the Saigon regime was defeated (30 April).

Did the Paris agreement permit a “decent interval” at the end of which the whole of Vietnam was left to the Hanoi regime? Even if it did not end the state of war in South Vietnam,

Ambassador William H. Sullivan (lower right) and Xuan Thuy (upper right) watch as Dr. Henry Kissinger (lower center) and Le Duc Tho (second from upper right) initial the Paris Peace Accords in Paris on 23 January 1973. (Bettmann/Corbis)

at least it allowed the United States to withdraw from the conflict, although it was not spared the humiliation of seeing its allies easily defeated.

PARTAI KOMUNIS INDONESIA (PKI) (1920)

In the Netherlands East Indies, the Partai Komunis Indonesia (PKI, Communist Party of Indonesia) evolved from its predecessor, the Indies

Social Democratic Association (ISDV), established in 1914. A group of ISDV leaders believed that a socialist revolution was feasible in the Netherlands East Indies, even though it was generally held that socialism could only be attained by developed capitalist societies. As the ISDV became more radical, it also gained more Indonesian members, who became the dominant group by 1917. In 1920, the ISDV became the PKI.

The early strategy of the Indonesian communists was to work within the dominant religious organization in the Netherlands East Indies—namely, the Sarekat Islam (SI). By 1922 this strategy was mostly successful, with the communist leaders challenging the noncommunist leaders of the SI for control. In the power tussle that ensued in 1923 the SI was split, with the communists taking away more than half of the SI membership.

In 1926 and 1927, the PKI launched revolts in various parts of the Netherlands East Indies. Two of the areas affected more seriously were Bantam (West Java) and Minangkabau (West Sumatra). The revolts came as a surprise because they took place when the trade recession that hit the Netherlands East Indies during 1921 and 1922 was ending, and the economy was recovering.

For the party itself, the reasons for revolt were political. By 1924 the PKI had resolved to focus attention on the urban proletariat instead of the peasant masses. In 1925 a series of strikes took place as a prelude to a huge uprising. The Dutch colonial government reacted swiftly. Top PKI leaders were detained and given the choice of exile or departure abroad. One of those leaders was Tan Malaka (1897?–1949), who chose the latter option. The right of assembly was severely curtailed. It was clear that dependence on the proletariat would not work yet, and PKI activists dispersed to evade capture. In two areas, Bantam and Minangkabau, PKI leaders manipulated latent dissatisfaction to foment revolt.

Ironically, in Bantam the participants were led by the wealthy and the influential. Religious leaders were convinced that a bright future would follow from a successful revolution, and they brought the poorer members of their flock to support the PKI. There were some grievances over the variety of taxes. Minangkabau was a region with rich economic possibilities, given the introduction of coffee and

rubber cultivation. The PKI-led revolt was supported by the new rich against traditional leaders. The supporters of the revolt included those with local grievances. Employees of the colonial government were spooked by rumors of retrenchment, and there was talk that family homes would be taxed, woodlands delimited and declared off limits, and land taxes introduced.

The failed revolt of 1926–1927 led to a series of arrests. The PKI was crippled, but not driven out of existence. Its leaders fled abroad. Within the Netherlands East Indies itself, it went underground for much of the 1930s and reemerged only at an opportune time—the Indonesian revolution of 1945.

The revolution against Dutch rule was the right time for the communist leaders to return from exile, and the PKI resurfaced. The leaders were now Musso and Tan Malaka. At first the PKI aligned itself with the national objectives of the Indonesian revolution, giving priority to driving the Dutch out from the independent Republic of Indonesia. By 1948, however, the communists had begun to exhibit a more militant anti-imperialist line. They criticized the republican leaders, whom they accused of being overaccommodating, since they were engaged in negotiations with the Dutch. When the negotiations displayed signs of failure, the communists forged links with the opposition to the republican government and launched a revolt in Madiun (East Java) in 1948.

The republican government quickly branded this revolt as stabbing the nation in the back while negotiations with the Dutch had entered a critical phase. In the face of a mighty nationalist swing against the PKI, the communists failed to achieve their goal to seize power through the Madiun revolt. The Indonesian army was the principal instrument for crushing the communists. The PKI's nationalist image was severely tarnished, and party leaders who advocated armed revolution were discredited. From then on the PKI adopted a nationalist strategy, and that was the principal platform of the new leadership that emerged in 1951 under D. N. Aidit (1923–1965) (chairman).

The PKI of the 1950s can therefore be characterized in the following ways:

- Ever mindful of past failures, the PKI chose to identify with nationalist issues, of

which there were many. One was the sense that the republic had not won complete independence from the Dutch, shackled as it was by financial debts and other economic constraints. By championing an anticolonial, anti-imperialist platform, the PKI was able to regain the reputation of being pronationalist—that is, pro-Indonesia.

- The PKI also received endorsement from the Soviet and Chinese attitudes that newly independent countries like Indonesia were still subject to a form of neocolonialism.
- The PKI was careful not to advance too far ahead of the policies of the government of the day and thus risk isolation. Instead it supported most government policies, especially those promoted by the Indonesian Nationalist Party (PNI), which held office during the best part of the four years after 1952. This alignment with the government of the day gave the PKI the legal protection it needed from persecution, as well as the opportunity to work the ground for mass support. In return, the PKI was a loyal ally. The PKI continued to extend its support to President Sukarno (t. 1945–1967) after 1957, when the president gradually overthrew parliamentary institutions that enabled the PKI to flourish and instead introduced his brand of Guided Democracy, with the Indonesian army as his political partner.
- Sensing that President Sukarno also needed a mass base, and requiring protection from persecution by the Indonesian army, the PKI threw in its full support for Sukarno's Guided Democracy.

Using the above platforms as points of departure, the PKI was a reliable crusader against imperialists, colonialists, and neocolonialists. In return for this support, the governments of the day gave the PKI full rein to establish mass support in the countryside and among workers. As a result, the PKI became a household name. In the parliamentary elections of 1955, it was the fourth strongest in the country. In the provincial elections of 1957, it further increased its

reach in Java. By the 1960s, it could count 27 million supporters (Mortimer 1974: 366).

Given its influence in Indonesian politics, what was the next step for the PKI? Would the party continue to play second fiddle to the government of the day? Or would it seize an opportunity to grab power for itself? These questions became important toward the mid-1960s as Sukarno's Guided Democracy showed debilitating results. The economy was floundering, running into triple-digit inflation, and Sukarno's own political influence was at risk. It was not a foregone conclusion that he would retain undiminished power. Moreover, it was noticed from 1964 that he was unwell. Meanwhile, the Indonesian army was also maneuvering into positions of power, especially as Indonesia launched a military confrontation in 1963 against the newly formed Malaysia, which it regarded as a neocolonialist plot designed to subvert fiercely independent countries like Indonesia. With a weakened Sukarno and a strong army, the PKI's political position could be endangered. This dilemma had to be addressed.

In 1965 the world was stunned by the news that the PKI had launched a coup on 30 September to capture power. The motivations are still shrouded in mystery and controversy. Witnesses at the subsequent trials of captured PKI leaders testified that the party made plans for the coup during July and August 1965. A group of dissident army officers, led by Lieutenant Colonel Untung, was urged to make the first move. The justification was to protect President Sukarno from a Council of Generals that was plotting to seize power. Six leading generals were kidnapped and murdered by PKI supporters, and the PKI went into action with other coordinated actions as well. The plan misfired, however, because the defense minister, General Abdul Haris Nasution (1918–2000), and General Suharto (1921–), the commander of the Strategic Reserve based in Jakarta, were able to mount a counteroffensive. The army began to round up PKI leaders, and Aidit was killed in central Java. Other leaders, such as Lukman (1914–1965), Njoto, and Sakirman, met the same fate.

Revenge killings against PKI members and their supporters took place in North Sumatra, Java, and Bali. The purge resulted in many people being killed. Estimates range from 40,000 to a million. Early in 1966, a special

military tribunal (*Mahmillub*) was established throughout Indonesia to try the leaders of the coup attempt. Trial proceedings revealed that the PKI had set up a Special Bureau to infiltrate the armed forces that would pave the way for a coup. On 11 March 1966, General Suharto outlawed the PKI and its affiliate organizations.

Anybody observing the massive measures taken against the PKI in the aftermath of the 1965 coup would have drawn the conclusion that the PKI as an organization was history. Hardcore communist detainees and their supporters were exiled to the island of Buru (East Indonesia), where they remained until their release and reintegration into society many years later. The scars still remain, and the most prominent among the former detainees, Pramodya Ananta Toer (1925–), used his skill as a novelist to continue his criticism of the Indonesian government. In the years after 1965, unrest in Indonesia continued to be blamed on the work of PKI remnants, although such explanations have tapered off.

This account has adopted the standard historical approach of origins, growth, and demise; the PKI has been viewed linearly. Yet it is necessary also to consider other circumstances that did not get sufficient exposure in the sweep of chronological events. An important question is why communism continues to be so resilient, even after the party was destroyed each time after an unsuccessful revolt. If the fears of the party's return are to be given credence, then it becomes even more important to explain why the PKI was like a phoenix, rising from the ashes after each denouement.

The answer is speculative at best, but it is reasonable to argue that among the core values of Indonesian society, a streak of social justice exists. Social justice as a goal was addressed in various ways by different sectors in society. Communism could well regard itself as one of the exponents of this core value, ensuring for itself a role in Indonesian society.

PARTAI RAKYAT BRUNEI (PRB)

Partai Rakyat Brunei (Brunei People's Party) was established by Sheikh A. M. Azahari (1928–2002) in 1956 to voice demands for independence, democracy, and socialism. It was the first genuine political party in the Brunei sultanate and the only one to have won strong support at a time when something approaching free speech was still possible. Inspired particularly by Indonesian *merdeka* (independence), the movement grew out of the new global situation after World War II (1939–1945), the British retreat from empire, and the rapid expansion of the Brunei oil industry that had created inequalities of wealth.

The PRB, originally intended as a branch of the left-wing Partai Rakyat Malaya (1955),

sought registration by the government in January 1956. At that time Brunei was still administered by a British resident. Legal recognition was eventually granted on 15 August 1956, provided that the party confined its activities to Brunei itself. The PRB's manifesto proclaimed the party's desire "to oppose all forms of colonialism in the political, economic and social spheres." The party favored unity "for the Malay homeland" (a nebulous entity, which by 1962–1963 had come to mean *Kalimantan Utara*, a proposed federation of Brunei, Sabah, and Sarawak), providing educational opportunities for the people, and promoting social welfare. Azahari intended to follow constitutional methods but asserted that independence was "a fundamental right of any people."

The PRB established itself as an important player in the sultanate's affairs in 1956–1957. The level of support was fickle, however, and never as great as the party pretended. In fact, the PRB was probably a repository for "protest votes," expanding its base when there was a particular issue on which the people wished to make their voice heard—notably a desire for early independence.

The late 1950s and early 1960s were characterized by a struggle between the party and the sultan to inherit the British mantle. The PRB was largely a Malay-Kadayan party, strong in Kampong Ayer and among Kadayan farmers but with little or no appeal to non-Muslim indigenes or the Chinese community. The PRB's demand that the Chinese "monopoly" of trade be broken alarmed the Brunei Chinese, who were an increasingly important section of the population. Nor did Brunei irredentism appeal to citizens of Sabah and Sarawak.

In March 1957, Sultan Omar Ali Saifuddin III (r. 1950–1967) announced plans for the reform of the State Council (the legislature). The public was to elect ten members to the council, but not directly: the monarch would choose the ten from the twenty-two elected candidates. Azahari denounced the proposed reform, which was abandoned, as a "mockery of democracy"; instead, he demanded that three-quarters of the members of the State Council be directly elected. At the end of March the first annual congress of the PRB drew up a plan of action, including the dispatch of a delegation to London to fix a date for autonomy. The mission duly took place in September

1957, but it ended in failure. For the time being, the party had shot its bolt and remained comparatively quiescent until 1960–1961, when its leaders became involved in interlocking trade union activity.

The constitution promulgated in 1959 represented a very cautious advance, under which the monarchy inherited all the former prerogatives of the resident. Nevertheless, the sixteen elective seats on the Legislative Council gave the people a prospective voice in the running of their country. The PRB, however, argued that control of their country remained in colonialist hands.

Progress toward the creation of a federation of Malaysia in 1961–1962 galvanized the party's fortunes. Following the 1962 elections (held a year behind schedule), the party occupied all the elective seats on the Legislative Council; there was still, however, a nominated majority of one, which meant that the party's measures could be blocked. Proscribed in December 1962 during the Brunei Rebellion, when many of its members were arrested and interned without trial, the PRB sought to continue the struggle in exile.

The next major turning point came in 1973, when eight leading PRB members were released from internment in Brunei and granted political asylum in Malaysia. The party was reactivated in Kuala Lumpur in 1974. A new manifesto was issued, renouncing the party's socialist stand and its demand for Kalimantan Utara. It still championed a nonaligned foreign policy. With Malaysian support, the party took its case to the UN Committee on Decolonization in 1975–1977, and in 1977 the UN General Assembly adopted a resolution proposing free elections in Brunei, the end of the ban on political parties, and the return of all political exiles to Brunei. Once independence had been achieved (1984), there was apparently little left for the party to fight for; it had been dropped, meanwhile, by Kuala Lumpur, and once again it faded away. Former party leaders drifted back to the sultanate in the 1990s; after a period of detention and the swearing of an oath of loyalty, they were released.

PARTAI ISLAM SE MALAYSIA (PAS)

Officially registered as *Persatuan Islam Se Malaya* (PAS), or Pan-Malaya Islamic Party (PMIP), on 14 June 1955, the party originated from the *Persatuan Alim Ulama Se Malaya* (Association of Pan Malaya Islamic Scholars). The latter was formed by the United Malays National Organization (UMNO) religious wing at a meeting in Muar in February 1951. Headed first by former UMNO Ulama Committee chairman, Haji Ahmad Fu'ad Hassan of Terengganu, PAS came into being on 24 November 1951 at a meeting in Butterworth, Penang, in the midst of an ideological and leadership crisis within UMNO. The name of the party was amended to *Persatuan Islam Se Tanah Melayu* (Pan-Malaya Islamic Association) in December 1958 and af-

ter the formation of Malaysia, *Partai Islam Se Malaysia* (Pan-Malaysia Islamic Party) in 1971.

When Ahmad Fu'ad resigned as president in disagreement with the PAS central committee's decision not to participate in a national conference organized by Dato' Onn bin Ja'afar (1895–1962) and seven chief ministers, his place was filled by a medical officer, Dr. Abbas Abdul Aziz, in November 1953. Under the leadership of the veteran nationalist and former chairman of Partai Kebangsaan Melayu Muda (PKMM, National Party of Malay Youth) and Pusat Tenaga Rakyat (Putera, Centre of People's Power), Dr. Burhanuddin Al-Helmi (1911–1969), who became PAS president in December 1956, PAS secured Kelantan and Terengganu in 1959. However, in October 1961, Terengganu was wrested by UMNO when two PAS representatives and three from the Partai Negara (PN) defected. Kelantan remained a PAS stronghold, and after the May 13 Incident (1969) the party came to terms with the Alliance Party and participated to form the National Front (Barisan Nasional, BN) in 1974. However, UMNO-PAS rivalry continued, and when a serious leadership crisis occurred in Kelantan, a state of emergency was declared by the UMNO-controlled central government; the Kelantan PAS-led state government was toppled in a snap election in March 1978.

PAS views Islam not only as a religion but also as a political ideology and has long showered criticism on UMNO's secularism. After a successful reorganization in the 1980s and rifts within UMNO, PAS recaptured Kelantan in 1990 and Terengganu in 1999, thus continuing to pose a serious challenge to UMNO and BN.

PARTIDO NACIONALISTA (NATIONALIST PARTY, NP)

The Partido Nacionalista was one of the first Philippine political parties formed under U.S. colonial administration. Based on a platform of immediate independence for the Philippines, the party became the strongest political party at that time. After the Pacific War (1941–1945), it rose and fell in various elections and was eclipsed during martial law by the government-sponsored Kilusang Bagong Lipunan (KBL, New Society Movement).

The Partido Nacionalista was organized on 12 March 1907 by means of the fusion of two existing proindependence parties headed by nationalist Filipino political leaders, including Manuel L. Quezon (1878–1944) and Sergio Osmeña, Sr. (1878–1961). The party's platform stood for immediate independence and the constitution of a sovereign nation under a democratic government. The party also opposed any attempt to dismember the Philippines as defined in the Treaty of Paris (1898).

The party opposed and defeated the Federalista Party, which was initially supportive of U.S. rule, in the elections for the first Philippine Assembly in 1907. It became the dominant Filipino political party after that.

It split into two factions twice, first in 1922 because of the rivalry between Quezon and Osmeña, and again in 1933, over the issue of the Hare-Hawes-Cutting Act. In both cases the party reunited and defeated smaller opposition parties in succeeding elections.

The party was dissolved by the Japanese during the Pacific War, but it was revived afterward under the leadership of Osmeña. Younger politicians, led by Manuel Roxas (1948–1948), however, bolted the party and created a new party, the Liberal Party (LP), which defeated the NP in the 1946 elections.

The NP and LP maintained an adversarial relationship as they traded places in government. Since there was no basic difference be-

tween the two, party shifting became common when personal feuds developed.

During martial law (1972–1981), the party was split on whether or not to participate in elections under Marcos, which were thought to be unfair. The party was eclipsed by the government-supported KBL, but it rose after Marcos was deposed in 1986. The party is still extant and participates in elections, although it no longer is the dominant party.

The Partido Nacionalista is today the oldest existing political party in the Philippines. Its proindependence stand during the U.S. colonial period won it strength, and epitomized a colonial people fighting for independence within a legal framework.

PASAI

A Thirteenth-Century Muslim Entrepôt

Pasai, known also as Pasé, one of the twin cities of Samudera Pasai, was an important medieval Islamic entrepôt on the northeast coast of the island of Sumatra. Present-day Pasai is located a short distance southward from the modern city of Lhoksuemawe in eastern Aceh, situated inland about 4.8 kilometers upriver from the mouth of the Krueng Pasai, the Pasai River. The original settlement was near the modern village of Geudong in the regency of Aceh Utara. It was about one hundred kilometers from its rival, Pedir, another contemporary pepper harbor to the northwest on the same coast. To the southeast lay the anchorage of Tamiang and the piratical kingdom of Aru.

Pasai was populated predominantly by Gujarati merchants. It flourished from about the mid-/late thirteenth century to the early sixteenth century, by which time much of its trade

had been lost to Melaka. But for more than two centuries it was the foremost among a number of small harbors on the northeast coast of Sumatra. The history of the founding of Pasai was immortalized in the texts of the *Sejarah Melayu* (Malay Annals) and the *Hikayat Raja-Raja Pasai*. The first sultan, Malik-al-Saleh, died in 1297. He reputedly named the settlement after his dog, Pasai, who discovered an ant as big as itself at the Cot Astana, "the palace hill."

Marco Polo (1254–1324) is said to have stopped there awaiting the monsoon on his way back to Europe from China. In the early fifteenth century, the Ming Chinese fleet under Admiral Cheng Ho (Zheng He) (1371/1375–1433/1435) visited Pasai on no fewer than three occasions. The Portuguese had a brief but unsuccessful association with it. Tomé Pires (ca. 1465–ca. 1540), writing in the second decade of the sixteenth century, left a full description of Pasai and its neighbors, its trade, and customs before it fell to the Acehnese. Pasai as an independent royal center and a town of 20,000 inhabitants disappeared by the end of the first quarter of the sixteenth century. It was attacked and destroyed in 1522 by Ali Mughayat Syah (r. 1496–1528), the first sultan of neighboring Aceh.

The location of Pasai was such that it was a convenient spot for merchants sailing to either east or west with the monsoon winds. There, Bengalis, Gujaratis, Tamils, Peguans, Siamese, and Malays were able to wait for the seasonal changes in direction, which would take them either through the Straits of Melaka and the Indonesian archipelago and thence north and east to China, or westward to Ceylon (Sri Lanka), India, and the Persian Gulf. Pasai was well supplied with fresh water.

Pires suggests that the original kings of Pasai were heathens worn out by the cunning of the Moorish merchants. The rulers from that point on were Muslims. They brought an unfortunate custom with them: anyone who succeeded in killing the king could become king in his stead. Despite this, Pasai was an important Islamic center. The rulers were fervent Muslims but had little political or religious influence on its immediate mountainous hinterland, which was inhabited by the Gayo, a race of hardy tribal people.

All the products of Sumatra and from emporiums east and west were said to be available in

Pasai. From the immediate hinterland came benzoin, camphor, and gold dust, brought down from the mountains of the Bukit Barisan. But pepper; cloves; nutmeg; precious gaharu wood and other perfumes; sandalwood; stonewares from Burma, Thailand, and Vietnam; Chinese porcelain; silk; silver; and turtle shell were all available. Indeed, in the early sixteenth century Pasai produced from 8,000 to 10,000 *bahar* of pepper (some 1,500 metric tons) annually, some, if not most, presumably produced on the hill slopes of its immediate hinterland. Imported silk was exchanged for cloth and other goods from Cambay in Gujerat.

Because of a shortage of teak for shipbuilding, Pasai built only *lanchara*, or galleys, but had no merchant junks of its own. These were bought from Melaka, which was said to have had an abundance of teak.

Archaeological evidence of the former prosperity of Pasai in and around the modern village of Geudong can be seen from the several ornate marble tombs imported from Cambay, and from numerous grave complexes of Batu Aceh. Supportive evidence is also found in ceramic shards, including Chinese porcelain and glazed stonewares, from the kilns of Burma, Thailand, and Vietnam. Other artifacts include burnished earthenware from India and pottery from elsewhere, glass bangles and beads, and numerous coins of both gold (*dirham*) and fragile but often badly corroded lead (*pitis*), inscribed with Arabic script.

PASISIR**The Northern Coastal Strip of Java**

Pasisir, Javanese for “beach,” refers to the northern strip of Java, which stretches roughly from Surabaya to Cirebon. People in the Pasisir did not have a coherent sense of a common identity and certainly no history of political unity. The term *Pasisir* was used primarily to distinguish the coastal areas from the other parts of the island, in particular the central provinces. In the conceptions of the central Javanese kingdoms, the Pasisir was considered peripheral. Control of Mataram over the coastal provinces was less direct than on the heartlands (*negara agung* and *mancanegara*) of the kingdom. But to the rulers and regents of the Pasisir, perspectives were much different.

With the bloom of long-distance shipping in the fifteenth century, these coastal areas became potentially very wealthy and modern places. The Pasisir was Java’s window to the world. It was a tremendously dynamic place, frequented by large numbers of merchants from all corners of the world. In their wake came settlers and foreign worldviews, which added a decidedly cosmopolitan and multicultural atmosphere to most of the large cities along the coast. Thus, from the fourteenth century, the Pasisir became the hotbed of Islam on Java. The graves of the nine famous men who had brought Islam to Java, the *wali sanga* (*wali songo*), are all located in the Pasisir. Although the spread of the new religion did not remain restricted to the coast, it was there that the most vibrant forms of Javanese Islam budded in early modern times.

The political heyday of the Pasisir fell in the late fifteenth and sixteenth centuries, when the central Javanese kingdom of Majapahit broke down, and many small states emerged along the northern coast of the island. Most prominent among the young Pasisir states was Demak, whose sultan succeeded in establishing his authority over large parts of the coast, and even launched expeditions to Banjarmasin. But Demak’s power soon waned, until its conquest by the emerging power of Mataram in 1588. During the first half of the seventeenth century most states in the Pasisir became subjected to Mataram. This expansion phase was concluded in 1625 with the annexation of Surabaya.

The seventeenth century deeply changed the face of the Pasisir. The continuing violence and hard-handed rule of Mataram stifled local

trade, which dipped in the first half of the century. Susuhunan Amangkurat I (r. 1646–1677) explicitly aimed at destroying the financial basis of the Pasisir nobility by disrupting trade. In 1655 he closed the ports along the Pasisir and destroyed the merchant fleets. Only when Mataram began to show signs of wear later in the century did the coastal areas try to regain some autonomy, but no ruler or regent was strong enough to dominate the entire coast.

Besides, the regulatory policies of the Dutch United East India Company (VOC) made themselves felt in Java’s north coast. After 1619, Chinese junks were forcibly channeled to Batavia, traders from India and farther west disappeared altogether, and the shipping links with the Moluccas (Maluku) were blocked in order to protect the spice monopoly. Real VOC presence in the Pasisir, however, remained slight until after 1678, when Susuhunan Amangkurat II (r. 1677–1730) ceded Semarang to the Dutch. Thereafter the VOC only reluctantly took on administrative responsibilities over other parts of Java, even if it became deeply entangled in every major political ripple in the Mataram territories. Only by 1743 did the rest of the Pasisir, together with western Madura and the eastern part of Java, formally come under VOC rule. The Pasisir became once more politically separated from central Java, and it became a crucial supplier of rice and timber to the VOC headquarters in Batavia. Under VOC suzerainty, Pasisir towns developed into modest centers of timber industry and shipping. Trade picked up after the setbacks of the seventeenth century, but although it almost doubled during the late seventeenth and eighteenth centuries, it was the VOC that gained most from the expansion of trade.

In the nineteenth century, the economy of the Pasisir regained some of its old vigor, but now almost entirely under the wing of colonial rule. Semarang developed into the major port for exports from the states of Yogyakarta and Surakarta and the sugar industries along the north coast, and it became a financial center for Java’s export economy. Toward the middle of the nineteenth century, Surabaya resurfaced as the most prominent harbor of the island, helped by the Dutch naval establishment and the expansion of the sugar industries and plantation enterprises along the northeastern coast of Java—and especially the tobacco on the

Djember plateau. Other towns were much less dynamic and became sleepy places that long exuded a marked *Indische* atmosphere. In the twentieth century, Surabaya overshadowed all other harbor regions.

**PATANI (PATTANI),
SULTANATE OF**

According to traditional sources, the sultanate of Patani evolved, probably around the fourteenth century, out of Kota Mahligai, an old settlement along the eastern coast of the upper Malay Peninsula and a village named Pak Tani. The kingdom evidently accepted Islam after that religion had already spread to Sumatra, Melaka, and Kedah. Patani became prosperous and, in fact, replaced Melaka, which fell to the Portuguese in 1511, as a center of maritime trade in the upper region of the Malay Peninsula. It also inherited Melaka's on-off hostility with Siam, its more powerful northern neighbor. In 1563 it was recorded that one Patani ruler, Sultan Muzzafar Shah, learning that the Siamese capital, Ayudhya, was under a Cambodian siege, led his troops in a rear attack of the capital. Although Sultan Muzzafar Shah died soon after the attack, Siamese-Patani hostility

continued in earnest. However, Patani was able to fend off Siamese attacks and grew into a renowned center of commerce, Islamic teaching, and Malay high culture throughout the seventeenth and eighteenth centuries. At times, Patani was strong enough to challenge the legitimacy of the Siamese ruler, even to the point of refusing to recognize that ruler's credentials as king of Siam.

Patani was well remembered for having three consecutive queens regent as rulers, during whose reigns in the seventeenth century Patani not only became prosperous and well respected within the Malay world but also succeeded in maintaining friendly and close relations with Siam. However, with the change of the ruling dynasty and the political ideology in Siam after the fall of Ayudhya in 1767, Patani gradually and steadily became, in the eyes of the Siamese ruling elite, the symbol of the Malay resistance to Siamese power. During the years 1785–1841, Patani was forced to accept the status of a tributary to Bangkok. Those years in fact spelled the end of Patani as a separate and autonomous polity. From the Siamese perspective, for the security and undisputed politico-military position of Siam in the upper Malay Peninsula, Patani had to be subjugated. It was clear that Patani's ability to project itself as champion of the Malay cause and Islamic teachings among the northern Malay States—Kedah, Kelantan, and Terengganu—spelled its eventual downfall. It was also clear that Siam, facing continuing attacks from Burma in the west in the early nineteenth century, could not afford to have an independent yet hostile kingdom at its southeastern doorstep.

The last straw for Siam came in 1809, when Patani, inspired by the religious teachings of a certain *syed*, joined forces with Malay pirates from Siak and attacked the Siamese outpost of Singora (Songkhla). As a consequence, Patani was militarily subjugated and divided into the seven small principalities of Tani, Jaring, Saiburi, Legeh/Ra-ngae, Raman Yala, and Nongchik. Each principality had its own raja-governor, and all of them came under the supervision of Songkhla, now promoted to the position of viceroyalty of the south. The breakup of the old sultanate did not quite bring about the tranquillity and order in the deep south that Bangkok had expected. The leaders of the seven principalities—particularly that of Tani—

continued for some time openly, at other times implicitly, to frustrate and undermine Siam's position in the Malay Peninsula. In order to overcome stubborn Malay resistance and the administrative malpractice committed by its own agents, Bangkok decided to transform the seven principalities into inner provinces of the kingdom. Steps were taken to withdraw certain powers of the raja-governors, including those over life and death and confiscation of property. The final step for the incorporation of the seven principalities into Siam proper came in 1902. A year earlier, however, as a response to Bangkok's move to remove the ruler's power to tax and the introduction of a payment of annual allowances to the rulers, the raja-governors of Tani, Raman, and Sai appealed to the British authority in Singapore to assist them against "Siamese abuses." The raja of Tani, Abdul Kadir, whom Bangkok regarded as the ringleader, was swiftly arrested and sent under house arrest in Siam; the other two raja-governors were suspended from their duty. These severe measures convinced other raja-governors to toe the Bangkok line. The 1902 Royal Decree on the Administration of the Seven Principalities ushered in the reform of the administration in the seven principalities. The decree, in practice, stripped the raja-governors of all real administrative powers and put them in the hands of a high commissioner appointed by Bangkok who supervised the whole seven-principality area. By 1907, the old sultanate of Patani was regrouped into three provinces of Pattani (Tani, Jaring, and Nongchik); Yala (Yala and Raman); and Bangnara, later changed to Narathiwat (Legeh and Sai).

The incorporation of the sultanate of Patani, which was completed in 1907, drew a final curtain on the glorious achievements of a Malay kingdom. Since their incorporation, it is evident that until recently, the three provinces in the deep south had posed serious socioreligious and politico-economic problems to the central authority. It was only in the 1980s, after the Bangkok government adopted liberal policies, that relative peace and socioeconomic development were achieved in the former sultanate. Presently, certain privileges related to Islamic teachings are given to the Thai Malay Muslims of the south, particularly the *syariah* laws concerning inheritance and marital affairs.

PATHET LAO (LAND OF LAOS)

Pathet Lao literally means "land of Laos," "Lao nation," or "Lao state." The term was originally applied by the French to refer to the communist-controlled zones in Laos in the immediate post-World War II period, just as the pro-Vietnamese anti-French nationalist movement began to refer to itself under this rubric. Thereafter, *Pathet Lao* became the standard term applied by Westerners and the Western media to the Lao communist movement. The Lao communist movement, in turn, comprised political—including parliamentary and military—sections directed by a secretive Leninist cadre party, the Lao People's Revolutionary Party (LPRP), successfully employing a variety of "united front" tactics. Founded in December 1975, the Lao People's Democratic Republic (LPDR) is heir to the thirty-year-long Pathet Lao struggle against the Royal Lao Government and its French and U.S. backers.

Origins of "Pathet Lao" and the Evolution of the Term

In fact, the term *Pathet Lao* was originally quite neutral. But in the context of the prewar Vichy French attempt to buttress Lao nationalism against perceived Thai irredentism, the term *Pathet Lao* first gained a political connotation.

Specifically, the first public use of the term was linked with the surfacing in 1945 of a “Pathet Lao Press” sponsored by the Lao Nhay or Lao Renovation movement, to which a number of prominent Lao nationalist figures contributed.

In 1950, however, the term resurfaced for the first time in an anti-French context in a document issued by the Neo Lao Issara, or Lao Patriot Front, founded in August of that year. Here, Pathet Lao is referred to as “land of Laos,” as in “The establishment of a truly independent and united land of Laos.” In this sense, the Pathet Lao rejected the sovereign claims of the French-backed Royal Lao Government. In the procommunist literature the term recurs in the French-language publication of 1954 as “Le Peuple du Pathet Laos.” Also in 1954, the term *Pathet Lao* commenced to appear in Vietnamese and Soviet communist statements and publications. But the Pathet Lao and the movement it represented especially gained international currency at the 1954 Geneva Conference on Indochina, where it was written into various documents. Although not formally represented at Geneva, the Pathet Lao nevertheless were legally awarded control of two northern provinces of Laos as regroupment bases. In any case, as Brown and Zasloff (1986: 47) argue, “[T]he designation Pathet Lao had meanwhile been generally adopted [by Westerners] to distinguish the Neo Lao Issara from the Royal Lao Government.”

Still, the use of the term *Pathet Lao* did not supersede Neo Lao Hak Sat, or Lao Patriot Front, the legal political party of the Lao communist movement formed in early 1956. In fact, the use of the term dropped out of Lao communist vocabulary and never entered the writings of such leading Lao communists as Kaysone Phomvihane (1920–1992) or Phoumi Vongvichit (1909–1994). The reason, no doubt, was the desire of the Lao communist party to distance itself from the Western propaganda use of the term by emphasizing the role of the front as a strictly “patriotic” organization. An additional explanation is that such an umbrella term did not fit well with the communist orthodoxy of the time, which stressed the interlocking role of parties, fronts, and armies.

The Pathet Lao Military

The highest-profile element of the Lao communist movement was simply the Pathet Lao

military. By contrast, the leadership and party were unknown and distant in Royal Lao Government circles, especially with the breakdown of the First Coalition Government (November 1957–July 1959) and Second Coalition Government (November 1962–September 1963). To Western diplomats and newsmen, the best-known symbol of the Pathet Lao military was simply their unique uniform: color-coordinated olive green fatigues, sneakers, Lenin-style cap, and trademark AK-47s. The Pathet Lao military distinguished themselves from their adversaries in the U.S.-backed Royal Lao Army by their guerrilla-style tactics, their discipline, and their political socialization as an army of “national liberation.”

The official birth date of the Lao People’s Liberation Army (LALP) is traced to the Latsavang unit, founded in Sam Neua Province in 1949 by Kaysone Phomvihane, the future party supremo and prime minister of the LPDR. But its origins were in Prince Souphanouvong’s (1911–1995) Lao Army of Liberation and Defence, and in a number of shadowy anti-French resistance elements. Kaysone was in charge of the Pathet Lao military throughout the period of alliance between Pathet Lao and Neutralist forces from 1960 to 1962, relinquishing command in 1962 to Khamtay Siphandone (1926–), a future president of Laos.

A particular feature of LALP recruitment in Laos was the participation of ethnic minorities, including the Lao Theung or Montagnard leader Sithone Kommadan (1908–1977) and his Hmong counterpart Faydang (d. 1986). It was the Pathet Lao military that constantly expanded territorial control of the movement in the creation of “liberated” zones of Laos. By the time of the formation of the Second Coalition Government, the Pathet Lao claimed to have liberated one-third of the national territory, rising to two-thirds by the time of the Third Coalition. By prodigious recruitment efforts the Pathet Lao managed to increase its strength from 20,000 in 1964 to 40,000 or 50,000 in 1971 (Zasloff 1972: 121).

The Party

At the center of the Pathet Lao movement stood the Leninist-style Lao People’s Party (Phak Pasason Lao), formed in March 1955 and tracing its origins to Hồ Chí Minh’s Indochina

Communist Party, which had been dissolved in 1951. Known as the LPRP from February 1972, the Lao communist movement enjoyed close collaboration with its Vietnamese counterpart. Such collaboration ran from doctrinal to tactical to political, including economic and military. Support from other fraternal communist nations, however, never eclipsed the “lips and teeth” (moral and material) relationship of the Lao and Vietnamese communist parties. In July 1977 this “special relationship” was formalized as the Lao-Vietnamese Treaty of Friendship and Cooperation, binding for twenty-five years and underwriting long-standing Vietnamese defense cooperation with its junior partner.

The Lao Patriotic Front

Under covert party control, the Lao Patriotic Front (Neo Lao Hak Sat, NLHS) was born in January 1956. Prince Souphanouvong was placed in charge of its central committee. In the prince, the front sought to expand its popular influence over a broad section of the Lao and minority population under the banner of “a peaceful, independent, neutral, democratic, unified and prosperous Laos.” A key element in front strategy was to win acceptance as a legitimate political party. In the national elections of May 1958, the NLHS posted thirteen candidates and won nine seats. Souphanouvong was elected to head the National Assembly, and the Pathet Lao military was slated to merge with the Royal Army. The proposed merger was resisted by the U.S. government, which, replacing France as the dominant prop of the “Vientiane-side” government, was on the verge of embarking on its own “secret war” in Laos, unknown even to the U.S. Congress. But in the wake of the Geneva Agreement of 1962, a Second Coalition Government was forged, this time with the Pathet Lao heading a slate of ministerial positions with Souphanouvong serving as acting prime minister. A new factor was the participation of various neutralist forces. Violent events in the capital, however, obliged the Pathet Lao leadership to withdraw within the year to their isolated base in the caves of Sam Neua Province. Breakdown of the Second Coalition Government also heralded a final and “heroic” stage of the struggle that pitted the Pathet Lao military in ground actions against

U.S. Central Intelligence Agency (CIA)–backed Hmong mercenary forces, while simultaneously facing down a massive U.S. bombing campaign directed at the “liberated” zones. Negotiations leading to a cease-fire on 21 February 1973 were conducted in the context only of U.S. withdrawal from the Indochina theater. Such events played into the hands of the Pathet Lao, which successfully parlayed their participation in a third and final government of national union promulgated on 5 April 1974. In the face of creeping united front tactics, the facade of the Third Coalition Government gave way on 1 December 1975 with the proclamation of the LPDR and the abrogation of the monarchy. In a stroke, the Pathet Lao had become the government.

Unquestionably, the umbrella role of the Pathet Lao movement was primordial in winning power in Laos. This was a thirty-year struggle, employing military, diplomatic, parliamentary, and united front tactics. It was also a classic communist strategy that had certain Eastern European parallels. But Pathet Lao military methods were also a “fourth generation” model selectively borrowed from the Chinese, North Vietnamese, and Viet Cong experience—especially the induction of ethnic minority elements into a Maoist-style guerrilla army. Although representing itself as authentically patriotic, the Pathet Lao was undoubtedly successful alongside the U.S.-backed “Vientiane-side” in expanding its popular base. Pathet Lao appeal was also facilitated by the highly charismatic and capable “Red Prince,” Souphanouvong, especially in the governments of national coalition and on the diplomatic front. But at the core of the Pathet Lao stood the party, staunchly wedded to Hanoi’s worldview and resolutely backed by Vietnamese communist power, and, behind it, the military support of the Soviet Union. Having institutionalized itself in the LPDR as a one-party state, the Pathet Lao view of national history in Laos is axiomatic. Just as the institution of the monarchy ended on 1 December 1975, likewise alternate views of Lao nationalism or the Lao state are not entertained in the LPDR.

PATRON-CLIENT RELATIONS

Patron-client relations serve as bonds that tie leadership to the political economy. In it, patrons grant their clients services and favors in exchange for loyalty and personal services. The relationship is based on mutual obligations and needs, and can result in acts considered illegal by modern law, but it can remain practical and functional in terms of everyday sociopolitical-economic relationships.

Patron-client relations existed in Southeast Asia since traditional times. A *datu* (chieftain) owned land but needed workers and cultivators to develop it. On the other hand, cultivators needed land to work. The *datu*, as patron, granted patronage to the cultivators by allowing them to work on his land. The patron awarded loyalty and hard work with protection and additional benefits. The clients in turn provided the patron with strength; the strength of a *datu* could be measured by the number of followers he had. Both provided each other with a sense of security as long as the reciprocal obligations were met; a favor done had to be repaid.

During the colonial period, the patron-client relationship was reinforced as the colonized peoples who served the colonizers loyally were

awarded powers over other people. Town heads who kept their people obedient were rewarded by their superiors with the power to collect taxes, from which they could obtain a share. Provincial administrators owed loyalty to the governor-general, who in turn was a client of the king, who had appointed him. The relationship continued on even after decolonization.

The web of patronage extended beyond the political sphere, as politicians extended favors to businessmen, such as facilitating government contracts, in return for a share in the proceeds. Although this would be considered corruption under modern law, it was functional to the businessman, because it cut through red tape and ensured approval of the contract. Small-store owners owed loyalty to distributors who provided merchandise. Again, illegal transactions could be entered into but were practical, since they enabled the small business to survive. Military officers hoping for promotion cultivated relations with politicians and senior officers to act as their patrons; they would owe them loyalty and services in exchange, such as protecting the patrons' property or business. Provincial governors cultivated ties with congressmen to receive special funds, while in turn ensuring their patrons of victory at the next election.

The system could break down when the unwritten rules were broken, such as when expected obligations or favors were not met. This could result in militant peasants who opposed their landlords, and labor unions striking against their companies. It was eroded too by the rise of mass mobilization, caused by greater education, media exposure, discontent in the agricultural sector, and public protests. However, for as long as the need remains, and the system relationship remains functional, it can continue to serve as a foundation for socioeconomic political relationships.

PAVIE, AUGUSTE (1847–1925)

French Explorer-Diplomat

Born in Dinan, Brittany, on 31 May 1847 and baptized Auguste Jean Marie Pavie, this noted French explorer came from a social background very different from that of most of his compatriots who explored the territories that came to form French Indochina. Neither a military officer nor a university-trained professional, Pavie was the son of a cabinetmaker. Joining the army as an enlisted man in 1864, he made his first contact with the Indochinese region as a member of a marine infantry unit sent to Saigon in 1869. Returning as a civilian in 1871, he became a telegraphist, first in Cochin China (southern Vietnam) and then in the isolated Cambodian coastal settlement of Kampot. There he developed a fascination with the people and languages of the region that eventually led to his becoming the French vice consul in Luang Prabang in January 1887. His rescue of the king of Luang Prabang from an attack by Chinese and T'ai bandits in June 1887 forged a strong link between this ruler and Pavie. In the following decade this relationship was of great importance in helping France to assume colonial control of Laos at the end of the nineteenth century.

Pavie is best remembered for his remarkable record as an explorer of the Indochinese region. Between 1879 and 1895 he and his assistants undertook a series of expeditions that explored and mapped largely unknown territories in Cambodia, Laos, Thailand, and Vietnam, traveling in total some 90,000 kilometers. The results of these journeys of exploration, known as the *Mission Pavie* (Pavie Mission), were later published in ten text volumes and an atlas and remain important to the present day for students of history and ethnography. Returning to France in 1895, he retired from public service in 1904. Throughout the remainder of his long life Pavie retained an active interest in the countries of French Indochina, but he never returned there. He died in 1925.

During his posting to Kampot in the mid-1870s, Pavie immersed himself in Cambodian culture, hunting and fishing with villagers of the region and participating in their festivals.

Teaching himself Cambodian, he began a series of journeys through the country, always walking barefoot and wearing a characteristically wide-brimmed hat that became his personal trademark. During his period of employment as a telegraphist, Pavie had supervised the construction of a telegraph line running from the Cambodian capital, Phnom Penh, to Kampot. This brought him to the attention of the governor of Cochin China, Charles Marie Le Myre de Vilers (t. 1879–1882), who gave Pavie permission to begin his first official mission, mapping a journey from the Gulf of Thailand to Cambodia's Great Lake (Tonle Sap) and then to the Mekong River. With this task successfully completed, Le Myre de Vilers commissioned Pavie to oversee the construction of another telegraph line, from Phnom Penh to the Thai capital, Bangkok. By this time Pavie's talents had become widely recognized, and in 1886 he was appointed a member of the French diplomatic service and posted to Luang Prabang. He was later French consul in Bangkok at the time of the Paknam Incident (1893), an event leading to Thailand's ceding control of Lao territories to France.

From 1879 to 1895, Pavie and forty associates carried out the remarkable series of expeditions that formed the basis for the eleven-volume publication *Mission Pavie en Indochine, 1879–1895*, published in Paris between 1898 and 1904. Pavie was the driving force behind this remarkable compilation. His appearance belied his energy. Writing of him in the 1880s, a French officer observed: "At first glance his appearance was against him. Thin, with a sickly appearance, below average height, he said of himself that he had the air of being a weak individual." But the same commentator went on to note that "beneath this appearance of physical weakness, there was a wealth of intelligence put to work with an energy and a strength of will without equal" (de Séménil 1900: 52–53). He showed this energy and strength repeatedly in his long journeys on foot and by elephant, or down the Mekong River by raft.

Despite claiming that he had achieved his aims in the Indochinese region through "the conquest of hearts," the title of his autobiography published in 1921, Pavie was a convinced colonialist, a man of his time. He had no doubts about the superiority of European civilization or the desirability of imposing French control

over the peoples of Indochina. What distinguished him from many others was his capacity to understand the values of the exotic societies in which he moved. Some of his descriptions and assessments of the Cambodian court, for instance, provide insights that few of his contemporaries were able to match. As a commentator and explorer, Pavie remains a major figure in the early “heroic” years of French colonialism in Indochina.

PEASANT UPRISINGS AND PROTEST MOVEMENTS IN SOUTHEAST ASIA

Southeast Asian history is replete with examples of resistance against political authority and representatives of government, including both anticolonial protests and rebellions against indigenous rulers and elites. Uprisings have varied considerably in their character, organization, scale, and duration, and have resulted from a complex combination of factors and processes. At one extreme were sporadic, localized, and sometimes violent religious reactions to perceived injustices and to cultural crises that often flared up suddenly and were rapidly suppressed.

At the other end were large-scale, coordinated, prolonged rural-based uprisings with clear political and economic objectives that were usually led by provincial and urban elites and that posed substantial political and sometimes military threats to colonial regimes. The range of expressions of resistance—from millenarian, nativistic, and revivalist movements to secular protests—defies simple explanation and demands detailed research. The former were led by folk prophets, or by local Muslim, Buddhist, or Christian religious leaders who foretold a “golden age” of plenty and prosperity. Political leaders with defined programs of revolution or reform staged secular opposition.

It was probably the distinguished U.S. scholar Harry Benda (1965) who was the first to attempt to place peasant uprisings in Southeast Asia in a more general conceptual framework and to draw attention to the problems that the study of anticolonial rural resistance poses for the historian. His comments are of particular importance because he raised issues about the study of what was referred to in the historiography of Southeast Asia as “Asiacentric” or “domestic history”—or in John Smail’s words, “autonomous history” (1961). In other words, it is the study and writing of history that place Southeast Asians center stage and examine the lives of ordinary people and the interpretation of their history from a local perspective.

Until the 1960s the Southeast Asian historical tradition had focused primarily on political centers and elites, and on European activities and colonial administrations in the region. Here Benda refers to two main problems in the historical study of the peasant masses. First is the lack of recorded historical information on rural lives; second is the marked tendency for historians to accord the main roles in the making of history not to ordinary people but instead to those, whether native or European, who wielded or struggled for power and exerted influence in the court centers and capital cities. Nevertheless, despite the difficulties in gathering data on rural communities, the 1960s and 1970s witnessed a surge of interest in the writing of the social, economic, and political history of the Southeast Asian masses and a shift away from “court history,” “colonial history,” and “nationalist history.”

Importantly, this change in emphasis was also accompanied by the increasing contribution of

social scientists, particularly political scientists and anthropologists, to the study of rural history and the adoption of theories and perspectives from the social sciences on rural social and cultural organization and on processes of social transformation. Colonial records were sifted, pieced together, and reinterpreted, and hitherto neglected sources were accessed to provide information on rural communities; wherever possible, researchers also collected oral histories and interviewed informants on peasant uprisings of the recent past (Kerkvliet 1977).

One of the first general surveys of agrarian revolt in Southeast Asia was provided by Erich Jacoby (1961 [1949]). However, the detailed study of specific uprisings got under way in earnest from the mid-1960s and was marked by particularly fine pieces of work by two historians: Kartodirdjo Sartono's examination of the Banten peasants' revolt in West Java in 1888 (1966), followed by his more general consideration of agrarian radicalism in Java (1973), and David Sturtevant's series of studies of Philippine protest movements from the mid-nineteenth century (1966, 1969), which were brought together in a general study of popular protest from 1840 to 1940 (1976). Given the more intensive presence of the colonial powers in certain parts of Southeast Asia, these subsequently became "seedbeds of peasant unrest" and generally received the most attention from researchers (Scott and Kerkvliet 1973: 241). Such regions include Central Luzon, Lower Burma, the Mekong and Tonkin Deltas in Vietnam, and large parts of Java.

One of the main preoccupations of students of rural protest, aside from attempting to understand the characteristics of peasant movements, was the underlying reasons for resistance and the complex processes that had resulted in expressions of discontent. Sartono, for example, stated firmly that "agrarian unrest cannot be satisfactorily explained by placing undue stress upon any one factor. . . . [It] can only be explained by a combination of separate causes" (1973: 3). Not unexpectedly, research focused heavily on the social, economic, political, and cultural changes that had been wrought during the colonial period. The most sophisticated analysis of these changes was undoubtedly that presented by James Scott, in his concept of peasant "moral economy" (1976), though his work owes much to the inspiration of Eric Wolf

(1969) and E. P. Thompson (1966). Scott's analysis of the Saya San (Hsaya San) rebellion in the Irrawaddy Delta region of British Burma and the Nghe-An and Ha-Tinh "Soviets" in the northern Annam region of French Indochina led to an enormous outpouring of research on rural unrest in Southeast Asia. Some of it illustrated the validity of Scott's thesis, as in Benedict Kerkvliet's detailed study of the Hukbalahap rebellion in Central Luzon (1977), while other commentators such as Samuel Popkin, in his own examination of Vietnamese anticolonial protest (1979), presented detailed criticisms of Scott's "moral economy" perspective.

A summary of Scott's concept will permit a consideration of the importance of his insights and the ways in which alternative perspectives place emphasis on those aspects of peasant protest that Scott has tended to neglect or underplay. Scott starts from the concrete material circumstances of rural livelihood, specifically the characteristics of peasant subsistence economy. He then links these with various social, cultural, and technical arrangements designed to enhance the chances of a peasant household or family meeting its basic material requirements of existence and lessening the risks of its not meeting them, or averting the risks altogether. He therefore identifies a crucial and overriding concern for certain sectors of the peasantry in Southeast Asia and elsewhere—namely, "the desire for subsistence security" or, alternatively, "the fear of dearth" (1976: vii, 6).

Scott's historical focus is captured appositely in his statement that "the transformation of land and labor (that is, nature and human work) into commodities for sale had the most profound impact. Control of land increasingly passed out of the hands of villagers: cultivators progressively lost free usufruct rights and became tenants or agrarian wage laborers; the value of what was produced was increasingly gauged by the fluctuations of an impersonal market" (ibid.: 7). What is more, the colonial state contributed directly to this process: "Not only did it provide the legal and coercive machinery necessary to ensure that contracts were honored and the market economy retained, but the state was itself a claimant on peasant resources. Much of its administrative effort had been bent to enumerating and recording its subjects and their land for tax purposes" (ibid.: 8). Scott analyzes these processes specifically in

relation to so-called depression or tax rebellions in 1930–1931 in regions of Southeast Asia where the economic deprivation resulting from colonial agrarian policies was especially acute.

The Saya San rebellion, for example, which erupted in December 1930 at the height of the Great Depression (1929–1931), spread rapidly through large parts of the Irrawaddy Delta and lasted until mid-1931. With the collapse in rice prices, mounting debts, and loss of land, peasant cultivators directed their anger at British head and land taxes (*ibid.*: 150–151). Nevertheless, the movement also drew on the ideology of folk Buddhism, and established a cult of invulnerability, with amulets, oaths, and other protective devices. Its prophet and leader, Saya San, claimed to be both the *Setkya-min*, the vengeful ruler of Burmese traditions, and the *Buddha Yaza*, the divinely ordained creator of a Buddhist utopia (*ibid.*: 149–150). The mobilization of large numbers of peasant cultivators was also enabled by the leading roles that village headmen and monks (*pongyis*) played in organizing the rural protests.

Widespread rebellion in Nghe-An and Ha-Tinh in central Vietnam during roughly the same period was rather different in character. As in Lower Burma, protest was closely associated with the deteriorating economic conditions, but the scale of the protest was due in no small measure to the organizational abilities and involvement of the Indochina Communist Party (*ibid.*: 142–149). Nevertheless, this region of northern Annam also had a long tradition of popular protest and, despite modern political party involvement, many peasants continued to follow local cultural traditions and practices. Kerkvliet too, in his detailed study of the Hukbalahap unrest and its antecedents, which emerged in Luzon in the 1930s and raged off and on until the 1950s, employs a “moral economy” framework. He argues that “a major cause for the unrest was the dramatic deterioration of traditional ties between local elites and peasants” and the loss of the protection, sponsorship, and financial assistance that those ties afforded following the development of absentee landlordism and capitalist agriculture (1977: 250).

Although Scott and Kerkvliet do identify some of the mainsprings of peasant discontent, two important considerations in evaluating their work are, first, the extent to which their

findings are generalizable, especially with regard to their concentration on poor peasants and tenants, and second, the degree to which their emphasis on “traditional” values, behavior, and relationships based on the principles of reciprocity and the right to subsistence appropriately captures the nature of rural society in Southeast Asia. Popkin, in his critical commentary on the moral economists, accepts that peasants are preoccupied with security and “the constant threat of falling below the subsistence level”; indeed, some of his data support Scott’s argument (1979: 5, 145–154, 156–157, 165, 182). But contrary to Scott, he argues that the small-scale cultivator, rather than being cooperative, collectivist, and altruistic, is “a rational problem-solver, with a sense both of his own interests and of the need to bargain with others to achieve mutually acceptable outcomes” (*ibid.*: ix). Thus, “exchanges between peasants are shaped and limited by conflicts between individual and group benefits” (*ibid.*: 4). Popkin then sees individual farmers as rational, self-interested strategists, risk-takers, and gamblers motivated by personal gain and applying “investment logic” to short- and long-term as well as public and private investments. He maintains that traditional rural life in Southeast Asia was far from being rosy and harmonious; rather, welfare and insurance arrangements were imperfect and limited, patrons were not essentially paternalistic, and village-based practices and arrangements reinforced rather than leveled social inequalities. Furthermore, local farmers, particularly the better off among them, manipulated and even rejected some colonial decrees in order to maintain former patterns of inequality and exploitation. For Popkin, exposure to a money economy and markets was not necessarily disadvantageous to the peasantry. What Popkin does demonstrate, in his use of examples of peasant responses to change in colonial Vietnam, is that Scott’s framework does not apply to peasant society and peasant movements generally. It is much less relevant to those forms of rural protest that were forward-looking, well organized and led, firmly established, institutionalized, supralocal, and involving richer peasants and other members of the rural and urban elite. These forms, rather than constituting defensive and restorative actions in relation to “traditional” sociocultural values and practices, sought to remake, transform, or replace el-

ements of the local social and cultural order, to grasp the new opportunities on offer, and to engage with capitalism and the market (*ibid.*: 17–31). Popkin concentrates on four antifeudal movements that looked to construct a new Vietnam: the Hoa Hao and Cao Dai religions in Cochin China, the Catholic Church, and the Communist Party. All of them sought to attract rural dwellers to their cause and build a power base by breaking the dependence of the peasantry on landowners and village patrons, and by using their political skills and bureaucratic connections to provide ordinary villagers with alternative means of support and security (1979: 184ff.). Importantly, these movements comprised both rural and urban elements, and leaders emerged from the educated ranks of provincial and urban elites.

Aside from Scott's focus on economic imperatives and material security, and Popkin's interest in peasants as rational risk-takers and in the leadership, political competence, and organizational abilities of peasant movements, historians such as Sturtevant and Sartono draw attention to the specifically cultural and religious dimensions of rural protest. They serve to remind us of the multidimensional character of peasant uprisings and the difficulties of establishing cause and effect in complex historical processes. In his detailed study of Javanese agrarian radicalism, Sartono, while recognizing that some uprisings, which he calls "anti-extortion movements," were clearly prompted by strong economic grievances, suggests that other responses had a much more "messianic" or "sectarian" character and seemed to be primarily religious reactions to colonial intervention (1973: 15–16). In the case of millenarian movements, the emergence of a messiah or prophet with a message of salvation seems to have been generated principally by profound cultural antagonisms rather than economic discontent. In addition, sectarian movements or revivalist and nativistic cults, which tended to be much more oriented to otherworldly concerns than millenarianism, were directed mainly by religious goals; they aimed to revive and regenerate traditional cultural (including religious) values and practices. In other words, when long-established cultural traditions, essential to the identity and integrity of rural communities, were considered threatened by the actions of an external political power, that was sometimes suffi-

cient cause to spark a response. The response could sometimes be violent and millennial in character, or sometimes passive and involving a withdrawal from and rejection of established society.

The sense of cultural deprivation as an important motivation in rural uprisings is explored directly in Sturtevant's studies of Philippine popular protest. He draws attention to the strength and persistence of the Philippine "hamlet dweller's turbulent tradition" and suggests that "nativistic" resistance was not primarily the result of increasing socioeconomic inequalities, tenancy, taxation, and loss of land. Indeed, between 1840 and 1930 there were very few if any movements "organized around purely economic symbols" (1976: 17). Instead, he argues, protest centered on "cultural alienation" and "profound conflicts between deep-seated peasant values and modern urban attitudes" (1969: 29–30); discontent focused on efforts to "revitalize" peasant traditions, and supernatural, mystical, and spiritual themes were frequently emphasized.

Examples of Philippine religious uprisings inspired the Guardia de Honor, a Catholic-based organization that emerged in northwestern Luzon in the 1870s and subsequently incorporated animistic elements and took an increasingly millenarian direction. In 1886 one of its leaders, Julian Baltasar, announced the approach of the Day of Judgment, when floods would sweep away corruption and evil and usher in salvation for the virtuous (Sturtevant 1976: 99). Similar mystical cults referred to under the general term "Colorumism" were widespread in the Philippines and developed rapidly from the later nineteenth century; they also combined Christian and animistic elements, practiced asceticism, and predicted an imminent apocalypse. Following an increase in tensions, a violent encounter between Colorum communities and the Philippine constabulary broke out in Mindanao in January 1924 (*ibid.*: 141–157).

In Java too, protest was closely intertwined with magico-religious beliefs and practices, and the institution of the Javanese "Just King" (Ratu Adil), the messiah who, following some kind of cataclysm, was thought to usher in a period of peace, justice, and abundance and deliver ordinary people from oppression. The leader of the movement would identify himself, or he was

identified by his disciples as the messiah; his position was legitimized by a process of inner conversion or divine revelation (Sartono 1973: 9,15). Javanese pre-Islamic beliefs were also sometimes intertwined with Islamic ones. Consequently, mystical movements also took on the ideology of a holy war (jihad) and were led by local Muslim religious teachers. Some of these leaders declared themselves to be the Mahdi, or Islamic messiah, who would appear at the end of the world and bring in a period of peace and righteousness.

Subsequently, however, with the increasing strength of indigenous nationalism and the development of modern political movements, rural protest began to be integrated into supralocal secular organizations in the early decades of the twentieth century. In Java, Sartono refers to these as local Sarekat Islam (SI) movements because, though some were still predominantly traditional in orientation, they came under the umbrella of a broad-based Islamic political movement that was pushing for realistic socioeconomic reform and Indonesian economic autonomy (ibid.: 141–151). In the Philippines too, the 1920s and 1930s witnessed a shift to much more secular, nationalist responses, such as Sakdalism, led by educated members of the urban-based native elite, though often mobilizing rural support by appealing to more “traditional” cultural and religious themes (Sturtevant 1976: 195–242). Nevertheless, religiomagical responses to the disruptive consequences of economic, cultural, and political change have never been far from the surface of Southeast Asian rural life. Even in the postwar period of political independence, there have continued to be reports from various parts of the region of the emergence of self-styled prophets and cult leaders who carry messages of hope and salvation for the poor and oppressed.

PEGU**Traditional Stronghold of the Mon**

Pegu, also known as Hanthawaddy, Hamsavadi, or Ussa, was the traditional seat of Mon power in Lower Burma, until its final destruction by King Alaungpaya (Alaung-hpaya) (r. 1752–1760), founder of the Konbaung dynasty (1752–1885), in May 1757. It was the capital of a Mon polity from 1369 to 1539, capital of a united Burma under the First Toungoo dynasty (1486–1599) until its destruction in 1599, and again capital of a resurgent Mon polity from 1740 to 1757. Its fate in Burmese history has been integral to the story of the Mon in Lower Burma.

Pegu emerged as the center of a polity in Lower Burma following the eclipse of the polity at Pagan after the Mongol incursions (1283–1287). A Shan, Wareru (r. 1287–1296), brother-in-law to King Ramkhamhaeng (r. 1279–1298) of Sukhothai, held power in Lower Burma, which during the mid-fourteenth century may have been aligned to Siam, if not a vassal state of Siam. The rise to dominance by the Pegu polity is associated in the early fifteenth century with the rule of Razadarit (r. 1385–1423), who brought the city-states of Lower Burma—Pegu, Bassein, and Martaban—into close alliance. During his reign he engaged in military excursions against the Burmese kings of Ava, particularly Mingyiswasawke (r. 1368–1401) and his son, Minkhaung (r. 1401–1422). Exhaustion on the part of both antagonists brought hostilities to a halt in 1417. Pegu's rise to prominence was aided by its proximity to the international trading routes and engagement in maritime commerce.

While Upper Burma at this time was beset with internal troubles, Lower Burma based at Pegu enjoyed a golden age of commercial prosperity and cultural development, attracting European merchants to its markets. One of these, Nicolo di Conti, a Venetian who visited Pegu in 1435, described Pegu as a great urban center 19 kilometers in circumference. In 1496 a Russian merchant, Nikitin, and a Genoese merchant, Hieronymo Santo Stefano, visited Pegu, the latter describing the king at the time, Binnya Ran (r. 1492–1526), as “a great lord who possesses more than ten thousand elephants” (Khin Maung Nyunt 1998: 19). Since he could not visit Ava, with which the city-state of Pegu was at war, Stefano sold his cargo to the king of Pegu, who purchased it for 2,000 ducats. Another visitor, Lu-

dovico di Varthema, a jeweler of Bologna who visited in 1503–1504, was awestruck with the rubies and gems, gold and precious stones he saw at the court of Binnya Ran and with the king's generosity in offering the visitors a handful of rubies. Through Pegu went the forest products, ivory, herbs, lac, musk, pottery, and “Martaban jars” used for storing wine, to the wider markets of international trade.

King Dhammazedī (r. 1472–1492), a former monk and advisor to the previous queen Sawlu (r. 1453–1472), initiated a religious and cultural revival. Recent research by Michael Aung-Thwin credits King Dhammazedī (or Dammaceti) with creating the “Mon Paradigm”—namely, that Theravada Buddhist culture and script were transmitted to the Burmese at Pagan via Thaton in 1057, by displacing the sacred geography, genealogy, and chronology of Buddhist India to Lower Burma in his Kalyani inscriptions (Aung-Thwin 2001). It was this fame as a cultural and commercial center that attracted the Portuguese viceroy in Goa, when the Portuguese entered the Indian Ocean trading sphere after 1498, to send an embassy to Pegu in 1511 headed by Ruy Nunez d'Acunha. After the Portuguese seizure of Melaka in 1511, they sought to extend their trading linkages with Lower Burma, sending Andrea Correa there in 1519 to negotiate a commercial treaty with Martaban, one of the vassal states of Pegu.

Pegu was, by the mid-sixteenth century, a wealthy polity based on the revenues of international trade. When Upper Burma, under the house of Toungoo, reorganized its resources, the stage was set for a new confrontation between Upper and Lower Burma. It is more accurate to view this contest as one for the resources and revenues of maritime commerce than as an ethnic conflict. As Victor Lieberman (1978) has shown, in the conflicts of the fifteenth to eighteenth centuries, there was no clear-cut Mon-Burman division: Mons fought loyally for Burmese leaders, and Burmese sided with Mon rulers in Pegu. Nor was ferocity limited to one side: the battle was hard fought, and no quarter was given by either.

Pegu in 1539 was the site for one of the coronations of King Tabinshweihti (r. 1531–1581), second king of the First Toungoo dynasty, who, in uniting Upper and Lower Burma, elected to have dual coronations, one at

Pegu and one at Pagan. Under his successor, Bayinnaung (r. 1551–1581), of *cakravartin* status (exhibition of righteous moral behavior), the Burmese empire extended across all mainland Southeast Asia from Manipur to Laos. Pegu was made the most brilliant capital, attracting merchants from many lands. It was the dominant port in the region. Caesar Federici, a European traveler who visited in 1569, described Pegu's wealth and beauty. His arrival was during the beginning of the reign of Bayinnaung, and he chanced to witness the king's triumphant return from his victory over Siam. In 1576, Bayinnaung was reputed to have built seven ships carrying some 2,500 men and sent them on an expedition to Sri Lanka (Ceylon). Much of Pegu's wealth went to adorn the famous temple, the Shwe Maw Daw, the new palace of Bayinnaung, and the new city he ordered built as testimony to his prowess. Craftsmen and artisans from the conquered states of Chiang Mai (1558) and Ayutthaya (1564–1569) were deported to Pegu to lend their skills and art in royal construction projects. The grandeur of these structures was described by Federici, and echoed by Casparo Balbi, who visited in 1583–1584 during the following reign.

But civil war during the reign of Bayinnaung's son, Nanda Bayin (r. 1581–1599), and the attacks by the Arakanese and their Portuguese and Burmese allies, laid waste the city and the delta in 1599. The great palace, Kamboza Thadi, was burned. By the time King Anaukpetlun (r. 1605–1628) of the "Nyaungyan dynasty" could rout the invaders and kill the Portuguese Felipe de Brito, self-styled king of Syriam, in 1613, the delta was impoverished. It prompted the English captain Peter Floris, who saw the comparable conditions of Lower Burma and Lower Siam during his round-the-world voyage in 1611–1615, to comment that Siam had "comme uppe again," after being eclipsed by Pegu in the past.

King Thalun (r. 1629–1648) was crowned at Pegu but moved the capital back to Ava in Upper Burma in 1635, a prelude to his far-reaching administrative reforms, which sought to rejuvenate the finances of the kingdom. For the remaining period of the Restored Toungoo dynasty, Ava remained the center of power.

Lying on a fault line, prone to earthquake (such as the one that struck the Shwe Maw Daw in 1931), Pegu, in Dr. Khin Maung

Nyunt's view, had "become geopolitically obsolete" (Khin Maung Nyunt 1998: 31). Furthermore, its access to the ocean had become impeded by silting of its waterways, and trade consequently moved to neighboring ports, such as Patein, Dalla, Syriam, Tavoy, Mergui, and Tenasserim.

Pegu again challenged Ava for supremacy in the eighteenth century as the dynasty weakened. In 1740 the Mon at Pegu rose in revolt against the resource and taxation demands of the monarchs. In 1752 the Mon sacked Ava, deporting its king and most of the royal princes, of whom only two managed to escape. A conspiracy to restore the captive Toungoo king, Mahadammayazadipati, "the king who came to Hanthawaddy," instead ended with his execution and that of his supporters in 1754. It ultimately led to central Burma's deserting Pegu to throw its support behind the new Burmese *minlaung*, charismatic leader Alaungpaya. In a series of campaigns to unite the Burmans, Alaungpaya in 1756 cut off the source of foreign arms and reinforcements to Pegu, and seized Syriam and the delta. In 1757 he invaded and razed Pegu, putting to death the last king of Pegu, Binnya Dala, hence ending Pegu's history as a center of power.

Pegu today is a small rural town where the remains of Bayinnaung's royal palace testify to its glorious past. The province of Pegu, or Bago, is some 37,500 square kilometers in extent, with a population of about 5 million people (Hla Min 2001: 99). It is the center of an agricultural-industrial area that produces cotton, sugarcane, tapioca, crude oil, natural gas, rubber, teak, porcelain, and some light industrial products. Its religious center and symbol of former glories remains the Shwe Maw Daw pagoda.

PENAL SETTLEMENTS IN SOUTHEAST ASIA

Between 1787 and 1860, the British transported tens of thousands of South Asian convicts overseas to penal settlements in Southeast Asia: Bencoolen (1787–1825), Penang (1790–1860), Melaka and Singapore (1825–1860), and various sites in Burma, including Arakan and the Tenasserim provinces (1828–1862). For a brief time (1847–1856) a much smaller number of convicts were transported from Hong Kong to Singapore.

Over 95 percent of the convicts shipped to Southeast Asia were men. Most had been convicted of serious crimes, such as murder, robbery, or *dacoity* (gang robbery), and were serving life terms. Nearly all the convict women were transported for the crimes of murder or infanticide. Others were transported for anti-British resistance. These included several hundred *adivasi* (tribal) santhals from Bengal, transported for their part in the 1855 *Húl* (rebellion). The British also transported more than a thousand Indian *thugs* (supposed ritual murderers) during their anti-thuggee campaigns in the mid-nineteenth century. Convicts came from all socioeconomic backgrounds, though the majority were poor Hindus. The largest proportion of convicts was from the Bengal presidency, but convicts came from all over India and Ceylon (Sri Lanka). The British be-

lieved that Indians particularly feared transportation, owing to its impact on caste purity. It was widely believed that the crossing of the *kala pani* (black waters, or the sea) in a *jatha juna* (living tomb, or convict ship) was a worse punishment than death.

During the early years of transportation, convicts satisfied labor demands in new British territories and built much of their infrastructure. Indeed, convicts were transported overseas only when there was a demand for them. It was the Southeast Asian authorities, rather than India, that controlled convict supply. Most convicts were put to work at hard labor, in land clearance, road building, and other public works. Others were employed in skilled labor as brick makers, blacksmiths, weavers, gardeners, and printers. From the mid-1820s, the treatment of convicts changed. Convicts were not simply to be punished through hard labor, but trained and reformed. Some remarkable convict-built structures still stand, such as St. Andrew's Cathedral, Singapore (completed in 1862). When F. J. Mouat, inspector general of prisons, Bengal, visited the Straits Settlements in 1861, he declared that the penal settlement there was the most remarkable example of the successful industrial training of convicts in the world.

The changing nature of convict labor was reflected in organizational changes. Until the 1820s, discipline was relatively slack. The first set of convict regulations was not produced until 1824, when Stamford Raffles (1781–1826) devised the Bencoolen Regulations. These had strong parallels with the carrot-and-stick management system already in place in the Australian convict colonies, and they formed the basis of later convict regulations (such as the Penang Rules [1827] and Butterworth Rules [1860]). Convicts were divided into classes, according to length of sentence, time in the settlement, and conduct. The system rewarded convicts for good behavior and punished them for misdemeanors. The prospect of a ticket-of-leave (probation) was held out to all convicts. Meanwhile, convicts who behaved well might receive a gratuity or rise to the position of petty officer. Recalcitrant convicts could be downgraded or punished with flogging or labor in irons.

As only scattered records survive, it is difficult to estimate the total number of convicts sent to the penal settlements in Southeast Asia. Sandhu (1966) and Rajendra (1983) put the

figure at around 15,000. Yet, given that almost 900 convicts were transported to the Indian Ocean colony of Mauritius (together with Aden, another destination for Indian convicts) from Bengal alone from 1815 to 1817, this seems an underestimation. Before 1859, time-expired convicts were not provided with a return passage to India. As a result, most settled in Southeast Asia and married local women. In the Straits, they formed the majority of the *Jawi-Pekan* (Indo-Malay) community. Their influence was particularly strong in Penang, which was a mainly Jawi-Pekan settlement until the second half of the nineteenth century.

After the 1857 Indian Uprising (Indian Mutiny) in India, European residents in the Straits Settlements began to regard convicts as a threat to security. By 1860 transportation to the Straits had mostly ended, though by 1864 there were still more than 3,000 convicts there. In 1873 the penal settlement was abandoned, though approximately 1,800 convicts still remained. The authorities granted pardons to some surviving convicts. Ticket-of-leave holders were permitted to merge into the population; the infirm were maintained at government expense. The few Hong Kong convicts still in the Settlements were returned to Hong Kong to serve out their sentence. At the same time, convict transportation to Burma also came to an end. The remaining Indian convicts were transferred to the Andaman Islands, which had been established as a penal colony in the wake of the 1857 Indian Uprising. An earlier attempt at turning the islands into a penal colony (1793–1796) had failed.

PENANG (1786)

First British Outpost in the Straits of Melaka

Established in 1786, Penang was the first British outpost that subsequently facilitated the creation of "British Malaya"—namely, British colonial rule over the Malay Peninsula (present-day West Malaysia) and Singapore. A combination of motives (economic, political, and military), coupled with the pivotal role played by an English country trader, led to the settlement of Penang.

The need to protect the English East India Company's (EIC) lucrative China trade in luxury goods (tea, silk, porcelain) and to safeguard British military and strategic interests in the Bay of Bengal and the Straits of Melaka subsequently made the EIC undertake steps to secure Penang. Francis Light (1740–1794), an English country trader, had actively traded at Junk Ceylon (Ujung Salang, present-day Phuket) in southern Siam (Thailand), and along the Kedah coast. The Malay rulers of Kedah—Muhammad Jawa (1710–1773) and Abdullah Muharum Shah (1773–1798)—were willing to cede territories in return for British protection against their enemies—namely, their overlord, Siam, and Burma (Myanmar). By 1785 the EIC had intensified its search for a suitable commercial-cum-naval base. The geopolitical situation then in Southeast Asia witnessed the increasing as-

pendency of Dutch hegemony over the Malay Archipelago; French ambitions in Burma, Annam, and Cochin China; and Austrian interest in Aceh, alarming the EIC. Meanwhile Sultan Abdullah was equally anxious to seek military assistance against his Siamese overlord. Siam was on the verge of being invaded by Burma.

Against this background Light then requested Penang from Sultan Abdullah in return for EIC protection against his enemies and compensation in lieu of the loss of trade. He acted as the sultan's *wakil* (representative) to represent his wishes to the EIC at Calcutta. But Light did not faithfully represent the sultan's views; instead, he was economical of the truth, and certain points were misrepresented. Calcutta was agreeable to the sultan's conditions as intimated by Light, but awaited the decision on military protection and the amount of financial compensation pending a decision from the EIC directors in London.

Meanwhile the EIC appointed Light as superintendent of Penang. Not heeding warnings from Sultan Abdullah that he should not land in Penang pending the decision from London, Light took possession of the island in August 1786. Subsequently two treaties were signed between Kedah and the EIC (1791 and 1800) that formally brought Penang and the mainland territory, Province Wellesley, under British control.

Following the Battle of Trafalgar (1805), the French threat abated. But what was essential of Penang as a naval base was to ensure the protection of British merchant ships in the China trade from piracy. Plans were under way for a naval dockyard, a fort, and a fleet from 1805. In that same year Penang was elevated as the fourth presidency of India, with a governor heading an expanded administration. But shortly thereafter the viability of Penang as a naval base was in doubt. Obstacles like the chronic shortage of hardwood timber and the unhealthy malarial swampland proved insurmountable. All plans for a naval base were dashed when the Admiralty and the EIC directors withdrew their support in the years following 1810.

The British in Penang sought to check the extension of Siamese influence in the Malay Peninsula. The missions undertaken in 1826 resulting in the Burney Treaty and Low Treaty succeeded in limiting Siamese hegemony over the Malay States, particularly that of tin-rich Perak.

In 1826 the three British settlements of Penang, Singapore (1819), and Melaka (1824) were united administratively as the “Straits Settlements.” Penang became its administrative capital. Despite the large volume of trade, owing to “free port” status and the British free trade policy, the Straits Settlements were unable to meet their own administrative costs and had to rely on the Indian government. In 1830 the Indian government decided to lessen the financial burden by relegating Penang, and in turn the Straits Settlements, to a residency under the presidency of Bengal. In 1832, Singapore replaced Penang as the capital.

Situated in the northern part of the Straits of Melaka, Penang could not match Singapore’s strategic focal position in the Malay Archipelago and the command of the east-west shipping route between China and Europe via India. Penang’s city-port of George Town was the port-of-call of the lucrative British China trade, the center of the regional pepper trade, a principal exporter of tin, a base for tin smelting, and a port for rubber exports. Efforts to transform Penang into a “second Moluccas” failed as disease and the market worked against a successful spice plantation sector. However, the sugar plantations in Province Wellesley proved viable and profitable.

In 1867, Penang, Melaka, and Singapore became Crown colonies under the direct control of the Colonial Office in London. Penang remained a Crown colony until incorporation into the Malayan Union in 1946, then became part of the Federation of Malaya in 1948 and Malaysia in 1963. During the late 1940s the Penang Secessionist Movement unsuccessfully lobbied against participation in the Federation of Malaya, arguing that Penang would lose out economically and politically in a Malay-dominated federation.

From its beginnings Penang attracted an immigrant population from the neighboring territories and from afar. Penang became home to Malays, Chinese, Indians, Eurasians, Europeans, Achenese, Javanese, Boyanese, Bugis, Arabs, Siamese, Burmans, Japanese, Armenians, and Jews. The predominant settlers, however, were the Chinese, including the eclectic Baba Nyonya community. Each ethnic group brought with them their unique customs and traditions, characteristic lifestyles (attire, food), colorful celebrations, and religious observances and rituals.

Penang offers a living example of blissful coexistence in a multiethnic and multicultural society.

PENANG FREE SCHOOL (1816)

Earliest English-Medium School in East and Southeast Asia

The Penang Free School was the premier educational institution in British Malaya and continues to be one of the most outstanding government schools in present-day Malaysia. Established in 1816, it was the first English school in Southeast and East Asia. The idea of an English-language school in Penang was mooted and earnestly pursued by the Reverend R. S. Hutchings, the colonial chaplain of Penang. “Free” meant that the school was a secular institution welcoming all children, irrespective of race, religion, creed, or socioeconomic status. Merit-based scholarships were given to deserving students.

The English East India Company (EIC) government granted a piece of land in George Town for a schoolhouse. The school building on Farquhar Street was completed in 1906. Meanwhile the school operated from one of

1050 Penang Secessionist Movement

the Chinese shophouses along Love Lane before moving into the handsome two-story building along Farquhar Street in 1907. In 1927 the school moved to its current premises in the southern suburbs of Georgetown.

Penang Free School began its career on 21 October 1816 with several male pupils. By 1824 there were 104 boys of various ages on the rolls. Plans for a school for girls, vernacular education (Chinese, Malay, and Tamil), and vocational education were aborted within a few years of establishment because of poor response. The demand from the very start was for an English-language school for boys.

Modeled after English public schools in England, Penang Free School emphasized academic excellence, the building of character and discipline, and fair play on and off the playing field. A string of English headmasters and teachers steered the predominantly Chinese student enrollment. Outstanding performance was recorded in public examinations (Junior Cambridge, Senior Cambridge), and its pupils almost monopolized the highly coveted Queen's Scholarship for tertiary education in Britain during the pre-1941 period. Football (soccer), rugby, cricket, hockey, badminton, swimming, and athletics were popular among the boys.

Prominent personalities numbered among the old boys of the school include Tunku Abdul Rahman Putra Al-Haj (1903–1990), the architect of Malaya's independence (1957), proponent of "Malaysia" (1963), and its first prime minister (1957–1970). The Old Frees' Association (OFA) has chapters in Kuala Lumpur, Singapore, and London.

Penang Free School continued its tradition of excellence during the postwar (1945) period. As in all English-language schools in independent Malaya/Malaysia, the Malay language replaced English as the medium of instruction. Scholastic achievement and glories in sporting activities remained the forte of Penang Free School.

PENANG SECESSIONIST MOVEMENT (1948–1951)

Failed Attempt at Separation

The primary objective of the Penang Secessionist Movement was that Penang refrain from joining the Federation of Malaya (1948). Instead, Penang should continue as a British Crown colony of the Straits Settlements with ties within the British Empire.

Led by the Penang Straits Chinese British Association (SCBA) and the Penang Chinese Chamber of Commerce, the Penang Secessionist Movement was supported by the majority of the professional and business elite of Europeans, Eurasians, Indians, and Indian Muslims. Straits Chinese leaders, particularly Heah Joo Seang, played pivotal roles.

Economic grievances and political anxieties were the chief concerns of the secessionists. They feared that Penang's commercial and trading interests would be adversely compromised in favor of the peninsular Malay States. Other anxieties arose over the possibility that Penang's free-port status, which was vital to its entrepôt economy, would be abolished. There were fears that Penang would be politically submerged by a Malay-dominated federation, fears that were already evident in the unequal citizenship proposals and the privileged access of Malays to education, scholarships, and the civil service.

Although European members of the movement emphasized the status quo, Straits Chinese leaders considered secession only as the last resort, favoring the inclusion of Singapore in the federation to counter the ethnic ratio and prevent a Malay domination. Only if unsuccessful, the Straits Chinese then proposed secession and joining Singapore in a resurrected Straits Settlements.

In December 1948 the Penang Secession Committee was set up. Its motion for secession was defeated at the Penang Settlement Council in February 1949. A petition to the Colonial Office forwarded in November 1949 and the face-to-face meeting with the secretary of state for the colonies in Penang in May 1950 did not produce favorable outcomes.

The British government, in its formal response of 19 September 1951 to the petition, rejected the demands, stating that Penang should resolve its grievances through negotiations within the federation itself. The British were reluctant to jeopardize the restored Anglo-Malay relations following the Malayan Union (1946) debacle. Moreover, the Emergency (1948–1960), a Chinese-led leftist insurgency, strongly dissuaded the British authorities from alienating vital Malay support in the event of a concession to the appeals of the Penang secessionists.

Thereafter the Penang Secessionist Movement withered away. A new era of interethnic consultations was beginning to develop with the formation of the Communities Liaison Committee (1949). The inauguration of the Malayan Chinese Association (1949), a pan-Malayan Chinese organization, by Tan Cheng Lock (1883–1960) of Melaka preempted the parochial demands of the Penang secessionists. A new Sino-Malay consensus was in the making that encompassed the fate of the entire Federation of Malaya.

PEOPLE'S ACTION PARTY (PAP)

Singapore's Durable Ruling Party

The People's Action Party, which has won every election since forming the government in 1959, is the dominant political force in Singapore and has enjoyed a continuity of gover-

nance that is rare among democratically elected governments. Under its rule, Singapore has been transformed from a turbulent colonial outpost into a modern and economically vibrant city-state.

The PAP was founded on 21 November 1954 by a group of professionals and trade unionists. From its beginning, the party was divided between two factions, with the noncommunist moderate faction, led by Lee Kuan Yew (1923–), and a procommunist radical faction, led by Lim Chin Siong (1933–). They were united only by their common objective of desiring an end to British colonial rule. Both factions initially needed each other. The moderates, many of them English-educated, needed the mobilizing skills of the radical group to attract mass support for the PAP, especially among the largely Chinese-educated population. The procommunists, on their part, needed a left-wing political party to provide cover for their subversive activities after the outlawing of the Malayan Communist Party (MCP) in 1948; they found the PAP willing to accommodate. In 1955 the PAP entered the electoral fray and won three of the four seats it contested. Lee Kuan Yew, its secretary-general, became de facto opposition leader.

As prospects for self-government brightened in 1957 after constitutional talks in London, the power struggle within the party also became more intense, and in August the radicals through manipulation captured six of the twelve places in the PAP's Central Executive Committee (CEC), the party's highest decision-making body. The remaining six noncommunists refused to assume office, so as to avoid being associated with the decisions of the CEC. A timely security operation to foil a parallel communist attempt to capture the Singapore Trade Union Congress by the Labour Front government later in the month resulted in arrests. Five of the six newly elected procommunist members of the CEC were taken into police custody, thus paving the way for the moderate leadership to reassert their control. To prevent a similar recurrence, the moderate PAP leaders revised their party constitution in October to create two classes of membership: ordinary membership, which was open to all, and cadre membership, which was given only to proven members of the PAP. Henceforth, only cadre members were eligible to select the CEC.

The procommunist group was not prepared to break with the moderates and supported the PAP in the May 1959 elections, which saw the party sweeping the polls decisively to form the government. But new internal fissures soon surfaced. The first occurred in 1960 as a result of a challenge by the party's treasurer and minister of national development, Ong Eng Guan. Expelled from the party, Ong, who subsequently formed the United People's Party with two other defectors, convincingly defeated the PAP candidate for the seat he had vacated in a by-election in April 1961. The more serious challenge came from the procommunists over their opposition to the proposal by the Malayan premier, Tunku Abdul Rahman Putra Al-Haj (1903–1990), to form an expanded Malaysian Federation inclusive of Malaya, Singapore, and the British Borneo territories, a scheme welcomed by the moderates as the means for Singapore to achieve independence. Their sharp differences precipitated an open split within the PAP ranks, with thirteen assemblymen from the procommunist faction defecting in July 1961 to form the Barisan Sosialis, and leaving the moderate faction with a weakened presence in parliament. The PAP reestablished an electoral majority only after the 1963 elections, held on 21 September, five days after Singapore joined the new Federation of Malaysia, when it won thirty-seven of the fifty-one seats.

Conflict soon surfaced between the PAP and the ruling Alliance Party over differences concerning Singapore's role and position in the new federation. Twenty-three months of heightened political competition saw the Alliance campaigning in Singapore against the PAP and the latter contesting the 1964 federal elections in Peninsular Malaysia. Meanwhile, Sino-Malay riots erupted in Singapore, and the PAP-led Malaysia Solidarity Convention was formed. Finally, both sides reluctantly agreed to Singapore's separation in August 1965 to avoid a potentially racially charged and explosive situation.

Following separation the political position of the PAP consolidated considerably, and in the next four elections the party won every seat in parliament until it lost a by-election in 1981. In subsequent elections the PAP's dominant position remained unrivaled, largely because it has amassed immense credibility through its achievements and ability to deliver the goods, and because of the weakness of the opposition.

The PAP lost only two to four seats in the elections it contested from 1984 to 1997. Realizing the need to remain relevant and responsive, it has instituted a process of party and leadership renewal to appeal to the aspirations of a younger, better-educated, and informed population; in 1986 it started a youth wing (renamed Young PAP in 1993), followed by a women's wing in 1989.

PEOPLE'S INDEPENDENCE FRONT (BARISAN KEMERDEKAAN RAKYAT, BAKER) (1966)

A Rejuvenated PRB

The People's Independence Front, or Barisan Kemerdekaan Rakyat (BAKER), was the main political party in Brunei during the second half of the 1960s. Its principal goal was the eradication of the vestiges of British colonial authority in the sultanate.

BAKER was founded on 31 July 1966, following the union of two existing parties (the

Brunei People's Front and the People's Progressive Party), which had themselves been founded only earlier that year. BAKER aimed to achieve independence by constitutional means. It pledged loyalty to the sultan as Brunei's legitimate ruler and sought to uphold Islam as the official religion and Malay as the national language. The chairman was Pengiran Dato Haji Mohd Ali (1916–), an elected member of the Brunei District Council; the president was a former Partai Rakyat Brunei (PRB) activist, Awang Hapidz Laksamana. It was suggested, indeed, that BAKER was the old PRB incarnate, but in fact none of its objectives would be much out of place under the post-*merdeka* Melayu Islam Beraja (MIB) system, apart from the party's call for democratization. In January 1968, BAKER was jolted when Pengiran Dato Haji Mohd Ali lost a legislative council by-election in Temburong district. At nationwide elections later that year the party won only twenty-four seats out of the fifty-five on offer. The 1967 abdication of Sultan Omar Ali Saifuddin III (1914–1986) in favor of his son, Hassanal Bolkiah (1946–), had the effect of boosting popular allegiance toward the royal family; as a result BAKER achieved limited success in its attempts to rally majority support. In 1969 the party fell into further disarray after several leaders resigned. The Legislative Council was converted by royal decree into a fully nominated body in 1970. No further elections were held.

The focus of political activity shifted overseas to the PRB, which had been reactivated in 1974. There was a call for BAKER to be revived as a counterweight, but in reality BAKER was already defunct. In terms of personnel, however, there was some continuation in the Brunei National Democratic Party (BNDP), founded in 1985.

PEOPLE'S PARTY (THAILAND)

See Constitutional (Bloodless) Revolution (1932) (Thailand); Pridi Phanomyong (1900–1983)

PEOPLES' REPUBLIC OF KAMPUCHEA (PRK)

A Vietnamese-Sponsored Regime

The Peoples' Republic of Kampuchea was the Vietnamese-sponsored regime that governed Cambodia from 1979 to 1989. The PRK was established in January 1979, shortly after some 100,000 seasoned Vietnamese troops, in a blitzkrieg attack, had driven the preceding Cambodian government of Democratic Kampuchea (DK), led by Pol Pot (1925–1998), from power (Gottesman 2002: 11). The new regime in Phnom Penh was established with Vietnamese guidance, and was composed chiefly of figures known for their loyalty to Vietnam. Many of them, including Cambodia's prime minister in the 1990s and 2000s, Hun Sen (1951–) had defected from DK in 1977 and 1978 when purges swept through the eastern part of the country. Others had lived in Vietnam since the 1950s.

During the 1980s, more than 100,000 Vietnamese troops were stationed in Cambodia, along with several hundred political advisors. The troops, alongside a slowly developing Cambodian army, prevented DK forces on the Thai-Cambodian border from regaining power. Despite the slackening of Vietnamese political control over the years, the PRK's foreign relations and continuing one-party rule were inspired by Vietnamese models.

To strengthen its legitimacy and to distance itself from the previous regime, the PRK moved swiftly to reestablish markets and schools that had been closed under DK, and allowed people to return to the cities, towns, and villages from which they had been forcibly evicted by DK. In the process, more than 600,000 Khmer, including remnants of Cam-

bodia's educated class, sought refuge in Thailand and later found asylum in third countries (Ablin and Hood 1987: 223). Inside Cambodia, some Buddhist monasteries were allowed to reopen, but no one under the age of fifty was allowed to become a monk. When money was reintroduced in 1980, social differences, smothered under DK, slowly reemerged, especially between urban and rural dwellers. Throughout the 1980s, however, Cambodia was one of the poorest countries in Southeast Asia, and per capita income, on a national basis, never regained the pre-1970s level. Cambodia in the post-PRK period, despite rapid advances in the urban sector, may well have been even poorer.

In 1979 the PRK staged a show trial in which Pol Pot and his foreign minister, Ieng Sary (1927–), were accused of genocide and condemned to death in absentia. Soon afterward, a Museum of Genocidal Crimes was established on the site of what had been a secret interrogation center under DK, in which some 15,000 political prisoners had been questioned under torture (Chandler 1999: 8). All but a handful of them had been put to death. Annual “days of hate” mobilized ordinary people to ventilate their grievances and relate their sufferings under DK. These campaigns encouraged by the Vietnamese slowed down after the Vietnamese withdrew their forces in 1989.

To gain popularity with ordinary people and to keep them from leaving the country, PRK proceeded slowly with its socialist agenda. Attempts to sustain collectivized farming quickly lost momentum, and discredited terms such as “socialism” and “revolution” were rarely used. On the other hand, following communist models, an independent judiciary was never developed, party members were the most favored members of society, and suspected opponents were dealt with severely.

Nothing that the PRK and its Vietnamese advisors did reduced international pressure on the regime, seen in the West and by China and its allies as a Vietnamese concoction. Throughout the 1980s, DK representatives continued to hold Cambodia's seat at the United Nations, the only government in exile to do so; sorely needed foreign assistance for Cambodia, held hostage to the politics of donor nations, was reduced to a trickle, except for aid from the Soviet bloc. The long-term damage to Cambodia

and its people caused by this sustained indifference is impossible to assess.

In 1989, as the Cold War ended, Vietnam withdrew its troops from Cambodia. Left to its own devices, the PRK sped up a program of economic liberalization while continuing to suppress opposition. As pressures for a Cambodian settlement intensified, the PRK changed its name to the State of Cambodia, altered its flag, and opened negotiations with Prince Norodom Sihanouk (1922–), the ostensible leader of the coalition that had been dedicated to overthrowing the PRK.

The PRK period coincided with the final decade of the Cold War; it also probably marked the last time that Cambodia would be occupied by a foreign power, and the last time in its history when its interests would be subordinated to those of Vietnam.

PEPPER

The Most Widely Used Spice

Black pepper, the most widely used spice in the world, derives from the dried berries of the *Piper nigrum* vine. After ripening to a reddish color, the harvested berries are dried in the sun to produce the long-lasting black peppercorns. White peppercorns are a variation on the same product, obtained by soaking the berries until they swell and cleaning off the outer skin, which bursts during the process. A third variety of pepper is the long pepper, obtained from the berries of the *Piper officinarum* vine. In early historical times it was as widely sought after as black pepper, but today its use is restricted essentially to the tropics. These two pepper vines were first cropped within their natural range of southern India. However, cultivation of black pepper had probably spread to Vietnam by the third century C.E., and Chinese sources apparently report long pepper grown in Java by the twelfth century. In Malaysia and adjoining regions, a native pepper vine, *Piper cubeba*, was also tended and its berries used as a condiment, but lately they have been regarded as only of medicinal value.

Black pepper was known in southern China as a trade good from India more than 2,000 years ago, and it may well have been one of the Indian products shipped through the South China Sea at that time. By the early fifteenth century, pepper plantations had been established in North Sumatra, then in South Sumatra, West Java, and the Malay Peninsula by the early sixteenth century. Early Islamic sultanates based in Aceh, Banten, and Patani soon established themselves as the outlets for their respective pepper-growing areas of North Sumatra, South Sumatra/West Java, and the Malay Peninsula. Aceh initiated the supply of Sumatran pepper to India's Malabar Coast, whose trade with the West was then dominated by Portugal, and to Islamic ports in the Red Sea. With North Sumatra's pepper then traded westward, Banten and Patani filled the gap to supply China, the traditional market for Southeast Asian pepper and still then the world's largest consumer of pepper.

Dutch and English merchants transformed the structure of the pepper trade at the end of the sixteenth century when they began dealing directly with the Aceh and Banten sultanates and, soon after, purchasing supplies from the

producers themselves. Gradual elimination of the middlemen allowed Holland and England to offer growers better prices, while creaming off higher profits, as these nations dominated the trade to Europe, which now outstripped the market in China. Even as the Dutch East India Company (VOC) brought Aceh and Banten to heel in the late seventeenth century, the English maintained their independent interests with their establishment of a pepper entrepôt at Bengkulu (Bencoolen) in southwest Sumatra. Meanwhile, China continued to be supplied by a medley of Chinese and other merchants, aided by the expansion of Chinese-established plantations across Brunei, the Riau archipelago, and the Malay Peninsula during the eighteenth century.

The unprecedented productivity of the Chinese plantations increasingly attracted English attention, and, after 1800, British occupation in Sarawak, Singapore, and Malaya focused on those places where Chinese growers had been active. England's consignment of Bengkulu to the Dutch, linked to its restitution of Holland's colonies in the aftermath of the Napoleonic Wars (1803–1815), ushered in the familiar geopolitics of the colonial era: Dutch rule over Netherlands India (now Indonesia) and British control over the present territories of Malaysia and Singapore. Aceh reemerged as a thorn in the side of the Dutch, in particular supplying North American traders whose operations rivaled those of the British Empire. Nonetheless a pattern is observable of steady growth in Southeast Asia's production and exports from an increasing array of supply sources throughout the nineteenth and early twentieth centuries.

Sarawak, a late entrant in 1876 when Raja Brooke invited Chinese pepper-growers to settle around Kuching, eventually proved so successful that its export performance matched that from the whole of Indonesia on the one hand, and all of India on the other, from 1968 to 1982.

Southeast Asia has continually supplied about half (or more) of the pepper requirements of the world ever since the middle sixteenth century, a remarkable record of a major agribusiness over the long term. The Lampung district of South Sumatra has persisted as a production center virtually throughout the period, but other centers, especially North Sumatra and the lands

near Penang, have experienced boom-bust cycles in response to opportunities in international trade, exhaustion of local soils, and other factors. Recent studies by historians have particularly focused on attempts by the "pepper sultanates" to maintain the greatest possible autonomy in the face of increasing European company and colonial control over the international market.

"PERAK MAN"

A Palaeolithic Human Skeleton

"Perak Man" is a forty- to forty-five-year-old man who was buried in Gua Gunung Runtuh, Lenggong, Perak, around 10,000 to 11,000 years ago. He is the only known prehistoric skeleton in the world that suffered from a congenital deformity in the third digit of the left hand called *Brachymesophalangia Type A2*.

Two features distinguish the Perak Man from skeletons that are contemporaneous with it in

Southeast Asia. He has a chronometric date and is as nearly complete as possible. He was found in situ, and that provided reliable data that allowed for analyses and interpretations of the burial and its rituals.

We rarely get a glimpse of burial rituals from this period. In this case, he was ceremoniously buried in a fetal position, and around him were food offerings and stone tools—almost 3,000 *brotia costula/spinosa* riverine shells, stone tools, and meats. Both his hands were seen grasping meats, and based on the bones remaining, it could have been meat from at least five types of animals—pig, deer, monkey, monitor lizard, tortoise—and maybe also *kijang* (barking deer), leopard, and gibbon.

There was no evidence of death through violence. He could have died of old age or an illness, in or near this cave. His teeth showed severe tooth wear, suggesting a highly abrasive diet. This correlates with the kinds of food he was buried with. Despite being born with a physical handicap, he survived well in a nomadic hunting and gathering life, probably because of the care given to him. He could have compensated for his physical handicap through sharp hunting skills, or perhaps he rarely hunted and instead took on other tasks. In a community in which the average human lifespan was twenty to thirty years, he could have been an elder in the group, and perhaps was also the shaman and the person with the most knowledge about survival, hunting, gathering, and other aspects of a Palaeolithic way of life.

PERANAKAN Eclectic Heritage

In Malay and Indonesian languages, *Peranakan* designates a locally born person whose male ancestors originated in China and whose female ancestors originated in Southeast Asia. In Penang, Melaka, and Singapore, Peranakans were called *Babas*. The terms mark the observer's perception of difference.

Impelled by ambition or poverty and recruited by Chinese brokers, Chinese immigrants transferred to Southeast Asia their skills in agriculture, mining, and trade. Serving and enriching local elites, they mined gold in Kalimantan and tin in Bangka and Selangor, and grew pepper in Singapore and sugar in Java.

Chinese culture dictated that women stay in China, so immigrants found companionship with women from Southeast Asia's ports or the villages bordering mines and plantations. Women gave Chinese men roots, in-laws, and children. Peranakan communities developed, with temples, cemeteries, and a form of Chinese culture divorced from emperor and scholarship. It was perpetuated across generations as Peranakans intermarried or married new immigrants.

In Java, where Peranakan took on the meaning of Chinese Muslim, conversion enhanced their access to the local authority. The convert wound his hair under a cloth wrapper, replaced trousers with sarong, was circumcised, and adopted Arabic or Javanese names. His wife wore a batik cloth wrap with a Chinese blouse. Children spoke the mother's native language with a mixture of Chinese words.

When the Dutch gained control of the archipelago and the British control of the Malay Peninsula, Peranakan leaders offered their expertise and labor to the new rulers. Some converted to Christianity. Most turned away from Islam, now the religion of the subject class. The latter saw Peranakans increasingly as an alien community. In times of crisis Peranakans could become the target of violence. Babas also rejected Islam, identified with their Chinese heritage, and sealed their relationship with the British by sending sons to English-

language schools and finding occupations serving colonial bureaucracy and commerce.

Today, the government of Indonesia restricts the political, educational, and economic opportunities of citizens of Chinese ancestry. Peranakans, while showing enormous variety in cultural orientation, face an uncertain future as Buddhists or Christians in Southeast Asia's Islamic communities.

PERFORMING ARTS OF SOUTHEAST ASIA

The term "performing arts" denotes a broad range of performance practices in the Southeast Asian region, covering dance, drama, and music. "Drama" should not be taken here as referring exclusively to theatrical genres performed by human actors, for it can also be extended to include those forms of performance, such as shadow play, wherein the actors are puppets manipulated by a human agent and a story is enacted.

In general, dance in Southeast Asia cannot easily be separated from acting, and performances always involve a musical accompaniment of some kind, which may or may not include singing. Thus the notion of dance as a completely autonomous art form as understood in the West does not correspond to what in Southeast Asia is regarded as dance, which is the equivalent of "dance-drama," often with spoken or sung dialogue and mimed sections.

Specific forms and genres are different in every Southeast Asian country, but commonalities within the region's performing arts can also be found. They can be traced back to historical interactions and linguistic, ethnic, racial, social, political, religious, and literary affinities. Dance-drama narratives tend for example to be inspired by the ubiquitous *Râmâyana* story, which

came to Southeast Asia from India. Its main character, Prince Rama, became a model of kingship and just rule. Or they may be associated with other Hindu/Buddhist religious tales or narrative cycles focused on a specific character or characters. This can be seen across the whole region, regardless of the main religious practice, for Hindu/Buddhist cults, often simultaneously, have deeply influenced Southeast Asian cultures.

It is fair to say that at some point in their history all performing arts of Southeast Asia were ritualistic or had a strong association with religious ritual. However, those performance genres discussed here, in contemporary Southeast Asia, have come to be considered as secular artistic practices, following a Western classificatory model. These performance genres are today widely adopted in the region, particularly in terms of vocational training, largely in the hands of state academies. These forms are what the various Southeast Asian countries promote as classical performing arts. That is not to say that Southeast Asian performing arts have wholly dissociated themselves from prior conceptualizations linked to specific cosmologies and influenced by specific notions of spirituality. However, that ideational background is not necessarily present in the way performers consciously approach their artistic practice, or in the way it may be perceived by a contemporary Southeast Asian audience.

A standard approach to classification of Southeast Asian performing arts is to divide them into traditional and modern (or contemporary), the latter understood to be essentially a twentieth-century Western import. Whereas this may initially seem to be a helpful categorization, it is not, however, a desirable one, for it produces the impression that modernity is extraneous to the Southeast Asian social fabric and induces views of an unchanging, static, and exotic Southeast Asian artistic heritage in constant need of preservation. In so doing, it fails to take into account the reality of historical intermixture of genres and their organic growth. Another standard approach is to divide the performing arts into folk and classical, the former associated with an imagined authenticity of village life, the latter with past court patronage replaced in modern times by that of the state, following the transition from palace to the urban proscenium theater. This is a classification ac-

tively promoted by Southeast Asian governments and one that forms the basis of academy-based training. Although very useful, this division is not without disadvantages, however, because it risks introducing a hierarchical differentiation that fails to do justice to the high artistic quality of folk performance.

Performance Genres

The different performance genres are here introduced by country and categorized as dance-drama (the two being combined, for all practical purposes, into one), mask performance, and puppetry. In those instances where dance is to be seen as separate from drama, that is specifically indicated.

Myanmar (Burma)

The country of Myanmar is adjacent to India and Bangladesh and borders on China, Laos, Thailand (Siam), and Vietnam. Ethnically mixed, its main religion has been Theravada Buddhism colored by local animism for several centuries to the present. The Burmese themselves developed most performance genres of Myanmar, and many dance-dramas have Buddhist tales as their main inspiration. The *zat pwe* is among the best-known unmasked genres, whereas the erstwhile masked court dance-drama known as *zat gyi* is today taught at the National School of Drama and identified as a classical genre. It is characterized by lavish costumes, and it mixes dancing with singing and mime. Modern dramas and plays are known as *pya zat* and enjoy tremendous popularity. They often address serious issues in the guise of comic interludes, a device used throughout Southeast Asian dramatic genres to articulate political dissent. The *pwe* usually incorporates numbers of solo dancing females, known as *nat* dance, derived and adapted from ecstatic, trance performances for the *nat* spirits and making use of a strong percussive base.

Thailand

Formerly known as Siam, Thailand borders on Malaysia, Myanmar, Laos, and Cambodia. Its population is also ethnically mixed, and here too the main religion is Theravada Buddhism, with animistic and Hinduistic features. Thai

classical dancing corresponds to the dance-dramas of the court, known as *khon* and *lakon fai nai*, supposedly of Khmer ancestry; the issue of relationship of Thai dance forms with Khmer forms is open to controversy. *Khon* is a predominantly masked dance-drama performed by men who reenact episodes from the *Ramakien*, the Thai version of the story of Prince Rama. The main stance of the dancers is a squat position with the legs turned out. The movements of the puppets of the *nang yai*, the Thai shadow play, provide inspiration to the dancers.

Khon involves fighting sequences and acrobatic leaps, the latter performed by monkey characters. A cast of all-female dancers who also take on male roles performed the *lakon*. The emphasis of the *lakon* is on emotional situations, and the dancing is more restrained than that seen in its male counterpart. These forms receive government support and are taught in vocational institutions.

Another form, the *likay*, is a popular dramatic genre that combines dance, acting, and singing inspired by the classical forms but adapted to more commercial tastes.

Cambodia

Bordering on Thailand, Vietnam, and Laos, Cambodia is inhabited predominantly by Khmers. Theravada Buddhism has been its main religion since the thirteenth century, but the country has a strong base of Hinduism (both Saivism and Vaishnavism) and Mahayana Buddhism as well as indigenous animistic practices. Cambodia's troubled recent political history has had a devastating effect on the country's performing arts, especially those that had received court patronage prior to the Khmer Rouge. It is only since the late 1980s to 1990s, after the Khmer Rouge were defeated and the monarchy reinstated, that effort has been put into revitalizing the performing arts, providing an infrastructure for training, and attempting to re-create classical forms and a classical repertoire. These classical performance genres correspond to the forms that had been previously cultivated in the Khmer court. They include the all-female dance-drama known as *lakon karach boran*, the mask dance-drama known as *lakon khol*, and the shadow play *nang sbek thom*. The *Reamker*, the Khmer version of the *Râmâyana*, provides a source for the stories en-

acted, although not exclusively so. These forms are undoubtedly close to their Thai counterparts, by which they were influenced, because of Thailand's proximity and earlier Thai political dominance over the Khmers, dating back to the fifteenth century. There is, however, a tendency to regard the Khmer forms as more ancient, invoking the presence of temple relief showing dancers as evidence of an older tradition.

There are also affinities with Javanese performance genres. It is believed that King Jayavarman II (r. 770/790/802–834 C.E.), who in the ninth century reportedly spent time in exile in the Indonesian kingdom of Śrīvijaya, must have brought over the Javanese influence. He then returned to Cambodia, where he seized power and introduced the cult of the *devaraja*, "the god-king," which became the foundation of Khmer royal power.

Other performance genres include spoken drama, which is very popular, with hundreds of amateur theater companies throughout Cambodia. This kind of drama often combines Western acting techniques with those derived from Khmer theatrical forms and addresses contemporary issues.

Vietnam

Vietnam borders on Cambodia and also Laos and China, and of all the Southeast Asian countries, it is the one that exhibits most strongly elements of Chinese culture, absorbed through Confucianism and Taoism. In ancient times it was known as Champa, and it was the seat of a rich Hindu-Buddhist culture that left considerable traces on its performing arts. A former French colony, it has only recently begun a slow recovery from decades of war in the Indochinese peninsula. Marxist socialism has left as a legacy the growth of a strongly didactic modern theater.

Water puppetry, known as *mua roi nuoc*, with a comic repertoire based on animal fables, has enjoyed a revival, slowly obtaining international recognition. The shows are staged on ponds, where the puppeteers remain hidden from view, skillfully manipulating the puppets. The former court dances, among which is the *hat boi*, bear a strong Chinese influence in their plot and their style of singing. They have suffered some decline because they tend to be closely linked with imperial culture and impe-

rial values, and that did not find audience favor in socialist Vietnam. *Cai luong* is a popular form of musical theater, highly appreciated by Vietnamese audiences. Since the 1980s, *hat boi*, water puppetry, and *hat cheo*, a form believed to have emerged in the first century C.E. and presenting a mixture of poetry, mime, singing, and dancing, have been taught at the Academy of Theatre and Film in Hanoi; research is carried out there with the aim of reviving other forms of folk theater and training a new generation of accomplished performers.

Laos

The Laotians are closely related to the Thais. There is a strong affinity in the performing arts of Laos and of Thailand, particularly since the Laos court forms were consciously modeled on those of the Thais, down to sharing their names; earlier, they were close to those of the Khmers.

Typically, Laotian is the form of sung storytelling known as *lum pun*, of which there are several varieties, depending on whether they are for courtship or healing. *Lim glawn* is the name given to the courtship forms, whereas the ones for curing disease are known as *lum pee fah*.

Modern drama is based on *likay*, which, in parallel with its Thai counterpart, is a form of musical theater adapted to include elements from the lum pun. Laos also boasts its own version of shadow theater, *nang daloong*, with stories drawn from the *Râmâyana*.

Indonesia

The Indonesian archipelago comprises thousands of islands that make up the modern Republic of Indonesia. They are all known for having their own forms of performance, which are quite distinct. The islands of Java and Bali have a long history of performing art practice, and here the different forms have achieved an unsurpassed level of sophistication and refinement. Although Indonesia is now predominantly Islamic, with the exception of Bali, Hindu/Buddhist culture has had a substantial impact on the growth of the performing arts, intermingled with Islamic mysticism.

A pervasive genre is the *wayang*, the puppet tradition, practiced in many variant forms. This genre is so important that it has given rise to

forms that are performed by human actors whose movements are inspired by those of the puppets. Thus in Java, for example, one finds the *wayang orang*, developed at the courts of the cities of Yogyakarta and Surakarta. *Wayang kulit* is performed with leather puppets. A *dhalang*, accompanied by a *gamelan* ensemble, manipulates the puppets, which project their shadows onto a white screen. In West Java it is the *wayang golek*, rod puppets, rather than *wayang kulit*, that has pride of place. *Wayang kulit* is most spectacular in central Java, where performances take place with a full *gamelan* and two *pesindhen*, female singers, who provide musical interludes. The repertoire is composed of tales from the Hindu epics *Râmâyana* and *Mahâbhârata*, as well as other narrative cycles. Originally a ritual for the ancestors, the *wayang* is today a form of secular entertainment. In the harsh political climate of the former New Order regime, the *wayang* was a major vehicle for articulation of political dissent, through comic interludes enacted by clown characters and through subtle references to contemporary issues in the characters' dialogues.

Among the dance-dramas, apart from the already mentioned Javanese *wayang orang*, one finds the *topeng*, a masked genre practiced in Java and Bali. Dancing styles are classified as *alus* (refined), *gagah* (strong), and *putri* (female), and all dance-drama genres involve a combination of these styles, which are linked with characterization. This is common to Javanese and Balinese forms. There are also dances with no narrative content, which were associated with the courts and were practiced by female corps. In Java one finds the *bedhaya* and *serimpi* of the Yogyakarta and Surakarta courts, very refined and controlled female dance styles of a nonrepresentational kind. In Bali one finds the elegant *legong*, loosely inspired by a tale of doomed love, which is, however, rendered as an abstract dance. Originally the *legong* was performed only by prepubescent girls, but now it is regarded as a classical form that is at the root of a number of new dance compositions, such as *Panyenbrama*, a welcoming dance, choreographed in Balinese dance academies. Male styles of Balinese dance include the *baris*, based on warrior stances and movements. A newer form, very exacting and danced by women in a male-oriented, vigorous style, is the *Terunajaya*. A popular Balinese theatrical form is the *Arja*, which combines dancing, acting, and singing. Equally

popular, especially among tourists, is the *Barong*, whose origin is in exorcistic rites, in which the mythical creature barong fights the evil witch *Rangda*; it has men stabbing themselves with a kris after entering a trancelike state.

New dance-dramas are named *sendratari*, an acronym made up of the words *seni*, *drama*, and *tari*, translated as dance-drama. This is a dance-drama inspired by traditional tales from the *Râmâyana*, performed without dialogue or songs and only to music, in an attempt to make it accessible to non-Javanese and non-Balinese speakers. It is in fact performed at major tourist venues and at the Prambanan temple complex in central Java, where there is a purpose-built open-air theater.

Java is also home to a very lively scene of modern and contemporary dance that makes use of a dance vocabulary drawn from more traditional forms but is entirely modern in choreography and repertoire. Choreographers such as Sardono W. Kusumo and Miroto have received international acclaim and recognition for their innovative work. Modern spoken drama is also highly developed throughout Indonesia in urban contexts, with playwrights such as W. S. Rendra, also a major poet, and the late Arifin C. Noer creating a theater that derives its strength from reworking traditional forms and adapting them to a modern context.

Malaysia and Singapore

Malaysia has a strong Islamic majority. Its population is ethnically diverse and multifaith, with a sizable Indian and Chinese presence. The performing arts therefore include Hindu-Islamic Malay genres, South Indian dance such as Bharata Natyam, and Chinese opera, predominantly Cantonese. Malay genres include storytelling, such as *awang*, and theatrical forms involving acting and singing, such as *bangsawan*, parallel to the Thai *likay*. *Mak yong* is an all-female dance-drama (*mak yong* means “queen”) of court derivation, and *sandiwara* is a theater genre that developed from the 1930s and has a Western origin, in that it uses a script and takes historical themes as its subject matter. Puppet performance is not lacking. Known as *wayang siam*, it is similar to other Southeast Asian shadow theater performances, and the repertoire is based on the *Cerita Maharaja Wana*, a Malay version of the *Râmâyana*.

Singapore has a mixed population of Malays, Indians, and Chinese. With four official languages (Mandarin, Tamil, Malay, and English), its theatrical forms have been inspired by Chinese, Tamil, English, and Malay models, with a fairly strict separation among the different theatrical communities. In more recent years, intercultural performance has received a boost, and there have been attempts to use Asian forms with multilingual pieces, as seen in the productions of the playwright Kuo Pao Kun.

The Philippines

In the Philippine Islands pre-Christian dancing has survived with a number of tribes. Scholars have done extensive research into these forms in order to reconstruct early Filipino traditions, which were recorded in the writings of sixteenth- and seventeenth-century European travelers. Side by side with these traditions, which follow a widespread Southeast Asian pattern, there are Hispanic genres that constitute the major theatrical traditions of the Philippines and some Islamic-influenced dancing. The Hispanic forms consist of religious spectacles, such as Lenten and Christmas plays known as *senakulo* and *panululuyan*. The *Komedya* dramas have their origin in Spanish plays, but their stylized movement and set characters are also strongly Southeast Asian and not necessarily a borrowing from Spain. Among the American-influenced genres there is *bodabil*, or vaudeville, and spoken drama.

Modern theatrical forms are also present, following the institution of cultural centers for the arts and of acting schools.

As Southeast Asian performing arts have entered the twenty-first century, one witnesses conscious revivals and reconstruction of forms deemed to be traditional and identified as significant in redefining contemporary ethnic and cultural identities. One also sees experimentation, engagement with interculturalism, and involvement in a global, international culture. This in turn gives rise to cross-fertilization, and new genres are being created that respond more specifically to changing sociopolitical conditions and the changing taste of audiences. There are occasional tensions between those who would like to block all foreign influences, fearing loss of identity and cultural values, and those who want to emphasize internationalism

and interconnectedness. But the rise of the professional performer, trained in academies with an international outlook, has marked an irreversible trend and caused a shift in perception. Contemporary artists increasingly see themselves as professionals playing for a world audience, with inevitable changes and moves in the direction of an international aesthetic standard of performance, linked to international funding and programming policies.

PERJUANGAN (PERDJUANGAN)

During Indonesia's war of independence against the Dutch (1945–1949), those who rejected compromise and negotiation with the Dutch and who favored a purely armed strug-

gle described their platform as *perjuangan* (Indonesian, "struggle"). They contrasted *perjuangan* with *diplomasi* (Indonesian, "diplomacy"), which they equated with willingness to accept less than full independence in exchange for Dutch recognition.

Tan Malaka (1897?–1949) made especial claim to the term *perjuangan* as he forcefully argued that far-reaching social reform to dismantle the colonial social order would give the Indonesian masses such a stake in independence that they would fight to the death to defend it. Tan Malaka rejected the Sjahrir government's view that independent Indonesia had to accept a place within a basically capitalist world system. The term was also linked to the charismatic army commander General Sudirman (1915–1950), who regarded armed struggle as pure and noble, and to numerous irregular armed units (*badan perjuangan*, "struggle organizations").

The strategy of successive Indonesian governments during the revolution (1945–1949) was to use armed force to back negotiations on the grounds that armed force alone would not win victory. In this strategy, the government was backed by the influential general A. H. Nasution (1918–2000), who aimed to create a small but disciplined army and to eliminate the irregular *badan perjuangan*. Nongovernment parties consistently criticized governments in the name of *perjuangan* for surrendering too much to the Dutch, but they adopted similar policies once in office. In this respect, *perjuangan* was a powerfully expressed opposition slogan rather than a defined policy alternative.

After the revolution, *perjuangan* remained a powerful term in Indonesia's political lexicon, indicating nationalist commitment, steadfastness, and purity of principle. From the mid-1950s it was appropriated to some extent by the armed forces to highlight their role in securing independence and to justify their role in politics, but it retained a sense of populist engagement. In 1998, Megawati Sukarnoputri (1947–) used the term to designate her new party, the Partai Demokrasi Indonesia—Perjuangan (PDI-P), following her expulsion from the PDI.

PERSATUAN ULAMA-ULAMA SELURUH ACEH (PUSA)

Persatuan Ulama–Ulama Seluruh Aceh, or the Association of Aceh *Ulama*, is an organization that unites religious leaders (*‘ulama*) in the Aceh region. It was established in 1939 by several Acehese *‘ulamas* such as Tengku Mohammad Daud Beureu’eh (1906–1987), Teuku Haji Cik Johan Alamsyah, Teuku Mohammad Amin, and Tengku Ismail Yakub. Tengku Mohammad Daud Beureueh was the first chairman of the association.

In the beginning, PUSA was an Islamic organization that had a modern religious orientation, like Muhammadiyah. Therefore it dealt mainly with propagation of the Islamic faith and improvement of people’s education. For those purposes, PUSA had built Islamic schools, one of which was the Perguruan Normal Islam (Schools for Islamic Teachers). However, because of strong Japanese hegemony in Southeast Asia, PUSA gradually developed into a nationalist radical organization as well as an organization of religious elites (Tengku) with strong anti-Dutch colonial government feelings. As a consequence it fought against the Dutch government and traditional aristocrats, *uleebalang* (Teuku), who worked for the Dutch and, considered as the landlords, oppressed the Acehese people.

Fighting against the Dutch and its allies, PUSA sought help from the Imperial Japanese army, which at the same time tried to occupy Indonesian territory. In February and March 1942, the Acehese people, led by several

PUSA leaders such as Tengku Said Abubakar, waged war against the Dutch. In the 1945–1946 civil war, *uleebalangs* were exterminated, and their power fell into the hands of *‘ulama*. The PUSA organization came to an end during the Japanese occupation (1942–1945). However, after Indonesian independence, several former PUSA leaders received high positions in the civil and military governments. Some of them, such as Daud Beureu’eh, were also involved in the fight against the central government of the Republic of Indonesia in the revolt of Darul Islam in Aceh (1953–1959).

PERSERIKATAN NASIONAL INDONESIA (PNI) (1927)

Perserikatan Nasional Indonesia was a leading Indonesian nationalist party established in 1927 during the Dutch colonial period. After the abortive uprising of the Partai Komunis Indonesia (PKI, Communist Party of Indonesia) and its destruction in 1926 and early 1927, a group of Indonesian elites attempted to find a new way of struggle that placed nationalism above both Islam and communism as the dominant ideological position. They reorganized their struggle around an emerging charismatic leader, Soekarno (Sukarno) (1901–1970).

Soekarno had helped to convene the *Algemeene Studieclub* (General Study Club), an overtly political organization for university students in Bandung in 1925. Soekarno, together with some returned members of *Perhimpunan Indonesia* and leading figures in the study club, such as Boediarto, Iskaq, Tilaar, Soenarjo, Soedjadi, Anwari, Tjipto Mangoenkoesoemo, and Sartono, took the initiative of founding a new party. These individuals had previously disagreed with Mohammad

Hatta's (1902–1980) idea on a new political party. Hatta's idea was considered too moderate and was thought to place too much stress on education. They met several times beginning in March 1927 in Jakarta and Bandung to discuss the foundation of the party. The new party, called *Perserikatan Nasional Indonesia* (Indonesian Nationalist Association), was finally declared during a meeting in Bandung on 4 July 1927 with Soekarno as the chairman. The party aimed to achieve Indonesian independence through uncooperative methods (a policy of noncooperation with the Dutch colonial authorities) and mass organization based on an ideology of secular nationalism. The radical notions of the party quickly attracted attention among Indonesian nationalist groups, while the colonial government began to monitor the new party closely.

PNI claimed to have branches in all main cities in Java and one in Palembang, with nearly 4,000 members by the time its name was changed to *Partai Nasional Indonesia* (PNI, Indonesian Nationalist Party) in a congress in Jakarta in May 1929 (Ingelsohn 1979: 55). PNI received continuous strong support from secular nationalists, particularly in Java. The party claimed to have more than 10,000 members, about half registered in Bandung, by late 1929 (*ibid.*: 106). The colonial government finally reacted against PNI and arrested their leaders on 24 December 1929. They were charged with being a threat to public order, and Soekarno himself was sentenced to four years' imprisonment on 22 December 1930. The leaders of PNI declared the liquidation of its party in April 1931.

PERTAMINA CRISIS (1975–1976)

Devastating Financial Loss

PT Pertamina (short for *Perusahaan Pertambangan Minyak dan Gas Bumi Negara*), established in 1968, is Indonesia's biggest government-owned company. It is responsible for the production and sharing agreements that foreign oil companies have to accept if they want to exploit Indonesia's vast reserves of natural oil and gas. Pertamina expanded quickly with the increase of oil exports in the late 1960s, and an official investigation in 1970 criticized Pertamina's lack of efficiency and accountability. The company was widely regarded as a nest of corruption. After 1973 the increase in oil prices accelerated the expansion of the company's activities. Under President Director Ibnu Sutowo, the company's growing profits and an increasing amount of borrowed funds found their way into a range of projects, including telecommunications, real estate, an airline, and PT Krakatau Steel.

The company's lack of accountability led to a major scandal in 1975–1976. The origins of the scandal lay in the government requirement of 1972 that all state enterprises obtain official approval for overseas loans of more than one-year maturity. To elude this, Pertamina embarked on massive short-term overseas borrowing. International lenders were eager to lend because of Pertamina's rising oil revenues and because a global post-1973 slump reduced alternative lending opportunities. However, in March 1975 the company could not meet its short-term obligations. The Indonesian government took responsibility for Pertamina's foreign debts. In January 1976 it became known that Pertamina had external debts of more than U.S.\$10 billion, at that time

30 percent of Indonesia's Gross Domestic Product (GDP) (Goldstone 1978: 122; Biro Pusat Statistik 1977). Corruption, undue optimism, and incompetence were revealed as key reasons for the calamity. The government reasserted control over the firm. Sutowo was dismissed, most of the company's nonoil enterprises were divested, and its debts were renegotiated.

PHAM VAN DONG (1906–2000)

A Party Stalwart

One of the veteran members and leaders of the Vietnamese Communist Party, Pham Van Dong served as prime minister of the Democratic Republic of Vietnam (DRV) and the Socialist Republic of Vietnam (SRV) for more than thirty years (1955–1987).

Pham Van Dong was born to a mandarin family in Quang Nai Province (present Nghia Binh Province) of central Vietnam in 1906. His father was a court mandarin and private secretary of Emperor Duy-Tan (r. 1907–1916). Dong was educated at Quoc Hoc (the National Academy) in Hué and the law faculty of the Lycée Albert Saraut in Hanoi. He began his revolutionary activities at the age of eighteen by participating in the students' patriotic movement. In 1926 he went to Guangzhou in southern China and joined the Revolutionary Youth League of Vietnam, the predecessor of the Communist Party, organized by Hồ Chí Minh (1890–1969) in 1925. In Guangzhou he took a political training course run by Hồ Chí Minh and studied at the Whampoa Military Academy founded by Dr. Sun Yat-sen (1866–1925), the founder of the Chinese Nationalist Party (Kuomintang, KMT). Dong

Vietnamese prime minister Pham Van Dong.
(Richard Melloul/Corbis Sygma)

gradually came to the attention of Hồ Chí Minh and became one of Hồ Chí Minh's two most trusted lieutenants (the other was Vo Nguyễn Giap [1911–]). In 1927, Dong was sent back to Saigon in southern Vietnam. In early 1929 he was assigned to work for the Youth League's regional executive committee, responsible for revolutionary activities in southern Vietnam.

The French arrested Dong for his political activities soon after he returned from Hong Kong, where he had attended the Congress of the Youth League. He spent several years in jail and joined the Communist Party in the prison on Con Son Island in the South China Sea. In 1937, Dong was granted an amnesty by the French government. Thereafter he served as a journalist in Hanoi during the Popular Front period (1936–1939). He went to China to meet with Hồ Chí Minh in 1940, and was sent back to Vietnam to set up revolutionary bases in northern Vietnam in 1942.

On the eve of the 1945 August Revolution, Dong attended the National People's Congress

in Tân Trao, Tuyên Quang Province, in northern Vietnam, and was elected to the Standing Committee of the Vietnam National Liberation Council, which functioned as the provisional government. He became financial minister of the newly established government of DRV in September 1945. Dong became head of the Standing Committee of the National Assembly in March 1946. In 1949 he was appointed vice premier. As DRV's principal negotiator with external powers, he led the Vietnamese delegation to the Fontainebleau Conference in France for formal negotiations with the French government on peace for Vietnam. In May 1954 he headed the DRV delegation to the Geneva Conference, which resulted in the Geneva Agreements on Indochina issues and ended the Indochina War. Dong was foreign minister from 1955 to 1961. He served as premier of the Democratic Republic of Vietnam after September 1955, and kept the position of premier after the two Vietnams were merged into the Socialist Republic of Vietnam in 1976. During that time he concurrently worked as deputy chairman of the National Defense Council. After 1986 he held the position of chairman of the Council of Ministers.

Dong was elected alternate member to the Party Central Committee in 1947 and two years later became a full member. In the Second National Party Congress, convened in 1951, Dong remained a full member of the Party Central Committee and was elected to the political bureau for the first time. Both positions were secured in the next three consecutive national party congresses in 1960, 1976, and 1982. He worked as advisor to the Party Central Committee in the next three party congresses until December 1997.

Although he continued to serve as chief director of the state's affairs, Dong's power declined first after Hồ's death in 1969, and again after the reunification in 1976. In June 1987, Pham Van Dong retired from all governmental and party offices because of advanced age and ill health. Dong died at age ninety-four in 2000 in Hanoi.

Pham Van Dong is remembered for his talent in administration and negotiation. As a loyal follower of Hồ Chí Minh, he carried out Hồ's organizational and administrative policies faithfully. He was responsible for the creation of the bureaucracy of DRV under Hồ's tutelage. Dong

was moderate in character, and he could reconcile divergent opinions within the party and government leadership. He was neutral in the Sino-Soviet dispute, maintaining that Vietnam should not ally with either China or the Soviet Union.

PHAN BỘI CHÂU (1867–1940)
Vietnamese Revolutionary Thinker

Among the several scholars of Confucian learning involved intellectually and actively in the struggle against French rule in Vietnam during the first quarter of the twentieth century, Phan Bội Châu stood out as the most representative. He was the revolutionary thinker and strategist behind virtually every party and every agitation that rankled the colonial administration.

Born in a scholar-gentry family in Nam Đàn district, province of Nghệ An, Phan Bội Châu appeared destined to pursue a career in officialdom after having passed the regional civil service examinations in 1900. His reading of the reformist publications of Kang Yu-wei (1858–1927) and Liang Qichao (1873–1929) incited him, however, to embark upon a lifetime of anticolonial activities. He thereafter began his political action as an anticolonial proselytizer and organizer, seeking in almost all of his voluminous and passionate writings to arouse patriotism, to denounce French exploitation, and to propose solutions to his country's

quandary. Ideas, however, were treated by him merely as tools of concrete political action: at the same time he directly promoted countless campaigns all aiming at gaining independence for his country—hence his special historical importance as the outstanding revolutionary thinker and strategist of his time.

Admiring the Japanese example of progressive monarchism, he dreamed of a Meiji-style renovation in Vietnam that could keep the Vietnamese monarchy as its symbolic centerpiece. In 1904 he created *Việt Nam Duy Tân Hội* (Vietnam Modernization Association), at the head of which he placed the pretender Cường Để (1882–1951), a direct descendant of Gia Long, the founder of the Nguyễn dynasty. The first of a succession of conspiratorial organizations set up on Phan Bội Châu's instigation, this association aimed at encouraging Vietnam to follow Japan's path in adopting Western science and technology in order to throw off Western domination. Soon after, Phan Bội Châu initiated what was to become an Eastern travel movement (*Đông Du*), going himself to Japan in 1905. His idea was to send Vietnamese youth to study at Japanese schools, to be groomed for the prospect of restoring Vietnam's independence. Japan in those years was a good center for contacts with other Asian, particularly Chinese, reformers and revolutionaries: it was not long before Phan Bội Châu entered into relations there with Liang Qichao and Sun Yat-sen (1866–1925). In October 1907, *Việt Nam Cộng Hiến Hội* (the Vietnamese Constitutional Association) was begun, in which all the Vietnamese students were enrolled. Considered a kind of provisional government of Vietnam in exile, with Cường Để as president and Phan Bội Châu as secretary-general, it helped to develop democratic forms of political organization and the growth of national consciousness among the Vietnamese community abroad.

The shift in Japanese policy to the Franco-Japanese Treaty of 10 June 1907 led to the expulsion of Phan Bội Châu, Cường Để, and the body of Vietnamese students from Japan in late 1908. Disillusioned with Japan as a revolutionary base, Phan Bội Châu, who then paid special attention to the concept of world revolution, settled initially in Hong Kong and then in Guangzhou (Canton). He decided to form pan-Asian associations in order to “establish ties of solidarity between the activists of all the col-

onized countries” (Phan Bội Châu 1997: 161–162). One such organization was *Chấn Hoa Hung a Hội* (League for the Strengthening of China and the Development of Asia), in which the role of China as the “elder brother of the whole of Asia,” with special responsibilities for helping national liberation throughout the continent, was strongly emphasized (ibid.: 201). Indeed, after the October 1911 revolution in China, the Chinese pattern of revolutionary change became more attractive to Phan Bội Châu. Accordingly, in June 1912, with more than a hundred other Vietnamese in exile in South China, he founded a new association called *Việt Nam Quang Phục Hội* (League for the Restoration of Vietnam) that was closely modeled on the Chinese Tung Meng Hui. (Tongmeng Hui) Cường Để was given presidential status within the new structure, but power was entrusted to a deliberative committee of three elder statesmen (with Phan Bội Châu representing Central Vietnam) supported by an executive committee of ten activists with specialist functions. The purpose of the organization was to create a democratic republic in Vietnam similar to the one that Sun Yat-sen was trying then to achieve in China. More important, it decided to create its own army to fight for the recovery of Vietnamese independence. Thus was born the strategy of reconquering the country from China border bases, crucial to the history of Vietnamese nationalism. However, several attempted coups de main in Vietnam failed, in particular spectacular terrorist acts meant to kill Indochina's governor-general, Albert Sarraut (1911–1914, 1917–1919); a succession of desperate and disastrous operations launched in 1913–1914 resulted only in the elimination of much of the movement's leadership. Phan Bội Châu himself was thrown into a Guangzhou jail on 17 January 1914, in the wake of Yuan Shi-kai's (1859–1916) counterrevolution. Upon his release in 1917 he appeared temporarily discouraged, writing in 1918 an essay entitled “Letter of Opinion on Franco-Vietnamese Collaboration” (“Pháp Việt Đề Huê Chính Kiên Thư”, which suggested the possibility of reconciliation with the colonial regime, in the eventuality of an attempt made by Japan to conquer Indochina. In any case he continued to write from Hangzhou, where he was mainly based, on themes relating to the problem of Viet-

namese political, social, cultural, and moral emancipation, but ceased to exercise any political initiative.

In 1925, French security agents kidnapped Phan Bội Châu in Shanghai. After his trial and the substitution of a sentence of house arrest for one of life imprisonment, he spent the rest of his days quietly in Huế. He began compiling works in which he expounded the significance of Confucianism to modern Vietnam, replacing concern for the physical independence of Vietnam with concern for its spiritual vitality. Displaying the dispassionate wisdom of a moral philosopher, he took a step back toward a Confucian vision of society by deploring the final loss of Vietnam's personality, owing to the disappearance of the self-regulating moral education and the social rituals of its classical past. He proclaimed admiration for the type of well-balanced "democracy" of the ancient Chinese sage-emperors in his *Không học đấng* (*The Light of Confucian Knowledge*). But in his second autobiography, *Phan Bội Châu niên biểu* (*Phan Bội Châu's Chronology*), compiled sometime between 1929 and 1937, the moralist viewpoint he adopted in relation to his life led him to emphasize the traditional aspect of his action—for instance, privileging the eulogy of admirable moral deeds over the analysis of events, tactics, and programs. He also acknowledged at the same time the futility of his past enterprises, assessing in a realistic fashion the limits of his endeavors while humbly and earnestly making a request to those of the younger generations to learn from his painful experiences.

He died on 29 October 1940, still exhibiting distress for having massively failed his country and being tortured by a sentiment of indebtedness toward his dead companions whose confidence he blamed himself for having betrayed. Yet later generations have come to regard him as the personification of the very essence of Vietnamese resistance to foreign intervention. He was one who had a particular grasp of the fundamental importance of political and military power, and who largely created modern parties, though without much organization within the country, or programs beyond the immediate objective of liberation and power.

PHAN CHÂU TRINH (1872–1926)

Vietnamese Reformer

A younger contemporary of Phan Bội Châu (1867–1940), Phan Châu Trinh endorsed a form of anticolonial movement that sought reform and modernization through the strategy of learning from the West, in order to build a new Vietnamese society.

Belonging to a scholar-gentry family in Quảng-Nam, he passed the civil service examinations in 1901 but resigned an appointment at the Ministry of Rites in 1905. Thereafter he traveled through different provinces of Vietnam with his close friends and associates Trần Quý Cáp (1870–1908) and Huỳnh Thúc Kháng (1876–1947). He reviled the classical studies and examination system of which he was a product, and condemned the disastrous social consequences of the colonial situation in a public letter addressed to the governor-general of Indochina, Jean Baptiste Paul Beau (1902–1907). The association policy proclaimed by the latter induced him indeed to believe in the possibility of compromising with the colonial government, which would make possible a peaceful evolution toward an autonomous regime. He also became strongly involved in the actions of the Đông Kinh Nghĩa Thục (Free School of the Eastern Capital [Hanoi] for the Just Cause). He was one of the most popular lecturers of this patriotic educational organization. The new and exciting aspects were the emphasis on modern subjects—mathematics,

science, history, and geography—as opposed to the Confucian classics, and the insistence on the value of *quốc ngữ* (the romanized script) as an instrument for teaching literacy to, and communicating with, the masses. The cultural revolution it propagandized aimed at fighting conservatism and obscurantism, and at overcoming Vietnamese backwardness. At the same time it focused on building up Vietnamese initiative in industry and commerce, science, technology, and education. The initiative was achieved through the domestication of the ideas of European political and educational theorists by means of the establishment of mutual education societies and the development of a network of agricultural and commercial cooperatives. These objectives concurred with the conviction that Phan Châu Trinh maintained throughout his life that “reliance on foreign help is foolish and violence is self-destructive,” a conviction apparently reinforced following his visit to Hong Kong and Tokyo in 1906 (Huỳnh 1983: 13–14). Disagreeing with Phan Bội Châu and other Vietnamese political activists who tended to count exclusively on foreign help and to consider military resistance the only means likely to lead to the restoration of Vietnam’s national independence, he favored instead gradual domestic reforms within the French colonial system. He hoped that *Đông Kinh Nghĩa Thực* would create the conditions for social and political change and thus eliminate the need for political revolt.

Nevertheless he was active as one of the sponsors of a wide tax resistance movement in central Vietnam in 1908, intended to be a movement of civil disobedience that took advantage of the peasantry’s dissatisfaction to organize a massive trend of opinion capable of influencing the colonial administration. As a result Phan Châu Trinh was imprisoned as part of the colonial government’s campaign of suppression of the dissident scholar-gentry. Released in 1911 at the behest of the French League for the Rights of Man, he spent the years from 1911 to 1925 in France. During this period, he frequently met with Vietnamese students and political agitators abroad, in particular Hồ Chí Minh (1890–1969), for whom he played the role of a mentor in the days before the Comintern took Hồ under its wings. Together with the lawyer Phan Văn Trường (1878–1933), in Paris he ran a friendly society

with political overtones called the Association of Vietnamese Patriots. Attracting in this way the attention of the French Sûreté, he was arrested, charged with subversive activity, and incarcerated in the Santé jail for ten months beginning in September 1914.

An uncompromising critic of the collaborationist Huê court and an advocate of republicanism, Phan Châu Trinh was especially famous for his scathing diatribes against the concept of monarchy. In a “seven points letter” (*Thất Điều Trần*), he wrote on 15 July 1922 to accuse the king Khải Định (r. 1916–1925) of “seven major crimes” (Nguyễn 1992: 255). He wrote thus: “The emperor is the man who takes other people’s rights and makes them his own, who takes public powers and makes them private powers” (Steinberg 1987: 317). Also “The emperor, to whom it is forbidden to govern, is nothing more than a well-clothed mannequin, sitting on a carefree throne, doing what he is ordered to do, signing what he is commanded to sign” (Nguyễn 1985: 156–157). Believing that popular fixations regarding the person and position of the king hampered the development of the image of the nation, he was preoccupied with the need for clearing away the relics of the old institutions. In their place, he intended to establish a Western democratic political structure supported by a Western scientific educational system. He believed that the superiority of the West proceeded not only from its scientific and technological advances but above all from the vitality that political democracy imparted to Occidental societies. Subsequently he was increasingly receptive both to the idea of socialism as a dynamic mode of collective action and to social Darwinist criticisms of existing institutions. Yet, remaining a prisoner of his classicism with its elitist values, he was unable to see the problems of building organized communities in terms other than Confucian.

Like his contemporaries, he had received most of his information on Western political and social theories through the reformist writings in literary Chinese by Kang Yu-wei (1858–1927) and Liang Qichao (1873–1929). His almost fifteen-year sojourn in France notwithstanding, he still never escaped completely from Kang Yu-wei’s spell. Consequently, he showed a total lack of confidence in the revolutionary capacities of the Vietnamese people, which he combined with a belief in the possi-

bility of the French colonial administration's acting as a progressive force, taking its professed "civilizing mission" seriously. Impressed by the liberal aspects of French culture and humanist philosophy, he thought that the French presence in Vietnam could be a positive force if it led to the introduction of progressive aspects of Western civilization and ultimately to concession of political rights and the ideals of the Enlightenment.

Allowed to return to Vietnam in June 1925, under the express condition that he refrain from any call to violence against the established order and from any offensive polemic against his sovereign, Phan Châu Trinh quickly demonstrated that he remained true to the ideas he had always defended. In the speeches that he gave in Saigon late that year, he addressed himself to the two crucial questions of the synthesis of East and West in Vietnam, and of the form that a future government for the Vietnamese people might take. He maintained that Western democracy was more appropriate for a modern nation, and made a serious attempt to approach the problem of the assimilation of Western values into Vietnamese civilization.

He died in Saigon on 24 March 1926. His funeral was the occasion for national demonstrations of mourning, as well as the expression of an intense patriotic fervor.

PHAULKON, CONSTANCE (CONSTANTINE) (d. 1688)

Greek Adventurer at the Court of Siam

Constance Phaulkon became a favorite of King Narai (r. 1656–1688) and one of the most important officials in the kingdom. Born in Cephalonia, Phaulkon was employed by the English East India Company (EIC), coming to Siam during the 1670s. He entered Siamese royal service, converted to Catholicism, and married a Roman Catholic mestizo, Maria Guyomar (Guimar). Once in the service of King Narai, he helped the king pursue a monopolistic commercial policy and a pro-French foreign policy. Phaulkon became rich through his trading activities, and he was soon a powerful figure at court. He was first a protégé of the minister for foreign and trading affairs, Chaophraya Kosathibodi (Lek), and after the minister's demise in 1682 he became the de facto minister, although refusing to assume the title formally.

He was mainly responsible for conducting Siam's diplomatic relations with the court of King Louis XIV (1638–1715) of France, culminating in the sending of two embassies from France to Siam in 1685 and 1687, interspersed with an embassy from Siam to France in 1686. The second French embassy (1687), however, also brought many French troops into Siam and resulted in the garrisoning of two key towns in the kingdom: Bangkok and Mergui. Phaulkon thus became increasingly unpopular at court. When King Narai fell terminally ill in 1688, a group of anti-French and anti-Catholic Siamese courtiers led by Okphra Phetracha seized the royal palace in Lopburi. Unable to summon French help from the garrison at Bangkok, Phaulkon was arrested and put to death. His allies the French (with the exception of some missionaries) were by the end of 1688 expelled from Siam.

Phaulkon was able to exert great influence over Siamese foreign and commercial affairs, but his lack of a political power base within the

kingdom left him in a weak position when his royal patron was overthrown.

PHETSARATH (1890–1959)

Nationalist Laotian Prince

Born in 1890 as the third son of Prince Boun Kong (d. 1920), the “second king” of Laos, Phetsarath Ratananvongsa was heir to the cadet branch of the royal family of Luang Prabang, the branch of the family that had been supported by Siam in the nineteenth century. An outstanding and inspiring administrator in French Laos, Phetsarath was also a somewhat tragic figure. Unlike his two younger half-brothers Souphanouvong (1911–1995) and Souvanna Phouma (1901–1984), who played center stage in Lao nationalist politics, Phetsarath was destined to near-permanent exile in Siam (Thailand).

Having been tutored in early life at Luang Prabang, in 1904 the young prince joined other Lao students at the Lycée Chasseloup in Saigon. But Phetsarath was the first of the Lao royal family to receive an education in France, where he spent nearly eight years at the elite École Coloniale and other schools. Returning to Laos in 1913, he took up a number of positions in the French Indochina civil service, as well as in Laos. Beginning his career as clerk in the Royal Treasury at Luang Prabang, a year later he served in the office of the French resident in Vientiane. In 1919 he was appointed director of the Laos civil service, a position of both prestige and trust befitting a demonstrably capable collaborator with the French in the

creation of a “modern” administrative system. From 1919 until 1930, Phetsarath was appointed to the Government Council of Indochina, also joining the Economic Council from 1932 to 1937. Additionally, in 1923, Phetsarath was promoted to inspector of Lao political and administrative affairs, with responsibility for organizing a consultative assembly. This position gave him the authority to expand the number of Lao in the civil service, matching his nationalist inclinations to check Vietnamese domination in this area. His patrician interest in arts and culture also stirred early expressions of nationalism among the Lao elite.

As the most powerful Lao personage in the French colonial service, Phetsarath’s role even eclipsed that of King Sisavang Vong (r. 1904–1959). When, for example, the French sought to bolster the institution of Buddhism in Laos, Phetsarath was appointed head of the Buddhist Council. In 1941 the position of viceroy, abolished with the death of Boun Kong in 1920, was revived for Phetsarath. He also became prime minister of the modernized version of the king’s council.

Phetsarath split with Crown Prince Sisavang Watthana (1907–1984; r. 1959–1975) over collaboration with the Japanese. On 27 August 1945, with the defeat of the Japanese, Phetsarath took control of Vientiane. Dismissed by the king on 10 October for seeking to resist the return of the French and to forge a single independent kingdom, on 20 October Phetsarath answered back by passing a motion in the National Assembly deposing the king. Earlier, on 12 October, Phetsarath had proclaimed himself head of an Independence Committee (Lao Issara). Dynastic rivalry aside, Phetsarath’s ambitions to rule over a unified Laos also ran into the opposition of Prince Boun Oum of Champassak, the traditional leader in the south.

Phetsarath then threw in his lot with the Lao Issara (Free Lao) government-in-exile in Thailand, joined later by the “Red Prince” Souphanouvong, who had been leading the military struggle against the French on the Mekong River front. But unlike the radical elements within the Lao Issara, who followed Souphanouvong back to Vietnam, and unlike the moderates around Souvanna Phouma, who gravitated to Vientiane, Phetsarath, stripped of his positions, vacillated, biding his time in Thailand. Although also entering into negotiations with the French,

reconciliation with the king he had dared to dethrone was a problem.

Phetsarath briefly returned to Laos in 1956 on family business before making a final return in March 1957 upon gaining his reinstatement as viceroy. With his prestige restored, he continued to work with his brothers for a unified Laos. Courted by the British and Americans, he proved no Western lackey, supporting the coalition government and even pressing for diplomatic relations to be opened with communist countries. Nevertheless, his ideals were of an independent and united Laos, geopolitically anchored to Thailand, a view shared by Souvanna Phouma. He died in retirement in 1959.

Neglected in Lao historiography, Phetsarath was undoubtedly a complex figure, a traditionalist connecting with Luang Prabang's precolonial past but, being French educated, a modernist and progressive for his time. Born to rule, he was also an aristocrat who distanced himself from his half brother's international socialist projects. Married to a Thai and spending long years in Thailand, he was also true to his paternal origins and benefactors. As a servant of France in the service of his people, his nationalist inclinations—or vanity—also turned him against France. In communist historiography, Phetsarath has long been viewed as a patriot, but in popular lore he is also revered as a man of merit.

PHILIPPINE REVOLUTION (1896–1898)

The Philippine Revolution was a struggle for independence by a group of Filipino revolutionaries spearheaded by the Katipunan, which launched an uprising against the Spanish colonial government in 1896 that rapidly spread throughout the archipelago. The revolution was the culmination of Filipino nationalist aspirations during the last quarter of the nineteenth century, originating from the Propaganda Movement to the founding of the revolutionary Katipunan. Despite failing to attain independence, the revolution heightened the nationalist consciousness that was witnessed during the Philippine War of Independence (1899–1902), when Filipinos fought the newly installed U.S. colonial regime.

Anti-Spanish revolts prior to the mid-nineteenth century were characterized by parochial dissatisfaction toward harsh or unjust treatment at the hands of local Spanish officials or friars. The Muslim Moros had long waged a protracted struggle in resisting Spanish control ever since the inception of Spanish rule over the rest of the archipelago from the late sixteenth century. During the nineteenth century two events had a deep impact on Filipino attitudes toward the Spanish colonial regime. The tragedy of Tayabas in 1840 reflected the oppressive attitude of the Spanish authorities, who were hand in glove with the friars. Racial discrimination was the rule within the clergy: despite their education, Filipino priests were allocated only subordinate positions in the church hierarchy. When Father Apolinario de la Cruz (1814/1815–1841) sought permission to start the cofraternity of San José in Tayabas, he was denied because the Dominicans felt threatened. Nonetheless Cruz went ahead to found his order, with followers coming from Tayabas, Laguna, and Batangas. In 1841 during a meeting at Tayabas, Spanish troops killed many adherents, including Cruz. The following year, Filipino soldiers in Tayabas staged a mutiny; they were ruthlessly suppressed.

Then in 1872, Filipino troops in Cavite mutinied; the mutiny was swiftly suppressed. The Spanish friars, especially the Dominicans, feeling that Filipino intellectuals and clergy had criticized them, instigated the Spanish colonial government to take severe measures, including the arrest, imprisonment, or exile of those in-

tellectuals. Still dissatisfied, the Dominicans demanded the execution of the Filipino priests Jose Burgos, Mariano Gomez, and Jacinto Zamora; the three were executed by garroting.

The Tayabas and Cavite episodes stirred the general population to indignation but also exhibited their impotence at taking further action, owing to the repressive Spanish regime. Meanwhile a group of Filipino students—the *ilustrados*—from well-to-do families living and studying in Spain began what became known as the Propaganda Movement, which sought to convince the Spanish home government to institute reforms in the colonial administration of the Philippines. Through the columns of the newsletter *La Solidaridad*, these reformers proposed moderate demands such as freedom of speech, equality before the law, Filipino representation in the Spanish Cortes, Filipinization of the clergy, and assimilation. The influence of the Propaganda Movement was limited; some Spanish, especially fellow intellectuals, sympathized with them, but the Spanish government showed lack of interest. Airing their reformist views in the Spanish language denied the reformers the needed support from the majority of their untutored countrymen at home. However, it was not the intention of the reformers to rouse the peasant masses to revolt; their objective was to move the Spanish government to take measures to improve the colonial system.

José Rizal (1861–1896), who came from a wealthy family, was an active advocate of reform. His novels *Noli Me Tangere* (1887) and its sequel *El Filibusterismo* (1891) sought to expose the evils of the colonial regime. Rizal was a reformer, not a revolutionary, despite the strong language and damaging criticism he leveled at the Spanish colonial government in his second novel. In *Noli*, his protagonist agitated for reforms utilizing peaceful means. But in *Fili*, the same protagonist was forced to abandon peaceful measures owing to their futility, and turned to radical action including violence to achieve his ends. Rizal returned to the Philippines in 1892. He discussed his plans for reform with Governor Eulogio Despujol (t. 1891–1893), who showed interest. In July he formed La Liga Filipina, an organization that strove for the betterment of the Filipinos. But on 6 July Rizal was arrested and banished to Dapitan, Mindanao.

Rizal's writings, including his two novels, were banned in the Philippines but enjoyed a wide readership among intellectuals. Andres Bonifacio (1863–1897), born of plebeian background, was greatly influenced by Rizal and his works, in particular *El Filibusterismo*, in which force and radical solutions are advocated. Bonifacio and others revived La Liga Filipina. Its objectives were to explore all peaceful ways and legal means to convince the Spanish colonial regime to introduce reforms. When the colonial government did not pay heed to their appeals, La Liga Filipina again disbanded. Two groups emerged: the *Compromisarios* continued to advocate reforms through the support of *La Solidaridad*, and those led by Bonifacio formed the *Katipunan ng mga Anak ng Bayan* (Society of the Sons of the People).

Witnessing the futility of peaceful means and the fruitless emphasis on reform, the Katipunan raised the standard of armed revolt. Through its underground newspaper *Kalayaan* (*Freedom*), edited by Emilio Jacinto (1857–1899), the Katipunan's cause was expressed: expulsion of all Spaniards from the Philippines and complete independence, severing all ties with Spain. An armed revolution was called for.

Only the peasants heeded Bonifacio's and the Katipunan's call for revolution. But support from the moneyed class was lacking; consequently funds were low, retarding efforts to procure arms. Therefore the readiness for an armed revolution in 1896 was premature. In July 1896, when told of the Katipunan's plans for a revolution, Rizal decried its limited resources and its timing and predicted its inevitable failure.

But when the Katipunan's revolutionary plans were betrayed to the Spanish authorities and thousands were arrested and executed, Bonifacio launched the Philippine Revolution on 30 August 1896, with the Battle of San Juan Del Monte as the first clash of arms between the Katipunan-led revolutionaries and the Spanish colonial army. A month later at Binakayan, Cavite, the revolutionaries tasted their first significant victory.

When the revolution broke out, Rizal was on his way via Spain to Cuba, where he intended to volunteer his medical services. The island colony was in the midst of the Cuban War of Independence (1895–1898), led by the writer and patriot José Martí (1853–1895).

Rizal was arrested upon his arrival in Spain and shipped back to Manila. Tried, convicted, and executed on 30 December 1896, Rizal was transformed into a martyr for the nationalist struggle.

Meanwhile, for want of arms and strong leadership the revolutionaries faced repeated setbacks on the battlefield. What is more, within the Katipunan dissension came to the fore. Despite an agreement reached on 12 March 1897, members were split between followers of Bonifacio and those of Emilio Aguinaldo (1869–1964), a proven military strategist. In May, Aguinaldo had Bonifacio arrested and executed.

The Pact of Biaknabato (December 1897) witnessed a brief cease-fire. In return for Aguinaldo's exile, the Spanish side agreed to grant amnesty to all Filipinos who gave up their arms and indemnify them for war damages. The Filipinos, however, were dissatisfied, as fundamental demands were not addressed: equality, representation in the Spanish Cortes, secularization, and the granting of human rights and civil freedoms. Bad faith on both sides led to renewed hostilities. Francisco Makabulos, a revolutionary leader, achieved some success in Central Luzon.

The Spanish-American War broke out in 1898. At the Battle of Manila Bay (May 1898), the U.S. Asiatic Squadron under Commodore George Dewey (1837–1917) destroyed the Spanish fleet. A Philippine-American alliance was made to defeat the common foe, Spain. On 12 June 1898, Aguinaldo declared the independence of the Philippines. By the end of June, Aguinaldo and Makabulos had secured most parts of Luzon and had laid siege to Manila. Major General Wesley E. Merritt attacked and seized Manila on 13 August 1898. Fearing a massacre, Dewey persuaded Aguinaldo and the revolutionaries not to enter Manila when the Americans launched the assault. The Spanish governor, Diego de los Rios (t. 1898), surrendered to Dewey. On 10 December 1898 the Spanish-American Treaty of Paris witnessed Spain's ceding the sovereignty of the Philippines to the United States in exchange for U.S.\$20 million. Double-crossed and cheated, the Filipino revolutionaries turned on their former allies in February 1899, starting the Philippine War of Independence (1899–1902).

The Filipino revolutionary government did not recognize the U.S. acquisition of the Philip-

pines. Instead, on 20 January 1899, Aguinaldo became the president (t. 1899–1901) of the Philippine Republic. A Congress of Representatives was convened in Malolos (October–November 1899) whereby a constitution drafted by Apolinario Mabini (1864–1903) was adopted.

Reflecting on the revolution, including Aguinaldo's resistance to the U.S. takeover, Schumacher noted: "The Revolution of 1896–1902 was indeed a nationalist revolution in which all classes of society participated. But beneath that common surge of national feeling, a complexity of motives and forces were at work, which no monolithic framework can adequately explain" (1991: 209).

PHILIPPINE WAR OF INDEPENDENCE (1899–1902)

The Philippine War of Independence started on 4 February 1899, when U.S. soldiers in Manila fired at Filipino troops surrounding the city. When General Emilio Aguinaldo (1869–1964) noticed that the Americans intended to attack his troops, he declared war on the United States. The war that erupted was viewed differently by the two warring parties. The Filipino side considered the conflict a “war of independence,” because they had proclaimed an independent republic and saw the Americans as imperialists, bent on occupying their country. The United States did not recognize the Philippine Republic and considered itself the legitimate sovereign of the islands, after Spain had transferred the colony to it. Consequently the United States spoke of the war as the Philippine Insurrection and saw the Filipino freedom fighters as rebels.

The Spanish–American War (1898) concluded with the Treaty of Paris on 10 December 1898. Spain had agreed to cede Cuba, the Philippines, Guam, and Puerto Rico to the United States, and the United States had promised to pay the sum of U.S.\$20 million to Spain for the transfer of the Philippines. By that time it had become clear that the U.S. government was bent on acquiring the Philippines as a colony. On 21 December U.S. president William McKinley (t. 1897–1901) delivered a proclamation, claiming jurisdiction over the Philippines and announcing the intention to rule the islands in accordance with the principle of “benevolent assimilation.”

This went against the wishes of the Filipino revolutionaries, who had proclaimed an inde-

pendent Philippine Republic, with the center of government at the town of Malolos, and had adopted a constitution for the new state. On 21 January 1899, Aguinaldo proclaimed the constitution as the supreme law of the republic, and the next day Aguinaldo was formally inaugurated as president of the new republic. What would later be called the First Republic or the Malolos Republic was now a fact.

When war broke out, the Americans had gathered a sizable army in the islands and were prepared to attack the Filipino troops and conquer the islands. General Aguinaldo had prepared his forces for conventional warfare and had put up lines of defense to block the advancing U.S. troops. However, time and again the Filipino troops were defeated; they had to abandon their positions and retreat. The Americans advanced to the north, because they thought that if they could conquer the town of Malolos, the Filipino revolutionaries would give up their resistance. In May, Malolos fell and Aguinaldo’s troops continued their retreat to the north. As a result of the retreat, the Filipino army disintegrated. In November, by which time little was left of the Filipino army, Aguinaldo and his generals decided to shift to guerrilla warfare. From then on, small Filipino units carried out attacks against U.S. troops.

The U.S. Army was at a level of 40,000 men in the first year, and reached 70,000 in 1900. Initially the soldiers were equipped with outdated rifles, but later they acquired newer ones. The Filipino side probably counted between 80,000 and 100,000 men in regular units, armed with standard European rifles, but they were short of ammunition. The Americans were better trained than the Filipinos. According to historian Glenn Anthony May (1987: 154), difference in weapons, however, was not the decisive reason why the United States had the upper hand. The main reason why the Americans won the war was that they were better trained, and that General Aguinaldo stuck to the principle of conventional warfare, instead of using guerrilla tactics at an early stage of the war. Moreover, the Philippine population was lukewarm in its support for Aguinaldo and his army. In addition, ethnic conflicts and personal rivalry weakened the Filipino military effort. In June 1899, General Luna, a competent military leader, was assassinated, probably with the knowledge of General Aguinaldo, who feared him as a rival.

Fighting continued throughout 1900. In early 1901 many Filipino commanders had been killed or captured or had surrendered. South of Manila, in the province of Batangas, U.S. forces conducted a harsh campaign against Aguinaldo's men, causing large numbers of civilian casualties (May 1993).

General Aguinaldo had withdrawn to the northeast coast, with a small group of Filipino soldiers. In a surprise attack by the Americans, assisted by Filipino auxiliary troops, General Aguinaldo was captured on 23 March 1901 in Palanan, Isabela Province. The Americans brought him to Manila. In April, Aguinaldo issued a statement acknowledging and accepting the sovereignty of the U.S. government over the Philippines and calling upon his fellow countrymen to lay down their weapons. After having taken the oath of allegiance to the U.S. government, Aguinaldo returned to private life. Three Filipino generals continued fighting in the provinces to the south of Manila, but they surrendered in the early part of 1902. On 4 July 1902 the U.S. government declared that the "Philippine Insurrection" was over and that a state of peace existed in the islands. The United States proclaimed a general amnesty for all those who had fought against the Americans. In 1901 the Americans had replaced the military government with a civilian administration. Many Filipinos from the educated stratum and the elite had offered their services to the U.S. administration in the Philippines.

However, the war was not yet over. A number of Filipino commanders with their soldiers refused to take the oath of allegiance and continued fighting against the U.S. occupation. The U.S. government now considered them criminals, who could no longer count on amnesty but could receive the death sentence if captured. In several places cultist sects with politico-religious beliefs rebelled against the Americans. The U.S. government created the Constabulary, a military police force, to deal with these law-and-order problems. By 1906 the Philippines had been brought under U.S. control, except for the Muslim provinces in the south, which took another decade to pacify.

PHILIPPINES UNDER SPANISH COLONIAL RULE (ca. 1560s–1898)

Spanish colonial rule in the Philippines started when Captain-General Miguel López de Legazpi (1500–1572), sailing with his fleet of four ships from Mexico to Asia, landed on the island of Cebu on 27 April 1565, claimed the island for Spain, and established a fortified settlement. In 1571 the Spaniards took the town of Manila and transferred their headquarters there. In the following decades most parts of the northern and central islands were explored and brought under Spanish control. In some areas the population was never completely subdued—namely, the Muslim populations in most parts of Mindanao and the Sulu archipelago, and the inhabitants of the Cordillera mountain areas in northern Luzon. Spanish rule lasted for more than three centuries and ended with the defeat of the Spaniards in the Spanish–American War (1898) and the transfer of the Philippines to the United States at the Treaty of Paris in December 1898.

The Spaniards did not achieve the main objective of their expansion into Asia—that is, getting access to and control over the spice-producing islands of the Moluccas in what is presently Eastern Indonesia. First the Portuguese and later the Dutch repelled Spanish incursions into those islands. The Spaniards also failed in another objective, that of acquiring a

foothold in China and Japan in order to Christianize the inhabitants. The rulers of these countries were not sympathetic to Christian missionary activities. Spain then concentrated on its third objective—namely, Christianizing the people in the Philippine Islands. A moderate degree of Hispanization was the result.

Governing the Philippines was difficult because of the great distance between Spain and its colony. At the top of the Spanish imperial bureaucracy stood the Spanish king and the Royal Council of the Indies. Until Mexican independence in 1821, the Philippines was governed via the viceroyalty of New Spain (Mexico) in Central America. From 1836 until the end of Spanish rule in the Philippines, the colony was under the Ministry of Overseas Colonies in Madrid. The highest official in the Philippines was the governor and captain-general, who represented the Crown and was the head of the colonial government and the commander-in-chief of the army and navy. He was assisted by the *Audiencia*, a tribunal that performed three functions—namely, advising the governor on political and legal matters, initiating legislation, and acting as the highest court of law in important cases.

In the Philippines under Spanish rule the state and the Catholic Church were closely interconnected. The important role of the church originated from an exclusively Spanish institution, the *patronato real*, or the royal patronage. The pope had granted to the Spanish kings the rights and duties of patron of the Catholic Church in the colonies—that is, the obligation to spread the Catholic faith among the conquered peoples, to support the church financially, and the privilege of appointing suitable personages in ecclesiastical positions. The pope had granted this royal patronage because the Holy See did not have at its disposal a missionary organization capable of Christianizing the populations in the newly discovered lands.

As a result the Spanish colonial system was based on two pillars. Parallel to the political and civil administrative machinery ran the ecclesiastical organization. Accompanying the first groups of Spanish conquistadors were members of the main religious orders: the Augustinians, Franciscans, Jesuits, Dominicans, and Recollects. These friars Christianized the people in the areas occupied by the Spanish soldiers, built churches, and organized the provision of reli-

gious services. The head of the church in the Philippines was the archbishop of Manila. In the small towns at the local level, power was in the hands of the local priest, who supervised the local officials, collected taxes, managed the local funds, reported to the higher Spanish officials, and executed public orders.

The Spaniards had been drawn to Asia in the expectation of getting access to potential sources of wealth and to important trade routes. That expectation was not realized. The Portuguese and the Dutch blocked them from entering the profitable trade between Asia and Europe. Contrary to early expectations the Philippines turned out not to have large deposits of precious metals. And the much-sought-after spices, such as pepper, nutmeg, and cloves, did not grow well in the Philippine Islands.

However, after the capture of Manila the Spaniards discovered a profitable trade link. Chinese traders brought silk and porcelain to Manila in exchange for silver. Spanish galleons then transported these oriental goods to Mexico, where they fetched high prices. The returning galleons brought a steady flow of Spanish-American silver to Asia. Manila became the big entrepôt in the China-Manila-Acapulco trade, and once a year the galleon plied the route between the Philippines and Mexico. The profits of this trade benefited both the Crown and private traders in Manila. The first galleon sailed in 1565, and the last returned in 1815 (Schurz 1939).

Until the end of the eighteenth century the Philippines did not produce goods that could be exported. The Spanish merchants were concentrated in Manila, depending for their trade on the annual galleon. They hardly spread out to the provinces, and they were not inclined to take up agriculture. Because local resources did not yield enough money to maintain the colonial administration, the government was constantly running a deficit and had to be supported with an annual subsidy from the Spanish government in Mexico, the *situado*. The Spanish government in the islands was facing high military expenses, combating the threats from the Dutch and the English as well as attacks from Muslim and Chinese pirates. In 1762–1764 the British occupied Manila.

A typical feature of Spanish rule was the emergence of large estates owned by the religious orders. These haciendas were situated in

the provinces adjacent to Manila. The friars claimed that the land had been donated to them by Spaniards or by Filipino chiefs, and that they had the right of ownership. Filipino tenants worked the land and paid rent to the friars. The income from these haciendas supported religious institutions, such as hospitals and schools. The Filipino tenants often protested rent increases and abusive levies by the friars. In the last decades of the nineteenth century the friar estates became the focus of strong resentment among the Filipino middle class (Roth 1977).

Throughout the period of Spanish rule the government had to contend with revolts and rebellions of the indigenous population, the *Indios* as the Spaniards called them. Historians have recorded more than a hundred revolts. Aside from that there were numerous small, local disturbances and uprisings that have not been documented. The causes of these revolts were numerous and diverse. During the first decades, when the Spanish rulers attempted to establish control over areas and to Christianize the population, local chiefs and their followers resisted. In later periods uprisings broke out against the excessive tribute and forced labor requirements imposed by the Spaniards. In several places the local population revolted against the usurpation of land by the friar orders. In 1762–1765 a large-scale revolt took place in the Ilocos provinces, led by Diego Silang and after his death by his wife, Gabriela, against Spanish domination. Indigenous religious movements, even when they were inspired by the Christian faith, became the focus of Spanish repression. In 1841 a Spanish army crushed the cofraternity led by Apolinario de la Cruz, whom they suspected of rebellion against the colonial government; they massacred hundreds of his followers. The general pattern was that the Spaniards crushed the rebellion by military force and with the assistance of loyal Filipino troops, and that the rebel leader was executed.

In the last decades of the eighteenth century the Spanish government became convinced of the need to make the Philippines more profitable. Attempts were made to introduce new crops in the islands, such as indigo, cotton, and pepper, and to start large-scale plantations. In 1785 the government in Madrid created the Royal Philippine Company, a trade company that would ship the new products to Spain and

at the same time carry out trade with Asia and the Americas. Although some of the company's operations had been successful, as an overall enterprise it failed, and in 1834 the company was terminated.

Another attempt to raise income for the government in Manila was the creation of the tobacco monopoly in 1781. Under this scheme the colonial government assumed control over tobacco trade and manufacture in a number of provinces on the island of Luzon. In these areas farmers had to grow tobacco and to sell the produce to the government at fixed prices. The government then sold the tobacco to the Filipino consumers, earning a profit on the sales. During the nineteenth century the system was criticized for its forced labor and the many abuses inherent to it. In 1883 the tobacco monopoly was finally abolished (De Jesus 1980).

During the nineteenth century Philippine agriculture underwent a process of commercialization. Foreign merchants, mainly British and Americans, came to the Philippines to buy agricultural products, such as sugar, Manila hemp (abaca), and tobacco. Filipino landowners produced these crops on an increasingly large scale. Until the end of the century exports were steadily rising. The foreign merchant houses played an important role as bankers, extending credit to Filipino farmers and boosting production, and the foreign firms imported textiles and machinery (Legarda 1999).

The commercialization of the economy brought about changes in the socioeconomic structure of Philippine society. For centuries Chinese traders had come to the islands, and many of them had settled around Manila. The rise of commercial agriculture attracted more Chinese migrants, who fanned out to the provinces. Many of them became intermediary traders between the foreign merchant houses in Manila and the farmers in the rural areas (Wickberg 1965). Chinese mestizos—that is, the children of Chinese fathers and Filipina mothers—became landowners engaged in the cultivation of cash crops. This stratum of relatively well-to-do farmers became a rising middle class, availing themselves of imported luxury goods, and sending their children to study abroad.

In the nineteenth century the colonial government, shocked by the independence struggle of the Spanish-American colonies, grew increasingly nervous about a possible Filipino

uprising. They feared that the newly emerging mestizo class of commercial landowners would take over control of the country. The government considered the Spanish friars to be the most loyal and dependable executioners of the Spanish rule, and it looked at the secular Filipino priests as politically unreliable. In the 1850s and 1860s the government followed a policy of replacing Filipino priests in parishes with Spanish friars. Some Filipino priests protested against this policy. This controversy became the background of the events of 1872. In that year a group of Filipino soldiers in the Spanish army rose in mutiny. The uprising was quickly suppressed. The government then accused three leading Filipino priests—Mariano Gomez, José Burgos, and Jacinto Zamora—of having directed the revolt. The priests were brought before a tribunal, and although evidence was lacking, they were sentenced to death and executed. This made a deep impression on the Filipino population. The three priests, conveniently referred to as “Gomburza,” were considered martyrs and became a rallying symbol in the revolution of 1896.

The 1880s and early 1890s were a period of increasing social and political unrest among the Filipino population. The Spanish government suppressed any attempt at political protest, and even moderate attempts at political reform. The wave of arrests, deportations, and executions in 1872 forced many young Filipinos to leave the country and go to Europe. Filipino expatriates in Spain formed the Propaganda Movement, which aimed at political reforms in the colony. When the Spanish government did not heed their pleas, the attitude among Filipino nationalists became more radical. In the Philippines a secret organization, the Katipunan, was formed, which started a revolution in 1896. Two and a half years later Spain had definitely lost the Philippines.

PHILIPPINES UNDER U.S. COLONIAL ADMINISTRATION (1898–1946)

U.S. colonial administration of the Philippines lasted from 1898 to 1946, broken only by the Pacific War (1941–1945), when Japan occupied the Philippines for three years (1942–1945).

The period of direct civil colonial administration lasted from 1900 to 1941. During this period, the Americans implemented colonial policies attempting to mold Filipinos in their image. The Americans, however, were not fully decided on whether to keep the Philippines or not, and that, together with the Filipino clamor for independence, led to changing political policies. On the one hand, a strong colonial political presence was manifested by Republican administrations; the Democrat administration of Woodrow Wilson (t. 1913–1921) and his governor-general, Francis Burton Harrison (t. 1913–1921), on the other hand, opted for greater autonomy for Filipinos. Policies relating to security, trade, public works, health and sanitation, and education, however, remained consistent, as did the Filipino campaign for independence.

During the U.S. colonial administration, significant developments were achieved in road construction and infrastructure building; the educational level was raised; hygiene and sanitation were greatly improved; and the standard of living in cities and some towns went up. However, because of the U.S. free-trade policy, the Philippine economy remained agricultural and dependent on cash crop production, particularly sugar. The Philippine economy was tied to the U.S. market, and, as a result of the unequal distribution of wealth, the gap between the rich in the cities and towns and the poor rural peasants became increasingly apparent. Peasant uprisings occurred periodically as social tensions escalated.

The campaign for independence by Filipinos, as well as changing U.S. priorities in the 1930s, also brought about acts that paved the way for an end to U.S. rule and Philippine independence. The Tydings-McDuffie Act, which promised the end of U.S. colonial rule after a ten-year transitory period, was passed by the U.S. Congress and was approved by the Filipinos. The Philippine Commonwealth government was inaugurated in 1935, pursuant to that act; the commonwealth was an almost autonomous government that would address the problems of becoming independent, such as national defense, economic restructuring, and changing relations with the United States. Halfway through the transition period, war broke out in the Pacific, and Imperial Japanese forces occupied the Philippines.

U.S. colonial administration of the Philippines had five distinct periods: 1900 to 1913, 1913 to 1921, 1921 to 1927, 1927 to 1935, and 1935 to 1941. The first period, from 1900 to 1913, was marked by the establishment of a civil administration taking over from U.S. military rule that was set up in 1898. The arrival of the Second Philippine Commission, otherwise known as the Taft Commission (headed by William Howard Taft), began the shift from military government to civil administration. The Taft Commission assumed legislative functions and limited executive powers in September 1900, and on 4 July 1901 it took over from the military government. The basic U.S. policy for the Philippines was to create a Philippines for Filipinos, using the American way of life as a model. The initial priorities of the colonial administration were to restore peace and order, subduing anti-American sentiment; to end the Filipino-American War (1899–1902); and to establish U.S. sovereignty through a civil government. Taft's Philippine Commission had both legislative and executive functions; Taft became the first civil governor-general to the Philippines, becoming the representative of the U.S. president in the Philippines. Provincial and municipal governments were set up as the Philippine Constabulary, a national paramilitary force created to crush armed resistance to the Americans, control lawless elements, and maintain order. Laws suppressing the clamor for independence were passed, such as the Flag Law, which prohibited the display of the flag adopted by the 1898 Philippine Republic. The Sedition and Brigandage Acts made utterances and armed uprisings against the Americans punishable as criminal acts. Armed Filipino nationalistic movements were eventually crushed, but the quest for independence continued in other nonviolent ways.

There were five U.S. governors-general during the first period of American colonial rule: William Howard Taft, Luke E. Wright, Henry C. Ide, James F. Smith, and William Cameron Forbes. Taft's influence in Philippine affairs continued even after his term as governor-general expired; he became secretary of war and president of the United States (t. 1909–1913). The Philippines was under the direct authority of the president through the governor-general in the Philippines. In 1902 the U.S. Congress passed the Philippine Act, which served as the basic law for the Philippines until 1916. The

Philippine Act legitimized the president's acts until then and gave him continuing authority over the Philippines.

The first period of U.S. colonial rule saw the introduction of a nationwide public education system, through which American ideas and the English language were taught. The University of the Philippines was founded in 1908 to provide higher education, and selected Filipinos were sent to the United States to study as government scholars.

Health and sanitation measures were taken almost immediately to reduce illness. Mapping of the Philippines and the construction of roads, government buildings, schools, and ports were also a priority of the U.S. colonial administration.

In its operations, the Philippine Commission was also guided by the principle of Filipinizing the administration as much as practicable, and as consistent with U.S. interests. The Philippine Commission, in creating the bureaucracy of government, trained and hired Filipinos in the civil service; provincial and municipal officials were elected to office in most cases. Filipinos were appointed to the Philippine Commission, but they were always the minority during the first period of U.S. rule. The Philippine Act of 1902 provided for the creation of a Filipino legislative body to complement the Philippine Commission, and it was created in 1907. The Philippines thus had a bicameral legislature, with the U.S.-dominated Philippine Commission as the upper house and the Filipino-dominated Philippine Assembly serving as the lower. To give some representation to Filipinos in the United States, the Philippine Bill also created the position of Philippine resident commissioner to the United States.

The advent of Filipinos in politics resulted in the first Filipino political parties being formed. The Americans encouraged party politics following the U.S. pattern, and the first Filipino political party was the Partido Federal (Federal Party), which was founded in December 1901. The Federal Party advocated acceptance of U.S. sovereignty and eventual statehood. It was not popular with Filipinos, however, and nationalist, proindependence parties were formed soon after. The strongest and most successful of these was the Nacionalista Party, formally organized from other nationalist parties in 1907.

Other priorities of the early U.S. colonial administration were the opening of markets for Philippine products, stabilizing the Philippine peso, and attempting to implement a form of land reform by buying lands owned by Spanish religious orders (friar lands) and selling them to Filipinos.

One of the reasons for U.S. acquisition of the Philippines was the opening of markets for U.S. goods in Asia. Preferential relations between the United States and the Philippines could start only in 1909, however, when a provision maintaining the status quo in trade in the Treaty of Paris lapsed. In 1909 the U.S. Congress passed the Payne-Aldrich Act, which allowed all U.S. goods to enter the Philippines duty-free; conversely, the Philippines could export all products without paying duties except on rice, while sugar and tobacco could be exported under fixed quotas. The 1913 Underwood-Simmons Act removed all quotas and established a system of free trade between the United States and the Philippines. This was opposed by Filipinos in the Philippine Assembly, who foresaw a dependency relationship, an unbalanced economy, and a loss of revenues for the insular government.

During the first period of U.S. colonial rule, Mindanao and Sulu with their Muslim populations were constituted as the Moro Province, and they remained under a military governor until 1913.

The second period lasted from 1913 to 1921, with a Democrat administration in the United States under President Woodrow Wilson (t. 1913–1921). The governor-general in the Philippines during this period was Francis Burton Harrison (t. 1913–1921), who advocated greater autonomy for the Philippines and made Filipinization his main priority. By the end of his term, 96 percent of the Philippine government was in Philippine hands, and Harrison had granted Filipino political leaders under Manuel L. Quezon (1878–1944) and Sergio Osmeña, Sr. (1878–1961) great leeway in governing the country. He felt that Filipinization and actual hands-on training were the best way to prepare for independence, particularly with the passage of the Jones Law in 1916, which stated that the U.S. government would relinquish its sovereignty and recognize Philippine independence once stable government had been achieved. Harrison also encouraged gov-

ernment involvement in the economy, through government-owned and -controlled companies, in order to diversify the economy. Filipinization made Harrison very popular with Filipinos, but it made him unpopular among Americans who wanted greater control over the Philippines. It also resulted in inefficiency and corruption.

The third period (1921 to 1927) marked the return of strong U.S. political presence under Governor-General Leonard Wood (t. 1921–1927). Wood clashed with Filipino nationalist aspirations, which resulted in a stormy political relationship. Adversarial relations peaked in the Cabinet Crisis of 1923, wherein most members of the Filipino cabinet resigned over Wood's decision to reinstate a U.S. police agent under investigation. Wood managed, however, to restore efficiency and control corruption in government.

The fourth period (1927–1935) saw a balancing of U.S. interests with Filipino aspirations, with subsequent governors-general—Henry L. Stimson, Dwight F. Davis, Theodore Roosevelt, Jr., and Frank Murphy—adopting more conciliatory policies.

Filipino politicians campaigned for independence throughout all periods, and in 1933 the U.S. Congress passed the Hare-Hawes-Cutting Act, which provided for Philippine independence after a ten-year transition. Quezon rejected it because of several unacceptable points; he then went to the United States to seek a better bill. The result was the Tydings-McDuffie Act, which resembled the Hare-Hawes-Cutting Act. This was accepted by the Philippine legislature in 1934.

With the acceptance of the Tydings-McDuffie Act, a constitutional convention was formed that drafted the constitution for the Philippine Commonwealth government and that would serve as the basic charter for the future Philippine Republic.

The last period of U.S. colonial rule was the Philippine Commonwealth government period, from 1935 to 1941. The commonwealth was a nearly autonomous government that would prepare the Philippines for independence after ten years. Elected president of the commonwealth was Quezon, with Osmeña as vice-president. The commonwealth had to face serious problems in order to prepare the Philippines for independence. These

included social reform, land reform, preparing for national defense, economic diversification, and building stronger national consciousness. During the commonwealth years the Philippines remained a colony of the United States, which held power over currency and coinage as well as foreign affairs. The post of governor-general was abolished, and in its stead was created the American high commissioner, who served as representative of the U.S. president but did not have actual legislative or executive functions.

War in the Pacific broke out before the commonwealth period was over; Japanese occupation ended the forty years of U.S. colonial rule abruptly. The impact of those years is still very visible in the Philippines today.

PHILIPPINES–U.S. “SPECIAL RELATIONSHIP”

The historical relationship between the Philippines and the United States, spanning more than a century, has been characterized as “colonial” (from 1898 to 1946) and “neocolonial” (from 1946 to the present). It has been variously described as a “special relationship,” a “love-hate relationship,” an “unequal relationship,” a case of “sentimental imperialism,” and “slaying the father.” Advocates for continuing the relationship went so far in the 1950s as to propose U.S. statehood for the Philippines. Those opposed essentially blame the United States for the many political, economic, and social ills that the Philippines suffers to this day. The former group values the sense of freedom and public education that the United States introduced. The latter argues that U.S. exploitation of the Philippine economy made it weaker and essentially dependent on the United States, even long after the Philippines became independent.

The Americans themselves point out that the Philippines was a successful experiment in Western-style democracy with the introduction of representative government and popular institutions such as political parties and elections, due process, checks and balances, and the principle of self-government. Also, they take pride in the fact that they honored their commitment to restore Philippine independence peacefully after a transition period. That was unlike the case of most colonies in Southeast Asia, which had to wage long and bloody struggles against their former colonial masters to regain their independence. Still, Filipino nationalists argue that the political freedoms and practices the Americans introduced benefited mainly the native elite, known as *ilustrados* (the educated class), and were essentially meaningless to the vast majority of Filipinos. The economic foundation of the society, which was dominated by the conservative elite, was not reformed sufficiently to redress the unequal distribution of resources and justice in the feudal system after 300 years of Spanish rule. It remained intact under the succeeding American colonizers.

What is more, the United States established two huge and several medium-size military bases and facilities at Clark Air Base and Subic Bay, as well as in various other parts of the country, ostensibly for technical assistance and mutual security. This effectively embroiled the Philippines in the U.S. war effort and activities in other parts of Asia—notably in Vietnam in the 1950s and 1960s. The U.S. bases were a constant irritant in Philippine–U.S. relations. They actually became a major factor in the resurgence of Philippine nationalism in the 1960s. A continuous campaign by nationalist elements to terminate the bases on Philippine soil did not succeed until 1991, when its Senate abrogated the Military Bases Agreement (MBA) with the United States, whose original lease was for ninety-nine years. In 1992 the last U.S. military troops departed from Subic Bay.

But that is not the end of Philippine–U.S. relations. Only the MBA was terminated. Other agreements between the two countries, such as the Mutual Security Treaty signed in 1951, remained. This means that should there be an attack against the Philippines by external forces, the United States is obligated under the treaty to come to the defense of its former colony.

During the short-lived Estrada presidency (1998–2000), the Philippine Senate approved a Visiting Forces Agreement (VFA), which would allow the United States to conduct military exercises in the Philippines but not to establish basing rights on Philippine territory.

This was essentially used to send 1,000 U.S. troops, including 660 Special Forces or “advisers,” from Hawai‘i to the Philippines. The intention is to train the Filipino military in defeating the Abu Sayyaf (“Bearer of the Sword”), the extremist Muslim group in Basilan, Mindanao, that had been identified as a front for Osama bin Laden’s al-Qaeda terrorist organization. This sparked a political firestorm in the Philippines, with demonstrators claiming that it was an affront to Philippine sovereignty. On the other hand, President Gloria Macapagal-Arroyo (t. 2000–2004; 2004–) has fully supported the U.S. military deployment, vowing to “crush” the Abu Sayyaf. Her administration has hired a foreign secretary who is more compatible with her foreign policy position regarding the United States than her predecessor. In return the Philippine government stands to gain about U.S.\$100 million for the modernization of its

military and to fund projects for poverty alleviation and other social programs.

In effect, Philippine-U.S. relations continue after a lapse of six years during the Clinton administration (1993–1999). The presence of a large Filipino community in the United States, now estimated at 2 million not counting “illegals,” is a major factor in the continuing relationship. They are positively disposed to the continuing role of the United States in Philippine affairs, although a small but vocal minority espouses the need to respect Philippine sovereignty. And the substantial remittances they send back home help to shore up the Philippine economy, which continues to be hounded by a spate of human and natural disasters in addition to the fundamental problems associated with its complex history. The United States continues to be the prime destination of thousands of Filipinos every year, who arrive with immigrant and nonimmigrant visas.

PHNOM PENH

Cambodia's Commercial Heart

Phnom Penh, capital of Cambodia since 1866, is the country's largest city, with a population estimated at approximately 1.1 million in 2000 (United Nations 2002: 46). Founded in the fifteenth century following the abandonment of Angkor, Phnom Penh rapidly became a commercial center, acting as an entrepôt for goods coming south along the Mekong, southeast along the Tonle Sap, and northward from the Mekong Delta. Cambodia's capital during this

period was at Lovek, or at Udong, both north of the city, but in the seventeenth century, the thriving port of Phnom Penh hosted traders and missionaries from Japan, Portugal, The Netherlands, China, and elsewhere. In 1811, when the Vietnamese established a protectorate over Cambodia, Phnom Penh became the royal capital until the court returned to Udong in 1848.

The greatest expansion of the city occurred during the French colonial period (1863–1953). Phnom Penh became Cambodia's capital again in 1866. Under French tutelage swamps were drained; the royal palace, villas, and government offices were built; and tree-lined boulevards, modeled on those of provincial France, were laid out. From the 1940s until 1970, Phnom Penh was arguably the prettiest and most orderly capital city in Southeast Asia. Its population rose gradually in the colonial era, with the largest number of newcomers being immigrants from China and Vietnam, who soon dominated the commercial sector. Cambodia's first high school, the Lycee Sisowath, was founded in Phnom Penh in 1935.

During the early years of independence, Phnom Penh's population continued to grow, reaching approximately 500,000 in 1970. In the Cambodian civil war of 1970–1975, an estimated 2 million refugees from rural areas sought asylum in the city, where they lived (and often died) under horrendous conditions (Chandler 1991: 122).

Following the Khmer Rouge victory in 1975, the entire population of Phnom Penh was evacuated to the countryside as part of the new regime's anti-urban, propeasant policies. Money, markets, and schools were abolished. Under Democratic Kampuchea (DK), fewer than 50,000 soldiers, government employees, and factory workers were allowed to live in the city, under close surveillance (Kiernan 1995: 26). When DK was overthrown in the course of a Vietnamese invasion in 1979, thousands of former residents flocked back into Phnom Penh to find public services nonexistent and much of the city's infrastructure in ruins. In the 1980s services were gradually restored, and the population expanded rapidly, outstripping the capacity of the administration to provide clean water, sewage treatment, electricity, and paved streets. By the mid-1980s, perhaps 200,000 people inhabited the city (Gottesman 2002: 39). When Cambodia opted for a free-market economy in

Rush-hour traffic in Phnom Penh. (Michael S. Yamashita/Corbis)

1989, a modest boom occurred in housing and hotel construction. But the city expanded even more dramatically in the late 1990s, when Cambodia's long civil war came to an end, political stability returned, and Cambodia joined the Association of Southeast Asian Nations (ASEAN). During these years, a flourishing garment industry, employing over 150,000 people, sprang up on the outskirts of the city (Pottebaum 2002: 36). Phnom Penh's population doubled in these years, as people poured in from the impoverished countryside seeking uncertain economic opportunities (Gottesman 2002: 122). Government services were inadequate in the face of the influx, and many streets in the city remained unpaved and became impassable in the rainy season. Serious traffic problems developed along several major streets, and there were frequent outbreaks of violent crime. Under an energetic mayor, and with infrastructural assistance, largely from Japan, several beautification projects were undertaken in the late 1990s, and the city regained some of its earlier glamour. The city continues to serve as an important freshwater port. Its name, "Penh mountain," refers to a small hill, topped by a Buddhist temple, at the northern edge of the city.

**PHRA NARET (KING NARESUAN)
(r. 1590–1605)**

Siam's Warrior-King

A notable warrior-king of Siam, Naresuan rebelled against the king of Burma (Myanmar) and freed Ayutthaya from the Burmese yoke during the latter part of the sixteenth century.

Naresuan was a son of King Maha Thammaracha (r. 1569–1590), a former ruler of Phitsanulok who sided with the Burmese when they attacked Ayutthaya. Naresuan was descended from the royal family of Sukhothai on his father's side, while his mother was a daughter of King Maha Chakraphat (r. 1548–1569). Even before the Siamese defeat and the fall of Ayutthaya in 1569, Naresuan had been given to the Burmese king as a hostage for his father's good behavior, and he spent part of his youth at the Burmese court.

After his return to Siam, Naresuan was appointed ruler of Phitsanulok. He rapidly gathered followers, declared Siamese autonomy from Burma, and defeated the Burmese in several battles and skirmishes. King Nanda Bayin (r. 1581–ca. 1599) of Burma tried to recapture Ayutthaya in 1586–1587 and later sent large invasion forces to Siam under his son the crown prince, in 1590 and 1592–1593. Under Naresuan's personal leadership, the Siamese armies successfully withstood all Burmese pressure. Naresuan's most famous victory was at the Battle of Nong Sarai in early 1593, when, according to the Siamese chronicles, he killed the Burmese crown prince in a battle on elephant-back while completely surrounded by enemy troops.

Having repulsed the Burmese invaders, Naresuan soon turned the tables and invaded Burma. Although he took several Burmese or Mon towns, the Siamese king failed to conquer Toungoo, running out of provisions after a siege lasting two months. What Naresuan managed to do was to reconquer the key trading ports of Mergui (Tenasserim) and Tavoy on the Bay of Bengal. Right at the end of his reign Naresuan was still involved in a military campaign against Burma. Indeed, he died at Muang Hang while on his way to fight Burma.

Naresuan had also to contend with a constant threat from the Cambodians, who made

raids into Siam to gather captives and increase their manpower. Naresuan launched an invasion of Cambodia in 1593–1594 and managed to capture the Cambodian capital of Lovek. During this campaign many Siamese who had been taken to Cambodia, plus several Cambodian war captives, were brought back to Siam to bolster the kingdom's manpower resources.

Apart from conquering Cambodia, Naresuan also turned his attention northward and succeeded in placing Lan Na under Ayutthaya's suzerainty. Naresuan may be said to have secured, through his military successes, Siam's borders on the western, eastern, and northern sides.

Naresuan's reign was also notable for the contacts with foreign traders, and for diplomacy. The Spaniards and the Dutch came to Siam for the first time during Naresuan's reign, in 1598 and 1604, respectively. The Spanish governor of Manila sent an embassy to Siam and a treaty was concluded, allowing the Spaniards to reside and trade in Siam. But Spanish ambitions in mainland Southeast Asia ended in failure, especially their involvement in Cambodia, and Hispano-Siamese trading relations did not prosper. The Dutch, in the form of the United East India Company (VOC), arrived in Siam hoping to get to China on Siamese ships. Although their hopes were disappointed in this aspect, they stayed on to trade, opening a factory or agency in Ayutthaya during the next reign, that of Ekathotsarot (r. 1605–1610/1611).

Naresuan appeared to have kept well abreast of developments elsewhere in Asia: witness his correspondence with the Chinese court on the subject of the Japanese. The Siamese king suggested to the Chinese that Siam and China join forces to subdue the Japanese shogun Hideyoshi Toyotomi (1537–1598), who had been pursuing an expansionist policy in East Asia. The Chinese did not respond positively to Naresuan's proposal, but the episode shows the Siamese king's high estimation of his kingdom's place in the region.

Historical evidence on this king is full of contradictions. In Thai historiography Naresuan is portrayed as a national hero who liberated the country from Burmese domination. But Western sources are not totally complimentary about Naresuan's way of governing the kingdom. The Flemish diamond trader Jacques de Coutre, who visited Ayutthaya during Nare-

suan's reign, and the Dutch merchant Jeremias van Vliet, writing in the 1630s, both relate that Naresuan's reign was characterized by examples of strict discipline and even cruelty on the part of the king.

King Naresuan's prominent place in Thai history is, however, ensured on account of his military prowess and victories against the Burmese and Cambodians. He died at the age of fifty in 1605 and was succeeded by his brother Ekathotsarot, also known as Phra Ramesuan (r. 1605–1610/1611).

PHYA TAKSIN (PHYA TAK [SIN], KING TAKSIN) (r. 1767–1782)

Unifier of Siam

Taksin, King of Siam, is portrayed in Thai historiography as the unifier of the Siamese kingdom, which had been torn asunder by the Burmese invasion and capture of Ayutthaya. The period of his reign is known as the "Thonburi period" in Thai history, after the city of Thonburi (opposite present-day Bangkok), where he set up his capital.

Born a commoner, Sin was the son of a Chinese father, a tax farmer of Teochiu descent, and a Siamese mother. He was adopted by a noble family and grew up in the capital, receiving his education from a Buddhist monastery there. By 1767 he had risen to the position of governor of Tak, a town to the northwest of

Ayutthaya—hence his being known as “Phya Tak (Sin)” or “Taksin.”

At the time of Ayutthaya’s final capitulation to the Burmese in 1767, Taksin was able to lead a small band of 500 followers out of the doomed capital. Establishing themselves near the mouth of the Chao Phya (Phraya) River, and increasing their power eastward to places such as Chanthabun, Taksin and his supporters became one of five main power groups vying for political supremacy in post-1767 Siam. The other groups were those of Prince Thep Phiphit, a member of the old Ayutthaya royal family, now based in Phimai in northeastern Siam; the governor of Phitsanulok; the priest-prince of Fang (near Phitsanulok); and the governor of the southern city of Nakhon Si Thammarat (Ligor).

Once he had driven out the small Burmese army and set about eliminating his political rivals one by one, Taksin consolidated his status as king and revived the Siamese economy. There was much hardship, even famine, during the first years of Taksin’s reign, and foodstuffs had to be imported. The existence of a Chinese (presumably Teochiu) network of traders in the Gulf of Siam and the Malay and Indonesian archipelagoes facilitated the purchase of provisions and weapons necessary for the continued conduct of war. Taksin bought guns and ammunition from, among others, the Dutch and the Danes, trading with Dutch Batavia via Chinese intermediaries.

His reign was notable for vigorous campaigns to ensure that Siam was no longer vulnerable to outside invasion, and for a first attempt to revive a Siamese Buddhist state. Taksin sent armies to annex Battambang and Siem Reap in Cambodia as early as 1769, and during the 1770s the king and his forces captured Chiang Mai and other northern cities. Control or suzerainty over Chiang Mai was considered essential if Siam was to avoid a repeat of the Burmese invasion that had led to the fall of Ayutthaya.

Taksin conquered the port polity of Ha Tien on the Cambodian coast, a key trading center then controlled by a Cantonese Chinese warlord, Mac Thien Tu (1700–1780). Ha Tien may have been attacked because of its strategic importance in the trade of the region, with its access to the forest products of the Mekong basin.

The major diplomatic initiative undertaken by King Taksin was to reestablish relations with

China, and to be recognized as a legitimate ruler by the Chinese Imperial Court. After several attempts he succeeded in gaining a measure of recognition from China.

Taksin was a Sino-Siamese whose rise to power had more to do with the possession of political charisma and military skills than with any blood ties to royalty or the old nobility of Ayutthaya. Nevertheless he seems to have been able to command the allegiance of the majority of his nobles and courtiers for a considerable time. Two of his staunchest allies were the brothers Chaophraya Chakri (Thong Duang) and Chaophraya Surasi (Bunma), who served as his military commanders. They conducted the military campaigns waged by Siam in Laos and Cambodia, and were instrumental in repelling a major Burmese invasion in 1775.

Following political conflict, King Taksin was dethroned in 1782. Chaophraya Chakri, fighting a campaign in Cambodia, was compelled to rush back to Thonburi and restore order. He ascended the throne as the first king of the Chakri dynasty and is known as Rama I. Taksin was executed. The circumstances of his fall continue to be a point of debate in historical circles. Siamese chronicles and a contemporary French missionary source tell of the king’s descent into madness, owing to an excess of religious zeal. But a revisionist interpretation of King Taksin’s place in Thai history ascribes the monarch’s “insanity” to hostile propaganda written by adherents of the new dynasty. However, Taksin’s vital role in the unification and revival of Siam after its total defeat at the hands of the Burmese in 1767 cannot be doubted.

PIGNEAU DE BÉHAINE, PIERRE JOSEPH GEORGES, BISHOP OF ADRAN (1741–1799)

Friend to the Nguyễn

From 1787 to 1799, Pierre Joseph Georges Pigneau de Béhaine, French missionary bishop in Cochin China, organized vital military assistance in support of Nguyễn Anh's successful bid to restore his dynasty to the imperial throne of Vietnam.

Born in 1741, Pigneau joined the Société des Missions Étrangères and entered Cochin China in 1765. Driven out of Hatien in 1769, he retreated to the French settlement of Pondicherry in India where, after founding a seminary, he was appointed titular bishop of Adran and vicar apostolic of Cochin China, returning to Hatien in 1775. Here Pigneau encountered the youthful Prince Nguyễn Anh, who was organizing a revolt against the Tayson ruler, and he participated in Anh's seizure and subsequent loss of Saigon. Anh sent the bishop to plead with the French governor at Pondicherry, Conway, for military assistance. Since help was denied, Pigneau embarked for France where, on arrival in 1787, he was lionized at the French court and negotiated a Franco-Vietnamese treaty that he signed on Anh's behalf. Pigneau raised funds mainly from private French donations and returned to Pondicherry with sufficient funds to overcome the reluctance of Governor Conway to organize a military and naval expedition. Equipped with four ships, ample munitions, and a body of volunteers, Pigneau made a highly significant contribution to the success of Anh's bid for power. Arriving at Saigon in 1789 shortly after the prince's recapture of the town, Pigneau helped Anh extend and consolidate control over much of Cochin China during the following decade. Pigneau's

corps of volunteers, especially the naval officer Jean Marie Dayot and the fortress engineer Olivier de Puymanel, played significant roles in the conquest of much of the rest of Vietnam. By the time that Anh ascended the throne as the emperor Gia Long in 1802, Pigneau had been dead for two years, after succumbing to dysentery at the age of fifty-eight.

PIRACY

"Piracy" is often reported from contemporary Southeast Asia, particularly from the Straits of Melaka. The word has been widely used in Southeast Asia's past, but in a variety of ways.

In the traditional Malay world, there was often a strong political element to robbery and violence at sea, for which the narrow seas and the complicated coastline provided unusual opportunities. It was indeed part of the dynamics of the state system: a means by which an entrepôt's attempts to centralize trade might be effected and sustained, for example; a means, too, whereby it might be challenged or overthrown. Robbery and violence at sea were also a means by which change might be effected within a state, particularly a riparian or archipelagic one. For instance, an aristocracy might condone

them in its adventurous younger sons; a bold man might seek to increase his wealth and status by plunder and his following, in a thinly populated region, by raiding or slave trading. Whatever the impact on those who were plundered or enslaved, it was often not a matter of mere robbery at sea, though no doubt that took place as well.

Some of this would have been familiar to the Europe of the Crusades. With the subsequent breakup of Europe into independent states and the development of interstate diplomacy and international law, different conventions were established. In particular, Europeans drew a distinction between “piracy,” mere robbery at sea on the part of the common enemy of humankind, and acts of violence and plunder authorized by a recognized state through licensed privateering or declaration of war.

The activities of the Europeans who first came to Southeast Asia, J. C. van Leur observed of the Portuguese, were “filled with piracy and naval warfare” (van Leur 1955: 164), and in that sense not dissimilar from activities common in the traditional Malay world. With the successful establishment of their power, they began to adopt the concepts and to enforce the practices authorized by an emergent European international law.

Checking piracy was not a European innovation. China had helped to establish Melaka in the early fifteenth century in order to check it. But from the early nineteenth century the Europeans gave it a new emphasis. That was partly because the establishment of new entrepôts—in particular Singapore in 1819—increased the opportunity to prey on native vessels coming from other parts of the Indonesian archipelago and the Malay Peninsula. It was also because the suppression of piracy was associated with attempts to reorder the Malay world—though not necessarily, indeed, to bring it under formal European control.

In the treaty of 1824, for example, the British and the Dutch committed themselves to the suppression of piracy. It became an argument for expansion, used by the colonial powers but particularly by the British on the spot. Their superiors in India and in London were opposed to the extension of political control. They could not, however, oppose the suppression of piracy. There was as a result a tendency to apply the word widely, in order to justify ac-

tion. It was used in attempts to stop the sultan of Aceh from centralizing trade with Penang on his capital. It was used by James Brooke (1803–1868) to secure naval support for his policy in Brunei and Sarawak. It was used on the Malay Peninsula as a reason for intervention in Selangor in the early 1870s. In the process what were “legitimate” political activities were suppressed and the authority of Malay States denied. That was also in keeping with the advance of the positivist approach to international law. The French were even more creative than the British. The disorder and opposition they faced on land in Tonkin was qualified as piracy.

It was not surprising that historians of the second half of the twentieth century—when states had won independence and imperialism had been defeated—looked at this matter again, anticipating, as historians of Southeast Asia often did, the impact of a fashionable “deconstructionism.” They could draw, indeed, on contemporaries who had criticized the tendency to label the Malays pirates and to extend the ambit of the term. In the 1820s, piracy in the Johor region had been ascribed to the “breaking down of larger Government” (Tarling 1963: 53). Brooke had been criticized and his proceedings subjected to a commission of inquiry in 1853–1855.

Nicholas Tarling’s *Piracy and Politics in the Malay World* adopted what came to be called the “decay” theory. Anne Reber (1966) regarded Tarling’s work as too dependent on observers of the time. According to James Warren (1981), who worked on Sulu and the “pirates” of the Moro regions, the increase in piracy there in the first half of the nineteenth century was seen as a positive attempt on the part of the Sulus and their sultanate to respond to the new commercial opportunities. Two conclusions were obvious: the one enjoined historians to be careful in interpreting words whose meanings shifted over time; the other suggested that “piracy” could have diverse origins, not only in the mind of the beholder but also in the society and polity where it originated.

There were also other “pirates” in Southeast Asia in the nineteenth century: one source was China, following the Taiping rebellion (1851–1864). There were other pirates in the later twentieth century, preying on the boat people from Vietnam, and pouncing on the crews of oil tankers in the Straits of Melaka. Their activi-

ties were robbery, without at least any formal approval from state authorities.

PIRES, TOMÉ (ca. 1465–ca. 1540)

Early Travel Writer

The Portuguese apothecary Tomé Pires is chiefly remembered today as the author of the *Suma Oriental*, a comprehensive report on the economy, trade, and geography of the East that he wrote from 1512 to 1515 for King Manuel I of Portugal (1495–1521). He was born around 1465, possibly in Leiria. His father was apothecary to King João II of Portugal (1455–1495), and he himself served as apothecary to his son Afonso (d. 1491). In 1511 he sailed to India, where he had been appointed *feitor* (factor), and, after nine months in Cannanore and Cochin, he went early in 1512 to Melaka as *feitor*, accountant, and *veador* (controller) of drugs in the Portuguese *feitoria* (trading post) there. While living in Melaka he wrote most of the *Suma Oriental* and traveled to other parts of Southeast Asia, including Java and Sumatra. In 1517 he was sent as Portuguese ambassador to China, where,

through no fault of his own, he incurred the wrath of the Chinese, was arrested in Guangzhou (Canton) in 1521, and was imprisoned. According to some sources he died in prison in 1524, while others maintain that he was banished from Guangzhou to a town called Sampitay, where he died before 1540.

An Italian translation of part of the *Suma Oriental* was published in Ramusio's *Navigazioni e Viaggi* (Venice, 1550), but the complete work was not published until the Portuguese historian Armando Cortesão discovered a manuscript of it in the *Bibliothèque Nationale* in Paris bound in the same codex as the contemporary *Book of Francisco Rodrigues*, and in 1944 published both works in an annotated edition, with English translations, in the Hakluyt Society series.

The *Suma Oriental* contains a vast amount of commercial, geographical, historical, and ethnographic information, much of it firsthand, about the trading world of Asia in the early sixteenth century, and its detailed account of Melaka is the first known in any European language.

PITSANULOK (PHITSANULOK)

A Strategic Town

An important town located between the lower north and the upper sector of the central plain of Thailand (Siam), Pitsanulok is also called Muang Song Kwae (lit. town of two rivers) in Thai history, owing to its location. Nowadays Pitsanulok serves the government decentralization policy as the center of administration, higher education, and medical service for the lower northern region.

Its history as a center of T'ai settlements can be traced back to the pre-Sukhothai period (ca. thirteenth–ca. fifteenth century C.E.). In the eleventh century, T'ai communities lived in the area (Tambiah 1976: 79). During the reign of King Rama Kamhaeng of Sukhothai (r. 1279–1298), the town was incorporated into the more powerful Sukhothai kingdom.

Pitsanulok would later play crucial roles in the defense of Siamese (Thai) kingdoms founded in the Chaophraya delta, since its location served as a main passage to and from the upper north, where rivals from the northern kingdoms of Lanna and Burma used it as the main route for waging war against Siamese kingdoms.

During the Ayudhya period (1351–1767), its rulers in the first half of the period paid great attention to expanding territories to the north, especially their attempt to absorb the Sukhothai kingdom. In the reign of King Boromrachathirat I (r. 1370–1388), Ayudhya was able to capture Pitsanulok and other satellite towns that had been under the political control of Sukhothai. When Sukhothai was finally absorbed into Ayudhya in 1438, the political status of the former was deliberately reduced; on the contrary, Ayudhya rulers promoted the status of Pitsanulok, considering its strategic location, which allowed Ayudhya to have access to the north. During the reign of Borommaracha II (Chao Samphraya) (r. 1424–1448), the political status of Pitsanulok became even more important when the king decided to send Ramesuan, his son whom he chose as his heir apparent, to rule the town in order to control the northern territory (Wyatt 1984: 70).

When Ramesuan succeeded his father as King Boromtrailokanat Trailok (r. 1448–1488) and decided to launch military campaigns against his archrival, King Tilokaracha of the Lanna kingdom (r. 1441–1487), Pitsanulok became the capital of Ayudhya, since the king decided to transfer the capital there in 1463 in order to be able to control the northern areas bordering the Lanna kingdom. The war between Ayudhya and Lanna arising from their competition to control the Sukhothai areas lasted for about three decades without a clear-cut victory for either side. However, it was during this period that Pitsanulok became the center of the kingdom. In 1463, King Boromtrailokanat had a new monastery built to the south of the town, where he spent two years as a Buddhist monk and appointed his son as regent to rule Ayudhya (ibid.:78). New constructions and major town expansion also took place between 1463 and 1688. It was not until the death of Boromtrailokanat in 1488 that the capital city was transferred back to Ayudhya; however, Pitsanulok still maintained its political status as the town where heirs apparent were sent to rule.

Pitsanulok was located in a strategically important position, which allowed those who took control of it to have access to the Chaophraya delta and to the northern part of Siam, which had abundant and valuable forest products, manpower, as well as rice supplies; as a result, it was always targeted by Burma, which launched military campaigns against Ayudhya. In both major Burmese invasions of Ayudhya, in 1569 and in 1767, which led to the latter's fall, Burmese armies laid siege to Pitsanulok, captured it, and used it as a base for marching to Ayudhya, depriving the latter of its much-needed manpower and food supplies from the north. After Ayudhya fell to the Burmese in 1767, a local leader of Pitsanulok formed an independent state and proclaimed himself a king. However, he was defeated by King Taksin of Thonburi in 1770 (Steinberg 1987: 112) and, as a result, Pitsanulok was absorbed into the new kingdom. It remained an important town in the following Chakri dynasty, founded by King Rama I (r. 1782–1809), whose father had been a high-ranking official of the town before the second fall of Ayudhya. When King Chulalongkorn (Rama V) (r. 1868–1910) undertook administrative reforms in the 1890s by grouping a number of provinces to form a single administrative unit called *Monthon Thesaphiban*, or circle, Pitsanulok was chosen as one of the circles to rule provinces in the lower sector of the north, until the government abolished the system in 1933.

Nowadays, Pitsanulok still plays an important role as the administrative, economic, and educational center of the lower north of Thailand. Its prosperity began during the 1960s, after the first national five-year economic and social development plan was implemented. Infrastructure, such as new roads and an air base, were built (ibid.: 390), and they help to stimulate economic prosperity and rapid expansion of the town.

PLAEK PHIBUNSONGKHRAM, FIELD MARSHAL (1897–1964)

Molder of the Modern Thai

Phibunsongkhram, Phibun for short, was born Plaek Khittasangkha on 14 July 1897 in a humble family. His parents were hardworking durian growers and sellers in Nonthaburi, now a satellite town of Bangkok. Apparently an intelligent child, he was sent at the age of twelve to the prestigious military academy. He graduated in 1915 and served as a sublieutenant in the artillery. His service and academic achievements earned him advanced military training in France from 1924 to 1927. It was in France that Phibun joined a group of young students led by Pridi Phanomyong (1900–1983) who began a plan for the overthrow of the Chakri absolute monarchy. Upon his return to Siam in 1927, Phibun served on the army general staff. One year later he was bestowed the rank and title of Luang Phibunsongkhram, a low-ranking noble title commonly granted to those who entered the royal service with an overseas education or training. On the eve of the 1932 coup d'état, Phibun attained the rank of major and was appointed a supervisor in the Ministry of Defense. He was also made an aide-de-camp to the king's uncle, who was a member of the all-influential Supreme Council set up by King Prajadhipok (Rama VII) (r. 1925–1935) in 1925. Phibun thus appeared on the eve of the 1932 Revolution secure and successful in the career of his choice.

During the 24 June 1932 Revolution that brought an end to Siam's absolutist monarchical system and replaced it with that of the People's Party version of democracy, Phibun assumed the role of only a second-rung military leader. Yet he appeared genuinely dedicated to the cause of the revolution. With the success of the coup, Phibun was appointed minister without portfolio in the first "democratic" government. Soon the increasing conflicts between the progressive wing of the People's Party, of which Phibun was one of its leading figures, and its conservative wing, supported by the royalists, resulted in a showdown in June 1933. Phibun

clearly rendered his leadership and support to the cause of the progressive wing. Together with Phraya Phahon, the official leader of the People's Party, and Luang Suphachalasai, leader of the junior naval officers, Phibun staged a coup and seized power from the conservative government led by Premier Phraya Manopakorn-nittithada. The success of the coup ensured that the political power was now solely in the hands of the People's Party. For Phibun, the successful coup also assured him of a leading role in the affairs of the nation. His position was further strengthened after the failure of the royalist-conservative attempt to physically remove the People's Party ruling elite from power in the Boworadet Rebellion of October 1933. Phibun, as the military leader of the government party, was promoted to deputy commander-in-chief of the army and minister of defense one year later. It was evident that with the support of the armed forces and the rapid political changes in the international arena, Phibun's forceful and action-oriented leadership put him ahead of Pridi Phanomyong, his main political rival. In December 1938, when Prime Minister Phraya Phahon decided to step down, Phibun became a natural choice of both the outgoing premier and the National Assembly to take up the role of premier.

Phibun's first premiership, December 1938 to July 1944, covered most of the war years. The period saw Phibun's serious and high-handed attempts to remold the country and the Thai people into what he believed to be the suitable sociocultural and modernized characteristics of the Thai nation-state, based on the principles of democracy, nationalism, and new national identity. It was Premier Phibun who gave the traditional Kingdom of Siam its new name, Thailand. He modernized the Thai language and introduced a "classless" vocabulary into the classical Thai, a most class-conscious language in Southeast Asia. Phibun succeeded in instilling a deep sense of patriotism and nationalism into the Thai masses, and it was he who was responsible for a makeover of modern Thai appearance and mannerisms. All of these accomplishments attributed to Phibun are visible components of contemporary modern Thai identity. It was during this period also that the military assumed an active and high-profile participation in the affairs of state. Phibun himself held both the premiership and commander-in-

chief of the armed forces. He took the country into the Indochinese War against France in 1941 and won. For that, the premier was conferred the rank of field marshal. By mid-1941, Premier Phibun had reached the zenith of his political and military career.

Phibun was blamed for bringing the military into politics, and thus for the bastardization of democracy in Thailand. His firm leadership and administration during the war years led to the eclipse of the monarchy and fostered conflicts with the royalists and the throne. Most damaging of all, Phibun as an “anti-royal” premier brought about uneasy relations with his monarch, to Phibun’s eventual political detriment.

Phibun was compelled to resign his premiership in July 1944 after the National Assembly voted down two government bills. During 1944–1947, Phibun was forced to live in a political wilderness. At the end of the war, he was arrested and charged with war crimes against the Allied Powers and humankind. Phibun evaded the gallows or imprisonment on a technicality but remained a target of political mudslinging and official surveillance under the political ascendancy of Pridi.

The 1947 coup brought Phibun back to power and the premiership for the second time, in April 1948. Although Phibun held the reins of office until September 1957, when he was ousted by another military coup led by Field Marshal Sarit Thanarat (t. 1957–1963), his erstwhile protégé, his second administration was not noticeable for its positive domestic policies. Instead it was noted for its anticommunist stance and pro-Western foreign policies. Under Phibun’s leadership, Thailand emerged as the staunchest ally of the United States in Southeast Asia against the ideological threats of the Cold War and communism. It was during this time that Thailand identified itself as a member of the Free World/capitalist system against the communist/Iron Curtain grouping by becoming a founding member of the Southeast Asia Treaty Organization (SEATO). This regional defense pact comprised five Western states—the United States, the United Kingdom, France, Australia, and New Zealand—and three Asian nations—Thailand, the Philippines, and Pakistan.

Until his death in June 1964, Phibun was forced to lead the life of a political exile in Japan. He took a vow of monkhood in the Bud-

dhagaya Temple in India in August 1960. His ashes were brought back from Japan to Thailand and befittingly laid to rest at the temple that Phibun had built, both as a symbol of the victory of the People’s Party against the Boworadet Rebellion and as a mausoleum for revered national leaders.

PLURAL SOCIETY

John Sydenham Furnivall (1878–1960), the British scholar-administrator, formulated the concept of pluralism in his studies of British Burma and the Netherlands East Indies (1956). He drew attention to the significance of ethnic divisions in colonial society and the importance of the overseas Chinese and Indian trading communities as economic intermediaries between the European and native populations. He conceived of colonial or “tropical society” as deeply divided, comprising distinct “economic castes” or “separate racial groups” (Europeans, Chinese, Indians, and natives), which kept to their own sociocultural worlds, meeting only in the marketplace for buying and

selling. Therefore, for him, competing economic interests were aggravated by ethnic diversity. Furnivall argued that each group was an aggregate of people and not an integrated whole; immigrant populations were mainly temporary residents whose commitment to the territory in which they lived was slight; they sought economic gain and their social life was incomplete. The colonial state, which created the plural society, kept it in being by a policy of divide-and-rule and political coercion because the constituent groups had no shared culture or common social will.

Critics of Furnivall suggest that his image of colonial society is too static, and the relations between race or ethnicity and economic function were much more complex than he realized (Taylor 1987: 123–137). Social class and cultural cleavages divided the constituent ethnic groupings internally. For example, the Indian population in Burma comprised traders, shopkeepers, moneylenders, landowners, and urban and rural workers, and it was often competition between members of different ethnic groups who shared the same social class position rather than the coincidence between ethnicity and class that resulted in ethnic tensions and conflict. In addition, the Indians were divided by religion into Hindus, Muslims, Sikhs, and Jains, as well as by caste, region, and language (Adas 1974: 104–106). The divisions between groups were also blurred by intermarriage, religious conversion, and assimilation, and there were hybrid or mixed populations such as the Anglo-Indians and Anglo-Burmese. Furnivall's ethnic groups were, in effect, stereotypes constructed through colonial policies and practices and assigned certain characteristics that were then used to explain their respective positions in the colonial division of labor.

POL POT (SALOTH SAR) (1925–1998)

Mass Murderer

Pol Pot was the pseudonym of Saloth Sar, Cambodian communist political leader and prime minister of Democratic Kampuchea (DK) from 1976 to 1979.

Pol Pot was born into a prosperous peasant family that enjoyed the patronage of the Cambodian court, at a time when Cambodia formed part of French Indochina. Several of his relatives worked in the Royal Palace in Phnom Penh, and an elder sister was a minor wife of King Sisowath Monivong (r. 1927–1941).

Pol Pot was educated in French-language schools in Phnom Penh and Kompong Cham, but he made little impression on his fellow students. In 1949 he was awarded a scholarship to study radio and electricity in Paris. After repeatedly failing his examinations and joining the French Communist Party, Pol Pot returned home in 1953 and served briefly in anti-French guerrilla forces controlled by the Vietnamese communist movement.

In the 1950s, Pol Pot was a schoolteacher in Phnom Penh, where he was popular with his students and worked in secret for Cambodia's small, clandestine Communist Party. In 1956 he married Khieu Ponnary, a fellow communist whom he had met in France. The couple had no children. In 1960 he joined the central committee of a newly constituted Communist Party (later to be known as the Communist Party of Kampuchea, CPK), and three years later, fearing arrest, he went into hiding with several colleagues at a Vietnamese army base in eastern Cambodia. He visited North Vietnam and China for several months in the mid-1960s and came away favorably impressed by the Chinese Cultural Revolution but chafing under continuing guidance from Vietnam. In the late 1960s he moved his base of operations into the sparsely populated northeastern part of the country, inaugurating armed struggle against Norodom Sihanouk's (1922–) government in early 1968.

Pol Pot in the Cambodian jungle, ca. 1980. (Bettmann/Corbis)

When Sihanouk was overthrown in 1970, Pol Pot secretly assumed command of guerrilla forces, allied with the Vietnamese communists that sought to defeat the new, pro-American regime holding power in Phnom Penh and headed by Lon Nol (1913–1984). His forces, known popularly as the Khmer Rouge, or Red Khmer, were victorious in 1975.

Soon after their victory, Pol Pot and his colleagues set in motion radical policies inspired by Maoist China that had genocidal effects on Cambodia's population. Their aim was to preside over the swiftest and farthest-reaching Marxist-Leninist revolution in world history. Perhaps Pol Pot succeeded, but from 1975 to 1979 at least 1.5 million Cambodians died of starvation, overwork, and misdiagnosed or untreated diseases. At least 200,000 more were executed summarily as "enemies of the state," and several thousand others died in the war that broke out against Vietnam in 1978 (Chandler 1999a: 3).

A Vietnamese invasion in December 1978 drove Pol Pot from power. For the next twenty

years, aside from brief visits to China and North Korea, he lived with the remnants of his army in bases along the Thai-Cambodian border. This formidable guerrilla force engaged Vietnamese troops stationed inside Cambodia for more than a decade, and laid antipersonnel mines over hundreds of square kilometers of Cambodia's north and northwest.

Although his "retirement" was announced in 1985, when he reached sixty in the 1980s, Pol Pot continued to lecture to soldiers and subordinates, dazzling them with his revolutionary vision. People who worked with him in those years consistently recalled his calm and kindly demeanor, his fervent devotion to the principles of communism (although it was a word he rarely used), and his ability to inspire small groups. During this time, Pol Pot remarried and fathered a daughter.

In the late 1990s, the government originally installed by the Vietnamese in Phnom Penh gained international legitimacy. Several senior CPK figures defected from the movement. Pol Pot, eager to rekindle the revolutionary fervor

that had impelled the CPK in the past, introduced harsh, puritanical policies that were immensely unpopular, and he ordered the assassination of a close associate, Son Sen, whom he accused of treason.

At this point, in July 1997, his colleagues turned against him and put him on trial. A few months later, under house arrest, Pol Pot gave a rambling interview to a U.S. journalist in which he denied responsibility for the horrors of his regime. He was already in failing health, and six months later he died, apparently of heart failure but perhaps a suicide, in a two-room shack without modern amenities. His place in world history is ensured. One Cambodian in seven died from 1975 to 1979 (Chandler 1999a: 3). The Cambodian revolution was thus, on a per capita basis, the most murderous in a century of revolutions.

POLO, MARCO (1254–1324)

World Traveler

A Venetian merchant-cum-traveler, Marco Polo traveled to Asia and inspired the imaginations of generations of Europeans and further adventures.

In 1254, Marco Polo was born to a Venetian family that conducted business in the Middle East (West Asia). At the age of seventeen, he traveled to China, then under the rule of the Mongols (Yuan dynasty, 1271–1368), via a land route that passed through Central Asia. The young Marco accompanied his father and uncle—who had been appointed by Kubilai Khan (1215–1294), then the emperor of China, as ambassadors to the pope—on their trip back to China to report of their mission. Marco became one of the foreigners who was taken to favorably by Kubilai, and he was sent on several missions to distant parts of the empire as far as Yunnan in southwest China and possibly Tagaung in Myanmar (Burma). He was assigned important administrative duties, such as the governorship of Yangzhou for a three-year term. Altogether he stayed in China for seventeen years. In 1292 he set off on his return trip to Venice from the port of Zaytun (modern Quanzhou/Fujian).

On the way he stopped at Champa, Sumatra, and a number of Southeast Asian islands, then all unknown to the Western world. His accounts of this part of the world, together with the even more amazing descriptions of the vast Mongol empire in his travel writing *Il milione*, conjured an exotic wonderland to his fellow Europeans. His travel accounts were in the first place regarded as heretical as the existence of another world—strong, rich, and culturally different—and simply unbelievable, but they were soon proved to be authentic as more accounts followed.

However, the authenticity of the part of his travels within China has always been a matter of controversy. For such an allegedly high-ranking agent of Kubilai as Marco, there is up to now no direct Chinese evidence available to support his various missions and duties.

PORTUGUESE ASIAN EMPIRE

There were two chief motives behind the Portuguese search for the sea route to India during the fifteenth century. They hoped to find Prester John, a legendary Christian ruler who was believed to dwell somewhere in the Indies and by the end of the century was generally identified with the emperor of Ethiopia, and to persuade him to join a grand alliance against Islam along with other Christian princes who it was thought there might be in the region. They also hoped to gain direct access to the valuable Indian Ocean trade in gold and ivory from east Africa, horses from Arabia and Persia, silks and porcelain from China, and above all pepper, spices, and aromatic woods from Southeast Asia.

In the early years after Vasco da Gama (1469–1524) first landed near Calicut on the western coast of India on 20 May 1498, the Portuguese confined themselves to setting up a few *feitorias* (trading posts) on that coast. Before long, however, the imperial policy of King Manuel I (1495–1521) evolved into a plan to establish Portuguese power in Asia permanently by creating a chain of *feitorias* and fortresses in the Indian Ocean under a unified administration and to replace Venice with Lisbon as the chief port for the distribution of spices throughout Europe. This policy, which was often accompanied by violence, soon attracted the opposition of the Islamic powers in the region. The naval victory won at Diu in 1509 by Dom Francisco de Almeida, first viceroy and governor of Portuguese India (t. 1505–1509), against an alliance of Islamic powers led by Mameluke Egypt and assisted by Venice marked a turning point. This triumph enabled Almeida's successor, Afonso de Albuquerque (t. 1509–1515), to capture Goa (1510), Melaka (1511), and Ormuz (1515). He failed, however, to take Aden and so gain control of the Red Sea, to lay the foundations of the *Estado da India*, as the Portuguese maritime empire in Asia later came to be called.

Albuquerque's achievements were consolidated by a series of agreements, some voluntary and some imposed by force, between the Portuguese and Asian rulers whereby they were permitted to set up *feitorias* and fortresses in their realms. These included Ceylon (Sri Lanka) (1518), Chaul (1521), Ternate (1522), Diu (1535), Mozambique (1540), Macau (1557), and Daman (1559). Some governors and viceroys—

notably Vasco da Gama (1524), Nuño da Cunha (1529–1538), and Dom João de Castro (1545–1548)—attempted to extend Portuguese territorial power in India by military means, but with no permanent results.

There was fierce opposition by the Muslim powers to Portuguese intrusions, especially by the Ottoman Turks, who in 1516 had succeeded the Mamelukes as the most powerful Islamic state in the western Indian Ocean. The Muslim states of the Indonesian archipelago, notably Aceh, Japara, and Ternate, prevented the Portuguese from imposing a Crown monopoly and from enforcing the *cartaz* (safe-conduct) system by which they undertook to police the sea-lanes and provide convoys for private merchant shipping in return for payment of customs dues.

Under Manuel I's successor, João III (1521–1557), imperial policy in Asia became increasingly directed toward purely commercial objectives. Needless to say, the Manueline crusading ideals of destroying Islam and making Portuguese Asia into a Christian empire did not entirely bear fruit. It is revealed by the heroic theme of *Os Lusíadas*, the national epic of Portugal, written by Luís Vaz de Camões in the 1550s, and by the missionary work of the mendicant orders and of St. Francis Xavier (1506–1552) and his successors in the Society of Jesus.

In 1570, King Sebastião (1557–1578) abandoned the royal trading monopoly, which caused a substantial reduction in the Crown's direct involvement in Asian trade. At the same time, the ability of the Portuguese to cover the cost of maintaining their empire from the income derived from that trade declined. However, the income was reduced by the increase in the number of trading voyages and government offices granted to individuals as a reward for public services, and by the growth of corruption at every level in the administration of the *Estado da India*. This in turn opened increased opportunities for advancement in the so-called shadow empire to Portuguese mercenaries serving in the armies of Asian rulers (such as Pegu, Ayutthaya), and to merchant adventurers engaging in local trade or joining a semiautonomous merchant colony (for example, Hugli, Negapatam, Patani, Macau).

At the end of the sixteenth century the Dutch and English appeared in Asian waters. By 1623 the Dutch had driven the Portuguese out

of the Spice Islands; in 1641 they captured Melaka; and by 1663 they had taken Ceylon and most of the Portuguese possessions in India. By the end of the seventeenth century, only Goa, Daman, Diu in India, Timor (where the first Portuguese governor was appointed in 1702), and Macau remained in Portuguese hands.

Outside these last strongholds, Portuguese influence in Asia was confined to a few scattered Portuguese-speaking, Catholic communities, some of which survive to this day (such as Melaka, Tugu in Java, some of the Lesser Sunda Islands, Bangkok). The final demise of Portugal's Asian empire, however, did not come until the Indian annexation of Goa, Daman, and Diu (1961); the expulsion of the Portuguese from East Timor (1975); and the return of Macau to China (1999).

**PRAJADHIPOK
(RAMA VII) (r. 1925–1935)**

Last of the Absolutist Monarchs

The reign of the Cakri (Chakri) dynasty's seventh king is known best for its anomalies. Prajadhipok's reign, from 1925 to 1935, straddled the 24 June 1932 Revolution, making him the last of Siam's absolute monarchs and its first constitutional monarch. His nine-year reign was the briefest of all the Cakri dynasts; he was the only member of his dynasty to abdicate, and the only member to die abroad, in England, at the age of forty-eight.

Prajadhipok was born in Bangkok on 8 November 1893, the child of King Chulalongkorn (Rama V) (r. 1868–1910) and Queen Saowapha. He was the younger full brother of the future king Vajiravudh (Rama VI, r. 1910–1925) and the seventy-sixth of Chulalongkorn's seventy-seven children. After spending three months in the Buddhist monkhood, Prajadhipok married his cousin, Princess Rambhai Barni, in 1918.

Prajadhipok received his formal education in Europe; he studied at both Eton and the Woolrich Military Academy in England, and attended the École Supérieure de Guerre in France. He returned to Siam only one year before ascending the throne in 1925.

Prajadhipok was educated for a military appointment, and his rise to kingship was largely unexpected. The heir presumptive to the throne, Prajadhipok's older brother Prince Asdang, died unexpectedly in February 1925. King Vajiravudh produced no male heir; his only child, a daughter (Princess Benjaratana), was born two days before his death. Had this child been a boy, the infant would likely have inherited the crown. This confluence of events thrust the largely unprepared Prajadhipok onto Siam's throne.

The initial challenges faced by the new king were substantial. Because of economic mismanagement and a series of financial and political scandals by the previous administration, the government was in organizational disarray, near bankruptcy, and held in open contempt by many members of Bangkok's emerging middle class. Prince Damrong (1862–1943), the respected elder statesman and brother to King Chulalongkorn, declared the throne a "deplorable inheritance" because of the collapse of royal authority experienced in the previous

reign. Prajadhipok saw two roots of this widespread dissatisfaction—the open favoritism and nepotism practiced by the previous court, and the emergence of a “free press” in Siam capable of openly criticizing such behavior and disseminating dissenting political viewpoints to a large urban audience.

The new king’s answer to this political challenge was the creation of a Supreme Council of State, established just three days after the death of Rama VI. The council was made up of five senior princes who had served in the still-respected government of his father, Chulalongkorn. By design the council was meant to counteract the corrupting tendencies of absolutism by devolving power to a larger group of political leaders. All major decisions of state were to be agreed upon by the king and his council, thereby minimizing the possibility of political favoritism. This new bureaucratic arrangement was greeted favorably by the Bangkok public.

The Great Depression, which began in the United States in 1929, spread to Siam by the following year, posing another major challenge to the Prajadhipok regime. During the period from 1930 to 1932 the value of rice, Siam’s major export commodity, fell by two-thirds, and land values plummeted further still. By early 1932, the government was forced to make deep budgetary cuts, leading to political turf battles that were covered by the capital’s independent print media.

Launched against this background was the June 1932 Revolution, led by the People’s Party, a group of 114 military and civilian persons, the core group of whom had been educated abroad. The coup group was united in their opposition to absolutism, although much divided over the form of rule that should supplant it.

The king received news of the coup while playing golf on a vacation in the south of Siam. He agreed to the coup group’s demands for a new constitutional system for the nation. By 10 December 1932 the king had promulgated a new constitution, and shortly thereafter a prime minister was appointed under the constitution.

Many strains and tensions marked the relationship between the People’s Party and Prajadhipok and his court. These were intensified by a coup within the new constitutional govern-

ment in June 1933, which resulted in the ascendance of a military faction over the civilian and proroyalist factions. In October 1933, Prince Boworadet, the former minister of war in Prajadhipok’s government, led a narrowly defeated reactionary revolt against the new government. Although Prajadhipok was never implicated in this revolt, relatives of Queen Rambhai were deeply involved, and political relations grew still more troubled.

In early 1934, Prajadhipok left Siam for medical treatment in England. The government, interested in the king’s return to Siam, entered negotiations with the monarch. Mutually satisfactory guarantees for a return of royal power could not be reached, and on 2 March 1935, Prajadhipok abdicated. The crown passed to the ten-year-old Ananda Mahidol (Rama VIII) (r. 1935–1946), then attending school in Switzerland.

Prajadhipok lived the remainder of his life quietly in Surrey, England. He adopted a son, his only child, Prince Chirasakti. On 30 May 1941 he died of heart failure. His widow returned his ashes to Bangkok in 1949.

Hindu temples at Prambanan, on the island of Java, Indonesia. (Arvind Garg/Corbis)

PRAMBANAN A Hindu Architectural Marvel

The Prambanan complex of Hindu temples is often called the Lara Jonggrang group, after a Javanese folk term meaning “slender maiden,” which refers to a Durga image in the main shrine. Scholars now believe that the complex was consecrated in 856 C.E. after a construction period of perhaps twenty-five years.

The complex consists of 224 subsidiary chapels symmetrically arranged around a central group on an artificially raised plateau. The main buildings are temples to Brahma and Visnu that flank a shrine dedicated to Siva. Facing this trinity are three auxiliary temples. That facing the Siva temple contains a Nandin statue. The purpose of the buildings facing the Brahma and Visnu temples is still unclear. Earlier theories suggested that they were meant to hold images of the *vahanas* (vehicles) of those gods, but this idea has now been discarded, since other temple complexes with the same basic plan have been discovered, none of them

with the requisite statues of goose and eagle (*garuda*).

The interior of the Siva temple is divided into four cellae. The largest one contains an image of Siva Mahadeva standing on a tall base. The southern cella houses an Agastya, and that on the west, Ganesha, whereas on the north, Durga Mahisasuramardini. This group formed a standardized disposition of images in Javanese Hindu temples for centuries. The other two main temples each contain but a single cella, for the statues of Brahma (on the south) and Visnu (on the north).

In addition to statuary, the three main shrines bear narrative reliefs. Paradoxically, although the Siva shrine is the center of the complex, the relief series on this and the other two main shrines are dedicated to Visnu. The *Râmâyana* is depicted in a series that begins on the inner face (that is, that facing the main shrine) of a low wall on the outer side of a processional path allowing devotees to circumambulate the Siva shrine above ground level. The

reliefs begin on the left side of the main entrance. The opening scene depicts Visnu seated on a serpent in the midst of the ocean with Garuda offering him a flower, while other gods beseech him to incarnate himself as a human in order to rid the earth of some demons. The rest of the reliefs depict Rama's marriage, his banishment with Laksmāna and Sita, Sita's abduction and Garuda's conveying of news of her whereabouts, the forming of the alliance with the monkey army of Hanuman and Sugriva, and the preparations for the storming of Ngālengka. The *Rāmāyana* series then continues on the Brahma temple. The Visnu temple is used as a canvas for another text: the story of Visnu's incarnation as Krisna. These are usually thought to be from the *Krisnayana*, though no text precisely corresponding to the reliefs on the Visnu temple has been identified. The first part of the story can be followed, but interpretation of the latter half of the reliefs continues to defy consensus.

In addition to the *Rāmāyana* and Krisna reliefs, the Siva temple bears two other interesting sets of pictorial art. One of these consists of a set of portraits of Lokapala, guardians of the various directions. The other has been identified as illustrations of dance postures known as *tandava*, based on the *Natyasastra* text. It was believed that Siva himself had performed these postures. Some have suggested that the sequence of dance reliefs replicates an actual dance performance, but this has not been proven. It is also possible that the present sequence of reliefs on the monument is not the original. The site was in a very ruinous state in the late nineteenth century, and the activities of an amateur archaeological group made it impossible to reconstruct the original location of some of the reliefs with certainty.

The central point of the complex lies not beneath the Siva statue but beside the staircase leading into the main cella of the Siva shrine. At this point is a small nondescript shrine that may have been dedicated to the local spirit of the place. An inscription believed to refer to the founding of the site refers to the "evil ones" who had to be placated.

Prambanan shares numerous design elements with Borobudur and other early Javanese monuments meant for Mahayana Buddhism; the ruler who probably instigated its construction, known by the title Rakai Pikatan, was married

to a Buddhist queen, and the royal couple donated to foundations belonging to both religions. There are, however, some elements of Prambanan that are unique, such as the motifs of lions in niches, wishing trees (*kalpataru*) flanked by imaginary animals, and finials often termed *keben* after a Javanese fruit.

The Prambanan complex was one of the most elaborate Hindu architectural projects ever undertaken in Southeast Asia. It incorporates an elaborate cosmology, with reliefs of numerous deities of the various compass directions. An inscription written in 856 C.E. found in central Java probably commemorates its inauguration. It was the last large temple ever built in pre-Islamic Java.

**PRASAT THONG (r. 1629–1656)
Usurper King**

King of Siam during a time of increased international trade, the usurper Prasat Thong was one of the more powerful personalities to have reigned in the Siamese capital of Ayutthaya. His rule was firm, especially as regards the officials

or nobility (*khunnang*) who were potential challengers to his authority. He was also a great builder-king, erecting many religious and secular buildings during his long reign.

Much of what is known about Prasat Thong's rise to power and the first ten years of his reign comes from the Dutch merchant Jeremias van Vliet's accounts of Siam, notably the *Historical Account of the Kingdom of Siam*. Prasat Thong was a first cousin of King Songtham (r. 1610/1611–1628), his father being the eldest brother of the king's mother. As a young page in the royal palace at Ayutthaya, Prasat Thong was said to have been unruly, his exploits often getting him into trouble. Nevertheless he distinguished himself in war and became a high-ranking nobleman with the title of Okya Si Worawong by 1628, when King Songtham fell seriously ill and died. Various factions at court contested the royal succession.

Okya Si Worawong managed to assemble a large following, allying himself with, among others, the strong Japanese mercenary force under Yamada Nagamasa or Okya Senaphimuk. After putting King Songtham's young son Phra Chetthathirat on the throne, he assumed the title of Okya Kalahom (minister in charge of military affairs). The next step was to eliminate Phra Chetthathirat, and Yamada, whose usefulness had expired. An even younger prince, Phra Athityawong, was put on the throne, with Okya Kalahom as regent. The young monarch reigned for only a short time. Okya Kalahom deposed him and ascended the throne as King Prasat Thong. Although he was a cousin of the late king Songtham, he was a commoner and his family is known as the Prasat Thong dynasty.

A master politician, Prasat Thong sought to keep various elements in Siamese politics under close control. Upon his accession, he made some of the wives and daughters of his predecessor, King Songtham, queens and royal consorts. Such action helped to legitimize his irregular accession to the throne by linking him to the previous royal family.

The political group most vigilantly controlled by King Prasat Thong was the nobility, for the obvious reason that he himself had risen to power through the ranks of the nobility. He made the nobles who held governorships of provinces reside in Ayutthaya, and compelled them to come to court every day. Their free-

dom to assemble was severely curtailed, and when they died their inheritances were heavily taxed or even confiscated. The nobility also found themselves confused by the frequent changes of position within the administrative bureaucracy, a tactic the king used to prevent officials from accumulating a power base in any particular department or ministry.

The foreign trade of Siam prospered during the seventeenth century, and King Prasat Thong's reign was one of the high points. Siamese royal trade was conducted to many ports in Southeast, East, and South Asia. Trade was carried on with China, Japan, the Malay sultanates of the archipelago, India, and the Europeans—especially the Dutch.

Relations with the Dutch United East India Company (VOC) play a prominent part in the history of this reign. The Dutch traded principally in sapanwood (a dye wood) and animal skins, with Japan as their major market. They therefore wanted monopolies in these goods. Military cooperation was given in return for trade privileges, when Prasat Thong attempted to subdue his vassal of Pattani in 1634.

Prasat Thong built the great monastery Wat Chai Watthanaram by the Chao Phya (Phraya) River in Ayutthaya, considered to be a masterpiece of Siamese architecture. He also built Prasat Nakhon Luang on the Pa Sak River, and the Phra Wihan Somdet audience hall in the royal palace of Ayutthaya. To be seen as a wealthy and meritorious man served to increase his political legitimacy: the usurper could thus argue that he was justified in seizing the throne on account of his high accumulated merit, or *karma*.

King Prasat Thong died in 1656 and was survived by his younger brother, Si Suthammarcha, and several sons. His eldest son, Chaofa Chai, and another son, Phra Narai, were royal princes. The cycle of Ayutthaya court politics had come full circle. Prasat Thong had seized the throne when the nobles were strong and the princes weak. He had then tried to curb the power of the nobility, with some success. Now, at the end of his reign, his sons and younger brother contested violently for the crown. The struggle ended with the victory and accession of Phra Narai (r. 1656–1688).

PRE-HISPANIC PHILIPPINES

Pre-Hispanic Philippines is generally based on the type of archaeological cultural material remains identified from the various archaeological sites found throughout the Philippine archipelago. The Old World archaeological sequence of Old Stone Age, New Stone Age, Copper-Bronze Age, and Iron Age is adopted to the Pre-Hispanic Philippines, with the Copper-Bronze and Iron Ages lumped together as the Metal Age in the Philippines.

The earliest fossil remains of elephant, stegodon, rhinoceros, large crocodile, giant tortoise, pig, and deer were found in the Cagayan Valley of northern Luzon dating to more than 200,000 years ago. There is speculation that remains of a *Homo erectus* fossil that may be related to Peking Man and Java Man may also be found in this area. Crude stone tools similar to those found to be associated with Peking Man and Java Man have also been observed in the archaeological sites in the Philippines. However, no physical evidence of the fossil *H. erectus* has been found to confirm the existence of a *Homo erectus* there. The type and number of stone tools observed in the archaeological sites suggest that a small group of hominid hunter-gatherers arrived in the Pre-Hispanic Philippines.

The earliest archaeological evidence of humans in the Philippines is the fossil bones of *Homo sapiens* (modern man) excavated at the Tabon Cave in southwestern Palawan Island, Philippines. The fossil bones were recently dated to 16,500 ± 2,000 years ago, by means of

gamma-ray dating techniques at the Institut de Paleontologie Humaine (IPH), National Museum of Natural History in Paris. It has been suggested that modern man from 30,500 to 8,800 years ago continuously occupied the Tabon Cave, based on the various assemblages of stone tool remains in its stratigraphic layers.

Archaeological sites associated with pottery, blade stone tools, and ground-edge or polished stone tools are classified as "Neolithic," or New Stone Age. Ground-edge and polished stone tools may also include the shell of giant clams such as the *Tridacna gigas*, which were used to make boats. The New Stone Age in the Philippines began during the beginning of the Holocene period, or about 10,000 years ago to about 700 years ago, or 500 B.C.E. The Holocene is the period when the sea level rose to its present-day level. People began to move by boat and settled in islands in Southeast Asia. It is usually assumed that Neolithic communities engaged in a sedentary way of life and practiced horticulture and agriculture. However, hunting-and-gathering activities must have persisted, although not as a primary but as a secondary way of living. There is some paleobotanical evidence of plant remains, which showed signs of cultivation in the Neolithic period. Paleozoological evidence of animal bones as well as some other archaeological remains of settlements suggests Neolithic habitations and sedentary activity areas. Large settlement sites with shell middens were located in Lallo, Cagayan Valley, in northern Luzon, Philippines. Red-slipped pottery ware identified in this period suggests the movement of people called the Austronesians from about 6,000 years ago in the Pre-Hispanic Philippines. The Austronesian people had been moving around the mainland and island Southeast Asia, with major settlements in the Philippine archipelago.

Archaeological sites possessing metals such as copper, bronze, gold, and iron are referred to as "Metal Age" sites, dating from ca. 500 B.C.E. to ca. 500 C.E. The earliest metals in the Pre-Hispanic Philippines come in the form of gold, copper, and bronze artifacts and later iron implements, which may have been brought in by the Austronesians themselves and their Chinese associates in the process of their movement in both mainland and island Southeast Asia. Glass, which is a by-product of metalworking, made its appearance during the Metal Age in the

form of beads and bangles such as bracelets, armllets, and anklets. The Metal Age societies began to evolve from simple sedentary agricultural and fishing communities into some kind of groupings with alliances called complex societies. It was assumed that there was expanding population movement during this period, as reflected in the archaeological record of burial practices in the Pre-Hispanic Philippines. There were simple open-pit burials; primary, secondary, and multiple jar burials; and log-coffin burials. In primary burial, the entire corpse was disposed of completely in a particular place. In secondary burial, the bones or fragments of skeletons of the first burial were moved into another container and location. In multiple burial, a number of bones from various skeletons of primary and secondary burials were placed together in either jar burials or log coffins. During the Metal Age, pottery developed with ornate decorations, and was used for both primary and secondary burials, such as those found in Ayub Cave, Maitum, Saranggani Province, in Mindanao, southern Philippines.

A "Contact and Trade" archaeological site has porcelain, glass beads, and metals. The Age of Contact and Trade in the Pre-Hispanic Philippines may have lasted from about 500 C.E. to the coming of the Spanish colonizers in 1521. Archaeological evidence of wooden boats from Butuan site in northern Mindanao suggested dates from the thirteenth century C.E. Continuous population movement and expanding settlements were archaeologically observed in this period on the basis of the wide distribution of various artifacts such as low-fired earthenware pottery, metal tools and ornaments, glass beads, and medium- and high-fired ceramics related to this period. The societies in this period were characterized anthropologically as chiefdoms with a network of trade both international and domestic within the mainland and island Southeast Asian region. An Arabic type of ceramics, dating to about the tenth century C.E., was found in Laurel, Batangas, and central southern Luzon and in Butuan. The ceramics and other cultural material remains of the Chinese dynasties from the Sung-Yuan period (eleventh century), Yueh period (twelfth century), Ming dynasty period (thirteenth to seventeenth centuries), and Ching dynasty period (eighteenth to twentieth centuries) were all represented in both land and underwater ar-

chaeological sites of the Pre-Hispanic Philippines. A number of underwater archaeological sites in the form of shipwrecks were located in the Philippine archipelago and were systematically excavated and studied. The shipwrecks were found intact with their cargoes, which show the complex trade items they carried for distribution and redistribution in the pre-Hispanic Philippines.

The period of Pre-Hispanic Philippines ended in 1521 during the so-called discovery of the islands by Ferdinand Magellan (1480–1521), a Portuguese working under the banner of Spain.

PREM TINSULANOND, GENERAL (1920–)

Architect of Thailand's "Halfway Democracy"

General Prem Tinsulanond, who governed from 1980 to 1988, was the second-longest-serving prime minister of Thailand, after Field Marshal Phibulsongkram (Plaek Phibun-songkhram, t. 1938–1944; 1948–1957). As an unelected premier, his government faced challenging problems from both domestic and external sources, including two failed coups engineered by the "Young Turks," two dissolutions of the National Assembly, five major reshuffles of the cabinet, and a decisive devaluation of the baht. Unlike Phibul, Prem was finally able to end his tenure voluntarily without being forced out by some of his comrades in the army. Yet Prem's ability to doggedly hold on to his power helped him to survive and effectively implement the ongoing political change that came to be known as the "halfway democracy" or "semi-democracy"—namely, a political system composed of elected and appointed politicians exercising political power.

Prem Tinsulanond was born on 26 August 1920 in Bo Yang subdistrict, Songkhla Province, in the south of Thailand. His father was a junior-ranking civil servant under the absolutist regime. After finishing primary education in the temple school, he went to Vajiravudh School in Songkhla before coming to Bangkok for higher education. In Bangkok, Prem was enrolled in the prestigious and elite Suan Kularb Witthayalai school. He then chose a career in the military, continuing his studies in the Army Technical School and Chulachomklao Royal Military Academy in the cavalry.

Prem's apprenticeship in politics started with an appointment to the Senate in 1968 and to the Legislative Assembly in 1973. After the 1977 coup, Prem was a member of the Constitutional Convention in 1977. Prem's political star rose swiftly when he became army commander under the Kriengsak government (1977–1980), in which he was also deputy minister of the interior. Then, under pressure from the Young Turks army faction, Kriengsak re-

signed, and Prem succeeded him at the helm of the government.

Even though Prem came to power by means of military influence over the government, and continued to appoint retired officers to key cabinet ministries throughout his tenure in government, he was firmly against open army intervention in politics. Thus his government was instrumental in the preparation for open politics in the coming globalized economy. Under Prem's administration, the Buddha Mandala, once Phibul's major project, was constructed as the symbol of Thai Buddhism. He was appointed privy councilor to the king, and statesman.

PRESERVATION OF SIAM'S POLITICAL INDEPENDENCE

In the nineteenth century, when various Southeast Asian kingdoms had succumbed either directly or indirectly to European colonialism, Siam was the only country in the region to preserve its political independence. This has perhaps come to be the best-known fact in Thai history, as well as the most central to the shaping of Thai national identity by the state.

Siam's feat of escaping the fate of its traditional rivals, Burma and Vietnam, which were colonized by the British and French, respectively, has been attributed to the foresight and skills of its rulers, principally Mongkut (r. 1851–1868) and Chulalongkorn (r. 1868–1910). Mongkut has been credited with discerning that shutting the West out was no

longer possible, as seen from the Opium War (1839–1842, 1856–1860) in China, in which Asia's hitherto mightiest empire was defeated by Western gunboats. He thus relied on diplomacy to handle the new pressures, signing the Bowring Treaty of 1855 with Britain and similar agreements with France, the United States, Germany, The Netherlands, and Japan, among others. These treaties opened Siam to free trade. The only imposts permitted were the 3 percent export tax, and import tariffs based on the then-prevailing rates charged on goods shipped by Siamese vessels. The treaty also granted the subjects of the powers the right to reside in Bangkok, and extraterritoriality, which meant that they were under the jurisdiction of their respective consular courts, and not Siamese courts.

King Chulalongkorn and his brothers continued Mongkut's legacy of accommodation and implemented fundamental reforms to Siam's administrative structure along Western lines. In order to facilitate Western trade and practices, government ministries were restructured along functional lines, replacing the traditional territorial divisions. In addition, the king relinquished his suzerainty over the principalities to the left of the Mekong River to the French, who incorporated them into their colonies of Laos and Cambodia, and its Malay provinces of Kedah, Kelantan, Terengganu, and Perlis to the British. With their ambitions for control of areas adjacent to their colonies satiated, the two imperial powers were inclined to leave the heartland of Siam intact politically, as a buffer zone. Hence it was a combination of its geographic position in colonial geopolitics and the ability of the Siamese elites to demonstrate their reformist inclinations that convinced the colonial powers that Siam could modernize under its own rulers.

The degree to which Siam's independence was preserved in the age of colonialism bears examination. In particular, the Siamese economy resembled those of colonial Burma and Vietnam. From a basically self-subsistent economy where overseas trade was controlled by the court, Siam became a rice producer for colonial markets and an importer of manufactured goods, with hardly any significant industries. Internal trade was largely in the hands of Chinese merchants, and Western banks, agency houses, and insurance companies dominated the exter-

nal market, controlling about 70 percent of the economy. Export and import taxes were frozen by treaties at the 1855 levels, which were certainly unrealistic with the falling value of the Siamese currency in relation to the British. Furthermore it was untenable, especially by the 1890s, when state revenues were required to fund the administrative reforms and infrastructure development to ensure stability within the newly defined borders of the realm, and to meet the demands of Westerners for improved facilities. However, the treaty powers were not amenable to revision without concessions in return. In addition, with the consolidation of colonial rule in Southeast Asia in the last decades of the nineteenth century, there was an influx of Asian subjects of the treaty powers residing in Siam. In particular, Chinese who claimed to have hailed from the British Straits Settlements and Hong Kong, Portuguese Macao, and the French and Dutch colonies were not subjected to the Siamese legal system. Without the cooperation of the treaty powers, the Siamese authorities had difficulty in verifying that they were indeed colonial subjects. Finally, Siam's rulers absorbed the colonial powers' worldview, selectively equating Europe with civilization and progress and categorizing its highland dwellers as beyond the pale of civilization; rural villagers were seen as backward but potentially of economic value, and Bangkok as the repository of civilization and progress. What really distinguished Siam from its colonial neighbors then was the fact that it was the Siamese ruling house itself that centralized power over the newly created territorial state.

The identification of its rulers as saviors of the kingdom from colonial rule has become a credo of mainstream Thai history, justifying the continued existence of the absolute monarchy before 1932 and, thereafter, the military regimes that built on the myth that Thailand's independence was best ensured by authoritarian leadership. History and culture, and the definition of what is considered "Thai," have remained largely in conservative hands.

PRIDI PHANOMYONG (1900–1983)**Ending Absolutist Kingship**

Pridi Phanomyong was without question one of the two most important leaders of Thailand (Siam) during the Pacific War (1941–1945) and the immediate postwar period; the other was Field Marshal Plaek Phibunsongkhram (1897–1964). Born on 11 May 1900 to Siang and Lukchan, who were humble farmers in the province of Ayudhya, the old capital of Thailand, Pridi never forgot the heavy and unfair lot of the common people. A highly intelligent youth, Pridi was able to complete his barrister training even before he was twenty years old and had to wait until 1920 before he was admitted to the Thai bar, and with it a position as a legal clerk with the Ministry of Justice. In the same year he won a king's scholarship to study law in France. It took Pridi altogether six years to complete his study and graduate with a doctorate in law and a postgraduate diploma in political economy from the University of Paris. Upon his return to Siam, Pridi was appointed a judge attached to the Ministry of Justice and later was promoted to become an instructor of the Law School, Ministry of Justice.

Pridi was credited for setting up the People's Party, the first meeting of which was held in Paris in early 1927 with seven founding members, including Pridi himself and Phibunsongkhram (then Lieutenant Plaek Khit-tasangha), Pridi's political nemesis. The main

aim of the group was to change the political system in Siam from that of absolute monarchy to a constitutional monarchy.

Pridi was well recognized as the "brain" of the 1932 Revolution, which replaced the Chakri absolutist rule with that of a constitutional monarchy. It was Pridi who drafted the iconoclastic manifesto of the People's Party condemning the Chakri kings for their delinquencies, which had brought about all the socioeconomic and political ills in the kingdom and the sufferings of the people. Arguably, Pridi's most valuable contributions to the early period of the revolution were the 1932 Constitution and the Economic Plan he drafted and proposed for adoption by both the State Council (cabinet) and the National Assembly as the country's blueprint for socioeconomic development. Both the manifesto and the Economic Plan were more or less regarded as the pillars of Pridi's political credentials at the time. They strengthened his position as the civilian leader of the People's Party.

Pridi's political fortune shone brightly throughout the premiership of Phraya Phahon-phayuhasena (t. 1933–1938). He was first recalled in October 1933 from a short political exile forced upon him by the government of Phraya Manopakorn-nitithada, prime minister (t. 1932–1933) of the first conservative-royalist government after the revolution, on grounds of being a communist or harboring communist sentiments. During the premiership of Phraya Phahon, Pridi was given at different times various portfolios, including the interior, finance, and foreign affairs. His main rivals, Phraya Songsuradej and Luang Phibunsongkhram, appeared subdued. However, during the last years of Phraya Phahon's cabinet, Phibun was able to catch up with Pridi's political influence and in fact managed to edge out Pridi from the running for the premiership. When the assembly selected Phibun as Phahon's successor in December 1938, Pridi was persuaded to serve in the Phibun cabinet. The Pridi-Phibun friction prevailed and eventually led to the promotion of Pridi to the Council of Regency in early 1942. His promotion was due to his pro-Allied sentiments, which had unsettled the Japanese, who had become Thailand's war allies.

Pridi reached his political pinnacle in March 1946. He became prime minister three times,

each time for a very short period. Altogether, Pridi was prime minister for about five months between 24 March and 20 August 1946. Prior to his acceptance of the premiership, the young king Ananda Mahidol (Rama VIII) (r. 1935–1946) honored Pridi on 8 December 1945 with the title of “elder statesman.” It was a clear indication of the royal appreciation of his role as regent and as the leader who helped to steer the country out of the danger of the aftermath of war. As elder statesman, Pridi spent most of his time exerting his power and influence through his handpicked successors in the cabinet and supporters in the assembly. His most noted direct involvement in state affairs was in efforts to settle the territorial dispute with French Indochina after the war.

Pridi and his supporters were ousted from the arena of Thai politics in November 1947 when a group of officers staged a coup d'état that eventually brought the military and Phibun back to power. Pridi spent his life in exile first in the People's Republic of China (PRC) and later in France. He made one serious attempt to regain his political power by force through a failed coup, the Grand Palace rebellion, in 1949.

The remainder of his life was spent mainly in defending his political record and his reputation as the champion of Thailand's democracy. He died in Paris on 7 August 1983.

PRIYAYI

Backbone of the Javanese Civil Service

During direct Dutch colonial rule (1816–1942), the *priyayi* formed the core of the native civil service corps in Java. They were the direct link with the independent kingdoms of Java's past. The cultivation of power by mystical exercises was an important characteristic of *priyayi* culture. The assumed spiritual power of the aristocracy shaped the relationship between the common people and the Javanese elite. In the course of the nineteenth century the *priyayi* became salaried officials, subordinate to the central government. The Java War (1825–1830) made it clear that it was essential to foster the loyalty of the *priyayi* by involving them more in government and treating them with respect. At the end of the nineteenth century the *priyayi* were integrated in the colonial administration, which made them increasingly dependent on the Dutch.

The development of the native corps from the late nineteenth century to the Japanese occupation marked the idea of a paternalist colonial state administered for the mutual benefit of the indigenous people and the Dutch. During the Japanese occupation (1942–1945), things changed profoundly. The Japanese admitted new players to positions of influence, recognizing nationalist and Muslim leaders as legitimate links between the central administration and the people. The Japanese maintained the essential structure of the corps, but the privileged position of the officials was reduced. At the end of the war the relationship between the *priyayi* and the new leaders of the incipient Indonesian state had become very tense.

The postrevolutionary *priyayi* had to function under a new kind of government. The corps was renamed from *Pangreh Praja* (the Rulers of the Realm) to *Pamong Praja* (the Servants of the Realm) in 1946. Now the nationalists were in control, and the *priyayi* had to carry out their instructions. Under the New Order of Soeharto (Suharto) (t. 1967–1998), the local

civil service was almost completely subordinated to the army's territorial organization.

PROPAGANDA MOVEMENT

A Filipino Reformist Movement

The Propaganda Movement was a movement of educated Filipinos in Spain, from about 1880 till 1895, demanding political rights for the people in the Philippines and political reform of the Spanish colonial rule in the country. The propagandists used the means of mass communication available at the time—such as newspaper articles, books, pamphlets, and public speeches—in order to convince the Spanish government of the need to introduce reforms in its Asian colony. They claimed that they voiced the aspirations of the people, but they did so in Spanish, a language that was not generally understood by the majority of the people in the Philippines. The Propaganda Movement failed to obtain liberal reforms from the Spanish government. However, the ideas of the movement deeply influenced the independence movement in the Philippines, which started the Philippine Revolution in 1896.

Two decades earlier, in 1872, the Spanish government in the Philippines had felt threat-

ened by a number of critical priests and discontented soldiers, and it reacted with a wave of terror. Three Filipino priests—Burgos, Gomez, and Zamora—were executed, and many Filipinos were deported to the Marianas Islands. Throughout the 1870s and 1880s the government remained suspicious, ready to arrest, deport, or execute Filipinos on the basis of denunciations by Catholic friars, who indiscriminately accused people of *filibusterismo*, rebellion against the Spanish colonial government. To avoid arrest, many educated Filipinos went abroad. Families sought to protect their sons by sending them to study English in Hong Kong or Singapore, or to study medicine, law, engineering, or the arts in London, Paris, or Madrid. In all these places sizable Filipino communities came into existence. They were called *ilustrados*, educated and enlightened persons, coming from wealthy families.

Filipino self-exiles in Spain observed the freedom and the liberal conditions in Spain and in other European countries, and they wanted the same for their own country. Although these Filipino emigrés belonged to different ethnolinguistic groups in the Philippines, they began to see themselves as Filipinos and to develop a national consciousness. In the early 1880s they started Filipino associations and a Tagalog newspaper. The central figure was Marcelo del Pilar, writer and organizer. In 1882, José Rizal (1861–1896) arrived in Spain as a student and soon played an important role in the movement.

The propagandists demanded a number of specific political and social reforms from Spain. The main demands included that the Philippine people be represented in the Spanish parliament, and that the Spanish constitution be extended to the Philippines. They insisted that primary education be encouraged without any intervention of the friars. They also requested that secular priests replace the friars in the parishes, and that Filipinos be admitted into the priesthood. The propagandists urged the granting of political rights for Filipinos, such as freedom of religion and freedom of the press. Alongside this reformist line, a more strongly nationalist line was discernible. The propagandists wanted to put an end to the racism and arrogance of the Spaniards in the Philippines and the humiliation of the Filipinos. They demanded recognition for the human dignity and the basic rights of the Filipino people.

In their campaign for political reforms, the propagandists followed two strategies. The first was to expose the shortcomings of the colonial administration in the Philippines, criticizing the power of the Spanish officials and the friars. The second was to show that Filipinos were literate and cultured and capable of self-government. The Propaganda Movement was not asking for separation of the Philippines from the mother country, but for assimilation—that is, changing the status of the Philippines from a colony to a province of Spain.

The propagandists used several instruments to achieve their ends. In 1888 they founded the *Asociación Hispano-Filipina*, a Spanish-Filipino association striving for reforms. In 1889 they started *La Solidaridad*, a Spanish-language journal. At the same time several propagandists joined Spanish Masonic lodges, hoping to enlist political support from liberal Spanish politicians in their lobby for reforms. Del Pilar was the organizer in all three fields of activity. He strongly believed in assimilation, and he was convinced that it was in Spain's interest to democratize and modernize the political system in the Philippines and to abolish the rule of the friars.

In December 1889, Del Pilar became the chief editor of *La Solidaridad*, a function that he performed until the journal was closed down in 1895. The journal discussed the general issues pertinent to the reform agenda of the movement, and it criticized social and political abuses in the Philippines. Aside from Filipino propagandists, some foreigners also contributed articles to the journal, the most famous being the Austrian professor Ferdinand Blumentritt, an expert on the Philippines and a friend of Rizal's.

The Propaganda Movement failed, because it was directed at the government and the general public in Spain, neither of which was interested in the political conditions of their Asian colony. Spanish liberals did not keep their promises. The propagandists could not operate in the Philippines, because they were branded as rebels and their publications were banned. In 1892, Rizal drew the conclusion that it was futile to continue the work in Europe, and he decided to return to the Philippines to organize a political movement. Shortly after his arrival he was arrested and deported to Mindanao. On the night of Rizal's deportation Andres Bonifacio (1863–1897) founded a secret society, the Katipunan, which would start the revolution of

1896. Indirectly, the nationalist principles of the Propaganda Movement would inspire the nationalist movement and the independence struggle in the Philippines.

PUSAT TENAGA RAKJAT (PUTERA) (CENTRE OF PEOPLES' POWER)

After the Triple A movement (support for Japanese leadership in Asia), started in April 1942, began to crumble, the Japanese military administration in Java decided to set up an organization to mobilize the population in Java for their war effort on a far broader scale. PUTERA, as the new organization is known to history, existed from March 1943 to February 1944. Unlike the Triple A movement, PUTERA was meant only for Indonesians. Prominent Indonesian nationalists such as Sukarno (1901–1970), Hatta (1902–1980), Mansur, and Dewantara, all belonging to the *Empat Serangkai*, were asked to take over the leadership and the government of the organization. It was planned that PUTERA would have branches established throughout Java at the residency, agency, and district levels, with a center

in Jakarta. The whole organization was under close control of the Japanese at each level. Despite Japanese control, the nationalists expected that PUTERA would give them an opportunity to intensify their efforts to raise national consciousness among the people and to improve their conditions.

The objectives of the movement were to create a powerful Java as a link in the Greater East Asia Co-prosperity Sphere, by extending aid and cooperation to Japan in order to secure the ultimate victory. The most important activities of PUTERA lay in the field of propaganda. The population of Java had to be stimulated to build up a New Java and actively participate in the defense of a Greater Asia. All American, British, and Dutch influences had to be obliterated. The organization had to promote mutual understanding between the Japanese and the Indonesians. Besides the study of Japanese, the use of the Malay language should be encouraged. In the economic field, agricultural production had to be raised and labor efficiency promoted. Moreover, information on hygiene should be widely disseminated and physical education promoted. The Japanese needed the nationalists to spread the propaganda for their war effort. However, from the beginning they set certain limitations to prevent the influence of the nationalists from gaining too strong a hold among the population.

Branches of the new organization below the level of the district were not planned. In the residencies, permission was needed from the resident, who was often a Japanese, to appoint persons in the local sections. Moreover, the *pan-greh praja* (the Indonesian civil service), which formed the link between the Japanese military administration and the mass of the population of Java, obstructed any efforts the nationalists might have made to get in touch with the local population. Its members did not want to see their position undermined by the growing influence of the nationalists. Another factor preventing the nationalists from making contact with the local youth was the establishment of the *seinandan* (Youth Association) and the *Keibotan* (Civil Defence Corps) shortly after PUTERA became operational. The Japanese made sure that these associations were set up well outside the influence and organizational cadre of PUTERA. Even the Sports Training Movement, *Gelora*, which had been established by

PUTERA, was not given permission to continue and was brought under the control of the Java Sports Association. These measures ensured that the expectations the nationalists fostered of gaining their goal were trimmed back within three months of the existence of PUTERA.

Both the nationalists and the Japanese were disappointed in their expectations of PUTERA. In the matter of food supply, production remained insufficient, especially to satisfy the requirements of the military government. Because of the Japanese policy of treating residencies as largely self-sufficient units, the distribution of rice and other foodstuffs were extremely chaotic and smuggling flourished. Production and distribution of agricultural goods were a persistent problem for the Japanese in Java and contributed to the failure of PUTERA. Labor problems were another complication that made PUTERA's job difficult. The Japanese exerted heavy pressure on the population to be gainfully employed. Large numbers of workers were taken away from Java as *romusha* (members of labor groups recruited, often through coercion, by the Japanese in occupied countries during the Pacific War). Young men were recruited for Peta (the Indonesian Self-Defence Force) or forced to join the *seinandan* to repair roads and prepare land for cultivation. The oppression of the Japanese government and the increasing shortage of food did not improve the popularity of the government, weakening the position of PUTERA even further.

From the beginning it was clear that both the Japanese and the Indonesians had their own agendas for reaching their own goals. This greatly hampered the development of the organization into a Java-wide cooperation between Japanese and Indonesian nationalists. Both were to gain from PUTERA, but it was not to fulfill the real expectations of either group. In the beginning of 1944, dissatisfied with PUTERA, the Japanese announced the formation of a new organization, the *Djawa Hokokai* (the Javanese Service Association). The new organization was placed under firm Japanese control. PUTERA agreed to merge with it, and that marked the end of this short-lived organization.

PYUS

The Pyu people resided in central and Upper Burma (Myanmar) from the seventh to the eleventh centuries C.E., where they founded a number of city-states. The first of these is usually considered to be Sri Ksetra, traditionally founded in 638 near modern Prome (Pyay). That date also traditionally marks the beginning of the Burmese Buddhist (śaka) era. Over the course of the next century and a half, the center of Pyu power moved northward to Beikthano and Hanlin, near Shwebo. These are today the other main Pyu archaeological sites in Burma. The Pyu appear to have lost power to the Burman city-states in the eleventh century and were assimilated by them.

The most significant Pyu archaeological excavations were carried out at Beikthano in the 1960s. Yet what little we know of the Pyu and their kingdoms is derived mainly from Chinese sources, from epigraphy, and from other limited archaeological finds. The Pyu people had their own script as well as a distinctive religious, artistic, and architectural identity. For this reason most historical writing on the Pyu has tended to concentrate on the contribution made by them to the development of Burma's literary, artistic, and religious history.

The fullest descriptions that we have of the Pyu states are those in the Chinese chronicles of the Tang dynasty (606–910 C.E.). These detail that a number of diplomatic and cultural exchanges were made between the Pyu kings and the Chinese court. They also report that in the ninth century the Pyu kingdom contained eighteen dependent states and nine walled towns. However, the Chinese as well as the Arakanese to the west of Burma used the term *Pyu* in a quite general way. The term could refer to many groups living in this region, which complicates interpretation of these sources. The Chinese chronicles do give quite a lot of information, however, about the city of Sri Ksetra and the kind of government and social organization that flourished there. These accounts emphasize the relatively benign nature of the Pyu ruler's authority and the high degree of artistic accomplishment of the local craftsmen. Excavations at the site of Sri Ksetra also reveal it to have been a city of considerable size. The city walls, which appear to have been both high and strongly built, were apparently far greater in extent than those of the later Burmese kingdom of Pagan. The Pyu people at Sri Ksetra were Buddhist, but it seems that this was mixed with elements from the Vishnu cult of Indian Hinduism, as well as possibly with a megalithic cult and with other pre-Buddhist traditions. Three large pagodas are still visible at the site, and these are remarkable not only for their Pyu-language inscriptions but also for their use of glazed bricks and interior vaulting. In these pagoda-temples most art historians trace the origins of the distinctive Burmese style of pagoda that was later to be developed so dramatically at the Burmese kingdom of Pagan.

The reasons why the Pyu center of power moved northward from Sri Ksetra are uncertain. However, the Chinese chronicles suggest that the Pyu city-kingdoms had influence over an expansive area of central and Upper Burma, having links with Manipur and Arakan to the west and China to the east. Much more research needs to be done on the historical relationship between these areas and their interconnections. By the eighth century, the kingdom of Nanchao in western Yunnan had become powerful and appeared to exert an increasing influence over the Pyu city-kingdoms. The chronicles tell us that in 800–802 a delegation of Pyu musicians accompanied a Nanchao

mission to the Chinese court, and in 808–809 the Nanchao ruler took the title *P'iaohsin* (Pyushin), translated as “Lord of the Pyu.” In the eleventh century this relationship seems to have become much more aggressive and caused the Pyu to lose control of their states. The newly powerful Burmese kingdom of Pagan then absorbed these territories.

Much of the research into Pyu archaeology and ethnohistory is highly politicized. Although the Pyu people are today an entirely historic ethnographic entity, spurious claims are still made by some groups to be descended from them, the “original inhabitants” of Burma. Considerable kudos would be attached to such an ancestry. There are references to individuals making these claims as late as the early twentieth century, but more recently some historians of the Maru or Lawngwaw ethnic group (one of the modern Kachin subgroups in Burma) have taken up the idea. This is based on the premise that the Lawngwaw use the word *Pyu* for “man.” Some Burmese nationalists have encouraged the argument, as it undermines argu-

ments of ethnic unity among the Kachin peoples, who were engaged in armed nationalist resistance to the Burmese government from the 1960s to the early 1990s. Nationalist Burman historical writing also seeks to create continuity between the Pyu and the early Burman polity in the central dry zone. Much more research remains to be done.

QING (CHING/MANCHU) DYNASTY (1644–1912)

The Qing (Ching) was the last imperial dynasty of China, ruled by the Manchus, who were regarded by the Han Chinese as alien and barbarian. This prejudicial view prevailed until the collapse of the dynasty, when under a new racial scheme the Manchus were considered part of a conquered and enlarged Chinese nation consisting of Han and other ethnic minorities. For the first half of the dynasty, the relationship between China and Southeast Asia continued to operate within the confines of the tributary system, until the time of the Western encroachment in the nineteenth century.

Generally speaking, the sinocentric tributary system continued to function as the framework regulating the relationship between the Chinese Empire and the Southeast Asian states, the latter being vassal states required to send regular tributary missions to China as a sign of respect to the Manchu, albeit alien, emperors. After fulfilling the tributary obligations, free trade was allowed. Junk trade among China, Cambodia, Luzon, Annam, Sulu, Brunei, Johor, and Batavia was voluminous. The Chinese government received Siamese merchants, especially in Guangdong (focusing on Guangzhou [Canton]), with particular enthusiasm as suppliers of rice, a staple food in South China.

Qing law explicitly prohibited Chinese from going abroad for trade and settlement, as the Ming originally did, to prevent the conglomer-

ation of anti-Qing forces, in view of the resistance movement at Taiwan led by Koxinga (Zheng Chenggong) (1624–1662) and his son during the reign of Emperor Kangxi (1654–1722, r. 1661–1722). However, numerous instances of Chinese emigration to peripheral states in Southeast Asia are known. Patriotic Han Chinese fled to Southeast Asia for refuge after the Manchus succeeded in usurping the Ming regime in 1644 and massacred Han people in a number of cities. Supporters of the anti-Qing Taiping Kingdom (1850–1864) fled to Southeast Asia after this Nanjing regime was eventually overthrown by the Qing army in 1864. By means of the coolie trade, a large number of Chinese went abroad starting in the mid-nineteenth century and worked as indentured laborers in tin mines and rubber plantations in the Straits Settlements, many of them lacking the means to return and thus settling down.

It was the singular circumstances of the nineteenth century that forced the Qing government to fundamentally revise its attitudes toward the overseas Chinese and the vassal states. Traditionally the Chinese government stood aloof to and even antagonized the Chinese overseas, who were regarded as deserters of the Chinese Empire. The imperial court was unsympathetic to them, even in crises such as the Red River Incident (1740), in which more than 10,000 Chinese sojourners in Batavia (Jakarta) were killed by the locals. This negative attitude showed little change until the coming

of the West, when China's various defeats in foreign wars alerted the Qing court to the need for protecting its overseas nationals, a lesson it learned from the West, which would protect their nationals to the extent of launching wars. The overseas Chinese were also increasingly viewed as a potential source of support, especially inasmuch as China was in grave need of funds for various factory and railway projects in its attempt to modernize. The first step taken was to establish a Chinese consulate in Singapore in 1877. Hoo Ah Kay (1816–1880), a prominent local merchant, served as the first consul. Realizing the potential and invaluable source of support (financial in particular) of the overseas Chinese, the Manchu government sought to protect overseas Chinese communities; an initial start was the establishment of a Chinese consulate in Singapore. Against this background of intention to tap and exploit the overseas Chinese, the Manchu court at Beijing also became aware that most of its vassal states, particularly those in Southeast Asia, were increasingly absorbed into Western spheres of influence and many were already under Western colonialism. The number of tribute-bearing states to the "Son of Heaven" was fast declining. Therefore, the increasingly formal representation of China in Southeast Asia symbolized the collapse of the tributary system, which, along with the Chinese Empire, had become weak, useless, and irrelevant in all aspects.

The opening of treaty ports in China for traders of all nationalities in the mid-nineteenth century, which superseded the previous one-port trade policy, with Guangzhou as the only trade port, facilitated trade not only between China and the West but also regionally in Asia. The rise of Hong Kong as an entrepôt, under British colonial rule from 1841 to 1997, wove China more firmly into a Southeast Asian trade and financial network in which Hong Kong and Singapore served as the two nuclei. It was through Hong Kong that Chinese emigrants went to Southeast Asia and remitted funds to their native villages on the Chinese mainland.

Southeast Asia played a special role in the last decade of the Qing's history, wherein Chinese reformists and revolutionaries tested their strength in contending for support from the overseas Chinese there. Singapore became a revolutionary base with branches in Indochina. Sun Yat-sen (1866–1925), a renowned Chinese

revolutionary, prepared in Singapore for some important uprisings conducted in South China, succeeding in winning financial and material support from the Chinese sojourners of Singapore. The Wuchang Uprising in October 1911 finally sparked off a nationwide anti-Qing movement, resulting in the establishment of a republic in 1912 and the end of China's dynastic history, which had lasted for more than two thousand years.

QUEZON, MANUEL LUIS (1878–1944)

Personifying Philippine Prewar Politics

Manuel Luis Quezon was a leading Filipino political leader in the fight for independence from the United States. He became senate president (1916–1935) in the U.S. colonial administration, and then served as president of the Philippine Commonwealth from 1935 to 1944.

Quezon was born on 19 August 1878 in the town of Baler, Tayabas (now Quezon) Province. His father, Lucio Quezon, had served with the Spanish colonial army and was of mixed Spanish and Filipino blood. Quezon studied at the San Juan de Letran College. During the Philip-

pine Revolution (1896–1898) against Spain and the Filipino–American War (1899–1902), he joined the Philippine revolutionary forces as an officer under General Emilio Aguinaldo (1869–1964).

After the Filipino–American War (1899–1902), Quezon earned a law degree from the University of Santo Tomas, passed the bar examinations, and practiced law. He entered government as provincial treasury official, and then went to Manila and cofounded the Nacionalista Party, whose platform was immediate independence from the United States.

In 1905, Quezon entered politics when he won the elections for provincial governor of Tayabas. In 1907 he won a seat in the first Philippine Assembly, the lower house of the bicameral legislature in the U.S. colonial government. He was elected majority floor leader of the body. Quezon was chosen by the Philippine Assembly to become resident commissioner to the United States in 1909. As resident commissioner, he represented the Philippines in the U.S. Congress, although he could not vote. While in the United States he campaigned for Philippine independence. He returned to the Philippines in 1916 armed with the Jones Law, which pledged that the United States would grant the Philippines independence once a stable government was established by Filipinos.

The Jones Law established the Philippine Senate as the upper house in the Philippine legislature. Quezon succeeded in becoming a senator for the first Philippine Senate in 1916, and he was elected senate president. He shared Filipino political leadership with Sergio Osmeña, Sr. (1878–1961), who was speaker of the House of Representatives. Quezon asserted his claim as top Filipino politician and triumphed, and from 1923 onward he was the leading Filipino politician. He won Osmeña back to his side and established a coalition government.

In protest against Governor-General Leonard Wood's (t. 1921–1927) interference in internal matters, Quezon resigned his position as senate president after the similar resignation of José P. Laurel (1891–1959). He led a campaign against Wood and the struggle between the two proved costly to his health.

Quezon kept up the campaign for independence under succeeding U.S. governors-general, leading several missions to the United States. He, however, opposed the Hare–Hawes–

Portrait of Manuel Quezon (1878–1944), president of the Philippines. (Bettmann/Corbis)

Cutting Act (1933), which had been brought home by Osmeña and Manuel Roxas (1892–1948). He led a campaign that rejected the act, and then went to the United States the next year to try to obtain a more acceptable independence act. The act finally passed by the U.S. Congress was basically the same as the Hare–Hawes–Cutting Act, but Quezon brought it home in triumph. It was accepted by the Philippine legislature, and Quezon worked to bring back those who had opposed him.

Quezon then was elected president of the Philippine Commonwealth, an almost autonomous government that would prepare the Philippines for independence in ten years. He took his oath of office on 15 November 1935. As president of the commonwealth, Quezon's priorities were to establish a national defense system and a program of social justice, to close the gap between rich and poor, the development of a more diverse economy, and building a stronger national character. The outbreak of war in China (1937) and Europe (1939), as well as the limited time to prepare for independence, led Quezon to ask for emergency powers, which the legislature granted him. His opponents criticized him as fascistic and dictatorial, but Quezon rationalized his position as

being legal and a form of constitutional authoritarianism.

Quezon pushed for constitutional amendments that would revise the legislature and allow him to pursue a second term. These were approved, and Quezon ran for president in November 1941. The outbreak of war in the Pacific intervened, and Quezon was forced to move the seat of government to the island of Corregidor, where he took his oath of office on 30 December 1941.

While in Corregidor, Quezon lobbied for greater U.S. aid to the Philippines and at one point suggested immediate independence and neutrality for the Philippines. Little aid came, and life on Corregidor was unhealthy for Quezon. He was evacuated to the Visayas in February 1942 and then was taken by the Americans to Australia, from which he moved to the United States, where he established the commonwealth government-in-exile. There he worked for greater U.S. attention to the Philippines while trying to keep up the morale of Filipinos in the Japanese-occupied Philippines.

According to the Philippine constitution, Quezon's term as president would end in November 1943. Quezon argued that because of war, the operation of the constitution had been suspended, and that he should remain as president until the end of the war. Vice President Osmeña, who would have succeeded as president, chose to allow Quezon to continue on.

Quezon died of complications caused by tuberculosis on 1 August 1944 in the United States. His remains were transferred to the Philippines in 1946.

Charismatic and dynamic, Quezon personified Philippine politics during the first half of the twentieth century. A skilled politician, he utilized all means at his disposal to attain his ends and defeat his political enemies. Highly emotional at times, he could court the support of Filipinos and exemplified a brand of politics very different from that of Sergio Osmeña (1878–1961), his rival.

QUIRINO, ELPIDIO (1890–1956)

Against the Odds

Elpidio Quirino was the second president of the post-Pacific War (1941–1945) Philippine Republic, serving from 1948 to 1954. He attempted to place the Philippine economy on sound footing, restore peace and order, and establish a firm relationship with other countries during the Cold War.

Quirino was born on 16 November 1890, in the town of Vigan, Ilocos Sur. He earned his law degree at the College of Law, University of the Philippines, in 1915 and passed the bar examination in the same year.

He worked as a clerk and secretary in the Philippine legislature in the U.S. colonial government in the Philippines, and he was noticed by Manuel Quezon (1878–1944), then president of the Philippine Senate. Quezon appointed Quirino as his secretary, but after two years Quirino decided to run for a seat in the House of Representatives in 1919. He won despite having limited financial support. In 1925 he became senator and was reelected in 1931, becoming majority floor leader. He served as secretary of finance (1934) during Governor-General Frank Murphy's (t. 1933–1935) term while keeping his senate seat. He was elected a delegate to the 1934 Constitutional Convention. With the inauguration of the Philippine Commonwealth government, President Manuel Quezon appointed Quirino as secretary of the interior, in which position he served from 1935 to 1938. He ran for the National Assembly in 1938, but he was not supported by Quezon and lost. In 1941, Quirino was elected senator, but the outbreak of war in the Pacific intervened.

During the Battle of Manila (February 1945), Quirino lost his wife and three children, and barely escaped with his own life.

Quirino assumed his position as senator in June 1945, when the Philippine Senate convened for the first time since the 1941 election. In April 1946 he was elected vice-president on a Liberal Party ticket, together with Manuel Roxas (1892–1948) as president, to serve during the last months of the Philippine Commonwealth and the first years of the postwar Philippine Republic. Quirino was appointed concurrently secretary of finance and secretary of foreign affairs.

Quirino became the second president of the postwar Philippine Republic upon the death of Manuel Roxas on 15 April 1948, taking his oath two days later.

He ran for a full term in 1949, when the first four-year presidential term ended. He ran against José P. Laurel (1891–1959), who had been president of the Japanese-sponsored Philippine Republic (1943–1945). It was a controversial election, marred by fraud. Laurel refused to concede, but Quirino took his oath as scheduled.

As president, Quirino strove to restore the faith of the people in the government and took steps toward total economic mobilization. He tried to weed out corrupt government employees and sought to build a solid foundation for an industrial economy through the construction of industrial plants, roads, and hydroelectric plants. He worked to stabilize the Philippine *peso*, balance the national budget, and improve the trade imbalance with the United States.

A major challenge for Quirino was the continuing antigovernment Huk rebellion, which had broken out during Roxas's term. Seeking a peaceful resolution of the crisis, Quirino proclaimed amnesty for the Huks and welcomed Luis Taruc (1913–) back to the government in 1948. He attempted to push social programs to uplift conditions of the poor and thus win back the peasantry. However, Taruc and the Huk leadership were not satisfied with the conditions Quirino offered, and they went back underground. Quirino appointed the dynamic Ramon Magsaysay (1907–1957) as secretary of national defense, who fought against the Huks with vigor and combined military and social programs, eventually controlling them.

In the field of foreign relations, Quirino sought a regional security alliance and called an international conference to form a Pacific Pact. The United States did not participate, and the pact did not materialize. Under his administration the Philippine government signed the San Francisco Peace Treaty with Japan, maintaining its stand on the need to obtain war reparations from Japan. He pardoned and returned convicted Japanese war criminals in order to improve Philippine-Japanese relations. Quirino also sought assurances from the United States that it would come to the assistance of the Philippines in case of war. As a sign of his government's commitment to anticommunism, he authorized the dispatch of Philippine military forces to Korea in 1950.

Despite his policies, Quirino's administration was marred by charges of graft and corruption, and various scandals broke out. Quirino's political enemies, some of whom sought his impeachment, created a crisis in the government that was aggravated by the threat of the Huks. Consequently there was a flight of capital out of the country, necessitating the imposition of economic controls that proved unpopular.

Quirino ran for a second term in 1953 but was defeated by Ramon Magsaysay. Quirino, who had become sick in the last years of his presidency, retired after losing the elections and died on 28 February 1956 of a heart attack.

Quirino's presidency has been misunderstood, and negative aspects such as graft and corruption were highlighted over sound economic and international policies. The period during which he served was particularly difficult, with the Cold War, the economic problems caused by the Pacific War, partisan politics, and an antigovernment rebellion occurring at the same time. His administrative style was criticized as being weak, but only years after his administration ended have the positive aspects been recognized.

QUỐC NGỮ

Literally translated as “national language,” *Quốc Ngữ* was originally developed by European Christian missionaries for the writing of the Vietnamese language in Roman letters. These missionaries came to Vietnam in the seventeenth century for evangelization purposes. A romanized script for the Vietnamese language with no tonal marks was cited for the first time in a book by Christophoro Borri, published in 1631 in Rome. However, the phonetics of the transcription are believed to be based on Portuguese. By 1650 five tonal marks plus a few diacritics had been added to the romanized script. The French Jesuit Alexandre de Rhodes (1591–1660) was credited with systematizing the transcription by using tone marks and dia-

critics to help with vowel pronunciation that is essential for understanding the tonal Vietnamese language. The year 1651 is seen as a landmark, with the publication in Rome of two works in *Quốc Ngữ* by Alexandre de Rhodes, including a Vietnamese-Portuguese dictionary.

During the French colonization of Cochinchina in the second half of the nineteenth century, the French authorities promoted the use and teaching of *Quốc Ngữ* as an alternative to Chinese characters and *Nom* (a demotic system of writing Vietnamese using Chinese characters). The first issue of a government-sponsored magazine in *Quốc Ngữ*, the *Gia Dinh Bao*, was published on 15 April 1864. Petrus Truong Vinh Ky, its editor, was one of the best-known Vietnamese scholars and linguists at the time. He contributed significantly to the development of *Quốc Ngữ* literature. As French colonial rule became established, the use of *Quốc Ngữ* spread to northern and central Vietnam, gradually becoming the accepted script.

R

RAFFLES COLLEGE

Begun in 1929, Raffles College was one of two nuclei (the other being King Edward VII College of Medicine) of the first university in Malaysia—namely, the University of Malaya. Named in tribute to Sir Stamford Raffles (1781–1826) and in honor of the centenary of Raffles's establishment of Singapore (1819), Raffles College was set up to meet the public demand for tertiary education in the sciences and liberal arts in British Malaya.

The Maxwell Committee (1918) deliberated on the commemoration of the centenary of Singapore and proposed the establishment of an institution of higher learning as a fitting memorial to Raffles, himself a scholar of the Malay world (present-day Indonesia and Malaysia). The Firmstone Committee (1919) implemented the groundwork of what came to be known as “Raffles College.”

Funds for the project came from the Straits Settlements government as well as from the Malay States government. The site (at Bukit Timah Road), buildings, and annual maintenance were borne by the Singapore government. Donations flowed in from the public irrespective of class, ethnicity, and creed. Chinese *toukay* (prosperous businessmen, entrepreneurs) competed with each other in their contributions. The European community and the Jewish sector, despite their small numbers, were equally generous in their financial support.

Construction of the campus buildings commenced in 1922. By the end of the decade Raffles College was operational, offering a three-year baccalaureate program. The disciplines in the arts initially included English, geography, economics, and history. Mathematics, physics, and chemistry catered to the science stream. All the courses were modeled on that of the University of London. In addition a postgraduate course in pedagogy facilitated the training of teachers to serve upper secondary schools. Inasmuch as English was the language of instruction, its students were drawn from government and mission English schools; graduates of vernacular schools (Chinese, Malay, and Tamil) were unable to enter, owing to their poor command of English. The faculty members came mostly from Britain.

The amalgamation in 1949 of Raffles College and King Edward VII College of Medicine provided the foundation for the University of Malaya.

RAFFLES, SIR (THOMAS) STAMFORD BINGLEY (1781–1826)

Visionary British Imperialist

Thomas Stamford Bingley Raffles was the founder of Singapore and also the London Zoo—fitting memorials to his twin ambitions to promote free trade and the study of natural history.

Born aboard his father's ship off Jamaica on 6 July 1781, Raffles was forced to leave school at fourteen to support his widowed mother and four younger sisters. Joining the East India Company's (EIC) London office as a junior clerk, he was promoted in 1805 to assistant secretary at Penang, setting sail with his bride, Olivia Mariamne Fancourt (1771–1814), a vivacious and intelligent widow ten years his senior.

Teaching himself Malay on the outward voyage, Raffles embarked in Penang on a lifetime study of the history, literature, flora, and fauna of the Malay world. Persistently he urged the EIC to use the Napoleonic Wars (1803–1815) to replace the Dutch economic system of monopoly, protective tariffs, and forced deliveries with more liberal British influence.

Visiting Calcutta in 1810, Raffles succeeded in reversing plans to raze Melaka, and Governor-General Lord Minto (1807–1813) appointed him lieutenant governor when the company occupied Java the following year. Aiming to make British rule permanent, Raffles posted residents (British officers) at Javanese courts, urged Calcutta to appoint agents throughout the archipelago, and began to replace forced labor with money rents. When this brought a substantial loss of revenue, Raffles sold government lands to bolster a shaky paper currency, and in October 1815 he was recalled, still grief-stricken over Olivia's sudden death a few months earlier.

The year 1817 brought better fortune. On 13 February the EIC directors exonerated Raffles from dishonorable motives in Java and

confirmed his appointment as lieutenant governor of the West Sumatra residency at Benkulen. Nine days later he married Sophia Hull (1786–1858), who was to be his steadfast support. Raffles was elected a fellowship of the Royal Society, his two-volume *History of Java* was published to acclaim, and in May 1817 he was knighted by the prince regent, from that time styling himself Sir Stamford instead of the more pedestrian Tom. But he failed to win backing for a chain of stations on the China route, since both the British government and the EIC wanted to return Dutch territories and reduce their commitments in Southeast Asia.

Undeterred, Raffles tried to develop Benkulen as a base for expansion, but when he visited Calcutta once more in September 1818, the governor-general vetoed his ambitious Sumatra schemes. However, he approved a limited proposal for a treaty with Aceh in the north and a trading station at some southern point in the Melaka Straits.

Attracted by Singapore's historical associations as the probable site of the port of Temasek (Tumasik), which was destroyed in the late fourteenth century, on 30 January 1819 Raffles signed a preliminary agreement with the local chieftain permitting the EIC to set up a trading post. Since the sultanate was disputed by two half brothers, with the Dutch supporting the younger claimant, Raffles recognized the elder as sultan and signed a treaty with him on 6 February 1819. Raffles immediately left to negotiate the Aceh treaty, returning briefly in May 1819 with settlers from Penang. In face of vigorous Dutch protests, the British occupation was not recognized until 1824.

Meanwhile, in October 1819, Raffles visited Calcutta yet again to plead in vain to be given control of all the British possessions in Southeast Asia: Penang, Province Wellesley, Benkulen, and Singapore. He then narrowed his vision to trying to turn Benkulen into a model colony, but he decided to leave the East when three of his four children died and both Raffles and Sophia fell seriously ill.

First he visited Singapore, where, from October 1822 to June 1823, he laid down long-term administration on liberal lines, including permanent free trade. In February 1824 he and Sophia left Benkulen for England on the *Fame*,

which caught fire. All on board were saved, but the entire cargo was lost, including irreplaceable scientific papers, original Malay manuscripts, drawings and paintings, live plants, fish, animals, and birds.

In England later that year, Raffles published a *Statement of the Services of Sir Stamford Raffles* (1824), justifying his administration. In 1825 he bought a country estate at High Wood near Hendon and launched a long-cherished proposal for a London zoo and the Zoological Society, to which he was elected president in February 1826.

In his last months he lost most of his capital in a bank failure, and in April 1826 the EIC directors refused a pension, demanding a huge sum in alleged overpayments. On 5 July 1826, Raffles died suddenly from an unsuspected brain tumor. Of his grand strategy only Singapore survived, but he was respected by leading scientists and gave his name to *Rafflesia arnoldi*, the largest flower in the world, which he discovered in Sumatra. His widow published a devoted biography, and Charles Wurtzburg's 1954 *Raffles of the Eastern Isles* is the most complete twentieth-century work; an authoritative modern biography is long overdue.

RAJA ALI HAJI (ca. 1809–1869)

Historian and Author

Malay historian and author of the *Tuhfat al-Nafis* (The Precious Gift), Raja Ali Haji was the grandson of Raja Haji, the Bugis *Yamtuan Muda* killed by the Dutch at Melaka in 1784. While still a teenager, Raja Ali Haji accompanied his father, Raja Ahmad, on an expedition to Batavia, and by age twenty he had acquired considerable experience of the world outside his homeland, Riau. When he was thirty-two, he was appointed joint regent and ruler of Lingga for the young Sultan Mahmud. A scholar of Malay history, language, religion (Islam), and culture, Raja Ali Haji corresponded with Dutch scholars working in Riau and published in Dutch journals as well as locally. A prolific author, he expressed views held by most educated Malays of the period.

Raja Ali Haji's political influence in Riau's administration spanned four decades, but it is as a scholar that he is remembered. While still a young man, he was regarded as an authority on Islam and an expert on genealogy and court procedure. His published works cover subjects as varied as theology, statecraft, genealogy, history, law, literature, and the Malay language, and include a Malay grammar, *Bustan al-Katibin* (Garden of Writers) and a dictionary, of which only part survives (Abu Hasan Sham 1993). In Riau today, Raja Ali Haji is thought of as the author of the *Gurindam Dua Belas*, twelve short, didactic poems of a religious nature.

Raja Ali Haji's greatest work is the *Tuhfat al-Nafis*, which covers the entire span of Malay history from the descent of the first Malay king, Raja Seri Teri Buana, at *bukit* Siguntang, to the rule of Temenggung Abu Bakar (r. 1862–1895) of Johor. As a historical source it is considered second in importance only to the *Sejarah Melayu* (Malay Annals). The main section of the *Tuhfat al-Nafis* (the name can be read as *Dedication to the Task* as well as *The Precious Gift*) contains a description of events covering nearly two centuries of the history of Johor and its relationship with the wider Malay world. It is believed that the *Tuhfat* was initially started by Raja Ali Haji's father, Raja Ahmad, a keen student of history and author of the *Sjair Perang Johor* (Verses of the Johor War), and was completed by its main author in the late 1860s. The *Tuhfat* is remarkable in that it brings mod-

ern concerns to the writing of Malay history, including factual accuracy, due attention to dates, and acknowledgment of sources; its subjects, as in earlier historiography, are kings and aristocrats.

The *Tuhfat al-Nafis* is a valuable source of information for the history of Sumatra, Kalimantan, and the Malay Peninsula, particularly for the eighteenth century and the first half of the nineteenth. It is based upon a number of manuscripts preserved in court libraries in Riau, Siak, and Kalimantan, and on named oral sources. It is the first Malay history to fully introduce human agency in the making of history. *Takdir* (God's will) is rarely invoked, and only then to explain an inexplicable event, such as the length of a man's life or the outcome of a battle. Instead, through his interpretation of the past, Raja Ali Haji demonstrates how human behavior influences, for better or for worse, the course of history.

The *Tuhfat's* political purpose is to defend Bugis involvement in the Malay world and to justify the status that the Bugis achieved as the protectors of the Malay realm. In accomplishing this objective, Raja Ali Haji is selective of his sources and their interpretation. Importantly, Raja Ali Haji puts forward the view that rulers are appointed by God, and if they are dethroned that is because they have failed to obey God's commands. God thus replaces genealogical descent as the source of political power.

Some of these ideas probably stem from the revivalist movements that swept through the Islamic world in the nineteenth century, which placed greater emphasis on the importance of personal effort in religious matters. Raja Ali Haji's views are derived in large part from Abu-Hamid Muhammad al-Ghazzali's (1058–1111) great work, the *Ihya' 'Ulumal-Din* (The Revitalization of the Religious Sciences), which he translated into Malay. Raja Ali Haji's underlying argument is that the function of the state is to provide a climate conducive to the proper observance of religion, so that the faithful can fulfill their spiritual obligations and prepare themselves for the day of judgment. For this reason, God has appointed kings to set examples of righteous behavior and to assist men in their religious observances. Thus the well-being of the realm reflects the virtue of the ruler, who alone has the power to create the conditions favorable for spiritual well-being and material prosperity.

**RAMA I (CHAKRI) (r. 1782–1809)
Founder of the Chakri Dynasty (Siam)**

Rama I (Chakri) was the founder of the present dynasty of Thailand—that is, the Chakri dynasty—and of Bangkok, its capital city. During his reign he devoted most of his time to reconstructing and defending the newly established kingdom in order to bring to Siam the same glory that used to be found in Ayudhya before it was destroyed by Burmese forces in 1767.

Rama I was born Thong Duang on 20 March 1736 in Ayudhya during the reign of King Boromkot (r. 1733–1758). During the last two reigns of the Ayudhya kingdom, Rama I served as a junior official at the court until 1761, when he was appointed as a senior judicial official to work at Ratchaburi, a satellite town to the west of the capital city. He served in that position until the fall of Ayudhya in April 1767.

After Ayudhya fell to Burma, Phya Taksin reunited the kingdom and became King Taksin (Thonburi) in late 1767. King Taksin moved the capital city from Ayudhya to a town called

Thonburi, located on the western bank of the Chao Phraya River. During the reign of King Taksin, Rama I held many important positions in the bureaucracy and helped the king to suppress his rivals and to defend the kingdom from Burmese attempts to reoccupy Siam. In 1775 the Burmese king decided to launch a major military campaign to reoccupy Siam. Rama I, with his younger brother, fought against the largest Burmese army at Pitsanulok, one of the most strategically important towns in the lower northern part of the kingdom. At Pitsanulok, Siamese troops under the leadership of Rama I and his younger brother, who were then called *Chaophraya* Chakri and *Chaophraya* Surasi, respectively, were able to prevent Burmese troops from moving further to the south and the capital.

In 1782, Rama I was assigned to lead Siamese troops to wage war against Cambodia after a succession crisis took place there. While he was fighting the war there, Rama I was informed that a rebellion was taking place in Thonburi and that the political stability of the kingdom was at risk because King Taksin was grossly obsessed with Buddhism and was developing aberrant behavior. When he arrived at Thonburi, high-ranking officials invited him to accept the throne, which he did. King Taksin was then executed on 6 April 1782, and Rama I became the new king on the same day (Wyatt 1984: 145). He founded a new dynasty called Chakri and had the capital moved from Thonburi to a town called Bangkok, located on the eastern bank of the Chao Phraya River.

All through his reign, Rama I was faced with the difficult tasks of establishing a strong and unified kingdom and defending that new kingdom from external threats—especially Burmese invasion. In order to reconstruct a kingdom, he decided to follow Ayudhya administration and to build his new kingdom as a strong Buddhist state, with the intention of recreating the glory of Ayudhya in his kingdom. As a result, he reorganized Buddhist administration, which had deteriorated during the final years of the Thonburi period. He issued ecclesiastical laws to restore discipline to the monkhood and appointed to positions of leadership senior and knowledgeable monks who had been demoted by King Taksin. In 1788 he established ecclesiastical commissions to redefine and consider Buddhist scriptures. He also spon-

sored the education of thousands of monks (Tambiah 1977: 183–188). By extending royal patronage for Buddhism, the king also enhanced his own legitimacy.

Other attempts indicating Rama I's determination to restore the glory of Siam were the appointments of legal and literary commissions to work on revisions of law codes and translations of foreign literature. In 1805, Rama I appointed a commission of legal scholars to redefine Siamese law codes of the Ayudhya period, which led to a compilation of state law codes entitled Three Seals Laws. Concerning literary and cultural restoration, the king chaired various commissions to translate foreign literature, such as Indian, Chinese, and Mon, into Thai. This translated literature not only stimulated public literary interest but also was used by the king to give moral lessons to his subjects (Osborne 1995: 52).

Burma still posed a serious threat to the stability of Siam, and in 1785 a Burmese king sent more than 100,000 troops to invade the kingdom. However, Rama I, with help from his younger brother, was able to drive them out. After this war, the king succeeded in strengthening Siamese political control over the north and the south of the kingdom.

When Rama I died in September 1809, he left behind a very well-established kingdom. His political, religious, and cultural achievements laid strong foundations on which his successors could build.

RAMA KAMHAENG (r. 1279–1298) Paternalistic King of Sukhothai

Rama Kamhaeng was a son of Bang Klang Hao, the ruler of Bang Yang in the Sukhothai region who overthrew Khmer rule in the region in the 1240s and founded the Sukhothai kingdom. Under Rama Kamhaeng's rule, Sukhothai became one of the most important and powerful political and cultural centers of the Thai people in the upper part of the Chaophraya (Chao Phraya) delta before Ayudhya eventually superseded its power after his death.

Rama Kamhaeng was born Rama but was given the epithet Rama Kamhaeng (lit. Rama the Bold) by his father when he was only nineteen years old after Rama helped him fight against the forces of the neighboring town of Sot, which had attacked Sukhothai (Wyatt 1984: 53). When Rama Kamhaeng succeeded to the throne in 1279, Sukhothai was still a very small kingdom compared with the kingdom of Lanna of King Mangrai (r. 1259–1317), to the north of Sukhothai. Under his rule, Rama Kamhaeng was able to expand the territory of the Sukhothai kingdom to cover most of the Chaophraya delta, Luang Prabang in Laos, and some parts of the Malay Peninsula. However, Sukhothai's political power over its orbital states was rather uneven. Its sovereignty over its immediate vicinity in the north and the lower Chaophraya delta was strongly felt, while that over the remote areas, such as the Malay Peninsula in the south, was nominal. Although Rama Kamhaeng might have used forces to absorb neighboring towns and to maintain the relationship with Sukhothai, he adopted more peaceful diplomacy of various means, such as marriage or Buddhist bonds, to maintain the relationship with remote towns and states. As a result, the far-flung states accepted the indirect political power of Sukhothai in the form of semivassalage and personal relationships rather than direct control over their sovereignty (ibid.: 56; Taylor 1992: 169). For example, the Mon state of Pegu accepted the authority of Sukhothai because its ruler had married Rama Kamhaeng's daughter, while small states in the Malay Peninsula were absorbed into Sukhothai via Nakhon Sithammarat, which had political control over a significant number of states in the region and had a close link with Sukhothai via Buddhism. On the other hand, to guarantee

peaceful coexistence with powerful neighboring states of Lanna and Phayao in the northern flank of Sukhothai, Rama Kamhaeng concluded an alliance with King Mangrai of Lanna and King Pha Muang of Phayao in 1287.

Another policy that Rama Kamhaeng adopted to rule his kingdom was a paternalistic form of administration. This form of government was in sharp contrast to the autocratic Khmer rule in the Angkorean period, under which its subjects had to pay high taxes and the gap between the rulers and the ruled was extremely wide because of a complicated hierarchical social and political system. A benevolent ruler was a key to success if a small and newly established Sukhothai kingdom was to be able to attract Siamese people in the surrounding regions to settle down in a kingdom that was not particularly fertile in comparison with the lower Chaophraya delta. As a result, Rama Kamhaeng portrayed himself as a benevolent father, or lord, whom his subjects could rely on when they had troubles. The inscription of 1292, which the king himself partly inscribed, indicated clearly how idyllic, peaceful, and prosperous the city of Sukhothai was. For instance, if people needed to seek assistance from the king, they were able to have easy access to him by ringing the bell that Rama Kamhaeng ordered to have hung at the palace gate. The king would then come and help them solve their problems. Moreover, they had freedom to travel and carry out their business activities without having to pay taxes. The dispossessed from other towns were welcome to settle down in Sukhothai, and the king was willing to help them until they were able to stand on their own feet (Wyatt 1984: 53–54).

Theravada Buddhism was firmly established in Sukhothai during the reign of Rama Kamhaeng and since then has become the main religion in Thailand. Rama Kamhaeng was a devout follower of Buddhism and ruled his kingdom according to Buddhist precepts (Tambiah 1977: 84–86). He shared his throne with learned monks who preached *dhamma* (precepts) to his subjects on Buddhist holy days. It was during his reign that unique art forms of Sukhothai closely related to Buddhism first appeared.

Since the political success of Sukhothai under Rama Kamhaeng's rule was based on the

combination of his articulate diplomacy, military might, and personal relationships, it lasted only during his lifetime. When Rama Kamhaeng died in 1298, his successors were not able to sustain the political power of Sukhothai; as a result, by the middle of the fifteenth century it had been absorbed into the more powerful kingdom of Ayudhya.

RAMATHIBODI (r. 1351–1369)

Established the Kingdom of Ayutthaya

Ramathibodi (r. 1351–1369), or King Uthong, was the first of the thirty-four kings of Ayutthaya, an important kingdom and capital of Siam. He is reputed to have been the founder of the kingdom, situated on the Menam Chao Phraya River, a rich rice-field plain and the central region of present-day Thailand. He is also known to have sent troops to conquer Angkor, a great and highly civilized kingdom in Cambodia.

In spite of all these accomplishments, the origin of Uthong is rather obscure and surrounded by myth and legend. In the process of Thai nation-building, modern Thai historiography has constructed Uthong as a hero. He is seen as an offspring of an uninterrupted line of Thai ruling families that migrated from the area where four present-day countries meet: China, Burma, Laos, and Thailand. He might

have been of mixed origins, possibly Sino-Khmer. He later married into the two competing ruling houses of Suphanburi and Lopburi, both located in the central plain of Siam. He therefore became a mediator and brought an end to the political fragmentation of the area, and with the foundation of Ayutthaya, a new chapter in the history of Siam had begun.

Uthong was probably born in 1314 and married by the 1330s; he established Ayutthaya in 1351. He reigned for eighteen years and passed away in 1369, at the age of fifty-five.

RAMOS, FIDEL VALDEZ (1928–)

Protestant General at Malacanang

Elected as president (1992–1998) of the Philippines by a small plurality in 1992, Fidel Valdez Ramos was the first career military officer and Protestant to win election in a predominantly Catholic country. He graduated from West Point in 1950 and saw action in both the Korean (1950–1953) and Vietnam (1964–1975) Wars as a young officer. Rising through the ranks, he became the chief of the Philippine Constabulary (the national police) and later vice chief of staff of the Philippine Armed Forces. He served under his second cousin Ferdinand Marcos (1917–1989), who declared martial law in 1972. But in 1986 he defected to the opposition and teamed up with another defector, Defense Minister Juan Ponce Enrile, to help overthrow the Marcos regime in the now-famous "people power revolution" of February 1986 in Manila.

Fidel Ramos, prior to the overthrow of Ferdinand Marcos in 1986, when he held the rank of lieutenant general. Ramos was elected president of the Philippines in 1992. (Nik Wheeler/Corbis)

Ramos was installed in the successor Aquino government (1986–1992) as armed forces chief of staff and later secretary of national defense. He is credited with foiling the various military coup attempts against Aquino. In appreciation for his loyalty and support, President Aquino “anointed” Ramos as her successor and campaigned vigorously for him in the 1992 presidential elections.

Ramos is best remembered for his efforts to institute reforms of the country’s institutions to accelerate economic development. He also worked more effectively with the Philippine Congress than did Aquino. He likewise pursued peace negotiations with three dissident groups—the communists, the Muslims, and the right-wing military elements. He offered amnesty to the military insurgents and the New People’s Army (NPA), but only the former accepted it. With the help of Indonesia, Ramos negotiated a peace agreement before the end of his presidential term in 1998 with the Moro National Liber-

ation Front (MNLF), the biggest Muslim rebel movement in Mindanao. He gave the Muslims an autonomous region with a governor.

As president, Ramos made frequent trips domestically and internationally to assess countrywide development and seek foreign aid, earning him the accolade “the flying-est” Philippine president. Now a private citizen, he devotes his time to working for his foundation for peace and development.

RANGOON (YANGON) “The Enemy Is Consumed”

Since the time of the Second Anglo-Burmese War in 1852, Rangoon (Yangon since 1989) has been the capital, first of British Burma and then, after the Third Anglo-Burmese War in 1885, of the province of Burma. It remained the capital, after independence on 4 January 1948, of the Union of Burma (1962) and its successor, the Union of Myanmar (1989).

A port city on the Ayeyawaddy (Irrawaddy) River delta facing the Bay of Bengal and Indian Ocean, it was founded at the village of Dagon opposite the walled city of Syriam. It was established in 1756 by King Alaungpaya (r. 1752–1760), first monarch of the Konbaung dynasty, Myanmar’s third and last indigenous imperial dynasty. Alaungpaya renamed Dagon “Rangoon” or “Yangon,” popularly translated as “end of strife”; Lieberman, however, suggests that a more accurate rendition is “the enemy is consumed,” which is consistent with Alaungpaya’s propensity for psychological war against his enemies (Lieberman 1984: 243). In death, the king’s body in 1760 was laid on a boat at Rangoon to be transported to the capital at Shwebo in Upper Myanmar.

From its early beginnings as a port city to replace the destroyed port/capital city of the Mon at Pegu, which Alaungpaya razed in 1757, Rangoon was frequently the site of Mon rebellions. Occurring in 1758–1759, 1774, and 1783, these uprisings were instigated by their desire to restore the Mon kingdom in Lower Burma and eliminate the exactions of the Burmese governors, or *myowuns*.

Nevertheless, in the late eighteenth century as British-French rivalry climaxed during the Napoleonic Wars (1803–1815), the port of Rangoon grew in size and wealth. Both British and French were seeking trading privileges and access to Burmese teak for shipbuilding purposes. The British captain Michael Symes visited in 1795 and again in 1802. Another British official, Hiram Cox, observed in 1797 that Rangoon had annual revenues of 150,000 *kyats* of silver from commerce. The Italian missionary

Gaetano Mantegazza wrote that in 1784, two years after King Bodawpaya’s succession (r. 1782–1819), the revenues of Rangoon surpassed all other sources of Crown revenue (Koenig 1990: 120).

When Captain Canning visited in 1810, the cost of his trip upriver from Rangoon to King Bodawpaya’s capital at Amarapura on the Upper Ayeyawaddy River was paid for by a levy of 20 *kyats* per household in Rangoon. By the 1802 *sit-tan*, or royal order, Rangoon was part of the “super-wun” of Hanthawadi, the most important of the four provinces (the others were Martaban, Toungoo, and Prome) accorded such status. The *myowun* of Hanthawadi had the powers, but not the title, of a viceroy (*bayin*) of the realm.

Resentment of government levies and tax exactions led arsonists to burn Rangoon to the ground in 1810, 1812, and 1814. When it was rebuilt, the census of households reported only 1,000 of 2,500 houses listed, an example of the widespread official corruption that reputedly deprived the realm of as much as 40 percent of its revenue (ibid.: 157) through underreporting of tax receipts and appropriation of state lands.

The city of Rangoon is overlooked by the famous Shwedagon Pagoda, whose founding is traced in legend to the early years of Buddhism. Mon kings of Hanthawadi, Pegu, since the fourteenth-century Banya-u (r. 1353–1385) are credited with enlarging and endowing the pagoda, shrine to the sacred hairs of the Buddha. Queen Shin Sawbu (r. 1453–1472), granddaughter of Banya-u, enlarged the pagoda, gilded it, and donated her weight in gold for its beautification, together with some 9,000 hectares of land to support it. Her successor and son-in-law, the former monk King Dhammazedi (r. 1472–1492), continued the tradition and had a large bell cast and installed there. European travelers such as Gasparo Balbi, who saw it in 1583, compared it to St. Marks in Venice. Royal patronage of the Shwedagon became a tradition, with successive Myanmar kings combining religious and political motives so that the pagoda became a symbol of Burmese nationalism and identity. Anaukpetlun (r. 1605–1628) wrested it back from the heretic, the Portuguese Felipe de Brito of Syriam; installed a new “umbrella,” or *hti*, on the spire; and restored it following a severe earthquake in 1620. King Hsinbyushin (r.

1763–1776) further enhanced the pagoda following another earthquake in 1768. He also donated a new umbrella and planned to donate a bell, a wish carried out by his son, Singu (r. 1776–1781), after his death.

In 1824, at the commencement of the First Anglo-Burmese War (1824–1826), the British desecrated the pagoda when the commander of the invading forces, Sir Archibald Campbell, commandeered it for his headquarters. The great Burmese general Maha Bandula was recalled from Arakan, but he was unable to dislodge the British, who retained possession until they evacuated Rangoon at the end of the war. In the interim before the Second Anglo-Burmese War in 1852, King Tharrawaddy (r. 1837–1846) made a politico-religious pilgrimage to Rangoon. During his five months' residence there he moved the town inland, away from the river, for better defense, and had an earthen wall erected some 4.9 meters high to protect the city. The Shwedagon was incorporated in the city's defenses. He donated a bell to the pagoda and his queen of the Western Palace had a roof constructed over the western staircase. The politico-religious symbolism of the city and pagoda were evident to the British in the Second Anglo-Burmese War (1852). On 14 April 1852 they stormed the pagoda on the eastern side, invested it, pillaged the treasures, and set Major Fraser of the Royal Engineers to construct a tunnel deep inside the pagoda. Lord Dalhousie (t. 1848–1856), governor-general of India, condemned the desecration. The loss of the war meant the loss of Rangoon and the pagoda to the British, who continued to occupy it as a stronghold and fort.

From his new capital at Mandalay in Upper Burma, King Mindon (r. 1852–1878) in 1869 wished to visit the pagoda and donate a new umbrella. But the British, aware of its dual politico-religious symbolism, would not permit the visit, although, after a year's delay, King Mindon's umbrella was installed on the pagoda by citizens of Rangoon on 26 November 1871. Royal patronage of the pagoda ceased with the dethronement of the last Konbaung monarch, King Thibaw (r. 1878–1885), at the conclusion of the Third Anglo-Burmese War (1885).

Under British control, the delta became a major rice-exporting region, and Rangoon increased in size and wealth, being the seat of government offices for the province of British

Burma. In 1929 the Shwedagon was restored to Myanmar people. The city suffered much destruction during the Pacific War (1941–1945), when it was bombed by both sides. Since independence and both during and after the socialist era, the Shwedagon has retained its politico-religious symbolism, closely identified with Myanmar nationalism and culture. Pious Myanmar families donate to its upkeep; many thousands of families visit it daily; young monks go there for their Buddhist examinations. It is a living temple, part of the everyday lives of the Myanmar people.

Rangoon today is a city of some 5 million people with beautiful tree-lined streets and gracious colonial architecture, overlooking its two lakes, Inya Lake and Royal Lake, so much a part of its history.

**RATU ADIL
(RIGHTEOUS KING/PRINCE)**

The idea of a *Ratu Adil*, the just king who will finally reign over Java, is very closely bound up with the prophecy of Joyoboyo. It was believed that a twelfth-century king, Jaya Bhaya of Kediri, predicted such a phenomenon. According to Javanese tradition, Joyoboyo was a seer who foretold that after an era fraught with disasters

and humiliations, a just king would arise who would reign over Java. This would signal the commencement of an era of freedom, peace, and prosperity. Especially in times of crises, or when hopes of a better world were raised, the prophecy revived among the people. Leaders in their turn used the prophecy to try to convince people that they were the just king who would lead them to peace and prosperity.

The first known leader with whom this legend was associated was Diponegoro (ca. 1785–1855). He instigated the Java War (1825–1830) and saw himself as the Ratu Adil, who would liberate Java from the Dutch and would reign afterward. The people of Java also assumed that he was the long-expected just king. Haji Umar Said Tjokroaminoto (1882–1934), one of the leaders of Sarekat Islam (1912), was sometimes taken to be the Ratu Adil. Just before the Pacific War broke out in 1941, the prophecy circulated again. This time it was thought that the Japanese would free them from the Dutch colonial yoke. The Japanese used the prophecy for their own purposes by accentuating the fact that a Javanese prince had pointed to them as the liberators of Indonesia.

The old prophecy played an important role in the Indonesian nationalist movement whereby Sukarno (1901–1970) led Indonesians to independence. The Javanese people regarded Sukarno, the first president of the Republic of Indonesia (t. 1945–1967), as the Ratu Adil.

REFORMS AND MODERNIZATION IN SIAM

As with China and Japan, the two major Asian countries not to have been directly colonized by the West, Siam faced three challenges from the mid-nineteenth century: keeping colonialism at bay, and strengthening the country by learning from the West while retaining what were considered the essential attributes of the society. In Siam it was the royal family rather than intellectuals emerging from new social groups that managed the country's modernization endeavors, which were defined as the implementation of reforms to the administrative system.

According to King Chulalongkorn (r. 1868–1910), who formulated the blueprint for reforms, the traditional institutions of government had become inefficient and corrupt. Noble families had entrenched themselves in territorially defined offices, living off the labor and taxes of the people under them while failing to provide justice and security of livelihood. The king thus moved to dismantle their power bases by introducing a modern bureaucratic system based on functional differentiation, fully accountable to the minister and in turn the monarch. These pivotal reforms have long been understood, in Chulalongkorn's terms, as the demarcation between old and new Siam, the long-drawn battle between the conservatives and modernizers in which the latter eventually triumphed. Had they been defeated, the argument went, Siam would undoubtedly have been colonized along with the other Southeast Asian countries, as the Western powers were intent on supplanting rulers and systems that were opposed to open markets and modern administrations.

Chulalongkorn's reforming zeal was not only a response to the threat of colonialism or a legacy of maladministration; to him, both could only be addressed with the revival of the fortunes of the Chakri royal family. The dynasty had lost out in relative strength to the powerful noble families—in particular, the Bunnag, who were instrumental in the selection of Mongkut (r. 1851–1868), then a monk for twenty-seven

years, to the throne upon the death of his half brother King Nangklao (1824–1851), and whose scion Chuang was regent for five years until 1873, when Chulalongkorn turned twenty.

Chulalongkorn's mark as a modernizer had actually been stamped during the regency. In 1871–1872, Chuang Bunnag arranged for him to visit Java, the Straits Settlements and British Burma, and India to acquaint him with the workings of the colonial possessions. These visits marked the first time that a Siamese monarch had ventured abroad. In 1874, Chulalongkorn announced that all children born into debt slavery at the beginning of his reign who had not been redeemed earlier would be free when they were twenty-one years old. The colonial powers did not fail to take note of this dramatic though long-drawn-out rupture with what they considered one of the worst features of an uncivilized society. At the same time, the control of labor services as the key to resource extraction was growing anachronistic, for the open-market economy functioned on wage rather than *corvée* labor, and monetization meant that taxation became the key source of state revenue.

With the creation of the functional ministries in 1892, the Ministry of Finance had charge of the revenue collection and expenditures of the kingdom, allocating funds for infrastructure development that aimed at the centralization of power, which would also facilitate the operations of the Western businesses. The intertwined interests were manifested in the appointment of foreign advisors not only for their technical skills but also for their policy recommendations: British (financial, British companies having the largest economic interest in Siam); French, Belgian, and Japanese (legal codes); Danish (navy and the gendarmerie); and German (railways and the post office).

The monarchy consolidated its rule through the reforms, in particular those of the Ministry of Interior, that enforced the writ of Bangkok in hitherto remote and autonomous regions, such as forest resource-rich Chiangmai (Chiang Mai). The extension of a uniform taxation system to the subsistent economy of the northeast erupted in millenarian uprisings in 1902 that were put down by the modernized army dispatched expeditiously on newly built railways.

Chulalongkorn controlled the scope and pace of the modernization program tightly, re-

jecting a petition in 1885 from a group of princes and officials for a constitutional monarchy and a parliamentary system. The king deemed that the small number of educated Siamese, and the urgency of the colonial threats, meant that political and legislative reforms were premature. Similar calls for reforms made by commoners through the press up to the 1932 overthrow of the absolute monarchy also went unheeded.

The modernization program of King Chulalongkorn was modeled on the colonies where executive institutions were predominant, a legacy that the country's subsequent regimes built upon. The strengthened Siamese absolute monarchy was one of the last significant ones in Asia to survive into the early twentieth century.

REJANGS

The Rejangs are a historically important Indonesian minority population inhabiting the Barisan mountain range of southwest Sumatra inland of the coastal port of Bengkulu (Bencoolen, Benkulen). They refer to themselves as “tun Jang” (“the people of Jang”) but are called “Rejang” by the neighboring Malays of South and central Sumatra, from whom they are distinguished linguistically and culturally (Jaspan 1964: 2). This region of Sumatra was an important early focus of European mercantile activity, being a source of pepper, gold, and silver. Gold is still mined and panned sporadically by the Rejangs. From early times Indian traders referred to Sumatra as the “Golden Island” (*Su-*

varnadvipa). Traditionally, the Rejangs were shifting cultivators of hill rice and forest-gatherers. However, that extensive system of cultivation has been gradually replaced from the second half of the nineteenth century by the cultivation of coffee, cloves, and pepper for the market; wherever suitable flat land in valley bottoms is available, irrigated rice agriculture has been established (Psota 1998).

Until the Dutch military conquest and then the occupation of the Lebong valley in the heartland of Rejang country in 1859–1861, most of the Rejangs were a relatively isolated group, although some communities also lived in lowland or coastal settlements. These latter were introduced to the English-speaking world as early as the late eighteenth century in the work of the English scholar William Marsden (1754–1836), who later became president of the Royal Society. Marsden compiled a considerable amount of material on the great island of Sumatra during his residence there from 1771 to 1779, when he was secretary to the president and council at Fort Marlborough, Bengkulu. Bengkulu then was an important British trading settlement and seat of the English East India Company (EIC) in the western Indonesian archipelago. Marsden also spent some time with his elder brother, John, who served in Sumatra as the EIC resident in Lais, a coastal settlement in lowland Rejang country, some 48 kilometers northeast of Bengkulu, where the EIC had a factory and trading outpost.

In his now classic *History of Sumatra* (1783), Marsden provided a general survey of Sumatran peoples and their histories, but he devoted considerable attention to the Rejangs in his chapters on political and economic life, ecology, and social organization; he considered them to be a prototypical Sumatran society. However, even in the seventeenth century there are references to the interior communities in such accounts as the *Sumatra Factory Records* of the English East India Company, given that the EIC had had a long-standing presence in southwest Sumatra at Fort Marlborough from 1685 until 1825. Following the Anglo-Dutch Treaty of London in 1824, the British recognized Sumatra as falling within the Dutch sphere of influence and concentrated their attention on the Malay Peninsula and the Straits Settlements to the north. Nevertheless, the British had had little contact with the interior Rejangs, and it was the Dutch

after 1826 who began to plan for the establishment of a system of direct rule there.

The Rejang region commanded considerable Dutch attention during the late nineteenth century because of the discovery of rich gold deposits, and private Dutch mining companies were active in the Rejang Highlands from 1897 into the 1940s. The Dutch also developed tea and coffee plantations in the interior. The gold and silver deposits in the Rejang area provided the bulk of the production from Sumatra and indeed of the whole of the Dutch East Indies in the late colonial period (Prodolliet and Znoj 1992).

The Rejangs are organized into patrilineal clans, although over time the influence of modernization and change and the gradual spread of Malay culture have undermined this system. Rejangs have several myths of origin; a frequently quoted version indicates descent from four brothers who were said to be princes and Buddhist monks of the Javanese kingdom of Majapahit. According to the myth the four brothers left their homeland sometime in the fourteenth century and, having settled in the Lebong valley in Sumatra, founded the Rejang as a distinct people and bequeathed them their culture and sociopolitical organization. The Rejang were divided into four territories and four patrilineal clans, later referred to as *marga*, each ruled by one of the brothers. The Dutch reorganized this system and transformed the clan and district chiefs (Rej.: *pesirëa*; Ind.: *pasirah*) into salaried colonial officers. It is claimed that this local elite, members of which were incorporated into the Dutch administrative system and received Dutch education, lent this myth of origin an official, authoritative status and claimed their descent from the four brothers (Galizia 1992). They also used it to demonstrate the illustrious ancestry of Rejang and the distinctiveness of Rejang culture, despite later Malay accretions, and their links with the high civilization of Java.

The *pasirah* and *marga* system was abolished in 1979, but well before that, and as far back as the communist rebellions in West Sumatra of 1926, the system established by the Dutch began to face opposition and was gradually undermined. Its fate began to be sealed during the anti-Dutch revolution of 1945–1950, when those members of local elites who had benefited from the Dutch colonial system were con-

fronted by the emergence of new elites committed to the establishment of a postcolonial social and political order.

RELIGIOUS DEVELOPMENT AND INFLUENCE IN SOUTHEAST ASIA

Southeast Asia is home to all the major world religions. The Philippines is the only Christian nation in Asia; Indonesia's Muslim population is the world's largest; and the Theravada Buddhism of Cambodia, Laos, Burma (Myanmar), and Thailand (Siam) is quite distinctive. These world religions have made significant adaptations to the Southeast Asian environment, and many areas hold fast to indigenous beliefs. In

this culturally diverse region, religion can form the basis of ethnic identity and national cohesion. It can equally foster divisiveness and conflict, and galvanize resistance to state authority.

Animism

Any survey of Southeast Asia's religious history must begin with Animism, which sees the natural world as animated by a vast array of spirits and deities. Capable of great kindness or extraordinary malevolence, they can bring about both good fortune and calamity. Elaborate rituals, which sometimes involved animal or even human sacrifice, were developed to propitiate powerful spirits. Although men generally dominated religious ceremonies, through much of Southeast Asia women could also take a leading role. A number of societies accorded a particular place to individuals who took on the accoutrements of the opposite sex, symbolically combining the regenerative powers of both male and female.

As religious influences from outside slowly penetrated the region, they struck an alliance with existing belief systems. Whereas the world religions were concerned with questions of cosmic significance and life beyond death, the assistance of spirits was sought in regard to the concerns of daily life, such as recovery from illness, a prosperous harvest, or success in warfare. Despite challenges from proponents of religious orthodoxy, spirit propitiation has remained relevant for many communities into modern times.

Indian Influences: Hinduism and Buddhism in Southeast Asia

The influence of Indian religious thought in Southeast Asia increased with expanding trade. From the seventh century these influences were especially pronounced in the fertile rice-growing areas of modern Burma, Thailand, Cambodia, central Vietnam, Java, and Bali, where local societies were being organized into larger political units. Nonetheless, the process of localization meant that several aspects of Hinduism, such as caste, were never adopted except in a very modified form.

Numerous religious buildings and temple complexes remain as evidence of the appeal of Indian ideas. The temples of the Khmer capital

of Angkor, established in Cambodia in the ninth century, symbolically represented the world-mountain and were dedicated to the worship of Hindu gods with whom the king was linked. Royal support for Mahayana Buddhism is evident in the later period. Hindu-Buddhist states also emerged in Sumatra and Java, and traces of Indian ideas can be found elsewhere in the archipelago.

The penetration of Islam from the fourteenth century did not eliminate previous ideas, especially on Java. Bali retained its adherence to Hinduism, although this was modified to fit the local environment. Balinese religion provided an important focus for identity in the face of advancing colonialism—as in 1906, when hundreds of unresisting Balinese were killed by advancing Dutch troops in a ritual suicide (*puputan*). In seeking to preserve Bali's "Hindu" culture, however, the colonial regime also helped to re-create what they saw as "traditional" religious practices.

After Indonesia gained its independence, Balinese leaders successfully fought to gain official recognition of their religion by emphasizing its connection with Indian Hinduism. In the process some teachings and rituals were modified to conform more closely with those of India, but the continuing strength of earlier traditions is apparent in virtually all aspects of modern Balinese life.

Theravada Buddhism

From the eleventh century the influence of Theravada Buddhism in Southeast Asia grew because of increased contacts with Sri Lanka (Ceylon), where that school was flourishing. Although remnants of Hindu and Mahayana practices survived, ideas about kingship and government in Burma, Thailand, Cambodia, and Laos display much Sinhalese influence. According to Theravada theories, a king reigns because of the merit he has acquired in previous lives, and he has the task of protecting Buddhism and supporting the Sangha (the Buddhist monkhood). The royal city of Pagan (Bagan) in Burma is a good example of the role that royalty played in sponsoring Buddhism.

It seems that early societies were drawn to Theravada Buddhism by the ideas of rebirth and merit-making, which offered a devout layperson the possibility of rewards in both this

life and the next. Links between monks and laity were strengthened because it was customary for young men to enter the Sangha during the rainy season. Although nuns disappeared in the Theravada tradition, pious laywomen could also be respected for their spiritual knowledge. Monks and lay nuns taught, studied, and meditated, but they also conducted ceremonies to ward off evil or promote communal prosperity. It was thus possible to blend local cults of spirits with Theravada rituals. In the eighteenth century the strength of Theravada Buddhism in Southeast Asia helped inject new life into the Sri Lankan Sangha, which had suffered after the Portuguese and Dutch conquests.

In all Theravada Buddhist countries there has been an uneasy relationship between rulers and the Sangha, because the spiritual standing of monks was higher and the religious hierarchy was sometimes willing to defy royal commands. One important theme, therefore, concerns the state's continuing efforts to make the Sangha responsive to its wishes. This has been most successful in Thailand, where Rama IV (r. 1851–1868) founded the reformist Thammayut order in 1833. This state-religion alliance, which lessened the likelihood of dissident factions within the monkhood, has been maintained in more recent times; notably, the Sangha Act of 1963 links the Buddhist hierarchy to the state bureaucracy. During the 1980s and 1990s some monks and lay Buddhists were critical of Thailand's rapid modernization and of alleged misconduct in the Sangha. Reformists promote a "socially engaged" Buddhism that espouses moral values. A separate but equally significant development has been the pressure from women for the revival of full ordination.

Historically, authority in the Burmese Sangha has been less regulated, and disputes between different sects were not uncommon. In the late nineteenth century the imposition of British colonialism, the abolition of the monarchy, and the failure to appoint a patriarch undermined the capacity of the monkhood to lead. In Burma (as elsewhere in the Theravada Buddhist world), "holy men" continued to emerge as leaders of popular rebellions, and in 1930 a major uprising was led by Saya San, a former monk. Colonial rule also produced a more politicized Buddhism among the educated elite, and after independence that was manifested in the policies of U Nu (1907–1995). In his three

terms as prime minister between 1948 and 1962, he fostered “Burmese Buddhist socialism” as the basis of state ideology. Since 1962 the military-dominated government in Burma has frowned on spirit propitiation and effectively curbed antigovernment tendencies within the Sangha, although the latter still exercises a major influence in Burmese life.

Although colonialism, civil war, and periods of communist government have weakened the Sangha in Cambodia and Laos, some monks have always been willing to express opposition to the state. After the withdrawal of Vietnamese troops from Cambodia in 1989, Buddhism was restored as the state religion; now men below middle age are again permitted to enter the monkhood. Since the 1970s there has been a resurgence of Buddhism in Laos, following a period of repression under the Pathet Lao. Doctrinally, Buddhism has been considerably simplified, and monks are required to study Marxist-Leninist thought. Despite the belief that the inculcation of Buddhist morals will provide a counter to Westernizing influences, the pace of economic and social change throughout Southeast Asia will undoubtedly affect the role that Buddhism plays in the lives of the next generation.

Confucianism

China controlled Vietnam for a thousand years prior to the eleventh century, and even after independence Vietnamese rulers acknowledged their subordinate status. This explains the influence of China’s philosophies and religions, which were amalgamated with Vietnamese beliefs in nature spirits, ancestors, and legendary heroes.

The spread of Mahayana Buddhism dates from around the fourth century, but from the fourteenth century it suffered a long decline as Confucian scholars increasingly accused Buddhism of corrupt practices. Nonetheless, Buddhism remained strong at the village level, where it became closely associated with popular interpretations of Daoism (Taoism). Although the intricacies of Daoist metaphysics were difficult to grasp, Vietnamese were drawn to the ideas of protective immortals and deities. Women as spirit mediums who made contact with the supernatural were able to assume a more prominent role in Daoist ceremonies.

With China as a model, the Vietnamese court in the fifteenth century became an active sponsor of Confucianism. As a result, precepts previously loosely observed were enforced more rigorously. The Chinese heritage was most apparent at elite levels, but even here there was selectivity in what was adopted, particularly in regard to male-female relations. The seventeenth century saw some revival of Buddhism at higher levels of society, and Christian proselytizing attracted numerous followers, especially among court women. Influence from the more Confucian north was further diluted as Vietnamese control spread southward into territory occupied by Chams, Khmers, and non-Vietnamese hill tribes.

During the nineteenth century kings made renewed efforts to enforce Confucianist ideas and were particularly hostile to Christianity, which they saw as a challenge to the social order. Under French colonial rule from the 1860s, Confucian scholarship declined, opening the way for new religious movements, particularly in the south. Founded in 1926, the militant eclectic sect known as the Cao Dai controlled its own zone in the unsettled times after the Pacific War (1941–1945). It aimed for the perfect synthesis of world religions, with a cross-cultural pantheon of saints and spirit medium advisors. The Hoa Hao, essentially a local form of Buddhism with strong millenarianist tendencies, spread through the Mekong Delta in the 1940s. It came to provide the basis for an influential political party. The 1950s saw a revival within Mahayana Buddhism, focusing on opposition to the Catholic Ngô Đình Diệm regime (t. 1955–1963) and its alliance with the United States. This history of political action has meant that since unification in 1975 the communist government has been wary of institutional religion, although restrictions have eased somewhat since the mid-1980s.

Islam

The first trustworthy reference to a Muslim community in Southeast Asia comes from Marco Polo (1254–1324), who visited northern Sumatra in 1291. We know that Islam did not come directly from the Middle East (West Asia) but passed first through India, where it made considerable adjustments to local society and was exposed to Hindu influences. The Shafi’i

school of Islamic law is prevalent in southern India, which explains its dominance in Southeast Asia. It is believed that Chinese Muslims, who had been converted by overland trade with the Middle East, were also influential in spreading Islam in the Philippines, Borneo, and the northern coast of Java.

The Islamization process began to quicken in island Southeast Asia in the mid-fifteenth century, but it never made any significant inroads on the mainland, where Buddhism and Confucianism were already well established. Malay rulers of Melaka, the center of regional trade, became important sponsors of Islam from around 1430. Islam moved easily along trading routes because the Malay language, already a lingua franca for commerce, served as a medium for preaching the faith. Islamic teachings found a sympathetic audience in local courts, since kings were anxious to attract Muslim traders and join a prestigious community that included the rulers of Istanbul and later Mughal India. In explaining this rapid spread, scholars have stressed the attraction of Islam's simple, direct message and its guidelines about conduct in this life. In addition, mystical Islam (Sufism) apparently had considerable appeal because its goal of spiritual communion with Allah resembled existing ideas of communication with the supernatural. There was also a localization process, since practices like cockfighting and gambling were tolerated. Women rarely took the veil, and even among the upper classes female seclusion was limited. The Portuguese conquest of Melaka in 1511 further encouraged the spread of Islam as Muslim traders patronized alternative ports and as important centers such as Brunei and later Makassar adopted the new faith. Perhaps most important, the Hindu-Buddhist Javanese kingdom of Majapahit was defeated around 1524 by a coalition of Javanese northern coast Islamic states. By the latter part of the seventeenth century Islam was more or less established across the Indonesian world, although pockets of Christianity remained in eastern Indonesia under the sponsorship of both the Portuguese and the Dutch.

Although the great strength of Islam was its ability to adapt to pre-Muslim beliefs and practices, periodic waves of reform have tried to rid the faith of accretions. The puritanical Wahabi capture of Mecca in 1803, for example, inspired the so-called Padri Wars (1821–1837) among

the Minangkabau of Sumatra in the early nineteenth century. Reformists often criticized rulers who were seen to be deviating from their role as champions of Islam. In rural areas, especially in Java, this opposition to authority frequently coalesced around charismatic leaders. Here messianic beliefs in the coming of a just king (*ratu adil*) were widespread, and religious schools provided a network that linked teachers and students from many areas.

Colonialism strengthened Islam's role as a focus for rebellion, especially as the opening of the Suez Canal in 1869 tightened connections with the Middle East. Growing tensions between Islam and the West, and Turkey's efforts to promote a Pan-Islamic movement, meant that European colonial administrators remained suspicious of Islamic leaders. This was especially so in the Netherlands Indies, where there were numerous anticolonial rebellions that were clearly Islamic-inspired. Although the most prolonged was the thirty-year "holy war" in Aceh, there were other uprisings throughout the archipelago. On the Malay Peninsula Muslims in southern Thailand felt particularly resentful of their position as a religious minority.

Because of colonial surveillance, political Islam was largely kept in check during the first half of the twentieth century. Since the Pacific War (1941–1945), however, the political role that Islam can play has become increasingly evident in the independent states of Southeast Asia. In Brunei, Islam is the state religion, and the sultan wields absolute control; since 1991, however, the national ideology has promoted a "Malay Muslim Monarchy." In multicultural Malaysia, Islam has always been important in the sense of being "Malay," but it has also provided a vehicle for a vehement Malay opposition. In 1999 two states (Kelantan and Terengganu) were under Islamic governments critical of the Malay-dominated national coalition. In the southern Philippines, Islam has similarly provided a rallying point for armed resistance to Manila's policies.

Although around 90 percent of Indonesians profess Islam, a large proportion are considered nominal Muslims, especially on Java. Calls for an Islamic state upon independence in 1945 did not gain national support, although outside Java, resistance to Jakarta has often coalesced around Islam, sometimes in armed rebellion. Political dissension among Islamic groups was blunted

after President Suharto (t. 1967–1998) came to power in a military coup because Muslim leaders were largely coopted into his “New Order.” Non-Muslims became increasingly concerned about the government’s commitment to religious plurality, noting that Islam appeared to be favored and that traditional religions were actively discouraged. From the late 1990s there has been a resurgence of militant Islam, and conflicts between Muslims and Christians have claimed thousands of lives, notably in Ambon. Specialists believe that the return of a more tolerant environment is heavily dependent on the health of the economy and the maintenance of political freedoms.

Christianity

In 1493 the Vatican made it obligatory for Catholic kings to promote the spread of Christianity, and subsequently divided the world into two spiritual jurisdictions—that of the Portuguese and the Spanish. A lack of resources limited Portuguese missionizing in Southeast Asia to pockets of eastern Indonesia such as Timor, but in the Philippines the Spanish were more successful. The first expedition arrived in 1521, but effective missionary work began after 1570, when the Spanish captured Manila. Christianizing efforts failed in the south because of the strength of existing Islamic sultanates, but northward there were no large kingdoms to resist the colonial advance. Having learned from the South American experience, Spanish missionaries were also more tolerant of some local practices, while condemning leaders of indigenous religions as devil-worshippers. Many aspects of Catholicism—such as holy water and the veneration of saints—appealed to the Filipinos, and the conversion of the native elite encouraged their followers to accept Christianity.

Because of its privileged position in Philippine society, the Catholic Church remained highly resistant to social change and refused to accord religious equality to native priests. In the nineteenth century a number of peasant rebellions were led by religiously inspired individuals, but it was the execution of three native clergy as rebels that helped fuel the Philippine Revolution of 1896. From 1902, American colonial control opened the door to Protestant missionary activity, yet although the Catholic

Church lost some of its former wealth, it remained a formidable influence in Philippine society. This was evident during the regime of President Ferdinand Marcos (t. 1965–1986). The Catholic hierarchy generally supported his declaration of martial law in 1972 because it was seen as a move against the communists. However, opposition within the Church steadily grew, and its stand against Marcos was a major factor in his downfall. Evangelical Catholicism has maintained the appeal of Catholicism, despite the increased membership of various Protestant sects, and the Church is still one of the most effective forces for change.

Other areas of Christian activity in Southeast Asia are less studied. From the seventeenth century the Dutch promoted Protestantism in Indonesia, and in Vietnam French missionaries preached Catholicism, despite the suspicions of Vietnamese rulers. Although most missionaries were eventually evicted, Christianity gained ground under French colonialism, especially in the south. The survival of Catholicism under Portuguese rule made Christianity an important focus of anti-Indonesian resistance in the now independent East Timor. In Singapore, Christianity is also common among the English-educated. For the most part, contemporary non-Christian Southeast Asian states forbid missionary work, or limit it to animist groups.

As yet there has been no complete study of Southeast Asia’s religious history, although common themes can be detected. Although belief in spirits is still common, individual faiths also display a trend toward greater conformity with textual teachings. Economic development has not led to an obvious decline in religious loyalties, which remain both a source of potential support for the state and the possible focus of opposition.

RELIGIOUS SELF-MORTIFICATION IN SOUTHEAST ASIA

The revival of religious self-mortification in Southeast Asia represents a new epoch in the evolution of human ideas about pain, in particular the transformational potential of sacred pain. Religious self-mortification involves deliberate self-infliction of physical pain during a culturally sanctioned, often annual ritual or festival. Following a worldwide decline since the eighteenth century, insular Southeast Asia experienced a singular and synchronous revival of ritual self-mortification from the 1950s, including localized and syncretic interpretations of Hinduism, Buddhism, Christianity, and Islam, as well as Chinese popular religion. Massive audiences flocked to witness dramatic ritual performances, in both capital cities and rural provinces, disseminated worldwide by international media and supported as cultural heritage by state and local sponsorship. Yet despite the ongoing commercialization and appropriation of religious self-mortification as a spectacle of cultural exoticism, values integral to the history of Southeast Asia—notably the acquisition of spiritual power—remain at the core of the renaissance.

Ritual Types

There are two major types of religious self-mortification in contemporary Southeast Asia: beating the body and corporeal piercing. The former, such as Christian self-flagellation, involves intentional bloodletting. In contrast, corporeal piercing, which is usually as bloodless as possible, requires participants to enter a trance or an altered state of consciousness prior to ritual performance, as performed in Hindu, Buddhist, and Muslim rites. In both cases the primary objective is to achieve analgesia: not simply to control or even conquer pain, but to feel its absence as a transcendent spiritual experience. However, while protagonists who pierce seek to make the body superhuman and inviolate (via rehearsed trance) in order to negate pain from the outset, bloodletting rituals stipulate a vulnerable, human body. Initially, experiential pain is progressively transcended as divine blessing and protection are procured. Spilling or letting blood—the life force—is essential. The religious body must be weakened, even subjugated, and spiritual resolve tested, before analgesia can be achieved.

Case Studies

Concentrated in and around maritime Southeast Asia, the host of countries involved in the revival of religious self-mortification reflects the historical and cultural influence of India and China, rather than the modern political boundaries of post-1945 Southeast Asia. The Hindu festival of Thaipusam, which originated in South India, was introduced in Malaysia in the late nineteenth century and rose to prominence after the Pacific War (1941–1945) as the preeminent Tamil festival. Although Hindus worship the god Murugan at Thaipusam, across the Bay of Bengal in Sri Lanka, Murugan is revered as the deity Skanda at the Kataragama festival, where Sinhalese Buddhists now perform self-mortification, including hook-hanging, alongside Tamil Hindus, as ritual expressions of *bhakti*, a devotional religiosity.

Although not a major event in the Chinese calendar, the Vegetarian (Nine Emperor Gods) festival in Thailand probably originated in Fujian province and was brought from China to southern Thailand by a Hokkien drama troupe in the nineteenth century (the official, although disputed, date is 1825). Influenced by the rise of Thaipusam in Penang (a short distance south in the Straits of Melaka), the Vegetarian festival expanded rapidly in the 1980s in Phuket and Trang, initially among Chinese Thai immigrants. A similar ritualistic celebration is also an annual affair in Penang, though less extensive in scale than in Phuket. Ritual piercing is now highly ostentatious and competitive, especially among male youths. In contemporary Singapore and Taiwan, Chinese spirit-mediums also practice ritual piercing.

Spanish missionaries introduced Christian self-flagellation in the Philippines in the late sixteenth century. Prohibited by archbishops at the Synod of Calasiao in 1773, the ritual emerged from obscurity in the late 1950s when tens of thousands of Catholic flagellants took to the streets in Central Luzon. In 1961 a new self-mortification ritual was invented: crucifixion by nailing. Both rituals, performed during Holy Week, reenact the passion and death of Jesus Christ two thousand years ago.

There are myriad forms of religious self-mortification in contemporary Indonesia, all of which require further investigation before a widespread revival can be verified. In Sumatra, for example, *dabus* is an adapted Islamic (Sufi)

ritual that originated in Arabia and entered Indonesia (Aceh and Minangkabau, in particular) via Muslim India, probably in the sixteenth century. It involves ritual self-stabbing. Participants attempt to attain union with Allah in a state of mystical ecstasy and corporeal invulnerability, induced by musical performance.

Power and Place

Religious self-mortification is not indigenous to Southeast Asia; almost always it is not aboriginal. Spanish missionaries and indentured Indian laborers, Chinese immigrants and Muslim traders—all introduced ritual self-mortification in the region during colonization. However, one consequence of the revival is that performance is increasingly tied to a sense of place—insular Southeast Asia. Assimilation of ritual difference from regional neighbors—notably Chinese Buddhists in Thailand and Tamil Hindus in Malaysia and Singapore—has led to a vernal hybridity, an emerging indigenous identity and pan-regional cultural heritage. This inventive syncretism is self-consciously postcolonial, yet it taps the ancient spiritual value of potency. Ritual participants might protest the caste system, attempt to mitigate status hierarchy, or make suffering sufferable, but on complex levels access to mystical power is paramount. This primordial divine energy is sought to heal a family member (contracted under supplicatory vow), for community revitalization in times of crisis, or to alleviate state oppression via the ritual empowerment of the powerless. At the dawn of the twenty-first century, the revival of religious self-mortification has provided a new medium by which to acquire and accumulate potency, a traditional foundation for political leadership in Southeast Asia.

RENTAP (d. ca. MID-1860s) **Challenging White Raja Rule**

Libau, better known by his praise name (*ensumar*) of Rentap, was the preeminent Iban warrior of the Upper Skrang of the 1850s to 1860s who challenged the rule of James Brooke (r. 1841–1868), the first White raja of Sarawak. "Rentap" is shortened for *rentap tanah*, meaning "earth tremor."

In 1853, Rentap launched a raid on Skrang Fort, a Brooke government outpost at the confluence of the Skrang and Lupar Rivers, established in 1849–1850 to prevent unruly Ibans

from marauding settlers along the coast. In the ensuing battle Layang, Rentap's son-in-law, lanced and killed Alan Lee, the Brooke officer in charge of Lingga.

The killing of Lee increased the prestige and reputation of Rentap as a great warrior. Iban firebrands rallied to his banner, including those from the Saribas River. Attempts at negotiating a peaceful settlement with Rentap were made in the latter part of 1853 but were unsuccessful. An expedition in 1854 succeeded in dislodging Rentap from his base at Sungai Lang.

Consequently Rentap fled to the interior and barricaded himself atop Mount Sadok, a 3,000-foot (900-meter) hill that became his fortress. It took three expeditions (June 1857, July 1858, and August 1861) led by Charles Johnson Brooke (1829–1917), the rajas younger nephew, to defeat Rentap. He, however, evaded capture, and escaped with a few followers to the fastness and inaccessible areas of the headwaters of the Skrang, Katibas, and Kanowit Rivers. There, it was believed, Rentap passed away peacefully sometime in the mid-1860s.

Rentap's involvement in the killing of Lee and his defiance could be seen in terms of the Brooke government's efforts in pursuing a gang of murderers. But his ability to attract disaffected Ibans to Sadok and the portrayal of himself as *Raja Ulu* ("King of the Interior") in opposition to Raja Brooke elevated his struggle to an anti-Brooke rebellion. His refusal to acknowledge the authority of the "White Raja" made him a symbol of resistance. Rentap's opposition was a struggle against the harbinger of change from without, as presented by Raja Brooke's regime.

RENVILLE AGREEMENT (JANUARY 1948)

The Renville Agreement of 19 January 1948 was the culmination of efforts to settle the unresolved issues between the Indonesian nationalists and the Dutch arising from the First Police Action of July 1947. The negotiations were conducted at a neutral venue on the USS *Renville* moored at Batavia harbor. The Indonesian nationalists, represented by the Republic of Indonesia, wanted the Dutch to recognize their control over Java and Sumatra. They demanded that Dutch troops withdraw from their territorial gains obtained during the First Police Action. They also pressed for international supervision over any future agreement between the republic and the Dutch. The Dutch objectives were different. The aim was to force the Republic of Indonesia to participate in the proposed United States of Indonesia, the federal government envisaged in the Renville Agreement. Stalemate was almost inevitable, but this time, unlike the earlier Linggadjati Agreement, international actors—namely, the United Nations—were involved as well.

The main terms of the Renville Agreement were:

- The involvement of the United Nations in the political settlement between the republic and The Netherlands concerning Java and Sumatra was reaffirmed.
- The efforts by the Dutch to form more federal states would cease forthwith.
- Dutch troops would withdraw to their positions before the First Police Action.
- Steps would be taken to organize the United States of Indonesia.

Twelve other points were subsequently added by The Netherlands delegation to the Renville discussions. To make the proposed terms agreeable to the republic, the U.S. Department of State also proposed seven additional points that in effect reinterpreted the twelve points proposed by the Dutch. It was

soon clear that the Renville Agreement was hardly an agreement at all.

REPUBLIK MALUKU SELATAN (RMS, REPUBLIC OF THE SOUTH MOLUCCAS)

The South Moluccan islands comprise Buru, Ambon, Haruku, Nusa Laut, Saparua, and Seram. They are a part of the Indonesian province of Maluku and were involved in a bid for independence from Indonesia in 1950.

The inhabitants of the islands were among the first in Indonesia to be converted to Christianity by Dutch missionaries. Consequently, the literacy rate was much higher than elsewhere in the country. Many Moluccan men entered the colonial army (the *Koninklijk Nederlandsch-Indisch Leger*, KNIL), colonial public service, or private European (mainly Dutch) companies and were stationed in other parts of the country. They adopted Dutch social attitudes and developed an intense loyalty to the colonial regime.

During the Indonesian independence war (1945–1949), the Dutch colonial government established a federal system in Indonesia. Regional governments were instated, including the Republic of East Indonesia (*Negara Indonesia Timur*, NIT), in 1947. The local council of the South Moluccan islands, established in 1946, participated in the NIT. After Indonesia's independence in December 1949 as a fed-

eral state, the Indonesian government started to dismantle the federation by abolishing member states. This disrupted the planned integration of the KNIL forces and the armed forces of the Republic of Indonesia (RI), then one of the republics in the Indonesian federation. The RI forces sought to dominate the new federal armed forces (APRIS, Angkatan Perang Republik Indonesia Serikat [Armed Forces of the Federal Republic of Indonesia]), which were opposed by some former KNIL forces. On 5 April 1950, RI forces disembarked in the NIT capital of Makassar (Sulawesi) to attempt the dismantling of the NIT. Former KNIL forces in APRIS stationed in Makassar resisted this move with NIT government support.

Dr. Christiaan Soumokil, a South Moluccan who had been NIT minister of justice, urged NIT president Sukawati to declare the independence of East Indonesia. That did not happen. A new assault by RI forces on Makassar led to the surrender on 21 April of the remaining former KNIL forces. Soumokil fled to Ambon, where he helped the local council of the South Moluccas to organize a people's congress on 24–25 April that declared the independence of the South Moluccas from both the NIT and the federal Republic of Indonesia. On 9 May the South Moluccan KNIL forces stationed in Ambon formed the armed forces of the RMS. The Netherlands refused to recognize the RMS, while the new unitary Republic of Indonesia refused to negotiate with the RMS or accept mediation from the United Nations.

Meanwhile, the reorganization of the KNIL in other parts of Indonesia continued. Some 4,000 South Moluccan KNIL soldiers were still awaiting their future in Sumatra, Kalimantan, Sulawesi, and Java. After the declaration of the RMS, most refused to join APRIS and demanded their right to be demobilized in RMS territory or in nearby Dutch New Guinea. The Dutch authorities in charge of the KNIL reorganization refused this, because it could inflame the situation. The KNIL was abolished on 26 July 1950. As the status of the South Moluccan former KNIL forces had not yet been determined, they were given the status of the Dutch Royal Army and remained a Dutch responsibility. Their representatives started proceedings in

Dutch courts against the Dutch government. Lower courts—and ultimately in March 1951 the Dutch High Court—found that by law the Dutch government could not demobilize the former KNIL forces in Indonesian territory against their will. The legal wrangling meant that the deadline by which all remaining Dutch forces had to leave Indonesia was approaching fast. For that reason, the Dutch government decided in March 1951 to ship the remaining 3,500 former KNIL forces and their families temporarily to The Netherlands. Against their will, they were demobilized at sea. Most decided to stay in The Netherlands after arrival, trying to find the justice that the Dutch government had denied them.

After the establishment of a unitary state in November 1950, RI forces attacked the RMS in the South Moluccas. The RMS was already weakened owing to regional factionalism and opposition from Moluccans who supported the new Republic of Indonesia. The RMS forces were soon defeated, although remnants continued a guerrilla war in Seram until 1963, when RMS president Soumokil was captured. He was executed in Jakarta in 1966. Support for the RMS continued among the South Moluccans in The Netherlands, where the RMS government in exile was based under Presidents Ir. Johannes Manusama (until 1993) and Dr. F. Tutuhatuwena (since 1993).

In the 1970s, second-generation South Moluccans in The Netherlands tried to renew public attention and support for the RMS cause through several hijackings. They failed to achieve their goals. RMS support is waning in The Netherlands as first-generation Moluccans pass away and third-generation Moluccans now identify themselves more with The Netherlands. In Maluku, support for the RMS waned as a consequence of strong repression and an increase in the share of Muslims in the province who have strong allegiance to the Republic of Indonesia and resent the supposedly Christian RMS. Such strong feelings contributed to the tragic tensions and riots between Muslims and Christians in Ambon from 1999 to 2001.

RESIDENCIA

All officials in the Spanish Philippines faced a quasi-judicial investigation of their activities at the end of their term in office. The *residencia* was an examination to determine whether an officeholder had faithfully executed his duties; it involved a review of his record, performance, and even personal behavior. Such examinations could be rigorous and lengthy affairs, especially for senior officials, lasting up to six months for governors-general and comparatively shorter periods for high court judges (*oidores*) and provincial magistrates (*alcaldes mayor*). The requirement for holding residencias in the case of minor officials was abolished in 1799 and made dependent on allegations of misconduct for *alcaldes-mayor* and military governors (*corregidores*). Theoretically, anyone within an officeholder's jurisdiction had an opportunity to present a complaint or grievance to the presiding magistrate (*juez de residencia*). However, since the latter was usually the incumbent's successor, proceedings were frequently subject to undue personal considerations and corrupt practices. Although a number of senior officials including governors-general were broken and ruined as a result of unfavorable verdicts, most were able to elicit a favorable outcome for a price. The *residencia* system was supposedly supplemented by the regular visits to the provinces of high court magistrates equipped with wide investigative powers. (The activities of all officials might be investigated at any time in cases of substantiated impropriety; such an examination was known as a *pesquisa*.) Minor irregularities were punishable by a series of disciplinary measures that ranged from mere warnings to reprimands involving fines to suspension from duty for a period of three to six months with loss of salary. More serious offenses, as in the case of other public employees, were subject to criminal proceedings.

RESIDENTIAL SYSTEM (MALAYA)

By the terms of the Pangkor Engagement (1874), the British introduced the residential system to Perak, a western Peninsular Malay State. The most significant article was the appointment of a British officer styled as resident who was to be accredited to the court of the Malay ruler and whose advice must be sought and acted upon on all state matters except those dealing with the Islamic faith and Malay customary practices. Similar treaties were signed with the Malay rulers of Selangor and Sungai Ujong (later Negri Sembilan) in the same year and with Pahang in 1888. A resident was subsequently appointed in each of the states. In practice the residential system effectively made the resident the *de facto* authority that administered in the name of the Malay sultan, ushering in the beginnings of British colonial rule of the Malay Peninsula (present-day West Malaysia).

The earl of Kimberley, secretary of state for the colonies, had instructed in his dispatch of 20 September 1873 to Sir Andrew Clarke (1824–1902), governor-designate of the Straits Settlements, to report whether it was advisable to British interests that a British officer be appointed to reside in the Malay States. He was to be entrusted with the task of promoting the restoration of peace and securing the protection of British trade and commerce with the Malay States. In the Pangkor Engagement (1874), Clarke further widened the responsibility of the resident, who not only possessed advisory functions but also commanded executive authority; in practice he single-handedly administered the country in the name of the sultan.

In the formative years of the residential system, the resident faced a formidable task. He had to disarm the warring factions and restore law and order, including introducing a code of law. In order to ensure the resumption of economic activities (namely tin mining), he initiated the improvement of transport and communication, undertook land surveys, and established an equitable land tenure system. He also had to establish a regular system of revenue collection and to set up an effective centralized administrative structure. On top of all these heavy responsibilities, the resident had to persuade the sultan, the various Malay territorial chiefs, the Malay peasantry, and Chinese inhabitants to accept the new style of government. In carrying out his multifaceted tasks in the absence of instructions or procedures from the Colonial Office, the resident had to be both diplomat and bully, forceful and sensitive, tactful and assertive. Knowledge and understanding of the Malay people, their language, customs and traditions, sensitivities, and mentality were essential ingredients of success.

Although the residential system achieved unqualified success in Larut, Sungai Ujong, and Selangor, it faced violent opposition in Perak and Pahang. Unlike the situation where the Malay chiefs were in no position to act (Larut) or willingly supported the resident (Sungai Ujong and Selangor), circumstances were different in Perak and Pahang. Both Sultan Abdullah Muhammad Shah (r. 1874–1876) of Perak and Sultan Wan Ahmad (r. 1863–1914) of Pahang and their chiefs reacted forcefully to the usurpation of their political power, economic privileges, and social prestige. Aggravating the situation in Perak was Resident J. W. W. Birch's (1826–1875) haughty attitude toward the Malays and insensitivity toward their customs and practices—for example, over the issue of debt-bondage. In Pahang the *rakyat* (masses) was dissatisfied with the imposition of a series of fees, licenses, and taxes that affected their daily lives. Moreover the government police force, comprising Sikhs and non-Pahang Malays who enforced the regulations, created further resentment. Consequently the situation ended in the murder of Birch in November 1875 and the Pahang Rebellion (1891–1895).

Although in theory the resident was to act solely as an adviser, the demands and expectations on him to establish law and order, to organize an effective system of taxation, and to

develop the resources of the country made it impossible for him merely to offer advice. In line with the adamant insistence of the Colonial Office to “advise only,” the facade was kept up in the creation of the State Council in 1877. Although the sultan formally presided over the Council and all bills received his royal assent, the resident wielded the real power in the council: he set the agenda, introduced resolutions, and advised the sultan to pen his approval to the proposed resolutions.

Notwithstanding Birch's assassination and the Pahang Rebellion, the residential system was on the whole a successful exercise in the introduction of British colonial rule in the Malay States. Political stability, law and order, economic prosperity, and infrastructure development (road, rail, and telegraph) were the benefits associated with the British residential system.

RHODES, ALEXANDRE DE (1591–1660)

Originator of *Quốc Ngữ*

Alexandre de Rhodes was a French missionary who went to Vietnam and devised the roman-

ized orthography of the Vietnamese language (*Quốc Ngữ*). He was born in Avignon in southern France and became a member of the Society of Jesus (Jesuits) in Rome in 1612. In 1619 he was sent to Asia to serve as a missionary in Japan by the Society of Jesus, but because the Tokugawa Shogunate severely banned the propagation of Christianity, he changed his destination. In 1624 he was sent to the kingdom of Cochin China in central Vietnam and in 1627 moved to the kingdom of Tonkin in northern Vietnam. In 1630 he was banished from Vietnam, but in 1640, 1642, and 1644 he returned to Cochin China and Tonkin and again engaged in missionary work. In 1645 he was sentenced to death; he escaped the gallows, however, and was deported from Vietnam. In 1649 he returned to Rome and afterward wrote some literary works on Vietnamese language, culture, and history. Among his writings, his Annamite (Vietnamese)-Portuguese-Latin dictionary (1651) and the *History of the Kingdom of Tonkin* (1652) are the principal works. He died during his missionary days at Ispahan in Persia.

During his stay in Vietnam, Alexandre de Rhodes mastered the Vietnamese language. Before he came to Vietnam, some Jesuit missionaries, such as Francisco de Pina and Gaspar de Amaral, had tried to devise a transliteration of the Vietnamese language using the Roman alphabet. Rhodes took over their pioneering work and completed the orthography of the Vietnamese language. This orthography, thereafter called *Chu Quốc Ngữ* (national scripts), came into wide use in the early twentieth century under French colonial rule. His dictionary based on this orthography is an invaluable work representing a rare look at Middle Vietnamese of the seventeenth century.

RICE IN SOUTHEAST ASIA

At the start of the nineteenth century, farmers in Southeast Asia grew hundreds and probably

thousands of varieties of rice, and much of the region's population ate rice as a staple food.

Rice planting took place in a wide range of environments: upland farmers grew rice in dry fields that depended on rainfall; a majority of lowland farmers planted rice on land inundated by flooding; and in places where the population was dense or the environment particularly difficult, farmers developed terraces fed by elaborate systems of irrigation to increase production. These planting arrangements and the cycle of rice production shaped rural life, influencing housing arrangements, work patterns, and social ties.

The rice seeds that farmers planted in their fields included a mixture of varieties. These plants had different growing seasons, and the harvest was therefore spread out over weeks and even months. Also, each type of rice had different resistance to plant diseases, and a mixture of varieties provided a degree of security against devastating losses.

Cities—the administrative and religious centers of the indigenous states, and the trading ports along the coast—had long provided a modest but steady market for rice. In the eighteenth century new export cultivation in Luzon and Java created a need for rice to feed to the workers involved in the production of crops such as sugar and coffee, and commercial rice cultivation developed in nearby areas.

In the nineteenth century the demand for rice grew in Europe, where it was used as food, in brewing, and as a source of commercial starch. Responding to this opportunity and to overcrowding in Upper Burma, farmers cleared heavily forested land in Lower Burma and began planting rice for export. The Burmese government discouraged exports of food, but the British takeover of Arakan and Tenasserim in 1826 created opportunities for farmers to sell rice, and the British takeover of Lower Burma in the 1850s led to a steady expansion of rice cultivation in the Irrawaddy Delta. By the early twentieth century, Burma had become the major rice-exporting country in the world.

Commercial rice production in Burma, and later in Siam and Cochin China, made it possible for investors to develop plantation agriculture in parts of Southeast Asia where it had not previously been practical. Along the western coast of the Malay Peninsula and the eastern coast of Sumatra there were large tracts of for-

est in areas with small populations. With a supply of inexpensive rice available from Burma, it became feasible to bring workers from southern China and southern India to Southeast Asia to clear the forest and plant commercial crops.

In the early twentieth century the plantations and urban areas of Southeast Asia depended almost entirely on rice imported from Burma, Siam, and Cochin China, but these rice-growing territories produced far more rice than the Southeast Asian and European markets combined could absorb. What made commercial production viable was the existence of vast markets for food in China and India. Both countries produced huge quantities of rice and other grains, but internal demand was so great that they bought surplus rice from Southeast Asia in years when crops there were large and prices low.

By the 1920s farmers across Southeast Asia were beginning to abandon rice farming. Imported rice from mainland Southeast Asia was inexpensive, and farmers elsewhere could spend their time more profitably on other activities and buy rice with the money they earned. Many turned to planting smallholdings of fruit trees or rubber, while others entered the new labor market created by the expanding export sector. The decline in rice cultivation concerned colonial administrations, but they could do little to change a situation that was dictated by local geographical conditions and competitive advantage. By the 1920s many rural areas had become heavily dependent on imported rice.

Colonial governments across Southeast Asia had begun paying attention to rice shortly after 1900. The creation of departments of agriculture dates from this period, and while the primary focus was on export crops such as rubber, researchers also carried out experiments aimed at improving rice production. They planted rice using a variety of techniques on sample plots in an attempt to find ways to increase production, and they tried to improve the strains of rice used in the region through the selection and propagation of plants that showed particularly favorable characteristics.

At first these efforts yielded few results, for the colonial governments did not know enough about rice cultivation to offer useful advice. By the 1920s, however, the situation was beginning to change. In areas where rice planting took place commercially, or where farmers

brought their own rice to commercial facilities for milling, there was pressure to plant pure strains rather than a mixture of varieties as in the past. The reason was that rice mills could handle grains of uniform size only. Mixtures produced poor results—with some grains passing through unhusked, and others shattering between the millstones.

The Depression at the start of the 1930s caused the value of plantation crops to fall sharply. Governments tried to increase domestic rice production in order to reduce the sums spent on imported food, safeguard food supplies, and provide a source of livelihood for farmers. Officials adopted two approaches to stimulating rice production. The first was to introduce scientific and technical improvements to seeds and to irrigation in order to increase yields and improve farmers' profits. The second was to use taxes or quotas to limit the import of foreign rice—but governments needed to avoid sharp rises in food prices, because plantations were a major source of export earnings and depended on cheap food to hold costs down and remain competitive. The economic recovery a few years later would probably have thwarted these efforts, but the Japanese invasion at the end of 1941 completely disrupted regional markets and created an entirely new situation.

Japanese armies captured both the rice-surplus and rice-deficit areas of Southeast Asia at the start of 1942. Production in the region was more than sufficient to meet the needs of the deficit zone, but Japan's resources were badly stretched in prosecuting the war and there was no transport available to move rice into areas where it was needed. By 1945 rice production had declined sharply in the three major exporting countries because crops could not be sold. In rice-deficit areas people were surviving on unhealthful diets heavy with tapioca, sweet potatoes, and other root crops.

Demand for rice was extremely high after 1945, but political turmoil in Burma and Vietnam interfered with the rehabilitation of the rice industries in those two countries. Moreover, newly independent governments in the region pursued policies that were inimical to the restoration of prewar patterns of production and consumption. Chinese business networks had dominated the prewar rice industry, but they had been badly disrupted by the war. In an

attempt to improve food security and promote the interests of non-Chinese businessmen, the new governments kept a tight control on the import and sale of rice, and the old system never recovered. Governments also needed to find sources of income for expanding rural populations, and expanding domestic rice cultivation offered a way of keeping those populations on the land.

By the 1970s high-yielding varieties of rice produced through hybridization were increasing local crops. Many of the new varieties had short growing seasons, and double cropping became the norm in much of the region. As a result of these developments, the number of varieties of rice cultivated in Southeast Asia diminished significantly. High-yielding rice required better water control, however, and more use of fertilizer and insecticides than the older varieties.

Traditionally, people stored rice in household or village granaries and prepared it for consumption daily by pounding the grain in large mortars to remove the husks. By the end of the twentieth century, many farmers were using commercial mills that remove the bran that once enriched rural diets and sell it as animal feed.

Rural diets formerly consisted of rice, vegetables and fruits grown in the villages, fish, and condiments. The latter were often made from chili peppers and fish sauce or prawn paste, both preserved with salt, and were an important source of nutrition. Rice and such condiments, eaten with uncooked vegetables, often constituted a full meal.

Glutinous "sticky" rice also figured in regional diets. Throughout much of Southeast Asia it was used to make sweet cakes, an important dietary supplement given that many people ate just two full meals a day. In northern Thailand glutinous rice was eaten as part of the regular diet, along with fish or meat and vegetables.

With improved transportation imported fruits and vegetables have become widely available, and the consumption of animal protein and fish from the sea has increased. However, older sources of protein, such as freshwater fish caught in rice fields and irrigation canals, have largely disappeared from local diets, owing to the deleterious effects of chemical fertilizer and insecticides.

Although rice is not the only dietary staple in Southeast Asia, it remains the most important, and a wide variety of foods are prepared to be eaten with rice. Farmers today generally plant specially bred dwarf varieties of rice, and they often produce two or even three crops per year. These changes, and increasing mechanization, have raised production levels to keep pace with growing populations. There are signs that dietary preferences in the region may be changing with the availability of large quantities of imported foods, but there is little chance that rice will be displaced from its central place in Southeast Asian cuisine.

RIDLEY, H[ENRY] N[ICHOLAS]
(b. 1855)

“Rubber” Ridley

Henry Nicholas Ridley, the “Father of the Malayan Rubber Industry,” was born in Norfolk, England, on 10 December 1855. His lineage came from very prominent personalities, which included historians and politicians who had crossed between Great Britain and North America. He was educated at Haileybury and Exeter College, Oxford. Right from his youth he had shown his interest in research on natural history, but after his appointment to the Department of Botany of the British Museum in 1889, he began to acquire a special interest in the subject. Ridley began to be identified with it, for it was in this field that he made tremendous contributions.

In 1888, Ridley landed a job as the director of the Botanical Gardens in Singapore, which was the capital of the Straits Settlements and the Protected Malay States. It was there that he received some rubber (*Hevea brasiliensis*) seeds from Ceylon (Sri Lanka) and germinated them. He was convinced that these seeds could be planted without much expense and could become a lucrative commercial product. He tirelessly experimented on the planting of the seeds and the extraction of the product, often being ridiculed by other British officers who dubbed him “Rubber” Ridley or “Mad” Ridley.

In the 1890s, however, the tide turned slightly for Ridley, who found some support from fellow botanists from other Malay States, such as Hugh Low (t. 1877–1889), the resident to Perak. They experimented on the trees and found that rubber could be a viable product. In the same decade the British government in the newly established Federated Malay States (FMS) stressed the importance of large-scale agricultural production for export. Several products, such as gambier, pepper, coffee, and sugar, had been produced, but they did not last very long—either they were blighted with disease or could not compete with producers from other countries. The production of Malayan (later Malaysian) rubber, however, found its first market in London in the early 1900s. After that, European and other planters never looked back. British Malaya became the largest rubber producer in the world; next to tin, rubber became the chief product for foreign exchange for Great Britain.

Ridley devised the herringbone method of tapping rubber, which maintained the health and productivity of the tree. Prior to this procedure, latex was extracted by slashing the rubber tree, which easily damaged it. His research and that of others led later to the establishment of the Rubber Research Institute in 1925 in Kuala Lumpur.

Ridley, however, was not known only for rubber but also for other studies on tropical botany. He published numerous articles and books on the subject that are listed in the Exhibition of Ridleyana. For his contributions he was elected a fellow of the Linnean Society and the Royal Society, and he received prestigious medals from the Rubber Planters’ Association, the Linnean Medal, and various other honors. He was still involved in serious research even in his old age.

RIZAL, JOSÉ (1861–1896)

National Hero of the Philippines

José Rizal is regarded as the most important national hero in the Philippines. He was a nationalist, medical doctor, writer, poet, linguist, sculptor, and man of letters. He played a leading role in the Propaganda Movement of Filipinos in Spain, and his writings inspired the Philippine Revolution of 1896.

Rizal was born in the town of Calamba, Laguna, on 19 June 1861. His father was a relatively wealthy tenant on an estate owned by the Dominican order. His mother was a highly educated woman who deeply influenced the intellectual development of her children. Rizal received his elementary education in the town of Biñang, and went to high school in Ateneo de Manila. He studied medicine at the University of Santo Tomas in Manila.

A writer, physician, and patriot, José Rizal was perhaps the first Asian nationalist. His writing revealed the injustices he saw in the Philippines and so angered Spanish colonial officials that they banned his work and severely persecuted him. (Library of Congress)

In 1882, Rizal left for Spain to continue his studies at the Central University of Madrid. During these years he participated in the Filipino community in Spain, joining the Propaganda Movement and contributing articles to its journal, *La Solidaridad*. He also traveled widely in Europe, continuing his medical studies in Paris and Heidelberg while at the same time meeting up with scholars. An Austrian professor, Ferdinand Blumentritt, an expert on Philippine history and ethnography, became a close friend and companion of Rizal's.

While in Europe, Rizal published several works that criticized the Spanish colonial regime in the Philippines. In 1887 he published a novel, *Noli Me Tángere* (*Touch Me Not*), a satirical story situated in the Philippines, exposing the despotism of the colonial regime and the abuses of the friar orders.

In 1887 and 1888, Rizal was back in the Philippines. A conflict had erupted between the

Dominican friars who owned the estate in Calamba and their tenants, led by Rizal's family, over the payment of rent. Rizal advised his family to oppose the friars. However, the Dominican corporation, supported by the Spanish government, responded with harshness and evicted the Rizal family, which lost its wealth in the process. On the advice of his family Rizal left again for Spain, disillusioned and embittered at the Spanish colonial regime.

During his second sojourn in Europe (1888–1892), Rizal adopted a more radical attitude toward the future of the Philippines, viewing complete separation as the only option. In 1891 he published his second novel, *El Filibusterismo* (*The Subversive*), a sequel to *Noli*, but much more pessimistic and radical. The Spanish authorities in the islands considered Rizal a dangerous firebrand and banned both novels. Rizal wrote a number of essays (“On the Indolence of the Filipinos,” “The Philippines in Hundred Years’ Time”) that attempted to present a positive and dignified picture of Filipino civilization. He gradually grew disappointed with the reformist stance of the Propaganda Movement. In 1892 he decided to return to the Philippines, in order to undertake more direct action for the improvement of his country.

Back in Manila in June 1892, he founded La Liga Filipina, an organization intended for the moral uplift of the Filipinos. Shortly afterward the Spanish authorities arrested him and deported him to Dapitan, a village on the island of Mindanao. He remained in exile for four years. In 1896 he requested that the Spanish authorities grant him permission to go to Cuba to work as a medical doctor in the Spanish army, which was engaged in quelling the Cuban revolution. This permission was granted, and Rizal boarded a ship that would bring him to Spain. In the meantime the Katipunan movement started the revolution in the Philippines. Rizal was arrested and returned to the Philippines, where he arrived in early November. He was incarcerated in Fort Santiago. In early December, Rizal was accused of being the instigator of the rebellion/revolution that was spreading in the country, and a case against him was brought before a military court. On 26 December the court pronounced the death sentence, and on 30 December 1896, José Rizal was executed by firing squad at the field of Bagumbayan in Manila, renamed Rizal Park.

Historians have interpreted Rizal's actions in different ways. In the beginning of the twentieth century several authors depicted him as an assimilationist and reformist who abhorred revolutionary action against the Spanish regime. The U.S. government in the Philippines at that time promoted the veneration of Rizal as a national hero, a man favoring liberal reforms and gradual change. Marxist historians like Agoncillo (1977) and Constantino (1975) have depicted Rizal as a bourgeois reformist who shied away from violent revolution because he could not disengage himself from his elite background. Their real hero was Andres Bonifacio (1863–1897), the leader of the Katipunan movement, who mobilized the revolutionary proletariat. Recent authors such as Quibuyen (1997) and Ocampo (2001), however, have refuted this view, portraying Rizal as a nationalist who advocated separation from Spain and who favored a revolution—but who was against it as long as the people were not sufficiently prepared.

ROTI (ROTE)

The island of Roti, located off the western tip of Timor, is the southernmost island in the Indonesian archipelago. The island is low-lying and dry, with a relatively high population. In 2001 the Rotinese population numbered just under 100,000. In addition, because of continuing migration from Roti since the early nineteenth century, there are perhaps as many as 80,000 Rotinese settled on the island of Timor, mainly in Kabupaten Kupang.

Rotinese is a central Malayo-Polynesian language related to the other Austronesian languages of Timor. As a language, Rotinese consists of a chain of dialects distributed from east to west across the island. It is possible to distinguish eight dialects (three in east Roti, two in central Roti, and three in west Roti). There is only limited mutual intelligibility between the dialects of east and west Roti.

Rotinese were drawn into relations with the Dutch East India Company (VOC) during the second half of the seventeenth century. The first treaty of contract with local rulers was signed in 1662. Over the next century, subsequent treaties were signed and renewed dividing the island into seventeen separate domains, each domain (*nusak*) with its own ruler. (A separate treaty was signed with the ruler of the tiny island of Ndao, off the western coast of Roti; in dealings with the Dutch, this domain, with its distinct linguistic population, was included as the eighteenth domain of Roti.)

The VOC, and later the colonial government, officially recognized each ruler as a regent, or *raja*. Locally, these rulers held the title of *manek* (from the Rotinese root *mane*, meaning "male"). Each "male lord" was supported by a complementary "female lord" and presided over a court made up of the lords of the clans that composed the domain. The ruler's powers were both judicatory and ritual. The ruler's

“feast of origin” was the most prominent of the origin feasts of the domain. In each domain, however, a clan or group of clans stood opposed to the ruler in representing its first inhabitants and their relationship to the “powers” of the earth.

All of the domains promoted their distinctness by emphasizing social and dialect differences. Drawing on rich oral traditions and a predilection for verbal cleverness, the domain, its court, and its associated rituals provided a forum for “speaking,” which is regarded as a distinguishing feature of Rotinese culture. The Rotinese, to this day, maintain the use of a ritual language based on the canonical pairing of words for the preservation and performance of their most vital traditions.

Early in the eighteenth century, beginning with several ruling families, the Rotinese began to adopt Christianity and shortly thereafter to establish local schools to provide religious instruction in Malay. The ruler of Thie was baptized in 1729, and he established the first school in his domain in 1735, provoking a rivalry among other rulers who attempted to emulate his initiative. By 1756, Roti had more than a dozen schools in different domains, and young Rotinese trained in Malay had begun to replace schoolmasters supplied from outside the island. In the second half of the eighteenth century, Roti had one of the only self-sustaining, locally supported Malay school systems in the Indonesian world. A large number of Rotinese had become Christians long before the arrival of the Dutch missionaries and had fused traditional culture with Christian teachings.

In the early nineteenth century, to settle internal disputes within particular domains and to create a buffer around the still beleaguered Dutch in Kupang, the colonial government began transporting Rotinese to settle around the bay of Kupang and in the Oesau plain. This formed the basis of a migration that has continued to this day. Driven by the limitation on local resources and supported by a strong tradition of local education, Roti has exported a significant portion of its population for almost two hundred years.

In the twentieth century, the Dutch made various attempts to amalgamate domains in larger administrative units. The Indonesian government has continued this process. At present, Roti has the status of a *kabupaten* (region/

province) made up of five *kecamatan* (districts/wards). The domain, or *nusak*, is still a primary identification for all Rotinese on the island, and for most Rotinese who have migrated to Timor.

Because of the advantages of their educational system, Rotinese have figured significantly in Indonesian national life. Thus, for example, the first Indonesian rector of the University of Indonesia and the second rector of Gadjah Mada University in Yogyakarta were Rotinese.

**ROXAS, MANUEL ACUÑA
(1892–1948)**

**Inaugural President of
Independent Philippines**

Manuel Acuña Roxas was the first president of the post-Pacific War (1941–1945) Philippine

Republic. His administration faced numerous problems related to the dislocation and destruction consequent of the war, plus an antigovernment, communist-led peasant rebellion. He died before his term as president was over.

Roxas was born on 1 January 1892, in the town of Capiz (now Roxas City), Capiz province. He obtained a law degree from the College of Law, University of the Philippines, in 1913.

He became provincial governor of Capiz and in 1922 a member of the House of Representatives, to which he was elected speaker. The position of speaker, which he held until 1933, was strong at that time, and it enabled Roxas to enter the realm of Filipino political leadership together with Manuel L. Quezon (1878–1944) and Sergio Osmeña, Sr. (1878–1961). He participated in the Filipino missions that lobbied for independence in the United States in the 1920s, and in 1933, together with Osmeña, he brought back the Hare-Hawes-Cutting Act, which pledged Philippine independence after a ten-year transition period. Senate president Quezon, however, opposed the act and orchestrated its rejection by the Philippine legislature. The political battle resulted in two factions, and Roxas was toppled as speaker of the House of Representatives in the process. Nonetheless, Roxas was elected delegate to the Constitutional Convention of 1934, where he actively participated in the framing of the Philippine constitution.

With the establishment of the Philippine Commonwealth government in 1935, Quezon, who had been elected president, invited Roxas to become secretary of finance in 1938. Roxas became actively involved in economic plans for the future Philippine Republic and directed several government corporations. He was a member of the Joint Preparatory Commission on Philippine Affairs, which strove to resolve problems relating to Philippine independence. Roxas also became a reserve officer in the Philippine army.

Elected senator in 1941, Roxas was unable to take his seat because of the outbreak of the Pacific War. He served as liaison officer with the rank of colonel (later brigadier general) between the commonwealth government and the U.S. Army in the Philippines, commanded by Lieutenant General Douglas MacArthur (1880–1964). During the campaign against the

Manuel Roxas served as president of the Philippines from 1946 until his death in 1948. In striving for Philippine independence, he supported American institutions and represented the elite. (Library of Congress)

Japanese, Roxas was responsible for food supplies for the defense forces in the Bataan Peninsula. Quezon appointed Roxas executive secretary in February 1942, and in March named him successor to the president and vice-president of the commonwealth. The Japanese captured him in Mindanao and attempted to use him in the Japanese-sponsored administration, but he evaded appointment, claiming ill health. In 1943 he became a member of the Preparatory Commission for Philippine Independence, which was assigned the task of framing a constitution for the Japanese-sponsored Philippine Republic. José P. Laurel (1891–1959), president of the wartime republic, persuaded him to serve in his government to solve the food shortage.

Roxas established contacts with the underground resistance movement. The Japanese, however, kept a close watch on his activities. He was taken to Baguio with the Laurel government in December 1944 but escaped to U.S. lines in April 1945.

When the Philippine legislature convened on 9 June 1945, Roxas took his post as senator and was elected senate president. He left the Nacionalista Party and formed a new political party, the Liberal Party, so that he could run for president against Sergio Osmeña in the April 1946 elections. He won and became the last president of the Philippine Commonwealth, taking office on 28 May 1946. On 4 July 1946, with the independence of the Philippines, he became the first president of the post–World War II Philippine Republic.

As president, Roxas faced serious problems in rehabilitation of the war-ravaged economy, restoring peace and order, building the government, and establishing foreign relations. The country was divided on the issue of collaboration with the Japanese, and the widening gap between rich and poor. The issue of national security had to be addressed, and Roxas allowed the United States to maintain military and naval bases while providing assistance to Philippine armed forces. Roxas worked closely with the Americans in seeking rehabilitation funds and in resuscitating the Philippine economy. The Americans extended free trade between the United States and the Philippines and provided for rehabilitation funds, but sought a constitutional amendment that would grant U.S. citizens the same rights as Filipinos in exploiting Philippine natural resources (parity rights). Roxas campaigned for parity, while nationalistic groups opposed it. In the emotional campaign for or against parity, Roxas was almost assassinated.

When opposition politicians were deprived of their seats in the Congress and the Huk peasant movement turned to violence against the government, Roxas used an iron fist policy to crush the rebellion, while offering better conditions for peasants. To solve the rift caused by the collaboration issue, he granted amnesty to all suspected political and economic collaborators with the Japanese in 1948.

Roxas established a Philippine diplomatic presence in the United Nations and the United States, and created the Department of Foreign Affairs to handle the new republic's foreign relations. He died before his term was over, after delivering a speech at the U.S. Clark Air Base on 15 April 1948.

Roxas faced immense challenges in steering the Philippines from U.S. colonial administra-

tion to independence while recovering from a war. He has been accused of being overly pro-American in his administration, but given those times, he had his reasons for steering the course he chose.

RUBBER

“Miracle” Crop

Natural rubber, produced from the latex extracted from the bark of the *Hevea brasiliensis* tree, is one of the raw materials most vital to the industrial development of the world since the late nineteenth century—for example, in the manufacture of vehicle tires. Southeast Asia contains the major producers of natural rubber, principally Malaysia, Indonesia, and Thailand, with minor amounts coming from Burma (Myanmar) and southern Vietnam. Historically, the growth of this industry underlay much of the movement of migrant labor (notably from India and China) into the region prior to the Pacific War (1941–1945), and it determined the living conditions of a substantial proportion of the population.

The industry was established on the initiative of the British India Office, which in 1876 organized the transfer of specimen trees from the Amazon region of Brazil to Ceylon, Singapore, and Penang, where they were propagated

Girls working in a Malayan rubber factory, ca. 1950. (Horace Bristol/Corbis)

in the government botanical gardens. Some also reached the Dutch East Indies (Java). Seeds from there were subsequently distributed to planters, with rubber gaining widespread popularity as a commercial crop on estates owned largely by Western companies (registered in the United Kingdom, Holland, and France), with substantial Asian-owned holdings (notably Chinese) in Malaya. Seeds also came into the hands of indigenous farmers (smallholders), who found rubber a valuable year-round source of

income to supplement and even replace subsistence crops such as rice. The Chinese assumed a dominant role throughout the region in the collection, transport, and processing of smallholder rubber for sale on world markets. As a result of rubber price booms in 1909–1910 and 1925, the rubber acreage in Southeast Asia by the interwar years totaled roughly 3.5 million hectares. In Malaya, the leading producer at that time, ownership of the rubber area was divided between estates of more than 40 hectares (60

percent) and smallholdings under 40 hectares (40 percent). In the Dutch East Indies, smallholder, or “native,” rubber as it was then known, predominated at 54 percent—though that almost certainly understates the share (Drabble 1991: 1). In Thailand the industry was almost entirely Asian-owned.

The perennial issue facing the natural rubber industry has been the volatile relationship between supply and demand as reflected in market prices. Whereas world supply came from hundreds of thousands of individual producers scattered throughout several countries, demand was highly concentrated in a few industrialized Western countries, notably the United States. Economic conditions in these countries largely determined the state of the international economy, which underwent marked instability, notably the economic depressions in 1920–1922 and 1929–1932. In the latter period the price of rubber stood at one one-hundredth of its peak in 1910. This decimated the economies of producing countries in Southeast Asia, which depended heavily on export earnings from rubber. There was widespread unemployment as estates dismissed workers, and indebtedness among smallholders led to losses of land to their (mainly nonindigenous) creditors. The response of the colonial governments was to impose compulsory restriction on rubber exports under the Stevenson Scheme (1922–1928) and the International Rubber Regulation Agreement (1934–1941), in order to restore market prices to profitable levels.

During the war in the Pacific, the Japanese occupation cut off Western consumers from rubber supplies from Southeast Asia. Synthetic rubber (derived from petroleum) was developed in the United States. After the war this commodity, although not a full substitute for all uses, offered price competition to natural rubber. A further problem for Southeast Asian suppliers was that increasing numbers of the trees, thirty or more years old, were becoming uneconomic to keep in production. National governments in Southeast Asia sought to rejuvenate the industry by using new high-yielding types of tree (producing three to four times as much) to replace the older stock, as well as for new development projects. Malaysia was in the lead until the 1960s. Indonesia did little prior to the Suharto New Order (1967–1998). The

major performer since the 1980s has been Thailand, which has expanded its area under rubber to gain a leading position as a world supplier.

In the late twentieth century, natural rubber production still occupied a very important position in many of the economies of the Southeast Asian region. Some, like Malaysia, have begun to use the commodity in local manufacturing industries, such as rubber gloves, instead of exporting it in a semiprocessed state for manufacturing elsewhere. However, the prime emphasis in national development plans has been on the growth of high-technology industries with a different range of inputs, so that rubber is no longer the leading force in economic growth that it had been for much of the twentieth century.

Recent historiographical studies of the natural rubber industry have focused on such questions as the role of governments, the relative efficiency of estates and smallholders as producers, a shift in ownership away from Western toward local interests, and the impact of new technology.

RUBBER RESEARCH INSTITUTE OF MALAYSIA (RRIM)

Established in 1926, the Rubber Research Institute has developed into the world's foremost and largest research center focused on natural rubber (*Hevea brasiliensis*). Headquartered in Kuala Lumpur, RRIM from its beginning undertook to research, develop, and sustain the natural rubber industry primarily for the economic benefit of Malaya (now Malaysia).

The Singapore Botanical Gardens, headed by H. N. Ridley (b. 1855) since 1888, carried out experiments and research on rubber. The efforts in Singapore were complemented by work at experimental gardens in Penang, Taiping, and Perak. Hugh Low (t. 1877 to 1889), the British resident to Perak, among others, tested various species of rubber. Research was also done at the Department of Agriculture set up in 1905 at Serdang, Selangor. Two years later the Rubber Growers' Association was inaugurated. Close cooperation between the association and the Department of Agriculture benefited the rubber industry. But during the 1910s and early 1920s, the colonial government apparently preferred the private sector to initiate the research and development of the rubber industry. Despite achieving important advances, progress in the hands of private enterprise was generally slow and inconsistent, owing to a reluctance to invest funds solely for research that might not bear immediate results.

The exigencies of the Great War (1914–1918) and the increasing importance of rubber to Malaya made the government realize the need for a central research facility for the industry. By the 1920s rubber was one of two major export commodities of British Malaya (the other being tin). As the priorities of the Department of Agriculture reoriented toward food crops, particularly rice, it was imperative that the RRIM be established to concentrate full-time on research and development of rubber aimed at the expansion of the industry. With support from the government as well as occasional input from private enterprises, the work of RRIM progressed steadily. Signatories of the Rubber Regulation Agreement (1934–1938) contributed to a fund to support research in rubber.

Major technical achievements prior to the Pacific War (1941–1945) included improved

planting methods (suitable distances between trees, adoption of fertilizers), high-yield species (bud-grafting, cloning), design of a tapping knife, a tapping schedule to maximize latex output, latex processing, and pest control. Competition from synthetic rubber in the postwar years spurred research into improving the quality and yield of natural rubber.

RRIM has faithfully served the Malaysian rubber industry, contributing to maintaining the country as one of the largest world producers of natural rubber. During the 1990s the primary objectives of RRIM *inter alia* have included improvements in natural rubber materials and products, offering technical support to the manufacturing sector, and promoting greater use of natural rubber.

RUKUNEGARA

Rukunegara, the national ideology of Malaysia, is aimed at the fostering of national unity among the multiethnic population of the country. A combination of two Malay words, *rukun*, meaning “principles” or “rules,” and *negara*, meaning “nation” or “country,” Rukunegara denotes “Principles of the Nation” or “National Principles.”

Proclaimed on 31 August 1970 by the king of Malaysia, Rukunegara is to act as a guide in the attainment of unity of the people, the maintenance of a democratic way of life, and creation of a just society whereby the wealth of the nation is equitably shared. Furthermore it is to ensure a liberal approach to the nation's rich and diverse cultural traditions, and build a forward-looking society oriented toward modern science and technology. The five principles of Rukunegara are belief in God (*Kepercayaan kepada Tuhan*), loyalty to king and country (*Kese-*

tiaan kepada Raja dan Negara), upholding the constitution (*Keluhuran Perlembagaan*), rule of law (*Kedaulatan Undang-Undang*), and good behavior and morality (*Kesopanan dan Kesusilaan*).

The first principle guarantees religious freedom and tolerance, notwithstanding Islam's being the official religion of the country. Nonetheless Rukunegara does not condone ideologies that deny the existence of God. Every citizen is expected in accordance with the second principle to possess undivided loyalty to the king and nation. The third principle emphasizes the responsibility of each citizen to understand and respect the letter, the spirit, and the historical background of the constitution, in particular as relating to the position of the Malay rulers, status of Islam, special privileges of the Malays and other indigenous groups of Sabah and Sarawak, citizenship, and Malay as the country's official language. The fourth principle stresses the rule of law, equality before the law, guarantees under the law relating to inter alia the freedom of speech, religious freedom, basic human rights and freedom, and the right to own property. The fifth principle emphasizes good and tolerant behavior of individuals and groups toward others and eschewing conduct that might lead to divisiveness in society. High morality goes hand in hand with exemplary behavior.

Conceived in the aftermath of the most serious Sino-Malay clashes of 13 May 1969, Rukunegara was one of the strategies employed by Prime Minister Tun Abdul Razak (t. 1970–1976) in working toward national consolidation by fostering a common identity, common values, and a sense of loyalty among the multiethnic population. In the absence of a recurrence of the May 13 Incident in the past three decades, it can be said that Rukunegara has effectively played its role.

RUSSIA AND SOUTHEAST ASIA

The earliest information about Southeast Asia is said to have reached Russia by the eleventh century: a monk in a Kiev monastery mentioned an "island country" in his chronicle. A Russian trader of the fifteenth century, A. Nikitin, mentioned Southeast Asian countries in his travel tales. In the seventeenth century Russians received information about Indonesia from The Netherlands, with which Russia maintained regular contacts, especially during the reign of Russian czar Peter the Great (1672–1725).

The first personal acquaintances of Russians with the countries and peoples of Southeast Asia took place early in the nineteenth century. A world sea expedition by two Russian ships, the *Nadezhda* and *Neva*, under command of the famous Russian navigators I. F. Krusenstern and Yu. F. Lisiansky, visited Singapore. They brought to Russia the first true information about the peoples of Singapore and the Malay Peninsula. Later information on the region appeared regularly in the journal *Sea Stories*, which published articles written by Russian navigators who sailed the Straits of Melaka. In the middle of the nineteenth century a Russian naval officer, A. Butakov, visited Penang. He wrote about the nature and the life of Penang's population. In the second half of the century many Russian travelers frequented Southeast Asia: a journalist, V. Krestovsky; a geographer, M. Venyukov (Malaya); a traveler, N. Nenyukov; a diplomat and ethnographer, P. I. Pashino (Burma); and many others.

A well-known Russian scientist, N. N. Mikluho-Maklay, traveled through a number of Southeast Asian countries and stayed for a long time in New Guinea among aborigines, studying their mode of life and culture.

In the closing years of the nineteenth century, Southeast Asia was on the route of the

Russian world tour made by the future Russian tsar, Nicolas II (1868–1918). After his visit to Siam one of the princes of the Chulalongkorn family went to Russia to study in a military school. There he married a Russian girl who returned with him to Siam.

There is information that Konbaung Burma in the 1870s several times attempted to engage Russian assistance in the struggle against British colonial expansion; Russia, however, did not answer Burma's appeals, in order not to antagonize the British government.

After the October Socialist Revolution (1917) in Russia, its relations with Southeast Asia were maintained primarily through Comintern and concerned left-wing and communist groups in the region. A number of local communist leaders studied in Moscow (Hô Chí Minh from Vietnam; Alimin, Musso from Indonesia). A number of representatives of Southeast Asian communists worked in Comintern structures. Stalin (1879–1953) paid a lot of attention to the situation in the region. He did not approve of the Indonesian communist plans to start a revolt against Dutch colonialism in the middle of the 1920s. After the revolt was crushed, the Soviet communists condemned such actions on the part of the Partai Komunis Indonesia (PKI).

At the closing stage of World War II (1939–1945), the Soviet leadership demonstrated only minor interest in the Japanese occupation of Southeast Asia: the region was recognized as the British sphere of influence. The Union of Soviet Socialist Republics (USSR) and the United States did not lay claims on Southeast Asia then. Both powers sympathized with the national liberation movements, but did not support them openly. At the end of the war Stalin considered the colonial zone of Southeast Asia to have few prospects for the Soviet Union, both economically and strategically.

After World War II two main tendencies influenced the Soviet attitude toward Southeast Asia: the beginning of the Cold War and the national liberation movements. The USSR was interested in diminishing Western influence in the region; therefore it supported the struggle against colonialism and tried to win political influence in the newly independent states. At the same time the Soviet Union intended to spread communism among Southeast Asian peoples and create socialist states. Toward this

end, it provided moral and material assistance to communist and other left-wing parties and organizations of the region in their struggle for state power.

The USSR greeted the proclamation of the Democratic Republic of Vietnam (DRV) and established diplomatic relations with it in January 1950. It gave wide material, political, and military support to the Vietnamese struggle against French colonialism. Only with massive Soviet assistance could the DRV have developed industry and infrastructure and trained high-skilled specialists. With the completion of its economic recovery in 1958, the DRV began to pay more attention to strengthening the revolutionary movement in the south, but first it had to face the Soviet leadership's unwillingness to plunge into the Southeast Asian conflict. Nevertheless, the new Soviet leadership that came to power in 1964 again oriented itself toward closer cooperation with the DRV. The USSR emphasized moral and political support of the Vietnamese people's war against U.S. imperialism. Soviet material assistance (economic and particularly military) to the DRV expanded and kept on increasing. It could be ascertained that without Soviet material assistance the Vietnamese would not have won and created the united Socialist Republic of Vietnam (SRV) in 1976. As a reward, the USSR was permitted to use military bases in Vietnam.

With the disintegration of the USSR, Vietnam lost an important strategic ally. The Russian Federation had not enough material and financial resources for the continuation of its former assistance to the SRV. Nevertheless, Russia still participates in the development of key Vietnamese industries, particularly oil and gas production and other energy sources. Russia remains the only provider of arms to Vietnam. In the political sphere Russia and Vietnam have declared themselves strategic partners. Their approach to key problems of world development, such as polycentrism in international relations and antiterrorism, is similar.

The USSR provided moral and political assistance to Laos and Cambodia in their struggle for national liberation. After they achieved sovereignty in 1954, the USSR established diplomatic relations with these countries. At the same time the Soviet leadership provided moral and material support to communist and left-wing organizations, helping them to seize state

power. The USSR greeted the establishment of procommunist regimes in Laos in 1975 and Cambodia in 1976, the latter with Vietnamese assistance. After the demise of the Soviet Union and Laos and Cambodia shifting to market economies, the Russian Federation nonetheless maintains friendly relations with both countries.

After the Republic of Indonesia proclaimed its independence on 17 August 1945, the Soviet Union supported it in the United Nations in its struggle against Dutch efforts to reestablish the colonial regime. The USSR officially recognized independent Indonesia in January 1950, and between the two states diplomatic relations were established. The Soviet-Indonesian ties intensified after President Sukarno (t. 1945–1967) visited the USSR in 1956. The USSR provided credits to the republic; economic, technical, and scientific assistance in the development of Indonesian industry, agriculture, and the military sphere; as well as assistance in education and sport. In 1960 a long-term trade agreement was signed. The USSR provided every kind of assistance to Indonesia in its struggle for the liberation of West Irian (Irian Jaya) from Dutch colonialism and its return to the republic.

This was also a period of intensive cultural, religious, scientific, educational, and other humanitarian contacts between the USSR and Indonesia. After 1965, when the New Order anti-communist regime was established in Indonesia, Soviet-Indonesian relations drastically diminished. Economic, technical, and scientific cooperation was curtailed; trade exchange was reduced; and cultural, educational, and other humanitarian contacts were practically stopped. A new upturn in Soviet-Indonesian relations began in the closing years of the 1980s. Indonesian president Suharto (t. 1967–1998) paid an official visit to the USSR. The exchange of parliamentary and other high-level delegations became regular. After the demise of the USSR the Russian Federation intensified its contacts with Indonesia. In 1999 several new agreements on economic and technical cooperation and trade were signed between the two countries. The Russian and Indonesian positions often are similar or very close on a number of important international problems, including ecology, narco traffic, and the proliferation of nuclear weapons.

The USSR was among the first states that officially recognized independent Burma in

1948. Diplomatic relations between the two countries were established on the initiative of the Burmese national hero Aung San (1915–1947). But the relations were developing unevenly. The Soviet Union was helping the Burmese communists in the civil war, which started in the country immediately after the proclamation of independence. Consequently the exchange of embassies took place only in 1951. The year 1955 became the turning point in Soviet-Burmese relations. Soviet and Burmese heads of state exchanged official visits. The development of political contacts occurred side by side with the development of economic, trade, scientific, and technical relations. The Soviet Union provided assistance in rebuilding various Burmese cities and towns, a hotel, a hospital, and a technological institute. Burma delivered rice to the USSR. The mutually beneficial ties between the countries continued during the new Burmese political regime led by General Ne Win (t. 1962–1988). Both countries based their relations on five principles of peaceful coexistence. But with the aggravation of the Sino-Soviet confrontation, the Burmese leadership started to curtail their relations with the USSR, as the People's Republic of China (PRC) was afraid of Soviet influence in this country and exerted moral and political pressure on the Burmese government. In this complicated situation Ne Win's leadership preferred not to antagonize the Chinese. Nevertheless, the Burmese leaders maintained low-level relations with the Soviet Union, mostly in cultural and other forms of humanitarian exchange. After the disintegration of the USSR, the Russian Federation and Myanmar (Burma as it was renamed after 1989) established friendly relations, but their scope is restricted because of the absence of sufficient material resources in both government organizations. Nevertheless, economic cooperation started to develop on the basis of private business contacts.

Thailand was the first Southeast Asian country with which the USSR established diplomatic relations, as early as in 1941. The relations were resumed in 1946 and in 1948, when the first Soviet mission arrived in Bangkok. But until the beginning of the 1970s, Soviet-Thai ties were restricted and kept low-profile, as Thailand was inclined to side with the United States in the Cold War. During civil rule in Bangkok, the USSR and Thailand exchanged a

number of delegations. The second wave in the development of relations between the two countries began in the closing years of the 1970s. Political and cultural contacts widened, and the Soviet–Thailand trade intensified. The rise in Russian–Thai contact continued after the disintegration of the USSR. A new phenomenon was active relations between representatives of private businesses. Thailand became a favorite country for Russian tourists, and Thai students began to study in Russian universities.

The USSR officially recognized Malaysia in 1967. From that time on, political, economic, trade, cultural, and other relations between them grew and widened. Malaysia became one of the most important Russian trade partners in the region.

Soviet–Philippine relations were established only in 1976, and the countries began to develop contacts in many spheres. Since 1991 the two countries have been building relations in various aspects (*Yugo-Vostochnaya Asia* 1989: 320; Russian Ministry of Foreign Affairs).

The Russian Federation maintains political and mutually beneficial economic contacts with Singapore and Brunei. It has cooperated with the Association of Southeast Asian Nations (ASEAN) in political, economic, and security matters.

S

SABAH CLAIM **Unsettled Dispute**

The “Sabah Claim” refers to the sovereignty claim pursued by the Philippines to the Malaysian state of Sabah, located in the north-east portion of the island of Borneo (Kalimantan). The basis for the claim pursued by the Philippines is that the area in question formed part of the territory under the control of the sultanate of Sulu, a sultanate that had its center in the southern parts of what is today the Philippines. The Sabah claim has been a disputed issue between the Philippines and Malaysia since the Federation of Malaysia was established in 1963 with Sabah as one of its component states.

In January 1878 an agreement was signed between the sultan of Sulu and representatives of a British commercial syndicate. The agreement stipulated that North Borneo was either leased or ceded to the British syndicate (depending on the translation used) in return for the payment of 5,000 Malayan dollars per year. In 1881 the British North Borneo Chartered Company took over the concession. In 1888 the United Kingdom established a protectorate over North Borneo, but that did not alter the administrative responsibilities of the company. During the Pacific War (1941–1945) North Borneo came under Imperial Japanese forces. Following the end of Japanese occupation, the British North Borneo Chartered Company relinquished its duties, and North Borneo be-

came a colony of the United Kingdom in 1946.

The official claim of the Philippines to North Borneo dates back to 22 June 1962. On that day the Philippines officially declared that there was a dispute between, on the one hand, the Philippines and the sultanate of Sulu and, on the other, the United Kingdom with regard to the ownership and sovereignty of North Borneo. This statement came in response to a diplomatic note addressed to the embassy of the Philippines in London.

When the sovereignty of the colony of North Borneo was transferred to the new Federation of Malaysia on 16 September 1963, the dispute over Sabah became a bilateral issue between the federation and the Philippines. In fact the Philippines opposed the creation of the Federation of Malaysia on the grounds that Sabah would become a part of the federation. The crisis that followed failed to be contained by both the Association of Southeast Asia (ASA), created in 1961 with the then Federation of Malaya, the Philippines, and Thailand as members, and by Maphilindo, created in 1963 with Malaysia, the Philippines, and Indonesia. In fact the dispute over Sabah prevented the two associations from functioning properly.

The crisis between Malaysia and the Philippines relating to Sabah continued to be very serious into the late 1960s, but open military confrontation was avoided. This implies that the crisis persisted after the establishment of the As-

sociation of Southeast Asian Nations (ASEAN) in 1967. Gradually relations improved between the Philippines and Malaysia during the presidency of Ferdinand Marcos (t. 1965–1986) in the Philippines, but the dispute over Sabah was not formally settled. Filipino presidents Corazón Aquino (t. 1986–1992) and Fidel Ramos (t. 1992–1998) continued to seek to improve relations between the two countries. President Ramos visited Malaysia in January 1993, and Malaysia's prime minister, Dr. Mahathir bin Mohamad (t. 1981–2003), visited the Philippines in February 1994. High-level contacts have continued, as exemplified by the visit to Malaysia by President Gloria Macapagal-Arroyo (t. 2000–2004, 2004–) in August 2001. Despite these high-level efforts to improve bilateral relations, the Sabah issue has yet to be settled. In the Philippines the Congress has not supported attempts aiming at revoking the sovereignty claim to Sabah and has instead moved to reiterate the claim, thus forcing the Filipino government to do likewise.

The latest development in the Sabah dispute has been the move by the Philippines to safeguard its claim to North Borneo (that is, Sabah). The Philippines sought to intervene in the case concerning the sovereignty of Pulau Ligitan and Pulau Sipadan brought to the International Court of Justice (ICJ) by Malaysia and Indonesia. The islands of Sipadan and Ligitan are located off the eastern coast of the island of Borneo. The move by the Philippines is motivated by a concern that its claim may be affected by a ruling by the ICJ in the case. The Philippines has explicitly stated that it is not seeking to become a party to the dispute over the two islands. On 13 March 2001 the Philippines filed an application for permission to intervene in the case. On 23 October 2001 the ICJ decided, by fourteen votes to one, that the application made by the Philippines to intervene in the case could not be granted.

Then on 18 December 2002, the ICJ, in a 16–1 majority, ruled on the question of sovereignty in Malaysia's favor not on the grounds of historical factors but on the basis of *effectivites* (control). How the Philippine government is reacting to this ruling has yet to be seen.

SAGO

The sago (*Sagu metroxylon*) palm thrives in coastal peat swamps. Its pith produces a starchy substance that is consumed as food (mainly carbohydrate); following processing, it is used as industrial starch. In Southeast Asia sago was at best a minor trade commodity during the nineteenth and twentieth centuries, in comparison with pepper and the celebrated rubber.

However, to the Melanau community of the northwestern Bornean coast, sago not only played a significant role as a foodstuff and trade item but also had sociopolitical influence prior to the Pacific War (1941–1945). Owing to the lack of suitable land for rice cultivation, the Melanau turned to the exploitation of the sago palm, which initially grew wild along the lower reaches of the Igan, Oya, and Mukah Rivers. The organization of sago production was based on a three-way mutual partnership of the sexes and the patron-client relationship between aristocrats and peasantry. The man would fell the palms, strip the bark from the trunk, chop the pith, and shred it into smaller pieces. Then it was the woman's turn to wash and trample the pith on a very fine mat in order that the starch together with water percolated through the mat, leaving behind the woody waste on the surface of the mat. The water was then drained, and the solid sago starch was ready either to be boiled and consumed, baked to produce sago biscuits, or further processed to produce starch for in-

dustrial use. Because the Melanau peasant did not own enough land to cultivate his own palms and sustain a living, he had to rely on palms from the larger holdings of an aristocrat who acted as his patron. This traditional structure successfully withstood against Chinese and European interlopers from the 1860s to the 1940s.

The opening of Singapore in 1819 as a British entrepôt free port offered an international market for Melanau sago. Fluctuating world sago prices during the 1950s undermined the traditional patron-client partnership. Consequently both aristocrats and peasants turned to Chinese and European entrepreneurs, who offered more competitive prices for the palms. Chinese-owned sago palm holdings and Chinese and European sago mills reduced the Melanau to secondary players in the industry from the 1950s.

SAIGON (GIA ĐÌNH; HỒ CHÍ MINH CITY) “Paris of the Orient”

In 1623 the Khmer gave the Vietnamese the right to establish a customhouse in Prei Nokor, a small market town of Cambodia. This was the starting point of the Vietnamese settlement in the Mekong Delta, on the Saigon River, a tributary of the larger Đền Nai River. This settlement, called Bến Nghé (Wharf of the Calves), became the administrative outpost of southern Vietnam and a base for trade and tax collecting, as by the end of the seventeenth century the Vietnamese had effectively controlled much of the Mekong Delta. In 1679, Chinese refugees coming from Guangxi (Kwangsi) to seek asylum were allowed by the Nguyễn lord to settle in the Đền Nai basin. Four years later they set up a market at a location 2 kilometers west of

the Vietnamese settlement, calling the place Zhaijun (Saigon). The activities of this urban center as a trading port caused it later to take on the Vietnamese denomination of Chợ Lớn, meaning literally the “Great Market.”

In 1698 the first administrative center in southern Vietnam was formally set up, with the establishment of the prefecture of Gia Định comprising the two military provinces of Trấn Biên (Biên Hòa today) and Phiên Trấn (Saigon area today). A citadel was built on the left bank of the Saigon River to house the area governor and his administrators. From then on, official documents would designate the Saigon-Cholon conurbation under the denomination of Gia Định.

During the civil war of the last three decades of the eighteenth century, the Nguyễn fought a seesaw campaign from 1778 to 1788 with their adversaries the Tây-sơn for the possession of Saigon—and the town changed hands seven times in this period. In September 1788, with Siamese support, Nguyễn Ánh (1762–1820), who later became the first emperor of the Nguyễn dynasty under the reign title of Gia Long (r. 1802–1820), captured Saigon for the fourth and last time, expelling the Tây-sơn from the southernmost bastion of their power. He ordered the rebuilding and reinforcement of the city’s citadel. Surrounded by 4.8-meter laterite walls, the citadel of Gia Định was constructed as a royal residence with royal storehouses. From 1808 on it was the administrative core of the southern third of the country, with an “overlord of the citadel of Gia Định” (*Gia Định thành tổng trấn*) ruling a unit of five southern provinces from Saigon. However, Saigon was probably more important as a commercial center than it was an administrative base. Saigon, since the last decade of the eighteenth century, had become one of the main ports of international trade in the South China Sea, with yearly traffic from China amounting to a hundred junks (Nguyễn 1970: 242–243). The Chinese living there accounted for upward of 10 percent of all the Chinese living anywhere in Vietnam at the time (Nguyễn 1970: 46–48). The embryo of the subsequent “primate” city of modern Saigon could thus already be seen in the traditional metropolis.

Captured by the French in 1859 and formally ceded to France in 1862, Saigon became a modern city under French rule. Following

their conquest of Cochin China, the French immediately opened the port of Saigon to general commerce, largely financed by Chinese merchants in the Straits of Melaka who owned several of the ships that plied between the French port and Singapore. On a strip of marshland near the Chinese trading town of Cholon, the French built a new city in the European style as the central market for all Indochina. Capital of the French colony of Cochin China, Saigon was from 1887 to 1902 the capital of the French Indochinese Union. During the colonial period the port of Saigon grew rapidly to develop into a city qualitatively different in size and importance from the other urban settlements of Indochina: it became two to three times larger than the next largest conurbation in French Indochina.

Assuming the aspect of a European city, Saigon soon acquired a reputation for its beauty and cosmopolitan atmosphere. Possessing large, tree-lined avenues differentiating the residential districts to the north, the administrative and business center to the northwest, and the commercial districts toward the banks of the river, Saigon was dubbed "Paris of the Orient." To the south, spreading more than 5 kilometers on the right bank of the Saigon River, are the port installations, which can accommodate 9,000-ton ships (at present, the harbor is accessible to 50,000-ton vessels). Indeed, owing to the great depth of the river, ships of the largest tonnage can sail upstream to the port of Saigon, from which 824 ships of 1,290,430 tons cleared in 1907 (Trần 1987: 258–262). But Saigon failed to rise from its modest status as a regional port and grow into a port city of significance, as its harbor was unable to compete with the superior facilities of Singapore and Hong Kong.

Cholon, for most of the colonial period much larger than its twin city, Saigon, to which it is connected by road, rail, and canal waterways, has always contained a large portion of Vietnam's Chinese population. The members of the Chinese community, here as elsewhere throughout the peninsula, have held a quasi-monopoly over commerce, particularly the rice trade. Still mainly a Chinese city, it has preserved its charm of yesteryear with its temples and pagodas, its Chinese cultural houses, its wooden shops, and the numerous canals that crisscross the town.

For administrative purposes Saigon and Cholon were merged in 1932; in 1956 the two cities were included in the new prefecture of Saigon, the capital of the state of South Vietnam created in 1954. During the Vietnam War (1964–1975), the city took on the aspect of a giant military complex, with the air base of Tân Sơn Nhất, the highway from Saigon to Biên Hòa, the naval base, and the Nhà Bè storage complex. But throughout the 1960s and early 1970s, at least 1 million refugees from the rural areas poured into the city, creating serious housing problems and overcrowding (Thrift and Forbes 1985: 308). In 1960 the population of the Saigon metropolitan area was more than two million, and by 1970 it had swollen to 3,320,000 (Thrift and Forbes 1985).

After the reunification of Vietnam in 1975, Saigon lost its status as a capital and was renamed Hồ Chí Minh City on 2 June 1976. Its local economy was disrupted during the early years of the new regime, which curtailed foreign investment and promoted collectivization while initiating a harsh clampdown on Cholon and expelling tens of thousands of Chinese. However, conditions improved in the 1980s and 1990s as the Vietnamese government relaxed its economic policy. Gradually adapting to the new system, Hồ Chí Minh City has become Vietnam's booming economic engine, and with a population of 5,250,000 in 1997 it is the largest city, the greatest port, and the commercial and industrial center of the country (*Indochina Chronology* 1999: 28).

SAILENDRAS

A Javanese Buddhist Dynasty

The Sailendras were a dynasty of Buddhist kings who ruled the kingdom of Mataram in Central Java from the late eighth to middle ninth centuries C.E., and were later associated with the kingdom of Śri Vijaya (Śrivijaya, Śriwijaya) in southern Sumatra. The title *Sailendra* is often translated as “King of the Mountain,” and it was probably inspired by the volcanic mountains that dominate the landscape of these islands.

The Sailendras were only one of the many dynastic lineages of Central Java, but they appear to have become predominant between the years 760 and 860 C.E. Their renown is based largely on their patronage of Buddhism, in particular the construction of the great Buddhist stupa at Borobudur. Other Buddhist sites associated with Sailendra rule include the related temple structures of Candi Mendut, Candi Kalasan, and Candi Sewu. In addition to their agricultural base in Central Java, the Sailendras seem to have had access to some of the key ports on the northern coast and clearly had

commercial and marital ties with the rulers of the maritime empire of Śri Vijaya, based in southern Sumatra.

This association between the Sailendra rulers of Java and the kings of Śri Vijaya has engendered considerable debate as to the origins of the Sailendras. A stela found at Ligor in southern Thailand commemorated the foundation of a Mahayana Buddhist sanctuary by a king of Śri Vijaya on 15 April 775 C.E. The reverse of this stela also bears an inscription of a Śri Maharaja of the Sailendra line. The Dutch author N. J. Krom thought that the king of Śri Vijaya on the first side of the stela was the same as the Śri Maharaja on the second, and he argued that the Sailendras were a Śri Vijayan dynasty that had later conquered parts of Java. In contrast, W. F. Stutterheim used the same evidence to argue that the Sailendras were from Java, and that Śri Vijaya had come under Javanese domination (Hall 1981: 51).

It is probable, however, that neither of these hypotheses is accurate and that the relationship between the Sailendras and Śri Vijaya was based on commercial interaction and intermarriage rather than conquest. When the rulers of Śri Vijaya funded the construction of sleeping quarters for monks at the Buddhist pilgrimage site of Nalanda in northern India during the late ninth century, they chose to emphasize their Sailendra lineage. This is probably an indication not only of former marital ties but also of the prestige of the Sailendra dynasty among the wider Buddhist community of that time.

The earliest record of a Sailendra ruler in Java is an inscription found at Candi Kalasan to the east of Yogyakarta. It commemorates the foundation of the temple to the Buddhist goddess Tara in 778 C.E., during the reign of King Panangkaran, who is described as an “ornament of the Sailendra dynasty.” J. G. de Casparis (1956) has argued that Panangkaran was not himself a Sailendra, but merely a local ruler under the Sailendra king Vishnu Dharmatunga. The Sailendras were the first to adopt the title *Śri Maharaja* (derived from a Sanskrit compound meaning “Great King”) and claimed the defeat of neighboring kingdoms.

The inscription from Candi Kalasan also lists a number of state officials, relatives of the king, and local nobility who helped to administer clearly defined districts and villages. However, despite this hierarchical structure, it appears that

under the Sailendras the state of Mataram was largely decentralized. Although minor surrounding kingdoms were absorbed into the main structures of the state, local village communities, or *wanua*, remained stable and largely independent from the politics of the court, forming their own village networks for the marketing of agricultural produce (Christie 1995: 275). Sailendra domination in Central Java appears to have weakened during the first half of the ninth century, and the last Sailendra king of Central Java is said to have been defeated in 856 on the Ratubaka plateau.

Our current knowledge of the Sailendras is derived from a very small number of inscriptions, and their interpretation has been the cause of considerable debate. The most influential work on this subject is that by J. G. de Casparis, completed after World War II (1939–1945) and published in two volumes in Dutch (1950) and English (1956). It should be emphasized, however, that even the names of the Sailendra kings remain uncertain, and many of de Casparis's conclusions are necessarily speculative. Attempts to link the title of the dynasty as "Kings of the Mountain" with the Sailodbhava and Pandya dynasties in India have been refuted, and the connection suggested by George Coedès (1968: 89) with the kings of Funan has not been supported by further evidence.

SAKDALIST MOVEMENT

Antidote to Socioeconomic Ills

The Sakdalist movement was a political and rebellious movement in the Philippines, from 1930 to 1935, opposing the Filipino elite and the U.S. regime in the country. The movement was active on two fronts: as a political party it participated successfully in the elections within the newly emerging political system in the country, and as a rebellious movement it unsuccessfully attempted to grab power in several dozen municipalities in central and southern Luzon. The uprising was an outburst of militant nationalism, fueled by agrarian discontent.

The founder and leader, Benigno Ramos, was born in 1893 in Bulacan to a municipal civil servant. He attended public schools and worked as a government clerk and teacher. In 1912 he went to Manila and started a career as a journalist writing for various newspapers. From 1917 he was employed by the national politician Manuel Quezon (1878–1944) as a translator and later as an assistant and as director of the Senate clipping division, an important position in the Nacionalista Party. In 1930, Ramos's governmental position came to an end. He had participated in a student strike against an American teacher, and this brought him in conflict with Quezon, who dismissed him.

After his dismissal Ramos started a Tagalog weekly newspaper called *Sakdal*, which means "to accuse" or "to strike" in Tagalog. Ramos vehemently attacked the political leadership of Quezon and other politicians and the continuation of the U.S. colonial government. The periodical was critical of the elite of the country, and spoke out in defense of the poor and exploited classes in Philippine society. The periodical attracted a wide readership among the lower and lower-middle classes in the provinces. *Sakdalism* promised to wash the Filipinos of their 400 years of Spanish domination and to prevent their Americanization.

The 1930s in the Philippines was a time of socioeconomic hardship and political unrest. The Great Depression (1929–1931) had reduced the prices of all agricultural export products and brought poverty to the provinces. La-

borers had started organizing themselves to demand better wages. In the rural areas tenants were protesting the power of the landlords, demanding a higher share of the harvest. Politically the country was preparing for independence, the first phase of which would start in 1935 with the adoption of a constitution and the inauguration of the commonwealth, giving autonomy to the Philippines. Quezon was the most prominent and powerful national politician negotiating independence issues with the U.S. colonial administration.

In October 1933, Ramos formed the Sakdal Party and became its president. The party had the following goals: (1) complete and absolute independence by 31 December 1935; (2) abolition of all taxes; (3) equal distribution of land to the landless; (4) natural resources for Filipinos; and (5) fighting the rule of the oligarchs. The new party participated in the legislative elections of 1934 in eight provinces in Central Luzon and was able to win three seats in the House of Representatives, one governorship, and scores of municipal offices. The political triumph, however, was short-lived; the three party members who had been elected quickly defected to one of the factions of Quezon's Nacionalista Party.

After the elections the ruling political elite decided that a plebiscite would be held on the new constitution for the Philippine Commonwealth in June 1935. As the Sakdal Party was strongly opposed to the new constitution, which did not bring immediate and genuine independence, political tensions in the country rose. The government proscribed the newspaper *Sakdal* and made it difficult for the party to conduct meetings. Fearing arrest, Ramos had fled to Japan in November 1934, where he tried to mobilize Japanese support for his movement, though without much success. A leaflet printed in Japan entitled *Free Filipinos* was distributed in the Tagalog provinces, enhancing the mood of rebellion among the *sakdalistas*. The Sakdal Party secretly prepared for action.

The Sakdal uprising was a two-day affair. On the night of 2 May 1935, groups of Sakdal followers, carrying guns and knives, attempted to take control of fourteen towns in central and southern Luzon. In eleven of these towns the local police dispersed the crowds; in three municipalities the Sakdals succeeded in taking over the town hall. The next day the Constabulary (the military police) retook the buildings and

killed or drove out the rebels. The total number of sakdalistas involved in these actions was estimated at between 5,000 and 7,000, both men and women. The total membership of the movement was estimated at 68,000. The total number of people killed or wounded during the action was slightly more than a hundred.

The official view was that the uprising had been instigated by religious fanaticism. But a more thorough investigation undertaken by Joseph Ralston Hayden, a political scientist and the vice governor of the Philippines, discovered that the rebellion was directed against the power of the landlords and the abuses of the Constabulary (Hayden 1942). The rebellion was clearly rooted in socioeconomic inequality and class conflict in the Philippines.

Fearing new outbreaks of violence, the leaders of the Nacionalista Party tried to adopt social reforms. To show the change in attitude, the sakdalistas who had been arrested and imprisoned were released after a couple of months. President Quezon launched a campaign for "Social Justice," proposing minimum wage legislation and agrarian reforms. In the countryside the communist and socialist peasant unions became active, while landlords organized armed gangs to defend their property. Political tensions increased. The outbreak of the Pacific War (1941–1945) and the Japanese invasion in December 1941 put an end to this period in Philippine history and ushered in a totally new situation.

SAMBAS AND PONTIANAK SULTANATES

The sultanate of Sambas was one of the most important early Muslim sultanates on the western coast of Borneo. It was founded sometime in the sixteenth century along with Sukadana and Landak and had connections with the sultanate of Johor (Irwin 1955: 3). The Dutch East India Company (VOC) attempted to establish a commercial presence at Sambas in the early seventeenth century, but in 1610 their factory was attacked and their representatives put to death. Dutch interest in the western coast languished for much of the century until, in 1698, the sultan of Landak, who was at war with Sukadana, enlisted the support of the Dutch and the sultan of Bantam (Banten) in West Java and sacked Sukadana. From then on the western coast states became clients of Bantam and ultimately the Dutch (Jackson 1970: 3).

In the mid-eighteenth century the sultan of Sambas was recruiting Chinese miners to work in the rich West Borneo goldfields inland of the coast between the Sambas and Kapuas Rivers. The miners began to settle at Seminis, Larah, Montrado, Buduk, and Mandor, and, after a short period under Malay control, the mining communities (*kongsis*) soon established their independence and avoided Malay taxation (*ibid.*: 22–23).

Increasing Anglo-Dutch commercial rivalry in island Southeast Asia in the eighteenth century and the intervention of the Dutch in the affairs of several of the Malay States in Borneo disrupted normal trading relations, and some Malay sultans turned to piracy. Sambas was to become an important center for piratical raids against European and other shipping in the early nineteenth century, and it served as a base for the notorious Illanuns (Ilanuns) from the southern Philippines. At this time Sambas was also vying with the sultanate of Pontianak for political and economic control of the western coast. Pontianak had been established in 1772 with the assistance of the Dutch when an Arab pirate and adventurer, Abdul Rahman, founded a trading colony at the village of Pontianak near the mouth of the Landak River. At that

time the main center of trade commanding the Kapuas Delta was farther upriver at Landak. Although the sultan there complained to Bantam that his rights over this territory had been violated, the Dutch interceded in behalf of Pontianak, secured Bantam's rights over West Borneo, and gave full recognition to the new sultan. The Dutch then established a factory at Pontianak, and the sultan of Bantam ceded all his rights to the western coast to them. Subsequently the company supported Pontianak in attacks against Sukadana and the minor state of Mempawah, and by the early nineteenth century it had become the major entrepôt on the west coast, eclipsing Sambas (Irwin 1955: 24). The Dutch negotiated new treaties with the rulers of Sambas, Pontianak, and Mempawah in 1818, and they formally recognized Dutch sovereignty. Residents were installed at Pontianak and Sambas in 1824, though in 1826, Sambas was reduced in status to an assistant-residency, while a Dutch resident continued at Pontianak. The Dutch channeled all trade through these two ports. Pontianak became the capital of the newly created Western Division of Borneo in 1849.

In the early nineteenth century the West Borneo goldfields were the most important source of gold in the whole of Asia and provided about one-seventh of total world output (Jackson 1970: 2). By 1850 the Chinese gold-mining communities inland of Sambas contained some 50,000 Chinese; they were self-governing districts that raised their own taxes and smuggled in such goods as opium, salt, and gunpowder from Singapore. The sultan of Sambas had no means of controlling them (Irwin 1955: 165–174). The Dutch decided to bring them under direct administration and sent in an armed force of more than 2,000 troops in May 1854. Chinese resistance rapidly collapsed (King 1993: 148). At this time the gold mines were already on the decline, and the Chinese were moving to other regions of West Borneo to take up commercial farming and trade. Virtually no mining activity remained by the 1890s.

During the late colonial period (1930s) the power and authority of the Malay sultans of West Borneo were at an end, though Pontianak in particular enjoyed increasing prosperity as the main administrative and commercial center of the Western Division. Following Indonesian

independence Pontianak became the capital of the province of West Kalimantan, while Sambas remained as a smaller regional market and administrative town serving the agricultural districts of its immediate hinterland (Cleary and Eaton 1992: 69).

SAMIN MOVEMENT

Withdrawing from the Modern World

The Samin Movement was a peasant movement founded around 1890 in the Blora area of Central Java by Surontiko Samin (1859?–1914). Although both the Dutch authorities and later Indonesian nationalists interpreted the movement as a form of political opposition to colonial rule, Saminism seems to have been a more general and peaceful reaction to modern life.

Samín and his followers were illiterate, and we depend on colonial reports and court transcripts for our knowledge of their ideas and actions. The movement first attracted attention in 1905, when its followers began to withdraw from the communal village life that Dutch rule had promoted, refusing to contribute to rice banks or to herd their animals with those of other villagers. The Saminists continued to pay tax, but they regarded those payments as voluntary contributions, not obligations. In 1907, fol-

lowing rumors that the Saminists planned a revolt, the colonial authorities arrested Samín and exiled him to Sumatra, where he later died.

The movement survived under a succession of leaders, reaching a peak membership of about 3,000 households in 1914. Although it attracted most attention when it resisted taxes, tax increases, and restrictions on access to the state-controlled teak forests of the region, the movement seems to have been driven by a broader ethical doctrine that emphasized the self-sufficiency of the peasant economy and the centrality of the sexual relationship between husband and wife. Its followers perplexed the colonial authorities by their refusal to be deferential to officials while nonetheless remaining diligent farmers, honest and generous neighbors, and, above all, nonviolent. Officials were especially offended by the fact that the Saminists used low Javanese (*ngoko*) to address their superiors. Saminists called their beliefs “the science of the prophet Adam,” but they rejected the authority of local Muslim officials as calmly and firmly as they rejected that of the Dutch and the Javanese bureaucratic elite. They often resisted sending their children to school, though this may have been because they objected to the fees they were charged, rather than because they rejected education. Although some colonial reports and later scholars describe Saminism as messianic, its followers seem never to have expected a supernatural savior or a future golden age. Rather, they wanted to withdraw from the wider world and live a simple and unregulated agricultural existence, free of the vexations of government and money. Saminism drew little or nothing from Islamic doctrine, but scholars do not agree on whether it drew from older Hindu-Buddhist influences, whether it reflected the most ancient, pre-Indic Javanese peasant traditions, or whether it was a relatively modern reaction to the pressures of colonial modernization—especially the increased intrusion into village customs brought about by the Ethical Policy.

Although the movement persisted into the era of Indonesian nationalism, it developed no ties with nationalist organizations or with later political parties. Saminist areas, however, voted strongly for the Partai Komunis Indonesia (PKI, Communist Party of Indonesia) in the 1955 elections, but it is hard to recognize a primitive socialism in the individualistic self-sufficiency of

the Saminists. Saminist communities survived in the Blora region until the 1970s.

Saminitism's lack of engagement with orthodox religion, ideology, and the modern economy has led scholars to regard it as a reminder of the difficulty that modern scholars face in understanding peasant society.

SANDAKAN DEATH MARCH

A Tropical Hell

In 1945 about 2,400 Australian and British prisoners of war died in northwest Borneo in a prolonged atrocity known as the Sandakan Death March. The prisoners of war, who had been captured mainly in Singapore, were sent to Sandakan in British North Borneo to construct an airfield. Although worked hard and treated as badly as other captive labor forces, the Sandakan prisoners were not treated with unusual severity until 1945. Evidently anxious over the approach of Allied forces toward Borneo, early in 1945 the Japanese ordered many prisoners at Sandakan to march westward through the jungle to

Ranau. From January to May a series of "death marches" began, during which about 1,050 prisoners died. Already poorly nourished, weak, and sick, prisoners died on the trail of illness and exhaustion and were shot or bayoneted if they fell out. The survivors were subjected to further mistreatment and heavy labor at Ranau until, by war's end, all the prisoners in Japanese hands at both Ranau and Sandakan were dead. The last prisoner of the 1,300 left at Sandakan was executed on 15 August 1945. Only six prisoners were recovered, all Australians, who had been succored by local people. The Japanese soldiers responsible for the march were tried as war criminals at Labuan; nine were executed, sixty-four sentenced to imprisonment, and eleven acquitted. Despite the common perception that Sandakan has been forgotten or even concealed, the episode has been the subject of more books, films, exhibitions, and radio documentaries than any comparable episode in Australian military history. The dead of Sandakan lie in the Commonwealth War Graves cemetery on Labuan, Malaysia, and there are memorials to them in Ranau, Sandakan, Canberra, and several Australian cities.

SANGHA

Buddhist society consists of four categories of people. Most are laymen and laywomen whose religious lives center on the practice and support of Buddhism while they remain in society. Buddhist monks and nuns formally renounce society to live in single-sex, celibate communities. The collective term for these monks and nuns is the *Sangha*, which means "community." As novices they are bound by the ten precepts, to abstain from killing, lying, stealing, sexual activity, intoxicants, wearing perfume or jewelry,

attending dances or singing, eating after mid-day, handling gold or silver, and sleeping on luxurious beds. After higher ordination they are bound by more than 200 monastic rules attributed to the Buddha that are recited collectively once a fortnight. The knowledge and strict observation of these rules vary among the many different monastic lineages, which are often differentiated by apparently minor rules, such as variations in monastic dress. All lineages of monks, however, descend from the Buddha's first five disciples, and the lineage of nuns goes back to the Buddha's aunt. In Theravada the tradition of nuns had died out, but it was restored in Thailand from the Chinese lineage in 2002. Ordination into the *Sangha* has long been a coming-of-age ceremony for men in Southeast Asian countries, most monks returning to lay life after a three-month period.

As well as providing the context in which people may strive for Enlightenment, a goal regarded by many as impossible in this day and age, the *Sangha* preserves and communicates the Buddha's teaching and performs rituals. Traditionally, the *Sangha* has also provided formal education. The *Sangha* has provided political stability and acted as a check on political power, as well as being used by political powers to gain popularity or to influence the population as a whole.

Monasteries where the *Sangha* dwelled are also the location of the main sacred objects of the Buddhist landscape: *stupa*, hemispherical monuments commemorating and often incorporating relics of the Buddha; Buddha images; and the sacred tree, descended from the one under which the Buddha achieved Enlightenment.

**SANGKUM REASTRE NIYUM
(PEOPLES' SOCIALIST
COMMUNITY) (MARCH 1955)**

Sangkum Reastre Niyum (often translated as Peoples' Socialist Community) was the mass-

based political movement founded by Prince Norodom Sihanouk (1922–) in 1955. The Sangkum, controlled by the prince, dominated Cambodian political life until March 1970, when Sihanouk was driven from power in a bloodless coup.

In March 1955, soon after Cambodia gained its independence from France, Prince Sihanouk, who had been king of Cambodia since 1941, abdicated the throne and named his father, Norodom Suramarit, to succeed him. As an "ordinary citizen," the "father of independence," as he was popularly known, entered the political fray with a view to ending pluralist politics in the country.

Shortly after his abdication, Sihanouk founded the Sangkum as a national, ostensibly apolitical, movement dedicated to his vision of an independent Cambodia. To become a member of the Sangkum, one had to abjure membership in any other political party. The effect of this regulation was to throw existing political parties competing for a national election into disarray.

Violence and fraud characterized the 1955 elections. Sangkum candidates gained 85 percent of the vote, as well as all the seats in the National Assembly. Candidates in the elections in 1958, 1962, and 1966 campaigned as members of the Sangkum. Candidates in 1958 and 1962, handpicked by Sihanouk, were unopposed, but those in 1966 competed as rival Sangkum representatives.

During his years in power Sihanouk pursued policies of neutralism in foreign affairs and concocted a national ideology that he labeled "Buddhist socialism," which celebrated what he saw as Cambodia's values and the status quo. The prince was immensely popular until the Vietnam War (1964–1975) encroached on Cambodia in the mid-1960s and the economy declined. When he was overthrown by a vote of his National Assembly while he was overseas, the Sangkum movement dissolved. In the 1990s, as pluralist politics reemerged in Cambodia, several candidates banking on the nostalgia of older voters formed parties with the word *Sangkum* in their names.

SANTO TOMAS, UNIVERSITY OF Asia's Oldest University

The University of Santo Tomas (UST) is the oldest existing university in the Philippines and in Asia. Bestowed the title of "Pontifical and Catholic University of the Philippines," it is a Dominican institution of higher learning from which many great Filipinos obtained their degrees. The university draws its inspiration from the teaching and philosophy of Saint Thomas Aquinas (1225–1274), the most famous theologian of the Dominican order.

The University of Santo Tomas was originally established as the Colegio de Nuestra Señora del Santísimo Rosario (College of Our Lady of the Sacred Rosary) in Intramuros, the Walled City in Manila, in 1611. It was then a boarding school intended to prepare young men for the priesthood. In 1617 it was renamed the Colegio de Santo Tomas (College of Saint Thomas), in memory of the foremost Dominican theologian, Saint Thomas Aquinas. In 1645 the college was elevated to the level of a university, and in 1680 it was placed under royal patronage. Following the British occupation of Manila, the Spanish king granted UST the title "Royal University" in recognition of its members who had fought to defend Manila. In 1902, UST was made a Pontifical University, and after the Pacific War (1941–1945), in 1947 it was given the further title of "The Catholic University of the Philippines."

Because of the growing student population and the cramped confines in Intramuros, the university moved to a larger campus in the Sampaloc district of Manila in 1927, where it remains to this day. During the Pacific War the Sampaloc campus was initially used as a gathering point for soldiers prior to being sent to fight the Japanese. When the Japanese took over Manila, the campus was used as an internment camp for U.S., British, and Allied nationals. The Intramuros buildings were destroyed during the battle for Manila in 1945.

The university was, and still is, renowned for its courses on philosophy, theology, law, and later, architecture, medicine, and other disciplines. It also has the oldest press in the Philippines, an extensive library, archives, and a museum. The university's graduates form a veritable Who's Who in Philippine history, ranging from scientists, philosophers, and artists to political and nationalist leaders. The university ranks as one of the best in the Philippines today, with the longest tradition and history behind it.

SANTRI

The term *santri* indicates a devoutly religious, *pesantren*-dwelling student. These rural Koranic schools, *pesantren*, have a long history. Like other such institutions in Java, *pesantren* have their roots in institutions of the Hindu-Buddhist period (from about the second to the sixteenth centuries). A *santri*'s stay in a *pesantren* is part of the general process of his becoming a pious Muslim. A very important person in the life of a *santri* is the *kiyai* (*kiai*), the religious leader of a *pesantren*. The *kiyai* teach religion, direct ceremonies, give advice in the case of illness, and are seen as intermediaries between Allah and the believers. Often supernatural powers to promote prosperity and well-being are ascribed to these religious leaders. After death, some *kiyai* are regarded as saints who can still effect the granting of *selamat*, well-being and blessing. Hence pupils and followers of a religious leader often pray at his grave.

The *santri* adhere strictly to the obligations of Islam. They pray five times a day, pay their religious taxes, and fast during Ramadan. Like every good Muslim, they hope to go on a pilgrimage to Mecca at least once in their life-

time. However, in some regions of Java and Madura, their religious ideas are mixed up with all kinds of non-Islamic elements. Every transition in their life (birth, circumcision, marriage, and death), must be accompanied by a communal ceremonial meal, a *selamatan*, for only that will ensure the good fortune of the person involved and his family. In fact, these meals are organized on all sorts of other occasions, to ward off evil influences. The prayers at such *selamatan* are addressed not only to Allah but also to the ancestors.

**SARAWAK AND SABAH
(NORTH BORNEO)**

The East Malaysian states of Sarawak (124,449 square kilometers) and Sabah (76,522 square kilometers), located in the northwest portion of the island of Borneo, had separate historical development from the Peninsular Malay States (West, or Peninsular, Malaysia). Until 1963 these two territories, together with Brunei, constituted "British Borneo"; in that year Sarawak and North Borneo (as Sabah was then known), both British protectorates since 1888 and colonies since 1946, gained their independence through joining the Federation of Malaysia.

The population (2000 census) of Sarawak is 1.6 million and Sabah 1.7 million; that of Malaysia is 23.2 million. But unlike Peninsular Malaysia, where the indigenous Malay predominate over the immigrant Chinese and Indian communities, Sarawak and Sabah have a very small Malay minority and collectively more than fifty indigenous ethnic groups. The Ibans and the Kadazan-Dusuns are the largest indigenous groups in Sarawak and Sabah, respectively. There are more than twenty native communities in Sarawak, including Bidayuh, Bisayah,

Melanau, Kayan, Kenyah, Orang Hulu, Kelabit, Kedayan, Penan, Lun Bawang, and Kajang; in Sabah there are some thirty or more indigenous ethnic peoples, including Murut, Bajau, Illanun (Illanun), Lotud, Rungus, Tambanuo, Dumpas, Maragang, Paitan, Idahan, Brunei Malay, Sulu, Orang Sungei, Minokok, and Tidong. The Chinese community in both Sarawak and Sabah is equally diverse in terms of dialect groups: Hokkien, Teochiu, Cantonese, Hakka, Foochow, Henghua, and Hainanese are the more prominent. Unlike the Hokkiens, Teochius, and Cantonese who migrated to Sarawak from Singapore in the mid-nineteenth century, the Hakkas crossed over from southwestern Borneo in the early 1820s. The Foochows, who dominated the Rejang valley and delta, arrived in the early 1900s directly from South China. The majority of the Chinese in Sabah migrated from China in the 1890s and 1900s. The Islamized indigenous communities include Malay, Kedayan, and some Melanau. The majority of the indigenous peoples of Sarawak and Sabah, including the Chinese, are Christians, both Catholics and Protestants, but native animistic beliefs and pagan practices remained relevant to many ethnic communities. Since the fifteenth century the Malay language has been the lingua franca of trade and communication among the diverse population.

The territories of what are present-day Sarawak and the western part of Sabah were nominally under the sovereignty of the Muslim sultanate of Brunei. The Sulu sultanate similarly claimed nominal overlordship of eastern Sabah. But neither Brunei nor Sulu exercised direct, effective administration over these territories. The genesis of Sarawak occurred with the second arrival of an English gentleman-adventurer, James Brooke (1803–1868), who assisted in putting an end to the anti-Brunei rebellion (1836–1840) and was rewarded with the governorship, styled "Rajah of Sarawak" by the Brunei sultan in 1841. From the original bequeathed territory of the Lundu to the Sadong valleys, Brooke and his successors extended Sarawak's boundary eastward at the expense of Brunei to reach the Lawas in 1905.

Sabah's (North Borneo's) beginning as a modern state originated with several profit-motivated individuals. In exchange for payment, the sultans of Brunei and Sulu gave

grants of territory in North Borneo to the following foreigners: Charles Lee Moses, the U.S. consul general (1865); Joseph W. Torrey and Thomas B. Harris (1865–1866); and Baron Gustav von Overbeck and Alfred Dent (1877). Through the efforts of Dent a royal charter was granted in November 1881, and thus began the British North Borneo Chartered Company and its administration of North Borneo.

While North Borneo was administered by a chartered company with its board of directors in London, Sarawak had a white rajah dynasty. The Brooke rajahs—James (t. 1841–1868), Charles (t. 1868–1917), and Charles Vyner (t. 1917–1941, 1946)—were absolute monarchs. The Malay *datu* (nonroyal chiefs) provided advice to the rajah, who also sought counsel from Chinese communal leaders. European officers termed residents administered large tracts of territory, each subdivided into districts under district officers. Native officers (mainly Malays) assisted the district officers. Chinese and Eurasian clerical personnel handled the skeletal bureaucracy's paperwork. Heading North Borneo's administration was the governor, who was answerable to the court of directors in London. The administrative structure resembled that of Sarawak—namely, residents, district officers, and native officers (mainly Kadazan-Dusuns). The participation of native chiefs, headmen, and village elders in the administration was more institutionalized in North Borneo than in Sarawak.

Both in words and in deeds, James Brooke was exceptionally partial to the indigenous peoples. The Brooke tradition of the rajahs holding the mandate to rule for the benefit of the natives and not for self-enrichment was strongly emphasized in all spheres, particularly in the economy. At the height of the rubber boom (1909–1910), Rajah Charles denied the entry of Western capitalists to open plantations; native rubber smallholdings were the norm, large estates the exception. Although not entirely exploitative of the indigenous population, the company emphasized the pronative policy to a lesser extent than did the Brookes. European capitalists were offered incentives to develop commercial agriculture (tobacco, rubber) and extract minerals. Unlike Sarawak, which was governed like a Brooke family country estate, North Borneo's administrators expected

profitable returns to satisfy shareholders in London with attractive dividends.

The mainstay of Sarawak's economy from the Brooke perspective was agriculture—subsistence swidden hill rice and wet rice, sago, pepper, and rubber. The collection of jungle products (resins, rattan, bird's nests, dammar, wild rubber) was greatly encouraged. Mineral extraction was a non-native industry, with the Chinese involved in gold, cinnabar, and coal, and Western companies concentrating on oil production. Trade and commerce were in the hands of European companies and Chinese enterprise, the latter dominating the distributive trade networks. Jungle products and sea produce were important sources of income to North Borneo's native inhabitants. Natives engaged in swidden rice farming, food crops, and rubber. Commercial agriculture was mainly the preserve of Europeans—tobacco and rubber. The Chinese focused on trade and timber production.

Brooke rule faced numerous challenges, especially during the first three decades: the Iban "pirates" of Saribas and Skrang (1840s), the Chinese assault on Kuching (1857), the Malay conspiracy (1857–1860), and Rentap (1850s). The Brookes exploited traditional animosities between downriver Ibans and their upriver brethren and Iban-Kayan/Kenyah rivalries in pacifying the country. The opposition posed by Bantin (1890s) and Asun (1930) to the Brooke government was the consequence of a personal feud and misunderstanding, respectively. The rajah also brokered peace between antagonistic native groups with the "killing-a-pig-peace-ceremony." The most serious challenges to company rule, however, were the Mat Salleh rebellion (1894–1905) followed by the Runday rebellion (1915). Misunderstanding of intentions between ruler and ruled developed into armed conflict, but neither in North Borneo nor in Sarawak were there millenarian uprisings or nationalistic struggles.

As a move to safeguard its interests in the region vis-à-vis other Western powers, Britain in 1888 granted protectorates over Sarawak, North Borneo, and Brunei. Defense and foreign relations were handled by Britain, while internal administration remained the purview of the respective territories. Consequently, "British Borneo" was created.

When war became imminent in 1940–1941, only a small Punjab regiment was sent to Sarawak—despite Britain’s promise to defend the territories—with the purpose of defending the airfield outside Kuching and oil installations at Miri. However, only scorched-earth tactics were undertaken in the face of the Japanese landings at Miri in early December 1941. The outbreak of the Pacific War (1941–1945) ushered in the military occupation of Sarawak and North Borneo by the Japanese Imperial Army. Sarawak’s capital, Kuching, was occupied on 24 December 1941; on 1 January 1942 Labuan fell; and North Borneo’s Jesselton (Kota Kinabalu) followed on 9 January. “Musim Jipun,” or “Masa Jepun” (Japanese Era), made for dark days for the inhabitants. The Chinese suffered the most, physically as well as financially. Although there were no mass massacres as in Singapore, the *sook ching* (purification through deeds) served on the Chinese of Sarawak and North Borneo was in the form of financial contribution to the Japanese war effort. Urban inhabitants suffered from deprivation owing to shortages of food, clothing, and other daily necessities; the subsistence-based population in the rural districts did not suffer as much as townspeople. As in other Southeast Asian countries, Europeans spent the occupation years behind barbed wires and fences inside internment camps. Batu Lintang, outside Kuching, was the largest prisoner-of-war and civilian internment facility in Borneo. The abortive Chinese-led uprising in Jesselton in October 1943 resulted in swift and heavy Japanese reprisals along North Borneo’s western coast. Toward the closing months of the war, the Japanese transferred prisoners of war (mainly Australians) from the Sandakan camp farther inland to another at Ranau. This disastrous death march claimed many lives, owing to malnutrition, exposure, ill treatment, and outright killings by Japanese guards.

By the time of the Australian landings at Brunei Bay and Labuan on 10 June 1945, many districts in the interior had been “liberated” by guerrilla elements from the Services Reconnaissance Department (SRD). There was little opposition to the Australian landings, as the bulk of the Japanese forces had withdrawn inland. Ironically, Allied bombs practically destroyed large parts of Jesselton, Sandakan, and other towns of North Borneo prior to their

liberation. Despite the Japanese surrender on 15 August 1945, news of the end of the war came only in early September for most parts of North Borneo and Sarawak, owing to the vastness of the land and poor communications.

In the postwar aftermath, the cession controversy swept across Sarawak like a storm, but there were only little drizzles when the issue reached North Borneo. Rajah Vyner Brooke and the court of directors had agreed to transfer sovereignty to the British Crown. The work of postwar rehabilitation and reconstruction in Sarawak and North Borneo proved too huge an undertaking, however, which neither the Brooke government nor the company could handle financially. Although cession met with general acquiescence in North Borneo, the Malay community in Sarawak was split over the issue. The anticeSSIONISTS found a leader in Anthony Brooke, the nephew of the rajah. Sarawak became a Crown Colony in June 1946, followed by North Borneo in July. The anticeSSION groups in Sarawak continued their protests, which climaxed in the assassination of the second colonial governor, Duncan Stewart (t. 1949), at Sibu in 1949. Thereafter the anticeSSION movement fizzled out but left a deep schism in the Malay community and politics.

During the Crown Colony period (1946–1963), the principal objective was to improve and develop the infrastructure of the two territories as a means of spurring economic growth and progress. A series of development programs were implemented with expertise from Britain, Canada, Australia, and New Zealand. Equal attention was given to education and public health. On the political front, leftist elements began to disseminate anti-imperialistic and anti-colonial propaganda, mainly within the Chinese community. Workers’ strikes and incidents of sabotage were evidence of leftist attempts to disrupt the economy. Conversion to the English language in vernacular Chinese schools sparked a controversy that was readily exploited by the leftist groups. However, pragmatism and utilitarianism overruled cultural sentiments, and the majority of secondary vernacular Chinese schools converted their language of instruction from Chinese (*kuo yi*) to English without incident.

After the proposal for the Federation of Malaysia was announced in 1961, much improved in the social and economic sector, but

much more remained to be done. Politically, the peoples of Sarawak and North Borneo have yet to be awakened. The "Malaysia" proposal was the wake-up call for the various ethnic communities to contemplate their political direction. Several ethnic-based political parties were hurriedly established: United National Kadazan Organization (1961), United Sabah National Organization (1961), United National Pasok Momogun Party (1962), Sabah Alliance Party (1962), Sarawak National Party (1961), Sarawak United People's Party (1959). Except for the socialist-leaning and mainly Chinese-based Sarawak United People's Party, all political factions in Sarawak and North Borneo favored joining "Malaysia." The British government appointed a five-member commission of inquiry (the Cobbold Commission) to ascertain the views of the peoples of Sarawak and North Borneo regarding the proposed Federation of Malaysia, and the findings revealed that the majority of the inhabitants were in favor. Owing to protests by Indonesia and the Philippines to the formation of "Malaysia," the United Nations in August 1963 sent a ten-member delegation to ascertain the opinion of the people of Sarawak and North Borneo on the issue. This UN Commission confirmed that the majority of their populations wished Sarawak and North Borneo to gain independence from Britain by joining "Malaysia." Notwithstanding the vociferous opposition by Indonesia and the claims by the Philippines to North Borneo, Sarawak and North Borneo (thereafter known as Sabah), together with Singapore, joined the Federation of Malaysia on 16 September 1963.

President Sukarno (t. 1947–1967) of Indonesia labeled "Malaysia" a neocolony of Britain and launched his *Konfrontasi*, or "Crush Malaysia" campaign. Diosdado Macapagal (t. 1961–1965) of the Philippines stepped up his claims to Sabah, proclaiming that the sultanate of Sulu, which furnished the concession of 1877, was part of the Philippines. Cross-border incursions by the Indonesian army into Sarawak were pushed back, and Sukarno's fall from grace in 1965 ended *Konfrontasi*. In the Philippines the new presidency of Ferdinand Marcos (t. 1965–1986), though not formally ending the "Sabah Claim," placed the issue in abeyance.

Within Malaysia, Sarawak and Sabah have gained tremendously, particularly in safeguarding the interests and welfare of the various indigenous ethnic minorities. The *bumiputera* policy of affirmative action accorded the indigenous Malays of Peninsular Malaysia has been extended to the natives of Sabah and Sarawak, who have since benefited in the economy and in education. The discovery in the 1970s of offshore oil fields and natural gas off the coast of Bintulu, Sarawak, and the lucrative timber extraction industry of Sabah remain important foreign exchange earners for both of these East Malaysian states. Tourism, especially ecotourism, is increasingly developing as an attractive source of revenue for these thickly rain forest-clad territories with exotic flora and fauna.

SARAWAK MUSEUM

Renowned Center of Bornean Studies

The oldest and one of the foremost museums in contemporary Southeast Asia, the Sarawak Museum is more than a center for showcasing the historical and sociocultural artifacts of Sarawak and Borneo; it also thrives as a scholarly institution for research and development of Bornean-wide studies. Established in Kuching in 1870, the original building, which hints of French-inspired architectural design, remains pristine despite its age; it is complemented by a modern complex linked by a crossroad bridge.

The inspiration for the establishment of a museum came from Rajah Charles Brooke (r. 1868–1917), the second white rajah of Sarawak, who felt that the collection of flora and fauna originating from the research undertaken in Sarawak by the English naturalist Alfred Russel Wallace (1823–1913) should be for public consumption. Wallace spent a sojourn during the 1860s as a guest of the first Rajah Brooke; he independently developed a theory of evolution and published his findings in *Contributions to the Theory of Natural Selection* (1870).

Following upon Wallace's collection, materials for the museum gradually came in from Brooke officers serving in the outstations. Amateur botanists, archaeologists, social anthropolo-

gists, mineralogists, and ornithologists, not to mention naturalists, were numbered among European Brooke officers who spent their leisure time exploring their domain. In addition, Rajah Charles insisted that his officers report on anything of interest that happened in their district. The *Sarawak Gazette* (SG 1870), apart from carrying official proclamations, decrees (styled as "Orders") and regulations, and general goings-on throughout the land, featured articles contributed by Brooke officers recounting bizarre tales, and botanical, faunal, and natural wonders. Others contributed treatises on ethnohistory of the many ethnic communities.

The museum staff managed not only the *Sarawak Gazette* but also the *Sarawak Government Gazette* (SGG 1909) and the scholarly *Sarawak Museum Journal* (SMJ 1911). The editorial committee of all three publications relied heavily on museum personnel. All official matters relating to the business of government were the responsibility of SGG, allowing SG to play the role of a semiofficial "newspaper." SMJ was and continues to be a scholarly journal for the dissemination of research findings in the natural sciences, humanities, and social sciences. Archaeology, history, anthropology (social, cultural), geology, zoology, and botany are the forte of SMJ.

The museum headed archaeological works in Niah and Santubong during the 1950s and 1960s. Also, much data on ethnohistory have been recorded, and items of material culture of various ethnic groups have been collected for research and exhibition. The archive section of the museum furnishes researchers and students with documents dating back to the mid-nineteenth century and earlier. The museum library has a fairly good collection of secondary source materials relating specifically to Sarawak and to Borneo in general.

Energetic directors such as E. Banks, Tom Harrisson, Benedict Sandin, and others built on the work initially envisioned by Rajah Charles of creating a museum-cum-institution of Bornean studies.

SAREKAT ISLAM (1912)**Mass Muslim Nationalist Organization**

Sarekat Islam (SI, Islamic Union) was the first large nationalist organization in Indonesia. Sarekat Islam drew on a wide range of grievances against colonial rule to draw an unprecedentedly large following, especially in Java. It was riven, however, by personal conflicts, disagreements over strategy, and a growing conflict between Islamists and leftists. After 1923 the party became a small but durable advocate of an Islamic state.

In 1911, Haji Samanhudi (1868–1956) established the Sarekat Dagang Islam (SDI, Islamic Traders' Union) as a cooperative of Javanese batik traders hostile to Chinese traders in the sector in Central Java. The SDI soon spread, changed its name to Sarekat Islam in 1912, and came under the charismatic leadership of Haji Oemar Said Tjokroaminoto (1882–1934), becoming the focus for a wide range of grievances, especially in Java. The organization attracted Indonesians who felt that their way to social advancement was blocked by Europeans and Chinese. It attracted Muslims unhappy with Christian rule. It attracted peasants, who saw in it a potential ally against oppressive local power structures. Its appeal was suffused with a strong messianic element. Many members saw Tjokroaminoto as a future “just king,” or *ratu adil*.

Sarekat Islam's ill-defined opposition to the social order won it a large membership, perhaps half a million (it claimed 2 million in 1919), but it was largely without effective central coordination. Local branches pursued their own agendas, sometimes coming to resemble secret societies, sometimes directly attacking local Chinese traders, sometimes forming something close to a shadow administration in the countryside. The Semarang branch in Central Java came under the influence of the socialist Indies Social Democratic Association (ISDV), and in West Java some activists established a secret revolutionary branch called “Afdeeling B” (“B Section”). In 1913 the colonial authorities had given legal recognition to these SI branches,

thus sparing the central organization legal responsibility for their activities but further limiting its control over them.

With the establishment of the partly elected *Volksraad* (People's Council) in 1918, Sarekat Islam began to fall apart over the issue of cooperation. Radicals wanted to boycott colonial institutions and prepare an anticolonial uprising, but others feared that colonial police repression and general bureaucratic intimidation would destroy the organization's mass base if it took a radical path. The murder of a Dutch official in Tolitoli (northern Sulawesi) and the Dutch discovery of Afdeeling B activities in West Java led to restrictions on SI activities and thus sharpened the divisions over strategy. Tjokroaminoto was jailed in 1921.

At the same time, Sarekat Islam began to polarize between the leftists of the ISDV and Islamists led especially by Haji Agus Salim (1884–1954). In 1920 the ISDV became the Partai Komunis Indonesia (PKI, Communist Party of Indonesia) and, following Leninist doctrine, denounced Pan-Islam. A bitter public battle followed that culminated in the SI party congress decision in October 1921 to impose party discipline, thus prohibiting SI members from holding membership in any other party, such as the PKI. Because of the independent status of local branches, this struggle was repeated at branch level, with individual branches following the PKI as “Red SI” or the Islamists as “White SI.” In February 1923, Tjokroaminoto formally transformed the Central SI into the Partai Sarekat Islam, absorbing the White SI branches and creating new local branches to challenge the Red SI branches (which soon renamed themselves Sarekat Rakjat [People's Unions]). A large part of Sarekat Islam's former constituency and many of its leaders, however, went over to the PKI. Under Salim's influence, the Partai SI now adopted a policy of noncooperation with the colonial authorities, withdrawing from the *Volksraad* and in 1929 even expelling members of the Muhammadiyah because their organization accepted Dutch subsidies for its schools. After Tjokroaminoto's death in 1934, however, Salim was expelled from the party, which came under the more radical leadership of Tjokroaminoto's brother, Abikoeso Tjokrosoejoso (b. 1895).

These conflicts, together with increased Dutch repression, sharply reduced the Partai

SI's public support. Whereas both the modernist Muhammadiyah and the traditionalist Nahdatul Ulama avoided direct politics and focused instead on building an Islamic society in Indonesia, the doctrinally modernist Partai SI increasingly positioned itself as the main political advocate of the primacy of Islam. Even after it located itself within the nationalist movement in 1929 by taking the name Partai Sarekat Islam Indonesia (PSII), it remained a staunch opponent of the efforts of Sukarno (1901–1970) to promote nationalist unity at the expense of Islamic purity.

Banned by the Dutch in 1940, the PSII re-emerged in 1947 as a breakaway from the Masjumi. It strongly advocated an Islamic state but did poorly in the 1955 elections, winning only 2.9 percent of the vote. In 1973 it was forced to merge into the Partai Persatuan Pembangunan. The Partai Syarikat Islam Indonesia, led by a great-grandson of Tjokroaminoto, won a single seat in Indonesia's 1999 elections.

Sarekat Islam's initial success indicated the deep veins of discontent that existed within colonial Indonesian society. The diversity of that discontent, however, left the organization with no clear path of action. The choice of radical Islamism gave it an enduring but limited role in twentieth-century politics.

SAVU (SABU)

The island of Savu (Sabu; in Savunese: Rai Hawu) is located between the larger islands of Sumba and Timor. In 2000, Savu, including the offshore islet of Rajjua, had a population of just under 65,000. Savu is a dry island with limited water. The population's main sources of subsistence are sorghum, maize, and mung bean, with a heavy dependence on the tapping of lontar palm. Rice can be grown in only a few areas on the island. In recent years, the Savunese have begun cultivating seaweed for export.

Savunese settlements are to be found in east Sumba around Melolo, in Kupang on Timor, and in Ende on Flores. The population of the tiny island of Ndao, off the western coast of Roti, originated from Savu and speaks a language closely related to Savunese.

Savunese is an Austronesian language that is classified as part of the Bima-Sumba subgroup of Central Malayo-Polynesian languages. Within this group, Savunese appears to be more closely related to the languages of Bima and of Manggarai than the languages of Sumba.

The Savunese maintain a complex oral history of their migrations and of ritual and social developments on the island, which is reliant on elaborate genealogical knowledge. The Portuguese had contact with the island before 1600 and may have carried out some mission activities. The first recorded Dutch contact with the island was in 1648. Initially the Savunese resisted Dutch incursions, but by 1756 the island's rulers had signed a treaty with the Dutch East India Company (VOC). This treaty recognized five domains on the main island: Seba, Menia, Dimu, Liae, and Mehara. Menia was

eventually conquered and incorporated within Seba, leaving four domains plus Raijua. To this day, these domains preserve their local ritual identity, although they are now incorporated into three *kecamatan*: Sabu Timur, Sabu Barat, and Raijua within the *kabupaten* of Kupang.

Seba, with its wide harbor, provided favored access to the island for the Dutch. Captain James Cook (1728–1779), who visited Savu in the *Endeavour* in 1770, encountered a Dutch company officer, originally from Saxony, who was stationed in Seba. After the collapse of the company at the end of the eighteenth century, official relations with Savu diminished, and only in the second half of the nineteenth century did the colonial officials manage to settle a shipwrecked Dane, stranded in Kupang, as *posthouder* at Seba.

Savu's relative isolation left it vulnerable to devastating epidemics in the nineteenth century, when closer contact was reestablished. In 1869, Savu is reported to have lost a substantial portion of its population to a severe smallpox epidemic. Then came a cholera epidemic in 1874 and another outbreak of smallpox in 1888. Conversion to Christianity and the migration of Savunese converts to Sumba followed on these epidemic catastrophes. Prior to these migrations only Savunese men had left the island, mainly on a seasonal basis, to serve as armed militia for the Dutch company and, later, the Dutch colonial service.

Savu is notable for the maintenance of its traditional culture. Each domain (*rai*) has its own indigenous priesthood (*mone ama*), who as a group oversee a varied sequence of ceremonies according to a complex lunar calendar. The ceremonial year is divided into periods of sound and silence, associated with phases of the agricultural cycle. Each priesthood group is structured somewhat differently. In Seba, the two highest-ranked priests are the *Deo Rai*, "Lord of the Earth," and *Apu Lodo*, "Descendant of the Sun." The *Deo Rai* in his person and by his required celibacy—generally an elderly figure is selected for this office—epitomizes the sacredness of the earth. Participants in all ceremonies come from the specifically designated localized male origin groups (*udu*) distributed in discrete villages (*rae*).

Savunese recognize a system of bilineal descent. In addition to localized male origin groups, Savu has an islandwide female moiety system. All women belong to one of these moi-

eties: *hubi ae*, "the greater blossom," or *hubi iki*, "the lesser blossom." These "Blossoms" are divided into a number of female origin groups called "seeds" (*wini*). Membership in these women's groups is publicly displayed in the particular coloring and designs of the traditional *ikat* cloths that women wear at ceremonies.

Savu's indigenous ceremonies are not performed outside of the island, because they are specific to places in each domain. Most Savunese are now Christian, and many Savunese regularly migrate to other islands in search of a livelihood. Education has been an important factor in this emigration. Yet local traditions exert a strong hold on most Savunese and continue to define identities and allegiances, as well as the need to return to the island.

SĔJARAH MĔLAYU (MALAY ANNALS)

"History of the Malays"

SĔjarah MĔlayu, literally "History of the Malays," is the modern name for the most fas-

cinating piece of Malay historical writing, generally translated into English as “Malay Annals.” The original title of the book is actually *Sulalat-us-Salatin* or the *Pedigree of the Kings*. Originating from a *hikayat Melayu* (Malay history) believed to have been compiled since the days of the Melaka sultanate in the fifteenth century, the rewriting of the book was officially and ceremoniously decreed by Raja Di Hilir or Raja Bungsu, later Sultan Abdullah Mughayah Syah of Johor, in May 1612. The editorship of the revised version, as indicated in the preface of some manuscripts, is generally ascribed to the Bendahara Tun Muhammad, better known as Tun Seri Lanang. It is not precisely known whether the rewriting was completed in Johor or in Pasai, where the sultan, Raja Di Hilir, and Tun Seri Lanang were prisoners of Aceh from 1613 to 1615.

There are at present no fewer than thirty-two versions of the *Sĕjarah Mĕlayu*, including the romanized form edited and transliterated by modern scholars. Nearly all extant manuscripts are copies made in the nineteenth century. The Raja Bungsu edition—that is, Raffles MS 18—is perhaps nearest to the original. The *Sĕjarah Mĕlayu* has been translated into many languages and is the main indigenous source for the Melaka sultanate and sixteenth-century Johor. Although containing some questionable statements, its contents are generally historically reliable and can be corroborated by other sources, both Chinese and Portuguese. Together with the *Undang-Undang Melayu* (Malay Law) and *Undang-Undang Laut Melaka* (Maritime Law of Melaka), the *Sĕjarah Mĕlayu* contains rich information about social, cultural, and political aspects of Melaka and the Malays in the fifteenth and sixteenth centuries.

SEMAOEN (SEMAUN) (1899–1971)

Leftist Leader and Writer

Indonesian leftist political activist, journalist, and writer Semaoen hailed from Gununggangsir, East Java, coming from a family of railway workers. He attended the elementary schools of *Sekolah Angka Loro* and *Sekolah Angka Satu*, which catered to the native population. At the age of thirteen Semaoen started work for a state train company, *Staatsspoor*, alongside his father.

After one aimless year he joined the first mass-based nationalist group of Sarekat Islam (SI) in Surabaya, where he was appointed secretary. After 1915, Semaoen embarked on the study of Marxism and communism. He also became involved in radical labor movements after associating with H. J. F. M. Sneevliet, the founder of *Indische Social Democratische Vereeniging* (ISDV). Semaoen established close contacts with the train worker union of *Vereeniging voor Spoor en Tramweg Personeel* (VSTP). He was deeply influenced by Sneevliet, from whom he learned at a very early age the skills and knowledge necessary for becoming a journalist and a prominent radical labor union leader.

The young Semaoen then moved to Semarang, where he was elected chairman of the local branch SI in 1917. He was editor of *Sinar Djawa* and *Sinar Hindia*, official newspapers of Sarekat Islam Semarang, while he still retained leading positions at VSTP and ISDV. He headed the radical and Marxist-oriented faction within SI. ISDV later changed its name to *Perserikatan Komunis Hindia* in May 1920 and then to *Partai Komunis Indonesia* (PKI) in 1924, with Semaoen as chairman. Despite opposition from some SI members, Semaoen was also made chairman of the labor organization *Persatuan Perkumpulan Kaum Buruh* in 1920 and a member of the Inter-

national Communist Trade Union founded in 1921. Meanwhile, his career in SI came to end in 1921, when party discipline was invoked to eliminate members with double membership, aimed particularly at those SI members who were also members of PKI. Semaoen and other communist cadres parted with Tjokroaminoto's SI.

After that, Semaoen concentrated his activity among the communist groups, where he published a newspaper called *Pandu Merah*. In 1923, Semaoen left Indonesia for exile in Europe after leading a strike by train workers. He visited Moscow to attend the fifth congress of the Comintern in 1924 and then The Netherlands. In The Netherlands he made contact with radical and communist groups and encouraged the organization of Indonesian students in The Netherlands, *Perhimpunan Indonesia*, to adopt a more radical direction.

After concluding several agreements with Mohammad Hatta (1902–1980) as to future strategy for an independent Indonesia, Semaoen spent most of his life in Russia, where he lived after 1926. He was in Russia during World War II (1939–1945) and returned to Indonesia only in 1956. He held some important posts during the Soekarno (Sukarno) era (1945–1967), and lectured at the Padjadjaran University, Bandung. His novel *Hikajat Kadiroen*, published as a serial in *Sinar Hindia* from 5 May to 22 September 1920, displays his talent as a writer and social critic.

SENI PRAMOJ, M. R. (1905–1997) Lawyer, Diplomat, and Politician

M. R. Seni Pramoj was a renowned lawyer whose legal career was overshadowed by his roles in politics, especially during the Pacific War (1941–1945), when he founded the Free Thai Movement in the United States to fight against the Japanese occupation of Thailand. Subsequently, he was made the postwar prime minister. He became one of the key members of the proroyalist Democrat political party, competing with the influential wing of the People's Party under Pridi Phanomyong (1900–1983), who received popular support from the Free Thai Movement. The struggle was fierce and bitter, but in the end both groups lost to the army in the Coup of 1948.

Seni was born on 20 May 1905 in Bangkok into a junior branch of the royal family. His father, Prince Khamrob, was former director-general of the police department under the absolutist regime. He received his secondary education from Suan Kularb College and later studied at Trent College in England. He then went to Worcester College, Oxford, for another four years, from 1925 to 1929, graduating with first-class honors. During this time he also studied for the bar at the Gray's Inn, where he earned fame by gaining the bar prize of 300 guineas. After returning to Thailand, Seni began to work in the ministry of justice and soon passed the bar exam to be a Thai barrister-at-law. In 1938, Seni was appointed a judge of the Court of Appeal at the age of thirty-two. He also was a lecturer in a law school.

In 1940 he was appointed minister plenipotentiary to the United States. When he received the Thai declaration of war against the United

States after Japanese troops invaded Thailand in December 1941, he refused to deliver it and founded the Free Thai Movement in the United States. As the postwar premier (t. 1945–1946), Seni accomplished the task of negotiations with the victorious powers, preventing them from punishing Thailand as a belligerent nation. After that, Seni resigned to allow an elected government to rule the country. At that time, without Plaek Phibunsongkhram (1897–1964) active in politics, the political scene was left to Pridi and his allies.

In the postwar liberal political atmosphere, Seni then joined with Khuang Aphaiwong (1902–1968) in establishing the Kaona (Advanced) Party, which grew to be a full-fledged political party in 1948 with the new name Prachatiwat (Democrat). Khuang became the prime minister in 1946, and Seni the foreign minister. Their government, however, lost in a vote of no-confidence a few months later. The political tide turned in favor of Seni and Khuang when the young King Ananda Mahidol (r. 1935–1946) was shot dead soon after his arrival from Europe on 9 May 1946. The Democrat Party attacked Pridi and his party on this issue and became an effective opposition party in the National Assembly (Parliament). The political situation was intense and volatile, especially when the Democrat Party launched the opening of a no-confidence vote on the Thamrong-Pridi government in October 1948. The economic problems and dissatisfaction among the military caused by their discredited position in postwar politics led the army to stage a coup on 8 November 1948. Although Seni and the Democrat Party lent support and cooperation to the Coup Group, they too were soon expelled from sharing power and government with the army.

During the 1950s, Seni returned to his legal career, lecturing in law and writing his political column in the newspaper. Following the death of Khuang in 1968, Seni became the leader of the Democrat Party for the general election of 1969. Under the military-dominated government, the Democrat Party again played the role of opposition. Seni was, however, ineffective on the opposition bench. Then came the student revolt in 1973, and the Democrat was left the political party that had been in existence the longest. Unsurprisingly, Seni became the prime minister again in 1975–1976, when the Democrats won the largest number of seats in the

National Assembly. Quickly Seni's political career ended in tragedy. After a massacre of student demonstrators by military-backed paramilitary forces on 6 October 1976, the military staged a coup, removing Seni from power.

Seni was also well-known for his novel ideas on the origin of the Thai constitution, which, he contested, was first invented by King Ramkhamhaeng (Rama Kamhaeng) of the kingdom of Sukhothai in 1283. He also translated traditional Thai poetry into English. Seni died in 1997, at the age of ninety-two.

SERVICES RECONNAISSANCE DEPARTMENT (SRD)

Laying the Groundwork

The Services Reconnaissance Department (SRD) was an Australian special operations unit that helped lay the groundwork for the Australian reoccupation of northwest Borneo (Sarawak, Brunei, and North Borneo/Sabah) during the Pacific War (1941–1945). SRD activities contributed to the success of the Australian amphibious landings (OBOE 6 operations) at Brunei Bay and Labuan in June 1945.

SRD was an Australian outfit directly responsible to General Sir Thomas Albert Blamey, commander-in-chief of the Australian Military Forces (AMF) based at Allied Land Headquarters in Melbourne. In fact, SRD was a cover name for Special Operations Australia (SOA), which had moved out of the Allied Intelligence Bureau (AIB). Lieutenant Colonel P. J. F. Chapman-Walker commanded SRD, whose members were mainly Australians and New Zealanders with a few British officers.

SRD implemented a series of long-term field operations code-named AGAS (lit. “sand-fly”) and SEMUT (lit. “ant”) in North Borneo and Sarawak, respectively. In March 1945, SRD units were parachuted behind enemy lines in the Upper Baram and Trusan valleys in Sarawak and at Labuk Bay in North Borneo. SRD operations focused on the gathering of intelligence and organizing the local inhabitants, including training and arming them, into resistance groups to wage guerrilla warfare against the Japanese. SRD operations to a considerable extent paved the way for the invasion in the Brunei Bay–Labuan Island area in mid-1945.

SRD long-term field parties succeeded in establishing a semblance of prewar administration over vast areas that came under their de facto authority. Consequently it facilitated the establishment of military administration that was undertaken initially by the British Borneo Civil Affairs Unit (BBCAU), followed by the British Military Administration (British Borneo) or BMA (BB). But of particular importance was the fact that this SRD-sanctioned native administrative structure minimized civil disorder and deterred open ethnic clashes prior to the establishment of stable government.

SEXUAL PRACTICES IN SOUTHEAST ASIA

In the sixteenth century, European explorers, religious missionaries, and administrators arrived in the various countries of Southeast Asia with the prevailing ideology that all sexual practices were to be avoided unless they occurred within monogamous marriage for purposes of procreation. This worldview brought the Westerner into conflict with indigenous peoples in the countries throughout the region, in particular in relation to aspects of sexual practice that the Europeans labeled adultery, fornication, prostitution, polygamy, the “sin against nature,” and the various penis pin devices (named *sagra* or *palang*, among others) common in some areas.

Throughout the Southeast Asian region, there was no one common set of rules in relation to sexual practice. Instead, practices tended to be influenced by the different religious ideologies that permeated the areas concerned. There is, however, one commonality that can be established. Before the arrival of Christianity, Sinic, Indic, and Muslim patriarchal traditions tended to impose constraints on sexual practices, especially where women were concerned, whereas those areas in the region that followed the more matrilineally based Animist traditions of the ancestors had few if any restrictions.

This also applied to the literature of the region. Spanish friars in the Philippines burned erotic and explicitly sexual texts. Sensuality was purged from Malay and Thai sources; remaining Balinese texts construct “primarily a world of desire and sensuality” (Creese 2000: 4; Vickers 1986).

There are few, if any, Animist societies throughout peninsular or island Southeast Asia today that have not been directly influenced by a patriarchally based religion or philosophy. Buddhism and Confucianism both were influential in Vietnam before a small band of erstwhile Catholics added their input in the sixteenth century. Although never colonized by Asian or European powers, Thailand was influenced by Hinduism and Buddhism. Islam has increasingly affected the Malay Peninsula and archipelagic Southeast Asia—especially including the greater part of Indonesia. In Bali there is a mixture of religious traditions, with Hinduism and mystical forms of Islam being the

dominant influences. In the Philippines there is evidence that Animist communities borrowed liberally from Indic ideas before Islam made its way from Borneo to Mindanao and the Sulu Archipelago. Hispanic Catholicism colonized the minds and bodies of the rest of the Philippine population in the sixteenth and seventeenth centuries. East Timor has also been greatly influenced by Catholicism introduced by the Portuguese in the early part of the sixteenth century.

In Southeast Asian communities that followed matrilineal Animist traditions, there was no reason to control women's bodies. Indeed in Minangkabau (Sumatra), where women owned and inherited property, there was no institution of marriage, and throughout their lives men lived in the maternal home with their mother and sisters. This had the added implication that men were financially responsible to the maternal household and psychologically attached to the children of their sisters—rather than their own biological offspring.

While one community at least found no need for marriage, other communities, in which there was a bilateral system of inheritance (that is, where the offspring inherited equally from both parents with no primogeniture), did have the institution of marriage. But that was without the associated control of women's bodies that was consistent with patrilineally based societies. In the non-Muslim Philippine context, for example, virginity was neither valued nor esteemed. Indeed, in 1582, the Spanish conqueror and settler Loarca observed that “the women are extremely lewd, and even encourage their own daughters to a life of unchastity; so that there is nothing so vile for the latter that they cannot do it before their mothers, since they incur no punishment” (Loarca 1582: 118). In making sure that a female's hymen was no barrier to her natural instinct to be sexually satisfied, in some places a form of folk surgery was performed to break the hymen of relatively young girls. As Morga explains, there were men “whose occupation it was to brake [*sic*] in or devirginize the maidens, and they were held in regard and paid for their services” (Morga 1889: 290).

This autonomy relating to sex before marriage spilled over into extramarital sexual relationships—which the Christian commentators pejoratively labeled “prostitution” or “adultery.”

In Animist societies, where there was a bilateral system of inheritance, extramarital sexual encounters were unremarkable events for the indigenes, but they caused consternation for the leaders of various European expeditions. In Cebu in 1521, Magellan complained to a local chieftain that the Europeans “could not have intercourse with their [indigenous] women without committing a very great sin” (Pigafetta in Blair and Robertson 1973, 33: 144–145). Forty-four years later, Legazpi was even more forceful in his protestations about sexual intercourse between Spanish soldiers and Cebuano women. Legazpi's chronicler put the Spanish perspective well by pejoratively labeling as the “evil” of “prostitution” an activity that was for the Cebuano a matter of good manners and hospitality (unnamed military officer, in *ibid.*: vol. 2, 138). Indeed, that which the Europeans labeled “adultery” had little negative baggage throughout Animist Southeast Asia. In pre-Christian Luzon, Plasencia noted in 1589 that a husband was neither offended nor incensed that his wife had had a sexual relationship with another man, adding that neither the adulterous male nor the female involved was in any way disgraced (Plasencia 1589: 181–182).

In regions where sexual practices were restrictive, especially in relation to women—places where the underlying conceptual foundation was patriarchal—the European explorers discovered a high level of control over unmarried women and wives as well as polygamy (multiple wives) and concubinage. In attempting to eliminate this form of “adultery” from indigenous societies, the Christian Europeans insisted that the first wife was the only legitimate wife that a man could have, and that the “superfluous wives” or concubines must be set aside. However, in the Animist Philippines the Spaniards also encountered various forms of polyandry (plurality of husbands). The Jesuit priest Chirino referred to polyandry when he stated that “toward Dapitan, it was the custom for Bissayan women to marry two husbands” (Chirino in Blair and Robertson 1973, 12: 293). In the Philippine archipelago, especially among poorer rural people, a set of circumstances based on economic considerations again reflected a polyandrous relationship whereby, if one man could not afford the bride-price, two pooled their resources and shared one woman (Christie 1909: 57).

In different areas in the region, the practice of penile folk surgery was common. Penis decorations included bells that were not always inserted under the penile skin (Java); small, solid balls, pellets, or spheres (Siam/Thailand); and small, solid nonspherical objects (Sumatra) that were inserted beneath the skin. In addition, in the Visayas, southern Philippines, Borneo, and Sulawesi, pins or bars were inserted crosswise through the penis, with either decorations on the ends of the bar or pin or with the pin holding a ring or rowel-shaped object around the penis (Brown, Edwards, and Moore 1988: 1–4).

In the early sources that relate to the Philippines, Pigafetta suggests that the insertion of the *sagra*, or penis pin, was a significant moment in the life cycle of a young Visayan boy (Pigafetta 1521; Blair and Robertson 1973, 33: 170–173). However, other sources note that the males were older when the insertion occurred, suggesting “puberty, participation in head hunting, or adulthood” as the age or occasion for installation (Brown, Edwards, and Moore 1988: 4).

The reasons for the use of penis decorations differed from region to region. In Thailand it was a status symbol. However, in the Visayas the use of the *sagra* was not limited to elite male personages. Instead “every man and man-child among them” wore one of these devices (Pretty 1904, XI: 332–333). Nevertheless, observers seldom gave men any agency in regard to the insertion and use of penile devices. Instead, in an attempt to explain what Loarca termed this “abominable custom” (Loarca in Blair and Robertson 1973, 5: 117), the writers tended to place the “blame” squarely in the women’s court, from Pigafetta’s mild “they say that their women wish it so” (Pigafetta in Blair and Robertson 1973, 33: 170–173), to Morga’s explanation that “the natives of the Pintados Islands, especially the women, are vicious and sensual, and their wickedness has devised lewd ways of intercourse between men and women. . . . With this device, they have intercourse with women, and for long after copulation they are unable to withdraw” (Morga 1889: 289–290).

Anal sex between men and women and what we today term homosexual practices were also found throughout the region by the European explorers. Reports of these practices were always negatively charged with the label “unnatural vice” (sodomy)—which was (within Catholicism) considered the worst of all the

sins of lust because it was thought to be an act against the ordinance of nature. Little is known about indigenous attitudes toward anal sex and same-sex practices. In 1598 the second archbishop of Manila, Ignacio de Santibáñez, in a letter to Philip II, suggested that the practice of sodomy was widespread among both men and women, although (like adultery) it was not considered worthy of rebuke or censure. Blaming the Chinese for introducing Filipinos to the practice, Santibáñez wrote to his king, Philip II, in 1598 that “the sin of Sodom is widespread among them [the Chinese], and they have infected the natives with it, both men and women, for since the latter are a poor-spirited people who follow the line of least resistance, the Chinese make use of them for their corrupt pleasures; this curse though extensive attracts little public notice” (Santibáñez to Philip II, Manila, 24 June 1598, in Blair and Robertson 1973, 7: 141–152).

Transvestism, or cross-dressing, was another custom that early chroniclers tended to associate with what they called perverse sexual practices. Typical of the descriptions of these men—*bissu* in South Sulawesi and *asog* in the Visayas—was that they were men who wore their hair long, dressed like women, and performed religious rituals. As one commentator put it, they “ordinarily act like prudes, and are so effeminate that one who does not know them would believe they are women” (Quirino and Garcia 1958: 430). However, in relation to sexual practices, there seems to be a great difference between areas where women were, in the main, the religious facilitators (Visayas) and other places where the men who dressed like women had exclusive access to the priestly role. On the western coast of South Sulawesi, where the *bissu* were considered priests to the king, they—as Antonio de Paiva, a Portuguese observer, commented in 1545—“marry, and have sex only with other men because contact with a woman in thought or deed would lead to the destruction of their religion” (cited in Andaya 2000: 10). In the Philippines, however, no such misogynistic thinking prevailed, and the sexual practices of the transvestites there seemed to span the spectrum of possibilities from celibacy to marriage to women or to what we today term homosexuality (Brewer 2001: 229–254).

A significant characteristic of the power imbalance that existed between colonizer and col-

onized was that patriarchal traditions—including those of the Europeans—attempted to impose their own restrictive sexual practices onto the societies with which they came into contact. With the introduction of restrictive sexual practices, the relative gender symmetry of some indigenous societies was also disrupted, inserting in its place the underlying basic assumption that women were “naturally” different from and inferior to men. Therefore, this “biological given” became the foundation on which all other societal relationships were built, and the accompanying homogenized restrictive sexual practices had a deleterious impact on the self-esteem and self-perception particularly of women.

SHAMSUDDIN AL-SUMATRANI (d. 1630)

Distinguished Sufi Theologian

Sharing Hamzah Fansuri's religious convictions of the *Wahdat al-Wujud* ("Unity of Being") of Wujudiyah mysticism, Shamsuddin al-Sumatrani was better adept in deflecting opposition to the extent that he attained the confidence and patronage of Aceh's greatest ruler, Sultan Iskandar Muda (Mahkota Alam) (r. 1607–1636). In the royal court Shamsuddin flourished as the preeminent Islamic scholar.

Little is known of his background, such as his birth date and place. He was also addressed as Shamsuddin bin Abdullah al-Sumatrani as well as Shamsuddin of Pasai, the latter indicating perhaps his hometown. Pasai, located on the eastern coast of Sumatra, was one of the earliest city-ports in Southeast Asia to embrace Islam, in 1295. Emphasizing his Sumatran and Pasai roots, it is probable that he was an Acehnese. Shamsuddin studied with the Javanese teacher Pangeran Bonang and was also influenced by Fadl Allah al-Burhanpuri of Gujerat. But there was no indication, despite his convergence of religious thoughts, that he was ever a student of Hamzah or his contemporary.

Shamsuddin's core ideas are summarized as follows. "Its outstanding features are the doctrines of unity . . . the Unity of Existence and the Perfect Man. . . . [His thoughts] represent the more speculative type [of mysticism], centering around the theory of existence equally . . . [and] it stands midway between the Indian and Javanese forms" (Van Nieuwenhuijze 1945: 236, 239). He asserted that "only Being is real; man, a puppet in God's shadow-play, is but appearance, an image of the attributes of Allah." Therefore, "[to] know one's self is the way to perfect knowledge" (Winstedt 1991: 100).

Capitalizing on royal patronage, Shamsuddin expounded his and Hamzah's brand of Wujudiyah mysticism. In his lifetime, he succeeded in defending *Wahdat al-Wujud* ("Unity of Being") against all opposition. He was fluent in both Malay and Arabic, and more than eighteen works have been attributed to Shamsuddin. However, only a few survived the flames when he, together with Hamzah, was violently denounced as heretical by the Indo-Arab Sufi Nuruddin al-Raniri (d. 1658) after the death of Sultan Iskandar Muda. The *Mir'at al-Mu'minin* (*Mirror of the Muslims*), dated 1601 in Malay and Sundanese, and a fragment of the *Mir'at al-Muhakkikin* survived. The first section of the latter is entitled "Nur al-daka'ik" ("Light from All Ages"). *Mir'at al-Muhakkikin* contains excerpts from *Dikr da'ira qab qausain au adna*, *Sirr al 'arifin*, and *Mir'al al-Kulub*, apparently lost works of Shamsuddin. His commentaries on Hamzah's poems are *Sharh Ruba'i Hamzah al-Fansuri*.

Shamsuddin was a distinguished Sufi theologian particularly influential within the Acehnese court and throughout the Malay Archipelago. He died in 1630. Notwithstanding criticism of his teachings and the burning of his works, his contribution to Islamic mysticism and Malay literature was undisputed.

SHAN NATIONALISM

Shan nationalism, the belief that the Shan people of Myanmar (Burma) should have their own political autonomy, and perhaps an independent state, evolved from the mid-1950s, when a number of students from the Shan states organized cultural associations at Yangon (Rangoon) and Mandalay universities. The

Shan, who probably number about 4 million out of Myanmar's approximately 50 million population, represent little more than half of the people who live in the Shan state (Smith 1999: 30). The Shan state borders China, Laos, and Thailand in the northeast of Myanmar. Ethnographers and linguists link the Shan together with the Thai, Lao, and Assamese populations of southern China, northern Southeast Asia, and the eastern Indian region to form the T'ai group. The Shan language uses the Burmese alphabet, but the spoken language is very similar to spoken Thai. The Shan are overwhelmingly Theravada Buddhists, as are most of the other population groups in the region.

Prior to the arrival of European colonialism in Asia, petty kings and princes known as *sawbwas* governed the Shan. The sawbwas, whose powers were similar to those of other monarchs in the region, owed allegiance to whoever among the major monarchies in the region could claim sway to them. Thus they might owe allegiance to the Burmese kings, the northern Thai princes, the Thai kings, or perhaps the Chinese emperors. Marriage alliances were often formed between the courts of the sawbwas and the larger kingdoms that sought to exert tributary relations with them. As the power of the larger monarchies waxed and waned, the sawbwas sought to exert their independence.

However, when the British and French came to dominate the region, and the Thai monarchy under King Chulalongkorn (r. 1868–1910) began to dominate northern Thailand from the 1880s onward, relations between the sawbwas and the state began to change. The British, who had conquered the Shan states quickly following the annexation of northern Myanmar to the Indian empire, determined that they would maintain the authority of the sawbwas. A system of indirect rule ensured that as long as the individual sawbwas obeyed the instructions of the British superintendents who were appointed to advise them, they would remain in power. In 1931 the British recognized seventeen sawbwas and nineteen lesser rulers (*myosas* and *ngwekunhmus*, who often claimed the title of *sawbwa*) in the Shan states. The petty kingdoms varied in population at that time from a small community of 2,700 to large settlements of 242,000. The effect of British rule was to isolate the Shan states from the changes taking

place in the rest of Myanmar, where Burmese nationalism was growing apace, by establishing a different form of rule in the Shan states. Moreover, the colonial government forbade people from other parts of the country to travel to the territories of the sawbwas. And the autocratic powers of the sawbwas were enhanced by the more efficient administrative techniques that the British introduced. The result was occasional rebellions, particularly by members of other minority groups, against the sawbwas' taxing powers. Recognizing the anomalous position of the Shan states in the modern world, the British were laying plans in the 1940s to bring the states more in line with an egalitarian form of administration. Such an administration would have lessened the autocratic powers of the sawbwas. These plans were soon superseded by the rise of Burmese nationalism.

Prior to Myanmar's regaining its independence in 1948, the sawbwas and other minority leaders agreed with the British and the Burmese nationalist leaders in the Anti-Fascist People's Freedom League (AFPFL) to join in a new federal constitution for all of the country. The Shan states and the tiny Kayah state were given the right to secede from the Union of Burma after ten years if they wished to do so. However, before exercising that option, the thirty-four remaining sawbwas agreed to abandon their traditional rights and powers in exchange for a state pension. In the meantime, the central state's army had entered into active administration in large parts of the Shan states where there were Chinese Nationalist troops (KMT, Kuomintang/Guomindang) that had crossed over the border from China. These Chinese Nationalist troops, with the backing of Thailand and the United States, were preparing to invade China. They eventually became involved in the opium and other illegal trades in the region.

Opposition to the central government in Yangon and the rise of Shan nationalism were consequently fueled by a number of factors. Key among them, in addition to opposition to the oppressive behavior of the central government troops, were the efforts of the government to impose the same administrative and political structures on the Shan state as on the rest of the country. The delayed introduction of modern systems of administration was much resented by the local populations, which in-

sisted that they should have the right to develop their own administrative systems. Arguments about the fair distribution of revenues for development projects and other issues also occurred. Soon armed bands in the name of Shan rights arose in opposition to the government. The first armed clash occurred in 1959. Since then a number of legal and illegal political parties and armies, some with connections to the former sawbwas, have arisen. Several of them have become involved in the illicit drug trade in order to support themselves financially.

SHAN UNITED REVOLUTIONARY ARMY (SURA)

The Shan United Revolutionary Army (SURA) was one of the breakaway factions of the highly fractionalized Shan nationalist movement that arose in the early 1960s in Burma (Myanmar). Led by former Burma Communist Party (BCP) member Gon Jerng (aka Mo Heing), in the Laikha district of the Shan state, SURA refused incorporation in the Shan State Army but entered into an alliance with Chinese Nationalist (KMT, Kuomintang/Guomindang) remnants in 1969. Like all the insurgent groups operating in the Shan states, they became involved in the opium trade across the border with Thailand in order to finance their military activities. SURA was just one of many insurgent groups in the area whose fortunes

waxed and waned as new and different players entered the drug trade.

SURA was rejuvenated in 1996 as a consequence of the surrender to the government of Khun Sa's Mong Tai Army (MTA), then the largest of the drug dealers in the region. It was in 2001 led by Yord Serk, who demanded the right to dictate cease-fire terms with the government. This was rejected, and in the early 2000s Yord Serk's SURA was one of the most active of the insurgent groups that had not reached a cease-fire agreement with the government. Claiming that it was not involved in the drug trade and was merely pledged to autonomy for the Shan people, SURA operated on both sides of the Myanmar/Thailand border. A series of government offensives against SURA forced the relocation of 1,500 villages in the central and southwest Shan state, generating thousands of refugees who fled into Thailand (Smith 1999: 447).

SHANS

The Shan are a subgroup of the T'ai peoples. They reside mainly in northern and eastern Burma (Myanmar), where they form the second largest ethnic group. Smaller numbers of Shan people also live in Laos, the Chinese Shan states of Yunnan, and Thailand. Spoken Shan shares similarities with other T'ai languages, and Shan ethnohistory is also characterized by the historic importance of the T'ai *muang*. This comprised a number of villages owing personal allegiance to a local ruler, or *chao*. Yet the Shan people are also distinguished by the degree to which their culture and script have been influenced by contact with Burma. However, the Shan feel that they have historical, literary, religious, artistic, and architectural traditions that can hold their own with those of the majority Burman population in Burma, and that is a source of considerable pride.

Several Shan people at Bhamo, Burma, ca. 1886. (Hulton-Deutsch Collection/Corbis)

The earliest significant migrations of T'ai peoples into the valleys of the Salween, Irrawaddy, and Chindwin Rivers seem to have coincided with the rise of the Nanchao kingdom in western Yunnan after 729 C.E. By 832, Nanchao was waging war in Burma, thereby creating opportunities for the expansion of T'ai muang across the region. The term *Shan* (*Syam*) seems first to have appeared in inscriptions in the Burmese kingdom of Pagan in ca. 1120, although Shan chronicles state that Shan communities were established throughout Upper Burma by the tenth and eleventh centuries. Much more archaeological and historical research on early Shan ethnohistory remains to be done.

Under the leadership of Sao Hkan Hpa (r. 1152–1205) it is claimed that Shan muang extended from Assam, across to the Shweli valley, to Sipsong Panna in Yunnan. In 1215 the muang of Mogoung was established, which was an important site for the control of the northern trade

routes between India and China. Throughout the thirteenth century, Shan muang were also consolidated on the eastern plateau of Burma, such as at Mong Nai in 1223. This plateau was later to form the heartland of the Shan states. In 1229 the migration northwest led to the founding of the T'ai kingdom of Ahom in Assam. Shan subgroups, such as the Khamti, then emerged with their own muang in this region.

Traditionally, the fall of the Burmese kingdom of Pagan in 1287 is said to have brought about a Shan dynasty in Burma at Ava, founded by three "Shan Brothers." Recent research has questioned the Shan identity of these brothers, believing it to be a myth invented by the British during the colonial period in Burma (1824–1948). The post-Pagan Burmese dynasty seems not to have had any significant Shan characteristics, but the decline of Pagan did provide opportunities for Shan expansion in the north and east. Only with the emergence of a new Burmese dynasty at Toungoo in 1486

was there a more successful and aggressive policy adopted toward both the Mon and the T'ai kingdoms, especially under King Tabinshwehti (r. 1531–1550) and King Bayinnaung (r. 1550–1581). Although by 1527 a coalition of Shan *chao* (or *sawbwa* in Burmese) had managed to establish a discernibly Shan authority at Ava, that collapsed, and Shan authority fragmented again into numerous muang.

Despite the fragmentation of Shan political organization, Shan nationalist ethnohistory prides itself on the fact that Shan *chao* always retained their independence from the Burmese kings, even though tribute might be paid to them. The British continued this administrative separation from central Burma after they annexed Upper Burma in 1885. They governed the muang of the eastern plateau, which also contained significant numbers of non-Shan and non-T'ai peoples, as the "Shan states" through the leadership of the hereditary *chao*. Greater political unity was created in 1922, when the Shan States Federation was established. The Shan *chao* had the most significant political voice of all the minorities in Burma in the debates leading up to independence, and by the time of the Panglong Agreement in 1947, Shan leaders anticipated that a high degree of autonomy from the Burmese center would continue. At Panglong the future of the Shan states within an independent Burma was outlined, and a promise was given that, after a ten-year period following independence in 1948, the Shan states would be allowed to secede if they felt their interests were not properly represented. Political upheavals meant that this option was never allowed to take effect. In 1959 the *chao* lost most of their political powers, and in 1974 a new Burmese constitution was introduced in which the Shan states lost most of their autonomy. These frustrated ambitions have led to continuing ethnic conflict between Shan nationalist organizations and the Burmese government. Since 1989, various armed Shan nationalist groups have entered into their own cease-fire agreements with the government, although these have tended to exacerbate internal divisions within the Shan nationalist movement. The agreement attracting the most international comment was that of 1996 between the government and the Mong Tai Army, led by Khun Sa. Khun Sa has been at the forefront of international debates about the role of

the drug trade in the financing of ethnic conflict in the region. The cease-fires still stand, but they are fragile; the political future of the Shan states is still uncertain, although calls for independence from Burma are unlikely to be met.

SHIPBUILDING

During the past 5,000 years the expansion of the Austronesians from Taiwan into Southeast Asia, and from there into the Pacific and to Madagascar, has always been carried out, out of necessity, across the seas and upstream along the rivers of the major islands. At the turn of the first millennium C.E., local and regional maritime exchange networks had expanded into long-distance overseas commerce that brought local ships and traders to harbors of the South China Sea and the Indian Ocean. Linguistic, ethnographic, archaeological, and historical research has all contributed to a considerable body of knowledge on Austronesian shipbuilding traditions. Other peoples of Southeast Asia, particularly the Mon, appear in time to have developed their own shipbuilding industries. However, for lack of proper studies, it is not clear how much of it was indigenous, or how much they owed to borrowings during interaction with the neighboring Austronesians (Austronesian nautical terms appear in Old Mon inscriptions).

The typical Austronesian vessel appears to have been developed from a dugout canoe. As its size grew, side-planks were added to the dugout hull, which progressively turned into a keel. In the early stages of seafaring, as in historical and modern smaller and narrower boats,

outriggers were necessary stabilizing devices. As these smaller vessels grew into bulkier, high-seas trading ships with rounded hulls, however, it appears that outriggers were not used: the earliest descriptions of Austronesian ships, in third- to eighth-century Chinese texts, do not mention stabilizing devices. What they do describe are very large ships, carrying hundreds of tons of cargo and passengers, propelled by multiple sails rigged on several masts. According to these early witnesses, no iron was ever used in fastening the planks of these ships, only strings made of vegetal fibers. Archaeological work carried out in Peninsular Malaysia, Sumatra, and the Philippines has indeed brought to light an indigenous tradition of shipbuilding that fully confirms these early texts. Sites from the third to the twelfth centuries C.E. have yielded remains of hulls made of planks fastened together by wooden dowels and stitches of palm-sugar fiber strings. Some of these shipwrecks were as much as 30 meters in length. These sites also yielded some side rudders, a feature described in later ships that survived in twentieth-century Javanese and Bugis traders. Their sails and masts were reconstructed from iconography, as depicted on a few early seals and on the famous eighth-century relief of the Borobudur temple: they carried multiple tripod masts and canted square sails made of matting. This early stitched technique partly survived in seventeenth-century Philippines and Moluccan boats and in modern whaling boats of Lomblen.

By the fifteenth and sixteenth centuries, much of the local large-scale trade was carried out in ships known in Malay or Javanese as *jong*, a local term that gave birth to the word “junk” in European languages (later to be used only for Chinese ships). Their hulls were still being assembled without any iron fastenings: wooden dowels had by then completely replaced the earlier fiber lashings to keep the planks fastened together, and the shell was in turn dowelled to the sturdy frames. These were huge sailing vessels, even by European standards of the times: Malay and Javanese *jong* that hauled 500 tons of merchandise and a few hundred people were regularly described in Portuguese sources. Like earlier vessels, they were steered with a pair of side rudders and carried multiple masts, and as many lug sails of fiber matting, including a typical bowsprit sail.

The fleets of large indigenous *jong* were to disappear in the second half of the sixteenth century because of a combination of economic and political factors that laid considerable strain on the capacities of local powers to maintain their own trading fleets. As a result of increased warfare at sea, much of the local capital and energy was then spent on building and maintaining profusely armed war fleets of long craft. The largest were new ships for the region, galley-type craft built according to Mediterranean standards learned from Portuguese renegades and Turkish shipwrights, built in such a way as to allow them to carry and shoot the large cannon necessary for battles at sea.

Shipwreck archaeology has also proved that, by the fifteenth century, indigenous Malay and Javanese *jong* were no longer the only large trading ships built locally. Southern Chinese vessels had conquered their own share of the local shipping. However, the ban on shipbuilding and overseas shipping imposed by the Ming dynasty (1368–1644) appears to have prompted many Chinese to settle in Southeast Asia and to build their ships locally. This contributed to the birth of the so-called South China Sea shipbuilding tradition, a blend of two nautical traditions, Austronesian and southern Chinese.

In Indonesian seas, a significant fleet of lesser coasters (under 100 tons) survived the disappearance of the large oceangoing *jong*. The building of these vessels kept the local shipbuilding traditions alive until modern times. Together with the fishing boats, these fleets of small to medium-size Madurese, Butonese, and Bugis ships were the last to bear witness to the earlier grandeur of Malay world shippers.

"SHOE ISSUE"

A Clash of Civilizations

The "Shoe Issue" refers to what might be called a "Mexican standoff" between the aggressive British colonial administrators and the last rulers of the Konbaung dynasty, particularly King Mindon (r. 1853–1878) and his son, King Thibaw (r. 1878–1885). In essence, under Burmese custom, it is offensive to wear shoes in the sacred precincts of a pagoda or temple or the king's palace. Shoes are also taken off before entering private homes.

The issue came to prominence only once British delegations began to have audiences with the Burmese monarchs after the Treaty of Yandabo (1826) at the conclusion of the First Anglo-Burmese War (1824–1826), which provided for a British resident to be located in the capital city. Communications, audiences, and formal contacts between the British representatives of the East India Company (EIC), then

the governor-general in India, and the Burmese court were constantly fraught with thorny issues of custom and etiquette: for instance, the question of at which point shoes or hats should be taken off, if at all; how an official letter was to be delivered and received; or where delegations should be housed. On such important issues the fate of an empire balanced.

In 1855, 1862, and 1867, the British delegations to the court of King Mindon compromised: they took off their shoes, under duress, within the palace precincts. By 1875 the official British attitude had so hardened that the last British resident to the Konbaung court, Sir Douglas Forsythe, was ordered not to remove his shoes by the chief commissioner for British Burma, Sir Charles Bernard. As a result, King Mindon could no longer receive him. The incident greatly saddened Mindon, whose policy it had been to try to have amiable relations with the British. It meant that the British resident no longer had access to the royal court, a fact that was very detrimental to British-Burmese relations in the last years of the Konbaung dynasty. By 1879, when King Thibaw was on the throne, the British found a pretext to formally withdraw the British resident from the court at Mandalay altogether.

The "Shoe Issue" surfaced again in the context of awakened Burmese nationalism in the early twentieth century. The Young Men's Buddhist Association (YMBA) at the 1916 All Burma Conference of Buddhists at Jubilee Hall, Rangoon College, examined British religious policy. There was intense controversy as fifty branches of the YMBA took up the Shoe Issue, which led to the colonial government's banning additional discussion. It further increased nationalist sentiment. In 1918–1919, the Prome lawyer U Thein Maung and other leaders of the "no footwear" group drafted memorials to the government on the issue. The revered Ledi Sayadaw published a 95-page book in Burmese entitled *On the Impropriety of Wearing Shoes on Pagoda Platforms*. Shortly thereafter, on 4 October 1919, some Europeans, including women wearing shoes at the Eindawya Pagoda in Mandalay, were attacked by angry *pongyis* (lit. "great glory"; Buddhist monks in Burma). Four monks were arrested, tried, and convicted. Their leader, U Kettaya, was convicted of attempted murder and sentenced to life imprisonment.

The Shoe Issue became the first overt expression of anticolonial political views in Upper Burma since the pacification of 1895. British refusal to support the Buddhist supreme patriarch, the *Thathanabaing*, was perceived as the attempt of a Christian government to subvert the traditional religion of the country and foster the disintegration of the Buddhist Sangha.

**SHORT DECLARATION,
LONG CONTRACT**

The Short Declaration (a literal translation of the Dutch *Korte Verklaring*) was the formula used by the Netherlands Indies government (the colonial administration in Batavia) to extend its territorial control over the rest of the Indonesian archipelago. Briefly, the Short Declaration empowered the colonial administration to issue instructions to local rulers on how to exercise their authority. The essentials of the Short Declaration remained more or less the same throughout the late nineteenth and twentieth centuries. All those who signed recognized subordination to the authority of the Netherlands Indies government in Batavia. All agreed that their relations with foreign powers would be curtailed. In this way, the Netherlands extended sovereignty over the entire Indonesian archipelago. By the time of the Japanese

Occupation (1942), more than 250 such local rulers had signed the Short Declaration. Some of these rulers exercised control over large territories, while others were merely low-ranking village and district chiefs.

The Short Declaration was short and brief because it contrasted with the “long” contracts that were earlier concluded between the Netherlands Indies government and some seventeen so-called self-governing lands. The latter were left under the charge of rulers who were empowered to deal with legislative and administrative matters pertaining to their territories, but they had to ensure that obligations to the Netherlands Indies government were met. The long contracts defined the limits of the competency of both the rulers and the Netherlands Indies government.

Both the Short Declarations and the long contracts were modified during the period just before the Japanese Occupation. In both cases, the subordinate status of the local rulers was reiterated, and all did not regain their autonomy.

**SIAMESE MALAY STATES
(KEDAH, PERLIS, KELANTAN,
TERENGGANU)**

The term “Siamese Malay States” often refers to four states in Peninsular Malaysia (Malay Peninsula): Perlis, Kedah, Kelantan, and Terengganu. All these are situated in the northern and eastern parts of the peninsula. The term is used to indicate Siamese political influence in these states, although Terengganu had very little to do with Siam, except that it shares its borders with Kelantan, which was politically linked with Siam. Kedah, which shares its northern boundary with southern Siam, had had a longer connection politically and culturally with the latter, although that did not necessarily mean that

Kedah was always under Siamese sovereignty. Perlis was originally part of Kedah until the 1820s, when, with the help of Siam, it became autonomous and later became independent. Kelantan was never under Siamese jurisdiction, except in the last quarter of the eighteenth century, especially when the rulers of the state began to invite Siam to intervene in its internal affairs.

Siam-Malay Relationships

Kedah had an old history that started in the fourth century C.E. Being situated on the Isthmus of Kra on the “neck” of the Malay Peninsula, it became the first landing place for Indian traders who crossed the Bay of Bengal on their way to mainland Southeast Asia and China in the East. Archaeological finds at Kuala Muda and the Bujang valley bear testimony to this. It is strengthened by the satires in the *Hikayat Merong Mahawangsa* (Merong Mahawangsa Chronicles), which tell the story of Kedah from local tradition. It is here, too, that the relationship between Kedah and Siam is described as one based on diplomatic relations as “between a younger brother to an older one” rather than as tributary. The sending of the *Bunga Mas* (“Gold Flowers”) and *Bunga Perak* (“Silver Flowers”), which are sometimes interpreted as a form of tribute, is mentioned in this tradition only as a token to “announce the birth of a son of the Kedah ruler” to Siam.

The Kedah relationship with foreign powers, such as Melaka, Siam, Burma (Myanmar), and later the British, was generally based on efforts by the reigning rulers to keep the state from being invaded. Thus Kedah rulers sided with one—and normally the stronger—power over the other to guarantee their political survival. In the early fifteenth century, for example, the ruler extended his diplomatic relations to the upcoming Melaka-Muslim power without having to refer to Siam, which already had some political influence on it. Similarly in the 1760s, Kedah preferred to be on friendlier terms with Burma because it was feared that otherwise the latter might invade it. In 1786, Penang, which belonged to Kedah, was leased to the British independently without referring to Siam. It cannot, however, be completely denied that Kedah was independent of Siam, because there were occasions when Kedah did

send tributes to Siam apart from other gifts. In the period from the 1820s to the 1840s it was clear that Siam ruled Kedah, after the occupation of the state in 1821 and the exile of Sultan Ahmad Tajuddin for twenty-two years. In 1841, however, Siam invited the sultan back to the state to resume his sultanate. Kedah-Siam relationships became more discernible, especially when there were internal squabbles among the Kedah ruling families, and when some parties preferred to ask for recognition from the Siamese authorities against their contenders. When the British began to intervene in the other Malay States, they concluded Anglo-Siamese Treaties in 1902 and 1909 with Siam over Kedah, Perlis, Kelantan, and Terengganu, showing their recognition of Siamese authority over these states. These treaties were to enable the British to concentrate on the northern states of the Malay Peninsula without Siamese interference. The treaties transferred any Siamese rights over the “Siamese Malay States” directly to the British.

Kelantan in the northeast corner of the peninsula had always been connected with Siam through Patani, a territory in southeast Thailand where the founder of the Kelantan sultanate originated. Kelantan, whose sultanate began in the last quarter of the eighteenth century, became noticeably more politically dependent on Siam. This was apparently inevitable, especially when the heirs of its founder, Sultan Long Yunos, sought Siamese help against their enemies—namely, from Terengganu, its neighbor on its southern border in the first decade of the nineteenth century. Troubles with Terengganu often involved tussles over the throne, because marriages between the Kelantan and Terengganu royal families seemed to open contentions from the latter also to claim rights over the throne. These led to the possibility that Terengganu would invade Kelantan for the purpose. Kelantan would normally send the *Bunga Mas* to Siam, requesting help and protection and also indicating Kelantan’s position as Siam’s dependency. In 1894 a Siamese commissioner was stationed in Kota Bharu, the capital of Kelantan, to help in its administration. As in Kedah, Kelantanese rulers often referred to Siam whenever they faced disputes over the issues on succession or other problems. In return Siam insisted that Kelantan send regular reports and tributes to it. As has

been explained above, Siamese rights over Kelantan and Terengganu were completely removed by the conclusion of the Anglo-Siamese Treaty of 1909.

Economic Development of the Siamese Malay States

Kedah, together with Perlis, had long been an entrepôt for traders from India and mainland Southeast Asia to China. Its land was suitable for the production of rice, a staple food for the Asians. But from the fifth to eleventh centuries, Kedah thrived on trade of goods from the surrounding areas. It had also begun to attract traders from Arabia and China and had made Kuala Muda, the estuary of the main river, into an important port of the state, especially when Kedah was under the influence of Śrīvijaya, a powerful kingdom in the seventh through the eleventh centuries. But Kedah's fortunes began to decline at the end of the eleventh century, when it was dragged into warfare with the enemies of Śrīvijaya, whose influence also began to dwindle. In the fourteenth century it was overshadowed by Melaka, which eventually replaced Śrīvijaya in importance. Subsequently Kedah tied trading and political relationships with Melaka, especially when its ruler (presumably Merong Mahawangsa) also became a Muslim. Economically, Kedah became more important as a rice-producing country, although trade continued to play a vital role. In the eighteenth century, when Siam began to play an important role in the politics of Kedah, the latter was reported to have sent tributes and other expensive gifts that included artifacts made of silver and platinum, gold-thread cloth, Japanese and Chinese silk, and boxes of potpourri, probably from India. All these show that Kedah still remained an international port. This phenomenon continued when the Portuguese and Dutch in Melaka also had trading relations with Kedah. When the British took the island of Penang in 1786, Kedah was seen as a major rice-producing state for the increasing number of immigrants who began to inundate Penang. A strip of land opposite the island that belonged to Kedah was later annexed by the British to produce foodstuffs. This acquisition in 1800 was later named Province Wellesley. Besides the production of rice, which is still the major product of Kedah today, some mining ar-

reas were exploited in the south, especially around Kulim. These were developed by Chinese entrepreneurs from Penang.

Kelantan and Terengganu were equally important in rice. But they were also important in jungle products, such as rattan. Pepper, coffee, gold dust, tin, rice, and woven cloth were also produced and exported. Trade was already established with Singapore by the 1820s. They were also reported to have sent their goods for trade via Penang, when the island thrived as an entrepôt. Kelantan and Terengganu were certainly known to have busy ports in the early nineteenth century. It was reported that in the 1830s there were some 40,000 people living in Kelantan, a figure that was higher than that of many other Malay States. In fact, the existence of some ports in these eastern Malay States was already mentioned in Chinese records in the early years of the Christian era. However, these two states were overshadowed economically when the British began to dominate the western coast Malay States (namely Perak, Selangor, and Negri Sembilan), which had begun to develop their tin and rubber industries. During this period Kelantan and Terengganu continued with their traditional economic activities—that is, agriculture and the trade in jungle products. Furthermore, they were comparatively disadvantaged because they were subjected to the stormy northeast monsoons (from November to February).

Siamese Cultural Influences

Unlike the case in the southern Malay States in the peninsula, Siamese cultural influences were discernible in the Siamese Malay States. The titles of rulers were given in Siamese, although they had different kinds of terms in their respective states. Sultan Ahmad Tajuddin, who ruled Kedah from 1803 to 1821 and again from 1841 to 1843, was given the Siamese title of *Chao Phraya Zaiburi*, while his younger brother was known as *Phra Aphainuratraja*. The sultan's assistants were known as *Phra Palat*. These titles were officially used in correspondence between Kedah and Bangkok. All official correspondence was written in both Malay and Siamese.

Kelantan royal titles also had their Siamese equivalents. In 1881, Sultan Muhammad II (r. 1838–1886) was given the title *Phya Pipit Pakdi*,

while his oldest son, who was heir apparent, was called *Phaya Ratsada*. When Sultan Muhammad later allowed his son, Ahmad, to be the full ruler, the former assumed the title of *Phya Lecha* (Senior Sultan).

Other cultural influences are still to be found today in the traditional dances, such as *Makyong*, in Kelantan, and Siamese vocabularies spoken in Kedah, Perlis, and Kelantan. The cuisine and attire to a certain extent have shades of Siamese influence. There are place-names that still bear testimony to Siamese influences in all these states.

The End of Siamese Political Influences

When the British began to expand their influence in the Malay States, they had to face possible opposition from Siam, which claimed that it also had rights in some of these states. To minimize such opposition, they concluded several treaties with Siam. The first was the Treaty of Bangkok (or Burney Treaty), which was signed in 1826. By this treaty the British recognized Siamese sovereignty over Kedah and Perlis, but not making clear the position of Kelantan and Terengganu. British influence became more prominent when Frank Swettenham, the governor of the Straits Settlements and high commissioner of the Federated Malay States, concluded the Anglo-Siamese Treaty in 1902 with Siam. Under this treaty the British proposed to establish foreign relations in Kelantan and Terengganu and offered to aid Siam against other foreign interferences in these states. The British also proposed that an adviser and assistant be appointed to help administer these states. It was, however, the Anglo-Siamese Treaty of 1909 that concluded Siamese political influences in Kedah, Perlis, Kelantan, and Terengganu. By this treaty the Siamese transferred all their rights in these states to the British, and in return the latter surrendered all their territorial rights in Siam to them.

After 1909 the history of foreign relations of the former Siamese Malay States was more closely linked with the expansion of British rule in the Malay Peninsula. They also endured the Japanese occupation in 1941–1945 and later joined the rest of the Malay States in their fight for independence from the British. They became part of the Federation of Malaya in

1948 and part of independent Malaya in 1957, and later of Malaysia in 1963.

SIEM REAP

Siem Reap is the provincial capital of the province of the same name in Cambodia. The Siem Reap River, which flows south from the Kulen Mountains into Cambodia's Great Lake (Tonle Sap), turns through the town. To the west, the medieval Cambodian city of Angkor, which survives in the form of more than a thousand Hindu and Buddhist temples, most of

them in ruins, covers an area of over 250 square kilometers. In its heyday in the twelfth century C.E. the city probably held over a million people, making it one of the largest urban centers in the world.

Angkor was gradually abandoned in the fifteenth and sixteenth centuries, following several Thai invasions and the shift of Cambodia's center of gravity to the region of Phnom Penh. Some of the temples were restored in the mid-sixteenth century, and pilgrims visited the ruins on a regular basis. When Angkor was "discovered" by a French explorer in 1860, however, its fame spread to the outside world. The ruins and the surrounding province, then called Mahanokor (or Great City), had come under Thai control since the 1790s. Under the French protectorate, they were returned to Cambodian jurisdiction in 1907. Over the next sixty years, French archaeologists supervised the restoration of the Angkorean temples, and Siem Reap became a pleasant provincial town. The ruins were fought over briefly in the Cambodian civil war in the 1970s, and tourists did not return in large numbers for twenty years. By 2002, Siem Reap had become a boomtown with dozens of hotels and guesthouses catering to foreign and domestic visitors numbering more than half a million per year.

SIHANOUK, NORODOM (1922–)

Royal Patriot

Cambodian king and political leader Norodom Sihanouk was born into Cambodia's royal family at a time when Cambodia was part of French Indochina. His mother's father, Sisowath Monivong, reigned as king during Sihanouk's boyhood. When Monivong died in 1941, Sihanouk was taken out of high school and crowned king by the French. At the time, Japa-

nese troops were stationed throughout Indochina with the permission of French authorities, Sihanouk was monitored closely by his French advisors, but in March 1945 the Japanese imprisoned all French colonial officials throughout Indochina and encouraged Sihanouk to declare Cambodia's independence.

When the French returned at the end of 1945, Sihanouk welcomed them. Soon afterward the French encouraged political parties to form and a constitution was drafted. For the next eight years, Sihanouk quarreled with the nationalist members of Cambodia's small elite who sought independence on their own terms. In 1953, Sihanouk dramatically embarked on what he called a "Crusade for Independence," threatening to abdicate if the French persisted in political and economic control. The French caved in and granted Cambodia's independence at the end of 1953.

Two years later, Sihanouk abdicated the throne; had his father, Norodom Suramarit, named king; and embarked on a full-time political career. His political movement, the Sangkum Reastre Niyum, remained the dominant political force in Cambodia until Sihanouk was removed from office in a bloodless coup in 1970.

In the twenty-first century, the so-called Sihanouk years are looked back upon as something of a golden age, when Cambodia was at peace and relatively prosperous. Sihanouk, almost unopposed, was immensely popular, especially among Cambodia's rural poverty-stricken peasantry, toward whom he displayed sustained and genuine affection. In the international arena, he flamboyantly pursued a policy of neutrality, which alienated him from the United States, pleased the communist bloc, and kept Cambodia out of the Vietnam War (1964–1975), which was being waged less than 96 kilometers from Phnom Penh.

In the late 1960s, as the war intensified, Sihanouk's behavior became increasingly erratic. He spent much of his time writing, directing, and starring in popular films that dramatized himself and Cambodia's past. His support diminished among Cambodia's elite and also among many younger Cambodians, attracted to the idea of revolution. A civil war directed against communist-led guerrillas (the so-called Khmer Rouge) broke out in 1968.

Arrival of Prince Sihanouk in Phnom Penh after a thirteen-year exile, December 1991. (Michael S. Yamashita/Corbis)

In March 1970, Sihanouk was overthrown in a bloodless coup d'état launched by his National Assembly while he was traveling abroad. The new regime, led by Lon Nol (1913–1984), called itself the Khmer Republic (1970–1975) and plunged into an alliance with the United States and into warfare against communist forces inside Cambodia. Sihanouk took refuge in Beijing and became the titular head of a government in exile, allied with the Communist Vietnamese, the People's Republic of China (PRC), and the Communist Party of Kampuchea (CPK) led by Saloth Sar, alias Pol Pot (1925–1998).

In April 1975, CPK forces defeated the Khmer Republic. The CPK inaugurated a series of utopian economic and political measures that soon led to more than 1.7 million deaths and tore Cambodia apart. Sihanouk was brought to Cambodia but after several months was placed under house arrest. The regime in power named itself Democratic Kampuchea

(DK). When Vietnamese forces overthrew DK in early 1979, following two years of warfare, Sihanouk was flown to the United Nations to plead DK's case. But by 1980 he was expressing anticommunist ideas and presenting himself as an alternative to the Peoples' Republic of Kampuchea (PRK), the pro-Vietnamese regime in power in Phnom Penh.

Sihanouk's extended marriage of convenience with DK, whose forces formed the backbone of anti-PRK resistance, diminished his popularity among some older Cambodians. However, as the Cold War ended and foreign powers sought to remove themselves as political actors from Indochina, Sihanouk came to be seen, as he had always seen himself, as a crucial unifying element in a new Cambodian government acceptable to foreign powers and Cambodian factions alike.

Under the Paris Peace agreements in 1991, Sihanouk returned to Phnom Penh as de facto chief of state, while the country, under UN

auspices, prepared for national elections. He became king again in 1992, under Cambodia's fifth constitution since 1947. King Sihanouk in the 1990s lost the aura and pomp that marked the kingship of pre-1970 Cambodia, where the royal trappings of flag, national anthem, street names, and army uniforms so glamorized the monarchy. Sihanouk often acted as a counterweight to the authoritarian excesses of the new regime.

Although a sincere and hardworking patriot, Sihanouk had a mixed effect on his country. His opponents have justly criticized his personalistic, flamboyant style and his long-term alliance with the Khmer Rouge, while his supporters have pointed to his unquestioned patriotism and his devotion to Cambodia's rural poor unmatched by previous or subsequent Cambodian rulers. An eloquent orator and a fluent writer, Sihanouk has defended his record in several volumes of memoirs.

SINGAPORE (1819)

Founded in 1819 as an East India Company (EIC) outpost, in 1826 Singapore formed part

of the Straits Settlements, which became a Crown colony in 1867. After wartime Japanese occupation, it became a separate Crown colony in 1946 and was granted city status in 1951. Achieving internal self-government as the State of Singapore in 1959, it won independence as part of the Federation of Malaysia in 1963, and became an independent republic in 1965.

On 6 February 1819 a treaty was signed among Sir Stamford Raffles (1781–1826), the sultan of Johor, and the local chieftain. The terms permitted the East India Company to establish a post situated at a small village at the mouth of the Singapore River, on the site of the long-deserted fourteenth-century port of Temasek (Temasik)/Singapura. Despite vigorous protests from Dutch Batavia, disapproval from Penang, and initial lack of support from London, the British occupation was recognized by the Treaty of London in March 1824, and in August that year the two Malay chiefs ceded the whole island in perpetuity. Two years later Singapore was united with the company's other peninsular possessions to form the Straits Settlements.

Free trade and unrestricted immigration quickly attracted traders, who came initially from nearby settlements at Melaka, Penang, and Riau, and later from the archipelago and other parts of Southeast Asia, China, India, and Europe. In 1827 the population already numbered nearly 16,000 (Turnbull 1989: 36), of whom more than half were Chinese, but for many years it was transitory and shifting, comprising mostly young men, drawn from many ethnic and dialect groups, looking to their own headmen or "secret societies."

The opening of the Suez Canal in 1869 and the economic expansion of the region consolidated Singapore's position as the commercial hub of Southeast Asia. The population increased during long years of unbroken peace, gradually becoming more settled under administrative control. But up to the Pacific War (1941–1945) it remained a plural society, with communities living largely separate lives, divided by language, education, religion, ethnicity, and culture. Apart from a mutiny among its Indian army garrison, which was quickly suppressed, World War I (1914–1918) did not directly affect Singapore. In the 1930s it became an important naval and military base but fell to the Japanese in February 1942, after a lightning campaign

down the peninsula and bitter fighting on the island itself.

Following a temporary British military administration, when the rest of the peninsula was incorporated into a Malayan Union in April 1946, Singapore became a separate Crown colony. It remained so when the British, bowing to intense Malay nationalism, replaced the union by a federation in 1948. Although the Malayan communist-led insurgency (the "Emergency"), which broke out upcountry in 1948, did not directly engulf Singapore, the same regulations were imposed, repressing radical politics and masking widespread discontent over poverty, unemployment, housing, and education.

The first polls, held in 1948 and 1951 to elect a few legislative councillors, aroused little popular enthusiasm. But radical politicians triumphed at elections held in April 1955 to implement a new constitution, which provided a measure of self-government. The Labour Front, under lawyer David Marshall (1908–1995), formed a minority government that immediately faced violent strikes and riots, when the communist wing of the rival People's Action Party (PAP) made a bid to seize power through trade unions and Chinese schools. Their leaders' imprisonment under the emergency regulations left moderates, led by lawyer Lee Kuan Yew (1923–), in control of the PAP. The Labour Front government took steps to reform education, extend citizenship, and localize the public services, and the British government agreed to internal self-government.

The PAP won an outright majority in the ensuing May 1959 elections and aspired to achieve full independence through merger with the then-independent Federation of Malaya. This provoked a violent party split that threatened to plunge Singapore into chaos but alarmed the federation into offering merger, and in September 1963, Singapore became a state in a new Federation of Malaysia.

The association proved painful, and in August 1965, Singapore was expelled to form an independent republic. Hitherto considered too small to be viable, it built up its economy and defenses and became a founding member of the Association of Southeast Asian Nations (ASEAN), which was formed in 1967. It also

had to create a sense of nationhood while respecting the roots of a multicultural society, of whom 77 percent were Chinese, 14 percent Malay, and 8 percent Indian (Demaine 2002: 1282). The PAP continued in office into the twenty-first century, with a virtual monopoly of power. Lee Kuan Yew handed over the premiership to Goh Chok Tong (1941–) in 1989 but remained as senior minister. Goh continued to exert firm central direction, but the political climate relaxed somewhat; Singapore entered the twenty-first century a stable, prosperous state, with a population of 4 million living in an area of some 255 square miles (6,602 hectares) (ibid.).

SINGAPORE, ENTREPÔT TRADE AND COMMERCE OF (NINETEENTH CENTURY TO 1990s)

For the first fifty years from its opening in 1819 as a British port of call, Singapore depended almost entirely on entrepôt trade, exchanging British manufactures, Indian opium, and Chinese wares for tropical produce from the Indonesian archipelago and other parts of Southeast Asia. The island lacked natural resources, and mid-nineteenth-century agricultural enterprises were short-lived. But trade flourished from the start because of a combination of Singapore's excellent geographical position at the tip of mainland Southeast Asia, well-placed for trade winds in the days of sail, and its unique freedom from commercial tariffs and restrictions. Trade increased more than fourfold from 1823 to 1824 and from 1868 to 1869 (Wong 1960: 194), but it remained the barter of unprocessed goods, requiring little more than simple warehousing. Fearful of challenge from other regional ports, Singapore merchants jealously guarded their free-port status.

With the opening of the Suez Canal in 1869, the growing dominance of steamships, and the expansion of Western colonial rule in the region, Singapore entered a second stage as a staple port: the center for the collection, processing, and re-export of primary commodities, most importantly from Indonesia. Trade continued in exotic tropical produce, such as gambier, pepper, and spices, but increasingly it turned to three staples: tin in the nineteenth century, and rubber and petroleum from the early twentieth century.

These staples required reprocessing, transport, and dock facilities, as well as banking and insurance services. European firms handled most of the overseas trade with Europe, North America, and Australia; family-based Chinese networks largely controlled regional trade. By the early twentieth century Singapore was the world's seventh largest port in tonnage and the leading tin smelter and exporter (Huff 1994: 120). By World War I (1914–1918) it was the world's biggest rubber exporter, and became a major petroleum distributor in the interwar years (*ibid.*: 31, 236–244). Because of its dependence on primary products, Singapore suffered severely from the great international de-

pression of the 1930s, and its economy was battered by the Japanese occupation (1942–1945); it revived as a staple port, however, in the 1950s, profiting particularly from the Korean War boom of 1950–1951. By 1959, Singapore was the largest storage and distribution base for petroleum in Southeast Asia and began refining oil in 1960 (*ibid.*: 279). But rubber made up half its exports, with 80 percent of them coming from Indonesia, and throughout the decade Singapore was the largest market for Indonesian produce (*ibid.*: 281).

Internal self-government in 1959 introduced a third phase, when trade remained the engine of growth but shifted from dependence on staple primary products to manufactures. In 1961, Singapore's first and only development plan saw little room to expand the entrepôt trade. Faced with a spiraling population, unemployment, and regional competition, the government promoted new industries that initially aimed at import-substitution, with the prospect of merger with the federation opening up a wider domestic market. Briefly Singapore aspired to be the "New York of Malaysia," but its trade suffered greatly during the Indonesian Confrontation (1963–1966), and its separation from Malaysia in 1965 erected barriers to its traditional hinterland.

The separation with Malaysia forced a major change in economic policy to promote export-oriented industries led by government-linked companies and multinational enterprises. Singapore continued to be a major exporter of petroleum and rubber, but in 1973 manufactured exports overtook primary commodities; from the late 1970s, services—mainly business and financial—became the third important component in trade. Commerce prospered with the end of the Confrontation, followed by the Vietnam War (1964–1975) boom, although Indonesian trade figures remained confidential into the twenty-first century. In the eight years following independence Singapore's external trade expanded fifteenfold, despite the sudden British withdrawal from its military bases, which had accounted for 20 percent of gross domestic product (GDP) (Turnbull 1989: 297).

Until the last few years of the twentieth century there was remarkable and sustained economic growth, with occasional sharp setbacks: the 1974–1975 Arab oil crisis, the 1984–1986

world recession in the electronics industry, and the 1997–1998 regional financial crisis. Entrepôt trade remained strong, but strict re-exports requiring simple repackaging declined in favor of exports that had been wholly produced or transformed in Singapore. Most of these were also re-exports in that they involved the import and export of similar commodities, notably the import of components and parts and the export of electronic goods. By the 1990s the United States was Singapore's main trading partner, but diversification of markets guarded to some extent against recession, although it remained vulnerable to international and regional crises. Singapore entered the twenty-first century as one of the world's most open economies, with foreign trade equivalent to three times its GDP. Its economy was a unique combination of strong government intervention and international free trade, and Singapore became an enthusiastic supporter of globalization, the ASEAN Free Trade Area, bilateral free trade pacts, and a free-world trade system.

SINGAPORE-MALAYA/MALAYSIA RELATIONS (ca. 1950s–1990s)

Singapore, a corruption from Malay, *Singapura* (lit. “Lion City,”), was in the old days known as Temasik. It became a territory of the Malay kingdom of Palembang and later, for some time before the emergence of Melaka, was claimed as a vassal state by Siam. Lying at the southern tip of the Malay Peninsula, Singapura automatically became a part of the Malay sultanate of Johor when the Portuguese seized the city-state of Melaka in 1511. In 1819, taking advantage of the succession dispute and other weaknesses of Johor, Stamford Raffles (1781–1826) acquired Singapore from one party in the Johor conflict on behalf of the English East India Company (EIC). In 1826 the British formed the Straits Settlements and made Singapore its capital and center of British activities in Southeast Asia.

Before the emergence of Singapore as a separate independent nation in 1965, the term “British Malaya” or simply “Malaya,” as used by the British, meant the Malay Peninsula inclusive of Singapore. The governor of the Straits Settlements also acted as the British high commissioner for the Malay States on the peninsula. However, when Penang and Melaka were merged with the Malay States to form the Malayan Union (MU) in 1946, Britain kept Singapore as a British Crown colony. This was one of the reasons why, despite the many advantages to be gained from the MU, the non-Malays, including those in Singapore, were unenthusiastic toward the new setup. Radical nationalists of all shades and ethnicities held fast to the idea of the inseparableness of Malaya and Singapore, and that contributed toward intercommunal negotiations leading to the All-Malaya Council of Joint Action (AMCJA)–Pusat Tenaga Rakyat (PUTERA) conference in 1947, demanding a united Malaya inclusive of Singapore. Similar sentiments were put forth in the Peoples Constitutional Proposal for Malaya, which was presented in the same year. The British, however, rejected the idea and prolonged the Malaya–Singapore separation. For social, economic, political, and security reasons, all chief ministers of Singapore from 1955 to

1963—David Marshall (t. 1955–1956), Lim Yew Hock (t. 1956–1959), and Lee Kuan Yew (t. 1959–1963)—favored merger with Malaya. Accordingly they all made attempts to woo Tunku Abdul Rahman Putra Al-Haj, chief minister (t. 1955–1957) and later prime minister of independent Malaya (t. 1957–1963), to agree to a Malaya–Singapore merger. But Tunku and the United Malays National Organization (UMNO) were opposed to the idea, because the merger would tip the racial balance in favor of the Chinese and would thus be politically and economically detrimental to the generally rural Malays. However, toward the end of the 1950s, against the geopolitical situation of the Cold War and the prospect of Britain letting go of its colonies in Southeast Asia, Tunku reconsidered his stance. On 27 May 1961 he openly expressed in Singapore the need for Malaya, Singapore, Sarawak, North Borneo, and Brunei to work toward political unification. With Malaya as the key partner, Singapore under the People's Action Party (PAP) played an active role in the formation of "Malaysia" that finally materialized on 16 September 1963. The numerical superiority of the *bumiputera* ("sons of the soil") in Sabah and Sarawak helped to neutralize the demographic advantage the Chinese would have enjoyed had the merger been only between Malaya and Singapore.

Under the Malaysian federal system, Singapore was allotted fifteen federal seats and given jurisdiction over items such as education and labor. Defense, internal security, and foreign affairs came under the control of the federal government in Kuala Lumpur. Differences in political styles soon led to irreparable disputes between Singapore and Kuala Lumpur, leading to strains that endangered the new entity. Failing to replace the Malaysian Chinese Association (MCA) in the alliance, in May 1965 the Singapore PAP formed the Malaysian Solidarity Convention to oppose the alliance and the UMNO-led federal government. Led by the PAP, the convention comprised Chinese-based peninsular parties, the United Democratic Party (UDP) and People's Progressive Party (PPP), and Sarawak opposition parties including the Sarawak United People's Party (SUPP) and MACHINDA. Finding the Singapore threat intolerable and mindful of potential Sino-Malay clashes, Tunku decided on the Singapore–Malaysia separation that went into effect on 9 August 1965.

The Singapore–Malaysia relationship since 1965 was to some extent determined by the previous experiences of the respective leaders of the two countries. The relationship was rather difficult from 1965 to 1981. Although not always smooth, Singapore–Malaysia relations were better after Dr. Mahathir Mohamad (1925–) became prime minister of Malaysia in 1981. By that time the burden of the past had eased, and both countries had accepted each other's existence as equals. Malaysia and Singapore, together with Thailand, the Philippines, and Indonesia, founded ASEAN (1967), which by the year 2000 had encompassed all ten countries of Southeast Asia and had proven to be a success.

Malaysia–Singapore relations have been likened to those of a husband and wife or Siamese twins, which continue to be interdependent despite occasional hiccups. A causeway and a bridge physically linked the two countries. Furthermore, a sizable number of Malaysians and Singaporeans have relatives or friends across the Teberau Strait. Singapore continued to rely on Malaysia for its water supply and foodstuffs (vegetables and other perishables), and Malaysian states, particularly Johor and Melaka, gained economically from the tourist trade via or emanating from Singapore. Both countries agreed early in 2003 that their overlapping claims over Pulau Batu Putih (Pedra Branca) would be resolved through the International Court of Justice (ICJ) in The Hague.

SINGHASÂRI (1222–1293)

Beginning of Javanese Imperialism

The ancient kingdom of Singhasâri succeeded that of Kadiri (Kediri) in Java, Indonesia. The state formation of Singhasâri was the first attempt at empire building in the history of Java. The culmination of that trend of development was achieved during the subsequent period of Majapahit (1293–ca. 1520s). It is this aspect of development that can be considered significant in Southeast Asian history, since similar attempts in this region can be studied comparatively.

The first king of Singhasâri was the fabulous Ken Arok/Angrok (r. 1222–1227), as he is known in later traditional historiography. His official name, however, mentioned in a document closer to his time, the *Nâgarakertâgama* of early Majapahit, is Śrî Ranggalah Râjasa or Śrî Girinâtha. He was considered the dynasty founder of both the Singhasâri and Majapahit line of kings. Old Javanese written sources indicate that this king led significant development efforts for the region "east of the mountain Kawi" in East Java. Singhasâri kings like him and the later Kĕrtanagara (r. 1268–1292) were the initiators of formal admittance of the identification of the "highest truth" of Saivism and Buddhism.

A Singhasâri inscription containing the fact of empirical structure of the kingdom was that authorized by Narâryya Sminingrat (r. 1248–1268), the copper plate inscription of Mûlamaluring, issued in the year 1177 śaka (1255 C.E.). Sminingrat installed members of his family as regents in different territories, mentioned by the names of (fortified) capital towns (called

nagara or *râjya*); some also have the names of the "countries" (called *bhûmi*). The names and their respective territories are as follows:

- An individual (unknown because of a missing plate of the inscription) made to reign as *haji* (= regent, king) in the *nagara* Madhura
- Narâryya Kirana as regent in *nagara* Lama-jang
- The consecrated Śrî Krĕtanagara in the *nagara* Daha of *bhûmi* Kadiri
- Śrî Jayakatyĕng, along with the king's daughter as his consort, at *nagara* Glang-glang in *bhûmi* Wurawan
- Śrî Ratnarâja at *râjya* Morono
- Śrî Narajaya at *nagara* Hring, and
- Śrî Sabhâjaya at *nagara* Lwa

It is conspicuous that the only kingdom known from inscriptions before Singhasâri was Kadiri. No inscriptions from the other six "kingdoms" have ever been found. On the contrary, the twin kingdom of Kadiri, Janggalala, is not mentioned in the above list. Other inscriptions—namely, the so-called ferry charter of 1358 C.E. and the Maribong inscription of 1255 C.E.—mentioned that Sminingrat is also the name of Wisnuwardhana, the fourth king of Singhasâri. In those inscriptions his full name is spelled bhatâra Śrî Wisnuwardhana ikang Pañji Sminingrat, and Śrî Jaya Wisnuwardhana sang Mapañji Sminingrat. It seems that he was the initiator of empire-building.

The succession of kings of Singhasâri is as follows. First came Ranggalah Râjasa alias Ken Angrok, who usurped Tunggul Amĕtung, the *akuwu* (local chief) of Tumapĕl, and then Angrok changed the status of *akuwu*-ship into kingship. Thus the relatively small Tumapĕl was presumably made the center of a new and enlarged scope of a kingdom. Râjasa's successor was Anusapati, a son given birth to by his consort, but actually the son of her previous husband, Tunggul Amĕtung. After him followed Angrok's son Tohjaya, then followed Wisnuwardhana, also called Ranggawuni, the son of Anusapati. Then followed the last king of Singhasâri, King Kĕrtanagara, the son of Wis-

nuwardhana. Kĕrtanagara's daughters played an important part in the history of the next emerging kingdom, Majapahit.

During the Singhasāri period, temple building in stone seems to have gotten a new impetus. Some of these temples, known as commemorative temples for deceased kings, include those in the present village of Kidal (for Anusapati); that in the village of Tumpang, called the *candi* (= temple) Jago (in Old-Javanese sources it is called Jajaghu; for Wisnuwardhana); and that in the present village of Singasari (for Kĕrtanagara). The temple for Rājasa at Kagēnĕngan, and a second temple for Wisnuwardhana at Waleri mentioned in written sources, have not been identified. In fact, the chronicle-poem *Nāgarakĕrtāgama* of the fourteenth century gives the information that the Singhasāri kings Rājasa (r. 1222–1227), Wisnuwardhana (1248–1286), and Kĕrtanagara (r. 1268–1292) were proponents of Śiva-Buddha teachings.

Buddhist statuary and iconography developed markedly during this period. The beautiful statues representing Buddhist deities originating from the temple Jago are now displayed at the National Museum in Jakarta, while three huge Sivaitic Hindu statues originating from the temple at Singhasāri are now in the Ethnographic Museum in Leiden, The Netherlands.

SINO-SOVIET STRUGGLE

From the end of the 1950s till the end of the 1980s, the Union of Soviet Socialist Republics

(USSR), or the Soviet Union, and the People's Republic of China (PRC) were in a state of deep conflict, embroiled in an ideological and diplomatic struggle and sometimes military confrontation. Previously they had been regarded as tied by monolithic communist unity, fraternal friendship, and stable alliance, and firmly committed to conquering the world for communism.

After World War II (1939–1945) the Chinese Communist Party (CCP) received military aid from the USSR in its revolutionary struggle. The USSR welcomed the establishment of the People's Republic of China on 1 October 1949. In the spring of 1950 the two countries signed the Treaty of Friendship, Alliance, and Mutual Assistance. But the victorious Chinese revolution created the second great communist power. It became difficult for the USSR and its communist party (Communist Party of the Soviet Union, CPSU) to remain the world center of communism. From the very beginning of its existence the PRC and the CCP wished to maintain complete independence from the USSR and CPSU. Besides, PRC leadership decided that China should become a great Asian power and head the communist camp in the East.

Toward the end of the 1950s, fraternal solidarity between Chinese and Soviet communists was replaced by mistrust and suspicion. The origin of the rift between the USSR and PRC was usually traced to 1958. The first impetus was given by the de-Stalinization process in the Soviet Union initiated at the twentieth CPSU congress in 1956, systematized at its twenty-second congress, and embodied in the new Party Program. Chinese leader Mao Zedong (1893–1976) was displeased with the Soviet leader Nikita Khrushchev's (1894–1971) denunciation of Stalin (1879–1953). Condemnation of Stalin's "personality cult" jeopardized Mao's Stalin-like position in the Chinese Communist Party.

From 1959 to 1963 there were developing between the two communist giants a struggle for doctrinal authority and leadership in the world communist movement, competition for influence on developing countries of the Third World, as well as a power struggle in the international arena, including Southeast Asia. The public face of the Sino-Soviet split was multiple: foreign policy differences, interstate conflicts, and ideological disputes about communist principles and strategy.

First of all the conflict concerned the ideological sphere. Chinese communists did not agree with the Soviet leaders' new conception of peaceful coexistence, which, the Chinese thought, underplayed the role of war and violence in the worldwide struggle for socialism. At the heart of the ideological dispute was the question of what role violence and war play in the revolutionary transition to socialism. The Chinese rejected the concept of a peaceful road to socialism and the idea that the danger of war had lessened in the nuclear age. Leaders and members of other communist parties joined in the argument. The ideological dispute escalated to a formal split in the world communist movement. The great majority of communist parties all over the world supported the Soviet position, but a number of communist parties and factions within parties backed the Maoist line.

In Southeast Asia, communist parties of Thailand, Burma (Myanmar, from 1989), and Malaya became pro-Maoist. The Communist Party of Cambodia and the Philippines split into two, the splinter group of the latter naming itself "The Party of Mao Zedong's Ideas" and creating its military units under the name "New People's Army." Communists in Vietnam and Laos sided with the USSR and CPSU. The Communist Party of Indonesia (Partai Komunis Indonesia, PKI) formally maintained a balanced middle position, but in practice it was more inclined toward the Chinese side.

By 1963, Beijing and Moscow had completely broken apart after three years of increasingly abusive polemics. The communist parties' leaderships of the USSR and China intended to grasp the command of the international communist and national liberation movements, including those in Southeast Asia. Each side began to accuse the other of undermining the anticapitalist and anti-imperialist struggle. Chinese leaders began vigorously championing—and, where possible, actively promoting—"wars of national liberation" and "anti-imperialist struggles" in the developing world. With the emergence of Sino-Soviet differences, Mao saw China confronting two opponents: the United States and the Soviet Union. To oppose these two foes, Mao proposed the formation of an international united front. China reached out to antigovernment guerrillas in Burma, Thailand, Malaysia, the Philippines, to Norodom Sihanouk (1922–) in Cambodia, and to the leftist

regime under Sukarno (t. 1947–1967) in Indonesia. In Indonesia, China tried to promote a militant "united front" between Sukarno and the PKI. Guided by the thesis that "the rifle gives rise to power," China intensified political, ideological, and material assistance to antigovernment communist rebellions in Thailand, Burma, Malaysia, and the Philippines by supplying arms to them. China was involved in the abortive coup d'état in Indonesia in 1965, in which Indonesian communists played a major role—and consequently paid a high price. In 1975, Chinese leadership succeeded in creating a totalitarian regime of the Khmer Rouge headed by Pol Pot (1925–1998) in Cambodia. Soviet leaders tended to be more cautious. They warned that local Third World conflicts could escalate to a destructive global and nuclear war.

Communist China, the biggest developing nation, was ambitious to become the leader of all the developing countries on three continents, a goal abhorred by the USSR. Each was making efforts to damage the other's image among the developing countries. Beijing was trying to eliminate the Soviet Union as an Asian country in the Afro-Asian bloc by branding it as just another white colonial power. Although the Soviet Union extended over more than two-fifths of the Asian continent, the Chinese leadership had proclaimed the Soviet Union a non-Asian country and had launched the racist slogan "Asia belongs to the Asians." But the countries of Southeast Asia rejected the Chinese thrust as fostering discord between white and colored peoples and preaching racial hatred. They neither accepted the Chinese point of view that the Soviet Union was a white and European country nor endorsed any effort aimed at the political expulsion of the USSR from Southeast Asia. Besides, the mores and methods of the Chinese Cultural Revolution (1966–1968) had been discredited in the Southeast Asian countries because communists had tried to instigate disturbances in some of them and to fan racial and territorial disputes in Southeast Asia. The Soviet Union criticized Mao's policy of intensifying troubles in the region, and of unceremoniously interfering in the affairs of other countries.

The Vietnam War (1964–1975) contributed to intensifying the rivalry and the breach between China and the USSR, and it became di-

visive. With the completion of its economic recovery in 1958, the Democratic Republic of Vietnam (DRV, North Vietnam) began to pay more attention to strengthening the revolutionary movement in the south. From 1954 to 1963, China was closely involved in the development of Hanoi's policy. In its heyday Sino-Vietnamese friendship was described as "comrades plus brothers." The escalation of the conflict in Vietnam after the Gulf of Tonkin Incident (August 1964), however, coincided with a certain cooling in Soviet-North Vietnamese relations. This chill, in turn, was partly attributable to the growing differences between the USSR and the PRC, the two chief patrons and supporters of the Vietnamese struggle against the Saigon regime.

The effect of the Sino-Soviet split in Vietnam soon manifested itself as Beijing and Moscow wooed Hanoi to take sides in their ideological dispute. China wanted the Hanoi leadership to side with the PRC in the Sino-Soviet split, and Beijing's extensive aid to the DRV (mostly military) was designed to draw Hanoi into China's orbit. The USSR was competing with China to win the allegiance of the Vietnamese communists; the USSR and the DRV concluded formal military and economic agreements. Through this gesture to Hanoi, Moscow wanted to offset Chinese influence and demonstrate its ideological rectitude on issues of national liberation.

Hanoi was virtually on China's side in the bifurcated international communist movement. The two countries shared a common ideological outlook and a common concern over U.S. intervention in Indochina. But leaders in Hanoi wanted to avoid the danger of submitting to a dependent relationship with China. Besides, China could not protect the DRV from U.S. bombings; therefore, in 1965, DRV decided to rely more on the USSR for protection and military supplies. The Sino-Soviet rivalry over Vietnam provided leaders in Hanoi an opportunity to obtain maximum support from their two communist allies. But Moscow gained greater influence in Hanoi because of the North Vietnamese need for Soviet material assistance. Nevertheless, Beijing continued to assist the DRV. Inasmuch as Mao envisioned China as a spokesman for the Third World cause of independence, by firmly backing the Vietnamese struggle against the United States, China wanted

to demonstrate to Third World countries and movements that it was their only true friend. Victory for North Vietnam's war of national unification with China's support would show the political correctness of Mao's more militant strategy for coping with U.S. imperialism, and the incorrectness of Khrushchev's policy of peaceful coexistence.

The turning point in their relations came in 1968, when Sino-Soviet relations took a decisive turn for the worse. The Chinese now regarded the United States as a potential counterbalance against the Soviet Union in Southeast Asia, but their Hanoi comrades continued to see Washington as the most dangerous enemy.

Shortly after the conclusion of the Vietnam War, the two Asian communist states went to war with each other. After the withdrawal of U.S. troops from Vietnam and the unification of the country, Hanoi's bilateral disputes with Beijing over Cambodia came to the fore. The political and diplomatic struggle became especially intense after Vietnam invaded Khmer Rouge Cambodia in 1979, overthrew Pol Pot's regime, and created a new pro-Vietnamese government. The dispute between China and Vietnam, backed by the USSR, over Cambodia culminated in a direct clash in 1979.

The USSR was assisting in every way not only Vietnamese but also Laotian communists in their struggle to establish communist regimes in Laos. In 1975, Laotian communists overthrew the royal government and established the Lao People's Democratic Republic (LPDR) in 1975.

By the 1970s the Sino-Soviet alliance had virtually dissolved. When the Sino-Soviet Treaty of Friendship, Alliance, and Mutual Assistance expired, it was not prolonged.

Desirous of replacing the former colonial domination in Southeast Asia with its own, China made efforts to undermine Soviet positions in the region. Chinese foreign policy became increasingly defined by its anti-Sovietism; Soviet foreign policy was also aimed against the PRC. In Southeast Asia, China was intimidating local governments with Soviet hegemony and Vietnamese minihegemony, thus trying to draw the Southeast Asian governments—especially Thailand and Burma—into the orbit of Chinese foreign policy. Meanwhile the USSR was "unmasking" Chinese intrigues with similar intentions.

In Burma the Chinese leadership linked amelioration of relations between the two countries with Burma's involvement in the struggle against "superpower hegemonies." The PRC painfully reacted to the Soviet efforts to establish closer ties with this country, which was regarded by China as a zone of its immediate vital importance. As a tool for pressure in the Burmese government the Chinese leaders used Burmese communist insurgents, who were supported by the Chinese Communist Party. In this complicated international situation the Burmese government preferred not to irritate its northern neighbor and refrained from developing close relations with the USSR. At the same time Rangoon (Yangon) tried to play on the Sino-Soviet rivalry in Southeast Asia in order not to fall into Chinese hands.

Although Thailand's government had reestablished formal diplomatic relations with the PRC, it did not wish to become too intimate, because that would have a negative impact on Thai-Soviet links. In the case of the U.S. withdrawal from Southeast Asia after the Vietnam War, unbalanced relations either with the USSR or with China would be damaging to Thailand's security.

Beijing was very active in developing close ties with the Association of Southeast Asian Nations (ASEAN) in trying to involve the association in its anti-Soviet and anti-Vietnam political course in the region. China planned to create a united front with ASEAN countries against the USSR. On its side the Soviet Union, taking into consideration that one of ASEAN's main intentions was to resist Chinese efforts to impose its control on Southeast Asia, changed its negative attitude to the association and did a lot in order to strengthen the anti-Chinese aspect of ASEAN activity.

After Mao Zedong's death in 1976 the Sino-Soviet struggle began to diminish. Reasons for the normalization were the change of leadership in both countries and communist parties, as well as of the political course, aimed now at reforms and the creation of favorable inner and outer conditions for them.

The PRC became interested in peaceful co-existence, proclaimed by the USSR, which had been denounced by previous Chinese leaders. The official normalization of relations between the USSR and the PRC occurred in 1989. Both countries today maintain full indepen-

dence of each other and absolute equality. A number of trade and political agreements were concluded between them, but there is no alliance. The Russian Federation has withdrawn from Southeast Asia, but China is constantly strengthening its position in the region.

SINO-VIETNAMESE RELATIONS

Few countries share such a long history of relations as China and Vietnam. For more than a thousand years Vietnam was part of the Chinese Empire, before gaining independence in the tenth century C.E. The independent Vietnam remained under Chinese cultural and political influence and a tributary relationship devel-

oped. This close relationship ended with the period of French colonial rule in Vietnam during the second half of the nineteenth century and the first half of the twentieth century.

After Vietnam regained full independence from France in 1954, official relations between China and Vietnam were officially very close up to the end of the Vietnam War in 1975. Thereafter relations gradually deteriorated, leading to open conflict in 1978 and to war in early 1979. Tension remained high for most of the 1980s, but beginning in the late 1980s relations started to improve, leading to full normalization of relations in November 1991. The 1990s were characterized by two contradictory trends, with expanding and improving relations in most fields on the one hand, and with reoccurring periods of tension relating to the border disputes between the two countries on the other. Both countries are making considerable efforts aimed at managing and eventually settling the border disputes.

The history of relations between the two countries has been characterized by long periods of collaboration and shorter periods of military conflict. The developments in the post-colonial period reflect a similar pattern of bilateral relations.

Historical Relations

Two parallel processes marked the period of direct Chinese rule over Vietnam from 111 B.C.E. to 939 C.E. One was the colonization of Vietnam by Chinese migrants and the other was the Vietnamese drive to regain political independence from the Chinese Empire. Apart from a steady migration from China to Vietnam of people such as administrators, farmers, and landlords, there were also persons seeking refuge from political upheavals in other parts of the Chinese Empire.

The first major rebellion against Chinese rule was the Trung rebellion in the first century C.E. Other rebellions and uprisings followed. But it was not until after the fall of the Tang dynasty, in 907 C.E., that the Chinese Empire was weakened enough to allow Vietnam to gain full independence.

After Vietnam's independence, refugees from China continued to arrive there. One wave of migrants came after the fall of the Sung dynasty (960–1279), when the Mongols (Yuan, 1271–

1368) occupied China in the thirteenth century. Another wave came after the fall of the Ming dynasty (1368–1644) in the seventeenth century after the Manchus, who had established the Ching dynasty (1644–1911), had overthrown it.

Relations between China and Vietnam remained strong, even after Vietnam had gained independence. Vietnamese emperors paid tribute to the Chinese emperors, for which, in exchange, they received the blessings and the protection of the Chinese state. Chinese culture and thinking continued to have great influence on Vietnam. This can be seen from the prominent role that Confucianism played in Vietnamese society. Chinese influence was also evident in the fields of art and literature. However, relations between China and Vietnam were not always harmonious. For instance, in times of internal strife in Vietnam, there were sometimes Chinese military interventions.

During the period of French colonial rule over Vietnam, Vietnamese nationalists looked at developments in China as a source of inspiration in their anticolonial struggle. Furthermore, after the victory of the Chinese Communist Party (CCP) in the Chinese Civil War in 1949, China started to provide the Việt Minh with invaluable support in the anticolonial war against the French. The Chinese support contributed to the Việt Minh victory in that conflict in 1954.

Relations from 1954 to 1975

After Vietnam regained full independence from France in 1954, relations between China and the Democratic Republic of Vietnam (DRV) were very close for the remainder of the 1950s. China provided the DRV with extensive economic and military assistance and sent thousands of advisers to assist the Vietnamese in various fields. China also provided Vietnam with considerable assistance during the Vietnam War in the 1960s and the first half of the 1970s. However, irritants developed owing to differing perceptions of the Soviet Union and divergent views on relations and negotiations with the United States. After the Paris agreement in 1973, Vietnam claimed that China had advised it to diminish the level of the fighting in the south for a few years—advice perceived as

aimed at keeping Vietnam divided. China rejected this claim.

Sino-Vietnamese Relations: 1975 to 1991

Following the end of the Vietnam War in late April 1975, relations between China and Vietnam went through dramatic changes from seemingly good and normal relations in 1975 to war in 1979. Relations deteriorated over a number of issues. First, there were differences in opinion concerning the Soviet Union and China's uneasiness about Vietnam's relations with that country. Second, there were conflicting interests in Cambodia and China's gradually increasing support for Cambodia in the conflict between Vietnam and Cambodia. The Vietnamese military intervention in Cambodia in late December 1978 caused further tension in relations with China. A third issue related to the territorial disputes between the two countries: along the land border, in the Gulf of Tonkin, and in the South China Sea. The maritime disputes contributed to the deterioration of bilateral relations by adding two more issues to the deepening differences between the two sides, although it is difficult to discern their specific impact. The clashes that occurred along the border were an indication of divergences with regard to other issues and the overall deterioration of relations, rather than an important issue in themselves. A fourth issue in Sino-Vietnamese relations was the situation of the ethnic Chinese in Vietnam and the way in which the Chinese minority was treated. It was the mass migration of ethnic Chinese from Vietnam in the spring of 1978 that officially led to the open and public deterioration of bilateral relations between the two countries. The overall deterioration of relations led to a militarized conflict that escalated into China's attack on Vietnam in February and March 1979.

The normalization process began with low-level contacts in the mid-1980s and expanded to high-level meetings from early 1989. In early September 1990 a (then secret) high-level meeting was held in China. Despite this meeting the normalization process lacked momentum on the political front. This situation prevailed up to mid-1991, when the process gained momentum. The increased diplomatic interaction paved the way for a high-level sum-

mit from 5 to 10 November 1991, during which bilateral relations were officially fully normalized.

Sino-Vietnamese Relations since Full Normalization in Late 1991

Since full normalization, the relationship between China and Vietnam has been characterized by two contradictory trends: one positive, with expanding contacts and cooperation in many fields, and the other negative, with continued differences relating primarily to territorial disputes. The positive trend has been prevalent throughout the period but has at times been slowed down by fluctuating levels of tension relating to border disputes—in particular, those in the South China Sea area.

Expanding political, cultural, economic, and military contacts between the two countries illustrate the positive trend in improving and expanding bilateral relations. There are official delegations regularly visiting the other's country to discuss ways of expanding cooperation in various fields. There is a strong political willingness to strengthen and deepen the overall relationship between the two countries. A number of bilateral agreements were signed following the full normalization of relations in late 1991. The growing economic relations can be seen through the growth in bilateral trade, up to U.S.\$1 billion in 1996 and U.S.\$2 billion in 2000. China is also providing loans and assistance to upgrade Chinese-built factories in northern Vietnam. In the political field the relationship between the two ruling parties—that is, the CCP and the Vietnamese Communist Party (VCP)—has been expanded through a steady stream of exchange visits at various levels within the two parties. The contacts between the armed forces of the two countries have also expanded through regular visits.

Tension in bilateral relations has primarily been caused by differences relating to territorial disputes and to a lesser degree by problems relating to cross-border smuggling. Since late 1991 sharp differences relating to all the territorial disputes were prevalent from May to November 1992. They include overlapping claims to the Paracel and Spratly archipelagos, water and continental shelf areas in the South China Sea and in the Gulf of Tonkin, and areas along the land border. Differences relating to oil exploration in

the South China Sea and the signing of contracts with foreign companies for exploration were prevalent during the periods April–June 1994, April–May 1996, and March–April 1997. During 1998 there were no extended periods of tension relating to border disputes, but shorter periods can be noted, such as in January along the land border and in the South China Sea during the months of April, May, July, and September. During 1999 the focus was on reaching a settlement of the land border dispute, and this resulted in the signing of a Land Border Treaty on 30 December 1999. During 2000 the focus was on settling Gulf of Tonkin disputes, and that resulted in the signing of the Agreement on the Demarcation of Waters, Exclusive Economic Zones, and Continental Shelves in the Gulf of Tonkin on 25 December 2000. Since 1999 no periods of tension have been caused by any of the border disputes. However, in 1999 and in 2001, official protests were issued in response to a limited number of actions carried out in or in relation to the South China Sea.

Conclusion

China and Vietnam share a long history of relations that have a strong bearing on the contemporary relationship. Relations during the second half of the twentieth century were characterized by periods of close collaboration and a period of deep conflict. We are currently witnessing a period of close cooperation following a considerable improvement of relations during the 1990s, as compared with the situation that prevailed in the late 1970s.

The future development of the Sino-Vietnamese relationship will be determined by how successfully the two sides handle disputed issues. Deepening bilateral cooperation in different fields and expanding economic interaction contribute to building a more stable bilateral relationship, and the progress in managing territorial disputes in recent years contributes positively to the prospect for long-term stability in the Sino-Vietnamese relationship. However, the unresolved disputes in the South China Sea area remain potential threats to the relationship in the long term.

SINO-VIETNAMESE WARS

China and Vietnam share a history of relations marked by long periods of collaboration and shorter periods of military conflict. The military conflicts have been of a dual nature: first, rebellions by Vietnamese to regain independence from the Chinese Empire during the more than a thousand years when Vietnam was part of the Chinese Empire, and second, militarized conflicts between independent Vietnam and China.

During the more than a thousand years of direct Chinese rule over Vietnam, a number of rebellions occurred. The Trung rebellion, in the first century C.E. (ca. 40–43), was a genuinely Vietnamese rebellion. The Chinese immigration that aimed at colonizing Vietnam gradually led to the emergence of a new Sino-Vietnamese ruling class, a social and economic decolonization of Vietnam, and efforts to establish political independence from the Chinese Empire. That led to new rebellions, but they all failed because of the strength of the Chinese Empire. After the fall of the Tang dynasty in 907 C.E., the prospects for Vietnamese independence increased, and in 939 C.E. Vietnam regained complete independence.

Relations between the independent Vietnam and the Chinese Empire continued to be very close both politically and culturally. However, relations between China and Vietnam were not always harmonious; in times of internal strife in Vietnam, Chinese emperors took advantage of the opportunity to interfere militarily in order to gain direct control. For instance, the Ming emperor gained control over Vietnam from 1407 to 1428. Also, the Chinese imperial court might attempt to assist a threatened or deposed monarch, as in the case of the last Vietnamese

emperor of the Le dynasty in 1788. On both occasions the Vietnamese eventually defeated the Chinese. Another period of militarized conflict occurred in the late thirteenth century, when the Mongols ruled China (Yuan, 1271–1368) and tried to expand political control into Vietnam. Eventually Vietnam won a decisive battle in 1288.

After Vietnam gained full independence from French colonial rule in 1954, the Democratic Republic of Vietnam (DRV) and China enjoyed two decades of extensive cooperation and good relations. However, the end of the Vietnam War in late April 1975 signaled the beginning of a gradual deterioration of relations marked by an escalating number of military clashes along the common land border. These military clashes culminated in a Chinese offensive along the whole land border between 17 February and 16 March 1979. China declared that it was a response to Vietnamese attacks on China and claimed to have captured three out of six provincial capitals in the bordering provinces, Cao Bang, Lang Son, and Lao Cai, as well as seventeen other cities and counties, before announcing the pullout on 5 March. China announced that the withdrawal was complete by 16 March.

Attempts at negotiations between the two states were made from April 1979 to March 1980, but the points of discussion were too far from each other to make possible any agreement. Vietnam wanted to discuss problems solely related to the armed conflict between the two states and ways of reducing tension around the common border. China agreed to discuss those issues but also wanted to discuss the presence of Vietnamese troops in Cambodia and Laos, the situation of the ethnic Chinese in Vietnam, as well as territorial problems between the two states.

Relations remained tense during and after these talks—especially so along the common border, where both sides had many troops stationed. There were mutual accusations about military incursions, and enemy shelling became part of everyday life in certain areas of the bordering provinces. There seems to have been a link between Vietnamese offensives in Cambodia and increased Chinese military activity on the Sino-Vietnamese border. Up to August 1987 six major flare-ups were registered along the border: in July 1980, in May 1981, in April

1983, in April 1984, in June 1985, and in December 1986–January 1987. In March 1988 the two states clashed around the Spratly Islands in the South China Sea. The clashes resulted in China's seizing some of the islands. During the second half of 1988 tension along the common land border steadily decreased, and by December 1988, border trade had been resumed.

Following a slow process of normalization during the second half of the 1980s and into the early 1990s, it gained momentum during the second half of 1991. The increased diplomatic interaction paved the way for a high-level summit on 5 to 10 November 1991, during which the bilateral relations were officially fully normalized. Most disputed issues were settled during this process, but not the territorial disputes. During the 1990s, territorial disputes caused a fluctuating level of tension in bilateral relations. However, the tension did not lead to military clashes. Gradually the two countries have developed mechanisms for handling these disputes; through negotiations they resolved the land border and Gulf of Tonkin disputes in 1999 and 2000, respectively.

SISAVANG VONG (r. 1904–1959)

King of Colonial Laos

Born in 1885 and invested as king in 1904 at the age of nineteen, Sisavang Vong played a largely ceremonial role in the affairs of French Laos, but nevertheless he entered center stage in the crucial months following the defeat of the Japanese and the postwar return of the French. A symbol of the unity of the country, he had a stature that grew as his independent kingdom came to be drawn into international politics surrounding the Indochina wars. However, it was to be his son and heir, Sisavang Watthana, who would increasingly replace him in public life as his health faded in the 1950s.

Following French intervention in upper Laos, especially that associated with the Pavie missions, the French sought to preserve the ancient kingdom of Luang Prabang. Upon the death of King Zakharine on 25 March 1904, the French chose his younger son, Prince Sisavang Vong, in preference to the elder Prince Sisaleumsak as Zakharine's successor. Returning from France, where he had undergone higher education, the Crown prince arrived back in Luang Prabang to officiate at the royal cremation.

As a royal figure associated with the ancient kingdom of Luang Prabang and the Buddhist and mandarin traditions that supported the court, Sisavang Vong inherited great prestige and religious charisma. As a Buddhist monarch, he was not only a person of accumulated merit but in a Laos Buddological sense also a medium connecting to the metaphysical world, such as is celebrated in certain court rituals at Luang Prabang. Nevertheless, his administrative powers were strictly circumscribed by the French resident, and his edicts and titles conferred upon court officials were all subject to approval by the French, just as his royal budget was submitted for approval to the governor-general of Indochina. The French even built his palace.

In 1931, observing the anomalous character of the semiprotectorate semicolonial status of Laos, the king lobbied Paris to place the kingdom of Luang Prabang on the same legal status as Cambodia and Annam. The mixed oriental-Western legal structure of governance continued

virtually to the end. However, in a treaty signed in 1941 between Marshal Petain and the king, in order to compensate the monarch for the temporary loss of Sayaboury province to Thailand, Sisavang Vong was recognized, conceptually, as king of Luang Prabang and the rest of Laos.

On 8 April 1945, following the Japanese *coup de force*, the king, under duress, was obliged to proclaim the independence of Laos from France. There was no question that the Francophile king was coerced into making the proclamation, although the king and Crown prince were also critical of the inability of the French intelligence to track Japanese intentions and protect Laos.

With the French return to Laos following the Japanese surrender of 15 August 1945, the king's declaration of independence under Japanese duress was considered null and void. But, by the end of the month, differences with Prince Phetsarath (1890–1959) and the king on the future of the country were in the open. Charging that the king was no longer a free agent, Phetsarath appealed to the Allies to recognize Lao independence. The Lao Issara (Issarak), the Lao independence movement dominated by Phetsarath, and local Vietnamese communists, who mounted violent street demonstrations and actions in Vientiane and Luang Prabang, agreed. In a historic turn of events the king replied by dismissing Phetsarath from his posts, virtually forcing the latter's hand. With Phetsarath's fateful defection, the die was cast for the subsequent thirty years of civil war.

Despite the modern veneer, Laos under the monarchy upheld many time-bound traditions in a fundamentally Theravada Buddhist and animist culture. For example, the credulous king was not beyond consulting soothsayers even in the face of Việt Minh advances in Luang Prabang in 1953. But his refusal to vacate the royal capital redounded to his favor and popular acclaim. Even so, the focus of the monarchy was in Luang Prabang, as Laos was a deeply divided nation, between north and south where even the name of the monarch was largely unknown.

On 29 October 1959 the king died after a reign of fifty-four years. An official planning session held in Luang Prabang for the royal cremation, however, was the occasion for the Kongle coup d'état in Vientiane on 8 August 1960. Much delayed, 24 April 1961 was chosen as the

King of Laos Sisavang Vong, ca. 1949.
(Hulton-Deutsch Collection/Corbis)

auspicious day for the king's cremation. Celebrations continued over three days with much pomp and ceremony, notwithstanding the grave international crisis foreshadowing the Geneva Conference on Laos opening the following month.

An image of the king in the form of a statue survives in Laos, in Vientiane, a gift of the Soviet Union from the early 1970s, but undoubtedly the elder king also survives in the memories of an older generation as a man of Buddological merit and as a link with the past.

SISOWATH (1840–1927)

**Presiding over France's
*Mission Civilisatrice***

Sisowath, king of Cambodia, succeeded his older brother, Norodom (r. 1860–1904), to the throne in 1904. In the 1860s and 1870s, Sisowath ingratiated himself with the French authorities in Cambodia by helping to put down a series of dynastic rebellions—some orchestrated secretly by Norodom and others directed against him. The French secretly promised Sisowath the throne in the 1880s. Soon after he became king, France forced Siam (Thailand) to return two northwestern Cambodian provinces that had been annexed by Bangkok in the 1790s. One of these, Siem Reap, contained the medieval Cambodian ruins known popularly as Angkor Wat (Nagaravatta); the other, Battambang, soon became an important source for rice exports.

Under Sisowath's rule, French control over Cambodia intensified, but the French encountered little resistance from the Khmer, who enjoyed an unprecedented period of prosperity and peace. Sisowath presided, benignly, over the partial modernization of his kingdom. His popularity among ordinary Khmer and his acceptance of the colonial status quo helped to maintain royalty as a viable institution and allowed France's *mission civilisatrice* ("civilizing mission") to proceed at a stately pace. Between 1904 and 1927, hundreds of kilometers of paved roads were built; Phnom Penh, the capital, was modernized; the population grew rapidly; and Cambodian exports, particularly of rice, rubber, and corn, improved the livelihood of hundreds of thousands of Cambodian peasant farming families. After his demise at the age of eighty-seven, the French established Cambodia's first high school named after him, on the site of his former palace.

SJAHRIR, SUTAN (1909–1966)

**Westernized Face of
Indonesian Nationalism**

Sutan Sjahrir was an Indonesian socialist leader, and three times prime minister of the Indonesian republic during the years 1945 to 1947. Born in May 1909 in Padang Panjang (West Sumatra) of Minangkabau ancestry, he was edu-

cated in Medan, Bandung, Amsterdam, and Leiden. While in The Netherlands he made important contacts with young Dutch socialists and was a principal leader of the Perhimpunan Indonesia (PI, Indonesian Association), but he resigned from it in 1931 when communists gained control of the organization and expelled Mohammad Hatta (1902–1980).

Returning to Indonesia in 1931, he helped to found the Pendidikan Nasional Indonesia (PNI-Baru, National Education Club) to educate a socialist leadership for Indonesia's nationalist movement, and his interest in labor issues led to his being appointed chairman of the Indonesian Workers' Congress. Consequently he was arrested in 1934 and imprisoned in Batavia and then moved to the notorious Boven Digul camp in New Guinea, before being exiled to the relative comfort of Banda Neira, where he remained from 1936 until he was flown to Java by the Dutch in January 1942.

Sjahrir remained aloof during the subsequent Japanese occupation (1942–1945), building up an underground network of former PNI-Baru members and students, and attempting to make contact with the Allies while still retaining links with Indonesian leaders such as Hatta.

After the declaration of independence (August 1945), Sjahrir engineered a takeover within the Central Indonesian National Committee (Komite Nasional Indonesia Pusat, KNIP), securing the suspension of the 1945 Constitution in favor of cabinet government. The following month saw the creation of a new cabinet with Sjahrir as prime minister, minister of foreign affairs, and minister of the interior, and in the next month (October) the creation of the Socialist Party with Sjahrir as chairman. However, Sjahrir's government base in Jakarta (formerly Batavia) was not only physically, but also culturally and ideologically, divided from the capital of the republic in Yogyakarta, where Sukarno (1901–1970) and Hatta were based. His negotiations with the Dutch generated intense hostility within nationalist circles in Java. He resigned in the face of opposition in March 1946 but was immediately reappointed with a new cabinet, although its contents were more dictated by Sukarno and Hatta.

Local army units in Surakarta who feared a betrayal of Indonesian independence briefly held Sjahrir under arrest in June 1946. As a re-

sult, he resumed his cabinet government only in October in an even weaker position. He resigned in June 1947 for the third and final time as prime minister after failing to gain support for further compromises with the Dutch.

When the Dutch launched the first "police action" (1947), Sjahrir was abroad. He used the opportunity to act as the advocate of the republic, pleading for foreign support through a series of visits to foreign capitals and even addressing the UN Security Council, although he was not officially accredited.

He returned to Indonesia in April 1948, and he remained mostly detached from active politics thereafter. Following a token appearance at the Renville Agreement between the Dutch and Indonesians in January 1948, he refused to sit on any subsequent delegation, and even refused to attend the final Round Table Conference at The Hague in 1949.

He was imprisoned during the second Dutch "police action" in December 1948, being held at Prapat with Sukarno and Haji Agus Salim (1884–1954), but was controversially released before the other leaders and returned to Jakarta. In the same year his supporters founded a new Indonesian Socialist Party (PSI), with him as leader. This party was influential in parliament and the civil service until it was banned in 1960, but it fared very badly in the 1955 parliamentary elections. Sjahrir had, however, already effectively withdrawn from active politics after 1950. He was held under house arrest after January 1962 on the flimsy pretext of his supposed involvement in a plot against Sukarno. In 1965 he was allowed to go to Switzerland for medical treatment, but this was too late to save his life. He was given a full state funeral in 1966, attended by enormous crowds, and declared a "national hero" by presidential decree.

Despite his high profile as an Indonesian nationalist figure, Sjahrir actually spent very little of his life in sustained, active politics, often cultivating an impression of detachment and distaste for central politics. Instead he was always more dedicated to cadre formation and education than mass action—values with which he seemed to imbue his followers in the PSI. He always expressed a profound hostility toward feudalism, Hinduism, mysticism, and what he called "the passive East" that

made his relations with Sukarno and some other nationalists seriously strained. He was a practicing if idiosyncratic Muslim but did not see the religion as having any political role, although he valued aspects of modernist Islam as a rationalizing and dynamic force. His political vision was fundamentally Marxist, although with an emphasis on communal solidarity rather than class warfare. In November 1945 he published his most famous and widely translated works, *Perjuangan Kita* (*Our Struggle*), which displayed a commitment to international socialist revolution. Although Sjahrir never enjoyed broad political support in Indonesia, he did inspire a fierce loyalty among his elite followers, and his popularity among Europeans as the acceptable and apparently Westernized face of Indonesian nationalism undoubtedly helped to secure important support for the new republic.

SJARIFUDDIN, AMIR (1907–1948)
Indonesian Communist Leader

Amir Sjarifuddin was an Indonesian leftist nationalist activist, lawyer, and former prime minister. He was born of a Muslim family but converted to Christianity, and then he declared himself a communist. Born in Medan, North Sumatra, Sjarifuddin was recognized as a brilliant student at law school in Jakarta. Playing the violin was his lifelong passion.

His political consciousness began at his boardinghouse in Kramat 106, Jakarta, well-known as *Indonesis Clubgebouw*. From the late 1920s to mid-1930s he stayed at this residence, together with other student activists such as Abu Hanifah, Mohammad Yamin, Assaat, and other senior students of the famous medical school Stovia and law school RHS. He met many young nationalist activists who made this house their rendezvous. The building was also used for the first youth congress, held in October 1928; the congress adopted the three ideals of Indonesian national identity of *Sumpah Pemuda*, or Youth Pledge. As a young activist, Sjarifuddin played an important role during the congress, together with other members of *Perkumpulan Pelajar Pelajar Indonesia* (PPPI, Association of Indonesian Students). The progressive thoughts and writings of French philosophers Karl Marx (1818–1883), Friedrich Engels (1820–1893), and Vladimir Ilyich Lenin (1870–1924) were influential among many young Indonesian nationalist activists at that time, and Sjarifuddin was no exception. His article on Flanders, entitled “De fiere Vlaamsche Leeuw” published in PPPI’s journal was seized by the Dutch secret police.

Sjarifuddin rose as a political leader when he joined Sartono to form *Partai Indonesia* (Partindo) in 1931 after the dissolution of Soekarno’s PNI (Perserikatan Nasional Indonesia). Remaining in Partindo, he paid for his radical articles on the colonial government by spending some years in the Bandung prison (1933–1935). It is believed that Sjarifuddin converted to Christianity in 1935 and joined an illegal communist cell led by Moeso (Musso).

Partindo was dissolved in November 1936. Sjarifuddin, together with other Partindo cadres, formed *Gerakan Rakyat Indonesia* (Gerindo) in May 1937. Gerindo aimed to win a full parliament for Indonesia on the ba-

sis of cooperation with the Dutch against the threat of fascism. Sjarifuddin was appointed Gerindo's chairman in 1939. Shortly afterward he was jailed for his alleged involvement in underground political activity. However, in 1948 he confessed that he had been given 25,000 guilders by the Dutch government just prior to the arrival of the Japanese to facilitate the creation of underground political groups. During the occupation he was incarcerated by the Japanese military in Malang and sentenced to death. Appeals to Soekarno (Sukarno) (1901–1970) and Mohammad Hatta (1902–1980) commuted the death sentence to life imprisonment.

Following the proclamation of Indonesian independence in August 1945, Sjarifuddin set up a new party called Partai Sosialis Indonesia (Parsi). He worked with another socialist leader, Sutan Sjahrir (1909–1966), who then became prime minister and his main political rival. He served as minister of defense in Sjahrir's cabinet. In July 1947, he himself became prime minister. As premier he negotiated with the Dutch and signed the Renville Agreement in January 1948. Owing to major opposition to the agreement within the republican government, Sjarifuddin resigned as prime minister, and Mohammad Hatta assumed the premiership.

After separating from Sutan Sjahrir on 13 February 1948, Sjarifuddin formed a radical left-wing group named Front Demokrasi Rakyat (FDR, People's Democratic Front) on 26 February 1948. FDR became more radical when Moeso, a leader of the Partai Komunis Indonesia (PKI), joined in August 1948 upon his return from Moscow. After that, FDR was identical with PKI. Sjarifuddin was trapped between the radical strategy advocated by Moeso and the moderate line advocated by others. Declaring himself a communist on 29 August 1948, Sjarifuddin was in open conflict with Soekarno and Mohammad Hatta.

FDR and PKI were involved in the Madiun affair of September 1948. Sjarifuddin, his wife, Zainab, and other FDR/PKI leaders were apprehended by a military group loyal to Soekarno and Mohammad Hatta in Pati, Central Java, from where they were brought to Surakarta and then executed.

SLAVERY

For much of the population, the labor system of Southeast Asia, throughout most of its recorded history, was based on obligations to labor for a master, creditor, or lord. As a form of bondage, slavery existed within a larger pattern that also included debt-bondage and fealty to a ruler, and it was seldom sharply demarcated from these other forms.

A slave is generally someone who is considered the property of another and is required to perform compulsory labor. In Southeast Asia, the person-as-property aspect of bondage was generally secondary to notions of obligation and fealty. As elsewhere in Asia, slaves were not necessarily of lower status than the general population, and might at times attain considerable wealth and power. In the classical Southeast Asian trading states, where most labor and retailing was done by slaves, slaves frequently lived in their own houses, made income on the

side, and owned property, sometimes even possessing their own slaves. Early European observers were surprised to find that affluent Malay slaves in the cities of Melaka and Aceh disdained to perform any kind of manual labor, even when offered payment, leaving such work to recent captives or impoverished aliens. Compared with New World and European forms of plantation slavery, there was generally less social distance between slaves and slave-owners in Southeast Asia, and manumission was more common; after one or two generations, slaves were frequently freed or assimilated into more ambiguous forms of bondage.

War Captives and Debt-Bondsmen

Captives in war or raiding expeditions were usually enslaved, at least temporarily. In Angkor, at its height in the thirteenth century, a large proportion of the population appears to have been slaves captured or bought from nearby hill peoples or neighboring states. In this case, the social and cultural gulf between captive slaves and the dominant Khmer population was great, and vastly different from that which existed between ordinary people and indigenous bondsmen. But such situations were unusual. More often, the position of captives was temporary, so that within a generation or two, they shared the language, religion, and way of life of the dominant population.

In normal times, debts were the most important source of bondage in Southeast Asia. If a person was unable to pay a debt, the debtor became a bondsman to the creditor. In Southeast Asia, judicial sentences were often in monetary form, and when a fine could not be paid, the guilty person—and perhaps his family dependents—became bondsmen. Debt-bondage was widespread in premodern Southeast Asia. In Central Siam during the eighteenth and nineteenth centuries, debt-bondsmen were believed, for example, to have comprised between a quarter and a half of the population. Even in comparatively egalitarian upland societies, little penetrated by money, debt-bondage was widely reported. The Iban of West Borneo had both captive slaves (*ulun*) and debt-bondsmen (*jaumi*). The latter regularly redeemed themselves, while the former, by the second generation, or upon an owner's death, were freed by adoption

(*betembang*) into the owner's family. Consequently, bondage never became a permanently hereditary status, although families of known slave ancestry tended to suffer social stigma.

Urban Slaves

The large cities of premodern Southeast Asia—Angkor, Ayudhya, Melaka, Aceh, and Makassar—required, in their precolonial heyday, a large labor force that was provided not by spontaneous migration and wage labor, but by the large-scale importation of slaves. Some came in the retinue of traders and officials, as domestic slaves; others were brought back as war captives, to be distributed, sold, or to work for the king; still others were imported by slave traders. Merchants and officials who lived by trade could afford enormous retinues of slaves. For the dominant classes it was imperative to do no manual work and, as a mark of status, to possess large retinues of slaves. Early Western observers noted that slaves were treated as well as, if not better than, servants in Europe. In this cosmopolitan setting, traders were often foreigners, and so could not function without men bonded to them. Hence slaves were the single most important item of property. As in the classical Western world, the institution of slavery reached its peak during the high point of commercially oriented urban development.

With control over persons the major index of power, in many Southeast Asian states there was rivalry between the king and nobles. The king, on the one hand, would seek to maximize the number of people directly obligated to his royal person through *corvée* service, conscription, and taxation; the nobles, on the other, would attempt to withdraw men from such service through “private” bondage or slavery. The burden of royal *corvée* could be heavy, as, for example, in premodern Burma, Siam, and Cambodia. There, for ordinary people, there were three alternatives: bondage to the king, bondage to a monastery or religious foundation, and “private” bondage. Of the three, bondage to the king was usually the most burdensome, entailing in Siam one-half of a man's labor. By contrast, in the Malay world, to be a royal bondsman (*hamba raja*) was a privileged status. Powerful rulers tended to curtail the ability of citizens to control others, so that the

expansion of state power in later centuries coincided with efforts to abolish slavery and limit other forms of private bondage.

Early Modern Period and the End of Slavery

Before indentured labor in the nineteenth century, captives and slaves were the primary source of labor mobility in Southeast Asia. Europeans at first adapted to this system. However, as the Dutch and Spanish found cheaper ways to tap labor, particularly through systems of *corvée*, slaveholding declined.

According to Anthony Reid, the decline of slavery is associated with two structural factors in Southeast Asia. Firstly, the modern state, in both its colonial and national forms, increasingly demanded the undivided control over its people; secondly, a growing number of landless laborers and indentured aliens made wage labor cheaper and more efficient. European governments began to take steps against slavery at the beginning of the nineteenth century. Toward the close of the century, slavery was formally abolished throughout the region.

SNOUCK HURGRONJE, PROFESSOR CHRISTIAAN (1857–1936)

Scholar-Bureaucrat of Indonesian Islam

Snouck Hurgronje's contribution to Indonesian history and historiography is still debated, be-

cause of his dual role as orientalist scholar and colonial official. However, his insistence that textual studies be combined with direct observation in the field ensures that his writings are essential sources for any student of the history of Indonesian Islam and society.

Snouck Hurgronje defended a doctoral thesis at Leiden University on the history and rituals of the Hajj (pilgrimage) in 1880. In 1883 he was secretly appointed by the colonial administration to go to Arabia to conduct research into the resident communities of Southeast Asian scholars there, particularly with reference to discovering the political and religious currents disseminated among them. This he did from 1884 to 1885.

In 1889 he was appointed by the Netherlands (Dutch) East Indies administration as adviser for native languages and Islamic law. In 1891 he was dispatched to Aceh to conduct a study with a view to devising policies to put an end to the continuing conflict against Dutch rule. There, he identified the Acehese religious leadership as presenting the most serious source of resistance, and recommended that members of this leadership be pacified by the use of the same guerrilla tactics that they used against the Dutch. Accordingly, General J. B. van Heutsz (1851–1924) aggressively pursued Snouck Hurgronje's proposed course of action.

Snouck Hurgronje remained in the Indies until 1906. He then returned to Holland and was appointed professor in Arabic, Acehese, and Malay at Leiden University. Although holding that position, he continued his role as adviser to the colonial government until 1927. He played a major role in the training of many future Indies officials, inculcating in them the cultural policy of "Association"—that is, educating an Indies elite to share in Western modes of thought and civilization through Dutch education.

SOCIÉTÉ DES MISSIONS ÉTRANGÈRES (MEP)

Founded in Paris between 1658 and 1663 by Mgr Pallu and Mgr de la Mothe-Lambert, the Missions Étrangères de Paris (MEP) aimed at promoting the conversion of Asia to Catholicism. To reinvigorate Catholic missionizing, currently stagnating in Portuguese hands, it was necessary to evade the monopoly of episcopal jurisdiction in Asia (the *padroado*) given to the Portuguese Crown by the papacy during the fifteenth century. Bishops of a new type, “vicars apostolic,” were appointed from among missionaries of the MEP, who derived their episcopal powers from extinct sees in Asia Minor, outside the jurisdictional boundaries of the *padroado*. The main directive of the French MEP was to establish autochthonous clergies—that is, national churches with indigenous episcopates and priesthoods. Over the following three centuries this aim was not generally followed, and French clergy were to retain full canonical control of all the apostolic vicariates established by the society in Asia until the twentieth century.

In the seventeenth century the MEP maintained apostolic vicariates in Tonkin, Cochinchina, and Siam (Thailand), extending in the eighteenth century to parts of China and India. The period of the MEP’s greatest growth was the nineteenth century, when despite waves of intermittent persecution in some regions, new vicariates were opened up and existing vicariates grew large enough to require repeated subdivision. In the process the society became responsible for apostolic vicariates in Korea (1831), Mongolia (1840), Manchuria (1840), Melaka (1841), Tibet (1846), Japan (1846), and seven provinces of China (1840–1860), together with more in India, in Ava, and in Pegu (1846). But the MEP’s greatest commitment always remained Vietnam, Siam, and Cambodia, subdivided into eight vicariates from 1846 to 1864. They shared only East Tonkin with the Spanish Dominicans. Despite occasionally intense persecution in Vietnam, they retained their greatest numbers of converts there, mak-

ing Vietnam proportionately one of the most heavily Christianized societies in Asia.

For almost three centuries the MEP declined to respond to intermittent urging from the papacy to accept indigenous clergy as bishops. The devolution of responsibility to native bishops began with the appointment of the first Indian vicar apostolic in 1923, followed by six Chinese bishops in 1926 and a Japanese bishop in 1927. In spite of the huge rise in the size of the Christian population in Vietnam alone—to almost a million before the Great War (1914–1918)—no native bishops were consecrated there until 1933. The MEP’s surrender of ecclesiastical control in China accelerated after 1949, but in Vietnam the transfer of responsibility did not take place until 1960, when apostolic vicariates were finally abolished in favor of a local diocesan system.

SOEKARNO (SUKARNO) (1901–1970) **Populist Leader of Indonesian Independence**

Soekarno was a highly influential leader of the Indonesian nationalist movement, the first president of independent Indonesia, and closely linked with secular nationalist groups. He is remembered for his famous saying *jangan sekali-kali melupakan sejarah*, or *jas merah*, meaning never to forget history. He was born in Surabaya (Blitar?), East Java, on 6 June 1901 from a lesser *priyayi* (gentry) member of the official class, to a Javanese father and Balinese mother. Soekarno spent his early education in Mojokerto, where his father worked as a

Indonesian president Soekarno (Sukarno).
(Bettmann/Corbis)

teacher, before entering the European school system; there he completed the lower school in 1916. He was initially exposed to political movements while attending the European higher middle school of *Hoogere Burgerschool* (HBS) and while boarding in the house of Haji Oemar Said Tjokroaminoto (1882–1934), who was then chairman of Sarekat Islam (SI) in Surabaya. During this period, Soekarno met other leading nationalist leaders, such as Haji Agoes (Agus) Salim (1884–1954), Semaoen (Semaun) (1899–1971), and Ki Hadjar Dewantara (Dewantoro) (1889–1959) in Tjokroaminoto's house, a center of much political activity. The young Soekarno was even tied in marriage with Tjokroaminoto's daughter.

Soekarno joined Jong Java (Young Java), a Javanese youth movement organization, in 1918 and started to write for Sarekat Islam's newspaper, *Oetoesan Hindia*. He openly attacked capi-

talism, colonialism, and imperialism in his writings; in his oral presentation he also rejected the use of high-Javanese *kromo* and used low-Javanese *ngoko* instead, during meetings of Jong Java. Although Soekarno was very aware of his higher social status than most of the population, further enhanced by his oratorical ability, he also displayed a great interest in the challenges faced by the common people. He always considered himself the "mouthpiece of the people." It is not surprising, then, if his populism often put him into conflict with other nationalist leaders, who took issue with his unrealistic, simplistic, romantic, and, to some extent, ironically elitist views on issues.

Soekarno finished his studies at HBS in 1921. He then joined the newly established technical college *Technische Hoogeschool* (THS) at Bandung, and completed an engineering course in 1926. Unlike most other leading Indonesian nationalist leaders, who were educated abroad, his education and experience were entirely in Indonesia. Living in Bandung, Soekarno lost ties with Tjokroaminoto. He divorced Tjokroaminoto's daughter and then married the widow of his former landlord. He was now closer to secular nationalist leaders such as Tjipto Mangoenkoesoemo (1886–1943), Douwes Dekker (Danudirtdja Setiaboedi) (1880–1950), and Ki Hadjar Dewantara, and at the same time he encountered the growing number of Islamic modernists in Bandung. This socialization and intellectual environment contributed greatly toward Soekarno's way of thinking, which became more urbane and sophisticated. Soekarno began to adopt the mindset of most Javanese *priyayi* and *abangan* in matters of religion, Javanese culture, and philosophy. He believed in nationalism and unity and had his own interpretation of the differences among nationalism, Islam, and Marxism as political philosophy. In a series of articles published in *Indonesia Moeda* in 1926, Soekarno argued that there is no real difference among nationalism, Islam, and Marxism as an ideology. All three should be put together as the ideological basis in the struggle for the independence of Indonesia.

After completing college in 1926, Soekarno began his real political activity through Perserikatan Nasional Indonesia (Indonesian Nationalist Association) in 1927. The party changed its name to Partai Nasional Indonesia (PNI, Indonesian Nationalist Party) in 1929.

The radical activities of the PNI resulted in the imprisonment of Soekarno and other leaders by the Dutch colonial government. After his release in December 1931, Soekarno joined the new party, named Partai Indonesia (Indonesian Party), or *Partindo*, founded in August 1931 by former PNI members. But he was soon rearrested, in August 1933, and exiled, initially to Flores Island and then to Bengkulu, without trial. There is controversy over this period of Soekarno's life. Some scholars have argued that Soekarno had written four letters to the colonial authorities appealing for his release and offering his retreat from political activity in return. Others maintain that Soekarno lived in exile under the Dutch colonial authorities in Sumatra; it was then that he met his third wife, the teenager Fatmawati.

When Japanese troops entered Indonesia at the outbreak of the Pacific War (1941–1945), Soekarno returned to Jakarta in July 1942. Together with Mohammad Hatta (1902–1980) and other cooperative nationalist leaders, Soekarno worked for the Japanese authorities in the interest of the greater goal of Indonesian independence. Soekarno also played an important role in a Japanese-sponsored committee for the preparation for Indonesian independence, *Badan Penyelidik Usaha Persiapan Kemerdekaan Indonesia* (BPUPKI), convened in March 1945, about six months after Japanese prime minister Koiso (1880–1950) promised independence for Indonesia. The committee discussed basic philosophy and drafted a constitution for an independent Indonesia. Soekarno proposed his idea about a state ideology *Pancasila* during his speech on 1 June 1945, and had a hand in various aspects of the constitution plan. Together with the chairman, Dr. Radjiman Widioningrat, Soekarno was responsible for retaining the additional phrase “with the obligation to carry out Islamic law for the Moslem” in the first principle of *Piagam Jakarta* (the Jakarta Charter). There was strong opposition from Ki Bagoes Hadikoesoemo, a leading Islamic leader who had initially proposed that Islam be the state ideology for an independent Indonesia but later opposed the idea. Soekarno declined Hadikoesoemo's suggestions in order to appease the Islamic majority by resorting to a compromise. In fact, the phrase was finally removed when the constitution was approved after the declaration of Indonesian independence.

Despite some differences between the old and young groups among Indonesian nationalist activists concerning the right time to declare independence, Soekarno and Mohammad Hatta proclaimed Indonesian independence on 17 August 1945 in the name of the Indonesian people. They were then appointed the president and vice-president of the Republic of Indonesia by *Panitia Persiapan Kemerdekaan Indonesia* (the Preparatory Committee for Indonesian Independence), which acted as a transitional parliament. However, Soekarno soon realized that the new republic afforded no room for his wishes and ideology to be practiced. His proposal to create a national party was rejected, and subsequently the emerging political scenario headed toward a liberal, multiparty, parliamentary system. His position as the head of the cabinet was changed to the newly appointed position of prime minister, despite there being no provision in the constitution sanctioning such a post. It is interesting to note that despite his historical connection with the secular nationalist party of PNI, Soekarno never declared himself formally a member when most of his companions used a similar name for a newly created party in late 1945.

Soekarno led the Indonesian struggle against the returning Dutch during the revolution by means of his oratorical skills and charismatic personality, but he did not take part directly in most diplomatic negotiations; Mohammad Hatta actively participated in the various discussions with the Dutch. Bereft of military experience, Soekarno possessed no military strategy despite the fact that the Indonesians had to fight by conventional means to prevent a Dutch reoccupation. He also failed to build a strong rapport with individuals within the military, who considered themselves the most meritorious and patriotic group in protecting the country from a reassertion of colonial power. Instead it was his deputy, Mohammad Hatta, who administered and ran the government and signed several important political regulations concerning political parties and internal politics. Soekarno enjoyed his position as head of state, a symbolic figure required by the revolution. Like his former protégé Tjokroaminoto, many Indonesians—particularly Javanese—considered Soekarno a *Ratu Adil* (Righteous King/Prince).

In the second half of the 1950s, Soekarno began to be involved in a complicated contest

of power—particularly after the resignation of Mohammad Hatta as vice-president in 1956 in protest of the way in which Soekarno was running the country. The duumvirate had broken, and Soekarno began to enjoy full control over national politics and continued with his slogan of “unfinished revolution.” He introduced Guided Democracy (*Demokrasi Terpimpin*), brought back the less democratic and mystical constitution of *Undang Undang Dasar 1945*, and dismissed the elected parliament with the assistance of the army in 1959. Soekarno then emerged as an authoritarian leader with strong popular support, but he was trapped internally and internationally in the Cold War style of conflict by his *Nasakom* (nationalism, religion, and communism) ideology.

Soekarno brought himself into close contact with the Partai Komunis Indonesia (PKI, Communist Party of Indonesia), but he was still unable to close the gap with the military, which began to involve itself in daily politics. He was hostile to his opponents, particularly the Islamic reformist party and other socialist–Marxist–based parties, but too tolerant with, and to some extent even showing weakness in the face of, state bootlickers. Despite his involvement as a founding member of the nonaligned movement, Soekarno tended to nurture closer ties with the socialist Eastern bloc countries while at the same time challenging the interests of the Western democracies. In his private life, he was involved in many extramarital affairs and had several wives. Fatmawati, his third beloved wife, asked for and was granted a separation.

Indonesian politics was very tense, but economic growth was sluggish from the early 1960s. The tension came to a head in September 1965, when a group of military officers attempted to seize power by killing some army generals. The coup attempt failed, but it brought severe consequences to the lives of Indonesians. A struggle for power took place but differed significantly from the past, in that the military took the full initiative to acquire the upper hand. Soekarno was blamed for his strong support for the PKI, which was accused as the group behind the attempted coup. Despite the pressure, Soekarno stood by his *Nasakom* ideology and refused to put the blame on the communists. As a result, his own position was in danger. Opponents of communist groups backed by the military continued to

take action both on the street and in the parliament. There was a horrendous bloodbath as communists and their sympathizers were eliminated throughout the country.

After March 1966, Soekarno gradually saw his political power ebb away. The beneficiary of his fall was General Soeharto (Suharto, 1921–). Soekarno lost his presidential seat in February 1967, when a special session of the Provisional People’s Representative Assembly led by General A. H. Nasution (1918–2000) rejected his plea and transferred the presidential power to General Soeharto. Soekarno was held under house arrest until he passed away, on 21 June 1970.

SOETARDJO PETITION (1936)

Wishful Thoughts

The Soetardjo Petition was an unsuccessful attempt by cooperating nationalists in Indonesia to persuade the Dutch colonial authorities to introduce political reforms.

After the suppression of militant nationalist organizations in the Dutch Indies from 1926 to 1933, much nationalist attention focused on the possibility of reforming the *Volksraad*, the partly elected "People's Council," which had some legislative powers but no other control over government. The appetite for political change was widespread, partly because the examples of Burma (Myanmar) and the Philippines showed that extensive powers could be delegated to Southeast Asian parliaments without leading to chaos or maladministration, and partly also because of discontent with the colonial government's handling of the effects of the Great Depression (1929–1931). Salaries and government spending had been cut, and there was a widespread feeling that the Dutch had allowed these measures to fall most heavily on Indonesians.

The petition submitted to the *Volksraad* in July 1936 by Soetardjo Kartohadikoesoemo (b. 1892) called for a conference to set a ten-year timetable for Indonesian autonomy within a Netherlands-Indonesian union. Soetardjo envisaged an arrangement similar to the Philippine Commonwealth, but he did not present this arrangement as a precursor to independence. Soetardjo was a Javanese aristocrat and a former colonial bureaucrat, and more radical nationalists were at best lukewarm toward his proposal. The petition, however, was approved by the *Volksraad* and forwarded to the Dutch authorities. Formal rejection was not announced until November 1938, but by early 1937 it was already clear that the petition had not changed Dutch thinking.

The failure of the Soetardjo Petition is generally seen as marking the inability of the Dutch to recognize that global and domestic changes would soon make colonialism impossible. Furthermore, the rejection marked the Dutch failure to forge a cooperative relationship with a moderate nationalist elite to whom

they might have handed independence in a more or less peaceful manner.

SON NGOC THANH (1907–1976?)

Prime Minister of the Khmer Republic

Son Ngoc Thanh, Cambodian nationalist leader, was born into a wealthy Cambodian-Vietnamese family in southern Vietnam. He was educated in Vietnam and in France. He joined the colonial civil service in the mid-1930s and was affiliated with the Buddhist Institute in Phnom Penh and the nationalist newspaper *Nagara Vatta* (*Angkor Wat*). During the Pacific War (1941–1945), he sought Japanese support for his anti-French activities. Fearing arrest following a demonstration in 1942, he went into exile in Japan, returning only in May 1945 after Japan had persuaded the Cambodian king, Norodom Sihanouk (1922–), to declare Cambodia's independence. When the French returned to power later in the year, they arrested Thanh, accused him of treason, and imprisoned him in France. The sentence was later commuted to house arrest, and Thanh was able to obtain a law degree in France.

He returned to Cambodia in 1951 and began agitating for independence before going into hiding in Cambodia's northwest. The Khmer Issarak forces, dominated by communists, refused to ally with him, and he made little headway. He turned against Sihanouk after Cambodia gained its independence, and lived in Thailand and Vietnam, where he received support from the anti-Cambodian, U.S.-backed regimes in power in those countries. During the Vietnam War (1964–1975) he worked with the

United States to recruit ethnic Cambodians living in South Vietnam into the South Vietnamese army. He returned to Cambodia after Sihanouk was overthrown, and served briefly as prime minister in the Khmer Republic. Shortly before the Khmer Rouge victory in 1975, Thanh fled to Saigon where he died, probably a prisoner of the Vietnamese communists, in 1976.

SOOK CHING

A “Cleansing” Exercise

Sook ching (Mandarin: *xiao qing*), meaning “cleansing,” refers to the mass massacres of Chinese residents implemented by the Japanese Imperial Army (JIA) in Malaya (present-day West/Peninsular Malaysia), especially in Singapore, soon after its occupation. The objectives were to eliminate anti-Japanese elements lest subsequent military campaigns be hindered.

In Singapore, *sook ching* took place three times at different areas in 1942: 21 to 23 February, 28 February to 3 March, and toward the end of March. Altogether, almost half of the Chinese inhabitants, including women, the aged, and children, were screened. Criteria for identifying anti-Japanese elements were not clear. Those who had domiciled in Malaya for less than five years, could speak English, wore spectacles, came from Hainan, and so forth were regarded as anti-Japanese. Those who were classified as anti-Japanese were taken to isolated places and there executed en masse. According to Singaporean sources, 50,000 to 60,000 people were killed in Singapore (Ward 1992: 175–176). Japanese military sources, on the other hand, insist that it was fewer than several thousand (*ibid.* 148). At the war crimes court, seven Japanese commanding officers went on trial for this wartime execution and two of them were hanged. However, the pivotal initiator of the operation, Lieutenant

Colonel Tsuji Masanobu (1902–1968?), managed to conceal himself until the United Kingdom and the United States decided in 1950 not to prosecute him.

Similar operations took place in the main cities of Peninsular Malaya, such as Penang, Kuala Lumpur, Taiping, Johor Bahru, Muar, and also Kota Tinggi. In Johor, Negri Sembilan, and Melaka, the JIA in early 1942 encircled many small Chinese villages in the belief that anti-Japanese guerrillas were hiding inside. Thousands of villagers were killed at that time. The total number of victims for the whole of Malaya is considered by Malaysians to have been around 100,000.

**SOUPHANOUVONG
(RED PRINCE) (1911–1995)**

Leftist Prince of Laos

A scion of the Lao royal family, Prince Souphanouvong was born on 13 July 1911 in Luang Prabang, the royal capital of Laos, to the eleventh wife of the viceroy Boun Kong (d. 1920; r. 1887–1914). Rising to become titular head of the Pathet Lao movement, the Red Prince, as he was known to Western journalists—owing to his cohabitation with the Vietnamese-dominated Lao communist movement—led the anti-French and anti-U.S. struggle in Laos. He was appointed president of the Lao People’s Democratic Republic (LPDR) on 2 December 1975, a role that he held until illness forced him to step down in 1986.

Little is known about the prince’s early life, except his distaste for the court and his passion for self-advancement through education. At the age of twenty-one, a graduate of the Lycée Albert Sauraut in Saigon (class of 1931), Souphanouvong was undoubtedly a privileged student in colonial Indochina. Encouraged by his elder brother, Prince Phetsarath (1890–1959), the young prince continued his school-

ing in Paris at the Lycée Saint Louis and École Nationale des Pompes et Chaussées, where he graduated with a diploma in civil engineering (class of 1937).

Some writers have commented that in France the prince was also exposed to the radical socialist currents of the French Popular Front government of Leon Blum. Upon his return to Saigon in July 1937, the young graduate received his marching orders to report for duty—not in his homeland of Laos, as he had expected, but in the Vietnamese coastal town of Nha Trang. This was to change his life. First, he met and married his wife, Nguyễn Thị Kyi Nam (Pa Viengkham Souphanouvong), who bore him eight sons and two daughters. During the course of his assignment as engineer in 1939–1940, he also experienced at firsthand the iniquitous colonial caste system.

The exact extent of the prince's introduction to revolutionary Vietnamese communism is unclear. But a week after the August Revolution swept the Việt Minh to power in Hanoi in 1945, the prince, in the company of Emperor Bảo Đại (r. 1925–1945), met Hồ Chí Minh (1890–1969) in Hanoi. Endorsement of the ideals of the August Revolution and the hopes for a free and independent Laos were established then.

Returning from Hanoi to Hué on 30 September 1945, the prince embarked on his new career. Now at the head of the anticolonial Lao Issara (Free Lao Movement) and the Army for Liberation and Defence of Laos, the prince launched into an unequal struggle with French airpower. He was seriously wounded at the Battle of Thakek on 21 March 1946. Offered a safe base in Bangkok by the left-wing government of Pridi Phanomyong (1900–1983), Souphanouvong sought by diplomatic means what he had been unable to achieve by military force. But with the reestablishment of the dictatorship of Field Marshal Plaek Phibunsongkhram (1897–1964) in 1947, and U.S. support for the anticolonial struggle in Laos not forthcoming, the prince split with the moderate Lao Issara group, including his beloved brother Phetsarath. In this shift, the prince redirected the locus of his military struggle to the Lao-Vietnamese border, drawing upon pledges of support from Hồ Chí Minh.

The period up until 1954 also saw the rise of the Pathet Lao army under Kaysone

Phomvihane (1920–1992) and the creation of two northern provinces of Laos as Pathet Lao base areas, as mandated by the 1954 Geneva agreements on Indochina. In August 1957, in a turn toward electoral politics, the popular prince brought his “patriotic front” into a coalition with the U.S.-backed Vientiane-side royalist government under the prime ministership of his other brother, Prince Souvanna Phouma (1901–1984). The prince participated in this government as minister of planning and won his seat in elections in Vientiane. The unraveling of the coalition, however, led to the prince's imprisonment in Vientiane and dramatic escape from jail in May 1960.

After leading diplomatic negotiations, the prince entered another short-lived coalition government with the royalists from November 1962 to the following April. Just as Laos was drawn into the U.S. aerial war in Vietnam, so the prince raised his international socialist solidarity profile. Following the effective cessation of hostilities in Laos, the prince staged his triumphant reentry in Vientiane in April 1974.

Although serving as president of the Supreme People's Assembly and president of the LPDR, among ordinary Laotians he was reverentially known as “Chao,” or prince. Following his death on 9 January 1995 and Buddhist funeral, along with five days' official mourning, his ashes were placed in That Luang reliquary in Vientiane.

Unlike some other socialist leaders, the prince did not leave behind any body of writings, nor did he seek to develop a personality cult. But unlike many of his comrades-in-arms, he genuinely won the affection of his people, even if many disliked the regime of which he was titular head. He also enters Southeast Asian colonial history as leader of his country's struggle for independence. No substantial biographies exist in Western languages.

"SOUTHEAST ASIA"

Southeast Asia comprises the mainland states of Myanmar (Burma), Thailand (Siam), Cambodia (Kampuchea), Laos, and Vietnam, and the island or maritime countries of the Federation of Malaysia, Singapore, Negara Brunei Darussalam, Indonesia, the Philippines, and the newly independent Timor Leste (Portuguese), or Timore Lorosa'e (in Tetum, the local language), commonly referred to as East Timor. It is explicitly distinguished from the Indian subcontinent and the Chinese mainland. The concept of a Southeast Asia comprising independent but interrelated states was given greater salience with the formation of the Association of Southeast Asian Nations (ASEAN) in 1967 and its expansion in 1984, 1996, 1997, and 1998 to include ten countries (all but Timor Leste).

Southeast Asia did not always receive wide recognition as a region in its own right. It was not until the 1940s that the United States and its allies acknowledged that the territories between China and India occupied by the Japanese during the Pacific War (1941–1945) constituted an area of strategic and economic importance, rich in such raw materials as oil, tin, rubber, and timber. The term "Southeast Asia" was not in general use until then, although from the turn of the twentieth century

German-speaking scholars referred to broad cultural similarities in "Südostasien" (Reid 1999). However, these cultural traits do not coincide with political boundaries, and populations that belong culturally and linguistically to Southeast Asia are also found in southern China, interior Taiwan, northeast India, Madagascar, and most of the Pacific islands.

Prior to the Pacific War clear evidence of Indian and Chinese influences in Southeast Asia led Western writers to use terms such as "Further India," "Greater India," "L'Inde Extérieure" and "Hinterindien." The terms implied that Southeast Asia was an eastern outlier of the Indian subcontinent, or the "Far Eastern Tropics," suggesting a southern tropical extension of China or "Indochina," a region of mixed Indian and Chinese cultural elements.

Southeast Asia is known as much for its cultural and geographical diversity and political fragmentation as for its unity (Osborne 1985: 1–15). This diversity is the result of its open location straddling the great sea routes between the Indian and Pacific Oceans and the movements into the region of different populations and cultural traits. The process of cultural and political differentiation was further increased from the nineteenth century when the Western colonial powers carved up the region into separate spheres of influence.

SOUTH-EAST ASIA COMMAND (SEAC)

Defeating Imperial

Japan in Southeast Asia

The reorganization of Allied commands following the Quebec conference of August 1943

created the South-East Asia Command (SEAC) from the former Indian Command. It covered Burma, Sumatra, Malaya, and the Indian Ocean as far west as Ceylon, and from August 1945 all of the Dutch Indies and French Indochina. Thailand and Indochina (Sri Lanka) were within SEAC's boundary, but only for special operations. Based in India, though an Allied command, it was primarily a British strategic responsibility, whose forces were mostly drawn from India, Britain, and East and West Africa, with substantial U.S. logistic support. SEAC's supreme commander was Admiral Lord Louis Mountbatten (1900–1979). The fulfillment of SEAC's mission was hampered by wrangling between British and U.S. commanders (notably the abrasive American Joseph "Vinegar Joe" Stillwell [1883–1946]), by the unreliability of the Nationalist Chinese forces, and by the theater's low priority for troops and equipment. SEAC's war principally involved the protracted and costly campaign against the Japanese in Burma fighting over rugged terrain in an unhealthy climate. The main Allied force in the theater was what became the Fourteenth Army, known with some justice as the "forgotten army." Initially reacting to the Japanese thrust at Imphal and Kohima in mid-1944, in 1944–1945 the Fourteenth Army advanced south down the Irrawaddy valley to liberate Rangoon (Yangon). At Singapore in September 1945, Mountbatten accepted the surrender of Japanese forces in the region, and SEAC was enlarged to take in Indochina and the entire Indonesian archipelago. From 1945, SEAC grappled with the problems of reasserting colonial authority in Southeast Asia, confronting nationalist movements in Burma, Malaya, Indonesia, and Indochina.

SOUTHEAST ASIA TREATY ORGANIZATION (SEATO) (1954)

Anticommunist Containment Pact

The Southeast Asia Treaty Organization was established in 1955 to guarantee collective security in Southeast Asia; it existed until its disbandment in 1977. SEATO evolved from the Southeast Asia Collective Defense Treaty, or Manila Pact, concluded on 8 September 1954. It comprised eight member states: Australia, France, New Zealand, Pakistan (until 1972), the Philippines, Thailand, the United Kingdom, and the United States. The Manila Pact and SEATO were consequences of the French defeat in Indochina (1954) and expressions of anticommunist containment policy directed against North Vietnam (Democratic Republic of Vietnam, DRV) and the People's Republic of China (PRC). In essence, SEATO's *raison d'être* was the defense commitment to Southeast Asia by the United States and the United Kingdom.

SEATO was established with its headquarters in Bangkok; its organizational structure was divided into a military and a civil part, governed by a council of all member states. An international secretariat and the post of secretary-general were added in the following years. Within the civil part of SEATO, its members cooperated on economic and information issues. SEATO's military structure did not achieve more than common military exercises and did not serve as a framework for intervention in Vietnam, essentially because the members of the organization lacked a common strategic interest. From the early 1970s, SEATO became increasingly futile in the changed international political environment, and its military part was consequentially abolished after 1974. A year later the members agreed to dissolve SEATO as a whole by 1977.

The Manila Pact remains in force today, as it constitutes the only formal defense link between Thailand and the United States. Although SEATO was an externally inspired defense organization, it marked an important step toward regional organization in Southeast Asia, much like NATO (the North Atlantic Treaty Organization) in Western Europe.

SOUVANNA PHOUMA (1901–1984)
Neutralist Laotian Prince

Born into privilege, Souvanna Phouma was the son of the second most prominent family in Laos, that of the viceroy Boun Kong (d. 1920; r. 1887–1920). Destined to play a pivotal role as prime minister (1951–1954, 1956–1958, August–December 1960, 1962–1975) in the Royal Lao Government (RLG) until the communist takeover in 1975, the prince was better known in the West than his two no less patrician half brothers, Phesarath (1890–1959) and Souphanouvong (1911–1995).

Like his two brothers, the prince received a privileged education, studying engineering in the *École Nationale des Travaux Publics* in France. He married a French woman (Monique Allard) and, demonstrably, never lost his affection for French culture.

Returning to Laos in 1936, the prince entered government service. Notably, he was placed in charge of restoration of the historic Wat Phra Keo in Vientiane, a cultural project that he reflected upon in later life as particularly edifying.

During the Japanese interregnum, Souvanna Phouma retained his post as minister of public works. Following the Japanese surrender in Vientiane on 1 September 1945, he joined the Lao Issara (Issarak) government headed by his elder brother, Phetsarath, and briefly, in 1946, served as acting prime minister.

Joining the Lao Issara government-in-exile in Bangkok, following the armed French restoration in the Mekong valley, the prince took a post with the Thai Electric Company. Fatefully breaking ranks but not friendship with his left-leaning brother, Prince Souphanouvong,

and his elder brother, Phetsarath, he returned to Laos with his fellow exiles in 1949, essentially accepting the *pax français*.

Although the kingdom of Laos was still linked with France under the French Union arrangement, the prince duly entered the cabinet of Phoui Sananikone (1903–1983) formed in February 1950 (until November 1951) as minister of planning of the RLG. Following elections in August 1951, however, the prince formed his own government. As such, Souvanna Phouma was closely involved with the task of negotiating the final independence conventions of the kingdom with France.

In November 1954, Souvanna served as defense minister in the Katay Don Sasorith government. Reinstalled as prime minister in 1956, Souvanna Phouma was involved in negotiating with the Pathet Lao (Land of Laos) in the post–Geneva Conference (1954) period. In August 1956 the prince visited Beijing and Hanoi seeking respect for Lao’s territorial integrity. Notwithstanding challenges from domestic opponents, the prince also came under pressure from U.S. interests hostile to any accommodation with the Pathet Lao, especially as the United States replaced France as the leading economic contributor and military prop.

In and out of office in the early 1960s, Souvanna Phouma was installed as the head of a neutralist government created by Captain Kong Le (b. 1934; commander-in-chief of neutralist forces, August–December 1960), who staged a coup d’état in August 1960. Shortly thereafter this regime was driven out of Vientiane in a counterattack by rightist General Phoumi Nosavan (1920–1985; minister of defense and deputy prime minister, 1959–1964). In September 1961 the prince formed a neutralist party to strengthen that political tendency.

Returned to power in 1962 by Kong Le, the prince held the post of prime minister virtually without interruption till 1975. In that capacity, Souvanna participated in key discussions leading to the 1962 Geneva Agreements and the First Coalition Government, serving as prime minister and minister of defense.

A figure closely associated with the vicissitudes of Lao political history in the 1960s, Souvanna Phouma was increasingly propped up by the United States as indispensable—but also dispensable if he protested U.S. actions. He agreed in 1964 to the “secret” U.S. bombing

over Laos, not so much because he had abandoned his sense of a neutral Laos but because he feared the Pathet Laos were stalking horses for Vietnamese aggrandizement. Still, he disallowed U.S. ground forces in Laos and kept open channels with Beijing and Hanoi. In 1963 he revisited Beijing, and he visited Moscow the following year.

From 1972, Souvanna Phouma was the pivotal interlocutor for the RLG in negotiations with the Pathet Lao on peace, leading to the fateful cease-fire agreement signed in February 1973 and the formation of a Provisional Government of National Union. Souvanna Phouma, who remained prime minister of the Third Coalition government, also came under bitter attack from rightists. The strains of office took their toll on the prince, who suffered a heart attack in August 1974. But returning from convalescence in France, Souvanna Phouma had the unenviable role of facilitating the Pathet Lao takeover of power, albeit a bloodless one. Together with King Sisavang Watthana (1907–1984; r. 1959–1975), Souvanna Phouma was appointed advisor to President Souphanouvong.

Up until his death at eighty-three years of age on 10 January 1984, he famously indulged his interest in playing bridge and received visitors in his villa in Vientiane, notably including his brother, the prince-president. He was given a state funeral cremation at That Luang in Vientiane, and his remains were interred in the family stupa in Luang Prabang.

Some controversy attaches to Souvanna Phouma's role in accommodating the Pathet Lao takeover. Still, he could have led a bourgeois life in exile at any time during his career, but he chose Laos. In his defense, by not ordering his already weakened forces to oppose the Pathet Lao militarily, the country was spared loss of life. But like others, he was also naive to believe that the Pathet Laos would accept neutrality as a political ideal.

SPANISH EXPANSION IN SOUTHEAST ASIA

Spanish expansion into Southeast Asia started in 1519, with the expedition to the Pacific Ocean of Fernão Magelhães, or Ferdinand Magellan (1480–1521), a Portuguese captain in the service of the Spanish king Charles I (r. 1516–1556). He sailed via the southern tip of South America. Like the Portuguese at the time, and later the Dutch and the British, the Spaniards were in search of the famous spice islands in Asia, the Moluccas, the source of pepper, nutmeg, and cloves, items in great demand in Europe for food flavoring and preservation.

The Portuguese and the Spaniards were competitors in their discovery expeditions, though along different routes. In 1487 the Portuguese captain Bartolomeo Dias (1466–1500) had rounded the Cape of Good Hope and discovered the route to Asia. In 1492 Christopher Columbus (1451–1506), exploring the western route, had discovered the Americas. To prevent conflict between the two countries, the pope divided the heathen world between them. The Treaty of Tordesillas in 1494 drew a line of demarcation running north-south at about 60 degrees west longitude. Territories to the west of that line were assigned to the Spaniards, those to the east to the Portuguese. The Portuguese established a series of strongholds along the South and Southeast Asia coasts, which gave them access to the spice markets.

On the Asian side of the globe a line of demarcation was never settled. Magellan, who had been with a Portuguese fleet in the Indian Ocean, convinced the Spanish king that the famous spice islands were lying within the Spanish territory, and he suggested sending an expedition around South America. He sailed with five ships from Spain, and, after having navigated the strait that would later bear his name (Strait of Magellan), he reached the Philippine island of Samar in 1521, thinking that he had found the Moluccas, and claimed its possession for the Spanish king. He did the same for the

island of Cebu but was killed in a battle with a local chief. One of the Spanish ships picked up a cargo of spices in the Moluccas and returned to Spain in 1522, having circumnavigated the globe in four years.

Spain sent more expeditions to Southeast Asia in the next decades, but they failed to occupy the Moluccas or the Philippines. An expedition under Ruy Lopez de Villalobos in 1542 gave the name *Felipinas* to the islands (later written as *Philippines*), after the Spanish Crown prince Felipe, who would later become king as Philip II (r. 1556–1598). In 1564, Spain sent a fleet under Captain General Miguel Lopez de Legazpi (1500–1572) from Mexico to take possession of the Philippines; it reached Cebu in 1565 and established a settlement. In 1571 the Spaniards conquered Manila, defeating the Muslim ruler there, and established a fortress and a walled settlement called Intramuros at the mouth of the Pasig River at Manila Bay, a natural harbor. Within the Spanish Empire, the Philippine Islands were considered an extension of the viceroyalty of Mexico. By that time the Spanish expansion in Asia had three objectives—namely, to secure a share in the spice trade, to get access to China and Japan, and to Christianize the inhabitants of the occupied territories (Phelan 1959: 7). The Spaniards failed in the first two objectives, but they were able to establish Spanish rule in the Philippines and initiate a process of Hispanization.

Manila became a source of wealth for the Spaniards, not because of spices but because of the galleon trade with Mexico. Chinese merchants brought silk and porcelain to Manila and sold it to Spanish merchants in exchange for silver. Once a year a Spanish galleon shipped the goods to Mexico, where they were in great demand, and returned with a large amount of silver from the mines that the Spaniards exploited in the Americas. The first ship sailed in 1565 (from the island of Cebu) and the last in 1815. Manila thus became an entrepôt in this exchange of American silver for Chinese goods, driven by China's almost insatiable demand for silver, which served as money. The amount of silver shipped via the Pacific Ocean is estimated at 50 to 100 metric tons annually, which was more than that transported via the Atlantic Ocean (Flynn and Gi-

raldez 1994). During the two and a half centuries of galleon trade the British captured four galleons, along with their precious cargoes (Schurz 1939).

After the first expeditions to the Pacific Ocean, the Spanish king claimed proprietorship of the ocean, considering it a “Spanish lake.” For a long time the galleons were lightly armed, because the Spaniards did not expect that their enemies would threaten them in the Pacific. Spanish expeditions explored the ocean and tried to occupy certain parts. For some time the Spanish occupied Formosa (Taiwan), until the Dutch drove them out. Spain maintained a hold on Ternate, one of the Moluccan Islands, but it was forcibly evicted in 1662. Spanish expeditions explored several of the large island groups in the Pacific, but only the Marianas Islands and Guam were occupied. Spain had plans to establish footholds in Japan and China, but those plans failed.

After about the middle of the seventeenth century, the Spanish empire weakened significantly. Spain had lost its struggle against the rising Dutch nation in northwest Europe, and it had been engaged in fighting with the expanding Dutch and English in Southeast Asia. Spain succeeded in maintaining its hold over the Philippines, which it considered vital for the defense of its possessions in the Americas. During the eighteenth century, British, French, and North American ships were crossing the Pacific, in complete disregard of the Spaniards. After about 1790, Spain could no longer prevent foreign ships from trading with the Philippines, and it gradually opened its ports to foreign merchants. In 1815, Manila lost its function as an entrepôt. In 1821, Spain's colonies in the Americas gained their independence. The Philippines remained one of the few Spanish colonies left. After the Spanish–American War in 1898, Spain lost its Asian and Pacific possessions to the United States.

SPANISH PHILIPPINES

"Spanish Philippines" refers to the Philippines under Spanish rule from the mid-sixteenth century to 1898. The Spanish established their authority over the Philippines beginning with expeditions during the 1560s. Economic (spice trade) and religious (Catholicism) motives dictated Spanish designs over the Philippines. The mission of Captain General Miguel Lopez de Legazpi (1500–1572) set the pace for the colonization of the Philippines. Cebu was seized in 1565 and Manila captured in 1571. Manila served as the eastern terminal of the Philippine–Mexico–Spain galleon trade.

The Spanish capture of Cebu drew protest from their Iberian rival, the Portuguese, then established in the Moluccas. The Portuguese accused the Spaniards of contravening the Treaty of Tordesillas (1494). Following the unification of Spain and Portugal under Philip II (1527–1598) in 1580, Portuguese attempts to evict the Spanish from the Philippines ceased. Subsequently the Spanish, from their base in Manila, extended their control over the entire Philippine archipelago, notably the Visayas and Mindoro. But the southern Muslim-dominated islands resisted Spanish colonization. Not until the mid-1870s did the sultanate of Sulu submit to Spanish suzerainty. However, effective au-

thority over all the Sulu territories and Mindanao remained problematic.

Five centuries of Spanish rule created the entity of the "Spanish Philippines," where the processes of Christianization and Hispanization exerted a great influence over the islands. Nonetheless, Mindanao and islands in the Sulu Archipelago maintained the Islamic religion and traditions and strongly resisted the encroachment of the central authority of Catholic Manila.

By the Treaty of Paris (1898), which ended the Spanish–American War (1898), Spain ceded the Philippines to the United States, thereby ending five centuries of Spanish rule.

SPANISH-AMERICAN TREATY OF PARIS (1898)

The Treaty of Paris between the United States and Spain was signed by the representatives of both sides on 10 December 1898 and ratified by their respective governments a few months later. The treaty ended the Spanish–American War, which had started on 25 April of that year and had resulted in the defeat of the Spanish forces both in the Western Hemisphere and in the Pacific. In October, peace negotiations started in Paris by commissions from the two

countries; they consisted of four delegates each. Spain quickly agreed to relinquish sovereignty over Cuba, and to cede Puerto Rico, Guam, and the Marianas to the United States. The U.S. government also demanded the transfer of sovereignty over the Philippine Islands. However, it was not clear on what grounds that could be demanded. Right of conquest could not be the legal grounds, because the U.S. Army had occupied only the city of Manila and areas around the bay. In the rest of the country some areas were still under Spanish control, and other parts were under the control of the Filipino revolutionaries who had liberated them from the Spaniards. The head of the Filipino revolution, General Emilio Aguinaldo (1869–1964), had traveled with the U.S. fleet from Hong Kong to Manila Bay, and the revolutionaries had reason to believe that they were allies of the United States. The other argument was Spain's sovereign rights over the Philippines, but that meant a denial of the rights and the position of the Filipino revolutionary movement. The Spaniards were initially taken aback by the U.S. demand, but when the Americans offered a payment of U.S.\$20 million, they accepted the proposal. The Filipino revolutionaries felt betrayed by the deal, and in February 1899 hostilities broke out between U.S. forces and Aguinaldo's army, leading to the Philippine War of Independence (1899–1902).

Another legacy of the Treaty of Paris continued to cast a shadow over Filipino-U.S. relations. Article 8 of the treaty stipulated that the transfer of sovereignty did not affect private properties in the Philippine Islands. The largest properties were the large landed estates owned by Spanish monastic orders on the islands. These friar lands had been the source of endless conflicts and grievances against the friars and had contributed to the 1896 revolution. As the Spanish government in the Philippines did not have a proper system of land registration, the claims of the friars were questionable, but now the U.S. government recognized these rights without investigating them. From 1902 to 1907 the U.S. government negotiated with the papal chair in Rome over the purchase of the lands, which was settled for U.S.\$7,543,000. The sale and distribution of these lands to the tenants haunted the land issue in the Philippines for many years thereafter.

SPANISH-AMERICAN WAR (1898)

The Spanish-American War started on 25 April 1898, when U.S. president William McKinley (t. 1897–1901) declared war on Spain; it ended with the signing of the Treaty of Paris on 10 December 1898. The war signaled the emergence of the United States as a colonial power. By the mid-1890s political pressure groups in the United States had started to press for a more expansionist and imperialist role in international politics. From 1895 to 1898 two colonies of Spain—Cuba in the Western Hemisphere and the Philippine Islands in Southeast Asia—were in revolt against colonial rule. These colonies were the remnants of the Spanish Empire, together with Puerto Rico in the Caribbean, and the Carolina, Marshall, and Mariana Islands (including Guam) in Micronesia.

The Cuban revolt against an oppressive Spanish regime led to considerable sympathy among the U.S. public. The United States had economic interests in the island as well, mainly in sugar production, and the U.S. government advocated independence for Cuba. In February 1898 the battleship *Maine*, anchored in the harbor of Havana, exploded and sank, causing the deaths of 266 sailors. The Spanish investigation concluded that the explosion had been internal, but the U.S. investigation claimed that a mine had been the cause. This event fueled the anger of the American public. After the declaration of war, the United States started a naval blockade of Havana, while army troops were landed ashore. On 17 July the Spanish forces in Cuba surrendered. Shortly afterward Puerto Rico was occupied as well. In the meantime a

U.S. fleet under Commodore George Dewey (1837–1917) had sailed from Hong Kong to the Philippines, carrying Filipino revolutionary leader Emilio Aguinaldo (1869–1964), and confronted the Spanish fleet in Manila Bay. On 1 May, during the Battle of Manila Bay, U.S. forces destroyed the Spanish ships. After the arrival of more troops, the Americans besieged Manila and conquered the city on 13 August, unaware of the fact that a day earlier the two countries had signed an armistice agreement. The United States had won the war at a cost of 3,000 lives, mainly as a result of disease, and U.S.\$250 million. After several months of negotiation, the Treaty of Paris was signed. The United States annexed Puerto Rico, Guam, and the Philippines, while Cuba gained political independence.

SPICES AND THE SPICE TRADE

Spices are edible plant derivatives, of little or no nutritional value, that have an aroma or a pungent taste that enhances the flavor of food. The spice trade is usually understood to concern the three world-renowned spices whose zone of natural origins was restricted to Maluku (the Moluccas) in far eastern Indonesia: cloves, nutmeg, and mace. However, pepper, brought to Java from India in ancient times, was also a major Southeast Asian crop by at least the sixteenth century, when Sumatra led the world in production.

Cloves are the dried flower buds from the *Syzygium aromaticum* tree, whose natural range is confined to the offshore islands along the southwest coast of Halmahera. The *Myristica fragrans* tree, whose seeds are ground to yield nut-

meg and mace, was similarly restricted to the tiny Banda Islands. These spices are arguably Southeast Asia's earliest long-distance exports, having been shipped to China, India, and the Mediterranean region more than 2,000 years ago. Indeed, archaeological evidence is claimed for cloves in Mesopotamia by about 4,000 years ago. Despite this early export trade, manufactured wares such as metals and glass beads did not arrive in Maluku until less than 2,000 years ago—later than in many parts of Indonesia. Chinese ceramics and coins probably reached the Bandas and Halmahera region by 1,400 to 1,000 years ago.

Most of the wealth generated by the Maluku spices was evidently appropriated by the succession of island Southeast Asian empires that operated as the gateway between Indonesia and the world's main population centers: Śrīvijaya (Sumatra), Majapahit and its antecedents (East Java), and Melaka (Malaysia). The Portuguese, after taking Melaka in their efforts to dominate the spice trade, proceeded almost immediately to Maluku in 1512. There they found the distribution of cloves controlled by Ternate and Tidore, two island sultanates that had sprung up at the northern limit of the natural range of cloves. Muslims also headed the oligarchy of wealthy traders who operated in the Bandas. Subsequently, intense competition between the Portuguese, Spanish, Dutch, and English to embroil Ternate, Tidore, and the Banda ports in the competing European networks resulted in an extraordinary concentration of sixteenth- and early-seventeenth-century forts on these islets.

The Netherlands United East India Company (VOC) exerted a monopoly over the Maluku spices from the early seventeenth to late eighteenth centuries. In the 1620s the VOC established its own clove plantations on Ambon (also in Maluku), and, aided by Japanese mercenaries, decimated the Bandanese population to make way for Dutch planters. The VOC monopoly was complete with its occupation in 1667 of Makassar in Sulawesi, the center for unaligned traders, and its ejection of the last European competitors from Ternate and Tidore by 1666. In the 1770s, French and English traders smuggled clove seedlings to other parts of Southeast Asia and to East Africa; however, the Dutch-controlled plantations led world production until the late nineteenth century, even after financial problems led to the winding up of the

VOC in 1795. The Dutch monopoly over the less important trade in nutmeg and mace was also broken in the 1790s. Netherlands (Dutch) East Indies and, later, independent Indonesia became a net importer of cloves during the twentieth century, particularly after the development of the *kretek* (Indonesia's clove and tobacco cigarette), until the 1980s, when prices encouraged Indonesian farmers to establish clove plantations across the archipelago.

Pepper, the fruit of the *Piper nigrum* vine, has been grown too widely to fall prey to any trade monopoly, but it has always been commercially more important than the Maluku spices. It became a widely available commodity in Rome as early as 2,000 years ago and in China more than 1,000 years ago. Increased demand in China during the 1400s seems to have been the stimulus to expand pepper plantations in Sumatra and Malaysia beyond the small production zone in Java during Śrīvijayan times. A succession of Islamic polities, most famously Pasai and Aceh in North Sumatra and Banten in West Java, based their economies heavily on pepper sales until the late seventeenth century, when the growing dominance of the VOC allowed it to usurp control over the pepper trade in the Indonesian region. Dutch competition with British-aligned sultanates in West Malaysia and northwest Borneo and French-aligned suppliers in Indochina remained a major theme in the world of pepper commerce, right up to the recent independence of Europe's erstwhile colonies in Southeast Asia shortly following the end of the Pacific War (1941–1945).

The spices were truly splendid trifles whose rarity stimulated exploration and opened up the Southeast Asian waterways, whether it was Austronesian traders to India and China or Indians, Chinese, Arabs, and finally Europeans to the archipelago. Recent developments in the historiography of spices include an attempt to quantify their export importance since the fourteenth century and projects in historical archaeology designed to assess their long-term impact on societies within the production zones.

SPRATLY AND PARACEL ARCHIPELAGOS DISPUTES

Overlapping Claims in the South China Sea

The Spratly and Paracel archipelagos are located in the South China Sea. Both archipelagos are disputed territories. China, Taiwan, and Vietnam pursue sovereignty claims to the

whole of the Paracel archipelago. Currently China controls the whole of the archipelago. Six countries pursue sovereignty claims to the whole or to parts of the Spratly archipelago: Brunei Darussalam, China, Malaysia, the Philippines, Taiwan, and Vietnam. All claimants except Brunei control one or more of the features in the archipelago.

The Spratly archipelago extends north-south from 11°30'N to 4°N, and west-east from 109°30'E to 117°50'E. The archipelago consists of more than 100 islands, cays, and reefs covering an area of some 1,000 square kilometers. Since the Spratly archipelago covers a fairly extensive area, different approaches have been used to divide the archipelago. One approach is to divide it into four main subcategories: the Western Spratlys, the Southern Shoals, the Dangerous Area, and the Eastern Spratlys. Many of the features in the Spratly archipelago are very small, and some of the features are under water during high tide. Some of the larger features are Thi Tu Island, Itu Aban Island, North-East Cay, and Spratly Island. All four are located in the Western Spratlys.

The Paracel archipelago extends north-south from 15°46'N to 17°8'N and west-east from 111°11'E to 112°54'E. The archipelago consists of fifteen islets covering an area of approximately 3 square kilometers and about fifteen features scattered over an area forming a large oval that has a maximum diameter of approximately 200 kilometers. The Paracel archipelago is usually divided into two parts: the Amphitrite Group, located in the northeastern part of the archipelago, and the Crescent Group, located in the southwestern part. The largest islands of the Amphitrite Group are Woody Island and Lincoln Island. The largest islands in the Crescent Group are Triton Island, Pattle Island, and Duncan Island.

Brunei Darussalam has a sovereignty claim to Louisa Reef in the Spratly archipelago, but Brunei does not control that reef. Brunei's claim to Louisa Reef is based on the fact that it is located within the continental shelf area claimed by Brunei in the South China Sea.

China has sovereignty claims to the whole of both the Paracel and the Spratly archipelagos. Currently China controls the whole Paracel archipelago. China took control of the eastern part of the Paracels in 1956 and the western part in 1974. China gained its first foothold in

the Spratly archipelago in 1988. Since then, China has continued to expand its control over features in the archipelago. It is estimated that it currently controls at least ten features in the Spratlys. China's claims to the two archipelagos are based on historical records and maps that are used to sustain two kinds of claims. First, they show that China discovered the island groups in the South China Sea, and second, they show how Chinese people occupied the islands and developed them.

Malaysia has a sovereignty claim to the southern part of the Spratly archipelago. Currently Malaysia controls at least three features in the Spratly archipelago. Malaysia first took control of Swallow Reef in 1983 and has since then expanded its control. Malaysia's claim to part of the Spratlys is based on the fact that these features are located within the continental shelf area claimed in the South China Sea.

The Philippines has a sovereignty claim to the major part of the Spratly archipelago, with the exception of the Spratly Island itself, Royal Charlotte Reef, Swallow Reef, and Louisa Reef. The Philippines control at least ten features in the Spratly archipelago. The Philippines first took control of five features in the early 1970s and has since expanded its control. The sovereignty claim to the major part of the Spratly archipelago is based on the notion of discovery.

Taiwan pursues the same claims as mainland China in the South China Sea. Taiwan controls Itu Aban Island in the Spratly archipelago. Taiwan does not control any feature in the Paracel archipelago that is fully under China's control. Taiwan's sovereignty claims to the Paracel and Spratly archipelagos are based on historical records and maps that are used to sustain two kinds of claims. First, they show that "China" discovered the island groups in the South China Sea, and second, they show how Chinese people occupied the islands and developed them.

Vietnam has sovereignty claims to the whole of both the Paracel and the Spratly archipelagos. Vietnam currently controls more than twenty features in the Spratly archipelago. The control over features in the archipelago has gradually been expanded since the mid-1970s, when Vietnam controlled six of the features. Vietnam does not control any feature in the Paracel archipelago that is fully under China's

control. Vietnam's sovereignty claims to the Parcel and Spratly archipelagos are based on historical records from precolonial times and from the French colonial period. Interestingly enough, the unified Vietnam also relies on documentation from the former Republic of Vietnam (ROV) to substantiate its claims.

China, Taiwan, and Vietnam pursue historical claims to the Paracels and the Spratlys. China and Taiwan pursue what could be termed "Chinese" claims to the two archipelagos. The basis of the claims are historical records and maps displaying that China discovered the two archipelagos and that Chinese people occupied and developed them. Vietnam refers to historical records from precolonial times that show that these two archipelagos were under Vietnamese control during parts of the eighteenth and nineteenth centuries.

During the twentieth century the two archipelagos have been contested, and control over them has shifted. France took control of both archipelagos in the 1930s. Japan seized control of both during the Pacific War (1941–1945), and following the Japanese withdrawal, France reestablished control over the major part of them.

Among the current claimants, Taiwan was the first to take physical control of parts of the Paracels and Spratlys in the late 1940s. In the Paracels the French withdrawal in the mid-1950s was followed by the ROV's taking control over the western part of the archipelago and China's taking control of the eastern part. The situation prevailed until January 1974, when China, in a swift military operation, ousted the ROV and seized control of the whole of the Paracels. In the Spratlys the moves to take control of various parts of the archipelago gained momentum in the early 1970s, when both the ROV and the Philippines occupied some of the features. Then Malaysia gained a foothold during the first half of the 1980s. In 1988, China made a decisive move to gain a foothold in the Spratlys, and that led to a naval clash with Vietnam in March. China emerged victorious from this clash and took control over some of the features in the Spratlys. Since then, China, Vietnam, the Philippines, and to a limited extent Malaysia have sought to expand the number of features under their control. Such moves have at times caused considerable tension among the claimants. During the first half

of the 1990s there was tension mainly between China and Vietnam relating to disputes in the South China Sea. During the second half of the 1990s and into the early 2000s, tension between China and the Philippines has been more prevalent.

Conflict management approaches to the conflict situations around the Paracels and the Spratlys differ considerably. One reason is that the Parcel conflict is *de facto* considered to be a bilateral issue between China and Vietnam, whereas the Spratly dispute is considered to be a multilateral dispute. Furthermore, attempts at negotiations between China and Vietnam have displayed that Vietnam wants to include the Parcel issue on the agenda, but China is not amenable. China considers there to be no issue to negotiate, since China fully controls the archipelago.

Bilateral approaches to the disputes over the Spratlys relate primarily to talks between China and Vietnam, between China and the Philippines, and between the Philippines and Vietnam. China and the Philippines agreed on a "code of conduct" to be observed in the South China Sea in August 1995, and the Philippines and Vietnam agreed on a similar code in November 1995. Despite the agreement between China and the Philippines, periods of tension have continued to occur because of actions carried out in the South China Sea.

Multilateral approaches to the management of the Spratly conflict can be seen as a multifaceted dialogue process involving both state actors and nonstate actors. The multilateral process at the level of the state includes the ASEAN Regional Forum (ARF), which brings together all the claimants, except Taiwan, alongside other regional powers and the global powers for discussions on security-related issues, including the situation in the South China Sea. Another avenue for discussions is the dialogue between the Association of Southeast Asian Nations (ASEAN) and China, which involves talks on the overall situation in the South China Sea.

The role that ASEAN can play is a rather complex one, since four of its member states—Brunei Darussalam, Malaysia, the Philippines, and Vietnam—pursue sovereignty claims to all or parts of the Spratly archipelago. This creates a situation in which ASEAN cannot play the role of third-party mediator between China and these claimants. Nevertheless, the situation

in the South China Sea has been brought onto the agenda in the context of the ASEAN-China dialogue. One core issue is the search for a mutually agreeable “code of conduct” for the South China Sea. Thus far, no consensus has been reached.

It can be noted that the Spratly issue as such is not discussed in the multilateral forums outlined above—at least not those involving China. Instead, the references, statements, and declarations relate to the situation in the South China Sea. The reason for this is China’s expressed preference to handle the Spratly dispute bilaterally with each of the other claimants. Thus China opposes multilateral talks on the Spratly issue.

Among the multilateral contacts at the level of nonstate actors are the regular contacts between researchers and other experts at conferences and workshops. In this context it is worth noting the workshops arranged on a yearly basis since 1990 in Indonesia, with Canadian support, which bring together experts from various fields in the countries involved in the Spratly conflict. These workshops provide the opportunity to discuss issues that do not directly touch upon the sovereignty question. Another forum for discussion between scholars and policy-makers is the Council for Security and Co-operation in the Asia-Pacific (CSCAP). Within CSCAP, security-related issues are subject to discussion, including the situation in the South China Sea and the Spratly dispute.

SRI LANKA (CEYLON)

Sri Lanka (Ceylon), situated a few kilometers off the southern extremity of the South Asian subcontinent, is a country that has been a distinct geopolitical entity, an island civilization with a recorded history going back to the first millennium B.C.E.

The presence of humans dates from at least about 125,000 years ago. Prehistoric peoples occupied a number of different habitats, from the maritime belt and lowland plains to the high plateau and rain forests of the central mountains. An advanced microlithic stone-tool technology is found from an unusually early date (ca. 25,000 B.C.E.). Recent research indicates the early domestication of grasses (ca. 7500 B.C.E.). However, there is little evidence, as yet, of when the important transition (ca. 1000 B.C.E.?) from itinerant food-gathering to settled, village-based food production—involving wet-rice cultivation, irrigation, and the use of iron—took place, or who exactly the agents were who brought about these changes. An important question is: Did these changes take place as a result of large-scale migrations from

Seated Buddha at Anuradhapura, the ancient city that was Sri Lanka's first capital and the citadel of the Vijaya dynasty. (Corel)

the subcontinent, or principally through internal development, or, as is more likely, from a combination of internal and external factors?

The transformation from a preliterate, agrarian society to a literate, historical civilization, marked by the emergence of social classes, advanced political institutions, urbanization, writing, and the adoption of a higher religion, Buddhism, occurred between 500 and 250 B.C.E. The beginnings of the historical epoch date from the reigns of King Devanampiya Tissa (250–210 B.C.E.) and Dutthagamani (161–137 B.C.E.) and their immediate, semihistorical predecessors. Thereafter, the Early (ca. third century B.C.E. to fifth century C.E.) and Middle (sixth to thirteenth centuries) Historical Periods are marked by a dominantly centralized, all-island state. Other characteristics include the development and spread of Buddhism, the widespread diffusion of reservoir and canal irrigation, a flourishing internal and external trade, and the growth of urban and port centers.

Sri Lanka possessed one of the small but distinct civilizations of Asia. Testimony of it can be seen in the ruins of great capital cities and monasteries, together with a complex hydraulic system of man-made lakes and canals. There are also a distinctive architecture, with colossal stupas of the same order of magnitude as the pyramids; the remains of industrial-level iron production centers; numerous rock inscriptions; and a large body of ancient art and literature. This archaeological and historical record is well

represented in the World Heritage cities of Anuradhapura, Sigiriya, and Polonnaruwa, as well as many other archaeological and architectural sites and monuments.

The thirteenth century marks a significant watershed in Sri Lankan history. From this time onward, major changes took place in the nature of historical society: first, as a result (mainly) of internal evolution in the period from the thirteenth to sixteenth centuries; and subsequently, as a consequence of European colonial intervention.

The most visible manifestation of the changes in the Late Historical Period (thirteenth to mid-nineteenth centuries) was the shift in the main centers of political, economic, and cultural activity. Originally centered on the dry zone plains of the north-central, eastern, and southeastern regions, the focus shifted to the wet lowlands of the southwest, the central mountains, and the extreme north.

The island was subjected to European colonial invasions from the sixteenth century. In succession, the Portuguese, Dutch, and British occupied large sections of the coastal region. The British conquered Kandy in 1815, thereby ending the last independent Sri Lankan kingdom. The colonial experience left a lasting impression on the acculturation and modernization of the island, but a rich history and strong internal dynamics ensured the retention of its historic cultural fabric. Sri Lanka is one of the main repositories of Theravada Buddhism, the tradition that is also widespread in Southeast Asia. If the local chronicle literature of both Sri Lanka and mainland Southeast Asia is to be believed, missionaries sent by Asoka (r. 264–238 B.C.E.) of the Mauryan Empire brought Theravada Buddhism to these lands. From the twelfth century the prestige and prominence of the Sri Lankan Mahavihara school was apparent throughout mainland Southeast Asia, where it was readily adopted by Mons, Burmans, T'ais, and Khmers. In Sri Lanka around 70 percent of the people are Buddhists and Sinhala-speaking. A substantial Tamil-speaking population and Hindu, Muslim, and Christian minorities also contribute to make the island a multiethnic and multicultural nation, still trying to find a stable base of national unity, as evidenced by ethnic conflict and insurgency.

Sri Lanka is one of the oldest democracies in Asia, with universal suffrage, an elected legisla-

ture, representative government, and ministerial administration since the early 1930s. It regained full independence in 1948 after nearly 150 years of British colonial rule and 450 years of European colonial intervention. A republic was declared in 1972. A new constitution in 1978 created a presidential system and a parliament elected by proportional representation. Postindependence development in the spheres of nutrition, literacy, education, and health has given Sri Lanka a relatively high regional ranking in the human development index. It was also the first country in South Asia to adopt a liberalized, open-market economy and structural reform.

There were significant cultural manifestations in the twentieth century. Among them have been a modern movement in painting, which has made a significant contribution to the evolution of modern art in Asia, and a Sri Lankan school of contemporary architecture, combining the materials, forms, and spatial organization of indigenous tradition with the vision and aesthetics of the international style. And the emergence in the 1990s of a number of notable Sri Lankan novelists writing in English reflects some of the important cultural achievements.

ŚRĪVIJAYA (ŚRĪWIJAYA)

Overseeing Asian Maritime Trade

As early as the second or third century C.E., coastal polities on the southeastern shores of Sumatra had taken advantage of their position at the crossroads of maritime routes leading to China, India, and the Middle East (West Asia), and to the spice-rich islands of Eastern Indonesia. Changing circumstances in the history of the ancient world during the sixth and seventh centuries C.E. brought about a steady increase of Asian maritime trade. The reunification of China under the Sui (590–618 C.E.) and T'ang (618–907 C.E.) dynasties, and the demise of Persian long-distance trade, exerted a great impact on the burgeoning coastal polities of western Southeast Asia. A huge Chinese market opened with empty niches for Southeast Asian traders and their goods. Southeast Asian shippers, heirs to a mature technical tradition, were in a position to capitalize on centuries-old skills in constructing and sailing large trading vessels. Local resins and aromatics could now replace Indian Ocean commodities, long in demand in China. Camphor, oleoresins, and benzoin from Sumatra and the Malay Peninsula soon became standard trade commodities imported from the region, alongside spices, precious woods, gold, and tin.

A number of small polities in West Java and Sumatra first took advantage of these intense commercial activities in dispersed order. After 670 C.E., however, they coalesced into one single state, which the Chinese identified as *Shih-foshih*. Chinese records soon described this polity as one of the major trading operators of the southern seas. In 1918 epigraphist George Coedès took the brilliant step of linking these Chinese sources, together with later Indian and Arabic texts, to a group of stone inscriptions written in Old Malay. They told about the

foundation times of a polity named *Śrīvijaya*, for which *Shilifoshih* was a regular Chinese transcription. All these crucial inscriptions were carved between 683 and 686, and were found over the years in and around Palembang, in present-day South Sumatra province. Coedès concluded that they marked the birth place and the first political center of the state of Śrīvijaya, which should therefore have been located at Palembang, on the banks of the large Musi River and its tributaries. This is also where a few Buddhist and Hindu statues had been found over the years. All this evidence indicated that Śrīvijaya had been the first large-scale state—of world economic stature—to have prospered in insular Southeast Asia. The wealth and prestige of its ruler, the regional eminence of its capital and harbor-city, and its role as a center for the diffusion of Buddhism were acknowledged by the other world economies of the times, from the Arabs at Baghdad to the T'ang and Song (Sung) (960–1279 C.E.) Chinese.

This prosperous polity thrived from the seventh to the thirteenth centuries and extended its sphere of influence to much of Sumatra, the Malay Peninsula, and probably also to West Java and the western part of Borneo. It brought together into a still poorly understood entity a group of formerly autonomous harbor-based trading polities.

For half a century, however, the terrain at Palembang stubbornly refused to provide enough solid archaeological evidence to confirm that this site had indeed played such a major role in Asian history. Over the years, other sites, mainly on the isthmus of the Malay Peninsula, yielded enough archaeological vestiges, in the form of trade goods, inscriptions, monuments, and statuary, to lay claim to the status of capital of Śrīvijaya. This situation nurtured vigorous scholarly debate, often fanned by nationalism. It was only in the late 1980s, after years of intensive surveys, that archaeologists started unearthing in South Sumatra substantial evidence of economic and religious activity dating to the whole period of Śrīvijaya's prominence, thus tilting the balance back to South Sumatra and confirming Coedès's earlier hypotheses. The sites within and in the immediate vicinity of the modern city of Palembang have by now yielded pre-fourteenth-century material evidence for settlement, manufacturing, commercial, religious, and political hubs of ac-

tivity at a level that can only be reconciled with a focally situated large settlement—in other words, a settlement with the political and economic center of the early Malay polity. The settlement pattern revealed so far in archaeological sites at Palembang confirms the evidence provided by contemporary foreign sources, Arabic or Chinese. A riverine urban pattern is by now clearly discernible: multiple hubs of specialized activities have been found scattered along some 12 kilometers on the northern bank of the Musi River and its smaller tributaries. Religious sites tend to have been located on higher, dry land. Judging from the quantity of finds on some of the excavated sites, population density must have been high in some places. Many of these finds clearly indicate active, long-distance trade, and the role of merchants and shipmasters is underscored in local inscriptions. Although no ruler's residence has been located so far, the Sebokingking inscription in East Palembang clearly must have found itself at the hub or close to such a political center, at least at foundation time in the 670s and 680s.

Recent archaeological studies have not equally well documented all phases of the history of Śrīvijaya. Identification of confirmed archaeological sites dating back to foundation times (from the late seventh to the mid-eighth centuries) remains scarce. However, the spatial distribution in South Sumatra of contextless chance finds of seventh- to eighth-century inscriptions and statues, as well as the discovery of remains of Southeast Asian-built trading ships dating to the fifth to eighth centuries, does reveal a clear pattern, ancestral to the much better documented following phase. The late eighth and ninth centuries, in Sumatra as in most of Southeast Asia, remain very much shrouded in mystery. The last embassy sent to China by Shilifoshih/Śrīvijaya dates from 742 C.E. The name *Śrīvijaya* appears again in the late eighth century on an isolated inscription from southern Thailand, where it is associated with the foundation of two Buddhist sanctuaries and, for the first time, with the name of the *Sailendra* dynasty.

A Sailendra prince named Balaputradeva, defeated in Java by a rival of the Sanjaya dynasty in the 830s, appears to have emerged a few years later as a ruler of Śrīvijaya. These events, known from epigraphy, are exactly contemporary to a chronological phase brought to light in most archaeological sites in Palembang,

as well as in the other coastal sites said to be part of Śrīvijaya in southern Thailand and Malaysia (Kedah). This phase is marked by the first massive appearance in Southeast Asian sites of Chinese ceramic wares in industrial quantities, and it bears testimony, in perfect synchronization all over western Southeast Asia, to an outstanding increase in maritime traffic. During this second phase of its history (ninth to tenth centuries), Śrīvijaya reached the pinnacle of its prosperity. Contemporary sources always mention the city-state's king among the powerful rulers that thrived upon the wealthiest of maritime trade routes. The Chinese court again received numerous embassies (official records now use the term *Sanfoqi* to designate this born-again state of Śrīvijaya). Recent archaeological research has also brought to light along the valleys of the Musi River basin, upstream from Palembang, a number of sanctuaries, both Buddhist and Hindu, including a large complex of Hindu temples at Bumiayu. Temples were also built on behalf of the rulers of Śrīvijaya, in both China and India, as if to mark the limits of their sphere of commercial enterprise.

This flourishing state of affairs, however, appears to have attracted the interest of rising neighboring powers. Toward the end of the eleventh century, there were Chinese economic competition at sea and southern Indian (Cola) economic and military inroads into the Śrīvijayan scene. Furthermore, an antagonistic relationship with Java appears to have forced a shift of the center of political dominance from Palembang to the neighboring river basin of the Batang Hari in the Jambi province of Sumatra. It remained for a while an economically vibrant polity, still known to outsiders as Śrīvijaya, and strong enough to build the vast temple complex of Muara Jambi. However, its economic power appears to have quickly deteriorated under the blows received from both east and west. Consequently, so did its political ascendancy and its ability to control the original broad network of city-states. For reasons not yet fully understood, the ancient Malay center of political power that had occupied a coastal position for centuries now began to move inland to the Minangkabau highlands, heralding the final demise of Śrīvijaya.

Because of the paucity of written sources and the still limited amount of intensive and systematic archaeological research, the very na-

ture of the economic and political network that prompted foreign powers and traders to perceive Śrīvijaya as a single entity is far from fully understood. Recent interpretations, however, have clarified a number of moot points.

Early historical interpretations based on inadequate comprehension of the sources available and on the misleading worldview of colonial times pronounced that Śrīvijaya encompassed a vast "kingdom," or even an "empire," ruled from Palembang. Rereading of written sources after assessment of data produced by recent excavations in South Sumatra and on the Malay Peninsula, in both Malaysia and Thailand, now allows a scaled-down image to be reconstructed. At the local level, if the data gathered in Palembang inscriptions are valid for the other Śrīvijaya polities, it appears that politically weighty, but spatially limited, symbolic centers were built around the *datu*—that is, the ruler's palace and its fenced compound (the *kadatuan*). Scholars now understand the term *wanua* in the same inscriptions (also from the Malay linguistic stock) as referring only to the urban environment around the *kadatuan*, which included religious buildings and parks (both alluded to in the inscriptions), markets, and the semirural or riparian villages. As an outer circle, the inscriptions refer to a group of *mandalas*, under their respective datu, described as powerful local magnates ruling over their own wanua, but uneasily recognizing the authority of a *primus inter pares*, the ruler of Śrīvijaya. These outlying mandalas formed the outer reaches of the polity of Śrīvijaya. The overarching pattern that now emerges is that of a network of largely autonomous city-states. The true nature of the hierarchical relationship imposed on those peripheral polities that were drawn into the orbit of the South Sumatra-centered Malay polity remains, however, a matter of debate.

It has also been established by now that Śrīvijaya was composed of more than just a group of harbor-cities with entrepôt functions, passively exacting taxes over compulsory maritime routes. For one, progress in the field of maritime archaeology and history has confirmed that Malay world shippers and merchants played an active role in the Asian commercial scene. In South Sumatra, the expanding city-state exercised some sort of control over the vast river basin of the Musi, establishing

close relationships with upstream and downstream societies, as confirmed by a number of monuments recently brought to light upstream from Palembang. The same could be said for those polities on the Malay Peninsula that were included for a time in the orbit of Śrīvijaya: they must also be understood as true city-states, at the interface between international trade networks and a rich hinterland, which they tapped to increase their revenues.

STATE LAW AND ORDER RESTORATION COUNCIL (SLORC)

Rule of the Generals

The State Law and Order Restoration Council was the name the Myanmar (Burmese, prior to 1989) army adopted for the government it created when it seized power on 18 September 1988, following the failure of President Maung Maung (1925–1999) to restore order. The name was changed to the State Peace and Development Council (SPDC) in 1997. Led by General Saw Maung (1928–1997), who had been minister of defense in the previous Burma Socialist Programme Party (BSPP) government until his retirement in 1992, SLORC and then SPDC

have subsequently been chaired by Senior General Than Shwe (1933–). The other major figures have been General Maung Aye (1940–), the chief of staff and vice chairman of the armed forces, and Brigadier General Khin Nyunt, the head of military intelligence and first secretary of the council.

SLORC came to power following the widespread antigovernment demonstrations of July through September 1988 against the incompetence and bankruptcy of the old socialist regime. Promising to hold elections when order was restored, the new government immediately began to reverse a number of long-standing economic policies, officially abandoning socialism and autarky but not giving up a number of government controls on economic activity. Among its most successful policies was that of reaching military cease-fires with the majority of insurgent armies in the country, including

the Burma Communist Party (BCP), the Kachin Independence Organisation (KIO), and a number of smaller ethnic autonomy movements. The BCP subsequently dissolved itself. SLORC, however, was roundly condemned internationally for failing to honor the results of general elections held in 1990 that were won by the National League for Democracy (NLD), which was unable subsequently to take office.

STRAITS OF MELAKA

Linking East and West

The Straits of Melaka (sometimes termed Malacca) are one of the busiest stretches of water in the world, extending for about 800 kilometers from north to south between Malaysia and the Indonesian island of Sumatra. The straits are a narrow and crowded seaway. They are funnel-shaped: at their widest, around Penang Island, they extend for about 120 nautical miles, while at their narrowest, close to the adjoining Straits of Singapore, they are only 9 nautical miles wide. Historically these waters were the scenes of great commercial and naval activity, and along the shores of the straits a number of important cities and polities developed, most notably Melaka, Aceh, and Palembang. In recent times, the straits have remained a major commercial seaway with the port of Singapore at their head.

The straits occupy an important, strategic position within Southeast Asia. Opening out to the north into the Andaman Sea and Indian Ocean, they have long been an important route for shipping coming to the region from India, West Asia (the Middle East), and Europe. From the straits, significant local markets were acces-

sible, together with the historically important China trade. The straits were thus from the earliest times an important route for global trade. We know from Chinese records that as early as the ninth century, Chinese junks were sailing into the waters of the straits, trading with Śrīvijaya on Sumatra and, from the fifteenth century, with Melaka. The rise of Śrīvijaya, as with Melaka itself, was intimately linked with the ability to control and channel the trade and shipping of the straits to their advantage. Melaka was, by the mid-fifteenth century, the most powerful sultanate in the region and an important stopping point and entrepôt for shipping in the region. The pattern of monsoon winds there further enhanced the strategic importance of port cities in the straits.

European interest in the trade and strategic importance of the straits was recognized by the Portuguese, who took Melaka in 1511 in the hope of depriving Venice of its monopoly on the supply of precious spices for the European market. The Portuguese had hoped to seize the trade of the region, but most Muslim traders moved to cities elsewhere. Thus the rise of Aceh, at the northern tip of Sumatra, was due in large part to the migration of traders; others took flight to settlements such as Johor-Riau in the south to continue their trading activity. The Dutch replaced the Portuguese by taking the city in 1641, but, given that the key interests of the Dutch lay farther south in Batavia (Jakarta), they were able to reap little advantage from their efforts to control shipping through Melaka. Other kingdoms, most notably Johor-Riau, were better able to reap the benefits from their trading and sailing skills in the region. For many traders, sea traffic through the straits was important in stimulating the development of the region. European merchants, in particular, were keen to source commodities from the Malay Peninsula and Sumatra (spices, metals, and jungle products) with which to trade on the China market. This so-called country trade was an important catalyst in the growth of trade in the region.

The establishment of the port city of Singapore in 1819 by the English visionary Stamford Raffles (1781–1826) marked an effort to create a strong free port in the region. After the Anglo-Dutch Treaty of 1824 effectively divided the straits into Dutch and British spheres of influence, the port of Singapore grew rapidly, and by the early twentieth century it had become

one of the top five global ports. The Straits of Melaka continued to maintain their strategic importance as steamships replaced sailing ships. Global geopolitical forces, reflected in the rise of the Pacific economy (the United States and Japan), meant that control of the straits remained vital, and Singapore was a crucial naval base for the British as well as a vital cog in global trade networks. Not surprisingly, the taking of Singapore was a vital part of the Japanese invasion of Southeast Asia; as in the past, control of the straits was vital in controlling the economy and trade of the region.

Economic development in the region after about 1950, with the growth of the economies of Singapore and Malaysia, has continued to ensure that the straits remain a vital shipping artery. In addition, the expansion of demand for hydrocarbons in Japan has meant that some three-quarters of its energy supplies are shipped from West Asia through the Straits of Melaka. The careful policing of the straits, coupled with averting threats of environmental damage caused by collisions and spillage of oil, now is a major preoccupation of the regional powers. The states of Singapore, Malaysia, and Indonesia, which now share the straits, are increasingly developing international legislation to ensure that the crowded waters of the straits remain safe for international shipping. The success of those efforts will be vital to the economic development of the region.

STRAITS SETTLEMENTS (1826–1946)

Capitalizing on East-West Seaborne Trade

The Straits Settlements presidency was formed in 1826 by the union of the East India Company’s scattered possessions in the Malay Peninsula; it remained one political entity until it was dissolved in 1946. Initially it comprised Penang (the capital), Province Wellesley, Singapore, and Melaka. The Dindings region was added in 1874 but was transferred to Perak in 1934; the Cocos Keeling Islands were included from 1886, Christmas Island from 1900, and Labuan from 1906.

From the start, the presidency was a financial drain on the company. It derived no revenue from commerce, since Singapore’s free trade status was extended to Penang and Melaka in 1826. No land revenue could be raised from Singapore, where agricultural enterprises failed, nor from Melaka, where overgenerous compensation to former Dutch landed proprietors left the company in debt. The government relied on taxing so-called vices and pleasures, notably opium and alcohol, the collection of which taxes was farmed out to Chinese syndicates. To reduce the deficit, in 1830 the Straits Settlements were demoted to a residency within the Bengal presidency and became a useless burden after the company lost its China trade monopoly in 1833. But commerce flourished with free trade, *laissez-faire*, and unrestricted immigration, particularly in Singapore, which became the administrative capital in 1832 and judicial headquarters in 1855.

The merchants fought off several attempts to levy commercial charges to pay for port improvements and became increasingly critical of administrative inefficiency and the lack of representative institutions. In 1857, in the wake of the Indian Mutiny, the Singapore European merchants supported their Calcutta counterparts in petitioning for the company's abolition; they also requested that the Straits Settlements be brought under direct rule from London. Since the British government refused to accept a financial liability, the settlements remained under the authority of the new government of India, when the company was abolished in 1858.

A stamp duty introduced in 1863 solved the budget problem, and in April 1867 the Straits Settlements became a Crown colony, with a constitution that remained basically unchanged until after World War II (1939–1945). A governor appointed by the Colonial Office ruled with the help of an executive council of senior officials and a legislative council, to which the governor nominated a few “unofficials.” The first Chinese councillor was appointed in 1869, and over the years the number of unofficials and Asians increased, until by the 1920s there were equal numbers of officials and unofficials, with the governor holding the casting vote. No councillors were elected, but from 1924 the Singapore and Penang chambers of commerce were each permitted to nominate a representative. Asians were appointed as justices of the peace and municipal councillors and were admitted to junior professional appointments in Straits civil, legal, and medical services, which were created in the 1930s.

Singapore dominated the colony from the start, and in 1872 the Penang chamber of commerce petitioned unsuccessfully for separation. But resentment largely disappeared as the last thirty years of the nineteenth century brought prosperity to all three settlements. The colony was intimately bound up with the economic development of its peninsular hinterland, which began to come under British protection from 1874. Administratively the colony and the Malay States were linked by the Malayan Civil Service (MCS), which held all senior posts throughout the peninsula, while the governor was also high commissioner of the Malay States.

The settlements varied in their population and economy. Urbanized Singapore was almost entirely devoted to trade after agriculture petered out by the 1860s, whereas the other settlements had large rural populations. As early as 1826 half of Singapore's population was Chinese, rising to three-quarters by 1900 (1901 census). The rural inhabitants of the other settlements in 1826 were Malays, but Chinese peasant farmers moved into Melaka later in the nineteenth century, and subsequently large numbers of Indian laborers were recruited for rubber plantations everywhere. Penang's Georgetown initially had a substantial Indian community, but later it became predominantly Chinese, while Melaka town had a cosmopolitan population of Chinese, Indians, and Eurasians. In the twentieth century, rubber plantations replaced the older forms of agriculture: spices, sugar, and coffee in Penang and Province Wellesley, and coffee and slash-and-burn tapioca in Melaka. Penang never rivaled Singapore as a port but prospered as an outlet for the northern Malay Peninsula and North Sumatra.

The Straits Settlements colony was broken up in April 1946, when Singapore became a separate Crown colony, while Penang and Melaka were merged in the Malayan Union, despite vociferous objections from their non-Malay populations. Labuan became part of North Borneo, while the Cocos Keeling and Christmas Islands remained under Singapore until they were transferred to Australia in 1955 and 1958, respectively.

Two books deal with the Straits Settlements in the pre-1867 period, but no single work spans the whole of their existence.

STRAITS/MALAYAN/MALAYSIAN BRANCH OF THE ROYAL ASIATIC SOCIETY (MBRAS)

A learned society established in 1877 by a handful of British colonial officers, the Malaysian Branch of the Royal Asiatic Society is aimed at collecting, recording, and disseminating knowledge of Malaysia, Singapore, and Brunei, thereby increasing interest and focus in the scholarly study of the region. It publishes an academic-oriented scholarly journal, holds annual public lectures, and occasionally organizes academic conferences.

Beginning as the Straits Branch of the Royal Asiatic Society, it had its first name change in 1923, to the Malayan Branch of the Royal Asiatic Society; in 1964 it was renamed Malaysian Branch of the Royal Asiatic Society. The society's journal also underwent similar name changes, its current title being the *Journal of the Malaysian Branch of the Royal Asiatic Society* (*JMBRAS*).

Although at face value the scholarly pursuit of furthering knowledge of the Malay Peninsula appeared noble and worthy, the ulterior motive apparently appeared to be, as founder-president Archdeacon G. F. Hose explained in his inaugural address (February 1878):

[A] careful study of the religious opinions and practices of the people would be not interesting only, *but directly useful* . . . to the missionary, as shewing [sic] him what ground he has in common with the man whose spiritual life he hopes to benefit, what are the real errors to be eradicated and the real defects in faith and morals that have to be supplied, and useful to the governing class too, as discussing the true character and nature of the people to be governed. (Inaugural Address, 28 February 1878; Choy 1995: 88, emphasis added)

Seeking affiliation with the Royal Asiatic Society (RAS) in London (granted in May 1878), the founding members of the society acted consistently with their counterparts in other corners of the British Empire in establishing "Asiatic Societies." The RAS considered itself "an effectual instrument in bringing into activity the intellectual energies of the inhabitants of our [British] Eastern dominions, in directing them, when so awakened, to proper objects of public utility, and in making known the results

of these exertions to the European world" (*ibid.*: 89).

Notwithstanding its mercenary motives, the society was earnest and sincere in promoting an intellectual interest in the region. Looking through the more than 160 issues of the journal, a score of monographs, and a dozen reprints, one sees that the society has more than fulfilled its objective of disseminating academic-oriented information. The coverage of the journal is immense, catering to works from a variety of disciplines: anthropology, archaeology, botany, history, language, literature, zoology, and others. Malaysian history and Malay literature seem to be the general focus of the journal.

The society since its inception had enjoyed patronage from colonial governors and high commissioners to Malay and Brunei royalty, and premiers of Malaysia and Singapore. Although the majority of the original 150 founding members were mostly British colonial administrators, academics from the region and abroad constitute a sizable number of the membership since the 1960s.

STRATEGIC HAMLET PROGRAM (VIETNAM)

The Strategic Hamlet Program was a population relocation scheme undertaken in South Vietnam in the early 1960s by the Ngô Đình Diệm regime (1955–1963) in order to fight the resurgence of communist influence in rural areas.

Women and children of the strategic hamlet of Dá Bàn in the Republic of Vietnam (South Vietnam) pose for a military photographer in 1963. The purpose of the Strategic Hamlet Program was to provide security for the rural populace in South Vietnam by settling them in protected villages where the government could carry out political and economic programs. (U.S. National Archives)

Inherited from a first abortive attempt in 1959 (the Agrovillage campaign) and inspired by Sir Robert Thomson, British counterinsurgency expert in Malaya (present-day West or Peninsular Malaysia), the Strategic Hamlet Program was part of the Stanley mission proposal to accompany U.S. military aid to South Vietnam, which was decided in 1961 by the Kennedy administration (t. 1961–1963). The premise was that the Việt Cong (VC, Vietnamese communists) could not survive without the support of the population, “like a fish outside water” (a Mao Zedong image). Therefore the peasants had to be relocated to new and secured villages with, if possible, new land to farm and protection by their own militia. Launched in 1962 by President Ngô Đình Diệm (1901–1963) and managed by his brother Ngô Đình Nhu, this program aimed to build

more than 10,000 fortified hamlets to house peasants under government control as a means of depriving VC of their support.

But the program had to face many problems, and the first experiences did not appear promising. In March 1962, for example, government troops set up five strategic hamlets in Ben Cat district (north of Saigon), an area where the VC was known to be strong, but failed to convince the peasants to stay there. The program management was apparently too authoritarian—perhaps even more than VC policy. Besides, it did not take realities into account. Vietnam was not Malaya, and the VC was at this time mostly part of the population the Saigon regime wanted to relocate. U.S. military leaders themselves criticized the concept and its implementation. In September 1962, the regime claimed that one-third of the population was gathered

in strategic hamlets—an accomplishment very few believed. In any case, with the overthrow of the Diem regime in November 1963, no one spoke anymore about the program.

STUDENT REVOLT (OCTOBER 1973) (THAILAND)

The 14 October 1973 uprising came to be known as the “Student Revolt,” since the key actors at that time were student activists and intellectuals. The revolt led to the fall of the military regime (1963–1973) under Field Marshals Thanom Kittikachorn and Prapat Jarusathien, which succeeded the Sarit regime (1959–1963). Under Thanom and Prapat, it looked as if the authoritarian regime would be planted deeper in Thai politics. Comparable to the 1932 Revolution, the October 1973 uprising changed the course of Thai politics, breaking the monopoly of political power by the army and opening the political space to popular participation, in particular to the peasants and labor. Even though the period of democratization lasted about three years, and ended in a tragic bloody coup by the military on 6 October 1976, the political demands of the October Revolt have been accepted as the basic principles that a full democracy must reckon with.

The events started with a group demanding a constitution led by Thirayut Boonmee, former secretary-general of the National Student Center of Thailand (NSCT). They distributed

pamphlets on the streets of Bangkok, on 6 October 1973, demanding the promulgation of a constitution by the Thanom-Prapat government; the government hastily reacted by arresting thirteen members of the constitutional group. After a week of peaceful protest within Thammasat University in Bangkok, demanding the release of the thirteen students, lecturers, and politicians, the swelling crowd consisting of hundreds of thousands of ordinary people began to march toward the Government House. Apparently, the negotiations between the NSCT, which became the formal leader of the protest, and the Thanom government failed to reach an agreeable solution. On 12 October, the NSCT issued an ultimatum that the government had twenty-four hours to unconditionally free all the detainees. That night two student representatives and a group of Thammasat lecturers sought an audience with King Bhumibol Adulyadej (Rama IX) (r. 1946–) in order to explain the situation and peaceful activities of the students.

At 12 noon on 13 October the demonstrators poured out of Thammasat University in an orderly fashion according to a well-prepared plan. The front rows were women volunteers carrying national flags, the Dhamma Chaka banner (a symbol of Buddhism), and portraits of the king and queen. The politically conscious masses had decided to show their strength and cause to the military-led government for the first time since the huge demonstration against the Phibul government in 1957 that eventually led to its demise.

The whole day long, as the jostling throngs moved along Rajadamnoen Avenue, representatives of the NSCT held their final discussions with Field Marshal Prapat Jarusathien. Finally the government agreed to release the thirteen detainees and grant a constitution within the year. By the evening, Seksan Prasertkul, a student activist who had led the protest march, ordered the demonstrators to move from the Democracy Monument to the parade ground by the equestrian statue of Rama V, awaiting the final words and decisions from the NSCT leaders. The radio broadcast of the agreement between the NSCT and the government could not overcome the rumors that the student leaders had lost their lives. Near midnight Seksan decided to move the demonstrators from the equestrian statue of Rama V toward Jitlada Palace, hoping that he

could “rely on His Majesty’s *barami* [Buddhist power] for protection.”

On the morning of 14 October, while students and other demonstrators began to leave the Jitlada Palace for their homes, they were intercepted by police commandos equipped with nightsticks, wicker shields, and teargas guns. The group of demonstrators reacted by hurling wrapped bags of food at the police. Some threw wood and wounded a policeman. Next, two anti-riot police vehicles and riot police personnel equipped with crash helmets were launched against the crowd. Then the bloodshed began, arousing the vengeance of the people. Beyond all expectations, the minor clashes by Jitlada Palace spread rapidly and widely. The government used the military and the anti-riot police to violently suppress the protesting public. High school and college students, together with the general public, responded by causing chaos—breaking into and destroying various buildings regarded as symbolic of the power of the despotic government. The notorious and hated government buildings that were burned down included the Department of Public Relations, the State Lottery, and the BIFGO (Board of Inspection and Follow-up Government Operation), which was under Colonel Narong Kittikachorn, Thanom’s son and Prapat’s son-in-law. Clashes and attacks on police booths began to spread all over Bangkok and Thonburi and threatened to be widespread in the major provinces, which had been stirred up by news of the demonstrations against the “trio of tyrants.” By dawn Thanom had resigned from the government but still held on to the post of supreme commander of the armed forces. Meanwhile, the king addressed the nation on radio and television requesting all sides to refrain from further violence and appointing Professor Sanya Thammasak, rector of Thammasat University, privy councillor, and president of the Buddhist Association of Thailand, as the new prime minister.

Yet violence and suppression by government forces using tanks, helicopters, and heavy field artillery on the uprising continued on the night of 15 October, when the “trio of tyrants” fled the country. A rift inside the armed forces, in particular when newly promoted army commander general Krit Sivara defied Thanom’s commands and forced him to resign as supreme

commander, eventually forced Thanom-Prapat-Narong to flee the country.

Distinct from other political uprisings in Thai history, the October Revolt was characteristically a youth movement, which became known as the “New Generation.” These young men and women of the New Generation stepped forward to play unprecedented sociopolitical roles from 1969 to 1972, as election observers, village development volunteers, social critics, and a political force pushing for a change in Thailand’s U.S.-dominated policy to one of independent neutrality. The turning point for student involvement in Thai politics was the establishment of the NSCT in 1970.

During the period 14–15 October, no fewer than 77 people were killed and 857 others wounded.

SUEZ CANAL (1869)

Bypassing the Cape

The Suez Canal through Egypt connects the Mediterranean Sea and the Red Sea. Its completion in 1869 significantly decreased travel time between Asia and Europe, which trip previously had meant rounding the Cape of Good Hope. Shipping through the canal increased quickly from 11,000 tons in 1869 to 1.1 million tons in 1872 and 9.7 million tons in 1900 (Farnie 1969: 751). The significance of the

canal for trade took time to materialize, as only steamships could pass through it. During the first two decades, only high-value products such as cotton piece goods, tea, and indigo went from India to Britain through the canal. In contrast, sailing ships continued to carry bulk produce such as rice from Burma and sugar from Java along the cape. The change from sail to steam took until 1900. In the 1870s, British steamers bringing coal to Asia started to carry rice from Burma as a return cargo. By 1880 only 34 percent of Burma's rice to Europe went through the canal, growing to 94 percent in 1895 after rice prices increased and steamer freight prices decreased to levels equivalent to those of sail freight along the cape. Until 1895, 70 to 80 percent of the ships passing the canal were registered in Britain, as only Singapore could accommodate steamships (Farnie 1969: 371–372). The upgrading of the port of Batavia, and also the growth of tobacco production in North Sumatra, increased the share of Dutch ships passing through. The importance of the canal was underlined during Egypt's blockade in 1956, which severely disrupted trade flows between Europe and Asia. The canal's share in world shipping peaked in 1958–1959 at 15 percent (Farnie 1969: 754). Its share has declined since, because new generations of ships, such as supertankers and container ships, cannot pass through it.

SUGAR

Although sugarcane was known in Southeast Asia, palm sugar was long preferred for consumption. Cane sugar consumption increased only with the spread of refining techniques from

China after 1600. Cane sugar was traded within Southeast Asia and to South and East Asia. Increasing amounts reached Europe in the seventeenth and eighteenth centuries. Banten (West Java), Luzon (the Philippines), and central Thailand were the key sugar-producing areas.

Sugar production in Java increased under the Cultivation System after 1830. The Dutch colonial government compelled farm households to grow cane that was milled by contracted private sugar mills. Many mills stopped production after the abolition of the system in 1870. Others modernized production plants and produced cane on irrigated leased farmland in the mills' surroundings, especially in Central and East Java. Controversy surrounded land-leasing practices, levels of rent, and preference given to cane in the allocation of irrigation water during the dry season.

The closing of Java's land frontier increased the cost of leasing land. Sugar factories offset this by maximizing cane yields per hectare through high-yielding varieties and using labor-intensive cultivation techniques. A fall in sugar prices forced sugar mills to modernize, increase the scale of operations, and meticulously plan the milling season. By the 1920s the sugar industry in Java was technically and economically the most advanced in the world.

In the Philippines, sugar was produced for export in Luzon in the 1830s, and later in the sparsely populated Cebu and Negros, where Chinese-Filipino and a few Spanish entrepreneurs started large sugar estates (*haciendas*). In Luzon, sugar mills leased land from farmers. In other areas tenant farmers leased land from the large landholders to produce cane. Landholders generally had a stake in the mills. After World War I (1914–1918), investment from the United States modernized the sugar mills. Production and exports, largely to the United States, increased steadily.

In the late 1920s, sugar-importing countries restricted imports to protect their sugar industries. The crisis of the early 1930s compounded this. The Java sugar industry lost markets in India and Japan, and many sugar mills had to close. In contrast, sugar production in the Philippines remained level. Filipino sugar producers had preferential access to the U.S. market, where protection lifted sugar prices above international levels.

Sugar Production in Southeast Asia, 1880–2000 (1,000 tons)

SOURCES: Based on data from Bulbeck, D., et al. 1998. "Sugar." Pp. 124–126 and 132–135 in *Southeast Asian Exports since the 14th Century*. Singapore: Institute of Southeast Asian Studies (ISEAS); *FAO Production Yearbook*. 1980–2001. Rome: Food and Agriculture Organization.

During the Japanese occupation (1942–1945), sugar production decreased in Java and the Philippines, because exports were impossible. Many mills were dismantled. In Java, remaining mills were badly damaged during the independence war (1945–1949). Factories and sugar production and exports recovered quite quickly in the Philippines on the basis of investments from the United States and preferential access to the U.S. market.

In Java, many Dutch-owned firms did not recover their mills. Others invested only minimal amounts, because the political climate in independent Indonesia was hostile to foreign enterprise. Exports dwindled, as domestic demand for sugar increased. All foreign-owned sugar mills were nationalized after 1957. The Indonesian government considered sugar an essential product to be sold domestically at low prices. Exports ceased, and mills found it impossible to generate the profits required for maintenance and salary payments. Firms be-

came increasingly dependent on government subventions.

Sugar mills in Java had to phase out renting farmland for cane production and started purchasing cane from smallholders. However, mills had insufficient income to pay high enough prices, and the cane was of poor quality. The Indonesian military used force to make farmers produce sugarcane for the mills under military management. The efficiency of the sugar industry decreased drastically in the 1960s.

Increasing opportunity cost of land in Java and low international sugar prices should have caused the disappearance of sugar production. Instead, the Indonesian government rehabilitated the mills during the 1970s and increased incentives to contracted cane farmers. In the 1980s, new factories expanded production outside Java, where the cost of land for cane production was low. Still, because of persistent inefficiencies, Indonesia's state-owned sugar mills

could produce sugar only with high rates of effective protection.

Sugar production in the Philippines decreased after it gradually lost favorable access to the U.S. market in the 1970s. Sugar mills had to adjust costs to lower sugar prices at a time when international prices continued to slump as a consequence of increased competition in the international market.

Thai sugar exports decreased to insignificance in the nineteenth century, but Thailand reemerged as a sugar exporter in the 1970s. Growing Thai conglomerate companies had been successful in agricultural exports through vertical integration of crop production, processing, and marketing. Encouraged by relatively high sugar prices in the 1970s and early 1980s, they used this strategy to invest in sugar production. Under tight government regulation, they achieved efficiencies in the production, trade, and shipping of sugar. However, inefficiencies in terms of low cane yield and sucrose content plagued cane production by contractors. Sugar prices fell in the 1980s and remained low in the 1990s because of excess production in Cuba and Brazil. Low cane prices caused farmers to turn away from cane contracts, causing cane supply problems. Many Thai sugar ventures experienced problems after a drought-induced fall in cane output in 1997/1998.

Other countries in Southeast Asia remained minor producers of sugar. Vietnam and Malaya produced largely for domestic consumption and exported small amounts before the Pacific War (1941–1942). Malaysia imported most consumed sugar. In the 1970s the Malaysian government supported domestic sugar refining. As a consequence, Malaysia is now a major importer of raw sugar, largely from Australia, and exports refined sugar.

Sugar is a controversial product in the Association of Southeast Asian Nations (ASEAN) Free Trade Act (AFTA). High-cost sugar producer Indonesia preferred sugar to be exempted from AFTA; the Philippines wanted the reduction of sugar tariffs to be postponed until 2010; and low-cost sugar producer Thailand wanted neighboring countries to open their borders for sugar in 2002. As a compromise, the Philippines and Indonesia were allowed to delay the start of sugar import tariff cuts.

SUHARTO (1921–)

The Shrewd Puppeteer

Although he was forced from office in disgrace and tumult, and remained the subject of scorn and derision thereafter, Suharto remains one of the most important figures of twentieth-century Southeast Asia. He ruled Indonesia for more than three decades, initially by virtue of a letter of authority, the Supersemar, received from the hand of President Sukarno (t. 1945–1967) on 11 March 1966, then as acting president (1967–1968), and finally as president for seven consecutive terms (1968, 1973, 1978, 1983, 1988, 1993, 1998). This long period of dominance of the Indonesian political scene was marked by an astonishing refurbishment of Indonesia’s lackluster economy and, equally, by an authoritarian firmness, sustained both by an extraordinary political astuteness and by Suharto’s corporatist vision of a Pancasila Indonesia. The last of his presidential terms lasted just a few weeks, as Suharto, increasingly the target of criticism for his increasingly authoritarian ways and his obstinate refusal to accommodate growing calls for political and social reform, and ever more isolated by the forces that had kept him in power for so long, was forced to resign on 21 May 1998.

The preeminence that Suharto came to enjoy could not have been predicted from his

Thojib N.J. Suharto ruled Indonesia virtually unchallenged for more than three decades, from 1966 to 1998. During this era, Indonesia shifted its alliances toward the West and rejoined the United Nations. Critics have condemned Suharto for suppressing dissent, ignoring human rights, and enriching his family and friends through cronyism. (Embassy of Indonesia)

lowly and uncertain origins. Born in a hamlet a few kilometers from the royal center of Yogyakarta in Central Java on 8 June 1921, he endured a troubled and uncertain childhood and a disrupted, spasmodic, and undistinguished education. Unable to secure satisfactory employment, he joined the Dutch colonial army (KNIL) in 1940, fled the uniform when Java fell to the Japanese in March 1942, and eventually joined a Peta (Volunteer Army of Defenders of the Fatherland) unit shortly after the formation of that force in 1943. The Japanese surrender in August 1945 saw him joining the infant Indonesian army, where he quickly earned promotion to lieutenant colonel and the

job of commanding the troops responsible for the defense of the Yogyakarta region in the face of the developing threat from Dutch forces seeking to reclaim their former colony. With the fall of Yogyakarta, the republic's capital, to the Dutch in December 1948, Suharto led a local guerrilla resistance and came to notice with a flawed but symbolically important attack on the Dutch-held city in March 1949.

Once independence was won, Suharto's military career developed slowly through the 1950s. It was punctuated by his participation in such exercises as the campaign against regional rebels in South Sulawesi in 1950 and clumsy efforts to subdue an Islamic revolt among his troops in 1951–1952, but it was mainly characterized by steady routine service in a variety of posts in Central Java. Seniority and persistence, more than anything else, brought him to the command of the Central Java Diponegoro Division in 1956, where he developed a strong reputation for looking after the material needs of his troops, mostly through his development of foundations whose wealth came from local levies, military business, and trade. His appointment was followed closely by Sukarno's (1901–1970) invocation of a state of war and siege in March 1957, giving Suharto special political authority in his region, something he exercised so broadly that he was removed in October 1959 following allegations of corruption and smuggling. A period of staff training (1959–1960) finally delivered him, now at the rank of brigadier general, to Jakarta. His reputation as a solid and politically unambitious soldier earned him command of Indonesia's first centrally controlled mobile force, Kostrad (Army Strategic Reserve Command, then called Caduad [Army General Reserve]) (1961), as well as control of the military operations surrounding Indonesia's efforts to "liberate" West Irian from Dutch control (1962). Already standing deputy to the army chief of staff, at the height of the confrontation crisis ("Crush Malaysia" campaign) early in 1965, he was given operational command of fighting units in Sumatra and Kalimantan, although his efforts were directed toward managing and mitigating the conflict rather than expanding it.

The pivotal moment of his career came with the coup attempt of 1 October 1965, mounted by junior officers against the army leadership, probably with the encouragement and assis-

tance of a section of the Partai Komunis Indonesia (PKI) leadership. Displaying a shrewd mixture of decisiveness and tactical acumen, Suharto put down the attempt and then created a mood of violent vengefulness that led to an aggressive offensive against the PKI, exterminating the party and many of its members and supporters in rivers of blood. His successes inaugurated a long period of conflict with President Sukarno. Although he harbored no ambition for his country's leadership at that time, Suharto was determined that Sukarno should acknowledge the shortcomings of his rule, and particularly that he should formally disavow the PKI. Sukarno's failure to accommodate Suharto's wishes (expressed as a desperate strategy of minimizing the significance of the coup attempt) in a context of a gathering, army-encouraged crescendo of student criticism of the regime, proved fatal to his hopes of remaining in power. On 11 March 1966, Sukarno was forced to sign the letter of authority that had the effect of ceding sweeping executive powers to Suharto. Within hours, Suharto banned the PKI; within days he arrested a large number of Sukarno's ministers.

Thereafter, Suharto moved slowly and cautiously, but nonetheless relentlessly, to unseat Sukarno. Armed with the authority formally granted him in mid-1966 by the country's highest body, the Provisional People's Consultative Assembly (MPRS), and in the absence of any effective competitor for power, Suharto gradually chipped at Sukarno's declining charisma and legitimacy; in March 1967, Sukarno was unseated and replaced by Suharto in the post of acting president. Almost exactly a year later, Suharto was sworn in as full president.

Once in power, Suharto set to work on the two arenas that were to characterize his long tenure of power. The first was the construction of an economically developed and modernized Indonesia on the ruins wrought by Sukarno's prodigal economic mismanagement. Recruiting a group of Western-educated university economists who formed a formidable technocratic team, Suharto charged them with stabilizing the economy and developing a series of five-year development plans to revitalize the economy. The second was the establishment of a corporatist political and social order, labeled the New Order, based on the ideology of Pancasila, which combined both the repressive capacities

of the army and an incessant ideological barrage that emphasized the primacy of community over the individual and the virtue of toil and struggle, and sought to weave a harmonious whole from the unpromising yarns of Indonesia's diversity.

Suharto had, as well, to shore up his power. This he did by systematic purges of the state bureaucracy and the major state institutions in the late 1960s; by a thoroughgoing cleansing, reform, and centralization of the armed forces; by gathering around him a tightly knit and trusted group of like-minded military advisors and agents, of whom the most formidable was Ali Murtopo; by the calculated allocation of his powers of patronage (including the strategic deployment of off-budget income and by providing officers with access to business opportunities); by a controlled reconstruction of the bases and functions of political parties and electoral contestation; and by the judicious and sometimes ruthless disposal of those who stood in his way or, more rarely, presented a real threat to him. At various times through the 1970s, his regime seemed on the point of crisis, notably early in 1974 when army internal intrigues and inchoate social dissatisfaction at the style of economic development led to wild riots in Jakarta on the occasion of a visit by the Japanese prime minister, and again the following year when the regime's financial powerhouse, the Pertamina oil company, collapsed in a sea of debt.

Having survived these threats, however, Suharto in the early 1980s moved into a period of unparalleled ascendancy. Although his regime was not without its serious problems—notably the crisis caused by the rapid decline of world oil prices that threatened to bring down the economy—Suharto was able to turn these challenges to good account. The end of the oil boom in the early and mid-1980s, for example, forced him to reshape the economy in deregulated, liberalized, and export-oriented ways that led, in turn, to a new surge of economic growth. Suharto met growing dissatisfaction among army leaders at what they perceived as his gathering independence (and their own growing marginalization) with efforts to reshape the basis of his regime by developing Golkar as a powerful civilian-oriented political party, and attempts to strengthen his identification with growing Islamizing tendencies within Indonesian society.

By the early 1990s, as Suharto reached his seventies, there was a mounting social clamor focused on the problem of the presidential succession and the possibilities it might present for a more open society. Moreover, the kinds of social transformation that Suharto's economic policies had delivered (he had been named "Father of Development" by the People's Consultative Assembly in 1983) had created new social classes and developing political expectations that entertained notions of enhanced participation and the lifting of characteristic New Order repressiveness.

Suharto, however, had reached that point in his career when he identified the success of his own political career with the success of the nation. He was, he thought, indispensable to Indonesia's well-being. Paradoxically, he was unable to adjust his mode of rule so that it might accommodate new political demands, simply because such accommodation could have no other effect than to diminish his near-total control. Increasingly distanced from the society he ruled, tired, surrounded by sycophants and cronies, and burdened by a greedy and unpopular set of children, his one weapon was to apply unremitting repression—but without the political sophistication and artistry he had displayed earlier.

In the end, the Asian currency crisis of 1997–1998 was the immediate occasion, though not the fundamental cause, of his ousting. It laid bare the fact that the New Order that Suharto had created was now stagnant and immobilized, and its elite hopelessly addicted to corruption and unable to address realistically the reforms that resolution of the crisis demanded. Accordingly, the political legitimacy that Suharto's developmental successes had engendered withered away. In the end, as students occupied the parliamentary complex, and calls for fundamental political reform increased in shrillness, one by one his supporters deserted him, and his regime simply ceased to exist.

It would be wrong to characterize Suharto by the way of his going. He was one of Asia's most crafty and masterful politicians. Apparently unskilled and unpracticed in politics, Suharto took to the challenges of leadership as though born to them. Stubbornly pragmatic in securing the goals he had set himself, he was a master at delicate maneuvering, balancing contending political forces and individuals, and isolating or confusing

them so thoroughly that any threat they might have presented was dissipated. He was often slow to act, waiting until he had tested support and probed for any weaknesses, and hiding his intentions behind a broad but impassive smile. Once he decided to act, however, he did so with an efficiency and ruthlessness that gave his enemies no chance of recovery.

Undistracted by matters of the mind, and buoyed by an inner calm and resolve built upon his attachment to aphoristic principles of life and living derived from Javanese thinking, he was entirely consumed by what he saw as his duty and destiny: to reshape Indonesia economically, politically, and socially. In this effort he enjoyed significant but only partial success. Indonesia had, by the mid-1990s, enjoyed nearly three decades of rapid growth that had utterly transformed the country. At the political and social level, however, his efforts to create a corporatist Indonesia succeeded only because of the repressiveness of his New Order, not from any kind of popular inner conviction. His obstinate belief, more and more evident with the passage of time, that only he held the key to Indonesia's success meant an inability to prepare for his own passing and, more important, a devastating failure to construct strong institutions of governance that might have provided his fractious nation with the resilience it needed.

Once overthrown, Suharto fought off efforts to bring him to trial through the successful claim that a series of strokes had left him unable to defend himself. Increasingly frail and ill, he was left to contemplate his fate and that of his country, which showed signs of increasing incapacity in the years following his departure.

SUKARNO

See Soekarno (Sukarno) (1901–1970)

SUKHOTAI (SUKHODAVA)

The Cradle of T'ai Culture

Sukhotai (Sukhothai) was a kingdom of the T'ai (Siamese) located in the upper sector of

the Chao Phraya plain. It was founded in the first half of the thirteenth century as a small, local kingdom before it became the political center of the T'ai in the last two decades of that century. Sukhotai eventually lost its might and was absorbed by the more powerful kingdom of Ayudhya (Ayutthaya) in the fifteenth century. It is known in T'ai history as the kingdom that originated T'ai art and culture.

Before the kingdom of Sukhotai was founded, the T'ai had already settled themselves in the northern region and the Chao Phraya plains. However, they were not able to form their own independent kingdoms, and most T'ai principalities in the Chao Phraya delta, such as Lopburi, Sankhaburi, and Rat (in modern-day Uttaradit province), were semivassal or vassal states of the powerful Angkorian empire. Sukhotai was one of the Khmer Angkorian outposts in the upper sector of the Chao Phraya plain (Taylor 1992: 169). However, after the death of King Jayavarman VII (r. 1181–1220?) of Angkor in the 1220s, the political and military power of the Khmer kingdom was in drastic decline. This created an opportunity for local T'ai leaders in the Chao Phraya delta to form their own independent states.

Sukhotai was also founded during this period. In the 1240s, Pha Muang, who ruled the principality of Rat as an Angkorian fringe area, joined forces with his ally Bang Klanghao of Bang Yang, near Sukhotai, to attack the Khmer outpost at Sukhotai. The Khmer resisted, but they were defeated. However, Pha Muang, who might have realized the superior power of Bang Klanghao, did not want to become the ruler of the newly independent kingdom of Sukhotai and thus passed on his royal title of Sri Indraditya and the power to rule Sukhotai to Bang Klanghao. Wyatt suggests that, as a vassal ruler of Angkor, Pha Muang may have felt guilty about rising up against his Khmer lord; as a result, he did not want to rule Sukhotai (Wyatt 1984: 52).

During the reigns of Sri Indraditya and his son Ban Muang (r. 1240s–1270s), Sukhotai was still a local power and did not have expansive territories. However, during the reign of Rama Kamhaeng (r. 1279–1298), the younger son of Sri Indraditya, Sukhotai increased its political power and rose to be the political and cultural center of the T'ai in the Chao Phraya delta. Its success was closely associated with the charisma

and diplomacy of Rama Kamhaeng. Rama Kamhaeng, who was born Rama, demonstrated his military prowess from the age of nineteen, when he successfully helped his father fight against the troops of Sot (in modern Tak province) who attacked Sukhotai during the reign of Sri Indraditya. Rightly his epithet pronounced him *Rama Khamhaeng* or *Rama the Bold* (ibid.: 53). When he eventually ruled Sukhotai, Rama Khamhaeng adopted various means to enable him to extend his rule over a vast territory. In 1287 he concluded a triple alliance with Mangrai of Lanna and Pha Muang of Phayao, two equally powerful neighboring kingdoms. This mutual alliance allowed him to rest assured that the northern flank of Sukhotai would be safe from invasions, while it allowed Mangrai to concentrate on defending his kingdom from the Mongols.

Via his Buddhist connections, Rama Kamhaeng established peaceful relationships with Nakhon Sithammarat, a thriving port city in the south that controlled many small principalities in the Malay Peninsula. The consequence of these relationships was Sukhotai's access to maritime trade routes. The Mon kingdom, which had just gained independence from Pagan, was also a tributary state of Sukhotai via a marriage link of the Mon king with Rama Kamhaeng's daughter. Although the far-flung regions were absorbed into Sukhotai's political power by peaceful means, the immediately surrounding areas of Sukhotai in the Chao Phraya delta were brought under Rama Kamhaeng's rule by military power. It is likely that while Sukhotai maintained strong political control over its immediate vicinity, the more far-flung regions enjoyed greater autonomy, and Sukhotai controlled them only nominally. But more important, Sukhotai's relations with the fringe areas hinged on the personal relations between Rama Kamhaeng and his vassal rulers. As a result, when Rama Kamhaeng died in 1298, the power of Sukhotai over the fringe areas disappeared.

Sukhotai was a Buddhist state. It accepted Singhalese Buddhism from Ceylon via Nakhon Sithammarat. At the early stage, Hinduism probably played a vital role in the kingdom; Sukhotai was once part of the Angkorian empire. Temples built in the earlier period clearly demonstrate Hindu influences. However, from the reign of Rama Kamhaeng, Buddhism be-

came the state religion under royal patronage. The close relationship between polity and Buddhism can be clearly demonstrated by royal support of activities in relation to Buddhism. The tradition of having important temples built adjacent to palaces originated from the reign of Rama Kamhaeng (Tambiah 1976: 86). Moreover, the king shared his throne with revered monks who sat on the throne on Buddhist holy days to preach *Dharma* (Buddhist precepts) to Sukhotai's inhabitants.

Sukhotai was not a fertile state in comparison with other kingdoms or principalities in the northern plain or the Chao Phraya delta, as far as land and natural resources were concerned. It had a limited amount of low land, while its larger part was hilly or mountainous. Thus rice, its main staple, was produced only in sufficient quantities for local consumption. This explains why Rama Kamhaeng adopted a free trade policy in order to attract more people to settle in Sukhotai to conduct trade. In 1292 he made a stone inscription that portrayed his kingdom as a land of freedom in which its inhabitants enjoyed the right to undertake economic activities freely. Whoever wanted to trade did so without being required to pay taxes (Wyatt 1984: 54). Interstate commerce also became an important economy of Sukhotai. From the late thirteenth century to the fifteenth century, high-quality porcelain, especially celadon from Sukhotai and Si Satchanalai, its major satellite city, was exported widely throughout Southeast Asia (Reid 1988: 105).

In his stone inscription of 1292, Rama Kamhaeng describes himself as a king who ruled his subjects as a father rules his children. A bell was hung at the palace gate; people who wished to seek an audience with the king and obtain his assistance would ring this bell, and the king would readily come to meet them, listen to their complaints, and try to solve their problems (Wyatt 1984: 54). The inscription also clearly narrates how close the ruler and the ruled of Sukhotai were, in contrast to the very strict and hierarchical nature of Khmer rule, in which the gulf between the king and his subjects was very wide. This paternalistic rule, as well as the free trade policy, was an attempt by the rulers of Sukhotai to attract more people to the kingdom, who would provide much-needed manpower for the newly established state. It also portrays how idyllic Sukhotai was

in comparison with the Angkorian empire, whose subjects had to pay onerous taxes. There was also one highly significant cultural development during the reign of Rama Kamhaeng: the development of the T'ai script.

After the death of Rama Kamhaeng in 1298, his successors were not capable of maintaining the political power of the extensive kingdom. The king of Mon no longer accepted the sovereignty of Sukhotai. Suphanburi and Phetburi in the Chao Phraya delta also broke away from Sukhotai rule. As a consequence, the size of Sukhotai contracted substantially, and it became once again a small kingdom that had the power to rule only in its immediate vicinity. However, it was during this decline in political power that Sukhotai was known as a very strong Buddhist state. During the reign of Lo T'ai (r. 1298–1346) and especially the reign of Lu T'ai (r. 1346–1374), the kings extended their patronage and strong support of Buddhism. New city and forest temples were built as centers of Buddhist learning. T'ai art and culture also flourished. For instance, the unique architectural form of Buddhist buildings known as the lotus bud spire (*Phum Khao Bin*) on top of a *Chedi* (a cone-shaped building in which Lord Buddha's relics are believed to be kept) originated in Sukhotai. Many elegant and distinctive images of the Buddha in the walking posture were also cast during the Sukhotai period (*ibid.*: 58).

When the kingdom of Ayudhya was founded in 1351 in the lower Chao Phraya delta, Ayudhya kings—especially those from the Suphanburi house—considered Sukhotai their archrival. Starting from the reign of Boromracha I (r. 1370–1388), the more powerful Ayudhya launched repeated military campaigns against Sukhotai. In 1378, King Mahathammaracha II of Sukhotai was forced to accept Ayudhya's sovereignty and to swear allegiance to the latter. Even though Sukhotai tried to break away from Ayudhya from time to time, it never succeeded in gaining its independence. In 1396, Ayudhya was able to impose its legal system upon Sukhotai and in 1412 appointed one of its officials to be the resident of Sukhotai; this reduced its status to that of a vassal state of Ayudhya. Eventually, when Mahathammaracha IV (r. 1419–1438) of Sukhotai died in 1438, it was completely absorbed into Ayudhya and its status was reduced further to that of a provincial town (*ibid.*: 68–69). Thereafter, the Sukho-

tai region became a buffer zone that Ayudhya used as a base from which to launch military campaigns against the kingdom of Lanna in the north.

For almost two hundred years Sukhotai was the major political and cultural center of the T'ai in the northern sector of Chao Phraya delta. Although its paternalistic rule did not help the kingdom to survive, its strong belief in Buddhism and its artistic and cultural creativity laid solid foundations on which the T'ai kingdoms founded after its collapse would be built.

SULAWESI (CELEBES)

Along the Spice Trade Route

Sulawesi is the Indonesian name for the island generally known in the West as Celebes. Its total surface area is 72,890 square miles (approximately 189,000 square kilometers), roughly the size of Great Britain. Despite its great length of coastline (3,000 miles; 4,830 kilometers), much of it is not conducive to safe anchorage. Moreover, offshore are widespread and treacherous

coral reefs posing an ever-present danger to shipping. It is the peculiar shape of the island (described as an orchid, a demented spider, a wobbly K, among other things), with a high mountainous center and four arms stretching outward to form peninsulas, that made early European explorers believe that Sulawesi formed separate islands. They therefore called the island "The Celebes," though there is no consensus among inhabitants or scholars regarding the origin or meaning of this name.

Sulawesi is characterized by the general angularity of its relief and many lakes located in valleys. With its steep slopes and a climate noted for its dry season, heavy downpours lead to soil erosion in much of the island where shifting agriculture continues to be practiced. In addition to the shortage of flat or low-lying land, a hot climate and high annual rainfall discourage extensive and intensive agriculture. Except for areas in the southwestern and southeastern peninsulas, almost the whole island can be characterized by rugged uplands of more than 1,500 feet (450 meters).

Some of the earliest of prehistoric records have been found in the southwest peninsula, today known as the province of South Sulawesi. Excavations at three caves near Maros reveal a hunter-gatherer, at times cave-dwelling, culture termed "Toalean," dating to between 30,000 and 8,000 years ago. Another major prehistoric find, which dates from 4,500 to 6,000 years ago, is at Lake Tondano in North Sulawesi. Both sites reveal the use of stone tools and various occupations, as well as a wide range of habitats. In Central Sulawesi there is evidence of a megalithic culture sometime after the Neolithic period. These megaliths are worked stone formed into large cylindrical vats, statues, urns, and mortars. But who created them and what they signify are not yet known.

Sometime about 2000 B.C.E., Austronesian speaking people arrived on the shores of Sulawesi from the southern Philippines, after a lengthy period of movement from southern China to Taiwan and then down through the Philippines. In general these Austronesian speakers spread rapidly along the coastal areas throughout the region before attempting to settle in the interior. The differences that arose over time within this group in language, lifestyle, and even beliefs were a result of adaptation to particular environments and isolation

from one another. Descendants of these migrants inhabited the island of Sulawesi during the historical period that began in the first millennium C.E.

Of the four peninsulas in Sulawesi, it is the northern and the southwestern arms that have had the greatest impact on the history of the region. Two factors may have contributed to this. The first is the presence of good agricultural land in these areas. The Minahasa region at the northeastern tip of Sulawesi is blessed with rich volcanic soil and is hence able to produce sufficient quantities of rice. On the opposite end, in the southwest peninsula, the area around Makassar also is noted for its volcanic soils and great agricultural productivity. A second factor is that both areas were on an international trade route to and from the Spice Islands of Maluku. A southern route favored by most traders went from the western half of the archipelago along Java and the southern end of Sulawesi, then onward to Maluku. A northern route, used mainly by the Chinese and later by the Europeans, went from northern Borneo to the northern end of Sulawesi to Maluku. Both routes therefore touched one part of Sulawesi and helped to bring that island into international commerce. Ports at both ends—Menado in the north and Makassar in the south—therefore became major windows to the outside world for the inhabitants of the northern and southwestern peninsulas of Sulawesi.

There are four major ethnic groups in the modern Indonesian province of South Sulawesi, which incorporates the entire southwest peninsula. The largest is the Bugis, who occupy almost the entire eastern half and part of the western half of the peninsula. The Makassar people are the next largest in population and are found mainly in the west and the south. The next in size are the Sa'dan Toraja, who are found in the mountainous areas in the north, and finally the Mandar people, located in the coastal and mountain areas of the northwestern part of the peninsula. From early times the Bugis and Makassar peoples occupied the most fertile agricultural lands on the peninsula and had access to some of the most favorable port sites. These advantages enabled these two ethnic groups to become dominant through much of the history of South Sulawesi.

Very little is known about the early history of the island, though some argue that the major

Bugis epic cycle, the *I La Galigo*, provides a picture of South Sulawesi society prior to the fourteenth century. The epic depicts a hierarchical society of kings, nobles, commoners, and slaves, as well as a developed religion under native priests known as *bissu*. Equally noteworthy are the links between Sulawesi and the outside world described in the epic. This depiction can be substantiated by archaeological finds of large quantities of ceramic material dating from the fourteenth and fifteenth centuries from China, Vietnam, Thailand, and elsewhere, demonstrating South Sulawesi's thriving international trade.

From the sixteenth century the historical record becomes fuller, with evidence from both the Bugis and Makassar chronicles, as well as from European sources. The Makassar people of the kingdom of Gowa became a major force in the sixteenth century and dominated the other ethnic groups in the peninsula, particularly their chief rivals, the Bugis. Gowa's ability to control the trade in the "trinity" of spices—cloves, nutmeg, and mace—made Makassar a thriving entrepôt. Gowa's traders sailed the seas around eastern Indonesia collecting spices and removing any competitors. It met its match in the Dutch East India Company (VOC), whose aim also was to monopolize the spice trade. In the long and bloody Makassar War of 1666–1669, the VOC defeated Gowa with the major assistance of the Bugis under their leader Arung Palakka. The latter became ruler of Bone (1672–1696) and remained a major ally of the Dutch until his death.

The Makassar War marked a major point in South Sulawesi history. The Treaty of Bungaya, signed in 1667, established the dominance of the VOC in the affairs of South Sulawesi. With Dutch support, Arung Palakka became the undisputed leader of the peninsula and was able to take revenge on his former enemies. For the remainder of the century and into the eighteenth, there was a steady stream of refugees leaving South Sulawesi to seek to settle elsewhere in the archipelago. Some went to the nearby islands of Borneo and Sumbawa, while others sought refuge in Java, Sumatra, and the Malay Peninsula. The Makassar refugees were eventually eliminated from their positions of strength in Java and Sumatra and forcibly returned to Sulawesi. Others, including many Bugis, remained abroad and became influential

in local politics. The most famous cases of Bugis success were on the Malay Peninsula, where Bugis refugees founded the kingdom of Selangor in the eighteenth century, established the uniquely Bugis Raja Muda institution in the kingdom of Johor, and married into every royal family on the Malay Peninsula. In addition to establishing dynasties, the Bugis diaspora provided the basis for the creation of a widespread South Sulawesi trading network that spanned the entire archipelago.

From the late seventeenth century, South Sulawesi affairs were inextricably linked to events in the outside world. The permanent presence of the VOC at Fort Rotterdam in Makassar made the Dutch a significant part of the politics of South Sulawesi. Although there were a number of rebellions challenging the dominance of the VOC–Bone alliance, the latter continued to dominate affairs in the peninsula until the demise of the VOC at the end of the eighteenth century. The Dutch colonial state assumed the position of the VOC in the nineteenth century, but the generally excellent relations with their former Bugis allies were never again achieved. On the contrary, the nineteenth century saw major conflicts between the kingdom of Bone and the Dutch. It was not until 1905 that the Dutch succeeded in controlling all opposition and incorporating the Makassar and the Bugis kingdoms into the newly created Netherlands East Indies.

In the northern peninsula the Minahassans have been the dominant ethnic group, and the port of Menado the principal harbor. The northern, northeastern, and southeastern peninsulas face toward the east and have therefore been historically closely linked to the kingdom of Ternate in the present-day province of North Maluku. Located between Ternate and the powerful Bugis and Makassar kingdoms of South Sulawesi, these three peninsulas became a bone of contention in a power struggle between these two loci of political power from the sixteenth to eighteenth centuries. The replacement of the VOC by the Dutch colonial state in the beginning of the nineteenth century brought an end to this struggle. Under the Dutch, Menado became particularly favored because of its Christian population. Its many Dutch-speaking inhabitants came to staff the lower levels of the colonial bureaucracy, and the Menadonese Christians formed an important

part of the Royal Netherlands Indies Army (KNIL).

During the Japanese occupation (1942–1945), Sulawesi was placed under the administrative jurisdiction of the Japanese Imperial Navy, which was more oppressive and restrictive of nationalist activity than was the case in the army-administered areas. In the revolutionary period (1945–1950) the Bugis and Makassar areas in Sulawesi opposed the reestablishment of Dutch colonial control. Dutch troops under the command of Raymond “Turk” Westering committed terrible massacres of the local population. Then, in April 1950, Andi Aziz of the KNIL attempted unsuccessfully to preserve the Dutch-created state of East Indonesia, which included the island of Sulawesi. All Dutch-led opposition to Indonesian independence failed, and in 1950 the unitary Republic of Indonesia was proclaimed. The young republic faced a number of challenges, one of which was the PERMESTA (“Universal Struggle Charter”) movement of 1957–1958, based principally in North Sulawesi. That and other opposition movements in Sulawesi were put down by the central government, and the island subsequently became a loyal part of the Indonesian republic.

In modern Indonesia members of the different ethnic groups from Sulawesi have made their mark in the national arena, and the port of Makassar continues to be an important regional center for eastern Indonesia. Nevertheless, there has never been an islandwide identity. Instead, groups tend to identify with their ethnic origins and with their provincial unit. Sulawesi is a meaningful unit only to scholars.

SULTAN IDRIS TRAINING COLLEGE (SITC)

Stirring Malay Nationalism

Sultan Idris Training College was established as a teacher-training center. R. O. Winstedt (t. 1916–1924), assistant director of education of the Straits Settlements and the Federated Malay States, mooted the idea of centralizing all Malay teacher-training centers in one venue; such an institution would train Malay intellectuals and bureaucrats. Sultan Abdul Jalil (r. 1916–1918) of Perak agreed to have it built in Tanjong Malim, a town in the south of the state, in memory of the late sultan Idris ibni al marhum Raja Iskandar Shah (r. 1887–1916), his predecessor. In November 1922 the college was opened by Sir George Maxwell, the chief secretary of the government, who welcomed the first batch of 120 students arriving from all states in the Malay Peninsula, Brunei, and Labuan.

O. T. Dussek was the first principal of the college, and he remained as such for the next fourteen years. He was assisted by three European and seven Malay teachers, and one basketry instructor. Dussek was succeeded by other British educationists until 1958, when Zainal Abidin Ali became the first local person to hold the helm.

The curriculum of the college was based on what the British thought was the practical need

of the Malays—namely, to train them to be better farmers, fishermen, and craftsmen. Classes on gardening and craftsmanship were made compulsory, besides the teaching of arithmetic, geometry, geography, Malay language, history, teaching methodology, health science, drawing, writing, basket weaving, religion, and general studies. The most prominent department was the Translation Bureau. Outstanding Malay scholars who became well-known writers and Malay language specialists emerged from the college. One of them was Zainal Abidin bin Ahmad (1895–1973), better known as Za’ba, who also served as a staff member of the college.

True to its aim, graduates from this college taught Malay children at the government Malay primary schools, mostly in the rural areas—not only school subjects but also the spirit of nationalism. Graduates became very vocal fighters for the independence of Malaya through their political campaigns and writings. Some of them became pioneer ministers of independent Malaya. SITC was used first as a hospital during the Pacific War (1941–1945), and was later used as a Japanese military base when the latter occupied Malaya (1941–1945).

In February 1987 the status of SITC was upgraded from that of a teachers’ college to an education institution, thereby taking on the name Sultan Idris Education Institute; it then also offered higher degree programs for students who had graduated from other institutions of higher learning and wished to become teachers. In May 1997 its status was further upgraded to that of a university that trained students in educational studies, absorbing all education degree programs that used to be offered by other public universities in the country.

SULU AND THE SULU ARCHIPELAGO

Extending 288 kilometers from Basilan Island to the northeastern coast of Borneo, the Sulu Archipelago is bounded on the west by the Sulu Sea and on the east and south by the Celebes Sea. Its 400 named and more than 500 unnamed islands are grouped into five major island clusters: Samales, Pangutaran, Jolo, Tapul, and Tawi-Tawi.

Jolo Island, 59 kilometers long by 16 kilometers wide, is the largest in the archipelago. Fertile volcanic soils make possible intensive dry-field cultivation of over approximately half its area. The rest is nonarable mountain land, remnant forest, and former farmland turned to *imperata* grass. Rainfall is abundant—some 178 to 254 centimeters annually—but erratic, particularly during the northeast monsoon (November–March). Jolo Island is the principal home of the Tausug, the dominant ethnic group of the archipelago. This island was also the former residence of the Sulu sultanate, the Islamic polity that dominated the political and economic life of the region from the fifteenth until the beginning of the twentieth centuries.

For the Tausug, the name of both Jolo Island and the Sulu Archipelago derives from the same term, *sug* or *suug*, meaning literally “sea current.” The historical importance of the Sulu Archipelago is linked to its strategic location on sea-lanes connecting China and the Philippines, Borneo and the western Malay world, and Sulawesi and eastern Indonesia. The archipelago also forms a major zone of contention between the Philippine archipelago to the north, agrarian and long Christianized, and the Muslim maritime world to the south and west, rooted in trade and connected by religion.

For the past 400 years, Spanish and other Philippine sources have referred collectively to the Tausug and other Muslim peoples of the Sulu-Mindanao region as “Moros,” meaning “Muslims,” derived, by association, from the Iberian “Moors.” Relations for much of this period have been marked by conflict, with Moro raids during the eighteenth and early nineteenth centuries devastating large areas of the Visayan Islands and coastal Luzon. Since the

beginning of the 1970s, relations between Manila and the Muslim south have been dominated by a renewal of violence and the emergence of secessionist movements, some of them advocating the creation of a separate Muslim nation.

Trade and the Early History of Sulu

The Tausug are comparative latecomers to Sulu, first appearing in the islands in the eleventh century. As trade with China expanded, this community grew in size and political importance, becoming, by the end of the thirteenth century, the dominant population. Sulu is mentioned in Chinese sources as early as the Yuan dynasty (1271–1368), and an account of a tributary mission from Sulu appears in the Ming Annals. Genealogical sources place the founding of the Sulu sultanate in the mid-fifteenth century. By the beginning of the eighteenth century, regular diplomatic relations existed between China and the sultanate; the sultan of Sulu dispatched at least five tribute-bearing missions to the Chinese court between 1727 and 1763.

By the late seventeenth century, an expansion of Western commercial activity in China, connected to the China tea trade, enormously stimulated Chinese demand for maritime products, particularly *trempang* (*tripang*), or sea slugs (*Holothuria* spp.), an important ingredient in Chinese soups and medicinal preparations. Trempang fisheries were developed throughout the Sulu island chain, as well as along the eastern coast of Borneo, southward to the Maratua Islands in present-day East Kalimantan. The collection and drying of holothuria for export were, and remain, labor-intensive. At the height of the trade, some 20,000 persons in Sulu were believed to have been involved in trempang production. Pearls were another major item of trade between Sulu and China. Alexander Dalrymple, a servant of the English East India Company (EIC), writing at the end of the eighteenth century, described the coral reefs surrounding Tawi-Tawi Island as being the most valuable pearl fishery in the world. Pearls were supplanted, in the nineteenth century, by mother-of-pearl, as the second most valuable commercial product after trempang. Other items included shark fin, rattan, camphor, and birds' nests.

Sulu's trade grew rapidly between 1768 and 1848. Foreign traders brought mainly war supplies, cotton cloth, and opium to Jolo, and Sulu responded by intensifying its procurement trade in maritime and jungle produce. From the mid-eighteenth century, the Sulu market was supplied increasingly by private English merchants from Calcutta and Singapore, Manila Chinese, and Portuguese from Macao. Sulu's chief rivals were the Maguindanao and Brunei sultanates. However, by the beginning of the nineteenth century, Sulu surpassed them both, with the key to its success being its ability to control the surrounding sea-lanes. By 1768 the Sulu sultanate had become the center of a great intersocietal exchange network, extending from Mindanao and southern Palawan, through the Sulu Archipelago, to the northern coast of Borneo, and, from there, southward into the Celebes Sea. For a time, Jolo emerged as the principal coordinating center for slave raiding throughout Southeast Asia. In Jolo harbor, Ilanun and Balangingi vessels were outfitted, supplied with cannons, muskets, and munitions, and slaves were traded, mainly for cloth and firearms. The economic ascendancy of Sulu was linked to slave raiding, which, in turn, helped make possible the expansion of Sulu's export trade.

The Demise of an Independent Sulu

In the first half of the nineteenth century, the Tausug, under growing pressure from Manila, sought to diversify their commercial relations with Western powers. Their success in doing so created anxiety in Manila and led to a series of punitive expeditions that marked a critical turning point in Sulu's history. In 1848, James Brooke (1803–1868), in his capacity as governor of Labuan (t. 1848–1851), signed a treaty of friendship with Sultan Muhammed Fadl (r. 1844–1862). The Spanish government in Manila, in retaliation, sent gunboats that laid waste to Balangingi Island and the following year attacked settlements at Tunkil, Bukutua, and Bulan. In 1851 the Spanish fleet returned and attacked Jolo. Sultan Muhammed Fadl and his *datus* (nonroyal chiefs) withdrew to their *kotas* (forts) in the mountains, but their defenses were overrun; the sultan was forced to sign a treaty that, if honored, would have made the sultanate part of the Spanish colony of the Philippines.

The treaty, however, was largely ignored. In 1871, Spain renewed its efforts to subjugate Sulu. Gunboats bombarded Sama villages in the Tawi-Tawi island group and blockaded Jolo. The Spanish then began a systematic campaign to destroy all Sulu shipping. Gunboats cruised the archipelago, destroying all boats they encountered and sending the crews to Zamboanga or Manila to labor in irons on public works. They also destroyed coastal villages, burning houses and boats. In this way, Spain gradually imposed a complete blockade of Sulu, destroying native shipping and preventing commercial vessels from reaching Labuan and Singapore.

Sulu remained defiant. In 1875, Manila sent an expeditionary force of 9,000 soldiers. They attacked and destroyed Jolo Town, then Maimbung, Parang, and finally Tausug strongholds on Tapul and Lapac Islands. On Jolo they built a garrison and began to rebuild Jolo Town along European lines as a walled city. These events, together with the immigration of Straits Chinese into Sulu, brought about a total collapse of the former Sulu trading sphere. With the destruction of Jolo and the deliberate annihilation of native shipping, Sulu lost its ability to control the seas, and so the era of long-distance slave raiding came to an end. By the end of the 1880s, the Chinese, too, had begun to depart, with the result that Sulu ceased to be a significant regional entrepôt.

Following Spain's defeat in the Spanish-American War (1898), U.S. troops occupied Jolo Town in 1899. Sulu was made part of Moro Province in 1903, but, owing to continuing unrest, it remained under military rule until 1914. In 1915, Sultan Jamal ul-Kiram II (r. 1894–1915) relinquished all claims to secular power, and sovereignty over Sulu formally passed to the Philippine state.

Politics and Current History

Today, Sulu, including the provinces of Sulu and Tawi-Tawi, together with Lanao del Sur and Maguindanao, composes the Autonomous Region of Muslim Mindanao (ARMM).

The 1970s opened with an upsurge of violence in the southern Philippines in which the Moro National Liberation Front (MNLF), a Muslim secessionist movement, emerged as a serious challenge to the Philippine state. In

clashes with government troops, the secessionists were initially successful. However, in 1976 the movement was temporarily neutralized by the Tripoli Agreement, brokered by Colonel Muammar al-Qaddafi (1942–) of Libya. This agreement split the MNLF, and fighting soon resumed. In 1986, after the fall of President Ferdinand Marcos (t. 1965–1986), President Corazon Aquino (t. 1986–1992) sought to end what had become a sixteen-year secessionist war between the MNLF and the Philippine government. In August 1986 the president's brother-in-law met with Nur Misuari (1940–), the chairman of the MNLF, under the auspices of the Organization of Islamic Conference (OIC), and agreed to grant autonomy to four mainly Muslim-populated provinces, including Sulu and Tawi-Tawi, in return for an agreement by MNLF leaders to relinquish demands for complete independence. A new Philippine constitution was ratified in 1987 that made specific provision for the creation of an Autonomous Region of Muslim Mindanao, and in 1989 ARMM was formally established. From the outset, however, it enjoyed little public support, power, or funding.

In western Mindanao, fighting resumed. In 1992, President Fidel Ramos (t. 1992–1998) revived negotiations with the MNLF. The eventual outcome was a peace agreement signed in Jakarta in September 1996. This agreement was intended to implement the 1976 Tripoli Agreement and called for the creation of an executive council, legislative assembly, and administrative system. Nur Misuari was elected unopposed as governor.

Severe problems with the agreement soon emerged. It generated anxiety among non-Muslims in Mindanao, while among Muslims it was widely felt that autonomy had not brought the benefits promised. Furthermore, the 1996 peace agreement was concluded without the participation of the Moro Islamic Liberation Front (MILF), which, consequently, dissociated itself from the agreement and vowed instead to continue the armed struggle. After President Joseph Estrada (t. 1998–2000) came to office in 1998, negotiations with the MILF continued, but in 1999 there were clashes with the military and peace talks broke down. The military then escalated its campaign against the MILF, culminating in the overrunning of some fifty MILF camps.

Although this campaign was taking place, another, more shadowy group, the Abu Sayyaf, attracted considerable publicity following a series of hostage-taking incidents. Suspected of links with radical groups in the Arab world, including Osama bin Laden's al-Qaeda, Abu Sayyaf made "commercial insurgency"—kidnapping for ransom—its hallmark. In March 2000, fifty-three people were taken hostage. Although negotiations were under way, a further twenty-one were kidnapped, including nineteen foreign nationals, from the Malaysian island of Sipadan in Sabah. Foreign ministers from Germany, France, and Finland flew to Manila to discuss the crisis, and, in the end, seventeen foreign hostages were released upon payment of an estimated U.S.\$25 million. Later, a tourist resort in the Philippines was attacked and an American missionary couple were taken hostage. The attackers were said to have escaped using a high-powered vessel purchased with ransom money from the Sipadan kidnappings. In September 2001 the Philippine Armed Forces began an assault on Abu Sayyaf strongholds on Basilan and Jolo Islands. More than 100 Abu Sayyaf members were reportedly killed, and about 50,000 civilians are said to have fled to Malaysia.

Internationally, these events brought worldwide attention to the tenuous nature of Philippine rule in Sulu. The Malaysian government increased naval patrols along the Sabah-Sulu border. Following elections in November 2001, Nur Misuari led a failed uprising and, in the aftermath, fled to Sabah. There he was detained by Malaysian authorities and later deported to the Philippines. In January and February 2002, 650 U.S. advisers were sent to the southern Philippines to begin counterterrorism exercises with the Philippine armed forces. Thus, a hundred years later, U.S. troops were once again back in Sulu.

SUMATRA

Sumatra is a large and relatively sparsely populated island that lies to the west of Java and the Malay Peninsula, enclosing the western rim of island Southeast Asia. At first glance it is hard to determine clear patterns of either unity or continuity in Sumatra's history, yet this island provides important keys to understanding the history of the Indonesian-Malay archipelago. From early times northern Sumatra was a landfall for sailors crossing the Indian Ocean. From this point merchant ships might sail down the western coast of the island in search of camphor, benzoin, gold, or pepper on their way to the Sunda Strait, or they might navigate the eastern shores of Sumatra leading into the Straits of Melaka. Sumatra's geography has thus had an important impact on its history and has influenced the rise and fall of Sumatran port kingdoms that took advantage of its position on the trade routes.

The internal geography of the island has also helped to shape its history. A ridge of mountains, the Bukit Barisan, runs down the western part of the island in a line that effectively separates the west and east coasts along the length of the landmass. In earlier days the inaccessibility of the mountainous interior of Sumatra meant that it was often quicker for foreigners

to sail around the coast than to cross the island by land; coastal communities oriented themselves toward this seaborne trade. The interior of Sumatra, however, is rich in resources, and throughout the island's history it is possible to discern a distinctive pattern of coastal-hinterland interactions. Large tracts of the upland are covered in tropical forest and are largely uninhabited. But the high volcanic plateaus offer fertile soil and are much more densely populated by groups such as the Batak and the Minangkabau, who have developed distinctive cultures and their own forms of interaction with the coastal zones. Although Sumatra, today, forms an important part of the Republic of Indonesia, the history and culture of its inhabitants cannot be understood in isolation from those of the wider Malay world of which the island forms a part. In this sense Sumatran history forces us to look beyond recent political developments and beyond colonial boundaries in order to understand other patterns in the history of island Southeast Asia.

The record of Sumatra's earliest history is fragmentary and depends in large part on the descriptions of foreign travelers. The Greek geographer Ptolemy (90–168 C.E.), working probably from the accounts of Indian merchants, mentioned the Barousai islands, and scholars have sought to identify this toponym with northern Sumatra. But it is seventh-century Chinese sources that offer a first glimpse of Sumatra and many other Southeast Asian kingdoms that had involved themselves in the Chinese tribute trade. The most famous of these is the kingdom of Śrīvijaya, the center of which was located in southeast Sumatra. The late professor Oliver W. Wolters has shown how Śrīvijaya came to commercial prominence in the seventh century by inserting itself in the established seaborne trade between China and the Middle East (West Asia). The rotating pattern of the monsoon winds meant that no journey between China and the Middle East could be accomplished in one season, and merchant ships needed a safe harbor in which to wait for the winds to change. Through their dominance of the Straits of Melaka, Śrīvijaya's rulers were able to provide such a haven. Moreover, by gradually substituting local camphor and benzoin, gathered in the wooded hills of the Sumatran interior, for the prized "Persian" resins, the inhabitants of this early entrepôt involved themselves

in a dynamic way in the life of one of the world's great early trading routes.

Śrīvijaya's dominance of the Melaka Straits lasted for four centuries. The significance of this kingdom for Southeast Asian history, however, lies not just in its economic power but also in the emergence of a dynasty of Malay rulers who were claimed as ancestors by the rulers of Melaka and Minangkabau, among others. Details about Śrīvijaya's system of government are scarce. A number of important royal inscriptions in the old Malay language have been found in the vicinity of Palembang, and these provide insight into the way a Sumatran ruler of the seventh century exercised his authority. Several of these inscriptions take the form of oaths, which seem to have been administered by drinking liquid that was poured over the inscription; they contain elaborate royal curses that outline the terrible consequences of disobedience to the ruler, and the blessings that might flow to loyal subjects. The wording of these royal oaths makes it clear that the ruler's subjects were enjoined to believe in his sacred authority and his power to exact terrible punishments from a distance. This type of authority, based on a shared understanding of sacred power that was reinforced by royal messages to the outlying regions, seems to have been particularly appropriate in the context of a far-flung empire like Śrīvijaya. It is also the first example we have of a pattern that emerges in later periods of Sumatra's history.

Scarcity of sources means that it is difficult to trace the chronology of Sumatra's history following Śrīvijaya's decline in the eleventh century. Archaeological evidence suggests that authority in southeastern Sumatra passed to Malayu on the Batang Hari river system in the interior of Jambi, but we still know little about that kingdom. By the fourteenth century the dynasty that ruled Malayu moved inland to the Minangkabau highlands. Thanks to a series of inscriptions erected between 1347 and 1375 by a ruler called Adityawarman, we have the impression of a king who, like the rulers of Śrīvijaya, used inscriptions to announce his authority in spiritual terms, incorporating both fearsome and benevolent aspects.

Until this period it is possible, to some extent, to write about Sumatra's history as a development on the theme of Śrīvijayan authority, but by the thirteenth century the appearance of

numerous coastal centers with claims to independent status makes that impossible. Whether the rise of these new port states, particularly in the northern part of Sumatra, should be considered a new theme in Sumatran history or the continuation of an old one is a matter of judgment. The adoption of Islam by the rulers of centers such as Samudra-Pasai from the thirteenth to fourteenth centuries clearly gave an added impetus to trade with the Indian and Arab merchants who frequented north Sumatran ports in this period. Yet well-established centers, such as Fansur-Barus in northwest Sumatra, had also traded for centuries with Arab and Indian merchants prior to adopting Islam.

In thinking about the extent to which conversion to Islam signified far-reaching change in the Sumatran coastal regions, one must also consider the matter of deepening levels of conversion within these societies over time. What is clear is that north Sumatran ports such as Samudra-Pasai provided an important base for the spread of Islam to other parts of the archipelago. By the sixteenth century, the Islamic religion was sufficiently deeply absorbed in this region that the kingdom of Aceh became a major center for Muslim trade and, by the early seventeenth century, an important center of Islamic religious thought. Two of the best-known teachers of Islamic mysticism in this period, Hamzah Fansuri (d. 1590?) and Shamsuddin al-Sumatrani of Pasai (d. 1630), were Sumatrans whose ideas received patronage from Sultan Iskandar Muda of Aceh (r. 1607–1636). Under this ruler Aceh developed into a wealthy sultanate. It had links with the Ottoman Empire, launched attacks on other parts of the archipelago as well as non-Islamic parts of the coast and interior of Sumatra, and succeeded in dominating the trade of much of the west and northeast coasts of Sumatra. In his letters Iskandar Muda claimed to be ruler over all of Sumatra, and, while the rulers of Aceh failed to convert the Batak peoples of inland north Sumatra to Islam, for a period the Acehnese name was regarded with fear throughout most of the island.

Following the decline of such forceful rule in Aceh, the premodern history of Sumatra can perhaps be most easily summarized as one of interaction between coastal ports and the producers of the interior. This theme is highlighted, in particular, by the European push for trade in the coastal regions. The seventeenth-

and eighteenth-century records of the Dutch and English East India companies provide a picture of local rulers in coastal regions such as Barus, Pariaman, Inderapura, Benkulen, Palembang, Jambi, Inderagiri, and Siak, who sought to establish their small kingdoms as centers of local trade. The records also illustrate European attempts to monopolize this trade in items such as pepper, gold, and resins. Although the Europeans interfered in the structure of authority within these kingdoms, they also found that they were dependent on prestigious local intermediaries. The latter could provide safe and culturally acceptable conditions of trade for the inland peoples of the Batak regions, of Minangkabau, Pasemah, and Lampung, when they brought their goods to the coast.

Coastal rulers complained about the decline of their trade in the face of European competition. In the late seventeenth century a movement of resistance, led by a Minangkabau prince, took on the form of a holy war to drive the Europeans from the archipelago, and it gained support in several parts of island Southeast Asia. Letters from the inland Minangkabau court at Pagaruyung in this period make it clear that the descendants of Adityawarman's inland kingdom also made claims to preeminence over other Sumatran rulers. The frequency with which these letters were sent to the coastal regions in the seventeenth and eighteenth centuries and the impact that Dutch officials noticed they had among the population suggest the importance of a culture of communication that recalls the inscriptions issued by earlier Sumatran kings.

These hints of continuity between the earliest Sumatran kingdoms and the seventeenth-century kings of Minangkabau, and perhaps also of Aceh, remain suggestive. They may, however, help us understand ways in which the category "Sumatra" might have been understood in certain periods. Another theme, the theme of resistance to hierarchy and to overarching authority, is also clearly present in the cultural history of more than one Sumatran society. This trait manifested itself in central Sumatra during the late eighteenth century, when economic change and the impact of Islamic reformers helped to stimulate an internal division within Minangkabau society that culminated early in the nineteenth century in the Padri Wars (1821–1837); it was then that the royal dynasty

was all but eradicated. This internal conflict opened the way for the intrusion of Dutch forces. The mountainous interior of central Sumatra by the 1840s was brought under the control of the Netherlands Indies government. Elsewhere in Sumatra the colonial advance was accomplished by means of armed force and treaties that facilitated the development of an extensive plantation economy in the East Coast Residency surrounding Medan. It was in Aceh, however, that the most serious movement of resistance developed. It took the imperial power some thirty years of warfare to subdue the Acehnese people, and sporadic guerrilla resistance in the region continued until World War I (1914–1918).

Colonial boundaries have helped to shape the history of many parts of modern Southeast Asia. The agreements made between Britain and The Netherlands in 1824 and 1871 to divide the archipelago into two separate colonial spheres on either side of the Straits of Melaka ignored old cultural and political ties and reinforced new ones. The incorporation of Sumatra into the colonial state structure of the Dutch Indies in the nineteenth century undoubtedly had a profound impact on the later shape of the island's history. It provided the context for many of the common experiences and shared understandings that contributed to the development of an Indonesian nationalist movement in the early twentieth century. In this sense Sumatra's recent history has been written and understood within the paradigm of Indonesian nationhood, and "Sumatran" themes, as such, are much harder to detect. Nevertheless Sumatran leaders played a major part in the twentieth-century formation of broadly nationalistic movements, in the struggle for independence, and in the early years of the republic. On the other hand, there have been occasional Sumatran movements of resistance to the central government, as in the regional revolts of the 1950s and more recently (1990s) in Acehnese demands for independence from the republic.

SUN YAT-SEN, DR. (1866–1925)

Father of Chinese Republicanism

A famous Chinese revolutionary, Dr. Sun Yat-sen was renowned as the "Father of Modern China," particularly among the Kuomintang (KMT, Guomindang; Chinese Nationalist Party), which survived the military defeat by the Chinese Communist Party (CCP) in 1949 and continued its rule on Taiwan (Formosa). In the second half of the 1900s, Southeast Asia served as a crucial revolutionary base for Sun's uprisings against the Qing (Ching/Manchu) dynasty (1644–1912).

Born in a Guangdong county, Sun received his medical training at the Hong Kong College of Medicine for Chinese, and practiced in Macau. After his reform petition to the Qing court was ignored in 1894, he became a deter-

Dr. Sun Yat-sen, widely acknowledged as the father of modern China. (Bettmann/Corbis)

mined revolutionary. He formed Xingzhonghui (Revive China Society) in 1895 and Tongmenghui (Chinese United League) in 1905. His *sanmin zhuyi* (“Three Principles of the People”) formed the revolutionary ideology of Tongmenghui and the subsequent Kuomintang founded in 1912. (The three principles are nationalism, democracy, and people’s livelihood.)

Outlawed from entry to the Chinese mainland, Sun and his revolutionary comrades established their operational headquarters overseas, notably in Japan and later in French Indochina and the British Straits Settlements. Actually, Sun’s connections with Southeast Asia began early in 1898 with his support of the Philippine Revolution (1896–1898). From 1900 onward, Southeast Asia grew to be an important operational base of the Chinese revolutionary movement in terms of funding contributed by the Chinese sojourners there and the clandestine

planning of uprisings in South China, with Singapore and Penang being two outstanding centers. Sun had helped found organs such as *Thoe Lam Jit Poh* and *The Chong Shing Press*. The period from 1908 to 1910 marked the zenith of his planning efforts in Southeast Asia. It was there that he assembled the Chinese revolutionaries for meetings in Penang to organize last-ditch fights against the Qing.

Sun was appointed provisional president of the Republic of China at Nanjing in 1912 after the success of the Wuchang Uprising in October 1911. However, the founding of a republic did not mark the final realization of his dream of republicanism; Yuan Shikai (1859–1916), Sun’s successor, attempted to restore monarchism. From 1913 till his death in 1925, Sun conducted numerous abortive military campaigns, usually based in Guangzhou, to overthrow the regimes of Yuan and his successors at

Beijing, and to bring China back to the track of republicanism based on his political agenda. He died in 1925 before the Kuomintang under General Chiang Kai-shek (1887–1975) achieved the reunification of China a year later.

SURABAYA

Freedom in Blood

Java's second major city, the economic and political capital of the province of East Java, and an important naval base and port, Surabaya is also a focus of regional trade for the islands of Eastern Indonesia. In 1995 its population was about 2.5 million.

Legend says that the city earned its name, *sura ing bhaya* (“bravery in the face of danger”), from its part in the successful challenge to Mongol invaders who attempted to invade Java in the late thirteenth century. In other versions, *Surabaya* comes from a meeting of the *sura*, or shark, who rules the sea, with the *buaya*, or crocodile, the king of the river, a metaphor for its location where the great River Brantas, with its rich agricultural hinterland, meets the ocean.

Although the Dutch occupied the city in the early seventeenth century, they only began to develop the site two centuries later, founding a military base there in 1835. Urban construction displaced the indigenous settlers, who not only came from parts of Java but also included migrants from Madura, Sulawesi, and other islands; the colonial city soon had separate living areas for Europeans, Chinese, and natives. Port traffic expanded. The racial division of neighborhoods has broken down since Indonesian independence, but vestiges remain. Most native

Indonesian residents still live in crowded *kampung* (villages) surrounded by more tidy shops and houses that line main streets.

Important nationalist movements arose in Surabaya in the twentieth century. Haji Oemar Said Tjokroaminoto (1882–1934), chairman of the Sarekat Islam from 1912 to 1921, came from Surabaya. Indonesia's first president, Sukarno (1901–1970), lived in Tjokroaminoto's home as a young man, finishing his schooling and gaining political experience there. Early communist leaders were active in the city, especially among its harbor workers. Raden Dr. Sutomo (1888–1938), an influential secular nationalist, helped organize young educated people to think about a future, united, and multiethnic “Indonesia.”

Surabaya's long-established Chinese minority came in part from old *peranakan* (Java-born) families who had lived in northeastern Java for generations; others were recent immigrants. Among the temples they built is the Boen Bio (*wenmiao*, Temple of Confucius), which reflects one of the beginnings of a modern Confucianist movement among the Chinese in Java in the late nineteenth century.

Above all, Surabaya is known for its role at the onset of the Indonesian Revolution (1945–1949). The Japanese, after their surrender to the Allies in August 1945, had been charged with maintaining order and safeguarding the European population, thousands of whom had been interned in camps during the wartime occupation. Word of the Proclamation of Independence on 17 August 1945 led many young people to join the cause of the new republic. The city's youth showed their revolutionary spirit in mass rallies, but also in fights with Europeans and Eurasians. Released internees were rounded up and reimprisoned, and *kampung* mobs attacked Europeans or Japanese. Inflammatory radio broadcasts by Sutomo or Bung (brother) Tomo (1920–1981) urged youth and *kampung* masses to violence to prevent a return of colonialism, crying “Freedom or death.”

Allied forces had received the task of maintaining order, rounding up the Japanese, and evacuating former civilian internees. When they tried to land in the city on 25 October 1945, some 6,000 British troops, many from India, met resistance from the population. President Sukarno and Vice President Mohammed

Hatta (1902–1980), flown in from Jakarta, brokered a cease-fire, but on 30 October, the British commander, Brigadier General Mallaby, was killed in a standoff with Indonesian units. The British, with strong reinforcements, determined to occupy the city, issuing an ultimatum on 9 November, following with air and naval bombardment the next day. The British met fanatical resistance from perhaps 20,000 regular troops and several times that number of irregulars; three weeks passed before the entire city fell, at a heavy cost. Thousands of defenders and civilians were killed, most Indonesian residents fled, and the city was reduced to ashes.

Indonesians commemorate this battle each year on 10 November, Heroes' Day, but, in a bitter account entitled "Surabaya," the writer Idrus recalled the human suffering such heroism brought forth. The Battle of Surabaya cost the defenders great, perhaps irreparable, losses, but it was a turning point for the revolutionary situation. Its resistance convinced the British, who were responsible for turning Java over to the Dutch, that they could not carry out their tasks without the cooperation of the Indonesian republican leaders, with whom the Dutch did not want to deal. As a result the Allies negotiated with Sukarno and Hatta and, halfheartedly, the Dutch followed. Despite negotiations, fighting between Dutch and Indonesian forces recurred over the next years, but never was there such fanatical resistance as in Surabaya. Although the Dutch recognized independent Indonesia only in December 1949, Surabaya had provided an indelible symbol of the Indonesians' will to be free.

SURAKARTA

Sanctuary of Javanese Cultural Heritage

Surakarta, also known as Solo, is a city in Central Java and a seat of the Javanese Susuhunan since 1746, as well as a center of traditional arts and culture. The transfer of the Javanese capital had become necessary after the Kartasura *kraton* (royal courts) had been conquered by insurgents during the so-called Chinese War. After the division of the Mataram realm in 1755, two competing courts existed, that of Surakarta and that of Yogyakarta. Besides the Susuhunan, a minor court, that of Mangkunagara, was established there. Solo was more amenable to Dutch colonialism, whereas the more martial Yogyakarta started several major revolts. After independence the power of the Susuhunan was curtailed, falling only within the premises of the royal compound. The city itself developed rapidly, at present having more than half a million inhabitants (Daniel 2002: 548). It experienced a major wave of destruction in May 1998, when the Suharto regime (1967–1998) came to an end.

The establishment and growth of Surakarta took place within the framework of Dutch indirect rule, which allowed for a flourishing of Javanese culture but without any real political power. This setting was prolonged after the end of the Java War in 1830, when the Susuhunan had to relinquish the outer provinces of his realm (the so-called *mancanagara*) to the Dutch. Indo-European entrepreneurs leased the lands of Javanese courtiers and established sugarcane, coffee, and later, tobacco plantations in the area. In 1870 a railway link was established with Semarang that allowed for the rapid movement of goods toward the north coast of Java. After 1900, Surakarta lost some of its characteristics as a classical Javanese town and region. Between 1903 and 1926 the Dutch overhauled the Javanese agrarian, legal, and administrative systems, thus introducing more direct colonial rule. When in 1915 and 1920 the plague hit the region, many quarters with bamboo houses were simply torn down. Main roads were met-

aled and public health was improved by the construction of sewerage. For this, however, local taxes were increased, which meant an additional burden for the Javanese population.

In its original layout, Surakarta as a city corresponded to Javanese cosmological principles, with the kraton as the center of the world, built on the junction of the north-south and east-west axes. The various halls and buildings within the palace walls were likewise situated. A complex set of rituals and ceremonies had to ensure the balance between good and negative forces. The practicing of dance, music, and other fine arts furthered the legitimacy of the ruler.

The social structure of Surakarta was complex. Although more than 90 percent of the population were Javanese, the European and Chinese minorities played a very prominent role (DNA 1922; Houben 1989: 210–211). After 1755 a Dutch fort was constructed close to the kraton that became the center of a Eurasian quarter, since many soldiers married local women. As the number of Europeans grew in the course of the nineteenth century, they opened up a club, a Protestant church, and a Masonic lodge. There existed a lot of intermarriage between local Eurasian families, of which the elite were big plantation owners. In the twentieth century their social position was challenged by the increasing presence of European newcomers (*totok*). The Chinese, constituting about 5 percent of the city's population, dominated local trade and moneylending, whereas they also became increasingly involved in batik production (Houben 1989: 210–211; DNA 1922). This provoked opposition from the Javanese, who in 1912 founded in Solo the Sarekat Islam, the first nationalist mass organization.

During the era of Indonesian nationalism and at the time of the Indonesian Revolution (1945–1949), the situation in Surakarta was in transition. Susuhunan Pakubuwana X (r. 1893–1939) allowed several court members to be engaged in nationalist organizations. His successors, however, were weak. During the struggle for independence Pakubuwana XII (r. 1945–1946), troubled by internal court disputes, was faced with a radical popular movement against princely rule that had already started before the Pacific War (1941–1945). In 1946 a revolt was started against the government of the Indonesian republic, which resided

in Yogyakarta. In March 1950 the power of the Susuhunan and Mangkunagara outside their palaces was abolished by decree. In 1983 the kraton of the Susuhunan was partly destroyed by fire but afterward rebuilt. Nowadays Surakarta is known as a tourist destination, a cultural and educational city, and a center of small industry.

Surakarta played an important role in Javanese and national Indonesian history, but it remains secondary to its rival, the court town of Yogyakarta. Despite this the arts of Surakarta are considered more refined than those of Yogyakarta.

**SŪRYAVARMAN I (r. ca. 1002–1049)
A Revolutionary Reign**

The reign of Sūryavarman I marks the midpoint of the Angkor period, both in time and as a period of transition. It may even be called a period of revolution, because a dynasty that had held power since the ninth century was displaced by new leaders whose family relation-

ships with the former royalty are unclear. Sūryavarman himself seems to have come from a high-ranking family of officials, and it was this class that fought with the old royalty for state power.

Contrary to what is still found in most textbooks, Sūryavarman was not a foreigner from the Malay Peninsula who conquered Cambodia, nor was he a Buddhist. All historical interpretations that depend on those conceptions are to be disregarded.

The Angkor inscriptions—which begin in 877 in the reign of the third king, Indravarman, after a break of more than seventy years, including the reigns of Jayavarman II and III—increase in number, and with ever greater administrative detail, until the end of the eleventh century. There is increasing use of the Khmer language rather than Sanskrit, and they show a gradual growth in the number and influence of nonroyal officials relative to the royalty. There is also evident a panoply of new titles and ranks different from those found in the pre-Angkor inscriptions of the seventh and eighth centuries—for example, the titles *vap*, *loñ*, and *teng*, which then disappeared in the twelfth century. During the tenth and eleventh centuries, a time of great temple construction, it was these officials who were responsible for much of the work, and their inscriptions, although referring to kings, claim credit for themselves.

There are at least seventeen family history inscriptions set up from the tenth century through the reigns of Sūryavarman and his sons, which list the ranks, positions, and property of the families, usually beginning from the time of Jayavarman II. From these inscriptions it is clear not only that the official class was becoming more influential than the royalty, but also that there were tensions within this class itself. Some of the family inscriptions show disagreement among families over responsibilities and control of landholdings.

The tensions exploded at the very end of the tenth century, following the reign of the last king who belonged with certainty to the old royalty, Udayadityavarman I, with an ephemeral reign in 1001. He was followed at Angkor by a King Jayaviravarman, whose antecedents are totally obscure, and who was then attacked by the future Sūryavarman and his supporters.

Sūryavarman's first base was in eastern Cambodia, while Jayaviravarman controlled Angkor

and the western parts. The events of this period may be summarized as follows. In 1001, when Udayadityavarman was king, there were two inscriptions made in the east with Sūryavarman's name, one on the Mekong and one in Chikreng. From 1001 to 1003 there are three more inscriptions in the east, from Kompong Thom and Kompong Cham. The first inscriptions naming Sūryavarman all come from east, northeast, and southeast of Angkor, and they are records of officials who referred to him as their chief.

Jayaviravarman is named in inscriptions from 1003 to 1006 at Angkor, and his other inscriptions were in Kompong Thom, Battambang, and Siemreap (Siem Reap). Fighting occurred in 1005–1007, and perhaps as late as 1010. After 1006, Sūryavarman was in Angkor, and in 1011 he had long inscriptions with oaths of allegiance from provincial officials engraved in the Phimeanakas and the Khleang temples. The Sdok Kak Thom inscription inscribed just after Sūryavarman's reign in the northwest (now in Thai territory) says that the war caused much destruction to temples and sacred images, which had to be repaired later. That family continued to serve Sūryavarman, even though they had been in Jayaviravarman's territory when the war began.

As a result of the war some of the great families were destroyed, and Sūryavarman had more concentrated power than before, as seen in the oath inscriptions. None of the previous kings had made such inscriptions, and obviously Sūryavarman wished to ensure the loyalty of provincial officials after a time of political division and war.

Angkorean influence expanded at this time into what is now central Thailand and the Thai northeast, but not necessarily through aggression. Those areas had a Khmer population, and Angkorean expansion into them was probably no different from expansion within Cambodia from the new capital established at the turn of the eighth to ninth centuries.

The new dynasty established by Sūryavarman lasted only through the reigns of his two sons, Udayadityavarman II and Harshavarman III, until 1080, and Sūryavarman's revolution may have led to instability. Inscriptions from his sons' reigns show political unrest within Cambodia, possibly the result of opposition from groups unhappy with the dynastic change, and

the beginning of struggles with Champa that were to continue until early in the thirteenth century.

SŪRYAVARMAN II (r. 1113–1145?)

Builder of Angkor Wat

Sūryavarman II belonged to the new Mahidharapura (an unknown location that they gave as their place of origin) dynasty, which came from north of the Dangrek Mountains in what is now northeastern Thailand. This new dynasty assumed power in Angkor around 1080—not necessarily through conquest, for there are records to show that their first kings were being served by high officials from the previous dynasty of Sūryavarman I (r. ca. 1002–1049), including his sons. Sūryavarman II, however, explicitly came to the throne after an intrafamily war. The Mahidharapura are known first of all from inscriptions in their own temples in what is now northeast Thailand, especially the temples of Phimai, Phnom Rung, and Nom (Phnom) Wan.

Their dynastic and ritual traditions were different from those of previous royalty. They did not trace their families back to Jayavarman II,

who is hardly mentioned henceforth; and the *kamrateng jagat ta raja* (*devaraja*) is rarely seen in their inscriptions. The first two kings, Sūryavarman’s immediate successor, and Jayavarman VII seem to have preferred varieties of Buddhism different from that known in Cambodia previously, but Sūryavarman instituted Vishnuism as the predominant faith, contrary to the Saivism of nearly all kings of the previous dynasties.

Perhaps Sūryavarman is most famous today as the builder of Angkor Wat. Other important constructions of his reign are Boeung Mealea, Banteay Samre, and the last phases of Preah Khan of Kompong Svay and Preah Vihear. Particularly, these works of Sūryavarman lack foundation steles identifying their dates and constructors, which must be inferred from comparison of architectural styles with Angkor Wat. The latter may be identified with Sūryavarman through pictorial bas-reliefs of royal and military activities in which important individuals, including the king, are named in short inscriptions. The most important bas-relief is the so-called Historical Gallery of Angkor Wat. There we can see King Paramavishnuloka (posthumous title of Sūryavarman II) together with nineteen high officers on elephants in a parade. Four of these officers have names identifying them with places in central and northeastern Thailand, including the temples of Phimai and Phnom Rung.

In general the epigraphic record of this period is poor compared with that of the tenth to eleventh centuries. From the 47 years of the reign of Sūryavarman I (1002–1049), ninety-seven inscriptions are extant, but from the 117 years (1050–1167) from Udayadityavarman II through the successor of Sūryavarman II, in which six kings reigned, there are only sixty-three inscriptions, and only twenty from Sūryavarman II. This lack of inscriptions, taken together with the very impressive work of construction, must indicate still another difference from the traditions of the previous dynasty, and possibly important changes in society.

There is indeed some interesting evidence of enforced changes in society. People with titles *loñ* (male) and *teng* (female), who came into prominence after Jayavarman II and who were active in the temple construction of the time, held important middle-level official positions until Udayadityavarman II (1049–1066). But during the period of Sūryavarman II, they be-

gan to be reduced in status to the level of *khñum* (servants or workers); in one inscription *teng* are paired with *gho*, a type of male laborer, as serving personnel.

The reasons for this change are not clear. It may mean that the new Mahidharapura dynasty wished to eliminate the influence of those classes of people who had controlled the bureaucracy under the old dynasty. It is certainly apparent that the constructions of Sūryavarman II seem to show growth of royal power against the mid- and upper-level officials who dominate in the epigraphic record of the reign of Sūryavarman I and of his sons.

The reign of Sūryavarman II shows some evidence of expansion in commercial interest for such purposes. Thus, after a centuries-long break, relations with China were renewed, with missions sent from Angkor in 1116 and 1120. Sūryavarman also attempted several times to attack Vietnam, and succeeded in subjugating Champa, which then occupied what is now central and southern Vietnam. Both areas, of course, were important for their coastal access. Unfortunately the Angkor epigraphic record reveals no detail about this aspect of state activity, and inference is all that is possible.

The seaward expansionism of Sūryavarman II fit precisely into the terms of the relationship between China and Southeast Asia. Sūryavarman's reign coincided almost exactly with the first years of the Southern Sung (1127–1279), whose dependence on the sea impelled them to open trade with Southeast Asia beyond the level allowed by previous Chinese dynasties.

If Sūryavarman II was indeed trying to take advantage of the new China-oriented commercial opportunities to expand his control over the coasts of Vietnam and Champa, in the end he failed. His initiatives in that direction may have been a cause for the thirty-year period of troubles, bereft of inscriptions and still little understood, that followed his death, the date and circumstances of which are unknown.

SUU KYI, DAW AUNG SAN (1945–) Championing the Good Fight

The only daughter of Burma's (Myanmar's) assassinated national hero General Aung San (1915–1947), Daw Aung San Suu Kyi became the main leader of, and symbolic referent point for the international media to, the Myanmar prodemocracy movement that threatened to topple the country's military leaders in the late 1980s and 1990s. Born on 19 June 1945, she left Myanmar as a teenager to live in New Delhi, where her mother was ambassador. Subsequently she moved to England, where she studied at Oxford University. Prior to her marriage to Dr. Michael Aris in 1972, she worked briefly at the United Nations in New York. She also raised two sons and published a biography of her father, entitled *Aung San* (Brisbane: University of Queensland Press, 1984).

In 1988 she returned to Myanmar to attend to her ailing mother. During her visit demonstrations against the Burma Socialist Programme Party government broke out across the country. She quickly became a popular spokesperson for the prodemocracy forces that included students and others disgruntled at the poor economic and social conditions in the country. She became one of the three founding members and secretary-general of the National League for Democracy (NLD) when the army government announced that elections would be held in 1990. However, she was not allowed to stand in the election because of her marriage to a foreigner and long residence abroad. She was

placed under house arrest prior to the election and remained there until 1995. The NLD subsequently won a majority in the election but was denied office. In 1991 she was awarded the Nobel Peace Prize for her advocacy of nonviolent opposition to continued military rule in Myanmar.

SUARNABHUMI (LAND OF GOLD)

Suvarnabhumi, meaning “Land of Gold,” was a Sanskrit name used in India during the first century C.E. to describe Southeast Asia. The *Sasanavamsappadipika*, an early Indian text, asserts that the Mauryan emperor Asoka (r. 264–238 B.C.E.) sent the Buddhist monks Sona and Uttara on a religious mission to Suvarnabhumi in the third century B.C.E. The name is also mentioned in the *Samkha Jataka* and the *Mahajanaka Jataka*, which describe the early lives or incarnations of the Buddha.

Attempts have been made to identify a specific location for Suvarnabhumi, but these have not been conclusive. Early scholars identified it with Burma, which is closest to India, while Paul Wheatley (1980 [1961]: 285) has suggested an association with the island of Sumatra, which is rich in gold deposits. It is probable, however, that the name implies only a general reference to the riches of Southeast Asia as a whole.

The existence of an early maritime trade between India and Southeast Asia has been demonstrated by archaeology: Indian etched beads made from carnelian and agate have been found at the site of Ban Don Ta Phet in west-central Thailand, among graves dated to the early fourth century B.C.E.; an Indian ivory comb was discovered at Chansen in central

Thailand, in a context dated from the first to third centuries C.E.; and Roman coins, alongside other medallions, beads, and gemstone intaglios from India and the Mediterranean, have been found at Oc Êo in southern Vietnam and at Khuan Lukpad in southern Thailand, dating from the first to seventh centuries C.E.

These finds suggest that by the early centuries C.E., Southeast Asia had become integrated into a pattern of trade linking the Roman Mediterranean, via the Red Sea and Indian Ocean, to southern India and ultimately to China.

SWETTENHAM, SIR FRANK (1850–1946)

Creator of British Malaya

Frank Athelstane Swettenham (1850–1946) was one of the most outstanding British colonial administrators of the Malay States and greatly instrumental in creating the political entity of “British Malaya.” Armed with a fluency in the Malay language and culture, diplomatic skills, and personal charm, Swettenham distinguished himself in shaping the destiny of the Malay Peninsula.

At age twenty-four Swettenham participated in the drafting of the historic Pangkor Engagement and witnessed its signing in 1874. Shortly thereafter he became assistant British resident (1874–1876) to the court of Sultan Abdul Samad (r. 1857–1898) of Selangor, then assistant colonial secretary (native affairs) (1876–1882) and resident to Selangor (1882–1889) and to Perak (1889–1895). He brought much economic progress, particularly in mining and commercial agriculture and development in land transport and communication.

Swettenham was a prime initiator of a federated scheme aimed at centralizing the then-disparate political entities of the Malay Peninsula, thereby hastening economic development. He successfully secured the consent of the Malay rulers to sign a treaty in 1895 that brought into being the Federated Malay States (FMS) with himself as resident-general (1896–1900).

He was a prolific writer, producing no fewer than ten publications (books and journal articles) from 1880 to 1942. In his writings he exhibited a sympathetic view toward the Malays and an admiration of the Malay culture and way of life. In *British Malaya: An Account of the Origin and Progress of British Influence in Malaya* (London: John Lane Bodley Head, 1907), Swettenham sought to justify British imperialism and colonialism in the Malay States.

Swettenham retired in 1904 and assumed the chairmanship of several rubber companies. In 1909–1910 he served as chairman of a royal commission on Mauritius (1909–1910). He remained concerned with Malayan affairs and publicly aired his views during the decentralization debate of the 1920s and over the Malayan Union controversy of 1946.

SWIDDEN AGRICULTURE

Swidden agriculture is the scholarly and less derogatory term for "shifting cultivation" or "slash-and-burn agriculture." It refers to a diversity of agricultural systems, in that fields are cleared and prepared using sword, adze, or ax,

and fire; they are cultivated for a short period and then fallowed for a longer one (Conklin 1957: 1). Swidden agriculture is still today the dominant upland farming system in Southeast Asia and has been practiced there for millennia. It is practiced by tens of millions of farmers in the region and is well suited to its tropical ecosystems with high rainfall and poor soils.

This cultivation system is characterized by a cycle of clearing and burning vegetation, planting cultigens, weeding, harvesting, and fallowing (ibid.; Dove 1985; Freeman 1970; Izikowitz 1951). Burning of cleared vegetation creates a temporary niche for cultigens by eliminating competing plants, and it sustains these cultigens by converting the biomass to nutrient-rich ash. After these nutrients are exhausted, the field is permitted to return to fallow under forest cover, and the farmer "shifts" to another plot in the forest to begin the cycle again. It is the fields rather than the farmers that are shifted in this system. Once a field has been fallowed, natural processes of afforestation usually can restore nutrient levels to the point that cultivation is again possible, provided that the fallow period exceeds the cultivation period in length. The differentiation between the periods of cultivation and fallow is not as clear as was once thought. Recent research has demonstrated that fallow period regrowth is also managed for economic ends, which may include the planting of perennial crops such as rubber, rattans, sugar palms, and fruits (Conklin 1957; Pelzer 1978).

An oft-documented but widely misunderstood characteristic of swidden agriculture is its ability to produce relatively high returns per unit of labor if not land (Conklin 1957; Boserup 1966; Dove 1985), which gives farmers the time to simultaneously engage in other livelihood activities. Thus swidden agriculture is typically part of a broader portfolio that can include gathering of forest products, hunting, wage labor, agroforestry, home gardening, and permanent-field agriculture—all of which show how inadequate and essentializing the term "swidden cultivators" is when applied to such peoples. Furthermore, despite the popular perception of swidden cultivators as historically cut off from the rest of the world, some of these economic pursuits have for centuries connected swidden peoples to international markets through trade in both cultivated com-

modities such as pepper and rubber and forest products such as latexes and resins (Pelzer 1978). The misconception of their being isolated is exemplified in that the Indonesian government has long called swidden people *suku terasing*, meaning “the most isolated people.”

There is limited evidence on the prehistory of swidden agriculture in the region. Archaeological evidence on agricultural evolution in Southeast Asia suggests that there have been two major dimensions of agricultural evolution in Southeast Asia. One involves the initial development of wetland followed by dryland agriculture; the other, overlapping the first, involves the development of vegetatively reproduced crops in perennial gardens and then the seed-based reproduction of crops in swidden fields (Bellwood 1997: 203). This general developmental picture is supported by contemporary evidence from ritual and myth among swidden peoples. It suggests that in agricultural prehistory tubers such as taro (*Colocasia esculenta*) preceded grains, and that among the grains, Job’s tears (*Coix lachryma-jobi*) and foxtail millet (*Setaria italica*) preceded rice (Dove 1999).

Throughout recorded Southeast Asian history, views of swidden agriculture have been imbricated with culture, politics, and morality. Thus the region’s lowland states traditionally characterized upland swidden peoples as the cultural/ethnic “other” (Burling 1965). Similarly, colonial writers often referred to swidden cultivators as backward, irresponsible, and wasteful, with the Dutch referring to swidden agriculture as *roofbouw*: “robber agriculture.” The absence of any empirical basis for these views was revealed by the mid-twentieth-century publication of pioneering, monograph-length studies of swidden cultivation in the region (Condominas 1977 [1957]; Conklin 1957; Freeman 1970 [1955]; Izikowitz 1951). These studies demonstrated that swidden agriculture could be a highly sophisticated and productive use of the environment. What’s more, it may indeed be the only sustainable form of agriculture yet devised for tropical rain forest habitats (Kleinman, Pimental, and Bryant 1995); the less sustainable forms often represent not archaic and obstinate traditions but recent adaptations to urban road-building, markets, and capital. Its adaptability to market opportunities as well as to the tropical environment, plus its marked labor efficiency, helps to explain the remarkable

A Kantu swidden cultivator in West Kalimantan taps one of his rubber trees (Hevea brasiliensis) for cash income during a slack period in the swidden cycle. (Michael Dove and Steve Rhee)

persistence of this system of agriculture in the face of a century-old developmental teleology that insists that it is about to “disappear.” Swidden agriculture today supports as many as 1 billion people—some 22 percent of the population of the developing world in tropical and subtropical zones (Thrupp, Hecht, and Browder 1997).

In spite of half a century of systematic scholarship, the same century-old myths about the backwardness of swidden peoples and their system of cultivation persist in development and policy circles. The practice of swiddening continues to be treated by the governments of the region as perhaps the most powerful symbol of a condition of underdevelopment that requires corrective government intervention. Current scholarship on swidden agriculture focuses on why these misunderstandings and misrepresentations

tations of swidden agriculture persist and how they are deployed in debates about rural peoples and environments (Bryant 1994; Dove 1983, 1993). The fact that state antipathy toward swidden agriculture is uniform across the region, among governments of the left as well as the right, suggests that the source of this antipathy lies in the challenge that the “illegibility” of swidden agriculture poses to state efforts of control and extraction (Scott 1998: 282–283).

Many of the political and cultural dynamics most characteristic of the region are reflected, thus, in the way that swidden agriculture has been interpreted and represented, reflecting as it does both historic contests over ideals of kingdom and colony and contemporary contests over visions of nationhood and modernity.

SYAHBANDAR (SHAHBANDAR)

Syahbandar (*Shahbandar*) was a position given to a Melakan noble during the Melaka sultanate. He was one of the Eight Nobles of the administrative hierarchy. This position was first introduced during the reign of Muzaffar Syah (r. 1446–1459).

When Melaka became an entrepôt at the beginning of the fifteenth century, and it was reported that no fewer than 2,000 ships anchored at its harbor for trade at any one time, it became necessary to introduce an office responsible to these traders. That was the office of the *Syahbandar*. Perhaps it could be compared to the modern-day office of the harbormaster. Four officers, or *Syahbandar*, were appointed, each to be responsible to traders from one region. For exam-

ple, one Syahbandar was appointed to be in charge of those from the Gujarats, who formed the biggest number of traders. Another was for other Indian traders from the south and from Bengal, Burma (Myanmar), and Pasai in Sumatra. The third was for those from the islands of Southeast Asia, such as Java, Maluku (the Moluccas), Banda, Palembang, Borneo, and the Philippines. The fourth was for traders from Champa, China, and the Ryukyu Islands. Although these Syahbandar were mostly indigenous Malays, there were also Syahbandar who were appointed from foreign lands.

The Syahbandar was the first officer to be contacted by ships' captains. The former would then make arrangements for the captains to see the *Bendahara* (chief minister). He would also provide the captains with elephants with which to transport the goods from the ships to specific godowns for storage before trade could commence. The Syahbandar would then examine weights and measurements used and collect the official customs duties as specified by the *Undang-Undang Laut* (Malay Maritime Code). He was also responsible for the arrangements of giving "presents" to high-ranking officers of the state, such as the *Bendahara*, *Temenggong* (chief of police), and also himself.

The appointment of Syahbandar provided a systematic, orderly, and efficient functioning of trade and commercial transactions at Melaka. With the help of the Syahbandar, working in concert with the *Temenggong*, who maintained security in the port-city, and the *Laksamana* (admiral of the fleet), who ensured safety in the straits, Melaka flourished for the greater part of the fifteenth century.

SYED SHAYKH AL-HADY (1867?–1934)

Propagator of Islamic Modernism

Syed Shaykh al-Hady was a prominent leader in Islamic modernism and a pioneer of modern Malay literature.

Born in Melaka, Syed Shaykh came from an Arab family that had become established in the Malay world over a number of generations. He studied in Terengganu and Riau, both renowned centers of Islamic learning, and enjoyed close associations with the royal families of both Malay States. In journeys to the Middle East (West Asia), and then living in Singapore from 1901 to 1909, he began to be influenced by the teachings of such Islamic modernists as the Egyptian Muhammad Abduh (1849–1905) and became a major proponent of these views in Southeast Asia.

In 1906 he became a founder of the pioneering magazine *Al Imam*, which had a wide circulation in the Malay Archipelago and was influenced by the Egyptian journal *Al Manar*. In 1909 he moved to Johor to work as an Islamic lawyer and later began a school in Melaka. Facing opposition to his teaching, he moved to Penang in 1918 (or 1919), where he helped to set up the *Madrasah Al-Mashor*, which became a prominent religious school teaching secular as well as religious subjects and attracting teachers of high caliber and healthy numbers of students. In Penang, Syed Shaykh was soon involved again with journalism: in 1926 he was a founder of the journal *Al-Ikhwān* and in 1928 the weekly newspaper *Saudara*. In 1925–1926 he published *Hikayat Faridah Hanum*, a love story often considered to be the first Malay novel. Thereafter the many books he produced covered not only texts on religion (including commentaries on the Koran) but also a series of detective novels, the *Rokambul* stories, which have been described as portraying the ongoing struggle in this world between good and evil. In 1927 he established the *Jelutong Press*, which published his own translations and writings (including the influential *Islamic Religion and Reason*) and which, by the time of his death in 1934, became the largest publisher of Malay works in Malaya (West, or Peninsular Malaysia).

As an Islamic leader and of Arab background, Syed Shaykh focused on the "Muslim Brethren in the East," rather than merely on the

Malays. He was concerned about Muslim weakness at a time when the British and Dutch Empires in the archipelago were being consolidated, and when large numbers of industrious Chinese and Indians were settling on the Malay Peninsula and surrounding territories. He nevertheless saw the advantage of the colonial settlements of Singapore and Penang as enclaves from which to propagate reformist views beyond the reach of the conservative Malay sultans on the peninsula and the surrounding islands.

Syed Shaykh criticized the Malay rulers, believing them to be preoccupied with ceremonies and entertainment rather than the welfare of their subjects. He saw their traditional religious administrations as being too concerned with miracles, saints, and fine points of religious ritual. The old Islamic leadership, the *Kaum Tua* ("the old ones," traditionalists), conveyed a sense of resignation and despair rather than the determination to exploit the opportunities of the modern world. Syed Shaykh and other *Kaum Muda* ("the young ones," modernists) saw the essential doctrines of Islam as being in harmony with much modern scientific and constitutional thought. They sought, on the one hand, to eliminate irrational beliefs that had polluted Islamic religious teachings over the centuries and, on the other, to foster a new scientific learning. Syed Shaykh argued that apart from teaching law and tradition, Islamic schooling should provide curriculum matter found in modern secular education, including the teaching of English, and stressed the importance of rational thought. The education of women, he also suggested, was essential to the reform of Muslim society.

Writing in Penang and Singapore, Syed Shaykh was conscious of the challenge of secular liberal thought—of the concepts of individualism, nationalism, egalitarianism, and Darwin's "survival of the fittest." But he stressed the scientific, architectural, and other achievements of early Islamic society to remind his readers that it was not the Islamic religion itself that was responsible for their malaise. Islamic doctrines and practice continued to have a great "usefulness" for modern societies. The Friday prayer, the fast, the pilgrimage to Mecca, and the paying of the Muslim tithe (*Zakat*) could also be of assistance to promote progress in the Muslim community.

In advocating reform within Islam, and in defending his religion against the challenge of secular liberalism, Syed Shaykh employed a vigorous rhetorical style with an evocative vocabulary. Some have suggested that he wrote the novel *Faridah Hanum* to make money to publish his more serious religious works. But it can also be argued that introducing the novel genre into Malay literature was a deliberate strategy for spelling out Islamic modernist doctrines in a way that would make sense to people unlikely to read conventional religious texts. The novel offered the opportunity to elucidate modernist Islamic views in the context of a realistic human narrative.

However, by the 1930s such Islamic leaders as Syed Shaykh faced increasing competition from Malay nationalists, who gave Malay ethnicity and specifically Malay problems priority over the concerns of the broader Muslim community.

SYONAN-TO

Singapore was renamed *Syonan-to* during the Japanese occupation (1942–1945). *Nan* means "south," while *Tō* is "island." The Imperial Japanese government discussed on 14 February 1942 how to rename two strategic Southeast

Asian places, Singapore and the Dutch East Indies, in imminent expectation that these territories would be conquered by the Japanese Imperial Forces (JIF). As for the former, the names *Syonan-to* and *Kaname-tsu* (meaning Keystone Harbor) or *Kaname-shima* (Keystone Island) were proposed. *Syonan* means “clear definition of the South,” “Southern territory of Showa” (the Japanese calendar changes when a new emperor is enthroned; Showa commenced in 1926), or “lighting up the South.” *Syonan-to* was adopted unanimously. Two days after the British surrender in Singapore—that is, on 17 February 1942—the JIF headquarters officially announced the new name. (The Syonan Shrine built by the Japanese community in Singapore in 1939 had no direct connections with Syonan-to. The Chinese characters of both “syo”—and thus their meaning, although not their sound—were different.) As for the Dutch East Indies, though “South Indies” and “Sub-South Islands” were proposed, nothing was decided.

Likewise, the Japanese military administration of Malaya decided to rename Penang *Tōjo-to*, commemorating the visit in 1942 of Hideki Tojo (t. 1941–1944), the prime minister of Ja-

pan. The name was so unpopular among the local people that the authorities dared not enforce its use. Labuan Island off Brunei was renamed *Maeda-to* in February 1943, commemorating the commander-in-chief of the Borneo garrison force, Lieutenant General the Marquis Maeda Toshinari (1885–1942), who had died in a plane crash in September 1942. In December 1942 the term *Malai* replaced “Malaya,” “Malay,” and “Melayu.” Ironically enough, the Japanese government occasionally proclaimed that it would revive the original native place-names that had earlier been replaced by the Western colonial names.

Nonetheless, for the peoples of Singapore, the days of suffering under Japanese rule have been symbolized by the name *Syonan-to*.

T

TABINSHWEIHTI (r. 1531–1550)

Tabinshweihti was the second ruler of the First Toungoo Dynasty (1486–1599). Extending his power from its base at Toungoo in Upper Burma to the maritime provinces of Pegu, captured in 1539, he used Portuguese mercenaries together with Muslim soldiers (Lieberman 1984: 29). Taking Martaban (1541) and Prome (1542), he attempted unsuccessfully to subdue Arakan and Ayutthaya (1548), where perceived troubles at the succession of King Chakkraphat encouraged him to launch an attack through Three Pagodas Pass. Marching via Kanchanaburi and Suphanburi, his forces headed for Ayutthaya, but he was forced to retreat by the Siamese armies supported by their Portuguese mercenaries. The Siamese queen Suriyothai herself led the attack on the Burmese. In retreat, Tabinshweihti's forces captured the Siamese Crown prince, Ramesuan, and King Chakkraphat's son-in-law, Maha Thammaracha, viceroy of Phitsanulok, who were exchanged in return for safe passage for the Burmese forces. Tabinshweihti's attack was part of a wider strategy to draw into his polity the revenues of the international trade around the Bay of Bengal and the Gulf of Siam.

Tabinshweihti and his successor, Bayinnaung (1551–1581), for the first time since the decline of the classical Burmese empire of Pagan in the late thirteenth century, attempted a synthesis of Burman-Mon cultural traditions in a determined effort to create a multicultural society. From their capital at Pegu, they established an

empire similar in extent to that of modern Burma. Modeled on the pattern of Pagan, it had core areas (Pegu in the First Toungoo empire) and subsidiary centers at Chiang Mai, Martaban, Ava, Prome, and Toungoo in charge of a *bayin*, usually a near blood relative, who functioned as subking. Their autonomy and ambitions often led to challenges to the throne. The marriage between the agricultural heartland and the maritime provinces was an uneasy one, punctuated with rebellions at the end of each reign. Returning to Pegu from his failed Ayutthaya campaign, Tabinshweihti was said to have come under the influence of alcohol and to have been killed by his Mon courtiers (Wyatt 1984: 92).

TABON CAVE (PALAWAN)

A Pleistocene Site

Tabon Cave faces the South China Sea, along the western coast of the long northeast-southwest orientation of Palawan Island, in the Philippines. It is an important complex of caves and rock shelters collectively called "Tabon caves." The name Tabon Cave is derived from a *Megapodius* species (locally called *Tabon* bird) that leaves its eggs in the cavities of the cave's floor. The Tabon complex was intensively studied by the National Museum of the Philippines under the direction of Robert Fox, who carried out more than thirty excavations from 1962 to 1966. The most famous cave, called Tabon Cave, was the first site to unquestionably establish the presence of humans in the Philippines during the Pleistocene period, or the last Ice Age.

The most complete publication concerning Tabon Cave still remains the excavation report written by R. Fox (1970). It includes a collection of carbon-14 dates completed during the 1960s at the University of California (Los Angeles) that document a continuous occupation of the cave between at least some 30,000 and 9,000 years ago. Fox's excavation results were often quoted in the archaeological literature, since Tabon Cave is one of the very few sites in Southeast Asia that have yielded a Pleistocene fossil *Homo sapiens* (modern man). Such places are of the utmost importance for the study of the dispersion and movement of the Southeast Asian *Homo sapiens*.

Nevertheless, excavations and archaeological activities in Tabon Cave were discontinued shortly after Fox's first publication for various reasons, among which was the shift of interest to the open sites in the Cagayan Valley (Luzon Island) in the search for possibly earlier human remains. Therefore, little analytical work was carried out on the Tabon data. Reportedly, several scholars took samples from the archaeological deposits and also on the human fossils themselves, although no report was published on those materials.

Recently, the Archaeology Division of the National Museum of the Philippines decided to undertake new studies of Tabon Cave. As a preliminary phase, seeking to validate the older data gathered by Fox, it undertook radioisotopic dating and simultaneous anthropological study of the still almost undescribed human remains whose stratigraphical position is under discus-

sion. The most recent analytical work of Tabon data was undertaken in collaboration with the Institut de Paleontologie Humaine (IPH), National Museum of Natural History in Paris, France. Such a study is intended to provide new chronological data on the Pleistocene *H. sapiens* settlement at the margins of Sundaland.

The dimensions of Tabon Cave are 40 meters long, 15 meters wide, and 8 meters high, with a northwest-southeast-oriented karstic cavity situated in a limestone cliff of about 35 meters above present-day sea level. According to Fox (1970), the surface of the Tabon Cave is a jar burial site dating back to 500–200 B.C.E. Below the surface is the excavated Palaeolithic horizon, which may be divided into six levels. This horizon expands to about 2.5 meters of excavated stratigraphic layers and is named from the youngest to the oldest Flake Assemblages: IA, IB, II, III, IV, and V. This classification seems based more upon the stratigraphical distribution of the artifacts than on their typotechnological characters.

Although Fox does not document any conspicuous difference between the assemblages, his detailed description of Flake Assemblage III reflects some interesting behavioral features of the prehistoric groups that occupied the cave. The cave obviously sheltered a lithic workshop oriented toward the production of irregularly shaped and sized flakes, less than 20 percent of them used or retouched as actual flake tools. These tools are mainly regular and denticulated scrapers for which Fox proposes the name of *Tabonian* artifact tradition. All the operating stages are present in the cave, from the raw chert lumps to the flake tools, via the cores, hammerstones, waste flaking, unretouched flakes, and used flakes. The used raw material—namely, chert—is noted to be common in the riverbeds near the cave complex. But Flake Assemblage III also yielded several basalt trimmed choppers, together with basaltic and quartz pebbles likely to have been used as hammerstones.

Fragmented faunal remains, but no bone artifacts, were recovered in the layers related to Flake Assemblages IA, II, and, to a lesser extent, III and IV. Pig and deer, the latter being extinct today in Palawan, were the only large mammals that could be determined.

Although the precise geochemical history of the fossil is not fully known, recent isotopic dat-

ing procedures measured on the Tabon fragmentary skull strongly suggest a late Pleistocene age. It confirms Fox's (1970) suggestion about the antiquity of that fossil, but cannot give any more precision about its stratigraphical position within the published scheme.

It confirms, however, that *Homo sapiens* settled on Palawan Island well before the Holocene, most probably via the very narrow, several-kilometer-long straits that still separated the island (extended to Balabac Island) from Borneo during the Upper Pleistocene eustatic drops of sea level.

TAFT, WILLIAM HOWARD (1857–1930)

Molder of U.S. Colonial Policy toward the Philippines

William Howard Taft was the first American civilian governor-general of the U.S. colonial government in the Philippines; he later became president of the United States. As governor-general from 1901 to 1903, he established the civil government following the end of U.S. military administration, and carried out the first U.S. policies toward the Philippines. These policies centered on creating a stable government for the Philippines and Filipinos, setting up a system of public education, and constructing public works under U.S. rule. After his term as governor-general, he continued to exercise policy control over the Philippines as secretary of war (1904–1908), and then as president of the United States (1909–1913).

Taft was born in Cincinnati, Ohio, on 15 September 1857. He graduated from Yale University and earned his law degree from the Cincinnati Law School. He had a distinguished career as judge before he was appointed by

William Howard Taft, ca. 1908. (Library of Congress)

President William F. McKinley (t. 1897–1901) in 1900 to head the Second Philippine Commission, also known as the Taft Commission. Although he had personally opposed the U.S. conquest of the Philippines, with the formal acquisition of the archipelago through the Treaty of Paris (1898), he felt that it was the duty of the United States to give good government to the Philippines. The commission was to carry out U.S. policy toward the Philippines and set up a civil government. The Taft Commission arrived in Manila on 3 June 1900.

Taft's instructions were to establish a civil government for the Philippines that conformed to Filipino customs, habits, and prejudices, while following U.S. principles of government. The new government would embody the U.S. Bill of Rights (except for trial by jury and the right to bear arms). The Taft Commission would establish a civil service system and local government under U.S. supervision. The commission would also establish a system of free public education, with English being taught throughout the Philippines. Taft and his

commissioners traveled around the Philippines and met with Filipinos, to assess their readiness for self-government, and began establishing the foundations of local governments staffed by Filipinos.

Taft and members of his commission were not well received by the U.S. military government headed by General Douglas MacArthur (1880–1964). Taft and his commissioners persevered, however, and aside from meeting Filipinos, also accumulated information on the islands and the people that was necessary for administrative preparation; problems were identified and tentative solutions planned. Taft, apart from overseeing the work of the commission, also gave himself the task of studying the judicial system and landownership—in particular land owned by the Spanish friars.

In September 1900 the Taft Commission assumed legislative functions, taking over from the military governor. Taft guided the preparation and implementation of laws relating to taxes, appropriations, tariffs, and appointments. He instituted the insular civil service and provincial governments, even as the military had executive functions.

On 4 July 1901, Taft took the post of civil governor and became the direct representative of the U.S. president in the Philippines as U.S. military rule ended. Taft and his commission had executive and legislative functions, and set up a judicial branch founded on a criminal code the commission enacted. Taft then set out to establish basic policies that would govern the Philippines for most of the U.S. regime. He created the Philippine Constabulary to maintain domestic peace and order, approved legislation that fixed the peso exchange rate at two pesos to the dollar, set down the procedures for elections, established the public school system for mass education, and supervised health and sanitation projects as well as road and infrastructure construction.

Although Filipinos staffed government positions at local and national bureau levels, they did not have a hand in determining national policies, since all legislation during the period of Taft's administration as governor-general was handled by the Philippine Commission. The commission was initially all American, but Taft appointed three Filipinos to it near the end of his term. The majority remained in the hands of the Americans.

Taft's term as governor-general lasted until 1903; thereafter President Theodore Roosevelt (t. 1901–1909) appointed him secretary of war. The Philippines was, at that time, directly under the Department of War, and Taft thus continued to make and carry out policy for the islands. Taft became the twenty-seventh president of the United States in 1909, and thus continued to influence Philippine policy. When Taft's term as president ended in 1913, his role in shaping U.S. policy toward the Philippines came to an end. Taft later became chief justice of the U.S. Supreme Court, a post he held until his death on 8 March 1930.

Taft played a key role in formulating and implementing U.S. policies for the Philippines. The period from 1901 to 1913 would become known as the "Taft Years," wherein U.S. administration over the Philippines was established. The basic policies established by Taft would change only with the coming of a Democratic administration in 1913, which opted for a more lenient rule and favored early independence for the Philippines.

T' AIS

The T'ai peoples reside mainly in Burma (Myanmar), Thailand (Siam), Laos, northern Vietnam, and south and southwest China. With a population today estimated at more than 70 million, they are one of Southeast Asia's principal ethnic groupings, and have significantly in-

fluenced the cultural and political development of the region. The identity "T'ai" is primarily linguistic. However, there are also cultural and social aspects to T'ai identity, and many groups share myths of common ancestry. Recent research emphasizes the significance of the *muang* in T'ai ethnohistory. The *muang* comprised a number of villages, associated mainly with wet-rice agriculture, that owed personal allegiance to a local prince, or *chao*, from whom they received their rights to land. It is believed that historically all T'ai polities developed from this type of sociopolitical organization.

The ethnohistories of the various T'ai subgroups such as the Shan (Burma), the Thai (Thailand), the Black Tai (Vietnam), and the Tai Lue (Yunnan) differ according to the varied political and cultural environments into which each group migrated. For example, the Thai of Thailand were able to establish an independent, majority, ethnic T'ai nation-state, while the Shan peoples are today only a "national minority" in Burma—although since 1948 they have had their own regional state. The Black and Red Tai of northern Vietnam remain a relatively marginalized, upland-dwelling minority, while the Dai of Yunnan have their own prefecture, Xishuangbanna (Sipsongpanna). Furthermore, the T'ai Ahom of Assam are thought to have disappeared completely following the collapse of the Ahom kingdom at the beginning of the nineteenth century, while the T'ai Khampti peoples still live in this region as one of the "scheduled tribes" (those recognized by the government) of Arunachal Pradesh.

Much research remains to be done concerning the origins of the T'ai peoples. Most of the early evidence is from Chinese chronicles from the beginning of the last millennium onward. It is generally believed that the T'ai peoples originated in southern China and gradually migrated south and west following the river valleys. At some point the T'ai of the Black River region in northern Vietnam became separated from the main T'ai migration westward. For many years the kingdom of Nanchao, which rose to power in the eighth century C.E., was considered the first politically significant T'ai state in Southeast Asia. However, recent research suggests that the Nanchao rulers were not T'ai. Nonetheless, the T'ai peoples benefited from the greater trade, communications, and migration opportunities that arose at this

time, leading to the expansion of T'ai *muang* across a wider geographical area of Southeast Asia.

T'ai ethnohistory proper may be said to start in the early twelfth century. At that time a number of influential local *muang* developed to form small kingdoms or principalities. The Mongol invasions in the thirteenth century further assisted this development, leading to a number of important T'ai *muang* being formed: in 1215 the *muang* of Mogoung was established in Upper Burma; 1223 saw the creation of Mong Nai in eastern Burma; and in 1229 the Ahom kingdom was founded in Assam. In 1238 the T'ai attacked and defeated the powerful Khmer rulers, and this led to important political developments in northern Thailand. King Rama Kamhaeng (r. 1279–1298) established the kingdom of Sukhothai, and under him the first T'ai script was developed. Most important, in 1287, the kingdom of Chiang Mai was established under King Mangrai out of a treaty of friendship between the most important *chao* of the Menam river basin. In 1351, under King Ramadhipati (Ramathibodi) (1351–1369), this *chao* developed into the powerful kingdom of Ayuthia (Ayutthaya), from which the origins of the modern state of Thailand are usually traced.

Yet the thirteenth century also saw the establishment of the *muang* of Luang Prabang (Muang Swa). In 1353, the T'ai ruler Fa Ngum developed this into what is considered by some to be the first Laotian state. He had the support of the Khmer rulers of Angkor and had a clear orientation toward Indochina rather than to the T'ai states of Siam. It is from this point that attempts to trace a common T'ai ethnohistory usually cease; instead, the regional and local ethnohistories of the various T'ai groups are usually traced separately.

Pan-T'ai nationalism has been of much significance only in Thailand. In 1939 the kingdom of Siam changed its name to Thailand, and some politicians aspired toward the unification of the Thai (T'ai) peoples. This led to problems with neighboring countries, especially the modern state of Laos, which was created only in 1947. The Lao government has long been suspicious of Thai expansionism at their expense under the guise of pan-T'ai nationalism. In recent years such aspirations appear to have lessened, and that has enabled some academic researchers, especially anthropologists, to consider the T'ai

peoples in a broader and more comparative context that spans national boundaries.

TAM CUONG

Relationships of Submission

Tam Cuong crystallized the three basic teachings of Confucianism that concern the relationships between *Quan* (ruler) and *Than* (subjects), *Phu* (father) and *Tu* (son), and *Phu* (husband) and *Phu* (wife). According to these teachings, subjects, son, and wife must absolutely obey the ruler, father, and husband, respectively; in the meanwhile, the ruler, father, and husband should serve as role models for his subjects, son, and wife.

Tam Cuong were the basic moral principles of Chinese feudal society put forth by Confucians in the early years of the feudal period. They gradually became the basic ruling theory of feudal absolutism, and were promoted by rulers of various dynasties. These principles helped restrict people's minds and behaviors and regulated social relationships. With the domination by the Chinese in Vietnam, Confucianism was introduced into Vietnam; *Tam Cuong* also became the moral criteria of the Vietnamese in the dynastic period. Confucianism obtained a dominant role in ideology in the Le dynasty (1428–1789) and the Nguyễn dynasty (1802–1945) of Vietnam. *Tam Cuong* were especially emphasized by rulers such as Emperor Le

Thanh Tong (1460–1497) of the Le dynasty and Minh Manh (r. 1820–1841) of the Nguyễn dynasty. Emperor Minh Manh even ordered the issuance of the Confucian teachings, including *Tam Cuong*, in the form of allocutions, and demanded that everyone recite and comply with the teachings.

Tam Cuong reflected the special relationship between the ruler and the subjects, the father and the son, and the husband and the wife in the narrow sense; but they virtually reflected the relationship between people in the broader sense. *Tam Cuong* penetrated into Vietnamese society deeply in the last years of the feudal period and had a tremendous influence on the life of the Vietnamese people; this influence can even be found today.

TAM GIAO

Vietnam's Religious Traditions

The three traditional religions of Vietnam—Buddhism, Taoism, and Confucianism—were introduced into Vietnam during the early years of *Thoi Bac-Thuoc* (the Chinese colonial period, 111 B.C.E.–968 C.E.).

Strictly speaking, Confucianism is not a religion but a social ethic theory and life philosophy. Confucianism and Taoism came from China, and Buddhism was introduced into Vietnam simultaneously via sea from India (Theravada Buddhism) and overland from China (Mahayana Buddhism). Before Vietnam became independent of China, these three religions spread throughout the country at varying paces and set the ground of Vietnamese national traditional culture. After Vietnam became independent, these three religions played different roles in domestic affairs in different periods. In the Dinh dynasty (968–980 C.E.) and the First or Earlier Ly dynasty (980–1009 C.E.), Buddhism was regarded as the state/offi-

cial religion, while Confucianism was suppressed. From the time of the Le dynasty (1428–1789) onward, the three religions were practiced equally. The Le and Chen dynasties were known as the *Tam Giao* period, when all three religions prospered, which was reflected in the imperial examinations during that period. Examination subjects included Buddhism, Confucianism, and Taoism, and examinees included Buddhists, Confucians, and Taoists, among whom rulers selected civilian officials. During the late Chen period, Confucianism developed gradually and was promoted as the dominant ideology, and Buddhism and Taoism declined.

Tam Giao penetrated each other and inclined to integration, although they disputed sometimes after the three religions were introduced to Vietnam. The introduction of the three religions enriched the native culture, and Tam Giao eventually became a major part of Vietnamese traditional culture, retaining today an influence on contemporary Vietnam.

TAMAN SISWA (1922)

Promoting Homegrown Sociocultural Values

Taman Siswa (Indonesian “Garden of Pupils”) is an Indonesian educational association founded to develop indigenous social values and to resist Western and Islamic modernist influences.

The question of how Indonesia might achieve modernity was central to political debate in Indonesia in the early twentieth century. The main contending paths were Western-style developmentalism, socialism, and Islamic modernism, all of which, formally at least, regarded traditional Indonesian cultures as having little to contribute to a modern society. The

first Taman Siswa was a school founded in Yogyakarta in 1922 with the aim of infusing traditional Javanese values into a modern, Western-style education to achieve a kind of synthesis between Eastern values and Western technology; this idea had been widely discussed in Japan, China, and Korea.

The founder of that Taman Siswa was Ki Hadjar Dewantoro (1889–1959), previously called Suwardi Surjaningrat, who had been a leader of the radical Indische Partij (Indies Party) and had been exiled to The Netherlands from 1913 to 1919. While in The Netherlands he had developed an interest in educational movements, especially the ideas of Maria Montessori (1870–1952) and Rabindranath Tagore (1861–1941).

The Taman Siswa movement expanded rapidly. It established a teachers’ training college and by 1932 had 11,000 pupils and 166 schools. As a matter of principle, Taman Siswa refused to follow the official colonial curriculum and so received no subsidies from the government. The movement was never directly political, but its encouragement of Indonesian cultural self-confidence played an important role in promoting nationalism. In 1932–1933, moreover, Dewantoro led an archipelago-wide campaign against the colonial government’s “wild” (that is, unofficial) schools ordinance, which required unsubsidized private schools to obtain official permission to operate. The depth of public opposition to the move, introduced at a time when the government was cutting its own spending on education, led the governor-general to suspend the ordinance.

Taman Siswa’s educational role declined sharply after independence (1949) with the expansion of government education and an official emphasis on technical training, rather than personality development. Still reluctant to accept state subsidies, the Taman Siswa system generally had poorer facilities than other state and private schools and attracted fewer capable students, though leaders such as Dewantoro remained respected and influential in educational circles. Lower social status and a hostility to both Islamic modernism and technocratic elitism drew parts of the Taman Siswa movement closer to the Partai Komunis Indonesia (PKI) during the 1950s, and the organization remained deeply divided until the 1965 Gestapu affair.

Taman Siswa was the first major articulation of a stream of Indonesian political thinking that valued indigenous culture ahead of foreign (Western and Islamic) ideas. It took the view that an individual would best achieve a sound personality development in an educational environment that encouraged a love of learning and a familiarity with national culture. It emphasized the importance of the family as a model for social relationships, and played a major role in having “Bapak” (father) and “Ibu” (mother) accepted as the standard terms of address for older people. Taman Siswa ideas directly influenced the thinking of Sukarno (1901–1970), and indirectly that of Suharto (1921–). Both these presidents believed that it was possible to create a polity based on traditional values that would incorporate only what was appropriate from outside Indonesian culture. The family model, in which a father commands his children in love and wisdom and the mother’s duties lie primarily in the home, could be the basis for social organization in general. The perennial difficulty faced by this stream of thought was how to handle the enormous cultural diversity of the Indonesian archipelago. In practice, Taman Siswa, like Sukarno and Suharto, tended to draw most strongly on elements of Javanese culture, thus limiting its appeal in other regions.

TAMBRALINGA (TAN-LIU-MEI)

Early Trading Kingdom on the Malay Peninsula

Tambralinga, or by its Chinese name, Tan-liu-mei, was a kingdom situated on the eastern coast of the Malay Peninsula, around the Bay of Ban Don near modern Surat Thani in southern Thailand. It flourished from the eleventh to the early thirteenth centuries as an important trade center in the maritime commerce between India and China.

An embassy was sent from Tambralinga to China in 1001 C.E. Its independence was later challenged by the western extension of the empire of Sūryavarman I (r. ca. 1002–1049), based at Angkor in Cambodia. During this period (the eleventh century) it formed part of a trade network linking the ports of South India, controlled by the Chola dynasty, with the western capital of Sūryavarman I at Lopburi in Central Thailand.

A further embassy from Tambralinga was sent to China in 1016. In 1024–1025 the Cholas raided the Malay Peninsula. Tambralinga then may have been identified with the kingdom of “Madamalingam,” listed as one of the conquests of the Chola king Rajendra I (r. from 1014) in an inscription at Tanjore in South India. A second Chola raid on the western coast of the peninsula occurred in 1067. Shortly thereafter, in 1070, an embassy was sent from Tambralinga to China reasserting its independence.

During the twelfth century, Sri Lanka and the kingdom of Pagan in Burma (Myanmar) increasingly dominated the politics of the Malay Peninsula. It is clear, however, that Tambralinga remained an important commercial center. According to the *Ling-wai-tai-da* (a Chinese trade encyclopedia compiled in 1178), Tambralinga was famous for a high-quality *gharu* wood used in the production of incense sticks. In this connection it is interesting to note that two inscriptions from the town of Chaiya in southern Thailand, dated to 1230, were ordered by a King Candrabhanu, “The Lord of Tambralinga.”

Much of our information on Tambralinga has been derived from Chinese sources, collected and discussed by the historian O. W. Wolters.

TAN CHENG LOCK (1883–1960)

"A True Malayan"

Tan Cheng Lock was a fourth-generation Malayan Chinese born on 5 April 1883 of a prominent and long-established Melakan family. His great grandfather, Tan Hay, was a navigator from Fukien, China, and his grandfather, Tan Choon Bock, established himself in shipping and tapioca and gambier planting.

Educated in English, Tan Cheng Lock first became a teacher but in 1908 joined the growing rubber industry, ending up being director of about twenty rubber and industrial companies. Although proud of his Chinese descent, he was a true Malayan who urged the Chinese in Malaya to regard Malaya as their permanent home and the object of their singular loyalty; he laboriously worked toward that end.

Tan Cheng Lock was appointed to various bodies, including the legislative and executive councils. He was partly responsible for the appointment of Asians to the Melaka Executive Council beginning in 1933, the creation of a separate Straits Settlements Civil Service that admitted Asians in 1936, and the introduction of the Civil Marriage Ordinance in 1940.

Generally in favor of the Malayan Union scheme (1946) and opposed to the Federation of Malaya Agreement (1948), Tan chaired the formation of the All-Malaya Council of Joint Action (AMCJA) in 1946 and contributed to

the AMCJA-PUTERA (Pusat Tenaga Ra'ayat, Centre of People's Power) "Peoples Constitutional Proposal for Malaya" of 1947. It was through the Communities Liaison Committee (CLC), formed in 1949, and the Malayan Chinese Association (MCA), which appointed him president, that important aspects of his ideas began to be accepted by the Chinese, the British, and the United Malays National Organization (UMNO). He later endorsed the formation of the Alliance Party in 1954, participated in the Baling Talks (1955) with the Malayan Communist Party (MCP), and contributed significantly to the "sociopolitical contract" that paved the way for independent Malaya.

Tan Cheng Lock, who was knighted by both Britain (as "Sir") and Malaysia (as "Tun"), died on 8 December 1960 at the age of seventy-seven.

TAN MALAKA, IBRAHIM DATUK (1897?–1949)

Communist and Nationalist Leader

A prominent Indonesian communist leader, Tan Malaka was an ideologist, a teacher, and considered one of the most controversial nationalist political activists in history. The son of a Minangkabau village chief, Tan Malaka was a native of Pandan Gadang, West Sumatra. In his youth he spent his earlier education in Suliki in 1903 and then went to a teacher-training school near Bukit Tinggi until 1913. An intelligent teenager, he was awarded the honorific title "Datuk Tan Malaka" in 1912. His promi-

ment intellect attracted the Dutch teacher G. H. Horensma, who brought him to The Netherlands in 1913. He was sent to a teacher-training institution in Haarlem and then to Bussum, where he became acquainted with the thoughts of the German philosopher Friedrich Wilhelm Nietzsche (1844–1900) and longed to join a military academy. Still in Bussum after the Russian Bolshevik Revolution of 1917, he started to read more about Karl Marx (1818–1883) and Friedrich Engels (1820–1895). It was not until 1919 that he considered himself a communist. In the same year, he returned to Indonesia.

Tan Malaka was struck by the reality of impoverished coolie labor at the Senembah tobacco plantation of Deli, East Sumatra, where he served as teacher after his return to Indonesia. In his spare time he wrote articles in Dutch for a newspaper owned by a Bolshevik group and published in Semarang. Tan Malaka left Deli for Jakarta a few months after a group of radical labor unions started a wave of strikes in September 1920; he, however, expressed pessimism over the success of the action. He then decided to stay in Semarang, together with a leading communist leader, Semaoen (Semaun) (1899–1971). In June 1921, Tan Malaka started his school for children of Sarekat Islam members. He was also engaged in the newly established Partai Komunis Indonesia (PKI, Communist Party of Indonesia, 1920) and was appointed chairman in late 1921, replacing Semaoen, who went abroad. Tan Malaka also opened a similar school in Bandung. There on 13 February 1922, he was arrested by Dutch secret police, who accused him of involvement in several radical labor movements; he was ordered to leave Indonesia.

Tan Malaka went to The Netherlands and then Russia, from where he traveled to many countries as a Comintern agent for Southeast Asia and Australia. During his exile, Tan Malaka organized communist groups all over East and Southeast Asia, and wrote many books and articles using different pseudonyms. His book on the rising Indonesia, entitled *Indonezija: Ejo Mesto na Proboezjdajoesitjemsu Vostoke*, was written under orders from Comintern in 1924. While in China in 1925 he wrote a book entitled *Naar de Republiek Indonesia*. Tan Malaka expressed his disagreement with the decision of PKI to rebel in 1926 through his book *Massa Actie*. A year later he organized a group of In-

donesians to form a party called Partai Republik Indonesia (PARI, Indonesia Republic Party) in Bangkok, and he did similarly in the Philippines and in the British colonies. When Japan occupied Southeast Asia, Tan Malaka was still able to write an interesting book entitled *Madilog*—an acronym for materialism, dialectic, and logic—to express his new way of thinking. Tan Malaka returned to Indonesia in the middle of the Pacific War in 1944, when Indonesia was under Japanese occupation.

After the Indonesian proclamation of independence in August 1945, Tan Malaka was soon considered an alternative leader to Soekarno (Sukarno) (1901–1970), particularly within the circle of young radicals. However, Tan Malaka soon realized that he was unwelcome, including within leftist groups. Soekarno brought a young socialist, Sutan Sjahrir (1909–1966), to negotiate with the Dutch, and also to challenge Tan Malaka. Meanwhile Tan Malaka set up Persatuan Perjuangan (Union of Struggle), an organization that demanded full and complete independence, and rejected any negotiations with the Dutch. When the Sjahrir cabinet resigned in February 1946, Tan Malaka was asked to form a cabinet; he failed, however, particularly on account of strong opposition from the inner circle of socialist-Marxist groups and the lack of support from Soekarno and Mohammad Hatta (1902–1980). He was briefly jailed in March 1946. He was re-arrested on 6 July, accused of being the mastermind behind the attempted coup of 3 July 1946. Under such allegations, he spent about thirty months in jail without trial. During his incarceration he composed his monumental three-volume autobiography, *Dari Penjara ke Penjara [From Prison to Prison]*. He was finally released in the middle of the chaotic situation following the Madiun affair of September 1948.

He lent his support to the creation of Partai Murba (Proletarian Party), which derived its strength from the mass organization of Gerakan Revolusi Rakyat (People's Revolutionary Movement), which he had set up earlier. When the Dutch attacked Yogyakarta, the capital of the Republic of Indonesia, in December 1948, Tan Malaka was in East Java. He organized a military group around Kediri. But he was captured and fatally shot by republican troops. His "assassination" reflected the continuous ideological conflict among the Indonesians themselves.

TARUC, LUIS (1913–)
Peasant and Labor Leader

Luis Taruc was a Philippine peasant leader from Central Luzon, and continues to be active in peasant affairs. He led the Hukbo ng Bayan Laban sa Hapon (Hukbalahap, People's Anti-Japanese Army) against the Japanese during the Pacific War (1941–1945). After the war, he led the peasant movement against the government until his surrender in 1954.

Taruc was born on 21 June 1913, in the town of San Luis, Pampanga province. He was the son of peasants. He became aware early on of the difficulties and injustices in Philippine peasant society, seeing how landlords controlled society and the injustice in his barrio. He graduated from high school and entered National University and was soon involved in peasant and labor protest movements. He joined the Aguman ding Maldang Talapagobra (AMT,

League of Poor Laborers) and became close to Pedro Abad Santos, head of the Socialist Party, with which the AMT was affiliated. Taruc organized peasant strikes and demonstrations in the late 1930s. He was imprisoned four times from 1937 to 1941 but continued to lead peasant and labor strikes. He became the political director of the league's newspaper, *AMT*.

By 1940, Taruc and his comrades recognized that international fascism superseded domestic problems, and thus he began speaking about its dangers. With the outbreak of the Pacific War (1941–1945), Taruc mobilized peasants to resist the Japanese invaders. In early 1942 he attended a series of meetings on how best to oppose the Japanese. Working under the slogan "Anti-Japanese Above All," he and other peasant leaders dissolved their prewar organizations and, on 29 March 1942, formally established the Hukbo ng Bayan Laban sa Hapon (Hukbalahap, People's Anti-Japanese Army). Taruc was chosen to be chairman of the military committee of the Hukbalahap. He later became commander-in-chief, or *Supremo*, of the Hukbalahap.

With the end of the Pacific War, Taruc ran for Congress under the Democratic Alliance Party and won. He openly opposed the parity amendment called for by the Philippine Trade Act (Bell Trade Act) and supported by President Manuel Roxas (t. 1946–1948). Members of the Philippine Congress questioned his victory at the polls and alleged that he had used terror, intimidation, and electoral fraud. The majority of the Congress unseated him and other members of the Democratic Alliance in June 1946.

Taruc openly turned against the government as a result, and reorganized the Hukbalahap into the Hukbong Mapagpalaya ng Bayan (People's Liberation Army). Huk forces under his command attacked government forces and spread their influence in Central Luzon. They were later able to spread to other areas in Luzon and into the Visayas and Mindanao.

In 1948, President Elpidio Quirino (t. 1948–1953) offered amnesty to the Huks and invited Taruc to a dialogue with him. Quirino offered Taruc the chance to regain his seat in the Congress as well as reforms that would improve the life of the peasants. Taruc met with Quirino, took his seat in the Congress, and negotiated with the government. However, feeling that the government was not serious in its offers and did not meet all his reforms, on 15

August 1948 Taruc again went underground and resumed the Huk attempt to overthrow the government.

The Huk offensive was checked by vigorous military operations, in conjunction with socioeconomic governmental programs, led by Secretary of National Defense (later President) Ramon Magsaysay (1907–1957). Taruc surrendered to the government on 17 May 1954, facilitated by *Manila Times* reporter Benigno “Ninoy” Aquino, Jr. (1932–1983). He was charged with rebellion and sentenced to twelve years in prison. Murder charges were later filed against Taruc, resulting in his being sentenced to life imprisonment.

Taruc was eventually released and turned away from armed rebellion. He became leader of the National Farmer’s Organization, an affiliate of the Trade Union Congress of the Philippines. During the period of martial law (1972–1981) under President Ferdinand E. Marcos (t. 1965–1986), Taruc supported Marcos’s land reform programs. The government recognized the Huk veterans of the Pacific War, including Taruc, as a legitimate anti-Japanese guerrilla movement.

Taruc writes for newspapers and broadcasts on radio; he is still active in programs—particularly the establishment of cooperatives designed to ease the plight of the peasants.

Taruc was a genuine peasant leader who rose against the government in the 1930s. He led the anti-Japanese Huk movement and led them against the government after the Pacific War. He served as an inspiration to peasants and labor leaders throughout the world.

TAUSUG AND THE SULU SULTANATE

The Tausug (*tau*: “people of the current”; *sug*: “sea current”), also known historically as “Suluk,” “Sulu,” or “Joloanos,” compose the dominant ethnolinguistic group in the Sulu Archipelago of the southern Philippines. Jolo Island, located near the heart of the archipelago, constitutes the cultural and political center of Tausug society. However, major concentrations of Tausug are also present on Pata, Tapul, Lugus, and the Siasi islands; on the north and east coasts of Basilan; and in the Mindanao provinces of Zamboanga del Sur and Cotabatu. In addition, during the last three decades, increasing numbers of Tausug have migrated to eastern Sabah (Malaysia), chiefly to escape secessionist violence on Jolo and Basilan. Today, they are found from the Labuk-Sugut districts southward to Tawau.

In the Sulu Archipelago, the Tausug typically occupy the larger high islands, suitable for intensive agriculture, leaving the low, soil-poor coralline islands to the more maritime Sama. The Tausug is a culturally unified group, and regional differentiation is minimal. On Jolo Island, coastal-dwelling Tausug refer to themselves as *Tau Higad* (*higad*: “seacoast”) and to inland dwellers as *Tau Gimba* (*gimba*: “hinterland”), whereas both groups refer to Tausug living on islands other than Jolo as *Tau Pu* (*pu*: “island”). In Sabah, the Tausug are commonly known as “Suluk.”

The Tausug population of the Philippines was estimated at 325,000 in 1970, of whom 190,000 lived on Jolo Island. Following the destruction of Jolo Town in 1974 in the course of fighting between Muslim Tausug separatists and government Christian soldiers, that figure probably declined, as considerable numbers of Tausug were evacuated or fled, many to Basilan, Zamboanga, and Sabah. Although some have since returned, fighting has continued on both Jolo and Basilan Islands. In Sabah, locally born Tausug numbered 44,389 in 1991. Current estimates of their number, together with recent refugees, run as high as 150,000.

The language spoken by the Tausug belongs to the East Mindanao subgroup of central

Philippines languages. Its closest affiliation is with Butuanun, an East Mindanao language spoken at the mouth of the Agusan River. The two languages are believed to have separated some 900 years ago. It also exhibits extensive linguistic convergence with Sama/Bajau, indicating a long historical association. Tausug shows little dialectal variation, and the language served historically as the lingua franca of the Sulu sultanate. A Malay-Arabic script is used for religious and other writings, and, according to eighteenth- and nineteenth-century European visitors, Malay served as a second court language.

History and Cultural Relations

The Tausug appear to have come to Sulu from northeastern Mindanao as a result of contact with Bajau/Sama traders. This movement probably began sometime in the tenth or eleventh century and was related to the growth of Chinese trade during the Sung (960–1279 C.E.) and later Yuan (1271–1368) periods. Linguistic evidence suggests that a Tausug-speaking community may have originated from a bilingual population established in Jolo by Bajau/Sama traders and their Tausug-speaking wives and children. By the end of the thirteenth century, the Tausug emerged as a regionally powerful commercial elite.

The date of the earliest Islamic penetration is uncertain, but initial contact possibly began in late Sung times, when Arab merchants opened direct trading links with southern China by way of the Sulu Archipelago. There also seems to have been some early proselytizing by Chinese Muslims. Sufi missionaries, who came to the area from Arabia or Iraq via Malaya (West Malaysia) and Sumatra, reinvigorated Islam in Sulu.

The Sulu sultanate was established in the mid-fifteenth century, putatively by the legendary Salip (Sharif) Abu Bakkar or Sultan Shariful Hashim. Its establishment consolidated the ascendancy of the Tausug in the Sulu Archipelago and appears to have furthered their social and economic differentiation from an earlier Bajau/Sama-speaking population. The sultanate attained the height of its power comparatively late, in the eighteenth and early nineteenth centuries, when most other indigenous states in the region were in decline. At its zenith, its influence extended from Sulu

through the coastal foreshores of Mindanao and northeastern Borneo. Jolo emerged during this time as a major center of trade and piracy and as an entrepôt for slaves, most of them taken from the central Philippines. In addition to Tausug raiders, Ilanun and Balangingi Sama fleets under the commission of Tausug aristocrats also carried out slave raiding. Following Spain's colonization of the Philippines in the sixteenth century, warfare with the Spanish was almost continuous for the next 300 years. The first Spanish attack on Jolo Town occurred in 1578. The town was occupied briefly in the seventeenth century, and a permanent garrison was established for the first time in 1876. The Spanish presence was at best tenuous, however, and never extended to the countryside.

After Spain's defeat in the Spanish-American War (1898), U.S. troops occupied Jolo Town in 1899, but stiff resistance prevented them from gaining control over the interior of the island until 1913. The Pax Americana that followed saw the abolition of slavery, confiscation of firearms, and a temporary curtailment of piracy and feuding. In 1915, under the terms of the Carpenter Agreement, Sultan Jamal ul-Kiram II (r. 1894–1915) relinquished all claims to secular power, although retaining his religious role as an Islamic sovereign. Since the Pacific War (1941–1945), indigenous forms of armed conflict have revived. In addition, modern weapons have flowed into the area since the early 1970s.

Today, Sulu is a major center of Islamic separatism in the Philippines. It is the birthplace of many of the founding leaders of the Moro National Liberation Front (MNLF) and its offshoots, and it has witnessed some of the most destructive fighting of recent years between secessionists and government troops.

Settlements and Economy

Except for towns and coastal fishing villages, Tausug communities are typically dispersed, with individual houses located close to fields. The household, or cluster of two or three adjacent households, constitutes the smallest territorial grouping. The next larger unit is the hamlet (*lungan*). Still larger is the community (*kauman*), having a common name and headman. The unity of the kauman depends upon intermarriage, the existence of a core kin group, attendance at a common mosque, his-

tory of past conflicts, and the political skills of the community's headman. Boundaries between kauman tend to be ill defined, varying, at any given time, according to the dynamics of alliance and feuding.

Subsistence is based primarily on agriculture, fishing, and trade, with some livestock raising (cattle, chickens, ducks). The Tausug practice a distinctive form of intensive dry-field rice farming. Permanently diked but nonirrigated fields are prepared by plowing, using cattle or water buffalo as draft animals, and are planted in dry rice. Rice is intercropped with corn, cassava, and a small amount of millet, sorghum, and sesame. There are three annual harvests: first, corn and other cereals; second, rice; and third, cassava. The harvesting of cassava continues until the following dry season. Farms are typically fallowed every third year. Other crops, generally planted in separate gardens, include peanuts, yams, eggplants, beans, tomatoes, and onions. The principal cash crops are coconuts (for copra), coffee, abaca, and fruit. Fruit, some of it wild, is an important source of seasonal cash income and includes mangoes, mango-steens, bananas, jackfruits, durians, *lanzones*, and oranges. Today, many coastal Tausug are landless and make their living from fishing and petty trade. Fishing, as either a full- or a part-time occupation, is practiced in coastal waters, generally close inshore, mainly using nets, hook-and-line, or traps. In recent decades some coastal Tausug have taken up agar-agar cultivation, bringing them into conflict, in some areas, with Sama fishermen. In the past the manufacture of bladed weapons was an important local craft, and traditionally women produced pandanus mats and woven headcloths, the latter for both sale and domestic use.

From the founding of the Sulu sultanate until the mid-nineteenth century, the Tausug conducted an extensive trade with China in pearls, pearl-shell, birds' nests, *trepan*, camphor, and sandalwood. Historically, considerable interisland trade also existed within the Sulu Archipelago. Today, copra and abaca are sold primarily through Chinese wholesalers, while Tausug or Sama traders handle most locally consumed products. Although it is now in decline, throughout the twentieth century smuggling between Sulu and nearby Malaysian ports in Sabah constituted an important economic activity, giving rise to significant local differences

in wealth and power. Both men and women engage in trade, although interisland trade and smuggling are largely male occupations.

Politics and Society

The major cultural focus of Tausug society is on conflict, politics, law, and litigation. Tausug society is hierarchically stratified and has been since at least the founding of the Sulu sultanate. Three major ranks were formerly recognized: nobles, commoners, and slaves. The nobility consisted of *datu*, men holding patrilineally inherited titles who exercised regional power, and *salip*, religiously revered men and women who claimed descent from the Prophet (s.a.w.). As in other Malay polities, those of *datu* status were differentiated into "royal *datus*" and "ordinary *datus*" (namely, those directly related to the line of the ruling sultan and others related only distantly or not at all). Commoners, who constituted some 80 percent of the population, lacked ascribed titles and ranking. The law defined the position of each category. Commoners and slaves were required to pay allegiance to a particular *datu*, although they exercised some choice in the matter, as individual *datus* lacked unambiguously bounded territories. To a considerable degree, wealth and power were achieved independently of inherited titles, so that men of humble origin could gain influence and, in acknowledgment, received bestowed titles and positions of prominence in the alliance hierarchy. The system has thus been characterized as one of "status-conscious egalitarianism."

Although centralized as a polity, political power within the traditional Sulu sultanate operated primarily through networks of interlocking leader-centered alliances. Person-to-person bonds of friendship and patronage linked smaller alliances to larger ones in a ramifying network that extended from community headmen and local factional leaders to the sultan and his kindred at the apex of the system. Within the archipelago, the sultan's authority was strongest at the geographical center of the state, on Jolo and neighboring islands, and diminished to symbolic hegemony at its peripheries. Recognition of a leader's position in the alliance hierarchy was expressed through ranked titles (*panglima*, *maharaja*, *orangkaya*, *parukka*, etc.). Part of the sultan's authority de-

rived from his powers of investiture and control over the title system. At each level of the alliance network, leaders acted as representatives of the law, performing legal functions, mediating feuds, and imposing fines. They also offered their followers physical protection and, from the sultan downward, were responsible for administering religious law and for appointing local and regional religious officials. At the capital, a state council (*ruma bichara*) made up of religious advisors and leading datus advised the sultan. In addition to its advisory role, this state council reserved the right to determine succession. Today, traditional political values remain largely intact. Minimal and medial alliances still operate, whereas maximal alliances are now led by acculturated Tausug operating within the setting of Philippine electoral politics or secessionist factions.

Sulu is divided into two provinces, Sulu (Jolo) and Tawi-Tawi, both of which are part of the Autonomous Region of Muslim Mindanao (ARMM), which was granted partial autonomy by the Philippine government in 1989. Jolo, in turn, is divided into eight municipalities, each with elected officials, mayors, vice mayors, and municipal councillors.

The Tausug recognize three categories of law: pure Quranic law; interpreted religious law (*sara*), codified by the sultan and other religious officials; and customary law (*adat*), including offenses of honor. Armed feuds were, and remain, endemic. The pattern is chiefly one of individual revenge.

Religion

The Tausug are Sunni Muslims. Most preadolescent children attend Quranic school, or study the Quran with a private tutor, and when proficient, demonstrate their skill at recitation in a public ceremony called *pagtammat*. This is typically a festive occasion. Boys are circumcised (*pagislam*) in their early teens; girls undergo a similar rite (*pagsunnat*), but without ceremony, when they reach the age of five or six. The *imam*, the local religious leader, is an important community figure. He officiates at life crisis rites, offers religious counsel, and leads the faithful in prayer. Religion is central to Tausug identity and in the past played an important role in maintaining the hierarchical structure of the Sulu society. The sultan, as head

of an Islamic polity, was invested with religious authority. Official genealogies traced his descent from the Prophet (s.a.w.), and in his person he was expected to exemplify qualities of virtue and religious devotion. Paralleling the political pyramid was a religious one, conjoined at its apex in the sultan's person, and consisting, from state to community level, of religious advisors and mosque officials.

TAXATION

People in Southeast Asia long paid tax to local rulers as tribute, often because the point of a sword or the barrel of a gun forced them to. Some taxes were paid in currency, but tax revenues mainly took the form of a head or poll tax in kind, in the form of either requisitioned goods or labor. The amount of money in circulation was small, and few people earned cash incomes that could be taxed. Most of the population was engaged in sedentary agricultural production, and crops and rural labor were therefore the main sources of taxable surplus. Southeast Asia's most powerful states in the past—Angkor, Majapahit, and Pagan—depended on the ability of rulers and their tax collectors to extract agricultural surplus (particularly rice) from peasants and requisition their labor for the construction and maintenance of public works. Tax revenues were used to maintain the royal households and the bureaucracy. Often corrupt behavior by local tax collectors minimized the net revenues to the rulers.

Taxes were paid in currency in cities, where more people earned cash incomes. Cities expanded when trade increased in the seventeenth century. The tax farming system was widely used to collect urban taxes. In essence, tax farmers kept the revenues, particularly from port and customs duties. However, taxes on markets, gambling, and alcohol (arrack) production; road or river tollgate revenues; and from government monopolies on pawnshops and salt and opium sales, after having paid the ruler a fixed sum in advance, were secured often through competitive bidding among tax farmers. Earlier forms of tax farming involved an indigenous *syahbandar* (*shahbandar*, intermediary between traders and a ruler), but beginning in the seventeenth century tax farming by ethnic Chinese businessmen became more prominent. The Chinese as tax farmers functioned initially in the port cities under Dutch East India Company (VOC) control, and later in cities under control of the British and indigenous rulers. Tax farming was widely used, because rulers, unlike Chinese tax farmers, had limited knowledge of the taxable base and the degree to which it could be taxed without inhibiting economic

activity. Their bureaucracies were also too small. Ethnic Chinese tax farmers knew the tax base, understood what a tax farming license was worth, and offered the highest bids for the right to collect taxes.

During the process of colonization in the nineteenth century, governments of the budding nation-states seized prerogatives from indigenous rulers, including that of levying various taxes. Land tax in kind and corvée labor remained important, although it became possible to pay cash in lieu of corvée. In Java the colonial government forced small farmers to produce export crops, which earned them an income that they used to pay land tax.

Governments gave themselves an expanding mandate. Colonial governments, but also the government of King Chulalongkorn (r. 1868–1910) in Thailand (Siam), increasingly used tax revenues to improve and intensify public administration, and to provide more public goods such as roads, irrigation head works, port facilities and later railways, education, and health-care. Governments found new ways to tax commercial activities through the expansion to a greater array of taxable activities and the fine-tuning of the tax farming system. Leasing tax farms was not always the main source of government revenue, as monopolies (including export monopolies of tobacco, tin, etc.) were often more important.

Two main changes took place after 1900. First, taxes in kind were gradually scaled back. They were cumbersome, subject to annual fluctuation, and yielded relatively low net revenues. As economies diversified and monetization increased, it became easier to levy taxes in currency in some parts of Southeast Asia faster than in others. Consequently, corvée labor was replaced by a head tax. For instance, in Thailand the obligation on farmers to make available three months of labor or more for the king was replaced with a direct tax in 1899, and in colonial Java all compulsory labor was abolished in 1902. Still, some forms of corvée labor continued to be demanded by local administrations and rulers.

Second, tax farming was abolished as governments gained confidence in the capabilities of their administrations, which gathered more information about the taxable base. Thus a growing range of indirect taxes became levied and administered by government taxation ser-

vices. For instance, in Thailand the Royal Treasury Department was established in 1875 as the central agency for revenue collection; it became the Ministry of Finance in 1933. In the Philippines, tax collection was professionalized with the establishment in 1904 of the Bureau of Internal Revenue, which still exists today.

There were some antitax rebellions, such as the 1908 tax revolt against a new tobacco tax in Minangkabau (West Sumatra), the 1908 antitax rebellion in Annam, the 1927 Datu Tabil-led uprising in the Philippines against land taxation and the *cedula*, and the 1931 Saya San uprising in Burma (Myanmar). Although concerns about the tax burden may have been a trigger, these rebellions tended to have other causes, such as religious dissatisfaction. In Indonesia, several investigations in the 1920s addressed concerns about the tax burden on the Indonesian population.

Tax revenues increased quickly between 1900 and 1930. Economic expansion broadened the tax base. Revenues from taxes that had been less significant (such as stamp duties) increased. The efficiency of tax collection improved. However, tax systems became increasingly unwieldy and complex to administer. The cost of enforcement and administration was still relatively high. Taxes also had many anomalies and inequities. For instance, not all income-generating activities were taxed. Many taxes, such as the head tax or the company establishment tax, took no account of income generated. Not all forms of consumption were taxed, nor were they taxed at the same rate. The next challenge was simplification of tax systems, which involved a gradual change away from dependence on a wide range of indirect taxes toward direct taxation of personal and company income with progressively increasing rates. Flat-rate income taxes had been introduced in Burma in 1886, Indonesia in 1908, and the Philippines in 1913. The Philippines and Indonesia were the first to introduce progressive income taxes in 1920 and 1921, albeit with a high tax threshold that exempted most people. Malaya did not introduce an income tax until 1947.

The only significant change involved the introduction of several ad hoc taxes in the early 1930s in an effort to stem the fall of public revenue caused by crisis. The share of foreign trade

tax revenues increased, as exports of basic commodities were taxed in order to encourage processing before export, and imports were taxed at higher rates in an effort to further import-replacing manufacturing.

After the Pacific War (1941–1945), revenue systems in the region suffered from several problems. They were still haphazardly structured, showing the influence of historical accident, emulation of foreign tax systems, and ad hoc responses to specific situations such as the crisis of the early 1930s and the austerity of the late 1940s. There were many practical problems with taxation, particularly in Indonesia, Burma, and South Vietnam after independence—and to a lesser extent elsewhere. For instance, the myriad ad hoc alterations in tax laws had increased in complexity, inconsistency, and confusion. Moreover, uncertainty about new legislation and selective enforcement resulted in considerable tax evasion by concealing income, shipping capital overseas, or the exploitation of loopholes. In addition, economic stagnation reduced civil servant salaries and made tax collectors susceptible to corrupt behavior. As a consequence government revenue was low, at an average of 10 to 15 percent of gross domestic product (GDP), during the 1950s (Pierre Van Der Eng).

The accompanying table shows that in the 1950s, governments, except for that of Singapore, relied primarily on the revenues from taxing foreign trade. Even more than in the 1930s, governments used tariffs to protect domestic industry and used export taxes on exports of primary commodities either to encourage domestic processing or as an easy source of revenue. For instance, the state-owned rice marketing boards in Burma and Thailand served that purpose. In second place came revenues from taxes on domestic trade, particularly excise and sales taxes, while revenues from taxes on income and wealth were not as important.

The table reveals that dependence on taxation of foreign trade gave way to greater reliance on taxation of income and wealth after the 1950s. Countries shed import-replacing industrialization strategies and reduced tariffs and export taxes. The state coffers in all countries still benefited from the improved export performance in most of the region, because they taxed the increasing incomes of persons and companies. For instance, the table shows a

Shares in Public Revenues 1950–1990

Average 1950s	Indonesia	Malaya	Burma	Philippines	Thailand	S.Vietnam	Singapore
Taxes on foreign trade	55%	60%	50%	21%	46%	40%	0%
Taxes on domestic transactions	20%	10%	17%	45%	35%	41%	51%
Taxes on income/wealth	19%	14%	19%	19%	7%	5%	27%
Other revenue	7%	17%	15%	16%	13%	14%	22%
Total	100%	100%	100%	100%	100%	100%	100%
Per capita public revenue (\$U.S.)	5.2	26.2	5.0	10.7	8.7	2.9	57.0
1990		Malaysia				Vietnam	
Taxes on foreign trade	6%	18%	14%	24%	22%	25%	2%
Taxes on domestic transactions	24%	18%	24%	26%	40%	19%	10%
Taxes on income/wealth	64%	31%	17%	28%	27%	18%	27%
Other revenue	6%	33%	45%	22%	10%	38%	62%
Total	100%	100%	100%	100%	100%	100%	100%
Per capita public revenue (\$U.S.)	127.7	614.5	11.2	115.7	288.1	14.3	3,914.2

NOTES: Where possible converted with black market exchange rates to approximate the purchasing power of currencies. Vietnam 1990 refers to 1995.

significant increase in the share of income tax in Indonesia. This was in part due to an overhaul in 1984–1985 of the income tax legislation. The main reason was the growth of income taxes paid by oil- and gas-exporting companies, particularly state-owned Pertamina. In contrast, in Malaysia the oil and gas export windfall mainly took the form of export taxes and dividend subventions by state-owned Petronas. Singapore's profitable state-owned companies also contributed to the government's income through dividend subventions.

The tax systems of Indonesia in the late 1980s, Vietnam in 1990, and the Philippines in 1997 underwent comprehensive reforms aimed at simplifying procedures. In contrast, Thailand still uses the 1938 Revenue Code, which has

been changed frequently and remains less comprehensive than tax legislation in the other countries. Still, around the region governments abolished many small indirect taxes and introduced value-added taxes. Countries also enhanced their ability to tax the incomes of persons and companies through progressive income tax systems. This was supported by significant improvements in the capabilities of the taxation offices. Hence, since the 1950s, government revenue increased faster than economic growth to an average of 15 to 20 percent of GDP in the 1990s.

TÂY-SƠN REBELLION (1771–1802)

In 1771 a revolt broke out that was to plunge Vietnam into three decades of civil war. Its leaders, Nguyễn Nhạc, Nguyễn Huệ, and Nguyễn Lữ, were three brothers living in the An Khê foothills of the Trường Sơn range, 48 kilometers west of Qui Nhơn on the coast—whence their collective designation as the Tây-sơn (western mountains) brothers. They belonged to a section of the population composed essentially of peasants but with useful petty-bourgeois commercial connections. Nguyễn Nhạc was himself at one time a betel trader, before becoming a tax collector. Like the bulk of their followers, the three brothers were men of diverse experience, but it was Nguyễn Huệ, the second, who proved to be the military genius and charismatic figure.

The Tây-sơn insurgency was a social movement developing at the moment when, in the principality of the Nguyễn, an all-powerful regent, Trương Phúc Loan, managed the state from 1765 in the name of the minor lord and

oppressed the people. Initially directed against Trương Phúc Loan's usurpation and asserting the claim of the legitimate heir, the movement rapidly gained momentum and mass support. It developed the basic characteristics of a peasants' revolt. The customs stations on the frontier were attacked and plundered; callous officials and village chiefs were punished, their property confiscated and redistributed; land and tax registers were seized and burned; public granaries were ransacked and their stored rice distributed to the poor. The original nucleus of the movement consisted of mainly poor and landless peasants, deserters, exiles, and runaways. Criminals, thieves, and pirates numbered among its supporters, according to later Nguyễn sources. But it also attracted bonzes; progressive scholars; low-ranking mandarins and village officials; cattle dealers and merchants; Cham princes, who were offered restoration of their former dignities; and the hill peoples, who were promised various advantages.

By 1773 the Tây-sơn movement, after having seized Qui Nhơn and made it its capital, had developed into a serious threat to the stability of the Nguyễn state. But in the following years, the Tây-sơn leaders found themselves faced with a Trịnh invasion from the north that occupied the Nguyễn capital of Huế. This began an extremely troubled period, during which the whole of Vietnam was plunged into a three-cornered war, with the Trịnh and the Tây-sơn competing for domination and the Nguyễn struggling to survive in a few strongholds still remaining in their hands in the extreme south. To avoid having to fight a war on two fronts, the Tây-sơn leaders made a tactical alliance with the general commanding the Trịnh army. Shortly after, with the withdrawal of the Trịnh army, they were free to deal with the war in the south. By 1778 they were in effective control of the whole south, after having managed to kill nearly all the leading members of the Nguyễn family, with the exception of one prince, Nguyễn Anh. He managed to escape to Pulo Panjang in the Gulf of Siam, where he was able to rally his supporters. Meanwhile Nguyễn Nhạc proclaimed himself emperor.

In North Vietnam, a succession dispute among the Trịnh and an economic crisis aggravated by famine facilitated the spread of the Tây-sơn movement. In 1786, Nguyễn Huệ de-

feated the Trịnh, occupied much of North Vietnam, and assumed the imperial title that had once been that of the Lê dynasty, taking the title Quảng Trung in 1788. After almost two centuries of division Vietnam appeared consequently reunified, with the exception of some southern localities that still held out under Prince Nguyễn Ánh. However, severe strains were becoming apparent in the structure of the Tây-sơn state. Nguyễn Huệ's successes aroused the jealousy of his elder brother Nguyễn Nhạc. They also provoked Chinese intervention on behalf of the old Lê dynasty that saw in the collapse of the Trịnh the last chance for the revival of its ancient power. Nguyễn Huệ besieged Nguyễn Nhạc in the latter's capital at Qui Nhơn but was forced to accept an uneasy truce under the pressure of the Chinese intervention in North Vietnam. In early 1789 he repulsed the Chinese attempt to take Hanoi and was recognized by the Qing emperor in 1790 as the legitimate successor to the Lê.

Nevertheless, on Nguyễn Huệ's death in 1792, his power had by no means been consolidated. He left a ten-year-old son, Quảng Toàn, to succeed him, under the regency of a powerful mandarin, Bùi Độc Tuyên. The country was then divided into three parts. The kingdom of Quảng Toàn extended from Quảng-Nam province to the northern borders. The territories of Nguyễn Nhạc, with his capital at Qui Nhơn, lay to the south of Quảng-Nam. In the extreme south were the forces of Prince Nguyễn Ánh, who had been fighting a seesaw campaign with the Tây-sơn for the possession of Saigon. He finally succeeded in September 1788, with Siamese support, to capture the town, expelling the Tây-sơn from the southernmost bastion of their power. When Nguyễn Nhạc died in late 1793, his possessions were taken over by Bùi Độc Tuyên in the name of the young Quảng Toàn.

By this time the country had been devastated by more than two decades of war, and the Tây-sơn rulers had abandoned many of those altruistic principles that had made them so attractive to the peasantry and the merchants in the 1770s. Furthermore, the lack of strong leadership contributed to the success of Nguyễn Ánh's counterrevolutionary movement. By mid-1802, Hanoi fell; Nguyễn Ánh thereupon proclaimed himself emperor of all the Vietnamese territories.

Yet, despite the remarkable beginnings of reform under Quảng Trung, the Tây-sơn were reluctant to break completely with the past. Rather, a compromise was attempted between tradition and the assertion of a new indigenous identity. For instance, the traditional mandarin examination system was retained, but proficiency was required in the composition of prose and verse in *nôm* script. Agrarian reforms were attempted through conventional land redistribution and by bringing fallow lands into cultivation. At the same time, communal registers were introduced in order to induce the large floating population to settle. But there was no radical restructuring of society so as to resolve the perennial agrarian problems. Fundamental problems of agriculture remained. Trade and merchant activities were still in their infancy. Efforts were made to stimulate craft production and trade. Meanwhile, ironically, countermeasures were taken against the privileged position of the commercial class, such as the massacre in 1782 of thousands of Chinese traders living in southern Vietnam. The introduction of a unified currency system prompted the increased circulation of cash and the development of wage labor in the main commercial centers.

Although the Tây-sơn movement did not result in the creation of a new and lasting political order in Vietnam, in retrospect it can be seen to have foreshadowed developments that were later to change Vietnamese political life radically. What was especially remarkable about this popular rebellion, drawing its support from a peasantry oppressed by the demands levied on it by state officials, was that it did not rely upon millenarian religion to mobilize the large numbers of discontented peasants it attracted. Instead, the Tây-sơn invoked the memories of the ancient sage emperors whom Mencius (ca. 372–289 B.C.E.) had praised; by such invocations, and the declaration of the equality of the rich and the poor, they announced the beginning of the end of the old order in Vietnam. Despite its ultimate failure by 1802, the Tây-sơn rebellion thus inaugurated modern Vietnamese history.

TEMASIK (TUMASIK)

The place-name *Temasik* appears in several sources of the fourteenth century. It can be localized in the area of the south coast of the island of Singapore. Closely associated with it was the name *Long Yamen*, “Dragon’s Tooth Strait,” whence a mission was sent to Yuan-dynasty China around 1320.

Later fourteenth-century sources concerning this chiefdom include a reference in the *Desawarnana* (*Nāgarakertāgama*), a Majapahit court poem written in 1365 C.E., that lists Temasik as one of the Javanese kingdom’s vassals. Another mention is found in a memorial to a Vietnamese prince who could speak “the language of the envoys from Temasik” (Wolters 1982: 48, n. 45). A monk from Chiaochieh (north Vietnam) even in the seventh century was said to have been fluent in Malay (Wheatley 1983: 372). The two most important references, however, come from a Chinese document and a Malay source. The Chinese source is the *Dao Yi Zhi Lue*, written by a merchant named Wang Dayuan around 1349. Wang does not single out Temasik for special prominence, since it was not a particularly rich or powerful port. He did know the place rather well, however. For instance, he was able to report that “a few years ago” (perhaps around 1325) the “Siamese” besieged the place; they, however, did

not succeed in breaching its defenses (Rockhill 1915: 100). He also records that Chinese merchants lived here “mixed up among the natives” (Wheatley 1961: 82). This is the only port in Southeast Asia for which he records the existence of a resident Chinese community.

Wang also portrays the Dragon’s Tooth Strait as a dangerous place, a lair of pirates. Chinese ships sailing through this narrow waterway (the modern strait between Sentosa Island and Labrador Point) had to be on guard against canoes of warriors armed with blowguns shooting poisoned darts.

The Malay Annals (*Sejarah Melayu*) depict Temasik (under its modern name Singapore) as the first great Malay trading city. Five kings ruled the place, once repelling an attack from Majapahit, the second time being defeated by treachery. The last king, however, escaped and a few years later founded Melaka. This latter individual, Iskandar Syah, is a historical personage whose existence is confirmed by the Ming Annals. Combining information in the Ming Annals and the *Sejarah Melayu*, we can calculate that Temasik’s first ruler set up his kingdom there in 1299 C.E., while Iskander Syah de-camped around 1395.

Archaeological excavations have succeeded in uncovering some details of the fourteenth-century port. The hill now known as Fort Canning has yielded a wide range of local earthenware and Chinese porcelain, stoneware, glass, and coins, as well as gold jewelry. Some of the Chinese objects are of elaborate types unknown from other sites, attesting to a close connection between the inhabitants of the site (probably the ruling elite) and China. British reports of the early nineteenth century record numerous brick ruins on the hill, which have now entirely vanished. Sites along the bank of the Singapore River have yielded more objects of the same nature, plus Sri Lankan coins and proof of copper-working. A large inscription once stood at the mouth of the Singapore River written in a pre-Islamic, Indic-derived script palaeographically dated to the period of the ninth to fourteenth centuries, but this was destroyed in 1843.

TEMPLE POLITICAL ECONOMY
State-Sangha Relations during the
"Classical" Age

It was during the "classical age" of Burma (ninth to fourteenth centuries C.E.) that state-Sangha relations were institutionalized to become a recurring phenomenon throughout premodern Burmese history, and in some ways, to continue into the twenty-first century. In order to understand the history of the political economy of the temple and other religious buildings, the origins and growth of the state and the first unified kingdom of Burma must also be understood.

"Burma" is the colonial term for the country known indigenously since 1102 as Myanma (Myanmar), whose spoken colloquial name is Bama, from which probably came "Burma." "Burmese" is also a colonial term referring to the citizens of the country and culture; it refers to all ethnic groups belonging to that nation.

The state, whose major feature is urbanization, saw its beginnings around the first century C.E. with the culture we have come to call the Pyu. That culture dominated what was to become the area we know today as Myanmar or Burma, whose center was located in the dry zone of the country, the "heartland" of Burmese state and society, the nucleus of its demographic, economic, and political resources for nearly two millennia. After almost nine centuries, the Pyu polity and society were subsumed or replaced by the Burmese speakers

who in the mid-ninth century became the leaders of that state, to rule almost continuously for more than another millennium, until today. Their first kingdom, which unified the country as we know it today, was centered at the walled city of Pagan, and their dynasty was known as the Pagan dynasty, which lasted for nearly five centuries. It was during this Pagan period, from the mid-ninth to the mid-fourteenth centuries, that an intimate relationship between the state and Sangha (Buddhist church, monkhood) was born, grew, and became institutionalized in Burmese society.

The city of Pagan survives today as an ancient archaeological site of roughly 26 square miles (65 square kilometers), dotted with nearly 3,000 religious buildings, many of them still in use by devotees of Burmese Theravada Buddhism. Like nearly all the capital cities of Burma during premodern times, it is located in the dry zone of Upper Burma, so called because it receives an average of 45 inches (1,143 millimeters) of rain a year.

Although the walled city of Pagan was most likely built sometime in the mid-ninth century, it was not until the mid-eleventh century with King Aniruddha (r. 1044–1077), known as the first unifier of the country, that the material and human resources of the dry zone were successfully harnessed. This enabled him subsequently to expand and consolidate the rest of what was to become much of what is today's Burma. He did this by building defenses against the traditional route of invasion in the north and by constructing irrigation works on perennial rivers that flowed into the dry zone from the higher and wetter mountains surrounding it. As the soil in the dry zone was very fertile, only water was needed, and so his harnessing of these perennial rivers enabled Pagan to reap sometimes three crops of *sawah* (wet rice)—the economic foundation of the kingdom—a year. Thus agriculture was vital to the survival of Pagan, as it was to virtually every other dynasty and kingdom in premodern Burmese history. This fertile and flat plain created by the three major rivers—the Irrawaddy, Chindwin, and Sittaung (Sittang)—became the economic mainstay of the Pagan kingdom for several centuries, wherein lay its human, economic, cultural, political, and social resources.

Aniruddha's expansion was continued by his successors. Kings Kyanzittha (r. 1084–1113),

Alaungsithu (r. 1113–1167), and Narapatisithu (r. 1173–1210) expanded the kingdom to nearly what it is today, but, more important, consolidated and institutionalized what Aniruddha had done.

They stretched the kingdom from the upper reaches of the snowcapped mountains in the north to the sweltering delta at the Gulf of Muttama, a Y configuration that runs right down the middle of the country. This Y was attached to a long “leg,” the Tenasserim peninsula and its coastal cities that were important for foreign ideas and long-distance trade.

Thus, by the twelfth century, for the first time in Burma’s history, much of the country as we know it today was politically, militarily, and administratively governed by a monarchy from a single center: Pagan. By then, it included peoples and lands, cultures and languages, in the areas east and west of the Y configuration. But the core of the Burmese polity and the center of its power remained in and around the juncture of the Y created by the confluence of the Chindwin and Irrawaddy Rivers.

Equally important, the physical and military expansion and consolidation of the lands and human resources by Aniruddha and his successors were integrated with an ideology, perhaps best described as Burmese Theravada Buddhism, that became the predominant conceptual system of the state. Other beliefs founded in supernaturalism, based on human and non-human spirits, and Indic as well as local ideas concerning power, leadership, legitimacy, and authority were integrated with those of “orthodox” (that is, canonical) Theravada Buddhism of various schools, to create a Burmese political ideology.

In a state whose legitimacy was tied to the promotion and well-being of the Buddhist church, and a society whose people deeply believed in doing “good deeds” for the religion, this ideology was paramount. (The performance of “good deeds” shall in turn provide the merit needed to be reborn in the next life as a higher being.) As Burmese Theravada Buddhism became structurally and conceptually entrenched in state ideology and society at large, the Buddhist Sangha also became a prominent and regular socioeconomic and political force within that state and society. But it led, inadvertently and eventually, to a situation whereby, on the one hand, the legitimacy of

state and society was based on promoting the religion, and, on the other, the growth of the religious sector was weakening that very same state’s material wherewithal to remain viable as a Buddhist state. Consequently there was a “structural contradiction” difficult to resolve.

In other words, the legitimacy of state and society depended on the patronage of the Sangha, and that patronage was expressed in economic and material ways. Notably, this translated into the construction of temples, monasteries, rest houses, libraries, wells, irrigation canals, and the donation of productive rice lands and labor in perpetuity (often believers and all their family were donated as “servants of the Lord Buddha”). Over time, the number of temples, monasteries, and monks, along with the human and material wealth that supported them (particularly productive land and labor), grew enormously.

Initially, the integration of Theravada Buddhist ideology with the economy, polity, and society created a tremendous force that stimulated the social, economic, and political growth of the state. Subsequently, however, this relationship between state and church became a drain on the kingdom’s wealth, as land, people, and money flowed ceaselessly and permanently into the religious tax-exempt sector. Once that wealth became church property, it could no longer be used for what were considered state purposes. All this resulted in serious repercussions by the late thirteenth century, when nearly 63 percent of the then-cultivated land and a large amount of hereditary labor, along with much silver and gold, had become tax-exempt religious property (Aung-Thwin 1985: 186).

There were mechanisms by which the state could recover some of this loss without, at the same time, undermining the king’s role as chief patron of the religion. Although he could not and did not, as in Japan and China, use military force to take back the material wealth that the church possessed, he could and did use legal and ritual procedures sanctified by religious law. At the same time, the monarch could slow down the process of runaway wealth flow into the Sangha. One such procedure was called *sasana* reform—that is, the reform of the religion by “purifying” the texts, and with it, the monkhood as well. The complicated procedures, the magnitude of the process, and its kingdomwide implications needed the prestige

and might of the state to be successfully implemented; it allowed, in effect, the state to proclaim the current church “impure” for not following the important religious vow of poverty that was part of doctrine. Once declared “impure,” a monk and his property were no longer legally tax-exempt, and the state could confiscate the property and defrock the monk. At the same time, the state would create a new, smaller order of monks who were reordained in the more “orthodox” tradition of poverty. Such reform suited not only the needs of genuinely reform-minded monks who lived by the tenets of orthodoxy but also the needs of the state, which was concerned with the perpetuation of a large tax-exempt sector. Thus the relationship between the state and the Sangha was both ideologically cooperative and economically adversarial.

But sasana reform was only a temporary measure, for the more “pure” the new order was, the better the merit one accrued by patronizing it—so that once again, more and more people donated more and more wealth. Indeed, successors of reformers would donate even more to the new order to prove that they were more legitimate than their predecessors, ultimately measured by the growth and well-being of the church. In time, the once “pure” Sangha would become much like its predecessor that had been reformed—wealthy and powerful—and the whole process of wealth flow to the church and tax-exempt sector, along with the problems associated with it, would begin again.

During the last several decades of the thirteenth century, a weakened state and a wealthy church attracted invasion by external forces, most notably the Mongols. Although ultimately unsuccessful in either taking the capital city of Pagan or destroying the kingdom directly (after three successive attempts), the Mongols nevertheless exacerbated the problem of central weakness and the ever-present factionalism at court, ultimately accelerating the kingdom’s downward spiral. The resources and energy spent in the defense of the kingdom exacted a tremendous toll, which, when combined with the already depleted treasury, was more of a burden than the dynasty could recover from. Although the monarchy was resurrected by members of the royal family following the Mongol troubles for several decades, after the

invariable struggles for power, the dynasty and kingdom—toward the middle of the fourteenth century—finally became only one of several competing regional powers. The whole had returned to its parts.

This “structural contradiction” plagued the Burmese state beyond the Pagan dynasty and throughout its premodern history, and continued even into the twentieth century. For as long as the society’s beliefs and the legitimating system encouraged the economic growth of the church, the economic and political problems would remain to plague each new dynasty. Because institutions and the principles upon which they stood, as well as the material environment, remained relatively the same (that is, agrarian), post-Pagan state and society were affected in much the same way. More specifically, the merit path to salvation and the criteria for political and social legitimization in a society with finite agrarian resources and a stable, demographic growth rate continued to create the economic problems of tax-exempt revenues.

The problem was exacerbated in subsequent centuries, for gifts of land and labor to the Sangha made in perpetuity meant all new donations were added to those already extant, thereby creating a continual and cumulative problem. Donations to the Sangha continued at a relatively constant level in the First Ava dynasty that immediately followed Pagan. In the next period, the Toungoo (fifteenth to sixteenth centuries), donations of land per se may have declined somewhat. However, added to the already large amounts of exempted land in Upper Burma, where all the prime agricultural lands were, it was an increase in the total and only worsened the problem for the state. Since the Toungoo period saw increased commercial activity, the state may have donated less land and more cash, for it had less land to begin with and more cash. Indeed, one of the reasons Toungoo kings shifted their center from an agricultural to a commercial setting—the only time in premodern Burma’s history—may well have been the pressure exerted by the increasing loss of productive lands in Upper Burma. This pattern continued with the next dynasty to rule Burma, the Second Ava dynasty, which moved its capital back to Ava after about seventy-seven years in Lower Burma. Finally, at the time the British conquered and annexed Burma, the last Konbaung dynasty was strug-

gling with the same problem of wealth flow to the tax-exempt Sangha. Even after Burma became a modern nation, this intimate political and economic relationship between the state and Sangha continued in both the parliamentary and military periods. Today, although the economic consequences on the economy as a whole are not as significant as they once were when the latter was based almost entirely on agriculture and land, the political relations between state and Sangha are still very important.

The legacy of the Pagan kingdom lies in the principles and institutions that it established—particularly the relationship between state and church—which became the standard, the model, for Burmese society thenceforth.

TEMPLER, GENERAL SIR GERALD (1898–1979)

Winning "Hearts and Minds"

General (later Field Marshal) Sir Gerald Templer was Britain's most controversial postwar high commissioner of its protectorate the Federation of Malaya, serving from 1952 to 1954. He is best remembered for bringing a military approach to civilian problems in the multiracial society of Malaya.

After 1948, Malaya had been in a state of emergency to combat the armed insurgents of the predominantly Chinese Malayan Communist Party (MCP). In 1951 communist insurgents had assassinated Sir Henry Gurney (t. 1948–1951), Templer's predecessor, while he was on his way to the holiday resort of Fraser's Hill in the Pahang highlands. Although the situation in Malaya was getting out of the control of the civil and police authorities, the British government refused to impose martial law in the country and decided instead to continue civilian administration by using to the full the emergency powers it had acquired.

Templer's military regime succeeded in checking a difficult, deteriorating situation and turning it around, although this apparent military success was due largely to the change in communist strategy decided upon four months before he arrived. He, however, restored morale to the administration and got the military, police, and civil authorities to work together.

The impact of Templer upon Malaya was immediate. His tough and abrasive personality and no-nonsense approach, together with his rigorous direction of affairs, seemed to meet with early successes against the communist insurgents in the field. His tendency to speak bluntly, sometimes with foul language, shocked both European and Asian communities. His speeches frequently made the headlines, and even ruffled racial sensitivities. But in the second year of his administration he showed more tolerance and understanding of the complex problems of Malaya's multicultural society, so that by the time he left he had become subdued and benign.

Initially, the lull in hostilities between the communist insurgents and the government se-

curity forces had been credited to his strategies, but it was soon discovered that it was due to a change of policy by the MCP in urging its insurgents to avoid or reduce the number of public acts of violence and engagements with government troops. The communists were instructed instead to adopt legal and constitutional forms of struggle, including infiltration and subversion of political organizations. Templer's most notable strategy to counter the communists was to regard the war against them as a battle for the "hearts and minds" of Malaya's multiracial population. The strategy entailed the use of the stick and the carrot. Initially, the stick appeared to be given more prominence.

Templer's harsh policies became notorious when he began deliberately using collective punishment as a weapon of warfare on the local population, and greatly stiffened the penalties imposed on them. His showcase treatment of Tanjong Malim in Perak state, with the imposition of a twenty-four-hour curfew and reduced rice ration for the town, was unusually tough in response to the ambush and killing of a British patrol of twelve men—but it bore results. Shortly thereafter, information came from the inhabitants leading to the apprehension of twenty-eight suspects.

His actions raised a hue and cry in the local Chinese newspapers and in the British media, in the British Parliament, and in telegrams and letters to the British prime minister in London. But the British government defended his action. Tanjong Malim became only the first of a series of reprisals that continued until 1953. This not only increased Templer's unpopularity among the Chinese population, it also made the government's task of winning the psychological war—the battle for hearts and minds—against the communists more difficult. In spite of the obvious failure of collective reprisals to achieve their purpose, it was not for another fifteen months that he was persuaded to abandon them. In September 1953 he followed this up by declaring the existence of "white areas"—that is, areas free of the most irksome Emergency regulations, including food controls, curfews, limited hours of business, and restrictions on the movement of goods and people. The first deregulated state was Melaka.

Templer's strategy of the carrot was applied to some 500,000 squatters (men, women, and

children, 85 percent of whom were Chinese), who had been moved out forcibly from settlements at jungle fringes and resettled in about 500 "New Villages" (Stubbs 1989: 262). The authorities had regarded these squatter communities as the communists' main source of food supplies and a part of their network for obtaining shelter and protection. Removing the squatters to controlled areas with barbed-wire fences cut off the residents' contact with the communists. Although the resettlement move was seen as a punitive measure, the New Villages were provided with social and medical services. Templer ensured that money was spent to provide schools, roads, drains, electricity, and reasonable conditions of sanitation and public health, which had previously been lacking.

Despite this, Templer's relations with the Malayan Chinese Association (MCA), a political party formed at the initiative of his predecessor to represent the Chinese community and their interests, worsened and never improved. Although the MCA was contributing a lot to welfare work in the New Villages, Templer in June 1953 banned all lotteries run by political parties; he said that in their place government welfare lotteries would be increased. The MCA promptly retaliated by closing down all their welfare work in the New Villages.

Given his verbal and punitive strictures toward the Chinese community, Templer failed to get enthusiastic support for his call to the community to produce their right quota of recruits for the embryonic Federation Army. Although new citizenship legislation was introduced during his regime, under which by 7 May 1952 some 1.2 million Chinese and 180,000 Indians had automatically become federal citizens, the legislation allowing this was not of his making, for it had been prepared before he arrived (Cloake 1985: 304; Stubbs 1989: 115, 185; Purcell 1954: 218–220). But Templer did get the Malay rulers to agree to open the ranks of the Malayan civil service to Chinese and Indian citizens of the federation on the ratio of 4:1, Malays to non-Malays.

The British government in London, however, realized that the war against the communists could not be fought in the military field alone. Templer was urged to introduce political reforms, but he moved rather slowly, misjudging the mood of the people for immediate self-government and national independence. He

frequently stated that they were not yet ready for it. He also failed to recognize the potential leadership of Tunku Abdul Rahman Putra al-Haj (1903–1990), the president of the leading Malay nationalist party, the United Malays National Organization (UMNO), who later emerged as the country's prime minister and a leading world statesman. He tended to support more conservative and pro-British politicians such as Datuk Onn bin Ja'afar (1895–1962), who agreed to delay the advent of Malaya's independence after he stepped down from the leadership of UMNO. As many of his activities and energies were directed at the Chinese population, especially the resettlement squatter program, the Malay community generally felt that their interests were neglected.

It was when he saw the political tide turning that he grudgingly conceded to some constitutional reforms, such as the holding of federal elections. It was when the UMNO/MCA alliance demanded that federal elections be held by the end of 1954, to be followed by self-government, that he became aware that the end of British rule would come faster than he had expected.

The UMNO/MCA alliance, which was soon enlarged to include the Malayan Indian Congress (MIC), representing members of the Indian community, swept the federal elections that were duly held in July 1955, winning fifty-one of the fifty-two contested seats. The alliance was allowed to form the government and successfully negotiated and secured national independence from the British government on 31 August 1957.

After his departure from Malaya, Templer was promoted to overall head of the British army and later elevated to the title of field marshal in recognition of his military services. He died in 1979.

TENASSERIM

Lying on the southeastern littoral of modern-day Myanmar (Burma) facing the Indian Ocean, Tenasserim province has been fought over by Siamese and Burmese kings since at least the fourteenth century C.E., owing to its strategic location. Situated facing international trade routes and ports, it enjoys strategic proximity to the transpeninsular portage routes on the Isthmus of Kra linking the Indian Ocean with the port cities of Siam (Ayutthaya and later Bangkok), and the trade of the South China Sea. Consequently and inevitably, there were fierce conflicts to control the trade and revenues of Tenasserim. Its chief cities—Mergui, the hinterland city of Tenasserim on the river of the same name, Ye, Tavoy, and Martaban—have been regarded as the homeland of the Mon and Karen people, but their populations have also included the Mawken, Sea Gypsies, as well as Arakanese, Muslims, Indians, Portuguese, and many other nationalities. Mergui, protected by the offshore islands, provided a safe harbor in which trading ships sheltered from the monsoons. It was only after the rise of Singapore in the mid-nineteenth century diminished the strategic importance of Tenasserim that it ceased to be a conflict zone for the contesting states—namely, Siam (Thailand) and Burma. In 1826, as a result of the Treaty of Yandabo concluding the First Anglo-Burmese War (1824–1826), Tenasserim, with Arakan, was annexed to the administration in British India. Tenasserim proved more trouble than the British thought it was worth, costing more to administer than it produced in revenues. Upon establishment of the residency in Ava, one of the conditions of the Treaty of Yandabo, in 1837 the British attempted unsuccessfully to sell Tenasserim to the Burmese. In the words of J. A. Mills, Tenasserim, from the eighteenth to the nineteenth centuries, swung from “central-

ity to marginality” (1997: 35–58). Since Burmese independence from British colonial rule on 4 January 1948, Tenasserim has been beset by Mon and Karen insurgencies. However, recent explorations in oil and gas may restore Tenasserim to a place of importance in the region.

Since prehistoric times the ports on the Tenasserim coast have hosted a cosmopolitan population of merchants, traders, missionaries, and invading armies. Human occupation in this region, as shown by the cave site at Lang Rongrien in Krabi province, has been continuous since 38,000 to 27,000 years ago. In 245–250 C.E., a Chinese mission led by K’ang T’ai and Zhu Ying recorded ten “states” in Siam, Burma, the peninsula, and the archipelago that traded with Chin China (265–308 C.E.). Through the peninsula “states,” dependencies of the Funan polity centered in the Mekong Delta (first to sixth centuries C.E.), Chin China maintained trading relations with Ta-ch’in (Persia) via Ceylon (Sri Lanka) and South India. Tenasserim in these records is identified as Tien-sun. In the third century, its forest products, coral, ivory, pearls, glass, and precious stones made their way to the markets of the Chin capital as part of the Nanhai trade. The area around Tavoy and Mergui was rich in tin, apparently worked since prehistoric times. Following the widespread adoption of Buddhism in China in the fifth to eighth centuries C.E., many Chinese Buddhist pilgrims stopped at ports on the Tenasserim coast en route to India. The trade products changed accordingly to the trade in religious paraphernalia of the Buddhist faith, notably fragrant woods, incense, and candle wax. As Funan’s political power waned in the sixth century, the peninsular city-states asserted their independence, growing wealthy on the revenues of the international trade. One of these, Klong Thom in Krabi province, had for centuries held a special relationship with Ari-kamedu on the Coromandel coast of South India and was renowned for beads and glassware. Ko-lo near Mergui on the Tenasserim coast, and Takua Pa, P’an-p’an, and Ch’ih-t’u from the fifth to the eighth centuries, during Wheatley’s (1966) “Isthmian Age,” hosted Buddhist pilgrims, travelers, and merchants from many lands.

In the eighth and ninth centuries, as the Burmese and T’ai began to assert political

power in the mainland, Tenasserim was considered a wealthy province. It came under Pagan hegemony in the twelfth century. King Narapathisithu (r. 1173–1210) of Pagan drew Tenasserim more closely into the Pagan orbit in the late thirteenth century, when the region was the focus of predatory intentions from Ceylon and Angkor. By that time, the Tenasserim region had been drawn into the history of the mainland rather than the island world of the Srivijayan confederacy. In the early fourteenth century, the new T’ai state at Sukhothai sought to exert hegemony over Tenasserim through Martaban. The Siamese by 1460 had drawn Mergui and Tenasserim into the *mandala* of the new Ayutthaya polity. In 1488, King Trailok (r. 1448–1488) of Ayutthaya took Tavoy, thereby giving Ayutthaya direct access to the ports and trade of the Indian Ocean, the revenues from which helped to make Ayutthaya wealthy. Tenasserim’s importance to Ayutthaya was acknowledged in the sixteenth century by its being raised to the status of a vice-regal autonomous province. Muslim traders who were formerly based at Melaka, after that city’s fall to the Portuguese in 1511, flocked instead to the ports of the Tenasserim coast, through which flowed Indian textiles, minerals, opium, and dyestuffs to Ayutthaya in exchange for tin, Chinese porcelain, gums, and Thai Sawankhalok ware.

Tenasserim’s destiny as a field of conflict was marked in the mid-sixteenth century. In 1548, following his attack on Ayutthaya, King Tabinshwehti (r. 1531–1550) of the First Toungoo dynasty (1531–1599) demanded the customs duties of Mergui as ransom for the return of some royal prisoners. Mergui came under formal Burmese control in 1569 when Tabinshwehti’s successor, King Bayinnaung (r. 1551–1581), seized Mergui and conquered Ayutthaya. Mergui’s importance to the Burmese empire now established at Pegu was such that Bayinnaung made special provisions for shipping and merchants from India (Lieberman 1980: 216–217). Lieberman (1980) has estimated that by the late sixteenth century, some 18 percent of India’s trade eastward flowed through Mergui and Pegu. The Siamese under King Naresuan (Phra Naret) (r. 1590–1605) recaptured Tavoy and Mergui in 1593 after the defeat of the Burmese forces at Nong Sarai. In 1614 the Burmese recaptured Tavoy, but Mergui

remained in Siamese hands, a conduit for the trade revenues flowing to Ayutthaya. Nicolas Gervaise in 1688 noted Mergui as one of the first eight cities in the kingdom of Ayutthaya (Gervaise 1989). Its importance to the Siamese in the mid-seventeenth century was such that English merchants Richard Burnaby and Samuel White, friends of the Greek-born prime minister of King Narai's (r. 1656–1688), Constantine Phaulkon (d. 1688), were made governor and *sharbandar* (*syahbandar*, harbormaster) of Mergui. But their outrageous behavior led to a massacre of the English community at Mergui by the Siamese in 1687. Through Mergui in 1685–1687 the French priests, ambassadors, and soldiers came in their ill-fated attempt to establish dominance at the court of King Narai. In the early eighteenth century Mergui ranked second to Pegu in the elephant and tin trade with Madras. Mergui remained under Siamese control until 1760, when King Alaungpaya (r. 1752–1760) of the Konbaung dynasty seized Mergui en route to Ayutthaya; it was recaptured by the Siamese together with Tenasserim in 1761, only to be lost to the renewed Burmese invasion under King Hsinbyushin's (r. 1763–1776) commanders in 1765. One of three Burmese invading forces moving along the coast took Tavoy, Mergui, and Tenasserim, then advanced northward to Ayutthaya. Despite Siamese attempts to retake Mergui after the fall of Ayutthaya to the Burmese in 1767, from 1793 it remained part of the Burmese kingdom, until the British annexed Tenasserim in 1826. In 1809, Tavoy was selected by the Burmese king Bodawpaya (r. 1782–1819) as the staging ground for what was to be the last attempt to invade Siam from Tenasserim during the Konbaung dynasty.

In the First Anglo-Burmese War (1824–1826) the Siamese forces of King Rama III (r. 1824–1851) were poised ready at the border to take advantage of any opportunity presented by the British invasion to bring Tenasserim once more under Siamese control; in particular, they sought Tavoy. From 1830 the Tenasserim region, especially the Karens of Tavoy, Ye, and Moulmein, were the object of intense missionary activity by the American Baptist Mission in Burma from their headquarters at Amherst in British Burma. Mergui's declining importance as an international port was hastened in 1757 by the founding of Rangoon (Yangon), whose

trade revenues by 1797 were three times those of Mergui (Koenig 1990: 120). Throughout the nineteenth century, despite various schemes to improve the infrastructure of the province under its first British commissioner, Maingy, Mergui's economic fortunes continued to decline, overtaken by other places on the peninsula and changing international events.

Tenasserim's strategic importance was again highlighted during the Pacific War (1941–1945). Its three airfields, a priority for the Japanese as staging points for the invasion of Burma and Singapore, were seized on 23 January 1942. Mergui harbor was mined. Japanese naval forces at Mergui surrendered on 19 October 1944 to Allied forces in their reoccupation campaign.

Since 1948, Tenasserim has been the center of various insurgent groups—the Burma Communist Party (BCP), under Thakin Ba Thein Tin, was headquartered in the Tavoy area; the Karen National Union (KNU); and the Mon State Party—funded by the sale of Tenasserim's natural resources, particularly timber. In the past three decades, the area has been the scene of fishing rights disputes. Its pearl beds were in the hands of Sanda Win, General Ne Win's (1910–2002) daughter, and her husband (Lintner 1990: 62). In the 1990s exploitation of Tenasserim's oil and natural gas reserves saw increasing cooperation between Thailand and Myanmar punctuated at times by border disputes. Growing Chinese influence in the area and use of ports for Chinese naval operations in the Indian Ocean have been of concern to the Association of Southeast Asian Nations (ASEAN). These security interests, and Myanmar's membership in ASEAN in 1997, underpin Tenasserim's increasing importance to regional interests.

TERAUCHI HISAICHI, FIELD MARSHAL COUNT (1879–1946)

Conqueror of Southeast Asia

Field Marshal Count Terauchi Hisaichi was commander-in-chief of the Southern Army of Japan, which ruled occupied Southeast Asia during the Pacific War (1941–1945).

His father, Field Marshal Count Terauchi Masatake (1852–1919), was Japanese prime minister from 1916 to 1918. It was quite rare for both a father and his son to become field marshals in Japan.

Terauchi joined the army in 1897. He graduated from the Army College in 1909 and gained rapid promotion to senior appointments: chief of staff of the Korean Army in 1927, commander of the Taiwan Army in 1934, and commander of the North China Area Army in 1937. Meanwhile, immediately after the 26 February Incident of 1936, an abortive coup d'état staged by young extremist officers, Terauchi became minister of the army with the job of reconsolidating the army. Under his one-year tenure, the army widened its intervention into politics and strengthened its political power. His appointment in fact reinaugurated a system whereby an officer in active service could assume the post of minister of the army.

Prior to the commencement of the Pacific War (1941–1945), Terauchi was appointed commander-in-chief of the Southern Army in November 1941 and dispatched to Saigon, French Indochina. On 8 December 1941, the 1 million-strong Southern Army launched the war in Southeast Asia and by the end of May 1942 had occupied virtually the whole region. During the war his headquarters shifted from Saigon to Singapore in June 1942, to Manila in April 1944 (Terauchi himself moved in May 1944), and again to Saigon in November 1944. Tragic incidents such as *sook ching* in Singapore

Terauchi Hisaichi served in the Japanese army as the commanding general in North China during the early phases of the Second Sino-Japanese War and as field marshal in the southwest Pacific during World War II. (UCSB Davidson Library)

and Malaya (early 1942), the construction of the Thai-Burma “Death Railway” (1942–1943), the Imphal campaign (1944), and the “Death Marches” at Bataan (April 1942, Philippines) and at Sandakan (January 1945, North Borneo [Sabah]) took place with his approval.

Terauchi was promoted to field marshal in June 1943. He was said to have not always concurred with the Tokyo government; a notable example was his vain opposition to the secession of the four northern Peninsular Malay States (Kedah, Perlis, Kelantan, and Terengganu) of Malaya to Thailand. Despite a seizure of apoplexy in Saigon in April 1945, he continued in office. Despite setbacks in most theaters, he was determined to continue the war. However, upon hearing the broadcast of the emperor on 15 August, he persuaded his aides to surrender.

Interestingly, the British government removed his name from the list of war criminals in January 1946. The British took him into custody to Singapore in March 1946. Terauchi died of a cerebral hemorrhage in Rengam, Johor, Malaya, on 12 June 1946.

TET OFFENSIVE (1968)

A Turning Point

The Tet offensive in early 1968 marked a decisive moment in the Vietnam War (1964–1975), as well as the turning point.

This offensive took place three years after U.S. military intervention began in Vietnam. At the time, almost 500,000 men were deployed in South Vietnam; North Vietnam was being bombed constantly by the U.S. Air Force; and the chief commander in Saigon, General William Childs Westmoreland (t. 1964–1968), displayed optimism. Therefore the Americans were caught completely by surprise, especially since the Việt Cong (VC, Vietnamese communists) had launched a series of actions to divert their attention close to the 17th Parallel. Begun ten days before, the siege of Khe Sanh was regarded by the Americans themselves as crucial.

The conception of the offensive has been attributed to General Võ Nguyễn Giáp (1911–), minister of defense in Hanoi, rather than to the leader of the resistance in the south, Nguyễn Chi Thanh, who died in late 1967. Rather than laying siege to cities by occupying the countryside around them, like the Chinese, the Viet Cong preferred to trigger uprisings in the midst

Black smoke from fires set during the Tet offensive clouds the air over Saigon in 1968. The Viet Cong set the fires during attacks on the city on the Tet holiday, which is the celebration of the Vietnamese lunar new year. (U.S. National Archives)

of urban areas. Aided by the north and the communist camp, the “liberation forces” carried on a national tradition: in 1789, the chief rebel Quang Trung had attacked Thang Long (Hanoi), controlled by the Chinese, at the moment of Tet. A traditional Vietnamese festival, Tet celebrates the welcoming of the lunar new year. The night of the new lunar year always corresponds to a pause in activities, and the explosions of firecrackers rendered operations easier.

Was the 1968 Tet offensive really conceived to be successful? It would seem so, because the first banknotes distributed in the south in 1975, after “liberation,” were all marked by the date 1967. However, other reasons could have justified the offensive.

On the night of 30–31 January, surprise attacks were launched in the major cities. In Saigon, where the necessary means had been smuggled in, several operations were launched simultaneously—for example, on the army and police headquarters and radio facilities. The most spectacular was the attack on the American embassy at about 3 o’clock in the morning: nineteen members of a commando unit managed to enter the buildings and resisted counterattacks for more than six hours. At the price of extremely violent combat in the city and bombardments on the outskirts, the Saigonese–U.S. forces were able to retain control of the terrain. It was different in Huế, however, attacked at the same time; the Việt Cong captured the Imperial City and hoisted their flag. Determined to recapture the symbolic city at any price, U.S. units, supported by repeated artillery fire and aerial bombardments, took more than three weeks to accomplish this.

Violence spiraled out of control, illustrated by the photograph of the head of the Saigon police, General Loan, shooting a Việt Cong prisoner point-blank in the head with a revolver right in the center of Saigon. In Huế the bodies of more than 2,500 government officials and of several foreigners were found near the city after the battle. Even if some of these killings were the work of Saigonese Special Forces, most seemed to have been that of the liberation forces. Shortly afterward, in mid-March, three U.S. platoons at My-Lai exterminated hundreds of farmers without any justification.

Speaking in strictly military terms, the Tet offensive ended in a draw. However, beyond the

tens of thousands of registered deaths, its consequences were important. The conflict initiated a new phase in the media: fighting in the city was broadcast live, bringing about skepticism as to the outcome of the conflict. The U.S. commander-in-chief was replaced, and, despite new reinforcements having been brought in, the war came to a standstill. In his speech broadcast over radio and television on 31 March 1968, President Lyndon Johnson (t. 1963–1969) announced decreased bombings over the north, agreed to open negotiations, and indicated that he would not run for the next presidential term. Most important to the Việt Cong, however, was that another change was shaping up. The elimination of many of their leaders and militants, caused by the offensive and the repression that followed, would induce the north to send new leaders and fresh troops to the south—thus changing the nature of the relationship between the forces.

The Tet offensive revealed how vigorous resistance remained after three years of U.S. intervention, but also how crippling the situation was, inasmuch as none of the parties were able to bring about a decisive result. It modified not only the structure of U.S. engagement, now more inclined to seek a nonmilitary solution, but also that of the resistance, more than ever dependent on the north. Nevertheless, the war was to last another five years.

TEXTILES OF SOUTHEAST ASIA

Trade and commerce have influenced much of the history of Southeast Asia, owing to the key position of the region on land and sea trade routes. Of the items traded, textiles and associated products have played a major part.

The earliest textiles produced in the region were made from bark cloth. Later, weaving employed fibers from indigenous plants such as hemp, abaca, and wild swamp grass. Spindle whorls have been found in excavations of pre-historic sites on the mainland.

The use of indigo for dyeing blue-black probably predates Indian influence, and bark and tree roots such as morinda and sappan for reds and browns were also available at an early date. In mainland Southeast Asia, red was also produced from stick lac, the residue from insect deposits in tree bark.

The oldest form of loom found widely in Southeast Asia was the body tension loom, on which the warp forms a continuous loop; this type was probably introduced to the islands during the third millennium B.C.E.

The influence of Indian culture beginning early in the first millennium C.E. was associated with changes in textile technology and design as well as in costume. The use of words derived from Sanskrit to refer to the spinning wheel, silk, and cotton in most parts of the region suggests that Indians introduced them. Chinese records refer to the weaving of cotton in Sumatra from the sixth century. Frame looms, found widely in the Malay world and among the Cham, may also have been introduced from India.

Silk cloths are first mentioned in the maritime region in the sixth century C.E., worn by a king in Sumatra, and silk skeins were imported from early in the Śrīvijayan period; there is no mention, however, of sericulture until the thirteenth century. Chinese accounts of the fourteenth century refer to the trading of Indian double-ikat silk *patolu* cloth in the region. Silks continued to be prominent in trade, mentioned by the Spaniards as cargo items on Chinese ships in the Philippines in the sixteenth century. Muslim Gujerati traders continued to use the highly prized *patolu* as a medium of exchange, and they became an essential part of Javanese court costume. *Patolu* motifs were copied onto cloths from Bali to Rote and Sumba. Indian artisans may have in-

roduced the double-ikat technique used in making Balinese *gringsing* cloths. Imported Indian block-printed cotton cloths were also widely copied, and Sumatra's *pelangi* cloths owe a debt in technique to Indian *bandhani*. However, many elements of Indian trade cloths were copied from local textiles. That was certainly the case for textiles for the Thai market.

By the fifteenth century, Arab, Indian, and Chinese cloths were being traded in Melaka in return for spices, drugs, and precious woods. After Portugal took Melaka in 1511, the British and the Dutch set up trading factories in India where they produced textiles in order to compete for spices in the East. It is likely that *batik* was developed as a substitute for luxury Indian textiles in the Javanese courts when imports were disrupted as a result of Dutch interference in trade during the seventeenth century following the demise of the empire of Majapahit.

The Portuguese or Spanish might have introduced to the Philippines the pineapple leaf fiber as a weaving material for *piña*. In the sixteenth century a tribute imposed on the inhabitants payable in *piña* gave impetus to *piña* production. The influx of skilled Chinese artisans also encouraged the growth of the textile industry. Manila became the entrepôt for an exchange of fine fabrics and luxury articles from Asia for silver from the Spanish possessions in the Americas. The industry flourished for the next 300 years.

Textiles continued to dominate Southeast Asian trade with Europe until the nineteenth century, but European influence on the form of local textiles was limited. When European textiles began to be exported to the East in the nineteenth century, they continued to follow market demand as the Indian traders had done. However, some Eurasian batik designs remain popular, especially in Malaysia. European influences also include various types of embroidery and lace-making.

Dress codes in the region were affected by Islam and by European Christian missionaries, both advocating the adoption of clothing for the upper part of the body. During the nineteenth century male rulers and high-status officials adopted aspects of Western dress, such as trousers and military uniforms, often combined with local forms of dress. Although with globalization that trend has spread to wider sections of society, official encouragement has been

given to the wearing of local materials, partly to help develop the textile industry locally and partly to express national identity. Both aims have met with some success, especially in Indonesia and Thailand.

THAKIN

Thakin is a transliteration of an old Burmese word that came to have great political significance in Burma (Myanmar) nationalist politics in the 1930s. Originally having the meaning of “master” or “lord,” it had become used in such an indiscriminate manner by the 1840s that it was often thought to have no more connotation than the word *mister* in English. However, with the rise of British colonialism, the Europeans who held sway over Burma at that time took to expecting that Burmese would address them obsequiously by using the term. Like the word *sahib* in Hindi, it became a symbol of the racial domination of the Burmese peoples by the West.

Subsequently, in the early 1930s, Burmese nationalists who rejected what were perceived to be Western ways and values appended the term *Thakin* to their names to indicate that they were the rightful masters in Burma. The first to do so was Thakin Kodaw Hmaing, a fa-

mous poet and essayist of the period. He was one of the founders of the Dobama Asiayone (We Burmans Association, or DAA). Members of the DAA all marked their strong nationalist political posture by referring to themselves as Thakins. Soon the British authorities came to see the Thakins as a major threat to continued colonial rule. Among the leading Thakins were Aung San (1915–1947), who eventually led the Burma Independence Army and the Anti-Fascist People’s Freedom League; U Nu (1907–1995), who was the first prime minister of independent Burma; and Than Tun and Soe, key Burma Communist Party (BCP) leaders during and after the struggle for independence. The term is no longer in use in present-day Myanmar, except by the few remaining figures from the 1930s political era.

THAMMASAT UNIVERSITY

Palladium of Democracy

Thammasat University was the second state university (after Chulalongkorn University) set up by the first constitutional government to instill democracy among the citizens. The birth and development of Thammasat University are intertwined with those of the People’s Party, in particular Pridi Phanomyong (1900–1983), the intellectual leader of the party, who took it as his personal goal to establish a university for the future of a democratic nation.

Established by the Thammasat University Act in 1933, the university was inaugurated on 27 June 1934 as an “open university” with the objective of propagating the learning of law and politics to all. The university was then named “Thammasat Lae Karn Muang” (lit. The University of Morals and Political Science).

Throughout the 1930s to the eve of the Pacific War (1941–1945), Thammasat provided opportunities for higher education to all, especially those from the lower classes and from the provinces. The courses emphasized law and politics, which were the principal philosophy of the establishment of the institution—that is, to implement the rule of law in the country. By 1949 there were four major fields of study: law, commerce and accounting, political science and diplomacy, and economics.

Thammasat has been referred to as a “hotbed of radicalism” in Thailand. From 1934 to 1947, when the People’s Party was in control of the government, the university and its students were active in various political roles, particularly in the Free Thai Movement from 1941 to 1945; Thammasat was used as the headquarters for that underground movement.

After the 1947 coup, which ended Pridi’s political career for good, Thammasat was also brought under the control of the military-led government. In 1952, the name was changed to Thammasat University, leaving out “Political Science.” The fierce struggle by students resisting its subjugation to military power led to the creation of the famous slogan in 1952—that is, “Thammasat is a symbol of dhamma [right] protection,” the protection of the right or true (Buddhist) law. The slogan has since inspired subsequent generations of students to uphold the principles of liberty, equality, and justice well into the period of the October Student Revolt of 1973.

The most important event in the history of Thammasat was its involvement as a center for two October incidents: 14 October 1973 and 6 October 1976. The former was hailed as the “Day of Freedom” and the “Great Joy,” while the latter became its darkest page when students were massacred by government forces in its compound.

In 1962, Thammasat University introduced liberal arts education as an antidote to developmentalism, which increasingly has encapsulated Thailand. Since then, liberal arts education has spread to all universities in Thailand, providing what is called foundation core courses for all undergraduates. Thammasat thus has been regarded as the leader in the social sciences and humanities, not in pure and applied sciences. The shift from traditional courses, however, came in the age of globalization in the 1990s,

when medical schools and engineering were added to the university curriculum.

In 2001 the administration decided to move the whole campus to a new site at Rangsit, north of the Bangkok airport. The move incited protests from faculty and students as well as people who regarded the relocation as a destruction of the most quintessential symbol of democracy and the history of the people’s struggle to protect it.

**THANOM KITTIKACHORN,
FIELD MARSHAL (1911–)**

Tainted by Students’ Blood

Field Marshal Thanom Kittikachorn was the tenth prime minister of Thailand, whose tenure was terminated by the famous Student Revolt on 14 October 1973. Thanom succeeded Field Marshal Sarit Thanarat as premier in 1963, at which time the country had entered into an “American Era,” with U.S. troops and bases built up in Thailand to fight the war in Vietnam (1964–1975). It was a time of social ferment especially among the youth, which made it harder for Thanom to perpetuate the army’s control of the government and politics. His failure spelled the end of the army as a dominant factor in Thai politics and allowed for more political competition among other groups and classes of the population.

Thanom was born on 11 August 1911 in Tak province, where he received primary education before joining the Chulachomklao Royal Military Academy in Bangkok. He participated in the 1947 coup, which inaugurated a quarter-century of almost unbroken military

government. Unlike the 1932 “Bloodless Coup,” the coup group’s members were local graduates of the Chulachomklao Royal Military Academy. The subsequent reaction was the Grand Palace Coup of 1949, led by Pridi Phanomyong (1900–1983). Thanom led his army to seize the Grand Palace, which had become the headquarters of the rebel group. Afterward Thanom rose with Sarit to attain control over the army and in turn command more shares in the Plaek Phibunsongkhram (Phibul) government. The government was increasingly divided between the two rival army and police chiefs, both funded and supported by the U.S. Pentagon and Central Intelligence Agency (CIA) in the Cold War era in Asia. After Sarit toppled Phibul in a September 1957 coup, Thanom was named prime minister of the provisional government, which he was able to run for only nine months. In October 1958, freshly back from a medical operation in the United States, where he got ideas on developing the country, Sarit overthrew the government and established the first absolutist (namely, nonconstitution) regime in Thailand since 1932. Thanom was appointed deputy minister of defense and was seen as Sarit’s secondhand man.

With the death of Sarit from cirrhosis of the liver in 1963, Thanom succeeded as prime minister and minister of defense. By then people had begun to demand a return to constitutional government. The new constitution was granted, and Thanom established the Sahaprachathai (United Thai People) Party (UTPP) to run in the election of 1969. As expected, Thanom became the premier when the UTPP won the majority of seats in the National Assembly. Unable to control the members of parliament, he made a coup against his own government in November 1971 and ruled for a time by means of a Revolutionary Executive Council before issuing another constitution in December 1972, one that allowed for the military-dominated government without an elected assembly.

Unable to solve economic problems caused partly by the U.S. pullout from Thailand, the Thanom government lost its political trust with the people, and in particular with government officials. Corruption and abuse of power in his government were rife. The biggest protest against the government came from the students and intellectuals, who exploded in an uprising on 14 October 1973. Public resentment was fo-

cused on the triumvirate of Thanom, Praphat, and Narong. Field Marshal Prapat (Praphat) Jarusathien was the deputy prime minister. Colonel Narong Kittikachorn, Thanom’s son and Prapat’s son-in-law, headed the much-hated Board of Inspection and Follow-up Government Operation (BIFGO). Subsequent street protests led by students drove the notorious “trio of tyrants” to flee the country.

Two years later, Prapat and Thanom returned to Thailand in August and September 1976, a move that had been orchestrated to pave the way for intervention by the disgruntled army. As expected, the return of Prapat immediately ignited strong protest led by the National Student Center of Thailand (NSCT), and the Seni Pramoj government finally escorted Prapat out of the country. Before leaving, Prapat made a quick visit to see the king and queen. Learning of Prapat’s departure, Thanom entered the country as a Buddhist novice and was escorted by the immigration chief to Wat Bovornives, a royal temple, where he was ordained by the Supreme Patriarch as a monk. Heavy protest by students and others exploded as a result. The right-wing groups led by Kittivudho Bikkhu turned the issue into a religious one, accusing the students and protesters of destroying Buddhism.

The protest was met with more violence when two protesters were hanged in Nakornpathom province, allegedly by the police. The Seni government was unable to control the heated situation and was manipulated by right-wing coalition parties and politicians. The final straw was the student drama put on at Thammasat University depicting the story of the two murdered protesters. The play was viewed as *lèse-majesté* by right-wing newspapers and radio stations, which had been mobilizing the village scouts and Nawaphol (New Resolve) group, as well as the Red Gaur, to come out against the NSCT-led student movement. On 6 October 1976 the border patrol and other police units, together with right-wing groups, stormed Thammasat, where thousands of students were holding a protest against the return of Thanom. The onslaught led to a carnage of lynching and burning students to death, before the coup group finally took over the government again.

Since then Thanom has lived a private life with his family in Bangkok. The attempt by the

relatives of 14 October Heroes to bring him to court for his role in the suppression of 14 October has not been successful. Yet every time Thanom and his family have tried to clear up his role in that incident, the attempt has been met with protest from people demanding justice in the case.

"THE JEWS OF THE ORIENT"

"The Jews of the Orient" was an article written by King Vajiravudh (Rama VI) (r. 1911–1925) in July 1914, published in both Thai and English newspapers in Siam (Thailand). Writing under the pen name Asvabahu, the king intended to instill an awareness of Thai patriotism and to criticize what he saw as the dangerous characteristics of the Chinese by comparing them to the Jews of Europe. As a consequence, the famous phrase "Jews of the Orient" became a stigma of racism against the Chinese in Thailand for years to come.

The article was prompted by domestic and external political changes after Vajiravudh inherited the throne in 1911. The republican revolutions in China and Turkey made quite a stir among Thai government officials and urban middle classes, especially the Chinese community in Bangkok. The signs of warning were seen from the riot and strike organized by the Chinese secret societies (*hui*). Newspapers also

carried and published news and comments about social change and political revolution elsewhere, implying that Siam should follow in that direction. The failed coup of 1912, spearheaded by junior army officials aiming at replacing the absolute monarchy with a republican form of government, confirmed in Vajiravudh's mind that the country was at a crossroads.

Based mainly on the king's experiences while a student in England, the article traced the origins of anti-Semitic feeling among Europeans, in particular Russia, Germany, and France. The Chinese, he states, like the Jew in Europe, is always Chinese, wherever he goes and lives. He never changes or adopts the characteristics and beliefs of the host country. The problem with the Chinese is that, while he shares the wealth of the country where he lives, he never shares in its duties or sorrows. This pride of race and superciliousness toward non-Chinese thus leads to his attitude of superiority and selfishness.

The second reason the article cites for the comparison is the similarity between the moral contempt displayed by Jews for Gentiles and that of the Chinese for the *Huan* ("savages"). By relegating Gentiles and savages to the lower ranks of humankind and civilization, the Jews and Chinese, he says, feel no qualms about cheating those peoples, since they lack moral equality.

The third reason the article gives for the comparison is the extraordinarily acute money-making instinct, and all the negative consequences arising therefrom, in the Jews and Chinese.

Finally, Vajiravudh states that the difference between the two races—Jews and Chinese—is that the former had no country of their own, whereas the latter possessed a homeland. Although that fact made the Jews preferable to the Chinese, for spending their wealth in their adopted countries, they also, he says, attempt to grasp at political power, whereas the Chinese do not care much for political power.

The immediate impact of the article was limited to urban educated circles, in which many of the businessmen and government officials were Thai-Chinese or descendants of Chinese immigrants. The anti-Chinese ideas presented were not put into practice by the government. Such a negative stereotype of the Chinese, however, be-

came more pervasive in the next few decades and among a wider populace—among middle- and low-ranking officials.

However, in 1938, as part of the strategy of mobilizing Thai nationalism, Luang Wichit in the Phibul government utilized this idea of “the Jews of the Orient.”

THIRTY COMRADES

Striving for Burma’s Independence

The Thirty Comrades were the group of Burmese patriots led by General Aung San (1915–1947), the father of Burmese independence, who trained in Japan in 1940–1941 with the active support of the Minami Organ, a group of Japanese intelligence officers led by Colonel Suzuki. The Thirty Comrades belonged to the Thakin group of Burmese nationalists who had led the anticolonialist student strike of 1936. Many had been students at Rangoon University. They took the term *Thakin*, which means “Lord,” as an ironic jibe at the British colonial administration that compelled Burmese to address Britishers by that term.

Many of the Burmese nationalist leaders were arrested in 1940, but Aung San escaped, hiding on a Chinese boat and going first to Amoy, then to Japan. With the assistance of Colonel Suzuki and the Minami Organ, Aung

San secretly returned to Burma in 1941 and founded the Thirty Comrades. Suzuki arranged for their military training in three groups, much of it on Hainan Island. Under the colonial administration, Burmese (as distinct from Karen, who were favored by the British) were not allowed to bear arms or have military training. The Thirty Comrades formed the nucleus of the Burma Independence Army (BIA), dedicated to achieving Burmese independence from British and Japanese alike. Their actions were quite mercurial, at times appearing to be both anti- and pro-Japanese, and anti- and pro-British, depending on the situation and how the cause of Burmese independence could be best served. In March 1945, following disillusionment with the Japanese, Aung San threw the forces of the Burma Independence Army behind the Allied war effort.

There were various factions within the Thirty Comrades from the outset. The main lines were drawn among socialists, communists, and a group that might generally be called nationalists. After the Japanese surrender, these factions developed into the major political alignments in postcolonial Burma. The socialist group included Thakin Aung San (Bo Teza), Thakin Shu Maung (Bo Ne Win), U Kyaw Nyein, Thakin Chit Maung, U Ba Swe, and Thakin Mya. The communists included Thakin Soe, Thakin Ba Tin, Thakin Ba Hein, U Thein Pe, and Thakin Than Tun, Aung San’s brother-in-law, who joined the faction after the Japanese occupation. Thakin Nu belonged to the nationalist group, which preferred to be considered nonaligned. One member of the Thirty Comrades, Thakin Than Tin, died of appendicitis in Taiwan in 1941. Others were assassinated in the decades after independence as part of the continuing factionalism in Burmese national politics. These included Thakin Than Tun, who died in 1968. General Ne Win (1910–2002) led a military coup on 2 March 1962 that terminated the country’s twelve years of parliamentary democracy. He retired in 1988 and died at age ninety-two.

TIMOR

A Divided Island

Timor is the main island in the Nusatenggara group. The western part of Timor now belongs to Indonesia, and the eastern half became an independent state in 2002.

When the Portuguese established themselves on Timor in the area of Oekusi around 1520 for the trade in sandalwood, the island consisted of many small feuding fiefdoms. Portuguese Dominican monks established a fortress on Solor Island in 1561. In 1613 the Dutch took this fortress to use as a trading post for the Dutch East India Company (VOC). A treaty with the raja of Kupang allowed the VOC to build a fortress in Kupang and maintain a small battalion.

After the Dutch republic concluded peace with Portugal in 1641, the VOC and the Portuguese established spheres of influence on Timor: the Dutch in the west, the Portuguese in the east. Relations remained acrimonious, in part because both occasionally took sides in feuds between local rulers. The main challenge to Dutch presence came from the so-called black Portuguese (or *Tupassi*), descendants of mulattoes in the town of Oekusi, who turned the surrounding area into a Portuguese enclave in West Timor. Dutch military prowess forced the Portuguese in 1769 to leave the town of Liphao for Dili, the new capital. The VOC concluded a series of treaties with various rulers of Timor and the neighboring islands of Roti, Solor, and Sumba in 1756, which formed the formal basis for Dutch influence in West Timor.

In 1797 two English warships largely destroyed Kupang, when the Dutch refused to surrender. The English returned in 1810 with military reinforcements and took Kupang, Dur-

ing the English interregnum, the Portuguese increased their influence in Timor—for instance, by taking Atapupu port. The Dutch returned in 1816. Various small conflicts between the Dutch and Portuguese continued until treaties in 1859 and 1893 formally established spheres of influence.

Actual rule on Timor remained in the hands of the many indigenous rulers. The Dutch had insufficient manpower to exercise close administration themselves. Timor remained an outpost of limited relevance to the government in Batavia. Economic development remained minimal. The semiarid conditions, mountainous terrain, and sparse population prevented foreign enterprise from establishing plantations. The economy was dominated by subsistence agriculture. Sandalwood, livestock, and hides were the main export commodities. The same applied to the Portuguese half, which also exported coffee, tea, rubber, and copra. Until 1896, East Timor was ruled from Macao; it has since been ruled by a governor, but it remained an outpost in the Portuguese colonial empire. In 1917 there were about 330,000 Timorese on the Dutch side, 2,000 ethnic Chinese, and 350 Europeans (Stibbe and Ulenbeck 1921: 341). In 1919 there were 386,000 Timorese on the Portuguese side, 1,000 Chinese, and 900 Europeans, Tupassi, and Mestizos (Schlicher 1996: 246).

The Japanese military occupation of Timor in 1942 was disastrous, as drought struck in 1944 and at least 40,000 people died (Telkamp 1979: 75). After Indonesia's independence in 1949, West Timor became part of the province of Nusatenggara, later East Nusatenggara. East Timor became a province of Portugal in 1953. Both remained poor and underdeveloped.

The military regime that ruled Portugal ended in 1974, and Portugal decolonized its overseas possessions. In June 1975 it announced a three-year transition to full independence for East Timor, including a general election in October 1976. Two major political parties emerged: FRETILIN (Frente Revolucionária do Timor-Leste Independente, Revolutionary Front for an Independent East Timor), which supported independence, and Timor Democratic Union (UDT), which supported integration with Indonesia. UDT secured the support of the territory's police for a coup on 11 August 1975. FRETILIN in turn secured the support of the Timorese sections of the territory's army and re-

sisted the developments instigated by UDT. FRETILIN forces drove UDT supporters over the border into West Timor, and FRETILIN declared independence as the Democratic Republic of East Timor on 28 November 1975.

UDT supporters organized insurgencies from West Timor. Indonesian concerns about the left-leaning FRETILIN led to support for UDT and to an Indonesian attack on 7 December 1975. Indonesian armed forces captured Dili and soon occupied the core areas. UDT and other anti-FRETILIN groups formed a provisional government, which in July 1976 achieved integration into Indonesia as its twenty-seventh province, Timor Timur (East Timor). The legality of Indonesia's administration of East Timor remained disputed by the United Nations, however, and FRETILIN continued resistance through a guerrilla war. It became known that Indonesian troops had committed atrocities in December 1975 against the civilian population, as well as continued systematic violence with the aim of subduing resistance. The military forced the resettlement of the rural population. The ongoing war and the destruction or abandonment of food crops caused the deaths of possibly 100,000 people (Cribb 2001: 82–98).

During the next twenty-two years, East Timor experienced political repression, until after the regime change in Indonesia in 1998; then a popular referendum about East Timor's future was allowed on 30 August 1999. It resulted in overwhelming support for independence. Others, however, opposed independence. Consequently Timorese militia with the support of the Indonesian armed forces went on a rampage that lasted until Australian troops entered the territory on 20 September and forced the militia to withdraw to West Timor. In the process, some 250,000 East Timorese were forced to flee to West Timor and other parts of Indonesia, where they remained in refugee camps, often as hostages of the militias (*Jakarta Post*, 5 October 1999). UN-sponsored elections for a government of the territory were held on 30 August 2001, in which FRETILIN took 63 percent of the parliamentary seats. In August 2002, East Timor became an independent state.

TIN

Southeast Asia's "White Gold"

Southeast Asia produces more than half of the world's tin. A belt of tin deposits runs from Yunnan in China through mainland Southeast Asia, ending at the east coast of Sumatra in Indonesia. Rich sites occur in southern Thailand, West Malaysia, and the Indonesian islands of Bangka and Belitung (Biliton). Deposits of tin ore, or cassiterite, may be primary or lode deposits, usually embedded in granite rock, or secondary, so-called alluvial, deposits formed when weathering causes the rock to break down and water carries off the material. The heavy particles of ore concentrate along water-courses, not far from the surface, where they are easy to find and separate, even with simple technology. Historically, most tin mining in Southeast Asia has exploited alluvial deposits in open-cast mines; only in the twentieth century was mining of primary tin of interest.

Tin is also fairly easy to smelt, and for centuries Southeast Asians used the metal, often combined with other metals, in bronze. A major market for tin was in China, where it was used, alone or combined with other metals, in a variety of household objects and in tinfoil money burned in religious ceremonies; India was another destination. Following the example of Asian traders, early Portuguese and Dutch merchants traded tin from the Malay Peninsula, sometimes in Europe, but mostly in Asia.

During the eighteenth century, the expanding market for tin, above all in China, led to changes in tin production. Local rulers imported Chinese laborers to mine the tin in their domains. These outsiders, using technology from China or new devices, mined for tin in greater amounts and more cheaply than native workers. Organized in cooperative groups

called *kongsis* under bosses of their own choice, they pooled their labor, dividing the profits when the tin was sold. Because they worked more efficiently and more continually than local people, production increased, at first benefiting native rulers. Later much tin was smuggled and sold to independent European or Chinese traders prowling the nearby waters.

With the Industrial Revolution, demand for tin in Western countries rose; they soon replaced China as the major market for Southeast Asian tin. Tin plate, tin cans, and other products made all or partly from the metal came into widespread use; tin was also a base for dyes. Dutch colonial authorities took control of Bangka and its important production in 1818. In the Malay Peninsula in the 1860s, unrest in tin-mining areas and fighting among Chinese miners provoked British intervention and extension of colonial control, but the importation of thousands of coolies remained in Chinese hands, with some British supervision. Southeast Asia's mines continued to recruit in southeastern China to fill the expanding demand for laborers.

In the late nineteenth century, introduction of steam-driven pumps and other modern machines made it possible to mine deeper and larger sites, but at first that meant hiring more labor for the tedious work of hacking the soil and carrying out the pay dirt. After 1900 came more labor-saving devices: gravel pumps (giant water hoses to remove the dirt) and, above all, floating dredges that worked on flooded mine sites or on offshore deposits, digging the dirt and separating the tin ore.

Capital expenditures for mechanization gave Western investors an advantage over Chinese mine owners; they now came to control much large-scale production in British Malaya and the Dutch East Indies. Only after the 1940s, however, did native laborers break the near monopoly of Chinese mine workers.

Before and during the Great Depression (1929–1931), tin markets collapsed. Coolies were sent back to China or took up other occupations—petty trading or farming, usually on plots to which they had no clear title. During the Japanese occupation of Southeast Asia (1941–1945), despite the conquerors' hopes of controlling production, little tin was produced, and former workers planted food crops to survive.

British Malaya once led the world in tin production. Here, at a Chinese tin mine, a primitive work hut and modern mining equipment offer a study in contrast. Water is pumped into a tin-bearing area and tin ore is then sifted from the mud. (Bettmann/Corbis)

Although over the years most coolies returned to China, the hundreds of thousands who stayed changed the demographic balance where they lived. Ethnic Chinese became, by 1940, about 40 percent of the population in British Malaya and in Bangka and Belitung (Heidhues 1992: 178; Fukuda 1995: 40). Another effect of mining was ecological: large man-made lakes, surrounded by infertile soil and waste, remain when open-cast mines are abandoned.

Tin had been, after rubber, British Malaya's most important export product (and Malaya was the world's largest tin producer); in Siam (notably Phuket) and the Netherlands East Indies it was a major commodity. After the Pacific War (1941–1945), prices fluctuated with changing international demand, Cold War stockpiling by the United States, better recy-

cling, and competition from alternatives such as plastic, aluminum, and steel. Attempts to raise prices through a cartel failed in the 1980s.

Malaysia's new economy turned to new crops and industrial exports, discarding its dependence on tin, but it still has vast reserves. Indonesia, a low-cost producer, continues to export tin, despite generally sluggish world demand.

TJOKROAMINOTO, HAJI OEMAR SAID (1882–1934)

Bringing Nationalism to the Masses

Haji Oemar Said Tjokroaminoto was a leading Indonesian nationalist and Islamic leader. Born in the village of Bakur, Madiun, East Java, Tjokroaminoto was a charismatic figure, an enthralling public speaker, and the first father-in-law of Soekarno (Sukarno) (1901–1970), who was the first president of Indonesia. Son of a Javanese aristocrat, Tjokroaminoto enjoyed a first-class colonial education then available for the native population. After obtaining a degree from a training school for native officials called OSVIA (Opleidingschool voor Inlandsche Ambtenaren) in 1902, he spent a brief period as a civil official before turning his back on government service. In 1906, Tjokroaminoto moved to Surabaya, where he worked for private companies, continued his education at *Burgerlijke Avondschoon*, and started his political career as the leader of the local Boedi Oetomo (Budi Utomo) branch.

In 1912, Tjokroaminoto joined Sarekat Islam (SI), a growing Islamic nationalist group that previously was known as Sarekat Dagang Islam (SDI). He soon rose rapidly within SI. He was elected as deputy chairman of Sarekat Islam in 1913 and then appointed chairman to succeed Samanhudi in 1914, although it caused a serious row between both supporters. Tjokroaminoto set out to win the hearts and minds of hundreds of thousands of people, not only from

the traditional supporters of SI among Muslim traders of urban centers but also from peasants in rural areas. Tjokroaminoto was regarded as a messianic figure—*erucakra*, *ratu adil*, or *imam mahdi*—who was believed to possess mystical power to bring people into the golden age following the demise of colonial government domination. He also enjoyed close contact with many young nationalist activists, including the charismatic Soekarno; they usually gathered and stayed in his house in Surabaya. His article on Islam and socialism was widely read by young people who adopted a more radical stand against the Dutch. Consequently, under his leadership SI became the first mass-based nationalist movement in Indonesia, in contrast to groups that tend to attract only the elite.

Tjokroaminoto supported the creation in 1918 of the pseudo-parliament, the *Volksraad*. He served as a representative of SI together with Abdul Muis until he was jailed by the colonial government in 1921 on a charge of perjury in connection with the Garut affair. He was then replaced by another leading figure in SI, Agus Salim (1884–1954). Later, in 1927, he refused a seat in that body. Inside the party, Tjokroaminoto had to fight against internal conflicts when some party leaders such as Semaen (Semaun, 1899–1971) brought into SI socialist revolutionaries who embraced communism. In 1921 those who opposed communism, led by Agus Salim, succeeded in expelling communists and their sympathizers from SI. Although Tjokroaminoto finally attained the recognition and position he so desperately sought in the early days, he later found himself being displaced by the more radical younger generation of nationalist leaders who classified him into the cooperative faction because of his pragmatic acceptance of some colonial policies.

Tjokroaminoto penned many articles and served as editor of several Islamic publications. He died in Yogyakarta before finishing his controversial book *Tafsir Al Quran*, an interpretation and explanation of passages of the Holy Quran. His passing deprived the Islamic political groups of a commanding leader; consequently it brought about disintegration and further schism.

TO' JANGGUT (1853–1915) "Freedom Fighter"

To' Janggut ("The Bearded Elder") was the respectful nickname of Haji Mat Hassan of Pasir Puteh in Kelantan, who in 1915 led a brief revolt ending with his death. Kelantan came under British colonial rule in 1909 following the transfer from Siamese authority.

The underlying causes of the revolt were mainly the resentment of Engku Besar, the traditional chief of Jeram near Pasir Puteh, at the loss of privileges and authority caused by the appointment (from 1905) of a district officer to administer and collect taxes, and the resistance of the peasants to stricter enforcement of tax collection and the proposed introduction of a new land tax.

To' Janggut was a commanding figure, six feet tall (1.8 meters) and with a long white beard. He claimed to be invulnerable, a claim apparently believed by many. Like his father before him To' Janggut was a prominent supporter of Engku Besar, who probably encouraged him to mobilize the local peasantry in a successful

campaign against the payment of taxes. A Malay police sergeant was sent to arrest To' Janggut, who drew his *keris* (dagger) and killed him. He and his followers then pillaged the small town of Pasir Puteh and forced the district officer, an unpopular Singapore Malay, to flee.

There then followed a month (29 April to 24 May 1915) of confused colonial government action to deal with the uprising. Troops were brought in from Singapore; concurrently, Kelantan court officials were sent to negotiate with the rebels. The revolt, however, had lost its momentum at the time of an assault on a village near Pasir Puteh in which To' Janggut was killed by a stray bullet. His body was hung up in the town for several days before being given a decent burial. Nonetheless, in modern times To' Janggut has been added to the roll of Malay "freedom fighters" against colonial rule.

TOBACCO

Profitable Crop

Tobacco is one of the many products that, once peculiar to Meso-America, spread to the rest of the world following the Iberian "explorations" and conquests. It came into use in Europe in the course of the sixteenth century and made its way to Asia along the trade routes in the late sixteenth and seventeenth centuries.

In Meso-America it was associated with the ceremonial, even the sacred, though it was also a means of personal gratification. In Europe and Asia, it lost any religious overtones, though smoking it retained an element of ritual; while the emphasis was on personal gratification, it was initially used for medicinal purposes. Nicot introduced it to the French court as a medi-

nal herb, and Francis II (r. 1544–1560) found that, in the form of snuff, it cured his headaches. Chewed or smoked, it was recommended as a precaution during the Great Plague in England in 1665.

By contrast, King James I (r. 1603–1625) condemned smoking as harmful to the brain and dangerous to the lungs. But only in more recent decades—and only in the most prosperous societies—has it been widely condemned as a threat to health, and not without some hypocrisy. Like King James I, modern governments find it a useful source of revenue.

Tobacco grows on a variety of soils, but its quality varies with the soil. Both its cultivation and its preparation are labor-intensive. In Southeast Asia it was amenable to peasant cultivation. When plantations were introduced, it was still necessary to ensure personal attention.

“For home use, it is grown almost everywhere,” as John Crawford put it in 1856 in *A Descriptive Dictionary of the Indian Islands and Adjacent Countries*, “but it is only in the most fertile islands, as Java, Bali, and Luzon, that it is produced largely as an article of trade.” That of Luzon, he added, was exported, in the form of cigars, to India, Europe, and America (1961: 436–437).

In the Philippines the Spaniards had begun tobacco cultivation in the late sixteenth century, and it spread even to the mountain areas and the Muslim islands that they did not control. The threat to the continuance of their rule signaled by the British conquest of Manila in 1762 prompted a series of reforms. But the most successful, so far as the raising of revenue was concerned, was the creation of a government tobacco monopoly on the lines of the one recently instituted in Mexico. It enabled the Philippine government to do without the *situado*, or subsidy, from New Spain (Mexico). But it involved suppressing cultivation in some areas, so that tobacco grown in authorized *collecciones* could be disposed of to maximum advantage. That prompted smuggling and increased banditry.

Initially, too, cultivation was suppressed in one of the regions in fact most suited to producing high-quality tobacco, Cagayan. Only in the early nineteenth century was the ban dropped. When the government in Madrid asked for shipments of Philippine tobacco in the 1830s, it was found that Cagayan tobacco

was equal to that of Cuba and superior to that of the United States. The monopoly was, however, unable to meet the subsequent requisitions of the home government. Because of its contribution to revenue, however, it was not abolished till 1880.

Only in its latter phase had the tobacco monopoly in the Philippines—in origin a sumptuary tax—come to resemble the cultivation system in the Dutch East Indies to which the German traveler Friedrich Jagor had compared it. At the time, indeed, the Dutch were beginning to abandon the Cultivation System (*Cultuurstelsel*) and turn to private enterprise.

In Java—where the habit was to hold tobacco between lips and gums after the initial salivation produced by the traditional betel, rather than to smoke or chew it—it was grown on dry-season *sawah* or *tegalan*, particularly in Kedu and Rembang. Brought under the Cultivation System—though never a major component—it tended to lower the yields of succeeding rice and other crops. It also, of course, made heavy demands on labor, in return for a scanty remuneration set against the land rent.

In 1861 private merchants in Rotterdam sent out Jacobus Nienhuys to establish a tobacco plantation in Java. He was attracted by the accounts he was given about Deli, one of the territories on the eastern coast of Sumatra over which the Dutch had just begun to establish their control. Indeed the wrapper leaf produced by the plantations he and others established in Deli turned out to be of special quality. The foundations of the east coast's prosperity were also based, however, on oppression. On the one hand, the area became notorious for harsh treatment of imported Chinese and Javanese laborers. On the other, the symbiotic relationship the peasantry developed with the planters inhibited its developing new crops or responding to new markets.

Tobacco may have saved the fledgling state of North Borneo (Sabah). Planters from Deli were among those who established tobacco plantations on the northeast and east coasts and upriver in the 1880s, and the duty on tobacco enabled the governing Chartered Company to pay its first dividend. The prospect that Brunei would also benefit from the tobacco boom was one reason for Raja Charles Brooke's (1829–1917) preemptive strike on the Limbang in 1890. But the protectionist U.S. McKinley tariff

of 1892 struck the Borneo plantations a blow from which they never recovered.

In contemporary Southeast Asia, however, smoking flourishes. In Indonesia it displaced betel in the decades following the introduction of the “white” cigarette in the 1840s. That shift also, however, led to the emergence or re-emergence of a native style of cigarette, *kretek*: Indonesians added clove to their cigarettes, as they had added spice to their betel. Kretek was the basis of one of Indonesia’s most successful industries, though with its high nicotine content, it was a health hazard.

TONKIN (TONGKING)

In the very beginning of the seventeenth century, the Vietnamese territories, although placed under the nominal authority of the Lê dynasty (1428–1527, 1533–1789), were actually divided into two sharply opposing principalities. In the north, the Trịnh lord held power in the name of the Lê sovereign. In the south, in the former possessions of Champa centered in the region of the present city of Huế, the Nguyễn lord maintained an independent government out-

side of the Trịnh’s control, continuing all the while to profess allegiance to the Lê. Open warfare broke out in 1627. The Nguyễn claimed to liberate the Lê sovereign from the usurpation of the Trịnh, while the latter declared their purpose was to punish a rebellious vassal and to recover for their emperor his lost territories. After almost fifty years of warfare, with an interminable series of military and naval attacks and counterattacks, a stalemate was apparent in 1672, and the Trịnh had to accept the existence of a virtually separate kingdom on their southern frontier. A system of walls built on the 18th Parallel clearly delineated the boundary between the two domains. Westerners had come to distinguish the “Kingdom of Tongking” (a transliteration from Đông Kinh—“the eastern capital”—the denomination of Hanoi) and the “Kingdom of Cochin China.” To the Chinese and the Japanese, the latter was known as Guangnan.

These two states were reunited in 1802 under the rule of the heir of the Nguyễn, who took the reign title of Gia Long (r. 1802–1820). The new empire of Vietnam comprised three main regions (*Kỳ*), each with its administrative headquarters. The old patrimony of the Nguyễn formed the central part of the empire (Trung Kỳ), comprising nine provinces placed under the sovereign’s direct administration. Tonkin (Bắc Kỳ), with the administrative seat of its imperial governor-general (*tổng trấn*) at Bắc Thành (the Northern Citadel, or Hanoi), had thirteen provinces. Away in the extreme south Gia Định (present-day Saigon), the administrative center of the six provinces of Cochin China (Nam Kỳ) that had been progressively conquered at the expense of Cambodia, was also the seat of an imperial governor-general. This tripartite division of Vietnam was perpetuated at the end of the nineteenth century by the French occupation.

In order to control access to South China and to open the Red River to French trade, French expeditions were sent into Tonkin in 1873 and 1882; the latter resulted in a full-scale colonial war, complicated by Chinese intervention, and the establishment of a French protectorate in 1884. Vietnam had to concede to France a more direct control over Tonkin than over Trung Kỳ (Annam), where the court of Huế preserved its administrative structures. Tonkin thus fell increasingly under direct

French administration, without the protected government being able to exercise any control. Theoretically, Tonkin remained under the authority of the Vietnamese emperor in Huế, who was represented in Hanoi by a *Kinh-lược* (imperial high commissioner). However, by the royal edict of 10 June 1886, royal attributions were delegated to the *Kinh-lược*, thereby empowering him to appoint officials and to make all decisions concerning the administration of Tonkin without reference to the court. In practice, this authority was devoid of significance. As under Article VII of the protectorate treaty with France, officials in Tonkin could be dismissed at the French authorities' request; the *Kinh-lược* was in fact in a subordinate position to the French *résident supérieur* of Tonkin. Tonkin's administrative organization was thus taken away from the Huế court and placed under the discretionary power of the protectorate's agents. This confiscation of the king's authority was completed ten years later, with the abolition in 1897 of the *Kinh-lược*'s office, and the devolution of his prerogatives to the *résident supérieur* of Tonkin, who combined from then on in his person the powers of decision and of command. The Vietnamese district mandarins were kept at their posts, but their acts were controlled by the French résidents, who thus had virtual direction of the political, judicial, and financial administration of the interior, while taking no part in the details of the local government. Tonkin's constitutional evolution from then on depended entirely upon the French high official placed at the head of both the protected administration and the protectorate.

During the Pacific War (1941–1945), the region was occupied by the Japanese, whose immediate objective was to gain bases and a strategic position in northern Vietnam, and to sever the Red River route that had been used to send supplies to Nationalist China. But the French colonial administration was not actually displaced until March 1945, while most of Tonkin was devastated by a cataclysmic famine. The Việt Minh (League for the Independence of Vietnam, formed on the initiative of the Vietnamese Communist Party) had in 1941 launched a guerrilla war against the Japanese from bases near the Chinese border. They seized this opportunity to assume effective control in Tonkin and in parts of Annam and Cochinchina (now renamed, respectively, Bắc

Bộ, Trung Bộ, and Nam Bộ). On 2 September 1945, the establishment of a “Democratic Republic” of Vietnam was proclaimed in Hanoi. But France's will to restore its colonial power led to a full-scale confrontation, with the Việt Minh taking to the hills and calling the population to arms for a general uprising to liberate the national territory. After December 1946, Tonkin was torn by guerrilla warfare between the French and the Việt Minh. The French defeat in 1954 and the Geneva agreements led to a de facto partition of Vietnam along a line—the 17th Parallel—about 50 miles (80 kilometers) to the south of that which had once divided the Trịnh and Nguyễn lands.

After 1975, Vietnam's northern provinces were again the scene of fierce combat when thousands of Chinese soldiers crossed the border to “teach Vietnam a lesson” for its Christmas 1978 invasion of Cambodia. But normalization of relations between China and Vietnam is at present the rule. Therefore, in December 1999 the two countries reached a historic agreement on their land boundary. A year later, the Agreement on the Demarcation of the Bắc Bộ (Beibu in pinyin) Gulf resolved the Gulf of Tonkin question by drawing the equidistant line between Vietnam and Hainan Island. Recently, the two countries have furthermore pledged to complete follow-up steps in negotiations relating to the Agreement on Fisheries Cooperation in the Bắc Bộ Gulf as soon as possible. Moreover both parties resolved to actively accelerate the process of fixing the border and the installation of markers on the land border, “making the Vietnam–China border one of peace, friendship and durable stability” (Nguyễn Thế Anh 2002).

TORAJAS

The term *Toraja*, meaning "People of the Highlands," is used by lowland populations such as the Buginese and Makassarese to refer to the inhabitants of the remote and rugged interior uplands of central and southwest Sulawesi, who grow rice on rain-fed hill terraces. Anthropologists distinguish three subdivisions of Toraja—Western, Eastern (or Central), and Southern—on the basis of cultural and linguistic differences, though there are also more specific linguistic and territorial designations, such as Sa'dan and Bare'e (Nooy-Palm 1979: 6). In the early accounts of travelers, explorers, and missionaries, the Torajas were characterized in especially exotic terms for their headhunting practices; elaborate funeral rituals for noble families, which involved the sacrifice of large numbers of water buffaloes and pigs, carved effigies of the dead (*tau-tau*) displayed in rock-shelters, and massive commemorative stones or megaliths; and their colorful, carved, gable- and saddle-roofed ancestral houses (*tongkonan*) and rice-granaries. Traditional Torajan origin-houses, particularly those of the nobility, were important foci of communal rituals (Waterson 1990: 236).

The Torajas' main contacts with the outside world, until the Dutch pacification of the hinterlands, were mediated through the lowland Muslim Buginese, and the Buginese language served as a lingua franca among the Torajan elite. Torajan-Buginese relations were some-

times expressed in violence and conflict, with the periodic formation of alliances between lowland rulers and Torajan chiefs. Inter-marriage resulted in some Torajans converting to Islam, and that process accelerated in the later nineteenth century. The coastal Buginese states such as Bone and Luwu' also undertook slave raiding into Torajaland. However, the main medium of contact was trade, and itinerant Buginese traders exchanged imported Indian cloths, Dutch coins, weapons, and salt with the Torajas in return for such items as forest products, slaves, and, from the nineteenth century, coffee, the main Torajan cash crop. Imported cloths came to have sacred significance in Torajan culture (Nooy-Palm 1976: 2499).

The Torajas, who until the end of the nineteenth century remained virtually unknown to the Dutch colonizers, then received special prominence in the early-twentieth-century historical and ethnographic literature on the Dutch East Indies through the work of Albert Kruyt and Nicholas Adriani. Albert Kruyt was one of the great colonial missionary ethnographers. He spent many years among the Bare'e Toraja and, with Nicholas Adriani, another missionary, wrote an encyclopedic three-volume work on their history and culture (1912–1914). He also wrote a four-volume study of the Western Torajas (1938). Kruyt arrived in Torajaland in the 1890s and lived there for more than forty years. Missionary conversion went hand in hand with the Dutch movement to pacify and bring into an administrative framework the remote interior populations following the occupation of the lowland Buginese states of Bone and Luwu' in 1905. After assaults by Dutch troops on the highlands in 1906, they managed within the space of two years to establish a presence in highland Sulawesi, though only after bitter Torajan resistance (Bigalke 1981: 101–116).

The distinctive and dramatic elements of Torajan culture have been preserved and re-created for the purposes of the tourism industry, but one should not overlook the profound changes that have affected Torajas since the establishment of Dutch colonial rule. These include conversion to Christianity, particularly following the arrival of representatives of the Dutch Reformed Church in 1913, the introduction of the Malay-Indonesian language to replace Buginese, the abolition of slavery and

headhunting in the early twentieth century, the strengthening of Torajan ethnic identity with the standardization of their language and culture, and the increasing migration of Torajas to coastal towns and other parts of the Indonesian archipelago in search of work and for education.

TORDESILLAS, TREATY OF (1494) Half the World Each

The Treaty of Tordesillas was signed on 7 June 1494 at Tordesillas in northwest Spain, by King João II of Portugal and Ferdinand and Isabella of Spain, following the voyage of Christopher Columbus (1451–1506) across the Atlantic and his discovery of the New World. The treaty was aimed at addressing the rival claims of the two kingdoms to lands already discovered, or yet to be discovered, in the Atlantic. These claims had previously been defined in a series of papal bulls promulgated after 1452 and then confirmed, with papal approval, by the treaty of Alcáçovas-Toledo (1479–1480).

At Tordesillas were recognized Spain's claim to all lands west, and Portugal's claim to all lands east, of a line drawn from pole to pole 370 leagues west of the Cape Verde Islands (about 46 degrees west latitude). At this stage, four years before Vasco da Gama (1459–1524) discovered the sea route to India (1498), the problem of conflicting Spanish and Portuguese claims in Southeast Asia lay in the future. It was not until Ferdinand Magellan's (1480–1521) circumnavigation of the globe in 1520–1521 that it became apparent that the line of demarcation drawn at Tordesillas through the Atlantic emerged on the other side of the world at 134 degrees east latitude. Consequently it placed the coveted spice islands in Maluku, to which Spain and Portugal both laid claim, in the Spanish hemisphere, although they had already been discovered and occupied by the Portuguese. A Luso-Spanish commission was set up in September 1522 at Badajoz-Elvas to resolve this question, and that eventually led to the Treaty of Zaragoza (1529), by which Maluku was placed in the Portuguese hemisphere and the Philippine Islands in the Spanish, and the provisions of Tordesillas were thus extended to cover the whole world.

TOUNGGOO DYNASTY (1531–1752) A Mighty Burmese Power

The Toungoo dynasty established the second Burmese empire, successor to Pagan. Founded by Minkyinyo (r. 1486–1531), who married the daughter of the king of Ava and received as dowry the rich "rice bowl" lands around

Kyaukse, the empire's expansion under his son, Tabinshweihti (r. 1531–1550), saw the recommencement of campaigns against the Shans and the T'ai (Siamese). Conciliatory to the Mon, whose manners and customs he liked, Tabinshweihti had a double coronation ceremony, at both Pegu, the Mon capital, and at Pagan, as a clear sign that he united both Upper and Lower Burma. After his unsuccessful invasion of Siam in 1548, he returned to Pegu, where he is said to have fallen under the spell of a Portuguese adventurer and become dissolute before being assassinated.

Under his successor, Bayinnaung (r. 1551–1581), the Toungoo dynasty presided over an empire even more extensive than that of Pagan, taking in Manipur in the west to Laos, Siam (Ayutthaya), and up to the borders of Cambodia in the east. It was an extent that carried within it the seeds of its own demise, for such a vast territory was impossible to administer effectively. Both Tabinshweihti and Bayinnaung made their capital at Pegu in Lower Burma, which was built into a wealthy commercial city attracting merchants from the Mediterranean to China. After his successful campaign against Siam in 1569, Bayinnaung, Lord of the White Elephants, took the stance of a *cakravartin* (*cakkavatti*, “wheel turning” monarch) or “Universal Ruler” in the Buddhist tradition. He established suzerainty over conquered lands, deporting their royal families to ensure continued loyalty. However, Prince Naresuan (Phra Naret) (r. 1590–1605) of Phitsanulok (Pitsanulok), Siam, by a ruse escaped from Burmese control and raised the standard of rebellion. In 1593, at the battle of Nong Sarai, the Burmese were defeated, the Burmese Crown prince was killed in a famous duel on elephant-back with Prince Naresuan, and Siamese independence from Burma was regained. Under Bayinnaung's son, Nanda Bayin (r. 1581–1599), what the father gained the son lost, and by 1599 the wealth of Pegu and the delta was squandered in the ravages of civil war. A federation of Mon, Arakanese, Portuguese, and Burmese ended the First Toungoo dynasty.

The Restored Toungoo dynasty (1597–1752) commenced with the crowning in Pegu of Nyaungyan, half brother of Nanda Bayin. His death in 1606 ushered in the reign of his son, King Anaukpetlun (r. 1605–1628), who commenced clearing the delta of the Arakanese

and their Portuguese and Mon allies. Following the campaign against Prome in 1608, by 1613 he had ended the pretensions of the Portuguese adventurer Philippe De Brito, who had installed himself as king at Syriam. Martaban and Ye were retaken in 1614 and Chiang Mai in 1615. By 1626 he had reestablished control of an area stretching from Kengtung and Kenghung in the east to the Arakan border in the west, to Tavoy in the south and Hsenwi (Mogaung) in the north (Koenig 1990: 7). King Anaukpetlun's untimely murder by his son in 1628, and that son's brief installation as monarch, are a measure of the anarchy rampant at the time. In 1629 one of the most able of the Restored Toungoo dynasty monarchs, King Thalun (r. 1629–1648), son of Nyaungyan, ascended the throne. He re-established the capital at Ava in 1635 and instituted wide-ranging administrative and financial reforms in 1635–1638, to put the empire on a sound basis again. His census or inquest in those years included the entire Ayewaddy (Irrawaddy) River valley. To enhance the revenues and power of the Crown, he concentrated the Crown service population groups in the core area around the capital, rather than in the provinces where the manpower would be under the control of the *bayins*, royal relatives who often rebelled against the Crown.

However, in the late seventeenth century, palace intrigues and undermining of royal prerogatives by ministers and their patronage networks sapped the strength of the dynasty. The transfer of power upon the death of a monarch was always a problem, for there were many contenders for the throne owing to the practice of polygamy. The sons of the major queens frequently contested the succession. Factions at court meant that by the time of Minye Kyawdin (r. 1673–1698), the monarch no longer exercised actual power; he reigned but did not rule (*ibid.*: 10), for real power was in the hands of the ministers. In the early eighteenth century, as the power of Upper Burma weakened, vassal states such as Chiang Mai and Manipur defected. A major conflict between the two factions at court in 1735 led to the destruction of one by the other and paralysis of the administrative system. With disorder apparent in Upper Burma, the resurgent Mon revolted in 1740, spurred on by heavy taxation demands from the north, and challenged the power of the last monarchs of

the dynasty. They sacked Ava in 1752, taking its king, Maha Damayazadipati (r. 1733–1752), and royal princes to Pegu. Known as “the king who came to Hanthawadi,” his execution—just as the new Burmese leader, King Alaungpaya (Alaung-hpaya, r. 1752–1760), was rallying his forces to attack the Mon at Pegu—led to a revolt at Prome in 1754. Support from this area contributed to Alaungpaya’s successful campaign in the delta. He razed Pegu in 1757 and established the Konbaung dynasty (1752–1885), the third and last of Burma’s dynasties.

TOWKAY

Towkay is a Chinese term in the Hokkien dialect that literally means “head of a family” or “patriarch.” Commonly its use is extended to refer to an owner and proprietor of a shop, a mine, or a plantation—in all instances, a person

of wealth and standing. Therefore *towkay* came to mean a prosperous merchant, a big-time trader, or a wealthy businessman. It is also used as an honorific to show respect and even awe for a person of standing and influence.

In Southeast Asia where Chinese communities were concentrated, *towkay* constituted the social elite in the absence of the traditional Chinese scholar-bureaucratic class. They dominated the various commercial bodies such as the chambers of commerce and excise farm syndicates. The *towkay* provided the leadership of the Chinese *hui* organizations, clan houses, and dialect group and district associations. In these pivotal decision-making positions, the power and influence of the *towkay* elite was dominant and far-reaching. As sponsors of Chinese educational institutions and governors of the boards of management of schools and colleges, they commanded considerable influence in curricula and the appointment of teachers. Likewise they served on management committees of hospitals and hospices.

In rural agricultural and mining communities, the *towkay* provided the communal leadership in interethnic interaction as well as with the local indigenous monarch or colonial authorities. The position of *Kapitan China* was appointed from among one of the *towkay* elite.

Basically, members of the *towkay* elite possessed a conservative and traditional outlook on social and cultural affairs. In the political and economic spheres, they abided by the principle of caution. In general they are reluctant and slow to change, often preferring to adopt a wait-and-see attitude and meanwhile consolidating the status quo.

TRADE AND COMMERCE OF SOUTHEAST ASIA (ca. NINETEENTH CENTURY TO THE 1990s)

As economies develop, they rely increasingly on the exchange of goods and services between people and firms. Domestic and international trade allows producers and countries to specialize in the production of the goods and services they can produce efficiently. Over time, international trade increased because of technical improvements in overland transport and international shipping, which lowered the cost of transporting goods and people.

In premodern Southeast Asia, the flow of goods and people was relatively small because of transport impediments. Local communities were self-sufficient to a high degree. Intraregional trade occurred, and Southeast Asia benefited from its location between the main centers of economic activity in Asia: India, China, and Japan. Given the cost of transport, goods traded over longer distances tended to be luxury products with a high price/weight ratio, such as spices (pepper, nutmeg, cloves, mace, etc.) and silk. Some basic commodities such as rice, dried firs, and salt were also traded, mainly within the region.

Islamic rulers controlled the route by which Asian luxury products reached Europe. Portuguese and Spanish explorers broke this monopoly, and direct trade started in the sixteenth century. It gradually increased during the seventeenth to eighteenth centuries. The main products of the region involved in the trade with Europe were spices and sandalwood from Eastern Indonesia and later also coffee (from Java), gambier (leaves used as tannin or dye, from Malaya), and sugar (from Java and the Philippines).

The main institutions in Southeast Asia's trade were the European chartered trading companies, such as the Dutch East India Company (VOC). Using superior military technology, they established strongholds in the region, such as Batavia, from where they aligned themselves with native rulers to gain permission to purchase goods or to demand tribute in the form of goods in return for protection. The Spanish were active only in the Philippines (which was an entrepôt for shipments of silver from South and Central America to China, and silk and porcelain from China to Europe). The

Portuguese, English, and Dutch had strongholds throughout Asia. Intra-Asian trade was as important as intercontinental trade, if not more so. European companies competed in intra-Asian trade with Asian traders, often Chinese.

Expansion of Exports, Nineteenth Century

In the late nineteenth century, export of commodities to Europe and North America became more important than intra-Asian trade, and production for export diversified. Industrialization in Western Europe and North America spurred world trade; trade with Southeast Asia was of minor importance to them. Still, in absolute terms, trade between Western countries and Southeast Asia increased. Sustained economic growth in Europe and North America increased demand for luxury products such as spices, tea, tobacco, and coffee. It also increased the demand for products with a lower price/weight ratio, used as raw materials in manufacturing industries—in particular, minerals such as tin and petroleum, and products such as copra, used by the soap and margarine industries. After 1870 the export mix of Southeast Asia changed toward bulk products.

Facilitating this shift was a decline in long-distance transport costs, as a consequence of the construction of railways and of increasingly larger steamships. The opening of the Suez Canal in 1869 reduced the need to ship goods around the Cape of Good Hope. The Suez Canal also benefited trade with North America, most of which went to America's eastern seaboard via Europe until the construction of transcontinental railways in the United States and the opening of the Panama Canal in 1915.

The increasing trade of bulk produce, such as rice from Burma (Myanmar) and Thailand (Siam), benefited more from technological changes in shipbuilding and organizational changes in the international shipping industry. The shift from sailing ships to ships propelled by steam increased the speed of travel. Ships no longer depended on the wind or on the season of the year (important for crossing the Indian Ocean). Steam engines became so powerful that they could propel increasingly larger steel ships, which soon replaced wooden vessels on long hauls. Within fifty years, international

shipping costs per ton declined to about one-fifth of their initial levels.

Major international shipping companies emerged that maintained regular shipping lines that spanned the globe. This benefited Southeast Asia, because the Straits of Melaka became one of the busiest thoroughfares of the world, linking East Asia with South Asia and Europe. While this happened, smaller steel steamships gradually replaced wooden ships on increasingly regular main intraregional shipping lines, many of which called on Singapore as the main link to international lines. Wooden ships were relegated to feeding the main intraregional lines. An increasingly dense shipping network spanned the region, with the ports of Rangoon, Belawan, Penang, Singapore, Bangkok, Cholon, Danang, Haiphong, Manila, Makassar, Banjarmasin, Tanjung Perak, and Tanjung Priok as nodes.

Exported Products

From 1900 to 1940, Southeast Asia's exports were dominated by bulk produce: tin, petroleum, rubber, sugar, copra, coconut oil, palm oil, hemp, rice, and teak. These remained important until the 1980s. There were, however, some changes. Exports of rubber, copra, and tin languished after the Pacific War (1941–1945), while rice exports from Burma and South Vietnam plummeted. Indonesia ceased to export

sugar, and Thailand exported increasing quantities of cassava and sugar. Exports of petroleum, gas, and forestry products from Indonesia and Malaysia increased rapidly in the 1970s and 1980s.

Primary commodities dominated until countries encouraged export-oriented industrialization after the 1960s and the share of manufactures in exports increased. First came textiles, later a range of other labor-intensive simple manufactures, initially in Malaysia and then in Indonesia. Today manufactures make up most of the region's exports, except in Burma, Vietnam, Cambodia, and Laos.

The Value of Trade

The accompanying table shows that, except for Malaysia, per capita export values were long low. The growth of exports from Southeast Asia accelerated after the 1900s, when exports per capita often more than doubled, particularly in Malaya, a sparsely populated country that rode a tin boom after 1870 and after 1910 an enormous rubber boom supported by massive inward migration. It embraced export-oriented industrialization in the 1970s, after which manufactures sustained its superior export performance.

As the value of exports from Southeast Asia increased, countries were able to pay for increasing imports. This trend was reinforced by the

fact that manufacturing industry developed, in Europe and later in Japan. Technological change and economies of scale in manufacturing lowered production costs and the price of manufactures. Up until the mid-nineteenth century, European countries offered little of interest to Asia, except for silver. The Industrial Revolution allowed Europe and later Japan to mass-produce goods, some of which were exported to Southeast Asia. Textiles dominated Southeast Asia's imports in the nineteenth century. Steel products and a range of manufactures from the engineering industries came second, followed after 1900 by a growing range of manufactures, including household utensils and bicycles, for the growing mass market in the region.

Organization of Export Production

Mass markets gradually took shape in the region, as growing exports created new income opportunities in export production, trade, and transport. Throughout the nineteenth century, smallholder products dominated exports. Western companies processed some of these products: for instance, sugar factories in Java processed smallholder cane. After 1900 the share in exports of Western mining and plantation companies increased. They specialized in products that required investment in processing facilities to achieve good-quality produce, such as tobacco, or that needed investment in transport equipment, such as petroleum. Some products were produced by both small producers and foreign companies, such as tin in Malaya and rubber in both Malaya and Indonesia, but with different production techniques. During much of the twentieth century, a significant share of exports continued to consist of products of small producers, such as rice, copra, rubber, and tin.

Different support networks evolved for large firms and smallholders that supported their production for export. Western agricultural enterprises (producing rubber, tin, palm oil, tea, tobacco, sugar, etc.) relied on specialized trading companies, the biggest of which also provided finance and market information. For instance, in colonial Indonesia, these were the so-called *kultuurbanken* (Cultivation Banks). In contrast, smallholders relied on ethnic Chinese traders for information about distant markets, purchase of produce, and credit to bridge the period un-

til the next harvest. The Chinese traders were part of extensive rival networks that were important in the development of the key smallholder export products: rice from Burma, Thailand, and South Vietnam, and rubber from Malaya and Indonesia. Before the Pacific War, several of the networks had Singapore as their hub. Chettyar (Chettiar) moneylenders were also crucial in the development of rice exports from Burma.

The role of Western companies and ethnic Chinese or Chettyar middlemen was controversial. In Vietnam, Malaya, Indonesia, and the Philippines, fervent nationalists saw Western firms as tools of colonial oppression. Both colonial regimes and local people regarded Chinese middlemen as monopsonistic extortionists. After the Pacific War, Western companies were nationalized in North Vietnam, Indonesia, and Burma. Governments established "monopoly marketing boards" and supplied subsidized formal credit to smallholders in order to stabilize and maximize farm prices, to eliminate the Chinese and Chettyar middlemen. Nationalization often proved disastrous, while the experiences with subsidized small credit and marketing boards were at best mixed. The development of manufactured exports since the 1960s owed much to inward direct investment by foreign companies.

Trade as "Engine of Growth"

Why didn't the successful development of export production after the late nineteenth century contribute to a higher rate of general economic development and to a higher general standard of living? The growth of trade may have been significant, but trade can only have an impact to the extent that an economy depends on it. Except for small economies, international trade is generally merely a "handmaiden" of growth. Except for Malaya and Singapore, Southeast Asia's trade dependence was for some time low. The countries in the region were long exporters of primary commodities. The backward linkages of primary exports are small compared with manufactures. For example, apart from labor, rubber production does not require a lot of inputs in the form of machinery and tools. In contrast, textile production uses labor, cotton as a raw material, and capital goods in the form of spinning machines

and weaving looms that must be constructed, maintained, and replaced, giving rise to a domestic machinery and engineering industry. The backward linkages differ between commodities. For instance, sugar production in Java and the Philippines was more capital intensive than rubber.

Furthermore, it is said that exporters of primary products around the world have suffered from a structural decline in the price of such products vis-à-vis the price of manufactures. The evidence, however, is not overwhelming for Southeast Asia. Changes in the terms of trade were at times significantly adverse (for example, rubber in the 1920s and 1930s), but also favorable (notably rubber in the 1910s and petroleum from Indonesia and Malaysia in the 1970s). When they were adverse, producers could still offset them, for example, by increasing the level of processing of their produce before export and thus increase the unit value of produce. The same was true with remilling of smallholder rubber after the 1930s. In addition, they could apply new technologies to raise productivity. For example, sugar plantations in Java used high-yielding cane varieties to reduce per unit production costs in the 1920s and remain competitive. Rubber producers in Malaysia replanted their tree stock in the 1950s and 1960s with high-yielding rubber varieties that increased labor productivity and helped producers to offset the fall in rubber prices.

Another option was protection. Throughout most of the twentieth century, the Philippines could continue to export sugar on increasingly favorable terms to the highly protected U.S. market because of a reciprocal tariff arrangement. The terms of trade of the Philippines plunged when the United States withdrew this favor in the 1970s.

Lastly, although at a cost, producers could change from one product to another. In Malaysia many rubber plantations, in the light of sustained low rubber prices, switched to palm oil production; many smallholders changed to cocoa production in the 1980s.

Trade Surpluses/Deficits

The limited impact of foreign trade on economic development may have been caused by the trade surplus that most countries had before

the Pacific War. This is often referred to as the "colonial drain," although Thailand was never a colony and Malaysia and Indonesia also had large trade surpluses after the war. The trade surplus paid for overseas remittances and was not used for investment in Southeast Asia.

As a percentage of exports, the export surpluses of especially Burma, Thailand, and Indonesia were very significant at 30 to 40 percent of exports during the period between 1870 and 1940, less so for Malaysia, Indochina, and the Philippines. The surpluses were used for payment of dividends, interest, pensions, and transfers—as dividends (or profits after reinvestment) to overseas shareholders in Western firms (particularly from Indonesia, Malaya, Indochina, and the Philippines as recipients of foreign direct investment). They were also used for interest, mainly on government bonds held overseas; private remittances by foreign nationals (Europeans, Americans, Chinese, Indians, and others); the pensions of Europeans and Americans who retired overseas from public service or private enterprise; and transfers, particularly of budget surpluses from Java to the Dutch treasury during the years 1830 to 1870 under the Cultivation System and from the Burmese province to the treasury of British India (until the time of Burma's fiscal independence in 1932). Except for the last, these payments were income that was earned through the productive use of foreign labor and foreign capital.

After the Pacific War, Burma, Thailand, the countries of Indochina, and the Philippines struggled with trade deficits, mainly because they became net recipients of overseas remittances. It was in the form of economic and military foreign assistance (particularly to the countries of Indochina) and from nationals working overseas (particularly Thais working in Malaysia and the Middle East, Filipinos working in Hong Kong, and Vietnamese who had fled the country after 1975). They also received growing amounts of foreign investment (except for Burma). Such inflows allowed countries to sustain a trade deficit. Indonesia and Malaysia maintained a trade surplus, which for Indonesia amounted to 50 to 60 percent of export earnings in the 1970s and 1980s. The surplus was caused by the fact that both were recipients of large amounts of foreign investment. The surplus sustained the required payments of dividends and interest.

Intraregional Trade

Intraregional trade has long been minimal in Southeast Asia, after export production for distant markets increased in the nineteenth century. Normally, neighboring countries tend to trade more with each other as their economies evolve. That was the case in Southeast Asia, but apart from transit trade via Singapore, intraregional trade increased more slowly than trade with the rest of the world.

The main product in intraregional trade was rice. It was traded from mainland Southeast Asia to island Southeast Asia, where it was the main staple food in areas that depended on export production of other products. Apart from that, countries in the region were on the whole more competitive than complementary. To a large extent they produced similar export products.

After the Pacific War, intraregional trade decreased as Malaysia, Indonesia, and the Philippines sought to achieve self-sufficiency in rice, and Burma and South Vietnam virtually disappeared as rice exporting nations. Thailand took over, but it exported most of its rice to outside the region. In addition, countries embraced import protection in order to encourage industrial production for domestic markets.

Since the establishment of ASEAN in 1967, efforts to encourage intraregional trade have had at best modest effects. The share of intra-ASEAN trade in total export initially increased but has since fluctuated around 20 percent, which was the same as in 1938. The volume of intra-ASEAN trade has increased substantially owing to Singapore's key role in the transshipment of cargo and containers to and from the rest of Southeast Asia.

Key Role of Singapore

Singapore has facilitated the region's international trade since its establishment in 1819 because of its location in the Straits of Melaka, one of the busiest shipping routes in the world. The Anglo-Dutch Treaty of 1824 brought political stability to the region. Singapore was also a free port, where no government discriminated between traders and ships of different nationalities. In the nineteenth century, Singapore became the main port for the international trade of regional smallholder produce (nutmeg, pepper, cloves, rattan, copal, sago, copra, and

later rubber) and of tin produced in Malaya by Chinese migrants.

Smallholders in Malaya, Sumatra, and British and Dutch Borneo relied on networks of Chinese middlemen who operated out of Singapore to purchase produce; provide advice about market conditions, international prices, new technologies, new seeds, and the like; and extend credit. They brought small quantities of produce to Singapore, where it was repacked into bigger assignments for shipment to Europe or North America. The products were often of poor quality. For instance, forest products such as gums and resins had to be refined for export. Gradually an important industry emerged in Singapore, which processed smallholder produce to exportable quality.

The Chinese networks also handled imports. Large batches of textiles imported from Europe, but increasingly also from India and Japan, were cut up into smaller batches for distribution via networks of Chinese middlemen to small shopkeepers (often also Chinese) in the region. In addition, simple manufactures such as household utensils and rice from Thailand increasingly found their way into the region.

Until 1870 sailing ships from China to Europe bypassed Singapore, but steamships started to bunker coal in Singapore, using the occasion to load extra cargo. They enhanced Singapore's regional entrepôt role. This was the structure that absorbed the enormous expansion of activity caused by the rubber boom of the 1910s and 1920s. In terms of volume and value of produce, the remilling and export trade of smallholder rubber from Malaya and Sumatra in Singapore defeated all previous processing and export of smallholder produce.

Singapore fully occupied the attention and participation of Western companies, in particular in trade, transport, and banking. Again, Singapore did not perform that role only for the Malay Peninsula but also for the wider economy of which it was the hub. For instance, plantation companies in both Malaya and Sumatra conducted much of their financial business in Singapore.

The business interests of Western companies and Chinese entrepreneurs did not compete in Singapore. For instance, Western companies were not involved in rubber remilling. Likewise, Chinese banks were not involved in financing plantation companies. Both Western

and Chinese companies were, however, involved in shipping. But Chinese involvement was based on small ships operating on short intraregional routes, while Western firms engaged in intercontinental shipping.

Singapore continued to provide trade-related services after the Pacific War. Around the region, governments started to intervene in trade in order to further import-replacing development strategies (see below). Government intervention in Singapore was conducive to private enterprise and foreign trade. For instance, financial regulations created a sound banking system that services private enterprise in the region. Singapore's port facilities were improved to keep up with the demands of regional and international shipping. It has remained a business-friendly haven of free trade.

Trade Regulation

The region had virtually free trade until the 1930s. Import duties existed mainly to raise public revenue, not to protect domestic producers. The colonies in the region traded relatively more with their colonizers, and trade regulations supported that. For instance, the 1892 French tariff law applied to goods entering Indochina, while French goods entered duty-free. The 1928 French tariff law did away with exemptions and allowed Indochinese goods to enter France duty-free. Likewise, the 1909 and 1913 U.S. tariff acts implied a reciprocal free trade arrangement with the United States for the Philippines. The crisis of the early 1930s reinforced such arrangements. The Smoot-Hawley Tariff Act (1930) increased U.S. tariffs, and the Philippines benefited from preferential access to the U.S. market. The British Empire abandoned its long-established free trade principles, when it embraced the system of Imperial Preferences in 1932. Trade contacts between the U.K., Burma, Malaya, and Singapore strengthened. The Netherlands and colonial Indonesia also granted each other preferential tariffs. Apart from the sale of Dutch textiles in Indonesia, this had few implications, as only 15 percent of Indonesia's trade was with The Netherlands.

All countries imposed tariffs to strengthen trade relations with preferred partners or to stimulate domestic industrial production in an effort to combat the impact of the crisis. Partic-

ularly in Indonesia, where trade preferences had little effect, tariffs and quotas were used successfully to spur the domestic production of rice, textiles, processed foods, and so forth in the late 1930s.

After the Pacific War, import restrictions were continued in Southeast Asia. In the late 1940s they were necessary in the face of drastic foreign exchange shortages. But in the 1950s they protected local markets in an effort to diversify economies away from dependence on exports of primary commodities, to further domestic industrial production, and to create new income and employment opportunities.

The results of this import-replacing policy stance were mixed in the 1950s and 1960s. Depressed commodity markets caused foreign exchange shortages that continued to limit imports of machinery, equipment, spare parts, and raw materials for the budding industries. Markets for manufactures were generally small, and firms had insufficient opportunities to achieve scale economies to become competitive. Many upstream industries—such as steel and petrochemicals—were established as state-owned enterprises. Except in Singapore, such firms were under few pressures to become competitive. The high prices of their produce weighed down the development of other industrial sectors.

Foreign Direct Investment (FDI) and Export-Oriented Industrialization

The discouraging results of import-replacing industrialization led governments to change tack and encourage export-oriented industrialization. Singapore was the first to encourage FDI into an export-oriented, labor-intensive textile industry in the 1960s, followed by Malaysia in the 1970s. Both countries attracted increasing amounts of FDI from Europe, the United States, and Japan, initially into industries that produced simple, labor-intensive manufactures for export. Singapore soon progressed to more technologically demanding export industries. Thailand, the Philippines, and Indonesia also opened up to FDI in the 1980s.

ASEAN countries pursued strategies furthering export production with fervor in the 1980s and 1990s. The various economic sectors were deregulated and opened to foreign investment. Trade regimes were liberalized, and restrictions on foreign trade in the form of taxation, quotas,

and red tape were lifted. Incentives were put in place to attract foreign investors, including tax holidays, export-processing zones with superior infrastructure, duty drawback schemes, and unrestricted remittance of dividends.

The countries experienced an unprecedented FDI inflow. Much of it found its way to labor-intensive export-oriented manufacturing, although the capital-intensive extractive industries producing petroleum, gas, coal, copper, and other minerals in Malaysia and Indonesia and the high-tech and services industries of Singapore also attracted export-oriented FDI. Exports of manufactures increased fast during the 1990s. They gradually diversified away from simple manufactures such as textiles, garments, footwear, and toys to more technology-intensive products such as consumer electronics.

Manufactured exports have more significant backward and forward linkages than primary commodities. They depend to a greater degree on raw materials, parts, and components from suppliers, and producers in other economic sectors use them as inputs. Hence FDI and export-oriented industrialization had a more significant impact on economic development in the region than had been the case in the past.

The relatively small markets in the region caused foreign firms like assemblers of cars and consumer electronics to take advantage of preferential tariffs to purchase parts and components in neighboring ASEAN countries. FDI thus reinvigorated intraregional trade. When China diverted FDI away from Southeast Asia in the late 1980s, the ASEAN countries agreed on a process to abolish quotas and reduce tariffs to less than 5 percent within the region, in an effort to make the single ASEAN market more attractive to foreign investors. The process of eliminating all tariffs and achieving the ASEAN Free Trade Area (AFTA) commenced in 1993. Although the 1997–1998 economic crisis slowed it down, the AFTA goals were brought forward from 2008 to 2003.

Since the 1960s, Japan emerged as a major trading partner of all countries in the region at the relative expense of Europe, although the Philippines continued strong trade contacts with the United States. Japan increased its imports of petroleum, gas, metal ores, and timber. Japanese companies also emerged as prominent investors in the region when they relocated their labor-intensive industries to the region.

South Korea, Taiwan, and Hong Kong followed Japan's lead in the 1990s.

The recent ASEAN members are exempted from AFTA. Their export performance has been poor, partly because of the wars fought in the region, but also because of inward-looking socialist regimes. In Burma the cause was policies that kept the country reclusive. Teak and opium smuggled from Burma are not included in the table, but regardless, Burma's per capita exports were low. Vietnam attracted FDI after 1986 and increased its exports of manufactures. It is still a long way behind the ASEAN-4 and Singapore. The export performance of Laos, Cambodia, and Burma has remained poor.

Domestic Trade Development

Foreign trade is but a "handmaiden" of growth. Most of the economic development in the countries in the region involved a rapid increase in production for domestic markets by private firms, although often in conjunction with foreign companies. As economies grew, they diversified away from dependence on agriculture for employment and income, and became more complex. The growing complexity of domestic trade was sustained by the development of transport facilities—particularly road transport and intraregional shipping—within each of the countries and the development of commercial infrastructure, such as trading firms and banks.

TRAILOK (r. 1448–1488)

Institutionalized a Hierarchical Society

Trailok, or Borommatrailokanat (lit. "great king of the three worlds") was one of the greatest kings of Ayudhya (Ayutthaya). He was born Ramesuan and succeeded his father, Borommaracha II (r. 1424–1448), when the former died in a military campaign against the Lanna kingdom. Trailok's major contributions were his administrative reforms, which helped to strengthen Ayudhya's bureaucratic institutions, and his attempt to secure the northern territory, which led to continuous war with Lanna (Lan Na) until the end of his reign.

Trailok's administrative reforms began in 1454, when he issued two laws of military and civil hierarchies to divide Ayudhya bureaucracy into two grand divisions, military and civilian (Taylor 1992: 171; Andaya 1992: 382; Wyatt 1984: 73). Military affairs were the responsibility of the defense minister, Kalahom, while civil affairs were the responsibility of the minister of the interior, Samuha Nayok. Both ministries were subdivided into departments, or *krom*. Furthermore, the reform laws helped organize the relationships between Ayudhya subjects through ranking individuals by *sakdina* or "field power." The amount of land credited to each person was calculated according to his position and responsibility. Ordinary freemen were entitled to twenty-five *rai* (two and a half *rai*

equalled one acre), while junior officials were ranked from fifty to four hundred *rai*. Those who ranked above four hundred became *khun-nang* or nobility. However, the *sakdina* also symbolized responsibilities, the higher the greater. Punishments and fines also varied according to *sakdina* (Wyatt 1984: 73).

Trailok is also famous for his continuous war campaign against the Lanna kingdom during the reign of his archrival, Tilokracha (lit. "king of the three worlds," r. 1441–1487). Both parties were engaged in warfare from the 1450s to the 1480s in an attempt to control the Sukhotai kingdom and other towns located between the Chao Phraya delta and the northern plain. The war reached an impasse in 1486 without any clear-cut victory.

TRAVELERS AND SOJOURNERS, EUROPEAN

Travelers and sojourners have provided us with a wealth of historical, ethnographic, and geographical material on Southeast Asia. The theme of travel in Southeast Asia immediately evokes images of expanding colonialism in the nineteenth and early twentieth centuries. It conjures a time when the Western powers were competing for territories in the region and consolidating their hold on the remoter hinterlands and uplands of mainland Southeast Asia as

well as the great islands of Borneo, Sumatra, Sulawesi, New Guinea, Luzon, and Mindanao. However, from the early years of the first millennium C.E., the region was the site of long-distance travels by Southeast Asian traders and mariners, as well as, successively, by Chinese, Indian, Arab, and Persian merchants, pilgrims, and diplomats. Our knowledge of pre-European Southeast Asia comes especially from the chronicles of Asian and Middle Eastern travelers, though such an illustrious observer as Marco Polo (1254–1324) in the late thirteenth century was an early contributor to the creation of Western images of the East.

Information on the region increased appreciably from the Portuguese and Spanish voyages of discovery in the sixteenth century, then increasingly from Dutch, English, and French sources in the seventeenth and eighteenth centuries. Yet it is decidedly from the 1850s that we witness a surge of European exploration and travel in Southeast Asia and a corresponding increase in descriptions of places, peoples, customs, landscapes, and architecture. These explorers and travelers were both the agents of the policies, decisions, and plans generated in the European metropolitan centers, and the makers of their own and their countries' histories (King 1995: viii). However, there are different categories of travel. Some travelers experienced only a brief encounter with strange peoples and places. There were those who came for a longer sojourn in the country and, like colonial administrators, particularly those who were stationed in upcountry outposts traveled extensively in their assigned districts. Some Europeans embarked on dangerous journeys of exploration for specific scientific purposes; to open up remote populations to commerce; to map, survey, and fix territories and boundaries; or to pacify so-called untamed tribes and plant the flag in unclaimed terrain. As European administrations became firmly established, wealthy travelers visited developing tourist destinations such as Bali in the 1920s and 1930s for relaxation and recreation.

Very often, superficial encounters were made in the context of maritime trade and discovery. Good examples are Thomas Forrest's visit to Brunei, the "Venice of the East," in 1776 (King 1999: 1–11) and Erskine Murray's attempt to establish a British presence in the sultanate of Kutai on Borneo's east coast in 1844 (*ibid.*: 45–68).

Joseph Conrad's description of his visit to Indonesia's Bangka Island in 1883 (Saunders 1998: 3–7) is similar. Accounts of residence in the East and brief excursions from home bases are numerous. Examples include Ladislao Székely's description of his life as a rubber planter in East Sumatra from 1902 to 1918 (1937) and Emily Innes's rather tedious sojourn with her assistant-resident husband at Bandar Langat in the Malayan sultanate of Selangor in the 1870s (1885). Also there is Noel Wynyard's account of her life in northern Thailand in the mid-1930s with her "teak-wallah" husband (1939) and Henry Cochrane's experiences as an American missionary in Burma in the late nineteenth century (1904). An illustrious sojourner was Anna Leonowens, of "King and I" fame, who took up an appointment in Bangkok as the English governess of the Siamese king Mongkut in 1862 and stayed in the royal household for five years (Smithies 1995).

Among the most famous of the nineteenth-century explorers was the Frenchman Francis Garnier (1839–1873). Appointed in 1862 as the official in charge of Cholon, the twin city of Saigon, in the recently established French colony of Cochin China, Garnier held a passionate belief in the need to spread French culture, government, and commerce to the "unenlightened" and uncivilized populations of the East. With his colleague Doudart de Lagrée (1823–1868) and four other Frenchmen, he was the first European to explore 6,000 kilometers of the great Mekong River basin, from its delta in South Vietnam to its headwaters in southern China in 1866–1868 (Osborne 1975). Another notable French traveler was Henri Mouhot. Although he was not the first European to discover the majestic ruins of Angkor Wat, he did bring them to the attention of a European audience in his now famous and arresting account of his travels in Siam, Cambodia, and Laos from 1858 to 1860. Sadly, in a later expedition to northeast Thailand in 1860–1861, he was to meet his death (Mouhot 1989).

In other parts of mainland Southeast Asia, Sir J. G. (George) Scott is among the best known explorers. He traveled over much of the eastern borderlands of Burma in the late 1880s and early 1890s to conclude treaties and alliances with local rulers, to undertake mapping and surveying, and to fix territorial boundaries between the British, French, Thai, and Chinese

possessions in this region (Dalby 1995). Someone who secured a reputation for adventure and travel in several locations in Southeast Asia, and provided some dramatic descriptions of “savage” and “exotic” peoples and customs, was the Norwegian Carl Bock. He was commissioned by the Dutch governor-general Johan Willem van Lansberge (t. 1875–1881) to explore southeastern Borneo in 1879–1880, after his zoological collecting trip to Sumatra in 1878 sponsored by the Marquis of Tweeddale. He subsequently traveled independently through Siam and Laos in 1881–1882 (Reece 1995). Of undoubted importance was also the extended journey of the great English naturalist and evolutionist Alfred Russel Wallace (1823–1913), who spent an extraordinary eight years of scientific discovery (1854–1862) in the islands of Indonesia, during which time he collected more than 125,000 natural specimens (Wallace 1869).

These serious travelers progressively gave way to the forerunners of modern tourism. But the nineteenth-century explorers of jungles, exotic fauna, tropical landscapes, and culturally diverse peoples had already created images of Southeast Asia that remain to this day.

TRỊNH FAMILY (1597–1786)

Lord of North Vietnam

The Trịnh family was one of the most powerful families in the latter term of the Le dynasty (1533–1789) that substantially ruled North Vietnam from 1597 to 1786. Thanh Hoa was the base of the family.

After the Le dynasty was weakened by Mac Dang Dung (r. 1527–1541), General Nguyễn Kim of the Nguyễn family (also a prominent family of Thanh Hoa) helped Le Ninh (Le Trang Tong) to the throne and resisted the Mac army in Thanh Hoa. But after the death of

General Nguyễn Kim, his son-in-law, Trịnh Kiem succeeded his work in 1545. Kim's son, Nguyễn Hoang, was afraid of Trịnh Kiem's power and decided to go to the south. The Trịnhs' power in the Le court became decisive and continued to fight against the Mac.

In the period of Trịnh Kiem's son, Trịnh Tung (r. 1570–1623), the Le army triumphed and returned to the capital (present-day Hanoi) in 1597. Because of his distinguished services he was given the title of king (*vuong* in Sino-Vietnamese; *chua* in Vietnamese) by the Le emperor, and he set up the “Princely Establishment” beside the Le royal palace. After him their descendants succeeded the title, and the establishment gradually absorbed the function of the Le government.

After the conclusion of the civil war with the Mac, another conflict began with the Nguyễn lords in central Vietnam. Initially, Nguyễn Hoang obeyed the orders of the Le emperors—namely, the orders of the Trịnh—and cooperated and contributed to overcome the Mac. But because the Trịnh oppressively demanded tribute and intervened in domestic matters, Nguyễn Phúc Nguyễn, son of Hoang, decided to oppose the Trịnh.

In 1627 the Trịnh-Nguyễn war began. The Trịnh's army was much bigger than that of the Nguyễn, but along the Nhat Le River (in present-day Quảng Bình province), the Nguyễn had built the fortresses of Truong Duc and Dong Hoi. Neither side was able to decidedly claim victory. The civil war ended inconclusively in 1672.

After the war, the Trịnh changed their policies. Many civil officers from the Red River delta participated in the government. From the second half of the seventeenth century to the early decades of the eighteenth century, under the reigns of Trịnh Tac (r. 1657–1682), Trịnh Can (r. 1682–1709), and Trịnh Cuong (r. 1709–1729), many reforms were carried out. For example, the administrative system was reformed in 1663–1665, the land-redistribution system was reorganized in 1711 based on a different format from that of Le Thanh Tong (r. 1460–1497), and a new taxation system (including that of private lands) was imposed in 1722. In the cultural sphere, civil officers were ordered to compile a new chronicle named *Dai Viet Su ky Tuc Bien* (A History of Vietnam from 1532 to 1662), and a revised version of the *Lam*

Son Tuc Luc (A History of the Le Struggle for Independence of Vietnam).

But the effect of these reforms was limited. Increased population caused poverty and starvation. In northern Vietnam many peasants left their villages and became refugees or bandits. To defend against them and the exploitation of the Trịnh government, villages demanded the right of self-control and became autonomous communes, which character they generally maintained until the August Revolution of 1945.

In addition, from the period of Ming-Qing changeover in China (ca. 1640s), many Chinese laborers and brokers came to Vietnam by sea or land. The Trịnh tried in vain to control this flow of immigrants. Chinese immigrants worked as mine laborers, as in the case of the Tu Long copper mine in Tuyen Quang province. The newcomers were resented, and quarrels and clashes broke the public peace. Aggravating the situation, rebellions against the Trịnh regime continuously occurred, such as that of Le Duy Mat (who belonged to the Le royal family) from 1738 to 1770. The Trịnh could not easily overcome these troubles; it exposed the poverty of Trịnh power.

Meanwhile in the Nguyễn south, in the Binh Dinh area, the Tay Son brothers launched a major rebellion. They occupied almost all the south and south-central areas of Vietnam. Seizing this chance, the Trịnh sent an army that subsequently crushed the Nguyễn regime. But before long, Tay Son troops marched to the north and defeated the Trịnh in 1786.

In Vietnam, the Trịnh and the Nguyễn families have been underestimated as the lords who were directly responsible for disunion and disruption in Vietnam. But as the progenitors of the sociocultural traditions of early modern Vietnam, their contribution is gradually being reevaluated.

TRUONG CHINH (1907–1988)

In Mao’s Footsteps

One of the leaders of the Vietnamese Communist Party (VCP), Truong Chinh was known as the best party theoretician and a leader of a pro-China faction within the VCP.

Truong Chinh’s real name was Dan Xuan Khu, but he was better known under the pseudonym of Truong Chinh, which is the literal Vietnamese translation of the Chinese expression meaning the “Long March.” This name indicates that he admired the Chinese Communist Party led by Mao Zedong (1893–1976) and its army’s successful long march of 25,000 *li* (12,500 kilometers), which took place in 1934–1936.

Truong Chinh was born in a well-known scholar-gentry family in Nam Dinh province (present Ha Nam Ninh province). His father was a local schoolteacher who expected his son to follow in his footsteps. Chinh was educated in Nam Dinh and Hanoi. Under the influence of the traditional patriotic spirit, which was prevalent in his native place, he became an ardent revolutionary when he was very young. After receiving his French baccalaureate degree at the Lycée Albert Sarraut in Hanoi, he enrolled in the School of Commercial Studies. His first job was as a schoolteacher, but soon he

gave it up. He joined the Revolutionary Youth League of Vietnam in 1927 and the Vietnamese Communist Party in 1930. He was arrested and put in prison in 1930 for his political activities.

It was in Con Son Prison on an island in the South China Sea that he systematically studied Marxism-Leninism from smuggled materials. Chinh was released in 1936. After that, he worked for the Indochina Communist Party (ICP) as a journalist in Hanoi under the pen name Qua Ninh. He was appointed chairman of the North Vietnamese regional committee of the ICP in 1940. In 1941, Chinh was formally elected secretary-general of the ICP. He also served as the chief editor of *Liberation Banner*, the organ of the ICP, and the *Journal of Communism (Tap Chi Cong San)*, a political publication of the party. Chinh remained a member of the politburo during the Vietnam War (1964–1975).

In November 1945, when the ICP was dissolved in order not to harm national unity, and a substitute “Association of Marxist Studies” was set up, Truong Chinh served as the chairman of the new organization. In fact, the ICP still existed, but it went underground. In February 1951 the Second Congress of the Communist Party was held in Tuyen Quang province of North Vietnam; the party was renamed the Vietnamese Worker’s Party (VWP) and became public. Chinh was elected general secretary. In March 1951, Chinh became the editor-in-chief of the *People’s Daily*, the organ of the VWP. Chinh was dismissed from the position of general secretary in 1956 for the mistakes he committed during the land-reform movement, but he retained his seat on the politburo. The VWP launched the land reform movement as a means of winning peasant support for the fight against the French. Chinh reestablished his political influence soon thereafter. In 1958–1960 he was appointed vice premier and president of the Scientific Research Council. From 1960 to 1986 he served as a member of the Vietnam Worker’s Party Politburo and as chairman of the Defense Council. He regained the position of general secretary of the VCP for several months after Le Duan’s death in July 1986, yet resigned at the Sixth Party Congress in December 1986. After his retirement, Chinh served as an adviser to the party politburo until he died in 1988.

Chinh also served as a member of the constitution committee in 1946 and 1959. From 1959 to 1981 he was chairman of the standing com-

mittee of the National Assembly of the Democratic Republic of Vietnam. In 1981 he became chairman of the new Council of State, which functioned as a collective presidency under the 1980 Constitution. He supervised legislation, contributing to the construction and consummation of the Vietnamese law system.

Chinh was one of the most trusted colleagues of Hồ Chí Minh (1890–1969) and one of the best organizers of the Communist Party. He was one of the few communist leaders of Vietnam who had written on the Vietnamese revolution, and as a leading theoretician, he wrote extensively. His writings include *Oppose Reformism* (1935); *On Peasants' Issues* (1937–1940), in cooperation with Vo Nguyễn Giap; *The August Revolution* (1946); *The Resistance Will Win* (1947); *Marxism and Vietnamese Culture* (1948); and *On National United Front and Great Unity* (1954). He made far-reaching contributions to the revolutionary theory of the Vietnamese and the international communist movement. Coming from a scholar-gentry family himself, he respected scholars and intellectuals. He was considered a hard-liner in domestic matters and pro-China in the Sino-Soviet dispute. He favored full cooperation with China in every period. As a leader of the pro-China faction and an admirer of the Chinese revolution and the Chinese Communist Party (CCP), Chinh devised the political and military strategies of Vietnam on the basis of the experiences of Mao Zedong and the CCP.

TUH FAT AL-NAFIS (THE PRECIOUS GIFT)

A Breakthrough in Malay Historiography

Second only to the *Sulalat-us-Salatin* or *Sejarah Melayu* (Malay Annals) as the most important piece of Malay historical writing, *Tuhfat al-Nafis* is indeed a “precious gift,” not only to Malay history but also, even more importantly, to Malay historiography. The *Tuhfat* offers a realistic and accurate narrative of events and personalities of the Malay archipelago—in particular of the Malay Peninsula, Sumatra, and West Kalimantan—from the late seventeenth to the mid-nineteenth century.

Beginning with a brief recollection of early fifteenth-century Temasik (Singapore) and Melaka, the *Tuhfat's* main focus is on the historical developments in the Malay Archipelago throughout the eighteenth century. Specifically this historical work concerns itself with the Johor-Riau-Lingga empire, successor to the Melakan Malay sultanate after the Portuguese seizure in 1511, and also with the role and influence of the Bugis in the affairs of Johor-Riau-Lingga and the Malay Peninsula, and West Kalimantan. The Minangkabau intrusion in Johor-Riau-Lingga and consequent Bugis-Minangkabau antagonism are subject matters of importance of the *Tuhfat*. Details about the expansionist designs of the Dutch, another major player in the Malay Archipelago, are featured, including Anglo-Dutch relations to the mid-nineteenth century.

Unlike the case with its predecessors, the authorship of the *Tuhfat* is clear and undisputed: Raja Ali Haji Ibn Raja Ahmad (ca. 1809–1869). But it is believed that Raja Ahmad (b. 1773), the father of Raja Ali Haji, had a hand in the composition of the *Tuhfat* to the extent of being responsible for its first drafts (Matheson and Andaya 1982: 5). But there is no doubt that Raja Ali Haji himself completed the task. Besides establishing its authorship, the *Tuhfat* exhibits three further innovations or breakthroughs in Malay historiography—namely, the

emphasis on truth and accuracy of factual contents, clear indication of dating, and the identification of source materials. The *Tuhfat* is a refreshing work in that it is unlike previous "histories," such as the *Sejarah Melayu*, which are punctuated with fantasies and legends, an admixture of facts and fiction, and complete disregard for the enumeration of sources and authorship. Despite offering a Bugis perception of events, the historical narrative is neither hagiographic nor biased to the extent of being Bugis-centric. But the didactic tradition remains where the author emphasizes the principal role of human responsibility in the making of history lies: "intended to be a lesson for the present . . . as a guide for the future generations" (ibid.: 6). A drawback, if it can be seen as one, is that Raja Ali Haji "lacks the psychological insight and graphic pen of the author of the *Malay Annals*" (Winstedt 1991: 115).

TUN PERAK (d. ca. 1498)

Melaka's Finest Chancellor

Tun Perak was the most capable and best-known *bendahara* (chancellor/chief minister) of the Malay sultanate of Melaka in the fifteenth century. This son of Bendahara Seriwa Raja of the bendahara line was at first, at the insistence of the people, made *penghulu* (chieftain) of the district of Kelang to the north. Having proved his courage and ability in the defensive war against the first Siamese invasion in 1445–1446, Tun Perak was brought to the capital and given the title *paduka raja*, which placed him next in authority to the bendahara, Tun Ali. To resolve the enmity between the two that was splitting the Melakan population into opposing camps, Sultan Muzaffar Syah divorced one of his wives, Tun Kudu—incidentally Tun Perak's elder sister. She was then married to the elderly schemer Tun Ali, who retired; unity was restored after Tun Perak was made the bendahara.

A capable man, Tun Perak survived the reigns of Sultans Muzaffar Syah (r. 1446–1456) and Mansor Syah (r. 1456–1477) and lived through a major period of the reign of Alaud-din Ri'ayat Syah (d. 1488). Under his wise, strong, and charismatic leadership, Melaka was able to ward off repeated Siamese attacks and expanded its territory. Territorial expansion went beyond the Malay Peninsula to the adjacent islands, such as Bengkalis and Karimun, and a number of principalities on the eastern coast of Sumatra such as Jambi, Rokan, Tungkal, Kampar, Inderagiri, Siak, and Haru. In the peninsula, Pahang, Terengganu, and Johor became Melaka's vassals during Mansor Syah's reign. By the 1460s, Melaka was able to defend itself against foreign invasion and was less dependent on Chinese protection.

Better known by his coveted title *Bendahara Paduka Raja*, Tun Perak himself headed a number of successful military campaigns and contributed a great deal toward the rapid expansion of Melaka and its effective control of the Straits of Melaka, thus facilitating the phenomenal growth of Melaka into a political and commercial center that attracted a growing number of traders sailing between India and China. Favorable commercial policies and tariffs offered by Melaka enhanced this city-port's role as a halfway house and meeting place of various peoples and cultures.

As a wise man of principle, Tun Perak on a number of occasions made hard decisions that seemed to challenge even the wishes and wisdom of the sultan himself. Because of Tun Perak's disapproval, Sultan Mansor Syah had to send the heir apparent and his preference, Raja Muhammad, into exile in Pahang when the latter killed the bendahara's son, Tun Besar, in a game of *sepak raga* (akin to volleyball but using legs instead of hands).

Although ordered by Sultan Mansor Syah to recapture Pasai, and despite being capable of fulfilling the command, Tun Perak stayed adamant not to execute the order. He had Melaka in mind, as he later revealed to the sultan that he had ample evidence that the candidate favored by the sultan was a traitor who would not be loyal to Melaka.

Melaka attracted an increasing number of traders from the Middle East (West Asia) and India and soon became the nucleus in the spread of Islam in Southeast Asia and via the Malay language. Tun Perak was probably the man behind the compilation and promulgation of the Melaka Laws (*Hukum Kanun Melaka* or *Undang-Undang Melayu*) during the reign of Muzaffar Syah. The Melaka Laws became the basis for law and order throughout the Melakan empire and helped to boost Melaka's growth as a political and commercial power in the region. It also became the basis for the laws of other Malay States that emerged after the demise of Melaka in 1511.

In *Sulalat-us-Salatin* (*Sejarah Melayu*), Tun Perak is regarded as one of the three outstanding men in the Malay world, comparable to Aria Gajah Mada of Majapahit and Raja Kenayan of Pasai. He was an all-rounder who even headed the building of Mansor Syah's new palaces after the Hang Jebat rebellion. When his in-law Tun Ali died, Tun Perak became the custodian of the former's children, two of whom, Tun Muzahir (also read as Tun Mutahir) and Tun Zahir (also read as Tun Tahir), later became bendahara and *penghulu bendahari* (head of the state coffers), respectively.

When Tun Perak died his younger brother, Tun Perpatih Putih, was made bendahara, and on the demise of the latter, Sultan Mahmud (r. 1488–1528) assigned the post to Tun Muzahir. In contrast to Tun Muzahir, Tun Perak was not an advocate of blind loyalty to the ruler. He had

even forewarned Muzahir that by sentencing to death a man for a minor offense, Muzahir "was teaching a tiger cup [Mahmud] to eat flesh. One of these days he himself will be caught by the tiger." Muzahir was indeed put to death by Mahmud in 1510 on the charge of treason. Tun Perak's son, Paduka Tuan, was made bendahara when Sultan Mahmud finally established his new capital in Kampar in the 1520s.

TUN-SUN

"The Market Where East and West Meet"

Tun-sun was a kingdom situated on the Malay Peninsula during the early part of the first millennium C.E. The *Liang shu*, or *History of the Liang Dynasty* (a Chinese text of the fifth century), describes it as "the market where East and West meet"—suggesting it was situated on one of the most important trade routes across the peninsula and attracting merchants from both India and China. The maritime contacts with India are emphasized by the assertion that more than a thousand Indian Brahmins (*p'o-lo-men*) resided there, and that the people of Tun-sun not only followed their religion but also gave them their daughters in marriage. George

Coedès has doubted whether the p'o-lo-men of the Chinese text were all of Brahmin caste (1968: 271, n. 55), but the presence of Hinduism on the Malay Peninsula at this date is undoubted.

Tun-sun is described in the *Liang shu* as a dependency of Funan, a kingdom located in the lower Mekong valley of what is now Cambodia and southern Vietnam. It can probably be identified with the kingdom of Tien-sun, named among the naval conquests of the king Fan Shi Man of Funan during the early third century C.E.

The name "Tun-sun" may be of Mon origin, with the original meaning of "five states"—perhaps indicating a confederacy of small trading kingdoms. The Mon languages appear to have been dominant at this time in central Thailand, and Paul Wheatley has suggested a possible connection between Tun-sun and the early historical sites of P'ong Tuk and Nakhon Pathom, later associated with the

kingdom of Dvaravati (1961: 15–21). The exact location of Tun-sun is uncertain, but it appears to have been in the northern part of the Malay Peninsula, possibly on both shores of the Isthmus of Kra.

U OTTAMA (1897–1939)

See Young Men's Buddhist Association (YMBA) (1906)

U SAW AND THE ASSASSINATION OF AUNG SAN Indeed, to What End?

U Saw, Burmese right-wing politician and leader of the Myochits (Patriots) Party, was the instigator of the group of assassins who planned and carried out the slayings of the paramount Burmese independence leader, Bogyokegyi General Aung San (1915–1947), and others on the morning of 19 July 1947. Eight others, six of whom were members of Burma's Executive Council, were also killed. This assassination was an inestimable tragedy for postindependence Burma.

U Saw was tried and hanged in Insein Prison, Rangoon, for the crime on 8 May 1948. Five of the gunmen and accomplices who carried out the killings were also hanged in May 1948, while another three had their death sentences reduced to twenty years' imprisonment. Another perpetrator, Ba Nyunt, who had been assigned to kill U Nu (1905–1995) but changed his mind and turned king's evidence, was sentenced to ten years' imprisonment.

Together with Bogyokegyi Aung San, those shot to death in the secretariat building that fateful morning were Deedok U Ba Choe (councillor for information); Thakin Mya

(councillor for finance); U Abdul Razak (councillor for education and national planning); U Ba Win, the elder brother of Aung San (councillor for commerce and supplies); Mahn Ba Khaing (councillor for industry and labor); and Sao Sam Htun (councillor for frontier areas). Ohn Maung and Ko Htwe were also killed. The former was the deputy secretary for the Department of Transport and Communications, who was delivering a report to the Executive Council. Ko was the young bodyguard of U Abdul Razak, who, upon hearing the gunshots, was killed by the assassins as he went to help his master.

Of the eleven-member Executive Council, five survived; two of them had not been present at the meeting on 19 July 1947. One of the survivors, U Shwe Baw, secretary of the Executive Council, provided an eyewitness account of the shootings.

Meanwhile, U Saw stayed at his home at No. 4 Ady Road, on Inya Lake, while the killings were being carried out, and waited for the assassins to return, which they did by 11:00 A.M. They had made no attempt to conceal their actions or identities and were arrested with U Saw the same day, 19 July 1947. Credit for the speed with which the culprits were apprehended went to Major General Tun Hla Oung, deputy inspector general of the Criminal Investigation Department, who was tipped off by Captain Khan, a neighbor of U Saw's, who had almost collided with the assassins' jeep

as it turned into U Saw's compound. A search of U Saw's house and garden revealed, in addition to guns and ammunition, freshly printed stationery and seals and stamps with U Saw's name and the title prime minister (Kin Oung 1996: 16). By dusk that same day, U Saw and his accomplices were lodged in Insein Jail.

The motivation for the killings was at first thought to have been political rivalry. U Saw, an experienced politician who had been prime minister from 1940 to 1942, was known to want to take over the reins of government from Aung San. He stayed at home after the killings and confidently expected a call from Governor Sir Hubert Rance (t. 1946–1948), to form a new cabinet in the wake of Aung San's death. Instead, Thakin U Nu was invited to become prime minister (t. 1948–1956, 1957–1958, 1960–1962) and form a cabinet.

Investigators found a huge cache of weapons in Inya Lake near U Saw's home. There were boxes of ammunition and automatic weapons, far more than would have been necessary for the murderous task. Questions were raised as to why so much weaponry had been concealed in such a manner, and for what purpose. Investigations soon tracked its source to middle-ranking British officers then in Rangoon. They were identified as Major Peter Daine (Intelligence Branch, Burma Command Headquarters, and commander of the Base Ammunition Depot north of Mingaladon, Rangoon); Major J. A. Moore (officer commanding base ammunition depot, Botataung); Captain David Vivian (seconded from the Indian army as arms advisor to the Burma Police); and Major C. Henry Young (commander of the Indian Army Electrical and Mechanical Engineer Workshop Company). Vivian was arrested on 20 July, charged with selling arms to U Saw, and sentenced to five years' imprisonment. Freed by Karen insurgents in 1949, he joined them for several years and finally returned to Britain in the mid-1950s. He died at Swansea in the late 1980s. Young was arrested on 24 August for supplying arms to U Saw and was sentenced to two years' imprisonment, but he was acquitted on appeal.

The involvement of these British military personnel naturally raised the question of British knowledge of the planning of the assassinations. The trail led to other Britishers, notably the British council representative in Rangoon, John Stewart Bingley. U Saw wrote

several letters to him from his prison cell, seeking and expecting help. Suddenly Bingley left Rangoon on 4 September 1947 and disappeared from history. The questions of the extent of British involvement, and whether U Saw had other accomplices who escaped punishment, have never been satisfactorily answered.

Furthermore, other related questions also remained unanswered, such as why the assassins wore the insignia of the 12th Burma Rifles on the day they set out to kill Bogyokegyi Aung San. Why did a telegram of 19 July 1947 to Sir Gilbert Laithwaite, deputy undersecretary of state for Burma, 1947–1948, from R. W. D. Fowler, private secretary to the acting governor, identify the assassins as belonging to the 4th Burma Rifles? Did senior British politicians in Whitehall know of the plot, or were the arms sales to U Saw a unilateral and unauthorized activity of middle-ranking British officers in Rangoon acting on their own initiative? Were British commercial interests in Rangoon involved? Why was U Saw so confidently expecting to be appointed prime minister as a consequence of his actions?

These questions and many more may never be satisfactorily answered, but few think that U Saw acted on his own initiative. As a result of U Saw's actions, Burma lost many competent, experienced leaders, even before independence on 4 January 1948.

UNDANG-UNDANG LAUT (MELAKA MARITIME LAWS/CODE)

Undang-Undang Laut, or the Melaka Maritime Laws/Code, is one of the six component parts

of the *Undang-Undang Melaka*, or the Melaka Laws. The latter is one of the most important of Malay legal digests. The *Undang-Undang Laut* must have been drafted during the reign of Sultan Mahmud Syah (r. 1488–1511), not long after the Melaka Laws were codified.

Melaka became one of the greatest emporiums of the East from the beginning of the fifteenth century. It was a strategic port of call for traders from India, West Asia (the Middle East) and Europe, Southeast Asia, China, and Japan. Situated in the Straits of Melaka, the main sea route between the East and West, it was also blessed as being the place where the monsoons meet.

Melaka thrived on international trade and became the market for spices, Chinese silk and porcelain, Indian cotton and precious stones, as well as perfumes from West Asia. Maritime trading became the lifeline of Melaka. Hundreds of ships from various places anchored at the port. Issues on trading as well as shipping became major concerns of the Melaka ruler. Hence it was thought necessary that a maritime code be introduced.

The *Undang-Undang Laut* contains rules and regulations for ships' captains and their crew and the harbormasters and their officers. They were to observe the rules strictly, or face consequences and penalties. Generally, the *Undang-Undang Laut* is divided into eleven volumes, the result of discussions with traders—especially the Bugis—in Melaka. It aims to regulate and strengthen the laws in Melaka. The laws stress the issues of discipline on board ship and incidents of crime, immorality, and accidents on the seas. It also conveys the application of Islamic law, especially in cases of adultery.

The laws give details on the responsibility of port officers to observe correct rules regarding weights and measures, such as the *gantang*, *cupak*, *kati*, and *tahil*. These officers were also given jurisdiction to settle quarrels and feuds among traders. The laws also prohibit anyone rescued at sea from being enslaved. They further specify that a reward must be paid to anyone who recovers a boat at sea, except when it is proven to be stolen property.

The *Undang-Undang Laut* aimed to regulate and strengthen the laws in Melaka at the time. Later, other versions of the *Undang-Undang Laut* emerged, such as the *Undang-Undang Laut Aceh* and *Undang-Undang Patani*. Just like the

main *Undang-Undang Melaka*, the *Undang-Undang Laut Melaka* became the principal maritime laws of the Malay Archipelago.

UNDERWATER/ MARITIME ARCHAEOLOGY IN SOUTHEAST ASIA

Southeast Asia encompasses a vast area of water, including the Indian Ocean, Andaman Sea, Gulf of Thailand, South China Sea, Celebes Sea, and Philippine Sea. In this setting, maritime travel of people from the early period of perhaps 5,000 years ago to the present was a way of life in the Southeast Asian region. There has been archaeological, anthropological, and historical evidence to show that maritime contact among cultures in Southeast Asia prevailed. The material culture from the prehistoric, protohistoric, and historical periods may be compared between countries in Southeast Asia, and similarities and differences may easily be noted from their basic characteristics. Even before the advent of underwater and maritime archaeology in Southeast Asia, similarities were found among archaeological artifacts and features in Southeast Asian countries, suggesting contact among peoples within the region. Although the use of boats may have begun quite early, it evolved for long-distance maritime travel over vast areas of water in the Southeast Asian region.

In 1975, Dr. Wilhelm G. Solheim II, a prominent archaeologist-prehistorian specializing in Southeast Asian studies, claimed the

Southeast Asian maritime culture to be Austronesians or Austronesian speakers (1975: 151–157). He realized, however, that the use of the word *Austronesian* or *Malayo-Polynesian* for a people and culture is both awkward and incorrect. Both terms are for a language family, just like the word *Malay*, which means a language; it should not be used for other purposes. Solheim believes that because these people share both a basic culture and a language, it should not be difficult to coin a word for the people and culture from reconstructed protoforms of the language. As these are the people of the islands, Solheim proposed the term *Nusantao* for these people and culture. *Nusa* is a root word for “island,” according to George Grace, a linguist, and *tau* or *tao* means “man” or “people.”

Solheim’s concept of *Nusantao* refers to the natives of Southeast Asia—an area that includes southern China, which covers the Yangtze watershed to the south and their descendants with a maritime-oriented culture originating probably in southeastern island Southeast Asia before 5000 B.C.E. (Solheim and Higham 1996). A majority of the people of this culture probably spoke Malayo-Polynesian languages; minority groups spoke unrelated languages. The *Nusantao* were directly associated with the development and spread of the Malayo-Polynesian languages. At any one time there also existed other Malayo-Polynesian speakers living in the interior of the larger islands who were not maritime oriented and whom Solheim would not consider as *Nusantao*. The *Nusantao* and the nonmaritime Malayo-Polynesian speakers were constantly mixing genetically, culturally, and linguistically. Their genetic ancestry varied through time and places that include Southern Mongoloid, probably as the majority influence, and Melanesoid.

The *Nusantao* maritime traders were probably trading to the west and with the eastern coast of India by 700 B.C.E. The evidence for this is carnelian beads, and slightly later other varieties of stone beads made near Madras, which started appearing at about this time at sites in the Philippines and in mainland Southeast Asia. This trade may have started earlier with sugarcane, reported in India long before it was probably domesticated in New Guinea, and chickens, first domesticated in Southeast Asia

and which were also present west of India well before this time (*ibid.*).

Within Southeast Asia itself, Solheim feels that the most compelling evidence for a widespread maritime trading network during the first millennium B.C.E. is the distribution of jade earrings, called Lingling-O, and the much rarer but related probable earring pendant and two-headed animal figure jade artifacts. In addition, there is the overlapping in time and distribution of carnelian and the early glass beads and bracelets, probably at first brought in from India. These jade artifacts are distinctive and have been found in Botel Tobago, the southernmost part of Taiwan, the northern Philippines, Sarawak, coastal central and southern Vietnam, south-central Thailand, and the eastern coast of Peninsular Thailand.

There were extensive maritime activities in the South China Sea well before 1000 B.C.E. These maritime traders were Southeast Asian sailors until the entry of the Muslim maritime traders from the Middle East (West Asia) around 1000 C.E. There were no state boundaries during this time, only spheres of influence. The somewhat indefinite boundaries of Imperial China could be said to have come into existence in Southeast Asia early in the present era. The sailors and ships claimed by the present-day Chinese government to be Chinese from this period are Southeast Asian in culture, technology, and orientation until about the Tang dynasty (618–907 C.E.). Solheim (1984–1985) has argued that previous to that time the area of the Yangtze River drainage and the south was Southeast Asian and should not be considered as part of China for cultural purposes. The maritime activities in the South China Sea, including the small island groups therein where contact had been made, were Southeast Asian. Without international boundaries during that time, it could be said that any of these small island groups were a part of any of the relatively established states of Asia. The sailors making use of these islands had their bases in the areas that would become the Philippines, Vietnam, Indonesia, Malaysia, Thailand, and Cambodia. It is these countries, as a Southeast Asian consortium, that should work out how the resources of the island groups should be developed.

Underwater and maritime archaeology in Southeast Asia, both mainland and island, is a rather recent development compared with the

land-based archaeology in the islands, which started quite early in the late nineteenth and the beginning of the twentieth century. Underwater archaeology makes use of scuba-diving equipment or other forms of diving apparatus for research. Maritime archaeology, on the other hand, can be done without the use of scuba-diving equipment on marshland, shallow riverbanks, and former coastlines and waterlogged deposits. Other archaeological researches include the reconstruction of ancient maritime lifeways, such as the development of boat-building technology, maritime adaptations and the traces of trade route patterns, as well as the volume of goods transacted by the merchants with local inhabitants. In many regions of Southeast Asia, a number of underwater archaeological sites such as shipwrecks have already been documented in Thailand, Vietnam, Malaysia, Indonesia, Brunei, and the Philippines. Among these countries, the Philippines has been the most active in the pursuit of underwater/maritime archaeology. Attempts have been made to integrate underwater and maritime archaeology with land-based or terrestrial archaeology in the Philippines.

The Philippine archipelago is a country with a strategic position in island Southeast Asia. It is a group of islands where the vast Pacific Ocean meets the South China Sea. Located in the tropics, it is frequented by strong storms and typhoons. Given the strategic position of the Philippines in Southeast Asia, it is most likely the place where maritime technology like boat building was developed. Historically, it is a country that Ferdinand Magellan (1480–1521) claimed to have “discovered” on 16 March 1521 and subsequently named after King Philip II (r. 1556–1598) of Spain. After that, the Philippines was one of several countries in Southeast Asia regularly visited by the early European maritime explorers and colonizers.

As early as the ninth century C.E., and long before the time of Magellan, there was already existing trade and culture contact between Southeast Asian neighbor countries, including China, Japan, India, and other Arabian nations (Guy 1986). The Philippine group of islands was already known to Southeast Asian mariners and traders, such as the Thai, Vietnamese, Malay, Indonesian, Cambodian, as well as Southern Chinese peoples. Chinese traders were going as far as the Indian Ocean and to the South China

Sea and the Pacific Ocean. Since their trade goods, such as ceramics, silk, and iron, were quite popular in many areas of the world, it was commonly believed that these materials were carried by “Chinese junk” type boats (Green and Harper 1987). This culture and trade contact between the Philippine archipelago and the rest of the Southeast Asian world including China is known based on the archaeological material remains found in the Philippines even before the advent of underwater archaeology.

The underwater archaeological remains of ancient shipwrecks, both of Chinese and Southeast Asian origin, suggest that people in the Philippines were actively involved in long-distance maritime trade with people in the Southeast Asian region. The presence of imported non-Chinese ceramics indicates that people from the Philippines also imported commodities from neighboring areas. Otherwise, these imported goods would not have reached the Philippine territorial waters.

Ethnohistoric and archaeological evidence suggests that protohistoric Philippine societies actively participated in commercial exchanges between mainland Southeast Asia and island Southeast Asia as early as the tenth century C.E. Ethnohistoric texts, composed mainly of the Chinese dynastic annals and eyewitness travel accounts written by travelers who accompanied trade voyages to the Philippines, refer to Philippine maritime trading polities that traveled to Chinese courts and offered tribute to gain favored trade status. Eyewitness travel accounts also provide considerable information on local trading ports, commodities, and exchange patterns. Archaeological research in land archaeological sites over the last century reveals a tremendous number of tradeware ceramics in burial and habitation sites, in coastal as well as interior upland areas. From the recorded collection activities of Alfred Marche in the late nineteenth century up to the systematic archaeological excavations conducted today by the National Museum of the Philippines, ceramics and sherds constitute a significant portion of the artifacts recovered. Moreover, evidence from underwater archaeological activities over the last twenty years reveals that various shipwrecks, including Spanish galleons, Chinese junks, and other vessels carried in their cargo holds a variety of trade commodities, including trade ceramics that

originated from China and other areas of Southeast Asia.

Ceramics, along with other imported goods such as gold, iron pots, lead, colored glass beads, iron needles, and silk textiles, were the subject of a highly complex network of maritime trade in the Southeast Asian region. These foreign commodities were traded by foreign merchants in exchange for locally available beeswax, cotton, pearls, tortoiseshell, medicinal betelnuts, abaca, cloth, and coconut heart mats (Scott 1984: 69–70). Recent underwater archaeological activities throughout Southeast Asia have provided the material cultural evidence for the extensive trade pattern in the region.

UNIFIED BUDDHIST CHURCH (1963)

Upholding Buddhism

The Unified Buddhist Church was an independent Buddhist organization that instigated a series of protests against the Ngô Đình Diệm regime (t. 1955–1963) in South Vietnam in the summer of 1963. The government's brutal suppression of the protests stimulated the fall of Ngô Đình Diệm in November 1963.

Under the rule of the Catholic Ngô Đình Diệm (1901–1963), Buddhists were discriminated against. They were ousted from key positions and Catholics were appointed in their place. Tensions arose on 8 May 1963 after the government banned the flying of Buddhist flags in commemoration of the Lord Buddha's birthday (Sagar 1991: 61). Buddhist monks in Huế formed the Unified Buddhist Church and organized protests against the oppression of Buddhists. Ngô Đình Diệm and his brother Ngô Đình Nhu (1910–1963), who were both suspicious of communist support for Buddhist protests, ordered troops to fire at protesters; this led to the deaths of nine people. On 11 June 1963, Thich Quảng Duc, an elderly monk, burned himself to death in a public square in Saigon. Demonstrations spread from Huế and Saigon to other major cities and were supported by students and the disillusioned urban elite. On 16 June Diem compromised with the protesters and acceded to their demands for religious and political freedom (Smith 1987: 148–149). However, the government failed to keep its promise and continued to persecute leading Buddhist monks and nuns.

In August, Buddhist demonstrations again took place in major cities. Ngô Đình Nhu suppressed the demonstrations violently and arrested more than 1,400 people. In Huế about thirty monks and nuns were killed in a raid (Sagar 1991: 62).

The government's brutal suppression of Buddhists was strongly criticized by Washing-

ton. It also gave a pretext for anti-Diem military leaders to seek Washington's support to topple the Diem regime in November 1963.

UNITED MALAYS NATIONAL ORGANIZATION (UMNO) (1946)

Unifying Malay Nationalism

The United Malays National Organization (UMNO), or *Pertubuhan Kebangsaan Melayu Bersatu* in Malay, was officially formed on 11 May 1946 in Johor Bahru. Its formation followed a series of meetings of representatives of more than forty Malay organizations in reaction to the Malayan Union scheme imposed by the British in the aftermath of the Pacific War (1941–1945). The first meetings, attended by representatives of forty-one Malay organizations from all over Malaya including Singapore, were held at the Sultan Sulaiman Club in Kuala Lumpur from 1 to 4 March. A second “Congress” took place on 30 and 31 March to urgently decide on ways to counter the scheme that was to be officially established on 1 April. Headed by Dato’ Onn bin Ja’afar (1895–1962), the leader of the *Pergerakan Melayu Semenanjung Johor* (Johor Peninsula Malay Movement) and later chief minister of Johor, UMNO became a strong united force of the Malay people against the Malayan Union. Started as a conglomeration of existing societies, UMNO gradually replaced its sister organizations when it opened its branches throughout the country as provided for by its 1949 amended constitution.

Differences in the ideology, long-term strategy, approach, and political orientation of the leaders, however, led to UMNO’s incompatibility with the *Parti Kebangsaan Melayu Malaya* (PKMM), the Pan-Malaya Malay Nationalist Party, which therefore left UMNO in June 1946 to struggle separately to achieve independence from Britain. Led by the upper middle class and traditional aristocrats, UMNO

joined forces with the Malay sultans and was regarded more favorably by the British than the more radical and socialistic PKMM. The declaration of the Emergency (1948–1960), a leftist insurgency and the mass detention of leaders of rival organizations including PKMM and the newly formed *Hizbul Muslimin* in 1948, facilitated UMNO’s rise to dominance and its participation in the government.

As a member of internal affairs in the government (1951–1955) and a founding member of the Communities Liaison Committee (CLC) established in 1949, Dato’ Onn had political views that were influenced by the British and the non-Malays. Consequently, he was insistent from 1949 that UMNO be opened to the non-Malays and that its name be changed to “United Malayan National Organization” to reflect a multiracial identity. Failing to convince UMNO members, Dato’ Onn left UMNO in August 1951 and formed the Independence of Malaya Party (IMP) on 16 September.

Despite his commitment to the idea that “Malaya is a Malay country,” the next UMNO president, Tunku Abdul Rahman Putra Al-Haj (1903–1990), too could not avoid taking the immigrants into consideration in his planning for the future. Tunku, a prince from Kedah, had to consider the condition imposed by the British government as well as the recommendations of the CLC in formulating UMNO’s future direction; however, the single most important factor was the reality that Malaya was a multiracial country. The Kuala Lumpur Municipal Council election in February 1952 started the process of UMNO’s involvement in the less communal politics when the Kuala Lumpur branch of UMNO and the Selangor chapter of the Malayan Chinese Association (MCA) struck a deal to face the noncommunal IMP. The success of the UMNO-MCA alliance in Kuala Lumpur and subsequent local elections finally led to the formal establishment of a stronger alliance in 1954 when the Malayan Indian Congress (MIC) left Dato’ Onn’s camp and joined UMNO-MCA. As a member of the alliance and strongly influenced by the British, UMNO, led by Tunku, gradually succumbed to the demands of the non-Malays for less restrictive conditions in acquiring Malayan citizenship and equal political rights for the non-Malays. Through the alliance, favored by the British, and in collusion with the sultans, UMNO played a

major role in the negotiations with Britain, which subsequently led to Malaya achieving independence on 31 August 1957. Since then the posts of prime minister and deputy prime minister of Malaya (after 1963, Malaysia) were always in the hands of the president and deputy president of the UMNO.

In the first general election for Malaya in 1955, UMNO was allotted less than 70 percent (thirty-five of fifty-two) of the seats for contest, although Malays made up about 84 percent of the electorates. MCA, on the other hand, was allotted nearly 30 percent, although Chinese made up only 11.2 percent of the eligible electorate (Andaya and Andaya 2001: 276). UMNO secured all but one seat, which was won by Parti Islam Se Malaysia (PAS), which began to increasingly challenge UMNO's influence among the Malays. Although UMNO continued to be the strongest party in terms of seats, in 1959 the two northeastern states of Kelantan and Terengganu were wrested by PAS, and UMNO's influence in some other states also declined. By some political maneuvering UMNO managed to retake Terengganu in 1961, but PAS's challenge continued; assisted partly by rifts within UMNO, Terengganu was recaptured by PAS in 1999.

Started as a Malay-Muslim organization to safeguard the interest of Malays in Malaya, UMNO gradually developed into a *bumiputra* (native, indigenous) party that also admits non-Muslim indigenous peoples and lately even some non-Muslim Chinese in Sabah as members. Being the most senior member of the alliance, and since 1974 the Barisan Nasional (National Front), UMNO has played a significant role in the political and historical development of Malaysia since 1946.

UNITED NATIONS AND CONFLICT RESOLUTION IN SOUTHEAST ASIA

An Unenviable Task

One of the primary purposes of the United Nations (UN) is the maintenance of international peace and security. Since its creation in 1945, member states have called on the United Nations to resolve numerous conflicts among states. Through its Security Council and the General Assembly, the UN has also undertaken to resolve some of the major conflicts in post-war Southeast Asia. UN intervention has included the armed conflict between The Netherlands and Indonesia, the conflicts over Borneo, Irian Jaya, and East Timor, and the process of democratic transition of power in Cambodia, by far the organization's major peace-keeping operation. The United Nations cannot claim undisputed success in these activities, but it has been an indispensable factor in resolving each of the complex conflicts.

The Struggle for Indonesian Independence

When the Netherlands government remained unwilling to grant independence to Indonesia in the years following the end of the Pacific War (1941–1945), the United Nations became the public forum to examine and protest against Dutch actions in the archipelago. The conflict had been on the agenda since 1946,

and the first Dutch “police action” in Indonesia prompted debates in the Security Council in July 1947. On 2 August the United Nations called for a cease-fire, in a resolution promoted mainly by the United States, Australia, and India, that was accepted by both Indonesia and The Netherlands. The UN’s Good Offices Committee (GOC) was then instrumental in bringing about the subsequent so-called Renville agreement to end hostilities in January 1948. In the GOC, Belgium represented the interests of The Netherlands; Australia represented those of Indonesia; and the United States, as a neutral power, acted as chairman. But the cease-fire lasted only until the Dutch, in blatant violation of the agreement, launched a second “police action” on 18 December 1948 that led to open outrage in the United Nations. Now the United States and United Nations took a more resolute stance against Dutch action: in January 1949, the Security Council adopted a strong resolution demanding the immediate release of the imprisoned Indonesian leaders, establishment of interim government, and full transfer of sovereignty. The Netherlands had no choice but to bow to international pressure now, and negotiations between the two hostile parties were opened in The Hague in August 1949 under UN auspices. On 27 December 1949 The Netherlands officially transferred sovereignty over the territory of Indonesia, excluding Irian Jaya. The United Nations has proved an effective forum for international protest and, with the backing of powerful member states, was able to put through its resolutions.

The Borneo Dispute

In July 1963, the Malayan prime minister met with the presidents of Indonesia and the Philippines in Manila to discuss the imminent establishment of a Malaysian Federation, which was to include, besides Malaya and Singapore, the two British territories of Sabah and Sarawak in Borneo. As all three countries laid claim to the Borneo territories, the United Nations was approached to ascertain the popular will of the inhabitants. A UN mission of assessors was to prepare a study to this effect rather than to conduct a formal plebiscite. They began their work on 26 August 1963, and the UN secretary-general announced the findings on 13

September. The outcome was in favor of joining Malaysia, but the establishment of the new federation—including the Borneo territories—had already been announced on 29 August and had been set for 16 September 1963, irrespective of the outcome of the UN mission. This disregard for the authority of the United Nations provided the pretext for the Philippines and Indonesia to refuse recognition of Malaysia and the Indonesian policy of *Konfrontasi* (confrontation) against the new state, which even saw Indonesian incursions into the Malay Peninsula. When Malaysia was elected as a non-permanent UN Security Council member, Indonesia left the UN in January 1965 in protest. The confrontation ended only the following year after the usurpation of power by Suharto (1921–), and Indonesia finally rejoined the United Nations in September 1966.

Irian Jaya

When Indonesia attained independence in 1949, The Netherlands kept control over Irian Jaya, the sparsely populated western part of the island of New Guinea, and thereby laid the basis for a conflict that was to last for more than a decade. The Hague’s only concession to Indonesia was the prospect of holding further talks in the future. The Indonesian government under Sukarno (1901–1970), however, began a fierce diplomatic battle against the former colonial ruler, which led to U.S. mediation efforts and eventually, on 15 August 1962, to an agreement on Irian Jaya. This agreement provided for the monitoring of a cease-fire by and the temporary transfer of administration to the UN Temporary Executive Authority (UNTEA) from October 1962 and then to Indonesia from May 1963. In addition, however, the agreement foresaw a UN-controlled determination of the will of the inhabitants of Irian Jaya, whether or not they wished to remain under Indonesian authority. This determination took place several years later, in July–August 1969, and was strongly manipulated by Indonesian authorities. UN officials overseeing the expression of opinion were allowed to question only village leaders, who all voted in favor of Indonesia. The report presented to the UN General Assembly confirmed the outcome but also contained clear reservations and was met by heavy criticism. The General Assembly, nonetheless, en-

dorsed the report, and Irian Jaya was subsequently incorporated into the Indonesian Republic on 17 September 1969. Since then Indonesia has pursued a policy of transmigration, whereby nearly 200,000 settlers had been transferred to Irian Jaya, while the “Free Papua Movement” continued to contest Indonesian authority on New Guinea.

East Timor

After the revolution in Portugal in April 1974, the Lisbon government decided to pull out of its colony of East Timor in January 1975. A weak coalition government of the right-wing Timorese Democratic Union and the militant Revolutionary Front for an Independent East Timor (FRETILIN) quickly broke down and gave way to civil war in August 1975. In November 1975, FRETILIN declared unilateral independence, and before the end of the year Indonesia intervened by sending forces to support the pro-Indonesian Timorese Democratic Union, despite UN protests. In July 1976 the government in Jakarta declared the territory of East Timor to be the twenty-seventh province of Indonesia, but FRETILIN resistance continued, as well as protests by the UN Security Council and General Assembly. The UN continued to recognize Portugal as the legitimate administering power in East Timor, but the de facto acceptance of the new situation by major states deprived the UN’s resolutions of effectiveness. After 1982 the United Nations tried to bring about a solution through informal consultations with the governments of Indonesia and Portugal, and in 1997 the UN secretary-general appointed a personal representative for East Timor to demonstrate the importance of the question. However, only since the fundamental political changes in Indonesia in recent years has the situation come closer to resolution. Faced with open violence in East Timor early in 1999, the Habibie government indicated that it might consider independence for East Timor; in June the United Nations deployed an advance mission (UNAMET) to prepare a popular consultation of the inhabitants of East Timor. In a referendum overshadowed by violence in August 1999, the population of East Timor voted for independence from Indonesia. Late in the same year, the territory was finally placed under direct control of the UN

Transitional Administration (UNTAET), and Indonesian troops withdrew. On 31 October 2001 the UN Security Council adopted a resolution to the effect that East Timor was to attain formal independence as of 20 May 2002.

Cambodia

The active involvement of the United Nations in the conflict in Cambodia in December 1978 was triggered by the Vietnamese invasion of the country. In July 1981, the organization sponsored a first international conference on Cambodia in New York, for which ASEAN states had been pressing, but no decisive progress was made—due mainly to the absence of Vietnam and the Soviet Union. Nonetheless, already at this event the plan for a transitional authority followed by general elections was developed, as it was to be followed a decade later. Throughout the 1980s the UN General Assembly continued to recognize the ousted Khmer Rouge regime as legitimate representative of Cambodia and to condemn Vietnamese action. A second international conference, now with the participation of all involved parties, was called under UN auspices for July 1989 in Paris, as Vietnam was preparing to withdraw from Cambodia. It took the conference participants until 23 October 1991, including a long period of suspension of the conference altogether, to reach a comprehensive settlement. The agreement, which was signed by all rival Cambodian factions and nineteen foreign governments, stipulated the transfer of authority to the United Nations and general elections, once internal stability was restored. The United Nations deployed an Advance Mission in Cambodia (UNAMIC), which was transformed into the UN Transitional Authority in Cambodia (UNTAC) in March 1992. UNTAC became the UN’s largest and most ambitious peacekeeping operation, with 22,000 civilian and military personnel.

UNTAC assumed control of the key sectors of Cambodia’s administration, including defense, security, foreign affairs, and finance, in order to establish a stable environment for general elections. Faced with continuing violence among Cambodian factions, mainly from the Khmer Rouge, and acting under a mandate that did not allow the use of force, UNTAC managed commendably. UNTAC succeeded in registering 4.2 million voters, overseeing an election campaign,

and conducting general elections in May 1993 without grave disruptions—and with a voter turnout of around 90 percent. In September of the same year, a new constitution was put into place, King Sihanouk resumed the throne, and in October a coalition government under Hun Sen and Prince Norodom Ranariddh was sworn in. UNTAC's mandate officially ended in September 1993. During this time, the United Nations also managed to repatriate and resettle some 360,000 refugees and displaced persons. UN agencies have remained in Cambodia ever since, and monitors were sent again in 1997, when renewed fighting between rival factions broke out, and in 1998 to oversee general elections.

In addition to its efforts to promote economic and social development, and besides providing the most important global forum for newly independent states, the United Nations has played a significant role in resolving conflicts in Southeast Asia ever since the end of the Pacific War.

UNITED NATIONS TRANSITIONAL AUTHORITY IN CAMBODIA (UNTAC) (1992–1993)

The peacekeeping operation in Cambodia in 1991–1993 was one of the largest operations of that nature carried out by the United Nations. Although UNTAC was formally established in February 1992, peacekeeping by the United Nations was initiated in late 1991. The mandate for the operation was far-reaching, including such fields as administration, military functions, and elections. The Paris Agreements on Cambodia signed on 23 October 1991 formally settled the Cambodian conflict. The Paris Agreements included provisions for the initiation of a peacekeeping operation in Cambodia to be carried out by the United Nations.

The Cambodian conflict originated in the bilateral conflict between Cambodia and Vietnam in the late 1970s. This conflict escalated and led to the Vietnamese military intervention launched on 25 December 1978. Following the intervention the Peoples' Republic of Kampuchea (PRK) was established in Cambodia, whereas the overthrown government—namely, Democratic Kampuchea (DK)—in alliance with two noncommunist Cambodian groups in the Coalition Government of Democratic Kampuchea (CGDK), combated the PRK. Vietnam and the Soviet bloc supported the PRK, whereas the parties to the CGDK relied

on support from China (PRC), the Association of Southeast Asian Nations (ASEAN), and the United States. The developments between Vietnam's military intervention and settlement of the conflict through the signing of the Paris Agreements on Cambodia can be divided into three phases. First was the confrontation phase, 1979–1986, followed by the dialogue phase, 1987–1989, and finally the conflict-resolution phase, 1990–1991.

On 16 October 1991 the UN Security Council adopted a resolution in which it was decided to establish the UN Advance Mission in Cambodia (UNAMIC), to be sent to Cambodia immediately after the signing of the Paris Agreements on Cambodia. The formal decision to set up the UN Transitional Authority in Cambodia (UNTAC) was made by a unanimous vote of the Security Council on 28 February 1992. UNTAC was officially established with the arrival in Phnom Penh of Yasushi Akashi, the personal representative of the secretary-general of the United Nations, on 15 March 1992. The withdrawal of UNTAC from Cambodia took place from August to December 1993. On 24 September, Cambodia's new constitution was promulgated and the Constituent Assembly was transformed into a legislative assembly. This formally terminated UNTAC's mandate in Cambodia.

In the administrative field UNTAC was given extensive powers to supervise the existing administrative structures in Cambodia. For example, all bodies acting in the field of foreign affairs, national defense, finance, public security, and information would be under direct UNTAC control. Other units could also come under direct UNTAC control, if deemed necessary. Furthermore, all police would operate under its supervision and control.

In the military field, UNTAC's mandate covered three major aspects. First, it was to supervise, monitor, and verify the withdrawal of foreign forces and their nonreturn to Cambodia, as well as the cessation of foreign military assistance to the Cambodian parties. Second, it was to supervise the cease-fire, which was to be observed by the Cambodian parties upon the signature of the Paris Agreements in October 1991. Third, during the demobilization and cantonment process of the armed forces of the Cambodian parties, UNTAC should supervise the regrouping and relocating of all forces to

cantonment areas, and control and guard their military equipment.

In regard to the elections, UNTAC's role was to be fully and exclusively in charge of the organizing and conduct of the general elections to be held in Cambodia during the peacekeeping operation.

In assessing the peacekeeping operation, the major positive feature was the success of the general elections, carried out on 23 to 28 May 1993, both in terms of registration of voters and of the impressive turnout in the elections. In fact, 89.56 percent of the nearly 4.7 million registered voters participated in the elections. Another notable success was the repatriation of some 365,000 Cambodian refugees ahead of the general elections. Despite major efforts to promote respect for human rights and to combat politically motivated violence in the country, the United Nations did not succeed in creating a truly politically neutral climate for the elections. It also failed to adequately address the problem of the regular occurrence of armed attacks against the Vietnamese minority in Cambodia. To a certain extent the actions taken by the United Nations had the effect of worsening the situation of the ethnic Vietnamese. Another shortcoming was the decision to pay salaries to the peacekeepers in U.S. dollars, thus contributing to the dramatic depreciation of the local currency and causing a sharp increase in the cost of living for the Cambodian population. However, the most serious shortcoming was in the military field, where the demobilization and cantonment of the military forces had to be abandoned because the Party of Democratic Kampuchea (Khmer Rouge) refused to join in the process. As a consequence, the stage was set for continued civil war in the country following the withdrawal of UNTAC.

UNIVERSITY OF MALAYA

Malaysia's Oldest University

The birth of the University of Malaya was the result of recommendations made by a commission chaired by Sir Alexander Carr-Saunders concerning the development of a higher learning institute in Malaya. In 1947 the legislative councils of Malaya and Singapore passed an ordinance to set up the university. It was first agreed to amalgamate two existing institutions in Singapore as its base. They were the King Edward VII College of Medicine, set up in 1905, and Raffles College, which housed the arts and science faculties and was opened in 1919. In 1956 political developments in both Malaya and Singapore initiated considerations that the university be expanded also in Kuala Lumpur. New faculties were introduced in the Singapore campus, such as engineering and law. In 1958 the arts faculty started the first sessions in Kuala Lumpur, followed by the engineering faculty. In the following year the governments of Malaya and Singapore agreed that both campuses should be given individual autonomy—that is, the University of Malaya in Kuala Lumpur (formally established in 1962) and the University of Malaya in Singapore. (Later the name of the campus in Singapore was changed to the National University of Singapore.)

After 1958 the University of Malaya in Kuala Lumpur began to expand, with faculties such as the arts, engineering, science, Malay studies, Indian studies, and mineralogy. In 1960

the university offered a degree course in agriculture. This was followed by the introduction of additional faculties, such as the Faculty of Medicine, the School of Education, the Faculty of Economics and Administration, and the School of Biological Sciences. All were instituted in the 1960s. Since then various other faculties and institutes have been set up, such as the faculties of arts and social science, business and accountancy, dentistry, the Institutes of Post-Graduate Studies and Research and the Asia and Europe Institute, and computer science and information technology.

The University of Malaya continues to expand under the various five-year development plans that extend to the second decade of the twenty-first century. As Malaysia's oldest university it maintains its standing as a center of excellence for research and development. The School of Medicine, for example, has its own hospital and often hosts specialists of international standing. To date it houses one of the biggest libraries in the country, if not the region. It runs more than twenty faculties and provides many facilities for sports, cultural, and recreational activities catering to staff, students, and the public. It is the alma mater of many prominent figures in politics, the economy, the professions, and academia.

UNIVERSITY OF RANGOON

Part and Parcel of Myanmar Politics

The University of Rangoon was the first institution of higher education in Burma (Myanmar). The university's institutional predecessors were Rangoon Baptist College, which had

been founded by American missionaries in 1875, and Rangoon College, a branch of the University of Calcutta, founded in 1885. The Baptist College was renamed Judson College in 1918, and the two were brought together in 1920 to form the university. The university was reorganized following independence in 1948 and, under the 1964 University Education Law, renamed the Yangon Arts and Sciences University. Always a source of suspicion to the political authorities since its founding, the university progressively lost its autonomy and by the 1960s was controlled by the minister of education. Standards were progressively lowered because of political pressure, and the university is now a shadow of its former self.

The formation of the University of Rangoon was surrounded by political controversy. In 1920 students went on strike in protest at what was considered the elitist education being provided by the new institution. The politicization of student life continued in the 1930s, when the Student Union became dominated by nationalist youth who believed that the education they were receiving was "slave education." After independence, communist, socialist, and ethnic minority political movements all found the student body a fruitful source of recruits for their respective causes. Even after the establishment of tight government control under the military, the university remained a center of political discontent, particularly during the prodemocracy demonstrations in the late 1980s and 1990s.

U.S. INVOLVEMENT IN SOUTHEAST ASIA (POST-1945)

A Fruitless Endeavor

By this phrase we usually refer to the various forms of participation by the United States in military actions in Indochina (Laos, Cambodia,

and especially Vietnam) for almost thirty years following the end of the Pacific War (1941–1945).

Before the Pacific War, U.S. leaders knew and cared little about the peoples of Vietnam, Laos, and Cambodia, which were controlled by France. These territories were of minimal economic, political, or strategic importance to the United States. American leaders discovered Indochina early in the war, when the Japanese intruded on French Indochina. Toward the end of the war, when the retreat of Japanese forces from the region was imminent, President Franklin Delano Roosevelt (t. 1933–1945) suggested that the peoples of these countries be put under a UN trusteeship rather than subjected anew to French colonialism.

Toward the end of the Pacific War there already existed in Indochina a well-organized anti-Japanese resistance movement. As the French were determined to reassert their control in the region, the anti-Japanese resistance movement became transformed into a national liberation movement against the French, because the peoples of Vietnam, Laos, and Cambodia had no intention of submitting to them. But many leaders of the national liberation movement, especially in Vietnam, were communists; therefore French leaders warned that U.S. opposition to French colonialism in Indochina would drive the region into the arms of the communists and the Soviet Union. The United States, pursuing a policy of containing communism, began, by 1953, to extend massive aid to the French in their effort to suppress the national liberation movement of Indochinese peoples led by communists.

When the French failed in Indochina and were forced to come to terms with the Democratic Republic of Vietnam (DRV) in 1954, the United States was determined to do the job itself. The containment policy was extended to Southeast Asia. Indochina became enormously important to the United States, primarily because it was perceived in 1954 as the site of the next round of battle with the Sino-Soviet bloc. The so-called Domino Theory was applied to the situation in the region: Indochina alone may have lacked strategic and economic importance, but if Indochina fell to the communists, then all of Southeast Asia would follow.

The most ambitious U.S. undertaking was in South Vietnam. Following the French withdrawal in 1955, the American administration sent scores of advisers and spent billions of dollars in the effort to create an independent non-communist state that could stand as a bulwark against communist penetration in Southeast Asia.

But the South Vietnamese regime, created by the Americans, proved to be an imperfect instrument for achieving U.S. ends. It alienated much of rural Vietnam and antagonized Buddhist activists, intellectuals, and politicians. In the countryside, land reform promoted by U.S. advisers was less attractive to the peasants than the more radical programs that had been instituted by the North Vietnamese communists. The Kennedy administration (1961–1963) drastically stepped up aid to the government of South Vietnam, which was threatened by an internal insurgency supported by the communist DRV. Americans also tried to create a pro-Western, anticommunist regime in Laos, but those efforts proved counterproductive.

President John Fitzgerald Kennedy (t. 1961–1963) and his advisers indicated a determination to take their stand in Vietnam. They began by increasing the number of U.S. military “advisers” in South Vietnam, including four hundred members of the Special Forces, in direct violation of the limits set up by the Geneva Agreements of 1954. Kennedy demanded more aggressive tactics and did not flinch when these required Americans to engage in combat. Later Kennedy authorized the dropping of napalm (a jellied petroleum product that clings to the skin while it burns) and herbicidal defoliants (chemicals that denude the forest, destroy the productivity of the soil, and have unpredictable effects on humans who come into contact with them). Kennedy also decided to send U.S. “support” units to Vietnam. These forces dribbled in by the hundreds and thousands. There were approximately 1,500 U.S. military personnel in Vietnam when Kennedy took office in 1961. That figure had grown to some 15,000 by the end of his administration in 1963 (DeConde 1976: 278).

On 2 August 1964 there occurred an incident in the Gulf of Tonkin. A U.S. destroyer was attacked by DRV torpedo boats while patrolling in the gulf, allegedly on the high seas,

Napalm bombs explode on Viet Cong structures south of Saigon in 1965. One of the U.S. military's primary incendiary weapons in Vietnam, napalm attracted public protest as a weapon of terror. (U.S. National Archives)

off the coast of North Vietnam. This Gulf of Tonkin Incident gave the Johnson administration (1963–1969) the desired excuse to attack North Vietnam. It also provided the occasion for President Lyndon Johnson to ask the U.S. Congress for authority to take whatever steps were deemed necessary, including the use of force, to protect any endangered state in Southeast Asia.

From 1965 to 1968 the Johnson administration launched a full-scale war in Vietnam, initiating regular bombing raids over the DRV and sending a half-million men to maintain the governments of South Vietnam. The Soviet Union responded by sharply increasing its assistance to the DRV. North Vietnamese regular army troops were beginning to cross into the south. Evidence of large numbers of northern Vietnamese regulars in Laos led to secret U.S. bombing runs against suspected communist positions in Laos.

Unhappiness with the U.S. involvement in Vietnam manifested itself as early as March 1965 as student activists, religious pacifists, and academics specializing in Southeast Asian affairs

began to challenge the administration. Opposition to the war grew in intensity as the Americanization of the struggle continued, slowly drawing more and more ordinary Americans into the antiwar coalition.

The massive use of U.S. airpower failed. The bombing had not significantly affected North Vietnamese morale or ability to send men and materials south to the forces opposing the Saigon regime, supported by the United States, and the Soviet Union and China replaced equipment destroyed by U.S. bombing raids. The Soviet Union had remained virtually uninvolved until 1965, when the massive attacks on the DRV began. After that the Soviet Union demonstrated its commitment by sending Hanoi large quantities of modern military equipment.

The sequence of events in Indochina demonstrated that the United States could not win and could not seem to end the war. Popular dissatisfaction in the United States and around the world grew. As American casualties multiplied, antiwar demonstrations, draft resistance, and desertions from the military increased. The war was costing the American people a lot of money, not to mention the high toll in military casualties. There were demands that funds being used in Vietnam be used for a war on poverty at home. During the late 1960s the majority of Americans thought that the war in Vietnam was a mistake. Pressure on the U.S. government to end the war intensified.

In 1968 there began peace negotiations between the United States and both Vietnamese governments. The Soviet Union assisted as an intermediary. On 31 October 1968, President Johnson ordered the cessation of all attacks on North Vietnam. But that was only a part of the war. The struggle for control of the south continued. The United States was still determined to deny it to the communists. Consequently the peace talks and the war went on and on.

President Richard Nixon's administration (1969–1974), in searching for a way to get out of Vietnam without surrender yet quickly enough to stay ahead of antiwar sentiment at home, decided to transfer the main burden of the unpopular war onto their South Vietnamese ally. This step was called "Vietnamization" of military actions. Gradually, on a fixed schedule, U.S. troops were pulled back from combat and

out of the country. But in support of South Vietnamese troops, the air war was stepped up. It extended to staging areas in Laos and to infiltration routes (parts of the so-called Hô Chí Minh Trail) in neutral Cambodia.

Cambodian leader Prince Norodom Sihanouk (1922–) had been remarkably adept at protecting his people from the war in neighboring Vietnam. To accomplish this he was forced to tolerate the presence of North Vietnamese bases on his territory. In 1969, Nixon authorized bombing raids on North Vietnamese bases in Cambodia. Besides, early in 1970, Sihanouk was overthrown by a military coup led by officers friendly to Washington. In May, U.S. troops invaded neutral Cambodia, determined to destroy North Vietnamese bases. The results were disastrous for Cambodians and led to anti-American demonstrations around the world. In Cambodia, control gradually passed to a group of ultra-radical left-wing insurgents known as the Khmer Rouge.

In February 1971, South Vietnamese forces, supported by U.S. planes and helicopters, struck at North Vietnamese bases in Laos.

To a North Vietnamese conventional attack across the demilitarized zone in March 1972, the United States responded with massive air attacks on the DRV and ultimately with the mining of the North Vietnamese harbor of Haiphong. The North Vietnamese attack stopped short of the collapse of the Saigon government. The renewed military stalemate, additional U.S. concessions, and pressure from the Soviet Union and China finally led Hanoi to accept a diplomatic arrangement short of victory in the autumn of 1972. But after his reelection Nixon demanded changes in the agreement. The representatives of the DRV balked. Nixon then ordered the most devastating bombing of the war, the "carpet bombing" of parts of North Vietnam, a series of raids in which more bombs were dropped in twelve days than had been dropped in the two years from 1969 to 1971. At the same time massive supplies of military equipment were delivered to the Saigon regime. Finally, in February 1973 a cease-fire agreement was signed. The agreement led to the withdrawal of U.S. forces from Indochina. The war had ended for the Americans. Congress restricted the president's power to reinvolve the United States in the war in

Vietnam, and U.S. support for the Saigon regime declined.

However, the war between the DRV and the Saigon regime continued. Throughout 1973 and by mid-1974, operations of the Army of the Republic of Vietnam (ARVN)—that is, the South Vietnamese Army—had to be curtailed for lack of adequate supplies. The departure of the Americans and the reduction of U.S. aid affected morale in South Vietnam, and the will to fight had ebbed by early 1975. In July 1976 the country was unified as the Socialist Republic of Vietnam (SRV). After a war of roughly thirty years, the Vietnamese revolution had triumphed over the French, the Americans, and all internal opposition. But the dominoes of Southeast Asia did not fall.

More than 58,000 Americans and more than 3.2 million Vietnamese died in the American phase of the war in Indochina (“The Cold War in Asia” 1995/1996: 232). Defeat in Vietnam proved to be of little consequence, without impact on the strategic balance between the United States and its adversaries in the Cold War.

U.S. MILITARY BASES IN SOUTHEAST ASIA

The Cold War and the victories of national liberation movements in Southeast Asia created a power vacuum in which both the communist powers and the Western powers were eager to win support in the region and deny it to their rivals. Thus, military bases and base rights in Southeast Asia became part of a global system that was envisaged by the United States as a means of policing the world. Furthermore, these military installations were regarded as forward bases in a global contest with the Union of Soviet Socialist Republics (USSR), as the leader of world communism.

The rise to power of the People’s Republic of China, or Communist China, and its alliance with the Soviet Union created a situation in the East that was not conducive to American interests. Consequently, the importance of the military bases in Southeast Asia grew.

The first American military bases in the region were built in the Philippines, a U.S. colony since 1898. After the Philippines acquired independence in 1946, the Military Bases Agreement between the United States

and the Philippines was signed in March 1947. The agreement gave Washington the right to maintain military facilities on the islands—twenty-three naval and air bases, large and small, active and inactive—for ninety-nine years. The United States also gained broad legal jurisdiction over the bases and their personnel. The most important of the bases were the Subic Bay/Cubi Point naval and air complex and Clark Field Air Base. These were supplemented by small facilities elsewhere on the country's main island, Luzon: John Hay Air Station in Baguio City, the Naval Radio Station at Capas, the U.S. Naval Communications Station at San Miguel, and the Wallace Air Station at Poro Point. In October 1959, a memorandum of agreement was signed, whereby the term of the lease was reduced from ninety-nine to twenty-five years. U.S. operations were consolidated in four "active bases." The reduction of the effective length of the lease was confirmed in the 1966 revisions of the Military Bases Agreement, when some changes were made in the jurisdiction over criminal and civil matters in the base areas. The amendments of 1979 provided for a Philippine commander of each base site, and the area under U.S. command was substantially reduced. According to the amendments of 1983, the Philippine government assumed responsibility for the integrity of the bases, including perimeter security, although the U.S. commander remained responsible for internal security. After the term of the lease expired in 1991, the Philippine Senate rejected the request to prolong the base agreement. As a result, the U.S. military forces were withdrawn from the bases in 1992.

The so-called domino theory, which dominated American strategic thinking on Southeast Asia, focused during the 1960s and 1970s on South Vietnam. In order to fight the communists, a number of military air and naval bases were built in the area: at Pleiku, Phu Cat, Tuy Hoa, Nha Trang, Phan Rang, Bien Hoa, Tan Son Nhut, and Cam Ranh Bay. After the U.S. defeat in the Vietnam War, all these bases were lost.

Thailand was an important country in the U.S. security policy in Southeast Asia. With its central location in the area, it was ideally suited to become a secure, strategically placed, and extensive base. On 27 and 29 December 1951, in an exchange of notes between the United

States and Thailand, Thai officials offered the assurances necessary for the kingdom to receive military aid under the Mutual Security Act of 1951. The Southeast Asia Defense Treaty (Manila Pact) was signed on 8 September 1954.

This agreement was the legal basis for the stationing of U.S. troops on Thai soil and the initiation of reconnaissance and offensive air operations from Thai bases; the development of an extensive intelligence network in Thailand related primarily to the Indochinese conflict. The treaty also allowed the use of Thailand by the Central Intelligence Agency (CIA) and other U.S. government agencies for the logistical supply of anticommunist forces in the region. Furthermore, it enabled the development of patterns of Thai-American security cooperation that carried on well into the 1970s.

In 1961, U.S. Air Force personnel began their operations in Thailand by establishing an aircraft control and warning system at the Don Muang airport (Bangkok). A second major air facility was developed at Takhli, and an air center was established at Korat. Bases were developed also in Nakhon Phanom, Udorn, Ubon, and U-Tapao. For naval bases, the Americans used the port of Bangkok and a deepwater port at Sattahip. From 1965 onward, Thailand was to serve as a principal base for American reconnaissance as well as tactical and strategic air missions over Indochina.

In 1973, the Thai civil government moved toward an accelerated withdrawal of U.S. military forces from the country. The withdrawal started in 1974, and by 20 June 1976, all the bases had been turned over to Thailand. Today, the United States enjoys access to facilities in Singapore—the air base, the Sembawang naval base and shipyard, and other military facilities on the island.

V

VAJIRAVUDH (RAMA VI) (r. 1910–1925)

Advocate of Thai Nationalism

King Vajiravudh, the sixth king of the Chakri dynasty, is by far that dynasty's most controversial ruler. He was the first Thai king to be educated abroad, and his reign (1910–1925) is notable for its many important modernizing programs. Prominent among them were the compulsory primary education law, the foundation of Chulalongkorn University, and exhortations to improve the status of women in Thai society. In addition, following the Great War (1914–1918), Vajiravudh's government scored a major international political success, ensuring the kingdom's legal sovereignty through treaties signed with the major European powers. Yet these achievements are largely overshadowed by a series of financial scandals that weakened the state's long-term economic stability and by personal missteps that lowered Vajiravudh's esteem among other royalty and many in the kingdom's emerging urban middle class.

Vajiravudh was born in Bangkok on 1 January 1881, the eldest son of King Chulalongkorn (Rama V) (r. 1868–1910) and Queen Saowapha. King Chulalongkorn wisely promoted the education of his numerous sons and brothers to fill professional positions in the kingdom's rapidly expanding bureaucracy, and Vajiravudh benefited greatly from this policy. Vajiravudh arrived in England in January 1894 at the age of thirteen to begin a remarkable education. He stud-

ied with private tutors before attending Sandhurst in 1898 for military training, and then, in 1900, continued on to Oxford, where he studied history and law. Vajiravudh acquired an impressive fluency in English and proved himself an imposing intellect.

More notable still was Vajiravudh's self-education in the culture and arts of Europe. Many scholars have noted that Vajiravudh left England as a fully formed Victorian gentleman. The young prince mingled with European royalty and other elite. He took tea with Queen Victoria (r. 1837–1901) and represented his father at various functions throughout Europe, traveling to France, Belgium, Hungary, Italy, and Spain. He learned tennis, horsemanship, and other elite European pastimes. His greatest love, perhaps, was the European theater. Vajiravudh took to writing, staging, and acting in European-style plays, recruiting members of his entourage to help him carry off these amusements. Vajiravudh is remembered for his beautiful translations of several of Shakespeare's plays, including *As You Like It* and *The Merchant of Venice*, from English into Thai. This love of theater continued throughout Vajiravudh's life and remains a controversial hallmark of his reign.

Significantly, during Vajiravudh's lifetime the Thai rules of royal succession changed. The traditional system was one of dual kingship in which an elite council appointed both a primary and a secondary king, each with independent, though unequal, powers. This political

arrangement, dependent as it was on the personalities of the two rulers, could promote rivalry and infighting, as it did during the early years of King Chulalongkorn's reign. For these reasons, the death in 1886 of Second King Wichaichan inspired Chulalongkorn to replace this arrangement with one more resembling the European system of primogeniture. Vajiravudh was named Crown prince in early 1895, and was thus the first Thai monarch to inherit the throne in this manner.

In 1902, Vajiravudh chose to return to Siam before receiving his degree and to take up his duties as Crown prince. His return journey brought him to both the United States and Japan, where he met with President Theodore Roosevelt (t. 1901–1909) and the Japanese royal family, respectively.

Vajiravudh ascended the throne in November 1910, following the unexpected death of his father a month earlier. The new king made the interesting choice to have two coronation ceremonies. The first was a brief and economical affair. The second coronation, held a year later, however, was a lavish thirteen-day ceremony attended by delegations from fourteen nations, including royal representatives from Japan, Great Britain, Russia, Greece, Denmark, and Sweden. This second coronation marked two prominent features of Vajiravudh's reign—namely, the use of Western-style theatrical spectacle to promote the Thai monarchy and the profligacy of his government. The coronation was budgeted at 500,000 baht but ended up costing nearly 5 million, which amounted to 8 percent of Siam's budget for that year.

The king faced a number of unprecedented political challenges in his reign. Most notable was the abortive coup of 1912 by mid-ranking military officers, the first instance of a Siamese king being challenged by commoner bureaucrats. This event marks the emergence of the anti-absolutist ideologies that would eventually inspire the overthrow of the absolute monarchy in June 1932. A second major challenge was the emergence of a free press in Siam capable of openly criticizing the monarchy and its political policies. Vajiravudh's response to this criticism is surprising. He often answered his critics directly, by writing strongly worded essays that appeared in the local press, though often under pseudonyms. He also secretly purchased leading critical newspapers and con-

verted them into advocates for his reign and policies.

Bangkok's emerging middle class publicly criticized the king for his political favoritism, the widespread political corruption of that era, and the government's unchecked expenditures, which pushed the nation into a dangerous spiral of foreign indebtedness. However, dissatisfaction was not limited to the commoner class; fellow royalty also levied private criticism against Vajiravudh. They, too, resented the king's obvious political favoritism, as it often benefited commoner men to whom the king established personal attachment. More important, many were distressed by Vajiravudh's personal behavior, believing it diminished the long-term standing of the monarchy. Particular ire was aimed at the king's beloved theatrical activities, which were dismissed as game playing below the dignity of a monarch, and his disinclination to marry.

To this day, Vajiravudh is most noted for his tireless efforts to develop a new mode of nationalist sentiment among the Thai populace. To this end he wrote and published numerous nationalist tracts and plays. He also formed a voluntary military organization called the Wild Tigers, also designed as a vehicle to advance this new ideology. Most famously, he promoted the trinity of nation-Buddhism-monarchy, established as the three pillars of Thai society. To demonstrate disloyalty to one of the three elements, argued Vajiravudh, was tantamount to disrespecting them all. Scholars have labeled this ideology as elite or official nationalism, because it was designed to stave off emerging ideologies such as republicanism, constitutionalism, and other belief systems that challenged the foundation of the absolute monarchy in Siam.

The king's greatest political achievement came during the Great War, or World War I (1914–1918). The king argued forcefully for entering the war on the side of the Allies, building consensus for this position by writing and disseminating political essays through the local press under a pseudonym. Siam entered the war in July 1917, sending a 1,300-man expeditionary force to France. Following the war Siam was able to parlay the gratitude of the Allies into a number of hard-won diplomatic victories. Over the next several years new treaty arrangements with the United States and the European powers reestablished the legal sover-

eignty of Siam and the right of that state to negotiate and establish trade tariffs.

Vajiravudh died young, from a stomach ailment, on 26 November 1925, at the age of forty-four. His only child, Princess Benjaratana, was born to Queen Consort Suvadhana only two days before the king's death. He produced no male heir, thus the kingship passed to his younger brother Prajadhipok (r. 1925–1934).

VAN DEN BOSCH, COUNT JOHANNES (1780–1844)

Ensuring Profitable Colonial Possessions

Van den Bosch served in the army in the Dutch East Indies from 1798 to 1810. Back in The Netherlands, he contributed to the organization of the Dutch and Dutch East Indies armies. In his 1818 study of the Dutch possessions in Asia, America, and Africa, he argued against a liberal colonial system along lines established by the British lieutenant governor Stamford Raffles (t. 1811–1816) of Java. He proposed a paternalistic colonial system, maintaining that people in the colonies were unaccustomed to hard work and needed strong guidance. Under the Dutch king's auspices, he also established a society that employed urban paupers for the development of unused land in the north of The Netherlands.

Van den Bosch was appointed by the king as commissioner general to the Dutch West Indies in 1827 to advise on the reorganization of government. He also provided advice on a report of Commissioner General Du Bus de Gisignies's about opening Java to European entrepreneurs and free labor. Van den Bosch argued that Java could not compete with coffee produced with free labor against coffee produced with slave labor in Brazil. Based on this advice, Van

den Bosch was appointed governor-general of the Dutch East Indies in October 1828, a position he assumed in January 1830.

As governor-general (t. 1830–1834), he developed the Cultivation System (*Cultuurstelsel*), which aimed to maximize revenues for the colonial government by compelling farm households to produce export crops such as coffee that were sold to government agents. During his term as governor-general large parts of the principalities of Surakarta and Yogyakarta were brought under colonial rule. Van den Bosch focused his attention on Java and Sumatra, and did not favor expansion of influence in other parts of the archipelago.

As minister of colonial affairs (t. 1834–1839) he designed the positive net revenue (*batig slot*) policy, according to which the Dutch East Indies had to produce a budget surplus for remittance to the Dutch treasury. He became a member of the Dutch parliament in 1842.

VAN DER CAPELLEN, BARON GODERT ALEXANDER PHILIP (1778–1848)

Addressing Colonial Challenges

Born in Utrecht on 15 December 1778, Van der Capellen obtained a doctorate in law from the University of Utrecht. He had a prominent career involving various positions in the Dutch public service (1803–1814) and a brief period as minister of religion and the interior (1809–1810). He was appointed on 22 September 1814 as a member of the State Commission (*Commissie Generaal*), which had to reestablish Dutch authority in the colonies that had been taken over by the British during the war against

France. Van der Capellen was also appointed governor-general of the Indies (t. 1816–1825), in charge of the day-to-day government of the Indies and the implementation of the decisions of the State Commission. He did not leave for the Indies until 1816, as he attended the Conference of Vienna.

The State Commission started its work in the Indies on 19 August 1816, and until 16 January 1819, Van der Capellen governed the Indies together with the other members, C. T. Elout and A. A. Buyskes. Various administrative issues dominated during the rule of the State Commission, including the design and establishment of various institutions required to govern the colony, and in 1815 a new constitution (*Regeeringsreglement*). Van der Capellen's solitary rule since 1819 was characterized by various wars. The Java War started with the Diponegoro uprising of 1825. Various military expeditions were sent to Sumatra to subdue the ruler of Palembang and fight fundamentalist Muslims in the Padang area. In West Borneo the Dutch troops fought Chinese settlers, and in Sulawesi they fought against the local states of Boni, Tanette, and Supa.

After the Napoleonic Wars (1803–1815), The Netherlands was impoverished and unable to finance the running of a colony. It expected that resumption of colonial trade would reinvigorate the Dutch economy. The State Commission had to make that happen. The members were in agreement about the main principles by which the Indies would be governed. However, Elout and Van der Capellen disagreed about opening up Java to foreign private entrepreneurs. Van der Capellen was initially favorably disposed, but after the departure of Elout and Buyskes he came under the influence of those who argued that private enterprise would use its technological superiority to exploit the indigenous population. He then argued that it would be best for the government to orchestrate the economic development of Java itself.

Van der Capellen banned the sale of land by local aristocratic landowners to foreign private entrepreneurs and also forbade private entrepreneurs to lease land in the self-governing principalities in Central Java. This infuriated many enterprising Europeans in Java. In 1823 he even ordered the Javanese aristocrats to reclaim the land they had sold or leased and pay indemnities for improvements. The aristocrats

felt their authority challenged. This sparked the Diponegoro uprising in Central Java and the outbreak of the bloody Java War (1825–1830).

Van der Capellen also prohibited the sale of opium in Priangan in West Java. Van der Capellen journeyed to Sulawesi and the Moluccan islands in 1824 to renew agreements with self-governing rulers there. Faced with revolts in the Moluccas, he abolished the centuries-old Dutch spice export monopoly there. He also took several measures to reinforce the influence of indigenous rulers in Java, and implemented the Dutch-English treaty of 1824, which involved exchanges of territory in the Malay Archipelago. Lastly, he took initiatives to improve and extend Java's road network and build bridges.

Van der Capellen's downfall came after he defied a request from Elout, who had become the Dutch colonial minister, to grant a monopoly to the ailing *Nederlandsche Handel Maatschappij* (NHM) for the trade of coffee from Priangan. The wars, and the relatively costly administrative infrastructure Van der Capellen designed and implemented, were initially financed with the returns that high coffee prices generated for the treasury. But when world coffee prices slumped in 1823, the coffers of Van der Capellen's government were soon exhausted. The chaotic administration of government finances did not help. In 1824 the Dutch treasury reluctantly supported the Indies financially. To finance further current expenditure, Van der Capellen borrowed 8 million florins from the NHM and £60,000 from the English banking firm Palmer and Company in Calcutta on the basis of a promise to supply Java's produce, such as coffee, in years to come. However, the Dutch king did not approve the loan from Palmer and Company. He dismissed Van der Capellen as of 1 January 1826, ordered him to hand over the governor generalship to the vice-president of the Council of the Indies, General H. M. De Kock, and return to The Netherlands.

After his return to The Netherlands, Van der Capellen was given various honorable duties, but he did not return to the Dutch public service. He died on 10 April 1848 in De Bilt, The Netherlands.

VAN DIEMEN, ANTHONY (1593–1645)

Expanding and Consolidating Dutch Power in Asia

Van Diemen was born in Culemborg in 1593 and started his professional life in 1616 as a merchant in Amsterdam. After bankruptcy in 1618, he enlisted under the assumed name of Thonisz Meeuwiszoon as a Dutch United East India Company (VOC) naval cadet and left for the Dutch East Indies. Governor-General Jan Pieterszoon Coen (t. 1617–1623, 1624–1629) recognized his abilities and appointed him as a clerk at the secretariat of the VOC in 1619, ignoring instructions from the VOC's board of directors not to engage Van Diemen, because the VOC was not allowed to employ bankrupts. Coen promoted Thonisz Meeuwiszoon in 1619 to his assistant, and in 1620 to company merchant. In 1623 he promoted Van Diemen to chief merchant under his true name. In 1625, Van Diemen became a councillor of the Indies (*raad van Indië*) and accountant-general. When Coen became governor-general for the second time (1624–1629), Van Diemen supported him as the VOC's director-general of trade during 1627–1629. Van Diemen commanded a fleet to The Netherlands in 1631; he returned to the Indies in 1633 to be appointed deputy to Governor-General Hendrik Brouwer (t. 1632–1636). In 1636 he became Brouwer's successor as governor-general.

Van Diemen's time as governor-general (1636–1645) was characterized by an expansion

and consolidation of VOC activities in South Asia. In 1636 he ordered the blockade of Goa, the hub of Portuguese activity in the region. Two years later, he ordered the VOC attack on Portuguese strongholds in Ceylon (Sri Lanka). With the support of the Maharajah of Ceylon, the VOC captured Ceylon's key cinnamon-producing areas in 1644. In the process, the VOC increased its posts along the Coromandel coast of India.

In the meantime, the VOC renewed its efforts to capture strategically located Melaka from the Portuguese. With Goa blockaded and Portuguese forces tied up in Ceylon, few reinforcements could reach Melaka and trade from Melaka dwindled. In 1640, Van Diemen ordered the siege of Melaka, which was captured a year later. During his rule, the VOC used its foothold in Formosa (Taiwan) in 1642 to capture the whole island, driving out the Spanish in the process.

Under Van Diemen's administration, the VOC intensified relations with Japan. Portuguese efforts to convert the Japanese to Christianity had already led to their confinement to the island of Deshima, while the Dutch continued to operate freely from Hirado. The VOC exploited the fact that the Japanese shogun forbade Japanese merchants to go overseas; therefore the Dutch took over the lucrative silk trade between Tonkin and Japan in 1637. After a Christian-inspired uprising in Japan, the Portuguese were expelled in 1639, and the VOC obtained a monopoly on trade with Japan. By the end of Van Diemen's rule, the VOC had entrenched its political and commercial presence throughout Asia.

Within the East Indies, Van Diemen expanded and consolidated Dutch rule. He inherited ongoing unrest in Ambon. Its sovereign, the sultan of Ternate, had granted the VOC a monopoly on cloves, but Macassarese and Bugis continued to smuggle cloves. Dutch efforts to end this smuggling resulted in local uprisings. In 1637 and 1638, Van Diemen sailed to Ambon with a military force to subdue the resistance. He signed a treaty with the sultan of Ternate to reconfirm the VOC's clove monopoly and enable the company to suppress the Ambon uprising. That was the start of a war of conquest (1638–1643) in order to strengthen VOC rule in the Moluccan Islands and enforce the Dutch spice monopoly. In ad-

dition, soon after the takeover of Melaka, Van Diemen in 1641 concluded a treaty with the ruler of Aceh, who granted the VOC a monopoly on the trade between areas controlled by Aceh along the coast of West Sumatra and Europe. Within Java, Van Diemen successfully continued Coen's policy of keeping the rulers of Mataram and Banten apart so that they would not conspire against the Dutch in Batavia.

In 1640, Van Diemen ordered the lawyer Joan Maetsuycker to bring consistency in the numerous decrees and ordinances issued by the VOC in Batavia. Maetsuycker compiled the *Bataviasche Statuten*, which formed the code of law in the areas of the Indies under direct Dutch rule. It remained in force until the introduction of a new code in 1848. In addition, in 1639 and 1643 Van Diemen organized voyages of discovery to areas east and north of Japan and south of the Indies. The first voyage of Abel Tasman led to the discovery and exploration of a large part of eastern Australia and New Zealand. Tasman named the island of Tasmania Van Diemensland. Lastly, Van Diemen oversaw the completion of the construction of Batavia, which his predecessor Coen had started. Batavia grew as a city of residence and trade, and with its canals it took on a typically Dutch appearance. Van Diemen established a Latin school and two Protestant churches and a hospital in Batavia. He died in Batavia on 19 April 1645.

VAN HEUTSZ, GENERAL JOANNES BENEICTUS (1851–1924)

Militarist Face of Dutch Expansionism

Joannes Benedictus van Heutsz, as governor-general of the colony (t. 1904–1909), oversaw the expansion of the Netherlands (Dutch) East Indies to include within its boundaries all the territories that would subsequently become the Republic of Indonesia.

Van Heutsz was first posted to the Indies in 1873 and saw action in Aceh (1874–1876). After advanced training in The Hague (1881–1883) and promotion, he returned for a second tour in the Indies (1883–1893). This tour included further periods as a staff officer in Aceh (1889, 1890–1891). There and in Batavia (1892–1896), he associated closely with a professor named Christiaan Snouck Hurgronje (1857–1936), the colonial government's expert on Islam. He returned to Aceh for the 1896–1897 military campaign. On the basis of his record, he urged his own appointment as military governor there and served in this capacity from 1898 to 1904. During this term and with the continuing advice of Snouck Hurgronje, he mounted a vigorous military campaign, which, with the submission of the aspirant Sultan Muhammad Dawot (Muhammad Daud) in 1903, appeared to have been successful.

Although the war was, in fact, far from won, van Heutsz had secured an outstanding reputation. Thus, "the pacifier of Aceh" was appointed governor-general in 1904, a year in which the Indies faced a putative threat from Japan. His term was marked by controversy about continuing atrocities in Aceh, and he made use of the Malay press to bolster his position against his many Dutch detractors.

His governor-generalship witnessed the annexation of Central Sumatra, South Sulawesi, Bali, Sumba, Flores, and Ceram. For many, van Heutsz symbolizes the aggressive, militarist face of Dutch colonial rule. Nevertheless, his incumbency coincided with the expansion of public education in the Indies and the implementation of the ideals of the Ethical Policy, largely as a result of the initiatives of the then minister of colonies and his successor as governor-general, Alexander W. F. Idenberg (t. 1909–1916). An English-language biography of van

Heutsz has yet to be written. A good study in Dutch is that by J. C. Witte (1975).

VAN MOOK, DR. HUBERTUS JOHANNES (1894–1965)

Aspiring for a “Federal Indonesia”

Hubertus Johannes Van Mook was born in 1894 in Semarang (Central Java). Although Dutch in ancestry, he identified himself with the Netherlands East Indies (NEI) as distinct from The Netherlands. He regarded the NEI as his home, and himself as an “Indies-man.”

In 1930 he formed the *Stuw* (Stimulus) movement to promote the future development of the NEI as part of a commonwealth with The Netherlands. In the world of Dutch colonialism, this was a liberal position to take, especially during the 1930s when the Indonesian nationalist movement, struggling for independence, was severely curtailed. As a civil servant (Van Mook rose to the position of director of economic affairs in the NEI administration in Batavia), he endeavored to protect the Indonesians against private exploitation. In 1941, after the Japanese began their invasion of Southeast Asia, Van Mook was appointed lieutenant governor-general and left for Australia, where he organized an administration in exile, returning only in 1945 after the Japanese surrendered.

The NEI of 1945 was vastly different from the situation before 1942. As lieutenant governor-general, Van Mook was compelled to rely on his own ingenuity and political resourcefulness. He had no troops to deploy at a time when brute force would have been relevant. Yet he had to deal with the widespread nationalist support for the Republic of Indonesia led by Sukarno (1901–1970), Mohammad Hatta (1902–1980),

and Sutan Sjahrir (1909–1966). Van Mook’s strategy was to negotiate with Sjahrir (the prime minister). At the same time, when the Dutch military forces had regained sufficient strength, he deployed his troops in the First Police Action (July 1947) to assert Dutch control. He personally believed that a “police” action was needed because the disorderly conditions in Java and Sumatra were the result of criminal elements among the supporters of the republic who were preventing genuine political leaders from taking control. Van Mook felt that there were many Indonesians who were against the dominant position of the Republic of Indonesia. This led him to believe that a federal Indonesia, of which the Republic of Indonesia was merely one constituent state, would be the best political solution for a future independent Indonesia. He was also convinced that even among the ranks of the republic, there were many reasonable leaders who were not rabidly anti-Dutch and were willing to enter into negotiations with the Dutch regarding the political future of Indonesia.

Such sentiments led him to identify Indonesian leaders from territories outside Java and Sumatra where the influence of the republic was not so prevalent. He found them in West Java, Bali, and what was called the “Great East,” that vast stretch of seas and islands from Borneo to Celebes. These leaders he cultivated in the hope that they would provide the necessary support for an independent but federal Indonesia. Toward that end he organized several conferences (from 1946 to 1948) with prospective federal leaders to help them to counterbalance the dominance of the republic. This focus on federal leaders met with pitfalls. Some of the federal leaders harbored their own agenda and aspirations. Not all were puppets of the Dutch, and certainly there were some who clearly did not want to be puppets, although such were the allegations made against them. There were also conservative Dutch military officers who supported the anti-republican leaders and behaved as if Van Mook were not in charge. They embarrassed Van Mook, and undermined his relations with the republican leaders with whom he was trying to maintain links for further negotiations.

Faced with all these problems, the feasibility of a federal state for Indonesia was not bright.

Hubertus J. Van Mook. (Bettmann/Corbis)

Van Mook was blamed for the lack of progress in curbing the power and influence of the republic. The Netherlands government also distrusted his relatively progressive inclinations. At the same time, the Republic of Indonesia leaders had no choice but to regard him as the archenemy of an independent Indonesia. The federal states he supported turned out to be damp squibs. In 1948 he resigned and left Indonesia.

Shortly afterward, the ideal world he cherished of an Indonesia that offered a place for “Indies men” like himself fell asunder. The government in The Netherlands changed hands and launched the infamous Second Police Action, an exercise that Van Mook probably did not support wholeheartedly, although there were no more options left for the Dutch except to surrender to republican demands. In this Second Police Action (December 1948), Van Mook’s policy of negotiating with republican

leaders was abandoned. Instead, the republican leaders with whom Van Mook dealt were arrested and exiled.

Disillusioned, he turned his back on Indonesia and also The Netherlands. He accepted an assignment with the United Nations, and shortly thereafter died in France.

At the time when Van Mook departed from Indonesia, the esteem of the Dutch in Indonesian eyes was extremely low. Thus it was not surprising that one of Van Mook’s principal political initiatives—namely, the federal system—was stillborn. Federalism, the federal states, and federal leaders were all tarnished simply because they enjoyed support from Van Mook and the Dutch. Yet the idea of greater autonomy for Indonesian states became the vogue at the beginning of the twenty-first century. Perhaps it is too soon to write off Van Mook’s contribution to the constitutional lexicon of Indonesia today.

**VEREENIGDE OOST-INDISCHE
COMPAGNIE (VOC)
([DUTCH] UNITED EAST
INDIA COMPANY) (1602)**

**Presiding over a
Seaborne Mercantile Empire**

The Dutch United East India Company (VOC) was established in 1602 under pressure of the government of the United Provinces of The Netherlands. It concentrated all Asian commerce into the hands of one enterprise, thus making an end of prior fierce internal competition and gaining strength against other European forces in Asian waters. The VOC had a complicated decision-making structure. Because of its birth out of several trading companies in different cities in The Netherlands, the United Company was composed of so-called chambers, established in six cities in the maritime provinces of The Netherlands, that had previously been home to companies in Asia: Amsterdam, Middelburg (Zeeland), Hoorn, Enkhuizen, Rotterdam, and Delft.

The VOC derived its capital of almost 6.5 million guilders from shareholders (Bruijn et al 1987: 9). In contrast to previous companies, the VOC did not have to remit deposits plus dividends after each expedition or trading season. This enabled the directors in The Netherlands and the officials in Asia to make huge investments without the necessity to make immediate profits. Partly because of its firm financial basis the VOC remained the largest European trading company in Asia until the late eighteenth century. During the 196 years of its existence, the VOC expedited 4,720

ships to Asia and almost a million personnel (ibid.: 143).

The company was an institution with two faces: an enterprise in the Dutch republic and a (mercantile) state in Asia. In the company charter of 20 March 1602, the company was given the right to wage war, build forts, employ armies, and conclude treaties with Asian rulers—privileges that were usually the prerogative of states. Company power in Asia was based on the application of selective violence, which enabled it to gain control over the main production areas of the major spices, to monopolize or control trading routes and commodities, and to marginalize competitors. One secret of the VOC's financial success was its ability to engender profits in Asia itself by usurping the trade in luxury items between different regions around the Asian seas. It enabled the company to purchase products for the European markets (primarily spices, but later also coffee and tea) without having to ship enormous amounts of bullion from Europe.

By its peculiar combination of naval and military power and commercial strategy, the company deeply affected the commercial relations and political balance in Southeast Asia. Within decades of its first appearance in Southeast Asia, the company had become the strongest power in insular Southeast Asia. Its naval power was far superior to that of most indigenous states. Especially after the capture of Melaka from the Portuguese in 1641 and the conquest or submission of the major trade hubs—namely, Makassar (1668) and Banten (1682)—the VOC had few serious contenders in the archipelago. Consequently it was able to police international affairs in a fairly efficient manner through diplomacy, garrisoning, patrolling, and warfare. The company, which fairly regularly assessed the profitability of its individual trading posts, limited its territorial possessions to strategic control posts and harbors and the production areas of cloves, nutmeg, and cinnamon. Only in the Moluccan Islands and (after the late seventeenth century) on Java did the company engage in a form of extensive territorial rule.

In the late eighteenth century, things went sour for the company. One immediate cause of the company's bankruptcy was budgetary problems, caused by declining returns and mounting debts. The financial deficiency made it difficult

to send enough ships to Asia, let alone to bolster up new commercial initiatives. The Anglo-Dutch War of 1780–1784 was a severe blow to the company's delicate financial situation: Dutch ships were taken, establishments were occupied, and transportation between the Indies and The Netherlands was disrupted. But in the background of the demise of the VOC was a more structural problem: the incapacity to adjust to the shifting balance between returns of the spice trade and the rising costs of administration. The policies of the VOC never departed from the axioms established in the first half of the seventeenth century. To a certain extent, the company was able to broaden its range of products. In particular the introduction of coffee in West Java and the participation in the tea trade of China were major departures from the seventeenth-century reliance on spices, but the trade conditions were much less favorable. In contrast, the English East India Company (EIC) succeeded in a triple modernization: a transition from trading company to tax-extracting government, the annexation of large parts of the immensely profitable tea trade in China, and the encouragement of private merchants.

On 31 December 1799 the VOC was formally liquidated. The VOC enterprise was nationalized in 1798, but to the peoples in Asia, the company lived on, as formal Dutch rule continued. In the Indonesian archipelago, the people often referred to its successor, the East Indies government, as *Kumpeni* until late in the nineteenth century.

VIENTIANE

“City of Sandalwood”

Political capital of the Lao People's Democratic Republic (LPDR), the city of Vientiane (Vieng Chan, or “City of Sandalwood”) sprawls along the east bank of the middle Mekong River (population approximately 300,000 [Cummings 1994]). Tourists in the twenty-first century are impressed not only with its rich cultural heritage—a reference to its numerous Buddhist temples as well as its pseudo-French colonial bungalows, triumphal arches, and palaces—but also with its being one of the least transformed national capitals in a region of dynamic social and economic change. As the administrative capital of French Laos and the independent kingdom of Laos, Vientiane was also the site of major political developments shaping national politics and Laos's future political destiny.

Historical Foundations

In 1563, King Setthathirat (r. 1548–1571) transferred the capital of the kingdom of Lane Xang from Luang Prabang to Vientiane. Most likely, the site of Vientiane was chosen for its more central location, the king's desire for links with the Siamese (Thai) kingdom of Ayutthaya, its defensibility, and its ecologically optimum site on broad and cultivable floodplain. Enclosed by

a moat and wall, the ancient city hosted a royal palace including a temple repository of the Phra Keo (Emerald Buddha), the palladium of the kingdom, itself captured from Chiang Mai in 1548. Legend dates the foundation of Wat Phra Keo to 614 C.E. Home to some eighty temples, the centerpiece of the royal capital was and remains That Luang, constructed from 1566. Up until 1900, vestiges of the original ramparts of the newly founded capital could be observed. The reign of Settathirat is seen as the apogee of the kingdom of Lane Xang.

It was during the reign of King Souvigna Vongsa (r. 1637–1694) that Vientiane was first visited by European travelers. Dutchman Gerrit van Wuysthoff, who visited in 1641, left behind a glowing account of the city, as did Portuguese Jesuits visiting in 1666. Wuysthoff was received by soldiers mounted upon war elephants at That Luang, which he described as covered with gold. If Wuysthoff is to be believed, Vientiane was vastly populated at that time, including refugees from Luang Prabang, decimated by a cholera epidemic. In this epoch Vientiane ruled over an enormous territory including the western bank of the Mekong. Siam attacked Vientiane in 1778, looting the Phra Bang and carrying off to Bangkok the Emerald Buddha, later returned by King Mongkut (r. 1851–1898) in 1867. Chao Anou, who mounted the throne in 1827, left his legacy in the form of Wat Sisakhet (inaugurated in 1824). He also made an ill-advised attack on Siam, only to be routed. Siam responded by sacking Vientiane and reducing it to vassalage. Wat Sisakhet would be the sole surviving religious edifice in Vientiane at the time of the French arrival in the latter half of the nineteenth century. Damaged in 1873 by an invasion of Yunnanese adventurers, That Luang underwent some minor restoration in 1897–1889, before being elaborately restored in 1930 by the *École Française d'Extrême-Orient* (French School of the Orient). That Luang long remained the sacred reliquary of the kingdom and a place of pilgrimage.

Colonial Capital City

In July 1899, the French chose Vientiane as their administrative capital, while Luang Prabang remained the royal capital and seat of the king. The French restored historical monuments and temples in Vientiane destroyed by

Siam. Notably, Prince Souvanna Phouma (1901–1984) was in charge of the restoration of Wat Phra Keo, a tourist site in Vientiane today. Similarly, That Luang has undergone several renovations but serves as the focal point of socialist state anniversaries and ceremonies.

As the administrative and commercial capital of French Laos, Vientiane hosted the central bureau of the civil service. Although a small cadre of metropolitans residing in Vientiane dominated this bureaucracy, Vietnamese overwhelmingly staffed the technical services. The Vietnamese community in Vientiane also comprised merchants and petty traders. Otherwise, as in other Southeast Asian countries, Chinese dominated the import-export business, stamping their character upon the urban landscape. But as a colonial backwater, Vientiane was little more than an urban village, a collection point for agricultural surplus from the countryside.

Postwar Vientiane

In 1953 the French designated Vientiane the administrative capital of the kingdom of Laos, with Luang Prabang remaining as the royal capital. As the capital of an independent country, Vientiane came to host foreign embassies and missions. Under the terms of the 1954 Geneva Agreements on Indochina, Vientiane also hosted a French military mission. France retained its cultural mission in Laos. French remained the language of higher education of the Lao elite. But also, as the commercial center of the country, Vientiane confirmed its position as a primate city. Although the Mekong was not yet bridged, the city was connected to Bangkok and the world by the railhead at Nong Khai on the Thai bank of the river. Prior to communist rule, Vientiane was always open to Thai cultural influences, just as the river boundary remained porous to the many Lao who maintained family links across the Mekong.

The most striking monument of this era erected in Vientiane was undoubtedly the Arc de Triomphe-style edifice known as the Monument des Morts, opposite the National Assembly building, a marriage of French symmetry and Lao Buddhist ornate architecture. Also called the “vertical runway,” it is widely believed to have been constructed by money si-

phoned from aid funds allocated for the construction of the airport.

By the 1960s, Vientiane had undergone major physical changes, in part as a result of the war, in part stemming from an economy dependent on foreign aid, a reference to the windfall aid economy supported by the U.S. government. Notably, Wattay Airport was developed as a dual civilian–military airfield. A new suburb complete with sprawling bungalows, schools, and swimming pools served the American community who, in turn, serviced the parallel government in Vientiane.

Swollen by job seekers and refugees from the war-torn interior, Vientiane was a veritable haven during the war. But Vientiane was also known for its decadence. As a major beneficiary of rents derived from the U.S. aid economy, Vientiane enjoyed an artificial prosperity. Some elements—the elite, military families, and the bourgeoisie—enjoyed lifestyles hardly commensurate with their incomes. Since the 1950s, Vientiane had earned a reputation as an international center of gold and opium smuggling. The social costs of this freewheeling environment were not just drug addiction and prostitution, as frequently referenced in communist propaganda, but also a lifestyle that resembled more urban Thailand than Laos's traditions. But in a society lacking a social safety net outside of the family, Vientiane came to host an underclass of not only drug addicts but also the war-wounded and handicapped veterans, scavengers, beggars, criminals, day laborers, and a small army of the unemployed.

In contrast to the heavily bombed interior of Laos, and unlike Phnom Penh under the radical communist Khmer Rouge, Vientiane suffered little damage from war or revolution; its national patrimony of temples and libraries suffered only from long-term neglect. Otherwise, Vientiane celebrated a calendar of cultural and religious events of which the That Luang festival, officiated over by the king, with prayers recited by monks, was the most important.

Revolutionary Vientiane

Probably fewer than 100,000 people remained in Vientiane when, in December 1975, the Pathet Lao ordered all family members to assemble at the That Luang grounds to usher in the new order (Stuart-Fox 1997). The departure of

the Americans and leading officials of the “Vientiane-side” government had been orderly. The former American suburb now became the headquarters of senior military and party figures. President Souphanouvong (1911–1995) occupied the former French resident's palace. The departure of the middle and commercial classes, including many Chinese and Indian merchants, left almost all businesses and shops in Vientiane shuttered. The few remaining hotels and restaurants belonged to the state. Commercial and even market activity withered. There were no tourists. Private cars disappeared, replaced by military traffic and truck convoys arriving from Vietnam. Bicycles began to reappear only in the early 1980s. A new social element was the presence of Soviet and Eastern European technicians. The English-language boutiques of the old regime were now replaced with Russian-language schools. But foreign missions, most of which recognized the new regime, offered another international connection. Gone also was the cross-Mekong River trade, as relations with Thailand dimmed.

A major feature of urban Vientiane, lingering on into the 1990s, was the ubiquitous socialist poster art, featuring such themes as working elephants, ethnic minorities, hammer-and-sickle insignia, bountiful harvests, and even smokestacks. The new cultural themes emphasized in schools and workplaces in Vientiane were patriotic and socialist virtues. The new version of Lao history was also written into the new museums of the revolution as well as textbooks, replacing the old monarchical themes. To further draw a line between Thailand and the West, Lao music and dance were encouraged at the expense of imported forms. Until the 1980s, Vientiane remained a derelict, even depressing, town, although not lacking in charm.

Postsocialist Vientiane

The abandonment of hard-line socialist policies in 1978 and the progressive announcement of new market-oriented policies began to change the face of Vientiane. But the reorientation awaited the resumption of good relations with Thailand, the obvious source of foreign investment. By the late 1980s and through the 1990s, Vientiane reinvented itself as a postsocialist economy, just as Thai consumer goods once again flooded across the border and commercial

life rebounded. To the alarm of the regime, many once-discredited cultural practices also saw a reentry in the city. And so, when an Australian-built bridge spanning the Mekong River—dubbed the “AIDS Bridge”—was completed in 1994, the regime took care to monitor new arrivals closely. International tourism also made a revival in the 1990s, making Vientiane and the former capital Luang Prabang exotic travel destinations in the new century. But as Vientiane has been the major beneficiary of foreign investment and has achieved the highest national growth rates, so the gap between the city and the countryside has widened.

VIỆT CONG
“Charlie,” “VC”

The expression *Việt Cong*, for *Việt Nam Cong San* (Vietnamese communist), was used between the early 1960s and 1975 in South Vietnam to designate the forces that resorted to using arms to oppose the Saigon regime.

Contrary to *Việt Minh*, the Vietnamese abbreviation for the League for the Independence of Vietnam, established in 1941 by Hồ Chí Minh (1890–1969), the term *Việt Cong* was a nickname attributed by its enemies. The nickname appeared around 1961 and became a convenient term with which to designate an insurrection that spread quickly and led to a confusing situation. Following the Geneva partition in 1954 and the creation of a Republic of

Vietnam south of the 17th Parallel, given the fact that the general elections scheduled for 1956 did not take place, this new state became the arena for growing unrest. Throughout the succeeding years, several rural regions rebelled and broke away. There were many reasons for this, including opposition to the return of former landlords and exasperation with the demands of the new power or doings of clandestine militants (former *Việt Minh* who stayed on after 1954). *Việt Cong* was thus the convenient term under which to regroup all those opponents who resorted to rising up in arms against Saigon or who acted in this sense with the benevolent complicity of the North Vietnamese regime.

In vast areas of the central high plateaus or of the south (the region of Saigon, Mekong Delta), communist-inspired guerrillas had de facto forbidden the Saigon government to function where they themselves were established. During the entire length of the Vietnam War, the region to the south of the 17th Parallel appeared to be divided into three different zones, among which circulation proved to be particularly difficult: the “governmental” zone essentially regrouping the big cities and the national highways; the so-called liberated zones (*Việt Cong*) often situated on the border regions; and the contested zones, at stake in the conflict and the terrain where the battles took place—the main highways, rarely safe and at night more or less taken over by “the other side” (*Việt Cong*). But who were these *Việt Cong*? On the one hand they were those southerners who had joined the maquis against the regime; on the other, above all because of the U.S. intervention, and in the border regions with Laos and Cambodia, combatants from the north. After the 1968 Tet offensive and the harsh repression that followed—in particular the extremely efficient operation of the Phoenix Program (collating intelligence to track and eliminate members of the *Việt Cong* infrastructure [VCI])—the proportion of combatants from the north seemed noticeably to have grown.

The organization in charge of the maquis had itself evolved over the years, at least in its visible structure. A National Liberation Front (NLF) presided over by the lawyer Nguyễn Hữu Thọ was born in December 1960 “somewhere in South Vietnam.” At the beginning of 1968, this NLF was joined by the Alliance of Democratic Forces, which regrouped several

*A young Việt Cong member posing in front of a house with a gun. July 1970, Cambodia.
(Bettman/Corbis)*

dissident Saigon personalities after the Tet offensive to constitute a provisional revolutionary government (PRG) presided over by the architect Huynh Tan Phat. But the real leaders of the Việt Cong kept to the background. The decision to support or to activate the maquis of the south had been secretly made in Hanoi in May 1959 by the fifteenth plenary session of the central committee of the Labour Party, stressing that “the fundamental path of the Vietnamese revolution in the South is that of violence.” A north-south communication axis was then put into action, bypassing the 17th Parallel (the famous Hồ Chí Minh Trail), and a part of the central committee was soon given the mission to direct resistance in the south. This branch of the central committee for the south (U.S. forces referred to it as COSVN, Central Office for South Vietnam) was clandestinely installed there throughout the war under the direction of Nguyễn Chí Thanh (from 1965 to 1967) and of Phạm Hùng (from 1967 to 1975). Their operational headquarters were situated north of Tay Ninh (northwest of Saigon), among rubber plantations that straddled the Cambodian border.

The Saigon regime and the United States never wanted to distinguish between the Việt Cong and North Vietnam—a partially justified decision as the resistance organization was secretly directed by the Labour Party: this analysis justified their war and their strategy. However, if the latter had not been successful, it was precisely because it was not only a question of an “invasion” of an ideological nature, but also of a fundamentally political and national dimension.

VIỆT MINH (VIỆT NAM ĐỘC LẬP ĐỒNG MINH HỘI, LEAGUE FOR THE INDEPENDENCE OF VIETNAM) “A Magic Weapon”

Việt Minh was a national united front organization established by the Indochina Communist Party (ICP) in 1941 to solicit mass support in their struggles against first Japan and then France.

In May 1941, the Eighth Plenum of the Indochina Communist Party Central Committee was held at Pac Bo, Cao Bang province, in North Vietnam. It was at this meeting that the ICP formed new strategies and policies for the coming struggle. One of the new strategies was to set up a broad, national united-front organization to unite as many people as possible in order to fight against the Japanese and the French. On 19 May 1941, according to the resolution of the Eighth Plenum and the suggestion of Hồ Chí Minh (1890–1969), Việt Minh (short for Việt Nam Độc Lập Đồng Minh Hội, League for the Independence of Vietnam) was set up in Jingxi, a bordertown in Guangxi province, China. It proclaimed that the organization would unite all patriotic compatriots, regardless of class, age, gender, religion, or political standpoint, in order to defeat Japanese and French fascism, obtain the nation’s liberation and existence, and establish a revolutionary government according to a new democratic spirit. Hồ Chí Minh was elected chairman of Việt Minh. The organ of Việt Minh was *Bao Việt Nam Độc Lập (Vietnamese Independence)*.

Việt Minh successfully conjoined all patriot groups, such as the national salvation societies for workers, peasants, women, students, artists, and religious organizations. Việt Minh set up the first base in Cao Bang province; it greatly extended its base during the Pacific War (1941–1945), and before the August Revolution of 1945, its force had spread over central and North Vietnam and eventually all over the

Under the guard of communist Việt Minh troops, French and Vietnamese prisoners of war march from the battlefields of Dien Bien Phu, the fallen French fortress in Indochina, on 28 July 1954. This was one of the first pictures to reach the outside after the communists stormed over the bastion in May. (Bettmann/Corbis)

country. Branch committees of various levels of Việt Minh were set up all over Vietnam. After the establishment of Việt Minh, the anti-French and-Japanese fascist movement was called the Việt Minh movement.

During the Pacific War, Việt Minh tried to contact agents of the U.S. Office of Strategic Service (OSS), the forerunner of the Central Intelligence Agency (CIA). Việt Minh also sought the French resistance government led by General Charles de Gaulle (1890–1970) as well as the Kuomintang (KMT) government of China headed by Chiang Kai-shek (1887–1975), in order to garner support for its resistance movement. On 16–17 August 1945, Việt Minh convened a National People's Congress. The Vietnamese Nation Liberation Council, which functioned as the provisional government, was set up at this meeting. Hồ Chí Minh was elected chairman, and Tran Hui Lieu vice chairman. The standing committee consisted of

five members: Hồ Chí Minh, Tran Hui Lieu, Nguyễn Luong Bang, Pham Van Dong (1906–2000), and Duong Duc Hien. The same meeting passed the decision to launch an immediate general uprising and to carry out ten programs, including seizing power and establishing a revolutionary government named the Democratic Republic of Vietnam (DRV). This congress also passed a resolution about the national flag of the coming DRV.

Since the goal of Việt Minh was to win the nation's liberation, it began to prepare for a general uprising as soon as it was established, and by the eve of the August Revolution, Việt Minh had controlled most of the villages in central and North Vietnam. In August 1945, the ICP launched a nationwide insurrection and seized power in Vietnam following the Japanese surrender. After the victory of the August Revolution, the Democratic Republic of Vietnam was established in Hanoi and a provisional gov-

ernment led by Hồ Chí Minh was set up in the name of the Việt Minh. Việt Minh dominated in the first National Assembly of DRV and the united government formed in early 1946. Hồ Chí Minh was elected president of DRV. When the First Indochina War (1946–1954) broke out, Việt Minh called on all circles to unite to fight against the French. It was via Việt Minh and its attendant mass societies that DRV obtained mass support in the struggle against the French.

On 3 March 1951, Việt Minh was merged into a broader front organization, *Lien Việt Front* (League for the National Union of Vietnam), which was created by Việt Minh in May 1945 to win increased support from the masses. The new organization was named the *Front of Lien* (Vietnam National United Front).

Việt Minh represented the successful united-front strategy of the Vietnamese Communist Party (VCP) in gaining mass support to win revolutionary victory. Việt Minh gathered all kinds of patriotic organizations, and also established contacts with the Allies. Hồ Chí Minh and the VCP concluded that to set up a broad united front was a magic weapon for reaching their victory.

VIET NAM QUOC DAN DANG (VNQDD, VIETNAMESE NATIONALIST PARTY) (1927)

Radical Nationalist Organization

Established by Nguyễn Thái Học in 1927 in Hanoi, Viet Nam Quoc Dan Dang was a radical political party of Vietnam with some socialist colors. The party was based on Sun Yat-sen's (1866–1925) Three Principles of the People (*San Min Chu I* [*Sanmin Zhuyi*]—Nationalism, Democracy, and People's Livelihood) and copied the organizational structure of the Revolutionary Youth League of Vietnam. It was one of the major rivals of and co-operators with the Vietnamese Communist Party (VCP) in the early years of the twentieth century.

On 25 December 1927, Nguyễn Thái Học and other radical nationalists organized Viet Nam Quoc Dan Dang, and Học was elected chairman. The new organization had the same name as the party that had transformed itself from the Restoration Society, led by Phan Bội Châu (1867–1940) in 1924, and some of its members came from Phan's party or were Phan's sympathizers; strictly speaking, however, it was independent of Phan's party, which collapsed after Phan was arrested in 1925. The members of VNQDD came mainly from the middle class, such as petty bourgeoisie; bourgeoisie intelligentsia; and patriotic gentlemen, young teachers, students, and journalists; some peasants and workers also joined the party. In addition, VNQDD established branches among the Vietnamese soldiers who served in the French army, in order to prepare for an uprising and to seize power by force. At the very beginning, however, the French authorities had already penetrated the party, and that resulted in its disastrous failure later.

The goal of VNQDD was to evict the French regime, achieve national independence, and establish a democratic republic in Vietnam; it also claimed that it worked for other suppressed nations, especially small and weak nations. Communist influence could be found in VNQDD's principles mentioned above, but VNQDD rejected the Marxist concept of class struggle. VNQDD also looked to China for inspiration and received financial support from the Kuomintang of China (Chinese Nationalist Party, founded by Sun Yat-sen).

The governing body of VNQDD was the National Headquarters, and there were eight committees under the headquarters: propaganda and training, organization, finance, information, military, judiciary, supervising, and assassination. VNQDD established branches at all levels—region, province (city), county, and village. Its official organ was *Cach Mang Hon (Revolution Soul)*.

The development of VNQDD may be divided into three periods. In the first period (from 1927 to early 1929), VNQDD expanded quickly; its apparatus spread all over the country. But VNQDD committed itself to violent revolution and assassination, pursued personal heroism, and scorned building up a mass organization with popular roots. VNQDD's clandestine activities, such as the stockpiling of weapons and making bombs, alerted the French authorities. When a Frenchman was assassinated in Hanoi, VNQDD was suspected of being involved in the plot, and that resulted in most of its cadres being arrested; the organization system of VNQDD was destroyed.

In the second period (from early 1929 to February 1930), although VNQDD had not recovered from the damage done to it, its leaders—who were being pursued by the French—decided hurriedly to launch a general uprising. The uprising was fixed for the night of 9 February 1930. The insurrection proceeded as planned at Yen Bay and several other military posts in and around Hanoi. Meanwhile, however, the French authorities interrupted preparations at other venues. Nonetheless, all the insurrection was frustrated, owing to poor coordination and last-minute preparations. Nguyễn Thái Học was arrested five days after the uprising while trying to make his way to China. He died on the guillotine on 17 June 1930, together with twelve of his comrades. Most of the party's leaders were captured and executed.

In the third period (after the failed insurrection), some VNQDD members escaped to southern China, where they split into two factions—one still held the original radical strategy of fomenting an armed uprising, while the other inclined toward a reformist approach. Both factions continued their activities under the title of VNQDD based in China and received financial support from the Kuomintang. As for those members of VNQDD who stayed

home, some engaged in assassination plots, others joined the Indochina Communist Party (ICP). In general, after 1930 the influence of VNQDD on Vietnam's nationalist movement declined. The failure of VNQDD paved the way for the ascension of ICP to the leadership of the Vietnamese nationalist movement.

After the Japanese surrender at the conclusion of the Pacific War (1941–1945), VNQDD returned to Vietnam with the support of the Kuomintang and participated in the united government of the Democratic Republic of Vietnam led by Hồ Chí Minh (1890–1969). After Chinese troops withdrew from Vietnam, VNQDD lost its backing and quickly waned. In the south, VNQDD survived after 1954 but only as a minor party. VNQDD was later disbanded.

VIETNAM, NORTH (POST-1945)

The northern half of Vietnam is the cradle of the Vietnamese nation, and also, for a long time, its unique territory. However, since 1945, North Vietnam has been identified with an almost permanent state of war and with communist power, which first withstood the French and then U.S. armed forces, before uniting the entire nation in 1975.

A French protectorate since 1883, formerly composed of Tonkin and northern Annam, and in 1945 boasting a population of some 10 million, of which the majority were peasants living in the Red River delta, North Vietnam was to experience serious upheavals. In the 9 March 1945 coup, Japan, fearful of the progress made

by the United States in the Pacific, decided to end the privileged position of the French, with whom it had been collaborating since 1940. Japan conferred strictly controlled independence on the states it was “protecting.” U.S. bombardments seriously hampered communications, particularly the distribution of rice, causing a spectacular famine in the north.

The end of World War II (1939–1945) was close at hand when the Potsdam Conference (17 July–2 August 1945) constituted *de facto* North and South Vietnam as distinct territories, by dividing Indochina along the 16th Parallel in order to disarm the Japanese troops. As requested, China sent 200,000 men under the command of General Lu Han. He discovered a complicated situation and an OSS (U.S. Office of Strategic Service) team backing the Hồ Chí Minh insurrection. In fact, in August 1945, the Việt Minh (the League for the Independence of Vietnam) seized power, owing to a revolution that upset the entire country. On 2 September, Hồ Chí Minh (1890–1969) proclaimed independence and the birth of the Democratic Republic of Vietnam (DRV) in Hanoi in front of the assembled crowds. The Indochina Communist Party (ICP) withdrew in November.

In order to reestablish themselves north of the 16th Parallel, the French, who had been able to take over the command of the south, under British military control, negotiated simultaneously with the Chinese and the Vietnamese. The 6 March 1946 Hồ Chí Minh–Sainteny agreement recognized Vietnam as a free state within the French Union, but it remained cautious about the status of the south. The return of French troops to the north, where they would be stationed together with the new Vietnamese army, was permitted, but such proximity between these two, a year after France was “chased” away from the north, was antagonistic at best and did not last long. On 24 November the Haiphong “incidents” provoked the death of several thousands, while on 19 December 1946 the Vietnamese show of force signaled the beginning of war.

A spirit of reconquest and resistance suffused the beginning of the Indochinese war in the north. It took the French a month to recapture Hanoi, whereas the Vietnamese government, entrenched in the mountains to the north of the capital, controlled the entire territory down to the 16th Parallel. This Tonkin hideout

would never be seized or controlled permanently and the rare attempts to negotiate with Hồ Chí Minh would not bring about any results. The reconquest itself would also remain incomplete: several provinces, notably in the center-north (Thanh Hoa, Nghệ An), remained under his authority without interruption. The entire north was thus subject to two political forces: that of the French Union on one side—France and the associated state of Vietnam (Bào Đai), established in 1949 as a counterweight to Hồ Chí Minh and the DRV—and that of the latter, which directly administered some provinces and whose influence was strongly felt in others.

The Indochinese conflict lasted eight years, with the main theater of combat in the north. The first military operations had to contend with a scorched-earth policy. The French had a hard time trying to gain control; time and again the Chinese frontier towns were recaptured before being abandoned anew. The Red River delta, the main producer of vital rice crops, rapidly turned into a murderous terrain of “hide-and-seek.” In those areas where the French marked an advance, the guerrillas were hidden in the vicinity, careful not to engage in combat unless they were sure of themselves, and striking by night. The two sides seemed to be inextricably entangled.

From 1950 onward, after China became a communist state (People’s Republic of China, PRC), offering a secure rear for the DRV, the north became the scene of more spectacular battles. The French suffered their first defeat at Cao Bang in October 1950, but in January they defeated the troops of General Vo Nguyễn Giáp (1911–) at Vinh Yen. In 1951 the French commander-in-chief General de Lattre constructed a network of fortifications around the delta of the Red River that was supposed to resist enemy attacks. Fortified camps were soon strengthened in the mountainous regions, tempting enough to lure the enemy but also strong enough to withstand attacks and inflict heavy losses. This method proved successful for the French in Na San in December 1952, but not at Dien Bien Phu in May 1954.

The July 1954 Geneva Agreement restored the status quo of 1945. For the time being a new demarcation line, this time along the 17th Parallel, 100 kilometers north of the 16th, was to separate the adversaries (DRV and French

Union). The French forces evacuated Hanoi on 10 October 1954 and the port of Haiphong on 20 May 1955, while numerous refugees, mainly Catholics, abandoned the north. Việt Minh combatants undertook exactly the opposite itinerary from the south. However, elections planned for 1956 were never carried out, and until 1975 the DRV continued to function in the north.

The Democratic Republic of Vietnam rapidly organized itself as a state with its own currency—stemming directly from the maquis—and its own constitution (1959). The country then functioned as a “popular democracy,” within which the Labour Party (*Dang Lao Dong*), refounded in 1951, was actually invested with political power. During this period, at first directed by Truong Chinh (1907–1988), and then temporarily by Hồ Chí Minh himself in 1956, the Labour Party convened only a single congress, the so-called Third Congress in 1960. Le Duan (1907–1986) became the secretary-general until after reunification, while Hồ Chí Minh was president of the republic, seconded by Prime Minister Pham Van Dong (1906–2000).

The economic reconstruction of the DRV was handicapped by loss of relations with the south and areas where French interests were unable to be maintained. Nevertheless the DRV enjoyed the presence of French industrial infrastructure, the rich mineral resources such as coal (Hong Gai) and metals, and the support of both China and the entire Communist bloc. Therefore North Vietnam attempted to establish a veritable industrial base (the iron and steel-making complex of Thai Nguyên). As for agriculture, the agrarian reform that had been on the agenda since 1953 in the north, but had suffered from an excess of zeal as in Maoist China, provoked a serious crisis in 1956. A revolt broke out in the province of Nghệ An, and the secretary-general of the party, Truong Chinh, was forced to resign. Following that event, land collectivization began anew. Conversely, the liberal intellectual movement, similar to the Communist Chinese Hundred Flowers movement—part of the de-Stalinization process in motion in the communist world—would not perdure.

After the first decade of establishing the foundation of socialism (1954–1964), the north was again faced with the prospect of war. The north, considered by the United

States to be responsible for the reactivation of the maquis in the south and also designated responsible for the July 1964 incident in the Gulf of Tonkin, again paid heavy tribute to the war, albeit in a new way. Besides providing a growing number of young underground fighters in the south via the Hồ Chí Minh Trail, from 1965 to 1968 the north also suffered a severe escalation of U.S. bombing raids. Despite the fact that the DRV was not the Indochinese territory that suffered the heaviest bombing, the ever-increasing and audacious U.S. raids nevertheless dropped 425,000 tons of bombs there. Accordingly, destruction was clearly evident in all the important towns between the 17th Parallel and the Red River delta, as well as in a majority of industrial installations. Politically, the principal result of this onslaught was to reunite the population of the north, which was entirely mobilized behind its leaders in facing this threat. From 1968 onward, after a brief period of relative calm and after the final air raid on Hanoi in December 1972, before the signature of the Paris agreement, the North Vietnamese skyline returned to normal. Two years later—Hồ Chí Minh having died in 1969—on 30 April 1975 the People’s Army’s entry into Saigon was celebrated by enthusiastic crowds in Hanoi.

The north then proceeded to reunite the country. After designating a sole and unique national assembly in 1976, its political structure was extended to cover the entire territory. The moment of national integration had come, not only in the south but also in the north, where the “autonomous regions,” which since 1954 were supposed to guarantee special status to the minorities, were disbanded that same year. Yet the north did not enjoy immediate and complete peace, because in February 1979, in retaliation for Vietnamese intervention in Cambodia, the Chinese People’s Liberation Army (PLA) attacked it along the entire land frontier; within a month it had devastated all the towns there (Lang Son).

However, the north remains the decision-making center of the country, as it is the most populated area, with more than 40 million inhabitants today; it is also probably the most impoverished. After a decade of Soviet influence (1976–1986), united Vietnam did not escape major challenges in the north that the policy of

“renovation” (*doi moi*) had to face. One of these problems was to relieve the congestion of the countryside, more densely populated than ever, especially in the Red River delta, or address the deficit in international investment, indispensable for maintaining equilibrium with the south, which was traditionally more open to the outside world.

Long disparaged if not feared, birthplace of the country as well as of the revolution, and veritable national matrix, the north was able to enduringly uphold its preeminence, despite the upheavals of colonialism and East-West confrontation. The cradle of Vietnam remains the ruling core of the nation.

VIETNAM, SOUTH (POST-1945)

South Vietnam has been the most disputed part of the country since 1945. At war until 1954, and in varying degrees from 1959 to 1975, it has endured practically every kind of political regime in the past fifty years.

Southern Vietnam, originally the French colony of Cochinchina and the southern part of Annam, experienced numerous upheavals after 1945, beginning with the Japanese takeover by force on 9 March. Governor-General Jean Decoux (t. 1940–1945) and the entire French colonial administration were arrested in Saigon by the Japanese authorities they had been collaborating with until then. Thereafter the August Revolution established Vietnamese authority over the city (Tran Van Giàu) and the rest of the region, but that was not to last long. After the Potsdam Conference (17 July–2 August 1945), the British army took control of Indochina south of the 16th Parallel, while the Chinese did the same in the north, and let the French representatives reinstate French sovereignty in the south on 23 September. With some difficulty,

General Leclerc then progressively retook the southern towns where Vietnamese power had been established. Nevertheless, security would never be ensured there again.

The question of Cochin China—namely, that of the actual south (Saigon and the Mekong Delta)—envenomed relations between France and Vietnam, as well as between Saigon, where High Commissioner Georges Thierry d'Argenlieu (t. 1945–1947) was established, and Hanoi, capital of the insurrectionary Hồ Chí Minh government. The Hồ Chí Minh–Sainteny agreement of 6 March 1946, which permitted the return of French forces to the north, recognized Vietnam as a free state within the French Union. The agreement, however, did not actually settle the question of the south, because France exercised direct sovereignty in Cochin China as opposed to the rest of Vietnam—Annam and Tonkin, which were protectorates. France wished to preserve its sovereignty in Cochin China, but neither the Dalat Conference (April–May) nor that of Fontainebleau (July–August 1946) permitted an agreement regarding the novel status of Indochina. On 1 June 1946, France even permitted an autonomous Republic of Cochin China presided over by Vietnamese Dr. Nguyễn Văn Thinh to be proclaimed. This territorial bone of contention, combined with the fact that Hanoi and Saigon found little to agree about, was directly responsible for the tension that led to open war on 19 December 1946.

From 1946 to 1954, the south was one of the two most important theaters of the Indochinese war. Insecurity was widespread, and during the first few years land transport was conducted by armed convoys, which occasionally were victims of ambushes by Việt Minh (League for the Independence of Vietnam). The zones controlled by both sides were inextricably enmeshed. War took on multiple guises—for example, a “rice war” began in 1949, which was the reason why French forces blockaded the Transbassac—the southern half of the Mekong Delta and an important rice-producing region. French military operations, more or less lengthy and effective, permitted the partial loosening of the guerrilla stranglehold.

Meanwhile on the political level, the Cochin Chinese south progressively lost its own identity, as France, which opted to install Bảo Đại (1913–1997) to act as a counterbalance to Hồ

Chí Minh (1890–1969), transferred power to the former emperor. Action was undertaken stage by stage. In October 1947, the Republic of Cochin China became the “provisionary government of South Vietnam.” But Bảo Đại, who relied on the principal nationalist leaders of the country (north, central, and south), laid claim and obtained from France that which Hồ Chí Minh was refused—namely, the unity of the country. An agreement was reached on 8 March 1949, and Bảo Đại became the head of the Associated State of Vietnam (t. 1949–1955), with jurisdiction over the entire national territory. Soon the French National Assembly voted Cochin China back to Vietnam. Thus, in opposition to the Democratic Republic of Vietnam (DRV), there emerged a “Franco-Vietnamese” camp that had the southern territory better under control than the north. Bảo Đại established his capital in Dalat.

The Geneva Agreements of 1954 and the partition of Vietnam on both sides of the 17th Parallel sealed in a demilitarized zone that was soon impossible to cross. It virtually immobilized this division that covered a territory larger than it had been in 1945 south of the 16th Parallel—this time comprising the region of Huế and Danang at the center of the country. The south was the regroupment zone for French Union forces, while the forces of the DRV held the north. This division, meant to be temporary, was accompanied by two changes in the south. Ngô Đình Diệm (1901–1963), who in June 1954 had become the prime minister to Bảo Đại, then in France, would instead rely upon the United States, which maintained a military mission in Saigon after 1950 and whose influence in the conflict was growing. At the end of a confusing period of conflicts of influence in Saigon, the deposition of Bảo Đại was announced in May 1955, and in October, following a referendum, the Republic of Vietnam was proclaimed, presided over by Ngô Đình Diệm. The last French forces left the south in April 1956, and the general elections scheduled by the Geneva Agreements were never held.

Under the regime of Ngô Đình Diệm (1955–1963), which benefited from U.S. assistance, South Vietnam, populated by about 10 million, established itself like the north as a state (1956 constitution). But increasing disturbances were felt, first in the countryside and then in the urban areas. Saigon responded by trying to

regroup the rural population into “strategic hamlets.” Meanwhile, “somewhere in South Vietnam” the creation in December 1960 of the National Liberation Front of South Vietnam (NLF), under the presidency of the lawyer Nguyễn Hữu Thọ, kindled these movements of revolt and reactivated the former guerrilla Việt Minh. One would soon talk of “Việt Cộng” (Vietnamese Communists): the Labour Party of Hanoi had actually secretly created an entirely clandestine “southern branch” of its central committee. (The Labour [or Workers’] Party was the adopted name of the Vietnamese Communist Party [VCP]. The VCP came under this guise in 1951 when Hồ Chí Minh resurrected it.) From May to September 1963, tensions pitted Ngô Đình Diệm, whose family was Catholic, against the Buddhists of Huế and Saigon; demonstrations, confrontation, and suicide by fire followed each other in rapid succession, in particular after the old monk Thích Quảng Đức set himself on fire and died. On 1 November 1963 the United States, convinced of the necessity to change leaders, encouraged a military coup in which President Diệm and his brother and principal adviser, Ngô Đình Nhu, were assassinated.

During this prelude to the direct intervention of the United States in Vietnam, and in a south now in a state of war, the personality of General Nguyễn Văn Thiệu (1923–2001) rapidly emerged from the military junta in power, while a new constitution was adopted (1967). He would preside over the Republic of Vietnam from 1967 to 1975. From 1965 onward, U.S. troops displayed their presence in the south and pursued the Việt Cộng, or VC. The south would live according to the pace set by the U.S. presence, numbering up to 500,000, and the airlifted operations carried out against the guerrillas. Two important offensives from the maquis would mark this period, that of the Tet (New Year) 1968 and 1972. The Tet offensive was when war broke out in all the southern cities that had been spared until then, even wracking Saigon; neither side obtained a decisive success. The scenario of 1972 resembled the more conventional method of waging war. As a reaction to the harsh repression that followed the Tet offensive, the presence of northern fighters was reinforced in the south. Although negotiations were taking place in Paris (1968–1973), the south became an immense

battlefield. The Saigon regime was able to control most of the towns and national roads, which were moreover often cut, whereas the guerrillas, who had established a Provisional Revolutionary Government (GRP) in 1969, wielded authority over the countryside and the more remote regions. Even if the 1973 Paris agreement did establish a cease-fire, it did not bring about any political solution, nor did it modify this geographical situation.

The last communist offensive, which started from the central plateau of Ban Me Thuot in March 1975 under the direction of important leaders sent from Hanoi (Van Tien Dung, Le Duc Tho), brought about the demise of the southern regime. Deprived of U.S. support, its provinces and military forces collapsed like a house of cards. The Republic of Vietnam, abandoned by Nguyễn Văn Thiệu a week before, ceased to exist on 30 April 1975, when the People’s Army entered Saigon, which had been evacuated at the eleventh hour in an emergency operation by the last Americans still stationed there. No bloodbath took place, but the situation was completely unprecedented.

Because of the long period of separate development and in view of its privileged contact with Western powers (France, the United States), the south, with its population of 20 million, had evolved into a consumer society fed by imports and enjoying a level of life slightly superior to that in the north. A new chapter was to begin within a unified Vietnam under the leadership of the communist regime of the north. Admittedly, reunification was not officially and immediately made part of the agenda while a military committee ran Saigon. Only when a National Assembly was elected in April 1976 was reunification proclaimed. However, the south had to comply without fail to the new standards. Austerity gained ground after the relative affluence: reeducation in diverse guises, especially for those who exercised a post of responsibility under the old regime, or forced departure toward the “new economic regions,” which were not always very welcoming. Quite a few of those who had not managed to leave the country then attempted to do so. Tensions reached a climax during the triangular conflict between Vietnam and Cambodia of the Red Khmers (Khmer Rouge) on the one hand and between Vietnam and China on the other. The more or less tolerated departure of the “boat

people” in 1979–1980 led hundreds of thousands of Vietnamese, partly of Chinese origin, to leave Vietnam under great risk and peril.

The opening of Vietnam and the *doi moi* (renovation), from 1986 onward, partially restored dynamism to the south. This part of Vietnam had always been more open to the world, if only because of its geographic situation. When Vietnam was forced to abandon its adherence to the Soviet camp and began its integration into the new Asia of international investment and export-oriented industrialization, the south was the most adapted to meeting the challenge because of its fairly recent capitalist past. Thus it became one of the driving forces of this integration.

VIETNAM UNDER FRENCH COLONIAL RULE

If the southern part of Vietnam, Cochinchina, became in the 1860s a fully ceded colony under direct French administration, the central and northern parts, Annam and Tonkin, were formally occupied twenty years later as protectorates. However, there was not very great statutory disparity between Cochinchina, where a policy of assimilation was followed, and the protectorate of Annam-Tonkin, where a policy of association was supposedly tried. The difference became still smaller after the creation of the Indochinese Union in 1887. Integrated into a greater entity, the Vietnamese territories completely lost their individuality, while the unity of the whole, which had essentially the same boundaries as in the mid-nineteenth century, was progressively in-

creased by the improvement of communications. Despite considerable regional diversity, Vietnam was transformed into a more unified country and society. The prevailing idea of the reorganization attempted by Governor-General Paul Doumer (t. 1897–1902) in 1897 was to make the colony self-sufficient in economic terms and not a burden on France. Doumer also started a program for the modernization of the country, which included the construction of railroads (the *Transindochinois*, linking Hanoi to Saigon, was to be completed only in 1936), transport canals, roads and harbors, and the drainage of the Mekong Delta to expand the cultivated area. Two principal dimensions shaped the subsequent economic development: expansion and control of trade, and investment in production for export. But during the entire colonial period (1885 to 1945) the Vietnamese were in no position to prevent the French from dominating all these spheres, with the Chinese also playing an important role in trade, both internally and externally. It can be argued that by the late 1930s, Vietnam was still in part a “traditional” society and economy, but in part a component of the economy of the French empire. Vietnam did not really possess a “national” economy of its own. Nor were the French concerned to promote Vietnam’s balanced economic development as a country.

Substantial French investments transformed both the infrastructure of Indochina and its capacity to produce primary commodities for export. The building of canals, allowing more effective water control in the Mekong Delta, opened up large new areas for rice production. Although the French probably owned no more than about 15 percent of the rice land there, they benefited hugely from the expansion of exports (Nguyễn 1970: 187, 191). They also developed rubber planting on a large scale, as well as coffee plantations, while French investment in mining led to the exploitation of coal, tin, zinc, wolfram, and phosphates. On the other hand, businessmen in France actively discouraged significant investment in manufacturing in Vietnam, with the result that only a few factories were allowed to produce textiles, matches, and cement. The precolonial pattern of industrial handicrafts in Tonkin was still represented in 1934 by around 250,000 peasants

(7 percent of the labor force) engaged in small-scale industries (Gourou 1940: 312–314). But for the most part Vietnamese consumer demand was met by imports from France and elsewhere.

These developments, however, introduced sharp socioeconomic contrasts between the Mekong Delta and the Red River delta: differences in demographic densities were reflected in the growth of two opposite economies—one founded on the exportation of agricultural products, the other of a character already less colonial and more differentiated. The south (Cochin China), being the area most recently conquered and settled by the Vietnamese, as well as the first to be dominated by the French, was doubly different from the north (Tonkin) and the center (Annam). Originally part of Cambodia, the south had only gradually been brought under Vietnamese control between ca. 1660 and ca. 1840 and remained something of a frontier region even in the second half of the nineteenth century. The French were thus able, to a remarkable extent, to shape the pattern both of its economic exploitation and of its continued settlement by the Vietnamese. An engineering approach to development, which endeavored to get control of the waterways, drastically increased transportation capability and agricultural productivity. Already in the 1890s the digging of canals was allowing large new areas of rice production to be opened up, on the basis of government concessions to large landowners.

This process continued until the 1920s, producing in some areas a pattern of landownership and tenure quite uncharacteristic of traditional Vietnam. Two social groups were formed, the *điền chủ* (landowners) and the *tá điền* (tenant farmers). The former included the absent large landowner, often arousing discontent by lack of responsibility, and the small landowner. Interestingly, the small landowner’s living conditions were not necessarily very different from those of the *tá điền*, squeezed between the Chinese rice monopoly, the Indian moneylenders, the French colonial authorities, and the large landowners. But the Mekong Delta emerged in a short time as one of the major rice-exporting areas of the world, and rice production increased steadily, as shown in the following table.

Rice Cultivation and Export

Year	Area of Rice Cultivation	Export (metric tons of cleaned rice)
1880	1,282,000 acres	284,000
1900	2,656,000 acres	747,000
1920	4,572,000 acres	1,200,000
1939	5,450,000 acres	1,454,000

SOURCE: Nguyễn Thế Anh. 1970. *Viet-Nam duoi thoi Phap do ho* [Vietnam under French Domination]. Saigon: Lua Thieng, p. 184.

In the early twentieth century, comparable French encouragement was given to large-scale rubber, coffee, and tea planting in the northern part of Cochin China. Rubber production, which was enough to satisfy practically all the metropolitan needs, was controlled by French societies. On the eve of the Pacific War (1941–1945), rubber export reached 60,000 metric tons per year, representing 18 percent of Indochina's exports (Nguyễn 1970: 208). These developments contributed in turn to the growth of Saigon-Cholon as a major commercial center, with Saigon itself becoming a predominantly French-style city at its core.

Another significant feature of the society and economy of the south was the much higher percentage of Chinese residents there than elsewhere. Over the centuries Chinese settlement had contributed a great deal to the life and culture of Vietnam as a whole, but the south was unusual in that Chinese communities had already existed at Biên Hòa, Mỹ Tho, and Hà Tiên, even when the Vietnamese first established administrative control. Further migration occurred in the colonial period. By the mid-1930s, out of a total of 217,000 inhabitants counted as Chinese, as many as 171,000 lived in Cochin China (ibid.: 232, 238).

The acute congestion of the Red River delta forbade any possibility of exportable agricultural surplus such as in Cochin China. In the north, the French had to look for other forms of enterprise, drawing energy, raw materials, and manpower from the country's reserves. Large amounts of capital were injected in mineral exploitation—namely, in the coal mines of Hon Gai and Đông Triều, and in the zinc and

tin mines of the higher region. Capital was expended in the spinning and weaving mills of Nam Định and Hải Phòng, in the cement manufactures of Hải Phòng, and in the distilleries and breweries of Hanoi. Mining industries expanded the most: in 1939 the production of anthracite was 2,615,000 tons, 1,780,000 of which was exported (ibid.: 217). The impact of European industrialization, nevertheless, induced the emergence of new social categories, in particular of a somewhat unstable proletariat, even though the peasantry still constituted the bulk of the population.

Industrial activities, however, entirely accomplished under the sign of private initiative and free enterprise, did not seem to contribute efficiently to the solution of the problems brought about by population increase. For instance, on the eve of the Pacific War, factories employed all in all only about 90,000 workers (ibid.: 256). Likewise, temporary migrations of laborers going to work on the plantations of the south could in no way lighten the burden of overpopulation, since the growth rate of Tonkin's population amounted to 100,000 inhabitants per year (ibid.: 234). The healthy population growth owed much to French vaccination and inoculation programs, as well as the greater tranquillity that French rule brought to certain rural areas. In spite of positive economic progress, however, the living standard of Tonkin's peasantry remained miserable, and one should not wonder at the paradox that greater economic production went hand in hand with greater poverty at the lowest levels.

The populations of North and central Vietnam, living in complete deprivation, exasper-

ated by fiscal abuses (especially salt and alcohol monopolies) and by the systematic exploitation of manpower by the urban industrialists and the rural landowners, would easily listen to nationalist propaganda. Ever since France had intervened in Vietnam, national emancipation had been the goal of Vietnamese patriotism. But the tutelage imposed upon the Vietnamese monarchy by the French had dispossessed the Nguyễn dynasty of any nationalist influence and marked the defeat of traditional society. Rebellions against French rule, led previously by men loyal to the imperial government at Huế, were replaced by rural uprisings, which were virtually leaderless protests of discontented peasants. In any case, the traditional opposition of the Confucian mandarins, characterized by total refusal of the French presence solely because it was alien, had subsided even before World War I (1914–1918). Although still versed in Confucianism, a new generation of scholars advocated Westernization, and many tried to push for national modernization within a framework of cooperation with France. Even the old revolutionary Phan Boi Châu (1867–1940) had to go back on his long anticolonialist past to underline the sterility of regrets for an elapsed past in a brochure entitled “French Vietnamese Collaboration,” published in 1925. More and more young intellectuals with new ideas would wish for a closer association with the French, in the hope that France would engage their country on the path of administrative, social, and economic renovation. This young intellectual group mostly had attended Franco-Annamite schools concentrated in urban centers for their secondary education; some undertook advanced study at the University of Hanoi, founded by the French to offer training in medicine, law, and teaching. A small minority, usually the children of wealthy southerners, were sent to France for university training.

This new intelligentsia, a product of the French-controlled educational system, aimed to address the dilemmas of youthful alienation with calls for the re-creation rather than reform of the moral and social order in Vietnam. Belonging to the first real generation of intellectuals produced by French cultural influence and so attached to liberal ideas as to be intolerant of traditional forms altogether, these young radicals sought to break with the Confucian past and colonial present. A “Cultural Revolution”

thus took place in the 1920s–1930s. It waged a literary war—because it was difficult to attack the colonial regime frontally—against what was considered the decrepit institutions of traditional Vietnamese society, with the hope of bringing, through literature, the spirit of reform into all spheres of Vietnamese life.

In any case, placed in a subordinate position in auxiliary offices of the French administrative apparatus, the new leading class was only poorly associated with a superstructure that they did not belong to, and that notwithstanding, were uprooting it from its fundamental traditions. (Without exception, metropolitan Frenchmen held every important post in Indochina’s civil service, and even at lower levels, Frenchmen still staffed much of the bureaucracy.) But, steeped in the feeling of their racial superiority and set on safeguarding their privileges, the French *colons* urged the administration to maintain a despotic and exclusive (read pro-French colonist) policy. All attempts at reform were blocked, including the demands for a constitution presented by Bùi Quang Chiêu in the name of Cochinchina’s bourgeoisie (1923), and the proposals relating to the respect of Vietnamese identity and a genuine protectorate spirit formulated by Phạm Quỳnh (1924–1930). Many a discouraged Vietnamese moderate patriot was thus driven to parties influenced by Asianism or by communism. One of these was the Vietnamese Nationalist Party (Việt Nam Quốc Dân Đảng), which represented a new stage in Vietnamese revolutionaries’ efforts to forge new forms of integration, embracing a wider variety of social groups. It was a clandestine organization aimed at incorporating in the party’s program the three democratic principles of Sun Yat-sen’s Guomindang and at “realizing a national revolution, using violent means to overthrow the imperialist regime so as to establish an independent republic in Vietnam” (ibid.: 328–330). Communism attracted a large number of the urban, educated population, whose immediate support appeared to be best obtained by a communist appeal directed toward their frustration over the limited opportunities offered to a modern elite under French rule. Indeed, discouraged by the incomprehensive policy of the colonial administration, Vietnamese intellectuals were in search of any new anticolonial ideology that was unconnected with the past or the values of colonial-

ism. For want of an alternative mobilizing ideology, they turned toward communism, or at the very least sympathized with it. In part this was because the Indochina Communist Party, founded in mid-1929 and defining itself as a revolutionary organism of struggle against the colonial regime, appeared capable of offering at the same time “scientific” revolutionary techniques for political liberation and an ideological solution to replace the obsolete Confucian value system.

In the decade preceding the Pacific War, most of the Vietnamese elite had become fervent advocates of independence, albeit the failure of different revolts fomented by the Việt Nam Quốc Dân Đảng or the communists. The nationalist movement was now expressed through two principal tendencies. Cochin China’s bourgeoisie was rather partial to the evolution toward a dominion status for Vietnam. The Indochina Communist Party, although compelled to go underground, implanted all over Indochina syndicates and unions that laid claim to democratic liberties and the improvement of living conditions for all, while the ultimate goal remained the overthrow of French rule. It had become clear, however, that a more comprehensive, structured, and enduring movement was required to put an end to French domination. The opportunity for such action appeared to arise when the Japanese wartime occupation broke the French hold on Vietnam.

VIETNAM WAR (1964–1975)

See Indochina War, Second (Vietnam War) (1964–1975)

VIETNAMESE COMMUNIST PARTY (VCP) (DANG CONG SAN VIET NAM)

The Vietnamese Communist Party is the Vietnamese communist political organization and the current ruling party in Vietnam.

The VCP’s predecessor was the Thanh-Nien (Revolutionary Youth League of Vietnam), which was organized by Hồ Chí Minh (1890–1969) in 1925, in Guangzhou, China. In 1929 the first—which was also the last—congress of the Youth League was held in Hong Kong. During that congress the league split, and three communist organizations were set up in three separate regions. They were Dong Duong Cong San Dang (Indochinese Communist

Party, or CPI) in the north, Dong Duong Cong San Lian Doan (Indochinese Communist League) in the central region, and An Nam Cong San Dang (Annam Communist Party, or ACP) in the south. Hồ Chí Minh merged the three organizations into one in 1930 according to the directives of the Communist International (Comintern). He convened the meeting as the representative of the Communist International, and named the new party the Vietnamese Communist Party on 3 February 1930 in Hong Kong. Tran Phu was named the temporary general secretary of the party. Several months later, in October 1930, VCP was renamed the Indochinese Communist Party (ICP) under the instructions of Comintern, and Tran Phu was formally elected secretary-general of the party.

The principles of the party included a crack-down on imperialism and feudalism during the period of bourgeoisie democratic revolution in order to achieve national independence and effect the equal redistribution of land. Initially the headquarters, the Central Committee of the party, was located in central Vietnam and then was moved to Saigon (Hồ Chí Minh City). In spring 1931, most of the members of the Central Committee, including Tran Phu, were arrested in Saigon after the failure of the Nghe-Tinh Soviets Movement, which was agitated by local party members. Tran Phu died in prison several months later.

In the following years, ICP recovered gradually. Ban Chi Huy Hai Ngoai (the Overseas Executive Committee), which functioned as a temporary liaison bureau between Dabluro (short for Byuro Dalnego Vostoka, the Far Eastern Bureau, a branch of Comintern) in Moscow and the domestic party apparatus, was established in 1934 in Macao with the help of the Comintern. Its head was Le Hong Phong, a communist returned from Moscow. In 1935 the First Congress of ICP was held in Macao, which indicated ICP's recovery. During the Popular Front period (1936–1939), the Communist Party became public, and it was given a legal position. But soon after the end of the Popular Front period, in 1939, the French arrested more than 200 party leaders and drove the party underground.

In February 1941, Hồ Chí Minh came back to Vietnam and began to guide the Vietnamese revolution directly. In May, he presided over

the Eighth Plenum of ICP at Pac Bo. The primary task of the meeting was to establish the united front organization Việt Minh. Truong Chinh (1907–1988) was formally elected general secretary. ICP played a leading role in the August Revolution in 1945. To minimize the communist image and for the sake of unity, Hồ Chí Minh officially dissolved ICP on 11 November 1945 and set up a Society of Marxism Studies, whose president was Truong Chinh. In fact, ICP moved underground and continued to exist. The Second Congress of the party was held in February 1951 in Tuyen Quang province in North Vietnam, and ICP was renamed Dang Lao Dong Viet Nam (Vietnamese Worker's Party). Hồ Chí Minh was elected chairman of the Central Committee; Truong Chinh continued to serve as general secretary. The Third Congress of the party was held in 1960; Le Duan (1907–1986) was formally elected first secretary, and Hồ Chí Minh remained party chairman. In December 1976 the Fourth Congress was held in Hanoi, the two Vietnams were united, and the Vietnamese Worker's Party was renamed the Vietnamese Communist Party (VCP), the name that continues in use today. After Le's death in July 1986, Truong Chinh replaced him and served as head of the party until December 1986. At the Sixth Congress of the VCP, in 1986, Nguyễn Văn Linh was elected general secretary. At that congress, the VCP adopted the policy of *Doi Moi* (innovation), which started the course of reform and opening to the outside. In spring 2001, Nong Duc Manh became general secretary of the party.

As of the year 2000, the VCP had a total membership of 3 million. Its supreme body is the National Congress, which meets once every five years to approve important decisions and elect a Central Committee. The Central Committee meets twice a year to approve key decisions and functions during the adjournment of the National Congress. The ruling body of the party is the Politburo, elected by the Central Committee.

VIETS

The Viet people are the principal ethnic group in the modern state of Vietnam. Vietnamese, the official language, belongs to the Viet-Muong branch of the Mon-Khmer language family. The Viet people pride themselves on having some of the oldest political, literary, religious, and cultural traditions of any group in Southeast Asia. The region from the Red River to the Mekong Delta, some 1,500 kilometers in length, historically constitutes the principal area of Viet occupation. Ethnic Viet social organization is traditionally associated with wet-rice farming, and the search for suitable land led to their gradual migration southward.

Viet ethnohistory is sometimes traced from the kingdom of Van Lang in the Red River delta region from the seventh century B.C.E. onward. The Hung dynasty kings are considered the first “Viet” monarchs (to ca. 279 B.C.E.). However, the emergence of the Chinese Han dynasty (206 B.C.E.–220 C.E.) led to a period of significant Chinese influence, which lasted until the tenth century C.E. Initially, Chinese rule did not interfere greatly with Viet forms of kingship, but soon Chinese influence dominated the Viet political and social elite. At lower levels of society, non-Chinese traditions persisted. Some Viet rebellions took place in the sixth century C.E., but under the Tang dynasty (618–907) a more oppressive form of Chinese

rule was introduced, which increased the social divisions between the sinicized elite and local people. One example of this was the emergence of a distinct Viet religious identity, which contrasted with Chinese Confucianism. This local religion merged spirit cults with Buddhism, introduced as a result of closer trading contacts with mainland South Asia and Southeast Asia.

In 679, the protectorate of Annam was created in central Vietnam. Rebellions by non-Viet Annamese minorities, especially ethnic Muong and T'ai, took place until the eighth century. However, their defeat led to the further marginalization of these groups from the Viet people, who were able to take over their lands. When Chinese authority in the delta finally collapsed in 939, it was a Viet general called Ngo Quyen who was able to establish himself as leader of the independent kingdom of Nam Viet.

Viet political and cultural identity now consolidated itself. For example, by the thirteenth century Vietnamese vernacular literary culture was well established. The new state also engaged in wars against non-Viet neighbors—namely, the Indianized powers of Champa (Cham) and Cambodia (Khmer). This enabled southward migration, but it also brought tensions in the nature of Viet kingship. Little control could be exerted from the northern capital over the competing noble families, who were constantly at war with each other from the sixteenth to the eighteenth centuries. The country was politically divided throughout much of this period, and only in 1802 was a new, more central capital located at Huế. However, these political divisions did not result in the fragmentation of Viet ethnic identity, which was based upon the ideas of common language and shared cultural heritage and social organization.

In the nineteenth century Vietnam could not resist French colonial expansionism, and the country was divided from 1858 to 1873 into three political regions—namely, Cochin China, Annam, and Tonkin. Vietnamese nationalist movements grew under colonialism, but it was not until the rise of the communist nationalist leader Hồ Chí Minh (1890–1969) at the beginning of the twentieth century that one of these movements managed to integrate the peasantry. However, during this period a num-

ber of competing Viet identities did emerge that challenged the traditional underpinnings of Viet society in ways that other historical political divisions had not. For example, there was widespread Catholic missionary activity in the south, leading to the creation of a Viet Christian minority. This period also saw the development of a new Vietnamese script, *quốc ngữ*, which used roman letters rather than Chinese characters and was associated with the missionaries in the south. After the Pacific War (1941–1945), the communists under Hồ Chí Minh struggled to wrest control of the country from France, which was not achieved until 1954. At the Geneva Conference of that year, Vietnam was divided between the communist government in the north and the pro-Western regime in the south. Another twenty years of civil war followed. In 1975 the Socialist Republic of Vietnam was created with its capital in the north at Hanoi.

Divisions in the country from 1954 to 1975, and the emergence of two such different political systems, have undoubtedly made the writing of a unified Viet ethnohistory more difficult. However, problems in the relations between ethnic Viet people and other ethnic groups in the country were also made worse during this time. North and south introduced different policies for dealing with minorities, based on different interpretations of interethnic relations and majority Viet histories. Since reunification the fears of the minorities in relation to Viet hegemony have increased. This has been reflected particularly in the policy of population relocation. Ethnic Viet communities have been moved into many minority areas, such as the Central Highlands, in the effort to maximize agricultural and industrial production. Many feel that this is at the expense of the rights of other ethnic groups whose ancestral lands are being forcibly taken as a result.

**VISAYAN ISLANDS
(BISAYAN ISLANDS,
THE BISAYAS, THE VISAYAS)**

The Visayan Islands, otherwise known as the Bisayan Islands, the Bisayas, or the Visayas, are the central part of the Philippines, located between the islands of Luzon in the north and Mindanao in the south. They are bordered on the east by the Philippine Sea and on the west by the South China Sea. The combined area of the Visayan Islands is 61,077 square kilometers. Among the major islands, largest to smallest, are Samar, Negros, Panay, Leyte, Cebu, and Bohol. The sea area around the islands is called the Visayan Sea. Located in the middle of the Philippines, the Visayan Islands had active relations with other peoples of Southeast Asia, and also traded with China and Japan. They served as a link between Luzon and Mindanao. The islands were colonized by Spain and were made part of the Philippine Islands.

The Visayan Islands form the central portion of the Philippines and were, like Luzon and Mindanao, of tectonic origin. They are mountainous with coastal plains. Samar is the largest of the Visayan Islands, with an area of 13,080 square kilometers. Facing the Philippine Sea, it is exposed to typhoons and torrential rains. It is a rugged, mountainous island, with narrow coastal strips of land. Negros is the second largest, with an area of 12,705 square kilometers. Shaped like a boot, it is split by a mountain range that runs from north to south, peaking at Mt. Kanlaon, rising to 2,450 meters. Mt. Kanlaon, an active volcano, is the tallest mountain in the Visayas area.

Panay is the third largest Visayan island, with an area of 11,515 square kilometers. Mountains

break the island into four distinct areas—namely, Aklan, Antique, Capiz, and Iloilo. The highest mountain on the island is Mt. Nangtud at 2,049 meters. Next in size is the island of Leyte, of 7,214 square kilometers. Three mountain systems partition Leyte into three areas, the northeastern, the northwestern, and southern Leyte. Cebu is fifth largest in the Visayas area, with an area of 4,422 square kilometers. It is a long and narrow island with a mountain range running through the length of it. Cebu is geographically the center of the Visayan Islands. Lying south of Cebu is Bohol (3,865 square kilometers), which has the so-called Chocolate Hills, a group of small, rounded hills. Other islands in the Visayas region but considered under the administration of Luzon provinces are Palawan, Mindoro, Masbate, and Romblon.

Three distinct regions can be discerned among the Visayas Islands, characterized by different ethnolinguistic traditions. The Western Visayas speak Hiligaynon or Ilonggo, and comprise Panay and western Negros (Negros Occidental). Central Visayas speaks Sugbuanon, or Cebuano, and consists of eastern Negros (Negros Oriental), Cebu, and Bohol. Portions of western Leyte and northern Mindanao also speak Cebuano. The Eastern Visayas speak Waray-Waray and cover the islands of Leyte and Samar. A separate language is spoken in Aklan, island of Panay.

The people are called Visayans or Bisayans, and are generally of Malay origin. Mountain peoples of different ethnicity and languages are considered to have been the indigenous peoples; these consist of variants of the Negritos, among them the Atis in Panay, the Agta in Negros, and other groups. Legend has it that Bornean *datus* (chieftains) settled in the coasts, pushing the indigenous Negritos inland. Diverse but unique cultures emerged as local sociopolitical systems developed. Traditions of folk medicine, religion, and nobility arose.

The peoples in the Visayan region traded with each other, and also with neighboring peoples in Southeast Asia. By around 900 C.E., Chinese traders began to arrive, followed by Japanese. Several coastal towns emerged, with Cebu and Iloilo becoming particularly important.

The Spaniards arrived in March 1521, led by Ferdinand Magellan (1480–1521). Samar was the first island seen by the Spanish fleet sailing

from the Pacific. Magellan landed off Leyte and went on to Cebu. Filipinos led by Lapu Lapu killed Magellan in the island of Mactan, just off Cebu, when he attempted to subjugate the island. In 1565 the Spaniards returned under Miguel Lopez de Legazpi (1500–1572) and established their foothold in the Visayas. Filipinos resisted the Spanish onslaught, but they were defeated by force of arms. The Spaniards colonized the Visayan Islands, establishing the colonial capital in Cebu, before moving to Panay and then to Luzon. Cebu City became the first city in the Philippines, being established in 1565. The Spaniards formally divided the Visayan Islands into provinces, and established cities and towns.

Because of Spanish abuses such as forced labor, high taxes, and maltreatment, several revolts occurred during the Spanish colonial era in the Visayas. In 1621 the Tamblot revolt broke out in Bohol, while the Bankaw revolt occurred in Leyte. The Sumuroy rebellion erupted in 1649. The longest revolt against Spain was the Dagohoy revolt in Bohol, which lasted from 1744 to 1829. Not surprisingly the Visayas joined the anti-Spanish revolution that broke out in Luzon in 1896. When the United States assumed the colonial reins from the Spanish in 1898, the Visayans resisted the colonization, but the Americans were able to subdue this resistance and enforce their sovereignty over the islands.

Economic reforms during the late Spanish era and the American colonial period resulted in export crops being cultivated in the Visayas. This resulted in Negros and Panay having sugar plantations, while coconut farms were established in the other islands. Minerals (copper, iron) were also exploited on a small scale.

At the outbreak of the Pacific War (1941–1945), the Japanese invaded the Visayan Islands. Filipino and U.S. soldiers were defeated in conventional warfare against the Japanese in 1942. Visayans then turned to guerrilla warfare, which limited the Japanese occupation to the major towns and cities. Japanese reprisals, however, led to many atrocities. The Americans returned to the Philippines, landing first on the island of Leyte in October 1944.

Agriculture and fishing are the major sources of livelihood for the Visayas. Panay Island plants sugar and rice, and is the main source of rice to the region. Negros until re-

cently was a major sugar producer. The sugar industry, however, resulted in serious socio-economic problems because of a large gap between the wealthy landowners and the poor and landless seasonal farmworkers. Coconut is also grown in the Visayan Islands. The area is rich in mineral deposits, with copper, iron, and pyrite mines. Manufacturing exists in the various islands, and an international processing zone was established in Mactan. Fertilizer, cement, and smelting plants provide employment and income.

Cebu is the center of economic activity in the region, with Cebu City second in importance only to the capital, Manila. Other major cities are Iloilo, Bacolod, and Tacloban, which are also important ports. The San Juanico Bridge, the longest bridge in the Philippines, joins the islands of Leyte and Samar. The Visayas area hosts a number of educational institutions, among them Silliman University in Negros Oriental, Central Philippines University in Iloilo, and the University of San Carlos in Cebu. The major international airport is located in Mactan. As of 2000, the population of the Visayan Islands was 15.14 million (National Statistics Office 2000).

The Visayas are presently divided into three administrative regions, each with the following provinces: Region 6, Western Visayas (Aklan, Antique, Capiz, Iloilo, Negros Occidental, Guimaras); Region 7, Central Visayas (Bohol, Cebu, Mactan, Negros Oriental); and Region 8, Eastern Visayas (Leyte, Southern Leyte, Samar, Eastern Samar, Northern Samar, Biliran).

The Visayan Islands possess rich historical and cultural traditions that exist to this day. They form part of the sociocultural diversity of the Philippines.

VO NGUYỄN GIAP (1911–)

“Hero of Dien Bien Phu”

Comrade-in-arms of Hồ Chí Minh (1890–1969), Vo Nguyễn Giap is famous for having defeated the French forces at Dien Bien Phu (May 1954) at the end of the First Indochina War (1946–1954). He then continued to lead the defense of the Democratic Republic of Vietnam (DRV, North Vietnam) in the war against the United States.

Both nationalist and communist from the very beginning, Vo Nguyễn Giap was born into a family of literate farmers in 1911 in a village in the central Vietnamese province of Quảng Bình. He attended Quoc Huc College in Huế, from which he was expelled in 1927 for having instigated a strike. While still an adolescent he belonged to one of the revolutionary groups formed in Vietnam. Arrested during the clamp-down following the 1930 upheavals and imprisoned for some time, he joined Hanoi and the Indochina Communist Party (ICP) in 1933. Although becoming a militant of the revolution, he pursued his studies in law and graduated in 1937 to become a history teacher.

The period during World War II (1939–1945) was decisive for him. In 1939 he went into exile in China, meeting up with Hồ Chí Minh and, after the 1941 foundation of the Việt Minh (League for the Independence of Vietnam), stayed with the leader in the frontier zone. While in this frontier region, he rallied the numerous ethnic minorities to the revolutionary cause and began to form a military force. On 22 December 1944 he founded the Armed Propaganda Brigade for the Liberation of Vietnam, which, with other groups derived from the ICP, would constitute the People's Army of Vietnam.

The Revolution of August 1945 broke out less than a year afterward. As the right-hand man of Hồ Chí Minh, Vo Nguyễn Giap became minister of interior in the latter's first

General Vo Nguyễn Giap rejoicing, 29 May 1969. (Bettmann/Corbis)

government, besides occupying the post of vice-president of the Defense Council. He asserted himself as one of the key men during this decisive period that triggered the war. His first wife having died in prison, he remarried at that same time. However, some confusion in the division of tasks hinted at tension among leaders of the DRV. He became minister of defense in November 1946; war broke out the following month, and he left the post in June 1947 to assume the post of commander-in-chief of the People's Army. Then he regained the ministry of defense the following year and kept both posts, with the title of senior general.

During the First Indochina War, General Giap thus appeared to be the principal military leader of the resistance. He forged an efficient tool out of the People's Army with regular units and, from 1950 onward, was thus able to confront the French expeditionary corps directly. Although he was defeated, as at Vinh Yen in January 1951, he finally brought about a

brilliant victory in May 1954 at Dien Bien Phu, where he led the battle personally. After that battle, he became the strategist of the people's war.

In the divided Vietnam after 1954, he remained one of the main leaders of the DRV: member of the political bureau of the Labor Party (after its overhaul in 1951), vice-prime minister, minister of national defense, and commander-in-chief of the People's Army. In 1956 notably, he was the one to criticize the excesses of the agrarian reform in North Vietnam that was carried out by Truong Chinh (1907–1988). However, the “hero of Dien Bien Phu” was caught unprepared in the 1960s when the war was relaunched in the south and hit the north by the escalation of U.S. bombardments. His personal role in the decisions pertaining to the revolutionary war in the south is not well-known, but the 1975 victory, carried out by General Van Tien Dung, his deputy since 1953, is certainly also due to him.

After the reunification of Vietnam, while retaining all his functions, he took over responsibility for the “scientific and technical revolution” and presented a report on the subject at the Fourth Congress of the Communist Party (which by then had regained that name). Yet four years later, in 1980, after Vietnam’s double conflict against Cambodia and China, he lost his post of minister of defense and, in 1982, during the Fifth Congress of the Communist Party, he was evicted from the political bureau. After that he ceased to play any major political role.

General Giap might have seemed destined to enjoy the highest position in his own country, but he left the political scene following the demise of “Uncle Ho” when Vietnam, in open conflict with China, seemed yet again to have entered a difficult phase in its history.

VOLKSRAAD (PEOPLE'S COUNCIL) (1918–1942)

The Dutch colonial government started to implement a gradual process of decentralization after 1905. Democratization was part of the process, as more and more responsibilities were delegated to local councils that were partly elected. The establishment of the *Volksraad*, a unicameral parliament, in 1916 was also part of the process.

It first assembled in 1918 with a membership of thirty-nine, which was extended to sixty in 1931. Members were selected on the basis of ethnicity. Initially all of its thirty-nine members (fifteen ethnic Indonesians, twenty-three Europeans and “foreign orientals,” and a chairman) were appointed. Membership was expanded to forty-nine in 1921 and sixty in 1927. After 1931, membership consisted of thirty ethnic Indonesians, twenty-five Europeans, and five “foreign orientals.” Of them, twenty Indonesians, fifteen Europeans, and three “foreign orientals,” respectively, were elected for four-year terms by the members of city, town, and regional (*kabupaten*) councils combined by ethnicity as electorates.

The Volksraad was initially intended to provide advice to the colonial government. In 1925 it also obtained limited legislative powers, and in 1931 the budget of the Dutch East Indies required its assent. However, the governor-general and the departmental heads were not responsible to it.

The ethnic Indonesian members often had a conservative *pangreh prajah* (indigenous civil service) background and were at best moderately nationalistic. However, as members of the Volksraad, they held parliamentary immunity. During the 1930s, when Indonesian nationalists were increasingly impeded from public speaking, several Volksraad members started to use their position as a platform to draw attention to the issues that occupied nationalist groups.

With the Japanese occupation of Java in March 1942, the Volksraad was abolished.

W

WALI SONGO

The Founders of Islam on Java

The *Wali Songo* are the nine founders of Islam on Java. The term *wali* describes a personage who is regarded as a special “friend” of Allah—hence the translation “saint” is generally used to describe a wali. Contemporary tradition identifies nine such saints, although in the nineteenth century in East Java, there was a tradition of eight saints (*wali walu*).

The *Babad Tanah Jawi* is the oldest Javanese source to recount the activities of these wali. This babad gives prominence to four wali who formed part of a larger council convened in the kingdom of Demak after the fall of the great kingdom of Majapahit. These four wali are Sunan Giri from Gresik, Sunan Bonang from Tuban, Sunan Kudus from Demak, and Sunan Kalijaga from Adilangu. In the babad, Sunan Giri’s authority among the wali is given particular recognition; Sunan Bonang is a critical intermediary and teacher; Sunan Kudus is the defender of Demak, while Sunan Kalijaga’s role is to safeguard the spiritual foundation of the kingdom of Mataram.

Other babad sources, as well as a lively oral tradition, provide a rich repertoire of tales about the wali. These tales combine historical narrative with exemplary accounts of the wali’s powers intended to portray the virtues of Islam. As such, they embody Sufi traditions that have contributed to the formation of Islam on Java. In recent years, a substantial popular literature,

consisting of booklets, pamphlets, and locally stenciled brochures, has developed to recount the lives of the wali.

Solichin Salam’s influential *Sekitar Wali Songo (Regarding the Wali Songo)*, first published in 1960, is principally responsible for consolidating the tradition of the Wali Songo around specifically named figures. Each of these nine saints is designated by title and personal, usually Arabic, name. They are: (1) Maulana Malik Ibrahim: Syeik Maghibi, (2) Sunan Ampel: Raden Rakmat or Raden Ainul Yaqien, (3) Sunan Bonang: Raden Maulana Makdum Ibrahim, (4) Sunan Giri: Raden Paku or Prabu Satmata, (5) Sunan Drajat: Raden Syarifuddin, (6) Sunan Kudus: Ja’far Sodiq, (7) Sunan Kalijaga: Raden Mas Syahid, (8) Sunan Muria: Raden Umar Said, and (9) Sunan Gunung Jati: Faletahan or Raden Syarif Hidayatullah. Both genealogical and teacher–student relationships establish connections among these figures.

The discovery at the beginning of the nineteenth century of an early Islamic gravestone at Gresik, dating from the first part of the fifteenth century, led to the inclusion of Maulana Malik Ibrahim in the core group of the wali. The *Babad Dipanegara* was the first babad to include this figure in the genealogies of the wali.

Each of these figures has a recognized tomb, associated with a mosque, that is the site for local pilgrimage (*ziarah*). Visitors come, at specific times determined by the intersection of cycles according to Javanese calendar reckoning, to

pray and carry out acts of religious piety. Tomb visitation may take place at any time, and many tombs have become the focus for local tourism. Proper visitation, however, is deemed more auspicious if it occurs at night, and that is thus the norm at most tombs. Friday night is often an appropriate time for such a visit. In East Java, the Friday night that coincides with Legi in the Javanese calendar is auspicious, whereas in Central Java, the Friday night coinciding with Kliwon is considered so. Five of the nine wali have their tombs in East Java, three in Central Java, and one in West Java.

Besides the nine wali, there are many other holy men who, according to local tradition, are regarded as wali. Many of these wali, such as Sunan Tembayat, Sunan Geseng, and Syaikh Abdul Muhyi, have tombs that are important sites of visitation. In fact, the whole of the Javanese countryside is filled with potential ziarah sites.

Each wali's tomb has a custodian called a *jurukunci*, "the keeper of the key," who informs visitors about the wali and guides them in various associated pious practices. At some large tombs, there is an entire hierarchy of the jurukunci. These jurukunci maintain the local traditions associated with the tomb. Many custodians are descendants of the wali or of disciples associated with the wali. They are themselves a prime source of local knowledge about the lives of wali.

Visitors to the tombs of the wali believe that they gain blessing (*baroka*) from the rituals they perform as *ibadah* during their visit. On their return to daily life, they look for signs of this blessing, and many return to offer thanks if they feel that they have obtained the blessing they sought.

WALLACE LINE

A Biogeographical Divide

The Wallace Line is an imaginary line devised by the British botanist and explorer Alfred Russel Wallace (1823–1913) in the mid-nineteenth century to divide the biogeographical zone of Asia from that of Australia. In its earliest form it ran from the most southerly islands of the Philippines to the west of Sulawesi and on to the island of Lombok. More recent work has suggested that much of the Philippines is a transition zone between Asia and Australia rather than strictly within an Asian biogeographical zone.

The line thus seeks to delineate the boundaries of a distinctive Asian pattern of flora and fauna. Thus the flora of the Asian zone to the west of the Wallace Line is dominated by varied forms of tropical rain forest, secondary forest, and grassland, modified by elevation and by human influence. In that same zone distinctive fauna are evident, with the tiger, elephant, orangutan, and rhinoceros being characteristic marker species. To the east of the Wallace Line, it is argued, the flora change in type and composition, albeit rather slowly. The faunal boundaries are, however, much more distinct, with relatively few crossovers between the Asian and Australian zones. For fish, birds, and insects, the value of the line is much less clear—their boundaries are much less restrictive.

The Wallace Line has value as a useful way of conceptualizing the biogeographical character of a large and distinctive area and distinguishing it from neighboring zones. It is evident, however, that advances in our understanding of sea-level change and the role of land bridges between the Asian and Australian zones are testing the sustainability of this demarcation. Furthermore, coupled with the increasingly important role of humans in the dispersal of plants and animals, the concept of sharp boundaries of flora and fauna is much more difficult to sustain than

was the case in the mid-nineteenth century, when the line was first devised.

WAN AHMAD (1836–1914)

Traditional Malay Ruler

Wan Ahmad was a younger son of Bendahara Ali, ruler of Pahang from 1806 to 1857. At Ali's death (ca. 1857) Ahmad engaged in a long and hard-fought civil war (1857–1863) with his elder half brother, Tun Mutahir. In the end he was victorious and so secured the throne of Pahang to himself. In 1888 he reluctantly submitted to British control of his state. During the Malay risings of 1892–1894, Ahmad refrained from giving open support to the Malay rebels, but he took little part in the government of his state under the new regime; he died, a sick and embittered old man, in 1914.

Before his death, Bendahara Ali had designated his eldest son, Tun Mutahir, as his successor, granting him executive power in his lifetime. But Mutahir denied to Wan Ahmad (born on 23 May 1836, and so only twenty-one at the time) their father's legacy to Ahmad of the revenues and (as Ahmad asserted) control of the Kuantan and Endau districts. Ahmad owed his victory in the war partly to his outstanding ability as a field commander, and partly to support from Terengganu, acting for Siam. Ahmad seems to have founded his rule on the promotion, at the expense of traditional chiefs, of men of humble birth who had served under him with success during the war. He gave decisive support to Tunku Kudin in the later stages (1872–1873) of the Selangor civil war, partly because Kudin's opponents had given aid to Wan Aman, son of Tun Mutahir, in the latter's attempts to oust Ahmad. For these services Ahmad obtained reward, and his forces remained for some years in the Ulu Selangor district, to enforce payment.

Ahmad had been in conflict with Maharaja Abu Bakar (r. 1862–1895) of Johor, who had

supported Tun Mutahir and his sons against Ahmad. However, the two rulers were both in control of what had been outlying provinces of the Johor-Riau sultanate, and had a common problem of securing British and Malay recognition of their pretensions to be independent royal rulers. With the consent of his chiefs, Ahmad assumed the title of sultan in 1882, and Abu Bakar did the same in 1885. Abu Bakar gave Ahmad some support in his relations with Britain, which in the early years of his reign had been suspicious of Ahmad's association with former sultan Mahmud of Riau-Lingga, regarded as a puppet of Siam. Later Ahmad feared that Britain would support his brother, Engku Mansur, against him.

By the 1880s, fending off British intervention in Pahang, where Ahmad had granted extensive concessions to Straits Settlements' commercial interests, was becoming his most pressing problem. He was obliged to accept Hugh Clifford (1866–1941) as consular British agent at his capital in 1887, and then John Pickersgill Rodger (t. 1888–1896) as British resident late in 1888. The early reports of these officials disclose a tense relationship between Ahmad and his chiefs, and his reliance on men such as To Gajah, who had risen to power by royal favor. Ahmad also imposed a variety of heavy taxes that retarded economic development.

British moves toward the type of protectorate in Pahang that already existed in Perak and other states caused much resentment, both in the royal circle and among the chiefs. When some of the latter rose in revolt in the mid-1890s, Ahmad stifled his sympathy and gave active, though not sustained, support to clumsy British military moves to suppress the revolt and drive out its leaders.

From the start of British intervention Ahmad had adopted a policy of distancing himself from the unwelcome new system, withdrawing to hunt and indulge in amusement upriver. Nonetheless, step by step, he was obliged to accept what he saw as encroachment upon traditional privileges, such as losing the services of debt-bondsmen, and his inability to continue his authoritarian and sometimes cruel treatment of his opponents. In his last years, growing ill health immobilized him in embittered isolation. He kept some key elements of his authority in his own hands but left the new rou-

tine of Malay monarchy to his eldest son and ultimate successor, Tengku Besar Mahmud.

Clifford and others have left vivid accounts of Ahmad's lifestyle and personality, from the period in the late 1880s when he was still a much-feared autocrat to the later years of frustration and resentment. Clifford, who had been at Ahmad's court in the last year of his independence, described him in his prime as a mighty warrior and a keen hunter of big game. His contemporaries, a modern historian (Milner 1982) noted, admired his courteous and urbane manner, the outward model of what a Malay ruler in the traditional style should be. It was Ahmad's misfortune to outlive those days and to survive into an uncongenial environment.

WATANIAH

A Malay Guerrilla Anti-Japanese Force

Wataniah (also *Tentera Wataniah*) was a Malay anti-Japanese resistance force started in Bentong, Pahang, in Peninsular (West) Malaysia in 1942 by a Malay Administrative Service officer from Perak, Yeop Mahyuddin Muhammad Sharif. Having secured approval of the sultan of Pahang, Yeop Mahyuddin (alias Mahidin) estab-

lished a jungle training camp at Batu Malim about 16 kilometers from Raub, beginning with some 250 recruits including some former members of the Pahang volunteer force. Among those who also joined the Wataniah were Abdul Razak Hussein (1922–1976) and Ghazali Shafie, who later became prominent in Malaysian politics. When the Allied Force 136 landed in Pahang toward the end of 1944, it met with the Wataniah and the Malayan People's Anti-Japanese Army (MPAJA). The primary task of Wataniah then was to assist Allied landings by obstructing the movement of Japanese supplies from the east coast to the western part of the peninsula.

Fearing the abduction of the Pahang sultan by elements of the Malayan Communist Party (MCP), on 17 August 1945 the Wataniah, assisted by Force 136, took Sultan Abu Bakar Ri'ayatuddin Al-Mu'adzam Shah (r. 1932–1974) under protection. Consequently, a Japanese search operation was under way that saw some Chinese being killed and notices posted by the Japanese claiming that the communists had abducted and killed the sultan. To avoid racial clashes, Wataniah's men tore down the notices.

On 8 September 1945, led by Colonel Headley of Force 136, a detachment of Wataniah escorted the sultan back to the capital, Pekan. Pending the arrival of regular troops, and backed by Ghurkha paratroops of Force 136, Wataniah took control of large areas in Pahang to avert an MPAJA takeover.

British skepticism and belated support, however, stunted the effectiveness of the anti-Japanese guerrilla warfare of Malay forces such as Wataniah and *Askar Melayu Setia* (Loyal Malay Soldiers) of Kedah and Perak. Wataniah was disbanded as a military force in November 1945, and many of its members joined the *Peratuan Melayu Pahang* (Pahang Malay Association) in 1947.

WAYANG KULIT “Shadow Theater”

The *wayang kulit* (“shadow theater”) is a performance genre involving flat leather puppets casting a shadow over a white screen illuminated by a lamp. The puppets—mounted on a horn rod and with moveable arms—are manipulated by a puppet master enacting stories mostly

taken from the Hindu epics *Mahābhārata* and *Rāmāyana*. *Wayang kulit* is known primarily from Indonesia, but also Thailand and Malaysia.

The ancient *wayang kulit* was a shamanistic ritual, indigenous to Southeast Asia, with the puppets representing ancestors. This ritualistic background lives on in contemporary *wayang kulit*, although present-day urban performances are most likely to occur in secular contexts. The most spectacular form of *wayang kulit* is from central Java. Here accompanying the *dhalang* (puppet master) is a full gamelan orchestra, with *pesindhen* (female vocalists) providing song interludes. In the *wayang* of Java a *dhalang* is a man well versed in music and classical Javanese literature, with mastery over voice production and ability to improvise dialogues. Performances involve several characters. Puppets are said to be “dancing” when manipulated on the screen. Highly stylized, their iconography is complex. Their face and feet appear in profile, whereas the body is partly turned to the front. Among the characters, the *panakawan* (servant

clowns) are very important and feature in every performance. They provide a social commentary through their jesting. Possessed of magical powers, their role is that of counselors to the heroes of the story performed. An essential prop is the *gunungan*, or *kekayon*, used at the beginning and end of the performance and as a scene marker.

Contemporary Javanese wayang kulit is increasingly being performed in the world capitals by non-Indonesian dhalangs in Indonesian, English, Dutch, and other languages, in an attempt to make the genre accessible to international audiences while retaining the traditional performance format.

WESTERN MALAY STATES (PERAK, SELANGOR, NEGRI SEMBILAN, AND PAHANG)

The Term

The term "Western Malay States" is a loose one, used to identify the first four Malay States in the Malaysian peninsula, which were ruled by the British after 1874. These states were Perak, Selangor, Negri Sembilan, and Pahang. They were situated on the western part of the peninsula, hence the term. (Pahang's inclusion was purely for convenience; first, it came under the British only from 1888, and second, Pahang is situated on the central and eastern part of the peninsula.) During this time (1870s), the whole Malay Peninsula (present-day Peninsular/West

Malaysia) could be divided politically into three zones. First was the Straits Settlements, which consisted of Penang, Singapore, and Melaka, ruled by a British governor. The second was the Western Malay States, which were individually administered by a British resident who was responsible to the Straits Settlements governor. The third was the rest of the Malay States, which were not under the British. They consisted of Kedah, Perlis, Kelantan, Terengganu (collectively referred to as the Northern or Siamese Malay States), and Johor, which were ruled by independent Malay rulers.

The Western Malay States

The British had formed the Straits Settlements in 1826. Their main office was first set up in Penang, but it later moved to Singapore when the latter became more successful economically. Penang and Singapore became important entrepôts, serving to export the thriving tin industry from the Malaysian hinterland as well as trading ports for neighboring mainland and island Southeast Asia, East Asia, India, and Europe. The four Western Malay States, which were rich in the production of tin, had constant civil wars among the rival Malay rulers and chiefs, who were exasperated by rivalries among Chinese tin mine lords and workers that led to bloodshed and closure of mines. When some Malay chiefs or rulers began to side one Chinese group (*hui*) against another, the ones that were left to fend on their own urged the British either in Penang or Singapore to intervene. Moreover some Malay and Chinese chiefs began to invite British officers in the Straits Settlements to help settle their problems. Eventually, when a series of wars between the Malay chiefs and Chinese took place in Perak in the 1860s and early 1870s and jeopardized the trade in tin in the ports of the Straits Settlements, this prompted the governor in Singapore, Sir Andrew Clarke (t. 1874–1875), to intervene. Consequently the Pangkor Agreement (Engagement) was concluded in 1874. The sultan who was chosen to rule Perak as the result of this agreement would receive a British resident to advise him on matters concerning the administration of the state and all other affairs, excluding matters concerning religion (Islam) and customs. The Pangkor Agreement became a precedent for the British to establish their in-

fluence in Selangor, Negri Sembilan, and Pahang, which was completed in the 1880s. These states were rich in tin, or presumed to be rich in the mineral. Later they also became the world's biggest exporters of natural rubber.

The Expansion of British Influence

After having successfully put down the wars among the Malay chiefs and Chinese societies, the British set to work to develop the Western Malay States politically, economically, and socially. Each state had received a British resident as its chief administrator, although the sultans remained as constitutional monarchs. The traditional bureaucrats, such as the Malay nobles and *penghulu*, or district chiefs, were absorbed into the new system of administration. New district boundaries were created in each state, and each district was administered by a British district officer. These district officers were answerable only to the state residents. They began to introduce new legislation for the states, new land laws, and new methods of taxation, including on imports and exports, as well as economic, political, and social policies. The traditional Malay chiefs, who were absorbed into the administrative system, including the sultans, were given allowances. This was a drastic change from the past, when they had had the right to impose taxes on the people and extract free labor for public works. Consequently these traditional Malay leaders lost their authority, status, and influence on the *rakyat* (common people), a phenomenon that was felt greatly by the Malay chiefs, some of whom launched armed resistance against the British. The first such campaign was launched in Perak, where the first British resident was killed in 1875. This prompted the British to double up their security and act against those involved swiftly and severely.

After having been able to settle problems with the local people and set up the administration in each state, the British set about to fully exploit the wealth of the economy. The Western Malay States were geologically rich in tin, which was available in such abundance that it could be seen with the naked eye in the valleys and riverbanks. The British then introduced incentives—such as facilitating miners in the use or acquisition of mining lands and imposition of easy taxes to encourage both Euro-

pean and Asian (mainly Chinese) entrepreneurs. The immigration of laborers was encouraged. Since many Chinese were already involved in tin mining in the Malay States even before the imposition of British rule, it was quite natural that they responded to this “open door” policy in large numbers. Large tin miners were permitted and encouraged to organize the immigration and welfare of their workers. Thousands came and dominated the mining scenes, which also began to change the demographic patterns of the states. Inasmuch as there was a great demand for tin by the industries in the West (the tin-plating industry), the Western Malay States became the chief world producer of the mineral, especially from the 1880s to the late 1970s (long after Malaysia achieved its independence, in 1957).

Besides tin, the British also discovered, through experimentation, that the Western Malay States were very suitable for the large-scale planting of natural rubber (*Hevea brasiliensis*). The first rubber seeds were taken from Brazil and were successfully planted in Perak. The person responsible for spreading these seeds was R. N. Ridley (b. 1855), nicknamed “Mad Ridley” for his enthusiasm about the plant. His efforts were not wasted, for some people who believed in him took up his suggestions and began to plant rubber commercially. The first such person was Tan Chay Yan from Melaka, who became the first person to produce rubber and sell it to the market. The product was an instant success, for it fetched lucrative prices in Britain and in particular the United States, where the motorcar industry was booming by the early twentieth century. This encouraged British and other European entrepreneurs and companies to set up plantation industries in the Western Malay States. Just as in the tin-mining industries, the British administration provided facilities and incentives for entrepreneurs to involve themselves in the industry. As a result, these states became the most important world producer of natural rubber and continued to be so until the 1980s, when market prices could no longer support the industry.

The growth of the rubber industry also helped change the demographic scenery of the Western Malay States. Unlike the tin-mining industry, where the majority of the workers were Chinese, in this highly labor-intensive sector the majority of the workers were im-

ported from southern India. This was because many of the capitalists in this industry were Europeans, who could not provide their own labor force. Here the British administration took its own initiative to help estate owners to introduce Indian immigration policies with the agreement of the British Indian government. They also provided funds to facilitate Western entrepreneurs in the rubber plantations. Consequently, thousands of Indian immigrants came and dominated the estates.

The development of both the tin and rubber industries increased the population of the Western Malay States to an unprecedented level. The numbers of both Chinese and Indians, although many were transient workers, obviously overwhelmed the indigenous people, most of whom remained by their own choice, or as the result of British policies, as subsistence farmers producing rice. This became a major factor in the growth of a plural society in the Malay States.

The intensive development of the tin and rubber industries in the Western Malay States also initiated other infrastructural development. Roads, railways, bridges, and river transportation were built, initially to facilitate the development of these export industries. These roads and railways were built to connect towns and cities where mining and rubber estates were located with export ports. Thus the major lines for roads and railways were constructed almost parallel to the western coastlines, with the ports of Penang in the north and Singapore in the south.

The development of roads and railways also initiated the growth of urban areas that centered on tin-mining and rubber industrial areas. That also explains the presence of important towns and cities in the region. These towns and cities were dominated mostly by the Chinese and Indians attracted to the tin-mining and rubber industries. This factor also helped to strengthen the growth of the plural society.

The growth of urban areas also initiated other infrastructural development, such as the introduction of modern banking systems, insurance, postal and telegraphic facilities, as well as a few educational systems. These educational systems were not integrated but were introduced to serve individual communities. Except for the education of the Malays that was supported by the colonial government, there were different systems of education for the Chinese, Indians, and the English-language schools that were run

by Christian missionaries. Chinese schools were allowed to be organized and administered by their own communities. Tamil schools, which were made solely the responsibility of estate owners, were least attended to. Such educational differences also resulted in the presence of literacy gaps among the different communities in the Western Malay States.

Conclusion

It is undeniable that administratively, economically, and physically, the Western Malay States developed more prominently than the other parts of Peninsular Malaysia, with perhaps only Johor, in the southern tip of the peninsula, as an exception. The development became more coordinated after 1896, when all of the four states were placed under a central administration in Kuala Lumpur and were known as the Federated Malay States (FMS). Prior to that each state was administered separately by the individual resident, creating some unevenness in the administrative, economic, and political developments among the states. Difficulties sometimes arose, especially when development projects needed to cross state boundaries, such as in the construction of roads and railway lines and the opening up of tin mines and rubber plantations. It must be remembered that the individual state still had its own Malay sultan who held the sovereignty of his state. After the formation of the Federated Malay States, all residents of the four Western Malay States were responsible to the resident general based in Kuala Lumpur, who in turn was responsible to the British governor of the Straits Settlements in Singapore. Economic and other developments now became more integrated and coordinated. Under this political unit British influence in the peninsula became more effective, especially after World War I (1914–1918), when they were also able to place British advisers in all the other Malay States, which were later collectively known as the Unfederated Malay States (UMS). In these states the Malay rulers seemed to be more independent than those in the FMS. Such a situation had created uneasiness among the sultans of the former Western Malay States, who demanded that some of their powers be returned to them. The issue of decentralizing the power became a continuous debate among the Malay sultans and British officers

until the outbreak of the Pacific War (1941–1945). These issues became irrelevant after the war, when all the Malay States in the peninsula, including Penang and Melaka, were united under the Federation of Malaya in 1948. Undoubtedly, the formation of this union took root from the development of the Western Malay States.

“WHITE MAN’S BURDEN”

“Take up the White Man’s Burden.” The opening line of Rudyard Kipling’s (1865–1936) poem, first published in February 1899, stood for a view of responsibility and a view of race relations now almost impossible to recapture.

In the closing decades of the nineteenth century, most of Africa and Southeast Asia had come under the control of European powers. To rule its peoples—its “new-caught, sullen peoples, / Half devil and half child”—was a duty for which no thanks could be expected: those who took up the burden could reap only “The blame of those ye better, / The hate of those ye guard.” The reward was in fulfillment, “The judgment of your peers.”

The previous year, the United States had acquired the Philippines as a result of its victory in the Spanish–American War (1898), and the poem

has been interpreted as an invitation to share the imperial “burden.” Kipling indeed sent an advance copy to Theodore Roosevelt (1858–1919), and publication in fact took place on the very day that the subsequent war between the United States and the Philippine Republic began. The poem had its genesis, however, in 1897, before the war began or Roosevelt sent Commodore George Dewey (1837–1917) to Manila.

It was connected with Queen Victoria’s golden jubilee. “As to the Jubilee, I loathe it,” Kipling had written (Ricketts 1999: 232), his attitude to empire always ambiguous, but certainly not encompassing its pomp and circumstance. A lunch with the premiers of the self-governing colonies prompted him to start the ode, which was nevertheless expected of him, and he began “The White Man’s Burden.” Realizing that it would not be well received amid the jubilee celebrations, he laid it aside. What he produced was “Recessional.” Empires did not last forever. “Lord God of Hosts, be with us yet, / Lest we forget—lest we forget!” Its message, as Walter Besant put it, “went home to all our hearts” (ibid.: 237).

WINGATE, MAJOR-GENERAL ORDE CHARLES (1903–1944)

See Chindits

WINSTEDT, SIR R[ICHARD] O[LAF] (1878–1966)

Scholar and Author of Malay Subjects

Richard Olaf Winstedt, promoter of Malay education, was born in Oxford in August 1878 and received his tertiary education at New College. Later he sat for the joint examination for the home, Indian, and civil services, and afterward was sent to Malaya as a cadet officer in the British colonial government in 1902. He landed in Perak and became interested in the

beliefs and customs of the Malays, which became a lifelong passion for him.

Winstedt served as an assistant district officer in several districts in Perak, including Tapah and Matang. Later he was posted to Kuala Pilah in Negri Sembilan. It was his zeal in learning the Malay language and customs as well as his insatiable thirst for knowledge that commanded him respect from his fellow officers and superiors. Subsequently he was appointed as the assistant director of education for the Federated Malay States and the Straits Settlements in 1916. He later assumed the directorship (t. 1924–1931). He served as a member of the Straits Settlements Legislative Council and the Federal Council of the Federated Malay States.

During his tenure at the Department of Education, he undertook the establishment of the Sultan Idris Training College (SITC) in Tanjong Malim and the Raffles College in Singapore. He was the first president of the latter from 1921 to 1931. He was also responsible for the opening of Malay vernacular schools. For his vast experience and knowledge in the field of education in Malaya and Singapore, he was made a member of the Colonial Office Advisory Committee on Education following his retirement in 1935.

He was one of the few British officers who became very interested in Malay subjects and became expert in their language and customs. He wrote books based on his studies and keen observations that covered a large range of disciplines concerning their history, beliefs, customs, arts, folklore, and literature.

Winstedt collaborated not only with other fellow officers who shared similar interests, such as R. J. Wilkinson, but also with local folklorists, such as Raja Ali Haji and Pawang Ana. His works include *The Literature in Malay Folklore*, *Awang Sulong*, *An English-Malay Dictionary*, *Colloquial Malay: A Simple Grammar with Conversations*, *A History of Johore*, *A History of Malay Literature*, *A History of Malaya*, *The Malays: Cultural History*, *Malay Grammar*, and various others.

For his valuable contributions, Winstedt was elected a fellow of the British Academy, a member of the board of governors of the School of Oriental and African Studies, and president of the prestigious Royal Asiatic Society of Great Britain and Ireland. He was conferred a Companion of the Order of St.

Michael and St. George (CMG) in 1926 and made a Knight Commander of the Order of the British Empire (KBE) in 1935.

WIWOHO RESOLUTION (1940)

The Wiwoho Resolution was an attempt by moderate Indonesian nationalists in 1940 to persuade Dutch authorities to reform the constitution of the Netherlands Indies by introducing responsible, representative government.

During the second half of the 1930s, as the expansionist intentions of fascist governments in Europe and Asia became clear, moderate and leftist Indonesian nationalists increasingly pressed the Dutch authorities for political concessions, which, they said, would keep the Indonesian people in the antifascist camp. At that stage, the Netherlands Indies lagged far behind Burma and the Philippines, where the British and Americans had granted a high degree of responsible government. In Indonesia, the *Volksraad* (People's Council) was only partly elected, and it had only legislative power: no part of the colonial administration was responsible to it. The colonial government had rejected out of hand the Soetardjo Petition (1936), which called for Indonesian autonomy on the Philippine model. But a far more imminent threat of fascism in 1940 encouraged an Indonesian *Volksraad* member, Wiwoho Poerbohadidjojo, to propose a new motion calling for a more representative council and for department heads to be responsible to that council. The motion was passed in February 1940 but was rejected in August by the Dutch government, which was by then in exile in London. Later, on 10 May 1941, Queen Wilhelmina (r. 1890–1948), the Dutch

monarch, promised unspecified changes to the constitution after World War II (1939–1945).

The Netherlands' rejection of the modest requests of the Wiwoho Resolution played a significant role in persuading all Indonesian nationalists that no significant concessions could be expected from the Dutch. After the Pacific War (1941–1945), memory of the outcome of the Wiwoho Resolution contributed to the widespread belief that the Dutch would never negotiate in good faith with the independence movement.

WOMEN IN SOUTHEAST ASIA

It is commonly accepted that Southeast Asian women traditionally enjoyed a relatively high status in relation to men, although it is often difficult to generalize across the region because of cultural variation, differences in historical experiences, and the dearth of comparative research. Although one must avoid depicting premodern Southeast Asia as a kind of golden age for women, a long-term perspective does suggest that females have often been adversely affected by the rise of larger states, the spread of the world religions, and the demands of the global economy.

Women in Premodern Southeast Asia

Historical evidence indicates that relationships between men and women in premodern Southeast Asia were generally more equitable than in neighboring "cultural zones" such as East and South Asia. This is attributed to several factors, the most frequently cited being the importance of females in food production, especially rice cultivation; their prominence in mar-

keting and the domestic economy; complementary gender roles in ritual and the role of women as healers and spirit mediums; the prevalence of bilateral kinship patterns, matrilineal residence, and bride-wealth; traditions of female inheritance and independent income; low population densities that placed a high value on women's work and female fertility; and the absence of a strong state structure and a low level of urbanization. Although early political centers adapted political-religious models from India and China that accorded men a substantially higher place than women, these gender constructions had only limited influence beyond the upper classes. Leaders in small kinship-based village societies were normally male, but women continued to wield considerable influence because of their roles in the domestic economy. In all societies, older women whose reproductive days were past and who had thus become more "male" could also exercise some authority in communal discussions and often assume important positions as ritual leaders.

The expansion of historical sources from the fifteenth century means that research on women is more feasible than for earlier periods. The influence of the new power centers that emerged during this period was more far-reaching than that of earlier kingdoms, a critical factor because the alliance between political power and imported religions and philosophies entailed the promotion of certain ideas about gender roles. Not only did Theravada Buddhism, Confucianism, Christianity, and Islam view females as subordinate, but religious specialists were often actively hostile to women's position as propitiators of the ancient spirits. This gender hierarchy was reinforced by law codes and other pronouncements that, even if representing the ideal rather than lived reality, still affirmed male superiority.

On the other hand, it is apparent that outside influences underwent considerable modification as they penetrated local populations. Despite their patriarchal bias, the actual practice of religion often emphasized aspects that continued to attract women, such as the elevation of motherhood and the promise of protection in childbirth. Furthermore, ordinary women were still influential in community rituals dealing with fertility, and in the domestic economy. Even at elite levels, where female seclusion and wifely fidelity was more evident, women re-

mained critical in the marriage and family alliances that were the basis for male authority and prestige. In numerous instances a dowager queen assumed control of the government, although by the eighteenth century such cases had become much more rare as ruling elites endorsed the view that "good" women should be secluded from public life.

Women, Colonialism, and Nationalism

The expansion of global commerce from the sixteenth century had far-reaching effects on gender relationships in Southeast Asia. The new market demands for cash crops such as pepper, the growth of port cities, and the presence of large numbers of foreign men, both European and Asian, all impinged on the relationship between the sexes. Economic changes were particularly visible in the cosmopolitan port towns that were proliferating all along Southeast Asia's coastlines. Whether they were under European control, like Manila and Batavia, or indigenous rule, a sizable portion of the population in these ports was composed of single Chinese men. Inter-marriage and sexual liaisons at all levels led to a creolized urban society, in which the life of wealthy women contrasted markedly with a growing feminization of poverty caused in large part by the manumission of domestic slaves on the death of their owners.

Until around 1800 the impact of the growing European presence was felt primarily in the island world, especially on Java and the Philippines, where European interests were concentrated. By the 1890s, however, the entire region except for Thailand had fallen under European colonial control. Although there was considerable variation in the extent and nature of European penetration, the changes associated with colonization exercised far-reaching effects on gender relations. The expansion of capital-intensive ventures, such as long-distance trade and plantation agriculture, was almost invariably a male concern dominated by Europeans, Chinese, and other foreign Asians. As peddlers and petty traders, the Chinese also began to dominate local economies and displace women in many areas of small marketing. By the mid-nineteenth century women were being increasingly recruited as cheap labor on plantations and in processing plants. At the village level traditional gender relations were further under-

mined as colonization “reformed” the customary laws that gave women considerable autonomy in daily life. It goes without saying that the meager political concessions introduced by colonial powers in the first half of the twentieth century rarely addressed women’s concerns. Even in Siam (Thailand), the region’s only noncolonized country, enactments intended to “modernize” the country affirmed patrilineality and protected the existing class structure.

The male leaders of the nationalist movements that developed across Southeast Asia in this period focused on attaining self-government, but writings by educated women also indicate a deep-seated concern with issues such as polygamy, divorce, domestic abuse, and the financial responsibilities of fathers. Although more radical men occasionally espoused ideas about the position of women in a future independent state, such issues were generally seen as irrelevant because the primary goal was independence. Despite their involvement in anticolonial activities, sometimes as fighters but more often as strike organizers, journalists, couriers, and clandestine agents, women were always regarded as auxiliaries rather than partners. Such attitudes were still evident when independence movements exploded with new energy after the surrender of the Japanese, who occupied most of Southeast Asia from 1942 to 1945. In the male-dominated environment of revolutionary warfare there was little talk of the specific ways in which a future independent state would address the needs of its female citizens.

Women in Contemporary Southeast Asia

World War II represents a watershed in Southeast Asia because it effectively brought colonialism to an end. Theoretically, all the newly independent states were committed to gender equality, but that was not easily translated into reality. A major reason has been the fragility of regional democracy, which has severely limited the political rights of all Southeast Asians, men as well as women. The effective quashing of the left wing outside the communist states has weakened political groupings normally supportive of women’s rights. A second reason for the lack of attention to gender concerns has been official promotion of women as “mothers, wives, and helpers.” That is largely true even in

the socialist states, despite the sexual equality that is one of communism’s basic tenets. A third factor has been economic policies that have sought to attract foreign investment in manufacturing, textiles, clothing, and electronics by offering a cheap and compliant workforce composed largely of young unmarried women. In pursuit of this goal contemporary Southeast Asian governments have been quite willing to ignore workplace issues such as maternity leave and equal pay.

There is understandably some debate about the extent to which Southeast Asian women have benefited from the new employment opportunities. On the one hand, it has been argued that social norms that make women subject to family and patriarchal controls have been retained in the workplace, and that gender hierarchies have simply been transferred to the factory floor. Some authorities also contend that increased mechanization and rural development programs have privileged men and disadvantaged women, while migration to cities has drawn attention to urban poverty and the likelihood that unskilled, uneducated, and unemployed women will drift into prostitution. On the other hand, depictions of women as victims of globalism, patriarchy, and capitalism have been challenged by research that traces patterns of resistance that assert female worker solidarity against a male management. There has also been an increase in the number of female professionals as well as middle-class entrepreneurs and employers, an important development in light of a common pattern whereby a woman maintains her own finances independent of her husband.

There have been other changes over the last twenty years, as women have become more alert to the implications of state policies in relation to female concerns such as birth control and workplace benefits. Throughout Southeast Asia, there is little doubt that greater political acumen has been fostered by the increase in Non-Governmental Organizations (NGOs), which have blossomed in number since the 1980s. Through these associations women otherwise excluded from the political process have acquired knowledge and organization skills, an important factor in societies in which men are preferred as leaders. The increased availability of tertiary education for women is another factor contributing to greater political awareness and wider economic opportunities. Educated women can also

provide a rallying point for those who desire change, even when they obtain leadership positions through their male connections, since there is a tendency to see women as less venal than men and more likely to govern in the people's interest. Yet despite encouraging signs, women have yet to attain the 25 percent political representation considered necessary for any meaningful political participation to occur. Nor can it be assumed that those who do gain positions of political influence will be willing to stand as advocates of women's issues, for that risks alienating their male colleagues or the male electorate. Nonetheless, the resilience and pragmatism of Southeast Asian women and their undoubted influence in the community provide good reason for optimism regarding the expansion of their political presence.

Conclusion

The academic study of women in Southeast Asia has been dominated by anthropologists and sociologists, and has been largely concentrated on the twentieth century. Most research concentrates on specific countries, and comparative work is rare—even though the “high status” of women is commonly cited as a regional characteristic. Until recently there has been very little investigation of the historical basis for this assertion, or of how the alleged “female autonomy” may have varied over time and among different Southeast Asian cultures. Despite the frustrating absence of sources, we are now beginning to build up a bank of studies that will provide a more solid basis for generalized comments about the ways in which economic and social changes affected the lives of Southeast Asian women over the past 500 years. For the period before 1500, however, the dearth of data means that historians can only offer glimpses of what it meant to be born a woman rather than a man.

WORLD ECONOMIC DEPRESSION (1929–1931)

See Great Depression (1929–1931)

WUNTHANU ATHIN

Peasant Nationalists

The *wunthanu athin* were village nationalist and self-defense organizations founded in rural Burma (Myanmar) during the 1920s. *Wunthanu*, in common usage as early as 1915, means “supporting own race.” The word *athin* denotes “organization” or “society.” Affiliated with the General Council of Burmese Associations (GCBA), a large anti-British nationalist movement, they received leadership and education from politically motivated Buddhist monks. The movement grew rapidly as peasants attempted to organize themselves to defend their interests against the heavy taxes imposed by the colonial government and the interest rates charged them by moneylenders. The nationalist politicians in the cities, who were now entering into electoral politics, saw the athins as a source of political support for their campaigns as well.

Organized in parallel with the official government’s administrative hierarchy, there were athin organizations at village, circle, and district levels. The athins were particularly active in the organization of boycotts of government-sponsored activities such as the elections for the na-

tional legislature and auctions for the right to fish or to cultivate fallow lands. Their initial motivation was defense against the so-called punitive police that the British established to punish whole villages for the nonpayment of taxes. They also tried to pressure the Indian moneylenders, to whom many of the Burmese peasants were indebted, to lower their repayment obligations. Supporters of the *wunthanu athin* were active supporters of Hsaya San during the peasant revolt that he led in 1930. Many of the ideas that motivated the politics of the movement’s supporters grew out of traditional Buddhist ideas of statecraft, which the British colonial government was said to have violated.

Y

YAMASHITA TOMOYUKI, GENERAL (1885–1946)

“Harimau (Tiger) of Malaya”

General Yamashita Tomoyuki commanded the Japanese 25th Army, which conquered Malaya and received the surrender of Singapore, and later the 14th Army, which administered the Philippines.

Yamashita was the second son of a medical doctor in a small village on Shikoku Island, southwest Japan. The Chinese character of his personal name “Tomo” was meant to dedicate him to the Japanese emperor. Graduated from Hiroshima Military Preparatory School 1903, Yamashita could count many among his classmates who later played prominent roles in Japan. For instance there was Anami Korechika (1887–1945) who was army minister, April–August 1945, who committed suicide on the day Japan surrendered, and Yamawaki Masataka (1886–1974), commander of the North Borneo Defense Army (later 37th Army), September 1942–December 1944. After graduating from the Central Military Preparatory School in 1904, Yamashita enrolled in the Military Academy in 1905. He entered the Army College in 1913 and graduated in 1916 with the highest honors.

From 1918 to 1922, Yamashita served as a military attaché in Switzerland and Germany. Having witnessed a defeated and devastated Germany, it was said that he resolved never to wage a war that had no prospects of success. His senior officer in both postings was Tojo Hideki

(1884–1948). Although cordial at that time, their relations later became strained and were not restored till the end. On his return to Japan, Yamashita was promoted to major and in 1925 to lieutenant colonel. He then served in Vienna as a military attaché from 1927 to 1929. Further promotions followed. A month before going home, he became a colonel. In 1934 he attained the rank of major general. In the same year he succeeded Tojo as head of the Research Department of the army ministry. He was sympathetic to the young militant officers to the extent that he had a hand in instigating them to assassinate Prime Minister Okada Keisuke (1868–1952). Shortly after the 26 February abortive coup d'état of 1936 he was demoted to a brigade commander in Korea, a Japanese colony at that time. When the Sino-Japanese War began in July 1937, his brigade participated in the battles in China. Promoted to lieutenant general in November 1937, Yamashita became the chief of staff, North China Area Army, whose commanding officer was Terauchi Hisaichi (1879–1946) in 1938, then commander of the 4th Division stationed in Manchuria in September 1939.

Back in Japan, and succeeding Tojo again, Yamashita became director-general of the Aviation Department of the Army in July 1940. In this capacity he visited Germany from December 1940 to June 1941 to inspect the European war and to meet Adolf Hitler (1885–1945), the German führer. He was appointed commander of the Manchurian Defense Headquarters in

July 1941, and within four months, on 5 November 1941, Yamashita assumed command of the 25th Army. In his war preparation, he first went to Saigon, then to Taiwan.

On 8 December 1941, the 25th Army landed at three places on the Malay Peninsula and rapidly advanced southward. Yamashita himself landed in Singorra (Songkhla), South Thailand. In less than seventy days his army of 50,000 defeated the British defense forces of more than 100,000, comprising Indian, Australian, Malay, and British (Tsuji 1988: 37; Mant 1992: 12; Department of Self Defense Japan 1966: 626–627). Lieutenant General A. E. Percival, the general officer commanding Malaya, surrendered on 15 February 1942; Malaya, including Singapore, came under Japanese occupation. The accomplishment of this swift Malayan campaign earned Yamashita the reputation as “Harimau (Tiger) of Malaya.” It was widely reported that at the surrender negotiations with Percival he coerced the latter to immediately answer “Yes” or “No.” According to him, however, he was so irritated by the inappropriate translation of a Japanese interpreter that he shouted at him that “you only need to ask him yes or no” (Oki 1968: 225) The notorious *sook ching* (“cleansing”)—namely, mass massacres of Chinese residents—and the forced donation of 50 million Straits dollars imposed on the Malayan Chinese were implemented with his official approval. Lieutenant Colonel Tsuji Masanobu (1902–1968?), Yamashita’s chief operation staff, and Colonel Watanabe Wataru (1896–1969), deputy chief military administrator to Tsuji, initiated these policies.

In July 1942, Yamashita was transferred to Manchuria as commander of the First Area Army. It was, however, rumored that his friction with Prime Minister Tojo brought about this transfer. Nonetheless he was promoted to full general in February 1943. In September 1944, when Japanese forces suffered severe setbacks in the southern areas (notably Southeast Asia), he was entrusted with commanding the 14th Area Army based in the Philippines. On his way to Manila, he spent a brief week in Japan. His war strategies were expected to change the situation. However, he lost such decisive campaigns as Leyte and Luzon. From April 1945, to avoid detection, his headquarters were forced to move frequently about the mountainous areas.

A fortnight following the general surrender of Japan, he officially signed the surrender treaty on 3 September 1945. At the War Crime Trials held by the United States from October to December 1945, Yamashita was sentenced to death by hanging for widespread crimes committed by troops under his command. British War Crime Trials in Singapore started in the latter part of January 1946. He was not tried there, because the British court had insufficient time to demand that the United States hand him over to British prosecutors. He was executed on 2 February 1946 in Manila.

YANDABO, TREATY OF (1826)

Prelude to British Burma

The Treaty of Yandabo formally ended the first Anglo-Burmese War (1824–1826). Signed on 24 February 1826, it was named after the village of Yandabo, located above the confluence of the Chindwin and Irrawaddy Rivers in central Burma (Myanmar), one day’s march from the capital, then at Ava. This was the farthest north that British troops penetrated the country during the season of fighting. The treaty was emblematic of the conflicting ideas and interests that dogged relations between the forces of the expanding British Indian Empire and the Burman court for nearly a century before the final annexation of Burma to India in 1885.

Relations between Burma and British India had been tense since about 1800, when the expanding influence of Britain in India came up against the power of the empire of Konbaung Burma under King Bodawphaya (r. 1782–1819). Although the British took the view that there could be only one sovereign in any piece of territory, the Burmans, in keeping with the existing norm in Southeast Asia, argued that multiple, overlapping sovereignties were possible. The kings of the Konbaung dynasty also objected to being dealt with by the British East India Company (EIC) rather than having direct relations with the British monarch in London. The inequality expressed by the British was a cultural affront that the Burmans found most hurtful. The contrasting Asian and European principles of statecraft came into conflict along the River Naaf, which now divides Burma from Bangladesh, in 1824. The petty principalities of Manipur and Assam had come under the sway of the Burman court as well as the province of Arakan, which Bodawphaya had annexed in 1784. Arakan remained rebellious, however, and the king was forced to send military expeditions to the region in 1797 and 1811 to restore his authority. Burman troops made continual forays into Manipur and Assam, thus threatening British commercial penetration of these regions, which they perceived as part of their possessions. The Burman court had sent diplomatic missions to Calcutta until 1811, but after that time, faced with the intransigence of the British, relations were effectively severed until war broke out in 1824.
